A federal appellate court has rejected the claim of department chairs at the University of the District of Columbia that because the university had given them summer contracts for the previous ten years, they had a property interest in their summer pay. A decision had been made near the end of spring semester to withhold summer contracts because of budget limitations; the chairs asserted that they were denied due process. The court rejected the property interest claim outright. In addition, the court ruled that, because the chairs had not used the university grievance system, any lack of due process protections was the result of their own inaction. The court affirmed the trial court's award of summary judgment for the university (*UDC Chairs Chapter, American Association of University Professors v. Board of Trustees of the University of the District of Columbia*, 56 F.3d 1469 (D.C. Cir. 1995)).

**6.7.3. The private faculty member's procedural rights.** The rights of faculty employed by private colleges and universities are governed primarily by state contract law and, where applicable, by state constitutions. Although the lack of constitutional protections for faculty at private institutions gives the institution more flexibility in fashioning its decision-making procedures and in determining what procedural protections it will afford faculty, written policies, faculty handbooks, and other policy documents are interpreted as binding contracts in many states (see Section 6.2), and "academic custom and usage" (see Section 1.4.3.3) may also be used by judges to evaluate whether a private institution afforded a faculty member the appropriate protections. Because challenges to negative employment decisions brought by faculty against private institutions are interpreted under state law, the outcomes and reasoning of any particular case must be applied with care to institutions in states other than the state in which the litigation occurred.

Many private institutions have adopted, either in whole or in part, policy statements promulgated by the American Association of University Professors with regard to reappointment and dismissal of tenured faculty. Formal adoption of these policy statements, or consistent adherence to their terms (which could create an implied contract, as discussed in Section 6.2.1), will require the private institution to follow them. Failure to follow these policies can result in breach of contract claims.

The term of the contract, the conditions under which it may be renewed, and the individual's right to certain procedures in the renewal decision are all matters of contract law. If the contract states a specific term (one year, three years), then language to the contrary in other documents may not afford the faculty member greater protection. For example, in *Upadhyaya v. Langenburg*, 834 F.2d 661 (7th Cir. 1987), a faculty member was employed under several one-year contracts, which stated that the tenure evaluation would take place during the fifth year of employment. The faculty member was notified that he would not be given a fourth one-year contract. Asserting that language in the contracts guaranteed him five years of employment, the faculty member sued for breach of contract. The court disagreed with the plaintiff's interpretation, stating that the language regarding a fifth-year tenure review was not contractually binding on the college and that the contract was clearly intended to be issued for only a one-year period. Furthermore, the faculty handbook stated that there was no guaranteed right to renewal for probationary faculty members.

The written terms of the contract will generally prevail, even if the faculty member can demonstrate that oral representations were made that modified the written contract. In *Baker v. Lafayette College*, 504 A.2d 247 (Pa. Super. Ct. 1986), the plaintiff argued that the head of his department had promised him a full four-year probationary period. When Baker's two-year contract was not renewed, he sued for breach of contract. Pointing to language in the faculty handbook that gave the faculty member a right to *consideration* for reappointment, rather than an absolute right to reappointment, the court denied the claim.

Even handbook language that appears to afford probationary faculty members rights to reappointment may not bind the institution. In *Brumbach v. Rensselaer Polytechnic Institute*, 510 N.Y.S.2d 762 (N.Y. App. Div. 1987), the plaintiff, an assistant professor of public archaeology, was given a three-year contract. Her work was evaluated formally each year and was found to be satisfactory. Just before the contract's expiration, the department faculty decided to change the plaintiff's position to one in computer archaeology, a position for which the plaintiff was not qualified. The department offered the plaintiff a one-year terminal contract. At its expiration, the plaintiff instituted an action for breach of contract, asserting that the faculty handbook's statement, "If the result of the evaluation is satisfactory, it is normal for an assistant professor to be re-employed for a second three-year period," obligated the institution to reappoint her.

The court disagreed, stating that, upon expiration of the contract, the plaintiff became an employee at will. The handbook's language regarding evaluation did not amount to a promise to dismiss a probationary faculty member only for

just cause, and there was no showing that the decision to modify the plaintiff's position was arbitrary or capricious. For those reasons, the trial court's grant of summary judgment to the institution was affirmed.

An often-litigated issue in nonreappointment decisions is the timeliness of notice. Depending on the wording of the contract, faculty handbook, or policy document, failure to notify a faculty member of a nonrenewal decision in a timely manner may give rise to contractual damages and, in some cases, to tenure. In *Howard University v. Best*, 547 A.2d 144 (D.C. 1988), a trial court and an appellate court considered the issue of timeliness of notice—specifically, whether a faculty member was entitled to “indefinite tenure” if timely notice of nonreappointment was not given—and the meaning of the term “prior appointment.”

Marie Best had initially held a three-month nonfaculty appointment at Howard University. She was then given a three-year faculty appointment but was not given the one-year notice of nonrenewal of that appointment in a timely manner. Best sued for breach of contract, arguing that the university's failure to notify her of the nonrenewal entitled her to tenure. Alternatively, she argued that the three-year faculty appointment was really a reappointment, since she had previously held a position at Howard, and that the faculty handbook's provision that faculty received tenure upon reappointment after a previous appointment entitled her to tenure.

The court attempted to determine whether it was Howard University's “custom and practice” to grant tenure to a faculty member who had served in a part-time, nonfaculty position. Finding no evidence of a pattern of such tenure awards, the court ruled against Best's theory of tenure on reappointment. With regard to Best's theory that late notice of nonreappointment entitled her to tenure, or at least to an additional three-year appointment without tenure, the court found evidence that the university had given other faculty additional appointments in situations where reappointment notices were late. For that reason, the appellate court affirmed the jury verdict for a second three-year appointment without tenure, and \$155,000 in damages.

Faculty contesting denial of tenure at private colleges have asserted that procedural violations materially altered the outcome of the tenure decision. In most cases, courts have ruled that substantial compliance with the college's policies is sufficient to defend against such claims. For example, a state supreme court ruled that, although the dean violated the faculty handbook provisions by not providing a formal written annual evaluation of an untenured faculty member prior to the tenure evaluation, the informal annual evaluation provided the faculty member gave her notice that her performance did not meet the requirements for tenure, and thus there was no procedural violation (*Karle v. Board of Trustees/Marshall University*, 2002 W. Va. LEXIS 212 (W. Va., December 2, 2002)).

Similarly, informal means of complying with the procedures may be sufficient. For example, a state appellate court ruled that, although the university did not follow its written procedures that required notification of the plaintiff in writing that he was being considered for tenure, the professor knew about the meetings at which his tenure candidacy was discussed, he was invited to

several meetings to respond to questions about his performance, and he was informed in writing about the department's concerns. The court ruled that the lack of procedural compliance did not prejudice his application for tenure (*Galiatsatos v. University of Akron*, 2001 Ohio App. LEXIS 4051 (Ct. App. Ohio 10th Dist., September 13, 2001), *appeal denied*, 761 N.E.2d 47 (Ohio 2002)).

A state appellate court ruled that New York University substantially complied with its rules and procedures in a remanded tenure review of the plaintiff. The dean's failure to include the department chair on the ad hoc review committee and the university's determination not to follow the advice of the grievance committee concerning the conduct of the remanded evaluation did not render the dean's or the university's actions arbitrary or capricious. Simply because some faculty disagreed with the dean's conclusions and recommendations did not make them arbitrary, according to the court (*In re Loebel v. New York University*, 680 N.Y.S.2d 495 (N.Y. App. Div. 1998)).

On the other hand, providing misleading information to an untenured faculty member concerning his or her progress toward tenure has been found to be a major procedural violation that will sustain a breach of contract claim. For example, a state supreme court ruled that a college's deviation from its tenure standards was a breach of contract, and the misleading assurances of the candidate's department chair that she was performing adequately supported her claim for negligent misrepresentation, although she did not prevail in her discrimination claims (*Craine v. Trinity College*, 791 A.2d 518 (Conn. 2002), discussed in Section 6.4.2).

In addition to procedural claims, faculty denied tenure may assert that the criteria used, or the basis for the decision, were arbitrary and capricious (a substantive rather than a procedural violation of the contract). Courts are most reluctant to entertain these claims, as they require the court to substitute its judgment for the decisions of faculty and administrators. For example, in *Daley v. Wesleyan University*, 772 A.2d 725 (Ct. App. Ct. 2001), *appeal denied*, 776 A.2d 1145 (Ct. 2001), a professor denied tenure claimed that the department's report to the vice president mischaracterized the evaluations of his scholarly work by external evaluators. The court rejected the breach of contract claim, ruling that the plaintiff was required to prove by a preponderance of the evidence that the tenure denial decision was made arbitrarily, capriciously, or in bad faith, and upheld the jury's verdict for the college.

The importance of carefully drafting tenure revocation policies is highlighted in cases involving breach of contract claims. The case of *Murphy v. Duquesne University of the Holy Ghost*, 777 A.2d 418 (Pa. 2001) is instructive. Murphy, a tenured professor of law, was terminated after the university determined that he had violated its sexual harassment policy. Murphy challenged his dismissal, asserting, among other claims, that his conduct did not meet the standard for "serious misconduct" as articulated in the faculty handbook, and that the university had not followed its tenure revocation processes, also contained in the faculty handbook.

The state supreme court upheld the judgment of the state appellate court that the university had not breached the terms of the faculty handbook, but

chastised the appellate court for using a “substantial evidence” standard rather than traditional principles of contract interpretation. The court then explained the extent of its role when reviewing the decisions of private parties under contract law.

[P]rivate parties, including religious or educational institutions, may draft employment contracts which restrict review of professional employees’ qualifications to an internal process that, if conducted in good faith, is final within the institution and precludes or prohibits review in a court of law. . . . When a contract so specifies, generally applicable principles of contract law will suffice to insulate the institution’s internal, private decisions from judicial review [777 A.2d at 428].

The court then turned to the language of the faculty handbook, and determined that it reserved to the faculty and the university the determination of whether a faculty member’s conduct met the definition of “serious misconduct” such that it justified a decision to dismiss a tenured faculty member. The handbook required the university to demonstrate to the faculty hearing body by clear and convincing evidence that the individual had engaged in serious misconduct. It provided that the president could disagree with the faculty hearing body, and that if that occurred, the individual could appeal that decision to the board of trustees. Given the specificity of the process and the clear allocation of the decision-making authority to the president and the trustees, the court ruled, Murphy was not entitled to have a jury “re-consider the merits of his termination.”

Faculty and administrators can help ensure that judges and juries do not second-guess the judgments of academics by ensuring that written policies are clear, that the criteria applicable to faculty employment decisions are stated clearly, that the procedures for making these decisions are followed carefully, and that written justifications are given for recommendations or decisions made under the faculty handbook or other policies. Because these documents are the source of employment rights at private colleges, they should reflect the consensus of the academic community with respect to both the criteria and procedures that will be used to make these critical employment decisions.

**6.7.4. Implementing procedural requirements.** An institution’s procedures for making and internally reviewing faculty personnel decisions should be put in writing and made generally available. Public institutions must, at a minimum, comply with the constitutional due process requirements in Section 6.7.2 of this book and may choose to provide additional procedures beyond those required by the Constitution. Private institutions are not required to comply with constitutional requirements but may wish to use these requirements as a guide in establishing their own procedures.

Though personnel procedures can be administratively burdensome, that is not the whole story. They can also help the institution avoid or rectify mistaken assessments, protect the academic freedom of the faculty, foster faculty confidence in the institution, and encourage the resolution of nonrenewal and

termination disputes in-house rather than in the courts. When effective personnel procedures do exist, courts may require, under the “exhaustion-of-remedies” doctrine (see Section 2.2.2.4), that the faculty member “exhaust” those procedures before filing suit. This may be the case for either private or public colleges. For example, in *Rieder v. State University of New York*, 366 N.Y.S.2d 37 (N.Y. App. Div. 1975), *affirmed*, 351 N.E.2d 747 (N.Y. 1976), employees at a state institution were covered by a collective bargaining agreement containing a four-step grievance procedure. When some employees filed suit while awaiting a determination at step 2, the appellate courts ordered the suit dismissed for failure to exhaust administrative remedies.<sup>14</sup>

In cases such as *Rieder* (and see also *Beck v. Board of Trustees of State Colleges*, Section 2.2.2.4), where public institutions are involved, the administrative law of the state provides the source of the exhaustion doctrine. Such administrative law principles do not apply to private institutions, since they are not agencies of the state. Private institutions may be subject to a comparable exhaustion doctrine, however, stemming from the common law of “private associations” (see Section 9.4.4). Or the contract may require exhaustion of remedies by its own terms. Depending on the wording of the faculty handbook or other institutional policy, the courts may apply contract law in cases involving either a public or a private institution, and may refuse to review a tenure denial if the plaintiff has not followed the grievance processes prescribed within the handbook or policy. For example, in *Neiman v. Yale University*, 851 A.2d 1165 (Conn. 2004), the Connecticut Supreme Court, interpreting Yale University’s faculty handbook, granted the university’s motion to dismiss a faculty member’s breach of contract claim because she had not used the internal grievance process to challenge her denial of tenure. The court ruled that the handbook’s language, stating that an aggrieved faculty member “may” file a grievance (rather than “shall”), meant that use of the grievance process was mandatory. The court ruled that the handbook gave the plaintiff a choice between filing a grievance or accepting the university’s decision without complaint.

In some states, such as California and New York, state law provides that challenges to the final decisions of certain private entities not involving claims of discrimination may be brought only under state administrative code procedures, rather than in civil court as breach of contract claims. Such procedures provide for a narrower scope of review than common law breach of contract claims in that the judge is limited to evaluating whether the college followed its policies and procedures and, if there were deviations, whether those deviations influenced the outcome of the tenure decision. The typical standard used in such proceedings is whether the decision of the college was arbitrary and capricious, and whether discretion was properly exercised (*Sackman v. Alfred University*, 717 N.Y.S.2d 461 (Sup. Ct. N.Y. 2000)). (See generally Section 2.2.3.5.)

---

<sup>14</sup>Plaintiffs filing civil rights claims under Section 1983, the federal civil rights statute, need not exhaust state administrative remedies (see *Patsy v. Board of Regents of the State of Florida*, 457 U.S. 496 (1982), discussed in Section 2.2.2.4).

For example, in *Pomona College v. The Superior Court of Los Angeles County*, 45 Cal. App. 4th 1716 (Ct. App. Cal. 2d Dist. 1996), a professor denied tenure by Pomona College filed a breach of contract claim in a state trial court. The trial court rejected the college's assertion that the professor's sole remedy was through an administrative proceeding. The college appealed, seeking a writ of mandate from the appellate court to direct the trial court to set aside its rejection of the college's motion.

The court first addressed whether the state law, Section 1094.5 of the California Code of Civil Procedure,<sup>15</sup> applied to the final decisions of a private university. Previous state court decisions had applied this law to the final decisions of a private hospital, a private dental insurance plan, and a private manufacturer. Although the faculty member argued that Section 1094.5 did not apply to Pomona College because the college was not "required by law" to hold a hearing prior to its final decision (a requirement of the statute), the court disagreed. Noting that the faculty handbook provided for a grievance procedure involving a hearing and the consideration of evidence provided by the grievant, the court ruled that because the handbook was a contract, and its provisions required a hearing, the preconditions for Section 1094.5 had been met. Said the court: "Because the Handbook governed [the grievant's] employment relationship with Pomona, the college was required by law to provide the hearing described therein" (45 Cal. App. 4th at 1727, n.10), and a mandamus action under the statute was thus the proper remedy to pursue.

In the state of New York, Article 78 of the state's civil practice code provides the opportunity for an individual aggrieved by the action (or inaction) of a government body or a private corporation chartered by the state to have that decision reviewed in the state courts. If the institution has an internal grievance process, an employee may be required to use that process (to exhaust his or her remedies, as discussed in Section 2.2.2.4) prior to seeking judicial review of the negative decision. However, if this grievance process is voluntary rather than mandatory, the statute of limitations for filing a claim in court may not be tolled. For example, in *Bargstedt v. Cornell University*, 757 N.Y.S.2d 646 (N.Y. App. Div. 2003), an employee terminated for dishonesty attempted to use the state's C.P.L.R. Article 78 to challenge her termination. Under New York's C.P.L.R. law, an aggrieved party has only four months from the time of the final decision to file a claim in state court. The court ruled that the grievance process in question at Cornell University was voluntary, not mandatory, and thus the lawsuit, which was brought more than four months after the termination, was time barred.

A contrary result was reached in *Sackman v. Alfred University*, 717 N.Y.S.2d 461 (Sup. Ct. N.Y. 2000). A professor of music challenged his denial of tenure, which was based primarily on a determination by his department chair that

---

<sup>15</sup>Section 1094.5 provides that challenges to "any final administrative order or decision made as the result of a proceeding in which by law a hearing is required to be given, evidence is required to be taken, and discretion in the determination of facts is vested in the inferior tribunal, corporation, board, or officer" must be made through a mandamus action rather than through a common law contract claim.

his teaching performance was inadequate. The professor appealed the university's denial of tenure, and a faculty appeals committee concluded that his rights had been violated because the department chair had observed his teaching only once, and had not observed Sackman's teaching of two ensembles, a responsibility that made up two-thirds of his teaching load.

Sackman filed a complaint under New York C.P.L.R. Article 78 seeking to set aside the negative tenure decision. The court concluded that the department chair's failure to observe more than one of Sackman's classes violated the faculty handbook and constituted arbitrary and capricious behavior. The court remanded the case to the university for a new tenure review of Sackman. The court rejected Sackman's breach of contract claim, however, stating that the handbook did not create a tenure contract, but created the criteria and procedures for obtaining tenure. Sackman's contract with the university, said the court, was for a tenure-track appointment, not for tenure.

Other states have laws that limit public employees, such as faculty of public colleges and universities, to administrative law challenges rather than breach of contract claims when contesting employment decisions. See, for example, *Gaskill v. Ft. Hays State University*, discussed in Section 12.5.4.

In devising or reviewing procedures, administrators should carefully consider what procedural safeguards they should provide *before* making a personnel decision or suspending or terminating job benefits, as opposed to *after*. In public institutions, for example, a full-scale hearing need not be provided before the personnel decision is tentatively made. Some courts, however, require a hearing before an institution actually implements the decision by terminating the faculty member's pay or other substantial employment benefits. In *Skehan v. Board of Trustees of Bloomsburg State College*, 501 F.2d 31 (3d Cir. 1974), for instance, the plaintiff had been relieved of his duties, dismissed, and removed from the payroll for almost three months before he was afforded a hearing. The court held that the hearing, because of its timing, did not meet due process requirements. In *Peacock v. Board of Regents of University and State Colleges of Arizona*, 510 F.2d 1324 (9th Cir. 1975), however, the court upheld a post-termination hearing where the faculty member had been removed only from a nonpaying position as department head; and in *Chung v. Park*, 514 F.2d 382 (3d Cir. 1975), the court ruled for the institution because the hearing had been provided after the decision to terminate was made but before job benefits were actually terminated.

The question of when and in what detail statements of reasons for personnel decisions are to be given must also be carefully considered. The question of who shall preside over hearings is likewise important, with impartiality being the key consideration. Other critical issues are the confidentiality of the statements of reasons—and of any proceedings in which the faculty member challenges these reasons—and the question of what permanent records should be kept of adverse personnel decisions and who should have access to them. While the legal principles in Sections 6.7.1 and 6.7.2 create some limits on administrative discretion in these areas, considerable flexibility remains for administrators to make wise policy choices.

## **Sec. 6.8. Closure, Merger, and Reduction in Force**

**6.8.1. Overview.** The financial difficulties that began for postsecondary education in the late 1960s created a new and particularly sensitive faculty personnel issue, an issue with equal salience today.<sup>16</sup> In an era of inflation and shrinking resources, what are the legal responsibilities of an institution that must terminate an academic program or otherwise initiate a reduction in force? What are its obligations to faculty and students? And is there a difference between the institution's legal obligations during financial exigency and its obligations when it decides to close or reduce an academic program? On these questions, which should continue to stalk postsecondary education for the foreseeable future, the law is still developing. But enough judicial ink has been spilled to give administrators a fair idea of how to prepare for the unwelcome necessity of terminating faculty jobs in a financial crunch.

**6.8.2. Contractual considerations.** The faculty contract (Section 6.2) is the starting point for determining both a public and a private institution's responsibilities regarding staff reductions. Administrators should consider several questions concerning the faculty contract. Does it, and should it, provide for termination due to financial exigency or program discontinuance? Does it, and should it, specify the conditions that will constitute a financial exigency or justify discontinuance of a program and stipulate how the institution will determine when such conditions exist? Does it, and should it, set forth criteria for determining which faculty members will be released? Does it, and should it, require that alternatives be explored (such as transfer to another department) before termination becomes permissible? Does it, and should it, provide a hearing or other recourse for a faculty member chosen for dismissal? Does it, and should it, provide the released faculty member with any priority right to be rehired when other openings arise or the financial situation eases?

Whenever the faculty contract has any provision on financial exigency or program discontinuance, the institution should follow it; failure to do so will likely be a breach of contract. Whether such contractual provisions exist may depend on whether the AAUP guidelines<sup>17</sup> have been incorporated into the faculty contract. In *Browzin v. Catholic University of America*, 527 F.2d 843 (D.C. Cir.

---

<sup>16</sup>This Section is limited to financial exigency and program discontinuance problems concerning faculty. But such problems also affect students, and an institution's response may occasionally give students a basis on which to sue. See *Eden v. Board of Trustees of State University*; *Beukas v. Board of Trustees of Fairleigh Dickinson University*; and *Unger v. National Residents Matching Program*, discussed in Section 8.2.3; see also *Aase v. South Dakota Board of Regents*, 400 N.W.2d 269 (S.D. 1987). See generally Section 8.2.3, concerning an institution's contractual obligation to students.

<sup>17</sup>See "Recommended Institutional Regulations on Academic Freedom and Tenure," Regulation 4 (in *AAUP Policy Documents and Reports* (AAUP, 2001), 21), and "On Institutional Problems Resulting from Financial Exigency: Some Operating Guidelines" (in *AAUP Policy Documents and Reports*, 230). An earlier (1968) version of the "Recommended Institutional Regulations"—specifically the 1968 version of Regulation 4(c)—was interpreted in the *Browzin* case, discussed in the text in this Section. The court concluded that the defendant university had not violated the requirement that it "make every effort" to place terminated faculty members "in other suitable positions."

1975), for instance, the parties stipulated that the AAUP guidelines had been adopted as part of the faculty contract, and the court noted that such adoption was “entirely consistent with the statutes of the university and the university’s previous responses to AAUP actions.” As in *Browzin*, it is important for administrators to understand the legal status of AAUP guidelines within their institutions; any doubt should be resolved by consulting counsel.

The contract provisions for tenured and nontenured faculty members may differ, and administrators should note any differences. Nontenured faculty members generally pose far fewer legal problems, since administrators may simply not renew their contracts at the end of the contract term (see Section 6.7.2.1). If the faculty contract is silent regarding financial exigency or program discontinuance, in relation to either tenured or nontenured faculty members, the institution still may have the power to terminate. Under the common law doctrine of “impossibility,” the institution may be able to extricate itself from contractual obligations if unforeseen events have made it impossible to perform those obligations (see J. D. Calamari & J. M. Perillo, *Contracts* (4th ed., West, 1998), § 13-1).

The first major contract case on financial exigency was *AAUP v. Bloomfield College*, 322 A.2d 846 (N.J. Super. Ct. Ch. Div. 1974), *affirmed*, 346 A.2d 615 (App. Div. 1975). On June 29, 1973, Bloomfield College, a private school, notified thirteen tenured faculty members that their services would not be needed as of June 30, 1973. The college gave financial exigency as the reason for this action. The college also notified the remaining faculty members, tenured and nontenured, that they would be put on one-year terminal contracts for 1973–74, after which they would have to negotiate new contracts with the school.

The thirteen fired faculty members brought suit based on their contracts of employment. Paragraph C(3) of the “policies” enumerated in the contract provided that “a teacher will have tenure and his services may be terminated only for adequate cause, except in case of retirement for age, or under extraordinary circumstances because of financial exigency of the institution.” Paragraph C(6) provided that “termination of continuous appointment because of financial exigency of the institution must be demonstrably bona fide. A situation which makes drastic retrenchment of this sort necessary precludes expansion of the staff at other points at the same time, except in extraordinary circumstances.”

The faculty members alleged that no bona fide financial exigency existed and that the hiring of twelve new staff members three months after the plaintiffs were dismissed violated the requirement that during a financial exigency new staff persons would be hired only “in extraordinary circumstances.” Thus, the court had to determine whether there was a “demonstrably bona fide” financial exigency and whether there were such extraordinary circumstances as would justify the hiring of new faculty members.

The trial court analyzed the college’s finances and determined that no bona fide financial exigency existed because the college owned a large piece of valuable property that it could have sold to meet its needs. The appellate court, however, disagreed, finding that there was ample evidence that the college was facing financial exigency in terms of its operating budget and endowment.

[I]t was improper for the judge to rest his conclusion in whole or in part upon the failure of the college to sell the knoll property which had been acquired several years before in anticipation of the creation of a new campus at a different locale. . . . Whether such a plan of action to secure financial stability on a short-term basis is preferable to the long-term planning of the college administration is a policy decision for the institution. Its choice of alternative is beyond the scope of judicial oversight in the context of this litigation [346 A.2d at 617].

Though the appellate court thus held that the college was in a state of financial exigency, it was unwilling to find that the faculty members were fired because of the college's financial condition. The trial court had determined that the reason for the terminations was the college's desire to abolish tenure, and the appellate court found ample evidence to support this finding.

On the question of whether extraordinary circumstances existed sufficient to justify the hiring of twelve new faculty members, the trial court also held in favor of the plaintiffs. The college had argued that its actions were justified because it was developing a new type of curriculum, but the court noted that the evidence put forth by the college was vague and did not suggest that any financial benefit would result from the new curriculum. The appellate court did not disturb this part of the trial court's decision, nor did it even discuss the issue.

A major overarching issue of the case concerned the burden of proof. Did the college have the burden of proving that it had fulfilled the contract conditions justifying termination? Or did the faculty members have the burden of proving that the contractual conditions had not been met? The issue has critical practical importance; because the evidentiary problems can be so difficult, the outcome of financial exigency litigation may often depend on who has the burden of proof. The trial court assigned the burden to the college, and the appellate court agreed:

It is manifest that under the controlling agreement among the parties the affected members of the faculty had attained the protection of tenure after completing a seven-year probationary service. This was their vested right which could be legally divested only if the defined conditions occurred. The proof of existence of those conditions as a justifiable reason for terminating the status of the plaintiffs plainly was the burden of the defendants [346 A.2d at 616].

Since the college had not proven that it had met the contract conditions justifying termination, the courts ordered the reinstatement of the terminated faculty members.

A similar result occurred in *Pace v. Hymas*, 726 P.2d 693 (Idaho 1986). The University of Idaho's faculty handbook stated that a tenured faculty member's service could be terminated for cause or for financial exigency. The handbook defined financial exigency as "a demonstrably bona fide, imminent financial crisis which threatens the viability of an agency, institution, office or department as a whole or one or more of its programs . . . and which cannot be adequately alleviated by means other than a reduction in the employment force" (726 P.2d at 695).

Pace, a professor of home economics, was laid off after the State Board of Education issued a declaration of financial exigency. Relying on *Bloomfield College*, as well as on more recent cases, the Idaho Supreme Court ruled that the university had the burden of proof regarding the existence of financial exigency, and that it had not carried that burden.

Although the university had sustained a budget shortfall in the Agricultural Extension Service, the unit to which Pace was appointed, the university had received an increased appropriation from the state, it had received funds for a 7 percent salary increase for faculty, and it had a surplus of uncommitted funds at the end of its fiscal year. No alternatives to laying off faculty—including salary freezes, reduction in travel and other expenses, or other cost-saving practices—had been considered prior to Pace’s layoff. Because the university had not determined if the financial crisis could be alleviated by less drastic means than firing tenured faculty, the court ruled that the university had not met the faculty handbook’s definition of a bona fide financial exigency.

In *Pace*, the faculty handbook explicitly mentioned financial exigency as a permissible reason for termination of a tenured faculty member. Two U.S. Court of Appeals cases upheld institutional authority to terminate tenured faculty members even in the absence of any express contractual provision granting such authority. The first case, *Krotkoff v. Goucher College*, 585 F.2d 675 (4th Cir. 1978), concerned a termination due to bona fide financial exigency; the second case, *Jimenez v. Almodovar*, 650 F.2d 363 (1st Cir. 1981), concerned a termination due to discontinuance of an academic program. Both cases resort to academic custom and usage (Sections 1.4.3.3 & 6.2.3) to imply terms into the faculty contract. Both cases also identify implicit rights of tenured faculty members that limit the institution’s termination authority. The opinion in *Krotkoff* is discussed at some length as an illustration of the type of showing that, in this court’s opinion, attested to the good faith of the college’s actions.

Krotkoff was a tenured professor of German at Goucher College, a private liberal arts college for women. After having taught at the college for thirteen years, she was notified in June 1975 that she would be terminated on the grounds of financial exigency. Her performance had been at all times acceptable. Since her contract was silent on the question of financial exigency, the professor argued that the termination was a breach of contract. The college argued that it had implied authority to terminate in order to combat a bona fide financial exigency.

The college had sustained budget deficits each year from 1968 through 1975, and the trustees decided not to renew the contracts of eleven untenured faculty members and to terminate four tenured faculty members. A faculty committee had made recommendations concerning curricular changes, one of which was to eliminate all but introductory courses in German. Krotkoff had taught advanced German literature courses, while another tenured faculty member had taught introductory German. The department chair and dean recommended that the other faculty member be retained because she was experienced in teaching introductory German and because she could also teach French. The president concurred and notified Krotkoff that she would be laid off.

Although a faculty committee reviewing Krotkoff's ensuing grievance recommended her retention, it did not recommend that the other faculty member be discharged, nor did it consider how the college could retain both professors. The president rejected the committee's recommendation, and the trustees concurred. The committee had made an alternate recommendation that Krotkoff teach German courses and the other professor replace an assistant dean, who would be dismissed. This suggestion was also rejected by the president.

The college provided Krotkoff with a list of all positions available for the next year, and Krotkoff suggested that she assume a position in the economics department at her present faculty rank and salary and with tenure. The college refused her suggestion because she had no academic training in economics and terminated her appointment.

In a four-part opinion, the appellate court analyzed the facts regarding the college's overall retrenchment program and the particular termination at issue. It concluded that the faculty contract, read in light of "the national academic community's understanding of the concept of tenure," permitted termination due to financial exigency; that a bona fide financial exigency existed; and that the college had used reasonable standards in selecting which faculty to terminate and had taken reasonable measures to afford the plaintiff alternative employment. The well-reasoned and organized opinion not only discusses the difficult legal issues but also touches on practical considerations, such as the complexities of relying on faculty committees to recommend candidates for termination.

Since the college's policy statements and bylaws did not specify financial exigency as a reason for the discharge of a tenured professor, the court first turned to "academic custom and usage" to determine whether such a reason for discharge was subsumed within the concept of tenure. The court, with the help of an expert witness, examined the AAUP's 1940 "Statement of Principles on Academic Freedom and Tenure," which included financial exigency as a permissible reason for terminating tenured faculty.<sup>18</sup> The court also reviewed previous cases involving the termination of tenured faculty for financial exigency, concluding that none had established "a right to exemption from dismissal for financial reasons." Furthermore, the court concluded that, given the college's financial problems, academic freedom was not threatened by Krotkoff's dismissal because she was not being dismissed for her ideas or speech, nor would she be replaced by a newly hired faculty member with views more compatible with those of the administration.

After the court determined that the contract between Krotkoff and Goucher permitted termination on the basis of financial exigency, it then considered Krotkoff's claim that a jury should have determined whether the college had breached its

---

<sup>18</sup>The statement (in *AAUP Policy Documents and Reports* (AAUP, 2001), 3, 4) reads, in pertinent part: "After the expiration of a probationary period, teachers or investigators should have permanent or continuous tenure, and their services should be terminated only for adequate cause, except in the case of retirement for age, or under extraordinary circumstances because of financial exigencies.

"In the interpretation of this principle, it is understood that the following represents acceptable academic practice:

...

"(5) Termination of a continuous appointment because of financial exigency should be demonstrably bona fide."

contract. In particular, Krotkoff argued that the court should submit for the jury's determination the question of whether the trustees' belief that financial exigency existed was reasonable. The court disagreed, stating that Krotkoff had not asserted that the trustees had acted in bad faith, and that the existence of financial exigency should be determined based upon "the adequacy of a college's operating funds rather than its capital assets" (585 F.2d at 681).

Finally, the court considered whether Goucher had used reasonable standards to determine that Krotkoff's appointment should be terminated, and whether the college had made reasonable efforts to find her another position. Although Goucher had argued that neither of these subjects was appropriate for judicial review, the court disagreed. The court ruled that she was "contractually entitled to insist (a) that the college use reasonable standards in selecting which faculty appointments to terminate and (b) that it take reasonable measures to afford her alternative employment" (585 F.2d at 682). First, said the court, there was no contractual requirement that the college retain Krotkoff and discharge another professor of German. And, given the evidence that the only vacancy was one for which Krotkoff was not qualified, the court ruled that the college had complied with its contractual obligations.

*Krotkoff* provides an instructive analysis of postsecondary institutions' authority and obligations when terminating tenured faculty because of financial exigency. The case also provides an outstanding example of judicial reliance on academic custom and usage to resolve postsecondary education contractual disputes.

Somewhat different issues arise when the reduction is caused by a program closure, which may be done either on "educational" grounds or because of financial exigency. The plaintiffs in *Jimenez v. Almodovar*, cited above, were two professors who had been appointed to a pilot program in physical education and recreation at a regional college of the University of Puerto Rico. Their teaching positions were eliminated as a result of low enrollment and an unfavorable evaluation of the program. The court had to resolve some contractual questions in ruling on the plaintiffs' claim of deprivation of property without procedural due process (see Section 6.7.2). The parties stipulated that the plaintiffs had property interests established by their letters of appointment, but the letters did not detail the extent of these interests. Therefore, in order to determine the scope of procedures required by due process, the court had to determine the extent of the plaintiffs' contractual rights.

According to the court:

American courts and secondary authorities uniformly recognize that, unless otherwise provided in the agreement of the parties, or in the regulations of the institution, or in a statute, an institution of higher education has an implied contractual right to make in good faith an unavoidable termination of right to the employment of a tenured member of the faculty when his position is being eliminated as part of a change in academic program. . . . That the [institution's] implied right of bona fide unavoidable termination due to changes in academic program is wholly different from its right to termination for cause or on other personal grounds is plainly recognized in the following definition of tenure of the [AAUP/AAC] Commission on Academic Tenure in Higher Education [in] *Faculty Tenure: A Report and Recommendations* [Jossey-Bass, 1973]:

An arrangement under which faculty appointments in an institution of higher education are continued until retirement for age or disability, subject to dismissal for adequate cause or unavoidable termination on account of financial exigency or change of institutional program (emphasis in original omitted).

The foregoing authorities lead to the conclusion that, unless a Puerto Rican statute or a university regulation otherwise provides, the instant contracts should be interpreted as giving the University of Puerto Rico an implied right of bona fide unavoidable termination on the ground of change of academic program [650 F.2d at 368; footnotes omitted].

Finding no Puerto Rican statute or university regulation to the contrary, the court confirmed the university's implied contractual right to terminate tenured faculty. The court then analyzed the procedures available to the plaintiffs to challenge their terminations and concluded that they met procedural due process requirements.

The *Jimenez* decision is consistent with earlier precedents and AAUP policy in recognizing, first, a distinction between dismissals for causes personal to the individual and dismissals for impersonal institutional reasons and, second, a distinction between institutional reasons of financial exigency and reasons of program discontinuance. AAUP policy on the latter distinction, however, is found not in the 1940 Statement cited by the court but in the 1976 "Recommended Institutional Regulations on Academic Freedom and Tenure" (*AAUP Policy Documents and Reports* (AAUP, 2001), 21), which authorize program discontinuances "not mandated by financial exigency" when "based essentially upon educational considerations" and implemented according to AAUP specifications. Under this policy, if the institution adheres to it, or under the precedent now established by *Jimenez*, postsecondary institutions may, if they follow prescribed standards and procedures for doing so, terminate tenured faculty because of a bona fide academic program change.

The merger of two institutions may create complicated contractual issues that require courts to determine which contractual rights remain after the two institutions become one. Litigation related to the merger of Loyola University and Mundelein College provides an instructive example of legal issues that may accompany mergers.

Although faculty handbooks may deal clearly with the reasons for terminating a tenured faculty member while the institution is still operating, they may be either silent or ambiguous on the issue of whether tenure rights survive a merger or assimilation by another institution. In *Gray v. Mundelein College*, 695 N.E.2d 1379, *appeal denied*, 705 N.E.2d 436 (Ill. 1998), the court was asked to address the obligations to tenured faculty at Mundelein College when it entered an affiliation agreement with Loyola University. Mundelein was facing severe financial difficulties, and entered an agreement with Loyola in which Loyola acquired Mundelein's assets and assumed some of Mundelein's financial obligations. The agreement provided that Mundelein would remain in existence as a separate college governed and administered by Loyola. Loyola offered tenured positions to twenty-six of Mundelein's tenured faculty members; it offered another eleven tenured faculty five-year appointments without tenure; and it

offered three tenured faculty two years of salary as severance. Three of the faculty who were not offered tenured positions sued both institutions, claiming that their contract rights had been breached.

The trial and appellate courts adopted the view that the faculty handbook was contractually binding on the parties. The handbook listed four reasons for termination of tenured faculty: (1) financial exigency, (2) program discontinuance, (3) health, or (4) cause. There was no provision for the termination of tenured faculty in the event of a merger or affiliation. The trial court ruled that because the board of trustees had never declared the existence of financial exigency, the termination of the tenured faculty was unlawful. Furthermore, ruled the trial court, because the college still had valuable assets, a bona fide financial exigency did not exist. It ruled that Mundelein had breached the plaintiffs' contract, and ordered damages to be paid to the two plaintiffs who had been given severance. The third, who had accepted a five-year contract, was denied damages because the trial court viewed her acceptance of the contract as a waiver of tenure.

On appeal, the college argued that academic custom and usage should control the outcome of the case, and that AAUP policies and guidelines provide that tenure does not survive an affiliation or merger unless the parties have specifically agreed that it would. The court did not rule on whether tenure survives affiliation or merger; a custom and usage analysis is only necessary, said the court, when a court must interpret uncertain or ambiguous contract terms. In this situation, the court believed that the terms of the faculty handbook were clear. "Mundelein could have taken whatever course was necessary to remedy its financial difficulties without continued obligation to tenured faculty if it had followed the procedures set out in its manual" (695 N.E.2d at 1387).

The court affirmed the rulings for the terminated plaintiffs and reversed the trial court's ruling against the plaintiff who had accepted a five-year contract, ruling that this act was not a waiver of tenure, but an appropriate attempt to mitigate damages. Furthermore, said the court, if Loyola had intended to terminate the plaintiff's tenure claim against Mundelein by offering her a five-year contract, it could have included that provision in the terms of the contract. The Illinois Supreme Court denied review.

The effect of an institution's failure to declare financial exigency was also at issue in *Board of Community College Trustees for Baltimore County—Essex Community College v. Adams*, 701 A.2d 1113 (Ct. App. Md.), cert. denied, 702 A.2d 290 (Md. 1997). In the early 1990s, both the state and the county reduced their appropriations to Essex Community College. College officials developed a process for determining which programs would be reduced or terminated. Faculty were represented on the committee that made recommendations about program termination. Seven programs were selected for termination, one of which was the Office Technology program. The plaintiffs were tenured faculty in that program who were dismissed when the program was terminated. They pursued a grievance through the internal system that culminated in the trustees denying their grievance.

The terminated faculty filed a motion for mandamus relief, in which they asked the court to order the college to reinstate them because, under the terms

of the faculty handbook, they could only be terminated for “immorality, dishonesty, misconduct in office, incompetency [sic], insubordination, or willful neglect of duty.” There was no language in the contract about program reduction or closure, or the rights of the faculty should that occur. There had been no finding that the faculty were terminated for any of these reasons; the stated reason for the termination was program closure. This reason, said the faculty, was not provided for in the contract and therefore their terminations were unlawful.

The court reviewed legal authority in Maryland and other states, and determined that “the great weight of authority supports a holding that tenured professors may be terminated for reasons unrelated to them personally” (701 A.2d at 1117). To the plaintiffs’ claim that the financial crisis was a pretext for a breach of contract, the court responded that the clear weight of the evidence indicated that the financial crisis was real. And although the trial judge had ruled in the plaintiffs’ favor because the trustees had never declared a state of financial exigency, the appellate court reversed, stating that “the actions taken by the College were designed to avoid the necessity of declaring an ‘exigency.’ They were, nonetheless, indicative of attempts to resolve the present and anticipated financial shortfall in order to solve the financial problems without the necessity of taking the last step” (701 A.2d at 1140). The court remanded, however, on the plaintiffs’ due process claim, in which they claimed that the process of selecting tenured members for termination was flawed.

Significant to the outcome of this case was the court’s review of other litigation against the State of Maryland concerning budget cuts and the state’s authority to reduce personnel. The fact that the defendant college was public rather than private may provide part of the reason for the difference between this case and *Mundelein*.

If faculty handbooks, collective bargaining agreements, or other institutional policy documents specify a faculty role in determining how program reductions or closures, or the criteria for selecting faculty, will be accomplished, then excluding faculty from this process will invite breach of contract claims. But in some instances, despite the fact that handbooks and policy documents did not specify a faculty role in the process, breach of contract claims have been brought. For example, when Mercer University closed its Atlanta College of Arts and Sciences, the faculty asserted that excluding them from participating in the closure decision breached their contract because in the academic community the term “bona fide discontinuance of a program,” used in the faculty handbook, meant that faculty must be involved in the decision (Corinne Houpt, “The Age of Austerity: Downsizing for the 90s,” in *Academic Program Closures: A Legal Compendium*, Ellen M. Babbitt, ed. (2d ed., National Association of College and University Attorneys, 2002)).

Students have also asserted contract claims against a college or university for reducing or eliminating an academic program. These cases are discussed in Section 8.1.3.

**6.8.3. Constitutional considerations.** Public institutions must be concerned not only with contract considerations relating to financial exigency and

program termination but also with constitutional considerations under the First and Fourteenth Amendments. Even if a termination (or other personnel decision) does not violate the faculty contract or any applicable state statutes or administrative regulations, it will be subject to invalidation by the courts if it infringes the faculty member's constitutional rights.

Under the First Amendment, a faculty member may argue that financial exigency was only a pretext for termination and that termination was actually a retaliation for the faculty member's exercise of First Amendment rights (see Note, "Economically Necessitated Faculty Dismissal as a Limit on Academic Freedom," 52 *Denver L.J.* 911 (1975); and see generally Chapter 7). The burden of proof on this issue is primarily on the faculty member (see the *Mt. Healthy* case discussed in Section 7.6). *Mabey v. Reagan*, 537 F.2d 1036 (9th Cir. 1976), is illustrative. The defendant college had not renewed the appointment of a non-tenured philosophy instructor. The instructor argued that the nonrenewal was due to an argument he had had with other faculty members in an academic senate meeting and that his argument was a protected First Amendment activity. The college argued that this activity was not protected under the First Amendment and that, at any rate, the nonrenewal was also due to overstaffing in the philosophy department. In remanding the case to the trial court for further fact finding, the appellate court noted:

We emphasize that the trier [of fact] must be alert to retaliatory terminations. . . . Whenever the state terminates employment to quell legitimate dissent or punishes protected expressive behavior, the termination is unlawful. . . .

We stress that this holding does not shield those who are legitimately not reappointed. Where the complainant . . . does not meet his burden of proof that the state acted to suppress free expression, . . . the termination will stand [537 F.2d at 1045].

Under the Fourteenth Amendment, a faculty member whose job is terminated by a public institution may argue that the termination violated the due process clause. To proceed with this argument, the faculty member must show that the termination infringed a "property" or "liberty" interest, as discussed in Section 6.7.2.1. If such a showing can be made, the questions then are (1) What procedural protections is the faculty member entitled to?, and (2) What kinds of arguments can the faculty member raise in his or her "defense"? A case that addresses both issues is *Johnson v. Board of Regents of University of Wisconsin System*, 377 F. Supp. 227 (W.D. Wis. 1974), *affirmed without opinion*, 510 F.2d 975 (7th Cir. 1975).

In this case the Wisconsin legislature had mandated budget reductions for the university system. To accommodate this reduction, as well as a further reduction caused by lower enrollments on several campuses, the university officials devised a program for laying off tenured faculty. The chancellor of each campus determined who would be laid off, after which each affected faculty member could petition a faculty committee for "reconsideration" of the proposed layoff. The faculty committee could consider only two questions: whether the layoff decision was supported by sufficient evidence, and whether the

chancellor had followed the procedures established for identifying the campus's fiscal and programmatic needs and determining who should be laid off. Thirty-eight tenured professors selected for layoff sued the university system.

The court determined that the due process clause required the following minimum procedures in a financial exigency layoff:

[F]urnishing each plaintiff with a reasonably adequate written statement of the basis for the initial decision to lay off; furnishing each plaintiff with a reasonably adequate description of the manner in which the initial decision had been arrived at; making a reasonably adequate disclosure to each plaintiff of the information and data on which the decision makers had relied; and providing each plaintiff the opportunity to respond [377 F. Supp. at 240].

Measuring the procedures actually used against these requirements, the court held that the university system had not violated procedural due process. The most difficult issue was the adequacy of information disclosure (the third requirement above), about which the court said:

Plaintiffs have shown in this court that the information disclosed to them was bulky and some of it amorphous. They have shown that it was not presented to the reconsideration committees in a manner resembling the presentation of evidence in court. They have shown that in some situations . . . they encountered difficulty in obtaining a coherent explanation of the basis for the initial layoff decisions, and that, as explained in some situations, the basis included judgments about personalities. But as I have observed, the Fourteenth Amendment does not forbid judgments about personalities in this situation, nor does it require adversary proceedings. The information disclosed was reasonably adequate to provide each plaintiff the opportunity to make a showing that reduced student enrollments and fiscal exigency were not in fact the precipitating causes for the decisions to lay off tenured teachers in this department and that; and it was also reasonably adequate to provide each plaintiff the opportunity to make a showing that the ultimate decision to lay off each of them, as compared with another tenured member of their respective departments, was arbitrary and unreasonable. I emphasize the latter point. On this record, plaintiffs' allegations about the inadequacy and imprecision of the disclosure related principally to those stages of the decision making which preceded the ultimate stage at which the specific teachers, department by department, were selected.

Had the disclosure as it was made not been "reasonably adequate," it is possible that it could have been made adequate by permitting plaintiffs some opportunity to confront and even to cross-examine some of the decision makers. But I hold that the opportunity to confront or to cross-examine these decision makers is not constitutionally required when the disclosure is reasonably adequate, as it was here [377 F. Supp. at 242].

The court also determined that the university system could limit the issues which the faculty members could address in challenging a termination under the above procedures:

I am not persuaded that, after the initial decisions had been made, the Fourteenth Amendment required that plaintiffs be provided an opportunity to

persuade the decision makers that departments within their respective colleges, other than theirs, should have borne a heavier fiscal sacrifice; that non-credit-producing, nonacademic areas within their respective campus structures should have borne a heavier fiscal sacrifice; that campuses, other than their respective campuses, should have borne a heavier fiscal sacrifice; or that more funds should have been appropriated to the university system. However, I believe that *each plaintiff was constitutionally entitled to a fair opportunity to show: (1) that the true reason for his or her layoff was a constitutionally impermissible reason; or (2) that, given the chain of decisions which preceded the ultimate decision designating him or her by name for layoff, that ultimate decision was nevertheless wholly arbitrary and unreasonable.* I believe that each plaintiff was constitutionally entitled to a fair opportunity to make such a showing in a proceeding within the institution, in order to permit prompt reconsideration and correction in a proper case. Also, if necessary, each plaintiff was and is constitutionally entitled to a fair opportunity to make such a showing thereafter in a court [377 F. Supp. at 239–40; emphasis added].

Although the Constitution requires that institutions avoid terminations for a “constitutionally impermissible reason” and “wholly arbitrary” terminations, the court made clear that the Constitution does not prescribe any particular bases for selection of the faculty members to be terminated. The court stated that there was no constitutional requirement that the selection criteria be related to seniority or performance, and that the institution retained the discretion to develop appropriate criteria for selecting those to be laid off.

A federal appellate court found constitutional violations in the treatment of two professors who were laid off without being granted a hearing on the criteria for selecting faculty for layoff. In *Johnson-Taylor v. Gannon*, 907 F.2d 1577 (6th Cir. 1990), the trustees of Lansing Community College determined that financial exigency required the layoff of several faculty members. Under the collective bargaining agreement with the faculty, the trustees had the right to make the ultimate decision about how many faculty were to be laid off, but the union had the right to recommend criteria for selecting faculty and the procedure to be used.

Two faculty who were laid off argued that they were denied due process because no hearing had been held regarding their selection for layoff. Both asserted that they had been chosen to be laid off because of their criticisms of the institution and their union activity. Although both had filed grievances under the collective bargaining agreement, an arbitrator had concluded that they had been afforded all the protections that the contract required.

The court first examined whether the professors had a property or liberty interest at stake. Finding that the collective bargaining agreement provided for continued employment, the court concluded that the professors, indeed, had a property interest, which required the college to afford them due process. Furthermore, one of the professors was tenured, and thus had a second basis for a protected property interest.

The court concluded that the professors’ due process rights had been violated because neither had been afforded a hearing at which they were informed

why they were selected for layoff, nor had they had an opportunity to challenge the existence of financial exigency. The court remanded the matter to the trial court for an evidentiary hearing on both of these issues.

In *Milbouer v. Keppler*, 644 F. Supp. 201 (D. Idaho 1986), the plaintiff, a tenured professor of German, was laid off because of financial exigency and charged Boise State University with constitutional violations of her substantive and due process rights under the Fourteenth Amendment. A federal district court sketched out the basic due process rights to which a tenured faculty member is entitled when financial exigency requires termination.

First, said the court, the institution must demonstrate that a genuine financial exigency exists. It can do so by submitting evidence of budget shortfalls, legislative or executive branch reductions in funding, or other financial data indicating that funds are limited or may not be used to retain the faculty member.

With regard to the substantive due process claim, the court stated, the institution must demonstrate that uniform procedures were used to determine how the reduction would be effected and which faculty members would be terminated. In this case the institution had used enrollment trends, faculty/student ratios, and historical data on the number of majors in the foreign language department. The elimination of the department was justified, the judge ruled, by the small number of majors and low enrollments.

The plaintiff had been offered a part-time position teaching in the English department, which she had refused. She had also been offered retraining as a linguistic specialist in the business education department, but did not avail herself of that opportunity either. Although the plaintiff argued that a one-month notice prior to her termination was insufficient, the court ruled that that period of time was long enough to permit the plaintiff to write a detailed letter of appeal and to have her appeal heard by a hearing committee, which had been done.

Despite the fact that the university hired fifteen new faculty members for other “viable” programs at the same time that it closed its foreign language department, the judge ruled that the institution had demonstrated that a genuine financial exigency existed, and that its procedures afforded the plaintiff both substantive and procedural due process.

If faculty members have property interests in their jobs, the cases make it clear that the institution must provide a hearing for those selected for layoff, so that they can be told the reasons for their selection and given an opportunity to challenge the sufficiency of those reasons. But must faculty members be given a hearing when the institution decides to reduce or eliminate an academic program?

This question was considered in *Texas Faculty Association v. University of Texas at Dallas*, 946 F.2d 379 (5th Cir. 1991). The deans of the Education School and the School of Natural Sciences and Mathematics at University of Texas at Dallas (UTD) decided to eliminate two academic programs because of low enrollment and the desire to reallocate the resources devoted to those programs. The university was not facing a situation of financial exigency. The faculty teaching in those programs were told that their employment would be terminated.

The tenured faculty asserted that they had a right to a hearing on the merits of the decision to eliminate the two programs. They also asserted a right to a hearing to determine whether their employment should be terminated. No hearings were held, although the university counsel sent the faculty a letter stating that they could meet with the deans informally to discuss the reasons for the program elimination. The faculty responded by filing a lawsuit claiming denial of procedural due process with respect to both the closure decision and their terminations.

The court refused to require the university to hold adversarial hearings on the decision to eliminate academic programs. The court stated that such a requirement would “seriously impair the university’s significant interest in administering its educational programs in the manner it deems best” (946 F.2d at 385). Noting that courts are typically deferential to decisions based on academic judgments (citing *Board of Curators v. Horowitz*, 435 U.S. 78 (1978), discussed in Section 9.4.3), the court concluded that the judicial system was poorly equipped to review the substance of academic decisions, stating that “only the barest procedural protections of notice and an opportunity to be heard need be afforded the individual faculty member” (946 F.2d at 387). Because the faculty had been given nearly two years’ notice and had been invited on several occasions to discuss the matter with their dean, the institution had met this portion of its due process obligation.

With regard to the propriety of decisions to terminate individual faculty, however, the court’s attitude differed:

[W]e perceive the risk that a particular faculty member will be terminated erroneously to be somewhat greater [than the risk of incorrectly deciding to eliminate a program] under the rather unusual facts of this case. Unlike many, if not most, institutions of higher learning, faculty in the University of Texas system are tenured to their particular component *institution* rather than to a particular school or program within that institution [citing regulations of the board of regents]. . . . Consequently, UTD faculty had a right of continuing appointment to the University of Texas at Dallas as a *whole*, and not merely to their particular schools or academic programs [946 F.2d at 386; emphasis in original].

The court noted that many of the faculty were qualified to teach in other programs within the university. “Unless the procedures afforded appellants meaningfully considered whether each appellant should be retained at UTD in *some* teaching capacity, then the risk that a given faculty member could be terminated erroneously seems to us patent” (946 F.2d at 386; emphasis in original).

The court concluded that the university had failed to provide due process with regard to the termination decisions:

Because UTD faculty are tenured to the *institution*, each appellant was entitled to a meaningful opportunity to demonstrate that, even if his or her program was to be discontinued and the number of faculty positions associated with that program eliminated, he or she should nevertheless be retained to teach in a field in which he or she is qualified.

We do not believe affording faculty such an opportunity would unduly interfere with the university’s interest in academic freedom. A procedure ensuring

that (1) an instructor was not terminated for constitutionally impermissible reasons, (2) the administration's actions were taken in good faith, and (3) objective criteria were employed and fairly applied in determining whom, from *among the faculty at large*, to terminate, is all that the Fourteenth Amendment requires [946 F.2d at 387; emphasis in original].

The court elaborated on the practical consequences of its ruling, saying that not all faculty would need to be afforded adversarial hearings:

Initially, the administration probably need only consider, in good faith, a written submission from each affected faculty member setting out why he or she deserves to be retained. Only if a particular faculty member makes a colorable showing that, under the objective criteria the university employs, he or she deserves to be retained in another academic program, must any sort of "hearing" be offered. Otherwise, a brief written statement from the decision maker of the reasons why the faculty member does not deserve to be retained would suffice. The "hearing" offered need only be an opportunity for the aggrieved faculty member to meet with the ultimate decision maker, to present his or her case orally, and to explore with the decision maker the possible alternatives to termination. If the decision maker nevertheless decides not to retain the faculty member, a written statement of reasons is required. Of course, if the retention of one faculty member results in the displacement of another, the displaced faculty member is equally entitled to due process [946 F.2d at 388].

The court discussed the faculty members' contention that they were entitled to a full-blown adversarial hearing, with counsel, before an official other than the one who made the initial termination decision; the right to cross-examination; and a written record. Absent clear evidence of bias on the part of the decision maker, said the court, the official responsible for the termination decision may conduct the hearing. Because the termination was not for performance reasons, the presence of counsel, the right to cross-examine, and a written record were not necessary. But the court agreed that the plaintiffs did have a right to present documentary evidence and to receive a written statement of the hearing officer's conclusions. Because the faculty had not been afforded the type of due process outlined by the court, the court remanded the case for further proceedings.

In some cases, faculty also allege that the termination is related to statements they have made or to expressive conduct, a free speech claim. In *Brine v. University of Iowa*, 90 F.3d 271 (8th Cir. 1996), the university's decision to eliminate its dental hygiene program was challenged on constitutional and civil rights grounds. Three tenured associate professors in the Dental Hygiene program were reassigned to faculty positions in the College of Dentistry. They filed sex discrimination, First and Fourteenth Amendment claims, and state statutory and constitutional claims, asserting that because all of the faculty and students in the Dental Hygiene program were women, the university's decision to terminate the program was both intentionally discriminatory and also had a disparate effect on women (Section 5.2.1). They also alleged that the university retaliated against them for objecting to the program closure. In a mixed bench

and jury trial, the jury and judge rejected most of the plaintiffs' claims, but the judge allowed the jury's verdict for the plaintiffs on the retaliation claim to stand, and the plaintiffs were awarded damages and attorney's fees.

The appellate court affirmed all of the lower court's rulings in favor of the university, and reversed the ruling on the retaliation claim (and attorney's fees award). The plaintiffs had claimed that they had been excluded from the committees that reviewed the recommendations for program closure, that the department of dental hygiene had been abolished a year before the program actually ended, and that the former chair of the dental hygiene department had been retaliated against by being demoted to a program director position with less autonomy. The court found that the plaintiffs had no right to participate in the process, that the university had the discretion to abolish the department at the time of its choice, and that the department chair's demotion was an "inevitable consequence" of the decision to close the department. Furthermore, said the university, the program closure decision was made in concert with the university's strategic plan, and despite the fact that the university gave different reasons at different times for selecting the Dental Hygiene program (cost, lack of centrality to the university's mission), the reasons were not a pretext for sex discrimination. And finally, because the plaintiffs produced insufficient evidence of salary discrimination, they could not demonstrate that they had suffered an adverse employment action.

The UTD and *Brine* cases are very helpful to administrators at public institutions seeking guidance about program reduction or closure. Unless the institution has adopted procedures that require additional due process protections, or unless state statutes or regulations require more, the due process protections described in the UTD case should satisfy the institution's constitutional obligations to tenured faculty.

**6.8.4. Statutory considerations.** A public institution's legal responsibilities during financial exigency or program discontinuance may be defined not only by contract and by constitutional considerations but also by state statutes or their implementing administrative regulations. The case of *Hartman v. Merged Area VI Community College*, 270 N.W.2d 822 (Iowa 1978), illustrates how important statutory analysis can be.

In *Hartman*, a community college had dismissed a faculty member as part of a staff reduction occasioned by declining enrollment and a worsening financial condition. For authority for its action, the institution relied on a state statute authorizing it to discharge faculty "for incompetency, inattention to duty, partiality, or any good cause" (Iowa Code of 1973 § 279.24). The institution's position was that the phrase "good cause" supported its action because it is a broad grant of authority encompassing any rational reason for dismissal asserted by the board of directors in good faith. The appellate court disagreed and invalidated the dismissal. It reasoned that "good cause," interpreted in light of the statute's legislative history and in conjunction with other related Iowa statutes, "refer[s] only to factors personal to the teacher"; that is, factors that can be considered the teacher's own "personal fault" (see Section 6.7.2.3 for a consideration of such personal factors).

While *Hartman* deals only with substantive standards for staff reduction, state statutes or administrative regulations may also establish procedures with which institutions must comply. In *Mabey v. Reagan*, 537 F.2d 1036 (9th Cir. 1976), for instance, a college did not renew an instructor's contract, in part because his department was overstaffed. The instructor challenged the nonrenewal, arguing that the college had followed the wrong procedures in reaching its decision. The court rejected the challenge, agreeing with the college that the applicable procedures were found in the statutes dealing with tenure and non-reappointment rather than in the statutes dealing with separation for "lack of work or lack of funds."

Statutory analysis was important to the outcome of a claim by tenured faculty members terminated during a reduction in force (RIF) that the college should have applied its RIF policy to part-time as well as full-time faculty. In *Ackerman v. Metropolitan Community College Area*, 575 N.W.2d 181 (Neb. 1998), nine tenured faculty were dismissed when the college reorganized its Office Skills and Technology program. According to the RIF policy that the board had adopted, faculty were selected for dismissal on the basis of their previous evaluations, their level of placement, diversity issues, and their length of service. The faculty selected for dismissal were given the opportunity to participate in a hearing concerning the method for selecting faculty to be dismissed.

The court examined the Nebraska statutes applicable to the employment and termination of public employees. It concluded that these statutes were intended to apply to full-time employees who had employment contracts with a public employer. Part-time faculty were employed on a semester basis, said the court, and these laws did not apply to them. The court affirmed the ruling of the trial court, which had upheld the board's decision in all respects.

Public institutions considering staff reductions must identify not only the applicable substantive standards but also the applicable procedures specified by state law. The procedures may be contained in a legal source different from that setting out the standards (see, for example, *Council of New Jersey State College Locals v. State Board of Higher Education*, 449 A.2d 1244 (N.J. 1982) (substantive criteria from state board policy on financial exigency applicable despite collective bargaining agreement, but some procedures derived from board policy bargainable); *Board of Trustees of Ohio State University v. Department of Administrative Services*, 429 N.E.2d 428 (Ohio 1981) (state administrative procedure act applicable to termination of nonfaculty personnel)).

**6.8.5. Preparing for closures and reductions in force.** Everyone agrees that institutions, both public and private, should plan ahead to avoid the legal difficulties that can arise if financial or programmatic pressures necessitate staff reductions. Much can be done to plan ahead. Faculty contracts should be reviewed in light of the questions raised in Section 6.8.1. Where the contract does not clearly reflect the institution's desired position concerning staff

reductions, its provisions should be revised to the extent possible without breaching existing contracts.

For institutional planning purposes, administrators should carefully distinguish between the two alternative approaches to faculty termination—financial exigency and program discontinuance:

1. When drafting or amending contracts for nontenured, tenure-track faculty, the institution should consider specific provisions on both alternatives. Public institutions should consult state law (Section 6.8.3 above) to determine whether it permits use of both alternatives. If the institution chooses, the AAUP's recommended regulations on either alternative (see Section 6.8.2, n.18) may be incorporated by reference into its faculty contracts. The institution may also draft provisions altogether different from the AAUP's, although it will want to give close attention to the competing policy considerations.

2. When interpreting existing tenure contracts, the institution should determine whether it has already, either expressly or by institutional custom, adopted AAUP policy for either alternative; or whether, in the face of institutional silence, courts would likely fill the gap with AAUP policy (see Section 6.8.2 above). In such circumstances the institution should consider itself bound to follow AAUP requirements and thus not free under existing contracts to strike out unilaterally on a different course.

3. When faced with circumstances mandating consideration of tenured faculty terminations, and when authorized to follow either alternative approach, the institution should carefully consider its choice. Which alternative—institution-wide financial exigency or discontinuance of specific programs—can better be substantiated by existing circumstances? Which would better serve the institution's overall mission? If the institution decides to pursue one of the alternatives, it should be careful to identify and follow the particular decision-making requirements and protections for faculty specified for that alternative.

When the institution does have authority for staff reductions necessitated by financial exigency, it should have a policy and standards for determining when a financial exigency exists and which faculty members' positions will be terminated. It should also specify the procedures by which the faculty member can challenge the propriety of his or her selection for termination. Before administrators make a termination decision, they should be certain (1) that a financial exigency does actually exist under the institution's policy, (2) that the terminations will alleviate the exigency, and (3) that no other motivation for a particular termination may exist. After dismissing faculty members, administrators should be extremely careful in hiring new ones, to avoid the impression, as in the *Bloomfield* case (see Section 6.8.2), that the financial exigency was a pretext for abolishing tenure or otherwise replacing old faculty members with new. Similar considerations would apply in implementing program discontinuations.

Finally, administrators should remember that, in this sensitive area, some of their decisions may wind up in court despite careful planning. Administrators should thus keep complete records and documentation of their staff reduction

policies, decisions, and internal review processes for possible use in court and should work closely with counsel both in planning ahead and in making the actual termination decisions.

## Selected Annotated Bibliography

### Sec. 6.1 (Overview)

- American Association of University Professors. *AAUP Policy Documents and Reports* (the "Redbook") (9th ed., AAUP, 2001). A collection of the AAUP's major policy statements on academic freedom, tenure, collective bargaining, professional ethics, institutional governance, sexual harassment, part-time faculty, and other topics. Includes a discussion of the role and usefulness of AAUP policy statements and an appendix with selected judicial decisions and articles referring to AAUP statements.
- American Association of University Professors/Association of American Colleges, Commission on Academic Tenure in Higher Education. *Faculty Tenure: A Report and Recommendations* (Jossey-Bass, 1973). An evaluation of the status and limitations of tenure. Includes special essays on "Legal Dimensions of Tenure" by Victor Rosenblum and "Faculty Unionism and Tenure" by W. McHugh.
- Brown, Ralph S., & Kurland, Jordan E. "Academic Tenure and Academic Freedom," 53 *Law & Contemp. Probs.* 325 (1990). Discusses the role of tenure in reinforcing academic freedom; the costs of tenure; benefits of tenure, in addition to its role in protecting academic freedom; and various alternatives to tenure. Also discusses various perceived weaknesses in tenure and several methods of protecting the academic freedom of faculty who are not tenured.
- Chait, Richard P., & Ford, Andrew T. *Beyond Traditional Tenure: A Guide to Sound Policies and Practices* (Jossey-Bass, 1982). Includes chapters on "Tenure in Context," "Institutions Without Tenure," "Life Without Tenure," "Tenure and Nontenure Tracks," "Extended Probationary Periods and Suspension of 'Up-or-Out' Rule," "Tenure Quotas," "Sound Tenure Policy," "Evaluating Tenured Faculty," "Distributing Rewards and Applying Sanctions," and "Auditing and Improving Faculty Personnel Systems." Based on authors' survey and analysis of tenure options in existence at various institutions around the country. Provides case studies of leading examples. For extended reviews of the book, see 10 *J. Coll. & Univ. Law* 93–112 (1983–84).
- Finkin, Matthew W. "Regulation by Agreement: The Case for Private Higher Education," 65 *Iowa L. Rev.* 1119 (1980), reprinted in 67 *AAUP Bulletin* no. 1 (Parts I and II of the article), no. 2 (Part III), and no. 3 (Part IV) (1981). Provides a multifaceted review of various problems unique to employment relations in higher education. Part I of the article serves as a general introduction; Part II discusses the nature of the contract of academic employment and various questions that arise in contract litigation; Part III discusses the continued relevance of academic organization by collective agreement, notwithstanding *NLRB v. Yeshiva University*; Part IV sets out a proposal for an alternative system of self-regulation of employment matters.
- Furniss, W. Todd. "The Status of AAUP Policy," 59 *Educ. Record* 7 (1978). Reviews the role that AAUP policy statements play in the university employment scheme. Notes the increasing use of such statements in employment litigation and urges institutions of higher education to clarify the extent to which they accept AAUP policy

statements as their own institutional policy. The arguments raised in this article are challenged in a companion article: Ralph S. Brown, Jr., & Matthew W. Finkin, "The Usefulness of AAUP Policy Statements," 59 *Educ. Record* 30 (1978).

McCarthy, Jane, Ladimer, Irving, & Sirefman, Josef. *Managing Faculty Disputes: A Guide to Issues, Procedures, and Practices* (Jossey-Bass, 1984). Addresses the problem of faculty disputes on campus and proposes processes for resolving them. Covers both disputes that occur regularly and can be subjected to a standard dispute resolution process, and special disputes that occur irregularly and may require a resolution process tailored to the circumstances. Includes model grievance procedures, case studies of actual disputes, and worksheets and checklists to assist administrators in implementing dispute-resolution processes.

### **Sec. 6.2 (Faculty Contracts)**

Biles, George E., & Tuckman, Howard P. *Part-Time Faculty Personnel Management Policies* (ACE/Macmillan, 1986). Chapters include discussions on how to define a part-time faculty member, equal employment opportunity and affirmative action issues, appointment and reappointment practices, salaries and benefits for part-timers, tenure eligibility, the professional obligations of part-time faculty, evaluation of part-time faculty, and due process and collective bargaining issues. Also included are suggestions for a handbook for part-time faculty.

McKee, Patrick W. "Tenure by Default: The Non-Formal Acquisition of Academic Tenure," 7 *J. Coll. & Univ. Law* 31 (1980–81). Analyzes the impact of *Board of Regents v. Roth* and *Perry v. Sindermann* on the concept of nonformal tenure. Distinguishes among "automatic tenure," "tenure by grant," "nonformal or *de facto* tenure," and "tenure by default." To resolve confusion in lower court opinions applying *Roth* and *Perry* to nonformal tenure claims, the article develops a common law analysis covering employment relationships in both private and public institutions.

### **Sec. 6.3 (Faculty Collective Bargaining)**

Hustoles, Thomas P., & DiGiovanni, Nicholas, Jr. *Negotiating a Faculty Collective Bargaining Agreement* (National Association of College and University Attorneys, 2005). Provides a framework for negotiating a faculty collective bargaining agreement. Includes suggestions for negotiation strategies and sample contractual provisions and clauses. Focuses on strategies for preserving institutional flexibility.

### **Sec. 6.4 (Application of Nondiscrimination Laws to Faculty Employment Decisions)**

"The Academy in the Courts: A Symposium on Academic Freedom," 16 *U. Cal. Davis L. Rev.* 831 (1983). A two-part article. The second part is titled "Discrimination in the Academy" (for a description of the first part, see "Academy in the Courts" entry in bibliography for Section 7.1). This part contains three articles: Christine Cooper, "Title VII in the Academy: Barriers to Equality for Faculty Women"; John D. Gregory, "Secrecy in University and College Tenure Deliberations: Placing Appropriate Limits on Academic Freedom"; and Harry F. Tepker, "Title VII, Equal Employment Opportunity, and Academic Autonomy: Toward a Principled Deference."

- Achtenberg, Roberta. *Sexual Orientation and the Law* (Clark Boardman Callaghan, 1985, and periodic supp.). A comprehensive treatise on many areas of the law related to homosexuality. Employment-related subjects include civil rights and discrimination, First Amendment issues, employment and AIDS, insurance and AIDS, and tax issues. Written for attorneys who represent gay clients, the book includes sample forms and contracts.
- Baldus, David C., & Cole, James L. *Statistical Proof of Discrimination* (Shepard's/McGraw-Hill, 1980). A guide to the proper uses of statistics in discrimination litigation, with emphasis on employment discrimination. The book will be helpful to both plaintiffs' and defendants' counsel in such actions. Includes useful glossary and bibliography.
- Barnard, Thomas H., & Downing, Timothy J. "Emerging Law on Sexual Orientation and Employment," *29 U. Memphis L. Rev.* 555 (1999). Reviews state and municipal laws prohibiting employment discrimination on the basis of sexual orientation, as well as legal challenges to such laws. Also reviews litigation and other developments related to domestic partner benefits, as well as litigation strategies in states where no protective legislation exists.
- Bompey, Stuart H., & Witten, Richard E. "Settlement of Title VII Disputes: Shifting Patterns in a Changing World," *6 J. Coll. & Univ. Law* 317 (1980). Reviews the types of settlements available to plaintiffs and defendants and the various means of reaching such settlements. Examines the settlement process from the commencement of an action (when a plaintiff files charges with the EEOC) to the culmination of litigation through the entry of consent decrees.
- Centra, John A. *Reflective Faculty Evaluation* (Jossey-Bass, 1993). Provides new approaches for fostering and evaluating good faculty performance.
- Cole, Elsa Kircher (ed.). *Sexual Harassment on Campus: A Legal Compendium* (4th ed., National Association of College and University Attorneys, 2003). A collection of resources on sexual harassment: law review articles; EEOC policy guidelines; and sexual harassment policy statements from five universities, the AAUP, and the American Council on Education. Includes how to conduct an investigation (also available separately, see below), and a list of additional resources and suggestions for developing a sexual harassment policy.
- Cole, Elsa Kircher, & Hustoles, Thomas P. *How to Conduct a Sexual Harassment Investigation* (National Association of College and University Attorneys, 1997). Provides a checklist of suggestions for conducting an appropriate and timely sexual harassment investigation. Suggests questions to be asked at each step of the investigation, and offers alternatives for resolving harassment complaints.
- DiGiovanni, Nicholas. *Age Discrimination: An Administrator's Guide* (College and University Personnel Association, 1989). Written for campus administrators. Includes an overview of the ADEA, a discussion of how an age discrimination lawsuit is conducted and defended, and suggestions for minimizing the risk of liability. Additional chapters discuss planning for retirement (including the EEOC guidelines for retirement incentives), practical considerations in evaluating and counseling older workers, waivers and releases, and a table of state laws prohibiting age discrimination. (This book predates the passage of the Older Workers Benefit Protection Act, discussed in Section 5.2.6, this volume.)
- Dziech, Billie Wright, & Hawkins, Michael W. *Sexual Harassment and Higher Education* (Garland, 1998). The authors, one a professor and one a practicing attorney,

review the legal and regulatory environment and its application to higher education; discuss the importance of policy development that is sensitive to the institution's culture; examine the reactions of harassment targets; discuss the treatment of nonmeritorious cases; and review the effectiveness of banning consensual relationships.

- Fitzgerald, Louise F. *Sexual Harassment in Higher Education: Concepts and Issues* (National Education Association [NEA], 1992). A brief, practical guide to the major issues facing faculty and administrators with regard to sexual harassment. Includes definitions of harassment, an estimate of its prevalence, and a brief summary of the legal issues. Also includes suggestions for developing institutional sexual harassment policies and complaint procedures; a discussion of whether institutions should extend their prohibitions to include consensual amorous relationships between faculty and students; a comprehensive bibliography; a typology of sexual harassment; a sexual harassment experiences questionnaire; sample campus policies on sexual harassment; and the NEA's Sexual Harassment Statement.
- Gamble, Barbara S. (ed.). *Sex Discrimination Handbook* (Bureau of National Affairs, 1992). A concise guidebook to sex discrimination claims, their defense, and their avoidance. Case summaries and the text of federal nondiscrimination laws and regulations are included, as well as sample forms and policies. A directory of EEOC offices and the states' fair employment agencies is also provided.
- Gutek, Barbara. "Understanding Sexual Harassment at Work," 6 *Notre Dame J.L. Ethics & Pub. Pol'y.* 335 (1992). A review of social science research related to sexual behavior in the workplace. Discusses the definition of sexual harassment, the frequency of sexual behavior in the workplace, the impacts of such behavior, and the concept of "sex role spillover" and its implications for workplace behavior.
- Kesselman, Marc L. "Putting the Professor to Bed: Mandatory Retirement of Tenured University Faculty in the United States and Canada," 17 *Comp. Lab. L.J.* 206 (1995). Argues that the ADEA can be interpreted to permit the mandatory retirement of tenured faculty by using the decisions of Canadian courts that have upheld mandatory retirement of tenured faculty as a judicially created exception to the prohibition against age discrimination.
- LaNoue, George, & Lee, Barbara A. *Academics in Court: The Consequences of Faculty Discrimination Litigation* (University of Michigan Press, 1987). A comprehensive study of all academic discrimination lawsuits between 1972 and 1986. Chapter 2 describes the sources of protection against employment discrimination and discusses their application in the academic context. Five academic discrimination cases are discussed, and interview data from the parties involved are presented. The final chapter provides a series of recommendations for faculty members considering filing discrimination claims and for administrators who must determine how and whether to defend these claims in court.
- Lee, Barbara A. "Balancing Confidentiality and Disclosure in Faculty Peer Review: Impact of Title VII Litigation," 9 *J. Coll. & Univ. Law* 279 (1982–83). Analyzes Title VII litigation brought by faculty of higher education institutions. Includes a section on "Burdens of Proof and Persuasion," which elucidates the three stages of a Title VII case—the "*prima facie* case," "the institution's rebuttal," and plaintiff's proof of "pretextual behavior"—using illustrations from higher education cases. Also reviews issues concerning "evidence admitted by courts in challenges to peer review decisions" and "standards applied by courts to the peer review process."

- Lindemann, Barbara, & Kadue, David D. *Primer on Sexual Harassment* (Bureau of National Affairs, 1992). A concise overview of the legal, social, and policy issues related to sexual harassment in the workplace. Written for a nonlegal audience, the primer discusses the definition of sexual harassment; appropriate employer responses to reports of alleged harassment; significant court opinions; discipline and discharge issues; and other issues, such as workers' compensation for harassment claims.
- National Association of College and University Business Officers. *Federal Regulations and the Employment Practices of Colleges and Universities* (NACUBO, 1977, and periodic supp.). A loose-leaf service that provides information and guidance on applying federal regulations affecting personnel administration in postsecondary institutions.
- Paludi, Michele A. (ed.). *Sexual Harassment on College Campuses: Abusing the Ivory Power* (State University of New York Press, 1996). A collection of articles and essays on sexual harassment. Include discussions of the definition of harassment; the impact of sexual harassment on the cognitive, physical, and emotional well-being of victims; the characteristics of harassers; and procedures for dealing with sexual harassment complaints on campus. Sample materials for training faculty, draft forms for receiving harassment complaints, lists of organizations and other resources concerned with sexual harassment, and references to other written materials are also included.
- Perritt, Henry H., Jr. *Americans With Disabilities Act Handbook* (2d ed., Wiley, 1991, and periodic supp.). A comprehensive practice guide to Title I of the ADA. Chapters include a description of the statute, the legislative history, the various categories of protection, the employer's legal obligations, procedural and evidentiary issues, and suggestions for modifying employment policies and practices to comply with the ADA. The Rehabilitation Act of 1973 also is described, and an appendix provides a summary of the ADA's public accommodation provisions.
- Rothstein, Laura F. "The Employer's Duty to Accommodate Performance and Conduct Deficiencies of Individuals with Mental Impairments Under Disability Discrimination Laws," 47 *Syracuse L. Rev.* 931 (1997). Reviews federal disability discrimination law and its impact on employer discipline or discharge of employees for misconduct.
- Sandin, Robert T. *Autonomy and Faith: Religious Preference in Employment Decisions in Religiously Affiliated Higher Education* (Omega Publications, 1990). Discusses the circumstances under which religiously affiliated colleges and universities may use religion as a selection criterion. Provides a taxonomy of religiously affiliated colleges and models of their preferential hiring policies, reviews state and federal nondiscrimination statutes, summarizes judicial precedent regarding secular and religious functions in establishment clause litigation, and discusses the interplay between religious preference and academic freedom.
- Sandler, Bernice R., & Shoop, Robert J. (eds.). *Sexual Harassment on Campus: A Guide for Administrators, Faculty, and Students* (Allyn & Bacon, 1997). Includes chapters on peer sexual harassment of students, faculty harassment of other faculty, electronic sexual harassment, how to develop an effective policy, how to conduct an investigation, and numerous other issues. A thorough and well-organized resource for campus administrators and faculty.
- Sullivan, Charles A., Zimmer, Michael J., & Richards, Richard F. *Federal Statutory Law of Employment Discrimination* (Michie/Bobbs-Merrill, 1980). A one-volume basic text on

the federal law of employment discrimination, supplemented annually. Includes discussions of Title VII, the Equal Pay Act, the Age Discrimination in Employment Act, and 42 U.S.C. § 1981. Examines both the substantive and the procedural law developed under these statutes and integrates this law with other areas of law, such as the National Labor Relations Act. Includes extensive case citations and table of cases.

Van Tol, Joan E. "Eros Gone Awry: Liability Under Title VII for Workplace Sexual Favoritism," 13 *Indust. Rel. L.J.* 153 (1991). Examines the difficult issue of workplace romance and its potential legal implications for the employer. Although the article does not focus specifically on academic organizations, the issues addressed are relevant for academic workplaces as well as others.

Weber, Mark C. "Disability Discrimination Litigation and Institutions of Higher Education," 25 *J. Coll. & Univ. Law* 53 (1998). Discusses administrative enforcement and litigation issues, settlement, and alternatives to litigation, for cases brought by employees or students.

West, Martha S. "Gender Bias in Academic Robes: The Law's Failure to Protect Women Faculty," 67 *Temple L. Rev.* 67 (1994). Reviews data on the employment of women in tenured and tenure-track positions, analyzes the evolution of employment discrimination law and its effect on academic discrimination litigation, and suggests an agenda for changing academic employment policies to enhance equity.

### **Sec. 6.5 (Affirmative Action in Faculty Employment Decisions)**

Bureau of National Affairs. *Affirmative Action Compliance Manual for Federal Contractors* (BNA, published and updated periodically). A comprehensive loose-leaf guide. Provides detailed and continually updated information on the federal government's affirmative action program and the compliance responsibilities and procedures of the Departments of Labor, Education, Defense, and other federal agencies.

Clague, Monique Weston. "Affirmative Action Employment Discrimination: The Higher Education Fragment," in John B. Smart (ed.), *Higher Education: Handbook of Theory and Research*, Vol. 2 (Agathon, 1986), 109–62. Discusses significant decisions by the U.S. Supreme Court, including *Weber* and *Wygant*. Although the article predates more recent Supreme Court decisions in this area, it provides a thorough and thoughtful analysis of the legal and historical context for affirmative action in the 1970s and early 1980s.

Foster, Sheila. "Difference and Equality: A Critical Assessment of the Concept of 'Diversity,'" 1993 *Wis. L. Rev.* 105 (1993). Explores and criticizes the concept of diversity as developed through equal protection jurisprudence, with special emphasis on *Bakke* and *Metro Broadcasting*. Examines the concept of "difference" and discusses that concept against the history of exclusion of various groups. Also discussed is the tension between equal treatment and equal outcomes.

Oppenheimer, David B. "Distinguishing Five Models of Affirmative Action," 4 *Berkeley Women's L.J.* 42 (1988). Discusses quotas, preference systems, the use of goals and timetables for selected occupations, expanded recruitment pools, and affirmative commitment not to discriminate as alternate models for increasing the proportion of underrepresented persons in the workforce. Selected discrimination lawsuits are also analyzed.

Taylor, Bron Raymond. *Affirmative Action at Work: Law, Politics and Ethics* (University of Pittsburgh Press, 1991). Reports the result of a survey of state agency employees'

attitudes toward affirmative action and provides suggestions for organizations that wish to strengthen their affirmative action programs. Includes a brief legal history of affirmative action, as well as philosophical and ethical perspectives on affirmative action.

### ***Sec. 6.6 (Standards and Criteria for Faculty Employment Decisions)***

American Association of University Professors. *Post-Tenure Review: An AAUP Response* (AAUP, 1999). Offers “practical recommendations for faculty at institutions where post-tenure review is being considered or put into effect”; argues that the purpose of post-tenure review should be developmental, not for accountability or dismissal purposes; provides guidelines for faculty in deciding whether or not to support the development of a post-tenure review process; and lists “minimum standards for good practice” for post-tenure review systems. Available at <http://www.aaup.org/postten.htm>.

Copeland, John D., & Murray, John W Jr. “Getting Tossed from the Ivory Tower: The Legal Implications of Evaluating Faculty Performance,” 61 *Missouri L. Rev.* 233 (1996). Discusses legal issues related to faculty performance evaluation, including post-tenure review.

Finkin, Matthew W. (ed.). *The Case for Tenure* (Cornell University Press, 1996). A collection of writings by several eminent scholars on academic freedom and tenure. Also includes selected court opinions and commentary on reductions in force, faculty retirement, and post-tenure review.

Olswang, Steven G., & Fantel, Jane I. “Tenure and Periodic Performance Review: Compatible Legal and Administrative Principles,” 7 *J. Coll. & Univ. Law* 1 (1980–81). Examines the “separate concepts of tenure and academic freedom and their relation to one form of accountability measure: systematic reviews of the performance of tenured faculty.” Identifies the “differences between tenure and academic freedom” and the purposes and uses of periodic performance reviews “in an overall system of faculty personnel management.” Includes discussion of tenure terminations for cause based on incompetence, immorality, insubordination, and other such factors.

See the Centra entry for Section 6.4.

### ***Sec. 6.8 (Closure, Merger, and Reduction in Force)***

Babbitt, Ellen M. (ed.). *Academic Program Closures: A Legal Compendium* (2d ed., National Association of College and University Attorneys, 2002). A comprehensive resource for administrators, faculty, and legal counsel. Included are six chapters and law review articles discussing legal issues and planning issues, such as the roles of trustees, administrators, faculty, students, and other constituencies in planning for and implementing program closures. Also included are AAUP guidelines, policies from five institutions on faculty reductions and program termination, and documents on related issues, as well as a list of relevant books and articles.

Johnson, Annette B. “The Problems of Contraction: Legal Considerations in University Retrenchment,” 10 *J. Law & Educ.* 269 (1981). Examines the financial circumstances that justify retrenchment, how and by whom retrenchment decisions should be made, and the procedures to follow after the decision in order to preserve the legal rights of individuals affected by the retrenchment.

Ludolph, Robert Charles. "Termination of Faculty Tenure Rights Due to Financial Exigency and Program Discontinuance," 63 *U. Detroit L. Rev.* 609 (1986). Reviews faculty property rights (for both tenured and untenured faculty), discusses constitutional requirements for reductions in force and program closures, and analyzes contractual issues related to faculty terminations. Author proposes an analytical model that helps counsel develop an appropriate defense to challenges to program closures, reductions based on financial exigency, and the closing of a campus or an institution.

Martin, James, Samels, James E., & Associates. *Merging Colleges for Mutual Growth* (Johns Hopkins University Press, 1993). Provides practical and theoretical advice, by college administrators and legal counsel experienced in these matters, about merging colleges to avoid bankruptcy. Discusses a typology of models of mergers, the role of trustees and governing boards, the role of administrators and faculty, and financial planning. Attention is also given to planning for the effects of mergers on students and alumni, as well as academic support concerns, such as the merging of libraries.

Mingle, James R., & Associates. *Challenges of Retrenchment: Strategies for Consolidating Programs, Cutting Costs, and Reallocating Resources* (Jossey-Bass, 1981). Describes the actual retrenchment efforts of public and private institutions through an extensive set of case studies. Analyzes the complex organizational, legal, and political issues that arise when colleges and universities lay off faculty and cut back programs and departments because of rising inflation, declining enrollments, or both.

Olswang, Steven G. "Planning the Unthinkable: Issues in Institutional Reorganization and Faculty Reductions," 9 *J. Coll. & Univ. Law* 431 (1982-83). Examines the legal and policy issues inherent in institutional reorganization and faculty reduction. Analyzes the "three primary alternatives"—"financial exigency declarations, program eliminations, and program reductions"—for achieving reorganization and reduction. Also provides policy guidelines for determining which faculty to lay off and discusses faculty members' rights and prerogatives when they are designated for removal.

# 7

## Faculty Academic Freedom and Freedom of Expression

### *Sec. 7.1. General Concepts and Principles*

**7.1.1. Faculty freedom of expression in general.** Whether they are employed by public or by private institutions of higher education, faculty members as citizens are protected by the First Amendment from governmental censorship and other governmental actions that infringe their freedoms of speech, press, and association. When the restraint on such freedoms originates from a governmental body external to the institution (see subsection 7.1.5 below), the First Amendment protects faculty members in both public and private institutions. When the restraint is internal, however (for example, when a provost or dean allegedly infringes a faculty member's free speech), the First Amendment generally protects only faculty members in public institutions. Absent a finding of state action (see Section 1.5.2), an internal restraint in a private institution does not implicate government, and the First Amendment therefore does not apply. The protection accorded to faculty expression and association in private institutions is thus usually a matter of contract law (see Section 1.5.3).

While faculty contracts may distinguish between tenured and nontenured faculty, as may state statutes and regulations applicable to public institutions, tenure is immaterial to most freedom of expression claims. Other aspects of job status, such as tenure track versus non-tenure track and full time versus part time, are also generally immaterial to freedom of expression claims. In *Perry v. Sindermann*, 408 U.S. 593 (1972), discussed in Section 6.6.2.1, the U.S. Supreme Court held that a nonrenewed faculty member's "lack of a contractual or tenure right to reemployment . . . is immaterial to his free speech claim" and that "regardless of the . . . [teacher's] contractual or other claim to a job," government

cannot “deny a benefit to a person because of his constitutionally protected speech or associations.”<sup>1</sup>

When faculty members at public institutions assert First Amendment free speech claims, these claims are usually subject to a line of U.S. Supreme Court cases applicable to all public employees: the “*Pickering/Connick*” line. The foundational case in this line, *Pickering v. Board of Education*, 391 U.S. 563 (1968), concerned a public high school teacher who had been dismissed for writing the local newspaper a letter in which he criticized the board of education’s financial plans for the high schools. *Pickering* brought suit, alleging that the dismissal violated his First Amendment freedom of speech. The school board argued that the dismissal was justified because the letter “damaged the professional reputations of . . . [the school board] members and of the school administrators, would be disruptive of faculty discipline, and would tend to foment ‘controversy, conflict, and dissension’ among teachers, administrators, the board of education, and the residents of the district.”

The U.S. Supreme Court determined that the teacher’s letter addressed “a matter of legitimate public concern,” thus implicating his free speech rights as a citizen. The Court then balanced the teacher’s free speech interests against the state’s interest in maintaining an efficient educational system, using the following considerations: (1) Was there a close working relationship between the teacher and those he criticized? (2) Is the substance of the letter a matter of legitimate public concern? (3) Did the letter have a detrimental impact on the administration of the educational system? (4) Was the teacher’s performance of his daily duties impeded? (5) Was the teacher writing in his professional capacity or as a private citizen? The Court found that *Pickering* had no working relationship with the board, that the letter dealt with a matter of public concern, that *Pickering*’s letter was greeted with public apathy and therefore had no detrimental effect on the schools, that *Pickering*’s performance as a teacher was not hindered by the letter, and that he wrote as a citizen, not as a teacher. Based on these considerations and facts, the Court concluded that the school administration’s interest in limiting teachers’ opportunities to contribute to public debate was not significantly greater than its interest in limiting a similar contribution by any member of the general public, and that “in a case such as this, absent proof of false statements knowingly or recklessly made by him, a teacher’s exercise of his right to speak on issues of public importance may not furnish the basis for his dismissal from public employment.”

The *Pickering* balancing test was further explicated in later Supreme Court cases. The most important of these cases are *Givhan v. Western Line Consolidated School District*, 439 U.S. 410 (1979); *Connick v. Myers*, 461 U.S. 138 (1983); and *Waters v. Churchill*, 511 U.S. 661 (1994). They are discussed *seriatim* below.

---

<sup>1</sup>The *Perry* Court also held, in contrast, that the professor’s job status, “though irrelevant to his free speech claim, is highly relevant to his procedural due process claim” (408 U.S. at 599). The Fourteenth Amendment due process clause is the one constitutional basis for an academic freedom claim (see subsection 7.1.4 below) that distinguishes among faculty members on the basis of job status.

In *Givhan*, the issue was whether *Pickering* protects public school teachers who communicate their views in private rather than in public. In a series of private meetings with her school principal, the plaintiff teacher in *Givhan* had made complaints and expressed opinions about school employment practices that she considered racially discriminatory. When the school district did not renew her contract, the teacher filed suit, claiming an infringement of her First Amendment rights. The trial court found that the school district had not renewed the teacher's contract primarily because of her criticisms of school employment practices, and it held that such action violated the First Amendment. The U.S. Court of Appeals reversed, reasoning that the teacher's expression was not protected by the First Amendment because she had expressed her views privately. The U.S. Supreme Court, in a unanimous opinion, disagreed with the appeals court and remanded the case to the trial court for further proceedings. According to the Supreme Court, "[N]either the [First] Amendment itself nor our decisions indicate that . . . freedom [of speech] is lost to the public employee who arranges to communicate privately with his employer rather than to spread his views before the public" (439 U.S. at 415–16). Rather, private expression, like public expression, is subject to the same balancing of factors that the Court utilized in *Pickering*. The Court did suggest in a footnote, however, that private expression may involve some different considerations:

Although the First Amendment's protection of government employees extends to private as well as public expression, striking the *Pickering* balance in each context may involve different considerations. When a teacher speaks publicly, it is generally the content of his statements that must be assessed to determine whether they "in any way either impeded the teacher's proper performance of his daily duties in the classroom or . . . interfered with the regular operation of the schools generally" (*Pickering v. Board of Education*, 391 U.S. at 572–73). Private expression, however, may in some situations bring additional factors to the *Pickering* calculus. When a government employee personally confronts his immediate superior, the employing agency's institutional efficiency may be threatened not only by the content of the employee's message but also by the manner, time, and place in which it is delivered [439 U.S. at 415 n.4].

In *Connick v. Myers*, the issue was whether *Pickering* protects public employees who communicate views to office staff about office personnel matters. The plaintiff, Myers, was an assistant district attorney who had been scheduled for transfer to another division of the office. In opposing the transfer, she circulated a questionnaire on office operations to other assistant district attorneys. Later on the same day, she was discharged. In a 5-to-4 decision, the Court declined to apply *Givhan*, arguing that *Givhan*'s statements about employment practices had "involved a matter of public concern." In contrast, the various questions in Myers's questionnaire about office transfer policy and other office practices, with one exception, "[did] not fall under the rubric of matters of 'public concern.'" The exception, a question on whether office personnel ever felt pressured to work in political campaigns, did "touch upon a matter of public concern." In the overall context of the questionnaire, which otherwise

concerned only internal office matters, this one question provided only a “limited First Amendment interest” for Myers. Therefore, applying *Pickering* factors, the Court determined that Myers had spoken “not as a citizen upon matters of public concern, but instead as an employee upon matters only of personal interest”; and that circulation of the questionnaire interfered with “close working relationships” within the office. The discharge thus did not violate the plaintiff’s freedom of speech.

*Givhan* and *Connick* emphasize the need to distinguish between communications on matters of public concern and communications on matters of private or personal concern—a distinction that, under *Givhan*, does not depend on whether the communication is itself made in public or in private. The dispute between the majority and dissenters in *Connick* reveals how slippery this distinction can be. The majority did, however, provide a helpful methodological guideline for drawing the distinction. “Whether an employee’s speech addresses a matter of public concern,” said the Court, “must be determined by the *content, form, and context* of a given statement, as revealed by the whole record” (461 U.S. at 147–48; emphasis added). Because the “content, form, and context” will depend on the specific circumstances of each case, courts must remain attentive to the “enormous variety of fact situations” that these cases may present. In a more recent case, *City of San Diego v. Roe*, 543 U.S. 77 (2004), the Court reiterated this aspect of *Connick* and added that “public concern is something that is a subject of legitimate news interest; that is, a subject of general interest and of value and concern to the public at the time of publication” (543 U.S. at 83–84).

In *Waters v. Churchill*, 511 U.S. 661 (1994), the third key case explicating *Pickering*, a public hospital had terminated a nurse because of statements concerning the hospital that she had made to a coworker. In remanding the case to the trial court for further proceedings, the Justices filed four opinions displaying different perspectives on the First Amendment issues. Although there was no majority opinion, the plurality opinion by Justice O’Connor and two concurring opinions (by Justice Souter and Justice Scalia) stressed the need for courts to be deferential to employers when applying the *Pickering/Connick* factors. In particular, according to these Justices, it appears that (1) in evaluating the impact of the employee’s speech, the public employer may rely on its own reasonable belief regarding the content of the speech, even if that belief later proves to be inaccurate;<sup>2</sup> and (2) in evaluating the disruptiveness of the employee’s speech, a public employer does not need to determine that the speech actually disrupted operations, but only that the speech was potentially disruptive.

Under the first of these points from *Waters*—the “reasonable belief” requirement—the employer’s belief concerning the content of the employee’s

---

<sup>2</sup>As with other cases in the *Pickering/Connick* line, there is potentially a related question whether the employer terminated the employee because of unprotected (disruptive) speech or conduct, or because of other, protected, speech. See Section 7.6 below. In *Waters*, the Court raised this issue but did not resolve it, instead remanding the case to the lower courts for further fact determinations (511 U.S. at 682 (opinion of O’Connor, J.)).

speech apparently must be an actual or real belief arrived at in good faith. Justice O'Connor's plurality opinion, for instance, indicates that the employer must "really . . . believe" (511 U.S. at 679) the version of the facts on which it relies. In addition, the employer's belief must also be objectively reasonable in the sense that it is based on "an objectively reasonable investigation" of the facts (511 U.S. at 683; opinion of Souter, J.) or based on a standard of care that "a reasonable manager" would use under the circumstances (511 U.S. at 678; plurality opinion of O'Connor, J.). This aspect of *Waters* is discussed further in Section 7.6 below.

Under the second point from *Waters*—the potential disruption requirement—the employer may prevail by showing that it made a "reasonable prediction of disruption, to the effect" that "the [employee's] speech is, in fact, likely to be disruptive" (511 U.S. at 674; O'Connor J.). The reasonableness of the prediction would likely be evaluated under an objective standard much like that which Justice O'Connor would use to determine the reasonableness of the employer's belief about the facts. Even if the predicted harm "is mostly speculative," the Court apparently will be deferential to the employer's interests and give the employer's finding substantial weight (511 U.S. at 673; opinion of O'Connor, J.). In *Waters* itself, for instance, "the potential disruptiveness of the [nurse's] speech as reported was enough to outweigh whatever First Amendment value it might have had" (511 U.S. at 680; opinion of O'Connor, J.). This aspect of *Waters* was discussed and relied on in *Jeffries v. Harleston*, a U.S. Court of Appeals case examined in Section 7.5 below.

In various cases, lower courts have questioned whether there are circumstances in which they should not apply the *Pickering/Connick/Waters* analysis to public employees' free speech claims. In *Harrington v. Harris*, 118 F.3d 359 (5th Cir. 1997), for instance, the issue was whether there must be an "adverse employment action" by the employer before the *Pickering/Connick* line will apply. The plaintiffs were tenured law school professors at Texas Southern University who challenged the amount of the salary increases the dean had awarded them. The professors did not claim censorship, but rather claimed retaliation—that the dean had lowered the amount of their salary increases in retaliation for critical statements they had made concerning the dean. The appellate court declined to apply the *Pickering/Connick* public concern analysis and rejected the professors' free speech retaliation claim because they had "failed to show that they suffered an adverse employment action."

The professors in *Harrington* had alleged two possible adverse actions: first, that the dean had evaluated one of the plaintiffs as "counterproductive"; and second, that the dean had perennially discriminated against the plaintiffs in awarding salary increases. As to the first, the court held that "an employer's criticism of an employee, without more, [does not constitute] an actionable adverse employment action. . . . [M]ere criticisms do not give rise to a constitutional deprivation for purposes of the First Amendment." As to the second alleged adverse action, the court emphasized that each of the professors had received salary increases each year and that the professors' complaint "amounted to nothing more than a dispute over the quantum of pay increases." The court then

limited its holding to these facts: “If Plaintiffs had received no merit pay increase at all or if the amount of such increase were so small as to be simply a token increase which was out of proportion to the merit pay increases granted to others, we might reach a different conclusion.”

The appellate court in *Power v. Summers*, 226 F.3d 815 (7th Cir. 2000), however, disagreed with the *Harrington* analysis and ruled that proof of an adverse employment action is not a prerequisite for a faculty member’s free speech claim against the institution. The case concerned a claim by three professors that they had received reduced bonuses in retaliation for their criticisms of institutional policies. The district court dismissed the case on grounds that the award of smaller bonuses was not an adverse employment action; the appellate court, in an opinion by Judge Posner, reversed. The court’s opinion explained that proof of an adverse employment action is an appropriate component of a Title VII employment discrimination claim but not of a First Amendment free speech claim; employees asserting free speech claims need only show that some institutional action had inhibited their exercise of free expression: “Any deprivation under color of law that is likely to deter the exercise of free speech, whether by an employee or anyone else, is actionable . . . if the circumstances are such as to make a refusal an effective deterrent to the exercise of a fragile liberty” (226 F.3d at 820). This “deterrence” test is apparently objective in that it depends on whether, in the particular circumstances of the case, the average reasonable person would be deterred by the challenged action—not on whether the person asserting First Amendment rights was or would have been deterred in the particular circumstances (see, for example, *Davis v. Goord*, 320 F.3d 346, 352–54 (2d Cir. 2003)).

In *United States v. National Treasury Employees Union*, 513 U.S. 454 (1995) (the *NTEU* case), the U.S. Supreme Court itself carved out a category of public employee speech cases to which *Pickering/Connick* does not apply. In the course of invalidating a federal statute that prohibited federal employees from receiving honoraria for writing and speaking activities undertaken on their own time, the Court developed an important distinction between: (1) cases involving “a *post hoc* analysis of one employee’s speech and its impact on that employee’s professional responsibilities,” and (2) cases involving a “sweeping statutory impediment to speech that potentially involves many employees.” In the first type of case, the employee challenges an employer’s “adverse action taken in response to actual speech,” while in the second type of case the employee challenges a statute or administrative regulation that “chills potential speech before it happens” (513 U.S. at 459–60). The *Pickering/Connick* balancing test applies to the first type of case but not to the second. This is because the second type of case “gives rise to far more serious concerns” than does the first. Thus, “the Government’s burden is greater with respect to [a] statutory restriction on expression” (the second type of case), than it is “with respect to an isolated disciplinary action” (the first type of case). To meet this greater burden of justification, the Government must take into account the interests of “present and future employees in a broad range of present and future expression,” as well as the interests of “potential audiences” that have a “right to read and hear what

the employees would otherwise have written and said” (513 U.S. at 468, 470); and must demonstrate that those interests “are outweighed by that expression’s ‘necessary impact on the actual operation’ of the Government” (513 U.S. at 468, quoting *Pickering*, 391 U.S. at 571).

The critical distinction that the Court made in the *NTEU* case—the distinction between a “single supervisory decision” and a “statutory impediment to speech”—seems compatible with the Court’s earlier analysis in *Keyishian v. Board of Regents*, 385 U.S. 589 (1967) (discussed in subsection 7.1.4 below). Both *NTEU* and *Keyishian* are concerned with statutes or administrative regulations that limit the speech of a broad range of government employees, rather than with a particular disciplinary decision of a particular administrator. Both cases also focus on the meaning and application of the statute or regulation itself, rather than on the motives and concerns of a particular employer at a particular workplace. And both cases focus on the special problems that arise under the First Amendment when a statute or regulation “chills potential speech before it happens” (513 U.S. at 468). Given these clear parallels, the *NTEU* case has apparently laid the foundation for a merger of the *Keyishian* case and the *Pickering/Connick* line of cases as they apply to large-scale faculty free expression disputes, particularly academic freedom disputes. The two cases, in tandem, would apply particularly to external conflicts arising under a state or federal statute or administrative regulation that is alleged to impinge upon the free expression, or academic freedom, of many faculty members at various institutions (see subsection 7.1.5 below). But they would also appear to apply to internal conflicts involving a college’s or university’s written policy that applies broadly to all or most faculty members of the institution. The case of *Crue v. Aiken*, 370 F.3d 668 (7th Cir. 2004), provides an example of the latter type of application of *NTEU*. There the court majority applied *NTEU* analysis to invalidate a chancellor’s “preclearance directive” applicable to all faculty and staff of the institution (370 F.3d at 678–80); while a dissenting judge argued that the *Pickering/Connick* line, and not *NTEU*, provided the applicable test (370 F.3d at 682–88). (For discussion of *Crue v. Aiken*, see Section 10.4.3.)

In addition to the *Pickering/Connick* line of cases and *NTEU*, the cases on the “public forum” doctrine might also be invoked as a basis for some faculty free speech claims. While the public forum doctrine is often applied to free speech problems concerning students (see Section 9.5.2), however, it will only occasionally apply to the analysis of faculty free speech rights on campus. The mere fact that campus facilities are open to employees as workspace does not make the space a designated public forum or limited designated forum. In *Tucker v. State of California Department of Education*, 97 F.3d 1204, 1209, 1214–15, the court held that employer offices and workspaces are not public forums. Similarly, in *Bishop v. Aronov*, 926 F.2d 1066, 1071 (11th Cir. 1991), and *Linnemeir v. Board of Trustees, Indiana University-Purdue University*, 260 F.3d 757, 759–60 (7th Cir. 2001), the courts declined to consider classrooms to be public forums during class time; and in *Piarowski v. Illinois Community College District*, 759 F.2d 625 (7th Cir. 1985), the court declined to apply public forum analysis to a campus art gallery used for displaying the works of faculty members. On the

other hand, for certain other types of property, the institution may have opened the property for faculty members, the academic community, or the general public to use for their own personal expressive purposes. In such circumstances, the institution will have created a designated forum, and faculty members will have the same First Amendment rights of access as other persons to whom the property is open. In *Giebel v. Sylvester*, 244 F.3d 1182 (9th Cir. 2001), for example, the court considered certain bulletin boards on a state university's campus to be designated public forums open to the public.

In addition to their free expression rights, faculty members at public institutions also have a right to freedom of association under the First Amendment. Public employees, for example, are free to join (or not join) a political party and to adopt whatever political views and beliefs they choose (*Branti v. Finkel*, 445 U.S. 507 (1980)). They cannot be denied employment, terminated, or denied a promotion or raise due to their political affiliations or beliefs (*Rutan v. Republican Party of Illinois*, 497 U.S. 62 (1990)). Nor are these associational rights limited to political organizations and viewpoints; public employees may also join (or not join), subscribe to the beliefs of, and participate in social, economic, and other organizations (see *NAACP v. Button*, 371 U.S.415 (1963)). Since these rights extend fully to faculty members (see *Jirau-Bernal v. Agrait*, 37 F.3d. 1 (1st Cir. 1994)), they may—like other public employees—join organizations of their choice and participate as private citizens in their activities. Moreover, public employers, including institutions of higher education, may not require employees to affirm by oath that they will not join or participate in the activities of particular organizations. (See generally, William Van Alstyne, “The Constitutional Rights of Teachers and Professors,” 1970 *Duke L.J.* 841.) In *Cole v. Richardson*, 405 U.S. 676 (1972), however, the U.S. Supreme Court did uphold an oath that included a general commitment to “uphold and defend” the U.S. Constitution and a commitment to “oppose the overthrow of the government . . . by force, violence, or by any illegal or unconstitutional method.” The Court upheld the second commitment's constitutionality only by reading it narrowly as merely “a commitment not to use illegal and constitutionally unprotected force to change the constitutional system.” So interpreted, the second commitment “does not expand the obligation of the first [commitment].”

Public employees and faculty members also have other constitutional rights that are related to and supportive of their free expression and free association rights under the First Amendment. The petition clause of the First Amendment,<sup>3</sup> for example, may protect faculty members from retaliation if they file grievances or lawsuits against the institution or its administrators. (See *San Filippo v. Bongiovanni*, 30 F.3d 424 (3rd Cir. 1994).) And the Fourth Amendment search and seizure clause provides faculty members some protection for teaching and research materials, and other files, that they keep in their offices. In *O'Connor v. Ortega*, 480 U.S. 709 (1987), for example, the Court used the Fourth Amendment to protect an employee who was in charge of training physicians in the

---

<sup>3</sup>The petition clause prohibits government from “abridging . . . the right of the people . . . to petition the Government for a redress of grievances.”

psychiatric residency program at a state hospital. Hospital officials had searched his office. The Court determined that public employees may have reasonable expectations of privacy in their offices, desks, and files; and that these expectations may, in certain circumstances, be protected by the Fourth Amendment. A plurality of the Justices, however, asserted that an employer's warrantless search of such property would nevertheless be permissible if it is done for "noninvestigatory, work-related purposes" or for "investigations of work-related misconduct," and if it meets "the standard of reasonableness under all the circumstances."<sup>4</sup>

**7.1.2. Academic freedom: Basic concepts and distinctions.** Faculty academic freedom claims are often First Amendment freedom of expression claims; they thus may draw upon the same free expression principles as are set out in subsection 7.1.1 above. Academic freedom claims may also be based, however, on unique applications of First Amendment free expression principles, on constitutional rights other than freedom of expression, or on principles of contract law. The distinction between public and private institutions applicable to free expression claims (subsection 7.1.1 above) applies equally to academic freedom claims. Similarly, as is also the case for First Amendment freedom of expression claims, neither tenure, nor a particular faculty rank, nor even full-time status, is a legal prerequisite for faculty academic freedom claims. (See generally Ralph Brown & Jordan Kurland, "Academic Tenure and Academic Freedom," 53 *Law & Contemp. Probs.* 325 (1993); J. Peter Byrne, "Academic Freedom of Part-Time Faculty," 27 *J. Coll. & Univ. Law* 583 (2001).)

Academic freedom traditionally has been considered to be an essential aspect of American higher education. (See generally Walter Metzger, *The American Concept of Academic Freedom in Formation* (Arno, 1977).) It has been a major determinant of the missions of higher educational institutions, both public and private, and a major factor in shaping the roles of faculty members as well as students. Yet the concept of academic freedom eludes precise definition. It draws meaning from both the world of education and the world of law. In the education, or professional, version of academic freedom, educators usually use the term with reference to the custom and practice, and the aspirations, by which faculties may best flourish in their work as teachers and researchers (see, for example, the "1940 Statement of Principles on Academic Freedom and Tenure" of the American Association of University Professors (AAUP), discussed below in this section and found in *AAUP Policy Documents and Reports* (9th ed., 2001), 3–10). In the law, or legal version, lawyers and judges usually use "academic freedom" as a catchall term to describe the legal rights and responsibilities of the teaching profession, and courts usually attempt to define these rights by reconciling basic constitutional law or contract law principles with prevailing views of academic freedom's intellectual and social role in American life.

---

<sup>4</sup>Related cases are collected in Ralph V. Seep, Annot., "Warrantless Search by Government Employer of Employee's Workplace, Locker, Desk, or the Like as Violation of Fourth Amendment Privacy Rights—Federal Cases," 91 A.L.R. Fed. 226.

(See generally Walter P. Metzger, “Profession and Constitution: Two Definitions of Academic Freedom in America,” 66 *Texas L. Rev.* 1265 (1988).)

More broadly, academic freedom refers not only to the prerogatives and rights of faculty members but also to the prerogatives and rights of students. Student academic freedom is explored in Section 8.1.4 of this book.<sup>5</sup> In addition, especially for the legal version of academic freedom, the term increasingly is used to refer to the rights and interests of institutions themselves, as in “institutional academic freedom” or “institutional autonomy.” This third facet of academic freedom is explored in subsection 7.1.6 below.<sup>6</sup>

In the realm of law and courts (the primary focus of this chapter), yet another distinction regarding academic freedom must be made: the distinction between constitutional law and contract law. Though courts usually discuss academic freedom in cases concerning the constitutional rights of faculty members, the legal boundaries of academic freedom are initially defined by contract law. (See generally Jim Jackson, “Express and Implied Contractual Rights to Academic Freedom in the United States,” 22 *Hamline L. Rev.* 467 (1999).) Faculty members possess whatever academic freedom is guaranteed them under the faculty contract (see Section 6.1)—either an individual contract or (in some cases) a collective bargaining agreement. The “1940 Statement of Principles on Academic Freedom and Tenure,” AAUP’s 1970 “Interpretive Comments” on this Statement, and AAUP’s 1982 “Recommended Institutional Regulations on Academic Freedom and Tenure” (all included in *AAUP Policy Documents and Reports*, 3–10, 21–30) are sometimes incorporated-by-reference into faculty contracts, and it is crucial for administrators to determine whether this has been done—or should be done—with respect to all or any of these documents. For any document that has been incorporated, courts will interpret and enforce its terms by reference to contract law principles. Even when these documents have not been incorporated into the contract, they may be an important source of the “academic custom and usage” that courts will consider in interpreting unclear contract terms (see generally Section 6.2.3).

Contract law limits both public and private institutions’ authority over their faculty members. Public institutions’ authority is also limited by constitutional concepts of academic freedom, as discussed below, and sometimes also by state statutes or administrative regulations on academic freedom. But in private institutions, the faculty contract, perhaps supplemented by academic custom and usage, may be the only legal restriction on administrators’ authority to limit faculty academic freedom. In private religious institutions, the institution’s special religious mission may add additional complexities to contract law’s application to academic freedom problems (see, for example, the *Curran* case discussed in Section 6.1.5 and the *McEnroy* case discussed in Section 7.8 below). For instance, the establishment and free exercise clauses of the First Amendment

---

<sup>5</sup>For students, as for faculty members, there is both an education version of academic freedom and a law, or legal, version.

<sup>6</sup>As discussed in subsection 7.1.6, “institutional academic freedom” is in some circumstances a misnomer and an inappropriate usage.

may limit the capacity of the courts to entertain lawsuits against religious institutions brought by faculty members alleging breach of contract (see, for example, the *Welter* and *Alicea* cases discussed in Section 6.1.5).

Constitutional principles of academic freedom have developed in two stages, each occupying a distinct time period and including distinct types of cases. The earlier stage, in the 1950s and 1960s, included the cases on faculty and institutional freedom from interference by external (extramural) governmental bodies. These earlier cases pitted faculties and their institutions against a state legislature or state agency—the external conflict paradigm of academic freedom (see subsection 7.1.5 below). In the later stage, covering the 1970s and 1980s, the cases focused primarily on faculty freedom from institutional intrusion—the internal conflict paradigm. (See generally William Van Alstyne, “Academic Freedom and the First Amendment in the Supreme Court of the United States: An Unhurried Historical Review,” 53 *Law & Contemp. Probs.* 79 (1990).) These later cases pitted faculty members against their institutions—thus illustrating the clash between faculty academic freedom and institutional prerogatives often referred to as “institutional academic freedom” or “institutional autonomy.” Both lines of cases have continued to the present, and both retain high importance, but the more recent academic freedom cases based on the second stage of developments (internal conflicts) have been much more numerous than those based on the first stage of developments (external conflicts). Developments in the first years of the twenty-first century suggest, however, that the external conflicts cases are becoming more numerous and are attracting much more attention than they have since the 1950s and 1960s (see subsection 7.1.5 below).

### ***7.1.3. Professional versus legal concepts of academic freedom.***

The education, or professional, version of academic freedom is based on “professional” concepts, as distinguished from the “legal” concepts discussed later in this subsection. The professional concept of academic freedom finds its expression in the professional norms of the academy, which are in turn grounded in academic custom and usage. The most recognized and most generally applicable professional norms are those promulgated by the American Association of University Professors. Most of these norms appear in AAUP standards, statements, and reports that are collected in *AAUP Policy Documents and Reports* (2001). This publication, called “The Redbook,” is available in a print version and also online on the AAUP’s Web site, at <http://www.aaup.org/statements/Redbook/>.

The national academic community’s commitment to academic freedom as a core value was formally documented in the “1915 Declaration of Principles on Academic Freedom and Academic Tenure,” promulgated by the AAUP and currently reprinted in *AAUP Policy Documents and Reports*, pages 292–301. (See generally Neil Hamilton, “Academic Tradition and the Principles of Professional Conduct,” 27 *J. Coll. & Univ. Law* 609, 625–28 (2001).) The 1915 Declaration emphasized the importance of academic freedom to higher education and recognized two components of academic freedom: the teachers’ freedom to teach and the students’ freedom to learn. Twenty-five years later, the concept of

academic freedom was further explicated, and its critical importance reaffirmed, in the “1940 Statement of Principles on Academic Freedom and Tenure” (*AAUP Policy Documents and Reports*, 3–10), developed by the AAUP in conjunction with the Association of American Colleges and Universities and subsequently endorsed by more than 185 educational and professional associations. (See generally Walter P. Metzger, “The 1940 Statement of Principles on Academic Freedom and Tenure,” 53 *Law & Contemp. Probs.* 3 (1990).) The 1940 Statement emphasizes that “[i]nstitutions of higher education are conducted for the common good. . . . The common good depends upon the free search for the truth and its free exposition. Academic freedom is essential to these purposes . . .” (*AAUP Policy Documents and Reports*, 3).

The 1940 Statement then identifies three key aspects of faculty academic freedom: the teacher’s “freedom in research and in the publication of the results”; the teacher’s “freedom in the classroom in discussing [the subject matter of the course]”; and the teacher’s freedom to speak or write “as a citizen,” as “a member of a learned profession,” and as “an officer of an educational institution.” These freedoms are subject to various “duties correlative with rights” and “special obligations” imposed on the faculty member (*AAUP Policy Documents and Reports*, 3, 4; see generally Hamilton, above, at 634–52).

In 1970, following extensive debate within the American higher education community, the AAUP reaffirmed the 1940 Statement and augmented it with a series of interpretive comments (1970 “Interpretive Comments,” *AAUP Policy Documents and Reports*, 4–9). In addition, in 1957 the AAUP promulgated and adopted the first version of its “Recommended Institutional Regulations on Academic Freedom and Tenure,” subsequently revised at various times, most recently in 1999 (*AAUP Policy Documents and Reports*, 21–30). Regulation No. 9, on academic freedom, provides that “[a]ll members of the faculty, whether tenured or not, are entitled to academic freedom as set forth in the *1940 Statement of Principles on Academic Freedom and Tenure* . . .” (*AAUP Policy Documents and Reports*, 28).

The AAUP documents articulate academic national norms that evidence *national* custom and usage on academic freedom. Professional norms, however, are also embodied in the regulations, policies, and custom and usage of individual institutions. These institutional norms may overlap or coincide with national norms, especially if they incorporate or track AAUP statements. But institutional norms may also be local norms adapted to the particular institution’s character and mission or that of some particular organization with which the institution is affiliated. Whether national or local, professional academic freedom norms are enforced through the internal procedures of individual institutions. In more egregious or intractable cases, or cases of broad professional interest that implicate national norms, AAUP investigations and censure actions (see generally Section 14.5 of this book) may also become part of the enforcement process.

The legal version of academic freedom, in contrast to the professional version, is based on legal concepts that find their expression in legal norms enunciated by the courts. These legal norms, by definition, have the force of law and

thus are binding on institutions and faculty members in a way that professional norms are not.<sup>7</sup> In this sense, the distinction between legal norms of academic freedom and professional norms is similar to the broader distinction between law and policy (see Section 1.7). The primary source of legal norms of academic freedom is the decisions of the federal and state courts. These decisions are based primarily on federal constitutional law and on the common law of contract of the various states. (The foundational constitutional law principles are outlined in subsection 7.1.4 below.) Legal norms are enforced through litigation and court orders, as well as through negotiations that the parties undertake to avoid the filing of a lawsuit or to settle a lawsuit before the court has rendered any decision.

Trends from the 1970s to the present suggest that, overall, there has been relatively too little emphasis on the professional norms of academic freedom within individual institutions and relatively too much emphasis on the legal norms. The time may be ripe for faculty members and their institutions to reclaim the classical heritage of professional academic freedom and recommit themselves to elucidating and supporting the professional norms within their campus communities. (See Neil Hamilton, “Buttressing the Neglected Traditions of Academic Freedom,” 22 *Wm. Mitchell L. Rev.* 549 (1996).) Such developments would increase the likelihood that litigation could be reserved for more extreme cases where there has been recalcitrance and adamant refusals to respect academic customs and usages, national or institutional; and for cases where there is deep conflict between faculty academic freedom and “institutional” academic freedom, or between faculty academic freedom and student academic freedom. (See Robert O’Neil, “. . . But Litigation Is the Wrong Response,” *Chron. Higher Educ.*, August 1, 2003, B9; and Robert O’Neil, “Academic Freedom and the Constitution,” 11 *J. Coll. & Univ. Law* 275, 289–90 (1984).) The law and the courts could then draw the outer boundaries of academic freedom, providing correctives in extreme cases (see, for example, Section 7.1.4 below); while institutions and the professoriate would do the day-by-day and year-by-year work of creating and maintaining an environment supportive of academic freedom on their own campuses.

**7.1.4. The foundational constitutional law cases.** In a series of cases in the 1950s and 1960s, the U.S. Supreme Court gave academic freedom constitutional status under the First Amendment freedoms of speech and association, and to a lesser extent under the Fourteenth Amendment guarantee of procedural due process. The opinions in these cases include a number of ringing declarations on the importance of academic freedom. In *Sweezy v. New Hampshire*, 354 U.S. 234 (1957), both Chief Justice Warren’s plurality opinion and Justice Frankfurter’s concurring opinion lauded academic freedom in the course of reversing a contempt judgment against a professor who had refused to answer the state attorney general’s questions concerning a lecture delivered

---

<sup>7</sup>As suggested above in this subsection, professional norms may sometimes be converted into legal norms by being incorporated into a faculty contract or by being used as academic custom and usage that fills in gaps in a faculty contract.

at the state university. The Chief Justice, writing for a plurality of four Justices, stated that:

to summon a witness and compel him, against his will, to disclose the nature of his past expressions and associations is a measure of governmental interference in these matters. These are rights which are safeguarded by the Bill of Rights and the Fourteenth Amendment. We believe that there unquestionably was an invasion of petitioner's liberties in the area of academic freedom and political expression—areas in which the government should be extremely reticent to tread.

The essentiality of freedom in the community of American universities is almost self-evident. . . . Teachers and students must always remain free to inquire, to study and to evaluate, to gain new maturity and understanding; otherwise our civilization will stagnate and die [354 U.S. at 250].

Justice Frankfurter, writing for himself and Justice Harlan, made what has now become the classical statement on “the four essential freedoms” of the university:

It is the business of a university to provide that atmosphere which is most conducive to speculation, experiment and creation. It is an atmosphere in which there prevail “the four essential freedoms” of a university—to determine for itself on academic grounds who may teach, what may be taught, how it shall be taught, and who may be admitted to study [354 U.S. at 263, quoting a conference statement issued by scholars from the Union of South Africa].

In *Shelton v. Tucker*, 364 U.S. 479 (1960), the Court invalidated a state statute that compelled public school and college teachers to reveal all organizational affiliations or contributions for the previous five years. In its reasoning, the Court emphasized:

The vigilant protection of constitutional freedoms is nowhere more vital than in the community of American schools. “By limiting the power of the states to interfere with freedom of speech and freedom of inquiry and freedom of association, the Fourteenth Amendment protects all persons, no matter what their calling. But, in view of the nature of the teacher's relation to the effective exercise of the rights which are safeguarded by the Bill of Rights and by the Fourteenth Amendment, inhibition of freedom of thought, and of action upon thought, in the case of teachers brings the safeguards of those amendments vividly into operation. Such unwarranted inhibition upon the free spirit of teachers . . . has an unmistakable tendency to chill that free play of the spirit which all teachers ought especially to cultivate and practice; it makes for caution and timidity in their associations by potential teachers” [364 U.S. at 487, quoting *Wieman v. Updegraff*, 344 U.S. 183, 195 (1952) (Frankfurter, J., concurring)].

In *Griswold v. Connecticut*, 381 U.S. 479 (1965), the Court majority of six, in an opinion by Justice Douglas, stated that:

the State may not, consistently with the spirit of the First Amendment, contract the spectrum of available knowledge. The right of freedom of speech and press includes not only the right to utter or to print, but the right to

distribute, the right to receive, the right to read and freedom of inquiry, freedom of thought, and freedom to teach—indeed the freedom of the entire university community. Without those *peripheral rights* the specific rights would be less secure [381 U.S. at 482–83; emphasis added].

This statement is particularly important, not only for its comprehensiveness, but also because it focuses on “peripheral rights” under the First Amendment. These rights—better termed “correlative rights” or “ancillary rights”—are based on the principle that the express or core rights in the First Amendment are also the source of other included rights that correlate with or are ancillary to the express or core rights, and without which the core rights could not be fully protected. This principle is an important theoretical underpinning for the concept of academic freedom under the First Amendment. Academic freedom correlates to the express rights of free speech and press in the specific context of academia. The rights of speech and press, in other words, cannot be effectively protected in the college and university environment unless academic freedom, as a corollary of free speech and press, is also recognized. This correlative rights argument is closely related to the argument for implied rights under the First Amendment and other constitutional guarantees. Since it is generally accepted that the First Amendment is the source of an implied right of freedom of association (see, for example, *NAACP v. Alabama ex rel. Patterson*, 357 U.S. 449 (1958)), and since implied rights are recognized under other constitutional guarantees (see, for example, *Zablocki v. Redhail*, 434 U.S. 374 (1978), recognizing the right to marry as an implied right under the due process clause), there is considerable support, beyond *Griswold*, for a correlative or implied right to academic freedom under the First Amendment.

And in *Keyishian v. Board of Regents*, 385 U.S. 589 (1967), the Court quoted both *Sweezy* and *Shelton*, and added:

Our nation is deeply committed to safeguarding academic freedom, which is of transcendent value to all of us and not merely to the teachers concerned. That freedom is therefore *a special concern of the First Amendment*, which does not tolerate laws that cast a pall of orthodoxy over the classroom. . . . The classroom is peculiarly the “marketplace of ideas.” The Nation’s future depends upon leaders trained through wide exposure to that robust exchange of ideas which discovers truth “out of a multitude of tongues, [rather] than through any kind of authoritative selection” . . . [385 U.S. at 603; emphasis added].<sup>8</sup>

*Keyishian* is the centerpiece of the formative 1950s and 1960s cases. The appellants were State University of New York faculty members who refused to

---

<sup>8</sup>These strong statements of support for academic freedom did not stop with *Keyishian*, and they are not merely relics of the past. In *Rosenberger v. Rector & Visitors of University of Virginia*, 515 U.S. 819 (1995), for example, and again in *Grutter v. Bollinger*, 539 U.S. 306 (2003), the Court issued glowing statements on the importance of academic freedom to American higher education. See 515 U.S. at 835–36; 539 U.S. at 329.

sign a certificate (the “Feinberg Certificate”) stating that they were not and never had been Communists. This certificate was required under a set of laws and regulations designed to prevent “subversives” from obtaining employment in the state’s educational system. The faculty members brought a First Amendment challenge against the certificate requirements and the underlying law barring employment to members of subversive organizations, as well as other provisions authorizing dismissal for the “utterance of any treasonable or seditious word or words or the doing of any treasonable or seditious act,” and for “by word of mouth or writing wilfully and deliberately advocating, advising, or teaching the doctrine of forceful overthrow of the government.”

The Court held that the faculty members’ First Amendment freedom of association had been violated by the existence and application of this series of laws and rules that were both vague and overbroad (see Section 6.6.1 regarding the vagueness and overbreadth doctrines). The word “seditious” was held to be unconstitutionally vague, even when defined as advocacy of criminal anarchy:

[T]he possible scope of “seditious utterances or acts” has virtually no limit. For under Penal Law § 161, one commits the felony of advocating criminal anarchy if he “publicly displays any book . . . containing or advocating, advising or teaching the doctrine that organized government should be overthrown by force, violence, or other unlawful means.” Does the teacher who carries a copy of the Communist Manifesto on a public street thereby advocate criminal anarchy? . . . The teacher cannot know the extent, if any, to which a “seditious” utterance must transcend mere statement about abstract doctrine, the extent to which it must be intended to and tend to indoctrinate or incite to action in furtherance of the defined doctrine. The crucial consideration is that no teacher can know just where the line is drawn between “seditious” and nonseditious utterances and acts [385 U.S. at 598–99].

The Court also found that the state’s entire system of “intricate administrative machinery” was

a highly efficient *in terrorem* mechanism. . . . It would be a bold teacher who would not stay as far as possible from utterances or acts which might jeopardize his living by enmeshing him in this intricate machinery. . . . The result may be to stifle “that free play of the spirit which all teachers ought especially to cultivate and practice” [385 U.S. at 601, quoting *Wieman v. Updegraff*, 344 U.S. 183, 195 (Frankfurter, J., concurring)].

Noting that “the stifling effect on the academic mind from curtailing freedom of association in such a manner is manifest,” the Court rejected the older case of *Adler v. Board of Education*, 342 U.S. 485 (1951), which permitted New York to bar employment to teachers who were members of listed subversive organizations. In its place, the Court adopted this rule:

Mere knowing membership without a specific intent to further the unlawful aims of an organization is not a constitutionally adequate basis for exclusion from such positions as those held by appellants. . . . Legislation which sanctions

membership unaccompanied by specific intent to further the unlawful goals of the organization or which is not active membership violates constitutional limitations [385 U.S. at 606, 608].

One year after *Keyishian*, the Supreme Court decided *Pickering v. Board of Education*, 391 U.S. 563 (1968), and thus stepped gingerly into a new line of cases that would become the basis for the second stage of academic freedom's development in the courts. This line of cases, now called "the *Pickering/Connick* line," centers on the free speech rights of all public employees, not merely faculty members, and is therefore addressed in subsection 7.1.1 above.

In addition to its reliance on free speech and press, and procedural due process, the U.S. Supreme Court has also tapped into the First Amendment's religion clauses to develop supplementary protection for academic freedom. In *Epperson v. Arkansas*, 393 U.S. 97 (1968), and again in *Edwards v. Aguillard*, 482 U.S. 578 (1987), the Court used the establishment clause (see Section 1.6 of this book) to strike down state statutes that interfered with public school teachers' teaching of evolution. (See A. Morris, "Fundamentalism, Creationism, and the First Amendment," 41 *West's Educ. Law Rptr.* 1 (1987).) And in *O'Connor v. Ortega*, discussed in subsection 7.1.1 above, the U.S. Supreme Court used the Fourth Amendment's search and seizure clause in protecting an academic employee's office and his papers from warrantless searches. Similar Fourth Amendment issues are increasingly arising concerning electronic and digital records (see Martha McCaughey, "Windows Without Curtains: Computer Privacy and Academic Freedom," *Academe*, September–October 2003, 39–42). If faculty members' academic writings, research results, or other research materials are stored in their offices or laboratories on their own computer disks or on the hard drive of a computer they own, there may be an expectation of privacy, and thus a level of Fourth Amendment protection, similar to that in *O'Connor v. Ortega*. But if the writings or materials are stored on the hard drive of a computer that the institution (or the state) owns, or stored on the institution's network, the expectation of privacy and the Fourth Amendment protection will likely depend on the terms of the institution's computer use policies. (See, for example, Robert O'Neil, "Who Owns Professors' E-Mail Messages?" *Chron. Higher Educ.*, June 25, 2004, B9 (special legal issues supp.))<sup>9</sup>

The lower federal and state courts have had many occasions to apply U.S. Supreme Court precedents to a variety of academic freedom disputes pitting faculty members against their institutions. The source of law most frequently invoked in these cases is the First Amendment's free speech clause, as interpreted in the *Pickering/Connick* line of cases. Some cases have also relied on *Keyishian* and its forerunners, either in lieu of or as a supplement to the *Pickering/Connick* line. The legal principles that the courts have developed based on these two lines of

---

<sup>9</sup>The Web site of the Electronic Privacy Information Center, available at <http://www.epic.org/privacy/workplace>, contains current information on electronic privacy in the workplace and numerous sources to consult for further information.

cases, however, are not as protective of faculty academic freedom as the Supreme Court's declarations in the 1950s and 1960s cases might have suggested. As could be expected, the courts have focused on the specific facts of each case and have reached varying conclusions based on the facts, the particular court's disposition on liberal versus strict construction of First Amendment protections, and its sensitivities to the nuances of academic freedom. Sections 7.2 through 7.5 below provide analysis and case examples in four broad areas of concern, and Sections 7.6 through 7.8 address some additional special problems.

### ***7.1.5. External versus internal restraints on academic freedom.***

As indicated in subsection 7.1.2 above, there are two paradigms for academic freedom conflicts: they may be either external ("extramural") or internal ("intramural"). The first type of conflict occurs when a government body *external* to the institution has allegedly impinged upon the institution's academic freedom or that of its faculty or students (see Robert O'Neil, "Academic Freedom and the Constitution," 11 *J. Coll. & Univ. Law* 275, 276–83 (1984)). The second type of conflict occurs when the institution or its administrators have allegedly impinged upon the academic freedom of one or more of the institution's faculty members or students.<sup>10</sup> The means of infringement, the competing interests, and, to some extent, the applicable law may differ from one type of conflict to the other. The first type of conflict, or case, is usually controlled by the *Keyishian* line of cases (see subsection 7.1.4 above) or by the *NTEU* case that is an offshoot of *Pickering/Connick* analysis (see subsection 7.1.1 above); the second type of conflict is usually controlled by the *Pickering/Connick* line of cases.

The primary source of law involved in external conflicts is likely to be the First Amendment—not only free speech and free press, but also freedom of association and freedom of religion. If the conflict were between a government body and a private institution, the institution would have its own First Amendment rights to assert against the government, as would its faculty members (and its students, as the case may be). If the conflict were between a government body and a public institution, the institution's faculty members (and students, as the case may be) could assert their First Amendment rights against the government; but the public institution itself would not have its own constitutional rights to assert, since it is an arm of government. (It could, however, assert and support the rights of its faculty members and/or students.)

The government body that allegedly interferes with academic freedom could be: (1) a state legislature, as in the *Keyishian* case and the *Epperson* and *Edwards* cases (see subsection 7.1.4 above) and *Urofsky v. Gilmore* (discussed in Section 7.3 below); (2) a state legislative committee; (3) a state attorney general, as in the

---

<sup>10</sup>Such infringement can occur in overt and formal ways, as in most of the cases in Sections 7.2 to 7.5 below, or in covert and informal ways that may be too amorphous to be legally redressable. For examples of the latter type of impingement, see Alison Schneider, "The Academic Path to Pariah Status: Personal Disputes and Controversial Research Lead Some Scholars to Be Shunned by Colleagues," *Chron. Higher Educ.*, July 2, 1999, A12.

*Sweezy* case (see subsection 7.1.4 above); (4) a grant-making agency, such as the National Institutes of Health in *Board of Trustees of Stanford University v. Sullivan* (see Section 7.7.2 below) or the National Endowment for the Arts in the *Finley* case (see Section 13.4.6; and see generally Christopher Myers, “Many Colleges Deplore Anti-obscenity Pledge, but Most Accept U.S. Arts Grants Anyway,” *Chron. Higher Educ.*, July 11, 1990, A1); (5) a regulatory agency, such as the federal Equal Employment Opportunity Commission (EEOC) in *University of Pennsylvania v. EEOC* (see Section 7.7.1 below); (6) a grand jury, as in *Hammond v. Brown*, 323 F. Supp 326 (N.D. Ohio 1971), *affirmed* 450 F.2d 480 (6th Cir. 1971); (7) a city police department, as in *White v. Davis*, 533 P.2d 222 (Cal. 1975) (see Section 11.5); or (8) a court, as in some of the cases discussed in Section 7.7 below (see also *Kay v. Board of Higher Education*, 18 N.Y.S.2d 821 (N.Y. 1940) (the Bertrand Russell case)).

External or extramural academic freedom conflicts may also involve *private* bodies external to the institution that allegedly interfere with the academic freedom of the institution or its faculty members (or students). The external private body may be a foundation or other funding organization (see, for example, Erin Strout, “Provosts Object to Language Added to Foundations’ Grant Agreements,” *Chron. Higher Educ.*, May 14, 2004, A29); a religious organization or informal group of religious persons, as in the *Linnemeir* case discussed below; a political interest group, as in some of the “political correctness” examples discussed below; or a group of taxpayers as in the *Yacovelli* case discussed below. If it is a private body that infringes upon academic freedom, neither the institution nor its faculty members may assert constitutional claims against that body, except in the unusual case where the private body is engaged in state actions (see Section 1.5.2).

From the 1970s through the end of the twentieth century, internal academic freedom conflicts arose much more frequently than did external conflicts, at least in terms of litigation that resulted in published opinions of the courts. This ascendance of internal conflicts, at least in public institutions, was probably fueled by the U.S. Supreme Court’s decision in the *Pickering* case (see subsection 7.1.1), which provided a conceptual base upon which faculty members could assert free expression claims against their institutions. In the early years of the twenty-first century, however, external conflicts became more frequent and more visible, and commanded considerably more attention from practitioners, scholars, courts, and the media. (See, for example, Mary Burgan, “Academic Freedom in a World of Moral Crises,” *Chron. Higher Educ.*, September 6, 2002, B20.) The impetus for this reemergence apparently came primarily from two developments. One was the escalating terrorism marked by the disasters of September 11, 2001, which led to the USA PATRIOT Act, 115 Stat. 272 (2001), and other federal statutes and regulations that substantially impact America’s campuses. (See generally “Academic Freedom and National Security in a Time of Crisis: A Report of the AAUP’s Special Committee,” *Academe*, November–December 2003, 34–59.) The other development was a resurgence of the “political correctness” phenomenon,<sup>11</sup> in particular emphasizing allegations of political, ethnic, and religious bias or favoritism, on America’s campuses.

---

<sup>11</sup>For background, see generally Paul Berman (ed.), *Debating P.C.: The Controversy over Political Correctness on College Campuses* (Dell, 1992).

Regarding the first development, the PATRIOT Act has been a focal point of concern. (See Section 13.2.4 of this book for a general discussion of the PATRIOT Act.) The Act permits federal investigators to access various private communications, including those of faculty members, undertaken by way of telephones or computer networks; and permits access into certain library records kept by libraries, including those on America's campuses. (For this aspect of the Act, see Section 13.2.12.2 of this book and "Academic Freedom and National Security," above, 38–41.) The Act also places certain restrictions on foreign students wishing to study at American colleges and universities and foreign scholars seeking to visit American colleges and universities. It has frequently been argued that some uses of these federal powers on American campuses would, by interfering with the privacy of academic communications, interfere with faculty academic freedom and institutional autonomy. (See, for example, Jonathan Cole, "The Patriot Act on Campus: Defending the University Post-9/11," *Boston Review*, Summer 2003; available at <http://bostonreview.net/BR.3/cole.html>.)

Another concern post-9/11 has been various federal government initiatives that restrict or potentially restrict scientific research undertaken at American colleges and universities. Some of these restrictions are in the PATRIOT Act itself; others are in regulations promulgated by various government agencies. (See Jamie Keith, "The War on Terrorism Affects the Academy: Principal Post-September 11, 2001 Federal Anti-Terrorism Statutes, Regulations, and Policies That Apply to Colleges and Universities," 30 *J. College & Univ. Law* 239 (2004).) It has frequently been argued that several of these restrictions on university research, including restrictions imposed upon the granting of federal research funds, can limit research and publication in ways that interfere with faculty academic freedom and institutional autonomy. (See, for example, Julie Norris, *Restrictions on Research Awards: Troublesome Clauses, A Report of the AAU/COGR Task Force* (March 2004), available at <http://www.cogr.edu> and at <http://www.aau.edu>; and see also "Academic Freedom and National Security," above, 34–59.)

Regarding the second development mentioned above, claims regarding racial and religious bias, there have been various challenges to college programs, events, or decisions that are said to reflect such bias. In *Linnemeir v. Board of Trustees, Indiana University-Purdue University, Fort Wayne*, 260 F.3d 757 (7th Cir. 2001), for example, state taxpayers and individual state legislators challenged the planned performance of a play that a student had selected for his senior thesis and his departmental faculty had approved. The plaintiffs argued that the play, which presented a critique of Christianity, would violate the First Amendment's establishment clause and would be offensive to many Christians. The federal district court denied the plaintiffs' motion for a preliminary injunction (155 F. Supp. 2d 1034 (N.D. Ind. 2001)), and the appellate court affirmed the denial (260 F.3d 757 (7th Cir. 2001)). Similarly, in *Yacovelli v. Moeser*, taxpayers and students challenged an orientation reading program planned for incoming students at the University of North Carolina/Chapel Hill. The plaintiffs claimed that use of the assigned book, which concerned the early history of the Islamic faith, would violate the federal establishment clause and would also be an

exercise in "political correctness." At around the same time, a legislative appropriations committee of the North Carolina legislature sought to block the use of public funds for the planned orientation program. In the lawsuit, the U.S. District Court for the Middle District of North Carolina rejected the plaintiffs' challenge (August 15, 2002), and the U.S. Court of Appeals for the Fourth Circuit affirmed (August 19, 2002). (See Donna Euben, "Curriculum Matters," *Academe*, November–December 2002, 86, for discussion of this case.) Subsequently, the district court also rejected the plaintiffs' alternative argument that the program violated students' free exercise rights under the First Amendment (2004 WL 1144183 (M.D.N.C. 2004) and 324 F. Supp. 2d 760 (M.D.N.C. 2004)).

There have also been various challenges to professors' or departmental faculties' decisions regarding courses, course materials, classroom discussions, and grades. The challengers typically cite particular decisions that they claim foster indoctrination or otherwise reflect a political (usually liberal) bias. The challengers often claim that such decisions violate student academic freedom, thus adding an additional dimension of conflict to the situation—a dimension that is illustrated by the *Yacovelli* case above. For additional examples of student academic freedom claims, and challenges to faculty academic freedom, in the context of political bias disputes, see the discussion of the proposed "Academic Bill of Rights" in Section 8.1.4.

**7.1.6. "Institutional" academic freedom.** As academic freedom developed, originally in Europe and then later in the United States, it had two branches: faculty academic freedom and student academic freedom. (See generally Richard Hofstadter & Walter Metzger, *The Development of Academic Freedom in the United States* (Columbia University, 1955), 386–91.) But in modern parlance, articulated primarily in court decisions beginning in the early 1980s, a third type of academic freedom has joined the first two: that of the colleges and universities themselves, or "institutional academic freedom." (See, for example, *Feldman v. Ho* and *Edwards v. California University of Pennsylvania* in Section 7.2.2; *Urofsky v. Gilmore* in Section 7.3; and *University of Pennsylvania v. EEOC* in Section 7.7.) Consequently, there are now three sets of beneficiaries of academic freedom protections: faculty members, students, and individual higher educational institutions. Obviously the interests of these three groups are not always compatible with one another, therefore assuring that conflicts will arise among the various claimants of academic freedom. As the court stated in *Piarowski v. Illinois Community College*, 759 F.2d 625 (7th Cir. 1985):

[T]he term [academic freedom] is equivocal. It is used to denote both the freedom of the academy to pursue its ends without interference from the government . . . and the freedom of the individual teacher (or in some versions—indeed in most cases—the student) to pursue his ends without interference from the academy; and these two freedoms are in conflict . . . [759 F.2d at 629].

(See generally David Rabban, "A Functional Analysis of 'Individual' and 'Institutional' Academic Freedom Under the First Amendment," 53 *Law & Contemp. Probs.* 227 (1990); and David Rabban, "Academic Freedom, Individual or Institutional?" *Academe*, November–December 2001, 16.)

Institutional academic freedom (or institutional autonomy) entails the freedom to determine who may teach, the freedom to determine what may be taught, the freedom to determine how the subject matter will be taught, and the freedom to determine who may be admitted to study. In American law and custom, these four freedoms are usually traced to Justice Felix Frankfurter's concurring opinion in *Sweezy v. New Hampshire*, 354 U.S. 234, 263 (1957) (discussed in subsection 7.1.4 above). But it was not until the case of *Regents of University of Michigan v. Ewing*, 474 U.S. 214 (1985) (further discussed in Section 9.3.2), that the U.S. Supreme Court explicitly distinguished between an institution's academic freedom and that of its faculty and students.<sup>12</sup> "Academic freedom," said the Court, "thrives not only on the independent and uninhibited exchange of ideas among teachers and students . . . but also, and somewhat inconsistently, on autonomous decisionmaking by the academy itself" (474 U.S. at 226 n.12). This statement on institutional academic freedom, however, is not free from ambiguity. Although the Court did recognize the "academic freedom" of "state and local educational institutions," in the very same paragraph it also focused on "the multitude of academic decisions that are made daily by faculty members of public educational institutions . . ." (474 U.S. at 226). Thus the Court may not have intended to juxtapose the interests of the institution against those of its faculty, and was apparently assuming that the defendant university was either acting through its faculty members or acting in their interest.<sup>13</sup> The Court's distinction between institutional academic freedom and faculty (or student) academic freedom thus does not entail a separation of the institution's interests from those of its faculty members, nor does it suggest that institutional interests must prevail over faculty interests if the two are in conflict. (See Richard Hiers, "Institutional Academic Freedom vs. Faculty Academic Freedom in Public Colleges and Universities: A Dubious Dichotomy," 29 *J. Coll. & Univ. Law* 35, 56–57, 81–82 (2002).)

The same might be said of the Court's later statement on institutional academic freedom in *Grutter v. Bollinger*, 539 U.S. 306 (2003), the University of Michigan affirmative action case (see Section 8.2.5). As in *Ewing*, the Court in *Grutter* spoke of the academic freedom or autonomy interests of the institution (539 U.S. at 324, 329).<sup>14</sup> But, as in *Ewing*, the Court did not separate those interests from the

---

<sup>12</sup>Prior to *Ewing*, Justice Powell had drawn a similar distinction in his opinion in *Regents of the University of California v. Bakke*, 438 U.S. 265, 312 (1978), but he was speaking only for himself, not for the Court.

<sup>13</sup>Indeed, in academic matters, institutions do not operate separately from their faculties. It is "the traditional role of deans, provosts, department heads, and faculty [to make] academic decisions," and they make "discretionary choices . . . in the contexts of hiring, tenure, curriculum selection, grants, and salaries" (*Urofsky v. Gilmore*, 216 F.3d 401, 432–33 (Wilkinson, Ch. J., concurring in result)).

<sup>14</sup>Interestingly, the defendant in both *Ewing* and *Grutter*, the University of Michigan, happens to be a "constitutionally based institution" (see Section 12.2.3) with the constitutional status under Michigan's state constitution. This status provides the university considerable institutional autonomy (perhaps one might also say institutional academic freedom) as a matter of state law. It was apparently *not* this type of autonomy that the Court had in mind in *Ewing* and *Grutter*; and there is no indication that the Court would distinguish between constitutionally based and statutorily based state institutions in applying its rulings in *Ewing* and *Grutter/Gratz*.

interests of the faculty, or pit the two sets of interests against one another, or suggest that the institutional academic freedom claims would necessarily prevail over faculty academic freedom claims. (See Richard Hiers, “Institutional Academic Freedom—A Constitutional Misconception: Did *Grutter v. Bollinger* Perpetuate the Confusion?” 30 *J. Coll. & Univ. Law* 531, 568–77 (2004).)

Had the Court in *Ewing* or *Grutter* recognized institutional academic freedom as a First Amendment right separate from that of faculty members, additional conceptual difficulties would have arisen. The institution in these cases is a public institution that, like many other public colleges and universities, is an arm of the state government. States and state governmental entities do not have federal constitutional rights (see, for example, *Native American Heritage Commission v. Board of Trustees of the California State University*, 59 Cal. Rptr.2d. 402 (1996)). According to constitutional theory, persons (that is, private individuals and private corporations)—not governments—have rights; and rights are limits on governmental power to be asserted against government, rather than extensions of government power to be asserted on the government’s own behalf. (See William Kaplin, *American Constitutional Law: An Overview, Analysis, and Integration* (Carolina Academic Press, 2004), 38–40, 42–44.) Public institutions’ claims of institutional academic freedom therefore cannot be federal constitutional rights claims as such. These claims are better understood as claims based on interests—“governmental interests”—that can be asserted by public institutions to defend themselves against faculty members’ or students’ claims that the institution has violated their individual constitutional rights. This is the actual setting in which institutional academic freedom is discussed in both *Ewing* and *Grutter*. In this context, “institutional autonomy” is a more apt descriptor of the institution’s interests than is “institutional academic freedom,” since the former does not have the “rights” connotation that the latter phrase has.

Public colleges and universities may assert these institutional autonomy interests not only in internal or intramural academic freedom disputes with their faculties (or students) but also in external or extramural disputes with other governmental bodies or private entities that seek to interfere with the institution’s internal affairs. In the context of an external dispute, there may be no conflict between the institution’s interests and those of its faculty (or its students), in which case the institution may assert its faculty’s (or student body’s) academic interests as well as its own autonomy interests. If the institution is a private institution, however, and it is in conflict with an agency of government, it may also assert its own First Amendment constitutional right to academic freedom (see subsection 7.1.5 above). A rights claim fits this context because a private college or university is a corporate person within the meaning of the federal Constitution and therefore may assert the same constitutional rights as a private individual may assert. This is the only context in which institutional academic freedom makes sense as a constitutional rights claim.

## ***Sec. 7.2. Academic Freedom in Teaching***

**7.2.1. In general.** Courts are generally reticent to become involved in academic freedom disputes concerning course content, teaching methods, grading practices, classroom demeanor, and the assignment of instructors to particular

courses, viewing these matters as best left to the competence of the educators themselves and the administrators who have primary responsibility over academic affairs. Academic custom also frequently leaves such matters primarily to faculty members and their deans and department chairs (see “1940 Statement of Principles on Academic Freedom and Tenure,” in *AAUP Policy Documents and Reports* (9th ed., 2001), 3–7; and “Statement on Government of Colleges and Universities,” in *AAUP Policy Documents and Reports*, 217). Subsections 7.2.2 and 7.2.3 below explore the circumstances in which courts may intervene in such disputes, particularly in public institutions. Subsection 7.2.4 identifies and critiques the various types of analysis that courts may use in academic freedom cases concerning teaching. The concluding subsection (7.2.5) considers the sources and extent of protections for the freedom to teach in private institutions.

**7.2.2. *The classroom.*** Two classical cases from the early 1970s illustrate the traditional posture of judicial deference concerning classroom matters. *Hetrick v. Martin*, 480 F.2d 705 (6th Cir. 1973), concerned a state university’s refusal to renew a nontenured faculty member’s contract. The faculty member’s troubles with the university administration apparently began when unnamed students and the parents of one student complained about certain of her in-class activities. To illustrate the “irony” and “connotative qualities” of the English language, for example, the faculty member once told her freshman students, “I am an unwed mother.” At that time she was a divorced mother of two, but she did not reveal that fact to her class. On occasion she also apparently discussed the war in Vietnam and the military draft with one of her freshman classes.

The faculty member sued the university, alleging an infringement of her First Amendment rights. The court ruled that the university had not based the non-renewal on any statements the faculty member had made but rather on her “pedagogical attitude.” The faculty member believed that her students should be free to organize assignments in accordance with their own interests, while the university expected her to “go by the book.” Thus, viewing the case as a dispute over teaching methods, the court refused to equate the teaching methods of professors with constitutionally protected speech:

We do not accept plaintiff’s assertion that the school administration abridged her First Amendment rights when it refused to rehire her because it considered her teaching philosophy to be incompatible with the pedagogical aims of the University. Whatever may be the ultimate scope of the amorphous “academic freedom” guaranteed to our Nation’s teachers and students . . . it does not encompass the right of a nontenured teacher to have her teaching style insulated from review by her superiors . . . just because her methods and philosophy are considered acceptable somewhere in the teaching profession [480 F.2d at 709].

*Clark v. Holmes*, 474 F.2d 928 (7th Cir. 1972), also involved a state university’s refusal to rehire a nontenured instructor due to his teaching methods and classroom behavior. Clark had been told that he could be rehired if he was willing to remedy certain deficiencies—namely, that he “counseled an excessive

number of students instead of referring them to [the university's] professional counselors; he overemphasized sex in his health survey course; he counseled students with his office door closed; and he belittled other staff members in discussions with students." After discussions with his superiors, in which he defended his conduct, Clark was rehired; but in the middle of the year he was told that he would not teach in the spring semester because of these same problems.

Clark brought suit, claiming that, under the *Pickering* case (see Section 7.1 above), the university had violated his First Amendment rights by not rehiring him because of his speech activities. The court, disagreeing, refused to apply *Pickering* to this situation: (1) Clark's disputes with his colleagues about course content were not matters of public concern, as were the matters involved in *Pickering*; and (2) Clark's disputes involved him as a teacher, not as a private citizen, whereas the situation in *Pickering* was just the opposite. The court then held that the institution's interest as employer overcame any academic freedom interests the teacher may have had:

But we do not conceive academic freedom to be a license for uncontrolled expression at variance with established curricular contents and internally destructive of the proper functioning of the institution. First Amendment rights must be applied in light of the special characteristics of the environment in the particular case (*Tinker v. Des Moines Indep. Community School Dist.*, 393 U.S. 503, 506 (1969); *Healy v. James*, 408 U.S. 169 (1972)). The plaintiff here irresponsibly made captious remarks to a captive audience, one, moreover, that was composed of students who were dependent upon him for grades and recommendations. . . .

Furthermore, *Pickering* suggests that certain legitimate interests of the state may limit a teacher's right to say what he pleases: for example, (1) the need to maintain discipline or harmony among coworkers; (2) the need for confidentiality; (3) the need to curtail conduct which impedes the teacher's proper and competent performance of his daily duties; and (4) the need to encourage a close and personal relationship between the employer and his superiors, where that relationship calls for loyalty and confidence [474 F.2d at 931].

Most of the more recent cases are consistent with *Hetrick* and *Clark*. In *Wirsing v. Board of Regents of the University of Colorado*, 739 F. Supp. 551 (D. Colo. 1990), *affirmed without opinion*, 945 F.2d 412 (10th Cir. 1991), for example, a tenured professor of education taught her students "that teaching and learning cannot be evaluated by any standardized test." Consistent with these beliefs, the professor refused to administer the university's standardized course evaluation forms for her classes. The dean denied her a pay increase because of her refusal. The professor sought a court injunction ordering the regents to award her the pay increase and to desist from requiring her to use the form. She argued that standardized forms were "contrary to her theory of education" and that by forcing her to administer the forms, the university was "interfering arbitrarily with her classroom method, compelling her

speech, and violating her right to academic freedom.” The court rejected her argument:

Here, the record is clear that Dr. Wirsing was not denied her merit salary increase because of her teaching methods, presentation of opinions contrary to those of the university, or otherwise presenting controversial ideas to her students. Rather, she was denied her merit increase for her refusal to comply with the University’s teacher evaluation requirements. . . . [A]lthough Dr. Wirsing may have a constitutionally protected right under the First Amendment to disagree with the University’s policies, she has no right to evidence her disagreement by failing to perform the duty imposed upon her as a condition of employment. *Shaw v. Board of Trustees*, 396 F. Supp. 872, 886 (D.C. Md. 1975), *aff’d*, 549 F.2d 929 (4th Cir. 1976) [739 F. Supp. at 553].

Since the professor remained free to “use the form as an example of what not to do . . . [and to] criticize openly both the [standardized] form and the University’s evaluation form policy,” the university’s requirement was “unrelated to course content [and] in no way interferes with . . . academic freedom.” Moreover, according to the court, adoption of a method of teacher evaluation “is part of the University’s own right to academic freedom.” Thus, in effect, the court reasoned that the university’s actions did not interfere with *faculty* academic freedom and that, at any rate, the university’s actions were protected by *institutional* academic freedom.<sup>15</sup> (See Section 7.1.6 above for more on institutional academic freedom.)

In *Martin v. Parrish*, 805 F.2d 583 (5th Cir. 1986), the court upheld the dismissal of an economics instructor at Midland College in Texas, ruling that the instructor’s use of profane language in a college classroom did not fall within the scope of First Amendment protection. Applying *Connick v. Myers* (Section 7.1 above), the court held that the instructor’s language did not constitute speech on “matters of public concern.” The court also acknowledged the professor’s claim that, apart from *Connick*, he had “a first amendment right to ‘academic freedom’ that permits use of the language in question,” but the court summarily rejected this claim because “such language was not germane to the subject matter in his class and had no educational function” (805 F.2d at 584 n.2). In addition, the court used an alternative basis for upholding the dismissal. Applying elementary/secondary education precedents (see *Bethel School District v. Fraser*, 478 U.S. 675 (1986)), it held that the instructor’s use of the language was unprotected because “it was a deliberate, superfluous attack on a ‘captive audience’ with no academic purpose or justification.”

---

<sup>15</sup>In other situations, rather than challenging a requirement that he or she administer the student evaluation forms, a faculty member may challenge the institution’s use of student evaluations as a means of reviewing the faculty member’s classroom teaching. Assuming that the evaluations are adequately constructed and administered, and the results are accurately tabulated, a claim that use of student evaluation data infringes the faculty member’s academic freedom is likely to fail. (See *Yarcheski v. Reiner*, 669 N.W.2d 487 (S.D. 2003), in which the court rejected such a claim; and see generally Section 6.6 of this book.)

In a separate opinion, a concurring judge agreed with the court majority's *Connick v. Myers* analysis but disagreed with its alternative "captive audience" analysis, on the grounds that the elementary/secondary precedents the court had invoked should not apply to higher education. The concurring judge also agreed with the majority's rejection of the professor's argument based on an independent "first amendment right to 'academic freedom.'" Like the majority, the concurring judge acknowledged the possibility of a First Amendment academic freedom argument independent of the *Pickering/Connick* line of cases (Section 7.1 above) but rejected the notion that the professor's language was within the bounds of academic freedom.<sup>16</sup> According to the concurring judge: "While some of [the professor's] comments arguably bear on economics and could be viewed as relevant to Martin's role as a teacher in motivating the interest of his students, his remarks as a whole are unrelated to economics and devoid of any educational function."

*Bishop v. Aronov*, 926 F.2d 1066 (11th Cir. 1991), continued the trend toward upholding institutional authority over faculty members' classroom conduct while raising new issues concerning religion and religious speech in the classroom. An exercise physiology professor, as the court explained, "occasionally referred to his religious beliefs during instructional time. . . . Some of his references concerned his understanding of the creative force behind human physiology. Other statements involved brief explanations of a philosophical approach to problems and advice to students on coping with academic stresses." He also organized an optional after-class meeting, held shortly before the final examination, to discuss "Evidences of God in Human Physiology." But "[h]e never engaged in prayer, read passages from the Bible, handed out religious tracts, or arranged for guest speakers to lecture on a religious topic during instructional time." Some students nevertheless complained about the in-class comments and the optional meeting. The university responded by sending the professor a memo requiring that he discontinue "(1) the interjection of religious beliefs and/or preferences during instructional time periods and (2) the optional classes where a 'Christian Perspective' of an academic topic is delivered." The professor challenged the university's action as violating both his freedom of speech and his freedom of religion (see generally Section 1.6.2) under the First Amendment. The district court emphasized that "the university has created a forum for students and their professors to engage in a free interchange of ideas" and granted summary judgment for the professor (732 F. Supp. 1562 (N.D. Ala. 1990)). The U.S. Court of Appeals disagreed and upheld the university's actions.

With respect to the professor's free speech claims, the appellate court, like the majority in *Martin* (above), applied recent elementary/secondary education

---

<sup>16</sup>For earlier appearances of this academic freedom or "germaneness" analysis, see *State Board for Community Colleges v. Olson*, 687 P.2d 429, 437 (Colo. 1984), and two classic elementary/secondary cases: *Pred v. Board of Instruction of Dade County, Florida*, 415 F.2d 851, 857 n.17 (5th Cir. 1969); and *Mailloux v. Kiley*, 323 F. Supp. 1387 (D. Mass. 1971), *affirmed on other grounds*, 448 F.2d 1242 (1st Cir. 1971). For related analysis, focusing on the problem of hate speech in the classroom, and also distinguishing between germane and nongermane comments, see J. Weinstein, "A Constitutional Roadmap to the Regulation of Campus Hate Speech," 38 *Wayne L. Rev.* 163, 192-214 (1991).

precedents that display considerable deference to educators—relying especially on *Hazelwood School District v. Kuhlmeier*, 484 U.S. 260 (1988), a secondary education case involving student rights.<sup>17</sup> Without satisfactorily justifying *Hazelwood*'s extension either to higher education in general or to faculty members, the court asserted that “educators do not offend the First Amendment by exercising editorial control over the style and content of student [or professor] speech in school-sponsored expressive activities so long as their actions are reasonably related to legitimate pedagogical concerns” (926 F.2d at 1074, citing *Hazelwood*, 484 U.S. at 272–73). Addressing the academic freedom implications of its position, the court concluded:

Though we are mindful of the invaluable role academic freedom plays in our public schools, particularly at the post-secondary level, we do not find support to conclude that academic freedom is an independent First Amendment right. And, in any event, we cannot supplant our discretion for that of the University. Federal judges should not be ersatz deans or educators. In this regard, we trust that the University will serve its own interests as well as those of its professors in pursuit of academic freedom [926 F.2d at 1075].

In upholding the university's authority in matters of course content as superior to that of the professor, the court accepted the validity and applicability of two particular institutional concerns underlying the university's decision to limit the professor's instructional activities. First was the university's “concern . . . that its courses be taught without personal religious bias unnecessarily infecting the teacher or the students.” Second was the concern that optional classes not be conducted under circumstances that give “the impression of official sanction, which might [unduly pressure] students into attending and, at least for purposes of examination, into adopting the beliefs expressed” by the professor. Relying on these two concerns, against the backdrop of its general deference to the institution in curricular matters, the court concluded:

In short, Dr. Bishop and the University disagree about a matter of content in the course he teaches. The University must have the final say in such a dispute. Though Dr. Bishop's sincerity cannot be doubted, his educational judgment can be questioned and redirected by the University when he is acting under its auspices as a course instructor, but not when he acts as an independent educator or researcher. The University's conclusions about course content must be allowed to hold sway over an individual professor's judgments. By its memo to Dr. Bishop, the University seeks to prevent him from presenting his religious viewpoint during instructional time, even to the extent that it represents his professional opinion about his subject matter. We have simply concluded that

---

<sup>17</sup>*Hazelwood* was also relied on in the *Silva* case, discussed below in this section. For other applications of *Hazelwood* to higher education, see *Brown v. Li*, 308 F.3d 939 (9th Cir. 2002), and *Axson-Flynn v. Johnson*, 356 F.3d 1277 (10th Cir. 2004), both discussed in Section 8.1.4. For a more general discussion on applying lower education precedents to higher education, see Section 1.4.4.

the University as an employer and educator can direct Dr. Bishop to refrain from expression of religious viewpoints in the classroom and like settings [926 F.2d at 1076–77].

Though the appellate court’s opinion may seem overly deferential to the institution’s prerogatives as employer, and insufficiently sensitive to the particular role of faculty academic freedom in higher education (see generally Robert O’Neil, “*Bishop v. Aronov*: A Comment,” 18 *J. Coll. & Univ. Law* 381 (1992)), the court did nevertheless demarcate limits on its holding. These limits are very important. Regarding the professor’s classroom activities, the court clearly stated that the university’s authority applies only “to the classroom speech of [the professor]—wherever he purports to conduct a class for the University.” Even in that context, the court conceded that “[o]f course, if a student asks about [the professor’s] religious views, he may fairly answer the question.” Moreover, the court emphasized that “the university has not suggested that Dr. Bishop cannot hold his particular views; express them, on his own time, far and wide and to whomever will listen; or write and publish, no doubt authoritatively, on them; nor could it so prohibit him.” Similarly, regarding the optional meetings, the court noted that “[t]he University has not suggested that [the professor] cannot organize such meetings, make notice of them on campus, or request University space to conduct them; nor could it so prohibit him.” As long as the professor “makes it plain to his students that such meetings are not mandatory, not considered part of the coursework, and not related to grading, the university cannot prevent him from conducting such meetings.”

With respect to the professor’s freedom of religion claims, the court’s analysis was much briefer than its free speech analysis but just as favorable for the university. The professor had claimed that the university’s restrictions on his expression of religious views violated his rights under the free exercise clause and also violated the establishment clause, because only Christian viewpoints, but not other religious viewpoints, were restricted.

The court rejected the professor’s free exercise claim because he “has made no true suggestion, much less demonstration, that any proscribed conduct of his impedes the practice of religion. . . . [T]he university’s restrictions of him are not directed at his efforts to practice religion, per se, but rather are directed at his practice of teaching.” In similar summary fashion, the court rejected the establishment clause claim because “the University has simply attempted to maintain a neutral, secular classroom by its restrictions on Dr. Bishop’s expressions.”<sup>18</sup> Moreover, the university’s restrictions affected only Christian speech

---

<sup>18</sup>For another classroom case in which the court rejected a professor’s freedom of religion claims, see *Lynch v. Indiana State University Board of Trustees*, 378 N.E.2d 900 (Ind. 1978). For cases involving the establishment clause, see *Linnemeir v. Board of Trustees, Indiana University-Purdue University, Fort Wayne*, 260 F.3d 757 (7th Cir. 2001), discussed in Donna Euben, “The Play’s the Thing,” *Academe*, November–December 2001 (rejecting an establishment clause challenge to a student-selected and faculty-approved play challenging conventional Christianity); and *Calvary Bible Presbyterian Church of Seattle v. University of Washington*, 436 P.2d 189 (Wash. S. Ct. 1967) (rejecting an establishment clause challenge to teaching the Bible as literature).

because that was the only speech at issue in the situation the university was addressing; “[s]hould another professor express [other] religious beliefs in the classroom,” presumably the university would impose similar restrictions.<sup>19</sup> (For a suggested framework for analyzing the religion claims in *Bishop* and related cases, see O’Neil, above.)

More recent cases have served to enhance institutional authority to determine the content of particular courses and assign instructors to particular courses. For example, in *Webb v. Board of Trustees of Ball State University*, 167 F.3d 1146 (7th Cir. 1999) (further discussed in Section 7.2.2), the court relied on the distinction between institutional academic freedom and faculty academic freedom (see Section 7.1.6 above) to reject a professor’s claimed right to teach certain classes. Quoting from Justice Frankfurter’s concurrence in *Sweezy* (Section 7.1.4 above), the court asserted that recognizing such a claim would “impose costs . . . on the University, whose ability to set a curriculum is as much an element of academic freedom as any scholar’s right to express a point of view” (167 F.3d at 1149). Moreover, said the court, “when deciding who to appoint as a leader or teacher of a particular class, every university considers speech (that’s what teaching and scholarship consists in) without violating the Constitution.”

Similarly, in *Edwards v. California University of Pennsylvania*, 156 F.3d 488 (3d Cir. 1998), perhaps the most far-reaching and deferential case to date, the court rejected the free speech claims of a tenured professor who was disciplined for failing to conform his course content to the syllabus provided by the departmental chair and faculty. The court held flatly that “the First Amendment does not place restrictions on a public university’s ability to control its curriculum,” and therefore “a public university professor does not have a First Amendment right to decide what will be taught in the classroom” (156 F.3d at 491). In its result, and in its reliance on the university’s own academic freedom to decide what shall be taught, the *Edwards* case is consistent with the *Hetrick* and *Clark* cases above. But *Edwards* also introduces new and potentially far-reaching reasoning based on the U.S. Supreme Court decision in *Rosenberger v. Rector & Visitors of University of Virginia* (Sections 10.1.4 & 10.3.2 of this book). Relying on the *Rosenberger* concept of the public university or the state as a “speaker,” the *Edwards* court concluded that a university acts as a “speaker” when it enlists faculty members to convey the university’s own message or preferred course content to its students, and that the university was thus “entitled to make content-based choices in restricting Edwards’ syllabus.” (For criticism of *Edwards*, see the discussion of *Brown v. Armenti* in Section 7.2.3 below.)

A third case, *Scallet v. Rosenblum*, 911 F. Supp. 999 (W.D. Va. 1996), *affirmed on other grounds*, 1997 WL 33077 (4th Cir. 1997) (unpublished), differs from *Webb* and *Edwards* in that the district court determined that an instructor’s

---

<sup>19</sup>There was also an establishment clause issue concerning whether the professor’s religious speech was proselytizing or support for religion that could be attributed to the university and would violate the establishment clause. The court declined to resolve this issue because “[t]he university can restrict speech that falls short of an establishment violation, and we have already disposed of the university’s restrictions of [the professor] under the free speech clause.”

choices of course content could be considered speech on matters of public concern. The issue was whether a business school instructor's classroom materials and discussions on increasing racial and gender diversity in the business community were protected speech. Using the *Pickering/Connick* analysis, the court first determined that this speech did involve matters of public concern:

[I]t appears unassailable that [the instructor's] advocacy of diversity, through the materials he taught in class, relate to matters of public concern. Debate is incessant over the role of diversity in higher education, employment and government contracting, just to name a few spheres. Indeed, political debate over issues such as affirmative action is inescapable [911 F. Supp. at 1014].

In reaching this conclusion, the court rejected the university's argument that the instructor "was simply discharging his duties as an employee [of the business school] when he made his classroom remarks." Rather, said the court, a classroom instructor "routinely and necessarily discusses issues of public concern when *speaking as an employee*. Indeed, it is part of his educational mandate" (911 F. Supp. at 1013).

Nevertheless, the court ultimately sided with the university by concluding that the instructor's free speech interest was overridden by the business school's "powerful interest in the content of the [departmental] curriculum and its coordination with the content of other required courses." The school could restrict the classroom materials and discussions of its instructors when this speech "disrupt[ed], or sufficiently threaten[ed] to disrupt, [the school's] educational mandate in a significant way." The instructor's speech did so in this case because it "hamper[ed] the school's ability effectively to deliver the [required writing and speech] course to its students . . . ; created divisions within the [departmental] faculty"; and raised concerns among faculty members outside the department about the instructor's class "trenching upon their own." (Interestingly, the instructor had raised diversity issues in faculty meetings that were comparable to the issues he had addressed in class. In that different context, the court held that the speech was protected "because the defendants offer no competing interest served by stifling that speech" (see Section 7.4 below)).

Another later case, *Bonnell v. Lorenzo*, 241 F.3d 800 (6th Cir. 2001), like *Martin* (above), arose from student complaints about a professor's vulgar and profane classroom speech. The appellate court sought to pattern its decision after *Martin v. Parrish* and, like *Martin*, the *Bonnell* case resulted in a victory for the college. After a female student in Professor Bonnell's English class had filed a sexual harassment complaint against him, the college disciplined him for using language in class that created a "hostile learning environment." The language, according to the court, included profanity such as "shit," "damn," and "fuck," and various sexual allusions such as "blow job," used to describe the relationship between a U.S. President (now former President) and a female Washington intern. The college determined that these statements were "vulgar and obscene," were "not germane to course content," and were used "without reference to assigned readings."

The professor disagreed and claimed that disciplining him for this reason violated his First Amendment free speech rights.<sup>20</sup>

The appellate court accepted the college's characterization of the professor's statements and rejected the professor's free speech claims:

Plaintiff may have a constitutional right to use words such as . . . “fuck,” but he does not have a constitutional right to use them in a classroom setting where they are not germane to the subject matter, in contravention of the College's sexual harassment policy. . . . This is particularly so when one considers the unique context in which the speech is conveyed—a classroom where a college professor is speaking to a captive audience of students (see *Martin [v. Parrish]*, 805 F.2d at 586) who cannot “effectively avoid further bombardment of their sensibilities simply by averting their [ears]” [241 F.3d at 820–821, quoting *Hill v. Colorado*, 530 U.S. 703, 753 n.3 (2000)].

The court's result seems correct, and its “germaneness” and captive audience rationales seem relevant to the analysis, but in other respects the court's reasoning is shaky in ways that other courts and advocates should avoid. *First*, although the court grounded its analysis on the crucial characterization of the professor's speech as “not germane to course content,” the court neither made its own findings on this issue nor reviewed (or even described) whether and how the college made and supported its findings. *Second*, the court relied on the college's sexual harassment policy without quoting it or considering whether it provided fair warning to the professor and a comprehensible guideline by which to gauge his classroom speech (see the *Cohen* and *Silva* cases below). *Third*, the court relied heavily on the captive audience rationale for restricting speech without asking the questions pertinent to making a well-founded captive audience determination. Such questions would include whether the course was a required or an elective course; whether there were multiple sections with different instructors that the students could choose from; whether the students could withdraw from the course or transfer to another section without penalty; and whether the professor had given full and fair advance notice of the content and style of his class sessions. *Fourth*, the court began its discussion with lengthy references to the public concern/private concern distinction drawn in the *Pickering/Connick* line of cases but did not apply this distinction specifically to the classroom speech. It is therefore unclear whether the court assumed that the professor's speech was not on a matter of public concern, or whether the court assumed that the public/private concern distinction was not relevant to its analysis. And *fifth*, the court asserted that the college's case was strengthened because “it was not the content of Plaintiff's speech itself which led to the disciplinary action. . . .” This statement apparently ignores the U.S. Supreme Court's opinion in *Cohen v. California*, 403 U.S. 15 (1971), in which

---

<sup>20</sup>The *Bonnell* case is quite similar to the *Cohen v. San Bernardino Valley College* case, which is discussed below in this subsection. The court's reasoning in *Bonnell* can usefully be compared with the district court's reasoning in the *Cohen* case.

the Court determined that a punishment for using profanity was based on the content of the speech, and also made clear that courts must protect the “emotive” as well as the “cognitive” content of speech (see Section 9.6 of this book).

Although the above cases strongly support institutional authority over professors’ instructional activities, it does not follow that institutions invariably prevail in instructional disputes. The courts in *Wirsing*, *Martin*, *Bishop*, *Scallet*, and *Bonnell*, in limiting their holdings, all suggest situations in which faculty members could prevail. Other cases also include strong language supportive of faculty rights. In *Dube v. State University of New York*, 900 F.2d 587 (2d Cir. 1990), for instance, the court acknowledged the legal sufficiency, under the First Amendment, of a former assistant professor’s allegations that the university had denied him tenure due to a public controversy that had arisen concerning his course in “The Politics of Race” and the views on Zionism that he had expressed in the course. Relying on the *Sweezy*, *Shelton v. Tucker*, and *Keyishian* cases, and quoting key academic freedom language from these opinions (see Section 7.1.4 above), the court emphasized that “for decades it has been [clear] that the First Amendment tolerates neither laws nor other means of coercion, persuasion or intimidation ‘that cast a pall of orthodoxy’ over the free exchange of ideas in the classroom”; and “that, assuming the defendants retaliated against [the professor] based on the content of his classroom discourse,” such facts would support a claim that the defendants had violated the professor’s free speech rights.

Moreover, in other cases, faculty members—and thus faculty academic freedom—have prevailed over institutional authority. In *DiBona v. Matthews*, 269 Cal. Rptr. 882 (Cal. Ct. App. 1990), for example, the court provided a measure of protection for a professor’s artistic and literary expression as it relates to the choice of class content and materials. Specifically, the court held that San Diego Community College District administrators violated a teacher’s free speech rights when they canceled a controversial play production and a drama class in which the play was to have been performed. The play that the instructor had selected, entitled *Split Second*, was about a black police officer who, in the course of an arrest, shot a white suspect after the suspect had subjected him to racial slurs and epithets. The play’s theme closely paralleled the facts of a criminal case that was then being tried in San Diego. The court determined that the college administrators had canceled the class because of the content of the play. While the First Amendment free speech clause did not completely prevent the college from considering the play’s content in deciding to cancel the drama class, the court held that the college’s particular reasons—that the religious community opposed the play and that the subject was controversial and sensitive—were not valid reasons under the First Amendment. Moreover, distinguishing the present case from those involving minors in elementary and secondary schools, the court held that the college could not cancel the drama class solely because of the vulgar language included in the play.

In two other cases later in the 1990s, *Cohen v. San Bernardino Valley College* and *Silva v. University of New Hampshire*, courts also sided with the faculty member rather than the institution in disputes regarding teaching methods and classroom demeanor. Both cases, like *Bonnell*, above, arose in the context of

alleged sexual harassment in the classroom, thus presenting potential clashes among the faculty's interest in academic freedom, the institution's interest in enforcing sexual harassment policies, and the students' interest in being protected against harassment.

In the *Cohen* case, 92 F.3d 968 (9th Cir. 1996), *reversing* 883 F. Supp. 1407 (C.D. Cal. 1995), the appellate court used the constitutional "void for vagueness" doctrine to invalidate a college's attempt to discipline a teacher for classroom speech. The plaintiff, Professor Dean Cohen, was a tenured professor at San Bernardino Valley College who was the subject of a sexual harassment complaint made by a student in his remedial English class. According to the court:

One student in the class . . . became offended by Cohen's repeated focus on topics of a sexual nature, his use of profanity and vulgarities, and by his comments which she believed were directed intentionally at her and other female students in a humiliating and harassing manner. During [one] class Cohen began a class discussion on the issue of pornography and played the "devil's advocate" by asserting controversial viewpoints. Cohen has for many years typically assigned provocative essays such as Jonathan Swift's "A Modest Proposal" and discussed subjects such as obscenity, cannibalism, and consensual sex with children in a "devil's advocate" style. During classroom discussion on pornography in the remedial English class . . . Cohen stated in class that he wrote for *Hustler* and *Playboy* magazines and he read some articles out loud in class. Cohen concluded the class discussion by requiring his students to write essays defining pornography. When Cohen assigned the "Define Pornography" paper, [the student] asked for an alternative assignment but Cohen refused to give her one. [The student] stopped attending Cohen's class and received a failing grade for the semester [92 F.3d at 970].

The student filed a grievance against Cohen, alleging that his behavior violated the college's new sexual harassment policy, which provided that:

[s]exual harassment is defined as unwelcome sexual advances, requests for sexual favors, and other verbal, written, or physical conduct of a sexual nature. It includes, but is not limited to, circumstances in which:

. . .

- (2) Such conduct has the purpose or effect of unreasonably interfering with an individual's academic performance or creating an intimidating, hostile, or offensive learning environment . . . [92 F.3d at 971].

After a hearing and appeal, the college found that Cohen had violated part (2) of the policy and ordered him to:

- (1) Provide a syllabus concerning his teaching style, purpose, content, and method to his students at the beginning of class and to the department chair . . . ; (2) Attend a sexual harassment seminar . . . ; (3) Undergo a formal evaluation procedure . . . ; and (4) Become sensitive to the particular needs and backgrounds of his students, and to modify his teaching strategy when it

becomes apparent that his techniques create a climate which impedes the students' ability to learn [92 F.3d at 971].

The district court rejected Cohen's claim that application of the sexual harassment policy violated his right to academic freedom:

The concept of academic freedom . . . is more clearly established in academic literature than it is in the courts . . . [and] judicial application of this doctrine is far from clear. [Furthermore], a review of the case law shows that, despite eloquent rhetoric on "academic freedom," the courts have declined to cede all classroom control to teachers [883 F. Supp. at 1412, 1414].

The district court also rejected Cohen's claim that, under *Connick v. Myers*, the college had violated his free speech rights as a public employee. The court divided Cohen's speech into two categories: (1) vulgarities and obscenities, and (2) comments related to the curriculum and focusing on pornography and other sexual topics. It concluded that the speech in the first category was not on matters of public concern, but that the speech in the second category was, because Cohen did not speak merely to advance some purely private interest. Thus, under *Connick*, the college could regulate the first type of speech but could regulate the second only if it could justify a restriction in terms of the professor's job duties and the efficient operation of the college. The court agreed that the college had demonstrated sufficient justification:

[A]lthough there is evidence in the record that Cohen's teaching style is effective for at least some students [and that] Cohen's colleagues have stated that he is a gifted and enthusiastic teacher . . . [whose] teaching style is within the range of acceptable academic practice . . . the learning process for a number of students was hampered by the hostile learning environment created by Cohen. According to one peer evaluator who observed a class in which Cohen discussed . . . the topic of consensual sex with children, Cohen's "specific focus impedes academic success for some students" [883 F. Supp. at 1419].

In an important qualification, however, the district court addressed the problem of the "thin-skinned" student:

In applying a "hostile environment" prohibition, there is the danger that the most sensitive and the most easily offended students will be given veto power over class content and methodology. Good teaching should challenge students and at times may intimidate students or make them uncomfortable. . . . Colleges and universities . . . must avoid a tyranny of mediocrity, in which all discourse is made bland enough to suit the tastes of all the students. However, colleges and universities must have the power to require professors to effectively educate all segments of the student population, including those students unused to the rough and tumble of intellectual discussion. If colleges and universities lack this power, each classroom becomes a separate fiefdom in which the educational process is subject to professorial whim. Universities must be able to ensure that the more vulnerable as well as the more sophisticated students receive a suitable

education. . . . Within the educational context, the university's mission is to effectively educate students, keeping in mind students' varying backgrounds and sensitivities. Furthermore, the university has the right to preclude disruption of this educational mission through the creation of a hostile learning environment. . . . The college's substantial interest in educating all students, not just the thick-skinned ones, warrants . . . requiring Cohen to put potential students on notice of his teaching methods [883 F. Supp. at 1419–21].

Thus, although the court ruled in the college's favor, at the same time it sought to uphold the proposition that the college "must avoid restricting creative and engaging teaching, even if some over-sensitive students object to it" (883 F. Supp. at 1422). Moreover, the court cautioned that "this ruling goes only to the narrow and reasonable discipline which the College seeks to impose. A case in which a professor is terminated or directly censored presents a far different balancing question."

On appeal, the U.S. Court of Appeals for the Ninth Circuit unanimously overruled the district court's decision, but did so on different grounds than those explored by the lower court. The appellate court emphasized that neither it nor the U.S. Supreme Court had yet determined the scope of First Amendment protection for a professor's classroom speech. Rather than engage in this analysis, the court focused its opinion and analysis on the vagueness of the college's sexual harassment policy and held that "the Policy's terms [are] unconstitutionally vague as applied to Cohen in this case." The court did not address whether or not the "College could punish speech of this nature if the policy were more precisely construed by authoritative interpretive guidelines or if the College were to adopt a clearer and more precise policy."

In its analysis, the appellate court noted three objections to vague college policies:

First, they trap the innocent by not providing fair warning. Second, they impermissibly delegate basic policy matters to low level officials for resolution on an ad hoc and subjective basis, with the attendant dangers of arbitrary and discriminatory application. Third, a vague policy discourages the exercise of first amendment freedoms [92 F.3d at 972].

Guided by these concerns, the court reasoned that:

Cohen's speech did not fall within the core region of sexual harassment as defined by the Policy. Instead, officials of the College, on an entirely ad hoc basis, applied the Policy's nebulous outer reaches to punish teaching methods that Cohen had used for many years. Regardless of what the intentions of the officials of the College may have been, the consequences of their actions can best be described as a legalistic ambush. Cohen was simply without any notice that the Policy would be applied in such a way as to punish his longstanding teaching style—a style which, until the College imposed punishment upon Cohen under the Policy, had apparently been considered pedagogically sound and within the bounds of teaching methodology permitted at the College [92 F.3d at 972].

(See generally Sonja Smith, “*Cohen v. San Bernadino Valley College: The Scope of Academic Freedom Within the Context of Sexual Harassment Claims and In-Class Speech*,” 25 *J. Coll. & Univ. Law* 1 (1998).)

Since the appellate court’s reasoning is different from the district court’s, and since the appellate court does not disagree with or address the issues that were dispositive for the district court, the latter’s analysis remains a useful illustration of how other courts may handle such issues when they arise under policies that are not unconstitutionally vague.

In the second case, *Silva v. University of New Hampshire*, 888 F. Supp. 293 (D.N.H. 1994), a tenured faculty member at the University of New Hampshire (UNH) challenged the university’s determination that he had created a hostile or offensive academic environment in his classroom and therefore violated the university’s sexual harassment policy. Seven women students had filed formal complaints against Silva. These complaints alleged that, in a technical writing class, he had compared the concept of focus to sexual intercourse: “Focus is like sex. You seek a target. You zero in on your subject. You move from side to side. You close in on the subject. You bracket the subject and center on it. Focus connects the experience and language. You and the subject become one” (888 F. Supp. at 299). The complaints also alleged that two days later in the same class, Silva made the statement “[b]elly dancing is like jello on a plate with a vibrator under the plate” to illustrate the use of metaphor. In addition, several female students reported that Silva had made sexually suggestive remarks to them, both in and out of the classroom. For example, there were allegations that Silva told a female student, whom he saw in the library kneeling down to look through a card catalog, that “it looks like you’ve had a lot of experience down there”; that he gave a spelling test to another student in which every third word had a “sexual slant”; that he had asked two of his female students how long they had been together, implying a lesbian relationship; that he had asked another female student, “How would you like to get an A?”; and that he had physically blockaded a student from exiting a vending machine room and complained to her about students’ actions against him (888 F. Supp. at 310–11).

These complaints were presented to Silva in two “informal” meetings with university administrators, after which he was formally reprimanded. Silva then challenged the reprimand through the university’s “formal” grievance process, culminating in hearings before a hearing panel and an appeals board. (The court reviewed these procedures and some potential flaws in them in its opinion (888 F. Supp. At 319–26).) Finding that Silva’s language and innuendos violated the university’s sexual harassment policy, the hearing panel emphasized that a reasonable female student would find Silva’s comments and behavior to be offensive; that this was the second time in a two-year period that Silva had been formally notified “about his use of inappropriate and sexually explicit remarks in the classroom”; and that Silva had given the panel “no reason to believe that he understood the seriousness of his behavior” or its impact on the students he taught. The university thereupon suspended Silva without pay for at least one year, required him to undergo counseling at his own expense, and prohibited him from attempting to contact or retaliate against the complainants.

In court, prior to trial, Silva argued that the university's actions violated his First Amendment free speech rights. The court agreed that he was "likely to succeed on the merits of his First Amendment claims" and entered a preliminary injunction against the university. In its opinion, the court pursued three lines of analysis to support its ruling. First, relying on the U.S. Supreme Court's decision in the *Keyishian* case (Section 7.1.4), the court reasoned that the belly dancing comment was "not of a sexual nature," and the sexual harassment policy therefore did not give Silva adequate notice that this statement was prohibited—thus violating the First Amendment requirement that teachers be "clearly inform[ed]" of the proscribed conduct in order to guard against a "chilling effect" on their exercise of free speech rights. Second, relying in part on *Hazelwood v. Kuhlmeier* (see above), the court determined that the sexual harassment policy was invalid under the First Amendment, as applied to Silva's speech, because it "fails to take into account the nation's interest in academic freedom" and therefore is not "reasonably related to the legitimate pedagogical purpose of providing a congenial academic environment . . ." (888 F. Supp. at 314). In reaching this conclusion, the court reasoned that (1) the students were "exclusively adult college students . . . presumed to have possessed the sophistication of adults"; (2) "Silva's classroom statements advanced his valid educational objective of conveying certain principles related to the subject matter of his course"; and (3) "Silva's classroom statements were made in a professionally appropriate manner . . ." (888 F. Supp. at 313).

For its third line of analysis, the court resorted to the *Pickering* and *Connick* cases. Purporting to apply the public concern/private concern dichotomy, the court determined that "Silva's classroom statements . . . were made for the legitimate pedagogical, *public* purpose of conveying certain principles related to the subject matter of his course." Thus, these statements "were related to matters of public concern" and, on balance, "Silva's First Amendment interest in the speech at issue is overwhelmingly superior to UNH's interest in proscribing [the] speech" (888 F. Supp. at 316).<sup>21</sup>

Yet another, and more recent case, in which the faculty member (and faculty academic freedom) prevailed over institutional authority is the important case of *Hardy v. Jefferson Community College*, 260 F.3d 671 (6th Cir. 2001). In this case, the U.S. Court of Appeals for the Sixth Circuit held that an adjunct instructor's classroom speech was protected because it was on a matter of public concern and was germane to the subject matter of the course. The instructor had claimed that the community college's refusal to rehire him violated his "rights of free speech and academic freedom," and the appellate court agreed.

The instructor, Hardy, was teaching a summer course on Introduction to Interpersonal Communication when the incident prompting his nonrenewal occurred. He gave a lecture on "how language is used to marginalize minorities." Along with his lecture, he conducted a group exercise in which he asked students to suggest examples of words that had "historically served the interests

---

<sup>21</sup>For another interesting example of a case in which the court used the *Pickering/Connick* line of cases to protect a faculty member's in-class speech, see *Blum v. Schlegel*, 18 F.3d 1005 (2d Cir. 1994).

of the dominant culture.” Their suggestions included “the words ‘girl,’ ‘lady,’ ‘faggot,’ ‘nigger,’ and ‘bitch.’” A student in the class who was offended by the latter two words raised her concerns with the instructor and college administrators, and the instructor apologized to the student. But the student took her complaint to a vocal religious leader in the community, who subsequently met with college administrators to discuss the incident. The administrators then met with the instructor to discuss the classroom exercise and, in the course of the discussion, informed him “that a ‘prominent citizen’ representing the interests of the African-American community had . . . threatened to affect the school’s already declining enrollment if corrective action was not taken.” After this meeting, Hardy completed his summer course without further incident and received positive student evaluations from all students except the one who had complained about the class exercise. Nevertheless, Hardy was informed that he would not be teaching the following semester; he then filed suit against the college, the president, the former acting dean, and the state community college system.

The appellate court used a *Pickering/Connick* analysis to determine whether the instructor’s speech was on a matter of public concern and, if so, whether the employee’s interest in speaking outweighed the college’s interest in serving the public. Applying the first prong of the *Pickering/Connick* test, the court found that the instructor’s speech “was germane to the subject matter of his lecture on the power and effect of language” and “was limited to an academic discussion of the words in question.” The court also distinguished Hardy’s speech from the unprotected speech at issue in its previous ruling in *Bonnell v. Lorenzo* (above); Bonnell’s speech, unlike Hardy’s, was “gratuitous” and “not germane to the subject matter of his course.” Thus, in considering “the content, form, and context” of Hardy’s speech, as the *Connick* case requires, the court emphasized the academic “content” and “form” of the speech and its higher education classroom “context.” This same emphasis was apparent in the court’s conclusion that Hardy’s speech was on a matter of public concern:

Because the essence of a teacher’s role is to prepare students for their place in society as responsible citizens, classroom instruction will often fall within the Supreme Court’s broad conception of “public concern.” . . . Hardy’s lecture on social deconstructivism and language, which explored the social and political impact of certain words, clearly meets this criterion. Although Hardy’s in-class speech does not itself constitute pure public debate, it does relate to matters of overwhelming public concern—race, gender, and power conflicts in our society. . . .

Hardy has thus satisfied the first prong of the two-part test set forth in *Pickering* [260 F.3d at 679].

A similar emphasis on the academic context of the dispute also marked the court’s application of the second prong of the *Pickering/Connick* test, in which it balanced Hardy’s interest in speaking on a matter of public concern against the college’s interest in efficiently providing services to its students and the community. Citing *Keyishian* and *Sweezy*, the court in *Hardy* asserted that “[i]n balancing the competing interests involved, we must take into account the robust

tradition of academic freedom in our nation's post-secondary schools" (260 F.3d at 680). The college had presented no evidence that Hardy's speech had "undermined [his] working relationship within his department, interfered with his duties, or impaired discipline." In fact, Hardy had successfully completed his summer course and received favorable student course evaluations (see above). Nor did the concerns about the religious leader's threat to affect the college's enrollment weigh in the college's favor. Such concerns represented no more than the college administrators' "undifferentiated fear of disturbance" that, under the *Tinker* case (see Section 7.1.1 above), cannot "overcome the right to freedom of expression." The instructor's interests, supported by the tradition of academic freedom, therefore outweighed the interests of the college.

The court's analysis in *Hardy* draws upon both the *Pickering/Connick* line of cases and the germaneness approach to faculty academic freedom. The germaneness analysis follows the pathway that the court had previously sketched in *Bonnell*. *Hardy*, however, unlike *Bonnell*, places the germaneness analysis within the *Pickering/Connick* analysis, using it as a crucial component of its consideration of the content, form, and context of the speech, rather than as a separate analysis providing an alternative to *Pickering/Connick*. In doing so, the Sixth Circuit seems to have corrected much of the weaknesses of its reasoning in *Bonnell* (see above) and to have crafted an approach to faculty academic freedom claims that merges the better aspects of *Pickering/Connick* with the better aspects of the germaneness test.

Most of the cases discussed in this subsection concern the "classroom" as a physical, on-campus, location where the faculty member instructs students. In contemporary settings, however, instruction may often take place in varying locations that are not as fixed, and not as tied to the campus, as the traditional classroom, and some instructional activities may be optional rather than required. Such new settings may create new academic freedom issues. In the case of *Bishop v. Aranov* (above), for example, the court addressed the extent to which faculty members are free to have optional instructional meetings with students that they are currently teaching in a formal course. In *DiBona v. Matthews* (above), the court considered an issue involving a drama course that centered on the public performance of a play. A more recent case, *Hudson v. Craven*, 403 F.3d 691 (9th Cir. 2005), considers the scope of a faculty member's right to arrange optional field trips for her students. The court found that such activities implicate both freedom of association and freedom of speech but ruled, applying the *Pickering* balancing test (see Section 7.1.1), that the institution's interests prevailed over the instructor's on the particular facts of the case.

**7.2.3. Grading.** Grading is an extension of the teaching methods that faculty members use in the classroom and is an essential component of faculty members' evaluative functions. Just as courts are reluctant to intervene in disputes regarding the classroom (subsection 7.2.2 above), they are hesitant to intervene in grading disputes among professors, students, and the administration. While the administration (representing the institution) usually prevails

when the court rules on such disputes, there are circumstances in which faculty members may occasionally prevail.

In a case concerning grading policies in general, *Lovelace v. Southeastern Massachusetts University*, 793 F.2d 419 (1st Cir. 1986), the court upheld institutional authority over grading in much the same way that other courts had done in classroom cases. The university had declined to renew a faculty member's contract after he had rejected administration requests to lower the academic standards he used in grading his students. The faculty member claimed that the university's action violated his free speech rights. Citing *Hetrick* and *Clark* (subsection 7.2.2 above), the court rejected the professor's claim because the university itself had the freedom to set its own grading standards, and "the first amendment does not require that each nontenured professor be made a sovereign unto himself." According to the court:

Whether a school sets itself up to attract and serve only the best and the brightest students or whether it instead gears its standard to a broader, more average population is a policy decision which, we think, universities must be allowed to set. And matters such as course content, homework load, and grading policy are core university concerns, integral to implementation of this policy decision [793 F.2d at 425–26].

(For a more recent case to the same effect, see *Wozniak v. Conry*, 236 F.3d 888, 890 (7th Cir. 2001).)

When the dispute concerns an individual grade rather than general grading policies, however, different considerations are involved that may lead some courts to provide limited protection for the faculty member who has assigned the grade. The case of *Parate v. Isibor*, 868 F.2d 821 (6th Cir. 1989), provides an example. The defendant, dean of the school in which the plaintiff was a nontenured professor, ordered the plaintiff, over his objections, to execute a grade-change form raising the final grade of one of his students. The plaintiff argued that this incident, and several later incidents alleged to be in retaliation for his lack of cooperation regarding the grade change, violated his First Amendment academic freedom. Relying on the free speech clause, the court agreed that "[b]ecause the assignment of a letter grade is symbolic communication intended to send a specific message to the student, the individual professor's communicative act is entitled to some measure of First Amendment protection" (868 F.2d at 827). The court reasoned (without reliance on the *Pickering/Connick* methodology) that:

the professor's evaluation of her students and assignment of their grades is central to the professor's teaching method. . . . Although the individual professor does not escape the reasonable review of university officials in the assignment of grades, she should remain free to decide, according to her own professional judgment, what grades to assign and what grades not to assign. . . . Thus, the individual professor may not be compelled, by university officials, to change a grade that the professor previously assigned to her student. Because the individual professor's assignment of a letter grade is protected speech, the university

officials' action to compel the professor to alter that grade would severely burden a protected activity [868 F.2d at 828].

Thus, the defendant's act of ordering the plaintiff to change the grade, contrary to the plaintiff's professional judgment, violated the First Amendment. The court indicated, however, that had university administrators changed the student's grade themselves, this action would not have violated the plaintiff's First Amendment rights. The protection that *Parate* accords to faculty grading and teaching methods is therefore quite narrow—more symbolic than real, perhaps, but nonetheless an important step away from the deference normally paid institutions in these matters. (For a more extended critique and criticism of *Parate*, see D. Sacken, "Making No Sense of Academic Freedom: *Parate v. Isibor*," 56 *West's Educ. Law Rptr.* 1107 (January 4, 1990).)

The narrow protection accorded faculty members in *Parate* does not necessarily mean that administrators in public institutions can never direct a faculty member to change a grade, or that faculty members can always refuse to do so. As in other free speech cases, the right is not absolute and must be balanced against the interests of the institution. The professor's free speech rights in *Parate* prevailed, apparently, because the subsequent administrative change could fulfill whatever interests the administration had in the professor's grading of the student whose grade was at issue. If, however, the administration or a faculty or faculty-student hearing panel were to find a professor's grade to be discriminatory or arbitrary, the institution's interests would be stronger, and perhaps a directive that the professor change the grade would not violate the professor's free speech rights. In *Keen v. Penson*, 970 F.2d 252 (7th Cir. 1992), for example, the court upheld the demotion of a professor due to unprofessional conduct regarding his grading of a student. The professor had argued that "the grade he gave [the student is] protected by the First Amendment under the concept of academic freedom." In rejecting the argument, the court explained:

As this case reveals, the asserted academic freedom of a professor can conflict with the academic freedom of the university to make decisions affecting that professor. . . . Even if we were to assume that the First Amendment applies [to the professor's grading of the student], it would not be dispositive, because we would then balance Keen's First Amendment right against the University's interest in ensuring that its students receive a fair grade and are not subject to demeaning, insulting, and inappropriate comments [970 F.2d at 257–58].

On the other hand, once a court accepts the propriety of balancing interests in grading cases, it is also possible that some *post hoc* administrative changes of grades could violate a faculty member's academic freedom rights. Such might be the case, for instance, if the faculty member could show that an administrator's change of a grade was itself discriminatory or arbitrary (see generally Section 9.3.1).

Some courts will avoid such a balancing of interests, and refuse to engage in reasoning such as that in the Sixth Circuit's *Parate* opinion, by emphasizing institutional academic freedom in grading (see the *Lovelace* case above) or by

positing that the faculty member grades students as an “agent” of, and thus a “speaker” for, the institution. *Brown v. Armenti*, 247 F.3d 69 (3rd Cir. 2001), is the leading example of this judicial viewpoint. The professor (Brown) alleged that he had assigned an F to a student who had attended only three of the fifteen class sessions for his practicum course; that the university president (Armenti) had instructed him to change this student’s grade from an F to an Incomplete; that he had refused to comply; and that he was therefore suspended from teaching the course. The professor claimed that the university had retaliated against him for refusing to change the student’s grade, thus violating his right to “academic free expression.” In an appeal from the district court’s denial of the defendants’ motion for summary judgment, the U.S. Court of Appeals for the Third Circuit sought to determine whether the facts alleged amounted to a violation of the professor’s First Amendment rights.

The *Armenti* court declined to follow *Parate* and instead applied its own prior case of *Edwards v. California University of Pennsylvania*, 156 F.3d 488 (3d Cir. 1998), discussed in Section 7.2.2 above. The court drew from *Edwards* the proposition that “in the classroom, the university was the speaker and the professor was the agent of the university for First Amendment purposes” (*Armenti*, 247 F.3d at 74). Using this “university-as-speaker” theory, the *Edwards* court had asserted that, as the university’s agent or “proxy,” the professor in the classroom fulfills one of the university’s “four essential freedoms” set out in Justice Frankfurter’s concurring opinion in *Sweezy v. New Hampshire*, 354 U.S. at 263 (Section 7.1.4 above). Thus, relying on *Edwards*, the court in *Armenti* reasoned that “[b]ecause grading is pedagogic, the assignment of the grade is subsumed under [one of the four essential freedoms], the university’s freedom to determine how a course is to be taught.” Since this freedom is the university’s and not the professor’s, the professor “does not have a First Amendment right to expression via the school’s grade assignment procedures.” The change of a grade from an F to an Incomplete, according to the court, is thus not a matter that warrants “intrusive oversight by the judiciary in the name of the First Amendment” (247 F.3d at 75, quoting *Connick v. Myers*, 461 U.S. 138, 146 (1983)).

Even though its opinion is in direct conflict with the Sixth Circuit’s earlier opinion in *Parate*, the court in *Brown v. Armenti* does not explain or document why its reasoning based on *Edwards* is superior to the *Parate* reasoning. It makes the conclusory statement that the “*Edwards* framework . . . offers a more realistic view of the university-professor relationship” but provides neither empirical data nor expert opinion to support this conclusion. Nor does the *Armenti* court consider the broader implications of its global reasoning and conclusion. If the professor in the classroom—or its technological extensions—were merely the university’s agent subject to the university’s micromanagement, there would be no room at all for faculty academic freedom, and the full range of professors’ academic judgment and professional discretion would be subject to check at the mere whim of university officials. These potential broader implications of *Armenti* (and the earlier *Edwards* case) seem discordant with the past seventy-five years’ development of academic freedom in the United States, as

well as with the spirit of the *Sweezy* and *Rosenberger* cases on which the *Armenti* court (and the *Edwards* court) rely.

**7.2.4. Methods of analyzing academic freedom in teaching claims.** Taken together, the cases in subsections 7.2.2 and 7.2.3 illustrate and confirm five alternatives for analyzing First Amendment faculty academic freedom claims involving teaching: (1) “institution-as-speaker” analysis and the related institutional academic freedom analysis; (2) *Pickering/Connick* analysis; (3) vagueness analysis; (4) “pedagogical concerns” analysis; and (5) germaneness analysis.<sup>22</sup> These alternatives are discussed under numbers 1–5 below, followed by a discussion of other miscellaneous alternatives under number 6. As will be seen, more than one of the alternatives may be applicable to a particular problem; judges may disagree on which alternative fits best or may combine two or more of the various alternatives together to enhance the power of the analysis.

1. “*Speaker*” analysis and institutional academic freedom analysis. Speaker analysis—the newest alternative—is exemplified by *Edwards v. California University of Pennsylvania* (Section 7.2.2) and *Brown v. Armenti* (Section 7.2.3). The key point of this analysis is to determine whether, in the circumstances, the institution is itself acting as a speaker seeking to convey its own message through the instructors and materials it selects. If so, and if the institution’s message conflicts with that of the faculty member, the institution’s prerogatives as speaker will take precedence over the faculty member’s academic freedom. As noted in Section 7.2.2 above, the concept of the institution as a speaker—rather than a facilitator or regulator of the speech of others—arises from the U.S. Supreme Court’s decision in the *Rosenberger* case. The Court’s later decision in *Finley v. National Endowment for the Arts* (Section 13.4.5) also develops this concept, and it is referenced as well in *Board of Regents of the University of Wisconsin System v. Southworth*, 529 U.S. 217, 234–35 (2000)

Reliance on institution-as-speaker analysis would generally yield the same result, for much the same reason, as would heavy reliance on the concept of institutional academic freedom. The *Webb* case (Section 7.2.2 above), in which the court ruled strongly in the university’s favor based on its institutional academic freedom, illustrates this parallelism. That case’s distinction between the institution’s and the faculty member’s academic freedom parallels the distinction between the institution as speaker and the faculty member as speaker; in effect, institutional academic freedom trumps faculty academic freedom when the institution, in the circumstances, is acting as a speaker seeking to convey a message inconsistent with that of the faculty member. The *Wirshing* case, in Section 7.2.2 above, also uses institutional academic freedom analysis in this

---

<sup>22</sup>The second and third of these analytical approaches, *Pickering/Connick* and vagueness, and the institutional academic freedom branch of the first approach, may also be used to resolve the types of academic freedom claims that arise under Sections 7.3, 7.4, and 7.5 below. The other three approaches seem adaptable primarily to academic freedom claims concerning teaching functions.

manner, although its reasoning is not as strongly stated or as developed as that in *Webb*.

Of the five modes of analysis, the institution-as-speaker and institutional academic freedom mode provides the greatest protection for institutions and the least protection for faculty members. Indeed, this approach tilts so much in favor of the institution that it leaves almost no room in the teaching context for faculty academic freedom or for accommodation of faculty members' interests with those of the institution. (For further criticism of the institution-as-speaker analysis, see the discussion of *Brown v. Armenti* in Section 7.2.3 above.)

2. *Pickering/Connick analysis*. This analysis is addressed at length in the *Scaliet v. Rosenblum* opinion, as well as in the *Cohen* district court opinion and the *Silva* opinion (all in Section 7.2.2 above). The earlier opinion in *Martin v. Parrish* (Section 7.2.2) also uses this analysis, as does the court in *Blum v. Schlegel* (Section 7.2.2, fn.21). The central issue in this analysis is whether the faculty member's classroom statements were on "matters of public concern" or on "matters of private concern" (see Section 7.1.1 above; and see also Chris Hoofnagle, "Matters of Public Concern and the Public University Professor," 27 *J. Coll. & Univ. Law* 669 (2001)). This distinction is difficult to draw in many contexts, but perhaps especially so in the context of classroom speech. The district court in *Scaliet* does a creditable job with this distinction when it relates the classroom speech to societal issues currently the subject of broad public debate. The *Cohen* district court also does a creditable job discerning the nuances of this distinction, particularly when it sorts out the various types of comments made by the professor. The *Silva* opinion, on the other hand, does not reflect these nuances and appears to expand the public concern category beyond the U.S. Supreme Court's boundaries (see Todd De Mitchell & Richard Fossey, "At the Margin of Academic Freedom and Sexual Harassment: An Analysis of *Silva v. University of New Hampshire*," 111 *West's Educ. Law Rptr.* 13 (September 19, 1996)). *Silva*, therefore, is not a helpful example of this type of analysis.

3. *Vagueness analysis*. This analysis is exemplified by the appellate court's opinion in *Cohen*. The argument that the court accepted is that the college's policy was unconstitutionally vague *as applied to* Cohen under the particular facts of that case. The court in *Silva* accepted a similar argument. The court in *Bishop*, however, rejected a vagueness argument (926 F.2d at 1071-72). Another, broader, version of the vagueness argument would be that a policy is unconstitutionally vague *on its face*, that is, in all or most of its possible applications rather than only as applied to the particular plaintiff's circumstances.

Vagueness analysis as in *Cohen* and *Silva* is derived not from the speech clause alone but from that clause in conjunction with the Fourteenth Amendment's due process clause. Vague policies are invalidated by the courts in part because they "trap the innocent by not providing fair warning" (*Cohen*, 92 F.3d at 972) to the speaker subjected to the policy or clear guidelines for the decision makers applying the policy, and can therefore result in a "legalistic ambush" (*Cohen*, 92 F.3d at 972); that is the problem to which the due process clause speaks. Vague policies are also invalidated in part because they

“discourage” speakers from exercising their rights (*Cohen*, 92 F.3d at 972) or, in other words, because they have a “chilling effect” on the exercise of free speech rights (*Silva*, 888 F. Supp. at 312); that is the problem to which the free speech clause speaks. The *Keyishian* case (see Section 7.1 above), which the *Silva* court relied upon, is the classic U.S. Supreme Court precedent upon which to base a vagueness argument and, in particular, a chilling effect argument. In *Keyishian*, and in various other higher education cases, vagueness analysis is yoked with “overbreadth” analysis to emphasize the additional “chill” that may result from a policy so broadly worded that it covers a substantial amount of activity protected by the free speech clause. (For more on overbreadth and vagueness as applied to regulations of faculty conduct, see Section 6.6.1.)<sup>23</sup>

4. “Pedagogical concerns” analysis. This type of analysis derives from the case of *Hazelwood School District v. Kuhlmeier*, 484 U.S. 260 (1988), in which the U.S. Supreme Court upheld the validity of a high school’s regulation of a student newspaper because the regulation was “reasonably related to legitimate pedagogical concerns” (484 U.S. at 273). The Court has never applied this standard to higher education (as opposed to elementary/secondary education) or to faculty members (as opposed to students), but some lower courts have done so. The court in *Bishop v. Aronov* used this standard (or a modified version of it), as did the court in *Silva*.<sup>24</sup> The standard, as applied in *Hazelwood*, is a highly deferential standard that affords elementary and secondary school administrators broad discretion regarding the “school-sponsored” speech activities of their students. Because this deference appears to be justified in large part by the immaturity of elementary and secondary education students, and because the deference is so extensive that it does not leave room for higher education’s traditions of faculty and student academic freedom (see Sections 7.1, 7.2.2, & 8.1.4), the *Hazelwood* standard should not be applied unmodified to higher education (see generally *Scallett v. Rosenblum*, 911 F. Supp., 999, 1010–11 (W.D. Va. 1996)). The *Bishop* court and the *Silva* court both adopted modest modifications of the standard (*Bishop* at 1074–76; *Silva* at 313). With any such modification, the extent of deference should be less for higher education than what the U.S. Supreme Court provides for elementary/secondary education. This would necessitate that the “reasonably related” requirement and the “legitimate” requirement take on a different meaning in the higher education context, such that more weight is given to the faculty member’s own pedagogical interests and a greater burden is imposed on the institution to produce proof of its “pedagogical concerns” and the threat to its interests that the professor’s speech poses.

---

<sup>23</sup>The *Silva* court used a version of vagueness analysis in accepting the argument that, since *Silva*’s statement about a vibrator did not violate the university’s policy, *Silva* could not have been on notice that his statement was impermissible, and he therefore could not be penalized for it. Thus, as *Silva* illustrates, this type of analysis, focusing on the lack of notice to the professor, can be used not only in situations where the policy is vague and the court cannot determine whether it covers the particular behavior at issue, but also in situations where the court determines that the particular behavior is not covered by the policy.

<sup>24</sup>For another example, where the court applied the *Hazelwood* standard in a higher education faculty case but did not “definitively” decide whether the standard is appropriate for this context, see *Vanderbilt v. Colorado Mountain College District*, 208 F.3d 908, 913–15 (10th Cir. 2000).

5. *Germaneness analysis*. This analysis is used prominently in *Silva*, providing the first extended example of a court implementing germaneness analysis in a higher education academic freedom case. Germaneness was also used, briefly, by both the majority and the concurrence in *Martin v. Parrish* (Section 7.2.2 above). The best example to date of germaneness analysis, however, is provided by two cases decided by the Sixth Circuit U.S. Court of Appeals in 2001, *Bonnell* and *Hardy*, both discussed in Section 7.2.2 above. In *Bonnell*, in determining that a professor's classroom speech was not protected, the court emphasized that the speech was "not germane to the subject matter." In *Hardy*, in the course of protecting the professor's classroom speech, the court emphasized that it "was germane to the subject matter and advance[d] an academic message." In both cases, the court also recognized "the robust tradition of academic freedom in our nation's post-secondary schools" (*Hardy*, 260 F.3d at 680; see also *Bonnell*, 241 F.3d at 823) and used the germaneness test as an adjunct to this tradition of academic freedom. So used, germaneness analysis differs from pedagogical concerns analysis (number 4 above) because it focuses first on the *faculty member's* rather than the *institution's* pedagogical interests. Both sets of interests are pertinent to germaneness analysis, as well as to pedagogical concerns analysis; but germaneness analysis gives more immediate and direct attention, and greater weight, to the faculty interests.<sup>25</sup>

The germaneness approach does not provide that faculty members will always prevail if their classroom speech is germane to the subject matter, since this analysis must take account of institutional pedagogical interests as well as faculty pedagogical interests. It is therefore necessary to supplement the germaneness analysis by borrowing from one of the other approaches that consider both institutional and faculty interests. The two approaches that could fit this bill are the *Pickering/Connick* approach (number 2 above) and the pedagogical concerns approach (number 4 above). The *Silva* court's opinion provides a modest example of a merger of pedagogical concerns analysis and germaneness analysis. More important, the Sixth Circuit's opinion in the *Hardy* case provides a highly instructive example of a merger of germaneness analysis and *Pickering/Connick* analysis. (See Section 7.2.2 above for further discussion of this "merger.")

---

<sup>25</sup>A germaneness or "germane speech" test was also at issue in *Board of Regents of the Univ. of Wisconsin System v. Southworth*, 529 U.S. 217 (2000) (see Sections 10.1.3 & 8.1.4)—a case raising questions pertinent to student academic freedom and institutional autonomy. Although the Court had used this test in other contexts (see 529 U.S. at 227, 230–32), including a faculty rights case, it rejected the test as "unworkable" and "unmanageable in the public university setting" (*Id.* at 231–32) when applied to extracurricular student speech such as that in *Southworth*. The circumstances of *Southworth*, however, are clearly distinguishable from those in the academic freedom in teaching cases discussed in this Section. In *Southworth*, the Court would have had to address numerous abstract questions of whether particular types of speech content were germane to the university's mission and "the whole universe of speech and ideas" (*Id.* at 232). It was this "vast extent of permitted expression" that made "the test of germane speech inappropriate . . ." (*Id.*). In contrast, in the faculty academic freedom cases, there are "discernable limits" (see 529 U.S. at 232) to the speech pertinent to a particular course or class session. Moreover, the germaneness issues arising in the classroom cases are amenable to testimony by deans, department chairs, faculty colleagues, and outside academic experts in ways that the issues in *Southworth* were not.

The germaneness approach, supplemented by *Pickering/Connick* analysis or a modified pedagogical concerns analysis, is the approach most likely to take suitable account of the unique circumstances of academic life. The professor's "freedom of germane speech" would be based directly on a "freedom to teach" that can be considered a correlative or implied right emanating from the free speech clause (see *Griswold v. Connecticut*, 381 U.S. 479, 483 (1965), as discussed in Section 7.1 above). The freedom of germane speech would also be compatible with AAUP policies on academic freedom (see Section 7.1 above)—in particular the 1940 Statement, which declares that faculty members have a freedom to teach in the classroom but cautions that this freedom does not extend to "teaching controversial matter which has no relation to [the] subject"; the 1970 Interpretive Comments, which add that "the intent of [the 1940 Statement] is not to discourage what is 'controversial' [but] to underscore the need for teachers to avoid persistently intruding material which has no relation to their subject"; and the 1995 statement on "Sexual Harassment: Suggested Policy and Procedures for Handling Complaints," which provides that speech or conduct is not considered sexual harassment "in the teaching context" unless it is "persistent, pervasive, and not germane to the subject matter" (*AAUP Policy Documents and Reports*, 3, 6, 172; see also Robin Wilson, "Wisconsin Scales Back Its Faculty Speech Code: Professors Will Now Have Blanket Protection for All Comments That Are 'Germane' to a Course," *Chron. Higher Educ.*, March 12, 1999, A10.) This fifth approach, then, bears careful watching and could become the preferred approach in most circumstances (see, for example, *Rubin v. Ikenberry*, 933 F. Supp. 1425 (C.D. Ill. 1996)). While this would be a welcome development, it would be imperative that the germaneness analysis be applied with considerable reliance on internal peer review of teaching and, in especially difficult cases, on outside expert opinion regarding learning theory, teaching methodology, and the academic parameters of particular subjects.

6. *Other (miscellaneous) types of analysis.* *Clark v. Holmes*, *Martin v. Parrish*, and *Bonnell v. Lorenzo* (Section 7.2.2 above) all include abbreviated versions of "captive audience" analysis. (See the analysis of *Bonnell* for examples of factors to consider in determining whether students in a particular course may be considered a "captive audience.") While this approach may be useful in some situations concerning classroom speech, it is better viewed as an adjunct to the other approaches rather than as a separate and independent alternative. In particular, under the *Pickering/Connick* approach, "captive audience" considerations could be relevant to the "form" and "context" of the speech under the first prong of the test; and protecting a "captive audience" from discomfort and embarrassment could be a relevant interest on the institution's side of the scale under the second prong of the test. Also, under the germaneness approach, "captive audience" considerations could be relevant in determining how much leeway a court should provide for "nongermane" speech in the classroom; a court may be less tolerant of arguably nongermane speech, and less willing to protect the faculty member, when the faculty member has a "captive audience" for his classes. If captive audience analysis is used, however, serious attention

must be given to whether the class is actually “captive.” The pertinent questions to ask are set out in the *Bonnell* discussion (Section 7.2.2 above).

*Parate v. Isibor* (Section 7.2.3 above) includes an example of “compelled speech” analysis. This analysis may apply when a faculty member is penalized for what he or she *would not say*, or said only under protest, rather than for what he or she did say or did not object to saying. The basic argument is that the free speech clause protects individuals from being compelled by government to express ideas or opinions with which they disagree. As such, this type of analysis could be pertinent to grading disputes like that in *Parate*, as well as to classroom situations in which an instructor is directed to express others’ ideas or opinions as if they were his or her own, or to support ideas and opinions to which he or she is conscientiously opposed. Like germaneness analysis (number 5 above), however, compelled speech analysis should not be applied in a manner that ignores the institution’s legitimate academic interests. When government is regulating its citizens in general, there are usually no governmental interests that would justify compelled speech (*Wooley v. Maynard*, 430 U.S. 705 (1977)); and this is also usually the case when government is regulating members of the academic community (*West Virginia State Board of Education v. Barnette*, 319 U.S. 624 (1943)). But in the specific context of the classroom and teaching, if the institution’s academic interests are genuinely at stake, there may be an occasional situation in which courts will find an institution’s interests to be sufficiently strong to justify a regulation of speech that includes an element of compulsion. (For an example of such a case, and a court opinion that provides an extended example of compelled speech analysis, see *Axson-Flynn v. Johnson*, 356 F.3d 1277 (10th Cir. 2004), discussed in Section 8.1.4.)

Another possibility is the “material and substantial disruption” and the “undifferentiated fear of disturbance” analysis that comes from the *Tinker* case (see Section 9.5.1 of this book) (or a similar standard that can be implied from the *Pickering* case’s consideration of whether the teacher’s speech had a disruptive effect on the operation of the public schools (see Section 7.1.1 of this book)). In *Bishop v. Aronov* (Section 7.2.2), the appellate court declined to apply the *Tinker* case or the material and substantial disruption standard to the classroom speech at issue there. In the *Hardy* case, however, the court did use the “undifferentiated fear” part of the *Tinker* analysis in a secondary, supporting role: to determine whether the college’s interests were based on “undifferentiated fear of disturbance” and thus insufficient to overcome the faculty member’s free speech interests. Used in this way, the *Tinker* analysis becomes an addendum to the second prong of the *Pickering/Connick* test rather than an independent line of analysis.

Finally, in *Bishop*, the federal district court used public forum analysis (see Section 9.5.2 of this book) to decide the case in the professor’s favor. The appellate court disagreed and, appropriately, declined to treat the classroom as a public forum (926 F.2d at 1071; and see also Section 7.1.1 of this book).

**7.2.5. Private institutions.** Since First Amendment rights and other federal constitutional rights generally do not apply to or limit private institutions, as

explained in Section 1.5.2 of this book, legal arguments concerning the freedom to teach in private institutions are usually based on contract law. The sources, scope, and terms of faculty contracts are discussed in Section 6.1 of this book, and the contractual academic freedom rights of faculty members are discussed more specifically in Section 7.1.3. When the “1940 Statement of Principles on Academic Freedom” is incorporated into the faculty contract or relied upon as a source of custom and usage (see Section 7.1.3 above), it will usually provide the starting point for analyzing the faculty member’s freedom in teaching. The 1940 Statement provides that “[t]eachers are entitled to freedom in the classroom in discussing their subject,” but also contains this limitation: “[Teachers] should be careful not to introduce into their teaching controversial matter which has no relationship to their subject . . .” (*AAUP Policy Documents and Reports*, 3).

The case of *McConnell v. Howard University*, 818 F.2d 58 (D.C. Cir. 1987) (discussed further in Sections 2.2.5 & 6.6.2) is an instructive example of a dispute in a private institution about contractual protections for the freedom to teach. In *McConnell*, a professor had been discharged after challenging his university’s handling of an in-class conflict that arose between him and a student in one of his classes. The professor brought a breach of contract action, and the appellate court was sympathetic to the professor’s argument that the university’s actions breached the contract between the professor and the university. In reversing a summary judgment for the university, and remanding the case for a trial *de novo*, the appellate court declined to adopt traditional contract principles so as to accord deference to the judgments of the university’s administrators. The court’s reasoning indicates that, in some circumstances, contract law will protect the teaching freedom of faculty members in private institutions and that contract claims may sometimes be more promising vehicles for faculty members than federal constitutional claims.

Contractual freedom to teach issues may arise in private religious institutions as well as private secular institutions (as in *McConnell*), in which case additional complexities may be present (see Section 7.8 below). The unusual case of *Curran v. Catholic University of America* (discussed in Section 6.2.5) is an instructive example of this type of case.

### ***Sec. 7.3. Academic Freedom in Research and Publication***

Academic freedom protections clearly extend to the research and publication activities of faculty members.<sup>26</sup> Such activities are apparently the most ardently protected of all faculty activities. In the “1940 Statement of Principles on Academic Freedom and Tenure” (see Section 7.1.3 above), “full freedom in research and in the publication of the results” is presented as the first of three essential

---

<sup>26</sup>Research and publication also includes artistic creation, and the performance and display of artistic works. See generally Robert O’Neil, “Artistic Freedom and Academic Freedom,” 53 *Law & Contemp. Probs.* 177 (1993). The freedom to research and publish would also apparently include a freedom to seek and obtain funds to support such efforts. For an example, see Julie Nicklin, “Arbitrator Tells U. of Delaware to Allow Grant Requests to ‘Racist’ Fund,” *Chron. Higher Educ.*, September 4, 1991.

aspects of faculty academic freedom, and this “full freedom” does not include any limitation regarding subject matter, as does the freedom in the classroom that is listed second (*AAUP Policy Documents and Reports* (9th ed., 2001), 3). The courts, moreover, tend to distinguish between research and teaching and to provide stronger protection for the former. In *Bishop v. Aronov*, 926 F.2d 1066 (11th Cir. 1991) (discussed in Section 7.2.2 above), for example, the court upheld university limitations on the content of a professor’s classroom speech. At the same time, however, the court emphasized that “[t]he University has not suggested that [the professor] cannot hold his particular views; express them, on his own time, far and wide and to whomever will listen; or write and publish, no doubt authoritatively, on them, nor could it so prohibit him”; and that the professor’s “educational judgment can be questioned and redirected by the University when he is acting under its auspices as a course instructor, but not when he acts as an independent . . . researcher” (926 F.2d at 1076–77, emphasis added). The case of *Levin v. Harleston*, discussed below, illustrates this broad protection for faculty research and publication.

As colleges and universities have moved further into the age of information technology—and faculty members employ new means of researching, storing research, and disseminating their views—new questions have arisen about the freedom of research and publication. One example concerns research that faculty members do on computers supplied by the institution and the extent to which the institution or (in the case of public institutions) the state might impose limitations on faculty members’ research using such equipment. The case of *Urofsky v. Gilmore*, discussed at length below, illustrates the issues that may arise if the state or a public institution restricts the content of the materials that faculty members may access or store on state-owned computers. In other situations, issues could arise if an institution seeks access to research or communications faculty members have stored on their office computers (see Martha McCaughey, “Windows Without Curtains: Computer Privacy and Academic Freedom,” *Academe*, September–October 2003, 39–42). Another example concerns faculty members’ use of the institution’s Web page and server to display research or communicate personal viewpoints, and the extent to which the institution might impose limits on such use. Issues might arise, for instance, if an institution orders a faculty member to remove controversial or offensive content from a Web log that he or she maintains on the university’s Web site (see Robert O’Neil, “Controversial Weblogs and Academic Freedom,” *Chron. Higher Educ.*, January 16, 2004, B16). In most cases, such issues—though tinged with new technological implications—can nevertheless be resolved by careful application of traditional legal principles and sensitive consideration of the traditional attributes of the college and university environment, as addressed in the discussion below.

*Levin v. Harleston*, 770 F. Supp. 895 (S.D.N.Y. 1991), *affirmed in part and vacated in part*, 966 F.2d 85 (2d Cir. 1992), involves traditional media, not new technology, for faculty members’ publication of views and features the application of classical First Amendment and academic freedom principles. A philosophy professor at City College of the City University of New York had opined in certain writings and publications that blacks are less intelligent on average

than whites. In addition, he had opposed all use of affirmative action quotas. As a result of these writings, he became controversial on campus.<sup>27</sup> Student groups staged demonstrations; documents affixed to his door were burned; and students distributed pamphlets outside his classroom. On several occasions, groups of students made so much noise outside his classroom that he could not conduct the class. The college's written regulations prohibited student demonstrations that have the effect of disrupting or obstructing teaching and research activities. Despite this regulation and the professor's repeated reports about the disruptions, the university took no action against the student demonstrators. The college did, however, take two affirmative steps to deal with the controversy regarding the professor. First, the college dean (one defendant) created "shadow sections" (alternative sections) for the professor's required introductory philosophy course. Second, the college president (another defendant) appointed an ad hoc faculty committee "to review the question of when speech both in and outside the classroom may go beyond the protection of academic freedom or become conduct unbecoming a member of the faculty."

To implement the shadow sections, the college dean sent letters to the professor's students, informing them of the option to enroll in these sections. The dean stated in the letter, however, that he was "aware of no evidence suggesting that Professor Levin's views on controversial matters have compromised his performance as an able teacher of Philosophy who is fair in his treatment of students." After implementation of the shadow sections, enrollment in the professor's classes decreased by one-half. The college had never before used such sections to allow students to avoid a particular professor because of his views.

To implement the ad hoc committee, the president charged the members "to specifically review information concerning Professor Michael Levin . . . and to include in its report its recommendations concerning what the response of the College should be." The language of the charge tracked certain language in college bylaws and professional contracts concerning the discipline of faculty members and the revocation of tenure. Three of the seven committee members had previously signed a faculty petition condemning the professor. Moreover, although the committee met more than ten times, it never extended the professor an opportunity to address it. The committee's report, as summarized by the district court, stated "that Professor Levin's writings constitute unprofessional and inappropriate conduct that harms the educational process at the college, and that the college has properly intervened to protect his students from his views by creating the shadow sections."

The professor sought declaratory and injunctive relief, claiming that the defendants' failure to enforce the student demonstration regulations, the creation of the shadow sections, and the operation of the ad hoc committee violated his rights under the federal Constitution's free speech and due process clauses. After trial, the district court issued a lengthy opinion agreeing with the

---

<sup>27</sup>The *Levin* case is often compared with the later case of *Jeffries v. Harleston*—not only because the two cases involve the same university but also because both cases involve derogatory speech regarding particular minority groups. *Jeffries* is discussed in Section 7.5.2 below.

professor. Relying on *Keyishian* (see Section 7.1.4), the court noted the chilling and stigmatizing effect of the ad hoc committee's activities, as demonstrated by the fact that, during the time the committee was meeting, the professor had declined more than twenty invitations to speak or write about his controversial views. The court held that the professor had "objectively reasonable bases" to fear losing his position, and that the effects on him were "exactly that predicted in *Keyishian*. . . . Professor Levin was forced to 'stay as far away as possible from utterances or acts which might jeopardize his living.'" To determine whether this infringement on the professor's speech was nonetheless legitimate, the court then undertook a *Pickering/Connick* analysis. It held that there was "no question" that the professor's speech was "protected expression," since his writings and statements addressed matters that were "quintessentially 'issues of public importance.'" The only justification advanced by the defendants for the ad hoc committee and shadow sections was the need to protect the professor's students from harm that could accrue "if they thought, because of the expression of his views, that he might expect less of them or grade them unfairly." The court, however, rejected this justification because City College had presented no evidence at trial to support it. Consequently, the trial court granted injunctive relief, compelling the defendants to investigate the alleged violations of the college's student demonstration regulations and prohibiting the defendants from any further use of the shadow sections or the ad hoc committee.

The appellate court generally agreed with the district court's reasoning regarding the shadow sections and the ad hoc committee. The court noted that the "formation of the alternative sections would not be unlawful if done to further a legitimate educational purpose that outweighed the infringement on Professor Levin's First Amendment rights." But the defendants had presented no evidence to support their contention that the professor's expression of his ideas outside the classroom harmed the educational process within the classroom. In fact, "none of Professor Levin's students had ever complained of unfair treatment on the basis of race." The court concluded that the defendants' "encouragement of the continued erosion in the size of Professor Levin's class if he does not mend his extracurricular ways is the antithesis of freedom of expression." The appellate court also agreed that the operation of the ad hoc committee had a "chilling effect" on the professor's speech and thus violated his First Amendment rights. Affirming that "governmental action which falls short of direct prohibition on speech may violate the First Amendment by chilling the free exercise of speech," the court determined that, when the president "deliberately formed the committee's inquiry into Levin's conduct to mirror the contractual standard for disciplinary action, he conveyed the threat that Levin would be dismissed if he continued voicing his racial theories."

The appellate court disagreed, however, with the district court's conclusion regarding the college's failure to enforce its student demonstration regulations. Since the college generally had not enforced these regulations, and there was no evidence that "the college treated student demonstrations directed at Professor Levin any differently than other student demonstrations," the defendants'

inaction could not be considered a violation of the professor's constitutional rights.

To implement its conclusions, the appellate court affirmed the portion of the trial court's injunction prohibiting the defendants from using the shadow sections. Regarding the ad hoc committee, the appellate court modified the relief ordered by the trial court. Since the ad hoc committee had recommended no disciplinary action and had no further investigations or disciplinary proceedings pending, the injunction was unnecessary. It was sufficient to issue an order that merely declared the unconstitutionality of the defendants' use of the committee, since such declaratory relief would make clear that "disciplinary proceedings, or the threat thereof, predicated solely upon Levin's continued expression of his views outside of the classroom" would violate his free speech rights. Regarding the student demonstration regulations, the appellate court vacated the portion of the trial court's injunction ordering the defendants to investigate the alleged violations of the regulations.

*Levin* is an important case for several reasons. It painstakingly chronicles a major academic freedom dispute centering on faculty publication activities; it demonstrates a relationship between academic freedom and the phenomenon of "political correctness";<sup>28</sup> and it strongly supports faculty academic freedom in research by using the federal Constitution as a basic source of protection. The courts' opinions do not break new legal ground, however, since they use established principles and precedents applicable to public employees generally and do not emphasize the unique circumstances of academic freedom on the college campus. But these opinions do provide a very useful response to the particular facts before the court. The case dealt with traditionally protected faculty speech—writing and outside publication expressing opinions on matters of public concern—and not with opinions expressed in classroom lectures or in course materials. Not only is such publication given the highest protection, but the defendants produced no evidence that the professor's writings and views had any adverse impact on his classroom performance or his treatment of students. The college had never before created shadow sections and had advanced no "legitimate educational interest" in using them in this circumstance. Finally, the numerous procedural flaws in the establishment and operation of the ad hoc committee strongly supported, if only circumstantially, the professor's claims that his constitutional rights were being chilled.

In *Urofsky v. Gilmore*, 216 F.3d 401 (4th Cir. 2000) (*en banc*), the full twelve-member bench of the Fourth Circuit issued a ruling that contrasts starkly with *Levin* and is deeply inhospitable to faculty academic freedom in research. The case concerned a Virginia statute, codified as "Restrictions on State Employee Access to Information Infrastructure," that restricts the Internet-based research

---

<sup>28</sup>According to the trial court, "[t]his case raises serious constitutional questions that go to the heart of the current national debate on what has come to be denominated as 'political correctness' in speech and thought on the campuses of the nation's colleges and universities" (footnote omitted). See generally Paul Berman (ed.), *Debating P.C.: The Controversy over Political Correctness on College Campuses* (Dell, 1992).

of state employees, including faculty members at the state's higher educational institutions. The relevant codified language states:

Except to the extent required in conjunction with a bona fide, agency-approved research project or other agency-approved undertaking, no agency employee shall utilize agency-owned or agency-leased computer equipment to access, download, print or store any information infrastructure files or services having sexually explicit content [Va. Code Ann. § 2.2-2827(B)(2001); an earlier version of this statute, in force during the *Urofsky* litigation, was cited as Va. Code Ann. §§ 2.1-804 to 806 (1996), as amended in 1999)].

The statute defines “informational infrastructure” as including the various types of computer files and the modes of accessing and securing these files (that is, computer networks and the Internet). “Computer equipment” is not defined.

The statute prohibits state employees from using state-owned or state-leased computers to access information with “sexually explicit content” without prior approval from the head of the agency for which the employee works. The plaintiffs, who were professors at various Virginia state colleges and universities, argued that the statute interfered with their ability to do research concerning sexuality and the human body in various fields such as art, literature, psychology, history, and medicine. Specifically, the professors made two claims: (1) that the statute was unconstitutional on its face, since it restricted the content of the speech of public employees speaking on matters of public concern; and (2) that the statute was unconstitutional as applied to “academic employees,” since it burdened their First Amendment “right to academic freedom” in research. The state responded that the statute restricted only employee speech, not the speech of citizens addressing matters of public concern, and that this restriction served state interests in “maintain[ing] operational efficiency in the workplace” and “prevent[ing] the creation of a sexually hostile work environment” (995 F. Supp. at 639).

The district court, using the *Pickering/Connick* standards (see Section 7.1.1), invalidated the statute as an impermissible restriction on speech on matters of public concern (*Urofsky v. Allen*, 995 F. Supp. 634 (E.D. Va. 1998)). In applying *Pickering/Connick*, the court emphasized various factors regarding the statute that served to increase the state's burden of justifying the statute's restrictions on speech. *First*, the statute is broad in scope, deterring a large number of potential speakers and covering a broad category of speech. *Second*, the statute has a substantial capacity to “chill” speakers in advance because of their concern that their speech activities may violate the statute. *Third*, the statute has a substantial adverse impact on the general public's right to receive information, an impact exacerbated by the fact that the information suppressed is that of state employees who have special expertise of particular benefit to the public. *Fourth*, the statutory restriction on speech is explicitly content based, targeting sexual speech, but not any other speech that could impinge on state interests in the workplace. *Fifth*, the statute restricts the use of the Internet, “arguably the most powerful tool for sharing information ever developed,” thus enhancing the burden the statute places on speech (see generally *Reno v.*

*American Civil Liberties Union*, 521 U.S. 844, 849–53 (1997), discussed in Section 13.2.12.2).

On appeal, a three-judge panel of the Fourth Circuit reversed the district court, reasoning that the professors were speaking (and were restricted by the statute) only in their capacities as state employees, not as citizens commenting upon matters of public interest, and therefore had no First Amendment protection (*Urofsky v. Gilmore*, 167 F.3d 191 (4th Cir. 1999)). The full appellate court (all twelve judges) then reviewed the case *en banc*. The majority agreed with the panel’s decision but issued a majority opinion that is much more expansive than the panel’s and even more inhospitable to faculty academic freedom. The full Fourth Circuit thus upheld the panel decision, ruling that the Virginia statute did not violate the First Amendment. Seven judges joined in the majority opinion (two of whom also wrote concurring opinions); one judge (Chief Justice Wilkinson) wrote an opinion concurring only in the judgment, and four judges joined in a dissenting opinion.

The *en banc* majority relied on an abbreviated *Pickering/Connick* analysis based on the reasoning of the three-judge panel to conclude that the statute did not violate the free speech rights of public employees (that is, it was facially constitutional). The majority then undertook a lengthy review of the theory and practice of academic freedom to conclude that the statute did not violate faculty members’ First Amendment rights regarding their research projects (that is, the statute was constitutional as applied to the plaintiffs). Under the majority’s reasoning, therefore, faculty members, like all public employees, do have free speech rights, and these rights protect them in the same way and to the same extent as other public employees; they do not have any additional or different free speech rights, beyond those of other public employees, that accrue to them because they work in academia.

In the *Pickering/Connick* part of its analysis (addressing the statute’s facial constitutionality), the *en banc* court in *Urofsky* first reviewed the scope and application of the Virginia statute. The critical threshold question, according to the court, is whether the statute regulates employees “primarily in [their] role as citizen[s] or primarily in [their] role as employee[s].” Only in the former circumstance, according to the majority, do public employees enjoy the First Amendment protections articulated in the *Pickering/Connick* line of cases. The *Urofsky* court therefore focused only on the status or “role” of the person speaking—whether he or she is speaking as a citizen or as an employee—and did not consider the type of speech being regulated—whether the speech addresses a matter of public concern or a matter of private concern:

This focus on the capacity of the speaker recognizes the basic truth that speech by public employees undertaken in the course of their job duties will frequently involve matters of vital concern to the public, without giving those employees a First Amendment right to dictate to the state how they will do their jobs. . . . [T]he government is entitled to control the content of the speech because it has, in a meaningful sense, “purchased the speech at issue” through . . . payment of a salary [216 F.3d at 407 and 408 n.6].

Having declared its preference for using the role or status of the speaker as the litmus test for employee speech protections, the court then determined that the professors were speaking only as employees and not as citizens. As a result, the court did not analyze whether the speech at issue—access to and dissemination of sexually explicit materials for particular professional research projects—could rise to the level of public concern speech. Nor did the majority balance the professors’ free speech interests against the state’s interest in maintaining an efficient and nonhostile workplace. Instead, the majority simply determined that:

The speech at issue here—access to certain materials using computers owned or leased by the state for the purpose of carrying out employment duties—is clearly made in the employee’s role as employee. [T]he challenged aspect of the Act does not regulate the speech of the citizenry in general, but rather the speech of state employees in their capacity as employees. . . . Because . . . the challenged aspect of the Act does not affect speech by [faculty members] in their capacity as private citizens speaking on matters of public concern, it does not infringe the First Amendment rights of state employees [216 F.3d at 408–9].

By adopting this strained view of the public concern test and thereby avoiding the *Pickering/Connick* balancing test, the *en banc* court also conveniently avoided the impact of *United States v. National Treasury Employees Union*, 513 U.S. 454 (1995) (discussed in Section 7.1 of this book). This case requires a different and stronger showing of government interest when the speech of a large group of employees is limited by statute or administrative regulation. The case also warns of the burdens placed on employee speech by a “ban” that “deters an enormous quantity of speech before it is uttered, based only on speculation that the speech might threaten the Government’s interests” (513 U.S. at 467 n.11). The dissenting opinion in *Urofsky* provides an example of how the *NTEU* case’s balancing analysis would apply to the Virginia statute (216 F.3d at 439–41 (Murnaghan, J. dissenting)). In addition, by taking the position it did on the public concern test, the court majority avoided the “overbreadth” and “vagueness” analysis often applied to statutes regulating speech and thus also avoided any application of the *Keyishian* case (see Section 7.1), which employed such analysis and warned against statutes that exert a “chilling effect” on free speech.

In his concurring opinion, Chief Judge Wilkinson criticized the *en banc* majority’s use of the *Pickering/Connick* line of cases<sup>29</sup> because:

[B]y placing exclusive emphasis on the fact that the statute covers speech of “state employees in their capacity as employees . . .” the majority rests its conclusions solely on the “form” of the speech. The public concern inquiry, however, does not cease with form. The majority fails to examine the “content” of the speech, which surely touches on matters of political and social importance.

---

<sup>29</sup>The Wilkinson opinion, in turn, was criticized by another judge writing a concurring opinion (216 F.3d at 416–25 (Luttig, J., concurring)).

It also fails to examine the “context” of the speech, which can occur in a variety of settings, including the public university. As this case was brought by public university professors, I consider the statute’s application to academic inquiry as a useful illustration of how the statute restricts material of public concern [216 F.3d at 426–27].

Regarding “context,” for instance, Chief Judge Wilkinson made these points that, in his view, are central to the first prong of the *Pickering/Connick* analysis but are ignored by the majority:

[T]he context of the affected speech is unique. In the university setting “the State acts against a background and tradition of thought and experiment that is at the center of our intellectual and philosophic tradition.” *Rosenberger v. Rector & Visitors of Univ. of Va.*, 515 U.S. 819, 835 (1995). Internet research, novel though it be, lies at the core of that tradition. These plaintiffs are state employees, it is true. But these particular employees are hired for the very purpose of inquiring into, reflecting upon, and speaking out on matters of public concern. A faculty is employed professionally to test ideas and to propose solutions, to deepen knowledge and refresh perspectives. See William W. Van Alstyne, “Academic Freedom and the First Amendment in the Supreme Court of the United States: An Unhurried Historical Review,” 53 *Law & Contemp. Probs.* 79, 87 (1990). Provocative comment is endemic to the work of a university faculty whose “function is primarily one of critical review.” *Id.*

Furthermore, state university professors work in the context of considerable academic independence. The statute limits professors’ ability to use the Internet to research and to write. But in their research and writing university professors are not state mouthpieces—they speak mainly for themselves. See generally David M. Rabban, “Functional Analysis of ‘Individual’ and ‘Institutional’ Academic Freedom Under the First Amendment,” 53 *Law & Contemp. Probs.* 227, 242–44 (1990). It is not enough to declare, as the majority does, “The speech at issue here . . . is clearly made in the employee’s role as employee.” No one assumes when reading a professor’s work that it bears the imprimatur of the government or that it carries the approval of his or her academic institution [216 F.3d at 428–29].

By failing to consider the “content” and “context” of the prohibited speech, the Chief Judge said, the majority has reached a result under which:

even the grossest statutory restrictions on public employee speech will be evaluated by a simple calculus: if speech involves one’s position as a public employee, it will enjoy no First Amendment protection whatsoever. My colleagues in the majority would thus permit any statutory restriction on academic speech and research, even one that baldly discriminated on the basis of social perspective or political point of view [216 F.3d at 434].

The dissenting opinion (joined by four judges) also criticizes the majority’s use of *Pickering/Connick*, arguing that “the majority has adopted an unduly restrictive interpretation of the ‘public concern’ doctrine” and that its “formalistic focus on the ‘role of the speaker’ in employee speech cases . . . runs directly

contrary to Supreme Court precedent” (216 F.3d at 435–39). Even one of the judges joining in the majority opinion wrote a separate concurrence indicating that he had joined the majority because he felt bound by a prior Fourth Circuit case in which he had dissented, and that were he “left to [his] own devices,” he “would hold that the [professors’] speech in this case is entitled to some measure of First Amendment protection, thus triggering application of the *Connick/Pickering* balancing test” (216 F.3d at 425–26 (Hamilton, J., dissenting)).<sup>30</sup>

In the academic freedom part of its analysis (addressing the Virginia statute’s application to “academic employees’ right to academic freedom”), the *Urofsky* majority acknowledged that the U.S. Supreme Court, in various cases, has addressed and supported a constitutional concept of academic freedom. The Supreme Court’s focus, however—according to the *Urofsky* majority—was always on the institution’s own academic freedom, and not on the academic freedom of individual faculty members: “the Supreme Court, to the extent it has constitutionalized a right of academic freedom at all, appears to have recognized only an institutional right to self-governance in academic affairs” (216 F.3d at 412). (See Section 7.1.6 above for discussion of “institutional academic freedom.”) The *Urofsky* majority then determined that faculty members do not have any constitutional right to academic freedom, under the First Amendment, whether in regard to research or to other faculty functions. The majority therefore rejected the professors’ academic freedom claim because its “review of the law” led it “to conclude that to the extent the Constitution recognizes any right of ‘academic freedom’ above and beyond the First Amendment rights to which every citizen is entitled, the right inheres in the University, not in individual professors . . .” (216 F.3d at 410).<sup>31</sup>

Although it rejected the professors’ free speech and academic freedom claims, the *Urofsky* majority did acknowledge that other claims might validly arise when the Virginia statute’s provision on prior approval for research with sexually explicit content (Va. Code Ann. § 2.2-2827(B)) is applied to individual cases: “[A] denial of an application under the Act based upon a refusal to approve a particular research project might raise genuine questions—perhaps even constitutional ones—concerning the extent of the authority of a university to control the work of its faculty. . . .” But, said the majority, “such questions

---

<sup>30</sup>The majority, having rejected the professors’ claim under the first prong of the *Pickering/Connick* analysis (the public concern test), did not consider the second prong (the balancing test) mentioned in Judge Hamilton’s concurring opinion. Both the Wilkinson concurring opinion and the dissent, however, did reach the second prong of the analysis. The Wilkinson opinion concluded that the state’s interests, on balance, outweighed the professors’ speech interests (216 F.3d at 431–34 (Wilkinson, Ch. J., concurring in judgment)); the dissent reached the opposite conclusion. The Chief Judge relied extensively on the unique circumstances of higher education and academic freedom; the dissenters relied on more general factors that would be common to most public employee speech. Both opinions provide useful (though divergent) illustrations of how to do the balancing analysis in faculty speech cases.

<sup>31</sup>Neither the Wilkinson opinion, the Hamilton opinion, nor the dissent directly addresses the majority’s broad rejection of the plaintiffs’ second claim. The Wilkinson opinion does contain extended and supportive discussion of academic freedom (see 216 F.3d at 428, 431–35) that seems to acknowledge both faculty and institutional academic freedom, and also applies the *Pickering/Connick* test with particular reference to faculty members’ freedom of inquiry.

are not presented here” (216 F.3d at 415 n.17). Thus the majority did recognize that other legal issues may arise if a faculty member who seeks prior approval is refused permission; but at the same time the majority determined that this possibility of future violations was not sufficient to invalidate the statute either on its face or as applied to the plaintiffs (who had not sought prior approvals).

The dissenters, on the other hand, echoed the district court’s opinion in arguing that the Virginia statute is unconstitutional because it gives institutions broad, virtually unfettered, discretion as the sole arbiters for approving prior requests for accessing and disseminating sexually explicit materials used for professional purposes.<sup>32</sup> In rejecting the statute as both overinclusive and underinclusive in restricting broad categories of speech used for beneficial public purposes, the *Urofsky* dissent determined that the statute’s prior approval requirement could lead to arbitrary decisions that could “chill” faculty members’ speech:

The danger of arbitrary censorship is particularly relevant in the instant case, given the differing views on the merits of research and discussion into sexually-related topics. . . . [T]he mere existence of the licenser’s unfettered discretion, coupled with the power of prior restraint, intimidates parties into censoring their own speech, even if the discretion and power are never actually abused [216 F.3d at 441].

Faculty members subject to the Virginia statute, or a similar statute or regulation in another state, apparently have two options for avoiding such strictures on computer-based research. First, a faculty member may conduct the research using personally owned computer equipment; and second, the faculty member may seek the institution’s prior approval for a professional research project that will utilize the restricted materials. The first option is available because the statute addresses only a professor’s use of “agency-owned or agency-leased computer equipment”; thus, as the majority acknowledged, “state employees remain free to access sexually explicit materials from their personal or other computers not owned or leased by the state.” Presumably, faculty members could use personal computers in their faculty offices to access or store sexually explicit research material. But the statute may prohibit the use of personal computers to access the university’s Internet connections or search engines, or to store sexually explicit materials on the university’s network, since they may be considered to be “computer equipment” within the meaning of Section 2-2.2827.

The second option is available under the statute’s prior approval clause just discussed. This option requires that faculty members be aware of how their institutions have interpreted and implemented this clause. The option will be more meaningful if faculty members, collectively and individually, become involved in their institution’s policy making and decision making on prior approvals. The institution could, apparently, adopt a blanket approval policy or

---

<sup>32</sup>Judge Wilkinson, in his concurrence, takes a quite different tack. He viewed the prior approval requirement as a feature of the statute that preserved academic freedom and helped secure the Virginia statute’s constitutionality (216 F.3d at 432–34 (Wilkinson, Ch. J., concurring in result)).

an “advance permission” policy for faculty members in particular disciplines or departments—or perhaps all faculty members—thus minimizing the statute’s restraint on faculty research. (See the district court’s discussion of this point; 995 F. Supp. at 642–43.) If an institution establishes more rigorous criteria for gaining prior approval to access the restricted materials, then it would be important to assure that the criteria are clear, that there is a tight time frame for making decisions on approval requests, and that any faculty member whose request is denied will receive a full statement of the reasons for the denial. In the case of a denial, the decision may apparently be challenged in court, the *Urofsky* court having left the door open for such challenges (216 F.3d at 415 n.17; see also 216 F.3d at 441 (Murnaghan, J., dissenting)).

When the *en banc* majority opinion in *Urofsky* is viewed together with the concurrences and dissents, and with the district’s court’s opinion, the case provides a highly instructive debate on faculty academic freedom, especially (but not only) with respect to academic research. While the majority opinion is the controlling law in the Fourth Circuit, there is good reason to question whether its abrupt rejection of public employee speech rights and faculty academic freedom rights will, or should, become the prevailing legal view. The seven judges in the *Urofsky* majority were strongly criticized by the remaining five judges: Chief Judge Wilkinson concurring in the result (216 F.3d at 426–35) and Judge Murnaghan and the other three judges joining in his dissenting opinion (216 F.3d at 435–41). The Wilkinson opinion and the dissent both make important points worth serious consideration, as does the district court’s opinion in the same case (995 F. Supp. 634). The majority’s reasoning has also been strongly criticized in the legal literature (see, for example, Richard Hiers, “Institutional Academic Freedom vs. Faculty Academic Freedom in Public Colleges and Universities: A Dubious Dichotomy,” 29 *J. Coll. & Univ. Law* 35 (2002); J. Peter Byrne, “Constitutional Academic Freedom in Scholarship and in Court,” *Chron. Higher Educ.*, January 5, 2001, B13). Moreover, the *Urofsky en banc* majority opinion for the Fourth Circuit appears to be inconsistent with the Second Circuit’s opinion in the *Levin* case, discussed above, and with many other faculty academic freedom cases (see Sections 7.2 above & 7.4 below). The *Levin* opinion, the district court opinion in *Urofsky*, the Wilkinson concurrence in *Urofsky*, and the Murnaghan dissent in *Urofsky* all differ from one another in their reasoning in certain respects, and present four somewhat different views of the law, but all are united in their insistence that faculty members at public institutions do have First Amendment protections that extend to their research and writing activities. That is the better view of the law and is a view that can be well supported by a combination of the points made in these four sources.

## ***Sec. 7.4. Academic Freedom in Institutional Affairs***

**7.4.1. In general.** Faculty members are not only teachers and scholars; they are also participants in the governance of their academic programs, departments, and schools, and of the institution itself (see generally William G. Tierney & James T. Minor, *Challenges for Governance: A National Report* (Center

for Higher Education Policy Analysis, 2003), available at <http://www.usc.edu/dept/chepa/gov/survey.shtml>). Just as a faculty member's duties extend beyond instruction and research to governance, so do the possibilities for academic freedom disputes.

Although faculty members do not have any federal constitutional right to participate in the governance of their institutions (*Minnesota State Board for Community Colleges v. Knight*, 465 U.S. 271 (1984), discussed in Section 6.2.2), “[f]aculty involvement in academic governance has much to recommend it as a matter of academic policy,” (465 U.S. at 288) and academic policy considerations have supported “a strong, if not universal or uniform, tradition of faculty participation in school governance” (465 U.S. at 287). In many institutions, moreover, faculty members’ governance responsibilities and rights have been set out, at least in part, in institutional bylaws, faculty handbooks, or other documents that are part of the faculty member’s contract with the institution. In addition to such formal or official participation in governance—at the institutional, school, department, and program levels—faculty members may also involve themselves informally in institutional affairs at any of these levels.

In both circumstances—formal participation in governance and informal involvement in institutional affairs—freedom of expression issues may arise, particularly issues concerning the faculty member’s freedom to criticize the institution, or its trustees or officers, without fear of reprisal. In both public and private institutions, such issues may be dealt with using AAUP policy statements (in particular the “Statement on Government of Colleges and Universities,” in *AAUP Policy Documents and Reports* (9th ed., 2001), 217), the statements of other associations,<sup>33</sup> or the policies and customs of the institution where the dispute arises. Principles of contract law may also be pertinent (see Section 7.1.3 above). In public institutions, issues about faculty expression may also be, and often are, dealt with using the federal Constitution’s First Amendment. As the cases below illustrate, disputes about governance and institutional affairs that implicate the First Amendment are usually the most controversial and the most likely to result in litigation.

Many, but not all, faculty freedom of expression claims concerning governance and institutional affairs may also be considered academic freedom claims. The claim may properly be characterized as an academic freedom claim, and the dispute as an academic freedom dispute, if the opinions and ideas that the faculty member expresses implicate the *academic* operations of a program, department, or school; or if the faculty member’s expression results in some administrative penalty that adversely affects his or her teaching or research opportunities or “chills” the expression of other faculty members on academic matters. When such connections to academic affairs are not apparent, the dispute may only concern free speech in general; in this situation, the faculty member’s rights are essentially the same as those of any other public employee. If

---

<sup>33</sup>See, for example, the “AGB Statement on Institutional Governance” (Association of Governing Boards of Universities and Colleges, 1998); and see Neil Hamilton, “Are We Speaking the Same Language? Comparing AAUP and AGB,” *Liberal Education*, Fall 1999, 24–31.

the dispute is genuinely an academic freedom dispute, however, questions may arise concerning whether the faculty member's constitutional rights to speak out regarding institutional affairs differ in kind or degree from those of other public employees. (See generally, Matthew Finkin, "A Higher Order of Liberty in the Workplace': Academic Freedom and Tenure in the Vortex of Employment Practices and Law," 53 *Law & Contemp. Probs.* 357 (1990).)

In either situation, the interests that faculty members seek to protect, and those that institutions seek to protect, are different from interests relating to instruction or research. The institution may be concerned primarily with maintaining faculty members' focus on their contractual duties, promoting harmonious working relationships among faculty and administration, or maintaining the public's confidence in the institution. In contrast, the faculty member may be concerned about meaningful participation in governance, the freedom to criticize administrators, officers, and trustees as warranted, and more generally, the freedom to express views or personality on campus without fear of reprisal.

**7.4.2. *Speech on governance matters.*** In the cases discussed in this subsection, the First Amendment free speech clause is the primary focus of analysis, and courts have increasingly resorted to the *Pickering/Connick* line of cases (see Section 7.1.1) as the governing authority. From that line the lower courts have extracted a three-stage decision-making methodology. At the first stage, as explained in *Connick*, the question is whether the faculty member's speech is on a "matter of public concern." If it is not, the inquiry ends, and the faculty member is afforded no First Amendment protection. If the speech is on a matter of public concern, the court moves to the second stage and applies the *Pickering/Connick* balancing test. If the balance of interests weighs in favor of the institution, the inquiry ends, and the faculty member again obtains no First Amendment protection. If the balance of interests weighs in favor of the faculty member, however, the court will either protect the faculty member or proceed to a third stage of analysis, where questions of motivation and causation are considered. At this stage, if the faculty member cannot show that his protected statements were a "motivating factor" in the institution's decision to penalize him, or if the institution can show that, even though it may have considered the protected speech it would have nevertheless taken adverse action against the faculty member for reasons independent of the speech, the court will afford no First Amendment protection to the faculty member even if the speech was on a matter of public concern and the balance of interests weighed in the faculty member's favor. This potential third stage of the analysis is the focus of Section 7.6 below.

With some notable exceptions, the trend in the cases concerning institutional affairs has been to deny First Amendment protection to faculty speech. In many cases, courts accomplish this result by finding that the speech activities at issue were not "matters of public concern" (stage 1); in other cases, courts acknowledge that the speech addressed matters of public concern but then deny protection by applying the balancing analysis in a manner that favors the institution (stage 2); and occasionally a court will find no causation (stage 3). The following cases are illustrative.

*Ayoub v. Texas A&M University*, 927 F.2d 834 (5th Cir. 1991), involved an Egyptian-born professor, originally hired in 1968, who made repeated complaints that his starting salary was low and that, as a result, his salary in each succeeding year remained too low. In 1985, the professor's interim department head reviewed the salary and recommended no raise for the professor (as well as for four other professors who were white U.S. citizens), and the college dean also determined that the salary was appropriate. Later in 1985, the new department head attempted to move the professor's office to a different building, allegedly because of complaints other department members had made about his disruptiveness. The professor then initiated legal action, "alleging that his civil rights had been violated when his office was relocated in retaliation against his complaints about the University's past discriminatory pay scale."

The court recognized the difficulty in distinguishing between public and private concerns, as required by *Connick* (Section 7.1.1), "because almost anything that occurs within a public agency could be of concern to the public." The court's role

[is] "not [to] focus on the inherent interest or importance of the matters discussed by the employee [but instead] to decide whether the speech at issue in a particular case was made *primarily* in the plaintiff's role as a citizen or *primarily* in his role as employee. In making this distinction, the mere fact that the topic of the employee's speech was one in which the public might or would have had a great interest is of little moment" [927 F.2d at 837; emphasis added, quoting *Terrell v. University of Texas System Police*, 792 F.2d 1360, 1362 (5th Cir. 1986)].

Applying this test, the court determined that the professor had spoken primarily as an employee, because his speech "involved only his personal situation." Only after the professor filed suit did he "characterize his complaint in terms of a 'two-tier' system perpetuated by the University, whereby foreign-born professors were paid less than white, native-born professors." Nor was there any evidence that the professor "ever uttered such a protest at any time before the alleged retaliatory acts by the defendants." Thus, even if his comments were viewed "in terms of a disparate, 'two-tier' pay system, the record is absolutely clear that he only complained about its application to him." Consequently, the court concluded that the professor

consistently spoke not as a citizen upon matters of public concern, but rather as an employee upon matters of only personal interest. . . . [T]here is no evidence that [he] expressed concern about anything other than his own salary. Although pay discrimination based on national origin can be a matter of public concern, in the context in which it was presented in this case by [the professor] it was a purely personal and private matter [927 F.2d at 837-38].

In *Dorsett v. Board of Trustees for State Colleges and Universities*, 940 F.2d 121 (5th Cir. 1991), a tenured mathematics professor at a state university claimed that he had been retaliated against because he had "challenged several departmental decisions and [had] publicly supported another professor who had been

attacked by the administration for refusing to lower academic standards.” The departmental decisions he challenged concerned teaching assignments, pay increases, and other administrative and procedural matters. The appellate court held that “the alleged harms suffered by Dorsett [did] not rise to the level of a constitutional deprivation” and that, even if they did, nothing in the content, form, or context of the speech indicated an intent to address an issue of public concern, as required by *Connick*. The court specifically noted that the professor’s complaints had been directed to persons within the university and had not arisen in the context of a public debate about academic standards or about the administration of the university or the mathematics department. The court did not reach the *Pickering/Connick* balancing test because the speech in question was a matter of personal rather than public concern.

*Colburn v. Trustees of Indiana University*, 973 F.2d 581 (7th Cir. 1992), involved two nontenured sociology professors employed under one-year renewable contracts. Their department had for several years been split into two contending factions. The majority faction controlled the department’s primary committee, which constituted the first level of review for all promotion and tenure decisions. The two professors, members of the minority faction, each wrote a letter to university officials asserting that the “department was so divided that individual careers, and the effective functioning of the department, were being threatened,” and requesting an external review of the sociology department’s internal peer review system for professional advancement. University officials responded to the letters by urging the department to resolve its conflict internally. The primary committee continued to be controlled by the majority faction, however, and the two professors, along with the other members of the minority faction, wrote to the department chair describing “the deplorable and intolerable [situation], especially for junior members of the department who face discrimination by the now unchallenged dominant group.” Each professor subsequently nominated himself for promotion, but the primary committee recommended against promotion. The committee also recommended that one of the plaintiffs not be reappointed, noting that his “written and verbal comments to people outside the department have hurt the image of the Sociology faculty and undermined the integrity of the peer review process.” The second professor was also considered for tenure; although he received a favorable recommendation from the committee, the recommendation of the department chair was negative, and he was ultimately denied not only tenure but reappointment as well.

The two professors challenged these actions in court, charging that the university had retaliated against them for engaging in expression protected by the First Amendment. The trial court granted summary judgment for the university, finding that the professors’ speech was not on matters of public concern. On appeal, the professors advanced four arguments for classifying their speech as a matter of public concern. The appellate court rejected each argument and affirmed the trial court’s judgment.

First, the professors argued that “their letters were not simply an internal matter, but revealed that the integrity of the university was being threatened.”

The court recognized that “[e]xposing wrongdoing within a public entity may be a matter of public concern,” and that there is “[n]o doubt [that] the public would be displeased to learn that faculty members at a public university were evaluating their colleagues on personal biases.” The court asserted, however, that “the fact the issue could be ‘interesting’ to the community does not make it an issue of public concern.” The court viewed the plaintiffs’ letters as “principally an attempt to seek intervention in a clash of hostile personalities” rather than an “attempt to expose some malfeasance that would directly affect the community at large.”

Second, the professors argued that the “division in the department fell along the lines of membership and non-membership in the faculty union, and that pressures to join a union make the faculty clashes of deep public concern.” Again, the court recognized that “[s]peech which is related to collective activity may be a matter of public concern.” In this case, however,

[a]lthough union affiliation may have been a factor in determining membership in one of the two competing groups, pressure to join the union was not the central reason for the request for review of the department, nor were [the plaintiffs] attempting to inform the public that faculty members were being pushed into union membership. . . . [T]he point of their speech . . . was to highlight how the department’s in-fighting had affected them and would affect their futures at the university [973 F.2d at 587].

Third, the professors argued that “simply because they had some personal interest in calming the tensions in the department does not prevent their requests for review from being matters of public concern.” The court recognized that:

[s]peech is not unprotected simply because it raises complaints or other issues personal to the speaker. . . . However, where the overriding reason for the speech is the concern of a few individuals whose careers may be on the line, the speech looks much more like an internal personal dispute than an effort to make the public aware of wrongdoing [973 F.2d at 587].

Although the plaintiffs “emphasize[d] that they did not speak simply to further their own career interests but everyone in the department’s interest,” the court believed that the department’s “deterioration was principally of importance to the few faculty members who had to tolerate the bickering.”

Fourth, the professors argued that “the forum in which [they] raised their concerns is relevant to whether their statements should be characterized as a matter of public concern.” The court recognized that “[e]mployee speech does not go unprotected simply because the chosen forum is private and addressed solely to others in the workplace. . . . But statements made privately in the workplace themselves must be of some public concern in order to be protected.” The fact that the plaintiffs had communicated their concerns to only a few university officials “underscores the internal nature of the dispute.”

Thus, the court concluded, consistent with the trial court, that the professors’ letters and statements “are most reasonably characterized as relating to

matters of personal interest. Plaintiffs were not speaking primarily as citizens, but as faculty members concerned about the private matter of the processes by which they were evaluated.”

Taken together, these cases illustrate how lower courts have adapted the U.S. Supreme Court’s directives in *Pickering* and *Connick* to the particular circumstances of higher education. Most important, these cases establish a framework for determining whether the speech at issue was on a matter of public concern. As discussed below, this framework, and much of the courts’ reasoning under *Pickering* and *Connick*, is insensitive to the shared governance context of higher education and may be criticized on numerous grounds.

First, these cases accord relatively little weight to the particular “context” of the speech. According to *Connick*, “Whether an employee’s speech addresses a matter of public concern must be determined by the content, form, *and context* of a given statement, as revealed by the whole record” (461 U.S. at 147–48) (emphasis added). The courts have generally used the same analysis in faculty cases that they use in cases involving other types of public employees, thereby attaching no significance to the special context of higher education. While there are many similarities between college and university employees and other public employees, there are also important differences. Primary among them are the special governance structure of higher education and the special status of academic freedom. When courts are inattentive to such matters, the strictness of the “public concern” test and the fact sensitivity and malleability of the balancing test may combine to chill the faculty member’s willingness to participate forthrightly in departmental and institutional debate.

Similarly, these cases employ a cramped version of the *Connick* distinction between speaking out as a “private citizen” and as a “public employee.” This distinction is useful in the general employment context, as in *Connick*, but in the higher education context it ignores the fact that shared governance requires professors to speak out as professionals on matters of institutional concern. Those who do so may enhance rather than threaten the operation of the institution. When a court ends its inquiry because the speech is not a matter of public concern, as strictly conceived in *Ayoub*, *Colburn*, and *Dorsett*, it never considers the vital participatory role professors may play in shared-governance systems or the constructive impact that speech about “institutional concerns” may have on institutional operations over the long run.

Perhaps most problematic, these cases assign excessive weight to whether the speech was communicated to the general public. The *Ayoub* opinion relied on a previous case (*Terrell v. University of Texas System Police*, 792 F.2d 1360 (5th Cir. 1982)), in which the court, holding that First Amendment protections did not apply to a diary, “emphasized that [the claimant] made no effort to communicate its contents to the public.” Applying this reasoning to the professor’s claims, the *Ayoub* court noted that “[c]ertainly, [he] never attempted to air his complaints in a manner that would call the public’s attention to the alleged wrong.” Similarly, the *Colburn* court considered the fact that the professors had brought their concerns only to the attention of university officials and viewed this fact as underscoring the private, internal character of the speech.

This heavy emphasis on the audience of the speech, along with precious little emphasis on the subject matter, appears to conflict with the U.S. Supreme Court's holding in *Givhan* (Section 3.7.1). There, the Court made clear that the determination of whether speech is a matter of public concern does not depend on whether the communication itself was made in public or private. As an appeals court explained in *Kurtz v. Vickrey*, 855 F.2d 723 (11th Cir. 1988):

Although an employee's efforts to communicate his or her concerns to the public are relevant to a determination of whether or not the employee's speech relates to a matter of public concern, focusing solely on such behavior, or on the employee's motivation, does not fully reflect the Supreme Court's directive that the content, form, and context of the speech must all be considered. The content of the speech is notably overlooked in such an analysis. . . . Moreover, such a focus overlooks the Court's holding in *Givhan* . . . [855 F.2d at 727].

When courts ignore the nature of the higher education context while focusing on the "private citizen/public employee" distinction and the public/private context of the speech, they undercut the concepts of shared governance and collegiality. In the cases described above, the professors who followed administrative channels and did not communicate their criticisms to persons outside the institution did not receive First Amendment protection. Those professors who did communicate outside the institution, specifically to accrediting agencies, were afforded at least threshold First Amendment protections. These results seem to suggest that, to guarantee themselves protection under the First Amendment, faculty members should bypass internal administrative procedures and go directly to persons or agencies outside the institution. A First Amendment rule that would encourage, if not require, such behavior would conflict with the best interests and the customs of institutions that protect shared governance and collegiality.

In contrast to cases like *Ayoub*, *Dorsett*, and *Colburn*, other courts have occasionally applied the *Pickering/Connick* analysis in a manner that is more sensitive to the uniqueness of higher education and more hospitable to faculty members' academic freedom and free speech claims. One highly instructive example is *Johnson v. Lincoln University*, 776 F.2d 443 (3d Cir. 1985)—a case that avoids the problems characteristic of the cases above, and could serve as a model for later judicial developments. In declining to side with the university, the court found that the faculty member's speech was on matters of public concern; and although it then remanded the case to the trial court to apply the *Pickering/Connick* balancing test, the appellate court clearly signaled its inclination to give great weight to the faculty member's free speech interests.

The *Johnson* plaintiff was a chemistry professor challenging the termination of his tenure. The lawsuit grew out of a dispute within the university that began in 1977. At that time the university decided to make substantial reductions in its faculty. Led in part by the professor, the faculty responded with sharp criticism of both the university and its president. An initial lawsuit ensued, in which the faculty asserted that "various disciplinary actions had been taken in order to suppress

faculty criticism of university policy.” That case eventually was settled out of court. Four months later, the chemistry department chair initiated dismissal proceedings against the professor. The charges were based primarily on events related to the “rancorous, longstanding dispute within the chemistry department.” After a hearing, the presiding committee recommended the termination of the professor’s tenure. The university president accepted the committee’s recommendation, and the board of trustees upheld his decision. The professor thereupon sued in federal court, challenging the termination of his tenure on several grounds, including the ground that the termination was in retaliation for his statements about university policies and academic standards. The trial court focused both on the professor’s speech regarding disputes within the chemistry department and on letters he had written to the Middle States Association of Colleges and Schools regarding the university’s academic standards in general. Reasoning that disputes within the chemistry department were of interest only to those within the department and that the professor’s letters were “merely an outgrowth of his personal dispute with the university,” the trial court held that each of these speech activities concerned matters of “purely private concern” and therefore were not protected.

The appellate court vacated the trial court’s judgment, holding that it had erred as a matter of law in determining that the professor’s speech activities did not involve matters of public concern. First the court emphasized “that the mere fact that an employee’s statement is an ‘outgrowth of his personal dispute’ does not prevent some aspect of it from touching upon matters of public concern.” While the controversies within the department may have some personal aspects, other aspects are “concerned [with] questions of educational standards and academic policy of a scope broader than their application within the department.” As an example, the court quoted from a memorandum written by the professor regarding departmental standards: “I believe such grade inflation is a kind of crime against students, Lincoln University, and Black people. Standards of Black Colleges are always suspect and it took 50–60 years for Lincoln to earn a high reputation for quality education and high standards. . . . What [the department chair] has done is to encourage non-quality education and non-quality character. . . . A good reputation for academic quality was the only thing of value Lincoln ever had or ever will have” (776 F.2d at 452).

Commenting on this passage, the court asserted that “[i]t is difficult to imagine a theme that touches more upon matters of public concern.” The court then noted that the same theme was present in the professor’s letters to the Middle States Association, in which he criticized the standards of a master’s degree program at Lincoln because it did not require a bachelor’s degree. In these letters the professor “proceeded to connect the decline of academic standards at Lincoln with the demoralization caused by the suppression of academic freedom during the [prior] controversy, and encouraged the Middle States Association to investigate Lincoln.” The professor specifically emphasized “the vital importance of high educational standards to the future of mankind—and the special circumstances that make it a kind of crime to allow lower standards at Black institutions” (776 F.2d at 452).

Tracking the language of *Connick*, the court declared that “questions of academic standards are of ‘apparent . . . interest to the community upon which it is essential that public employees be able to speak out freely without fear of retaliatory dismissal.’” As to the letters, the court stated that “it is difficult to see any distinguishing features between these letters and the one which the *Pickering* court held to be protected activity.”

The appellate court also found that the trial court erred in limiting its inquiry to the two types of speech activities identified above. The professor’s claims also included “his role in [the prior] litigation [against the university], his role in the underlying activities leading up to that litigation, his longstanding criticisms of [the current] administration’s academic policy, his newspaper articles proposing that Lincoln eliminate the F grade, his attempts to have other faculty members censured for allowing students to take advanced courses without passing the prerequisites, and his criticisms of his department chairman over academic standards.” The court observed that whether these items “touch[ed] upon matters of public concern seems hardly open to question.”

In remanding the case to the trial court so that it could undertake the *Pickering* balancing analysis, the appellate court provided considerable guidance. Quoting one of its own prior decisions, it noted that “‘even if there were some evidence of disruption caused by plaintiff’s speech, such a finding is not controlling. . . . *Pickering* is truly a balancing test, with office disruption or breached confidences being only weights on the scales.’” The appellate court further cautioned that “a stronger showing [of the employer’s justification] may be necessary if the employee’s speech more substantially involved matters of public concern.”

Of special interest, and in marked contrast to *Ayoub*, *Colburn*, and *Dorsett*, the *Johnson* court placed significant importance on the circumstances of the academic environment. It began by declaring that “[d]espite the inappropriateness of this forum for resolving issues of academic policy and academic freedom, we find ourselves reviewing charges [of wrongful] termination of tenure.” Then, after asserting the importance of context, and tracking the language of *Tinker v. Des Moines School District* (see Section 9.5.1 of this book), the court stated:

[It] is particularly important that in cases dealing with academia, the standard applied in evaluating the employer’s justification should be the one applicable to the rights of teachers and students “in light of the special characteristics of the school environment.” . . . In an academic environment, suppression of speech or opinion cannot be justified by an “undifferentiated fear or apprehension of disturbance,” . . . nor by “a mere desire to avoid the discomfort and unpleasantness that always accompany an unpopular viewpoint” [776 F.2d at 453–54, quoting *Tinker*; other citations omitted].

Some other courts after *Johnson* have similarly adopted a more sensitive approach to institutional affairs cases and have classified particular faculty speech within the “public concern” category. In *Maples v. Martin*, 858 F.2d 1546 (11th Cir. 1988), for example, five disgruntled tenured professors in the mechanical

engineering department at Auburn University had continually opposed the personnel and administrative decisions of their department head. In anticipation of an accreditation review by the American Board of Education Technology, the professors distributed a survey to departmental faculty and students, to some alumni and administrators, and to the accreditation board. The professors compiled the data from these surveys into a report that discussed departmental problems, especially a morale problem, and was highly critical of the department head. Largely as a result of this report and related events that preceded and followed it, the university reassigned the five professors to other engineering departments, without loss of pay or rank.

The professors argued that reassigning them for having published the report violated their rights to freedom of speech. The district and appellate courts disagreed, upholding the reassignment. Applying *Connick*, the appellate court concluded that a portion of the professors' report was speech on matters of public concern because it would influence the public's perception of the quality of education at the university. The court then used the *Pickering* balancing test to weigh the professors' free speech interests in publishing the report against the report's "disruptive impact on the workplace." The report had "distracted both students and faculty from the primary academic tasks of education and research"; it was "produced in an atmosphere of tension created by the authors' longstanding grievance" against the department's administration; and the report's publication "contributed to a lack of harmony among the faculty and . . . severely hampered communication between the members of the faculty and the Department Head." The court therefore concluded that the report's "interference with the efficient operation of the [Mechanical Engineering] Department at Auburn was sufficient to justify the transfer[s]" and outweighed the professors' need to speak on matters of public concern.

In *Mumford v. Godfried*, 52 F.3d 756 (8th Cir. 1995), the appellate court relied on the U.S. Supreme Court's opinions in *Connick* and *Givhan* (Section 7.1.1 above) to reverse a trial court determination that a professor's speech was not on a matter of public concern. The professor had criticized his own department, the Department of Architecture at the University of Iowa. Speaking at various times with his colleagues, he had openly expressed his opinion that the department maintained a potentially unethical link with the Des Moines architectural professional community. In remanding the case to the trial court, the appellate court emphasized that the professor's statements did not lose their First Amendment protection merely because they were "only expressed to his colleagues," and that a speaker need not reach or intend to reach a "public audience" in order to be "acting as a concerned public citizen speaking on a matter of public interest."

In *Scallet v. Rosenblum*, 911 F. Supp. 999 (W.D. Va. 1996), *affirmed on other grounds*, 1997 WL 33077 (4th Cir. 1997), the court relied on *Mumford* to conclude that an instructor's faculty meeting comments on the importance of addressing "diversity" in the classroom were "related to matters of public concern." The speech, "although curricular in nature, cannot be said to relate to matters solely of institutional or personal concern since it also speaks to the general

debate on multiculturalism that currently thrives in all quarters of American society” (911 F. Supp. at 1017).

Similarly, in *Bloch v. Temple University*, 939 F. Supp. 387 (E.D. Pa. 1996), the court held that a professor’s complaints about the condition of his physics laboratory “embodied matters of public concern.” The professor had made statements about “improper storage of toxic and unidentified materials” in the laboratory. The university argued that the speech was not protected because the professor was speaking as an employee and was not seeking to inform the public. In rejecting the university’s contention, the court emphasized that the professor’s statements could be public concern speech even though he “undeniably had a personal stake in the cleanup” of the laboratory and even though the statements “may have been the outgrowth of personal disputes within the department.”

Even when courts determine that a faculty member’s speech is not on a matter of public concern, they can do a better job of elucidating the distinction between public concern and private concern than courts have done in cases like *Ayoub, Dorsett, and Colburn. Clinger v. New Mexico Highlands University, Board of Regents*, 215 F.3d 1162 (10th Cir. 2000), is an instructive example. The plaintiff, an assistant professor, claimed she was denied tenure partly in retaliation for four exercises of free speech: first, her “advocacy before the Faculty Senate of a ‘no confidence’ vote with respect to four members of the Board of Regents in light of their purported failure to comply with an internal policy on the appointment of a new president”; second, her “comments before the Faculty Senate criticizing [a] Regent. . . as untrustworthy based on the presidential appointment process”; third, her “criticism of Selimo Rael for accepting the position of University President”; and fourth, her “criticism of a proposed academic reorganization purportedly in conflict with the Faculty Handbook and the Board of Regents policy manual.”

The appellate court agreed with the trial court that the professor’s speech was not on matters of public concern. According to the appellate court: “Speech concerning individual personnel disputes or internal policies will typically not involve public concern. However, speech that exposes improper operations of the government or questions the integrity of government officials clearly concerns vital public interests” (215 F.3d at 1166 (internal citations omitted)). Using these guidelines, the court found that the professor’s speech did not challenge “the integrity, qualifications, [or] alleged misrepresentations of a public official.” Rather, “plaintiff simply differed with the Board of Trustees on the internal process they followed in selecting a president and reorganizing the University. Rather than challenging the president’s actual credentials, the professor “merely faulted him for taking part in an allegedly unsatisfactory process.” The statements relating to the Regent’s integrity did not concern vital public interests because they were based solely on his role in the internal decision-making process. The court therefore held that the professor’s statements only challenged internal structures and governance and did not “transcend the internal workings of the university to affect the political or social life of the community” (quoting the court’s previous decision in *Bunger v. University*

of *Okla. Bd. of Regents*, 95 F.3d 987, 992 (10th Cir. 1996)) and that “[t]he First Amendment does not require public universities to subject internal structural arrangements and administrative procedures to public scrutiny and debate.”

More recent cases have raised cutting-edge issues concerning free speech claims arising in the context of heated or prolonged internal disputes. These cases follow upon and build upon the earlier *Johnson v. Lincoln University* and *Maples v. Martin* cases, both of which also involved protracted internal disputes. In *Webb v. Board of Trustees of Ball State University*, 167 F.3d 1146 (7th Cir. 1999), for example, a professor and former department chair was involved in ongoing disputes within his department. The court described the disputes as “internecine warfare” and the department as one “suffer[ing] a collapse of cooperation and decorum.” The professor claimed that the university had retaliated against him by stripping him of his departmental chairship, in violation of the First Amendment, for views he had expressed in the context of the departmental disputes. The appellate court affirmed the trial court’s denial of a preliminary injunction for the professor. Accepting both the trial court’s refusal to “disentangle the public and private aspects of the speech” and the trial court’s conclusion that the plaintiff’s speech had become “disruptive,” the appellate court announced this guideline for cases involving internal disputes:

Universities are entitled to insist that members of the faculty (and their administrative aides) devote their energies to promoting goals such as research and teaching. When the bulk of a professor’s time goes over to fraternal warfare, students and the scholarly community alike suffer, and the university may intervene to restore decorum and ease tensions. . . . Under the circumstances, the University’s right as employer to achieve the organization’s goals must prevail . . . [167 F.3d at 1150].

In another case decided by the same Circuit shortly after *Webb*, *Feldman v. Ho*, 171 F.3d 494 (7th Cir. 1999), the court rejected the free speech claim of a former professor whose contract was not renewed after he had precipitated an internal dispute by making accusatory statements about a departmental colleague. Like the court in *Webb*, and somewhat like the court in the earlier *Maples v. Martin* case, the court in *Feldman* held that the professor’s free speech interests were overcome by the university’s interests in protecting other faculty members from the distractions of an internal dispute. But the court added a significant, and potentially far-reaching, new twist to its analysis by asserting that the professor’s claims did not even deserve to be submitted to a jury:

[I]t does not follow that a jury rather than the faculty determines whether Feldman’s accusation was correct. . . . [T]he Constitution does not commit to decision by a jury every speech-related dispute. If it did, that would be the end of a university’s ability to choose its faculty—for it is speech that lies at the core of scholarship, and every academic decision is in the end a decision about speech.

\* \* \* \*

If the kind of decision Southern Illinois University made about Feldman is mete for litigation, then we might as well commit all tenure decisions to juries, for all are equally based on speech [171 F.3d at 495, 496, 497].

The court did take care to note, however, that its deference to the university's judgments "is limited to the kind of speech that is part of the [university's] mission":

Feldman's speech was neither unrelated to his job . . . nor unrelated to mathematics. . . . Feldman objected to the way the Mathematics Department handled its core business of choosing and promoting scholars. That task is both inevitably concerned with speech and so central to a university's mission that the university's role as employer dominates [171 F.3d at 497-498].

In contrast, in *de Llano v. Berglund*, 282 F.3d 1031 (8th Cir. 2002), the court sorted out various statements that a professor had made after he was removed as chair of the physics department at North Dakota State University (NDSU). The statements appeared in numerous letters that the professor wrote to the local newspaper, to the school newspaper, and to officers of the university, criticizing the university administration and various faculty members. These letters "expressed [the professor's] dissatisfaction with a variety of ongoing conflicts he was having with the department." Prior to his removal as chair, there had been, in the court's words, "several years of acrimonious relations between de Llano, the NDSU administration and his Physics Department colleagues." After the professor sent the letters, further events transpired, including a censure of the professor by his department, followed by his dismissal from the faculty. Challenging this dismissal in court, he argued that six of his letters constituted public concern speech protected under the *Pickering/Connick* line of cases. The court found that most of the statements in these letters were not on matters of public concern and therefore were not protected by the First Amendment:

[A]lthough couched in general terms, [these comments] related specifically to the ongoing feuds he was having with the defendants. His letters essentially amounted to publicly airing his dissatisfaction with his removal as chair of the physics department and the department's undervaluation of his strong commitment to research. . . . These are just a few examples of de Llano's pattern of publicly complaining about private disputes that were unique to him and not a matter of public concern [282 F.3d at 1036-37].

On the other hand, some of the statements in the letters "are properly characterized as issues of public concern." Examples included statements "criticiz[ing] the growing percentage of non-academic staff at NDSU" and statements "citing the rising salaries of NDSU administrators as evidence that money was being poorly spent." These statements qualified for protection, said the court, because "[w]e generally have held that speech about the use of public funds touches upon a matter of public concern" (282 F.3d at 1037). Despite this

finding in his favor, however, the professor did not prevail in his lawsuit because he had not proven that the public concern statements were “a substantial factor in the decision to terminate him.” (For discussion of this part of the case, see Section 7.6 below.)

Subsequently, another Circuit weighed in on the application of the *Pickering/Connick* line to speech issues arising from acrimonious internal disputes. *Hulen v. Yates*, 322 F.3d 1229 (10th Cir. 2003), was actually the fourth in a line of helpful Tenth Circuit cases concerning the *Pickering/Connick* line’s application to intramural faculty speech.<sup>34</sup> Hulen was a tenured faculty member in the accounting and tax department at Colorado State University (CSU). According to the dean’s characterization, there had been “more than six years of divisiveness and dysfunction” within this department. In this context, Professor Hulen and other faculty members had sought to bring charges against another tenured faculty member in the department (“Dr. M.”), had pressed for an investigation of the charges, and had called for termination of Dr. M.’s tenure. The charges included “plagiarism and copyright violations, emotional abuse of students, abuse and harassment of staff, [and] misuse of state funds” (322 F.3d at 1233). Hulen made statements supportive of an investigation and of the termination of Dr. M.’s tenure to various members of the university administration, in particular to his department chair and the university provost. When an investigation did take place, Hulen made statements criticizing its inadequacy. When Hulen and his colleagues allegedly received threats delivered to them by the “then-Accounting Department Chair, . . . who advised that his message was from the CSU Administration” (322 F.3d at 1233), Hulen wrote memos to the university president requesting an investigation of the alleged threats. Subsequently, Hulen was transferred to another department against his wishes. In his lawsuit, Hulen claimed that this transfer was in retaliation for various statements he had made in the context of the dispute concerning Dr. M., and that such retaliation for an exercise of free speech violated the First Amendment.

Beginning its analysis, the appellate court set forth this guideline: “Speech which discloses any evidence of corruption, impropriety, or other malfeasance on the part of [state] officials, in terms of content, clearly concerns matters of

---

<sup>34</sup>The first of these cases is *Bunger v. University of Oklahoma Board of Regents*, 95 F.3d 987, 991–92 (10th Cir. 1996), in which the court determined that two untenured professors’ complaint about the exclusion of untenured faculty members from the graduate school’s administrative council was not public concern speech. The second case is *Gardetto v. Mason (Eastern Wyoming College)*, 100 F.3d 803 (10th Cir. 1996), in which the court held that a female professor’s speech regarding a no-confidence vote against the institution’s president and speech criticizing the president’s plan for reduction in force were matters of public concern. The third case is *Clinger v. New Mexico Highlands University Board of Regents*, 215 F.3d 1162 (10th Cir. 2000), in which the court distinguished *Gardetto* and determined that the faculty speech at issue was not on matters of public concern. (*Clinger* is discussed more fully earlier in this section.) A fifth case, decided after *Hulen*, is *Schrier v. University of Colorado*, 427 F.3d 1253 (10th Cir. 2005), in which the court determined that a department chair’s comments on a proposed relocation of the university’s health sciences center were on matters of public concern (427 F.3d at 1262–63). A careful comparison of these five cases and their facts should yield very useful insights concerning the difficult lines to be drawn between public and private concern speech in the arena of institutional affairs.

public import” (322 F.3d at 1237, quoting *Conaway v. Smith*, 853 F.2d 789, 796 (10th Cir. 1998)). Applying this guideline to the facts in the record, the court determined that:

The speech in this case fairly relates to charges at a public university that plainly would be of interest to the public, e.g., plagiarism and copyright violations, emotional abuse of students, abuse and harassment of staff, misuse of state funds, receipt of kickbacks from a publisher in return for adopting textbooks, and a claimed inadequate investigation of the allegations and alleged retaliation against those who made the allegations [322 F.3d at 1238, citing *Maples v. Martin*, 858 F.2d 1546, 1553 (11th Cir. 1988)].

The court thus ruled, at the first stage of the *Pickering/Connick* analysis, that Hulen’s speech was on matter of public concern. Furthermore, the court explained: “The fact that Dr. Hulen might receive an incidental benefit of what he perceived as improved working conditions does not transform his speech into purely personal grievances. Moreover, speech which touches on matters of public concern does not lose protection merely because some personal concerns are included” (322 F.3d at 1238).

At the second stage of the *Pickering/Connick* analysis, the court was unable to complete its analysis because the facts in the record were not yet sufficiently developed. The court did acknowledge, however, in a statement favorable to the professor, that “at this point in the proceedings, the evidence is far too general to link the actual disruption of the accounting department to Dr. Hulen’s protected speech.” The court also instructed that, in considering the university’s claims regarding disruption of the efficient operation of the department, the trial court should take into account “the inherent autonomy of tenured professors and the academic freedom that they enjoy” (citing Chief Justice Warren’s opinion and Justice Frankfurter’s concurrence in the *Sweezy* case, discussed in Section 7.1.4 above, as well as the “1940 Statement of Principles on Academic Freedom and Tenure,” discussed in Section 7.1.3 above).

All four of these cases—*Webb*, *Feldman*, *de Llano*, and *Hulen*—add to an understanding of *Pickering/Connick*’s application to free speech in the context of prolonged faculty-administration disputes. The *Webb* case provides a good general guideline on the threat to institutional interests that arises when a faculty member’s time is spent more on “fraternal warfare” than on teaching and scholarship duties. This guideline is useful only as a *general* guideline, however. In particular cases, postsecondary administrators, as well as the courts, must be on the alert not only for genuinely disruptive circumstances, but also for situations where discipline is selectively imposed upon some of the faculty members involved in a dispute but not others, based on the sides taken or the viewpoints expressed in the dispute. In such circumstances, the institution’s rationale of alleviating disruption may not be weighty enough to prevail in the *Pickering/Connick* balance.

The *Feldman* case, like *Webb*, provides a useful reminder of the important interests of the institution that may be at stake in divisive disputes. In *Feldman*, however, unlike *Webb*, the institution’s interest was not focused on the faculty

member's diversion of his own time and energy to the dispute at the expense of other faculty duties, but rather to the need to protect other faculty members from the distraction of a prolonged dispute. *Feldman* seems to overstate the case in this regard by its dictum that many faculty free speech claims arising from internal disputes do not even deserve to go to a jury. Surely there are faculty free speech claims, even in the Seventh Circuit, that deserve to go to a jury for various reasons—the primary one probably being that there are entrenched factual disputes about the causes, extent, and effects of the disruption; but the dictum in the *Feldman* case provides no basis for determining which claims deserve to go to a jury and which do not. Moreover, the *Feldman* court, in its second dictum set out above, suggests that the more related the professor's speech is to his or her professional job functions and expertise, the less protection his or her statements will have. This seems to turn an academic freedom claim on its head; it is usually when there is a close connection to the professor's professional duties and professional expertise that the academic freedom claim has the most credibility. Given these two difficulties with the court's reasoning, it is likely that the *Feldman* decision is best understood only as a decision that, in total, suggests that "institutional" academic freedom (or autonomy) will trump faculty academic freedom most, if not all, of the time in the area of institutional affairs.

The guidelines in the *Hulen* case are probably the most useful of any in the more recent cases about divisive internal disputes. The *Hulen* case is particularly helpful when compared with the earlier *Clinger* case, decided by the same circuit (*Clinger* is discussed above). In comparing the facts of those two cases, the court had to make fine judgments about the line between public concern and private concern speech in the context of internal faculty-administration disputes. The two cases together, therefore, provide an instructive illustration of how and where to draw that line in the difficult situations that typically arise in cases about prolonged disputes.

In all three of these cases, there appeared to be statements of private concern mixed in with the public concern statements that provided the basis for the faculty member's free speech claim. The three courts dealt with this problem in different ways. The *Webb* court, for instance, refused to "disentangle" the public and private concern aspects of the statements at issue in that case, apparently determining that the speech was sufficiently disruptive that the university would prevail at any rate in the second stage of the *Pickering/Connick* analysis. In contrast, the *de Llano* court carefully sorted through the various statements, but then asked whether the public concern statements were a cause of the university's action against the professor. The *Hulen* court, in a more nuanced opinion, also sorted the statements, determining that the public concern statements were the primary statements that the professor had made and were representative of the professor's primary motivation. Thus, the public concern statements would prevail, and the faculty member's claim would not fail simply because there would be some private benefit, or there had occasionally been some private motivation, for the faculty member's various statements made in the context of the heated dispute.

The case of *Sholvin v. Univ. of Medicine and Dentistry of New Jersey*, 50 F.Supp.2d 297 (D.N.J. 1998), provides another useful illustration consistent with *Hulen*. In this case, a tenured professor in the dental school had engaged in disputes with the school's administration that extended over several years and focused on various issues. Characterizing the case as one "where a faculty member during continuing disagreement with his department's administration and administrators addressed matters both of public and private concern," the court undertook to review and sort "the different categories of statements at issue here." The court also made clear that statements of public concern do not lose their protected character because they are made in the context of heated disputes or motivated in part by self-interest:

Plaintiff's apparent enmity for Buchanan, Catalanotto and other members of the NJDS [New Jersey Dental School] administration does not preclude a finding that some of this evidence was of public concern. Nor is it determinative that plaintiff was politically and/or otherwise allied with the Slomiany group. Many of his statements and expressions are in the realm of public concern and therefore may be entitled to First Amendment protection notwithstanding the personal disputes and interests which in part motivated plaintiff [50 F. Supp. 2d at 313, citing *Johnson*, 776 F.2d at 452].

On balance, nevertheless, the court determined that the disruptiveness of the plaintiff's expressive activities outweighed his interest in free speech.

Other cutting-edge issues about faculty intramural speech were raised in *Bonnell v. Lorenzo*, 241 F.3d 800 (6th Cir. 2001). This case was different from most of the others above because it did not involve a faculty member's grievance about wages, benefits, or working conditions (as did cases like *Ayoub* and *Bloch* above) or a protracted internal dispute (as did cases like *Webb*, *Feldman*, *de Llano*, and *Hulen* above); instead it involved a faculty member's intramural speech in the context of one of the institution's official governance functions—the processing of student grievances. The only other cases above to focus on a particular governance process or particular structure of governance are the *Clinger* case, which focused on debates in the faculty senate, and the *Scallett* case, which involved a faculty member's statements during faculty meetings.<sup>35</sup> Different institutional interests may be implicated in such cases, compared to the interests articulated in most of the other cases above.

In *Bonnell*, a female student alleged that a male professor had used language in his English class that constituted sexual harassment. (See Section 7.2.2 above for this aspect of the case.) The student filed a letter of complaint with college officials, who then scheduled a meeting with the professor and provided him a copy of the complaint. According to the court, the professor "made copies of the Complaint and passed them out to the students in all six of his classes after redacting the complaining student's name, and also posted a copy of the Complaint on the bulletin board outside of his classroom." In addition, the

---

<sup>35</sup>For another example of a case involving a faculty member's statements at a faculty meeting, see *Hall v. Kutztown University*, 1998 WL 10233, 75 Fair Empl. Prac. Cases 1440 (E.D. Pa. 1998).

professor “distributed copies of the Complaint to the more than two hundred College faculty members” along with his response to the charges in the form of “an eight-page essay entitled ‘An Apology: Yes Virginia, There is a Sanity Clause.’” (The “sanity clause” was a reference to the First Amendment’s free speech clause.)

After the college had disciplined the professor for distributing these materials, the professor filed suit, claiming that his distribution of the materials was protected by the First Amendment. The court first addressed the distribution of the complaint and then addressed the distribution of the “Apology,” in each instance agreeing that the distributions were “acts of expression” and then applying the *Pickering/Connick* analysis (see Section 7.1.1 above). Both the complaint and the apology, according to the court, covered matters of public concern. Regarding the complaint, “it is well-settled that allegations of sexual harassment, like allegations of racial harassment, are matters of public concern.” As to the apology:

[S]peech which sets forth the type of remarks that served as the catalyst to a sexual harassment complaint lodged against a college professor, and the professor’s reaction thereto, is speech which can “fairly be considered as relating to any matter of political, social, or other concern to the community.” *Connick*, 461 U.S. at 146 & 147–48. Said differently, the subject of profane classroom language which precipitates a sexual harassment complaint lodged against the instructor for his use of this language in relation to the First Amendment, as well as the sanctity of the First Amendment in preserving an individual’s right to speak, involves a matter of public import. . . . Stated more broadly, there is a public interest concern involved in the issue of the extent of a professor’s independence and unfettered freedom to speak in an academic setting [241 F.3d at 816–17].

Since the professor’s speech was on matters of public concern, the court proceeded to apply the *Pickering/Connick* “balancing” test. The court acknowledged that the professor’s interests in free speech and academic freedom on campus are “paramount,” but are nevertheless limited by the institution’s own academic autonomy (see Section 7.1.6 above). The college’s interests at stake were also strong and varied; the most important apparently were (1) “maintaining the confidentiality of student sexual harassment complaints,” (2) “prohibiting retaliation against students who file sexual harassment complaints,” and (3) “preserving a learning environment free of sexual harassment” and a “hostile-free learning environment.” Undertaking this “delicate” balance, the court determined that the college’s interests prevailed in the particular fact circumstances of this case.

**7.4.3. Intramural speech on extramural public affairs.** Whereas all the cases above concerned “intramural” speech, *Starsky v. Williams*, 353 F. Supp. 900 (D. Ariz. 1972), *affirmed in pertinent part*, 512 F.2d 109 (9th Cir. 1975), presents a different type of academic freedom problem. The case involved institutional affairs not in the sense that the speech concerned campus issues but rather in the sense that the professor’s on-campus speech

activities allegedly conflicted with his institutional responsibilities. Although the speech at issue did take place on campus, it concerned external public affairs rather than internal institutional operations. The case illustrates that, when campus speech regarding external affairs is at issue, the “public concern” test is easily met (compare *Jeffries v. Harleston* in Section 7.5.2 below) and the analysis will focus either on the *Pickering/Connick* balancing test (see Section 7.1.1 above) or on the *Keyishian* case’s concepts of “chilling effect” and “pall of orthodoxy” (see Section 7.1.4).

The plaintiff in *Starsky* was a philosophy professor who had taught at Arizona State for six years before the university dismissed him on a series of charges, some involving on-campus activity and others involving off-campus activity. (The charges in the latter category are discussed in Section 7.5 below.) After several incidents, generally involving the professor’s dissemination on campus of information about socialism, the board of regents directed the president to institute proceedings against him. The Committee on Academic Freedom and Tenure then held hearings and filed a report that concluded that the charges and evidence did not provide an adequate basis for dismissal. The board nevertheless terminated the professor’s employment, and the professor sought redress in the courts.

The federal district court held that the dismissal violated the professor’s constitutional right to free speech. One of the charges against the professor concerned his peaceful distribution of leaflets to other faculty members at the entrance to a faculty meeting. The leaflet was an “open letter” by a Columbia University student containing a philosophical and political discussion of activity taking place at Columbia. The university charged that the professor, in distributing the leaflet, had “failed to exercise appropriate restraint or to exercise critical self-discipline and judgment in using, extending, and transmitting knowledge” (353 F. Supp. at 907). The court, quoting the academic freedom declaration from the *Keyishian* case, stated:

There is a serious constitutional question as to whether speech can be stifled because the ideas or wording expressed upset the “austere” faculty atmosphere [as one faculty member had complained]; certainly the board has no legitimate interest in keeping a university in some kind of intellectual austerity by an absence of shocking ideas. Insofar as the plaintiff’s words upset the legislature or faculty because of the contents of his views, and particularly the depth of his social criticism, this is not the kind of detriment for which plaintiff can constitutionally be penalized [353 F. Supp. at 920].<sup>36</sup>

A case from the Seventh Circuit, *Trejo v. Shoben*, 319 F.3d 878 (7th Cir. 2003), illustrates the limits on judicial protection for intramural speech on external issues. The professor’s statements were made at an off-campus function involving the professor’s official duties rather than on the campus itself; but the

---

<sup>36</sup>For a more recent problem concerning faculty speech on extramural affairs, arising in the aftermath of 9/11, see Robin Wilson, “CUNY Leaders Question Faculty Comments of Terror Attacks,” *Chron. Higher Educ.*, October 19, 2001, A11.

court's analysis would apparently have been the same if the statements had been made in a similar context on campus. The university had declined to renew the contract of the professor, a probationary assistant professor of psychology. The nonrenewal was due in part to certain complaints about the professor's behavior at an academic conference that he attended with several of his graduate students. Of primary concern were statements the professor had made at a late-night dinner while in the company of his graduate students and other conference attendees. According to the court, the professor "attempted to regale his dinner companions with a discussion of a documentary recently aired on a local television station concerning the sexual behavior of primates. [He] vociferously opined that there is a relationship between pregnancy, orgasms, and extramarital affairs and went on to advocate sex outside marriage and extramarital affairs" (319 F.3d at 881). The court declined to provide First Amendment protection for these statements under either the *Keyishian* case or the *Pickering/Connick* line of cases. Regarding the latter, the professor claimed that "his intent was to foster an academic debate over socio-biological theories of mating," and that his statements were therefore protected as matters of public concern. The court disagreed:

These statements were simply parts of a calculated type of speech designed to further [the professor's] private interests in attempting to solicit female companionship and, at the same time, possibly to irritate the other graduate students to whom he was speaking. . . . [T]he individuals seated at the table all agreed that [the professor's] off-color remarks were delivered in a flirtatious manner peppered with double entendres and ribald references [319 F.3d at 887].

Thus, the professor's statements regarding the sexual behavior of primates "failed to address an issue of public concern."

## ***Sec. 7.5. Academic Freedom in Private Life***

**7.5.1. In general.** Faculty members would seem most insulated from institutional interference when they are engaging in private activities or practices. These activities and practices may be purely personal, or may be of a professional nature but not part of or related to the faculty member's responsibilities as an employee of the institution. In such circumstances, especially the former, the faculty member may be acting as an ordinary citizen, protected by rights that an ordinary citizen may claim or that any public employee may claim. Disputes concerning a faculty member's private life may thus often be viewed more as "personal freedom" than "academic freedom" disputes. "Personal freedom" disputes may have ramifications for academic freedom, however, if the faculty member's private activity has a negative effect on the fulfillment of his or her teaching or research responsibilities, or if the institution imposes a penalty on the faculty member that infringes upon his academic freedom or "chills" the academic freedom of other faculty members. A 1987 AAUP report on the case of Jeannette Quilichini Paz, a tenured professor who had been dismissed from the Pontifical Catholic University of Puerto Rico (CUPR), is illustrative.

In this case, the university administration had dismissed Quilichini when it learned that she had remarried, even though her previous Catholic marriage had ended in civil divorce and had not been ecclesiastically annulled (“Academic Freedom and Tenure: The Catholic University of Puerto Rico,” *Academe*, May–June 1987, 33–38). Relying on church law, under which the remarriage was considered sinful, the university administration insisted that their Catholic faculty members must adhere to the laws of the church in both their academic and their private lives. In disapproving the dismissal, the AAUP investigating committee emphasized that “[t]he issue of direct concern in Professor Quilichini’s case, however, is not academic freedom but personal freedom. It was her private conduct rather than her conduct as a teacher and researcher or any intramural or extramural statements she may have made that was the administration’s ground for dismissal.” Yet the university administration’s action affected the academic freedom of all the university’s faculty members:

The administration of CUPR, in basing the dismissal of Professor Quilichini from her tenured position on vaguely stated religious standards not demonstrably related to professional performance, has placed in question the academic freedom of all faculty members at CUPR. The statement in the faculty manual that a faculty member is expected to “conduct himself in accordance with the values and ethical principles of the Catholic Church (both within and without the University) . . .” is subject to such broad interpretation that it would allow the administration to dismiss almost any faulty member at will [*Academe*, May–June 1987, 38].<sup>37</sup>

Because a faculty member’s private life may involve activities not traditionally thought of as academic freedom concerns, rights other than free speech rights may be implicated in this type of dispute. In *Hander v. San Jacinto Junior College*, 519 F.2d 273 (5th Cir. 1975), for instance, the court considered a state college’s authority to enforce faculty grooming regulations. The college had dismissed the plaintiff, a professor, when he refused to shave his beard. Relying on the due process clause and the equal protection clause, the court ruled in favor of the professor. In its analysis, the court first distinguished faculty members from certain other government employees with respect to grooming regulations: “Teachers even at public institutions such as San Jacinto Junior College simply do not have the exposure or community-wide impact of policemen and other employees who deal directly with the public. Nor is the need for discipline as acute in the educational environment as in other types of public service.”

The court then enunciated this rule for institutions seeking to impose grooming regulations on their teachers:

School authorities may regulate teachers’ appearance and activities only when the regulation has some relevance to legitimate administrative or educational functions. . . .

---

<sup>37</sup>The professor subsequently sued the university, but the Puerto Rico courts ruled in the university’s favor (Docket No. RE-90-578, Supreme Court of Puerto Rico, June 27, 1997). The appellate court declined to rule on the professor’s claim concerning personal privacy, since it involved religious matters in which the court could not intervene.

The mere subjective belief in a particular idea by public employers is, however, an undeniably insufficient justification for the infringement of a constitutionally guaranteed right. . . . [It] is illogical to conclude that a teacher's bearded appearance would jeopardize his reputation or pedagogical effectiveness with college students [519 F.2d at 277].

Another aspect of faculty freedom in private life, and another application of the equal protection clause, is illustrated by *Trister v. University of Mississippi*, 420 F.2d 499 (5th Cir. 1969).<sup>38</sup> The plaintiffs were part-time faculty members who also worked at a legal services office of the federal Office of Economic Opportunity (OEO). University administrators warned them that they would lose their jobs at the university if they continued to work at OEO. There was no evidence that the OEO jobs consumed any more time than the part-time jobs of other faculty members. The court ruled that it was unconstitutional for a state law school to prohibit some part-time faculty members from working part-time at outside legal jobs while allowing other faculty members to do so. In upholding the plaintiffs' right to work at the OEO office, the court used the equal protection clause in this way:

We are not willing to take the position that plaintiffs have a constitutional right to participate in the legal services program of the OEO, or in any other program. Nor do they have a constitutional right to engage in part-time employment while teaching part time at the Law School. No such right exists in isolation. Plaintiffs, however, do have the constitutional right to be treated by a state agency in no significantly different manner from others who are members of the same class, i.e., members of the faculty of the University of Mississippi School of Law [420 F.2d at 502].

While this narrow reasoning was sufficient to uphold the plaintiffs' claim, other courts may be more willing to find a limited constitutional right to certain types of outside employment, as an aspect of First Amendment freedom of association or Fourteenth Amendment due process privacy rights, where such employment does not interfere with any substantial interest of the institution.

Other issues may arise concerning a faculty member's private behavior that offends the academic community's or broader community's conceptions of morality or propriety. The *Quilichini* case, discussed above, provides an example of this type of dispute. Other examples might involve allegations of extramarital sexual relationships, sexual "perversions," displays of racial or ethnic prejudices, sexual harassment not involving the campus community, or lying or misrepresentations in personal affairs—especially when such allegations, if proven, may constitute crimes. Such disputes about private behavior are more likely to arise in private institutions, especially religious institutions (as in the *Quilichini* case), than in public institutions. This is because private, and especially religious, institutions are more likely to have institutional missions that

---

<sup>38</sup>For an AAUP report on this matter, see "Academic Freedom and Tenure: The University of Mississippi," *AAUP Bulletin* (now *Academe*), Spring 1970, 75–86.

arguably implicate matters of private conduct; and because private institutions have more legal leeway to regulate the private conduct of their faculties and staffs. Private institutions are not bound by the federal constitutional rights clauses that substantially limit public institutions' authority to regulate such matters. The Fourteenth Amendment's due process clause, for example, limits a public (but not a private) institution's authority to use moral judgments as a basis for regulating a person's "liberty" to live a private personal life (see generally *Lawrence v. Texas*, 539 U.S. 558 (2003)). Similarly, the First Amendment's establishment and free exercise clauses limit a public (but not a private) institution's authority to regulate a person's private religious practices or to regulate other aspects of a faculty member's private life in the name of religion (see generally Michael Perry, "Religion, Politics, and the Constitution," 7 *J. Contemp. Legal Issues* 407, 412–17 (1996)).<sup>39</sup> For such disputes in private institutions, then, any legal issues that arise are likely to be cast in terms of contract law (see Section 7.1.3 above and Section 7.8 below). AAUP policies will also be relevant, either as part of the faculty contract or (as in the *Quilichini* case) as the basis for an AAUP investigation.

**7.5.2. Extramural speech.** When a faculty member at a public institution engages in "extramural" speech in his or her private life and is penalized by the institution for this speech, the dispute is likely to implicate the First Amendment's free speech clause. The applicable legal principles will therefore be more like those used in Sections 7.2 through 7.4 than those immediately above in subsection 7.5.1; but the rights at stake may often be generic free speech rights rather than academic freedom rights. In *Starsky v. Williams*, for example (also discussed in Section 7.4.3 above), a faculty member at Arizona State University had made a television appearance in which he criticized the board of regents, calling its actions hypocritical, and had also issued a press release in which he criticized the board. These acts provided part of the basis for dismissing him from the university.<sup>40</sup> The district court, finding for the professor, stated:

In each of these communications, plaintiff spoke or wrote as a private citizen on a public issue, and in a place and context apart from his role as faculty member. In none of these public utterances did he appear as a spokesman for the University, or claim any kind of expertise related to his profession. He spoke as any citizen might speak, and the Board was, therefore, subject to its own avowed standard that when a faculty member "speaks or writes as a citizen, he should be free from institutional censorship or discipline" [353 F. Supp. at 920].

---

<sup>39</sup>A private institution's authority would be limited to some extent, however, by the Title VII employment discrimination statute (see Section 5.2.1 of this book). But religious private institutions would be exempted from some of these Title VII requirements (see Section 5.5 of this book).

<sup>40</sup>The professor had also been charged with deliberately cutting a class in order to speak at a campus rally at another university. The court determined that he had broken no specific regulation by canceling the class and that such matters were usually handled informally within the department. The court chastised the board for selectively enforcing its general attendance policy against the professor in this particular instance and dismissed the charge.

The results may be different from those in *Starsky*, however, if the faculty member's extramural speech is not on a matter of public concern. In *Trejo v. Shoben*, 319 F.3d 878 (7th Cir. 2003) (also discussed in Section 7.4.3), for example, a university had denied reappointment to a professor and, in making this decision, had considered "all the facts and circumstances dealing with [the professor's] conduct during his three years as a non-tenured probationary employee at the University. . . ." Among these facts and circumstances were various charges and complaints about "boorish" and "unprofessional" behavior, often including statements or comments as a primary part of the behavior (319 F.3d at 883). One set of concerns, as the court described it, involved "off-color comments [the professor] made while he was attending parties, playing cards, or frequenting taverns around the University—such as his comment that he wanted to 'get his hands' on one graduate student and 'get naked' or 'drink some good beer' with another . . ." (319 F.3d at 887). The professor claimed that these comments were protected freedom of speech. The court disagreed, asserting that such comments were "casual, idle, and flirtatious chit-chat that may not form the basis of a First Amendment claim."

Moreover, under more recent precedents, the results in extramural speech cases may also differ from that in *Starsky* when the institution can make a connection between the extramural speech and an identifiable harm to the institution. The protracted litigation in *Jeffries v. Harleston* provides a leading example. A tenured professor and chair of the Black Studies Department at the City University of New York (CUNY) had made a controversial off-campus speech in the capacity of "an appointed consultant of the State Education Commissioner." While addressing the topic of reforming the educational system to promote diversity, the professor "made strident attacks against particular individuals, and made derogatory comments about specific ethnic groups" (828 F. Supp. at 1073). When CUNY subsequently removed the professor from his position as department chair, he claimed a violation of the First Amendment. The district court upheld a jury verdict in the professor's favor (820 F. Supp. 741 (S.D.N.Y. 1993), *motion to set aside jury verdict granted in part and denied in part, and permanent injunction granted*, 828 F. Supp. 1066 (S.D.N.Y. 1993)). Relying on *Pickering* and *Connick* (see Section 7.1.1), the court held that the speech was on a matter of public concern and that "Professor Jeffries's statements, when spoken outside the classroom, remain under the umbrella of constitutional protection, as long as those statements do not impede the efficient and effective operation of the College or University." Relying on the *Mt. Healthy* case (see Section 7.6 below), the court determined that the speech was "a substantial or motivating factor" in the university's decision to remove him as department chair. The court thus concluded that "[w]hile there may have been compelling and legitimate grounds upon which to discipline Professor Jeffries, the University chose to act upon illegitimate and unconstitutional grounds, specifically upon [the off-campus speech] and the publicity surrounding it." The appellate court affirmed the district court in all pertinent respects, remanding the case, however, for further proceedings regarding punitive damages (21 F.3d 1238 (2d Cir. 1994)).

The U.S. Supreme Court then granted the university's petition for review of the appellate court's opinion and, upon review (513 U.S. 996 (1994)), remanded the case to the lower courts for reconsideration in light of the Court's 1994 decision in *Waters v. Churchill* (see Section 7.1.1). After reconsideration, and relying on the Supreme Court's ruling in *Waters*, the appellate court reversed its earlier decision and ordered the district court to enter judgment for the defendants (*Jeffries v. Harleston*, 52 F.3d 9 (2d Cir. 1995)). (For contrasting critiques of the case, see Richard Hiers, "New Restrictions on Academic Free Speech: *Jeffries v. Harleston II*," 22 *J. Coll. & Univ. Law* 217 (1995); and Stephen Newman, "At Work in the Marketplace of Ideas: Academic Freedom, the First Amendment, and *Jeffries v. Harleston*," 22 *J. Coll. & Univ. Law* 281 (1995); and see also Michael Sherman, "The Leonard Jeffries Problem: Public University Professor/Administrators, Controversial Speech, and Constitutional Protection for Public Employees," 30 *Loyola U. Chi. L.J.* 651 (1999).)

In reversing its earlier decision, the appellate court in *Jeffries* did not revise its determination that the professor's speech was on a matter of public concern. Instead the court focused on the *Pickering/Connick* balancing test, determined that *Waters* had clarified this test in a way favorable to employers, and then reworked its balance of factors. According to the appellate court:

Even when the speech is squarely on public issues—and thus earns the greatest constitutional protection—*Waters* indicates that the government's burden is to make a substantial showing of *likely* interference and not an *actual* disruption. [W]hittled to its core, *Waters* permits a government employer to fire an employee for speaking on a matter of public concern if: (1) the employer's prediction of disruption is reasonable; (2) the potential disruptiveness is enough to outweigh the value of the speech; and (3) the employer took action against the employee based on this disruption and not in retaliation for the speech. By stressing that *actual* disruption is not required, *Waters* pulls a crucial support column out from under our earlier *Jeffries* opinion [52 F.3d at 13 (emphasis in original)].

Guided by this reading of *Waters*, the appellate court reviewed the jury's findings in the trial record and concluded that a majority of the defendants had "a reasonable expectation that the [off-campus] speech would harm CUNY"; and that a majority of the defendants were motivated by this "reasonable prediction of disruption," and not by a "retaliatory animus," when they demoted Jeffries. The court struck the balance in favor of the university by concluding (without any elaboration) that the university's concern about the potential disruptiveness of the speech was sufficient to outweigh Jeffries's interest in free speech.

The court did not mention academic freedom until the conclusion of its analysis. In a cryptic and enigmatic paragraph, the court noted that Jeffries's position as department chair was "ministerial" and "provided no greater public contact than an ordinary professorship," and that the university has not tried to silence "or otherwise limit [Jeffries's] access to the 'marketplace of ideas' in the classroom." Jeffries therefore did not have a viable "academic freedom" claim (52 F.3d at 14–15).

The *Jeffries* court’s reasoning provides precious little guidance on how to make the various sensitive determinations required by its analysis. To reach its ultimate conclusion, the court had to determine that university officials’ beliefs or predictions about the impact of Jeffries’s speech were reasonable (rather than unreasonable), that university officials took action against Jeffries because of the potential impact his speech would have on university operations (rather than because of their dislike of the content of the speech), and that the potential disruptiveness of the speech outweighed its First Amendment value (rather than the speech outweighing the potential disruptiveness). The opinion sets forth neither a methodology for making these determinations nor a substantive justification for the court’s conclusions—other than statements on the need to defer to the university.

It is especially difficult to determine how the *Jeffries* court distinguished between reasonable concerns about disruption and improper retaliatory motives. The problem seems to be with the court’s formulation of the issues: the university could not constitutionally discipline Jeffries for the content of his speech, yet it would not have had reason to discipline him without the speech. It was the speech that created the potential disruption. At most large universities, it would be hard to imagine “public concern” speech that would not stir any concerns regarding potential disruption of some university interest. The point at which mere offense at a particular message moves to a reasonable concern for university operations is not altogether clear. It is also not clear what types of impacts would be considered disruptions. Certainly the more extreme cases are imaginable—for example, the loss of substantial financial support directly attributable to the speech could be a disruption—but what of smaller financial losses, or losses attributable to a mix of factors? Or a small potential decline in student applications to a particular department? Or a student demonstration in reaction to the speech?

As used in *Jeffries*, the *Waters* concept of “potential” disruption seems to give colleges and universities wide discretion in controlling faculty members’ extramural speech. Even if the university concluded that Professor Jeffries had engaged in hate speech off campus, why was it reasonable to believe that this speech would disrupt university operations? And, if it was reasonable to conclude that Jeffries’s speech would disrupt university operations, then would it be reasonable to believe that all unpopular speech has a similar potential to disrupt? Neither *Waters* nor *Jeffries* provides any sound guidance on where and how to draw these lines, suggesting only the cursory standard of “reasonable belief.”

Some structure could be added to the analysis if the issues regarding retaliatory motives were treated as analogous to the causation issues addressed in the *Mt. Healthy* line of cases (see Section 7.6 below). When the case concerns a single speech or a related pattern of speeches on matters of public concern, and the faculty member has been terminated for this speech, the court must determine whether the speech can be separated into disruptive (unprotected) and nondisruptive (protected) portions. If the nondisruptive portions of the speech are the cause of—or motivation for—the termination, then the termination is

invalid. If the court can identify portions of the speech that were disruptive, however, the university should have to show a causal link between these particular statements and some particular (potential) disruption. Absent any such link, it would be reasonable to conclude that the university was motivated by its disagreement with, or its taking offense at, the speech, and that the termination was an act of retaliation rather than a well-considered attempt to protect university interests from disruption.

In *Waters*, Justice O'Connor, citing *Mt. Healthy*, used a similar analysis that provides helpful guidance for recognizing and resolving retaliation issues in cases like *Waters* and *Jeffries*. According to Justice O'Connor:

Churchill has produced enough evidence to create a material issue of disputed fact about petitioners' actual motivation. Churchill had criticized the [hospital's] cross-training policy in the past; management had exhibited some sensitivity about the criticisms; Churchill pointed to some other conduct by hospital management that, if viewed in the light most favorable to her, would show that they were hostile to her because of her criticisms. A reasonable factfinder might therefore, on this record, conclude that petitioners actually fired Churchill not because of the disruptive things she said to Perkins-Graham, but because of nondisruptive statements about cross-training that they thought she may have made in the same conversation, or because of other statements she may have made earlier. If this is so, then the court will have to determine whether those statements were protected speech, a different matter than the one before us now [511 U.S. at 681–82].

The opinions in *Scaliet v. Rosenblum*, discussed in Section 7.6 below, also develop a helpful relationship between retaliation analysis and the *Mt. Healthy* analysis.

Not all courts will be as deferential to a university's predictions of disruption as was the court in *Jeffries*. For instance, in *Burnham v. Ianni*, 119 F.3d 668 (8th Cir. 1997) (*en banc*), the court issued this warning:

The government employer must make a substantial showing that the speech is, in fact, disruptive before the speech may be punished. *Waters v. Churchill*, 511 U.S. 661, at 674 (1994). We recognize that the government, as an employer, has broader powers in suppressing free speech than the government as a sovereign. Indeed, we have given some deference to an employer's predictions of workplace disruption. *Id.* However, we have never granted any deference to a government supervisor's bald assertions of harm based on conclusory hearsay and rank speculation.

Even if we were to attempt [in this case] to balance the plaintiffs' free speech rights against the purported disruption of the pedagogical tasks of [the university], it is clear that the impact of the speech on [the university's] mission is totally unproven and unaddressed except in the most conclusory fashion. There is simply no evidence that establishes a nexus between the [speech] and an exacerbated climate of fear on the campus or, more importantly, that establishes a relationship between the [speech] and a decrease in the efficiency and effectiveness of [the university's] educational mission [119 F.3d at 680].

### ***Sec. 7.6. Administrators' Authority Regarding Faculty Academic Freedom and Freedom of Expression***

The discussions in Sections 7.1 through 7.5 above make clear that academic freedom and freedom of expression are areas in which the law provides few firm guidelines for college and university administrators—particularly those in private institutions, since the decided cases are mostly constitutional decisions applicable only to public institutions. The constitutional cases themselves are sometimes incompletely reasoned or difficult to reconcile with one another. Moreover, because these cases often depend heavily on a balancing of faculty and institutional interests in light of the peculiar facts of the case, it may be difficult to generalize from one case to another. Thus, institutions need to develop their own regulations on academic freedom and free expression, and their own internal systems for protecting academic freedom and free expression in accordance with institutional policy and the applicable law. The AAUP's guidelines (see Sections 7.1.3 & 14.5 of this book) often can be of assistance in this endeavor.

As the discussions in Sections 7.1.4 and 7.2.4 above suggest, administrators and counsel at public institutions must ensure that the institution's academic freedom policy and its faculty conduct regulations avoid the constitutional dangers of "overbreadth" and "vagueness" (see generally Section 6.6.1). Institutional policies and regulations should also protect faculty members from penalties imposed on the basis of their viewpoints (that is, viewpoint discrimination). In addition, policies and regulations must provide for procedural due process protections in situations where their application would deprive a faculty member of a "liberty" or "property" interest (see Section 6.7.2). Although these constitutional requirements bind only public institutions, they may provide useful guidance for private institutions as well.

For both public and private institutions, faculty handbooks and related documents may provide some guidance for administrators, and contract law will likely impose some limitations on administrators' authority to regulate academic freedom (see Section 7.1.3 above). The importance and usefulness of those limits, however, will depend on the particular terms of the institution's contract with its faculty members (see Section 6.1). Express academic freedom clauses, or clauses incorporating AAUP guidelines, may create substantial limits on administrative authority—and also substantial guidance for resolving disputes. So may contract clauses establishing procedural safeguards that must precede adverse personnel actions (see Sections 6.7.1, 6.7.3, & 6.7.4) and clauses establishing "for-cause" standards that limit administrative discretion to terminate the contract (see Sections 6.6.1 & 6.6.2).

For public institutions, the constitutional law cases, for all their difficulties, do provide other guidance and also further restrict administrators' authority to limit faculty academic freedom. Despite continuing disagreements among courts, there are cases that protect faculty academic freedom and that recognize limits on that freedom in all three internal arenas of concern: teaching (Section 7.2 above), research and publication (Section 7.3), and institutional affairs

(Section 7.4 above). Beyond these three internal arenas, faculty members have considerable freedom in external arenas to express themselves on public issues as private citizens, to associate with whom they please, and to engage in outside activities of their choice on their own time. In general, whether in an internal or external arena, administrative authority over faculty members' behavior or activities increases as their job-relatedness increases and as their negative impact on the educational process or other institutional functions increases.

Using all these contractual and constitutional, internal and external, sources of guidance, administrators should carefully avoid any reliance on an activity or behavior protected by academic freedom whenever they are deciding to terminate or discipline a faculty member or to deny tenure, promotion, or a contract renewal. Sticky problems can arise when the faculty member has engaged in possibly protected activities but has also engaged in unprotected activities that might justify an adverse personnel decision. Suppose, for instance, that a faculty member up for renewal has made public statements critical of state policy on higher education (probably protected) and has also often failed to hold his classes as scheduled (unprotected). What must an administrator do to avoid later judicial reversal of a decision not to renew?

The U.S. Supreme Court addressed this problem in *Mt. Healthy City School District Board of Education v. Doyle*, 429 U.S. 274 (1977), a constitutional case binding on public institutions but providing guidance for private institutions as well. The plaintiff schoolteacher had made statements regarding school policy to a radio broadcaster, who promptly broadcast the information as a news item. A month later the school board informed the teacher that he would not be rehired and gave the radio broadcast as one reason. It also gave several other reasons, however, including an incident in which the teacher made an obscene gesture to two students in the school cafeteria. The Supreme Court determined that the radio communication was protected by the First Amendment and had played a substantial part in the nonrenewal decision, but that the nonrenewal was nevertheless valid if the school board could prove that it would have declined to rehire the teacher even if the radio incident had never occurred:

Initially, in this case, the burden was properly placed upon . . . [the teacher] to show that his conduct was constitutionally protected, and that this conduct was a "substantial factor" or, to put it in other words, that it was a "motivating factor" in the Board's decision not to rehire him. [The teacher] having carried that burden, however, the District Court should have gone on to determine whether the Board had shown by preponderance of the evidence that it would have reached the same decision as to . . . [the teacher's] reemployment even in the absence of the protected conduct [429 U.S. at 287].

Numerous court decisions have applied the *Mt. Healthy* test to public post-secondary education in situations where both proper and improper considerations are alleged to have contributed to a particular personnel decision. In an early case, *Goss v. San Jacinto Junior College*, 588 F.2d 96 (5th Cir. 1979), the plaintiff, a junior college instructor, claimed that her contract had not been renewed because of her political and union activities, which were protected

activities under the First Amendment. The college responded that the instructor had not been rehired because of declining enrollment and poor evaluation of her work. After a jury trial, the jury agreed with the instructor and awarded her \$23,400 in back pay. In affirming the jury verdict, the federal appeals court issued an opinion illustrating what administrators should *not* do if they wish to avoid judicial invalidation of their personnel decisions:

There was ample evidence to support the jury finding that Mrs. Goss had not been rehired “because of her political and/or professional activities.” Dr. Spencer [the president of the college] testified that, when Mrs. Goss sought to organize a local chapter of the National Faculty Association, he distributed by campus mail a faculty newsletter expressing his concern about the organization, while denying proponents of the National Faculty Association the privilege of distributing literature by campus mail. Mrs. Goss testified that, after her husband had filed a petition to run for a seat on the Board of Regents, Dr. Carl Burney, chairman of the Division of Social and Behavioral Sciences, advised her to have her husband withdraw from the election. In deposition testimony, Dr. O. W. Marcom, Academic Dean, stated that, when Mrs. Goss presided at an organizational meeting of a local chapter of the Texas Junior College Teachers Association in the spring of 1971, he attended and voiced his objection to the group. Dr. Spencer himself testified by deposition that he had recommended the nonrenewal of Mrs. Goss’s contract to discipline her for “creating or trying to create ill will or lack of cooperation . . . with the administration.”

There was sufficient evidence to support the jury finding that “matters other than Mrs. Goss’s political and/or professional activities” were not responsible for the Board of Regents’ action. Appellants justified the nonrenewal of Mrs. Goss’s contract on the grounds that declining enrollment necessitated a staff reduction and that Mrs. Goss received a poor evaluation from Dr. Edwin Lehr, Chairman of the History Department, and Dr. Burney. Although Dr. Spencer had recommended a reduction of three faculty members in the History Department, Mrs. Goss was one of four faculty members in the History Department in 1971–72 who did not teach at San Jacinto Junior College in 1972–73.

Furthermore, Dr. Lehr’s evaluation of Mrs. Goss, upon which Dr. Spencer allegedly relied in making his recommendation to the Board of Regents, was inconsistent with the objective criteria established for the rating. The criteria by which the teachers were rated include the number of years of teaching at San Jacinto Junior College, enrollment in a doctoral program, the number of doctoral-level courses completed, the percentage of the teacher’s students earning credits, and other factors. Mrs. Goss was not awarded five points to which she was entitled on the objective scale for academic courses she had taken while employed as an instructor. Thus, she was assigned eighty points, rather than eighty-five. If she had been awarded the points to which she was entitled, she would have ranked in the middle of the seventeen history instructors rather than in the bottom three [588 F.2d at 99–100].

Evidence of an intrusion into academic freedom is not always as clear as it was to the court in *Goss*, however, and postsecondary institutions have often emerged victorious in court. In *Allaire v. Rogers*, 658 F.2d 1055 (5th Cir. 1981), for example, the court considered whether a university president had denied

merit raises to a group of tenured professors because they had lobbied for increased salary appropriations at the state legislature (protected) or because of their lack of merit (unprotected). Only one of the eight original plaintiffs ultimately prevailed on appeal. In *Hillis v. Stephen F. Austin State University*, 665 F.2d 547 (5th Cir. 1982), the court considered whether the contract of a non-tenured faculty member had not been renewed because of his private criticism of his superiors (apparently protected) or his insubordination and uncooperativeness (unprotected). After losing at trial, the university prevailed on appeal. In *Hildebrand v. Board of Trustees of Michigan State University*, 607 F.2d 705 (6th Cir. 1979), *appeal after remand*, 662 F.2d 439 (6th Cir. 1981) (further discussed in Section 2.2.1), the court considered whether a faculty member had been denied tenure because of his criticism of the department's curriculum (protected), his election to the departmental advisory committee (protected), or his unsuitability for the multidisciplinary emphasis of the department (unprotected). After extended litigation, the university eventually emerged victorious. In *Ollman v. Toll*, 518 F. Supp. 1196 (D. Md. 1981), *affirmed*, 704 F.2d 139 (4th Cir. 1983), the court considered whether the University of Maryland refused to appoint the plaintiff as department chair, after his selection by a search committee, because he held Marxist political views (protected) or because he lacked the necessary qualifications to develop the department according to the university's plans (unprotected). The university prevailed at trial and on appeal. (Compare *Cooper v. Ross*, 472 F. Supp. 802 (D. Ark. 1979).) In *Harden v. Adams*, 841 F.2d 1091 (11th Cir. 1988), the court considered whether a professor's tenure had been terminated because he helped maintain discrimination charges against the university and helped organize a chapter of a state education association (protected) or because he quarreled with supervising faculty members and sought to draw students into the disputes, caused dissension within the faculty, neglected faculty duties, and violated minor institutional rules (unprotected). The court concluded that the latter reasons had been the basis for the termination. And in *Nicholas v. Pennsylvania State University*, 227 F.3d 133 (3d Cir. 2000), the court considered whether a tenured faculty member had been terminated because of his criticisms of his supervisor (possibly protected) or because of his excessive outside consulting work (unprotected). The appellate court upheld a jury verdict in favor of the university.<sup>41</sup>

As these cases illustrate, and as *Mt. Healthy* provides, there are two ways in which public postsecondary institutions can win their cases even if the faculty member has engaged in speech on a matter of public concern. First, the institution

---

<sup>41</sup>The *Nicholas* case, like the *Goss* case discussed above, illustrates the important role that juries may play in litigation raising issues of "causation" (the "cause" of the institution's adverse action against the faculty member) or "motive" (the institution's "motive" for its adverse action). Causation and motive are largely fact determinations and thus within the province of the jury. The respective burdens of proof imposed upon the parties by *Mt. Healthy* (above) is therefore a critical consideration, as is the means available to the parties to prove or disprove causation or motive. The trial judge's instructions to the jury are also a critical consideration. On appeal in the *Nicholas* case, the professor challenged the accuracy of the jury instructions, but the appellate court rejected the challenge and upheld the instructions.

will prevail if the faculty member fails to meet his or her burden of proving that the public concern speech was “a substantial factor” or “motivating factor” in the institution’s decision; and second, the institution will prevail if it carries its burden of proving “that it would have reached the same decision [regarding the faculty member] even in the absence of the protected [speech]” (*Mt. Healthy*, above). The first alternative is illustrated by *de Llano v. Berglund*, and the second alternative is illustrated by *Scaliet v. Rosenblum*, both of which are discussed below.

In *de Llano v. Berglund*, 282 F.3d 1031 (8th Cir. 2002), the professor demonstrated that some of the comments in letters he wrote were on matters of public concern (see Section 7.4, above, for this aspect of the case), but he nevertheless lost because “there is no evidence in the record that these few comments on matters of public concern were a substantial or motivating factor in the decision to terminate him.” According to the court:

We are unable to ascertain any evidence that [de Llano] was terminated because of the letters he wrote to the various venues. The dismissal notice given to de Llano outlines a number of reasons for his termination, and those reasons were substantiated in two separate hearings. Not one of the reasons stated for his termination related to de Llano’s letters. . . . We conclude that as a matter of law, even when viewed in the light most favorable to the plaintiff, the record establishes that de Llano failed to meet his burden of showing that his letters were a substantial factor in the decision to terminate him [283 F.3d at 1037].

In *Scaliet v. Rosenblum*, 911 F. Supp. 999 (W.D. Va. 1996), *affirmed*, 197 WL 33077 (4th Cir. 1997) (unpublished), an instructor at the University of Virginia’s Darden Graduate School of Business (Darden) claimed that the university refused to renew his contract in retaliation for speaking out on matters of public concern. Three categories of speech were at issue: (1) the professor’s classroom discussions on the importance of “diversity” in education programs and in the corporate world; (2) the professor’s advocacy in faculty meetings regarding diversity issues and concerns; and (3) articles and cartoons the professor had placed on his office door. The district court determined that only the latter two categories were protected speech (see Sections 7.2.2 & 7.4). The instructor then had to demonstrate, as required by the *Mt. Healthy* case above, that the speech in these two categories was a “motivating factor or played a substantial role” in the contract nonrenewal; the court apparently accepted that the instructor’s evidence did show “some . . . illegal motivation.” Nevertheless, the defendants had demonstrated that the speech at issue “was not the ‘but for’ cause of his nonrenewal.” Rather, the reasons for the nonrenewal were the instructor’s “[f]ailure to observe and follow [the] institutional determination of which courses should embrace which matters within the particular course curriculum,” which led to “disaffections of the other [departmental] instructors” and “strong complaints about [the instructor’s] personal interrelations with those instructors.”

On appeal, the U.S. Court of Appeals for the Fourth Circuit affirmed the district court’s decision. The appellate court noted that there had been various complaints to the effect that the instructor had “a confrontational style that made the other writing teachers feel physically and emotionally threatened, and

that did, as the district court said, border on sexual harassment.” This, the appellate court determined, was the reason for the discharge, and not the desire to retaliate against the instructor for the protected speech.

By placing burdens on faculty members who assert violations of academic freedom or freedom of expression, *Mt. Healthy* and its progeny give administrators at public institutions breathing space to make sound personnel decisions in situations where faculty members may have engaged in protected activity. Administrators in private institutions already have such breathing space, and more, since they are not limited by the First Amendment; but they may nevertheless wish to use their breathing space in the way that is suggested below.

The goal for administrators, of course, is to make personnel decisions untainted by any consideration of protected expression or other illegitimate factors implicating academic freedom. But in the real world, that goal is not always attainable, either because under current legal standards it is difficult to determine whether particular expression is protected or because events involving conduct protected by academic freedom are so widely known that administrators cannot claim to have been unaware of them at the time they made their decision. In situations where both protected and unprotected conduct has occurred, administrators can still avoid judicial invalidation if they make sure that strong and dispositive grounds, independent of any grounds impinging academic freedom, exist for every adverse decision, and that such independent grounds are considered in the decision-making process and are documented in the institution’s records.

Administrators should also consider what procedures they will use in investigating situations that could give rise, or have given rise, to a claim of an academic freedom violation. The need to investigate in order to resolve factual disputes, and to clarify the nuances of what may be subtle and complex circumstances, may be especially great when the institution is contemplating disciplinary action against a faculty member because of activities that he or she may claim are protected by academic freedom. The U.S. Supreme Court’s decision in *Waters v. Churchill*, 511 U.S. 661 (1994) (discussed in Section 7.1.1 above), underscores the need for caution in such situations and provides some (although murky) guidance to public employers regarding investigations in cases with First Amendment overtones. In *Waters*, a hospital had discharged a nurse based on a third-party report that she had made disruptive statements concerning the hospital to a coworker. There was a fact dispute about the content of these statements; in the nurse’s version, the statements were on matters of public concern protected under the *Connick* case (Section 7.1.1 above). Although the Justices were splintered, a majority apparently did agree that, in these circumstances, the employer had a duty to conduct a “reasonable” investigation of the facts and could not dismiss the employee unless it had a “reasonable” belief that the third party’s or the employer’s version of the facts was accurate (see 511 U.S. at 682–86 (concurring opinion of Justice Souter)).

While the *Mt. Healthy* case and the *Waters* case, as First Amendment precedents, bind only public institutions, they can guide private institutions in establishing review standards for their own internal investigations of personnel

disputes; and they may, by analogy, assist courts in reviewing academic freedom claims based on a contract theory (see Section 7.1.3).

In addition to fair and probative investigatory processes, both public and private institutions will want to have well-conceived and well-drafted dispute resolution processes, such as grievance mechanisms and mediation, for resolving conflicts concerning academic freedom (see generally Section 2.3). Such dispute resolution mechanisms must be accompanied and supported by sound written policy statements and regulations on academic freedom—that is, policies that are both respectful of national and local custom and usage on academic freedom and sensitive to the particular needs of the institution. A key to the success of dispute resolution mechanisms and accompanying policies is the ability to accommodate the mix of legitimate interests that are likely to be at stake in academic freedom disputes. Interests of faculty members, students, and the institution, for instance, may all be involved in the same dispute; similarly, both the rights and the responsibilities of these stakeholders are likely to be involved. Successful dispute resolution and successful accommodation, in short, require recognition that all interests at stake must to some extent be limited to allow some room for the other legitimate interests; and that freedom entails both rights and responsibilities, each of which must be accounted for in resolving disputes. Thus institutions should strive for policies and processes that provide vigorous protection of the faculty’s (and students’) academic freedom as well as acceptance of the “duties correlative with rights” that accompany academic freedom (see the “1940 Statement of Principles on Academic Freedom and Tenure,” in *AAUP Policy Documents and Reports* (9th ed., 2001), 3–4, 5 (under comment 1)).

### ***Sec. 7.7. Protection of Confidential Academic Information: The “Academic Freedom Privilege”***

**7.7.1 Overview.** A difficult and divisive academic freedom problem for post-secondary faculty members and administrators is whether courts or administrative agencies may compel faculty members or their institutions to disclose confidential academic information if such information is relevant to issues in litigation. Faculty members may confront this problem if they are asked to provide a deposition, to answer interrogatories, or to be a witness in ongoing litigation, or if they are served with a subpoena or a contempt citation or are otherwise ordered by a court or administrative agency to surrender information within their control.

Administrators may become entwined in the problem if the institution seeks to assist a faculty member with such matters or, more generally, if the institution seeks to monitor institutional affairs so as to avoid litigation. Although faculty members and administrators may disagree on how best to respond to demands for confidential information, the primary clash is not between members of the academic community—as in the cases in Sections 7.2 through 7.6—but between the academic community, on the one hand, and the courts, administrative agencies, and opposing litigants on the other.

Issues related to the protection of confidential information tend to arise in two contexts: (1) requests to disclose the views of individual evaluators of faculty performance at the time that reappointment, promotion, or tenure decisions are made; and (2) the demand that unpublished data or research findings be released against the will of the researcher. These issues are examined in Sections 7.7.2 and 7.7.3.

**7.7.2. Personnel issues.** Many colleges and universities rely on the judgments of a faculty member's peers—either colleagues within the institution or experts in the faculty member's discipline from other institutions—to assess the quality of that individual's scholarship, teaching, and service and to recommend whether reappointment, promotion, or tenure should be conferred. Historically, candidates have not been given access to peer evaluations at many institutions; in fact, many external reviewers have been willing to provide candid judgments about a faculty member only if the institution provided assurances that the candidate would not have access to the evaluation. Institutions, their faculty, and external evaluators have argued that confidentiality is essential to encourage candor. On the other hand, candidates denied reappointment, promotion, or tenure have argued that refusing to give them access to the confidential evaluations upon which a negative decision may have been based is unfair and restricts their ability to challenge what may be an unlawful decision in court. Although this latter view prevailed in a decision of the U.S. Supreme Court, which required a university to disclose “confidential” evaluations to the Equal Employment Opportunity Commission (EEOC) (*University of Pennsylvania v. EEOC*, 493 U.S. 182 (1990)), it took ten years of litigation and a sharp division among the federal appellate courts to obtain an answer to this dilemma.<sup>42</sup>

The official beginning of judicial attention to this issue occurred when a trial court had ordered a University of Georgia professor serving on a faculty review committee to reveal and explain his vote on a promotion and tenure application that the committee had rejected. The professor refused, citing an “academic freedom privilege.” The appellate court (in *In re Dinnan*, 661 F.2d 426 (11th Cir. 1981)) rejected the professor's claim to an academic freedom privilege, stating that no constitutional issues were involved, and that Professor Dinnan was claiming a privilege that had never been recognized by any court.

While recognizing the significance of academic freedom, the court characterized Dinnan's claim as seeking to suppress information, and stressed the potential for frustrating the plaintiff's attempt to ascertain the reasons for her tenure denial. “This possibility is a much greater threat to our liberty and academic freedom than the compulsion of discovery in the instant case” (661 F.2d at 431).

The opinion demonstrates apparent irritation with Dinnan's claim that forcing disclosure of votes and evaluations will harm colleges and universities:

We fail to see how if a tenure committee is acting in good faith, our decision today will adversely affect its decision-making process. Indeed, this opinion should work to reinforce responsible decision-making in tenure questions as it

---

<sup>42</sup>Cases are collected in Martin J. McMahon, Annot., “Academic Peer Review Privilege in Federal Court,” 85 A.L.R. Fed. 691.

sends out a clear signal to would-be wrongdoers that they may not hide behind “academic freedom” to avoid responsibility for their actions. . . . Society has no strong interest in encouraging timid faculty members to serve on tenure committees [661 F.2d at 431–32].

The court therefore affirmed the trial court’s orders that Dinnan answer deposition questions about his committee vote and that he be fined and jailed for contempt if he continued to refuse. Dinnan again refused, and the court ordered him jailed. He arrived at the jail dressed in full academic regalia.

Although the point of view expressed in *Dinnan* foreshadowed the unanimous opinion of the U.S. Supreme Court in the *University of Pennsylvania* decision, nine years would elapse and several more appellate decisions would consider this issue before the high court resolved it.

The following year, another court, in *Gray v. Board of Higher Education*, 692 F.2d 901 (2d Cir. 1982), reached the same result as *Dinnan*, but on much narrower grounds, and left the door open for the creation of such a privilege under appropriate circumstances. Because the plaintiff, Gray, had not been given a reason for his tenure denial, the court ruled that he must be provided the “confidential” documents he sought; had he been given a reason, the court suggested, the university might have been able to withhold them. By leaving room for recognition of an academic freedom privilege in other cases, the court in effect adopted a middle-ground position earlier espoused by the AAUP (see “A Preliminary Statement on Judicially Compelled Disclosure in the Nonrenewal of Faculty Appointments,” *Academe*, February–March 1981, 27).

The U.S. Court of Appeals for the Seventh Circuit created and applied an academic freedom privilege in *EEOC v. University of Notre Dame*, 715 F.2d 331 (7th Cir. 1983), ordering the EEOC to accept redacted documents from which information identifying the writer had been removed, and asserting that the identity of the evaluators was protected by an “academic freedom privilege.” The court also accepted the university’s argument that the EEOC should be required to sign a nondisclosure agreement before it obtained the files of faculty who were not parties to the lawsuit. But the U.S. Court of Appeals for the Third Circuit rejected the attempt of Franklin and Marshall College to assert an academic freedom privilege when the EEOC requested “confidential” evaluative information in order to investigate a professor’s claim that his denial of tenure was a result of national origin discrimination. In *EEOC v. Franklin and Marshall College*, 775 F.2d 110 (3d Cir. 1985), the court, while recognizing the importance of confidentiality in obtaining candid evaluations, nevertheless ruled that the plaintiff’s need for information relevant to his discrimination claim outweighed the college’s interests in confidentiality.

Given the sharp differences among the four federal appellate courts that had addressed this issue, the U.S. Supreme Court granted review of a case in which Rosalie Tung, a professor in the University of Pennsylvania’s business school, sued the university for race, sex, and national origin discrimination in denying her tenure. The EEOC had subpoenaed the confidential peer evaluations on which the university had relied to make its negative decision. Although the university complied with much of the EEOC’s request, it refused to submit

confidential letters written by Tung's evaluators, letters from the department chair, and accounts of a faculty committee's deliberations. It also refused to submit similar materials for five male faculty in the business school who were granted tenure during that year, which the EEOC wanted to review for comparison purposes. The EEOC filed an action to enforce the subpoena; both the district court and the U.S. Court of Appeals for the Third Circuit ordered the university to produce the documents, relying on *Franklin and Marshall*. Still refusing to produce the materials, the university appealed the ruling to the U.S. Supreme Court. The university argued that quality tenure decisions require candid peer evaluations, which in turn require confidentiality. It asserted that requiring such disclosure would "destroy collegiality" and that either a common law privilege or a constitutionally based privilege should be created. The Court agreed to determine whether a qualified "academic freedom privilege" should be created or whether a balancing test should be used that would require the EEOC to show "particularized need" for the information before it was disclosed.

Writing for a unanimous court, Justice Harry Blackmun upheld the EEOC's need for peer evaluations and refused either to create a privilege or to require the EEOC to show "particularized need" (*University of Pennsylvania v. EEOC*, 493 U.S. 182 (1990)). Justice Blackmun first noted that Title VII contains no language excluding peer evaluations from discovery and that the EEOC's need for relevant information was not diminished simply because the defendant in this case was a university.

The Court gave the following reasons for its refusal to create a common law privilege:

1. Congress, in amending Title VII in 1972 to extend its protections to employees of colleges and universities, had not included such a privilege.
2. Title VII confers upon the EEOC a broad right of access to relevant evidence, and peer evaluations were clearly relevant.
3. Title VII includes sanctions for the disclosure of confidential information by EEOC staff.
4. Evidence of discrimination is particularly likely to be "tucked away in peer review files" (493 U.S. at 193).
5. Requiring the EEOC to show particularized need for the information could frustrate the purpose of Title VII by making the EEOC's investigatory responsibilities more difficult.

The Court also rejected the university's request that a constitutionally based academic freedom privilege be created. While acknowledging academe's strong interest in protecting academic freedom, the Court viewed the EEOC's request as an "extremely attenuated" infringement on academic freedom, characterizing it as a "content-neutral" government action to enforce a federal law rather than a government attempt to suppress free speech (493 U.S. at 198–99).

It was clear that the Court regarded the potential injury to academic freedom as speculative, and the argument that academe deserved special treatment as inappropriate:

We are not so ready as petitioner seems to be to assume the worst about those in the academic community. Although it is possible that some evaluators may become less candid as the possibility of disclosure increases, others may simply ground their evaluations in specific examples and illustrations in order to deflect potential claims of bias or unfairness. Not all academics will hesitate to stand up and be counted when they evaluate their peers [493 U.S. at 200].

The result in this case appears to require an institution, when confronted with an EEOC subpoena, to produce relevant information, whether or not the institution has promised to keep it confidential. Although the Supreme Court did not address the issue of whether an institution could provide peer review materials with identifying information redacted, the Court's very broad language upholding the need of the EEOC for relevant information suggests that, should the EEOC assert that identifying information is relevant to a particular claim, the information would have to be provided. And although this case involves access to information by the EEOC, rather than by a private plaintiff, it is likely that the case will be interpreted to permit faculty plaintiffs in discrimination cases to see letters from outside evaluators, written recommendations of department or other committees, and other information relevant to a negative employment decision. (For analysis of the *University of Pennsylvania* case's implications for faculty personnel decisions, see B. Lee, *Peer Review Confidentiality: Is It Still Possible?* (National Association of College and University Attorneys, 1990).)

Discovery requests in litigation challenging tenure denials since the *University of Pennsylvania* case have returned to the principles of relevance and burdensomeness that courts apply in nonacademic settings. For example, in *Kern v. University of Notre Dame du Lac*, 1997 U.S. Dist. LEXIS 21158 (N.D. Ind., August 12, 1997), a female professor denied tenure in the School of Business sought to obtain the promotion file of a male colleague who had been promoted to full professor the same year that she was denied tenure. Although the university objected on the grounds that the standards for promotion to associate professor with tenure were different from the standards for promotion to full professor, the court ordered the university to produce the dossier. There was no discussion of an academic freedom privilege. (For an unusual ruling barring a plaintiff from discovering the individual votes of faculty on a university-wide promotion and tenure committee, see *Staton v. Miami University*, 2001 Ohio App. LEXIS 1421 (Ct. App. Ohio, 10th App. Dist., March 27, 2001).<sup>43</sup>)

For public institutions (and some private ones as well) in states with open records laws, the result in *University of Pennsylvania* may have little significance,

---

<sup>43</sup>The court ruled that, because the institution's tenure policies specified that members of the university-wide promotion and tenure committee were not allowed to divulge the committee's decision-making process, that was a contractual requirement binding on both the committee members and all candidates for tenure.

because several of these laws have been interpreted to apply to faculty personnel decisions. For example, in *Pennsylvania State University v. Commissioner, Department of Labor and Industry*, 536 A.2d 852 (Pa. Commw. Ct. 1988), a state court interpreted the open records law as permitting faculty to see peer evaluations solicited for promotion or tenure decisions, calling them “performance evaluations” (for which the state law requires disclosure) rather than “letters of reference” (which are exempted from the law’s disclosure requirements). The state law was applied in the same manner when a faculty member at a private college sought access to peer evaluations after he was denied tenure (*Lafayette College v. Commissioner, Department of Labor and Industry*, 546 A.2d 126 (Pa. Commw. Ct. 1988)). Similarly, the Supreme Court of Alaska ruled that promotion and tenure decisions are subject to the state’s “sunshine law” (*University of Alaska v. Geistauts*, 666 P.2d 424 (Alaska 1983)).

But a Michigan court exempted some peer evaluations from disclosure in *Muskovitz v. Lubbers*, 452 N.W.2d 854 (Mich. Ct. App. 1990), ruling that a letter from a dean to the provost regarding a faculty member’s performance was exempt from the Michigan Employee Right-to-Know Act (Mich. Comp. Laws § 423.501 *et seq.*). The court characterized the letter as a “staff planning document” (one of the law’s exemptions). It also ruled that the names of persons who prepared the evaluations, and specific words used in them (if those words would reveal the identity of the writer), were exempt under the law as “employee references supplied to an employer” and could be removed from documents submitted to a plaintiff. The court noted the Supreme Court’s ruling in *University of Pennsylvania* but stated that it did not control interpretation of the Michigan law. Similarly, a state appellate court in Florida, in interpreting that state’s open-records law, ruled that tenure committee votes are exempt from disclosure (*Cantanese v. Ceros-Livingston*, 599 So. 2d 1021 (Fla. Dist. Ct. App. 1992)).

But the Supreme Court of Ohio read its own state open records law differently and refused to create a privilege for “confidential” materials in a tenure file. In *State ex. rel. James v. Ohio State University*, 637 N.E.2d 911 (Ohio 1994), an assistant professor of geology requested copies of records in his tenure and promotion file and the files of other faculty, as well. Although the dean informed James that he would give him a redacted version of the information in his tenure file, he rejected James’s request for the contents of other faculty members’ promotion and tenure files. He also refused to give James the letter from his department chair regarding the chair’s evaluation of James’s performance, and withheld the identity of individuals who had evaluated James’s work. James brought a mandamus action in the Supreme Court of Ohio, seeking a court order to force the university to disclose the information.

The university asserted that the tenure file documents were protected by a confidentiality exception in the Ohio Public Records Act, and also claimed that disclosure would violate the university’s academic freedom. The court rejected both defenses. To the first defense, the court noted that the confidentiality exemption in the public records law was limited to law enforcement investigatory records, and did not cover tenure files. Furthermore, said the court, the

university had admitted in its tenure guidelines that internal and external letters of evaluation were not exempted from the public records act. Regarding the second defense, the court cited *University of Pennsylvania v. EEOC* as authority for rejecting the university's argument. The court held that "promotion and tenure records maintained by a state-supported institution of higher education are 'public records'" under Ohio law, and ordered the university to provide the records sought by James.

Faculty in California attempted to use that state's education laws to seek access to their confidential peer evaluations, but without success. Section 92612 of the state's Education Code guarantees a faculty member access to material in his or her personnel files (although the name and affiliation of the writer may be redacted). In *Scharf v. Regents of the University of California*, 286 Cal. Rptr. 227 (Cal. Ct. App. 1991), the plaintiffs—six faculty members who had been denied tenure and the American Federation of Teachers—asserted that the state's Education Code gave them the right to review letters from outside reviewers and other confidential material in their personnel files. The university had given the faculty members summaries of the material but refused to provide the actual letters. The appellate court, citing Article IX, Section 9 of the California constitution, noted that the University of California has constitutional autonomy and that the provision in the state Education Code giving faculty access to confidential evaluations was, in its application to the university, unconstitutional. Distinguishing the *University of Pennsylvania* decision, the court noted that the faculty were not involved in litigation regarding their promotion or tenure decisions and that the reasoning of that case did not bind the California court in this case.

In light of the *University of Pennsylvania* decision and the proliferation of open records laws at the state level, the American Association of University Professors developed a policy on access to faculty personnel files. The report provides a thoughtful discussion of the two conflicting interests—preserving confidentiality in order to ensure complete candor, and ensuring access to evaluative material in order to encourage responsible and careful evaluation and to ascertain whether inappropriate grounds for a negative employment decision exist. The report, "Access to Faculty Personnel Files," is published in *AAUP Policy Documents and Reports* (9th ed., 2001), pages 41–46. It is a joint report of Committee A on Academic Freedom and Tenure and Committee W on the Status of Women in the Academic Profession, and reaches the following conclusions:

1. Faculty members should, at all times, have access to their own files, including unredacted letters, both internal and external.
2. A faculty member should be afforded access upon request to general information about other faculty members such as is normally contained in a *curriculum vitae*. . . .
3. Files of a faculty complainant and of other faculty members, for purposes of comparison, should be available in unredacted form to faculty appeals committees to the extent such committees deem the information relevant and necessary to the fair disposition of the case before them.

4. A faculty appeals committee should make available to the aggrieved faculty member, in unredacted form and without prejudging the merits of the case, all materials it deems relevant to the complaint, including personnel files of other faculty members, having due regard for the privacy of those who are not parties to the complaint [pp. 44–45].

The report acknowledges that these recommendations “go beyond the practices regarding access to personnel files that are common in many colleges and universities” (p. 46).

Given the broadened access of candidates for reappointment, promotion, and tenure to formerly confidential evaluative information, college and university administrators and faculty should assess their policies and practices regarding peer evaluation and access of candidates to such information. Particularly in those states where access is afforded by state law, faculty evaluators should be well informed about the institution’s criteria for such decisions and should be trained to provide appropriate documentation to support their recommendations. Given the heightened judicial scrutiny of institutions’ denials of tenure to faculty (see Sections 5.2, 6.7.2.2, & 6.7.3), time spent ensuring that peer evaluations and the ensuing employment decisions are amply supported by evidence is an excellent investment.

**7.7.3. Research findings.** Researchers are asked from time to time to provide their findings for a variety of lawsuits, the most common of which are products liability and regulatory actions. In some of these cases, the data have not been fully analyzed and the researcher is unwilling to make them public at that time. In other cases, the type of disclosure required would violate the confidentiality of research subjects. The legal question presented in these cases is whether, under evidence law or under the First Amendment, the information can be said to be privileged—protected from disclosure by a “researcher’s privilege.”

Judges, lawyers, and legal scholars disagree on the propriety of creating a “researcher’s privilege.” According to Robert O’Neil, compelling the disclosure of research has four “devastating effects”:

1. The researcher loses control over how and to whom the data are reported;
2. The process of responding to a subpoena and compiling the data requested “may severely hamper the research process” by either delaying or terminating the project;
3. Compelled discovery may lead to the use or publication of unverified information;
4. If the researcher has promised confidentiality to the research subjects, this confidentiality may be compromised (Robert M. O’Neil, “A Researcher’s Privilege: Does Any Hope Remain?” 59 *Law & Contemp. Probs.* 35, 36 (1996)).

On the other hand, “judges operate within a system that places a high priority upon obtaining relevant evidence that will aid in the truth-finding process” (Barbara B. Crabb, “Judicially Compelled Disclosure of Researchers’ Data: A Judge’s View,” 59 *Law & Contemp. Probs.* 9 (1996)). Because of these tensions, the cases are fact sensitive and the outcomes are inconsistent.

In *Dow Chemical Co. v. Allen*, 672 F.2d 1262 (7th Cir. 1982), the court looked to the First Amendment rather than creating an absolute privilege, and balanced the interests of the researchers in confidentiality of the data and in freedom from intrusion into their research against the needs of the parties for the sought-after data. The court refused to enforce subpoenas issued by an administrative law judge presiding over a hearing convened by the Environmental Protection Agency to consider canceling the registration of certain herbicides manufactured by Dow:

[The researchers had] stated, without contradiction by Dow [the company seeking the information], that public access to the research data would make the studies an unacceptable basis for scientific papers or other research; that peer review and publication of the studies was crucial to the researchers’ credibility and careers and would be precluded by whole or partial public disclosure of the information; that loss of the opportunity to publish would severely decrease the researchers’ professional opportunities in the future; and that even inadvertent disclosure of the information would risk total destruction of months or years of research. . . .

We think it clear that whatever constitutional protection is afforded by the First Amendment extends as readily to the scholar in the laboratory as to the teacher in the classroom. . . . Of course, academic freedom, like other constitutional rights, is not absolute and must on occasion be balanced against important competing interests. . . . [W]hat precedent there is at the Supreme Court level suggests that to prevail over academic freedom the interests of government must be strong and the extent of intrusion carefully limited. . . .

In the present case, the . . . subpoenas by their terms would compel the researchers to turn over to Dow virtually every scrap of paper and every mechanical or electronic recording made . . . [and] to continually update Dow on “additional useful data” which became available during the course of the proceedings. These requirements threaten substantial intrusion into the enterprise of university research, and there are several reasons to think they are capable of chilling the exercise of academic freedom. To begin with, the burden of compliance certainly would not be insubstantial. More important, enforcement of the subpoenas would leave the researchers with the knowledge throughout continuation of their studies that the fruits of their labors had been appropriated by and were being scrutinized by a not-unbiased third party whose interests were arguably antithetical to theirs. . . . In addition, the researchers could reasonably fear that additional demands for disclosure would be made in the future. If a private corporation can subpoena the entire work product of months of study, what is to say further down the line the company will not seek other subpoenas to determine how the research is coming along? To these factors must be added the knowledge of the researchers that even inadvertent disclosure of the subpoenaed data could jeopardize both the studies and their careers.

Clearly, enforcement of the subpoenas carries the potential for chilling the exercise of First Amendment rights.

We do not suggest that facts could not arise sufficient to overcome respondents' academic freedom interests in the . . . studies. . . . If, for example, Dr. Allen, Mr. Van Miller, or other researchers were likely to testify about the . . . studies at the [Environmental Protection Agency] hearing, there might well be justification for granting at least partial or conditional enforcement of the subpoenas. Of course, we need not decide that question now [672 F.2d at 1273-76; footnotes omitted].

In an earlier case, *Richards of Rockford, Inc. v. Pacific Gas and Electric Co.*, 71 F.R.D. 388 (N.D. Cal. 1976), a federal district court judge reached a similar conclusion in an opinion that identified and balanced the various competing interests at stake. But in *Wright v. Jeep Corp.*, 547 F. Supp. 871 (E.D. Mich. 1982), decided seven months after *Allen*, a federal district court rejected a privilege claim and enforced a subpoena requiring a University of Michigan professor to produce research data from a study that was apparently completed (unlike the study in *Allen*).<sup>44</sup>

Products liability cases involving research by scientists working for federal agencies have also relied on *Allen* and its progeny. In *Farnsworth v. The Proctor & Gamble Co.*, 758 F.2d 1545 (11th Cir. 1985), the company sought the names and addresses of women who participated in a study of Toxic Shock Syndrome, a disease linked to the company's products. The study was conducted by scientists working for the Center for Disease Control, a federal agency. The court, citing *Allen*, *Richards of Rockford*, and *Wright*, ruled that the agency's interests in protecting the research subjects' identity outweighed the company's interest in contacting the women individually to confirm their medical histories. The court noted that the agency's purpose is the protection of public health, and that forced disclosure of confidential information could damage the agency's ability to conduct other studies that were important to the protection of public health.

*Allen* was again cited by a scholar attempting to protect the confidentiality of his data, but without success this time. In *Deitchman v. E. R. Squibb & Sons, Inc.*, 740 F.2d 556 (9th Cir. 1984), the drug company was a defendant in a products liability lawsuit by women whose mothers had taken diethylstilbestrol (DES) and who had contracted cancer, allegedly as a result of their prenatal exposure to DES. Herbst, a professor at the University of Chicago medical school, maintained a registry of individuals suffering from certain forms of cancer. Herbst had promised confidentiality to all patients whose records had been submitted to the registry, and also conducted research using information from the registry.

---

<sup>44</sup>In a second case involving the same University of Michigan professor and the same research data, *Buchanan v. American Motors Corp.*, 697 F.2d 151 (6th Cir. 1983), the appellate court refused to decide the privilege issue, instead holding that to compel an "expert who has no direct connection with the litigation" to testify was "unreasonably burdensome." The court therefore quashed a subpoena seeking the professor's appearance.

Squibb asked Herbst to produce the entire registry, and Herbst, citing both the confidentiality issue and his “academic freedom” not to release research results before they had undergone peer review, refused. Although a trial judge quashed the subpoena, the appellate court required the parties to negotiate about the scope of discovery and the methods to be used to protect the patients’ confidentiality. The court stated that, although Squibb’s discovery demand was far too broad, the company had a legitimate need for some of the information contained in the registry. The court suggested that the parties consider redaction, a protective order, and other measures calculated to minimize the burden on Herbst and to protect the confidentiality of the patients.

Another federal appellate court enforced a subpoena for unpublished data in *In re Mt. Sinai School of Medicine v. American Tobacco Co.*, 880 F.2d 1520 (2d Cir. 1989). The tobacco company was a defendant in a products liability lawsuit. The company had asked a researcher at the medical school to produce research data on the effects of smoking on asbestos workers. The researcher was not a party to the lawsuit and refused to produce the data, saying that he had promised the subjects confidentiality and that redacting the data would be very expensive and would take thousands of hours of his time. A motion to compel production of the evidence, filed in state court, was quashed.

The tobacco company filed a second motion in federal court, this time seeking only the data from already published scientific papers, covering two years of the study, and offering to pay the costs of deleting the confidential information. The court agreed to enforce the subpoena and issued a protective order to guard the identities of the research subjects.

The Second Circuit denied that there was an “absolute privilege for scholars,” noting that the researcher’s interest in avoiding disruption of his ongoing research is only one factor that the court considers in applying a balancing test; another factor would be the public’s interest in accurate information. The court concluded that it was not unreasonable for the tobacco company to wish to examine the data that formed the basis for the articles, upon which expert witnesses (but not the researcher) were expected to testify on the plaintiffs’ behalf. No qualified privilege was used in this case; instead, the court used the usual criteria for determining whether a discovery request is appropriate: relevance, burdensomeness, and the party’s need for the information.

This case differs from *Allen* in that the data sought had already been published, so the researcher could not make the premature disclosure argument that the court considered so important in *Allen*. Also, the tobacco company was not seeking to compel the researcher to testify, so the privilege against compelled testimony was not an issue in this case. The interest in *Mt. Sinai* was primarily the researcher’s time, the effect on his ongoing research program, and the potential for disclosure of the names of research subjects. The court applied a balancing test, weighing the tobacco company’s need for the information against the adverse effect on the researcher and the research subjects. The court apparently concluded that these interests did not outweigh the tobacco company’s need for the information, primarily because redaction would preserve the subjects’ confidentiality.

Federal courts have been particularly unsympathetic to researchers when their data are required for criminal, rather than civil, proceedings. In *In re Grand Jury Subpoena*, 583 F. Supp. 991 (E.D.N.Y. 1984), *reversed*, 750 F.2d 223 (2d Cir. 1984), a doctoral student was conducting “participant observation” research for his dissertation at a restaurant on Long Island. When a suspicious fire and explosion destroyed the restaurant, the student’s observations and notes on his conversations at the restaurant were subpoenaed by a grand jury. The student moved to quash the subpoena, claiming a “scholar’s privilege” because he had promised confidentiality to his research subjects. The federal trial judge quashed the subpoena, comparing the student’s interest in confidentiality to that of a news reporter’s, as recognized in *Branzburg v. Hayes*, 408 U.S. 665 (1972). A federal appellate court reversed the trial judge’s ruling and sent the case back to the trial judge for further analysis in light of the criteria specified by the appellate court.

The appellate court was not convinced that a “scholar’s privilege” exists or that one should be applied under these circumstances. First the court discussed the showing that an individual claiming a scholar’s privilege would need to make:

Surely the application of a scholar’s privilege, if it exists, requires a threshold showing consisting of a detailed description of the nature and seriousness of the scholarly study in question, of the methodology employed, of the need for assurances of confidentiality to various sources to conduct the study, and of the fact that the disclosure requested by the subpoena will seriously impinge upon that confidentiality [750 F.2d at 225].

The court explained further that no evidence had been presented about

the nature of the work or of its role in the scholarly literature of sociology. One need not quip that “You can’t tell a dissertation by its title” to conclude that the words “The Sociology of the American Restaurant” afford precious little information about the subject matter of [the student’s] thesis [750 F.2d at 225].

The opinion suggests that the student would have been required to present testimony from recognized scholars justifying the seriousness of the subject and the appropriateness of the methodology. This requirement appears to be based upon the individual’s status as a student rather than a holder of a Ph.D. The opinion describes the showing that must be made before a scholar’s privilege could be considered:

What exactly [the student’s] role is, what kinds of material he hopes to collect, and how that role and that material relate to a need for confidentiality . . . , evidence of a considered research plan, conceived in light of scholarly requirements or standards, contemplating assurances of confidentiality for certain parts of the inquiry [750 F.2d at 225].

The court then discussed the limited nature of the scholar’s privilege (if it exists), which would cover only those portions of the research material that

required confidentiality. The court also noted that the scholar would be required to permit inspection of the material by a judge and redaction under the judge's supervision. The broad privilege claimed by the student, that all his research notes and journals were included, was roundly rejected by the court.

Another federal appeals court extended the trend against a "scholar's privilege" in *In re: Grand Jury Proceedings*, 5 F.3d 397 (9th Cir. 1993). Scarce, a doctoral student in sociology at Washington State University, had been asked to testify about conversations with some of his friends, animal rights activists who were accused of breaking into and damaging animal research facilities at the university. Scarce, who was conducting research on the animal rights movement and had written a book on the radical environmental movement, refused to testify and was jailed for six months. (For an account of this matter, see P. Monaghan, "Free After 6 Months: Sociologist Who Refused to Testify Is Released," *Chron. Higher Educ.*, November 3, 1993, A14–A15.) The court rejected the concept of a "scholar's privilege," stating that no cases had recognized the right of a scholar to withhold information from a grand jury where the information was relevant to a legitimate grand jury inquiry and was sought in good faith.

It appears that judges are increasingly hostile to claims of a researcher's or scholar's privilege, especially when the information is sought for a criminal, rather than a civil, proceeding. Absolute privileges appear to be unavailable to scholars, because judges have several strategies for protecting confidentiality and reducing the burden on the researcher. In light of these developments, faculty and administrators need to understand that promises of absolute confidentiality to research subjects may not be enforceable. Additional cases in which courts compelled discovery of research data include *Southwest Center for Biological Diversity v. U.S.D.A.*, 170 F. Supp. 2d 931 (D. Ariz. 2000); *Proctor & Gamble Co. v. Swilly*, 462 So. 2d 1188 (Ct. App. Fla. 1985); and *Burka v. U.S. Dept. of Health and Human Services*, 87 F.3d 508 (D.C. Cir. 1996). Courts refused to compel production of research data on the grounds that the requests were unduly burdensome in *Anker v. G. D. Searle & Co.*, 126 F.R.D. 515 (M.D.N.C. 1989), and *In re Snyder*, 115 F.R.D. 211 (D. Ariz. 1987).

Given judicial hostility to a "researcher's privilege," faculty or institutions facing compelled disclosure of research may fare better using the First Amendment argument that was successful in the *Dow Chemical* case. For example, in *In re Cusumano and Yoffie [U.S. v. Microsoft]*, 162 F.3d 708 (1st Cir. 1998), Microsoft, which was facing antitrust litigation brought by the U.S. Department of Justice, sought confidential research notes from two professors who were not parties to the litigation. Professors Cusumano and Yoffie had interviewed executives of Netscape, a Microsoft competitor whose allegations of unfair competitive practices had led to the antitrust litigation. Those interviews, with additional data, had formed the basis for a book about Netscape. Microsoft sought to compel the two professors to produce the notes from their interviews, asserting that the notes were significant for Microsoft's defense against the antitrust litigation. The professors had interviewed more than forty current and former Netscape employees, promising that they would disclose no proprietary information and would verify with the informant all interview information that would be used in the book. The professors turned over some

correspondence, but they refused to provide tapes or transcripts of the interviews and moved to quash Microsoft's subpoena.

A federal trial judge held a hearing and denied Microsoft's motion to compel production of the research. Using a balancing test, the court determined that Microsoft could have obtained the information it sought directly from the individuals whom the researchers had interviewed, and that its primary use of the information would be for impeachment of witnesses. The court also found that the researchers had a substantial interest in keeping the subpoenaed information confidential, and that significant First Amendment values favored its protection. The trial court retained jurisdiction to review individual items *in camera* (in chambers) to determine whether they were material to Microsoft's defense and stated that, should Microsoft be able to show particularized need for a particular item of information, the judge would order it to be produced. Microsoft appealed.

The U.S. Court of Appeals for the First Circuit affirmed the reasoning and the ruling of the trial court. Given the assurances made by the researchers, and the fact that, at the time the interviews were conducted, the antitrust case against Microsoft had not been filed, the interest of the researchers in maintaining the confidentiality of the interviews deserved "significant protection." The balancing test used by the trial court—Microsoft's need for the information versus the researchers' interest in confidentiality—was the proper standard, according to the court, citing an earlier First Circuit case, *Bruno & Stillman, Inc. v. Globe Newspaper Co.*, 633 F.2d 583 (1st Cir. 1980). (The court rejected Microsoft's argument that this case was irrelevant because it involved journalists rather than academic researchers.) Microsoft had access to a prepublication copy of the manuscript, which identified quoted individuals by name. Therefore, said the court, Microsoft could accomplish its purpose through deposing these individuals. With respect to the interests of the researchers:

The opposite pan of the scale is brim-full. Scholars studying management practices depend upon the voluntary revelations of industry insiders to develop the factual infrastructure upon which theoretical conclusions and practical predictions may rest. These insiders often lack enthusiasm for divulging their management styles and business strategies to academics, who may in turn reveal that information to the public. Yet, pathbreaking work in management science requires gathering data from those companies and individuals operating in the most highly competitive fields of industry, and it is in these cutting-edge areas that the respondents concentrate their efforts. Their time-tested interview protocol, including the execution of a nondisclosure agreement with the corporate entity being studied and the furnishing of personal assurances of confidentiality to the persons being interviewed, gives chary corporate executives a sense of security that greatly facilitates the achievement of agreements to cooperate. Thus . . . the interviews are "carefully-bargained for" communications which deserve significant protection [162 F.3d at 717].

Allowing Microsoft access to the notes, tapes, and transcripts would "hamstring not only the respondents' future research efforts but also those of other

similarly situated scholars” (162 F.3d at 717). “Even more important, compelling the disclosure of such research materials would [chill] the free flow of information to the public, thus denigrating a fundamental First Amendment value” (162 F.3d at 717). The trial court’s decision to retain jurisdiction to review materials *in camera* protected Microsoft’s interests adequately, according to the appellate court.

This case is interesting and important because both the trial and appellate courts were willing to extend First Amendment protection to confidential research findings. The case appears to have been decided solely on First Amendment grounds. The trial and appellate courts applied precedent from cases involving journalists without discussion of whether academicians deserve greater or lesser protection than their colleagues in the media; in fact, the appellate court appeared to equate the confidentiality concerns of academics and journalists. No claim was made that the material was protected by an “academic freedom” privilege; hence, that concept was not discussed; and there was no reference to the earlier cases involving confidentiality of research data.

Close attention should be paid to the particular context in which potential issues arise. Especially important are (1) the procedural and evidentiary rules of the court or administrative agency that would entertain the litigation and (2) the impact that disclosure of the requested information would have on academic freedom. (Suggestions for ways in which administrators and researchers can limit access to or interest in their research findings are found in N. Miller, “Subpoenas in Academe: Controlling Disclosure,” 17 *J. Coll. & Univ. Law* 1 (1990); and in Diane E. Lopez, “The Compelled Disclosure of Research Data,” National Association of College and University Attorneys Annual Conference Outline, June 26, 2002 (available at <http://www.nacua.org>.)

A second major issue involving confidentiality of research results is the requirement of some funding sources, both governmental and private, that research results be kept secret. Although this requirement presents the opposite dilemma of compelled disclosure, it is no less troubling from an academic freedom perspective.

When it is the government imposing the secrecy restrictions, the Constitution is asserted as the source of protection for the researcher’s academic freedom right to publish research results. The regulations of several federal agencies authorize officials to prohibit release of certain findings without the funding agency’s permission (see, for example, 48 C.F.R. §§ 324.70, 352.224–70 (1991), which authorize contract officers from the Department of Health and Human Services to place restrictions on disclosure of preliminary findings). At least one court has rejected the attempt of a government agency to prevent the publication of federally funded research without its permission. In *Board of Trustees of Leland Stanford Junior University v. Sullivan*, 773 F. Supp. 472 (D.D.C. 1991), the university argued that this restriction violated the First Amendment. Applying strict scrutiny to the federal regulation, the trial judge rejected as noncompelling the National Institutes of Health’s argument that secrecy was required in order to protect prospective patients from “unwarranted hope” that could be raised by the release of preliminary findings (773 F. Supp. at 477, n.16).

But constitutional protections would typically not apply to funding restrictions imposed by private funding sources, such as corporations or foundations. Such restrictions, if incorporated into the contract, could be removed only if the funding source agreed. And unless certain state constitutions or cases decided under their authority included free speech guarantees that applied to private entities as well as the government (see, for example, *State v. Schmid*, discussed in Sections 1.5.2 and 11.6.3), it is not clear that a faculty member or an institution would have a cause of action against a private funding source that withdrew funding after the faculty member refused to agree to secrecy requirements.

(For an extended discussion of secrecy and university research in the context of government restrictions on disclosure, see “Focus on Secrecy and University Research,” 19 *J. Coll. & Univ. Law* 199 (1993). This special issue of the journal includes four articles devoted to this subject.)

### ***Sec. 7.8. Academic Freedom in Religious Colleges and Universities***

In general, academic freedom disputes in religious institutions<sup>45</sup> are governed by the same contract law principles that govern such disputes in other private institutions (see Section 7.1.3 above). (These principles, as applied to academic freedom in teaching, are discussed in Section 7.2.5 above.) But the religious missions of religious institutions, and their affiliations with churches or religious denominations, may give rise to contract law issues that are unique to religious institutions. In addition, religious institutions may have First Amendment defenses to litigation that secular institutions do not have. Both of these matters are discussed in Section 6.2.5, and a more general discussion of First Amendment defenses is in Section 1.6.2. The *McEnroy* case below, and the case of *Curran v. Catholic University of America*, discussed in Section 6.2.5, illustrate how these matters may play out in academic freedom disputes between faculty members and religious institutions.

Academic freedom customs or professional norms in religious institutions may also vary from those in secular private institutions—particularly in situations where a faculty member takes positions or engages in activities that are contrary to the institution’s religious mission or the religious principles of a sponsoring religious denomination. This type of problem, and the potential for clashes between *faculty* academic freedom and *institutional* academic freedom, are illustrated by the debate concerning *Ex Corde Ecclesiae*, issued by Pope John Paul II in 1990, and *Ex Corde Ecclesiae: The Application to the United States* (<http://www.nccbuscc.org/bishops/excorde.htm>), subsequently adopted by the U.S. Conference of Catholic Bishops. (For commentary on this debate, see James Gordon III, “Individual and Institutional Academic Freedom at Religious Colleges and Universities,” 30 *J. Coll. & Univ. Law* 1, 20–25 (2003).)

---

<sup>45</sup>“Religious,” when used in this section to refer to a college or university, covers institutions that are sponsored by or otherwise related to a particular church or denomination, as well as institutions that are nondenominational and independent of any particular church body.

To account for possible differences in academic freedom norms at religious institutions, the “1940 Statement of Principles on Academic Freedom and Tenure” includes a “limitations clause” specifying that “[l]imitations on academic freedom because of religious or other aims of the institution should be clearly stated in writing at the time of [a faculty member’s] appointment” (*AAUP Policy Documents and Reports* (9th ed., 2001), 3). The meaning of this clause, its implementation, and its wisdom have been debated over the years (see, for example, the “1970 Interpretive Comments,” comment no. 3, in *AAUP Policy Documents and Reports*, 6; and see generally Gordon, above, at 16–20). In 1999, the AAUP issued “operating guidelines” for applying the clause (“The ‘Limitations’ Clause in the 1940 Statement of Principles on Academic Freedom and Tenure: Some Operating Guidelines,” in *AAUP Policy Documents and Reports*, 96).

When a religious institution invokes the limitations clause and imposes limits on the scope of academic freedom, contract law issues may arise concerning the interpretation of these limits as expressed in faculty appointment documents, the faculty handbook, or other institutional regulations; in addition, issues may arise concerning the extent of the religious institution’s prerogative, under AAUP policies, to limit its faculty’s academic freedom. When a religious institution adopts AAUP policies but does not invoke the limitations clause, issues may still arise concerning whether religious law governing the institution can justify limits on academic freedom or affect the analysis of contract law issues. In either situation, if an institution’s personnel action appears to conflict with AAUP policy or to breach a faculty member’s contract, the aggrieved faculty member may seek the protection of the AAUP in lieu of or in addition to resorting to the courts. The case of Carmel McEnroy, then a professor at the Saint Meinrad School of Theology in Saint Meinrad, Indiana, is illustrative. (See “Report: Academic Freedom and Tenure: Saint Meinrad School of Theology (Indiana),” in *Academe*, July–August 1996, 51–60.)

The school’s administration had dismissed Professor McEnroy after it learned, and she admitted, that she had “signed an open letter to Pope John Paul II asking that continued discussion be permitted concerning the question of ordaining women to the priesthood” (*Id.* at 51). McEnroy, a “member of the Congregation of Sisters of Mercy of Ireland and South Africa,” signed the letter “without citing her academic or religious affiliations” (*Id.* at 52). She was one of more than fifteen hundred signatories. At the time of the dismissal, the “1940 Statement of Principles on Academic Freedom and Tenure was adopted as institutional policy [and] printed in full in the Faculty Handbook, without specification of any limitations on academic freedom . . .” (*Id.* at 51). McEnroy contended that, in signing the letter, “she was exercising her right as a citizen as outlined in the 1940 Statement of Principles” (*Id.* at 55). Church and school officials, in contrast, contended “that she had publicly dissented from the teaching of the church and was therefore disqualified from continuing in her faculty position” (*Id.*)—thus, in effect, asserting that McEnroy was dismissed on “ecclesial grounds” rather than “academic grounds” (*Id.* at 60), and that the 1940 Statement therefore did not apply (*Id.* at 56). The AAUP’s investigating committee concluded that the 1940 Statement did apply and that Saint Meinrad’s administration had “failed to meet its obligation to demonstrate that

[Professor McEnroy's] signing of the letter to Pope John Paul II rendered her unfit to retain her faculty position," as required by the 1940 Statement, thereby "violat[ing] her academic freedom" (*Id.* at 58, 59). (The committee also concluded that Saint Meinrad's administration had violated the due process principles in the 1940 Statement when it dismissed McEnroy.)

The AAUP's Committee A on Academic Freedom and Tenure accepted the investigating committee's report and recommended that the university be placed on the AAUP's list of censured administrations. At the AAUP's eighty-third annual meeting, the membership approved Committee A's recommendation (available at <http://www.aaup.org/com-a/devcen.htm>). (For a discussion of the AAUP censuring process, see Section 14.5 of this book.)

McEnroy subsequently filed suit against Saint Meinrad's and two of its administrators, claiming breach of contract. The trial court dismissed the case, and the Indiana appellate court affirmed (*McEnroy v. Saint Meinrad School of Theology*, 713 N.E.2d 334 (Ind. 1997)). Resolving an ambiguity in the professor's contract, the appellate court reasoned that, in addition to its academic freedom and due process terms, the contract also included terms regarding the Roman Catholic Church's jurisdiction over the school. Thus "resolution of Dr. McEnroy's claims would require the trial court to interpret and apply religious doctrine and ecclesiastical law," which would "clearly and excessively" entangle the trial court "in religious affairs in violation of the First Amendment."

A different type of academic freedom problem arises when a government agency seeks to investigate or penalize a religious college or university or one of its faculty members. Such disputes are "extramural" rather than "intramural" (see Section 7.1.5 above). The institution may claim, in defense, that the government's planned action would violate its institutional academic freedom; or the faculty member may claim, in defense, that the action would violate faculty academic freedom. Since the dispute concerns government action, both the religious institution and the faculty member may assert constitutional rights against the government. Sometimes the rights will be the same as secular private institutions and their faculty members would assert—for example, the free speech and press rights asserted in the "academic freedom privilege" cases in Section 7.7 above. At other times the rights will belong only to religious institutions and their faculty members; these are the rights protected by the establishment and free exercise clauses of the First Amendment (see generally Section 1.6.2).<sup>46</sup> Examples would include the cases in which an institution argues that federal or state court review of its religious practices would violate the establishment clause (see the *McEnroy* case above; and see also Section 6.2.5 of this book); and the cases in which the institution challenges the authority of a government agency, such as the EEOC, to investigate or regulate its religiously based practices (see Section 5.5).

---

<sup>46</sup>Faculty members at private secular institutions could also invoke free exercise and establishment clause rights if the challenged government action interfered with their personal religious beliefs or practices. A private secular institution itself could also invoke these clauses if government were to require that the institution involve itself in religious matters or prohibit it from doing so.

## Selected Annotated Bibliography

### Sec. 7.1 (General Concepts and Principles)

- “Academic Freedom and Responsibility Symposium,” 27 *J. Coll. & Univ. Law* 565–707 (2001). The first part of this symposium focuses on a proposed “Academic Freedom Policy and Procedures” document drafted by Martin Michaelson (567–71). There are three commentaries on this document, by Robert O’Neil, J. Peter Byrne, and Richard De George, followed by a response from Mr. Michaelson. The second part of the symposium contains two additional articles: “Academic Tradition and the Principles of Professional Conduct” by Neil Hamilton, and “Matters of Public Concern and the Public University Professor” by Chris Hoofnagle.
- “Academic Freedom Symposium,” 22 *Wm. Mitchell L. Rev.* 333–576 (1996). Contains twelve commentaries preceded by a foreword by Neil Hamilton. Commentaries are (1) Irving Louis Horowitz, “Contrasts and Comparisons Among McCarthyism, 1960s Student Activism, and 1990s Faculty Fundamentalism: Culture Politics and McCarthyism a Retrospective from the Trenches”; (2) Lionel Lewis, “McCarthyism and Academic Freedom: The 1950s and 1990s: Similarities and Noteworthy Differences”; (3) Wagner Thielens, “McCarthyism and Academic Freedom: Why Wasn’t the Damage Worse? Some Answers from the Academic Mind”; (4) Seymour Martin Lipset, “1960s Student Activism and Academic Freedom: From the Sixties to the Nineties: A Double Edged Sword at Work”; (5) Todd Gitlin, “1960s Student Activism and Academic Freedom: Evolution of the Student Movement of the Sixties and Its Effect”; (6) David Horowitz, “1960s Student Activism and Academic Freedom: Leftwing Fascism and the American Dream”; (7) Nathan Glazer, “1990s Faculty Fundamentalism and Academic Freedom: Academic Freedom in the 1990s”; (8) Daphne Patai, “1990s Faculty Fundamentalism and Academic Freedom: There Ought to Be a Law”; (9) John Wilson, “1990s Faculty Fundamentalism and Academic Freedom: Myths and Facts: How Real Is Political Correctness?”; (10) Jordan Kurland, “1990s Faculty Fundamentalism and Academic Freedom: Commentary on Buttressing the Defense of Academic Freedom”; (11) Neil Hamilton, “Buttressing the Defense of Academic Freedom: Buttressing the Neglected Traditions of Academic Freedom”; and (12) Rita Simon, “Buttressing the Defense of Academic Freedom: What Should Professors Do?”
- “The Academy in the Courts: A Symposium on Academic Freedom,” 16 *U. Cal. Davis L. Rev.* 831 (1983). A two-part symposium. (The second part, “Discrimination in the Academy,” is described in the “Academy in the Courts” entry for Section 6.4.) The first part, “The First Amendment in the Academy,” contains three articles: Robert O’Neil, “Scientific Research and the First Amendment: An Academic Privilege”; Katheryn Katz, “The First Amendment’s Protection of Expressive Activity in the University Classroom: A Constitutional Myth”; and Martin Malin & Robert Ladenson, “University Faculty Members’ Right to Dissent: Toward a Unified Theory of Contractual and Constitutional Protection.” Symposium also includes a foreword by John Poulos, which briefly recounts the history of institutional academic autonomy and reviews each article’s critique of this concept.
- Byrne, J. Peter. “Academic Freedom: A ‘Special Concern of the First Amendment,’” 99 *Yale L.J.* 251 (1989). Develops a framework and foundation for the academic freedom that is protected by the First Amendment. Traces the development of academic freedom as construed by both academics and the courts and then espouses a new

theory of “academic freedom based on the traditional legal status of academic institutions and on the appropriate role of the judiciary in academic affairs.”

Byrne, J. Peter. *Academic Freedom Without Tenure?* (American Association for Higher Education, 1997). Part of AAHE’s New Pathways Working Paper Series. Discusses the relationship between academic freedom and tenure, and suggests alternative methods of protecting academic freedom. Considers the “elements” that would be needed to protect academic freedom without a tenure system and whether such “elements” can protect academic freedom more efficiently than a tenure system does.

Byrne, J. Peter, “The Threat to Constitutional Academic Freedom,” 31 *J. Coll. & Univ. Law* 79 (2004). Reviews the development of academic freedom as an academic norm; analyzes post-1990 judicial decisions that “threaten the demise of academic freedom as a constitutional right”; considers the counterbalance that may be provided by the Court’s reliance on institutional academic freedom in *Grutter v. Bollinger*; and reviews “intellectual and demographic changes [that] argue for continuing judicial protection of colleges and universities from outside interference.”

De George, Richard T. *Academic Freedom and Tenure: Ethical Issues* (Rowman & Littlefield, 1997). This book focuses on the question of whether academic tenure, as it commonly exists today, is an appropriate and efficient method for protecting academic freedom. Defends the existing tenure system while at the same time noting concerns and ethical issues about the system and suggesting improvements. Includes a section that reproduces pertinent documents and readings. A review of this book by John Cary Sims may be found at 25 *J. Coll. & Univ. Law* 443 (1998).

Doumani, Beshara (ed.). *Academic Freedom After September 11* (MIT Press/Zone Books, 2006). A diverse collection of essays by seven scholars. Against the backdrop of post-World War II developments, examines post 9-11 political interventions, their affects on academic freedom, and the conflicts that have arisen concerning the meaning of academic freedom.

Hamilton, Neil. *Zealotry and Academic Freedom: A Legal and Historical Perspective* (Transaction, 1996). Covers 125 years of the ongoing struggle for academic freedom, including discussion of new issues such as political correctness, racism, and gender discrimination. Also provides a frank look at the politics of higher education. Contains a comprehensive bibliography and a list of relevant cases.

Menand, Louis (ed.). *The Future of Academic Freedom* (University of Chicago Press, 1996). A collection of lectures by noted scholars from various disciplines, who debate the cutting-edge issues of academic freedom. This collection is the product of a lecture series sponsored by the AAUP.

O’Neil, Robert. *Is Academic Freedom a Constitutional Right?* Monograph 84-7 (Institute for Higher Education Law and Governance, University of Houston, 1984), reprinted (under title “Academic Freedom and the Constitution”) in 11 *J. Coll. & Univ. Law* 275 (1984). An argument on behalf of the continued vitality of constitutionally based claims of academic freedom. Examines the current status of and conceptual difficulties regarding such claims and makes suggestions for faculty members and other academics to consider before submitting such claims to the courts for vindication.

Symposium, “Academic Freedom and Tenure Symposium,” 15 *Pace L. Rev.* 1 (1994). Contains five articles that explore the foundations of academic tenure, contemporary criticisms of the system of academic tenure, and contemporary threats to the

system. Articles are by Ernest van den Haag, Burton Leiser, Deborah Post, Robert Spitzer, and Irwin Polishook.

“Symposium on Academic Freedom,” 66 *Tex. L. Rev.*, issue no. 7 (1988). Contains eighteen commentaries and responses preceded by a lengthy foreword by Julius Getman and Jacqueline Mintz. Commentaries include, among others, (1) Walter P. Metzger, “Profession and Constitution: Two Definitions of Academic Freedom in America”; (2) Matthew W. Finkin, “Intramural Speech, Academic Freedom, and the First Amendment”; (3) Charles E. Curran, “Academic Freedom and Catholic Universities”; (4) Lonnie D. Kliever, “Academic Freedom and Church-Affiliated Universities”; (5) Phoebe A. Haddon, “Academic Freedom and Governance: A Call for Increased Dialogue and Diversity”; (6) Rebecca S. Eisenberg, “Academic Freedom and Academic Values in Sponsored Research”; (7) David M. Rabban, “Does Academic Freedom Limit Faculty Autonomy?”; and (8) Douglas Laycock & Susan E. Waelbroeck, “Academic Freedom and the Free Exercise of Religion.”

Van Alstyne, William W. (special ed.). “Freedom and Tenure in the Academy: The Fiftieth Anniversary of the 1940 Statement of Principles,” 53 *Law & Contemp. Probs.*, issue no. 3 (1990); also published as a separate book, *Freedom and Tenure in the Academy* (Duke University Press, 1993). A symposium containing nine articles: (1) Walter P. Metzger, “The 1940 Statement of Principles on Academic Freedom and Tenure”; (2) William W. Van Alstyne, “Academic Freedom and the First Amendment in the Supreme Court of the United States: An Unhurried Historical Review”; (3) Judith Jarvis Thomson, “Ideology and Faculty Selection”; (4) Robert M. O’Neil, “Artistic Freedom and Academic Freedom”; (5) Rodney A. Smolla, “Academic Freedom, Hate Speech, and the Idea of a University”; (6) David M. Rabban, “A Functional Analysis of ‘Individual’ and ‘Institutional’ Academic Freedom Under the First Amendment”; (7) Michael W. McConnell, “Academic Freedom in Religious Colleges and Universities”; (8) Ralph S. Brown & Jordan E. Kurland, “Academic Tenure and Academic Freedom”; and (9) Matthew W. Finkin, “A Higher Order of Liberty in the Workplace: Academic Freedom and Tenure in the Vortex of Employment Practices and Law.” Also includes a helpful bibliography of sources: Janet Sinder, “Academic Freedom: A Bibliography,” listing 174 journal articles, books, and reports; and three appendices containing the 1915 AAUP “General Report,” the “1940 Statement of Principles,” and the 1967 “Joint Statement on Rights and Freedoms of Students.”

See entry for Finkin in Selected Annotated Bibliography for Chapter 1, Section 1.2.

### ***Sec. 7.2 (Academic Freedom in Teaching)***

Braxton, John, & Bayer, Alan. *Faculty Misconduct in Collegiate Teaching* (Johns Hopkins University Press, 1999). Against a backdrop of survey data, the authors examine professional norms regarding teaching and conduct in the classroom, factors that influence teaching behavior and the development of professional norms, and the mechanisms by which institutions address faculty misconduct and by which professional norms are enforced. The authors recommend adoption of codes of ethics for college teaching.

Olivas, Michael. “Reflections on Professorial Academic Freedom: Second Thoughts on the Third ‘Essential Freedom,’” 45 *Stan. L. Rev.* 1835 (1993). Presents the author’s perspective on faculty academic freedom, with particular emphasis on conflicts that

arise in the classroom. Considers and interrelates professional norms, First Amendment case law, and recent scholarly commentary.

O'Neil, Robert M. *Free Speech in the College Community* (Indiana University Press, 1997). Presents an array of free speech problems and their implications for the campus. Chapter 2, "The Outspoken University Professor," discusses dilemmas involving academic freedom in the classroom; and Chapter 8, "Academic Research and Academic Freedom," discusses dilemmas involving faculty research and publication. Leading cases are highlighted.

Smith, Sonya G. "Cohen v. San Bernadino Valley College: The Scope of Academic Freedom Within the Context of Sexual Harassment Claims and In-Class Speech," 25 *J. Coll. & Univ. Law* 1 (1998). Reviews the potential clash between a professor's First Amendment claims to academic freedom and students' claims to an academic setting devoid of sexual harassment. Article presents the issue through a discussion of the *Cohen* case, a 1996 Ninth Circuit case. Also presents a history and analysis of the *Connick/Pickering* test as it has been applied in other cases. Title VII and Title IX concepts of sexual harassment are compared along with supporting case law.

### ***Sec. 7.3 (Academic Freedom in Research and Publication)***

See entry for O'Neil in the Selected Annotated Bibliography for Section 7.2 above.

See O'Neil article listed under entry for Van Alstyne, "Freedom and Tenure in the Academy," in Selected Annotated Bibliography for Section 7.1 above.

See Eisenberg article listed under entry for "Symposium on Academic Freedom" in Selected Annotated Bibliography for Section 7.1 above.

### ***Sec. 7.4 (Academic Freedom in Institutional Affairs)***

See entry for Hamilton in Selected Annotated Bibliography for Section 7.1 above.

See Finkin article listed under entry for "Symposium on Academic Freedom" in Selected Annotated Bibliography for Section 7.1 above.

### ***Sec. 7.5 (Academic Freedom in Private Life)***

O'Neil, Robert. "The Private Lives of Public Employees," 51 *Or. L. Rev.* 70 (1971). Discusses the types of problems that can arise in the interaction of lifestyle and public employment. Symbolic expression, hair length, homosexual and heterosexual association, extracurricular writing, and other questions are examined. Although written primarily for the lawyer, the article is also useful for administrators of public postsecondary institutions.

See entry for DeChiara in Selected Annotated Bibliography for Section 7.6 below.

### ***Sec. 7.6 (Administrators' Authority Regarding Faculty Academic Freedom and Freedom of Expression)***

DeChiara, Peter. "The Need for Universities to Have Rules on Consensual Sexual Relationships Between Faculty Members and Students," 21 *Columbia J.L. & Soc. Probs.* 137 (1988). Reviews the issue of faculty-student sexual relationships and possible

responses by universities. Reports on the author's survey of thirty-eight institutions. Discusses constitutional right-to-privacy implications of regulation. Author asserts that regulation is needed because consensual sexual relationships between faculty and students can create problems of pressured decisions, sexual harassment, and favoritism.

### ***Sec. 7.7 (Protection of Confidential Academic Information: The "Academic Freedom Privilege")***

- Baez, Benjamin. "Confidentiality and Peer Review: The Paradox of Secrecy in Academia," 25 *Rev. Higher Educ.* 163 (2002). An essay that criticizes confidentiality in the peer review process, arguing that confidentiality benefits only the reviewer, and how it may inhibit a reviewer's critical analysis.
- Cecil, Joe S., & Wetherington, Gerald T. (eds.). "Court-Ordered Disclosure of Academic Research: A Clash of Values of Science and Law," 59 *Law & Contemp. Probs.* 1 (1996). A Symposium issue on this topic, including articles by Barbara B. Crabb, "Judicially Compelled Disclosure of Researchers' Data: A Judge's View"; Robert M. O'Neil, "A Researcher's Privilege: Does Any Hope Remain?"; Elizabeth C. Wiggins & Judith A McKenna, "Researchers' Reactions to Compelled Disclosure of Scientific Information"; Sheila Jasanoff, "Research Subpoenas and the Sociology of Knowledge"; Michael Traynor, "Countering the Excessive Subpoena for Scholarly Research"; and Bert Black, "Research and Its Revelation: When Should Courts Compel Disclosure?"; among others.
- Rap, Rebecca E. "In re *Cusumano* and the Undue Burden of Using the Journalist Privilege as a Model for Protecting Researchers from Discovery," 29 *J. Law & Educ.* 285 (2000). Reviews the *Cusumano* case, and concludes that the researcher's privilege should be based upon academic freedom rather than modeled after the journalist's privilege.

### ***Sec. 7.8 (Academic Freedom in Religious Colleges and Universities)***

- Bramhall, Eugene H., & Ahrens, Ronald Z. "Academic Freedom and the Status of the Religiously Affiliated University," 37 *Gonzaga L. Rev.* 227 (2001-02). Authors argue that religious institutions may reasonably limit academic freedom and still be considered legitimate universities to the same extent that secular universities with full academic freedom are considered legitimate. Article evaluates the philosophical justifications for academic freedom, acceptable limits on academic freedom based on these justifications, and factors other than academic freedom that characterize a legitimate university.
- Curran, Charles E. "Academic Freedom and Catholic Universities," 66 *Texas L. Rev.* 1441 (1998). Author discusses academic freedom's history and importance at Catholic universities, and considers the impact of the 1979 Vatican document, *Sapientia Christiana*, canon 812 of the 1985 Code of Canon Law, and the 1985 Proposed Schema for a Pontifical Document on Catholic Universities. Author concludes that academic freedom for Catholic universities benefits the Roman Catholic Church. In response, see Lonnie D. Kliever, "Academic Freedom and Church-Affiliated Universities," 66 *Texas L. Rev.* 1477 (1988), which critiques Curran's articulation of academic freedom and advocates a broader concept of academic freedom than that which Curran sets out; see also the Laycock & Waelbroeck article below.

Laycock, Douglas. "The Rights of Religious Academic Communities," 20 *J. Coll. & Univ. Law* 15 (1993). Author evaluates the role of religious universities and law schools and endorses religious universities' right to limit academic freedom in cases of supreme importance to the school. Addresses constitutional protections for religious institutions, and the difficulties religious universities face in communicating the justifications for their limits on academic freedom.

Laycock, Douglas, & Waelbroeck, Susan E. "Academic Freedom and the Free Exercise of Religion," 66 *Texas L. Rev.* 1455 (1988). Authors utilize the dispute between Father Curran and the Catholic University of America to illustrate the right of churches to settle their own disputes, as well as to highlight the delicate balance between academic freedom and the tenets of faith at religious universities. Article also considers the civil contract law aspects of professors' relationships to religious universities.

McConnell, Michael W. "Academic Freedom in Religious Colleges and Universities," 53 *Law & Contemp. Probs.* 303 (1990; also reprinted in William W. Van Alstyne (ed.), *Freedom and Tenure in the Academy* (Duke University Press, 1993)). Argues that secular concepts of academic freedom should not be applied to faculty employment decisions at religious institutions. Addresses academic freedom in seminaries and theological schools, behavioral restrictions on faculty in religious colleges and universities, and the applicability of laws against discrimination on religious grounds. In response, see Judith Jarvis Thomson & Matthew W. Finkin, "Academic Freedom and Church-Related Higher Education: A Reply to Professor McConnell," in William W. Van Alstyne (ed.), *Freedom and Tenure in the Academy* (Duke University Press, 1993).

"A Symposium on the Implementation of *Ex Corde Ecclesiae*," 25 *J. Coll. & Univ. Law* 645 (1999) (Introduction by John H. Robinson). A collection of articles offering various interpretations and examples of the legal consequences of adopting *Ex Corde Ecclesiae*, the papal constitution on Catholic higher education. Article topics include the political context from which *Ex Corde Ecclesiae* emerged, a comparative study of Catholic Universities under *Ex Corde Ecclesiae* and Brigham Young University under the Church of Jesus Christ of Latter-Day Saints; an evaluation of whether it is prudent to subject American educational institutions to oversight such as that provided for in *Ex Corde Ecclesiae*; and the tension between academic freedom and religious oversight, including the theological "mandate" to which Catholic theologians are subject.

THE COLLEGE AND  
ITS STUDENTS

# 8

## The Student-Institution Relationship

### *Sec. 8.1. The Legal Status of Students*

**8.1.1. Overview.** The legal status of students in postsecondary institutions changed dramatically in the 1960s, changed further near the end of the twentieth century, and is still evolving. For most purposes, students are no longer second-class citizens under the law. They are recognized under the federal Constitution as “persons” with their own enforceable constitutional rights. They are recognized as adults, with the rights and responsibilities of adults, under many state laws. And they are accorded their own legal rights under various federal statutes. The background of this evolution is traced in Section 1.2; the legal status that emerges from these developments, and its impact on postsecondary administration, is explored throughout this chapter.

Perhaps the key case in forging this shift in student status was *Dixon v. Alabama State Board of Education* (1961), discussed further in Section 9.4.2. The court in this case rejected the notion that education in state schools is a “privilege” to be dispensed on whatever conditions the state in its sole discretion deems advisable; it also implicitly rejected the *in loco parentis* concept, under which the law had bestowed on schools all the powers over students that parents had over minor children. The *Dixon* approach became a part of U.S. Supreme Court jurisprudence in cases such as *Tinker v. Des Moines School District* (see Section 9.5.1), *Healy v. James* (Sections 9.5.1 & 10.1.1), and *Goss v. Lopez* (Section 9.4.2). The impact of these public institution cases spilled over onto private institutions, as courts increasingly viewed students as contracting parties having rights under express and implied contractual relationships with the institution. Thus, at both public and private institutions, the failure to follow institutional policies, rules, and regulations has led to successful litigation by

students who claimed that their rights were violated by this noncompliance (see subsection 8.1.3 below and Sections 9.2 & 9.4).

Congress gave students at both public and private schools rights under various civil rights acts and, in the Family Educational Rights and Privacy Act (FERPA; Section 9.7.1 of this book), gave postsecondary students certain rights that were expressly independent of and in lieu of parental rights. State statutes lowering the age of majority also enhanced the independence of students from their parents and brought the bulk of postsecondary students, even undergraduates, into the category of adults.

Now another stage in the evolution of students' legal status has been emerging. Developments at this new stage suggest a renewed emphasis on the *academic freedom* of students. In classical thought on academic freedom, the student's freedom to learn is clearly recognized and considered to be at least as important as the faculty member's freedom to teach. In more modern legal developments, courts have occasionally recognized the concept of student academic freedom; in *Piarowski v. Illinois Community College*, 759 F.2d 625, 629 (7th Cir. 1985), for instance, the court noted that the term "academic freedom" is "used to denote" not only "the freedom of the individual teacher" but also "the [freedom of] the student." But most academic freedom cases have been brought by faculty members, and most academic freedom rights that courts have protected have belonged to faculty members (see especially Section 7.2). Student academic freedom issues are discussed in subsection 8.1.4 below.

**8.1.2. *The age of majority.*** The age of majority is established by state law in all states. There may be a general statute prescribing an age of majority for all or most business and personal dealings in the state, or there may be specific statutes or regulations establishing varying ages of majority for specific purposes. Until the 1970s, twenty-one was typically the age of majority in most states. But since the 1971 ratification of the Twenty-Sixth Amendment, lowering the voting age to eighteen, most states have lowered the age of majority to eighteen or nineteen for many other purposes as well. Some statutes, such as those in Michigan (Mich. Comp. Laws Ann. § 722.52), set age eighteen as the age of majority for all purposes; other states have adopted more limited or more piecemeal legislation, sometimes using different minimum ages for different purposes. Given the lack of uniformity, administrators and counsel should carefully check state law in their own states.

The age-of-majority laws can affect many postsecondary regulations and policies. For example, students at age eighteen may be permitted to enter binding contracts without the need for a cosigner, give consent to medical treatment, declare financial independence, or establish a legal residence apart from the parents. But although students' legal capacity enables institutions to deal with them as adults at age eighteen, it does not necessarily require that institutions do so. Particularly in private institutions, administrators may still be able as a policy matter to require a cosigner on contracts with students, for instance, or to consider the resources of parents in awarding financial aid, even though the parents have no legal obligations to support the student. An institution's legal

capacity to adopt such policy positions depends on the interpretation of the applicable age-of-majority law and the possible existence of special state law provisions for postsecondary institutions. A state loan program, for instance, may have special definitions of dependency or residency that may not conform to general age-of-majority laws.

Administrators will thus confront two questions: What do the age-of-majority laws require that I do in particular areas? And should I, where I am under no legal obligation, establish age requirements higher than the legal age in particular areas, or should I instead pattern institutional policies on the general legal standard?

**8.1.3. *The contractual rights of students.*** Both public and private institutions often have express contractual relationships with students. The most common examples are probably the housing contract or lease, the food service contract, and the loan agreement. In addition, courts are increasingly inclined to view the student handbook or college catalog as a contract. When problems arise in these areas, the written contract, including institutional regulations incorporated by reference in the contract, is usually the first source of legal guidance.

The contractual relationship between student and institution, however, extends beyond the terms of express contracts. There also exists the more amorphous contractual relationship recognized in *Carr v. St. John's University, New York*, 187 N.E.2d 18 (N.Y. 1962), the modern root of the contract theory of student status. In reviewing the institution's dismissal of students for having participated in a civil marriage ceremony, the court based its reasoning on the principle that "when a student is duly admitted by a private university, secular or religious, there is an implied contract between the student and the university that, if he complies with the terms prescribed by the university, he will obtain the degree which he sought." Construing a harsh and vague regulation in the university's favor, the court upheld the dismissal because the students had failed to comply with the university's prescribed terms.

Although *Carr* dealt only with a private institution, a subsequent New York case, *Healy v. Larsson*, 323 N.Y.S.2d 625, *affirmed*, 318 N.E.2d 608 (N.Y. 1974) (discussed below in this Section), indicated that "there is no reason why . . . the *Carr* principle should not apply to a public university or community college."

Other courts have increasingly utilized the contract theory for both public and private institutions, as well as for both academic and disciplinary disputes. The theory, however, does not necessarily apply identically to all such situations. A public institution may have more defenses against a contract action. *Eden v. Board of Trustees of State University*, 374 N.Y.S.2d 686 (N.Y. App. Div. 1975), for instance, recognizes both an *ultra vires* defense and the state's power to terminate a contract when necessary in the public interest. (*Ultra vires* means "beyond authority," and the defense is essentially "You can't enforce this contract against us because we didn't have authority to make it in the first place.") And courts may accord both public and private institutions more flexibility in drafting and interpreting contract terms involving academics than they do contract terms involving discipline. In holding that Georgia State University had not breached its contract with a student by withholding a master's degree, for example, the court in *Mahavongsanan v. Hall*, 529 F.2d 448 (5th Cir. 1976),

recognized the “wide latitude and discretion afforded by the courts to educational institutions in framing their academic requirements.”<sup>1</sup>

In general, courts have applied the contract theory to postsecondary institutions in a deferential manner. Courts have accorded institutions considerable latitude to select and interpret their own contract terms and to change the terms to which students are subjected as they progress through the institution. In *Mahavongsanan*, for instance, the court rejected the plaintiff student’s contract claim in part because an institution “clearly is entitled to modify [its regulations] so as to properly exercise its educational responsibility.” Nor have institutions been subjected to the rigors of contract law as it applies in the commercial world (see, for example, *Slaughter v. Brigham Young University*, discussed in Sections 9.2.3 and 9.4.4).

In some instances, courts have preferred to use quasi-contract theory to examine the relationship between an institution and its students, and may hold the institution to a good-faith standard. In *Beukas v. Fairleigh Dickinson University*, 605 A.2d 776 (N.J. Super. Ct. Law Div. 1991), *affirmed*, 605 A.2d 708 (N.J. Super. Ct. App. Div. 1992), former dental students sued the university for closing its dental school when the state withdrew its subsidy. The university pointed to language in the catalog reserving the right to eliminate programs and schools, arguing that the language was binding on the students. But instead of applying a contract theory, the trial court preferred to analyze the issue using quasi-contract theory, and applied an arbitrariness standard:

[T]his court rejects classic contract doctrine to resolve this dispute. . . . [T]he “true” university-student “contract” is one of mutual obligations implied, not in fact, but by law; it is a quasi-contract which is “created by law, for reasons of justice without regard to expressions of assent by either words or acts” [citing *Borough of West Caldwell v. Borough of Caldwell*, 26 N.J. 9 (1958)]. . . . This theory is the most efficient and legally-consistent theory to resolve a university-student conflict resulting from an administrative decision to terminate an academic or professional program. The inquiry should be: “did the university act in good faith and, if so, did it deal fairly with its students?” [605 A.2d at 783, 784].

Citing *AAUP v. Bloomfield College* (Section 6.8.2), the court explained its reasoning for using a good-faith standard rather than contract law:

This approach will give courts broader authority for examining university decisionmaking in the administrative area than would a modified standard of judicial deference and will produce a more legally cohesive body of law than will application of classic contract doctrine with its many judicially created exceptions, varying as they must from jurisdiction to jurisdiction [605 A.2d at 784–85].

---

<sup>1</sup>Courts have also reviewed student challenges to academic or disciplinary decisions by colleges under the law of private associations. (See, for example, *Boehm v. University of Pennsylvania School of Veterinary Medicine*, 573 A.2d 575 (Pa. Super. 1990); *Clayton v. Trustees of Princeton University*, 519 F. Supp. 802 (D.N.J. 1981); and *Tedeschi v. Wagner College*, 404 N.E.2d 1302 (N.Y. 1980); and see generally Section 14.2 of this book.) But most of the cases continue to focus on breach of contract claims and other claims of a contractual nature.

The state's appellate court upheld the result and the reasoning, but stated that if the catalog was a contract (a question that this court did not attempt to answer), the reservation of rights language would have permitted the university to close the dental school.

Similarly, another New Jersey appellate court refused to characterize the student-institution relationship as contractual in a student's challenge to his dismissal on academic (as opposed to disciplinary) grounds. In *Mittra v. University of Medicine and Dentistry of New Jersey*, 719 A.2d 693 (N.J. Ct. App. 1998), the court stated that when the institution's action was taken for academic reasons,

the relationship between the university and its students should not be analyzed in purely contractual terms. As long as the student is afforded reasonable notice and a fair hearing in general conformity with the institution's rules and regulations, we defer to the university's broad discretion in its evaluation of academic performance. . . . Rigid application of contract principles to controversies concerning student academic performance would tend to intrude upon academic freedom and to generate precisely the kind of disputes that the courts should be hesitant to resolve [719 A.2d at 695, 697].

Since the student had not identified any specific rule or regulation alleged to have been violated, the appellate court affirmed the trial court's award of summary judgment to the university.

In addition to challenging the application of curricular or other requirements, students have also asserted contract claims when challenging dismissals or other sanctions. Traditionally, courts have typically been more deferential to institutional decisions in dismissals for academic rather than for disciplinary reasons. For example, in a misconduct case, *Fellheimer v. Middlebury College*, 869 F. Supp. 238 (D. Vt. 1994), a federal court ruled that the student handbook of a private institution was contractually binding on the college and provided the basis for a breach of contract claim. In *Fellheimer*, a student challenged the fairness of the college's disciplinary process because he was not informed of all of the charges against him. (This case is discussed more fully in Section 9.4.4.) The court rejected the college's claim that the handbook was not a contract: "While [prior cases caution courts to] keep the unique educational setting in mind when interpreting university-student contracts, they do not alter the general proposition that a College is nonetheless contractually bound to provide students with the procedural safeguards that it has promised" (869 F. Supp. 243). The court ruled that Middlebury had breached its contract with the student because the disciplinary hearing had been flawed.

The existence of a contractual relationship between student and institution is significant if the student wishes to assert constitutional claims based on a property interest. In *Unger v. National Residents Matching Program*, 928 F.2d 1392 (3d Cir. 1991), the plaintiff, admitted to Temple University's residency program in dermatology, challenged the university's decision to terminate the program five months before she was to enroll. Unger claimed constitutional violations of both liberty and property interests. The court rejected the liberty

interest claim, stating that Unger was inconvenienced by Temple's actions but was not precluded from seeking other training.

To Unger's claim that Temple's decision deprived her of a property interest, based on her contract with the university, the court replied that the claim failed for two reasons. First, Unger had no legitimate expectation that she would continue her graduate medical training; second, she had no entitlement to the training provided by the program. The court did find that Temple's offer of admission was a contract; but it was not the type of contract that created a property interest enforceable under federal civil rights law (see Section 3.5).

Although various courts have applied contract law principles when an institution's written materials make certain representations, they may be more hesitant to do so if the promise relied upon is oral. In *Ottgen v. Clover Park Technical College*, 928 P.2d 1119 (Wash. Ct. App. 1996), a state appellate court affirmed the trial court's dismissal of contract and state consumer fraud claims against the college. Five students who had enrolled in the college's Professional Residential Real Estate Appraiser program sued the college when a promise made by a course instructor, who was subsequently dismissed by the college, did not materialize. Although the instructor had promised the students that they would receive appraisal experience as well as classroom instruction, the opportunity for on-the-job experience did not occur. The court ruled that there was no contract between the college and the students to offer them anything but classroom education. College documents discussed only the classroom component and made no representations about the eligibility for licensure of individuals who had completed the program.

Despite the generally deferential judicial attitude, the contract theory has become a source of meaningful rights for students as well as for institutions, particularly when faculty or administrators either fail to follow institutional policies or apply those policies in an arbitrary way. Students have claimed, and courts have agreed, that student handbooks, college catalogs, and other policy documents are implied-in-fact contracts, and that an institution's failure to follow these guidelines is a breach of an implied-in-fact contract (see, for example, *Zumbrun v. University of Southern California*, 101 Cal. Rptr. 499, 502 (Ct. App. Cal. 1972)). Other cases have involved student claims that the totality of the institution's policies and oral representations by faculty and administrators create an implied contract that, if the student pays tuition and demonstrates satisfactory academic performance, he or she will receive a degree.<sup>2</sup> And although some public institutions have escaped liability in contract claims under the sovereign immunity doctrine (see Section 3.4), not all states apply this doctrine to public colleges (see, for example, *Stratton v. Kent State University*, 2003 Ohio App. LEXIS 1206 (Ct. App. Ohio, March 18, 2003) (unpublished)).

The U.S. Court of Appeals for the First Circuit, applying Rhode Island law, provided an explicit recognition of the contractual relationship between a

---

<sup>2</sup>Students have also sought to state claims of educational malpractice against colleges and their administrators and faculty. Courts have rejected these tort claims, but some have agreed to entertain breach of contract claims based upon institutional representations regarding licensure or accreditation that were alleged to be false. These cases are discussed in Section 3.3.3.

student and a college. In *Mangla v. Brown University*, 135 F.3d 80 (1st Cir. 1998), the court stated:

The student-college relationship is essentially contractual in nature. The terms of the contract may include statements provided in student manuals and registration materials. The proper standard for interpreting the contractual terms is that of “reasonable expectation—what meaning the party making the manifestation, the university, should reasonably expect the other party to give it” [135 F.3d at 83].

And in *Goodman v. President and Trustees of Bowdoin College*, 135 F. Supp. 2d 40 (D. Maine 2001), a federal district court, applying Maine law, ruled that even though the college had reserved the right to change the student handbook unilaterally and without notice, this reservation of rights did not defeat the contractual nature of the student handbook.

Nevertheless, a reservation of rights clause or disclaimer in the college catalog or other policy document can provide protection against breach of contract claims when curricular or other changes are made. For example, in *Doherty v. Southern College of Optometry*, 862 F.2d 570 (6th Cir. 1988), the court rejected a student’s claim that deviations from the stated curriculum breached his contractual rights. The college’s handbook had specifically reserved the right to change degree requirements, and the college had uniformly applied curricular changes to current students in the past. Therefore, the court ruled that the changes were neither arbitrary nor capricious, and dismissed the student’s contract claim.

Similarly, an express disclaimer in a state university’s catalog defeated a student’s contract claim in *Eiland v. Wolf*, 764 S.W.2d 827 (Tex. Ct. App. 1989). Although the catalog stated that the student would be entitled to a diploma if he successfully completed required courses and met other requirements, the express disclaimer that the catalog was not an enforceable contract and was subject to change without notice convinced the court to dismiss the student’s challenge to his academic dismissal.

A reservation of rights clause was also present, but less important, in *Beukas v. Fairleigh Dickinson University*, discussed above. The court ruled that no express contract existed between the dental students and the university and that, under principles of “quasi-contract,” the university could close the dental school as long as it acted in good faith.

In *Coddington v. Adelphi University*, 45 F. Supp. 2d 211 (E.D.N.Y. 1999), a student claimed that the private university and several individual administrators had violated the Americans With Disabilities Act (ADA; see Section 9.3.5) and breached his contract with the university by failing to accommodate his learning disabilities. Although the court dismissed the student’s ADA claim and the contract claims against individual administrators, the court rejected the university’s motion to dismiss the contract claim against the university itself. Noting that the student had paid the required tuition and had claimed to have relied upon “admission bulletins and other materials regarding Adelphi’s programs and policies regarding students with learning disabilities” and the representations of

certain administrators of his right to untimed tests and note takers, the court ruled that the student had sufficiently pleaded “the existence of a contractual agreement” with the university (but not with the individual administrators).

A case brought by a student against Yale University and his faculty advisors provides an interesting example of the use of contract law to challenge alleged professional misconduct by a graduate student’s faculty mentors. In *Johnson v. Schmitz*, 119 F. Supp. 2d 90 (D. Conn. 2000), the student claimed that several professors had appropriated his ideas and used them in publications without his consent and without acknowledgment. The court refused to dismiss the student’s breach of contract claims because the plaintiff stated that he had relied upon specific promises contained in university catalogs and documents, including “express and implied contractual duties to safeguard students from academic misconduct, to investigate and deal with charges of academic misconduct, and to address charges of academic misconduct in accordance with its own procedures” (119 F. Supp. 2d at 96). Although the university argued that judicial review of the student’s claims involved inappropriate involvement in academic decisions, the court disagreed. Explaining that Johnson’s claims did not allege that he was provided a poor-quality education, but that the university breached express and implied contractual duties that it had assumed, the court said that its review would be limited to “whether or not Yale had a contractual duty to safeguard its students from faculty misconduct, and, if so, whether that duty was breached in Johnson’s case” (119 F. Supp. 2d at 96).

The court also allowed the plaintiff’s negligence claim to be heard, ruling that he should be allowed to attempt to demonstrate that Yale had a duty to protect its students against faculty misconduct. This is an unusual ruling, given the typical rejection by courts of students’ attempts to state claims of negligence in cases involving academic issues rather than personal injury claims (see Section 3.3.3).

The case of *Harwood v. Johns Hopkins*, 747 A.2d 205 (Ct. App. Md. 2000) provides an interesting example of an institution’s successful use of a contract theory as a defense to a student lawsuit. Harwood, a student at Johns Hopkins University, had completed all of his degree requirements, but the degree had not yet been conferred when Harwood murdered a fellow student on the university’s campus. The university notified Harwood that it would withhold his diploma pending the resolution of the criminal charges. Harwood pleaded guilty to the murder and was incarcerated. He then brought a declaratory judgment action against the university, seeking the conferral of his degree. The university argued that its written policies required students not only to complete the requirements for their degree, but to adhere to the university’s code of conduct. The court ruled that, because the murder violated the university’s code of conduct, the university had a contractual right to withhold the diploma.

Although courts are increasingly holding institutions of higher education to their promises and representations in catalogs and policy documents, they have rejected students’ attempts to claim that only the material in the written documents is binding on the *student*. For example, the Supreme Court of Alaska ruled in favor of a nursing professor at the University of Alaska who required a student who had failed a required course to take a course in “critical thinking.” When the student complained to the dean of the School of Nursing and Health

Sciences, the dean backed the professor, stating that because the requirement of this additional course was a condition of the plaintiff's remaining in the nursing program rather than removal from the program, her decision was final and could not be appealed within the university. The student then filed a breach of contract claim in state court, asserting that the student handbook did not list the course in critical thinking as required for the nursing degree.

In *Bruner v. Petersen*, 944 P.2d 43 (Alaska 1997), the state's highest court affirmed a trial court's ruling that there was no breach of contract, and also affirmed that court's award of attorney's fees to the university. Explicit language in the student handbook stated that it was not a contract, and allowed for the possibility of establishing conditions for reenrollment in any required course that a student had failed. Furthermore, said the court, the student had received all of the appeal rights provided by the catalog.

The nature of damages in a successful breach of contract claim was addressed in a case brought under Florida law. In *Sharick v. Southeastern University of the Health Sciences, Inc.*, 780 So. 2d 136 (Ct. App. Fla. 2000), a fourth-year medical student was dismissed for failing his last course in medical school. He sued the university for breach of contract, and a jury found that the university's decision to dismiss Sharick was arbitrary, capricious, and "lacking any discernable rational basis." Sharick had sought damages for future lost earning capacity as well as reimbursement of the tuition he had paid, but the trial judge would allow the jury only to consider damages related to the tuition payments. Sharick appealed the trial court's ruling on the issue of future lost earnings. The university did not appeal the jury verdict.

The appellate court reversed the trial court's limitation of damages to tuition reimbursement. Since previous cases had established that other contractual remedies, such as specific performance and *mandamus* to grant a degree were unavailable to plaintiffs suing colleges, the court stated that damages could properly include the value of the lost degree with respect to Sharick's future earnings. The Supreme Court of Florida first agreed to review the appellate court's ruling, then changed its mind, leaving the appellate decision in force (*Southeastern University of the Health Sciences, Inc. v. Sharick*, 822 So. 2d 1290 (Fla. 2002)). (For an analysis of the "lessons" of *Sharick*, see Scott D. Makar, "Litigious Students and Academic Disputes," *Chron. Higher Educ.*, November 8, 2002, B20.)

The contract theory is still developing. Debate continues on issues such as the means for identifying the terms and conditions of the student-institution contract, the extent to which the school catalog constitutes part of the contract, and the extent to which the institution retains implied or inherent authority (see Section 3.1) not expressed in any written regulation or policy. For example, in *Prusack v. State*, 498 N.Y.S.2d 455 (N.Y. App. Div. 1986), the court rejected the student's claim that a letter of admission from the university that had quoted a particular tuition rate was an enforceable contract, since other university publications expressly stated that tuition was subject to change. In *Eiland v. Wolf*, 764 S.W.2d 827 (Tex. Ct. App. 1989), reservation of rights language in a catalog for the University of Texas Medical School at Galveston absolved the institution of contractual liability. The catalog stated: "The provisions of this catalogue are subject to change without notice and do not constitute an irrevocable contract

between any student . . . and the University.” Furthermore, the catalog gave the faculty the right to determine whether a student’s performance was satisfactory, and stated that “the Faculty of the School of Medicine has the authority to drop any student from the rolls . . . if circumstances of a legal, moral, health, social, or academic nature justify such a request” (764 S.W.2d at 838). The court said: “Given the express disclaimers in the document alleged to be a contract here, it is clear that no enforceable ‘contract’ existed” (764 S.W.2d at 838).

Also still debatable is the extent to which courts will rely on certain contract law concepts, such as “unconscionable” contracts and “contracts of adhesion.” An unconscionable contract is one that is so harsh and unfair to one of the parties that a reasonable person would not freely and knowingly agree to it. Unconscionable contracts are not enforceable in the courts. In *Albert Merrill School v. Godoy*, 357 N.Y.S.2d 378 (Civ. Ct. N.Y. City 1974), the school sought to recover money due on a contract to provide data-processing training. Finding that the student did not speak English well and that the bargaining power of the parties was uneven, the court held the contract unconscionable and refused to enforce it.

A “contract of adhesion” is one offered by one party (usually the party in the stronger bargaining position) to the other party on a “take it or leave it” basis, with no opportunity to negotiate the terms. Ambiguities in contracts of adhesion will be construed against the drafting party (in these cases, the institution) because there was no opportunity for the parties to bargain over the terms of the contract (see, for example, *Corso v. Creighton University*, 731 F.2d 529 (8th Cir. 1984)). See also *K.D. v. Educational Testing Service*, 386 N.Y.S.2d 747 (N.Y. Sup. Ct. 1976), where the court viewed the plaintiff’s agreement with Educational Testing Service (ETS) to take the Law School Admissions Test (LSAT) as a contract of adhesion, but ruled it valid because it was not “so unfair and unreasonable” that it should be disregarded by use of the available “pretexts,” such as a declaration that it violated public policy.

The case of *Kyriazis v. University of West Virginia*, discussed in Section 2.5.5, is an example of a contract of adhesion that a court invalidated as contrary to public policy. In particular, the court’s opinion suggests factors relevant to determining whether the bargaining powers of the parties are substantially uneven. In *Kyriazis*, the court found that the university had a “decisive bargaining advantage” over the student because (1) the student had to sign the release as a condition of sports participation and thus had no real choice; (2) the release was prepared by counsel for the university, but the student had no benefit of counsel when he signed the release; and (3) the university’s student code required students to follow the directions of university representatives.

Since these contract principles depend on the weak position of one of the parties, and on overall determinations of “fairness,” courts are unlikely to apply them against institutions that deal openly with their students—for instance, by following a good-practice code, operating grievance mechanisms for student complaints (see Sections 9.1.2–9.1.4), and affording students significant opportunity to participate in institutional governance.

Although a promise to treat the other party to the contract fairly and in good faith is part of every contract (*Restatement (Second) of Contracts* 205 (1981)),

most claims by students using this theory have been unsuccessful. For example, in *Napolitano v. Trustees of Princeton University* (discussed in section 9.4.4), the court rejected a student's claim that withholding her degree for one year as punishment for plagiarism was a breach of the covenant of good faith and fair dealing. Said the court: "To upset Princeton's decision here, this court would have to find that Princeton could not in good faith have assessed the penalties it did against the plaintiff" (453 A.2d at 284). Other examples of judicial rejection of these claims are *Coveney v. President and Trustees of the College of the Holy Cross*, 445 N.E.2d 136 (Mass. 1983), and *Seare v. University of Utah School of Medicine*, 882 P.2d 673 (Utah Ct. App. 1994).

Although student attempts to argue that the institution has a fiduciary duty toward its students have typically been unsuccessful (Hazel Glenn Beh, "Student Versus University: The University's Implied Obligations of Good Faith and Fair Dealing," 59 *Maryland L. Rev.* 183, 202 (2000)), at least one court has ruled that a university and several of its faculty may have assumed a fiduciary duty to its graduate students. In *Johnson v. Schmitz*, discussed earlier in this Section, a federal trial court refused to dismiss a doctoral student's claim that the university breached its fiduciary duty toward the student by not protecting him from alleged academic misconduct by his faculty advisors. Said the court: "Given the collaborative nature of the relationship between a graduate student and a dissertation advisor who necessarily shares the same academic interests, the Court can envision a situation in which a graduate school, knowing the nature of this relationship, may assume a fiduciary duty to the student" (119 F. Supp. 2d at 97–98). The court also ruled that the plaintiff might be able to demonstrate that a fiduciary relationship existed between himself and his dissertation committee, and that the dissertation committee would need to demonstrate "fair dealing by clear and convincing evidence" because "the dissertation committee was created for no other purpose than to assist Johnson" (119 F. Supp. 2d at 98). The court ruled that the case should proceed to trial. (For more on fiduciary theories, see generally A. L. Goldman, "The University and the Liberty of Its Students—A Fiduciary Theory," 54 *Kentucky L.J.* 643 (1966).)

Other contractual issues may arise as a result of the action of institutional or state-level actors. For example, in *Arriaga v. Members of Board of Regents*, 825 F. Supp. 1 (D. Mass. 1992), students challenged the constitutionality of retroactive tuition increases ordered by the state board of regents after the state legislature, responding to a fiscal crisis, passed a law increasing tuition for nonresident students. Claiming that the institution's statements about the amount of tuition for nonresident students was a contract, the students argued that the regents' action impaired their contractual rights in violation of the U.S. Constitution's contracts clause, Article I, Section 10 (see Section 6.2.2).

The regents filed a motion to dismiss the lawsuit, arguing that they had the unilateral power to impose tuition increases, and thus it was not the legislature's action that was dispositive of the constitutional claim. The court was required to determine whether it was the action of the legislature or the regents that resulted in the tuition increase, for the contracts clause would apply only to the

acts of the legislature unless it had delegated its power to the executive branch (here, the regents). The court concluded that, although the regents determined that tuition increases were necessary before the legislature formally passed the law, their action was in anticipation of the law and thus was controlled by the provisions of the contracts clause.

Students enrolled in programs that are terminated or changed prior to the students' graduation have found some state courts to be receptive to their claims that promotional materials, catalogs, and policy statements are contractually binding on the institution. An illustrative case is *Craig v. Forest Institute of Professional Psychology*, 713 So. 2d 967 (Ala. Ct. App. 1997), in which four students filed state law breach of contract and fraud claims against Forest. Forest, whose main campus was located in Wheeling, Illinois, opened a satellite campus in Huntsville, Alabama, and offered a doctoral degree program in psychology. Although the Huntsville campus was not accredited by the American Psychological Association (APA), a regional accrediting association, or the state, Forest's written materials allegedly implied that its graduates were eligible to sit for licensing examinations and to be licensed in Alabama. The Alabama Board of Examiners would not allow Forest graduates to sit for a licensing examination because its regulations provided that only graduates of accredited institutions were eligible to take the examination.

The Alabama campus proved to be a financial drain on Forest, and it closed the campus before the students had completed their doctorates. Because the college was not accredited, the students were unable to transfer credits earned at Forest to other doctoral programs.

The students' claims were based on the college's alleged promises that they could obtain a doctorate at the Huntsville campus and be eligible for licensure in Alabama. The trial court granted summary judgment to the college, but the appellate court reversed. Disagreeing with a ruling by the South Dakota Supreme Court in an earlier case, *Aase v. State*, 400 N.W.2d 269 (S.D. 1987), the court ruled that "it is not clear that Forest fulfilled all of its contractual obligations to the students merely by providing them with instruction for which they had paid tuition on a semester-by-semester basis" (713 So. 2d at 973). The scope of the contract could not be determined without a trial, said the court; although Forest had pointed to language in one publication that reserved its right to modify or discontinue programs, the court stated that this language was not "dispositive" and that all relevant documents needed to be considered. The court also ruled that a trial was necessary on the plaintiffs' fraud claims.

Contract law has become an important source of legal rights for students. Postsecondary administrators should be sensitive to the language used in all institutional rules and policies affecting students. Language suggestive of a commitment (or promise) to students should be used only when the institution is prepared to live up to the commitment. Limitations on the institution's commitments should be clearly noted where possible, and reservation of rights language should be used wherever appropriate. Administrators should consider the adoption of an official policy, perhaps even a "code of good practice," on fair dealing with students, and provide avenues for internal appeal of both academic and disciplinary decisions.

**8.1.4. Student academic freedom.** Student academic freedom is not as well developed as faculty academic freedom (the focus of Chapter Seven), either in terms of custom or in terms of law. Nevertheless, like faculty academic freedom, student academic freedom has important historical antecedents and is widely recognized in the academic community. Moreover, since the early 1990s, developments in academia and in the courts have focused attention on the academic freedom of students and raised new questions about its status and role.

The concept of student academic freedom was imported into the United States from Europe, where, in German universities, it was known as *Lernfreiheit*, the freedom to learn. (See H. S. Commanger, “The University and Freedom: ‘Lehrfreiheit’ and ‘Lernfreiheit,’” 34 *J. Higher Educ.* 361 (1963); Richard Hofstadter & Walter Metzger, *The Development of Academic Freedom in the United States* (Columbia University Press, 1955), 386–91.) In 1915, in its foundational “General Declaration of Principles,” the American Association of University Professors (AAUP) recognized *Lernfreiheit*, the student’s freedom to learn, as one of the two components of academic freedom—the other being *Lehrfreiheit*, the teacher’s freedom to teach. (*AAUP Policy Documents and Reports* (the “Redbook”) (9th ed., 2001), 291–301). In the classic “1940 Statement of Principles on Academic Freedom and Tenure,” the AAUP and the Association of American Colleges and Universities, eventually joined by more than 150 other higher education and professional associations as endorsers, specifically acknowledged “the rights of the . . . student to freedom in learning” (*AAUP Policy Documents and Reports*, 3). Subsequently, in its “Statement on Professional Ethics” (promulgated in 1966 and revised in 1987), the AAUP emphasized professors’ responsibility to “encourage the free pursuit of learning in their students” and to “protect their academic freedom” (*AAUP Policy Documents and Reports*, 133).

In 1967, representatives of the AAUP, the Association of American Colleges and Universities, the U.S. Student Association, the National Association of Student Personnel Administrators, and the National Association for Women in Education promulgated a “Joint Statement on Rights and Freedoms of Students” that was endorsed by all five organizations and various other higher education and professional associations. The Joint Statement recognizes the “freedom to learn” and the freedom to teach as “inseparable facets of academic freedom” and emphasizes that “students should be encouraged to develop the capacity for critical judgment and to engage in a sustained and independent search for truth” (*AAUP Policy Documents and Reports*, 261). The Statement then elucidates “the minimal standards of academic freedom of students” that apply “in the classroom, on the campus, and in the larger community” (*Id.* at 264). This very helpful listing and exposition includes the freedom of “discussion, inquiry, and expression” in the classroom and in conferences with the instructor (*Id.* at 262); the freedom “to organize and join associations” of students, “to examine and discuss” issues and “express opinions publicly and privately” on campus, and “to invite and to hear” guest speakers (*Id.* at 263–64); the freedom “individually and collectively [to] . . . express views on issues of institutional policy” and “to participate in the formulation and application

of institutional policy affecting academic and student affairs” (*Id.* at 264); the “editorial freedom of student publications,” that is, “sufficient editorial freedom and financial autonomy . . . to maintain their integrity of purpose as vehicles for free inquiry . . . in an academic community” (*Id.*); and the freedom, “[a]s citizens,” to “exercise the rights of citizenship,” such as “freedom of speech, peaceful assembly, and right of petition,” both on and off campus (*Id.* at 265). In 1992, the Joint Statement was reviewed, updated (with interpretive footnotes), and reaffirmed by an interassociation task force.

Beginning in the 1950s, the U.S. Supreme Court has gradually, but increasingly, recognized student academic freedom. In one of the earliest and most influential academic freedom cases, *Sweezy v. New Hampshire*, Chief Justice Warren’s plurality opinion declared that “[t]eachers and students must always remain free to inquire, to study and to evaluate, to gain new maturity and understanding; otherwise our civilization will stagnate and die” (354 U.S. 234, 250 (1957) (emphasis added)). In subsequent years, the Court decided various cases in which it protected students’ rights to freedom of speech, press, and association on campus (see, for example, *Widmar v. Vincent*, 454 U.S. 263 (1981), discussed in Section 10.1.5, and *Papish v. Board of Curators of the University of Missouri*, 410 U.S. 667 (1973), discussed in Section 10.3.5). These cases typically were based on generic First Amendment principles that apply both outside and within the context of academia (for example, the “public forum” principles used in *Widmar*) and did not specifically rely on or develop the concept of student academic freedom. In one of these cases, however, *Healy v. James*, 408 U.S. 169 (1972) (Section 9.5.1 & 10.1.1 of this book), the Court did emphasize that, in upholding the students’ right to freedom of association, it was “reaffirming this Nation’s dedication to safe-guarding academic freedom” (408 U.S. at 180–81, citing *Sweezy*). Then, in *Rosenberger v. Rector and Visitors of the University of Virginia*, 515 U.S. 819 (1995), the Court, citing both *Sweezy* and *Healy*, further linked student free expression rights with student academic freedom and provided historical context for the linkage.

*Rosenberger* involved a university’s refusal to provide student activities funds to a student organization that published a Christian magazine. The Court determined that the refusal was “viewpoint discrimination” that violated the students’ right to freedom of expression. (For discussion of this aspect of *Rosenberger*, see Section 10.1.5.) In supporting its conclusion, the Court reasoned that:

[t]he danger [of chilling expression] is especially real in the University setting, where the State acts against a background and tradition of thought and experiment that is at the center of our intellectual and philosophic tradition. See *Healy v. James*, 408 U.S. 169, 180–181 (1972); *Keyishian v. Board of Regents of Univ. of State of N.Y.*, 385 U.S. 589, 603 (1967); *Sweezy v. New Hampshire*, 354 U.S. 234, 250 (1957). In ancient Athens, and, as Europe entered into a new period of intellectual awakening, in places like Bologna, Oxford, and Paris, universities began as voluntary and spontaneous assemblages or concourses *for students to speak and to write and to learn*. See generally R. Palmer & J. Colton, *A History of the Modern World* 39 (7th ed. 1992). The quality and creative power of *student intellectual life* to this day remains a vital measure of a school’s influence and

attainment. For the University, by regulation, to cast disapproval on particular viewpoints of its students risks the suppression of free speech *and creative inquiry* in one of the vital centers for the Nation's *intellectual life*, its college and university campuses [515 U.S. at 835–36 (emphasis added)].

Thus, although *Rosenberger* is based on free speech and press principles like those the Court used in the earlier students' rights cases, it goes further than these cases in stressing the academic freedom context of the dispute and in emphasizing the student's freedom to learn as well as the student's more generic right to speak.

The case of *Board of Regents of University of Wisconsin System v. Southworth*, 529 U.S. 217 (2000), a mandatory student fees case coming five years after *Rosenberger*, can also be seen as a student academic freedom case. (*Southworth* is discussed in Section 10.1.2.) Justice Kennedy's majority opinion in *Southworth* did not specifically invoke academic freedom, as did his previous majority opinion in *Rosenberger*, and the students did not prevail in *Southworth* to the extent that they had in *Rosenberger*. Nevertheless, the Court made clear that the justification for subsidizing student organizations through mandatory fee allocations is to provide students "the means to engage in dynamic discussions of philosophical, religious, scientific, social, and political subjects in their extracurricular campus life outside the lecture hall" (529 U.S. at 233). A university that subsidizes student speech for this purpose, however, has a "corresponding duty" to avoid infringing "the speech and beliefs" of students who object to this use of their student fees—a duty that may be fulfilled by assuring that the mandatory fee system is "viewpoint-neutral" (*Id.* at 231–33). Thus, the overall justification for the viewpoint-neutral mandatory fee system is, in effect, the promotion of student academic freedom; the university's "duty" to protect objecting students is, in effect, a duty to protect their academic freedom; and the students' right to insist on such protection is, in effect, a First Amendment academic freedom right.

The three concurring Justices in *Southworth*, unlike the majority, did specifically invoke First Amendment academic freedom (*Id.* at 236–39). In an opinion by Justice Souter, these three Justices argued that the Court's prior opinions on academic freedom (see generally Section 7.1.4 of this book) provide the legal principles that the Court should have considered in resolving the case, even though these prior precedents would not "control the result in this [case]." While the concurring Justices emphasized the "academic freedom and . . . autonomy" of the institution more than student academic freedom, they did make clear that institutional academic freedom or autonomy does not obliterate student academic freedom. From the concurring Justices' perspective, then, the objecting students' claims could be cast as student academic freedom claims, and the university's defense could be considered an institutional academic freedom or autonomy defense. (Institutional academic freedom is discussed in Section 7.1.6 of this book.)

Before *Rosenberger* and *Southworth*, as suggested above, most student academic freedom claims were based on generic free expression principles. If academic freedom was mentioned by advocates or by the courts, it was as an

add-on that gave nuance and additional weight to the traditional free expression claim. *Rosenberger* itself is perhaps the best example of this use of academic freedom arguments. The interests at stake in the earlier cases (and in *Rosenberger* itself), moreover, were traditional First Amendment interests in the right to speak rather than specific interests in the freedom to learn. Some of the cases after *Rosenberger* and *Southworth*, however, can be viewed differently; they are cast as (or are subject to being recast as) freedom to learn cases, that is, true student academic freedom cases. The *Southworth* case, as explained above, provides a kind of transitional example, combining elements of traditional free speech claims and elements of contemporary freedom to learn arguments.

Two post-*Southworth* cases, *Brown v. Li* in 2002 and the *Axson-Flynn* case in 2004, provide instructive examples of the “newer” type of student academic freedom claim.<sup>3</sup> Each of these novel U.S. Court of Appeals cases is discussed immediately below.

In *Brown v. Li*, 308 F.3d 939 (9th Cir. 2002), a master’s degree candidate at the University of California at Santa Barbara added a “Disacknowledgments” section in his master’s thesis in which he crudely criticized the graduate school’s dean, university library personnel, a former governor of the state, and others. Because the thesis contained this section, the student’s thesis committee did not approve it, resulting in the student exceeding the time limit for completing his degree requirements and being placed on academic probation. Although the university did award the degree several months later, it declined to place the thesis in the university library’s thesis archive. When the student (now a graduate) sued the dean, the chancellor, the professors on his thesis committee, and the library director in federal court, claiming that their actions violated his First Amendment free speech rights, both the trial court and the appellate court rejected his claim. The appellate court resolved the case by identifying and considering the academic and curricular interests at stake, taking into account the “university’s interest in academic freedom,” the “First Amendment rights” of the faculty members, and the “First Amendment rights” of the student. To guide its decision making, the court relied on *Hazelwood School District v. Kuhlmeier*, 484 U.S. 260 (1988), a U.S. Supreme Court precedent granting elementary/secondary school teachers and administrators extensive discretion to make curricular decisions, and expressly adopted the case’s reasoning for use in higher education. (See 308 F.3d at 947–52; and see Section 1.4.3 of this book for discussion of transferring lower education precedents to higher education.) Under *Hazelwood*, the appellate court explained, the defendants would prevail if their rejection of the plaintiff’s thesis “was reasonably related to a legitimate pedagogical objective” (as the court ruled it was); and in applying this standard, the court would generally “defer[ ] to the university’s expertise in defining academic standards and teaching students to meet them” (which the court did).

To supplement this mode of analysis, the court also briefly considered the relationship between the faculty members’ academic freedom under the First

---

<sup>3</sup>For another example from the post-*Southworth* era, see the *Hayut* case discussed in Section 9.3.4; and for two interesting and quite different pre-*Southworth* examples, see *Salehpour v. University of Tennessee*, discussed in Section 9.5.3, and *Levin v. Harleston*, discussed in Section 7.3.

Amendment and that of the student. Describing a faculty member’s right as “a right to . . . evaluate students as determined by his or her independent professional judgment” (see generally Section 7.2.3), the court determined that “the committee members had an affirmative First Amendment right not to approve Plaintiff’s thesis.” “The presence of [the faculty members’] affirmative right,” the court emphasized, “underscores [the student’s] lack of a First Amendment right to have his nonconforming thesis approved.”

While one may question the court’s willingness to apply *Hazelwood* with full force to higher education, as well as the court’s stark manner of according faculty academic rights supremacy over student academic rights, *Brown v. Li* nevertheless provides a good description of basic limits on student academic freedom. As a general rule, said the court, faculty members and institutions, consistent with the First Amendment, may “require that a student comply with the terms of an academic assignment”; may refuse to “approve the work of a student that, in [the educator’s] judgment, fails to meet a legitimate academic standard”; may limit a “student’s speech to that which is germane to a particular academic assignment”; and may “require a student to write a paper from a particular viewpoint, even if it is a viewpoint with which the student disagrees, so long as the requirement serves a legitimate pedagogical purpose” (308 F.3d at 949, 951, 953). The court provided this example of the latter point:

For example, a college history teacher may demand a paper defending Prohibition, and a law-school professor may assign students to write “opinions” showing how Justices Ginsburg and Scalia would analyze a particular Fourth Amendment question. . . . Such requirements are part of the teachers’ curricular mission to encourage critical thinking . . . and to conform to professional norms . . . [308 F.3d at 953].

*Axson-Flynn v. Johnson*, 356 F.3d 1277 (10th Cir. 2004), concerned a former student in the University of Utah’s Actor in Training Program (ATP) who had objected to reciting certain language that appeared in the scripts she was assigned to perform in her classes. The student’s involvement with the ATP had begun with an audition for acceptance into the program. At the audition, she stated that “she would not remove her clothing, ‘take the name of God in vain,’ ‘take the name of Christ in vain’ or ‘say the four-letter expletive beginning with the letter F.’” Despite her stipulations, she was admitted to the ATP and began attending classes. The student maintained that she informed her instructors that her stipulations were grounded in her Mormon faith.

When the student performed her first monologue, she omitted two instances of the word “goddamn” but still received an A for her performance. Later in the fall semester, she again sought to omit words that were offensive to her, but her instructor, Barbara Smith, advised her that she “would have to ‘get over’ her language concerns” and that she could “‘still be a good Mormon and say these words.’” Smith delivered an ultimatum that either the student perform the scene as written or receive a zero on the assignment. The instructor eventually relented, however, and the student omitted the offensive words and received a high grade

on the assignment. For the rest of the semester, the student continued to omit language that she found offensive from the scripts that she performed.

At the student's end-of-semester review, Smith and two other instructors addressed her omission of profane language from her performances. They advised her that "her request for an accommodation was 'unacceptable behavior'" and "recommended that she 'talk to some other Mormon girls who are good Mormons, who don't have a problem with this.'" The instructors then left the student with this choice: "You can choose to continue in the program if you modify your values. If you don't, you can leave." When the student appealed to the ATP coordinator, he supported the instructors' position. Soon thereafter, the student withdrew from the program (and from the university) because she believed that she would be asked to leave.

Subsequently, the student filed suit against the ATP instructors and the ATP coordinator, alleging violations of her First Amendment rights. She claimed that (1) "forcing her to say the offensive words constitutes an effort to compel her to speak in violation of the First Amendment's free speech clause," and (2) "forcing her to say the offensive words, the utterance of which she considers a sin, violates the First Amendment's free exercise clause." Although the student did not explicitly base her claims on academic freedom principles, it is clear that she considered the defendants' actions to be a restriction on her freedom to learn. The defendants, on the other hand, did rely on academic freedom principles, and claimed that "requiring students to perform offensive scripts advances the school's pedagogical interest in teaching acting . . ." (356 F.3d at 1291). In response to the defendants' academic freedom arguments, the appellate court decided to apply the "principle of judicial restraint in reviewing academic decisions" but explained that it did not "view [academic freedom] as constituting a separate right apart from the operation of the First Amendment within the university setting" (356 F.3d at 1293, n.14).<sup>4</sup>

For her free speech claim, the student relied both on the public forum doctrine (see Section 9.5.2) and on U.S. Supreme Court precedents on "compelled speech" (see *Wooley v. Maynard*, 430 U.S. 705 (1977); and *West Virginia State Board of Education v. Barnette*, 319 U.S. 624 (1943)). The appellate court considered her argument to be that the ATP classrooms were a "public forum" in which the student had a right to be free from content restrictions on her speech, and that the state defendants had compelled her to speak (that is, to recite the profane words in the scripts), which government may not do. The public forum argument could not itself carry the day for the plaintiff, according to the court, since "[n]othing in the record leads us to conclude that . . . the ATP's classrooms could reasonably be considered a traditional public forum [or a] designated public forum" (356 F.3d at 1284–85). The classrooms were therefore a "nonpublic forum" in which instructors and administrators can regulate student speech "in

---

<sup>4</sup>For more extensive judicial comment on the relationship between academic freedom principles and the First Amendment, see, for example, *Martin v. Parrish* and *Hardy v. Jefferson Community College*, Section 7.2.2 of this book; and see generally Peter Byrne, "Academic Freedom: A 'Special Concern' of the First Amendment," 99 *Yale L.J.* 251 (1989).

any reasonable manner.” Neither could the compelled speech argument necessarily carry the day for the plaintiff because students’ First Amendment rights, in the school environment, “are not automatically coextensive with the rights of adults in other settings,” especially “in the context of a school’s right to determine what to teach and how to teach it in its classrooms” (356 F.3d at 1284, quoting *Hazelwood v. Kuhlmeier* (below)). In establishing these baselines for the analysis, the appellate court, like the court in the earlier *Brown v. Li* case, relied expressly on the U.S. Supreme Court’s decision in *Hazelwood School District v. Kuhlmeier*, the elementary/secondary education case.

The *Axson-Flynn* court’s analysis did not end there, however, nor should it have. Following *Hazelwood*, the court determined that the student’s speech was “school-sponsored speech.” This is speech that a school “affirmatively promote[s]” as opposed to speech that it merely “tolerate[s]” and that may fairly be characterized as a part of the school curriculum (whether or not it occurs in a traditional classroom setting) because the speech activities are supervised by faculty members and “designed to impart particular knowledge or skills to student participants and audiences” (356 F.3d at 1286, quoting *Hazelwood* at 271). Regarding such speech, the “school may exercise editorial control ‘so long as its actions are reasonably related to legitimate pedagogical concerns’” (*Id.* at 1286, quoting *Hazelwood* at 273). Under this standard, the school’s restriction of student speech need not be “necessary to the achievement of its [pedagogical] goals,” or “the most effective means” or “the most reasonable” means for fulfilling its goals; it need only be a reasonable means (or one among a range of reasonable means) for accomplishing a pedagogical objective.

In determining whether the defendants’ compulsion of the student’s classroom speech was “reasonably related to legitimate pedagogical concerns,” the court gave “substantial deference to [the defendants’] stated pedagogical concern” (356 F.3d at 1290) and declined to “second-guess the pedagogical wisdom or efficacy of [their] goal.” In extending this deference, the court noted the generally accepted propositions that “schools must be empowered at times to restrict the speech of their students for pedagogical purposes” and that “schools also routinely require students to express a viewpoint that is not their own in order to teach the students to think critically.” As support for these propositions, the court cited *Brown v. Li* (above) and the example from that case (quoted above).

The *Axson-Flynn* court emphasized, however, that the judicial deference accorded to educators’ pedagogical choices is not limitless. In particular, courts may and must inquire “whether the educational goal or pedagogical concern was *pretextual*” (emphasis added). The court may “override an educator’s judgment where the proffered goal or methodology was a sham pretext for an impermissible ulterior motive” (356 F.3d at 1292).<sup>5</sup> Thus courts will not interfere

---

<sup>5</sup>The court in *Brown v. Li*, above, also made a brief reference to the problem of pretext, suggesting that it too would engraft a “no-pretext” requirement onto the basic *Hazelwood* analysis. Specifically, the court left open the possibility that a student might have a claim if the reasons for the rejection of the thesis were not “pedagogical”—as, for instance, if the committee had rejected the thesis because its members were offended by the opinions or ideas expressed in the “Disacknowledgments” section (*Brown v. Li*, 308 F.3d at 953–54).

“[s]o long as the teacher limits speech or grades speech in the classroom in the name of learning,” but they may intervene when the limitation on speech is “a pretext for punishing the student for her race, gender, economic class, religion or political persuasion” (356 F.3d at 1287, quoting *Settle v. Dickson County School Bd.*, 53 F.3d 152, 155–56 (6th Cir. 1995)). Using these principles, the student argued that her instructors’ insistence that she speak the words of the script exactly as written was motivated by an “anti-Mormon sentiment” and that their pedagogical justification for their action was merely a pretext. The court was sympathetic to this argument, pointing to the instructors’ statements that the student should speak to other “good Mormon” girls who would not omit words from the script, and indicating that these statements “raise[ ] concern that hostility to her faith rather than a pedagogical interest in her growth as an actress was at stake in Defendants’ behavior.” The appellate court therefore remanded the case to the district court for further examination of the pretext issue.

On the student’s second claim, based on the free exercise of religion, the appellate court framed the issue as whether adherence to the script was a “neutral rule of general applicability” and therefore would not raise “free exercise concerns,” or a “rule that is discriminatorily motivated and applied” and therefore would raise free exercise concerns (see generally Section 1.6.2 of this book). The possibility of pretext based on anti-Mormon sentiment, which the court relied on in remanding the free speech claim, also led it to remand the free exercise issue to the district court for a determination of “whether the script adherence requirement was discriminatorily applied” to the student based on her religion.

Alternatively, regarding free exercise, the student argued and the court considered whether the ATP had a system of “individual exemptions” from the script adherence requirement. In circumstances “in which individualized exemptions from a general requirement are available, the government may not refuse to extend that system to cases of religious hardship without compelling reason” (356 F.3d at 1297, quoting *Employment Division v. Smith*, 494 U.S. 872, 884 (1990)). If the ATP instructors or the coordinator could make exceptions to class assignment requirements “on a case-by-case basis” by examining the “specific, personal circumstances” of individual students, said the court, this would be “a system of individualized exemptions.” If ATP personnel furthermore granted exemptions for nonreligious but not for religious hardships, or discriminated among religions in granting or refusing exceptions, substantial free exercise issues would arise even if the class assignment requirements themselves were neutral and nondiscriminatory as to religion. Since there was evidence that one other ATP student, a Jewish student, had received an exception due to a religious holiday, and there was no other clarifying information in the record concerning individualized exemptions, the appellate court remanded the case for further proceedings on this issue as well.<sup>6</sup>

---

<sup>6</sup>The district court did not get the opportunity to develop the issues that the court of appeals had framed in this unusual case. After the appellate court’s decision, the parties settled the case. As part of the settlement, the university agreed to implement a policy on religious accommodations for students. See Elizabeth Neff, “Script v. Scripture: U. Settles Case Over Student’s Rights on Stage,” *Salt Lake Tribune*, July 7, 2004.

The *Axson-Flynn* case therefore provides no definitive dispositions of the various issues raised, but it does provide an extended and instructive look at a contemporary “freedom to learn” problem. The court’s analysis, once parsed as suggested above, contains numerous legal guidelines regarding the freedom to learn. These guidelines, combined with the more general guidelines found in the *Brown v. Li* case (above), will provide substantial assistance for administrators and counsel, and for future courts.

In addition to the judicial developments in *Brown v. Li* and *Axson-Flynn v. Johnson*, and *Rosenberger* and *Southworth* before them, there have been various other developments in academia that have reflected or stimulated greater emphasis on student academic freedom and what it entails. One major example is the concern about “hostile (learning) environments” (see Section 9.3.4). Most of the cases thus far have been brought by faculty members asserting violations of their own academic freedom.<sup>7</sup> These cases have made clear that, although faculty members’ academic freedom may be “paramount in the academic setting,” the faculty members’ rights “are not absolute to the point of compromising a student’s right to learn in a hostile-free environment” (*Bonnell v. Lorenzo*, 241 F.3d 800, 823–24 (6th Cir. 2001)). Thus the faculty cases have had an important impact on the academic freedom of students, and students have had an increasingly important stake in the disputes between faculty members and their institutions. Indeed, students have lodged some of the complaints that have precipitated such disputes. (See, for example, the *Cohen* case, the *Silva* case, the *Bonnell* case, and the *Hardy* case in Section 7.2.2.) A faculty member’s actions may have hindered the students’ freedom to learn, for instance, by demeaning certain groups of students, ridiculing certain students’ answers, or using the classroom to indoctrinate or proselytize. If the faculty member prevails in such a dispute, student academic freedom may be diminished, and if the institution prevails it may be enhanced (see, for example, the *Bonnell* case and the *Bishop* case in Section 7.2.2). Or a faculty member may have used methods or materials that intrude upon other student interests in learning—for example, their interests in fair grading practices or in freedom from harassment. If the faculty member prevails, such student interests may receive less protection, and if the institution prevails they may receive more (see, for example, the *Bonnell* case in Section 7.2.2). Conversely, a faculty member may have acted in a way that guarded the students’ freedom to learn or promoted related student interests; if the faculty member prevails in this situation, the students win too, and if the institution prevails they lose (see, for example, the *Hardy* case in Section 7.2.2). Such faculty cases thus have the potential to focus attention on student academic freedom and to influence the protection of student academic freedom through judicial acceptance or rejection of particular claims of faculty members.

---

<sup>7</sup>The leading exceptions are *Hayut v. State University of New York*, discussed in Section 9.3.4, which was brought by a student against the institution and a classroom instructor; and *Kelly v. Yale University*, 2003 WL 1563424 (D. Conn.), discussed in subsection 8.1.5 below, which was brought by a student at the Yale Divinity School who claimed that she was sexually assaulted by another student.

Another contemporary development implicating the freedom to learn is the continuing concern about “speech codes” and their effects on students (see Section 9.6), along with related concerns about the “political correctness” phenomenon on campus (see, for example, P. Berman (ed.), *Debating P.C.: The Controversy over Political Correctness on College Campuses* (Dell, 1992)). Required readings and exercises for student orientation programs have also raised concerns (see, for example, Erin O’Connor, “Misreading What Reading Is For,” *Chron. Higher Educ.*, September 5, 2003),<sup>8</sup> as have diversity training programs for students (see, for example, Gary Pavela, “Thinking About the UVA ‘Diversity Exercise,’” *Synfax Weekly Report*, September 23, 2003, 3179). In addition, there have been various claims (from within and outside the campus) about politicization and liberal bias in faculty hiring, selection of outside speakers for campus events, development of curriculum, selection of course materials, and the teaching methods, classroom remarks, and grading practices of instructors. (See Sara Hebel, “Patrolling Professors’ Politics,” *Chron. Higher Educ.*, February 13, 2004, A18.)

In the first years of the twenty-first century, such allegations and concerns led interested parties to draft and sponsor an “Academic Bill of Rights” for consideration by colleges and universities, and state boards and legislatures. The text of the Academic Bill of Rights (ABOR), commentary on the document, information on the author (David Horowitz), and background information on the matters addressed in the document can all be found on the Web site of Students for Academic Freedom, a primary sponsor of ABOR (<http://www.studentsforacademicfreedom.org>). For information on this organization, see Sara Hebel, “Students for Academic Freedom: A New Campus Movement,” *Chron. Higher Educ.*, February 9, 2004, A18.

Bills or resolutions supporting ABOR principles have been introduced in a number of state legislatures, including those of California, Colorado, Florida, Georgia, Indiana, Ohio, and Pennsylvania. Two resolutions have been adopted, one in Georgia and one in Pennsylvania. (See, for example, General Assembly of Pennsylvania, House Resolution No. 177, Session of 2005, which establishes a “select committee” to investigate “academic freedom and intellectual diversity” in Pennsylvania state colleges and universities and community colleges.) A resolution supporting ABOR was also introduced in Congress (House Congressional Resolution 318, October 2003), and a similar provision was added to a House bill (H.R. 4283, May 2004). Legislative developments concerning ABOR are tracked on the Students for Academic Freedom Web site, above.

---

<sup>8</sup>At least one controversy regarding a student orientation reading assignment has resulted in litigation. In *Yacovelli v. Moeser*, Case No. 02-CV-596 (M.D.N.C. 2002), *affirmed*, Case No. 02-1889 (4th Cir. 2002), a case concerning the University of North Carolina/Chapel Hill, both the U.S. district court and the U.S. Court of Appeals rejected an establishment clause challenge to the reading program brought by various students and state taxpayers. The case is discussed in Donna Euben, “Curriculum Matters,” *Academe*, November–December 2002, 86. In a later ruling, 324 F. Supp. 2d 760 (2004), the district court also rejected the plaintiffs’ free exercise clause challenge to the reading program. The case is discussed in Section 7.1.5 of this book.

Higher education associations and commentators in and out of academia have also vigorously debated the Academic Bill of Rights and its underlying ideas. The debate has focused on the empirical basis for some of the expressed concerns, the nature and extent of the problems that such concerns may present, the extent to which student academic freedom (or faculty academic freedom) may be endangered by the alleged developments addressed by ABOR, and the extent to which ABOR and other suggested solutions for the perceived problems may themselves endanger student, faculty, or “institutional” academic freedom. (See, for example, AAUP, “For the Record: Academic Bill of Rights,” in *Academe*, January–February 2004, 79–81); David Horowitz, “In Defense of Intellectual Diversity,” *Chron. Higher Educ.*, February 13, 2004, B12; and Stanley Fish, “Intellectual Diversity: The Trojan Horse of a Dark Design,” *Chron. Higher Educ.*, February 13, 2004, B13.) Subsequently, in June 2005, the American Council on Education and other higher educational organizations released a statement titled “Academic Rights and Responsibilities” that served as a response to much of the debate surrounding the Academic Bill of Rights (see Sara Hebel, “Higher Education Groups Issue Statement on Academic Rights and Intellectual Diversity on Campuses,” *Chron. Higher Educ.*, July 1, 2005, A16). The statement, containing “five central or overarching principles” concerning “intellectual pluralism and academic freedom” on campus, is available at <http://www.acenet.edu>, under News Room/Press Releases.

This continuing debate on the Academic Bill of Rights and intellectual diversity, and the legislative developments and lobbying efforts that fuel the debate, are serving to raise new policy and legal issues concerning the customary and legal protections that academic freedom affords students as well as faculty. (For related discussion of faculty academic freedom, see Sections 7.1.5 and 7.2 through 7.4 of this book.) In addition, the legislative and lobbying developments regarding ABOR are raising new issues concerning so-called institutional academic freedom. (For further discussion of the latter, see Section 7.1.6 of this book.)

**8.1.5. Students' legal relationships with other students.** Students have a legal relationship not only with the institution, as discussed in many Sections of this book, but also with other students, with faculty members, and with staff members. These legal relationships are framed both by external law (see Section 1.4.2), especially tort law and criminal law (which impose duties on all individuals in their relationships with other individuals), and by the internal law of the campus (see Section 1.4.3). For students' peer relationships, the most pertinent internal law is likely to be found in student conduct codes, housing rules, and rules regarding student organizations. Since such rules are created and enforced by and in the name of the institution, colleges and universities (as legal entities) are also typically implicated in student-student relationships, and in the resolution of disputes between and among students. In addition, institutions may become implicated in student-student relationships because aggrieved students may sometimes claim that their institution is liable for particular acts of other students. Although students generally do not act as

agents of their institutions in their relationships with other students (see generally Sections 2.1.3 & 3.2.3), there are nevertheless various circumstances in which institutions may become liable for acts of students that injure other students.

In *Foster v. Board of Trustees of Butler County Community College*, 771 F. Supp. 1122 (D. Kan. 1991), for example, the institution was held liable for the acts of a student whom the court considered to be a “gratuitous employee” of the institution. In *Morse v. Regents of the University of Colorado*, 154 F.3d 1124 (10th Cir. 1998), the court ruled that the institution would be responsible, under Title IX (see Section 13.5.3 of this book), for the acts of a Reserve Officer Training Corps (ROTC) cadet who allegedly sexually harassed another cadet if the first cadet was “acting with authority bestowed by” the university’s ROTC program. And in *Brueckner v. Norwich University*, 730 A.2d 1086 (Vt. 1999), the institution was held liable for certain hazing actions of its upper-class cadets because the university had authorized the cadets to orient and indoctrinate the first-year students and was thus vicariously liable for the damage the cadets caused by hazing even though written university policy forbade hazing activity.

Students themselves can also become liable for harm caused to other students. In some of the fraternity hazing cases, for instance, fraternity members have been held negligent and thus liable for harm to fraternity pledges (see Section 10.2.4). In defamation cases, students—especially student newspaper editors—could become liable for defamation of other students. *Mazart v. State* (discussed in Sections 3.3.1 & 10.3.6) illustrates the type of dispute that could give rise to such liability. In other cases, relationships between students may occasion criminal liability. In *State v. Allen*, 905 S.W.2d 874 (Mo. 1995), for example, a student was prosecuted for hazing activities resulting in the death of a fraternity pledge, and the highest court of Missouri upheld the constitutionality of the state’s anti-hazing criminal statute. Another possibility for student liability could arise under Section 1983, which creates individual liability for violation of persons’ constitutional rights (see Section 4.7.4 of this book). This possibility is more theoretical than practical, however, since students, unlike faculty members, usually do not act under “color of law” or engage themselves in state action, as Section 1983 requires. (See *Mentavlos v. Anderson*, 249 F.3d 301 (4th Cir. 2001) (students), and compare *Hayut v. State Univ. of New York*, 352 F.3d 733, 743–45 (2d. Cir. 2003) (faculty members), both discussed in Section 1.5.2.)

One of the most serious contemporary problems concerning student relationships is the problem of peer harassment, that is, one student’s (or a group of students’) harassment of another student (or group of students). The harassment may be on grounds of race, national origin, ethnicity, sex, sexual orientation, religion, disability, or other factors that happen to catch the attention of students at particular times on particular campuses. Such behavior may create disciplinary problems that result in student code of conduct proceedings; and more generally it may compromise the sense of community to which most institutions aspire. (See generally *Peer Harassment: Hassles for Women on Campus* (Center for Women’s Policy Studies, 1992); Thomas Mayes,

“Confronting Same-Sex, Student-to-Student Sexual Harassment: Recommendations for Educators and Policy Makers,” 29 *Fordham Urban L.J.* 641 (2001).)

In addition, peer harassment may sometimes result in legal liabilities: the harasser may become liable to the victim of the harassment, or the institution may become liable to the victim. Tort law—for instance, assault, battery, and intentional infliction of emotional distress—usually forms the basis for such liability. In more severe cases, the student perpetrator may also become subject to criminal liability—for instance, under a stalking law, a sexual assault law, a rape law, a hate crime law, or a criminal anti-hazing law. Some laws, especially federal and state civil rights laws, may also make the institution liable to the student victim in some circumstances in which the institution has supported, condoned, or ignored the harassment. Under the federal Title VI statute (see Section 13.5.2), for example, the Tenth Circuit held that a victim of peer racial harassment has a private cause of action against the school if the school “intentionally allowed and nurtured a racially hostile educational environment” by being deliberately indifferent to incidents of peer harassment of which it was aware (*Bryant v. Independent School District No. 1-38 of Gavin County*, 334 F.3d 928 (10th Cir. 2003)). And under the federal Title IX statute (see Section 13.5.3 of this book), another court held that a peer harassment victim had a cause of action against the institution where she was raped by another student if she remained “vulnerable” to possible future harassment by the perpetrator due to the institution’s unwillingness to provide “academic and residential accommodations” pending the perpetrator’s disciplinary hearing (*Kelly v. Yale University*, 2003 WL 1563424, 2003 U.S. Dist. LEXIS 4543 (D. Conn. 2003)).

The rest of this subsection focuses on peer sexual harassment under Title IX, the statute under which most of the litigation regarding peer harassment has occurred. This material should be read in conjunction with the material in Section 9.3.4 on faculty harassment of students. The definitions, examples, legal standards, and types of challenges addressed in that Section apply, for the most part, to peer harassment as well. As Section 9.3.4 indicates, *Franklin v. Gwinnett County Public Schools*, 503 U.S. 60 (1992), was the U.S. Supreme Court’s first look at student sexual harassment claims under Title IX. But since *Franklin* concerned a faculty member’s harassment of a student, it did not address or resolve issues concerning peer sexual harassment or an educational institution’s liability to victims of such harassment. These questions were extensively discussed in the lower courts after *Franklin*, however; and as with questions about an institution’s liability for faculty harassment, the courts took varying approaches to the problem, ranging from no liability at all (see *Davis v. Monroe County Board of Education*, 120 F.3d 1390 (11th Cir. 1997) (*en banc*)) to liability whenever the institution “knew or should have known” of the harassment (see *Doe v. Petaluma City School District*, 949 F. Supp. 1415 (N.D. Cal. 1996)). The U.S. Department of Education (ED) also addressed peer harassment and related liability issues in its document, *Sexual Harassment Guidance: Harassment of Students by School Employees, Other Students, or Third Parties*, 62 Fed. Reg. 12034 (March 13, 1997). Regarding peer sexual harassment, this Guidance stated that an institution would be liable under Title IX for a student’s sexual

harassment of another student if: “(i) a hostile environment exists in the school’s programs or activities, (ii) the school knows or should have known of the harassment, and (iii) the school fails to take immediate and appropriate corrective action” (62 Fed. Reg. at 12039). The Guidance also addressed how a school or college may avoid Title IX liability for peer harassment:

[I]f, upon notice of hostile environment harassment, a school takes immediate and appropriate steps to remedy the hostile environment, the school has avoided violating Title IX. . . . Title IX does not make a school responsible for the actions of harassing students, but rather for its own discrimination in failing to remedy it once the school has notice [62 Fed. Reg. at 12039–40].

In *Gebser v. Lago Vista Independent School District*, 524 U.S. 274 (1998), in a hotly contested 5-to-4 decision, the U.S. Supreme Court established an “actual knowledge” and “deliberate indifference” standard of liability for faculty harassment of a student. (For further discussion of this case, see Section 9.3.4.) It was not clear whether this standard would also apply to an institution’s liability for peer harassment. One year later, in *Davis v. Monroe County Board of Education*, 526 U.S. 629 (1999), the Court relieved the uncertainty. In another 5-to-4 decision, the Court majority held that an educational institution’s Title IX damages liability for peer harassment is based upon the same standard that the Court had established in *Gebser* to govern liability for faculty harassment:

We consider here whether the misconduct identified in *Gebser*—deliberate indifference to known acts of harassment—amounts to an intentional violation of Title IX, capable of supporting a private damages action, when the harasser is a student rather than a teacher. We conclude that, in certain limited circumstances, it does [526 U.S. at 643].

The Court took considerable pains to develop the “limited circumstances” that must exist before a school will be liable for peer sexual harassment. First, the school must have “substantial control over both the harasser and the context in which the known harassment occurs” (526 U.S. at 645). Second, the sexual harassment must be “severe, pervasive, and objectively offensive”:

[A] plaintiff must establish sexual harassment of students that is so severe, pervasive, and objectively offensive, and that so undermines and detracts from the victims’ educational experience, that the victim-students are effectively denied equal access to an institution’s resources and opportunities. Cf. *Meritor Savings Bank, FSB v. Vinson*, 477 U.S. at 57, 67 (1986).

\* \* \* \*

Moreover, the [Title IX requirement] that the discrimination occur “under any education program or activity” suggests that the behavior be serious enough to have the systemic effect of denying the victim equal access to an educational program or activity. Although, in theory, a single instance of sufficiently severe

one-on-one peer harassment could be said to have such an effect, we think it unlikely that Congress would have thought such behavior sufficient to rise to this level in light of the inevitability of student misconduct and the amount of litigation that would be invited by entertaining claims of official indifference to a single instance of one-on-one peer harassment. By limiting private damages actions to cases having a systemic effect on educational programs or activities, we reconcile the general principle that Title IX prohibits official indifference to known peer sexual harassment with the practical realities of responding to student behavior, realities that Congress could not have meant to be ignored [526 U.S. at 651, 652–53].

Speaking for the four dissenters, Justice Kennedy issued a sharply worded and lengthy dissent. In somewhat overblown language, he asserted:

I can conceive of few interventions more intrusive upon the delicate and vital relations between teacher and student, between student and student, and between the State and its citizens than the one the Court creates today by its own hand. Trusted principles of federalism are superseded by a more contemporary imperative. . . .

Today's decision mandates to teachers instructing and supervising their students the dubious assistance of federal court plaintiffs and their lawyers and makes the federal courts the final arbiters of school policy and of almost every disagreement between students. [526 U.S. at 685, 686 (Kennedy, J., dissenting)].

By highlighting the “limiting circumstances” that confine a school’s liability, and adding them to those already articulated in *Gebser*, the Court in *Davis* appears to create a four-part standard for determining when an educational institution would be liable in damages for peer sexual harassment. The four elements are:

1. The institution must have “actual knowledge” of the harassment;
2. The institution must have responded (or failed to respond) to the harassment with “deliberate indifference,” which the *Davis* Court defines as a response that is “clearly unreasonable in light of the known circumstances” (526 U.S. at 648);
3. The institution must have had “substantial control” over the student harasser and the context of the harassment; and
4. The harassment must have been “severe, pervasive, and objectively offensive” to an extent that the victim of the harassment was in effect deprived of educational opportunities or services.

The Court in *Davis* did not address the question of who within the institution must have received notice of the harassment or whether this individual must have authority to initiate corrective action—both factors emphasized in *Gebser*. Presumably, however, these factors would transfer over from *Gebser* to the peer harassment context and become part of the actual knowledge element—the first part of the four-part *Davis* standard.

The *Davis* standard of liability, therefore, is based upon but is not identical to the *Gebser* standard. The Court has added additional considerations into the *Davis* analysis that tend to make it even more difficult for a victim to establish a claim of peer harassment than to establish a claim of faculty harassment. As the Court noted near the end of its opinion in *Davis*:

The fact that it was a teacher who engaged in harassment in . . . *Gebser* is relevant. The relationship between the harasser and the victim necessarily affects the extent to which the misconduct can be said to breach Title IX's guarantee of equal access to educational benefits and to have a systemic effect on a program or activity. Peer harassment, in particular, is less likely to satisfy these requirements than is teacher-student harassment [526 U.S. at 653].

The *Davis* Court's emphasis on *control* also suggests that peer harassment claims will be even more difficult to establish in higher education litigation than they are in elementary/secondary litigation. The majority opinion indicates that institutional control over the harasser and the context of the harassment is a key to liability, that the control element of the liability standard "is sufficiently flexible to account . . . for the level of disciplinary authority available to the school," and that "[a] university [would not] . . . be expected to exercise the same degree of control over its students" as would elementary schools (526 U.S. at 649). It should follow that colleges and universities, in general, have less risk of money damages liability under Title IX for peer harassment than do elementary and secondary schools because they exert less control over students and over the educational environment.

*Davis* and the lower court litigation that has followed, however, is not the last or only word for institutions regarding peer sexual harassment under Title IX. Subsequent to *Davis* (and *Gebser*), the U.S. Department of Education reconsidered and reaffirmed the Title IX guidelines on sexual harassment that it had originally promulgated in 1997. (See *Revised Sexual Harassment Guidance: Harassment of Students by School Employers, Other Students, or Third Parties*, 66 Fed. Reg. 5512 (January, 19, 2001), also available at <http://www.wd.gov/offices/OCR/archives/shguide/index.html>.) This Revised Guidance, which applies to all the department's Title IX enforcement activities involving sexual harassment, was accompanied by substantial commentary (including commentary on the case law) prepared by the department. The Guidance and commentary provide colleges and universities with a detailed blueprint for complying with their Title IX responsibilities regarding peer sexual harassment.

## **Sec. 8.2. Admissions**

**8.2.1. Basic legal requirements.** Postsecondary institutions have traditionally been accorded wide discretion in formulating admissions standards. The law's deference to institutional decision making stems from the notion that tampering with admissions criteria is tampering with the expertise of educators. In the latter part of the twentieth century, however, some doorways were

opened in the wall of deference, as dissatisfied applicants successfully pressed the courts for relief, and legislatures and administrative agencies sought to regulate certain aspects of the admissions process.

Institutions are subject to three main constraints in formulating and applying admissions policies: (1) the selection process must not be arbitrary or capricious; (2) the institution may be bound, under a contract theory, to adhere to its published admissions standards and to honor its admissions decisions; and (3) the institution may not have admissions policies that unjustifiably discriminate on the basis of characteristics such as race, sex, disability, age, residence, or citizenship. These constraints are discussed in subsections 8.2.2 to 8.2.4 below.

Although institutions are also constrained in the admissions process by the Family Education and Privacy Rights Act (FERPA) regulations on education records (Section 9.7.1), the regulations have only limited applicability to admissions records. The regulations do not apply to the records of persons who are not or have not been students at the institution; thus, admissions records are not covered until the applicant has been accepted and is in attendance at the institution (34 C.F.R. §§ 99.1(d), 99.3 (“student”). The institution may also maintain the confidentiality of letters of recommendation if the student has waived the right of access; such a waiver may be sought during the application process (34 C.F.R. § 99.12). Moreover, when a student from one component unit of an institution applies for admission to another unit of the same institution, the student is treated as an applicant rather than as a student with respect to the second unit’s admissions records; those records are therefore not subject to FERPA until the student is in attendance in the second unit (34 C.F.R. § 99.5).

Students applying to public institutions may also assert constitutional claims based on the due process clause of the Fourteenth Amendment. In *Phelps v. Washburn University of Topeka*, 634 F. Supp. 556 (D. Kan. 1986), for example, the plaintiffs asserted procedural due process claims regarding a grievance process available to rejected applicants. The court ruled that the plaintiffs had no property interest in being admitted to the university, thus defeating their due process claims. And in *Martin v. Helstad*, 578 F. Supp. 1473 (W.D. Wis. 1983), the plaintiff sued a law school that had revoked its acceptance of his application when it learned that he had neglected to include on his application that he had been convicted of a felony and incarcerated. The court held that, although the applicant was entitled to minimal procedural due process to respond to the school’s charge that he had falsified information on his application, the school had provided him sufficient due process in allowing him to explain his nondisclosure. (For a more recent example of the withdrawal of admission for an otherwise qualified applicant for failure to report a criminal offense, see Fox Butterfield, “Woman Who Killed Mother Denied Harvard Admission,” *New York Times*, April 8, 1995, p. 1.)

Falsification of information on an application may also be grounds for later discipline or expulsion. In *North v. West Virginia Board of Regents*, 332 S.E.2d 141 (W. Va. 1985), a medical student provided false information on his application concerning his grade point average, courses taken, degrees, birth date,

and marital status. The court upheld the expulsion on two theories: that the student had breached the university's disciplinary code (even though he was not a student at the time) and that the student had committed fraud.

**8.2.2. Arbitrariness.** The "arbitrariness" standard of review is the one most protective of the institution's prerogatives. The cases reflect a judicial hands-off attitude toward any admissions decision arguably based on academic qualifications. Under the arbitrariness standard, the court will overturn an institution's decision only if there is no reasonable explanation for its actions. *Lesser v. Board of Education of New York*, 239 N.Y.S.2d 776 (N.Y. App. Div. 1963), provides a classic example. Lesser sued Brooklyn College after being rejected because his grade point average was below the cut-off. He argued that the college acted arbitrarily and unreasonably in not considering that he had been enrolled in a demanding high school honors program. The court declined to overturn the judgment of the college, stating that discretionary decisions of educational institutions, particularly those related to determining the eligibility of applicants, should be left to the institutions.

The court in *Arizona Board of Regents v. Wilson*, 539 P.2d 943 (Ariz. Ct. App. 1975), expressed similar sentiments. In that case a woman was refused admission to the graduate school of art at the University of Arizona because the faculty did not consider her art work to be of sufficiently high quality. She challenged the admissions process on the basis that it was a rolling admissions system with no written guidelines. The court entered judgment in favor of the university:

This case represents a prime example of when a court should not interfere in the academic program of a university. It was incumbent upon appellee to show that her rejection was in bad faith, or arbitrary, capricious, or unreasonable. The court may not substitute its own opinions as to the merits of appellee's work for that of the members of the faculty committee who were selected to make a determination as to the quality of her work [539 P.2d at 946].

Another court, in considering whether a public university's refusal to admit a student to veterinary school involved constitutional protections, rejected arbitrariness claims based on the due process and equal protection clauses. In *Grove v. Ohio State University*, 424 F. Supp. 377 (S.D. Ohio 1976), the plaintiff, denied admission to veterinary school three times, argued that the use of a score from a personal interview introduced subjective factors into the admissions decision process that were arbitrary and capricious, thus depriving him of due process. Second, he claimed that the admission of students less well qualified than he deprived him of equal protection. And third, he claimed that a professor had told him he would be admitted if he took additional courses.

Citing *Roth* (Section 6.7.2), the court determined that the plaintiff had a liberty interest in pursuing veterinary medicine. The court then examined the admissions procedure and concluded that, despite its subjective element, it provided sufficient due process protections. The court deferred to the academic judgment of the admissions committee with regard to the weight that should be given to the interview score. The court also found no property interest, since

the plaintiff had no legitimate entitlement to a space in a class of 130 when more than 900 individuals had applied.

The court rejected the plaintiff's second and third claims as well. The plaintiff had not raised discrimination claims, but had asserted that the admission of students with lower grades was a denial of equal protection. The court stated: "This Court is reluctant to find that failure to adhere exactly to an admissions formula constitutes a denial of equal protection" (424 F. Supp. at 387), citing *Bakke* (see Section 8.2.5). Nor did the professor's statement that the plaintiff would be reconsidered for admission if he took additional courses constitute a promise to admit him once he completed the courses.

The review standards in these cases establish a formidable barrier for disappointed applicants to cross. But occasionally someone succeeds. *State ex rel. Bartlett v. Pantzer*, 489 P.2d 375 (Mont. 1971), arose after the admissions committee of the University of Montana Law School had advised an applicant that he would be accepted if he completed a course in financial accounting. He took such a course and received a D. The law school refused to admit him, claiming that a D was an "acceptable" but not a "satisfactory" grade. The student argued that it was unreasonable for the law school to inject a requirement of receiving a "satisfactory grade" after he had completed the course. The court agreed, saying that the applicant was otherwise qualified for admission and that to make a distinction between "acceptable" and "satisfactory" was an abuse of institutional discretion.

All these cases involve public institutions; whether their principles would apply to private institutions is unclear. The "arbitrary and capricious" standard apparently arises from concepts of due process and administrative law that are applicable only to public institutions. Courts may be even less receptive to arbitrariness arguments lodged against private schools, although common law may provide some relief even here. In *Levine v. George Washington University* and *Paulsen v. Golden Gate University* (Section 8.2.6), for example, common law principles protected students at private institutions against arbitrary interpretation of institutional policy.

The cases discussed in this Section demonstrate that, if the individuals and groups who make admissions decisions adhere carefully to their published (or unwritten) criteria,<sup>9</sup> give individual consideration to every applicant, and provide reasonable explanations for the criteria they use, judicial review will be deferential.

**8.2.3. The contract theory.** Students who are accepted for admission, but whose admission is reversed by the institution through no fault of the student,

---

<sup>9</sup>A case from the Alaska Supreme Court suggests that an institution may use additional admissions criteria if they are supported by an appropriate academic rationale. In *Hunt v. University of Alaska at Fairbanks*, 52 P.3d 739 (Alaska 2002), the court rejected a student's claim that requiring him to take a standardized test (which he did not pass) in addition to fulfilling all published admission requirements was arbitrary and capricious. The court disagreed, stating that, because the student could not meet the published criteria, the university had given him an additional mechanism to demonstrate that he was qualified for admission.

have met with some success in stating breach of contract claims. For example, the plaintiffs in *Eden v. Board of Trustees of the State University*, 374 N.Y.S.2d 686 (N.Y. App. Div. 1975), had been accepted for admission to a new school of podiatry being established at the State University of New York (SUNY) at Stony Brook. Shortly before the scheduled opening, the state suspended its plans for the school, citing fiscal pressures in state government. The students argued that they had a contract with SUNY entitling them to instruction in the podiatry school. The court agreed that SUNY's "acceptance of the petitioners' applications satisfies the classic requirements of a contract." Though the state could legally abrogate its contracts when necessary in the public interest to alleviate a fiscal crisis, and though "the judicial branch . . . must exercise restraint in questioning executive prerogative," the court nevertheless ordered the state to enroll the students for the ensuing academic year. The court found that a large federal grant as well as tuition money would be lost if the school did not open, that the school's personnel were already under contract and would have to be paid anyway, and that postponement of the opening therefore would not save money. Since the fiscal crisis would not be alleviated, the state's decision was deemed "arbitrary and capricious" and a breach of contract.

An Illinois appellate court ruled that a combination of oral promises, past practice, written promises, and a lack of notice about a change in admission standards constituted an implied promise to admit ten students to the Chicago Medical School. In *Brody v. Finch University of Health Sciences/Chicago Medical School*, 698 N.E.2d 257 (Ill. App. 1998), the plaintiffs had enrolled in a master's degree program in applied physiology because they had been promised, both orally and in the college's written documents, that they would be admitted to the medical school if they earned a 3.0 average or better. They had also been told that the college had followed this practice for several years. The year that the plaintiffs applied to the medical school, however, the school changed its practice of accepting all qualified graduates from the applied physiology program, and instead admitted only the top fifty. Six of the plaintiffs had received letters stating that they had been admitted, while the remaining plaintiffs had been told orally that they would be admitted. But the plaintiffs were not admitted and were not advised of this until shortly before the program was to begin. Some of the plaintiffs had resigned from their jobs and moved to Chicago; many had signed housing leases; and several had given up opportunities for study at other medical colleges.

The trial court ruled that the combination of the written statements, the oral promises, and the college's past practice created an implied contract, and that the college's determination two weeks prior to the beginning of the program to admit only fifty students from the applied physiology program was arbitrary and capricious. The college had made no effort to contact the students who were not admitted, and they had reasonably relied on the representations of college employees, written documents from previous years, and the college's past practice of admitting all applicants with a 3.0 or better grade point average. The appellate court affirmed, endorsing the trial court's analysis. (The applicants' state law consumer fraud cause of action had been rejected by the trial court

because they had not addressed consumer protection issues in their complaint; the appellate court affirmed on this claim as well.)

But students relying on alleged promises by a faculty member that their admission is assured have been less successful. In *Keles v. Yale University*, 889 F. Supp. 729 (S.D.N.Y. 1995), *affirmed without opinion*, 101 F.3d 108 (2d Cir. 1996), the plaintiff sought admission to the graduate program in mechanical engineering at Yale University. He was rejected twice. He then contacted a professor in the department, seeking his assistance. The professor agreed to give the plaintiff a position as a research assistant and, “if things worked out,” to write a letter of support for his third attempt to be admitted to the program. At the time of this agreement, the professor advised the student, who had been admitted to a graduate program at another university, to accept that offer rather than to take his chances on an uncertain outcome at Yale.

The plaintiff worked as a research assistant for the professor, who became dissatisfied with the plaintiff’s work and refused to write the letter of support. He did, however, continue the plaintiff’s appointment as a research assistant and paid the tuition for a course the plaintiff enrolled in, although he again recommended that the plaintiff seek admission to programs at other institutions. In the interim, the plaintiff applied to the Yale program and was rejected two more times. He filed claims for breach of contract and fraudulent inducement, claiming that the promises made by the professor were an oral contract promising to admit him to the graduate program.

The court noted that the professor had twice recommended that the plaintiff apply to other graduate programs and ruled that the breach of contract claims were clearly refuted by documentary evidence. Given the clarity of the professor’s written agreements with the plaintiff, the court ruled that it was unreasonable for the plaintiff to believe that he had been admitted to the program. Determining that the professor and other Yale representatives had acted reasonably, the court rejected the plaintiff’s claim that their actions had been arbitrary or in bad faith. The court granted summary judgment on all but one of the claims, and dismissed the remaining claim because the damages sought were less than \$50,000, which is the jurisdictional threshold for diversity jurisdiction. The court also sanctioned the plaintiff’s attorney for bringing frivolous claims. The appellate court affirmed without comment.

Despite the positive outcome for the university, this case serves as a warning to faculty and administrators concerning offers of assistance with admission, or representations about admission, that are made to students or potential students. It is important that admissions materials and student catalogs make clear who has the authority to admit students to a program, and the criteria that will be used to make admissions decisions. Offers to write letters of support or provide other assistance with admission should be carefully stated and limited as the Yale professor did. The temporary nature of an employment relationship with a potential student, such as the plaintiff in this case, should be made clear in a letter or similar document that specifies the terms of the individual’s appointment; and in states where oral promises are contractually binding, faculty and administrators should specify that the written agreement is the entire

agreement between the parties. A statement in the college catalog or other official policy document that offers of admission are only official when made in writing by the institution will help prevent claims by disappointed applicants that oral representations by faculty or staff should be binding on the institution.

Thus, the contract theory clearly applies to both public and private schools, although, as *Eden* suggests, public institutions may have defenses not available to private schools. While the contract theory does not require administrators to adopt or to forgo any particular admissions standard, it does require that administrators honor their acceptance decisions once made and honor their published policies in deciding whom to accept and to reject. Administrators should thus carefully review their published admissions policies and any new policies to be published. The institution may wish to omit standards and criteria from its policies in order to avoid being pinned down under the contract theory. Conversely, the institution may decide that full disclosure is the best policy. In either case, administrators should make sure that published admissions policies state only what the institution is willing to abide by. If the institution needs to reserve the right to depart from or supplement its published policies, such reservation should be clearly inserted, with counsel's assistance, into all such policies.

#### **8.2.4. The principle of nondiscrimination**

**8.2.4.1. Race.** It is clear under the Fourteenth Amendment's equal protection clause that, in the absence of a "compelling state interest" (see Section 8.2.5), no public institution may discriminate in admissions on the basis of race. The leading case is *Brown v. Board of Education*, 347 U.S. 483 (1954), which, although it concerned elementary and secondary schools, clearly applies to post-secondary education as well. The Supreme Court affirmed its relevance to higher education in *Florida ex rel. Hawkins v. Board of Control*, 350 U.S. 413 (1956). Cases involving postsecondary education have generally considered racial segregation within a state postsecondary system rather than within a single institution, and suits have been brought under Title VI of the Civil Rights Act of 1964 as well as the Constitution. These cases are discussed in Section 13.5.2.

Although most of the racial segregation cases focus on a broad array of issues, a decision by the U.S. Supreme Court addressed admissions issues, among others. In *United States v. Fordice*, 505 U.S. 717 (1992), private plaintiffs and the U.S. Department of Justice asserted that the Mississippi public higher education system was segregated, in violation of both the U.S. Constitution and Title VI of the Civil Rights Act of 1964. Although a federal trial judge had found the state system to be in compliance with both Title VI and the Constitution, a federal appellate court and the U.S. Supreme Court disagreed. (This case is discussed in Section 13.5.2.)

Justice White, writing for a unanimous Court, found that the state's higher education system retained vestiges of its prior *de jure* segregation. With regard to admissions, Justice White cited the state's practice (initiated in 1963, just prior to Title VI's taking effect) of requiring all applicants for admission to the three flagship universities (which were predominantly white) to have a

minimum composite score of 15 on the American College Testing (ACT) Program. Testimony had demonstrated that the average ACT score for white students was 18, and the average ACT score for African American students was 7. Justice White wrote: “Without doubt, these requirements restrict the range of choices of entering students as to which institution they may attend in a way that perpetuates segregation” (505 U.S. at 734).

These admissions standards were particularly revealing of continued segregation, according to Justice White, when one considered that institutions given the same mission within the state (regional universities) had different admissions standards, depending on the race of the predominant student group. For example, predominantly white regional universities had ACT requirements of 18 or 15, compared to minimum requirements of 13 at the predominantly black universities. Because the differential admissions standards were “remnants of the dual system with a continuing discriminatory effect” (505 U.S. at 736), the state was required to articulate an educational reason for those disparities, and it had not done so.

Furthermore, the institutions looked only at ACT scores and did not consider high school grades as a mitigating factor for applicants who could not meet the minimum ACT score. The gap between the grades of African American and white applicants was narrower than the gap between their ACT scores, “suggesting that an admissions formula which included grades would increase the number of black students eligible for automatic admission to all of Mississippi’s public universities” (505 U.S. at 737). Although the state had argued that grade inflation and the lack of comparability among high schools’ course offerings and grading practices made grades an unreliable indicator, the Court dismissed that argument:

In our view, such justification is inadequate because the ACT was originally adopted for discriminatory purposes, the current requirement is traceable to that decision and seemingly continues to have segregative effects, and the State has so far failed to show that the “ACT-only” admission standard is not susceptible to elimination without eroding sound educational policy [505 U.S. at 737–38].

The use of high school grades as well as scores on standardized tests is common in higher education admissions decisions, and the state’s attempt to rely solely on ACT scores was an important element of the Court’s finding of continued segregation.

Although most challenges to allegedly discriminatory admissions requirements have come from African American students, Asian and Latino students have filed challenges as well. In *United States v. League of United Latin American Citizens*, 793 F.2d 636 (5th Cir. 1986), African American and Latino college students raised Title VI and constitutional challenges to the state’s requirement that college students pass a reading and mathematics skills test before enrolling in more than six hours of professional education courses at Texas public institutions. Passing rates on these tests were substantially lower for minority students than for white, non-Latino students.

Although the trial court had enjoined the practice, the appellate court vacated the injunction, noting that the state had validated the tests and that they were

appropriate: “The State’s duty . . . to eliminate the vestiges of past discrimination would indeed be violated were it to thrust upon minority students, both as role models and as pedagogues, teachers whose basic knowledge and skills were inferior to those required of majority race teachers” (793 F.2d at 643).

In response to the students’ equal protection claim, the court found that the state had demonstrated a compelling interest in teacher competency and that the test was a valid predictor of success in the courses. Because the students could retake the test until they passed it, their admission was only delayed, not denied. In response to the students’ liberty interest claim, the court found a valid liberty interest in pursuing a chosen profession, but also found that the state could require a reasonable examination for entry into that profession.

Latino students and civil rights groups also challenged the state’s funding for public colleges and universities located near the Mexican border, arguing that they were more poorly funded because of their high proportion of Latino students. A jury, applying the state constitution’s requirement of equal access to education, found that the state higher education system did not provide equal access to citizens in southern Texas, although it also found that state officials had not discriminated against these persons (K. Mangan, “Texas Jury Faults State on Equal Access to Top Universities,” *Chron. Higher Educ.*, November 27, 1991, A25). A state court judge later ordered the state to eliminate the funding inequities among state institutions (K. Mangan, “9 State Colleges in South Texas to Get Massive Budget Increase,” *Chron. Higher Educ.*, June 23, 1993, A23). But in *Richards v. League of United Latin American Citizens*, 868 S.W.2d 306 (Tex. 1993), the Texas Supreme Court ruled later that year that allegedly inequitable resource allocation to predominantly Hispanic public colleges did not violate students’ equal protection rights.

Asian students have challenged the admissions practices of several institutions, alleging that the institutions either have “quotas” limiting the number of Asians who may be admitted or that they exclude Asians from minority admissions programs. Complaints filed with the Education Department’s Office for Civil Rights (OCR), which enforces Title VI (see Section 13.5.2), have resulted in changes in admissions practices at both public and private colleges and universities. (For a discussion of this issue, see Note, “Assuring Equal Access of Asian Americans to Highly Selective Universities,” 90 *Yale L.J.* 659 (1989).)

In addition to the Constitution’s equal protection clause and the desegregation criteria developed under Title VI, there are two other major legal bases for attacking racial discrimination in higher education. The first is the civil rights statute called “Section 1981” (42 U.S.C. § 1981) (discussed in Section 5.2.4 of this book). A post-Civil War statute guaranteeing the freedom to contract, Section 1981 has particular significance because (like Title VI) it applies to private as well as public institutions. In the leading case of *Runyon v. McCrary*, 427 U.S. 160 (1976), the U.S. Supreme Court used Section 1981 to prohibit two private, white elementary schools from discriminating against blacks in their admissions policies. Since the Court has applied Section 1981 to discrimination against white persons as well as blacks (*McDonald v. Santa Fe Trail Transportation Co.*, 427 U.S. 273 (1976)), this statute would also apparently prohibit predominantly minority

private institutions from discriminating in admissions against white students. (For an example of a challenge to a denial of admission to graduate school brought under both Title VI and Section 1981, see *Woods v. The Wright Institute*, 1998 U.S. App. LEXIS 6012 (9th Cir., March 24, 1998) (using subjective judgments as one of several criteria for admissions is not racially discriminatory).)

Section 1981 was used in a successful challenge to the racially exclusive policy of the Kamehameha Schools in Hawaii. The schools had been established under the will of Princess Bernice Pauahi Bishop, the last direct descendant of King Kamehameha I. Her will directed that private, nonsectarian schools be established, and three such schools now exist, none of which receives federal funds. Although the will did not direct that applicants of Hawaiian descent be preferred, the trustees of the trust created by her will directed that native Hawaiians be preferred, which meant that, unless there were space available, only individuals of Hawaiian descent would be admitted to the schools. In *Doe v. Kamehameha Schools*, 416 F.3d 1025 (9th Cir. 2005), a white student challenged the admissions policy of the schools under Section 1981, suing the schools, the estate, and the trustees. Using the burden-shifting theory of the *McDonnell-Douglas* case (discussed in Section 5.2.1), the court ruled that the schools' policy acted as an absolute bar to admission on the basis of race, and thus violated Section 1981. Because the will had not specified racial criteria for admissions, the court upheld the lower court's award of summary judgment for the estate and the trustees.

Another mechanism for attacking race discrimination in admissions is federal income tax law. In Revenue Ruling 71-447, 1971-2 C.B. 230 (*Cumulative Bulletin*, an annual multivolume compilation of various tax documents published by the Internal Revenue Service (IRS)), the IRS revised its former policy and ruled that schools practicing racial discrimination were violating public policy and should be denied tax-exempt status. Other IRS rulings enlarged on this basic rule. Revenue Procedure 72-54, 1972-2 C.B. 834, requires schools to publicize their nondiscrimination policies. Revenue Procedure 75-50, 1975-2 C.B. 587, requires that a school carry the burden of "show[ing] affirmatively . . . that it has adopted a racially nondiscriminatory policy as to students" and also establishes record-keeping and other guidelines through which a school can demonstrate its compliance. And Revenue Ruling 75-231, 1975-1 C.B. 158, furnishes a series of hypothetical cases to illustrate when a church-affiliated school would be considered to be discriminating and in danger of losing tax-exempt status. The U.S. Supreme Court upheld the basic policy of Revenue Ruling 71-447 in *Bob Jones University v. United States*, 461 U.S. 574 (1983), discussed in Section 13.3.2, footnote 38 of this book.<sup>10</sup> A private institution must certify that it has adopted and is following a policy of nondiscrimination in order for contributions to that institution to be tax deductible. However, the Internal Revenue Service has exempted organizations that provide instruction in a skilled trade to American Indians from the nondiscrimination requirement, ruling that limiting

---

<sup>10</sup>Cases and materials are collected in Jean F. Rydstrom, Annot., "Allowability of Federal Tax Benefits to a Private, Racially Segregated School or College," 7 A.L.R. Fed. 548.

access to the training to American Indians was not the type of discrimination that federal law intended to prevent (Revenue Ruling 77-272, 1977-2 CB 191).

The combined impact of these various legal sources—the equal protection clause, Title VI, Section 1981, and IRS tax rulings—is clear: neither public nor private postsecondary institutions may maintain admissions policies (with a possible exception for affirmative action policies, as discussed in Section 8.2.5) that discriminate against students on the basis of race, nor may states maintain plans or practices that perpetuate racial segregation in a statewide system of postsecondary education.

**8.2.4.2. Sex.** Title IX of the Education Amendments of 1972 (20 U.S.C. § 1681 *et seq.*) (see Section 13.5.3 of this book) is the primary law governing sex discrimination in admissions policies. While Title IX and its implementing regulations, 34 C.F.R. Part 106, apply nondiscrimination principles to both public and private institutions receiving federal funds, there are special exemptions concerning admissions. For the purposes of applying these admissions exemptions, each “administratively separate unit” of an institution is considered a separate institution (34 C.F.R. § 106.15(b)). An “administratively separate unit” is “a school, department, or college . . . admission to which is independent of admission to any other component of such institution” (34 C.F.R. § 106.2(p)). Private undergraduate institutions are not prohibited from discriminating in admissions on the basis of sex (20 U.S.C. § 1681(a)(1); 34 C.F.R. § 106.15(d)). Nor are public undergraduate institutions that have always been single-sex institutions (20 U.S.C. § 1681(a)(5); 34 C.F.R. § 106.15(e)); but compare the *Hogan* case, discussed later in this Section). In addition, religious institutions, including all or any of their administratively separate units, may be exempted from nondiscrimination. The remaining institutions, which are prohibited from discriminating in admissions, are (1) graduate schools; (2) professional schools, unless they are part of an undergraduate institution exempted from Title IX’s admissions requirements (see 34 C.F.R. § 106.2(n)); (3) vocational schools, unless they are part of an undergraduate institution exempted from Title IX’s admissions requirements (see 34 C.F.R. § 106.2(o)); and (4) public undergraduate institutions that are not, or have not always been, single-sex schools.<sup>11</sup>

Institutions subject to Title IX admissions requirements are prohibited from treating persons differently on the basis of sex in any phase of admissions and recruitment (34 C.F.R. §§ 106.21–106.23). Specifically, Section 106.21(b) of the regulations provides that a covered institution, in its admissions process, shall not

- (i) Give preference to one person over another on the basis of sex, by ranking applicants separately on such basis, or otherwise;

---

<sup>11</sup>The admissions exemption for private undergraduate institutions in the regulations may be broader than that authorized by the Title IX statute. For an argument that “administratively separate” professional and vocational components of private undergraduate institutions should not be exempt and that private undergraduate schools that are primarily professional and vocational in character should not be exempt, see W. Kaplin & M. McGillicuddy, “Scope of Exemption for Private Undergraduate Institutions from Admissions Requirements of Title IX,” memorandum printed in 121 *Cong. Rec.* 1091 (94th Cong., 1st Sess., 1975).

- (ii) Apply numerical limitations upon the number or proportion of persons of either sex who may be admitted; or
- (iii) Otherwise treat one individual differently from another on the basis of sex.

Section 106.21(c) prohibits covered institutions from treating the sexes differently in regard to “actual or potential parental, family, or marital status”; from discriminating against applicants because of pregnancy or conditions relating to childbirth; and from making preadmission inquiries concerning marital status. Sections 106.22 and 106.23(b) prohibit institutions from favoring single-sex or predominantly single-sex schools in their admissions or recruitment practices if such practices have “the effect of discriminating on the basis of sex.”

Institutions that are exempt from Title IX admissions requirements are not necessarily free to discriminate at will on the basis of sex. Some will be caught in the net of other statutes or of constitutional equal protection principles. A state statute such as the Massachusetts statute prohibiting sex discrimination in vocational training institutions may catch other exempted undergraduate programs (Mass. Gen. Laws Ann. ch. 151C, § 2A(a)). More important, the Fourteenth Amendment’s equal protection clause places restrictions on public undergraduate schools even if they are single-sex schools exempt from Title IX.

After a period of uncertainty concerning the extent to which equal protection principles would restrict a public institution’s admissions policies, the U.S. Supreme Court considered the question in *Mississippi University for Women v. Hogan*, 458 U.S. 718 (1982). In this case, the plaintiff challenged an admissions policy that excluded males from a professional nursing school. Ignoring the dissenting Justices’ protestations that Mississippi provided baccalaureate nursing programs at other state coeducational institutions, the majority of five struck down the institution’s policy as unconstitutional sex discrimination. In the process, the Court developed an important synthesis of constitutional principles applicable to sex discrimination claims. These principles would apply not only to admissions but also to all other aspects of a public institution’s operations:

Because the challenged policy expressly discriminates among applicants on the basis of gender, it is subject to scrutiny under the equal protection clause of the Fourteenth Amendment. . . . That this statute discriminates against males rather than against females does not exempt it from scrutiny or reduce the standard of review. . . . Our decisions also establish that the party seeking to uphold a statute that classifies individuals on the basis of their gender must carry the burden of showing an “exceedingly persuasive justification” for the classification. . . . The burden is met only by showing at least that the classification serves “important governmental objectives and that the discriminatory means employed” are “substantially related to the achievement of those objectives” [citations omitted].

Although the test for determining the validity of a gender-based classification is straightforward, it must be applied free of fixed notions concerning the roles and abilities of males and females. Care must be taken in ascertaining whether the statutory objective itself reflects archaic and stereotypic notions. Thus, if the statutory objective is to exclude or “protect” members of one gender because

they are presumed to suffer from an inherent handicap or to be innately inferior, the objective itself is illegitimate. . . .

If the state's objective is legitimate and important, we next determine whether the requisite direct, substantial relationship between objective and means is present. The purpose of requiring that close relationship is to assure that the validity of a classification is determined through reasoned analysis rather than through the mechanical application of traditional, often inaccurate, assumptions about the proper roles of men and women [458 U.S. at 723–24].

Applying the principles regarding the legitimacy and importance of the state's objective, the Court noted that the state's justification for prohibiting men from enrolling in the nursing program was to compensate for discrimination against women. On the contrary, the Court pointed out, women had never been denied entry to the nursing profession, and limiting admission to women actually perpetuated the stereotype that nursing is "women's work." The state had made no showing that women needed preferential treatment in being admitted to nursing programs, and the Court did not believe that that was the state's purpose in discriminating against men. And even if the state had a valid compensatory objective, said the Court, the university's practice of allowing men to audit the classes and to take part in continuing education courses offered by the school contradicted its position that its degree programs should only be available to women.

The Court's opinion on its face invalidated single-sex admissions policies only at the School of Nursing at Mississippi University for Women (MUW) and, by extension, other public postsecondary nursing schools. It is likely, however, that this reasoning would also invalidate single-sex policies in programs other than nursing and in entire institutions. The most arguable exception to this broad reading would be a single-sex policy that redresses the effects of past discrimination on a professional program in which one sex is substantially underrepresented. But even such a compensatory policy would be a form of explicit sexual quota, which could be questioned by analogy to the racial affirmative action cases (this book, Section 8.2.5).

Whatever the remaining ambiguity about the scope of the *Hogan* decision, it will not be resolved by further litigation at the Mississippi University for Women. After the Supreme Court decision, MUW's board of trustees—perhaps anticipating a broad application of the Court's reasoning—voted to admit men to all divisions of the university.

The *Hogan* opinion provided important guidance in a challenge to the lawfulness of male-only public military colleges. In *United States v. Commonwealth of Virginia*, 766 F. Supp. 1407, *vacated*, 976 F.2d 890 (4th Cir. 1992), the U.S. Department of Justice challenged the admissions policies of the Virginia Military Institute (VMI), which admitted only men. The government claimed that those policies violated the equal protection clause (it did not include a Title IX claim, since military academies and historically single-sex institutions are exempt from Title IX). Equal protection challenges to sex discrimination require the state to demonstrate "an exceedingly persuasive justification" for the classification (*Hogan*, 458 U.S. at 739). In this case the state argued that enhancing

diversity by offering a distinctive single-sex military education to men was an important state interest. The district court found that the single-sex policy was justified because of the benefits of a single-sex education, and that requiring VMI to admit women would “fundamentally alter” the “distinctive ends” of the educational system (766 F. Supp. at 1411).

The appellate court vacated the district court’s opinion, stating that Virginia had not articulated an important objective sufficient to overcome the burden on equal protection. While the appellate court agreed with the trial court’s finding that the admission of women would materially affect several key elements of VMI’s program—physical training, lack of privacy, and the adversative approach to character development—it was homogeneity of gender, not maleness, that justified the program (976 F.2d at 897). The appellate court also accepted the trial court’s findings that single-sex education has important benefits. But these findings did not support the trial court’s conclusion that VMI’s male-only policy passed constitutional muster. Although VMI’s single-gender education and “citizen-soldier” philosophy were permissible, the state’s exclusion of women from such a program was not, and no other public postsecondary education institution in Virginia was devoted to educating only one gender.

The appellate court did not order VMI to admit women, but remanded the case to the district court to give Virginia the option to (1) admit women to VMI, (2) establish parallel institutions or programs for women, or (3) terminate state support for VMI. On appeal, the U.S. Supreme Court refused to hear the case (508 U.S. 946 (1993)). Following that action, the trustees of VMI voted to underwrite a military program at a neighboring private women’s college, Mary Baldwin College (“Virginia Military Institute to Establish Courses at Women’s College,” *New York Times*, September 26, 1993, p. A26).

The U.S. Department of Justice challenged the plan, saying that it is “based on gender stereotypes,” and asked the trial court to order VMI to admit women and to integrate them into its full program. After the trial judge approved the parallel program at Mary Baldwin College, a divided panel of the U.S. Court of Appeals for the Fourth Circuit affirmed, finding that providing single-gender education was a legitimate objective of the state, and that the leadership program at Mary Baldwin College was “sufficiently comparable” to the VMI program to satisfy the demands of the equal protection clause (44 F.3d 1229 (4th Cir. 1995)). The dissenting judge argued that the state’s justification for excluding women from VMI was not “exceedingly persuasive,” and that the women’s leadership program at Mary Baldwin College did not provide substantially equal tangible and intangible educational benefits; he thus concluded that maintaining VMI as a single-sex public institution violated the equal protection clause. A petition for rehearing *en banc* was denied.

The United States again asked the Supreme Court to review the appellate court’s ruling, and this time the Court agreed. In a 7-to-1 decision (Justice Thomas did not participate), the Court ruled that VMI’s exclusion of women violated the equal protection clause (518 U.S. 515 (1996)). Since strict scrutiny is reserved for classifications based on race or national origin, the Court used intermediate scrutiny—which Justice Ginsburg, the author of the majority

opinion, termed “skeptical scrutiny”—to analyze Virginia’s claim that single-sex education provides important educational benefits. Reviewing the state’s history of providing higher education for women, the Court concluded that women had first been excluded from public higher education, and then admitted to once all-male public universities, but that no public single-sex institution had been established for women, and thus the state had not provided equal benefits for women. With regard to the state’s argument that VMI’s adversative training method provided important educational benefits that could not be made available to women and thus their admission would “destroy” VMI’s unique approach to education, the Court noted that both parties had agreed that some women could meet all of the physical standards imposed upon VMI cadets. Moreover, the experience with women cadets in the military academies suggested that the state’s fear that the presence of women would force change upon VMI was based on overbroad generalizations about women as a group, rather than on an analysis of how individual women could perform.

The Court then turned to the issue of the remedy for VMI’s constitutional violation. Characterizing the women’s leadership program at Mary Baldwin College as “unequal in tangible and intangible facilities” and offering no opportunity for the type of military training for which VMI is famous, the Court stressed the differences between the two programs and institutions in terms of the quality of the faculty, the range of degrees offered, athletic and sports facilities, endowments, and the status of the degree earned by students. Criticizing the Fourth Circuit for applying an overly deferential standard of review that the Court characterized as one “of its own invention,” the Court reversed the Fourth Circuit’s decision and held that the separate program did not cure the constitutional violation.

Chief Justice Rehnquist voted with the majority but wrote a separate concurring opinion because he disagreed with Justice Ginsburg’s analysis of the remedy. The “parallel program” at Mary Baldwin College was “distinctly inferior” to VMI, said Justice Rehnquist, but the state could cure the constitutional violation by providing a public institution for women that offered the “same quality of education and [was] of the same overall calibre” as VMI. Justice Rehnquist’s opinion thus differs sharply from that of Justice Ginsburg, who characterized the exclusion of women as the constitutional violation, while Justice Rehnquist characterized the violation as the maintenance of an all-male institution without providing a comparable institution for women.

Justice Scalia, the sole dissenter, attacked the Court’s interpretation of equal protection jurisprudence, saying that the Court had used a higher standard than the intermediate scrutiny that is typically used to analyze categories based on gender. Furthermore, stated Justice Scalia, since the Constitution does not specifically forbid distinctions based upon gender, the political process, not the courts, should be used to change state behavior. Finding that the maintenance of single-sex education is an important educational objective, Justice Scalia would have upheld the continued exclusion of women from VMI.

The only other all-male public college, the Citadel, was ordered by a panel of the U.S. Court of Appeals for the Fourth Circuit to admit a female applicant

whom that college had admitted on the mistaken belief that she was male (*Faulkner v. Jones*, 10 F.3d 226 (4th Cir. 1993)). The court ordered that she be admitted as a day student, and remanded to the district court the issue of whether she could become a full member of the college's corps of cadets. On remand the trial judge ordered that she become a member of the corps of cadets. The college appealed this ruling.

The U.S. Court of Appeals for the Fourth Circuit ruled that the Citadel's refusal to admit women violated the equal protection clause, and despite the state's promise to create a military-type college for women students, the court ordered the Citadel to admit women as students (51 F.3d 440 (4th Cir. 1995), affirming the order of the trial court in 858 F. Supp. 552 (D.S.C. 1994)). Ms. Faulkner began attending classes at the Citadel, but withdrew after a few days; other women students are attending the college.

Important as *Hogan* and the VMI cases may be to the law regarding sex discrimination in admissions, they are only part of the bigger picture, which already includes Title IX. Thus, to view the law in its current state, one must look both to *Hogan/Virginia* and to Title IX. *Hogan, Virginia*, and their progeny have at least limited, and apparently undermined, the Title IX exemption for public undergraduate institutions that have always had single-sex admissions policies (20 U.S.C. § 1681(a)(5); 34 C.F.R. § 106.15(e)). Thus, the only programs and institutions that are still legally free to have single-sex admissions policies are (1) private undergraduate institutions and their constituent programs and (2) religious institutions, including their graduate, professional, and vocational programs, if they have obtained a waiver of Title IX admission requirements on religious grounds (20 U.S.C. § 1681(a)(3); 34 C.F.R. § 106.12).

The use of standardized tests in admissions decisions has been attacked as a form of sex discrimination. Some of the standardized tests used to make admission decisions—the Scholastic Aptitude Test (SAT), for example—have been challenged because of the systematic gender differences in scores. When these test scores are used as the sole criterion for decisions about admissions or awarding scholarships, they may be especially vulnerable to legal challenge. In *Sharif v. New York State Education Department* (discussed in Section 8.3.3), a federal district court ruled that this practice violated Title IX and the Fourteenth Amendment's equal protection clause. If, however, the test score is one of several criteria that are considered in admissions decisions, the courts have upheld their use, despite the gender differences in scores (see, for example, *El-Attar v. Mississippi State University*, 1994 U.S. Dist. LEXIS 21182 (N.D. Miss., September 13, 1994)). (For analysis of the potential discriminatory effects of standardized testing, see K. Connor & E. Vargyas, "The Legal Implications of Gender Bias in Standardized Testing," *Berkeley Women's L.J.* 13 (1992). See also L. Silverman, "Unnatural Selection: A Legal Analysis of the Impact of Standardized Test Use on Higher Education Resource Allocation," 23 *Loyola L.A. L. Rev.* 1433 (1990).)

In addition to Title IX, other laws include prohibitions on sex discrimination in admissions. For example, one section of the Public Health Service Act's provisions on nurse education (42 U.S.C. § 296g) prohibits the Secretary of Health

and Human Services from making grants, loan guarantees, or interest subsidy payments to schools of nursing unless the schools provide “assurances satisfactory to the Secretary that the school will not discriminate on the basis of sex in the admission of individuals to its training programs.”

Recent trends in student enrollment suggest that rates of undergraduate enrollment for women have bypassed those of men among low-income and several minority groups. A report published in 2003 by the American Council on Education, *Gender Equity in Higher Education*, concluded that, although men were the majority in doctoral and professional programs, and also outnumbered women in master’s programs in business and engineering, white women undergraduates outnumbered white men in the 1999–2000 academic year, as did women from African American, Hispanic, and Native American ethnicities with respect to their male counterparts.

**8.2.4.3. Disability.** Two federal laws—Section 504 of the Rehabilitation Act of 1973 (29 U.S.C. § 794) and the Americans With Disabilities Act (ADA) (42 U.S.C. § 12101 *et seq.*)—prohibit discrimination against individuals with disabilities (see Section 5.2.5 of this book). Before those laws were passed, these individuals had been the subject of a few scattered federal provisions (such as 20 U.S.C. § 1684, which prohibits discrimination against blind persons by institutions receiving federal funds) and a few constitutional equal protection cases (such as *PARC v. Pennsylvania*, 334 F. Supp. 1257 (E.D. Pa. 1971), which challenged discrimination against disabled students by public elementary and secondary schools). But none of these developments have had nearly the impact on postsecondary admissions that Section 504 and the ADA have.

As applied to postsecondary education, Section 504 generally prohibits discrimination on the basis of disability in federally funded programs and activities (see this book, Section 13.5.4). Section 104.42 of the implementing regulations, 34 C.F.R. Part 104, prohibits discrimination on the basis of disability in admissions and recruitment. This section contains several specific provisions similar to those prohibiting sex discrimination in admissions under Title IX (see this book, Section 8.2.4.2). These provisions prohibit (1) the imposition of limitations on “the number or proportion of individuals with disabilities who may be admitted” (§ 104.42(b)(1)); (2) the use of any admissions criterion or test “that has a disproportionate, adverse effect” on individuals with disabilities, unless the criterion or test, as used, is shown to predict success validly and no alternative, nondiscriminatory criterion or test is available (§ 104.42(b)(2)); and (3) any preadmission inquiry about whether the applicant has a disability, unless the recipient needs the information in order to correct the effects of past discrimination or to overcome past conditions that resulted in limited participation by people with disabilities (§§ 104.42(b)(4) & 104.42(c)).

These prohibitions apply to discrimination directed against “qualified” individuals with disabilities. A disabled person is qualified, with respect to postsecondary and vocational services, if he or she “meets the academic and technical standards requisite to admission or participation in the recipient’s education program or activity” (§ 104.3(l)(3)). Thus, while the regulations do not

prohibit an institution from denying admission to a person with a disability who does not meet the institution's "academic and technical" admissions standards, they do prohibit an institution from denying admission on the basis of the disability as such. (After a student is admitted, however, the institution can make confidential inquiry concerning the disability (34 C.F.R. § 104.42(b)(4)); in this way the institution can obtain advance information about disabilities that may require accommodation.)

In addition to these prohibitions, the institution has an affirmative duty to ascertain that its admissions tests are structured to accommodate applicants with disabilities that impair sensory, manual, or speaking skills, unless the test is intended to measure these skills. Such adapted tests must be offered as often and in as timely a way as other admissions tests and must be "administered in facilities that, on the whole, are accessible" to people with disabilities (§ 104.42(b)(3)).

In *Southeastern Community College v. Davis*, 442 U.S. 397 (1979), the U.S. Supreme Court issued its first interpretation of Section 504. The case concerned a nursing school applicant who had been denied admission because she is deaf. The Supreme Court ruled that an "otherwise qualified handicapped individual" is one who is qualified *in spite of* (rather than *except for*) his disability. Since an applicant's disability is therefore relevant to his or her qualification for a specific program, Section 504 does not preclude a college or university from imposing "reasonable physical qualifications" on applicants for admission, where such qualifications are necessary for participation in the school's program. The Department of Education's regulations implementing Section 504 provide that a disabled applicant is "qualified" if he or she meets "the academic and technical standards" for admission; the Supreme Court has made it clear, however, that "technical standards" may sometimes encompass reasonable physical requirements. Under *Davis*, an applicant's failure to meet such requirements can be a legitimate ground for rejection.

The impact of *Davis* is limited, however, by the rather narrow and specific factual context in which the case arose. The plaintiff, who was severely hearing impaired, sought admission to a nursing program. It is important to emphasize that *Davis* involved admission to a professional, clinical training program. The demands of such a program, designed to train students in the practice of a profession, raise far different considerations from those involved in admission to an undergraduate or a graduate academic program, or even a nonclinically oriented professional school. The college denied her admission, believing that she would not be able to perform nursing duties in a safe manner and could not participate fully in the clinical portion of the program.

While the Court approved the imposition of "reasonable physical qualifications," it did so only for requirements that the institution can justify as necessary to the applicant's successful participation in the particular program involved. In *Davis*, the college had shown that an applicant's ability to understand speech without reliance on lip reading was necessary to ensure patient safety and to enable the student to realize the full benefit of its nursing program. For programs without clinical components, or without professional training

goals, it would be much more difficult for the institution to justify such physical requirements. Even for other professional programs, the justification might be much more difficult than in *Davis*. In a law school program, for example, the safety factor would be lacking. Moreover, in most law schools, clinical training is offered as an elective rather than a required course. By enrolling only in the nonclinical courses, a deaf student would be able to complete the required program with the help of an interpreter.

Furthermore, the Court did not say that affirmative action is never required to accommodate the needs of disabled applicants. Although the Court asserted that Section 504 does not require institutions “to lower or to effect substantial modifications of standards” or to make “fundamental alteration[s] in the nature of a program,” the Court did suggest that less substantial and burdensome program adjustments may sometimes be required. The Court also discussed, and did not question, the regulation requiring institutions to provide certain “auxiliary aids,” such as interpreters for students with hearing impairments, to qualified students with disabilities (see Sections 8.7.3 & 13.5.4). This issue was addressed in *United States v. Board of Trustees for the University of Alabama*, 908 F.2d 740 (11th Cir. 1990), in which the court ordered the university to provide additional transportation for students with disabilities. Moreover, the Court said nothing that in any way precludes institutions from voluntarily making major program modifications for applicants who are disabled.

Several appellate court cases have applied the teachings of *Davis* to other admissions problems. The courts in these cases have refined the *Davis* analysis, especially in clarifying the burdens of proof in a discrimination suit under Section 504. In *Pushkin v. Regents of the University of Colorado*, 658 F.2d 1372 (10th Cir. 1981), the court affirmed the district court’s decision that the plaintiff, a medical doctor suffering from multiple sclerosis, had been wrongfully denied admission to the university’s psychiatric residency program. Agreeing that *Davis* permitted consideration of disabilities in determining whether an applicant is “otherwise qualified” for admission, the court outlined what the plaintiff had to prove in order to establish his case of discrimination:

1. The plaintiff must establish a prima facie case by showing that he was an otherwise qualified handicapped person *apart from* his handicap, and was rejected under circumstances which gave rise to the inference that his rejection was based solely on his handicap.
2. Once plaintiff establishes his prima facie case, defendants have the burden of going forward and proving that plaintiff was not an otherwise qualified handicapped person—that is, one who is able to meet all of the program’s requirements *in spite of* his handicap—or that his rejection from the program was for reasons other than his handicap.
3. The plaintiff then has the burden of going forward with rebuttal evidence showing that the defendants’ reasons for rejecting the plaintiff are based on misconceptions or unfounded factual conclusions, and that reasons articulated for the rejection other than the handicap encompass unjustified consideration of the handicap itself [658 F.2d at 1387].

In another post-*Davis* case, *Doe v. New York University*, 666 F.2d 761 (2d Cir. 1981), the court held that the university had not violated Section 504 when it denied readmission to a woman with a long history of “borderline personality” disorders. This court also set out the elements of the case a plaintiff must make to comply with the *Davis* reading of Section 504:

Accordingly, we hold that in a suit under Section 504 the plaintiff may make out a *prima facie* case by showing that he is a handicapped person under the Act and that, although he is qualified apart from his handicap, he was denied admission or employment because of his handicap. The burden then shifts to the institution or employer to rebut the inference that the handicap was improperly taken into account by going forward with evidence that the handicap is relevant to qualifications for the position sought (cf. *Dothard v. Rawlinson*, 433 U.S. 321 . . . (1977)). The plaintiff must then bear the ultimate burden of showing by a preponderance of the evidence that in spite of the handicap he is qualified and, where the defendant claims and comes forward with some evidence that the plaintiff’s handicap renders him less qualified than other successful applicants, that he is at least as well qualified as other applicants who were accepted [666 F.2d at 776–77].

The *Doe* summary of burdens of proof is articulated differently from the *Pushkin* summary, and the *Doe* court disavowed any reliance on *Pushkin*. In contrast to the *Pushkin* court, the *Doe* court determined that a defendant institution in a Section 504 case “does not have the burden, once it shows that the handicap is relevant to reasonable qualifications for readmission (or admission), of proving that . . . [the plaintiff is not an otherwise qualified handicapped person]” (666 F.2d at 777, n.7).

The *Doe* case is also noteworthy because, in deciding whether the plaintiff was “otherwise qualified,” the court considered the fact that she had a recurring illness, even though it was not present at the time of the readmission decision. This was an appropriate factor to consider because the illness could reappear and affect her performance after readmission. *Doe* is thus the first major case to deal directly with the special problem of disabling conditions that are recurring or degenerative. The question posed by such a case is this: To what extent must the university assume the risk that an applicant capable of meeting program requirements at the time of admission may be incapable of fulfilling these requirements at a later date because of changes in his or her disabling conditions?

*Doe* makes clear that universities may weigh such risks in making admission or readmission decisions and may consider an applicant unqualified if there is “significant risk” of recurrence (or degeneration) that would incapacitate the applicant from fulfilling program requirements. This risk factor thus becomes a relevant consideration for both parties in carrying their respective burdens of proof in Section 504 litigation. In appropriate cases, where there is medical evidence for doing so, universities may respond to the plaintiff’s *prima facie* case by substantiating the risk of recurrence or degeneration that would render the applicant unqualified. The plaintiff would then have to demonstrate that his

condition is sufficiently stable or, if it is not, that any change during his enrollment as a student would not render him unable to complete program requirements.

In *Doherty v. Southern College of Optometry*, 862 F.2d 570 (6th Cir. 1988), a federal appellate court considered the relationship between Section 504's "otherwise qualified" requirement and the institution's duty to provide a "reasonable accommodation" for a student with a disability. The plaintiff—a student with retinitis pigmentosa (RP), which restricted his field of vision, and a neurological condition that affected his motor skills—asserted that the college should exempt him from recently introduced proficiency requirements related to the operation of optometric instruments. The student could not meet these requirements and claimed that they were a pretext for discrimination on the basis of disability, since he was "otherwise qualified" and therefore had the right to be accommodated.

In ruling for the school, the district court considered the "reasonable accommodation" inquiry to be separate from the "otherwise qualified" requirement; thus, in its view, the institution was obligated to accommodate only a student with a disability who has already been determined to be "otherwise qualified." The appeals court disagreed, indicating that the "inquiry into reasonable accommodation is one aspect of the 'otherwise qualified' analysis" (862 F.2d at 577). To explain the relationship, the court quoted from *Brennan v. Stewart*, 834 F.2d 1248, 1261–62 (5th Cir. 1988):

"[I]t is clear that the phrase 'otherwise qualified' has a paradoxical quality; on the one hand, it refers to a person who has the abilities or characteristics sought by the [institution]: but on the other, it cannot refer only to those already capable of meeting all the requirements—or else no reasonable requirement could ever violate Section 504, no matter how easy it would be to accommodate handicapped individuals who cannot fulfill it. This means that we can no longer take literally the assertion of *Davis* that 'an otherwise qualified person is one who is able to meet all of a program's requirements in spite of his handicap.' The question . . . is the rather mushy one of whether some 'reasonable accommodation' is available to satisfy the legitimate interests of both the [institution] and the handicapped person" [862 F.2d at 575].

The appellate court's interpretation did not change the result in the case; since the proficiency requirements were reasonably necessary to the practice of optometry, waiver of these requirements would not have been a "reasonable accommodation." But the court's emphasis on the proper relationship between the "otherwise qualified" and "reasonable accommodation" inquiries does serve to clarify and strengthen the institution's obligation to accommodate the particular needs of students with disabilities.

Students alleging discrimination on the basis of disability may file a complaint with the Education Department's Office for Civil Rights, or they may file a private lawsuit and receive compensatory damages (*Tanberg v. Weld County Sheriff*, 787 F. Supp. 970 (D. Colo. 1992)). Section 504 does not, however, provide a private right of action against the Secretary of Education, who enforces Section 504 (*Salvador v. Bennett*, 800 F.2d 97 (7th Cir. 1986)).

The provisions of the ADA are similar in many respects to those of Section 504, upon which, in large part, it was based. In addition to employment (see this book, Section 5.2.5), Title II of the ADA prohibits discrimination in access to services or programs of a public entity (such as a public college or university), and Title III prohibits discrimination in access to places of public accommodation (such as private and public colleges and universities). A rejected applicant could file an ADA claim under either Title II (against a public college) or Title III (against both public and private colleges).

The ADA specifies ten areas in which colleges and universities may not discriminate against a qualified individual with a disability: eligibility criteria; modifications of policies, practices, and procedures; auxiliary aids and services; examinations and courses; removal of barriers in existing facilities; alternatives to barriers in existing facilities; personal devices and services; assistive technology; seating in assembly areas; and transportation services (28 C.F.R. §§ 36.301–10). The law also addresses accessibility issues for new construction or renovation of existing facilities (28 C.F.R. §§ 36.401–6). The law is discussed more fully in Section 13.5.4 of this book.

The law's language regarding "eligibility criteria" means that in their admissions or placement tests or other admission-related activities, colleges and universities must accommodate the needs of applicants or students with disabilities. For example, one court held that, under Section 504, the defendant medical school must provide a dyslexic student with alternate exams unless it could demonstrate that its rejection of all other testing methods was based on rational reasons (*Wynne v. Tufts University School of Medicine*, 932 F.2d 19 (1st Cir. 1991), discussed in Section 9.3.5).

Students with learning disabilities are protected by both Section 504 and the ADA, and legal challenges by such students are on the rise. For example, in *Fruth v. New York University*, 2 A.D. Cases 1197 (S.D.N.Y. 1993), a student with learning disabilities challenged the university's decision to rescind his acceptance because he had failed to attend a required summer orientation session for students with learning disabilities. Relying heavily on *Doe v. New York University* (discussed above), the court ruled that, since the student's grades were lower than the university's required grade point average, the university's insistence that the student attend the summer program was reasonable and not in violation of the ADA.

State courts have looked to ADA jurisprudence in interpreting state law prohibitions against disability discrimination. An illustrative case is *Ohio Civil Rights Commission v. Case Western Reserve University*, 666 N.E.2d 1376 (Ohio 1996). The plaintiff, Cheryl Fischer, an applicant to the Case Western Reserve (CWR) medical school, had become totally blind during her junior year at CWR. CWR had provided Fischer with several accommodations as an undergraduate, including lab assistants and readers, oral examinations instead of written ones, extended exam periods, and books on tape. Fischer graduated *cum laude* from CWR.

All U.S. medical schools belong to the Association of American Medical Colleges (AAMC), which requires candidates for a medical degree to be able to

“observe” both laboratory demonstrations and patient appearance and behavior. Despite Fischer’s excellent academic record, CWR’s medical school admissions committee determined that she did not meet the AAMC requirements because she was unable to see, and that she would be unable to complete the requirements of the medical school curriculum. Fischer reapplied the following year and again was denied admission. She filed a complaint under the Ohio nondiscrimination law with the Ohio Civil Rights Commission (OCRC), which found probable cause to believe that CWR had discriminated against Fischer. A county court affirmed the OCRC, but a state appellate court reversed, holding that CWR would be required to modify its program in order to accommodate Fischer’s disability, which the law did not require. The Supreme Court of Ohio affirmed.

The Ohio Civil Rights Commission, which had found for Fischer, had placed great weight on the experience of a blind doctor who had received his training at Temple University Medical School. The court noted that he had been trained twenty years earlier, and that the faculty and students at the Temple medical school had devoted a substantial amount of time to working individually with that student. Furthermore, the court rejected the findings of the commission and trial court that, because Fischer could have completed the first two years of medical school training with minimal modifications of the program, the more substantial modifications of the rest of the medical school program (such as having others read X-rays and patient charts, and waiving the requirement that she learn how to draw blood or insert an intravenous tube) would not be an undue hardship for CWR. A number of medical educators had testified that it would be impossible to modify the methods of training a medical student to accommodate a blind individual. In addition, said the court, requiring CWR to admit Fischer would impose an undue burden upon the faculty because of the extensive individual attention she would require from them.

Furthermore, the court indicated that the design of curriculum and teaching methods are matters of academic judgment and are deserving of deference “unless it is shown that the standards serve no purpose other than to deny an education to the handicapped.” It was irrelevant that Fischer intended to practice psychiatry rather than general medicine; the purpose of a medical school education was to produce general practitioners, not specialists.

In sum, postsecondary administrators should still proceed very sensitively in making admission decisions concerning disabled persons. *Davis* can be expected to have the greatest impact on professional and paraprofessional health care programs; beyond that, the circumstances in which physical requirements for admission may be used are less clear. Furthermore, while *Davis* relieves colleges and universities of any obligation to make substantial modifications in their program requirements, a refusal to make lesser modifications may in some instances constitute discrimination. Furthermore, interpretation of Section 504’s requirements has evolved since *Davis*, as evidenced by the *Doherty* case; and in some cases the ADA provides additional protections for students.

A federal appellate court has ruled that “flagging” scores on standardized tests that have been taken with accommodations does not violate the ADA. In *Doe v. National Board of Medical Examiners*, 199 F.3d 146 (3d Cir. 1999), a medical student with multiple sclerosis requested, and obtained, additional time to take the U.S. Medical Licensing Examination, a standardized examination developed and administered by the National Board of Medical Examiners (NBME). The NBME’s practice when reporting scores was to indicate that the examination had been taken with accommodations. The student asked the NBME to omit the “flagging” from his score report, but the organization refused. The student then sought a preliminary injunction, claiming that the practice of flagging test scores violated Title III of the ADA.

Although the trial court granted Doe a preliminary injunction, the appellate panel reversed. The NBME only flagged those scores when the test taker had been granted an accommodation that the board’s psychometric experts believed could affect the validity of the test score. Additional time, which was the accommodation that Doe received, could affect the validity of his score; the score of another test taker who only received a large-print version of the exam would not be flagged because this accommodation would not affect the validity of the score. The court ruled that, in order to be entitled to an injunction, Doe would have to demonstrate that the validity of his test score as a predictor of success in further medical training was comparable to the validity of the scores of test takers who had not been accommodated. Because the ADA does not bar the flagging of test scores, and because Doe had not demonstrated that the additional time had no effect on the validity of his score, the court vacated the preliminary injunction. To Doe’s claim that he would be discriminated against by residency and internship programs to which he would apply, the court responded that such potential discrimination could not be attributed to the NBME, and that such a claim was speculative.

Subsequent to the ruling in *Doe*, the College Board announced that, effective October 2003, it would no longer “flag” the test scores for individuals who were given extra time or other accommodations when taking the SAT. The Educational Testing Service has also halted the practice of flagging scores on the Graduate Management Admission Test (GMAT) and the Graduate Record Examination (GRE) (Eric Hoover, “Removing the ‘Scarlet Letter’: The College Board Will No Longer Flag the SAT-Score Reports of Students Granted Extra Time Because of Disabilities,” *Chron. Higher Educ.*, July 26, 2002, A41).

**8.2.4.4. Age.** In *Massachusetts Board of Retirement v. Murgia*, 427 U.S. 307 (1976), the U.S. Supreme Court held that age discrimination is not subject to the high standard of justification that the equal protection clause of the Constitution requires, for instance, for race discrimination. Rather, age classifications are permissible if they “rationally further” some legitimate governmental objective. The Court confirmed the use of the “rational basis” standard for age discrimination cases in *City of Dallas v. Stanglin*, 490 U.S. 19 (1989), saying that this standard is “the most relaxed and tolerant form of judicial scrutiny under the Equal Protection Clause” (490 U.S. at 26).

In *Miller v. Sonoma County Junior College District*, No. C-74-0222 (N.D. Cal. 1974) (an unpublished opinion decided before *Murgia*), two sixteen-year-old students won the right to attend a California junior college. The court held that the college's minimum age requirement of eighteen was an arbitrary and irrational basis for exclusion because it was not related to the state's interest in providing education to qualified students.

In *Purdie v. University of Utah*, 584 P.2d 831 (Utah 1978), a case that can usefully be compared with *Miller*, the court considered the constitutional claim of a fifty-one-year-old woman who had been denied admission to the university's department of educational psychology. Whereas the *Miller* plaintiffs were allegedly too young for admission, Purdie was allegedly too old. But in both cases the courts used the equal protection clause to limit the institution's discretion to base admission decisions on age. In *Purdie* the plaintiff alleged, and the university did not deny, that she exceeded the normal admissions requirements and was rejected solely because of her age. The trial court held that her complaint did not state a viable legal claim and dismissed the suit. On appeal, the Utah Supreme Court reversed, holding that rejection of a qualified fifty-one-year-old would violate equal protection unless the university could show that its action bore a "rational relationship to legitimate state purposes." Since the abbreviated trial record contained no evidence of the department's admissions standards or its policy regarding age, the court remanded the case to the trial court for further proceedings.

In *Tobin v. University of Maine System*, 62 F. Supp. 2d 162 (D. Maine 1999), a sixty-five-year-old law school applicant who was denied admission sued under Section 1983, claiming a denial of equal protection. After examining the law school's admissions criteria (LSAT scores and grade point averages for the applicant's baccalaureate degree), the court concluded that the plaintiff had not established that his rejection was motivated by age discrimination, and awarded summary judgment to the university. The same court had earlier dismissed Tobin's claims of emotional distress, breach of contract, and breach of an implied covenant of good faith and fair dealing (59 F. Supp. 2d 87).

Both public and private institutions that receive federal funds are subject to the federal Age Discrimination Act of 1975 (42 U.S.C. § 6101 *et seq.*). Section 6101 of the Act, with certain exceptions listed in Sections 6103(b) and 6103(c), originally prohibited "unreasonable discrimination on the basis of age in programs or activities receiving federal financial assistance." In 1978, Congress deleted the word "unreasonable" from the Act (see this book, Section 13.5.5), thus lowering the statute's tolerance for discrimination and presumably making its standards more stringent than the Constitution's "rationality" standard used in *Purdie*. As amended and interpreted in the implementing regulations (45 C.F.R. Part 90), the Age Discrimination Act clearly applies to the admissions policies of postsecondary institutions.

The age discrimination regulations, however, do not prohibit all age distinctions. Section 90.14 of the regulations permits age distinctions that are necessary to the "normal operation" of, or to the achievement of a "statutory objective" of, a program or activity receiving federal financial assistance (see Section 13.5.5

of this book). Moreover, Section 90.15 of the regulations permits recipients to take an action based on a factor other than age—“even though that action may have a disproportionate effect on persons of different ages”—if the factor has a “direct and substantial relationship” to the program’s operation or goals. The explanatory commentary accompanying the regulations provides examples of how the Office of Civil Rights would evaluate selection criteria that may bear a relationship to age (44 Fed. Reg. 33773–74 (June 12, 1979)).

State law also occasionally prohibits age discrimination against students. In its Fair Educational Practices statute, for example, Massachusetts prohibits age discrimination in admissions to graduate programs and vocational training institutions (Mass. Gen. Laws Ann. ch. 151C, §§ 2(d), 2A(a)).

Taken together, the Constitution, the federal law and regulations, and occasional state laws now appear to create a substantial legal barrier to the use of either maximum- or minimum-age policies in admissions. The federal Age Discrimination Act, applicable to both public and private institutions regardless of whether they receive federal funds, is the most important of these developments; administrators should watch for further implementation of this statute.

**8.2.4.5. Residence.** Public colleges and universities may provide preferences for state residents because of the high cost (subsidized by state taxpayers) of education and because it is more likely that in-state students will remain in the state after graduation and use their education to benefit the state and its residents (see generally *Rosenstock v. Board of Governors of the University of North Carolina*, 423 F. Supp. 1321, 1326–27 (M.D.N.C. 1976)). This is particularly true for professional training. In *Buchwald v. University of New Mexico School of Medicine*, 159 F.3d 487 (10th Cir. 1998), the court considered an equal protection challenge to a medical school admissions policy that favored long-term residents of the state over short-term residents. The district court had invalidated this preference as a burden on the fundamental right to travel (see Section 8.3.5 of this book). In remanding the case to the district court, the appellate court determined that the preference in favor of longer-term state residents served an interest in public health that “is not only legitimate but also compelling.” This interest, as characterized by the court, is an interest in “selecting those candidates [for admission] likely to return to the state of New Mexico and supply needed medical care to underserved areas of the state” (159 F.3d at 498).

The plaintiff in the *Buchwald* case also presented a second type of challenge to residency preferences in admissions: that they burden the interstate movement of people and thus burden interstate commerce in violation of the federal Constitution’s commerce clause (see generally Section 12.4). The appellate court quickly dispatched this argument by invoking the so-called market participant exception to the commerce clause:

[P]laintiff argues that defendant’s actions violate the dormant Commerce Clause. This claim fails to state a constitutional violation that could abrogate qualified immunity. The University of New Mexico’s educational activities constitute participation in the market for educational services, not regulation of that

market. Thus the policies in question fall under the “market participant” exception to the dormant Commerce Clause. See *Reeves, Inc. v. Stake*, 447 U.S. 429, 436–39 (1980) [159 F.3d at 496].

The U.S. Supreme Court’s decision in *Saenz v. Roe*, 526 U.S. 489 (1999), discussed in Section 8.3.5, suggests that state residency preferences and requirements for admission, when used by a public institution, could be challenged not only under the equal protection clause of the Fourteenth Amendment, but also under that amendment’s “privileges or immunities” clause and its “citizenship” clauses. The case also suggests, however, that such admissions preferences or requirements could withstand challenge when there is a “danger” that “citizens of other states” will “establish residency for just long enough to acquire . . . [their] college education,” the benefit of which “will be enjoyed after they return to their original domicile” (526 U.S. 505).

**8.2.4.6. Immigration status.** The eligibility of aliens for admission to U.S. colleges and universities has received heightened attention since the terrorist attacks of September 11, 2001. Although the Supreme Court ruled on equal protection grounds in 1982 that states could not deny free public education to undocumented alien children (*Plyler v. Doe*, 457 U.S. 202 (1982)), litigation related to alien postsecondary students has more often involved their eligibility for in-state tuition in state institutions than their eligibility for admission as such. The in-state tuition cases are discussed in Section 8.3.6 below.

As discussed in the Supreme Court’s *Nyquist* case (Section 8.3.6.1 below), alienage is a suspect classification for purposes of postsecondary education benefits. A public institution’s refusal to admit permanent resident aliens would therefore likely violate the federal equal protection clause. Private institutions are not bound by the equal protection clause, but could face liability for refusing to admit qualified resident aliens if the institution was engaged in some cooperative education program with the federal or state government that would be considered “state action” (see Section 1.5.2).

Temporary or nonimmigrant aliens have less protection under the federal Constitution. For example, in *Ahmed v. University of Toledo*, discussed in Section 8.3.6.1, the court distinguished between permanent resident aliens and temporary nonresident (nonimmigrant) aliens, refusing to subject a university policy that affected only nonresident aliens to strict scrutiny review under the equal protection clause. Under the lower “rational relationship” standard used by the court in *Ahmed*, a university policy that singled out nonresident aliens in order to meet a reasonable goal of the university would be constitutionally permissible. If a public institution were to deny admission only to aliens from a particular country, however, courts could view such a policy as national origin discrimination subject to strict scrutiny (see *Tayyari v. New Mexico State University*, 495 F. Supp. 1365 (D.N.M. 1980)).

More complicated are the legal issues that arise with respect to undocumented aliens. In 1996, Congress enacted the Illegal Immigration Reform and Immigrant Responsibility Act (IIRIRA, Pub. L. No. 104-208, 110 Stat. 3009, codified in scattered Sections of 8 and 18 U.S.C.). One IIRIRA provision

(8 U.S.C. § 1621(c)) declares that aliens who are not “qualified aliens”<sup>12</sup> are ineligible for certain public benefits, including public postsecondary education. However, the same section of the law also allows a state, after August 22, 1996, to enact laws that specifically confer a public benefit on aliens.

It is not yet clear whether admission to a public college or university is a “public benefit,” and thus whether the IIRIRA applies to admissions policies. Although the court in the *Merton* case, discussed below, concluded that the IIRIRA was not intended to apply to college admissions, there have been no definitive rulings on whether college admission is a “benefit,” and the views of commentators differ. (For a discussion of the application of the IIRIRA to admission to public colleges and universities, see Michael A. Olivas, “IIRIRA, the DREAM Act, and Undocumented College Student Residency,” 30 *J. Coll. & Univ. Law* 435 (2004).)

In 2002, the Attorney General of Virginia sent a memo to all public postsecondary institutions in the state stating that they should not admit undocumented aliens. The memo also encouraged officials of the institutions to report the presence of any undocumented students on campus to the federal authorities. When the public colleges and universities in Virginia followed the dictates of the memorandum with respect to admissions policies, an association that advocates for undocumented workers, as well as several undocumented individuals, filed a lawsuit against the boards of visitors of these colleges and universities, asserting that their refusal to admit undocumented alien applicants violated the U.S. Constitution’s supremacy, foreign commerce, and due process clauses. (For a discussion of supremacy clause principles, see Section 8.3.6 of this book.) The supremacy clause claim was based on the plaintiffs’ assertion that the restrictive admissions policies of the institutions regulated immigration and thus interfered with federal immigration law. The plaintiffs’ foreign commerce clause claim was based on the assertion that state policies denying admission to undocumented aliens burdened interstate commerce by precluding potential applicants from earning higher wages and sending funds to relatives living outside the United States. The due process claim was based on the plaintiffs’ assertion that the policy of denying admission to undocumented aliens deprived them of a property interest in receiving a public education in Virginia community colleges, as well as a property interest in receiving fair and impartial admissions decisions based on review of their applications. The defendants moved for dismissal of all claims.

In *Equal Access Education v. Merton*, 305 F. Supp. 2d 585 (E.D. Va. 2004) (*Merton I*), the court first addressed the issue of standing. Several of the named plaintiffs were high school students whose academic achievement would have made them competitive for admission to Virginia universities, except for the fact that they were not citizens or lawful permanent residents. One plaintiff was a high school student who had temporary legal status, but who had been denied

---

<sup>12</sup>Section 1641 of the IIRIRA provides seven categories of aliens who are considered to be “qualified” and thus eligible for public benefits. In addition to documented aliens, the category includes political refugees, aliens granted asylum, and Cuban and Haitian refugees (8 U.S.C. § 1641(b)).

admission to a public university; he alleged that the denial was based on an inaccurate assumption that he did not have a lawful immigration status. The court found that the individual plaintiffs had standing to bring the suit, as did the association that had been formed to further the interests of undocumented high school students in attending public colleges and universities in Virginia.

In addressing the plaintiffs' supremacy clause claim, the court looked to *DeCanas v. Bica*, 424 U.S. 351 (1976), in which the U.S. Supreme Court upheld a California statute forbidding employers to hire undocumented aliens if such employment would have an adverse effect on lawful resident workers. The Supreme Court rejected a claim that the state law was preempted by federal law and set forth a three-part test for determining whether a state statute, action, or policy related to immigration was preempted by federal law. Under this test, federal law will preempt the state when: (1) the state statute, action, or policy is an attempt to regulate immigration; (2) the subject matter of the state law, action, or policy is one that Congress intended to prevent states from regulating, even if the state law does not conflict with federal law; or (3) the state statute, action, or policy poses an obstacle to the execution of congressional objectives, or conflicts with federal law, making compliance with both federal and state law impossible.

Applying the *DeCanas* tests, the court determined, with one exception noted below, that the Virginia policy to deny admission to undocumented applicants did not meet any of the conditions under which federal law would preempt the policy. Specifically, the court determined that, in passing the IIRIRA, Congress did not intend to regulate the admission of undocumented aliens to college, leaving that issue to the states. The IIRIRA merely dictated that, if undocumented aliens were admitted to public colleges and universities, they would have to be charged the same out-of-state tuition paid by U.S. citizens (8 U.S.C. § 1623(a)). As long as the college officials used "federal immigration status standards" rather than creating different state standards for determining whether an applicant was undocumented or not a lawful resident, there was no violation of the supremacy clause. But because no trial had been held to determine whether the colleges had created an alternate set of "state standards" to evaluate applicants' citizenship status, the court declined to dismiss that part of the plaintiffs' supremacy clause claim.

The court then turned to the plaintiffs' foreign commerce clause claim, which asserted that the admissions policies relegated the plaintiffs to low-wage jobs by denying them access to postsecondary education, thus limiting their ability to send funds to relatives living outside the United States. The court rejected this claim, noting that there was no allegation that the plaintiffs made or intended to make such payments and that, since undocumented aliens are not eligible under federal law to work in the United States, it was unlikely that they would be able to earn the type of salaries that would result in significant payments to foreign nationals.

The court rejected the plaintiffs' due process claim, stating that they did not have a property right in admission to Virginia community colleges because admission was discretionary on the part of the colleges. And because public

colleges and universities may deny admission to any applicant for any constitutionally permissible reason, said the court, there is no entitlement to any particular procedures or criteria for admission. In *Merton I*, therefore, the court dismissed all of the plaintiffs' claims except for the one portion of the supremacy clause claim.

In *Equal Access Education v. Merton*, 325 F. Supp. 2d 655 (E.D. Va. 2004) (*Merton II*), the court granted the defendant universities' motion for summary judgment on that claim. The court did not rule on the merits of the claim, however; instead it reconsidered the plaintiffs' standing in light of its rulings in *Merton I* and determined that the plaintiffs no longer had standing to continue the action.

During 2003 and 2004, bills were introduced in both houses of Congress that would allow certain undocumented students to attend college in the United States and to begin the process of legalization of the student's immigration status. The bills, S. 1545 (the DREAM Act) and H.R. 1684 in the 108th Congress, had not been voted upon as of late 2005 (see S. 2075 (109th Cong.)). (For a discussion of these bills and their potential impact on the postsecondary education opportunities of undocumented students, see the Olivas article cited above.)

**8.2.5. Affirmative action programs.** Designed to increase the number of minority persons admitted to academic programs, affirmative action policies pose delicate social, pedagogical, and legal questions. Educators and public policy makers have agonized over the extent to which the goal of greater minority representation, or diversity in general, justifies the admission of less or differently qualified applicants, particularly in professional programs. Courts have grappled with the complaints of qualified but rejected nonminority applicants who claim to be victims of "reverse discrimination" because minority applicants were admitted in preference to them. Four cases have reached the U.S. Supreme Court: *DeFunis* in 1973, *Bakke* in 1978, and *Grutter* and *Gratz* in 2003, all of which are discussed below.

There are two types of affirmative action plans: "remedial" or "mandatory" plans and "voluntary" plans.<sup>13</sup> The former are ordered by a court or government agency. There is only one justification that the courts have accepted for this type of affirmative action plan: remedying or dismantling the present effects of past discrimination that the institution has engaged in or supported. "Voluntary" affirmative action plans, on the other hand, are adopted by the conscious choice of the institution. As the law has developed, there are two justifications for this type of plan. The first parallels the justification for remedial or mandatory affirmative action: alleviating the present effects of the institution's own past discrimination. The second—newer and more controversial—justification is achieving and maintaining the diversity of the student body.

---

<sup>13</sup>An affirmative action plan embodied in a consent decree, voluntarily accepted by the parties as a basis for settling a case, would apparently be considered a voluntary rather than a mandatory plan. See *Local No. 93, Int'l. Ass'n. of Firefighters v. City of Cleveland*, 478 U.S. 501, 516–17 (1986).

Just as there is a basic dichotomy between remedial and voluntary plans, there is also a basic distinction—developed in cases concerning race and ethnicity—between “race-conscious” voluntary affirmative action plans and “race-neutral” voluntary affirmative action plans. The former take race into account in decision making by providing some type of preference or advantage for members of identified minority groups. Race-neutral plans, on the other hand, do *not* use race as a factor in making decisions about particular individuals. Some allegedly race-neutral plans may have the foreseeable *effect* of benefiting certain racial or ethnic minorities, but this characteristic alone does not convert the neutral plan into a race-conscious plan, so long as the race of particular individuals is not itself considered in making decisions about them. Genuinely race-neutral plans raise fewer legal issues than race-conscious plans and are less amenable to challenge. If the plan is adopted for the purpose of benefiting some minorities over some nonminorities, however, and does have this intended effect, the plan could be subject to challenge as reverse discrimination and could be treated as a race-conscious plan. (See, for example, *Gomillion v. Lightfoot*, 364 U.S. 339 (1960); *Rogers v. Lodge*, 458 U.S. 613 (1982); and see generally Section 13.5.7.2 of this book.)

The legal issues concerning affirmative action can be cast in both constitutional and statutory terms and apply to both public and private institutions. The constitutional issues arise under the Fourteenth Amendment’s equal protection clause, which generally prohibits discriminatory treatment on the basis of race, ethnicity, or sex, including “reverse discrimination,” but applies only to *public* institutions (see Section 1.5.2 of this book). The statutory issues arise under Title VI of the Civil Rights Act of 1964 (prohibiting “race,” “color,” and “national origin” discrimination), and Title IX of the Education Amendments of 1972 (prohibiting sex discrimination), which apply to discrimination by both public and private institutions receiving federal financial assistance (see generally Sections 13.5.2 & 13.5.3 of this book); and under 42 U.S.C. § 1981, which has been construed to prohibit race discrimination in admissions by private schools whether or not they receive federal assistance (see Section 8.2.4.1 of this book).<sup>14</sup> In the *Bakke* case, a majority of the Justices agreed that Title VI uses constitutional equal protection standards for determining the validity of affirmative action programs (438 U.S. 265 at 284–87 (Powell, J.), 328–41 (Brennan, J., concurring in judgment), 412–18 (Stevens, J., concurring in judgment)). Standards

---

<sup>14</sup>The cases discussed below, and all of the major cases on affirmative action in admissions, involved race and/or ethnicity discrimination. Sex discrimination claims, however, are also a realistic possibility. A Georgia case provides a concrete example. Several rejected female applicants filed a lawsuit against the University of Georgia, challenging its practice of using gender preferences to make admission decisions in borderline cases. The U.S. district court ruled in the plaintiffs’ favor. See *Johnson v. University System of Georgia*, 106 F. Supp. 2d 1362, 1375–76 (S.D. Ga. 2000). Because far more female than male students would have been admitted if gender had not been considered, the university had applied a lower standard to male applicants in an attempt to narrow the gap between the proportions of female and male students. The university then eliminated consideration of gender in making admissions decisions. See Dan Carnevale, “Lawsuit Prompts U. of Georgia to End Admissions Preferences for Male Applicants,” *Chron. Higher Educ.*, September 3, 1999, A68.

comparable to those of the equal protection clause would also apparently be used for affirmative action issues arising under 42 U.S.C. § 1981, as suggested by the *Grutter* and *Gratz* cases, at least for public institutions and private institutions that receive federal financial assistance.<sup>15</sup> For Title IX affirmative action issues, equal protection standards would also apply; but it is not clear whether it would be the “intermediate scrutiny” standard that courts use when reviewing equal protection claims of sex discrimination (see *United States v Virginia*, 518 U.S. 515 (1996), discussed in subsection 8.2.4.2 above) or the “strict scrutiny” standard applicable to race claims under Title VI. (See *Jeldness v. Pearce*, 30 F.3d 1220 (9th Cir. 1994); *Johnson v. University System of Ga.*, 106 F. Supp. 2d 1362 (S.D. Ga. 2000).) Thus, *Bakke*, *Grutter*, and *Gratz*, taken together, establish a core of comparable legal parameters for affirmative action, applicable to public and private institutions alike.

Both the Title VI and the Title IX administrative regulations also address the subject of affirmative action. These regulations preceded *Bakke* and are brief and somewhat ambiguous. After *Bakke*, the U.S. Department of Health, Education, and Welfare (HEW, now the U.S. Department of Education) issued a “policy interpretation” of Title VI, indicating that the department had reviewed its regulations in light of *Bakke* and “concluded that no changes . . . are required or desirable” (44 Fed. Reg. 58509, at 58510 (October 10, 1979)). This policy interpretation, however, did set forth guidelines for applying the Title VI affirmative action regulations consistent with *Bakke*.

When an institution has discriminated in the past, the Title VI and Title IX regulations require it to implement affirmative action programs to overcome the effects of that discrimination—a kind of remedial or mandatory affirmative action (34 C.F.R. §§ 100.3(b)(6)(i) & 100.5(i); 34 C.F.R. § 106.3(a)).<sup>16</sup> When the institution has not discriminated, the regulations nevertheless permit affirmative action to overcome the present effects of past societal discrimination—a type of voluntary affirmative action (34 C.F.R. §§ 100.3(b)(6)(ii) & 100.5(i); 34 C.F.R. § 106.3(b)). Under more recent judicial interpretations, however, these regulations and the 1997 Policy Interpretation could not validly extend to voluntary race-conscious or gender-conscious plans designed to remedy societal discrimination apart from the institution’s own prior discrimination. (See the discussion in guideline 1 below in this subsection.)

---

<sup>15</sup>One appellate court has held, in a post-*Grutter* and *Gratz* case involving Section 1981, that Title VII standards (see Section 5.2.1 of this book), rather than equal protection standards, would apply with respect to “the order and nature of the proof” of intentional discrimination for a Section 1981 claim against a private school that does not receive federal funds; see *Doe v. Kamehameha Schools/Bernice Pauahi Bishop Estate*, 416 F.3d 1025 (9th Cir. 2005).

<sup>16</sup>The department, however, cannot require the institution to use admissions quotas as part of an affirmative action plan. Section 408 of the Education Amendments of 1976 (20 U.S.C. § 1232i(c)) provides that:

It shall be unlawful for the Secretary [of Education] to defer or limit any federal assistance on the basis of any failure to comply with the imposition of quotas (or any other numerical requirements which have the effect of imposing quotas) on the student admission practices of an institution of higher education or community college receiving Federal financial assistance.

The first case to confront the constitutionality of affirmative action admissions programs in postsecondary education was *DeFunis v. Odegaard*, 507 P.2d 1169 (Wash. 1973), *dismissed as moot*, 416 U.S. 312 (1974), *on remand*, 529 P.2d 438 (Wash. 1974). After DeFunis, a white male, was denied admission to the University of Washington's law school, he filed suit alleging that less-qualified minority applicants had been accepted and that, but for the affirmative action program, he would have been admitted. The law school admissions committee had calculated each applicant's predicted first-year average (PFYA) through a formula that considered the applicant's LSAT scores and junior-senior undergraduate average. The committee had attached less importance to a minority applicant's PFYA and had considered minority applications separately from other applications. DeFunis's PFYA was higher than those of all but one of the minority applicants admitted in the year he was rejected.

The state trial court ordered that DeFunis be admitted, and he entered the law school. The Washington State Supreme Court reversed the lower court and upheld the law school's affirmative action program under the equal protection clause as a constitutionally acceptable admissions tool justified by several "compelling" state interests. Among them were the "interest in promoting integration in public education," the "educational interest . . . in producing a racially balanced student body at the law school," and the interest in alleviating "the shortage of minority attorneys—and, consequently, minority prosecutors, judges, and public officials." When DeFunis sought review in the U.S. Supreme Court, he was permitted to remain in school pending the Court's final disposition of the case. Subsequently, in a *per curiam* opinion with four Justices dissenting, the Court declared the case moot because, by then, DeFunis was in his final quarter of law school, and the university had asserted that his registration would remain effective regardless of the case's final outcome. The Court vacated the Washington State Supreme Court's judgment and remanded the case to that court for appropriate disposition.

Though the *per curiam* opinion in *DeFunis* does not discuss the merits of the case, Justice Douglas's dissent presents a thought-provoking analysis of affirmative action in admissions. He discussed both "uniform" (or "race-neutral" plans) and "differential" (or "compensatory") plans (both further discussed below in this subsection) and then gave this assessment of the University of Washington law school's plan:

[Under the] policy . . . presented by this case the [admissions] committee would be making decisions on the basis of individual attributes, rather than according a preference solely on the basis of race. To be sure, the racial preference here was not absolute—the committee did not admit all applicants from the four favored groups. But it did accord all such applicants a preference by applying, to an extent not precisely ascertainable from the record, different standards by which to judge their applications, with the result that the committee admitted minority applicants who, in the school's own judgment, were less promising than other applicants who were rejected. Furthermore, it is apparent that because the admissions committee compared minority applicants only with one another, it was necessary to reserve some proportion of the class for them,

even if at the outset a precise number of places were not set aside. That proportion, apparently 15% to 20%, was chosen because the school determined it to be “reasonable,” although no explanation is provided as to how that number rather than some other was found appropriate. Without becoming embroiled in a semantic debate over whether this practice constitutes a “quota,” it is clear that given the limitation on the total number of applicants who could be accepted, this policy did reduce the total number of places for which DeFunis could compete—solely on account of his race [416 U.S. at 332–33].

Justice Douglas did not conclude that the university’s policy was therefore unconstitutional but, rather, that it would be unconstitutional unless, after a new trial, the court found that it took account of “cultural standards of a diverse rather than a homogeneous society” in a “racially neutral” way.

Five years after it had avoided the issue in *DeFunis*, the Supreme Court considered the legality of affirmative action in the now-famous *Bakke* case, *Regents of the University of California v. Bakke*, 438 U.S. 265 (1978). The plaintiff, a white male twice rejected from the medical school of the University of California at Davis, had challenged the school’s affirmative action plan under which it had set aside 16 places out of 100 for minority applicants whose applications were considered separately from other applicants. According to Justice Powell’s description of the plan, with which a majority of the Justices agreed:

[T]he faculty devised a special admissions program to increase the representation of “disadvantaged” students in each medical school class. The special program consisted of a separate admissions system operating in coordination with the regular admissions process. . . .

[C]andidates were asked to indicate whether they wished to be considered as . . . members of a “minority group,” which the Medical School apparently viewed as “Blacks,” “Chicanos,” “Asians,” and “American Indians.” [If so], the application was forwarded to the special admissions committee. . . . [T]he applications then were rated by the special committee in a fashion similar to that used by the general admissions committee, except that special candidates did not have to meet the 2.5 grade point average cutoff applied to regular applicant. . . .

From [1971] through 1974, the special program resulted in the admission of twenty-one black students, thirty Mexican-Americans, and twelve Asians, for a total of sixty-three minority students. Over the same period, the regular admissions program produced one black, six Mexican-Americans, and thirty-seven Asians, for a total of forty-four minority students. Although disadvantaged whites applied to the special program in large numbers, none received an offer of admission through that process [438 U.S. at 272–76].

The university sought to justify its program by citing the great need for doctors to work in underserved minority communities, the need to compensate for the effects of societal discrimination against minorities, the need to reduce the historical deficit of minorities in the medical profession, and the need to diversify the student body. In analyzing these justifications, the California Supreme Court had applied a “compelling state interest” test, such as that used by the state court in *DeFunis*, along with a “less objectionable alternative test.” Although it

assumed that the university's interests were compelling, this court determined that the university had not demonstrated that the program was the least burdensome alternative available for achieving its goals. (This analysis of possible alternatives is comparable to the "narrow tailoring" test that appeared in later litigation and was used by the Court in *Grutter* and *Gratz*.) The California court therefore held that the program operated unconstitutionally to exclude Bakke on account of his race and ordered that Bakke be admitted to medical school. It further held that the Constitution prohibited the university from giving any consideration to race in its admissions process and enjoined the university from doing so (*Bakke v. Regents of the University of California*, 553 P.2d 1152 (Cal. 1976)).

The U.S. Supreme Court affirmed the first part of this decision and reversed the second part. The Justices wrote six opinions (totaling 157 pages), none of which commanded a majority of the Court. Three of these opinions deserve particular consideration: (1) Justice Powell's opinion—in some parts of which various of the other Justices joined; (2) Justice Brennan's opinion—in which three other Justices joined (referred to below as the "Brennan group"); and (3) Justice Stevens's opinion—in which three other Justices joined (referred to below as the "Stevens group").

A bare majority of the Justices—four (the "Stevens group") relying on Title VI and one (Justice Powell) relying on the Fourteenth Amendment's equal protection clause—agreed that the University of California at Davis program unlawfully discriminated against Bakke, thus affirming the first part of the California court's judgment (ordering Bakke's admission). A different majority of five Justices—Justice Powell and the "Brennan group"—agreed that "the state has a substantial interest that legitimately may be served by a properly devised admissions program involving the competitive consideration of race and ethnic origin" (438 U.S. 265, 320 (1978)), thus reversing the second part of the California court's judgment (prohibiting the consideration of race in admissions). In summary, then, the Court invalidated the medical school's affirmative action plan by a 5-to-4 vote; but by a different 5-to-4 vote, the Court ruled that some consideration of race is nevertheless permissible in affirmative action admissions plans. Justice Powell was the only Justice in the majority for both votes.

In their various opinions in *Bakke*, the Justices debated the issues of what standard of review applies under the equal protection clause, what the valid justifications for affirmative action programs are, and the extent to which such programs can be race conscious, and whether the Title VI requirements for affirmative action are the same as those under the equal protection clause. No majority agreed fully on any of these issues, and they continued to be debated in the years following *Bakke*. Nevertheless, a review and comparison of opinions reveals three basic principles established by *Bakke* that were followed by later courts.

*First*, racial preferences that partake of quotas—rigid numerical or percentage goals defined specifically by race—are impermissible. *Second*, separate systems for reviewing minority applications—with procedures and criteria different from those used for nonminority applications—are impermissible. *Third*, Title VI embodies Fourteenth Amendment principles of equal protection and applies to race discrimination in the same way as the equal protection clause.

In addition to these principles that a majority of the Court adhered to in their various opinions, the Powell opinion in *Bakke* also includes important additional guidance for affirmative action plans. This guidance focuses primarily on the concept of student body diversity, and on the importance of individualized comparisons of all applicants. In addition, the Powell opinion (picking up on the Douglas opinion in *DeFunis*) addresses the concept of *differential* or compensatory affirmative action plans.

The core of Justice Powell’s guidance on student body diversity is that:

the state interest that would justify consideration of race or ethnic background . . . is not an interest in simple ethnic diversity, in which a specified percentage of the student body is in effect guaranteed to be members of selected ethnic groups, with the remaining percentage an undifferentiated aggregation of students. The diversity that furthers a compelling state interest encompasses a far broader array of qualifications and characteristics of which racial or ethnic origin is but a single though important element [438 U.S. at 315 (Powell, J.).]

The crux of Justice Powell’s guidance on individualized comparisons of applicants is that:

race or ethnic background may be deemed a “plus” in a particular applicant’s file, yet it [may] not insulate the individual from *comparison with all other candidates for the available seats*. The file of a particular black applicant may be examined for his potential contribution to diversity *without the factor of race being decisive* when compared, for example, with that of an applicant identified as an Italian-American if the latter is thought to exhibit qualities more likely to promote beneficial education pluralism. . . . In short, an admissions program operated in this way is flexible enough to *consider all pertinent elements of diversity in light of the particular qualifications of each applicant*, and to place them on the same footing for consideration, although not necessarily according to them the same weight. Indeed, the weight attributed to a particular quality may vary from year to year depending upon the “mix” both of the student body and the applicants for the incoming class [438 U.S. at 317–18 (Powell, J.) (emphasis added)].

And regarding differential admissions plans, Powell stated:

Racial classifications in admissions conceivably could serve a . . . purpose . . . which petitioner does not articulate: fair appraisal of each individual’s academic promise in light of some bias in grading or testing procedures. To the extent that race and ethnic background were considered only to the extent of curing established inaccuracies in predicting academic performance, it might be argued that there is no “preference” at all [438 U.S. at 306 (Powell, J.)].

In completing his analysis in *Bakke*, Justice Powell used a “strict scrutiny” standard of review. The Brennan group, in contrast, used an “intermediate scrutiny” standard; and the Stevens group, relying on Title VI, did not directly confront the standard-of-review issue. Cases after *Bakke* but before *Grutter* and *Gratz* did resolve this issue, however—in particular *City of Richmond v. J. A. Croson Co.*,

488 U.S. 469 (1989), and *Adarand Constructors, Inc., v. Peña*, 515 U.S. 200, 220–21 (1995), both discussed in Section 5.4.2 of this book. Under these cases, a race-conscious affirmative action plan will be constitutional only if the institution can prove that its use of race is: (1) “narrowly tailored” to (2) further “compelling governmental interest.” This “strict scrutiny” standard of review had previously been used in equal protection race discrimination cases that did not involve reverse discrimination; it is also the standard that was used by Justice Powell in *Bakke* (see 438 U.S. at 290–91) and by the state supreme courts in *DeFunis* and *Bakke*.

After the *Bakke* case, absent any consensus on the Court, most colleges and universities with affirmative action admissions plans followed the Powell guidelines. As the Court later explained in *Grutter*: “Since this Court’s splintered decision in *Bakke*, Justice Powell’s opinion . . . has served as the touchstone for constitutional analysis of race-conscious admissions policies. Public and private universities across the Nation have modeled their own admissions programs on Justice Powell’s views . . .” (539 U.S. at 307). In early challenges to the Powell type of race-conscious plan, the institutions usually prevailed. Two important state court decisions upholding affirmative action programs of state professional schools provide examples. In *McDonald v. Hogness*, 598 P.2d 707 (Wash. 1979), the court relied heavily on the Powell opinion as well as the Brennan opinion in *Bakke* in upholding the University of Washington medical school’s race-conscious admissions policy. And in *DeRonde v. Regents of the University of California*, 625 P.2d 220 (Cal. 1981), another state court relied heavily on the Powell and Brennan opinions, and on the Washington court’s ruling in *McDonald*, to uphold the University of California at Davis law school’s affirmative action policy. Both courts accepted student body diversity as a constitutionally sufficient justification for race-conscious admissions policies. A federal district court in New York did so as well in *Davis v. Halpern*, 768 F. Supp. 968 (E.D.N.Y. 1991).

After a period of relative quiet, however, a new round of court challenges to race-conscious admissions plans began in the 1990s, with several leading cases using reasoning and reaching results different from the earlier post-*Bakke* cases. In *Hopwood v. Texas*, 78 F.3d 932 (5th Cir. 1996), for instance, four rejected applicants sued the state and the University of Texas (UT) under the equal protection clause and Title VI, claiming that they were denied admission to the UT law school on the basis of their race. The plaintiffs challenged the continuing vitality of Justice Powell’s opinion in the *Bakke* case and more generally challenged the authority of colleges and universities to use “diversity” as a rationale for considering race, gender, or other such characteristics as a “plus” factor in admissions. The law school’s affirmative action admissions program gave preferences to African American and Mexican American applicants only and used a separate committee to evaluate their applications. “Cut-off scores” used to allocate applicants to various categories in the admissions process were lower for blacks and Mexican Americans than for other applicants, resulting in the admission of students in the “minority” category whose college grades and LSAT scores were lower than those of some white applicants who had been rejected.

The trial and appellate courts used the strict scrutiny standard of review, requiring the defendant to establish that it had a “compelling interest” in using

racial preferences and that its use of racial preferences was “narrowly tailored” to achieve its compelling interest. The law school had presented five justifications for its affirmative action admissions program, each of which, it argued, met the compelling state interest test: (1) to achieve the law school’s mission of providing a first-class legal education to members of the two largest minority groups in Texas; (2) to achieve a diverse student body; (3) to remedy the present effects of past discrimination in the Texas public school system; (4) to comply with the 1983 consent decree with the Office of Civil Rights, U.S. Department of Education, regarding recruitment of African American and Mexican American students; and (5) to comply with the standards of the American Bar Association and American Association of Law Schools regarding diversity. The federal district court ruled that the portions of the law school’s admissions program that gave “minority” applicants a separate review process violated the Fourteenth Amendment—following Justice Powell’s reasoning on this point in his *Bakke* opinion. The district court also held, however, that the affirmative action plan furthered the compelling interest of attaining diversity in the student body (the law school’s second justification) and that it served to remedy prior discrimination by the State of Texas in its entire public school system, including elementary and secondary schools (the law school’s third justification). A three-judge panel of the appellate court rejected these justifications and invalidated the law school’s program. Addressing the diversity rationale first, the Fifth Circuit panel specifically rejected Justice Powell’s reasoning about diversity and ruled that “achieving a diverse student body is not a compelling interest under the Fourteenth Amendment” (78 F.3d at 944). The appellate court then addressed the rationale of remedying prior discrimination. Although the court recognized that the state of Texas had discriminated on the basis of race and ethnicity in its public education system, the law school’s admission program was not designed to remedy that prior unlawful conduct because the program gave preferences to minorities from outside Texas and to minorities who had attended private schools. Furthermore, said the court, in order for the admissions program to comply with constitutional requirements, the law school would have had to present evidence of a history of its own prior unlawful segregation. “A broad program that sweeps in all minorities with a remedy that is in no way related to past harms cannot survive constitutional scrutiny” (78 F.3d at 951). Once prior discrimination had been established, the law school would then have to trace present effects from the prior discrimination, to establish the size of those effects, and to develop a limited plan to remedy the harm. The “present effects” cited by both the law school and the district court—a bad reputation in the minority community and a perceived hostile environment in the law school for minority students—were insufficient, said the court, citing the Fourth Circuit’s earlier opinion in *Podberesky v. Kirwan*, 38 F.3d at 147 (4th Cir. 1994) (discussed in Section 8.3.4).<sup>17</sup> One appellate judge, although concurring

---

<sup>17</sup>Another federal circuit court used reasoning similar to *Hopwood*’s to invalidate the University of Georgia’s undergraduate admissions policy (*Johnson v. Board of Regents of the University of Georgia*, 263 F. 3d 1234 (11th Cir. 2001)).

in the result reached by the panel, disagreed with the majority's statement that diversity could never be a compelling state interest and—foreshadowing *Grutter*—asserted that it was an open question whether diversity could provide a compelling interest for a public graduate school's use of racial preferences in its admissions program.<sup>18</sup>

After *Hopwood*, but before *Grutter* and *Gratz*, various important developments took place outside the courts. In Texas, the state legislature passed a statute providing alternative means by which to foster diversity in the undergraduate programs of public colleges and universities in the state. The statute reads:

(a) Each general academic teaching institution shall admit an applicant for admission to the institution as an undergraduate student if the applicant graduated with a grade point average in the top 10 percent of the student's high school graduating class in one of the two school years preceding the academic year for which the applicant is applying for admission and the applicant graduated from a public or private high school in this state accredited by a generally recognized accrediting organization or from a high school operated by the United States Department of Defense. . . .

(b) After admitting an applicant under this section, the institution shall review the applicant's record, and any other factor the institution considers appropriate, to determine whether the applicant may require additional preparation for college-level work or would benefit from inclusion in a retention program . . . [Tex. Educ. Code Title 3, Ch. 51, § 51.803].

Florida and California also adopted “percentage plans.” (For analysis of these plans, see Michelle Adams, “Isn't It Ironic? The Central Paradox at the Heart of

---

<sup>18</sup>In another Texas case challenging racial preferences—decided after *Hopwood* but before the U.S. Supreme Court's decisions in *Grutter* and *Gratz*—the Court provided guidance on how to resolve an institution's claims that the plaintiff would not have been admitted even if no racial preferences had been used. In *Lesage v. State of Texas*, 158 F.3d 213 (5th Cir. 1998), a three-judge appellate panel reversed the district court's summary judgment for the plaintiff because the decision to reject Lesage had been made prior to consideration of the applicants' race, and Lesage would not have been admitted irrespective of any racial considerations that might later have been used. Even if Lesage would not have been admitted absent racial preferences, said the appellate court, that issue was relevant only to the amount of damages, not to the determination of whether the university acted unlawfully by considering race and ethnicity in the preliminary application review process. If the university did employ racial preferences in the application screening process, then all applicants were not competing on an “equal footing,” and this fact itself, whether or not any particular applicant would ultimately have been admitted, constituted an injury to nonminority applicants. The U.S. Supreme Court then disagreed with the reasoning of the appellate court (*Texas v. Lesage*, 528 U.S. 18 (1999)). Relying on the *Mt. Healthy* case (Section 7.6), the Court's *per curiam* opinion reasoned that, if a public institution could establish that it would have made the same decision without using the “forbidden consideration” (here, the applicants' race), then it could not be liable for that particular decision. The Court credited the university's argument that Lesage would not have been admitted even if the admissions process had been completely race neutral because seventy-three rejected applicants had higher grade point averages and higher Graduate Record Examination scores. On the other hand, said the Court, if a plaintiff challenged an ongoing program of race-conscious admissions, rather than a particular admissions decision, and sought “forward-looking” relief, there was no need to establish that he or she would have been admitted. Cases and authorities on these issues are collected in Annot., “Standing to Challenge College or Professional School Admissions Program Which Gives Preference to Minority or Disadvantaged Applicants,” 60 A.L.R. Fed. 612.

‘Percentage Plans,’” 62 *Ohio St. L.J.* 1729 (2001).) In the state of Washington, voters passed Initiative Measure 200 (I-200) (codified as Wash. Rev. Code § 49.60.400(1)), which prohibited discrimination or preferential treatment on the basis of race (and other suspect classes) in the state’s “operation of public employment, public education or public contracting.”<sup>19</sup> Similarly, the voters of California approved Proposition 209, an amendment to their state constitution that outlawed voluntary affirmative action. The California measure, passed in 1996, states that “the state shall not discriminate against, or grant preferential treatment to, any individual or group on the basis of race, sex, color, ethnicity, or national origin in the operation of public employment, public education, or public contracting” (Cal. Const., Art. I, § 31(a)). Several civil rights groups challenged the measure on constitutional grounds, arguing that the provision violated the equal protection clause of the Fourteenth Amendment. The trial court entered a preliminary injunction and temporary restraining order to stop the state from enforcing the law. In *Coalition for Economic Equity v. Wilson*, 122 F.3d 692 (9th Cir. 1997), the U.S. Court of Appeals overturned the ruling of the trial court. According to the appellate court, Proposition 209 imposed no burden on racial or gender minorities, since it forbade discrimination against them. Since there is no constitutional right to preferential treatment, said the court, forbidding preferential treatment on the basis of race or gender did not injure these groups. Characterizing the law as “neutral,” and concluding that the plaintiffs had “no likelihood of success on the merits,” the court vacated the preliminary injunction and remanded the case to the trial court. (For further discussion of the appellate court’s opinion, see Jill Bodensteiner, “Discrimination Against Students in Higher Education: A Review of the 1997 Judicial Decisions,” 25 *J. Coll. & Univ. Law* 331, 342–46 (1998).)

In 2003, the U.S. Supreme Court heard and decided the two University of Michigan cases together as “companion cases.” In *Grutter v. Bollinger*, 539 U.S. 306 (2003), rejected white applicants challenged the law school’s plan for affirmative action in admissions; in *Gratz v. Bollinger*, 539 U.S. 244 (2003), rejected white applicants challenged a plan of the university’s undergraduate College of Literature, Science, and the Arts (LSA). Both plans were voluntary, race-conscious plans, but they were quite different in their particulars, as explained below. In each case, the plaintiffs alleged that the affirmative action plan violated not only the equal protection clause but also Title VI (42 U.S.C. § 2000d) and Section 1981 (42 U.S.C. § 1981). In *Grutter*, the Court upheld the law school plan by a 5-to-4 vote; in *Gratz*, the Court invalidated the undergraduate plan by a 6-to-3 vote. Justice O’Connor, who authored the majority opinion in *Grutter*, was the only Justice

---

<sup>19</sup>The passage of I-200 resulted in the dismissal of the prospective relief claims in a major lawsuit challenging the University of Washington law school’s race-conscious affirmative action plan. See *Smith v. University of Washington Law School*, 233 F.3d 1188 (9th Cir. 2000). Since the new state law prohibited the law school from continuing to use its admissions policy, the plaintiff’s claim was moot. The court allowed the case to continue, however, with regard to plaintiff’s claims for damages for having been denied admission under the law school’s pre-I-200 policy. In 2004, subsequent to the U.S. Supreme Court’s rulings in *Grutter* and *Gratz* (below, this subsection), the appellate court decided this part of the case in the university’s favor (*Smith v. University of Washington*, 392 F.3d 367 (9th Cir. 2004)).

in the majority in both cases. All together, the Justices issued thirteen opinions in the two cases. (See generally *Reaffirming Diversity: A Legal Analysis of the University of Michigan Affirmative Action Cases* (2003), a report by the Harvard Civil Rights Project, available at <http://www.civilrightsproject.harvard.edu>.) The *Grutter* majority reaffirmed the two basic points upon which a majority of the Justices in *Bakke* agreed: that rigid racial quotas are impermissible, and that other, more flexible forms of racial preferences are permissible. Further, the *Grutter* majority explicitly approved and adopted Justice Powell's reasoning in the *Bakke* case (539 U.S. at 323–25) and for the most part the *Gratz* majority did so as well (539 U.S. at 270–74). Justice Powell's principles regarding affirmative action in admissions, adhered to only by Justice Powell in *Bakke*, thus have now become the principles of the Court.

Like Justice Powell, both the *Grutter* and *Gratz* majorities applied a strict scrutiny standard of review. As explained by the *Gratz* majority, "strict scrutiny" review means that "any person, of whatever race, has the right to demand that any governmental actor subject to the Constitution justify any racial classification subjecting that person to unequal treatment under the strictest of judicial scrutiny" (*Gratz*, 539 U.S. at 270, quoting *Adarand*, 515 U.S. at 224). The *Grutter* majority used the same strict scrutiny standard but tempered its application to race-conscious admissions policies by emphasizing that courts should defer to the institution's own judgments about its educational mission. Both the law school policy (*Grutter*) and the undergraduate college policy (*Gratz*) met the "compelling interest" component of strict scrutiny (see below), but only the law school plan met the second, "narrow tailoring" prong.<sup>20</sup> Analytically, that is the difference between the two cases and the reason for the differing results.

In *Grutter*, the lead plaintiff, a white Michigan resident, sued university president Lee Bollinger and others, seeking damages, an order requiring her admission to the law school, and an injunction prohibiting continued racial discrimination by the law school. The plaintiff alleged that the law school used race "as a 'predominant' factor, giving applicants who belong to certain minority groups 'a significantly greater chance of admission than students with similar credentials from disfavored racial groups'" (539 U.S. at 306). The law school's admissions policy, drafted and adopted by a faculty committee in 1992, expresses the law school's interest in "achiev[ing] that diversity which has the potential to enrich everyone's education. . . ." The policy recognizes "many possible bases for diversity admissions" and provides that all such "diversity contributions are eligible for 'substantial weight' in the admissions process." While diversity therefore is not defined "solely in terms of racial and ethnic status," the policy does reaffirm a commitment to "racial and ethnic diversity with special reference to the inclusion of students from groups that have been historically discriminated against, like African-Americans, Hispanics and Native

---

<sup>20</sup>"Narrow tailoring" is a technical term, and its meaning is not immediately obvious. To enhance clarity, it is important to note that the term applies to the *means* by which an institution seeks to achieve the *end* of student body diversity—and in particular to the *race-conscious means* by which the institution seeks to achieve the *end* of racial and ethnic diversity.

Americans.” (See 539 U.S. at 315–16, quoting from the trial court record.) The significance of race in admissions decisions “varies from one applicant to another;” while race may play no role in the decision to admit some students, for others “it may be a ‘determinative’ factor.” The law school’s goal is to include a “critical mass of under-represented minority students” in each class. “Meaningful numbers” rising to the level of a “critical mass” do not indicate a particular “number, percentage, or range of numbers or percentages,” but only “numbers such that the under-represented minority students do not feel isolated or like spokespersons for their race.” (See 539 U.S. at 314–16, quoting and paraphrasing testimony of the university’s witnesses.)

The Court majority in *Grutter* (Justice O’Connor, joined by Justices Stevens, Souter, Ginsburg, and Breyer), adopting the reasoning of Justice Powell’s *Bakke* opinion, rejected the plaintiffs’ arguments. First, the *Grutter* majority held that “student body diversity is a compelling state interest that can justify the use of race in University admissions” (539 U.S. at 325). This is because “it is necessary that the path to leadership be visibly open to talented and qualified individuals of every race and ethnicity. All members of our heterogeneous society must have confidence in the openness and integrity of the educational institutions that provide . . . the training and education necessary to succeed in America” (539 U.S. at 332–33). Race and ethnicity, however, are not the only factors pertinent to student body diversity. Rather, student body diversity, as a compelling interest, entails a “broad range of qualities and experiences that may be considered valuable contributions” and “a wide variety of characteristics besides race and ethnicity . . .” (*Grutter*, 539 U.S. at 338–39). Moreover, the majority indicated that courts should “defer” to universities’ judgments about “the educational benefits that diversity is designed to produce.” “The institution’s educational judgment that [student body] diversity is essential to its educational mission,” said the Court, “is one to which we defer” (539 U.S. at 328).

Next, the majority in *Grutter* held that the law school’s admissions policy was “narrowly tailored” to the interest in student body diversity. The policy’s stated goal of “attaining a critical mass of underrepresented minority students” did not constitute a prohibited quota (539 U.S. at 335–36). Instead, the admissions process was “flexible enough” to ensure individual treatment for each applicant without “race or ethnicity” becoming “the defining feature” of the application (539 U.S. at 337). It was particularly important to the Court, regarding narrow tailoring, that “the Law School engages in a highly individualized, holistic review of each applicant’s file, giving serious consideration to all the ways an applicant might contribute to a diverse educational environment”; that “the Law School awards no mechanical, predetermined diversity ‘bonuses’ based on race or ethnicity” (as had occurred in the program at issue in *Gratz*); that the law school “adequately ensures that all factors that may contribute to student body diversity are meaningfully considered alongside race in admissions decisions” (as the Harvard plan approved by Justice Powell in *Bakke* had done); that the “Law School does not . . . limit in any way the broad range of qualities and experiences that may be considered valuable contributions to student body diversity” and “seriously considers each ‘applicant’s promise of making a

notable contribution to the class by way of a particular strength, attainment, or characteristic’”; that all “applicants have the opportunity to highlight their own potential diversity contributions through the submission of a personal statement, letters of recommendation, and an essay describing the ways in which the applicant will contribute to the life and diversity of the Law School”; and that, in practice, “the Law School actually gives substantial weight to diversity factors besides race, . . . frequently accept[ing] nonminority applicants with grades and test scores lower than underrepresented minority applicants (and other nonminority applicants) who are rejected . . .” (539 U.S. at 337–39).

Completing its narrow tailoring analysis, the Court in *Grutter* determined that the “holistic review” provided for by the policy does not “unduly” burden individuals who are not members of the favored racial and ethnic groups. The law school, moreover, had “sufficiently considered workable race-neutral alternatives” before adopting any racial preferences. Since the law school’s policy therefore met both components of strict scrutiny review, the Court upheld the policy.

In *Gratz v. Bollinger*, the case involving the University of Michigan’s undergraduate College of Literature, Science, and the Arts, the plaintiffs sought damages, declaratory relief, and an injunction prohibiting continued discrimination by the university. They argued that “diversity as a basis for employing racial preferences is simply too open-ended, ill-defined, and indefinite to constitute a compelling interest capable of supporting narrowly tailored means” (539 U.S. at 268, quoting Brief for Petitioners) and, further, that the university’s admissions policy was not narrowly tailored to achieve the end of student body diversity.

According to the Court, the university’s “Office of Undergraduate Admissions [oversaw] the . . . admissions process” and promulgated “written guidelines for each academic year.” Under its admissions policy, the undergraduate college considered African Americans, Hispanics, and Native Americans to be “underrepresented minorities.” The admissions policy employed a “selection index” under which each applicant could score up to a maximum of 150 points. Applicants received points in consideration of their “high school grade point average, standardized text scores, academic quality and curriculum strength of applicant’s high school, in-state residency, alumni relationship, personal essay, and personal achievement or leadership” (539 U.S. at 254–55). Under an additional “miscellaneous” category, “an applicant was entitled to 20 points based upon . . . membership in an under-represented racial or ethnic minority group.” An Admissions Review Committee provided an additional level of review for certain applicants flagged by admissions counselors. To be flagged, the applicant must have achieved “a minimum selection index score” and “possess a quality or characteristic important to the University’s composition of its freshman class,” examples of which included “socioeconomic disadvantage” and “underrepresented race, ethnicity or geography.” While the evidence did not reveal “precisely how many applications [were] flagged for this individualized consideration . . . , it [was] undisputed that such consideration [was] the exception and not the rule . . .” (539 U.S. at 274).

The *Gratz* majority (Chief Justice Rehnquist, joined by Justices Scalia, O’Connor, Kennedy, and Thomas) held that “the admissions policy violates the

Equal Protection Clause of the Fourteenth Amendment” (as well as Title VI and Section 1981) because it fails to provide “individualized consideration” of each applicant and therefore is not “narrowly tailored” to achieve the compelling interest in student body diversity. Specifically:

The LSA’s policy automatically distributes 20 points to every single applicant from an “underrepresented minority” group, as defined by the University. The only consideration that accompanies this distribution of points is a factual review of an application to determine whether an individual is a member of one of these minority groups. Moreover, unlike Justice Powell’s example, where the race of a “particular black applicant” could be considered without being decisive, see *Bakke*, 438 U.S., at 317, 98 S. Ct. 2733, the LSA’s automatic distribution of 20 points has the effect of making “the factor of race . . . decisive” for virtually every minimally qualified underrepresented minority applicant [539 U.S. at 271–72].

The undergraduate plan, therefore, was “not narrowly tailored to achieve the LSA’s compelling interest in student body diversity” and therefore failed strict scrutiny review.

Because Title VI and the equal protection clause embody the same legal standards, the *Grutter* and *Gratz* principles are applicable to both public institutions and private institutions that receive federal financial assistance. These principles are also likely to apply, in general, to institutions’ race-conscious decision making in areas beyond admissions (for example, financial aid (as discussed in Section 8.3.4), student orientation programs, or student housing). The principles of Justice Powell’s opinion in *Bakke* also apply, since the Court approved and adopted them in *Grutter* and *Gratz*. These various principles, according to the Court, must be followed “in practice as well as in theory” (*Grutter*, 539 U.S. at 338).

Read against the backdrop of *Bakke*, the *Grutter* and *Gratz* cases have brought some clarity to the law of affirmative action in admissions. The legal and policy issues remain sensitive, however, and administrators should involve legal counsel fully when considering the adoption or revision of any affirmative action admissions policy. The following seventeen guidelines—the last twelve of which apply specifically to race-conscious plans—can assist institutions in their deliberations.<sup>21</sup>

1. As a threshold matter, an institution may wish to consider whether it has ever discriminated against minorities or women in its admissions policies. If any such unlawful discrimination has occurred in the past, and its existence could be demonstrated with evidence sufficient to support a judicial finding of unlawful discrimination, the law requires that the institution use affirmative action to the extent necessary to overcome any present effects of the past discrimination.

---

<sup>21</sup>As for the other parts of this book that set out guidelines or suggestions for institutions or others, the seventeen guidelines here are not intended as legal advice. For legal advice on the matters covered in these guidelines or elsewhere in this Section, institutional administrators should consult their institution’s legal counsel.

(See the discussion in the *Bakke* opinions, 438 U.S. at 284, 328, & 414; see also the *Hopwood* case (above); and *Podberesky v. Kirwan*, discussed in Section 8.3.4.) The limits that *Grutter*, *Gratz*, and *Bakke* place on the voluntary use of racial preferences for diversity purposes do not apply to situations in which the institution itself has engaged in prior unlawful discrimination whose effects continue to the present. At least since *Bakke*, it has been clear that, when “an institution has been found, by a court, legislature, or administrative agency, to have discriminated on the basis of race, color, or national origin[,] [r]ace-conscious procedures that are impermissible in voluntary affirmative action programs may be required [in order] to correct specific acts of past discrimination committed by an institution or other entity to which the institution is directly related” (U.S. Dept. HEW, Policy Interpretation of Title VI, 44 Fed. Reg. 58509 at 58510 (October 10, 1979)). (For an example of a case applying this principle, see *Geier v. Alexander*, 801 F.2d 799 (6th Cir. 1986).) If a court or administrative agency makes such a finding and orders the institution to remedy the present effects of the past discrimination, the institution’s plan will be a *mandatory* (or remedial) affirmative action plan (see discussion at the beginning of this subsection). Absent any such finding and order by a government body, the institution may nevertheless implement a *voluntary* affirmative action plan designed to remedy the present effects of past discrimination, if it makes its own findings on past discrimination and its present effects, and these findings are supportable with evidence of discrimination of the type and extent used by courts in affirmative action cases.

With respect to voluntary affirmative action, it is clear that institutions have a “compelling interest in remedying past and present discrimination” (*United States v. Paradise*, 480 U.S. 149, 167 (1987)). But this rationale may be used only when the institution seeks to remedy its own prior discrimination or that of other entities whose discrimination the institution has supported (or perhaps, for a public institution, the discrimination of the higher education system of which it is a constituent part). Remedying prior *societal* discrimination does not provide justification for the use of racial preferences—at least not unless the institution has been a participant or “passive participant” in such discrimination (see *City of Richmond v. Croson Co.*, 488 U.S. 469, 485–86, 492 (1989)). *Croson* and *Adarand Constructors, Inc., v. Peña*, 515 U.S. 200 (1995), taken together, make this point in cases that are not about education but whose reasoning would extend to education admissions. (For an education case that makes the same point, see *Wygant v. Jackson*, 476 U.S. 267, 274 (1986) (plurality opinion of Powell, J.).)

2. In considering whether to adopt or revise an affirmative action policy for admissions, an institution should rely demonstrably on the educational expertise of its faculty and academic administrators and involve policy makers at the highest levels of authority within the institution. These planners and decision makers should exercise special care in determining the institution’s purposes and objectives in light of its educational mission, making their decisions in the context of these purposes and objectives. A lower court made these points clearly in a case decided two years before *Bakke* and more than twenty-five years before

*Grutter and Gratz*. In this case, *Hupart v. Board of Higher Education of the City of New York*, 420 F. Supp. 1087 (S.D.N.Y. 1976), the court warned:

[E]very distinction made on a racial basis . . . must be justified. . . . It cannot be accomplished thoughtlessly or covertly, then justified after the fact. The defendants cannot sustain their burden of justification by coming to court with an array of hypothetical and *post facto* justifications for discrimination that has occurred either without their approval or without their conscious and formal choice to discriminate as a matter of official policy. It is not for the court to supply a . . . compelling basis . . . to sustain the questioned state action [420 F. Supp. at 1106].

3. An institution may consider one or a combination of two basic approaches to voluntary affirmative action: the *race-neutral* or *uniform* approach, and the *race-conscious* or *preferential* approach (see guidelines 4 and 6 below). An institution might also consider a third possible approach, falling between the other two, which may be called a *differential*, or *compensatory*, approach (see guideline 5 below). While all three approaches can be implemented lawfully, the potential for legal challenge increases as the institution proceeds from a race-neutral to a differential to a race-conscious approach. The potential for substantially increasing minority enrollment also increases, however, so that an institution that is deterred by the possibility of legal action may also be forsaking part of the means to achieve its educational and societal goals.

4. A *race-neutral* or *uniform* affirmative action policy involves revising or supplementing the institution's general admissions standards or procedures so that they are more sensitively attuned to the varying qualifications and potential contributions of all applicants, including minority and disadvantaged applicants. These changes are then applied uniformly to all applicants. For example, all applicants might be eligible for credit for working to help put themselves through school, for demonstrated commitment to living and working in a blighted geographical area, for being the first in one's family to attend college, for residing in an inner-city area from which the institution typically draws very few students, or for overcoming handicaps or disadvantages. Or institutions might cease using preferences for "legacies," or for members of a particular religious denomination whose membership includes relatively few minorities. Or institutions may use test scores from additional tests that supplement traditional standardized tests and test abilities beyond what the standardized test measures (for an example, see Robert Sternberg, "Accomplishing the Goals of Affirmative Action—With or Without Affirmative Action," *Change*, January–February 2005, 6, 10–13). Such changes would allow all candidates—regardless of race, ethnicity, or sex—to demonstrate particular pertinent qualities that may not be reflected in grades or scores on traditional tests. Numerical cutoffs could still be used if the institution determines that applicants with grades or test scores above or below a certain number should be automatically accepted or rejected.

In the *DeFunis* case in the U.S. Supreme Court (discussed above), Justice Douglas described aspects of such a policy (416 U.S. at 331–32), as did the

California Supreme Court in *Bakke* (553 P.2d at 1165–66). Justice Douglas gave this explanation of a uniform plan:

The Equal Protection Clause did not enact a requirement that law schools employ as the sole criterion for admissions a formula based upon the LSAT and undergraduate grades, nor does it prohibit law schools from evaluating an applicant's prior achievements in light of the barriers that he had to overcome. A black applicant who pulled himself out of the ghetto into a junior college may thereby demonstrate a level of motivation, perseverance, and ability that would lead a fair-minded admissions committee to conclude that he shows more promise for law study than the son of a rich alumnus who achieved better grades at Harvard. That applicant would be offered admission not because he is black but because as an individual he has shown he has the potential, while the Harvard man may have taken less advantage of the vastly superior opportunities offered him. Because of the weight of the prior handicaps, that black applicant may not realize his full potential in the first year of law school, or even in the full three years, but in the long pull of a legal career his achievements may far outstrip those of his classmates whose earlier records appeared superior by conventional criteria. There is currently no test available to the admissions committee that can predict such possibilities with assurance, but the committee may nevertheless seek to gauge it as best it can and weigh this factor in its decisions. Such a policy would not be limited to blacks, or Chicanos, or Filipinos, or American Indians, although undoubtedly groups such as these may in practice be the principal beneficiaries of it. But a poor Appalachian white, or a second-generation Chinese in San Francisco, or some other American whose lineage is so diverse as to defy ethnic labels, may demonstrate similar potential and thus be accorded favorable consideration by the Committee [416 U.S. at 331–32].

(For an example of a more recent case in which the court upheld such “uniform” criteria for admissions as well as a related recruitment process, see *Weser v. Glen*, 190 F. Supp. 2d 384, 387–88, 395–406 (E.D.N.Y. 2000), *affirmed summarily without published opinion*, 168 *West's Educ. Law. Rptr.* 132 (2d Cir. 2002).)

5. A *differential* or *compensatory* affirmative action policy would be based on the concept that equal treatment of differently situated individuals may itself create inequality. Different or supplementary standards for such individuals would become appropriate when use of uniform standards would in effect discriminate against them. In *Bakke*, Justice Powell referred to a differential system by noting:

Racial classifications in admissions conceivably could serve a . . . purpose . . . which petitioner does not articulate: fair appraisal of each individual's academic promise in light of some bias in grading or testing procedures. To the extent that race and ethnic background were considered only to the extent of curing established inaccuracies in predicting academic performance, it might be argued that there is no “preference” at all [438 U.S. at 306 n.43].

(See also the California Supreme Court's discussion of this point in *Bakke*; 553 P.2d at 1166–67.) Justice Douglas's *DeFunis* opinion also referred extensively to differential standards and procedures:

The Indian who walks to the beat of Chief Seattle of the Muckleshoot tribe in Washington has a different culture than examiners at law schools. . . .

[Minority applicants may] have cultural backgrounds that are vastly different from the dominant Caucasian. Many Eskimos, American Indians, Filipinos, Chicanos, Asian Indians, Burmese, and Africans come from such disparate backgrounds that a test sensitively tuned for most applicants would be wide of the mark for many minorities . . . [416 U.S. at 334].

Justice Douglas went on to assert that the goal of a differential system is to assure that race is not “a subtle force in eliminating minority members because of cultural differences” and “to make certain that racial factors do not militate *against an applicant or on his behalf*” (416 U.S. at 335–36).

Using such a rationale, the institution might, for example, apply psychometric measures to determine whether a standardized admissions test that it uses is less valid or reliable as applied to its minority or disadvantaged applicants. If it is, the institution might consider using another supplementary test or some other criterion in lieu of or in addition to the standardized test (see Sternberg, above). Or if an institution provided preferences for “legacies,” or for adherents of a particular religion or graduates of schools affiliated with a particular denomination, the institution may consider whether such a criterion discriminated in effect against applicants from particular minority groups; if it does, the institution may consider using other compensating criteria for the minority applicants who are disadvantaged by the institution’s use of the discriminatory criterion. Since the institution would be revising its policies in order to advantage minority applicants, having determined that they are disadvantaged by the current policy, it is unlikely that such a revision would be considered race neutral, as a uniform system would be.

To remain true to the theory of a differential system, an institution can modify standards or procedures only to the extent necessary to counteract the discriminatory effect of applying a particular uniform standard or standards; and the substituted or supplementary standards or procedures must be designed to select only candidates whose qualifications and potential contributions are comparable to those of other candidates who are selected for admission. The goal, in other words, would be to avoid a disadvantage to minority applicants rather than to create a preference for them.<sup>22</sup>

6. A *race-conscious or preferential* affirmative action policy explicitly provides some form of advantage or preference available only to minority applicants. The admissions policies at issue in the cases discussed above, for the most part, fit within this category. It is the advantage available only to minorities that creates the reverse discrimination claim. For some institutions, especially highly selective institutions and large institutions with graduate and professional programs, some form of racial preference may indeed be necessary for the institution (or a particular school within the institution) to achieve

---

<sup>22</sup>Separate standards or procedures for minority applicants are generally impermissible when used in a way that provides a preference for such applicants (see guideline 8 below). Since a true differential plan does not provide any preference, it should follow that some separate treatment would be permissible when it serves the purposes of such a plan.

its educational and societal objectives. In *Bakke*, the four Justices in the Brennan group agreed that:

[t]here are no practical means by which . . . [the university] could achieve its ends in the foreseeable future without the use of race-conscious measures. With respect to any factor (such as poverty or family educational background) that may be used as a substitute for race as an indicator of past discrimination, whites greatly outnumber racial minorities simply because whites make up a far larger percentage of the total population and therefore far outnumber minorities in absolute terms at every socioeconomic level. . . . Moreover, while race is positively correlated with differences in . . . [grades and standardized test] scores, economic disadvantage is not [438 U.S. at 376–77].

Race-conscious policies may thus fulfill objectives broader than those of differential policies. As the discussion in this subsection indicates, there are two leading objectives for which race-conscious policies may be used: alleviating the effects of past institutional discrimination (see guideline 1 above) and diversifying the student body (see guidelines 11 and 12 below).

7. An institution opting for a voluntary, race-conscious policy must assure that its racial preferences do not constitute a “quota.” In *Bakke*, the Court ruled, by a 5-to-4 vote, that explicit racial or ethnic quotas constitute unlawful reverse discrimination. The Court in *Grutter* and *Gratz* affirmed this basic point. As the majority in *Grutter* explained, a quota “is a program in which a certain fixed number or proportion of opportunities are ‘reserved exclusively for certain minority groups’” (539 U.S. at 335, quoting *Croson*, 488 U.S. at 496). Quotas “‘impose a fixed number or percentage, which must be attained, or which cannot be exceeded’” and thus “‘insulate the individual from comparison with all other candidates for the available seats’” (539 U.S. at 335, quoting *Sheet Metal Workers v. EEOC*, 478 U.S. 421, 495 (1986) (O’Connor, J., concurring and dissenting), and *Bakke*, 438 U.S. at 317 (Powell, J.)). Such a policy would violate the equal protection clause as well as Title VI. A goal, on the other hand, “‘require[s] only a good-faith effort . . . to come within a range demarcated by the goal itself,’ and permits consideration of race as a ‘plus’ factor in any given case while still ensuring that each candidate ‘compete[s] with all other qualified applicants’” (539 U.S. at 335, citing and quoting *Sheet Metal Workers v. EEOC*, 478 U.S. at 495, and *Johnson v. Transportation Agency*, 480 U.S. 616, 638 (1987)). “[A] court would not assume that a university [employing such a policy] would operate it as a cover for the functional equivalent of a quota system” (*Bakke*, 438 U.S. at 317–18) (Powell, J.).

8. An institution using race-conscious policies should avoid using separate admissions committees, criteria, or cutoff scores for minority applicants. Such mechanisms are vulnerable to legal challenge, as the Court suggested in *Bakke* and directly held in *Grutter*. “[U]niversities cannot . . . put members of [certain racial] groups on separate admissions tracks. . . . Nor can universities insulate applicants who belong to certain racial or ethnic groups from the competition for admission” (*Grutter*, 539 U.S. at 334, citing *Bakke*, 438 U.S. at 315–16) (Powell, J.). The district court in *Hopwood* (above) invalidated part of the

University of Texas law school’s plan on this basis (861 F. Supp. at 577–79). This does not necessarily mean, however, that any difference in treatment is always impermissible. In *Smith v. University of Washington*, 392 F.3d 367 (9th Cir. 2004), for instance, the court upheld a law school’s use of a letter of inquiry that went only to some minority applicants, as well as a procedure for expedited review of certain minority applications done for recruitment purposes (392 F.3d at 376–78, 380–81).

9. Institutions may wish to clarify exactly why and how they use racial and ethnic preferences, distinguishing between the remedying-past-discrimination rationale and the student body diversity rationale. If employing the remedial rationale, the institution should identify and document the particular present effects of past institutional discrimination that the institution seeks to remedy. For the diversity rationale, the institution should define its diversity objectives and identify the particular values of diversity for its academic environment (see guideline 11 below). The institution may also wish to justify its choices of which minority groups it covers. (For discussion of the use of preferences for Asian American applicants, see *Smith v. University of Washington* in guideline 8 above, 392 F.3d at 378–79 (upholding a “slight plus” for Asian American applicants); and for discussion of possible pitfalls in limiting affirmative action programs to selected minority groups, see Gabriel Chin, “*Bakke* to the Wall: The Crisis of Bakkean Diversity,” 4 *Wm. & Mary Bill Rts. J.* 881 (1996)).

10. An institution that has, or is considering, a voluntary, race-conscious admissions plan should be familiar with *state* law in its state regarding such plans. Some states have amended their state statutes or state constitutions to prohibit state institutions from using such plans. California and Washington, as discussed above, are leading examples. Other states may reach the same result through administrative regulations or through state court interpretations of the state constitution. Florida is a leading example (Fla. Admin. Code Ann. R. 6C-6.002(7)).

11. An institution relying on student body diversity as the justification for a voluntary, race-conscious admissions plan should consider clearly elucidating the importance of such diversity to the institution or to particular schools within the institutions and connecting student body diversity to the institution’s or school’s educational mission. The institution will likely want to make these judgments at a high level of authority and with substantial faculty participation (see guideline 2 above).

12. A race-conscious admissions policy should broadly define student body diversity to include numerous factors beyond race and ethnicity, and the policy in operation should result in substantial weight being given to such additional factors. “[A]n admissions program must be flexible enough to consider all pertinent elements of diversity in light of the particular qualifications of each applicant . . .” (*Grutter*, 539 U.S. at 334). The policy must take into account “a wide variety of characteristics besides race and ethnicity that contribute to a diverse student body” (*Grutter*, 539 U.S. at 339) and must “ensure that all factors that

may contribute to student body diversity are . . . fully considered alongside race in admissions decisions” (*Grutter*, 539 U.S. at 337). The admissions staff and committee must “giv[e] serious consideration to all the ways an applicant might contribute to a diverse educational environment” (*Grutter*, 539 U.S. at 337), so that these factors are taken into account and weighted appropriately “in practice as well as in theory” (*Grutter*, 539 U.S. at 338).

13. Race-conscious admissions policies must provide for “individualized consideration” of applicants. According to Justice Powell, the key to a permissible racial preference is “a policy of individual comparisons” that “assures a measure of competition among all applicants” (438 U.S. at 319, n.53) and that uses “race or ethnic background only as a ‘plus’ in a particular applicant’s file” (438 U.S. at 317). Following Justice Powell, the *Grutter* majority specified that “race [must] be used in a flexible, nonmechanical way . . . as a ‘plus’ factor in the context of individualized consideration of each . . . applicant” (539 U.S. at 334, citing *Bakke*, 438 U.S. at 315–18) (Powell, J.). The institution’s policy must “ensure that each applicant is evaluated as an individual and not in a way that makes an applicant’s race or ethnicity the defining feature of his or her application. The importance of this individualized consideration in the context of a race-conscious admissions program is paramount . . .” (*Grutter*, 539 U.S. at 337).

14. Consistent with guideline 13, an institution should avoid using “automatic” points or bonuses that are awarded to all applicants from specified minority groups. There may be no “mechanical, predetermined diversity ‘bonuses’ based on race or ethnicity” (*Grutter*, 539 U.S. at 337). Such mechanisms are prohibited whenever the “automatic distribution of . . . points has the effect of making ‘the factor of race . . . decisive’ for . . . qualified minority applicants” (*Gratz*, 539 U.S. at 272, citing *Bakke*, 438 U.S. at 317) (Powell, J.).

15. When devising, revising, or reviewing a race-conscious affirmative action policy, an institution should give serious, good faith consideration to “race-neutral alternatives” for attaining racial diversity.<sup>23</sup> Race-conscious provisions may be utilized only if no “workable” race-neutral alternatives are available. Institutions have no obligation, however, to exhaust “every conceivable race-neutral alternative,” or to adopt race-neutral alternatives that “would require a dramatic sacrifice of [other types of] diversity, the academic quality of all admitted students, or both” (*Grutter*, 539 U.S. at 340).

16. An institution with a race-conscious affirmative action policy should monitor the results it obtains under its policy. In particular, the institution should determine whether its policy in practice is in fact achieving the goal of student body diversity, broadly defined. In addition, the institution should periodically

---

<sup>23</sup>The Office for Civil Rights of the U.S. Department of Education has issued two sets of suggestions on possible race-neutral alternatives: “Achieving Diversity: Race-Neutral Alternatives in American Education” (2004), and “Race-Neutral Approaches in Postsecondary Education: Innovative Approaches to Diversity” (2003). Both documents are available on OCR’s Web site at <http://www.ed.gov/OCR>.

determine whether consideration of race and ethnicity remains necessary to the achievement of racial and ethnic diversity. In doing so, institutions should monitor new developments regarding race-neutral alternatives and seriously consider any new alternatives that could prove “workable.” Universities “can and should draw on the most promising aspects of . . . race-neutral alternatives as they develop” in other institutions and other states (*Grutter*, 539 U.S. at 342).

17. Institutions may not use race-conscious admissions policies as a *permanent* means for achieving racial and ethnic diversity. The Court in *Grutter* stated its belief that, in time (perhaps in twenty-five years, the Court predicted), societal conditions will progress to the point where such policies will no longer be needed. Thus, “race-conscious admissions policies must be limited in time” and must provide for “a logical end point” for the use of such policies. This limitation may be implemented “by sunset provisions . . . and periodic reviews to determine whether racial preferences are still necessary to achieve student body diversity” (*Grutter*, 539 U.S. at 342; see also guideline 16 above).

These seventeen guidelines can help postsecondary institutions, working with the active involvement of legal counsel, to expand the legal space they have to make their own policy choices about affirmative action in admissions. By carefully considering, justifying, documenting, and periodically reviewing their choices, especially choices involving racial and ethnic preferences, as suggested in these guidelines, institutions may increase the likelihood that their policies will meet constitutional and statutory requirements.

**8.2.6. Readmission.** The readmission of previously excluded students can pose additional legal problems for postsecondary institutions. Although the legal principles in Section 8.2 apply generally to readmissions, the contract theory (Section 8.2.3) may assume added prominence, because the student-institution contract (see Section 8.1.3) may include provisions concerning exclusion and readmission. The principles in Sections 9.2 through 9.4 may also apply generally to readmissions where the student challenges the validity of the original exclusion. And the nondiscrimination laws provide additional theories for challenges to institutional refusals to readmit students.

Institutions should have an explicit policy on readmission, even if that policy is simply “Excluded students will never be considered for readmission.” An explicit readmission policy can give students advance notice of their rights, or lack of rights, concerning readmission and, where readmission is permitted, can provide standards and procedures to promote fair and evenhanded decision making. If the institution has an explicit readmissions policy, administrators should take pains to follow it, especially since its violation could be considered a breach of contract. Similarly, if administrators make an agreement with a student concerning readmission, they should firmly adhere to it. *Levine v. George Washington University*, C.A. (Civil Action) 8230-76 (D.C. Super. Ct. 1976), for instance, concerned a medical student who had done poorly in his first year but was allowed to repeat the year, with the stipulation that he would be excluded

for a “repeated performance of marginal quality.” On the second try, he passed all his courses but ranked low in each. The school excluded him. The court used contract principles to overturn the exclusion, finding that the school’s subjective and arbitrary interpretation of “marginal quality,” without prior notice to the student, breached the agreement between student and school. In contrast, the court in *Giles v. Howard University*, 428 F. Supp. 603 (D.D.C. 1977), held that the university’s refusal to readmit a former medical student was not a breach of contract, because the refusal was consistent with the “reasonable expectations” of the parties.

Although institutions must follow their written readmission policies, the burden of demonstrating that readmission is warranted is on the student. In *Organiscak v. Cleveland State University*, 762 N.E.2d 1078 (Ohio 2001), a student dismissed from a master’s program in speech-language pathology sued the university when it rejected her petition for readmission. The court rejected the student’s claim that it was the university’s responsibility to collect evidence of an improvement in her clinical skills; the burden was on the student to convince the university that her prior academic performance was an inappropriate indicator of her present ability to complete the program.

Another case illustrates the importance of carefully considering the procedures to be used in making readmission decisions. In *Evans v. West Virginia Board of Regents*, 271 S.E.2d 778 (W. Va. 1980), a student in good standing at a state school of osteopathic medicine had been granted a one-year leave of absence because of illness. When he sought reinstatement two months after termination of the leave, he was informed that because of his lateness he would have to reapply for admission. He did so but was rejected without explanation. The West Virginia Supreme Court of Appeals found that the student was “not in the same class as an original applicant to a professional school.” Nor was he in the same position as a student who had been excluded for academic reasons, since “nothing appears of record even remotely suggesting his unfitness or inability to complete the remainder of his education.” Rather, since he had voluntarily withdrawn after successfully completing two and a half years of his medical education, the student had a “reasonable expectation that he would be permitted to complete his education.” He thus had “a sufficient property interest in the continuation and completion of his medical education to warrant the imposition of minimal due process protections.”

The court prescribed that the following procedures be accorded the student if the school again sought to deny him readmission:

- (1) a formal written notice of the reasons should he not be permitted to continue his medical education;
- (2) a sufficient opportunity to prepare a defense to the charges;
- (3) an opportunity to have retained counsel at any hearings on the charges;
- (4) a right to confront his accusers and present evidence on his own behalf;
- (5) an unbiased hearing tribunal; and
- (6) an adequate record of the proceedings [271 S.E.2d at 781].

Given the fact that a readmission decision is an academic judgment, the extent of the procedural protections required by the court are especially rigorous.

The appellate court in *Evans* did not indicate the full terms of the school's policies regarding leave of absence and readmission or the extent to which these policies were put in writing. Other schools in the defendant's position may avoid legal hot water by having a clear statement of their policies, including any procedural protections that apply and the consequences of allowing a leave of absence to expire.

Although private institutions would not be subject to the Fourteenth Amendment due process reasoning in *Evans*, they should nevertheless note the court's assertion that readmission decisions encompass different considerations and consequences than original admission decisions. Even private institutions may therefore choose to clothe readmission decisions with greater procedural safeguards than they apply to admission decisions. Moreover, private institutions, like public institutions, should clearly state their readmission policies in writing and coordinate them with their policies on exclusion and leaves of absence.

Once such policies are stated in writing, or if the institution has a relatively consistent practice of readmitting former students, contract claims may ensue if the institution does not follow its policies. (For discussion of an unsuccessful contract claim by a student seeking readmission to medical school, see *North v. State of Iowa*, discussed in Section 8.2.1.)

Students may also allege that denials of readmission are grounded in discrimination. In *Anderson v. University of Wisconsin*, 841 F.2d 737 (7th Cir. 1988), a black former law student sued the university when it refused to readmit him for a third time because of his low grade point average. To the student's race discrimination claim, the court replied that the law school had consistently readmitted black students with lower grades than those of whites it had readmitted; thus, no systemic race discrimination could be shown against black students. With regard to the plaintiff's claim that the law school had refused to readmit him, in part, because of his alcoholism, the court determined that Section 504 requires a plaintiff to demonstrate that he is "otherwise qualified" before relief can be granted. Given the plaintiff's inability to maintain the minimum grade point average required for retention, the court determined that the plaintiff was not "otherwise qualified" and ruled that "[l]aw schools may consider academic prospects and sobriety when deciding whether an applicant is entitled to a scarce opportunity for education" (841 F.2d at 742). (For analysis of this case, see Comment, "*Anderson v. University of Wisconsin*: Handicap and Race Discrimination in Readmission Procedures," 15 *J. Coll. & Univ. Law* 431 (1989).)

A federal appellate court allowed a challenge to a denial of readmission to go to trial on a gender discrimination theory. In *Gossett v. State of Oklahoma ex rel. Board of Regents*, 245 F.3d 1172 (10th Cir. 2001), a male nursing student was required to withdraw from the program after receiving a D grade in a course. The student had presented evidence to the trial court that female students were treated more leniently than their male counterparts when they encountered academic difficulty. Although the trial court had rejected the evidence and had entered a summary judgment in favor of the university, the appellate court

reversed, ruling that the student's evidence had raised material issues of fact that needed to be resolved at trial.

In *Carlin v. Trustees of Boston University*, 907 F. Supp. 509 (D. Mass. 1995), a student enrolled in a graduate program in pastoral psychology had requested a one-year leave of absence (later extended to two years) so that she could obtain treatment for a psychiatric disorder. Her academic performance prior to the leave had been satisfactory. The university denied her application for readmission, stating that she lacked the "psychodynamic orientation" for pastoral psychology. The student filed a Section 504 (Rehabilitation Act) claim against the university. Determining that the student was academically qualified and possessed the required clinical skills, and that the university's action was closely related to its knowledge that the student had been hospitalized, the court denied the university's summary judgment motion.

In contrast, in *Gill v. Franklin Pierce Law Center*, 899 F. Supp. 850 (D.N.H. 1995), the court denied the student's Section 504 claim. Gill was dismissed from the law school at the end of his first year for failure to maintain satisfactory academic performance. He applied for readmission, but a faculty committee denied his request. In his lawsuit, he asserted that, in the personal statement that accompanied his application, he had stated that he was the child of an alcoholic parent. The court rejected Gill's argument that this statement put the law school on notice that he suffered from posttraumatic stress disorder, ruling that schools need accommodate only those disabilities of which they are aware.

The U.S. Court of Appeals for the Sixth Circuit rejected the claim of a former student that a decision not to readmit him was motivated by disability discrimination. In *Doe v. Vanderbilt University*, 1997 U.S. App. LEXIS 34104 (6th Cir. 1997) (unpublished), the plaintiff had been placed on academic probation after his first year at Vanderbilt's school of medicine because of a combination of poor academic performance and "behavioral and attitudinal problems." At the end of his second year of medical school, a faculty committee recommended that the student be dismissed. At that point he disclosed to his advisor that he had bipolar disorder, a condition that caused severe mood swings. The committee reconsidered the student's case in light of the new information and gave the student an opportunity to address them. The committee voted a second time to recommend dismissal, and the student withdrew voluntarily before the faculty as a whole acted on the recommendation.

After obtaining medication for his disorder, the plaintiff sought readmission on two occasions. He was rejected twice. The first time, the one position open in the second-year class was awarded to a transfer student with better qualifications. The second time he applied, the school replied that there were no spaces remaining in the second-year class. The student filed claims under the ADA and the Rehabilitation Act, alleging that the denial of readmission was based on his disability. A trial court granted the university's motion for summary judgment, and the plaintiff appealed.

The appellate court affirmed, stating that the plaintiff had not demonstrated that he was qualified to be readmitted, nor that the reason he was denied

readmission was his disability. The court said that the plaintiff had not shown that the medical school had excluded him even though it would have readmitted a student “whose academic performance and prospects were as poor but whose difficulties did not stem from a ‘handicap’” (1997 U.S. App. LEXIS 34104 at \*6). Furthermore, said the court, courts should respect the academic judgment of university faculties (citing *Ewing*; see Section 9.3.1).

At the time an institution suspends or expels a student either for problematic academic performance or behavior, the institution may specify conditions that a student must meet in order to be considered for readmission. In *Rosenthal v. Webster University*, 2000 U.S. App. LEXIS 23733 (8th Cir. 2000) (unpublished), a federal appellate court backed a private university’s refusal to readmit a former student with bipolar disorder after it expelled him for carrying a gun and threatening to use it. A condition of Rosenthal’s readmission was that he conduct himself appropriately during the period of suspension. Because the plaintiff had been charged with harassment after his suspension, he had failed to meet the conditions of his readmission, and the court ruled that the university was justified in refusing to readmit him.

Since the U.S. Supreme Court’s *Garrett* decision (see Section 5.2.5), federal courts have struggled with the question of whether public universities can be sued under Title II of the ADA (see Section 13.2.11) for money damages (*Garrett* involved Title I of the ADA). In *Garcia v. S.U.N.Y. Health Sciences Center of Brooklyn*, 280 F.3d 98 (2d Cir. 2001), the U.S. Court of Appeals for the Second Circuit ruled that the teachings of *Garrett* applied to cases brought under Title II, and that a student’s attempt to challenge a denial of readmission under the ADA failed because he had not asserted that the readmission was motivated by discriminatory animus or ill will due to disability, but simply because the institution had refused to accommodate him by readmitting him. With respect to Garcia’s Section 504 claim, the court ruled that the state had not waived sovereign immunity against suit under Section 504 by accepting federal funds, because at the time it did so, it was believed that Congress had abrogated sovereign immunity through enactment of the ADA. Federal courts in other jurisdictions do not agree with this interpretation of Section 504, and thus this issue awaits resolution by the U.S. Supreme Court. Students seeking readmission under disability discrimination theories, however, could still maintain claims against public institutions if they merely seek injunctive relief and do not seek money damages.

Other special problems may arise in the readmission process if a student seeking readmission claims that he or she withdrew to avoid sexual (or other) harassment by a faculty or staff member, or that the student was excluded due to low evaluations or grades from a faculty member whose sexual advances the student had rejected. In *Bilut v. Northwestern University*, 645 N.E.2d 536 (Ill. Ct. App. 1994) (also discussed in Section 9.3.1), for example, a graduate student who had been denied an extension of time to complete her dissertation claimed that she had rejected the advances of her dissertation director. The court rejected her claims because her “testimony is inconclusive evidence of quid pro quo sexual harassment” and because other professors reviewing the

student's work had "made his or her own independent scholarly and academic judgments" (645 N.E.2d at 543). In other cases, however, where the evidence of harassment is stronger and there is evidence that the harasser's evaluations infected the institution's academic judgments, the institution could be in jeopardy of both viable breach of contract claims (see *Bilut*) and Title IX claims (see Section 9.3.4).

Students may also raise tort claims in challenging denials of readmission. For example, in *Mason v. State of Oklahoma*, 23 P.3d 964 (Ct. Civil Apps. Okla. 2000), a law student, Perry Mason, was expelled for dishonesty in applying for financial aid. Mason claimed negligent and intentional infliction of emotional distress, denial of due process, violation of public policy, and breach of an implied contract. The court rejected all of the claims, affirming the trial court's dismissal of Mason's lawsuit.

The readmission cases demonstrate that colleges that specify the procedures for readmission (and follow them), use reasonable and relevant criteria for making readmission decisions, and can link those criteria to programmatic needs should prevail in challenges to negative readmission decisions.

### **Sec. 8.3. Financial Aid**

**8.3.1. General principles.** The legal principles affecting financial aid have a wide variety of sources. Some principles apply generally to all financial aid, whether awarded as scholarships, assistantships, loans, fellowships, preferential tuition rates, or in some other form. Other principles depend on the particular source of funds being used and thus may vary with the aid program or the type of award. Sections 8.3.2 through 8.3.8 discuss the principles, and specific legal requirements resulting from them, that present the most difficult problems for financial aid administrators. This Section discusses more general principles affecting financial aid.

The principles of contract law may apply to financial aid awards, since an award once made may create a contract between the institution and the aid recipient. Typically, the institution's obligation is to provide a particular type of aid at certain times and in certain amounts. The student recipient's obligation depends on the type of aid. With loans, the typical obligation is to repay the principal and a prescribed rate of interest at certain times and in certain amounts. With other aid, the obligation may be only to spend the funds for specified academic expenses or to achieve a specified level of academic performance in order to maintain aid eligibility. Sometimes, however, the student recipient may have more extensive obligations—for instance, to perform instructional or laboratory duties, play on a varsity athletic team, or provide particular services after graduation. The defendant student in *State of New York v. Coury*, 359 N.Y.S.2d 486 (N.Y. Sup. Ct. 1974), for instance, had accepted a scholarship and agreed, as a condition of the award, to perform internship duties in a welfare agency for one year after graduation. When the student did not perform the duties, the state sought a refund of the scholarship money. The court held for the state because the student had "agreed to

accept the terms of the contract” and had not performed as the contract required.<sup>24</sup>

Students may also rely on contract law to challenge the withdrawal or reduction in amount of a scholarship. For example, in *Aronson v. University of Mississippi*, 828 So. 2d 752 (Miss. 2002), a student sued the university when it reduced the amount of a scholarship awarded to the student from \$4,000 to \$2,000. The university defended its decision by saying that the catalog, in which the scholarship amount had been listed as \$4,000, was incorrect. Aronson filed a breach of contract claim against the university. The trial court dismissed the claim at the conclusion of the plaintiff’s case, and the appellate court reversed, ruling for the student. The state supreme court reversed and remanded the case, saying that the university was entitled to present a defense. The university had argued that disclaimers in its student catalog and other information should have put the student on notice that the scholarship amount had been changed.

The law regarding gifts, grants, wills, and trusts may also apply to financial aid awards. These legal principles would generally require aid administrators to adhere to any conditions that the donor, grantor, testator, or settlor placed on use of the funds. But the conditions must be explicit at the time of the gift. For example, in *Hawes v. Emory University*, 374 S.E.2d 328 (Ga. Ct. App. 1988), a scholarship donor demanded that the university return the gift, asserting that the funds had not been disbursed as agreed upon. The court found the contribution to be a valid gift without any indication that its use was restricted in the way the donor later alleged.

Funds provided by government agencies or private foundations must be used in accordance with conditions in the program regulations, grant instrument, or other legal document formalizing the transaction. Section 8.3.2 illustrates such conditions in the context of federal aid programs. Similarly, funds made available to the institution under wills or trusts must be used in accordance with conditions in the will or trust instrument, unless those conditions are themselves illegal. Conditions that discriminate by race, sex, or religion have posed the greatest problems in this respect. If a public agency or entity has compelled or affirmatively supported the imposition of such conditions, they will usually be considered to violate the federal Constitution’s equal protection clause (see, for example, *In Re Certain Scholarship Funds*, 575 A.2d 1325 (N.H. 1990)).<sup>25</sup> But if such conditions appear in a privately established and administered trust, they will usually be considered constitutional, because no state action is present. In

---

<sup>24</sup>Illustrative cases are collected in David B. Harrison, Annot., “Construction and Application of Agreement by Medical or Social Work Student to Work in Particular Position or at Particular Location in Exchange for Financial Aid in Meeting Costs of Education,” 83 A.L.R.3d 1273. State age-of-majority laws (regarding a parent’s obligation to support a child) are an important supplement to general contract law principles. These laws help the institution determine whether it should contract with the parent or the child in awarding aid and whether it should take parental resources into account in computing the amount of aid.

<sup>25</sup>Cases analyzing gender restrictions in charitable gifts or trusts are collected in Tracey A. Bateman, Annot., “Validity of Charitable Gift or Trust Containing Gender Restrictions on Beneficiaries,” 90 A.L.R.4th 836. See also Phillip E. Hassman, Annot., “Construction and Application of State Equal Rights Amendments Forbidding Determination of Rights Based on Sex,” 90 A.L.R.3d 158.

*Shapiro v. Columbia Union National Bank and Trust Co.* (discussed in Section 1.5.2), for instance, the Supreme Court of Missouri refused to find state action to support a claim of sex discrimination lodged against a university's involvement in a private trust established to provide scholarships exclusively for male students. Even in the absence of state action, however, a discriminatory condition in a private trust may still be declared invalid if it violates one of the federal nondiscrimination requirements applicable to federal fund recipients (see Sections 8.3.3 & 8.3.4).<sup>26</sup>

Conditions in testamentary or *inter vivos* trusts can sometimes be modified by a court under the *cy pres* doctrine. In *Howard Savings Institution v. Peep*, 170 A.2d 39 (N.J. 1961), Amherst College was unable to accept a trust establishing a scholarship loan fund because one of the trust's provisions violated the college's charter. The provision, stipulating that recipients of the funds had to be "Protestant" and "Gentile," was deleted by the court. Similarly, in *Wilbur v. University of Vermont*, 270 A.2d 889 (Vt. 1970), the court deleted a provision in a financial aid trust that had placed numerical restrictions on the size of the student body at the university's college of arts and sciences. In each case the court found that the dominant purpose of the person establishing the trust could still be achieved with the restriction removed. As the court in the *Peep* case explained:

The doctrine of *cy pres* is a judicial mechanism for the preservation of a charitable trust when accomplishment of the particular purpose of the trust becomes impossible, impracticable, or illegal. In such a situation, if the settlor manifested an intent to devote the trust to a charitable purpose more general than the frustrated purpose, a court, instead of allowing the trust to fail, will apply the trust funds to a charitable purpose as nearly as possible to the particular purpose of the settlor [170 A.2d at 42].

However, if the court finds that a trust's purposes can still be realized, it will not permit changes. For example, in *In re R. B. Plummer Memorial Loan Fund Trust*, 661 N.W.2d 307 (Neb. 2003), an alumnus had created a trust to provide loans to students. Because very few students applied for loans from the trust, the university petitioned the court to permit it to make grants from the trust rather than loans. The court refused, finding that Plummer had believed that students should pay for college, and that the university was not promoting the loan opportunities sufficiently to make them attractive to students.

Given the numerous legal and public relations issues involved in institutional fund-raising and gift acceptance, administrators should develop a clear policy on the acceptance of gifts.

A third relevant body of legal principles is that of constitutional due process. These principles apply generally to public institutions; they also apply to

---

<sup>26</sup>The relevant cases are collected in A. S. Klein, Annot., "Validity and Effect of Gift for Charitable Purposes Which Excludes Otherwise Qualified Beneficiaries Because of Their Race or Religion," 25 A.L.R.3d 736.

private institutions when those institutions make awards from public funds (see Section 1.5.2). Since termination of aid may affect both “property” and “liberty” interests (see Section 6.7.2.1) of the student recipients, courts may sometimes require that termination be accompanied by some form of procedural safeguard. *Corr v. Mattheis*, 407 F. Supp. 847 (D.R.I. 1976), for instance, involved students who had had their federal aid terminated in midyear, under a federal “student unrest” statute, after they had participated in a campus protest against the Vietnam War. The court found that the students had been denied a property interest in continued receipt of funds awarded to them, as well as a liberty interest in being free from stigmas foreclosing further educational or employment opportunities. Termination thus had to be preceded by notice and a meaningful opportunity to contest the decision. In other cases, if the harm or stigma to students is less, the required procedural safeguards may be less stringent. Moreover, if aid is terminated for academic rather than disciplinary reasons, procedural safeguards may be almost nonexistent, as courts follow the distinction between academic deficiency problems and misconduct problems drawn in Section 9.4.3.

In *Conard v. University of Washington*, 834 P.2d 17 (Wash. 1992), the Washington Supreme Court ruled that student athletes do not have a constitutionally protected property interest in the renewal of their athletic scholarships. The court reversed a lower court’s finding that the students, who had been dropped from the football team after several instances of misconduct, had a property interest in renewal of their scholarships. The financial aid agreements that the students had signed were for one academic year only, and did not contain promises of renewal. The supreme court interpreted the financial aid agreements as contracts that afforded the students the right to *consideration* for scholarship renewal and—citing *Board of Regents v. Roth* (see Sections 6.7.2.1 & 6.7.2.2)—refused to find a “common understanding” that athletic scholarships were given for a four-year period. Furthermore, the court said, the fact that both the university and the National Collegiate Athletic Association (NCAA) provided minimal due process guarantees did not create a property interest. Special considerations involving athletics scholarships and NCAA rules are discussed in Section 10.4.5.

Federal and state laws regulating lending and extensions of credit provide a fourth body of applicable legal constraints. At the federal level, for example, the Truth-in-Lending Act (15 U.S.C. § 1601 *et seq.*) establishes various disclosure requirements for loans and credit sales. Such provisions are of concern not only to institutions with typical loan programs but also to institutions with credit plans allowing students or parents to defer payment of tuition for extended periods of time. The federal Truth-in-Lending Act, however, exempts National Direct Student Loans (NDSLs; now Perkins Loans), Federal Stafford Loans, and Federal Family Education Loans) (see Section 8.3.2) from its coverage (15 U.S.C. § 1603(7)).

As a result of congressional action in 1996 to amend the Internal Revenue Code, all states have adopted college savings plans. Congress added Section 529 to the Internal Revenue Code (26 U.S.C. § 529), which allows a “state

agency or instrumentality” to establish a program under which a person “may purchase tuition credits or certificates on behalf of a designated beneficiary which entitle the beneficiary to the waiver or payment of qualified higher education expenses of the beneficiary” (26 U.S.C. § 529(b)(1)). States may establish either prepaid tuition plans or savings plans; educational institutions may establish only prepaid tuition plans. Contributions to the plans are excluded from the contributor’s gross income for federal income tax purposes. An amendment to Section 529 in 2002 allows a beneficiary to make a “qualified withdrawal” from a 529 plan that is free of federal income tax. There are penalties for withdrawals from the fund for noneducational purposes, and prepaid tuition plans differ from savings plans in significant ways. Basic information on these plans is available at <http://www.savingforcollege.com>. (For an assessment of these savings and prepaid tuition plans, see Michael A. Olivas, “State College Savings and Prepaid Tuition Plans: A Reappraisal and Review,” 32 *J. Law & Educ.* 475 (2003).)

Given the multitude of tax (see Section 13.3.1), contract, and other legal complications of prepaid tuition plans, institutions should consult with counsel knowledgeable in these areas of the law before implementing such plans.

**8.3.2. Federal programs.** The federal government provides or guarantees many millions of dollars per year in student aid for postsecondary education through a multitude of programs. To protect its investment and ensure the fulfillment of national priorities and goals, the federal government imposes many requirements on the way institutions manage and spend funds under federal programs. Some are general requirements applicable to student aid and all other federal assistance programs. Others are specific programmatic requirements applicable to one student aid program or to a related group of such programs. These requirements constitute the most prominent—and, critics would add, most prolific and burdensome—source of specific restrictions on an institution’s administration of financial aid.

The most prominent general requirements are the nondiscrimination requirements discussed in Section 8.3.3, which apply to all financial aid, whether or not it is provided under federal programs. In addition, the Family Educational Rights and Privacy Act (FERPA) (discussed in Section 9.7.1) imposes various requirements on the institution’s record-keeping practices for all the financial aid that it disburses. The FERPA regulations, however, do partially exempt financial aid records from nondisclosure requirements. They provide that an institution may disclose personally identifiable information from a student’s records, without the student’s consent, to the extent “necessary for such purposes as” determining the student’s eligibility for financial aid, determining the amount of aid and the conditions that will be imposed regarding it, or enforcing the terms or conditions of the aid (34 C.F.R. § 99.31(a)(4)).

The Student Assistance General Provisions, 34 C.F.R. Part 668, lay out eligibility criteria for institutions wishing to participate in federal student assistance programs, and for students wishing to obtain aid under these programs. Institutional eligibility criteria are addressed at 34 C.F.R. § 668.8. Generally, an

educational program that provides at least an associate's degree or the equivalent may participate in these programs if it meets federal requirements for program length, leads to at least an associate's degree, and meets other regulatory criteria. Proprietary institutions may also participate in federal student aid programs if they provide at least fifteen weeks of instruction that prepares students for "gainful employment in a recognized occupation," and meet other regulatory criteria. Proprietary institutions must also meet specific student completion rates and placement rates (34 C.F.R. § 668.8(e)).

The Student Assistance General Provisions require institutions to enter into a written "program participation agreement" with the Secretary of Education. The program participation agreement applies to all of the branch campuses and other locations of the institution. In the agreement, the institution must agree to a variety of requirements, including a promise that it will comply with all provisions of Title IV of the Higher Education Act (HEA) (the portion of the HEA that authorizes the federal student assistance programs), all regulations promulgated under the authority of the HEA, and all special provisions allowed by the statute. The institution must also certify that it will not charge students a fee for processing applications for federal student aid and that it will maintain records and procedures that will allow it to report regularly to state and federal agencies. The institution must also certify that it complies with a variety of laws requiring the disclosure of information, including the Student Right-to-Know and Campus Security Act (discussed in Section 8.6.3). Specific requirements of program participation agreements are found at 20 U.S.C. § 1994; regulations concerning these agreements are codified at 34 C.F.R. § 668.14.

Advances in technology have resulted in changes to definitions of terms in the General Provisions such as the term "week." Because of the increasing numbers of institutions offering courses to students via distance learning, previous definitions of "week" and "academic year" had excluded otherwise eligible students from receiving federal financial assistance. The Department of Education amended the General Provisions on November 1, 2002 (67 Fed. Reg. 67048, 67061), removing an earlier "twelve-hour rule" in the definition of "academic year" and permitting institutions that offer instruction at least one day per week to participate in the federal student assistance programs (34 C.F.R. § 668.3). In determining a student's eligibility for federal assistance, for instance, an institution must ascertain whether the student is in default on any federally subsidized or guaranteed loan or owes a refund on a federal grant, and must obtain the student's "financial aid transcript(s)" from other institutions to assist in this task (34 C.F.R. § 668.19).

The 2002 amendments of the General Provisions also provide several forms of "safe harbor" for providing incentives to individuals who recruit students for distance learning programs (67 Fed. Reg. 67048, 67072 (November 1, 2002)). The amendments to 34 C.F.R. § 668.14 allow institutions to hire individuals specifically to recruit students for employer-sponsored courses, provide token gifts to alumni or students in return for their assistance in recruiting students, with an annual limit per individual of \$100, and payments to individuals who refer prospective students to the institution via the Internet.

Another provision of the Higher Education Act requires an institution participating in the federal student aid program to certify “that it has in operation a drug abuse prevention program that is determined by the institution to be accessible to any officer, employee, or student at the institution” (20 U.S.C. § 1094(a)(10)). Similar provisions in other laws that place obligations on institutions receiving federal funds are discussed in Section 13.4.4 of this book.

Students convicted of drug offenses are excluded from eligibility for federal student financial aid (20 U.S.C. § 1091(r)). The same section of the law provides that students who have satisfactorily completed a drug rehabilitation program that complies with criteria in federal regulations, and who have either had the conviction reversed or expunged or have passed two unannounced drug tests, may be restored to eligibility for federal student financial aid. Regulations for this provision are found at 34 C.F.R. § 668.40.

Most of the federal student aid programs were created by the Higher Education Act of 1965 (20 U.S.C. §§ 1070 *et seq.*), which has been reauthorized and amended regularly since that year. The most recent changes are contained in the Higher Education Amendments of 1998 (Pub. L. No. 105-244, 112 Stat. 1581). Financial aid programs for veterans and military personnel are in various acts (see Section 13.4.2).

The specific programmatic restrictions on federal student aid depend on the particular program. There are various types of programs, with different structures, by which the government makes funds available:

1. Programs in which the federal government provides funds to institutions to establish revolving loan funds—as in the Perkins Loan program (20 U.S.C. §§ 1087aa–1087ii; 34 C.F.R. Parts 673 & 674).
2. Programs in which the government grants funds to institutions, which in turn provide grants to students—as in the Federal Supplemental Educational Opportunity Grant (SEOG) program (20 U.S.C. § 1070b *et seq.*; 34 C.F.R. Parts 673 & 676) and the Federal Work-Study (FWS) program (42 U.S.C. § 2751 *et seq.*; 34 C.F.R. Parts 673 and 675).
3. Programs in which students receive grants directly from the federal government—as in the “New GI Bill” program (38 U.S.C. § 3001 *et seq.*; 38 C.F.R. Part 21) and the Pell Grant program (20 U.S.C. § 1070a *et seq.*; 34 C.F.R. Part 690).
4. Programs in which students receive funds from the federal government through the states—as in the Leveraging Educational Assistance Partnership Program (20 U.S.C. § 1070c *et seq.*; 34 C.F.R. Part 692) and the Robert C. Byrd Honors Scholarship Program (20 U.S.C. §§ 1070d-31, 1070d-33; 34 C.F.R. § 654.1).
5. Programs in which students or their parents receive funds from third-party lenders—as in the Federal Stafford Loan Program. In the Federal Family Educational Loan program, private lenders provide federally guaranteed loans. This program includes Stafford Loans made to students (20 U.S.C. § 1071 *et seq.*; 34 C.F.R. Part 682), Parent Loans for

Undergraduate Students (PLUS) made to parents (20 U.S.C. § 1078-2; 34 C.F.R. Part 682), and Consolidation Loans (20 U.S.C. § 1078-3; 34 C.F.R. Part 682).<sup>27</sup>

6. Programs in which students and parents borrow directly from the federal government at participating schools. The William D. Ford Direct Loan Program (20 U.S.C. § 1087a *et seq.*; 34 C.F.R. Part 685) includes Direct Stafford Loans, Direct PLUS Loans, and Direct Consolidation Loans. These programs allow institutions authorized by the Department of Education to lend money directly to students through loan capital provided by the federal government.

In order to receive aid, students required to register with Selective Service must file statements with the institutions they attend, certifying that they have complied with the Selective Service law and regulations. The validity of this requirement was upheld by the U.S. Supreme Court in *Selective Service System v. Minnesota Public Interest Research Group*, 468 U.S. 841 (1984). Regulations implementing the certification requirement are published in 34 C.F.R. § 668.37.

The U.S. Department of Education has posted on the World Wide Web a guide to the federal student assistance programs that provides information on applying for grants, loans, and work-study assistance. It is available at <http://www.studentaid.ed.gov>. The department also has a Web site on Information for Financial Assistance Professionals (IFAP), available at <http://ifap.ed.gov>, that provides information on the requirements for the various financial aid programs, lists available publications, and provides updates on recent changes in laws and regulations governing these programs. The Education Department publishes annually the *Federal Student Aid Handbook*, which is mailed to every institution participating in the federal student aid programs, and which also may be downloaded free from the IFAP Web site.

A law passed by Congress in 1999, the Gramm-Leach-Bliley Act (Pub. L. 106-102, November 12, 1999, codified in part at 15 U.S.C. §§ 6801(b), 6805(b)), and intended to reform the banking industry by broadening the scope of permissible business activities for banks, has been interpreted by the Federal Trade Commission (FTC) to apply to institutions of higher education that administer federal financial aid programs. The law's "Standards for Safeguarding Customer Information" (16 C.F.R. Part 314) requires covered entities, including colleges and universities, to restrict their disclosure of information about recipients of federal student aid and to develop a "comprehensive information security program" that protects the privacy of participants in financial transactions with the institution. A brief description of the requirements of the Safeguards Rule and relevant Web-based reference materials are available on the National Association of College and University Attorneys (NACUA) Web site in NACUALERT

---

<sup>27</sup>The Secretary of Education has the authority to cause guarantors of federal student loans to cease operations, a power that was recognized in *Student Loan Fund of Idaho, Inc. v. U.S. Department of Education*, 272 F.3d 1155 (9th Cir. 2001), *amended* by 2001 U.S. App. LEXIS 29338, *rehearing en banc denied*, 289 F.3d 599 (2002).

Vol. 1, No. 4 (May 16, 2003), available at <http://www.nacua.org>. The FTC has issued guidance for complying with the Safeguards Rule, which is available on the FTC's Web site at <http://www.ftc.gov>.

The receipt of Title IV funds is conditioned on compliance with a number of verification measures affecting both educational institutions and alien students. In order to participate in grants, loans, or work assistance under Title IV programs, all students must declare in writing that they are U.S. citizens or in an immigrant status that does not preclude their eligibility. Alien students are required to provide the institution with documentation that clearly establishes their immigration status, and further requires the institution to verify the status of such students with the Bureau of Citizenship and Immigration Services. Regulations related to the verification of a student's eligibility to receive federal student aid with respect to citizenship or lawful residence in the United States are found at 34 C.F.R. § 668.133. Institutions are prohibited from denying, delaying, reducing, or terminating Title IV funds without providing students with a reasonable opportunity to establish eligibility. If, after complying with these requirements, an institution determines that a student is ineligible, it is required to deny or terminate Title IV aid and provide the student with an opportunity for a hearing concerning his or her eligibility (34 C.F.R. § 668.136(c)).

Much of the controversy surrounding the federal student aid programs has concerned the sizable default rates on student loans, particularly at institutions that enroll large proportions of low-income students. Several reports issued by the General Accounting Office have been sharply critical of the practices of colleges, loan guarantee agencies, and the Department of Education in implementing the federally guaranteed student loan programs. As a result, substantial changes have been made in the laws and regulations related to eligibility, repayment, and collection practices. Collection requirements of federal student loan programs are discussed in Section 8.3.8.3.

Institutions that participate in federal student aid programs must have their program records audited annually by an independent auditor. Regulations regarding the conduct of the audit and reporting requirements appear at 34 C.F.R. § 668.24.

Federal courts have refused to authorize a private right of action against colleges or universities under the Higher Education Act for students to enforce the financial assistance laws and regulations (see, for example, *L'ggrke v. Benkula*, 966 F.2d 1346 (10th Cir. 1992); *Slovinec v. DePaul University*, 332 F.3d 1068 (7th Cir. 2003)). The courts have reached this result because the Higher Education Act vests enforcement of the financial aid program laws and regulations in the Secretary of Education (20 U.S.C. § 1082(a)(2)). Should the Secretary decline to act in a case in which an institution is violating the federal student aid requirements, a plaintiff with standing may bring an action against the Secretary of Education, but not against the college.

A few courts, however, have permitted students to use state common law fraud or statutory consumer protection theories against the Education Department, colleges, or lenders when the college either ceased operations or provided a poor-quality education (see, for example, *Tipton v. Alexander*, 768

F. Supp. 540 (S.D. W. Va. 1991)). (See Section 13.4.5 for a discussion of private rights of action under federal funding laws.) One court has permitted students to file a RICO (Racketeer Influenced Corrupt Organization) claim against a trade school, alleging mail fraud. In *Gonzalez v. North American College of Louisiana*, 700 F. Supp. 362 (S.D. Tex. 1988), the students charged that the school induced them to enroll and to obtain federal student loans, which they were required to repay. The school was unaccredited; and, after it had obtained the federal funds in the students' name, it closed and did not refund the loan proceeds.

Federal student aid programs bring substantial benefits to students and the colleges they attend. Their administrative and legal requirements, however, are complex and change constantly. It is imperative that administrators and counsel become conversant with these requirements and monitor legislative, regulatory, and judicial developments closely.

**8.3.3. Nondiscrimination.** The legal principles of nondiscrimination apply to the financial aid process in much the same way they apply to the admissions process (see Sections 8.2.4 & 8.2.5). The same constitutional principles of equal protection apply to financial aid. The relevant statutes and regulations on nondiscrimination—Title VI, Title IX, Section 504, the Americans With Disabilities Act, and the Age Discrimination Act—all apply to financial aid, although Title IX's and Section 504's coverage and specific requirements for financial aid are different from those for admissions. And affirmative action poses difficulties for financial aid programs similar to those it poses for admissions programs. Challenges brought under Title VI and the equal protection clause against institutions that reserve certain scholarships for minority students are discussed in Section 8.3.4.

Of the federal statutes, Title IX has the most substantial impact on the financial aid programs and policies of postsecondary institutions. The regulations (34 C.F.R. § 106.37), with four important exceptions, prohibit the use of sex-restricted scholarships and virtually every other sex-based distinction in the financial aid program. Section 106.37(a)(1) prohibits the institution from providing "different amount[s] or types" of aid, "limit[ing] eligibility" for "any particular type or source" of aid, "apply[ing] different criteria," or otherwise discriminating "on the basis of sex" in awarding financial aid. Section 106.37(a)(2) prohibits the institution from giving any assistance, "through solicitation, listing, approval, provision of facilities, or other services," to any "foundation, trust, agency, organization, or person" that discriminates on the basis of sex in providing financial aid to the institution's students. Section 106.37(a)(3) also prohibits aid eligibility rules that treat the sexes differently "with regard to marital or parental status."

The four exceptions to this broad nondiscrimination policy permit sex-restricted financial aid under certain circumstances. Section 106.37(b) permits an institution to "administer or assist in the administration of" sex-restricted financial assistance that is "established pursuant to domestic or foreign wills, trusts, bequests, or similar legal instruments or by acts of a foreign government." Institutions must administer such awards, however, in such a way that

their “overall effect” is “nondiscriminatory” according to standards set out in Section 106.37(b)(2). Section 106.31(c) creates the same kind of exception for sex-restricted foreign-study scholarships awarded to the institution’s students or graduates. Such awards must be established through the same legal channels specified for the first exception, and the institution must make available “reasonable opportunities for similar [foreign] studies for members of the other sex.” The third exception, for athletics scholarships, is discussed in Section 10.4.6. A fourth exception was added by an amendment to Title IX included in the Education Amendments of 1976. Section 412(a)(4) of the amendments (20 U.S.C. § 1681(a)(9)) permits institutions to award financial assistance to winners of pageants based on “personal appearance, poise, and talent,” even though the pageant is restricted to members of one sex.

Section 504 of the Rehabilitation Act of 1973 (see Section 13.5.4), as implemented by the Department of Education’s regulations, restricts postsecondary institutions’ financial aid processes as they relate to disabled persons. Section 104.46(a) of the regulations (34 C.F.R. Part 104) prohibits the institution from providing “less assistance” to qualified disabled students, from placing a “limit [on] eligibility for assistance,” and from otherwise discriminating or assisting any other entity to discriminate on the basis of disability in providing financial aid. The major exception to this nondiscrimination requirement is that the institution may still administer financial assistance provided under a particular discriminatory will or trust, as long as “the overall effect of the award of scholarships, fellowships, and other forms of financial assistance is not discriminatory on the basis of handicap” (34 C.F.R. § 104.46(a)(2)).

A lawsuit challenging the denial of financial aid as alleged disability discrimination has had a tortured history, and is yet to be resolved. In *Johnson v. Louisiana Department of Education*, 2002 U.S. Dist. LEXIS 1284 (E.D. La. 2002), Johnson, a student at the University of New Orleans, had received financial aid from the university. Johnson experienced a “medical emergency” and withdrew from the university. Several months later, the university notified Johnson that he was no longer eligible for financial aid. Johnson was ready to resume his studies and appealed this decision. The appeals committee approved a continuation of financial aid, but imposed several academic conditions on continued eligibility for the aid. Because Johnson was not notified of the committee’s decision until after the fall semester began, he missed several classes and was unable to attain the grade point average specified by the committee. He was denied further financial aid, and sued the university under Section 504.

Although the university claimed that it was immune from litigation for money damages under Section 504 on the grounds of sovereign immunity, the trial court disagreed. Citing an earlier ruling by the U.S. Court of Appeals for the Fifth Circuit in *Pederson v. Louisiana State University*, 213 F.3d 858 (5th Cir. 2000), which determined that the university had waived its sovereign immunity from Title IX claims (discussed in Section 13.1.6), the trial court ruled that the university had waived sovereign immunity by accepting funds under federal spending programs (here, federal financial aid funds).

The U.S. Court of Appeals for the Fifth Circuit vacated the trial court's opinion, 330 F.3d 362 (5th Cir. 2003), and remanded the case with instructions to dismiss Johnson's claims for lack of jurisdiction. Relying on a Fifth Circuit opinion issued after the trial court's opinion in *Johnson (Pace v. Bogalusa City School Board*, 325 F.3d 609 (5th Cir. 2003)), the appellate court ruled that the university had not waived sovereign immunity. *Pace* had also involved a Section 504 claim. The court in *Pace* had ruled that, until the decision of the U.S. Supreme Court in *Board of Trustees of the University of Alabama v. Garrett*, 531 U.S. 356 (2001), university officials were bound by earlier judicial precedent that the acceptance of federal funds did not constitute a waiver of sovereign immunity. After *Garrett*, said the court, any institution's decision to accept federal funds would constitute an express waiver under those statutes, such as Section 504, that expressly condition the receipt of federal funds on a state's waiver of sovereign immunity. However, Johnson's claims arose prior to the *Garrett* decision, and thus the university did not knowingly waive sovereign immunity.

The U.S. Court of Appeals for the Fifth Circuit granted a motion to rehear both *Johnson* and *Pace en banc (Johnson v. Louisiana Department of Education*, 343 F.3d 732 (5th Cir. 2003); *Pace v. Bogalusa City School Board*, 339 F.3d 348 (5th Cir. 2003)). The *en banc* court in *Pace* agreed with the panel's ruling that the state had waived Eleventh Amendment immunity (403 F.3d 272 (5th Cir. 2005)). There have been no further proceedings in *Johnson*.

The Americans With Disabilities Act also prohibits discrimination on the basis of disability in allocating financial aid. Title II, which covers state and local government agencies, applies to public colleges and universities that meet the definition of a state or local government agency. The regulations prohibit institutions from providing a benefit (here, financial aid) "that is not as effective in affording equal opportunity . . . to reach the same level of achievement as that provided to others" (28 C.F.R. § 35.130(b)(1)(iii)). Both public and private colleges and universities are covered by Title III as "places of public accommodation" (28 C.F.R. § 36.104), and are prohibited from limiting the access of individuals with disabilities to the benefits enjoyed by other individuals (28 C.F.R. § 36.202(b)).

Regulations interpreting the Age Discrimination Act of 1975 (42 U.S.C. §§ 6101–6103) (see Section 13.5.5 of this book) include the general regulations applicable to all government agencies dispensing federal aid as well as regulations governing the federal financial assistance programs for education. These regulations are found at 34 C.F.R. Part 110.

The regulations set forth a general prohibition against age discrimination in "any program or activity receiving Federal financial assistance" (34 C.F.R. § 110.10(a)), but permit funding recipients to use age as a criterion if the recipient "reasonably takes into account age as a factor necessary to the normal operation or the achievement of any statutory objective of a program or activity" (34 C.F.R. § 110.12) or if the action is based on "reasonable factors other than age," even though the action may have a disproportionate effect on a particular age group (34 C.F.R. § 110.13). With respect to the administration of federal financial aid, the

regulations would generally prohibit age criteria for the receipt of student financial assistance.

Criteria used to make scholarship awards may have discriminatory effects even if they appear facially neutral. For example, research conducted in the 1980s demonstrated that women students tended to score approximately 60 points lower on the Scholastic Aptitude Test (SAT) than male students did, although women's high school and college grades tended to be higher than men's. In *Sharif by Salahuddin v. New York State Education Department*, 709 F. Supp. 345 (S.D.N.Y. 1989), a class of female high school students filed an equal protection claim, seeking to halt New York's practice of awarding Regents and Empire State Scholarships exclusively on the basis of SAT scores. The plaintiffs alleged that the practice discriminated against female students. The judge issued a preliminary injunction, ruling that the state should not use SAT scores as the sole criterion for awarding scholarships. (For a thorough analysis of legal and policy issues related to this issue, see K. Connor & E. J. Vargyas, "The Legal Implications of Gender Bias in Standardized Testing," 7 *Berkeley Women's L.J.* 13 (1992).)

**8.3.4. Affirmative action in financial aid programs.** Just as colleges and universities may adopt voluntary affirmative action policies for admissions in certain circumstances (see Section 8.2.5 above), they may do so for their financial aid programs. As with admissions, when the institution takes race, ethnicity, or gender into account in allocating financial aid among its aid programs or in awarding aid to particular applicants, issues may arise under the equal protection clause (for public institutions), Title VI, Title IX, or Section 1981 (42 U.S.C. § 1981). When the issues arise under Title VI, the "1994 Policy Guidance" on financial aid, issued by the U.S. Department of Education (ED), 59 Fed. Reg. 8756-64 (February 23, 1994), provides an important supplement to the statute and regulations.

The case of *Flanagan v. President and Directors of Georgetown College*, 417 F. Supp. 377 (D.D.C. 1976), provides an early example of affirmative action issues regarding financial aid. The law school at Georgetown had allocated 60 percent of its financial aid for the first-year class to minority students, who constituted 11 percent of the class. The remaining 40 percent of the aid was reserved for nonminorities, the other 89 percent of the class. Within each category, funds were allocated on the basis of need; but, because of Georgetown's allocation policy, the plaintiff, a white law student, received less financial aid than some minority students, even though his financial need was greater. The school's threshold argument was that this program did not discriminate by race because disadvantaged white students were also included within the definition of minority. The court quickly rejected this argument:

Certain ethnic and racial groups are automatically accorded "minority" status, while whites or Caucasians must make a particular showing in order to qualify. . . . Access to the "favored" category is made more difficult for one racial group than another. This in itself is discrimination as prohibited by Title VI as well as the Constitution [417 F. Supp. at 382].

The school then defended its policy as part of an affirmative action program to increase minority enrollment. The student argued that the policy discriminated against nonminorities in violation of Title VI of the Civil Rights Act (see this volume, Section 13.5.2). The court sided with the student:

Where an administrative procedure is permeated with social and cultural factors (as in a law school's *admission* process), separate treatment for "minorities" may be justified in order to insure that all persons are judged in a racially neutral fashion.

But in the instant case, we are concerned with the question of financial need, which, in the final analysis, cuts across racial, cultural, and social lines. There is no justification for saying that a "minority" student with a demonstrated financial need of \$2,000 requires more scholarship aid than a "nonminority" student with a demonstrated financial need of \$3,000. To take such a position, which the defendants have, is reverse discrimination on the basis of race, which cannot be justified by a claim of affirmative action [417 F. Supp. at 384].

Although *Flanagan* broadly concludes that allotment of financial aid on an explicit racial basis is impermissible, at least for needs-based aid, the U.S. Supreme Court's subsequent decision in *Bakke* (see Section 8.2.5) appeared to leave some room for the explicit consideration of race in financial aid programs. ED's 1994 Policy Guidance, above, confirmed the view that race-conscious financial aid policies are permissible in some circumstances. And more recently, the Supreme Court's 2003 decisions in *Grutter v. Bollinger*, 539 U.S. 306 (2003), and *Gratz v. Bollinger*, 539 U.S. 244 (2003) (see Section 8.2.5), although concerned with admissions rather than financial aid, have given further support for the position that some consideration of race in allocating and awarding financial aid is permissible.

Since the U.S. Supreme Court has not yet decided a case on affirmative action in financial aid programs, the admission cases, *Grutter* and *Gratz*, are therefore the precedents most nearly on point. It is likely that the general principles from these cases will apply to financial aid programs as well, and that courts will use these principles to resolve equal protection, Title VI, and Section 1981 challenges to financial aid policies of public institutions, and Title VI and Section 1981 challenges to such policies of private institutions.<sup>28</sup> This assessment does not necessarily mean, however, that race-conscious financial aid policies will always be valid or invalid under the law in the same circumstances and to the same extent as race-conscious admissions policies. The Court made clear in *Grutter* and *Gratz* that "[n]ot every decision influenced by race is equally objectionable," and that courts therefore must carefully consider the "context" in which a racial or ethnic preference is used. Since the "context" for financial aid policies typically has some differences from the "context" for admissions, as discussed

---

<sup>28</sup>One appellate court has suggested, however, in a post-*Grutter* and *Gratz* case, that somewhat different principles may apply under Section 1981 with respect to the "order and nature of the proof" of intentional discrimination (*Doe v. Kamehameha Schools/Bernice Pauahi Bishop Estate*, 416 F.3d 1025 (9th Cir. 2005)).

below, these differences may lead to some differences in legal reasoning, and perhaps results, in cases challenging affirmative action in financial aid.

The basic principles guiding a court's analysis, however, probably would not change from one context to the other. The threshold questions would likely still include whether the policy on its face or in its operation takes race into account in allocating or awarding financial aid, and if so, whether the policy uses racial quotas for either the dollar amount of aid available to minority applicants or the number of scholarships, loans, or other aid awards for minority applicants. There would still most probably be a need to determine the institution's justification for taking race into account, and the documentation supporting this justification. The permissible justifications for financial aid policies are likely to be the same as for admissions policies—student body diversity and remedying the present effects of the institution's past discrimination; and just as these interests are "compelling interests" for purposes of admissions, they will likely be considered compelling for financial aid as well. The "narrow tailoring" test will also likely continue to apply as the basis for judging whether the consideration of race is designed, and carefully limited, to accomplish whichever compelling interest the institution has attributed to its race-conscious financial aid policies. Thus the strict scrutiny standard of review, as articulated and applied to admissions in *Grutter* and *Gratz*, also can guide analysis of race-conscious financial aid and "provide a framework for carefully examining the importance and the sincerity of the reasons advanced by the governmental decision-maker for the use of race *in that particular context*" (539 U.S. at 327; emphasis added).

There appear to be three particularly pertinent ways in which the context of financial aid differs from the context of admissions. *First*, institutions dispense financial aid through a variety of scholarship, loan, and work-study programs that may have differing eligibility requirements and types of aid packages. It may therefore be questionable, in particular cases, whether each "part" of the aid program that takes race into account may be analyzed independent of the other parts of the institution's overall aid program, or whether courts may or must consider how other parts of the program may work together with the challenged part in accomplishing the institution's interest in student body diversity or remedying past discrimination. *Second*, some of the institution's financial aid resources may come from private donors who have established their own eligibility requirements for the aid, and the institution may have various degrees of involvement in and control over the award of this aid from private sources. (The U.S. Department of Education's 1994 Policy Guidance, for example, distinguishes between private donors' awards of race-conscious aid directly to students, which aid is not covered by Title VI, and private donors' provision of funds to a college or university that in turn distributes them to students, which funds are covered by Title VI (see 59 Fed. Reg. at 8757–58, Principle 5).) Questions may therefore arise concerning whether and when such financial aid is fully subject to the requirements of the equal protection clause, or Title VI or Title IX, and whether such aid may or must be considered to be part of the institution's overall aid program if a court considers how all the parts work together to accomplish the institution's interests (see first point immediately above). *Third*, "the

use of race in financial aid programs may have less impact on individuals who are not members of the favored group than the use of race in admissions. If individuals are not admitted to an institution, then they cannot attend it,” but “individuals who do not receive a particular race-conscious scholarship may still be able to obtain loans, work-study funds, or other scholarships in order to attend.” (See Elizabeth Meers & William Thro, *Race Conscious Admissions and Financial Aid Programs* (National Association of College and University Attorneys, 2004), 28; and see generally Meers & Thro at 24–30.)

The most vulnerable type of race-conscious aid is “race-exclusive” scholarships available only to persons of a particular race or ethnicity. Under the 1994 Policy Guidance, above, the U.S. Department of Education permits the use of race-exclusive scholarships in certain narrow circumstances (59 Fed. Reg. at 8757–58 (Principles 3, 4, & 5)). But under the *Grutter* and *Gratz* principles, as applied to financial aid policies, such scholarships may be viewed as employing racial quotas as well as a separate process or separate consideration for minority aid applicants—both of which are prohibited for admissions policies.

In a major case decided prior to *Grutter* and *Gratz*, *Podberesky v. Kirwan*, 38 F.3d 147 (4th Cir. 1994), a U.S. Court of Appeals invalidated a race-exclusive scholarship program of the University of Maryland. In *Podberesky*, a Hispanic student claimed that the university’s Banneker Scholarship program violated Title VI and the equal protection clause. The district court and the appellate court applied strict scrutiny analysis. Defending its program, the university argued that it served the compelling state interest of remedying prior *de jure* discrimination, given the fact that the state was then still under order of the Office for Civil Rights, U.S. Department of Education, to remedy its formerly segregated system of public higher education. The university also argued that the goal of the student body diversity was served by the scholarship program.

The district court found that the university had provided “overwhelming” evidence of the present effects of prior discrimination and upheld the program without considering the university’s diversity argument (764 F. Supp. 364 (D. Md. 1991)). The federal appeals court, however, reversed the district court (956 F.2d 52 (4th Cir. 1992)). Although the appellate court agreed that the university had provided sufficient evidence of prior discrimination, it found the Office for Civil Rights’ observations about the present effects of that discrimination unconvincing because they had been made too long ago (between 1969 and 1985); and it ordered the district court to make new findings on the present effects of prior discrimination. The appellate court also noted that race-exclusive scholarship programs violate *Bakke* if their purpose is to increase student body diversity rather than to remedy prior discrimination.

On remand to the district court, the university presented voluminous evidence of the present effects of prior discrimination, including surveys of black high school students and their parents, information on the racial climate at the university, research on the economic status of black citizens in Maryland and the effects of unequal educational opportunity, and other studies. The district court found that the university had demonstrated a “strong basis in evidence” for four present effects of past discrimination: the university’s poor reputation

in the black community, underrepresentation of blacks in the student body, the low retention and graduation rates of black students at the university, and a racially hostile campus climate (838 F. Supp. 1075 (D. Md. 1993)).

With regard to the university's evidence of the present effects of past discrimination, the court also commented: "It is worthy of note that the University is (to put it mildly) in a somewhat unusual situation. It is not often that a litigant is required to engage in extended self-criticism in order to justify its pursuit of a goal that it deems worthy" (838 F. Supp. at 1082, n.47). The court also held that the Banneker Scholarship program was narrowly tailored to remedy the present effects of past discrimination because it demonstrated the university's commitment to black students, increased the number of peer mentors and role models available to black students, increased the enrollment of high-achieving black students, and improved the recipients' academic performance and persistence. Less restrictive alternatives did not produce these results. The court did not address the university's diversity argument.

On appeal, the U.S. Court of Appeals for the Fourth Circuit again overruled the district court (38 F.3d 147 (4th Cir. 1994)). Despite the university's voluminous evidence of present effects of prior racial discrimination, the appellate court held that there was insufficient proof of present effects to establish a compelling interest for the race-exclusive scholarships. Furthermore, said the court, the scholarship program was not narrowly tailored to accomplishing the university's interest. The program thus failed both prongs of the strict scrutiny test.

The appellate court was sharply critical of the findings made by the district court on the present effects of prior discrimination. With respect to the district court's findings on the university's poor reputation in the minority community and the hostile racial environment on campus, the appellate court ruled that those then-present conditions were not closely related to the university's prior discrimination but were more directly a result of present societal discrimination that cannot form the basis for a race-conscious remedy. Regarding the findings of low retention and graduation rates of minority students, the appellate court held that this condition was not directly linked to the university's prior discrimination but was a result of economic and other unrelated factors. Similarly, regarding the underrepresentation of black students at the university, the appellate court held that this condition could not be traced directly to the university's prior discrimination; other factors, such as student preferences for predominantly minority public colleges in Maryland, decisions to apply only to out-of-state colleges, and decisions not to attend college at all could explain all or part of the underrepresentation.

The appellate court also rejected the district court's finding that the program provided role models and mentors to other black students, noting that the "Supreme Court has expressly rejected the role-model theory as a basis for implementing a race-conscious remedy" (38 F.3d at 159, citing *Wygant v. Jackson Board of Educ.*, 476 U.S. 267, 276 (1986) (plurality opinion)). In addition, the appellate court also criticized the university for asserting that its program was narrowly tailored to increase the number of black Maryland residents at the university, since the Banneker program was open to out-of-state students.

Thus, the court concluded: “[T]he program more resembles outright racial balancing than a tailored remedial program” (38 F.3d at 160).

Although the university had originally used two rationales for its race-conscious scholarship program—remediation of its own prior discrimination and enhancement of student diversity—the district court had addressed only the remediation rationale in its first decision. In the appellate court’s first reversal of the district court, it rejected diversity as a rationale for race-exclusive programs. The university therefore did not argue that rationale in the second round of litigation, not did the district or appellate courts address it.

*Podberesky* thus signals the legal vulnerabilities of race- or gender-exclusive scholarship programs. At the least, *Podberesky* illustrates how difficult it may be to justify a race-based scholarship program using the remedying-prior-discrimination rationale. The other, less developed, part of *Podberesky*, rejecting the student diversity rationale, is inconsistent with the Supreme Court’s decisions in *Grutter* and *Gratz*, and *Podberesky* therefore cannot be used to foreclose diversity rationales for race-conscious student aid programs. But, as suggested earlier in this subsection, *Grutter* and *Gratz* present institutions with other problems in demonstrating that a race-exclusive scholarship program is not the equivalent of a racial quota and does not employ a separate process insulating minority applicants from competition with nonminorities who seek financial aid. On the other hand, some room is apparently left open, by *Grutter* and *Gratz*, for an institution to argue that there are no race-neutral alternatives, or alternatives that do not involve exclusivity, for accomplishing the diversity objectives that it accomplishes with race-exclusive aid; or to argue that nonminority students are not unduly burdened by the race-exclusive program because their financial aid needs are met in other comparable ways with other funds under other programs. The U.S. Department of Education’s 1994 Policy Guidance (above) appears to adopt a similar position (59 Fed. Reg. at 8757) and thus provides further support for the validity of some race-exclusive scholarships, at least under Title VI.<sup>29</sup>

Both public and private institutions that have race-conscious or gender-conscious financial aid programs may wish to review them in light of these various considerations, and institutions considering the adoption or modification of any such program will want to do the same. In addition, careful monitoring of further developments in the courts, the U.S. Department of Education, and in the states (including proposed amendments to the state constitution) is obviously warranted.

**8.3.5. Discrimination against nonresidents.** State institutions have often imposed significantly higher tuition fees on out-of-state students, and courts have generally permitted such discrimination in favor of the state’s own

---

<sup>29</sup>Similar issues could arise with sex-restricted scholarships, and similar arguments would be available to institutions. In addition, institutions may sometimes rely on a Title IX regulation that expressly permits sex-restricted scholarships awarded under wills, trusts, and other legal instruments if the “overall effect” of such awards is not discriminatory (34 C.F.R. § 106.37(b); see subsection 8.3.3 of this book, above).

residents. The U.S. Supreme Court, in the context of a related issue, said: “We fully recognize that a state has a legitimate interest in protecting and preserving the quality of its colleges and universities and the right of its own bona fide residents to attend such institutions on a preferential tuition basis” (*Vlandis v. Kline*, 412 U.S. 441, 452–53 (1973)). Not all preferential tuition systems, however, are beyond constitutional challenge.

In a variety of cases, students have questioned the constitutionality of the particular criteria used by states to determine who is a resident for purposes of the lower tuition rate.<sup>30</sup> In *Starns v. Malkerson*, 326 F. Supp. 234 (D. Minn. 1970), students challenged a regulation that stipulated: “No student is eligible for resident classification in the university, in any college thereof, unless he has been a bona fide domiciliary of the state for at least a year immediately prior thereto.” The students argued, as have the plaintiffs in similar cases, that discrimination against nonresidents affects “fundamental” rights to travel interstate and to obtain an education and that such discrimination is impermissible under the Fourteenth Amendment’s equal protection clause unless necessary to the accomplishment of some “compelling state interest.” The court dismissed the students’ arguments, concluding that “the one-year waiting period does not deter any appreciable number of persons from moving into the state. There is no basis in the record to conclude, therefore, that the one-year waiting period has an unconstitutional ‘chilling effect’ on the assertion of the constitutional right to travel.” The U.S. Supreme Court affirmed the decision without opinion (401 U.S. 985 (1971)).

Other cases are consistent with *Starns* in upholding durational residency requirements of up to one year for public institutions. Courts have agreed that equal protection law requires a high standard of justification when discrimination infringes fundamental rights. But, as in *Starns*, courts have not agreed that the fundamental right to travel is infringed by durational residency requirements. Since courts have also rejected the notion that access to education is a fundamental right (see *San Antonio Independent School District v. Rodriguez*, 411 U.S. 1 (1973)), courts have not applied the “compelling interest” test to durational residency requirements of a year or less. In *Sturgis v. Washington*, 414 U.S. 1057 (1973), *affirming* 368 F. Supp. 38 (W.D. Wash. 1973), the Supreme Court again recognized these precedents by affirming, without opinion, the lower court’s approval of Washington’s one-year durational residency statute.

However, in *Vlandis v. Kline* (cited earlier in this Section), the Supreme Court held another kind of residency requirement to be unconstitutional. A Connecticut statute provided that a student’s residency at the time of application

---

<sup>30</sup>The cases are collected in Kenneth Rampino, Annot., “Validity and Application of Provisions Governing Determination of Residency for Purpose of Fixing Fee Differential for Out-of-State Students in Public College,” 56 A.L.R.3d 641. For citations to state statutes and regulations on residency determinations, and an analysis of the governance structure by which each state implements its requirements, see Michael A. Olivas, et al., “State Residency Requirements: Postsecondary Authorization and Regulations,” 13 *Coll. L. Dig.* 157, printed in *West’s Educ. Law. Rptr.* (NACUA Special Pamphlet, February 1983).

for admission would remain her residency for the entire time she was a student. The Supreme Court noted that, under such a statute, a person who had been a lifelong state resident, except for a brief period in another state just prior to admission, could not reestablish Connecticut residency as long as she remained a student. But a lifelong out-of-state resident who moved to Connecticut before applying could receive in-state tuition benefits even if she had lived in the state for only one day. Because such unreasonable results could flow from Connecticut's "permanent irrebuttable presumption" of residency, the Court held that the statute violated due process. At the same time, the Court reaffirmed the state's broad discretion to use more flexible and individualized criteria for determining residency, such as "year-round residence, voter registration, place of filing tax returns, property ownership, driver's license, car registration, marital status, vacation employment," and so on. In subsequent cases the Court has explained that *Vlandis* applies only to "those situations in which a state 'purports to be concerned with [domicile but] at the same time den[ies] to one seeking to meet its test of [domicile] the opportunity to show factors clearly bearing on that issue'" (*Elkins v. Moreno*, 435 U.S. 647 (1978), quoting *Weinberger v. Salfi*, 422 U.S. 749, 771 (1975)).

Lower courts have considered other types of residency criteria, sometimes (like the Supreme Court in *Vlandis*) finding them unconstitutional. In *Kelm v. Carlson*, 473 F.2d 1267 (6th Cir. 1973), for instance, a U.S. Court of Appeals invalidated a University of Toledo requirement that a law student show proof of postgraduation employment in Ohio before being granted resident status. This requirement created a type of irrebuttable presumption that "can act as an impossible barrier to many students who in utter good faith intend to and, for all other purposes, have succeeded in establishing residency in Ohio"; the regulation arbitrarily discriminated against such students, thus violating the equal protection clause. In *Samuel v. University of Pittsburgh*, 375 F. Supp. 1119 (W.D. Pa. 1974), a class action brought by female married students, a federal district court invalidated a residency determination rule that made a wife's residency status dependent on her husband's residency. While the state defended the rule by arguing the factual validity of the common law presumption that a woman has the domicile of her husband, the court held that the rule discriminated on the basis of sex and thus violated equal protection principles. And in *Eastman v. University of Michigan* 30 F.3d 670 (6th Cir. 1994), the court identified equal protection problems raised by a university durational residency requirement that did not clearly distinguish between *residency* and *domicile*. Remanding the case to the federal district court for further proceedings, the court reasoned:

A durational requirement imposed on a domiciliary or bona fide resident . . . would run afoul of the Equal Protection Clause. Because domicile can be obtained without the passage of any particular period of time, such a requirement imposed on one who has true domicile or bona fide residence in the state would not advance the legitimate state interest served by such a requirement—restricting preferential tuition rates only to domiciliaries. The requirement therefore would lack a rational basis and violate the Equal Protection Clause.

Although the passage of a certain period of time, such as a year, may be relevant as evidence on the question of domicile, it cannot be dispositive. Thus, if the University's registrar requires some individuals to have a physical residence in Michigan for one year before considering evidence on their domicile or bona fide residence status, and also refuses to give them retroactive credit for residence at the time that his investigation, whenever conducted, shows that domicile or bona fide residence began, then the policy would be unconstitutional as an impermissible durational requirement imposed on domiciliaries. If, on the other hand, the registrar determines, based on all the evidence, whether the student is a domiciliary or bona fide resident at the time of admission, then the policy would not be unconstitutional . . . [30 F.3d at 673-74].

Other courts (like the U.S. Supreme Court in *Starns* and in *Sturgis*) have upheld particular residency criteria against constitutional objections. In *Peck v. University Residence Committee of Kansas State University*, 807 P.2d 652 (Kan. 1991), for instance, the court rejected students' arguments that the state residency requirements violated equal protection and procedural due process (807 P.2d at 663-64). And in *Smith v. Board of Regents of the University of Houston*, 874 S.W.2d 706 (Ct. App. Tex. 1994), the plaintiff applied for the in-state tuition rate after living in Texas and attending the University of Houston for one year. He had moved to Texas in 1987 to commence study at the university's law center. The plaintiff was a full-time student who had declared his intent "to attend law school and live and work [in Texas] after graduation." During the school year he worked part time for a law firm in Houston; during the summers he worked full time for the same firm. In addition, he was registered to vote in Texas, held a Texas driver's license, registered his car in Texas, and rented an apartment in Texas. The university denied his initial request for reclassification as an in-state student and every subsequent request he made before each of his remaining semesters at the university.

The Texas statute defines a nonresident student as "an individual who is 18 years of age or over who resides out of state or who has come from outside Texas and who registers in an educational institution before having resided in Texas for a 12-month period" (Tex. Educ. Code Ann. § 54.052(f)). There is a presumption in favor of this nonresident student classification "as long as the residence of the individual in the state is primarily for the purpose of attending an educational institution" (§ 54.054). The regulations of the Coordinating Board, Texas College and University System, provide for a reclassification if the individual withdraws from school and resides in the state while gainfully employed for twelve months, but does not provide for this reclassification if the nonresident maintains his status as a full-time student.

The plaintiff argued that the Texas statute governing residency created an unconstitutional, irrebuttable presumption of nonresidency. Citing *Vlandis v. Kline* (above), the court rejected this argument:

Unlike the Connecticut statute [at issue in *Vlandis*], the reclassification rules in Texas do not permanently "freeze" a student in a nonresident status based on the student's classification at the time of application to the university. A student

may obtain reclassification in any number of ways. First, according to the policy on reclassification, a student will be entitled to reclassification if he or she withdraws from the University for a period of twelve months, and resides in Texas while gainfully employed. Secondly, the statute lists several factors that may result in reclassification. For example, a student may work full time in Texas, while enrolled as a student, or may purchase a homestead in Texas. Dependency on a parent or guardian who has resided in Texas for at least 12 months is also a factor that may result in reclassification. However, the factors listed in the statute are nonexclusive; therefore, presumably there are other circumstances that would result in reclassification. The rule in question also indicates that the “presumption of ‘nonresident’ is not a conclusive presumption,” and may be overcome by showing “facts or actions unequivocally indicative of a fixed intention to reside permanently in the state” [874 S.W.2d at 709].

The court had no difficulty with the university’s position that the plaintiff’s statement of intent to remain in Texas was not sufficient proof of that intent: “to accept the plaintiff’s argument would require the University to reclassify as a resident every student who, after attending the University for a year, makes a self-serving declaration that he intends to reside [in the state].”

The plaintiff also argued that the one-year waiting period infringed on his fundamental right to travel. Relying again on *Vlandis* as well as on *Starns v. Malkerson* (above), the court also rejected this equal protection claim:

We find the reclassification statute distinguishable from either of the two situations in which a statute has been invalidated because it impinged upon the fundamental right to travel. The reclassification statute, and its one-year waiting period, does not involve a basic right or necessity. . . . The right to receive a lower tuition rate at a state university cannot be equated to the right to receive welfare benefits, medical care, or the right to vote. Neither does the reclassification statute, on its face, seek to apportion or limit the benefits accorded to the citizens of Texas based on the length or timing of their residence. Instead, the reclassification policy seeks to establish which students are in fact bona fide residents of the state of Texas [874 S.W.2d at 711].

Because it found that the Texas statute and the regulations promulgated by the coordinating board do not create an irrebuttable presumption of nonresidency or an impingement on the right to travel, but instead create a test of bona fide residency for purposes of tuition, the court rejected the student’s claims and upheld the statute’s constitutionality. Subsequently, in *Teitel v. University of Houston Board of Regents*, 285 F. Supp. 2d. 865 (S.D. Tex. 2002), a federal court also upheld the constitutionality of the Texas residency statute and regulations, rejecting arguments similar to those in *Smith* (as well as contract and negligence claims that were summarily dismissed).

The court’s opinion in *Eastman v. University of Michigan*, 30 F.3d 670 (6th Cir. 1994), contains a useful discussion of the distinction between residency and domicile (30 F.3d at 672–73), as well as an implicit warning to drafters of residency regulations to exercise care in using these terms. The court also clarified that, while durational residency requirements are valid under *Starns*, *Sturgis*,

and *Vlandis*, such a requirement would be unconstitutional if applied to a student *who has already established a bona fide domicile* (as opposed to a resident status) within the state (30 F.3d at 673–74).

In addition to establishing acceptable criteria, institutions must ensure that the procedures they follow in making residency determinations will not be vulnerable to challenges. For instance, they will be expected to follow any procedures established by state statutes or administrative regulations. Their procedures also must comply with the procedural requirements of the federal due process clause. In *Lister v. Hoover*, 706 F.2d 796 (7th Cir. 1983), however, the court held that the due process clause did not obligate the University of Wisconsin to provide students denied resident status with a written statement of reasons for the denial; see also *Michaelson v. Cox*, 476 F. Supp. 1315 (S.D. Iowa 1979). And in *Ward v. Temple University*, 2003 WL 21281768 (E.D. Pa. 2003), the court, citing *Lister*, asserted that “a public university such as Temple does not have to provide a full panoply of procedural protections to individuals claiming in-state residency status for tuition purposes” (2003 WL 21281768 at \*4).

In most of the tuition residency cases discussed above, the courts analyzed the issues under the Fourteenth Amendment’s equal protection and due process clauses. In *Saenz v. Roe*, 526 U.S. 489 (1999), however, the U.S. Supreme Court determined that durational residency requirements for state services are also subject to analysis under the Fourteenth Amendment’s “privileges or immunities” and “citizenship” clauses (14th Amend., § 1, sentences 1 & 2). (See Erika Nelson, Comment, “Unanswered Questions: The Implications of *Saenz v. Roe* for Durational Residency Requirements, 49 *U. Kan. L. Rev.* 193 (2000).) Relying on these two clauses, the Court by a 7-to-2 vote invalidated a California one-year durational residency requirement for welfare benefits. While this case thus identifies two additional bases upon which new arrivals may attack residency requirements for state benefits and services, these new arguments are not likely to be applied successfully to state residency requirements—particularly durational residency requirements—for tuition benefits. In its opinion, the Court distinguished state tuition benefits from state welfare benefits:

[B]ecause whatever benefits [the plaintiffs] receive will be consumed while they remain in California, there is no danger that recognition of their claim will encourage citizens of other States to establish residency for just long enough to acquire some readily portable benefit, such as a divorce or a college education, that will be enjoyed after they return to their original domicile. See, e.g., *Sosna v. Iowa*, 419 U.S. 393 (1975); *Vlandis v. Kline*, 412 U.S. 441 (1973) [526 U.S. at 505].

Moreover, the Court said it was “undisputed” that the *Saenz* plaintiffs were citizens and thus residents of the state, and that it was not a case in which “the bona fides of [their] claim to state citizenship were questioned.” Since issues about the bona fides of residency are the focus of most of the cases in this Section, these cases are apparently still good law after the *Saenz* decision.

Residency cases have increasingly focused on issues of state administrative law. Typically, these issues concern the authority of state higher education institutions to promulgate administrative rules and criteria for residency

determinations, the legal interpretation of these rules and criteria, the burden of proof that petitioning students must meet to demonstrate residency, or the standard of review that courts must apply in reviewing administrative denials of residency petitions. In *Peck v. University Residence Committee* (above), for example, the student plaintiff had applied to the defendant residence committee for approval to pay the lower tuition charge for Kansas resident students. The committee denied his request despite the fact that he “(1) registered to vote and voted in Kansas; (2) registered an automobile in Kansas and paid personal property tax in Kansas; (3) insured his automobile in Kansas; (4) acquired a Kansas driver’s license; (5) had a checking and savings account in Kansas; and (6) registered with the selective service in Kansas” (807 P.2d at 656). The state district court overruled the committee’s decision, stating that its “action in denying Peck resident status is not supported by substantial evidence.” Reversing the district court, the Supreme Court of Kansas held that, although the student had established physical residence in Kansas, he had not established the requisite intent to remain permanently in Kansas after graduation. Reviewing the committee’s application of eight primary and nine secondary factors set out in state regulations for use in determining intent, the court concluded that most of the student’s evidence related to secondary factors, which, standing alone, were “not probative for an intent determination because many are capable of being fulfilled within a few days of arriving in Kansas.” The court also rejected the student’s arguments that the residency regulations were inconsistent with the authorizing state statute (Kan. Stat. Ann. § 76-729(c)(4)). The court therefore reinstated the findings and decision of the residence committee.

In a Vermont case, *Huddleston v. University of Vermont*, 719 A.2d 415 (Vt. 1998), the Supreme Court of Vermont upheld a university regulation requiring students to prove their in-state residency status by “clear and convincing” evidence. Pursuant to the Vermont legislature’s “broad delegation of authority” to the university’s trustees to define eligibility for in-state tuition, the university had adopted procedures, rules, and documentation requirements for determining a student’s tuition classification. The enabling statute (16 Vt. Stat. Ann. § 2282) did not mention burdens of proof, but the university nevertheless included the “clear and convincing” requirement in its regulations. The court upheld this provision because the university trustees had “implicit authority” to adopt a burden of proof requirement “in furtherance of this legislative charge to implement state policy on reduced tuition rates for in-state students.”

A case from Oregon, *Polaski v. Clark*, 973 P. 2d 381 (Or. App. 1999), concerned the legal interpretation of residency rules. The plaintiff-student had served in the U.S. Air Force at various locations in the United States. He petitioned to be classified an Oregon resident for tuition purposes beginning with the 1996 winter term. In his application, he explained that “[f]rom October 1994, when I decided to become an Oregon resident upon my discharge, I did all I could to become an Oregon resident. I registered to vote, registered my vehicle, got an Oregon driver’s license and changed my tax status to Oregon. I have recently even purchased my first home in Portland, and I intend to make Oregon my residence both now and in the future.” The Interinstitutional Residency

Committee, and then the vice chancellor for academic affairs, of the Oregon higher education system denied the student's request on the basis that he had not maintained a "continuous presence" in Oregon for the twelve months prior to his request for resident classification, as required by the system's regulation which provides:

- (2) An Oregon resident is a financially independent person who, immediately prior to the term for which Oregon resident classification is requested:
  - (a) Has established and maintained a domicile in Oregon of not less than 12 consecutive months; and
  - (b) Is primarily engaged in activities other than those of being a college student [Or. Admin. Reg. 580-010-0030].

The student sought judicial review of the vice chancellor's decision. Applying the Oregon Administrative Procedure Act, the appellate court explained that, on a petition for judicial review, the court "reviews [only] for substantial evidence and errors of law" (973 P.2d at 383, citing Or. Admin. Reg. 183.484 (4)). The student claimed that the vice chancellor's interpretations of the residency regulations were incorrect (that is, were errors of law). The court determined, however, that the vice chancellor correctly interpreted the rules in denying petitioner resident status. In particular, while the twelve-month rule "does not demand an uninterrupted physical presence" in the state, "it does demand an uninterrupted 'presence,'" in the sense of domicile, "even though the person is physically absent."

In comparison, the court's decision in *Ravindranathan v. Virginia Commonwealth University*, 519 S.E.2d 618 (Va. 1999), concerned issues of the adequacy of evidence rather than issues of legal interpretation (or errors of law). The student had moved to Virginia from Illinois to attend Virginia Commonwealth University (VCU) for her undergraduate education and had stayed on to attend medical school at VCU. She sought residency status for medical school, claiming that her boyfriend lived in Virginia, she paid taxes in Virginia, she registered to vote in Virginia, her father had secured a license to practice medicine in Virginia, and her parents were preparing to move to Virginia. After a residency officer denied her in-state tuition status, the student appealed to the Residency Appeals Committee; when her petition was again denied, she filed suit asking the court to review and reverse these administrative decisions. A state statute provided that the court's function in such a case "shall be only to determine whether the decision reached by the institution could reasonably be said, on the basis of the record, not to be arbitrary, capricious or otherwise contrary to law" (519 S.E.2d at 670, citing Va. Code § 23-7.4:3(A)). The circuit court upheld the Residency Appeals Committee decision, and the Supreme Court of Virginia affirmed. The student had been a nonresident when she came to Virginia for undergraduate school, said the court, and a "presumption" arose that the student continued in the state "for the purpose of attending school and not as a bona fide domiciliary." The student had the evidentiary burden of rebutting this presumption "by clear and convincing evidence." The appeals committee decided she had not met this burden. Moreover:

The circuit court correctly refused to reweigh the evidence considered by the Residency Appeals Committee and, as required by Code § 23-7.4:3, the circuit court limited its review to “whether the decision reached by the institution could reasonably be said, on the basis of the record, not to be arbitrary, capricious or otherwise contrary to law.”

\* \* \* \*

On appeal, the sole issue that we may consider is whether the circuit court was plainly wrong when it held that the Residency Appeals Committee’s decision was not arbitrary, capricious, or otherwise contrary to the law. Our review of the record reveals that the facts upon which [the student] relies to support her purported Virginia domicile could also be deemed auxiliary to fulfilling her educational objectives or are routinely performed by temporary residents of this Commonwealth. Thus, the Residency Appeals Committee’s decision was not arbitrary or capricious, and the circuit court’s judgment upon review of that decision was not plainly wrong [519 S.E.2d at 620-21].

As these administrative law cases illustrate, institutions that act responsibly and consistently will usually be able to prevail when students assert state administrative law challenges to residency determinations. The evidentiary burdens on students may be high; the state statutes may accord considerable discretion to institutions to promulgate rules and make determinations; and the scope of judicial review may be quite narrow. Generally students, to be successful in court, will need to show that the institution has violated its own procedures for processing residency requests, ignored its own residency criteria, or committed a clear error of law in interpreting state law or its own rules.

Similarly, the constitutional cases earlier in this Section indicate that institutions should usually be able to prevail against constitutional challenges to residency regulations. Durational residency requirements of up to one year, and other requirements directly related to the establishment of domicile, will be constitutional so long as they are implemented with clear and specific criteria and basic due process procedures. The two fatal flaws that drafters need to assiduously avoid are (1) the creation of irrebuttable presumptions of nonresidency (see *Vlandis* and *Kelm* above), and (2) creating confusion between the concepts of domicile and residency (see *Eastman* above, and see also *Martinez v. Bynum*, 461 U.S. 321, 327–31 (1983)).

### **8.3.6. Discrimination against aliens**

**8.3.6.1. Documented (immigrant and nonimmigrant) aliens.** In *Nyquist v. Jean-Marie Mauclet*, 432 U.S. 1 (1977), the U.S. Supreme Court set forth constitutional principles applicable to discrimination against resident aliens in student financial aid programs. The case involved a New York State statute that barred permanent resident aliens from eligibility for Regents’ college scholarships, tuition assistance awards, and state-guaranteed student loans. Resident aliens denied financial aid argued that the New York law unconstitutionally discriminated against them in violation of the equal protection clause of the Fourteenth Amendment. The Supreme Court agreed.

The Court's opinion makes clear that alienage, somewhat like race, can be a "suspect classification." Discrimination against resident aliens in awarding financial aid can thus be justified only if the discrimination is necessary in order to achieve some compelling governmental interest.<sup>31</sup> The *Nyquist* opinion indicates that the state's interests in offering an incentive for aliens to become naturalized, and in enhancing the educational level of the electorate, are not sufficiently strong to justify discrimination against resident aliens with regard to financial aid.

Since the case was brought against the state rather than against individual postsecondary institutions, *Nyquist's* most direct effect is to prohibit states from discriminating against resident aliens in state financial aid programs. It does not matter whether the state programs are for students in public institutions, in private institutions, or both, since in any case the state would have created the discrimination. In addition, the case clearly would prohibit public institutions from discriminating against resident aliens in operating their own separate financial aid programs. Private institutions are affected by these constitutional principles only to the extent that they are participating in government-sponsored financial aid programs or are otherwise engaging in "state action" (see Section 1.5.2) in their aid programs.

It does not necessarily follow from *Nyquist* that all aliens must be considered eligible for financial aid. *Nyquist* concerned permanent resident aliens and determined that such aliens as a class do not differ sufficiently from U.S. citizens to permit different treatment. Courts might not reach the same conclusion about nonresident aliens whose permission to be in the United States is temporary. In *Ahmed v. University of Toledo*, 664 F. Supp. 282 (N.D. Ohio 1986), for example, the court considered a challenge to the University of Toledo's requirement that all international students purchase health insurance. Those students not able to show proof of coverage were deregistered, and their financial aid was discontinued. The trial court ruled that the affected international students were not a suspect class for equal protection purposes, because only nonresident aliens were required to purchase the insurance; resident aliens were not. Since the situation was thus unlike *Nyquist*, where the challenged policy had affected resident rather than nonresident aliens, the court used the more relaxed "rational relationship" standard of review for equal protection claims rather than

---

<sup>31</sup>There are exceptions to this suspect class/strict scrutiny treatment of alienage classifications. One exception, directly pertinent to the financial aid issues, concerns the federal government's use of alienage classifications. When the federal government treats aliens differently from citizens, courts will presume that it has a legitimate reason for doing so—since the federal government (unlike state and local governments) has constitutional powers over matters of immigration and citizenship. Federal government alienage classifications are therefore not considered "suspect" and are not subject to the strict scrutiny standard the Court used in *Nyquist* (see, for example, *Mathews v. Diaz*, 426 U.S. 67 (1976)). A second possible exception may apply to classifications of nonresident (nonimmigrant) aliens—a class not involved in *Nyquist*. This possible exception is addressed in the *Ahmed* and *Tayyari* cases discussed below in this Section. An apparent third exception concerns classification of undocumented aliens; this exception is discussed in subsection 8.3.6.2 below. (Another exception, generally not relevant to financial aid issues, is discussed in Section 5.3.2 of this book with respect to state and local government employment.)

*Nyquist's* strict scrutiny standard (see generally, regarding strict scrutiny, Section 8.2.5), holding that the university's policy was rational and therefore constitutional. The U.S. Court of Appeals dismissed the students' appeal as moot (822 F.2d 26 (6th Cir. 1987)). In *Tayyari v. New Mexico State University*, 495 F. Supp. 1365 (D.N.M. 1980), however, the court did invalidate a university policy denying reenrollment (during the Iranian hostage crisis) to Iranian students who were nonimmigrant aliens in this country on student visas. The court considered the Iranian students to be members of a suspect class and determined that the university's reasons for treating them differently could not pass strict scrutiny.

Despite the *Tayyari* reasoning, public colleges and universities subject to the *Nyquist* principles can probably comply by making sure that they do not require students to be U.S. citizens or to show evidence of intent to become citizens in order to be eligible for financial aid administered by the institution. (The U.S. Department of Education has similar eligibility requirements for its student aid programs; see the Department's *Student Guide to Financial Aid*, available at [http://studentaid.ed.gov/students/publications/student\\_guide/index.html](http://studentaid.ed.gov/students/publications/student_guide/index.html); go to "who gets federal student aid" and then click on "eligible noncitizen." Institutions thus may decline to provide institutional aid to aliens who have F, M, or J visas (see Section 8.7.4 of this book) and other temporary nonresident aliens. Such a distinction between permanent resident and temporary nonresident aliens may be justifiable on grounds that institutions (and states) need not spend their financial aid resources on individuals who have no intention to remain in and contribute to the state or the United States. Whether institutions may also make undocumented resident aliens ineligible for financial assistance is a separate question not controlled by *Nyquist* and is discussed in subsection 8.3.6.2 below.

Moreover, since *Nyquist* does not affect state residency requirements, institutions may deny financial aid or in-state tuition status to aliens who are not state residents when the principles discussed in subsection 8.3.5 above permit it. Aid thus would not be denied because the students are aliens but because they are nonresidents of the state. Although state residency for aliens may be determined in part by their particular status under federal immigration law (see especially 8 U.S.C. § 1101(a)(15)), it is well to be cautious in relying on federal law. In *Elkins v. Moreno*, 435 U.S. 647 (1978), the University of Maryland had denied "in-state" status, for purposes of tuition and fees, to aliens holding federal G-4 nonimmigrant visas (for employees of international treaty organizations and their immediate families). The university argued the G-4 aliens' federal status precluded them from demonstrating an intent to become permanent Maryland residents. The U.S. Supreme Court rejected this argument, holding that G-4 aliens (unlike some other categories of nonimmigrant aliens) are not incapable under federal law of becoming permanent residents and thus are not precluded from forming an intent to reside permanently in Maryland. The Court then certified to the Maryland Court of Appeals the question whether G-4 aliens or their dependents are incapable of establishing Maryland residency under the state's common law.

In “Act 2” of this litigation drama, *Toll v. Moreno*, 397 A.2d 1009 (Md. 1979), *judgment vacated*, 441 U.S. 458 (1979), the Maryland court answered “No” to the Supreme Court’s question. In the interim, however, the university had adopted a new in-state policy, which no longer used state residency as the paramount factor in determining in-state status for tuition and fees. Because the changed policy raised new constitutional issues, the Supreme Court ended Act 2 by vacating the Maryland court’s judgment and remanding the case to the federal district court where the *Elkins* case had begun.

After the district court invalidated Maryland’s new policy and the U.S. Court of Appeals affirmed, the case returned to the U.S. Supreme Court (*Toll v. Moreno*, 458 U.S. 1 (1982)) for Act 3. The Court held that the university’s new policy, insofar as it barred G-4 aliens and their dependents from acquiring in-state status, violated the supremacy clause (Art. VI, para. 2) of the U.S. Constitution. The supremacy clause recognizes the primacy of federal regulatory authority over subjects within the scope of federal constitutional power and prevents state law from interfering with federal law regarding such subjects. Since the federal government’s broad constitutional authority over immigration has long been recognized, federal law on immigration preempts any state or local law inconsistent with the federal law. Applying these principles in *Toll*, the Court reasoned:

[Our cases] stand for the broad principle that “state regulation not congressionally sanctioned that discriminates against aliens lawfully admitted to the country is impermissible if it imposes additional burdens not contemplated by Congress.” *De Canas v. Bica*, 424 U.S. 351, 358 n.6 (1976). . . .

The Immigration and Nationality Act of 1952, 66 Stat. 163, as amended, 8 U.S.C. § 1101 et seq., . . . recognizes two basic classes of aliens, immigrant and nonimmigrant. With respect to the nonimmigrant class, the Act establishes various categories, the G-4 category among them. For many of these nonimmigrant categories, Congress has precluded the covered alien from establishing domicile in the United States. . . . But significantly, Congress has allowed G-4 aliens—employees of various international organizations, and their immediate families—to enter the country on terms permitting the establishment of domicile in the United States. . . . In light of Congress’ explicit decision not to bar G-4 aliens from acquiring domicile, the State’s decision to deny “in-state” status to G-4 aliens, *solely* on account of the G-4 alien’s federal immigration status, surely amounts to an ancillary “burden not contemplated by Congress” in admitting these aliens to the United States [458 U.S. at 12–14; citations and footnotes omitted].<sup>32</sup>

As a result of the *Elkins/Toll* litigation, it is now clear that postsecondary institutions may not use G-4 aliens’ nonimmigrant status as a basis for denying in-state status for tuition and fees purposes. It does not follow, however, that institutions are similarly limited with respect to other categories of

---

<sup>32</sup>The Court’s opinion also includes alternative grounds for invalidating the university’s policy—namely, that it interferes with federal tax policies under which G-4 visa holders are relieved of federal and some state and local taxes on their incomes. See 458 U.S. at 14–16.

nonimmigrant aliens. The nonimmigrant categories are comprised of aliens who enter the United States temporarily for a specific purpose and who usually must maintain their domicile in a foreign country (see, for example, 8 U.S.C. § 1101(a)(15)(B) (temporary visitors for pleasure or business); § 1101(a)(15)(F) (temporary academic students); § 1101(a)(15)(M) (temporary vocational students); and see generally Section 13.2.2 of this book). Such restrictions preclude most nonimmigrant aliens from forming an intent to establish permanent residency (or domicile), which is required under the residency laws of most states. Thus, federal and state law would apparently still allow public institutions to deny in-state status to nonimmigrant aliens, other than G-4s and other narrow categories that are not required to maintain domicile in their home countries.

It also remains important, after *Elkins/Toll*, to distinguish between nonimmigrant (nonresident) and immigrant (resident) aliens. Because immigrant aliens are permitted under federal law to establish U.S. and state residency, denial of in-state status because of their alienage would violate the federal supremacy principles relied on in *Toll* (Act 3). Moreover, such discrimination against immigrant aliens would violate the equal protection clause of the Fourteenth Amendment, as established in *Nyquist v. Mauclet*, discussed earlier in this subsection.

**8.3.6.2. Undocumented aliens.** Since the *Elkins/Toll* litigation, yet another critical distinction has emerged: the distinction between aliens with federal immigrant or nonimmigrant status on the one hand and undocumented aliens on the other. In some circumstances, the equal protection clause will also protect undocumented aliens from state discrimination in the delivery of educational services. In *Plyler v. Doe*, 457 U.S. 202 (1982), for instance, the U.S. Supreme Court used equal protection principles to invalidate a Texas statute that “den[ie]d to undocumented school-age children the free public education that [the state] provides to children who are citizens of the United States or legally admitted aliens.” Reasoning that the Texas law was “directed against children [who] . . . can have little control” over their undocumented status, and that the law “den[ie]d these children a basic education,” thereby saddling them with the “enduring disability” of illiteracy, the Court held that the state’s interests in protecting its education system and resources could not justify this discriminatory burden on the affected children. *Plyler* dealt with elementary education; the key question, then, is whether the case’s reasoning and the equal protection principles that support it would apply to higher education as well—in particular to state policies that deny to undocumented aliens financial aid or in-state tuition status that is available to U.S. citizens and documented aliens.

This question attracted a great deal of attention in California, where courts wrestled with it in a complex chain of litigation. In 1983, the California legislature passed a statute providing that “[a]n alien, including an unmarried minor alien, may establish his or her residence, unless precluded by the Immigration and Nationality Act (8 U.S.C. § 1101 et seq.) from establishing domicile in the United States” (Cal. Educ. Code § 68062(h)). It was not clear how this statute would apply to undocumented aliens who had been living in California and sought to establish residency for in-state tuition purposes. At the request of the

chancellor of the California State University, the Attorney General of California issued an interpretation of the statute, indicating that an undocumented alien's incapacity to establish residence in the United States under federal immigration law precluded that same alien from establishing residency in California for in-state tuition purposes (67 *Opinions of Cal. Attorney General* 241 (Opinion No. 84-101 (1984))). Subsequently, the University of California and the California State University and College System formulated identical policies charging all undocumented aliens out-of-state tuition.

In *Leticia A. v. Regents of the University of California*, No. 588-982-4 (Cal. Super. Ct., Alameda County, orders of April 3, 1985, May 7, 1985, and May 30, 1985 ("Statement of Decision")), four undocumented alien students challenged the constitutionality of these policies on equal protection grounds. The plaintiffs had been brought into this country during their minority and had graduated from California high schools. Relying on the Supreme Court's reasoning in *Plyler*, and on the equal protection clause of the state constitution, the *Leticia A.* court determined that "higher education is an 'important' interest in California" and that the defendants' policies can survive equal protection scrutiny only if "there is a 'substantial' state interest served by the [blanket] classification" of undocumented aliens as nonresidents. The court then compared the rationales supporting this classification and those supporting the federal immigration laws:

The policies underlying the immigration laws and regulations are vastly different from those relating to residency for student fee purposes. The two systems are totally unrelated for purposes of administration, enforcement and legal analysis. The use of unrelated policies, statutes, regulations or case law from one system to govern portions of the other is irrational. The incorporation of policies governing adjustment of status for undocumented aliens into regulations and administration of a system for determining residence for student fee purposes is neither logical nor rational [*Leticia A.* at 9-10].

The court therefore declared the defendants' policies unconstitutional (without rendering any judgment on the validity of Section 68062(h), on which the policies were based) and ordered the defendants to determine the state residence status of undocumented students and applicants for purposes of in-state tuition in the same way as it would make that determination for U.S. citizens.

Neither defendant appealed the *Leticia A.* decision. In 1990, however, a former employee of the University of California sued that institution to require it to reinstate its pre-*Leticia* policy. The employee, Bradford, had been terminated by the University of California for his "unwillingness to comply with the ruling of the [*Leticia A.*] court." The trial court granted summary judgment in favor of the employee. On appeal, in *Regents of the University of California v. Superior Court*, 276 Cal. Rptr. 197 (Ct. App. 2d Dist. 1990) (known as the *Bradford* case), the court reviewed the purpose and constitutionality of the defendant's pre-*Leticia A.* residency policy, as well as of Section 68062(h) itself. The court held that, as originally argued by the defendants in the *Leticia A.* litigation, Section 68062(h) "precludes undocumented alien students from qualifying as residents

of California for tuition purposes.” Then the court examined whether such an interpretation denied undocumented alien students the equal protection of the laws. Reasoning that undocumented aliens are commonly and legitimately denied basic rights and privileges under both state and federal law, that the university also denies the lower tuition rate to residents of other states and to aliens holding student visas, and that the state had “manifest and important” interests in extending this denial to undocumented aliens, the appellate court upheld the trial court’s ruling.

Unlike the *Leticia A.* court, the appellate court in the *Bradford* case did not rely on the Supreme Court’s *Plyler* decision but distinguished it on the basis of the “significant difference between an elementary education and a university education.” Thus, the *Bradford* court’s decision was in direct conflict with *Leticia A.* and served to uphold the constitutionality of Section 68062(h) as well as the University of California’s pre-*Leticia A.* policy. After *Bradford*, litigation continued in the California superior courts to work out the implementation of that decision and its application to the California State University and College System, which was not a defendant in *Bradford* (see, for example, L. Gordon, “Immigrants Face Cal. State Fee Hike,” *Los Angeles Times*, September 9, 1992, p. A3). Then, in a taxpayer action, *American Association of Women v. Board of Trustees of the California State University*, 38 Cal. Rptr. 2d 15 (Ct. App. 2d Dist. 1995), the court expressly disagreed with the reasoning of *Leticia A.*, affirmed that the *Bradford* decision “was correctly decided,” and held that *Bradford* is “binding upon the California State University System.” (For a review and critique of this line of cases, which concludes that *Leticia A.* represents the correct approach, see Michael A. Olivas, “Storytelling out of School: Undocumented College Residency, Race, and Reaction,” 22 *Hastings Const. L.Q.* 1019, 1051–63 (1995).)

The practical significance of the California cases has been diminished, however, by later developments in California and nationwide. In late 1994, the California electorate approved Proposition 187, which, among other things, denied public services to undocumented aliens. Section 8 of the proposition, which was codified as Cal. Educ. Code § 66010.8, included public postsecondary education among the public services denied to undocumented aliens. In *League of United Latin American Citizens v. Wilson*, 908 F. Supp. 755 (C.D. Cal. 1995), the court invalidated most of the provisions of Proposition 187 and the implementing statutes on federal preemption grounds (see Section 13.1.1 of this book), but left intact the provision on denial of postsecondary education benefits in Cal. Educ. Code § 66010.8(a). Then, in 1996, Congress passed two new laws, the Personal Responsibility and Work Opportunity Reconciliation Act (PRWORA) and the Illegal Immigration Reform and Immigrant Responsibility Act (IIRIRA), to create uniform national rules regulating and restricting aliens’ eligibility for public benefits. One provision of the IIRIRA, codified as 8 U.S.C. § 1621, makes undocumented aliens ineligible for “any state or local public benefit” (8 U.S.C. § 1621(a)) and defines such benefits to include “any . . . postsecondary education . . . benefit . . . for which payments or assistance are provided to an individual . . . by an agency of a state or local government”

(8 U.S.C. § 1621(c)(1)(B)). Relying on this provision, the district court that had issued the 1995 opinion reconsidered and revised its earlier disposition, concluding that the IIRIRA preempted Section 66010.8(a) and rendered it inoperative (*League of United Latin American Citizens v. Wilson*, 997 F. Supp. 1244 (C.D. Cal. 1997); see also *League of United Latin American Citizens v. Wilson*, 1998 WL 141325 (C.D. Cal. 1998)).

The end result appears to be that denial of state postsecondary education benefits to undocumented aliens—in California and in other states—is now governed primarily by federal law (the IIRIRA) rather than state law.<sup>33</sup> (Other provisions in 8 U.S.C. § 1611 govern undocumented aliens' eligibility for "Federal public benefit(s)," including "any . . . postsecondary education . . . benefit," and impose restrictions similar to those for state and local benefits in 8 U.S.C. § 1621.) The IIRIRA does, however, permit states to make undocumented aliens eligible for postsecondary benefits (and other state and local benefits) for which they are otherwise ineligible under Section 1621(a), but only if states do so "through the enactment of a state law after August 22, 1996, which affirmatively provides for such eligibility" (8 U.S.C. § 1621(d)). Another provision of the IIRIRA limits this state authority, specifically with respect to "postsecondary education benefit(s)," by providing that states may not provide greater benefits to undocumented aliens than it provides to United States citizens who are not residents of the state (8 U.S.C. § 1623). (For a review critique of these IIRIRA provisions and their impact on postsecondary education benefits for undocumented aliens, see Michael A. Olivas, "IIRIRA, The Dream Act, and Undocumented College Student Residency," 30 *J. Coll. & Univ. Law* 435, 449–57 (2004).)

IIRIRA is not likely to be the last word on these sensitive issues concerning financial aid for undocumented alien applicants and students. As of early 2005, eight states had passed legislation allowing undocumented students to qualify for in-state tuition rates (see, for example, Kan. Stat. Ann. 76-731(a)(2004)). In some other states, state universities have taken the same step without the support of post-IIRIRA state legislation. And the U.S. Congress itself is reconsidering the matter of education benefits and other protections for undocumented aliens. (See Olivas, above, 30 *J. Coll. & Univ. Law* at 455–63.)

The primary legislation, called the DREAM Act in the Senate, was introduced in the 108th Congress (S. 1545) and reintroduced in the 109th Congress (S. 2075), and was still pending as this book went to press (see also H.R. 1684 (108th Cong.) and H.R. 251 (109th Cong.)).

**8.3.7. Using government student aid funds at religious institutions.** Many states have student scholarship programs and other financial aid programs for students attending higher educational institutions within the state, and many of these programs cover students attending private (as well

---

<sup>33</sup>There is dispute, however, concerning whether the IIRIRA does, or should, apply in this way to benefits that are a function of state residency determinations, such as the in-state tuition rate; see Olivas, 30 *J. Coll. & Univ. Law* at 452–55 (cited in text below).

as public) institutions. The federal government, of course, also has financial aid programs for students in both private and public institutions (see Section 8.3.2 above). Legal problems may arise under such programs concerning the use of funds by students pursuing theological studies, studies to prepare them for religious vocations, or other religious instruction. More generally, problems may arise concerning the use of student aid funds by students attending religiously affiliated institutions, even when the students are pursuing secular or “nonreligious” studies. The issues that may surface are likely to be constitutional issues implicating the establishment and free exercise clauses in the federal Constitution’s First Amendment and the parallel provisions in state constitutions. Section 1.6.3 of this book addresses the leading cases on such issues.

If a state or the federal government decides to *permit* use of its funds by students pursuing religious studies or attending religious institutions, the resulting issues are likely to be establishment (or “antiestablishment”) issues. If a state or the federal government decides to *prohibit* use of its funds by students pursuing religious studies or attending religious institutions, the resulting issues are likely to be free exercise of religion issues. Under the federal Constitution, the leading establishment clause precedent is *Witters v. Department of Services for the Blind*, 474 U.S. 481 (1986) (see Section 1.6.3). The leading free exercise clause precedent is *Locke v. Davey*, 540 U.S. 712 (2004) (see Section 1.6.3).

*Witters* generally permits the inclusion of students pursuing religious studies in government aid programs, so long as the program is a “neutral” program serving students in both public and private institutions, and so long as a student’s use of the funds at a religious institution results from the free and independent choice of the student. The establishment clause reasoning of *Witters* was solidified and extended by the U.S. Supreme Court’s more recent decision in *Zelman v. Simmons-Harris*, 536 U.S. 639 (2002), which upheld an elementary/secondary school voucher program that included religious schools, even though most of the voucher recipients in the program used their vouchers to attend religiously affiliated schools. In some states, however, the state constitution is more restrictive than the federal Constitution, in which case there is less leeway for the state to include students pursuing religious studies or attending religious institutions in its aid programs. (See, for example, *Witters II*, discussed in Section 1.6.3.)

The more restrictive a state is regarding eligibility of students who pursue religious studies or enroll at religious institutions, the more likely it will be that excluded students will claim that the state has violated their federal free exercise rights. *Locke v. Davey* would then become the applicable precedent. In *Davey*, the Court narrowly construed the free exercise rights of students excluded from government aid programs and left considerable room for states to exclude students pursuing religious studies (particularly studies preparing one to enter the clergy) from state aid programs. It would be a different question, however, if a state were to exclude students attending a religious institution to pursue secular or “nonreligious” studies; it is unclear from *Davey* whether or not a student’s free exercise claim would prevail in this situation. Moreover,

some state constitutions may have freedom-of-religion clauses that the state courts interpret more broadly than the U.S. Supreme Court interpreted the federal free exercise clause in *Davey*. In this circumstance, the state would have less room to restrict the use of student aid funds.

When individual higher educational institutions award aid to their own students, the issues above typically do not arise. If the institution is public, it is generally prohibited—by the federal establishment clause, the state constitution, and other state law—from offering religious instruction; there would therefore not be any basis for questions of whether to award aid for this purpose. If the institution is private, on the other hand, the federal establishment and free exercise clauses do not apply (see Section 1.5.2), and similar state constitutional provisions usually do not apply; the private institution is therefore generally free to offer religious instruction, or not, and to award its own private financial aid funds to students pursuing such studies, or not, as it sees fit.<sup>34</sup>

### 8.3.8. Collection of student debts

**8.3.8.1. Federal bankruptcy law.** Student borrowers have often sought to extinguish their loan obligations to their institutions by filing for bankruptcy under the federal Bankruptcy Code contained in Title 11 of the *United States Code*.<sup>35</sup> The Bankruptcy Code supersedes all state law inconsistent with its provisions or with its purpose of allowing the honest bankrupt a “fresh start,” free from the burden of indebtedness. A debtor may institute bankruptcy proceedings by petitioning the appropriate federal court for discharge of all his provable debts. Following receipt of the bankruptcy petition, the court issues an order fixing times for the filing and hearing of objections to the petition before a bankruptcy judge. Notice of this order is given to all potential creditors, usually by mail.

Debtors may petition for bankruptcy under either Chapter 7 or Chapter 13 of the Bankruptcy Code. Under a Chapter 7 “straight” bankruptcy, debts are routinely and completely discharged unless the creditors can show reasons why no discharge should be ordered (11 U.S.C. § 727) or unless a creditor can demonstrate why its particular claim should be “excepted” from the discharge order as a “nondischargeable debt” (11 U.S.C. § 523). Chapter 13, on the other hand, provides for the adjustment of debts for debtors with regular income. After filing a Chapter 13 petition, the debtor must submit a plan providing for full or partial repayment of debts (11 U.S.C. §§ 1321–1323), and the bankruptcy court must hold a hearing and decide whether to confirm the plan (11 U.S.C. §§ 1324–1325, 1327). Prior to the hearing, the bankruptcy court must notify all creditors whom the debtor has included in the plan; these creditors may then object to the plan’s

---

<sup>34</sup>If the private institution is religiously affiliated, it would be protected by the federal establishment and free exercise clauses from governmental attempts to interfere with its choices on these matters. (See Section 1.6.2.)

<sup>35</sup>Because of the complexity of the law of bankruptcy, and its particular implications for the collection of student loans, a summary of the major issues is provided in this section. The discussion relies in part on Robert B. Milligan, Comment, “Putting an End to Judicial Lawmaking: Abolishing the Undue Hardship Exception for Student Loans in Bankruptcy,” 34 *U.C. Davis L. Rev.* 221 (2000).

confirmation (11 U.S.C. § 1324). If the plan is confirmed and the debtor makes the payments according to the plan's terms, the bankruptcy court will issue a discharge of those debts included in the plan (11 U.S.C. § 1328(a)).

Bankruptcy law relevant to the collection of student debts has changed several times over the past forty years. Currently, the only exception to nondischarge is the "undue hardship" provision.<sup>36</sup> The provision is contained in 11 U.S.C. § 523(a)(8):

**Section 523. Exceptions to discharge:**

(a) A discharge under Section 727, 1141, 1228(a), 1228(b), or 1328(b) of this title does not discharge an individual debtor from any debt . . .

(8) for an educational benefit overpayment or loan made, insured, or guaranteed by a governmental unit, or made under any program funded in whole or in part by a governmental unit or nonprofit institution of higher education, or for an obligation to repay funds received as an educational benefit, scholarship or stipend, unless excepting such debt from discharge under this paragraph will impose an undue hardship on the debtor and the debtor's dependents.

Student loans are nondischargeable under Chapter 13 (11 U.S.C. § 1328(a)). (For analysis of the prior versions of the bankruptcy law and the problems it posed for student loan collection, see Note, "Forging a Middle Ground: Revision of Student Loan Debts in Bankruptcy as an Impetus to Amend 11 U.S.C. § 523(a)(8)," 75 *Iowa L. Rev.* 733 (1990).)

Section 523(a)(8) covers loans made under any Department of Education student loan program as well as student loans made, insured, guaranteed, or funded by other "governmental units," such as state and local governments, and by nonprofit higher education institutions. Loans made by profit-making postsecondary institutions or privately owned banks (and not guaranteed or insured under a government program) are not covered by the provision and thus continue to be dischargeable. Moreover, Section 523(a)(8) applies to bankruptcies under both Chapter 7 and Chapter 13.

When a debtor files a petition under either Chapter 7 or Chapter 13 of the Bankruptcy Act, such filing creates an automatic "stay" against the attempts of creditors to collect from the debtor (11 U.S.C. § 362). Even if a student loan is nondischargeable under Chapter 7, the filing of a bankruptcy petition may nevertheless affect the institution's efforts to collect the debt. The bankruptcy judge may modify or cancel this prohibition during the proceedings, however, if the institution can show cause why such action should be taken (11 U.S.C. § 362(d)(1)).

In order for a borrower to request that a federal student loan be discharged in bankruptcy through the "undue hardship" exception, the debtor must file a

---

<sup>36</sup>Cases and authorities are collected at Andrew M. Campbell, Annot., "Bankruptcy Discharge of Student Loan on Ground of Undue Hardship Under § 523(a)(8)(B) of Bankruptcy Code of 1978 (11 U.S.C.A. § 523(a)(8)(B))," 63 A.L.R. Fed 570. See also Ana Kellia Ramares, Annot., "Validity, Construction, and Application of Statutes, Regulations, or Policies Allowing Denial of Student Loans, Student Loan Guarantees, or Educational Services to Debtors Who Have Had Student Loans Scheduled in Bankruptcy," 107 A.L.R. Fed. 192.

separate lawsuit in federal bankruptcy court against the agency or institution holding the loan. Several public colleges have challenged such suits, claiming that Eleventh Amendment immunity prevents them from being sued in federal court. If sovereign immunity protects state colleges (or other state agencies) in such cases, federal student loans made by these entities would effectively be nondischargeable under current law.

In *Tennessee Student Assistance Corporation v. Hood*, 319 F.3d 755 (6th Cir. 2003), *affirmed on other grounds and remanded*, 541 U.S. 440 (2004), the appellate court sided with the bankruptcy court's ruling that Congress had abrogated states' sovereign immunity for bankruptcy claims when it enacted Article I, Section 8 of the U.S. Constitution, thus requiring the state (or, in this case, the state student assistance agency) to be involved in the bankruptcy proceeding for purposes of determining whether the loan should be discharged on the grounds of undue hardship.

The U.S. Supreme Court, in a 7-to-2 opinion written by Justice Rehnquist, affirmed the outcome below, but refused to address the issue of the abrogation of sovereign immunity, stating that discharge of a student loan does not implicate sovereign immunity. Although the Court conceded that being served with process was an "indignity" to the state, the bankruptcy court did not have *in personam* jurisdiction over the state; its jurisdiction was *in rem*, and was limited to the debtor's property and estate. Even if Congress had not abrogated sovereign immunity under the bankruptcy clause (a finding that the Court did not make), said the Court, the bankruptcy court would still have the authority to make the undue hardship determination that the debtor was seeking in this case, and the state would be bound by that ruling, just as any other creditor would be bound.

There has been considerable litigation on the scope of the "undue hardship" exception to nondischargeability in Section 523(a)(8). In general, bankruptcy courts have interpreted this exception narrowly, looking to the particular facts of each case (see Scott Pashman, Note, "Discharge of Student Loan Debt Under 11 U.S.C. § 523(a)(8): Reassessing 'Undue Hardship' After the Elimination of the Seven-Year Exception," 44 *N.Y.L. Sch. L. Rev.* 605 (2001)). Primary importance has been attached to whether the student debtor's economic straits were foreseeable and within his control. Federal courts have established several tests for undue hardship.

The test created in *Brunner v. New York State Higher Education Services Corp.*, 831 F.2d 395 (2d Cir. 1987), has been used by the majority of federal appellate courts. The three-part test requires the court to determine

1. that the debtor cannot maintain, based on current income and expenses, a "minimal" standard of living for [himself or] herself and [his or] her dependents if forced to repay the loans; and
2. that additional circumstances exist indicating that this state of affairs is likely to persist for a significant portion of the repayment period of the student loans; and
3. that the debtor has made good faith efforts to repay the loans [831 F.2d at 396].

Because the *Brunner* standard is fact sensitive and requires a court to determine whether an individual has acted in “good faith,” results across circuits, and even within the same circuit, are difficult to predict. For example, in *In re Peel*, 240 B.R. 387 (N.D. Cal. 1999), a student loan debtor who graduated from chiropractic college filed for Chapter 7 bankruptcy. He had made some payments on the loan when he was financially able to. The court found that the debt was an undue hardship for the plaintiff and discharged his loan because his income was, and was projected to be, insufficient to repay the loan. On the other hand, the court in *In re Roberson*, 999 F.2d 1132 (7th Cir. 1993) rejected the plaintiff’s request to discharge his loan, despite the fact that the debtor was unemployed, owed child support, and had twice been convicted of driving while intoxicated.

Another approach to determining whether the plaintiff’s debt should be discharged under the “undue hardship” criterion is the test created in *In re Bryant*, 72 B.R. 913 (E.D. Pa. 1987). Rejecting the typically subjective standards used in the *Brunner* test, the court ruled that, if the plaintiff’s income exceeded the federal poverty rate, the debt would be ruled nondischargeable. Other issues that courts may take into consideration in determining whether undue hardship exists are the debtor’s mental illness (*In re Meling*, 263 B.R. 275 (N.D. Iowa 2001)), but not the disability of a debtor’s spouse (*In re Naranjo*, 261 B.R. 248 (E.D. Cal. 2001)), or the number and health of dependents (*Educational Credit Management Corp. v. Ross*, 262 B.R. 460 (W.D. Wis. 2000) (no discharge where debtor has no dependents)). In other cases, courts have approved a partial discharge, reducing the amount of debt that the debtor must repay (see, for example, *In re Yapuncich*, 266 B.R. 882 (D. Mont. 2001)).

Cosigners and nonstudents (such as parents) who take out federally guaranteed student loans also appear to be covered by the nondischargeability provisions of the bankruptcy law.<sup>37</sup> In *Webb v. Student Loan Funding Corp.*, 151 Bankr. Rptr. 804 (N.D. Ohio 1992), the parent, the obligor on a federal Parent Loans for Undergraduate Students (PLUS) loan taken out for her daughter’s college education, argued that she had not received a direct benefit from the loan (her daughter, not she, had received the education). The court disagreed, stating that the parent did receive at least an indirect benefit, and that this reason was insufficient to exempt PLUS loans from the clear intent of the bankruptcy law’s statutory language. Similarly, in *In re Hammarstrom*, 95 Bankr. Rptr. 160 (N.D. Cal. 1989), the court held that the exception to dischargeability in Section 523(a)(8) unambiguously applied to the debtor, whether or not the debtor received a direct benefit from the loan. And in *In re Pelkowski*, 990 F.2d 737 (3d Cir. 1993), the court overturned a lower court ruling that the loan was not an “educational” loan if the debtor was a cosigner or guarantor of the loan for the student borrower. After analyzing the legislative history of the amendments to the Bankruptcy Code related to federal student loans, the court concluded that

---

<sup>37</sup>Cases and authorities are collected at Lora C. Siegler, Annot., “Applicability to Obligations of Nonstudent Co-obligors of Exception to Discharge in Bankruptcy for Educational Loans Under 11 U.S.C. § 523(a)(8),” 120 A.L.R. Fed. 609.

Congress had acted for the purpose of reducing debtor abuse of the federal student loan program; extending the nondischargeability provisions to nonstudent debtors would further the intent of Congress in this regard. (For analysis of this issue, see Note, “Non-Student Co-Signers and Sec. 523(a)(8) of the Bankruptcy Code,” 1991 *U. Chicago Legal Forum* 357 (1991).)

Students may be precluded from further borrowing under the federal student loan program if they have had earlier loans discharged in bankruptcy. In *Elter v. Great Lakes Higher Education Corp.*, 95 Bankr. Rptr. 618 (E.D. Wis. 1989), a bankruptcy court allowed a state guarantee agency to deny a new educational loan to such students. (For analysis of this issue, see Comment, “*Elter v. Great Lakes Higher Education Corporation*: State Agencies That Grant Educational Loans May Discriminate Against Student Bankrupts Who Default on Prior Educational Loans,” 17 *J. Coll. & Univ. Law* 261 (1990).)

The provisions of Section 523(a)(8) of the Bankruptcy Code apply to “educational loans,” not to student debt incurred by failing to pay tuition or fees. Such indebtedness is dischargeable in bankruptcy, according to several court opinions. (See, for example, *In re Renshaw*, 222 F.3d 82 (2d Cir. 2000), in which Cazenovia College and the College of St. Rose intervened in bankruptcy proceedings brought by students who had been permitted to enroll and take classes despite their failure to pay tuition. Because the college’s forbearance with respect to collecting the tuition was not a formal “loan,” the debt was dischargeable in bankruptcy, according to the court. See also *In re Mehta*, 262 B.R. 35 (D.N.J. 2001).)

(For suggestions regarding appropriate institutional actions in collecting student loans from debtors in bankruptcy, see Julia R. Hoke, *The Campus as Creditor: A Bankruptcy Primer on Educational Debts* (National Association of College and University Attorneys, 2006).)

**8.3.8.2. Withholding certified transcripts.** The Bankruptcy Code generally forbids creditors from resorting to the courts or other legal process to collect debts discharged in bankruptcy (11 U.S.C. § 524(a)(2)). Under the former Bankruptcy Act, however, there was considerable debate on whether informal means of collection, such as withholding certified grade transcripts from a student bankrupt, were permissible. In *Girardier v. Webster College*, 563 F.2d 1267 (8th Cir. 1977), decided under the old Act, the court held that the Act did not prohibit private institutions from withholding certified transcripts. Besides reducing the scope of this problem by limiting the dischargeability of student loans, the 1978 Bankruptcy Act appears to have legislatively overruled the result in the *Girardier* case.

The provision of the old Act that was applied in *Girardier* prohibited formal attempts, by “action” or “process,” to collect discharged debts. In the 1978 Act, this provision was amended to read (with further amendments in 1984):

A discharge in a case under this title . . . operates as an injunction against the commencement or continuation of an action, the employment of process, or an act, to collect, recover or offset any such debt as a personal liability of the debtor, whether or not discharge of such debt is waived [11 U.S.C. § 524(a)(2)].

The language, especially the phrase “or an act,” serves to extend the provision’s coverage to informal, nonjudicial means of collection, thus “insur[ing] that once a debt is discharged, the debtor will not be pressured in any way to repay it” (S. Rep. No. 95989, 95th Cong., 2d Sess., reprinted in 1978 *U.S. Code Cong. Admin. News* 5866).

The 1978 Act also added the words “any act” to a related provision, Section 362(a)(6), which prohibits creditors from attempting to collect debts during the pendency of a bankruptcy proceeding. Bankruptcy courts have construed this language to apply to attempts to withhold certified transcripts (see *In re Lanford*, 10 Bankr. Rptr. 132 (D. Minn. 1981)). This legislative change, together with the change in Section 524(a)(2), apparently prevents postsecondary institutions from withholding transcripts both during the pendency of a bankruptcy proceeding and after the discharge of debts, under either Chapter 7 or Chapter 13.<sup>38</sup>

The charge typically made when a college refuses to provide a transcript for a student who has filed a bankruptcy petition is that the college has violated the “automatic stay” provisions of the Bankruptcy Code (11 U.S.C. § 362) (*In re Parham*, 56 Bankr. Rptr. 531 (E.D. Va. 1986); *Parraway v. Andrews University*, 50 Bankr. Rptr. 316 (W.D. Mich. 1986)). Even though the debt is nondischargeable, courts in most federal circuits have ruled that the college may not withhold the transcript during the automatic stay period (*In re: Gustafson*, 934 F.2d 216 (9th Cir. 1990); *In re: Weiner Merchant, Debtor*, 958 F.2d 738 (6th Cir. 1992)). However, federal courts in the Third Circuit have ruled for the colleges, reasoning that the colleges were entitled to withhold the transcript for nonpayment of a student loan prior to the filing in bankruptcy, and thus continuing to withhold the transcript maintains the status quo, which is the purpose of the automatic stay. (See, for example, *Johnson v. Edinboro State College*, 728 F.2d 163 (3d Cir. 1984); and *In re: Billingsley*, 276 B.R. 48 (D.N.J. 2002). For analysis of the limitations that the bankruptcy law places on colleges with regard to withholding transcripts, see P. Tanaka, *The Permissibility of Withholding Transcripts Under the Bankruptcy Law* (2d ed., National Association of College and University Attorneys, 1995).)

The situation is different if, as in the majority of situations, the student has not filed a bankruptcy petition. Nothing in the Bankruptcy Code would prohibit postsecondary institutions from withholding transcripts from such student debtors. Moreover, the code does not prevent institutions from withholding transcripts if the bankruptcy court has refused to discharge the student loan debts. In *Johnson v. Edinboro State College* (discussed above), for example, the bankruptcy court had declared a former student to be bankrupt but did not discharge his student loans because he had failed to prove that a hardship existed. Nevertheless, the bankruptcy court had held that the college was obligated to issue the student a transcript because of the Bankruptcy Code’s policy to guarantee debtors “fresh starts.” When the college appealed, the Court of Appeals

---

<sup>38</sup>Public institutions may also be restrained by Section 525 of the Bankruptcy Code, which forbids “governmental units” from discriminating against bankrupts in various ways—apparently including denial of transcripts (see *In re Howren*, 10 Bankr. Rptr. 303 (D. Kan. 1980)).

overruled the bankruptcy court, holding that when a bankrupt's student loans are nondischargeable under Section 523(a)(8), the policy of that section overrides the code's general fresh-start policy. The college therefore remained free to withhold transcripts from the student.

Entities that seek to collect federal student loans are subject to the Fair Debt Collection Practices Act (15 U.S.C. §§1692 *et seq.*). This law provides for civil penalties for using false, deceptive, unfair, or "unconscionable" methods of collecting debts. *Kort v. Diversified Collection Services*, 394 F.3d 530 (7th Cir. 2005) illustrates the application of this law and its "bona fide error" defense. In *Crockett v. Edinboro University*, 811 A.2d 1094 (Pa. Commw. Ct. 2002), a former student sued the college under the Pennsylvania Unfair Trade Practices and Consumer Protection Law (73 P.S. §§ 201-1-201-9.3) and the Fair Debt Collection Practices Act. The student had not completed his degree and his student loans became due before he graduated. The college refused to issue a transcript because the student had not made arrangements to repay the loan. The court ruled that the student's claims were barred by sovereign immunity.

Although private colleges do not have the protection of sovereign immunity, plaintiffs have similarly had difficulty persuading courts that withholding a transcript in situations not involving bankruptcy violated some legal right. In *Sheridan v. Trustees of Columbia University*, 745 N.Y.S.2d 18 (N.Y. App. Div. 2002), a student denied his transcript for failure to pay an outstanding tuition bill sued the university for breach of contract, fraud, negligent misrepresentation, and intentional infliction of emotional distress. The court dismissed all claims, finding that the university's behavior was reasonable and that the university had no obligation to forward the transcript to graduate schools in light of the unpaid debt.

Similarly, nothing in the federal Family Educational Rights and Privacy Act (FERPA) concerning student records (see this book, Section 9.7.1) prohibits institutions from withholding certified transcripts from student debtors. If an institution enters grades in a student's records, FERPA would give the student a right to see and copy the grade records. But FERPA would not give the student any right to a *certified* transcript of grades, nor would it obligate the institution to issue a certified transcript or other record of grades to third parties. Nor does FERPA prevent a college to which a former student owes student loan repayment from refusing to provide letters of recommendation as long as the loan is in default (*Slovinec v. DePaul University*, 332 F.3d 1068 (7th Cir. 2003)).

The most likely legal difficulty *would* arise under the federal Constitution's due process clause, whose requirements limit only public institutions (see Section 1.5.2). The basic question is whether withholding a certified transcript deprives the student of a "liberty" or "property" interest protected by the due process clause (see generally Sections 9.4.2-9.4.3). If so, the student would have the right to be notified of the withholding and the reason for it, and to be afforded some kind of hearing on the sufficiency of the grounds for withholding. Courts have not yet defined liberty or property interests in this context. But under precedents in other areas, if the institution has regulations or policies entitling students to certified transcripts, these regulations or policies could

create a property interest that would be infringed if the institution withholds a transcript without notice or hearing. And withholding certified transcripts from a student applying to professional or graduate school, or for professional employment, may so foreclose the student's freedom to pursue educational or employment opportunities as to be a deprivation of liberty. Thus, despite the lack of cases on point, administrators at public institutions should consult counsel before implementing a policy of withholding transcripts for failure to pay loans, or for any other reason.<sup>39</sup>

**8.3.8.3. Debt collection requirements in federal student loan programs.**<sup>40</sup>

During the late 1980s and 1990s, the default rate on federal student loans increased sharply. In 1990, the default rate was 22.4 percent, or nearly one in four borrowers. Funding required for these defaulted federal student loans was the fourth largest expenditure in the U.S. Education Department's budget (Roger Roots, "The Student Loan Debt Crisis: A Lesson in Unintended Consequences," 29 *Sw. U. L. Rev.* 501 (2000)). The federal government stepped up its debt collection activities, putting pressure on borrowers and institutions alike to increase repayment of the loans.

The Perkins Loan (formerly National Direct Student Loan) program's statute and regulations contain several provisions affecting the institution's debt collection practices. The statute provides (in 20 U.S.C. § 1087cc(4)), that where a note or written agreement evidencing such a loan has been in default despite the institution's due diligence in attempting to collect the debt, the institution, under certain circumstances, may assign its rights under the note or agreement to the United States. If the debt is thereafter collected by the United States, the amount, less 30 percent, is returned to the institution as an additional capital contribution. The Perkins Loan regulations (34 C.F.R. § 674.41 *et seq.*) provide that each institution maintaining a Perkins Loan fund must accept responsibility for, and use due diligence in effecting, collection of all amounts due and payable to the fund. Due diligence includes the following elements: (1) providing borrowers with information about changes in the program that affect their rights and responsibilities (34 C.F.R. § 674.41(a)); (2) conducting exit interviews with borrowers when they leave the institution and providing them with copies of repayment schedules that indicate the total amount of the loans and the dates and amounts of installments as they come due (34 C.F.R. § 674.42(b)); (3) keeping a written record of interviews and retaining signed copies of borrowers' repayment schedules (34 C.F.R. § 674.42(b)(4)); and (4) staying in contact with borrowers both before and during the repayment period, in order to facilitate billing and keep the borrowers informed of changes in the program that may affect rights and obligations (34 C.F.R. § 674.42(c)).

---

<sup>39</sup>Cases and authorities are collected in Ana Kellia Ramares, Annot., "Validity, Construction, and Application of Statutes, Regulations, or Policies Allowing Denial of Student Loans, Student Loan Guarantees, or Educational Services to Debtors Who Have Had Student Loans Scheduled in Bankruptcy," 107 A.L.R. Fed. 192; and Lewis J. Heisman, Annot., "Violation of Automatic Stay Provisions of 1978 Bankruptcy Code (11 U.S.C.A. § 362) as Contempt of Court," 57 A.L.R. Fed. 927.

<sup>40</sup>See generally, Annot., "Rights and Obligations of Federal Government, Under 20 U.S.C.S. § 1080, When Student Borrower Defaults on Federally Insured Loan," 73 A.L.R. Fed. 303.

The institution must also use specified “billing procedures” (set forth at 34 C.F.R. § 674.43), including statements of notice and account and demands for payment on accounts that are more than fifteen days overdue. If an institution is unable to locate a borrower, it must conduct an address search (34 C.F.R. § 674.4). If the billing procedures are unsuccessful, the institution must either obtain the services of a collection agency or utilize its own resources to compel repayment (34 C.F.R. § 675(a)).

The Federal Family Education Loan (FFEL, formerly Guaranteed Student Loan (GSL)) program includes fewer provisions related to debt collection, since post-secondary institutions are not usually the lenders under the program. The regulations require (at 34 C.F.R. § 682.610(a)), that participating institutions establish and maintain such administrative and fiscal procedures and records as may be necessary to protect the United States from unreasonable risk of loss due to defaults. Another approach to debt collection, with more specifics than FFEL but fewer than Perkins, is illustrated by the Health Professions Student Loan program (42 C.F.R. Part 57, subpart C). Participating institutions must exercise “due diligence” in collecting loan payments (42 C.F.R. § 57.210(b)) and must maintain complete repayment records for each student borrower, including the “date, nature, and result of each contact with the borrower or proper endorser in the collection of an overdue loan” (42 C.F.R. § 57.215(c)).

In order to step up collection activities under the Health Education Assistance Loan (HEAL) program (42 U.S.C. § 292 *et seq.*; 42 C.F.R. Part 60), the Public Health Service of the Department of Health and Human Services issued regulations authorizing institutions to withhold transcripts of HEAL defaulters (42 C.F.R. § 60.61). The regulations also require schools to note student loan defaults on *academic* transcripts. (For a discussion of the lawfulness of withholding student transcripts, see Section 8.3.8.2.)

Prior to 1991, the statute of limitations for defaulted student loans was six years. However, the Higher Education Technical Amendments of 1991 (Pub. L. No. 102-26, 105 Stat. 123, codified as amended at 20 U.S.C. § 1091(a)) deleted the six-year statute of limitations temporarily. The Higher Education Amendments of 1992 made the deletion permanent. Following passage of the amendments, the question before the courts was whether student loans in default for more than six years prior to the amendments’ enactment were now subject to collection. The courts have ruled that they are (see, for example, *United States v. Glockson*, 998 F.2d 896 (11th Cir. 1993); see also *United States v. Mastronito*, 830 F. Supp. 1281 (D. Ariz. 1993)).

A law passed by Congress in October 1990, the Student Loan Default Prevention Initiative Act of 1990 (Pub. L. No. 101-508, 104 Stat. 1388, codified at various sections of 20 U.S.C.), is aimed at reducing the number of defaulted loans by rendering institutions with high default rates ineligible to participate in certain student loan programs. Section 1085 provides that any institution whose “cohort default rate” exceeds a certain threshold percentage for three consecutive years loses its eligibility for participation in the FFEL program for the fiscal year in which the determination is made and for the two succeeding years. The regulations specifying how default rates are calculated appear at

34 C.F.R. § 668.15. The process for calculating the cohort default rate was described in *Canterbury Career School, Inc. v. Riley*, 833 F. Supp. 1097 (D.N.J. 1993). In this case the threshold beyond which termination would occur was 30 percent. The court also discussed the due process protections (particularly the opportunity for a hearing) available to schools threatened with termination of their eligibility to participate in federal student aid programs.

In another case, a chain of cosmetology schools challenged the Secretary of Education's decision to terminate the schools' eligibility to participate in the FFEL program. The plaintiffs charged that a "paper" appeal process, rather than a full-blown adversary hearing on the record, violated their rights of due process on both procedural and substantive grounds. The schools also charged that the Secretary had miscalculated the default rate. In *Pro Schools, Inc. v. Riley*, 824 F. Supp. 1314 (E.D. Wis. 1993), the trial court disagreed, noting that the Secretary was permitted to use default data from years prior to the enactment of the Student Loan Default Prevention Initiative Act, and that the use of these data did not make the Act itself retroactive because the issue was the schools' present eligibility, not their past eligibility (citing *Association of Accredited Cosmetology Schools v. Alexander*, 979 F.2d 859 (D.C. Cir. 1992)). Although the court accepted the plaintiffs' argument that continued eligibility for participation in the federal programs was both a property and a liberty interest (citing *Continental Training Services, Inc. v. Cavazos*, 893 F.2d 877 (7th Cir. 1990)), it viewed the written appeal process as sufficient to protect the schools' due process rights.

In *Ross Learning, Inc. v. Riley*, 960 F. Supp. 1238 (E.D. Mich. 1997), three technical schools whose eligibility to participate in the Federal Family Education Loan Programs had been terminated because their cohort default rates were equal to or greater than 25 percent challenged the Secretary's decision. The court determined that no due process violations had occurred, and that the Secretary had complied with the Higher Education Act.

Institutions have several weapons in their fight to collect Perkins Loans from defaulting student borrowers. The Student Loan Default Prevention Initiative Act permits colleges to use collection agencies to recover defaulted loans, and also permits judges to award attorney's fees to institutions that must litigate to recover the unpaid loans. In *Trustees of Tufts College v. Ramsdell*, 554 N.E.2d 34 (Mass. 1990), the court noted these provisions, but limited the attorney's fees to the state law standard, rather than the more generous ceiling that the university argued was permitted by federal regulations. The regulations interpreting the Act are found at 34 C.F.R. §§ 674.46 and 674.47.

For those loans that have been assigned to the federal government for collection, federal agency heads may seek a tax offset against the debtor's tax refunds by request to the Internal Revenue Service (as provided in 26 U.S.C. § 6402(d)). According to *Thomas v. Bennett*, 856 F.2d 1165 (8th Cir. 1988), the six-year statute of limitations on actions for money damages brought by the United States (28 U.S.C. § 2415(a)) does not bar the tax offset, because the statute of limitations does not negate the debt but only bars a court suit as a means of collection; the debt is still collectible by other means. By regulation,

however, the Internal Revenue Service has provided that it will not use the offset procedure for any debt that has been delinquent for more than ten years at the time offset is requested (26 C.F.R. § 301.6402-6(c)(1)). This regulation was upheld in *Grider v. Cavazos*, 911 F.2d 1158 (5th Cir. 1990). The appellate court refused to permit the Secretary of Education to intercept the tax refunds of two individuals who had defaulted on their loans fifteen and eleven years earlier. Although the Secretary had argued that the loans became delinquent when the banks assigned the loans to the Secretary for collection, the court sided with the debtors' argument that the loans went into default when the required payments to the bank (the lender) were not made. The court commented:

[We] take no pleasure in giving aid and comfort to those former students who shirk their loan repayment obligations by hiding behind statutes of limitation. We can only ask in rhetorical wonderment why the Secretary continues quixotically to pursue judicial construction of the Regulation instead of simply asking his counterpart in the Department of the Treasury to close the loophole in the Regulation with a proverbial stroke of his pen [911 F.2d at 1164].

A similar result occurred in *Lee v. Paige*, 276 F. Supp. 2d 980 (W.D. Mo. 2003), *affirmed*, 376 F.3d 1179 (8th Cir. 2004), in which the court rejected the Secretary of Education's attempt to offset the Social Security benefits of an individual who defaulted on student loans more than twenty years earlier. Interpreting the Debt Collection Improvement Act, which authorizes federal agencies to recover outstanding student loans by offsetting the debtor's Social Security benefits (31 U.S.C. § 3716(c)(3)(A)(i)), the court noted that the new law had left unchanged the original Debt Collection Act's provision that claims that had been outstanding for more than ten years could not be offset. However, in *Lockhart v. U.S.*, 376 F.3d 1027 (9th Cir. 2004), a case decided just two weeks before *Lee*, the U.S. Court of Appeals for the Ninth Circuit ruled that the Debt Collection Act's ten-year limit did not preclude the offsetting of Social Security benefits to obtain repayment of educational loans because the Higher Education Assistance Act, amended in 1991, provided that "notwithstanding any other provision of statute . . . no limitation shall terminate the period within which . . . an offset, garnishment, or other action initiated by . . . the Secretary [of Education] . . . for the repayment of [a student loan shall be made]" (20 U.S.C. §§ 1091a(a)(1)-(2)). The court in *Lee* had rejected that argument, ruling that when the 1991 amendments were enacted, Social Security benefits were not subject to offset, and thus Congress could not have intended that the abolition of the ten-year limitations period would apply to the offset of Social Security benefits.

Lockhart appealed, and the U.S. Supreme Court unanimously affirmed the appellate court's ruling in *Lockhart v. U.S.*, 126 S. Ct. 699 (2005). Rejecting the reasoning of *Lee*, the Court ruled that the Debt Collection Improvement Act "clearly makes Social Security benefits subject to offset, [providing] exactly the sort of express reference that the Social Security Act says is necessary to supersede the anti-attachment provision."

Students challenging their obligation to repay federal student loans have found some creative solutions in situations where the college involved either has closed or did not provide the promised educational services. In some cases students have argued that the lending banks or the state agency guarantors of their federal student loans must be subject to state law regarding secured transactions. (For a case in which students successfully argued this theory, see *Tipton v. Alexander*, 768 F. Supp. 540 (S.D. W. Va. 1991).) And in *Keams v. Tempe Technical Institute, Inc.*, 39 F.3d 222 (9th Cir. 1994), the court ruled that the Higher Education Act did not preempt state tort law regarding the circumstances under which a loan obligation is enforceable. Although the court dismissed the students' claims under the Higher Education Act (finding no private right of action), it allowed the state tort law claim to proceed.

Students arguing under other state law theories, however, have been less successful. In *Bogart v. Nebraska Student Loan Program*, 858 S.W.2d 78 (Ark. 1993), the Supreme Court of Arkansas rejected a group of students' claim that the guarantee agency and the banks who actually loaned the money to the students were agents of the stenographic school, against which the students had obtained a judgment for fraud, which they were then unable to collect. The court ruled that the Higher Education Act preempted the students' claims under agency law. A similar result occurred in *Veal v. First American Savings Bank*, 914 F.2d 909 (7th Cir. 1990).

In *Jackson v. Culinary School of Washington*, 811 F. Supp. 714 (D.D.C. 1993), the court rejected the claims of students seeking to have their loan obligations declared null and void because of the Secretary of Education's allegedly negligent supervision of the school's default rate and the quality of its curriculum. After appeals to the federal appellate courts and the U.S. Supreme Court, the U.S. Court of Appeals for the District of Columbia Circuit vacated the trial court's earlier opinion and ordered it to exercise its discretion in determining which defendants could be subject to District of Columbia consumer protection laws (59 F.3d 254 (D.C. Cir. 1995)). No further opinions in this case have been published.

In *Armstrong v. Accrediting Council for Continuing Education and Training, Inc.*, 168 F.3d 1362 (D.C. Cir. 1999), a student loan debtor filed a claim for declaratory and injunctive relief against an agency that had previously accredited the National Business School, a for-profit vocational school in Washington, D.C., that went bankrupt after the plaintiff students had obtained Guaranteed Student Loans and paid tuition. The plaintiff filed claims under the FTC Holder Rule (see Section 13.2.9), the Higher Education Act, and the District of Columbia Consumer Credit Protection Act. The appellate court ruled that such misconduct by schools and lenders could not be attacked through state consumer fraud laws, but noted that the 1992 amendments to the Higher Education Act helped to reduce the likelihood that students enrolling in proprietary schools would face the same kinds of problems that this plaintiff encountered.

Collection of student loans is a critical issue for colleges and universities, for legal reasons and because of the implications of student default rates for continued eligibility to participate in the federal student aid program. College and university officials should use experienced counsel and student aid professionals

to develop and enforce student financial aid policies that fully comply with state and federal requirements.

## **Sec. 8.4. Student Housing**

**8.4.1. Housing regulations.** Postsecondary institutions with residential campuses usually have policies specifying which students may, and which students must, live in campus housing. Such regulations sometimes apply only to certain groups of students, using classifications based on the student's age, sex, class, or marital status. Institutions also typically have policies regulating living conditions in campus housing. Students in public institutions have sought to use the federal Constitution to challenge such housing policies, while students at private colleges have used landlord-tenant law or nondiscrimination law to challenge housing regulations.<sup>41</sup>

Challenges to housing regulations typically fall into two categories: challenges by students required to live on campus who do not wish to, and challenges by students (or, occasionally, nonstudents) who wish to live in campus housing (or housing affiliated with a college), but who are ineligible under the college's regulations. An example of the first type of challenge is *Prostrollo v. University of South Dakota*, 507 F.2d 775 (8th Cir. 1974).

In *Prostrollo*, students claimed that the university's regulation requiring all single freshmen and sophomores to live in university housing was unconstitutional because it denied them equal protection under the Fourteenth Amendment and infringed their constitutional rights of privacy and freedom of association. The university admitted that one purpose of the regulation was to maintain a certain level of dormitory occupancy to secure revenue to repay dormitory construction costs. But the university also offered testimony that the regulation was instituted to ensure that younger students would educationally benefit from the experience in self-government, community living, and group discipline and the opportunities for relationships with staff members that dormitory life provides. In addition, university officials contended that the dormitories provided easy access to study facilities and to films and discussion groups.

Although the lower court ruled that the regulation violated the equal protection clause, the appellate court reversed the lower court's decision. It reasoned that, even if the regulation's primary purpose was financial, there was no denial of equal protection because there was another rational basis for differentiating freshmen and sophomores from upper-division students: the university officials' belief that the regulation contributed to the younger students' adjustment to college life. The appellate court also rejected the students' right-to-privacy and freedom-of-association challenges. The court gave deference to school authorities' traditionally broad powers in formulating educational policy.

---

<sup>41</sup>The cases are collected in Donald M. Zupanec, Annot., "Validity, Under Federal Constitution, of Policy or Regulation of College or University Requiring Students to Live in Dormitories or Residence Halls," 31 A.L.R. Fed. 813. See also Jeffrey F. Ghent, Annot., "Validity and Construction of Statute or Ordinance Forbidding Unauthorized Persons to Enter upon or Remain in School Building or Premises," 50 A.L.R.3d 340.

A similar housing regulation that used an age classification to prohibit certain students from living off campus was at issue in *Cooper v. Nix*, 496 F.2d 1285 (5th Cir. 1974). The regulation required all unmarried full-time undergraduate students, regardless of age and whether or not emancipated, to live on campus. The regulation contained an exemption for certain older students, which in practice the school enforced by simply exempting all undergraduates twenty-three years old and over. Neither the lower court nor the appeals court found any justification in the record for a distinction between twenty-one-year-old students and twenty-three-year-old students. Though the lower court had enjoined the school from requiring students twenty-one and older to live on campus, the appeals court narrowed the remedy to require only that the school not automatically exempt all twenty-three-year-olds. Thus, the school could continue to enforce the regulation if it exempted students over twenty-three only on a case-by-case basis.

A regulation that allowed male students but not female students to live off campus was challenged in *Texas Woman's University v. Chayklintaste*, 521 S.W.2d 949 (Tex. Civ. App. 1975), and found unconstitutional. Though the university convinced the court that it did not have the space or the money to provide on-campus male housing, the court held that mere financial reasons could not justify the discrimination. The court concluded that the university was unconstitutionally discriminating against its male students by not providing them with any housing facilities and also was unconstitutionally discriminating against its female students by not permitting them to live off campus.

The university subsequently made housing available to males and changed its regulations to require both male and female undergraduates under twenty-three to live on campus. Although the regulation was now like the one found unconstitutional in *Cooper*, above, the Texas Supreme Court upheld its constitutionality in a later appeal of *Texas Woman's University v. Chayklintaste*, 530 S.W.2d 927 (Tex. 1975). In this case the university justified the age classification with reasons similar to those used in *Prostrollo*, above. The university argued that on-campus dormitory life added to the intellectual and emotional development of its students and supported this argument with evidence from published research and experts in student affairs.

In *Bynes v. Toll*, 512 F.2d 252 (2d Cir. 1975), another university housing regulation was challenged—in this case a regulation that permitted married students to live on campus but barred their children from living on campus. The court found that there was no denial of equal protection, since the university had several very sound safety reasons for not allowing children to reside in the dormitories. The court also found that the regulation did not interfere with the marital privacy of the students or their natural right to bring up their children.

Housing regulations limiting dormitory visitors have also been constitutionally challenged.<sup>42</sup> In *Futrell v. Ahrens*, 540 P.2d 214 (N.M. 1975), students claimed that a regulation prohibiting visits by members of the opposite sex in

---

<sup>42</sup>Cases and authorities are collected in Donald M. Zupanec, Annot., "Validity of Regulation of College or University Denying or Restricting Right of Student to Receive Visitors in Dormitory," 78 A.L.R.3d 1109.

dormitory bedrooms violated their rights of privacy and free association. The regulation did not apply to the lounges or lobbies of the dorms. The court held for the institution, reasoning that even if the regulation affected rights of privacy and association, it was a reasonable time-and-place restriction on exercise of those rights, since it served legitimate educational interests and conformed with accepted standards of conduct.

Taken together, these cases indicate that the courts afford colleges broad leeway in regulating on-campus student housing. An institution may require some students to live on campus; may regulate living conditions to fulfill legitimate health, safety, or educational goals; and may apply its housing policies differently to different student groups. If students are treated differently, however, the basis for classifying them should be reasonable. The cases above suggest that classification based solely on financial considerations may not meet that test. Administrators should thus be prepared to offer sound nonfinancial justifications for classifications in their residence rules—such as the promotion of educational goals, the protection of the health and safety of students, or the protection of other students' privacy interests.

Besides these limits on administrators' authority over student housing, the Constitution also limits public administrators' authority to enter student rooms (see Section 8.4.2) and to regulate solicitation, canvassing, and voter registration in student residences (see Sections 11.4.3 & 11.6.4).

For private as well as public institutions, federal civil rights regulations limit administrators' authority to treat students differently on grounds of race, sex, age, or disability. The Title VI regulations (see Section 13.5.2) apparently prohibit any and all different treatment of students by race (34 C.F.R. §§ 100.3(b)(1)–(b)(5) & 100.4(d)). The Title IX regulations (see Section 13.5.3 of this book) require that the institution provide amounts of housing for female and male students proportionate to the number of housing applicants of each sex, that such housing be comparable in quality and in cost to the student, and that the institution not have different housing policies for each sex (34 C.F.R. §§ 106.32 & 106.33). Furthermore, a provision of Title IX (20 U.S.C. § 1686) states that institutions may maintain single-sex living facilities.

The Section 504 regulations on discrimination against people with disabilities (see Section 13.5.4) require institutions to provide “comparable, convenient, and accessible” housing for students with disabilities at the same cost as for nondisabled students (34 C.F.R. § 104.45). The regulations also require colleges to provide a variety of housing and that students with disabilities be given a choice among several types of housing (34 C.F.R. § 104.45(a)).

A federal court's analysis of a student's religious discrimination challenge to mandatory on-campus residency is instructive. In *Rader v. Johnston*, 924 F. Supp. 1540 (D. Neb. 1996), an eighteen-year-old first-year student at the University of Nebraska-Kearney challenged the university's policy requiring first-year students to live on campus. Students who were nineteen, married, or living with their parents or legal guardians were expressly excepted from the policy. The rationale for the policy, according to the university, was that it “fosters diversity, promotes tolerance, increases the level of academic achievement, and

improves the graduation rate of its students, [while] ensur[ing] full occupancy of . . . residence halls” (924 F. Supp. at 1543). The student contended that living in the campus residence halls would hinder the free exercise of his religion. Since he did not qualify for exception under any of the enumerated exceptions to the residency policy, he petitioned the university for an ad hoc exception “on the ground that his religious convictions exhort him to live in an environment that encourages moral excellence during [his] college career,” and, to this end, he requested that the university “allow him to live with other students of similar faith in the Christian Student Fellowship facility, across the street from the . . . campus.” The university denied the student’s request, citing its rationale for the residency requirement and finding that nothing in the residence hall environment would hinder the student’s practice of religion.

The court, relying on a U.S. Supreme Court decision in *Church of the Lukumi Babalu Aye v. City of Hialeah*, 508 U.S. 520 (1993) (Section 1.6.2 of this book), found in favor of the student. It cited the fact that “over one-third of freshman students are excused” from the residency requirement under the enumerated exceptions or under ad hoc exceptions that the university “routinely granted” for other students. The university had, according to the court, created “a system of ‘individualized government assessment’ of the students’ requests for exemptions” from the residency requirement, and had granted numerous exceptions for nonreligious reasons, but had “refused to extend exceptions to freshmen who wish to live at CSF [Christian Student Fellowship] for religious reasons” (924 F. Supp. at 1553). Under *Lukumi Babalu Aye*, therefore, the university’s on-campus residency policy for first-year students was not “generally applicable” or “neutrally applied” to all students and could withstand judicial scrutiny, as applied to Rader, only if the denial of his request for an exception “serves a compelling state interest.”

Although the court agreed that the interests enumerated in the university’s housing policy could be legitimate and important to the state, it found that the university’s implementation of the policy, which allowed more than one-third of the students to be granted exceptions, “undercuts any contention that its interest is compelling.” These interests therefore could not justify the resulting infringement on Rader’s free exercise rights.

Students lodged a claim against Yale University that was similar to the *Rader* claim. This suit was dismissed by a federal district court in *Hack v. The President and Fellows of Yale College*, 16 F. Supp. 2d 183 (D. Conn. 1998), *affirmed*, 237 F.3d 81 (2d Cir. 2000). Yale requires all unmarried freshman and sophomore students under twenty-two years old to live in campus housing. Four Orthodox Jewish undergraduate students requested exemptions from the housing requirement because all of Yale’s residence halls are coeducational, and the students stated that their religion forbade them to live in a coeducational environment. When the university refused to exempt the students from the housing requirement, they filed a lawsuit claiming that the housing policy violated the U.S. Constitution by interfering with their free exercise of religion, that it also violated the Fair Housing Act (FHA) and the Sherman Antitrust Act, and that it constituted a breach of contract.

The court dismissed the students' constitutional claims, ruling that Yale was a private university and not subject to constitutional restrictions. The students had claimed that, because the governor and lieutenant governor of Connecticut were *ex officio* members of Yale's governing body, the university was a state actor. Citing *Lebron v. National Passenger R.R. Corp.*, 513 U.S. 374 (1995) (Section 1.5.2 of this book), the court ruled that having two public officials on a governing board of nineteen was insufficient under the test articulated in *Lebron* to constitute state action. The court then ruled that the plaintiffs did not have standing to sue under the Fair Housing Act because Yale had not refused to provide housing to the students on the basis of their religion; it had provided them housing that they had paid for, but in which they refused to live.

With respect to the antitrust claim, the court ruled that the students' complaint had not specifically stated whether the tying market (see Section 13.2.8) that Yale was alleged to be attempting to monopolize was "a general university education or an Ivy League education" (16 F. Supp. 2d at 195). Furthermore, said the court, the plaintiffs had not identified the relevant market at issue; substitutes for Yale's campus housing could be obtained by attending a different university. Despite the plaintiffs' attempt to argue that the outcome in the Hamilton College antitrust case (Section 10.2.2) protected their claim against dismissal, the court responded that the Hamilton College case merely established that a private college affected interstate commerce, and that the plaintiff's failure to define the relevant market alleged to be monopolized by Yale doomed their complaint to failure.

In *Fleming v. New York University*, 865 F.2d 478 (2d Cir. 1989), a graduate student who used a wheelchair claimed that the university overcharged him for his room, in violation of Section 504 of the Rehabilitation Act. The trial court dismissed his claim, and the appellate court affirmed. The student had requested single occupancy of a double room as an undergraduate; the university charged him twice the rate that a student sharing a double room paid. After intervention by the U.S. Office for Civil Rights, the university modified its room charge to 75 percent of the rate for two students in a room.

When the student decided to enroll in graduate school at the university, he asked to remain in the undergraduate residence hall. The university agreed, and charged him the 75 percent fee. However, because of low occupancy levels in the graduate residence halls, graduate students occupying double rooms there were charged a single-room rate. When the student refused to pay his room bills, the university withheld his master's degree. The court ruled that the student's claim for his undergraduate years was time barred. The claim for disability discrimination based on the room charges during his graduate program was denied because the student had never applied for graduate housing; he had requested undergraduate housing. There was no discriminatory denial of cheaper graduate housing, the court said, because the student never requested it.

The Age Discrimination Act regulations (see Section 13.5.5) apparently apply to discrimination by age in campus housing. As implemented in the general regulations, the law apparently limits administrators' authority to use explicit age

distinctions (such as those used in *Cooper v. Nix* and *Texas Woman's University v. Chayklintaste*) in formulating housing policies. Policies that distinguish among students according to their class (such as those used in *Prostrollo v. University of South Dakota*) may also be prohibited by the Age Discrimination Act, since they may have the effect of distinguishing by age. Such age distinctions will be prohibited (under § 90.12 of the general regulations) unless they fit within one of the narrow exceptions specified in the regulations (in §§ 90.14 & 90.15) or constitute affirmative action (under § 90.49) (see generally Sections 13.5.5 & 13.5.6 of this book). The best bet for fitting within an exception may be the regulation that permits age distinctions “necessary to the normal operation . . . of a program or activity” (§ 90.14). But administrators should note that the four-part test set out in the regulation carefully circumscribes this exception. For policies based on the class of students, administrators may also be helped by the regulation that permits the use of a nonage factor with an age-discriminatory effect “if the factor bears a direct and substantial relationship to the normal operation of the program or activity” (§ 90.15).

The Fair Housing Act prohibits discrimination in housing on the basis of “familial status” (42 U.S.C. § 3604 (1989)). This statute may create rights for married students greater than they are afforded under the Constitution in cases such as *Bynes v. Toll* above. A case brought under both the Fair Housing Act and Title IX of the Education Amendments of 1972 (Section 13.5.3), although subsequently vacated for lack of jurisdiction, suggests a potential source of liability for colleges and landlords of off-campus housing. In *Wilson v. Glenwood Intermountain Properties, Inc.*, 876 F. Supp. 1231 (D. Utah 1995), *vacated*, 98 F.3d 590 (10th Cir. 1996), the trial court rejected claims by two nonstudent plaintiffs that the housing regulations of Brigham Young University (BYU) violated these laws and that the actions of landlords, who had entered into agreements with BYU to segregate their housing by gender and to rent only to BYU students, also violated the Fair Housing Act. The litigation involved claims of discrimination on the basis of gender, religion, and familial status. Regarding gender, the plaintiffs claimed that the landlords’ segregation of tenants by gender violated the FHA requirement that landlords offer nondiscriminatory “terms, conditions, and privileges” in the rental of housing; and that the landlords’ advertisements, which noted that they rented only to male, or only to female, BYU students, discriminated against them on the basis of gender.

The trial court dismissed the claims involving religious discrimination and discrimination with respect to advertising on jurisdictional grounds, but ruled on the plaintiffs’ other gender discrimination claim on the merits, awarding summary judgment to the defendants. The appellate court vacated the lower court’s judgment and remanded the case with instructions to dismiss, ruling that the plaintiffs lacked standing to challenge the landlords’ practices as a form of gender discrimination. Preliminarily, the court stated, renting only to students does not violate the Fair Housing Act, so the plaintiffs lacked standing because, as nonstudents, they would not be eligible to rent from these landlords even if they could meet the gender requirements. But the court carefully examined the claim of discriminatory advertising (which the trial court had dismissed with

very little analysis), stating that, had the plaintiffs alleged that they had been injured by the gender-exclusive advertising, they may have been able to state a claim. Because no such injury had been shown, the existence of the “discriminatory” advertising, by itself, was insufficient to confer standing on the plaintiffs to challenge the landlords’ actions under the Fair Housing Act.

Another group protesting discrimination in housing policies are same-sex couples. These couples have claimed that because they are not allowed to marry, they are unfairly excluded from a benefit extended to married students. Furthermore, since many colleges and universities prohibit discrimination on the basis of sexual orientation, gay couples have argued that denying them housing violates the institution’s nondiscrimination regulations. Several universities, including the University of Pennsylvania and Stanford University, have provided university housing to unmarried couples, including those of the same sex.

In *Levin v. Yeshiva University*, 691 N.Y.S.2d 280 (Sup. Ct. N.Y. 1999), *affirmed*, 709 N.Y.S.2d 392 (N.Y. App. Div. 2000), *affirmed in part and modified in part*, 96 N.Y.2d 484 (N.Y. 2001), a same-sex couple who were medical students at the university wished to live in university housing that was reserved for married students, their spouses, and dependent children. The medical school requires proof of marriage in order for spouses to live with students in campus apartments. The plaintiffs had been offered student housing, but were not permitted to live together. They argued that they were in a long-term committed relationship and that the medical school’s housing regulations violated the New York State Roommate Law (Real Property Law § 235-f); the New York State and New York City Human Rights Laws (Exec. L. §§ 296(2-a), 296(4), & 296(5)); and the N.Y.C. Admin. Code § 8-197(5)) because the regulations discriminated against the plaintiffs on the basis of their marital status. They also argued that the housing regulations had a discriminatory impact upon them because they were homosexuals.

The trial court rejected all the plaintiffs’ claims. Regarding marital status discrimination, the court cited New York case law that permitted landlords to “recogniz[e] the institution of marriage and distinguish[ ] between married and unmarried couples” [691 N.Y.S.2d at 282]. The plaintiffs were not denied housing by the medical school, said the court—they were provided the same type of housing for which other single students were eligible. Furthermore, New York appellate courts had ruled that a domestic partnership was not a marriage for purposes of health benefits for public school teachers. Regarding the disparate impact claim, the court repeated that the plaintiffs had been given housing by the medical school, and that Yeshiva University was not responsible for the fact that they could not marry.

Finally, the court rejected the claim under New York’s roommate law that allows tenants to live with their spouses and children, or with friends of their own choosing. This law was not intended to cover college housing, according to the court, because college housing is short term, available only as long as the tenants are students, provided as a benefit and a convenience to students, and offered at below-market rates.

The students appealed, and although the appellate court affirmed the trial court's ruling in all respects, the students' subsequent appeal to New York's highest court was somewhat more successful. Although the high court affirmed the lower courts' rulings on the marital status discrimination, they reinstated the plaintiffs' cause of action claiming that the housing policy had a disparately disproportionate impact on homosexuals, a potential violation of New York City's Human Rights Law.

Many colleges have established "theme" housing linked to linguistic or cultural groups. Questions have arisen as to whether these residences, which may not be, or may be perceived not to be, open to all students, violate civil rights laws. The U.S. Department of Education has determined that Cornell University did not violate Title VI of the Civil Rights Act of 1964 (Section 13.5.2) by creating "ethnic program houses," which are residence halls whose residents are predominantly members of a particular race or ethnic group. The positive ruling was premised on the understanding that admission to the residences was not restricted to a particular race or ethnic group (Karla Haworth, "Education Department Finds No Civil-Rights Violations at Cornell's Ethnic Houses," *Chron. Higher Educ.*, October 4, 1996, A45).

Regarding tort liability, residential colleges and universities may wish to consider that requiring students to live in student housing may create a duty to protect them from foreseeable harm, even if the housing is not owned by the university (see generally Section 8.6.2). For an example, see *Knoll v. Board of Regents of the University of Nebraska* (Section 8.6.2.), which discusses institutional liability for an off-campus injury that occurred in a fraternity house subject to the college's student housing policies.

**8.4.2. Searches and seizures.** The Fourth Amendment secures an individual's expectation of privacy against government encroachment by providing that:

the right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue, but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

Searches or seizures conducted pursuant to a warrant meeting the requirements of this provision are deemed reasonable. Warrantless searches may also be found reasonable if they are conducted with the consent of the individual involved, if they are incidental to a lawful arrest, or if they come within a few narrow judicial exceptions, such as an emergency situation.

The applicability of these Fourth Amendment mandates to postsecondary institutions has not always been clear. In the past, when administrators' efforts to provide a "proper" educational atmosphere resulted in noncompliance with the Fourth Amendment, the deviations were defended by administrators and often upheld by courts under a variety of theories. While the previously common justification of *in loco parentis* is no longer appropriate (see Section 8.1.1),

several remaining theories retain vitality. The leading case of *Piazzola v. Watkins*, 442 F.2d 284 (5th Cir. 1971), provides a good overview of these theories and their validity.

In *Piazzola*, the dean of men at a state university, at the request of the police, pledged the cooperation of university officials in searching the rooms of two students suspected of concealing marijuana there. At the time of the search, the university had the following regulation in effect: "The college reserves the right to enter rooms for inspection purposes. If the administration deems it necessary, the room may be searched and the occupant required to open his personal baggage and any other personal material which is sealed." The students' rooms were searched without their consent and without a warrant by police officers and university officials. When police found marijuana in each room, the students were arrested, tried, convicted, and sentenced to five years in prison. The U.S. Court of Appeals for the Fifth Circuit reversed the convictions, holding that "a student who occupies a college dormitory room enjoys the protection of the Fourth Amendment" and that the warrantless searches were unreasonable and therefore unconstitutional under that amendment.

*Piazzola* and similar cases establish that administrators of public institutions cannot avoid the Fourth Amendment simply by asserting that a student has no reasonable expectation of privacy in institution-sponsored housing. (Compare *State v. Dalton*, 716 P.2d 940 (Wash. Ct. App. 1986).) Similarly, administrators can no longer be confident of avoiding the Fourth Amendment by asserting the *in loco parentis* concept or by arguing that the institution's landlord status, standing alone, authorizes it to search to protect its property interests. Nor does the landlord status, by itself, permit the institution to consent to a search by police, since it has been held that a landlord has no authority to consent to a police search of a tenant's premises (see, for example, *Chapman v. United States*, 365 U.S. 610 (1961)).

However, two limited bases remain on which administrators of public institutions or their delegates can enter a student's premises uninvited and without the authority of a warrant.<sup>43</sup> Under the first approach, the institution can obtain the student's general consent to entry by including an authorization to enter in a written housing agreement or in housing regulations incorporated in the housing agreement. But, according to *Piazzola*, the institution cannot require the student to waive his or her Fourth Amendment protections as a condition of occupying a residence hall room.

Thus, housing agreements or regulations must be narrowly construed to permit only such entry and search as is expressly provided, and in any case

---

<sup>43</sup>In *New Jersey v. T.L.O.*, 469 U.S. 325 (1985), the U.S. Supreme Court created a judicial exception to the warrant requirement for certain searches of public school students. However, the Court's opinion directly applies only to public elementary and secondary schools. Moreover, the opinion applies (1) only to searches of the person or property (such as a purse) carried on the person, as opposed to searches of dormitory rooms, lockers, desks, or other such locations (469 U.S. at 337, n.5), and (2) only to "searches carried out by school authorities acting alone and on their own authority," as opposed to "searches conducted by school officials in conjunction with or at the behest of law enforcement agencies" (469 U.S. at 341, n.7).

to permit only entries undertaken in pursuit of an educational purpose rather than a criminal enforcement function. *State v. Hunter*, 831 P.2d 1033 (Utah App. 1992), illustrates the type of search that may come within the *Piazzola* guidelines. The director of housing at Utah State University had instigated and conducted a room-to-room inspection to investigate reports of vandalism on the second floor of a dormitory. Upon challenge by a student in whose room the director discovered stolen university property in plain view, the court upheld the search because the housing regulations expressly authorized the room-to-room inspection and because the inspection served the university's interest in protecting university property and maintaining a sound educational environment.

Under the second approach to securing entry to a student's premises, the public institution can sometimes conduct searches (often called "administrative searches") whose purpose is to protect health and safety—for instance, to enforce health regulations or fire and safety codes. Although such searches, if conducted without a student's consent, usually require a warrant, it may be obtained under less stringent standards than those for obtaining a criminal search warrant. The leading case is *Camara v. Municipal Court*, 387 U.S. 523 (1967), where the U.S. Supreme Court held that a person cannot be prosecuted for refusing to permit city officials to conduct a warrantless code-enforcement inspection of his residence. The Court held that such a search required a warrant, which could be obtained "if reasonable legislative or administrative standards for conducting an area inspection are satisfied"; such standards need "not necessarily depend upon specific knowledge of the condition of the particular dwelling."

In emergency situations where there is insufficient time to obtain a warrant, health and safety searches may be conducted without one. The U.S. Supreme Court emphasized in the *Camara* case (387 U.S. at 539) that "nothing we say today is intended to foreclose prompt inspections, even without a warrant, that the law has traditionally upheld in emergency situations." Although a warrantless search based upon the possibility of a health or safety problem may be permissible under the Fourth Amendment, this exception is a narrow one. The Supreme Judicial Court of Massachusetts determined that a warrantless search of a residence hall room by campus police at Fitchburg State College violated the Fourth Amendment to the U.S. Constitution. In *Commonwealth v. Neilson*, 666 N.E.2d 984 (Mass. 1996), a student challenged his arrest for illegal possession of marijuana, asserting that the search of his room was unconstitutional. Neilson had signed a residence hall contract providing that student life staff members could enter student rooms to inspect for health or safety hazards. A maintenance worker believed he heard a cat inside a four-bedroom suite; one of the bedrooms was occupied by Neilson. The maintenance worker reported the sound to college officials, who visited the suite and informed the occupants that no cats were permitted in university housing. The official posted notices on the bedroom doors of the suite, stating that a "door-to-door check" would be held that night to ensure that no cat was present. When the officials returned, Neilson was not present. They searched his bedroom, and noticed that

the closet light was on. Because they were concerned that there might be a fire hazard, they opened the door and discovered two 4-foot marijuana plants growing under the light. At that point, the campus police were called; they arrived, took pictures of the marijuana, and removed it from the room. No search warrant was obtained at any time.

The court stated that the initial search (to locate the cat) was reasonable, as was the decision to open the closet door, since it was based upon a concern for the students' safety. The constitutional violation occurred, according to the court, when the campus police arrived and seized the evidence without a warrant or the consent of Neilson. Neilson, in the residence hall contract, had consented to student life officials entering his room, but had not consented to campus police doing so. Furthermore, the "plain view" doctrine did not apply in this case because the campus police were not lawfully present in Neilson's room. The plain view doctrine allows a law enforcement officer to seize property that is clearly incriminating evidence or contraband when that property is in "plain view" in a place where the officer has a right to be. The court therefore concluded that all evidence seized by the campus police was properly suppressed by the trial judge.

Before entering a room pursuant to the housing agreement or an administrative (health and safety) search, administrators should usually seek to notify and obtain the specific consent of the affected students when it is feasible to do so. Such a policy not only evidences courtesy and respect for privacy but would also augment the validity of the entry in circumstances where there may be some doubt about the scope of the administrator's authority under the housing agreement or the judicial precedents on administrative searches.

A state appellate court ruled that a "dormitory sweep policy" is *prima facie* unconstitutional. In *Devers v. Southern University*, 712 So. 2d 199 (La. Ct. App. 1998), the court addressed the legality of the university's policy, which stated: "The University reserves all rights in connection with assignments of rooms, inspection of rooms with police, and the termination of room occupancy." The plaintiff, Devers, was arrested when twelve bags of marijuana were discovered in his dormitory room. The drugs were found by university administrators and police officers during a "dormitory sweep" that the university stated was authorized by its housing policy. Devers was expelled from the university after a hearing in which the student judicial board found him guilty of violating the student code of conduct. Devers sued the university, claiming that the search violated the Fourth Amendment. Although the university reached a settlement with Devers with respect to his expulsion (it was reduced to a one-term suspension), his constitutional claim was not settled.

The trial court held that the housing regulation was *prima facie* unconstitutional, and the appellate court affirmed. The court distinguished *State v. Hunter* because the wording of the housing regulation in *Hunter* differed from the language adopted by Southern University. The regulation in *Hunter* authorized entry into students' dormitory rooms for maintaining students' health and safety, for maintaining university property, and for maintaining discipline. Southern's regulation was broader, and would allow unauthorized entry into a student's room

for any purpose. The court also distinguished *Piazzola v. Watkins* because its regulation did not authorize searches by police, as did Southern's. The court noted that Southern "has many ways to promote the safety interests of students, faculty and staff" without using warrantless police searches.

In addition to these two limited approaches (housing agreements and administrative searches) to securing entry, other even narrower exceptions to Fourth Amendment warrant requirements may be available to security officers of public institutions who have arrest powers. Such exceptions involve the intricacies of Fourth Amendment law on arrests and searches (see generally *Welsh v. Wisconsin*, 466 U.S. 740 (1984)). The case of *State of Washington v. Chrisman*, 455 U.S. 1 (1982), is illustrative. A campus security guard at Washington State University had arrested a student, Overdahl, for illegally possessing alcoholic beverages. The officer accompanied Overdahl to his dormitory room when Overdahl offered to retrieve his identification. Overdahl's roommate, Chrisman, was in the room. While waiting at the doorway for Overdahl to find his identification, the officer observed marijuana seeds and a pipe lying on a desk in the room. The officer then entered, confirmed the identity of the seeds, and seized them. Chrisman was later convicted of possession of marijuana and LSD, which security officers also found in the room.

By a 6-to-3 vote, the U.S. Supreme Court applied the "plain view" exception to the Fourth Amendment and upheld the conviction. The Court determined that, since an arresting officer has a right to maintain custody of a subject under arrest, this officer lawfully could have entered the room with Overdahl and remained at Overdahl's side for the entire time Overdahl was in the room. Thus, the officer not only had the right to be where he could observe the drugs; he also had the right to be where he could seize the drugs. According to the Court,

It is of no legal significance whether the officer was in the room, on the threshold, or in the hallway, since he had a right to be in any of these places as an incident of a valid arrest. . . . This is a classic instance of incriminating evidence found in plain view when a police officer, for unrelated but entirely legitimate reasons, obtains lawful access to an individual's area of privacy.

*Chrisman* thus recognizes that a security officer may enter a student's room "as an incident of a valid arrest" of either that student or his roommate. The case also indicates that an important exception to search warrant requirements—the plain view doctrine—retains its full vitality in the college dormitory setting. The Court accorded no greater or lesser constitutional protection from search and seizure to student dormitory residents than to the population at large. Clearly, under *Chrisman*, students do enjoy Fourth Amendment protections on campus; but, just as clearly, the Fourth Amendment does not accord dormitory students special status or subject campus security officials to additional restrictions that are not applicable to the nonacademic world.

The Supreme Court placed an important restriction on the plain view doctrine in *Arizona v. Hicks*, 480 U.S. 321 (1987). A police officer, who had entered an apartment lawfully for Fourth Amendment purposes, noticed some stereo equipment that he believed might be stolen. He moved the equipment slightly

to locate the serial numbers and later ascertained that the equipment was, in fact, stolen. The Court ruled that the search and seizure were unlawful because the police officer did not have probable cause to believe the equipment was stolen—only a reasonable suspicion, which is insufficient for Fourth Amendment purposes.

Administrators at private institutions are generally not subject to Fourth Amendment restraints, since their actions are usually not state action (Section 1.5.2). But if local, state, or federal law enforcement officials are in any way involved in a search at a private institution, such involvement may be sufficient to make the search state action and therefore subject to the Fourth Amendment. In *People v. Boettner*, 362 N.Y.S.2d 365 (N.Y. Sup. Ct. 1974), *affirmed*, 376 N.Y.S.2d 59 (N.Y. App. Div. 1975), for instance, the question was whether a dormitory room search by officials at the Rochester Institute of Technology, a private institution, was state action. The court answered in the negative only after establishing that the police had not expressly or implicitly requested the search; that the police were not aware of the search; and that there was no evidence of any implied participation of the police by virtue of a continuing cooperative relationship between university officials and the police. A similar analysis, and similar result, occurred in *State v. Nemser*, 807 A.2d 1289 (N.H. 2002), when the court refused to suppress evidence of drugs seized by a Dartmouth College security officer because the college's residence hall search policy had not been approved or suggested by the local police. A Virginia appellate court reached a similar conclusion in *Duarte v. Commonwealth*, 407 S.E.2d 41 (Va. Ct. App. 1991), because the dean of students at a private college had told college staff to search the plaintiff's room, and police were not involved in the search. And in *State v. Burroughs*, 926 S.W.2d 243 (Tenn. 1996), the Tennessee Supreme Court ruled that a warrantless search of a dormitory room by a director of residence life at Knoxville College, a private institution, did not involve state action, and thus his removal of drug paraphernalia and other evidence did not violate the student's Fourth Amendment rights. The court noted that the student handbook and housing contract both forbid the possession or use of alcohol and drugs, and gave the residence hall director authority to search student rooms. Moreover, noted the court, the search was conducted by a college official, not a police officer, to further the educational objectives of the college, not to enforce the criminal law.

(For a comprehensive analysis of the application of search and seizure law to colleges, see Jan Alan Neiger, "An Overview of Search and Seizure Law on Campus," *Synthesis: Law and Policy in Higher Education*, Vol. 12, no. 4 (Spring 2001). See also Kristal Otto Stanley, "The Fourth Amendment and Dormitory Searches—A New Truce," 65 *U. Chicago L. Rev.* 1403 (1998).)

## **Sec. 8.5. Campus Computer Networks**

**8.5.1. Freedom of speech.** Increasingly, free speech on campus is enhanced, and free speech issues are compounded, by the growth of technology. Cable and satellite transmission technologies, for instance, have had such

effects on many campuses. But the clearest and most important example—now and for the foreseeable future—is computer communications technology. Computer labs, laptops, campus local area networks (LANs), servers, and Internet gateways have assumed a pervasive presence on most campuses, and are used increasingly by the campus community for e-mail communications, discussion groups, Web pages, research, access to information on campus programs and services, and entertainment. Students—the focus of this Section—may be both senders (speakers) and receivers (readers); their purposes may be related to coursework or extracurricular activities, or may be purely personal; and their communications may be local (within the institution) or may extend around the world.

As the amount, variety, and distance of computer communications have increased, so have the development of institutional computer use policies and other institutional responses to perceived problems. The problems may be of the “traffic cop” variety, occasioning a need for the institution to allocate its limited computer resources by directing traffic to prevent traffic jams. Or the problems may be more controversial, raising computer misuse issues such as defamation, harassment, threats, hate speech, copyright infringement, and academic dishonesty. The latter types of problems may present more difficult legal issues, since institutional regulations attempting to alleviate these problems may be viewed as content-based restrictions on speech.

Public institutions, therefore, must keep a watchful eye on the First Amendment when drafting and enforcing computer use policies. Just as federal and state legislation regulating computer communications may be invalidated under the free speech and press clauses (see Section 13.2.12), particular provisions of campus regulations can be struck down as well if they contravene these clauses. Private institutions are not similarly bound (see *CompuServe, Inc. v. Cyber Promotions, Inc.*, 962 F. Supp. 1015, 1025–27 (S.D. Ohio 1997); and see generally Section 1.5.2). Yet private institutions may voluntarily protect student free expression through student codes or bills of rights, or computer use policies themselves, or through campus custom—and may occasionally be bound to protect free expression by state constitutions, statutes, or regulations; thus administrators at private institutions will also want to be keenly aware of First Amendment developments regarding computer speech.<sup>44</sup>

---

<sup>44</sup>In addition to freedom of expression concerns, computer communications also present personal privacy concerns to which colleges and universities should be attentive. See, for example, Constance Hawk, *Computer and Internet Use on Campus* (Jossey-Bass, 2001), Ch. 3 (“Privacy Issues in Electronic Communications”), 81–117. Public institutions, for instance, should be aware of the Fourth Amendment implications of searching students’ personal computer files (see generally Sections 7.1.1 & 7.1.4), and both public and private institutions should be aware of privacy rights concerning computerized records that students may have under FERPA (see generally Section 9.7.1 of this book) and privacy rights concerning computer communications that students may have under the Electronic Communications Privacy Act (ECPA) (see generally Section 13.2.12.2 of this book). In addition, state statutes (many similar to the federal ECPA) and state common law principles may protect the privacy of students’ computer communications in certain circumstances.

Under existing First Amendment principles (see generally Sections 9.5.1, 9.5.2, & 9.6.2), administrators should ask four main questions when devising new computer use policies, or when reviewing or applying existing policies:

1. Are we seeking to regulate, or do we regulate, the *content* of computer speech (“cyberspace speech”)?
2. If any of our regulations are content based, do they fit into any First Amendment exceptions that permit content-based regulations—such as the exceptions for obscenity and “true threats”?
3. (a) Does our institution own or lease the computer hardware or software being used for the computer speech; and (b) if so, has our institution created “forums” for discussion on its computer servers and networks?
4. Are our regulations or proposed regulations clear, specific, and narrow?

For *question 1*, if a computer use policy regulates the content of speech—that is, the ideas, opinions, or viewpoints expressed—and does not fall into any of the exceptions set out below under question 2, the courts will usually subject the regulation to a two-part standard of “strict scrutiny”: (1) Does the content regulation further a “compelling” governmental interest, and (2) is the regulation “narrowly tailored” and “necessary” to achieve this interest? (See, for example, *Mainstream Loudoun v. Board of Trustees of the Loudoun County Library*, 24 F. Supp. 2d 552, 563–68 (E.D. Va. 1998), discussed below in this subsection.) The need to act in cases of copyright infringement, bribery, fraud, blackmail, stalking, or other violations of federal and state law may often be considered compelling interests, as may the need to protect the institution’s academic integrity when computers are used for “cheating.” In *Mainstream Loudoun* (above) the court also assumed “that minimizing access to illegal pornography and avoidance of creation of a sexually hostile environment are compelling government interests” (24 F. Supp. 2d at 565). Regulations furthering such interests may therefore meet the strict scrutiny standard if they are very carefully drawn.<sup>45</sup> But otherwise this standard is extremely difficult to meet. In contrast, if a computer regulation serves “neutral” government interests not based on the content of speech (for example, routine “traffic cop” regulations), a less stringent and easier to meet standard would apply.

In *American Civil Liberties Union of Georgia v. Miller*, 977 F. Supp 1228 (N.D. Ga. 1997), for instance, a federal district court in Georgia considered the validity of a state statute prohibiting data transmitters from falsely identifying themselves in Internet transmissions (Georgia Code Ann. § 16-9-93.1). In invalidating the Georgia statute, the court emphasized that a “prohibition of

---

<sup>45</sup>As an adjunct to strict scrutiny analysis, courts may also apply the prior restraint doctrine to some content-based restrictions. In *Mainstream Loudoun* (discussed below in the text of this subsection), for instance, the court determined that the blocking of Internet sites was an unconstitutional prior restraint because the blocking policy included neither sufficient standards nor adequate procedural safeguards (24 F. Supp. 2d at 568–70).

Internet transmissions which ‘falsely identify’ the sender constitutes a presumptively invalid content-based restriction” on First Amendment rights. Recognizing that there is a “right to communicate anonymously and pseudonymously over the Internet” (977 F. Supp. at 1230), the court held that the state may not blanketly prohibit all Internet transmissions in which speakers do not identify themselves or use some pseudonym in place of an accurate identification. The court in *Miller* also held, however, that “fraud prevention . . . is a compelling state interest.” Thus, if speakers were to use anonymity or misidentification in order to defraud the receivers of their Internet messages, then prohibition of false identification would be appropriate so long as the regulation is narrowly tailored to meet the fraud prevention objective. The court suggested that, in order to be narrowly tailored, a regulation must, at a minimum, include a requirement that the speaker has intended to deceive or that deception has in fact occurred (977 F. Supp. at 1232). Thus, for instance, if a public institution were to promulgate narrowly tailored regulations that prohibit speakers from intentionally “misappropriat[ing] the identity of another specific entity or person” (977 F. Supp. at 1232), such regulations would apparently be a valid content-based restriction on speech.

Regarding *question 2*, if a restriction on computer speech is content based, and thus presumptively invalid under the strict scrutiny standard of review, it would still be able to survive if it falls into one of the exceptions to the First Amendment prohibition against content-based restrictions on expression. All these exceptions are technical and narrow, and collectively would cover only a portion of the computer speech institutions may wish to regulate, but in certain cases these exceptions can become very important. One pertinent example is obscenity, which is recognized in numerous cases, including computer cases, as a First Amendment exception (see Sections 10.3.4 & 13.2.12). Another related exception is child pornography, which need not fall within the U.S. Supreme Court’s definition of obscenity to be prohibited, but instead is subject to the requirements that the Court established in *New York v. Ferber*, 458 U.S. 747 (1982). The exception for false or deceptive commercial speech, and commercial speech that proposes unlawful activities, is also pertinent to computer speech (see *Central Hudson Gas and Electric Corp. v. Public Service Commission*, 447 U.S. 557, 563–64 (1980)), as is the exception for “true threats” that was established in *Watts v. United States*, 394 U.S. 705 (1969), and further developed in *Virginia v. Black* (see Section 9.6.2 of this book).<sup>46</sup>

It is the exception for “true threats” that has received the greatest amount of attention in contemporary cyberspeech cases. In *United States v. Alkhabaz aka Jake Baker*, 104 F.3d 1492 (6th Cir. 1997) (*affirming on other grounds*,

---

<sup>46</sup>There is also an exception for “fighting words,” but since this exception is narrowly defined to include only face-to-face communications, it has no apparent application to cyberspeech. Defamatory speech and speech that constitutes incitement may also be regulated, but the analysis is different than for the “exceptions” or “categorical exceptions” just discussed. See generally William Kaplin, *American Constitutional Law* (Carolina Academic Press, 2004), Ch. 12, Secs. C.2(1), D.1, & D.2. Incitement analysis, and the difference between incitement and advocacy, are addressed in the *American Coalition of Life Advocates* case discussed below in this subsection.

890 F. Supp. 1375 (E.D. Mich. 1995)), for example, and again in *United States v. Morales*, 272 F.3d 284 (5th Cir. 2001), courts struggled with whether particular computer communications were threats for the purposes of 18 U.S.C. § 875(c) (see Section 13.2.12.3 of this book). Ultimately, using a combination of statutory and constitutional analysis, the courts concluded that Baker's e-mail messages in the first case were not threats for purposes of the federal statute, but Morales's chat room postings in the second case were threats for purposes of the statute. Another instructive example, providing more fully developed First Amendment analysis, is the case of *Planned Parenthood of Columbia/Willamette, Inc., et al. v. American Coalition of Life Advocates, et al.*, 290 F.3d 1058 (9th Cir. 2002).

The defendants in the *American Coalition of Life Advocates (ACLA)* case were organizations and individuals engaged in anti-abortion activities, and the plaintiffs included physicians claiming that they had been threatened and intimidated by these activities. On a Web site operated by a third party, the ACLA had posted the names and addresses of numerous doctors that the posting identified as abortionists. Those doctors on the list who had been murdered, allegedly by anti-abortionists, were particularly noted, as were those doctors who had been wounded. These listings in the "score card" of murders and woundings were labeled as the "Nuremberg Files." Before posting these materials on the Web site, the ACLA had also circulated "wanted posters" containing similar information, and, in fact, three physicians had been murdered after being featured on a wanted poster. The court emphasized the importance of understanding the defendants' messages in the context in which they were made, and that the relevant context included both the wanted posters and the Web site postings, as well as the pattern of murders of physicians whose names had been featured in these communications. Analyzing the speech in context, the court determined that the First Amendment's free speech clause did not protect the defendants because the speech could be considered to be a "death threat message" and therefore a "true threat" within the meaning of *Watts v. United States*. "If ACLA had merely endorsed or encouraged violent reactions of others, its speech would be protected. However, while advocating violence is protected, threatening a person with violence is not" (290 F.3d at 1072).

The court articulated this useful guideline for determining when speech constitutes a true threat and is therefore unprotected by the First Amendment: "Whether a particular statement may properly be considered to be a threat is governed by an objective standard—whether a reasonable person would foresee that the statement would be interpreted by those to whom the maker communicates the statement as a serious expression of intent to harm or assault" (290 F.3d at 1074, citing *United States v. Orozco-Santillan*, 903 F.2d 1262, 1265 (9th Cir. 1990)). Applying this test, the court emphasized that physicians on the lists of abortionists "wore bullet-proof vests and took other extraordinary security measures to protect themselves and their families." ACLA "had every reason to foresee that its expression of intent to harm" through the wanted posters and the Web site "would elicit this reaction." The physicians' fears "did not simply happen; ACLA intended to intimidate them from doing

what they do. This . . . is conduct that we are satisfied lacks any protection under the First Amendment. . . . ACLA was not staking out a position of debate but of threatened demise” (290 F.3d at 1086).

Regarding *question 3*, institutions may put themselves in a stronger regulatory position regarding student cyberspeech if they only restrict communications on *the institutions’* computers, servers, or networks; and if they structure student use in a way that does not create a “public forum” (see generally Section 9.5.2 of this book). The First Amendment standards would be lower and would generally permit content-based restrictions (regardless of whether they fall into one of the exceptions discussed above) other than those based on the particular viewpoint of the speaker. But if the institution, for policy reasons, chooses to use some portion of its computers, servers, or networks as an open “forum” for expression by students or by the campus community, then the normal First Amendment standards would apply, including the presumption that content-based restrictions on speech are unconstitutional. (See Joseph Beckham & William Schmid, “Forum Analysis in Cyberspace: The Case of Public Sector Higher Education,” 98 *West’s Educ. Law Rptr.* 11 (May 18, 1995).) The public forum concept is no longer limited to physical spaces or locations and apparently extends to “virtual” locations as well. In *Rosenberger v. Rector and Visitors of University of Virginia* (Section 10.1.5), for instance, the U.S. Supreme Court declared a student activities fund to be a public forum, subject to the same legal principles as other public forums, even though it was “a forum more in a metaphysical than a spatial or geographic sense . . .” (515 U.S. at 830).

*Loving v. Boren*, 956 F. Supp. 953 (W.D. Okla. 1997), provided the first illustration of public forum analysis being applied to a university computer system. The University of Oklahoma was concerned that some of the Internet news groups on the university news server were carrying obscene material. Consequently, the university adopted an access policy under which the university operated two news servers, A and B. The A server’s content was limited to those news groups that had not been “blocked” or disapproved by the university; the B server’s news group content was not limited. The A server was generally accessible to the university community for recreational as well as academic purposes; the B server could be used only for academic and research purposes, and then only by persons over age eighteen. Although the court rejected a free speech clause challenge to this policy, it did so on the basis of conclusory reasoning that reflects an incomplete understanding of the public forum doctrine. One conclusion the court reached, however, does appear to be valid and important: the restriction of the B server to academic and research purposes does not violate the First Amendment because “[a] university is by its nature dedicated to research and academic purposes” and “those purposes are the very ones for which the [computer] system was purchased” (956 F. Supp. at 955). The court apparently reached this conclusion because it did not view any part of the university’s computer services as a public forum. The better view, however, is probably that the B server is a “limited forum” that the university has dedicated to academic use by restricting the purposes of use rather than the content as such. On this reasoning, the court should have proceeded to give separate

consideration to the question of whether the A server was a public forum and, if so, whether its content could be limited as provided in the university's policy.<sup>47</sup>

A later case, *Mainstream Loudoun v. Board of Trustees of Loudoun County Library*, 24 F. Supp. 2d 552 (E.D. Va. 1998), provides better guidelines for determining whether a computer system's server or network is a public forum. The defendant library system had installed site-blocking software on its computers to prevent patrons from using these computers to view sexually explicit material on the Internet. The issue was whether the library's restrictions were subject to the strict scrutiny standards applicable to a "limited public forum," or to the lesser standards applicable to a "non-public forum." The court indicated that there are three "crucial factors" to consider in making such a determination: (1) whether the government, by its words and actions, displayed an intent to create a forum; (2) whether the government has permitted broad use of the forum it has created and "significantly limited its own discretion to restrict access"; and (3) "whether the nature of the forum is compatible with the expressive activity at issue" (24 F. Supp. 2d at 562–62). Using these factors, the court determined that the public library system was a limited public forum, that is, a public forum "for the limited purposes of the expressive activities [it] provide[s], including the receipt and communication of information through the Internet." Being a public forum, the library system's restriction on computer communications was subject to strict scrutiny analysis (see above in this subsection), which it could not survive; the restriction was therefore invalid under the First Amendment.

Under *question 4* in the list above, the focus is on the actual wording of each regulatory provision in the computer use policy. Even if a particular provision has been devised in conformance with the First Amendment principles addressed in questions 1, 2, and 3, it must in addition be drafted with a precision sufficient to meet constitutional standards of narrowness and clarity. If it does not, it will be subject to invalidation under either the "overbreadth" doctrine or the "vagueness" doctrine (see generally Sections 9.5.1, 9.5.3., & 9.5.6 of this book).

In *American Civil Liberties Union v. Miller* (above), for instance, the court determined that the language of the Georgia statute presented both overbreadth problems and vagueness problems. Regarding overbreadth, the court remarked that "the statute was not drafted with the precision necessary for laws regulating speech" because it "prohibits . . . the use of false identification to avoid social ostracism, to prevent discrimination and harassment, and to protect privacy," all of which are protected speech activities. The statute was thus "overbroad because it operates unconstitutionally for a substantial category of the speakers it covers" (977 F. Supp. at 1233). Similarly, regarding vagueness,

---

<sup>47</sup>There were also other potential issues that the court did not address separately: whether the B server could be restricted to persons over age eighteen (see generally *Reno v. American Civil Liberties Union*, 521 U.S. 844 (1997), in Section 13.2.12.2); and whether the standards and procedures for blocking materials from the A server were constitutionally sufficient (see the *Mainstream Loudoun* case, footnote 39, above in this subsection; and see generally Section 10.3.4).

the court determined that the statute's language did not "give fair notice of proscribed conduct to computer network users," thus encouraging "self-censorship"; and did not give adequate guidance to those enforcing the statute, thus allowing "substantial room for selective [enforcement against] persons who express minority viewpoints" (977 F. Supp. at 1234).

One may fairly ask whether all the preexisting First Amendment principles referenced in questions 1 through 4 should apply to the vast new world of cyberspace. Indeed, scholars and judges have been debating whether free speech and press law should apply in full to computer technology. (See, for example, Lawrence Lessig, "The Path of Cyberlaw," 104 *Yale L.J.* 1743 (1995); Timothy Wu, "Application-Centered Internet Analysis," 85 *Va. L. Rev.* 1163 (1999).) Although courts are committed to taking account of the unique aspects of each new communications technology, and allowing First Amendment law to grow and adapt in the process, thus far none of the basic principles discussed above have been discarded or substantially transformed when applied to cyber-speech. In fact, in the leading case to date, *Reno v. American Civil Liberties Union* (Section 13.2.12.2), the U.S. Supreme Court opinion relied explicitly on the principles referenced in the discussion above. Thus, although counsel and administrators will need to follow both legal and technological developments closely in this fast-moving area, they should work from the premise that established First Amendment principles remain their authoritative guides.

**8.5.2. Liability issues.** Colleges and universities may become liable *to students* for violating students' legal rights regarding computer communications and computer files; and they may become liable *to others* for certain computer communications of their students effectuated through a campus network or Internet service. The following discussion surveys the major areas of liability concern.

To help minimize First Amendment liability arising from institutional regulation of campus computer speech, administrators at public institutions may follow the guidelines suggested by the four questions set out in subsection 8.5.1 above. In addition, administrators might adopt an analogy to student newspapers to limit institutional liability for their students' uses of cyberspace. To adopt this analogy, the institution would consider students' own Web sites, bulletin boards, or discussion lists to be like student newspapers (see generally Section 10.3) and would provide them a freedom from regulation and oversight sufficient to assure that the students are not viewed as agents of the institution (see Section 10.3.6). Institutions might also create alternatives to regulation that would either diminish the likelihood of computer abuse or enhance the likelihood that disputes that do arise can be resolved without litigation. For instance, institutions could encourage, formally and informally, the development of cyberspace ethics codes for their campus communities. (For a foundation for such a code, see Marjorie Hodges & Gary Pavela, "Ten Principles of Civility in Cyberspace," and "Civility in Cyberspace," in *Synthesis: Law and Policy in Higher Education*, Vol. 8, no. 4 (Spring 1997), 624, 631.) To a large extent, the success of such codes would depend on widespread consensus about the

norms established and the willingness to enforce them by peer pressure and cyberspace “counterspeech.”

Another helpful initiative might be for institutions to provide a mediation or arbitration process adapted to the context of cyberspace. (See generally M. Katsh, “Dispute Resolution in Cyberspace,” 28 *Conn. L. Rev.* 953 (1996).) Such a process could be conducted using outside assistance, perhaps even online assistance. Two Web sites to consult regarding cyberspace dispute resolution are The Virtual Magistrate Project, available at <http://www.vmag.org> and The Online Ombuds Office at <http://www.ombuds.org>.

In two other leading areas of concern—tort law and copyright law—federal law now provides institutions some protection from liability for students’ online statements and their unauthorized transmission of copyrighted materials. (See generally Jonathan Bond & Matthew Schruers, “Safe Harbors Against the Liability Hurricane: The Communications Decency Act and the Digital Millennium Copyright Act,” 20 *Cardozo Arts & Ent. L.J.* 295 (2002).)

Regarding tort law, the Communications Decency Act (CDA), discussed in Section 13.2.12.2 of this book, contains a Section 509, codified as 47 U.S.C. § 230, that protects “interactive computer service” providers (which include colleges and universities) from defamation liability and other liability based on the content of information posted by others. Section 230(c)(1) applies when a third-party “information content provider” has posted or otherwise transmitted information through a provider’s service, and protects the provider from the liabilities that a “publisher or speaker” might incur in such circumstances (47 U.S.C. §§ 230(c)(1), (f)(2) & (3)).<sup>48</sup> As one court has explained:

By its plain language, § 230 creates a federal immunity to any cause of action that would make service providers liable for information originating with a third-party user of the service. Specifically, § 230 precludes courts from entertaining claims that would place a computer service provider in a publisher’s role. Thus, lawsuits seeking to hold a service provider liable for its exercise of a publisher’s traditional editorial function—such as deciding whether to publish, withdraw, postpone or alter content—are barred [*Zeran v. America Online, Inc.*, 129 F.3d 327, 330 (4th Cir. 1997)].

The Section 230(c)(1) immunity apparently extends beyond state tort law claims to protect interactive computer service providers from other state and federal law claims that could be brought against publishers or speakers. For example, in *Noah v. AOL Time Warner, Inc.*, 261 F. Supp. 2d 532, 537–39 (E.D. Va. 2003), *affirmed per curiam in an unpublished opinion*, 2004 WL 602711 (4th Cir.), the court held that Section 230(c)(1) protected an Internet service provider from liability under a federal civil rights statute, Title II of the Civil Rights Act of 1964 (42 U.S.C. § 2000a(b)). In addition, Section 230(c)(2) protects service providers from civil liability for actions that they take “in good faith to restrict

---

<sup>48</sup>For case law, see Annot., “Liability of Internet Service Provider for Internet or E-Mail Defamation,” 84 A.L.R.5th 169.

access to or availability of material” that they consider “to be obscene, lewd, lascivious, filthy, excessively violent, harassing, or otherwise objectionable . . .” (47 U.S.C. § 230(c)(2)(A); and see, for example, *Mainstream Loudoun v. Board of Trustees of Loudoun County Library*, 2 F. Supp. 2d 783 (E.D. Va. 1998)). Section 230 does not provide any immunity, however, from prosecution under federal criminal laws or from claims under intellectual property laws (47 U.S.C. §§ 230(e)(1) & (2)).

By its express language, Section 230 also protects “user(s)” of interactive computer services, such as persons operating Web sites or listservs on a provider’s service. In *Batzel v. Smith*, 333 F.3d 1018 (9th Cir. 2003), for example, the court held that an operator of a listserv was a “user” who would be immune under Section 230(c)(1) from a defamation claim if another “information content provider” had provided the information to him and he reasonably believed that the material was provided for purposes of publication. Users are protected under Section 230 to the same extent as providers. Litigation continues, however, on the scope of the user provisions and the extent of the immunity that Section 230 provides for users and providers. (See, for example, *Barrett v. Rosenthal*, 9 Cal. Rptr. 3d 142 (Cal. App. 2004), *opinion superceded and review granted*, 87 P. 3d 797 (Cal. 2004).)

Regarding copyright law, the Digital Millennium Copyright Act (DMCA), discussed in Section 13.2.5 of this book, contains a provision, 17 U.S.C. § 512, that protects Internet “service provider(s),” including colleges and universities, from certain liability for copyright infringement. Specifically, the DMCA establishes “safe harbor” protections for Internet service providers against copyright infringement liability attributable to the postings of third-party users (including students and faculty members) in certain circumstances and under certain conditions (see §§ 512(a)–(d)). The safe harbor provisions also provide some protection for Internet service providers against liability to alleged infringers (including faculty members and students) for erroneously removing material that did not infringe a copyright (17 U.S.C. § 512(g)), and some protection against persons who file false copyright infringement claims (17 U.S.C. § 512(f)). In addition, the DMCA contains a provision that, under certain circumstances, specifically protects colleges and universities, as Internet service providers, from vicarious liability for the acts of their faculty members and graduate students (17 U.S.C. § 512(e)).

Individual students (and faculty members) also have some protections under the DMCA. If a student operates a Web site that is maintained on the institution’s servers, he or she will have some protection against false copyright infringement claims (17 U.S.C. § 512(c)). In *Online Policy Group v. Diebold, Inc.*, 337 F. Supp. 2d 1195 (N.D. Cal. 2004), the plaintiff students sought monetary damages from the defendant, a copyright holder who had claimed that the students’ posting violated its copyright. The university had removed the posting on the Web site after it had received the defendant’s notice of an alleged copyright infringement. The court ruled in favor of the students and ordered the defendant to pay them money damages because “no reasonable copyright holder could have believed” that the postings in question “were protected by copyright.”

Taken together, Section 230 of the CDA and Section 512 and related provisions of the DMCA provide some leeway for institutions to regulate and monitor their computer systems as their institutional missions and campus cultures may require, and also serve to encourage institutions to create alternatives to regulation as well as dispute-resolution processes (see subsection 8.5.1 above).

One further, emerging, area of liability concern for institutions involves disabled students. Under Section 504 of the Rehabilitation Act (see Section 13.5.4 of this book) and Titles II and III of the Americans With Disabilities Act (see Section 13.2.11 of this book), institutions could become liable for discriminating against disabled students with respect to access to computer communications, or for failing to provide disabled students with computer-based auxiliary aids or services that would be considered reasonable accommodations. (See generally Sections 8.7.3 & 9.3.5.4 of this book; and see also Constance Hawke & Anne Jannarone, "Emerging Issues in Web Accessibility: Implications for Higher Education," *West's Educ. Law Reporter* (March 14, 2002), 715–27.)

## **Sec. 8.6. Campus Security**

**8.6.1. Security officers.** Crime is an unfortunate fact of life on many college campuses. Consequently, campus security and the role of security officers have become high-visibility issues. Although contemporary jurisprudence rejects the concept that colleges are responsible for the safety of students (see Section 3.3.2), institutions of higher education have, in some cases, been found liable for injury to students when the injury was foreseeable or when there was a history of criminal activity on campus.<sup>49</sup> Federal and state statutes, discussed in Section 8.6.3, also impose certain requirements on colleges and their staffs to notify students of danger and to work collaboratively with state and local law enforcement to prevent and respond to crime on campus.

The powers and responsibilities of campus security officers should be carefully delineated. Administrators must determine whether such officers should be permitted to carry weapons and under what conditions. They must determine the security officers' authority to investigate crime on campus or to investigate violations of student codes of conduct. Record-keeping practices also must be devised.<sup>50</sup> The relationship that security officers will have with local and state police must be cooperatively worked out with local and state police forces. Because campus security officers may play dual roles, partly enforcing public criminal laws and partly enforcing the institution's codes of conduct, administrators should carefully delineate the officers' relative responsibilities in each role.

---

<sup>49</sup>Cases and authorities are collected in Joel E. Smith, Annot., "Liability of University, College, or Other School for Failure to Protect Student From Crime," 1 A.L.R.4th 1099.

<sup>50</sup>For a general discussion of the legal restrictions on record keeping, see Sections 9.7.1 and 9.7.2. The Family Educational Rights and Privacy Act, discussed in Section 9.7.1, has a specific provision on law enforcement records (20 U.S.C. § 1232g(a)(4)(B)(ii)). Regulations implementing this provision are in 34 C.F.R. §§ 99.3 (definitions of "disciplinary action or proceeding" and "education records") and 99.8.

Administrators must also determine whether their campus security guards have, or should have, arrest powers under state or local law. For public institutions, state law may grant full arrest powers to certain campus security guards. In *People v. Wesley*, 365 N.Y.S.2d 593 (City Ct. Buffalo 1975), for instance, the court determined that security officers at a particular state campus were “peace officers” under the terms of Section 355(2)(m) of the New York Education Law. But a state law that grants such powers to campus police at a religiously controlled college was found unconstitutional as applied because its application violated the establishment clause (*State of North Carolina v. Pendleton*, 451 S.E.2d 274 (N.C. 1994)). For public institutions not subject to such statutes, and for private institutions, deputization under city or county law (see *People of the State of Michigan v. VanTubbergen*, 642 N.W.2d 368 (Mich. Ct. App. 2002)) or the use of “citizen’s arrest” powers may be options (see *Hall v. Virginia*, 389 S.E.2d 921 (Va. Ct. App. 1990)).

If campus police have not specifically been granted arrest powers for off-campus law enforcement actions, the resulting arrests may not be lawful. Decisions from two state courts suggest that campus police authority may not extend beyond the borders of the campus if the alleged crime did not occur on campus. For example, in *Marshall v. State ex rel. Dept. of Transportation*, 941 P.2d 42 (Wyo. 1997), the Wyoming Supreme Court invalidated the suspension of the plaintiff’s driver’s license, stating that his arrest was unlawful and thus the license suspension was tainted as well. Marshall, the plaintiff, had been driving by (but not on) the campus, and a security officer employed by Sheridan College believed that Marshall was driving a stolen car. The security officer followed Marshall and pulled him over. Although Marshall was able to demonstrate that the car was not stolen, the security officer believed that Marshall was driving while intoxicated. Marshall refused to be tested for sobriety, and his license was suspended. Because this was not a situation where a campus police officer was pursuing a suspect, the court ruled that the campus police officer had no authority to stop or to arrest Marshall, and thus the license suspension was reversed.

Some states, however, have passed laws giving campus police at public colleges and universities powers similar to those of municipal police. See, for example, 71 Pa. Stat. § 646.1 (2003), which provides that campus police may “exercise the same powers as are now or may hereafter be exercised under authority of law or ordinance by the police of the municipalities wherein the college or university is located. . . .” This statute overrules two Pennsylvania cases, *Horton v. Commonwealth of Pennsylvania*, 694 A.2d 1 (Pa. Commw. 1997), and *Commonwealth of Pennsylvania v. Croushore*, 703 A.2d 546 (Pa. Super. 1997), in which state appellate courts had ruled that campus police had no authority to effect arrests beyond the borders of the campus. State laws vary considerably regarding the off-campus authority of campus police officers, and the particular facts of each incident may also have an effect on the court’s determination. (For additional cases addressing this issue, see *People v. Smith*, 514 N.E.2d 1158 (Ill. App. Ct. 1987); and *Councill v. Commonwealth*, 560 S.E.2d 472 (Va. Ct. App. 2002).)

Police work is subject to a variety of constitutional restraints concerning such matters as investigations, arrests, and searches and seizures of persons or private property. Security officers for public institutions are subject to all these restraints. In private institutions, security officers who are operating in conjunction with local or state police forces (see Section 8.4.2) or who have arrest powers may also be subject to constitutional restraints under the state action doctrine (see Section 1.5.2). In devising the responsibilities of such officers, therefore, administrators should be sensitive to the constitutional requirements regarding police work.

Campus police or security guards responding to student protests and demonstrations must walk a fine line between protecting human and property interests and respecting students' constitutional rights of speech and assembly. In *Orin v. Barclay*, 272 F.3d 1207 (9th Cir. 2001), the federal appellate court rejected most of a student's constitutional challenges to limitations on a campus protest ordered by the dean and the campus security chief at a public community college, with the exception of the requirement that the protesters "not mention religion." The court ruled that the security officers had qualified immunity for their arrest of the plaintiff for trespassing, but that his claim of First Amendment violations for the prohibition of religious speech could proceed.

Administrators should also be sensitive to the tort law principles applicable to security work (see generally Sections 3.3.2 & 4.7.2). Like athletic activities (Section 10.4.9), campus security actions are likely to expose the institution to a substantial risk of tort liability. Using physical force or weapons, detaining or arresting persons, and entering or searching private property can all occasion tort liability if they are undertaken without justification or accomplished carelessly. Police or security officers employed by public colleges may be protected by qualified immunity if, at the time of the alleged tort by the officer, he or she reasonably believes in light of clearly established law that his or her conduct is lawful (*Saucier v. Katz*, 533 U.S. 194 (2001)). Private security officers who are not deputized and who do not have arrest powers, however, may not be protected by qualified immunity (*Richardson v. McKnight*, 521 U.S. 399 (1997)).

*Jones v. Wittenberg University*, 534 F.2d 1203 (6th Cir. 1976), for example, dealt with a university security guard who had fired a warning shot at a fleeing student. The shot pierced the student's chest and killed him. The guard and the university were held liable for the student's death, even though the guard did not intend to hit the student and may have had justification for firing a shot to frighten a fleeing suspect. The appellate court reasoned that the shooting could nevertheless constitute negligence "if it was done so carelessly as to result in foreseeable injury."

Institutions may also incur liability for malicious prosecution if an arrest or search is made in bad faith. In *Wright v. Schreffler*, 618 A.2d 412 (Pa. Super. Ct. 1992), a former college student's conviction for possession and delivery of marijuana was reversed because the court found that the defendant had been entrapped by campus police at Pennsylvania State University. The former student then sued the arresting officer for malicious prosecution, stating that the officer had no probable cause to arrest him, since the arrest was a result of the

entrapment. The court agreed, and denied the officer's motion for dismissal. See also *Penn v. Harris*, 296 F.3d 573 (7th Cir. 2002) (no liability for malicious prosecution because the police had probable cause to arrest him for disorderly conduct).

Campus police may also be held liable under tort law for their treatment of individuals suspected of criminal activity. In *Hickey v. Zezulka*, 443 N.W.2d 180 (Mich. Ct. App. 1989), a university public safety officer had placed a Michigan State University student in a holding cell at the university's department of public safety. The officer had stopped the student for erratic driving, and a breathalyzer test had shown that the student had blood alcohol levels of between 0.15 and 0.16 percent. While in the holding cell, the student hanged himself by a noose made from his belt and socks that he connected to a bracket on a heating unit attached to the ceiling of the cell.

The student's estate brought separate negligence actions against the officer and the university, and both were found liable after trial. Although an intermediate appellate court upheld the trial verdict against both the university and the officer, the state's supreme court, in *Hickey v. Zezulka*, 487 N.W.2d 106 (Mich. 1992), reversed the finding of liability against the university, applying Michigan's sovereign immunity law. The court upheld the negligence verdict against the officer, however, noting that the officer had violated university policies about removing harmful objects from persons before placing them in holding cells and about checking on them periodically. The court characterized the officer's actions as "ministerial" rather than discretionary, which, under Michigan law, eliminated her governmental immunity defense.

In light of *Hickey*, universities with local holding cells should make sure that campus police regulations are clear about the proper procedures to be used, particularly in handling individuals who are impaired by alcohol and drugs, and should ensure that the procedures are followed to reduce both the potential for harm to individuals and liability to the institution or its employees.

In *Baughman v. State*, 45 Cal. Rptr. 2d 82 (Cal. App. 1995), university police were sued for invasion of privacy, emotional distress, and conversion pursuant to the destruction of computer disks during a search undertaken in connection with a lawfully issued warrant. The court found that the officers had acted within their official capacity, that they were therefore immune from damages resulting from the investigation, and that the investigation justified an invasion of privacy.

Overlapping jurisdiction and responsibilities may complicate the relationship between campus and local police. California has attempted to address this potential for overlap in a law, Section 67381 of the Education Code. This law, passed by the state legislature in 1998, requires the governing board of every public institution of higher education in the state to "adopt rules requiring each of their respective campuses to enter into written agreements with local law enforcement agencies that clarify operational responsibilities for investigations" of certain violent crimes that occur on campus (homicide, rape, robbery, and aggravated assault). These agreements are to designate which law enforcement agency will do the investigation of such crimes, and they must "delineate the specific geographical boundaries" of each agency's "operational responsibility."

**8.6.2. Protecting students against violent crime.** The extent of the institution's obligation to protect students from crime on campus—particularly, violent crimes committed by outsiders from the surrounding community—has become a sensitive issue for higher education. The number of such crimes reported, especially sexual attacks on women, has increased steadily over the years. As a result, postsecondary institutions now face substantial tactical and legal problems concerning the planning and operation of their campus security systems, as well as a federal law requiring them to report campus crime statistics.

Institutional liability may depend, in part, on where the attack took place and whether the assailant was a student or an intruder. When students have encountered violence in residence halls from intruders, the courts have found a duty to protect the students similar to that of a landlord. For example, in *Mullins v. Pine Manor College*, 449 N.E.2d 331 (Mass. 1983), the court approved several legal theories for establishing institutional liability in residence hall security cases. The student in *Mullins* had been abducted from her dormitory room and raped on the campus of Pine Manor College, a women's college located in a suburban area. Although the college was located in a low-crime area and there was relatively little crime on campus, the court nevertheless held the college liable.

Developing its first theory, the court determined that residential colleges have a general legal duty to exercise due care in providing campus security. The court said that, because students living in campus residence halls cannot provide their own security, the college's duty is to take reasonable steps "to ensure the safety of its students" (449 N.E.2d at 335). Developing its second theory, the court determined "that a duty voluntarily assumed must be performed with due care." Quoting from Section 323 of the *Restatement (Second) of Torts*, a scholarly work of the American Law Institute, the court held that when a college has taken responsibility for security, it is "subject to liability . . . for physical harm resulting from [the] failure to exercise reasonable care to perform [the] undertaking." An institution may be held liable under this theory, however, only if the plaintiff can establish that its "failure to exercise due care increased the risk of harm, or . . . the harm is suffered because of the student's reliance on the undertaking."

Analyzing the facts of the case under these two broad theories, the appellate court affirmed the trial court's judgment in favor of the student. The facts relevant to establishing the college's liability included the ease of scaling or opening the gates that led to the dormitories, the small number of security guards on night shift, the lack of a system for supervising the guards' performance of their duties, and the lack of deadbolts or chains for dormitory room doors.

Courts have ruled in two cases that universities provided inadequate residence hall security and that lax security was the proximate cause of a rape in one case and a death in a second. In *Miller v. State*, 478 N.Y.S.2d 829 (N.Y. App. Div. 1984), a student was abducted from the laundry room of a residence hall and taken through two unlocked doors to another residence hall where she was raped. The court noted that the university was on notice that nonresidents frequented the residence hall, and it criticized the university for failing to take

“the rather minimal security measure of keeping the dormitory doors locked when it had notice of the likelihood of criminal intrusions” (478 N.Y.S.2d at 833). “Notice” consisted of knowledge by university agents that nonresidents had been loitering in the lounge of the residence hall, and the occurrence of numerous robberies, burglaries, criminal trespass, and a rape. The court applied traditional landlord-tenant law and increased the trial court’s damage award of \$25,000 to \$400,000.

In the second case, *Nieswand v. Cornell University*, 692 F. Supp. 1464 (N.D.N.Y. 1988), a federal trial court refused to grant summary judgment to Cornell University when it denied that its residence hall security was inadequate and thus the proximate cause of a student’s death. A rejected suitor (not a student) had entered the residence hall without detection and shot the student and her roommate. The roommate’s parents filed both tort and contract claims (see Sections 3.3 & 3.4 of this book) against the university. The court, citing *Miller*, ruled that whether or not the attack was foreseeable was a question of material fact, which would have to be determined by a jury. Furthermore, the representations made by Cornell in written documents, such as residence hall security policies and brochures, regarding the locking of doors and the presence of security personnel could have constituted an implied contract to provide appropriate security. Whether a contract existed and, if so, whether it was breached was again a matter for the jury.

In another case involving Cornell, the university was found not liable for an assault in a residence hall by an intruder. The intruder had scaled a two-story exterior metal grate and then kicked open the victim’s door, which had been locked and dead-bolted. In *Vangeli v. Schneider*, 598 N.Y.S.2d 837 (N.Y. App. Div. 1993), the court ruled that Cornell had met its duty to provide “minimal security” as a landlord.

Even if the college provides residence hall security systems, courts have ruled that the institution has a duty to warn students living in the residence hall about the use of these systems and how to enhance their personal safety. In *Stanton v. University of Maine System*, 773 A.2d 1045 (Maine 2001), the Supreme Court of Maine vacated a lower court’s award of summary judgment for the university, ruling that a sexual assault in a college residence hall room was foreseeable, and that the college should have instructed the student, a seventeen-year-old girl attending a preseason soccer program, on how to protect herself from potential assault. Citing *Mullins*, discussed above, the court ruled that the plaintiff’s complaint raised sufficient issues of material fact to warrant a trial. The court rejected, however, the plaintiff’s implied contract claim because no written or oral contract had been entered by the parties.

Institutions that take extra precautions with respect to instructing students about safety may limit their liability for assaults on students, as in *Murrell v. Mount St. Clare College*, 2001 U.S. Dist. LEXIS 21144 (S.D. Iowa, September 10, 2001). A second-year student was sexually assaulted by the guest of a fellow student whom she had allowed to spend the evening in her residence hall room. Earlier that day, the student asked the guests to leave, left her door unlocked, and prepared to take a shower. The guest entered the room and raped her. The

court, in granting the college's motion for summary judgment, noted that the college had provided a working lock, which the plaintiff had not used, had provided the students with a security handbook with guidelines that, if ignored, could lead to fines, and had held a mandatory meeting at the beginning of the school year to discuss residence hall safety and to warn students against leaving doors unlocked or propped open.

An opinion of the Supreme Court of Nebraska linked a university's oversight of fraternal organizations with its duty as a landlord to find the institution liable for a student's injuries. Although *Knoll v. Board of Regents of the University of Nebraska*, 601 N.W.2d 757 (1999), ostensibly involves alleged institutional liability for fraternity hazing, the court rested its legal analysis, and its finding of duty, on the landowner's responsibility for foreseeable harm to invitees. The student, a nineteen-year-old pledge of Phi Gamma Delta fraternity, was abducted from a building on university property and taken to the fraternity house, which was not owned by the university. University policy, however, considered fraternity houses to be student housing units subject to the university's student code of conduct, which prohibited the use of alcoholic beverages and conduct that was dangerous to others. Knoll was forced to consume a large quantity of alcohol and then was handcuffed to a toilet pipe. He broke free of the handcuffs and attempted to escape through a third floor window, from which he fell and sustained serious injuries.

Knoll argued that, because he was abducted on university property, the university had a duty to protect him because the abduction was foreseeable. Although the university argued that the actions were not criminal, but merely "horseplay," the court stated that the actions need not be criminal in nature in order to create a duty. And although the university did not own the fraternity house or the land upon which it was built, the court noted that the code of conduct appeared to apply with equal force to all student housing units, irrespective of whether they were located on university property. Therefore, the university's knowledge of prior code violations and criminal misconduct by fraternity members was relevant to the determination of whether the university owed the plaintiff a duty.

Unforeseeable "pranks" or more serious acts by students or nonstudents do not typically result in institutional liability. For example, in *Rabel v. Illinois Wesleyan University*, 514 N.E.2d 552 (Ill. App. Ct. 1987), the court ruled that the university had no duty to protect a student against a "prank" by fellow students that involved her abduction from a residence hall, despite the fact that the assailant had violated the college's policy against underage drinking. (See also *L.W. v. Western Golf Association*, 712 N.E.2d 983 (Ind. 1999).) A similar result was reached in *Tanja H. v. Regents of the University of California*, 278 Cal. Rptr. 918 (Cal. Ct. App. 1991); the court stated that the university had no duty to supervise student parties in residence halls or to prevent underage consumption of alcohol. Even in *Eiseman v. State*, 518 N.Y.S.2d 608 (N.Y. 1987), the highest court of New York State refused to find that the university had a legal duty to screen applicants who were ex-convicts for violent tendencies before admitting them. (For analysis of this case, see D. M. Kobasic, E. R. Smith, & L. S. Barmore

Zucker, “*Eiseman v. State of New York: The Duty of a College to Protect Its Students From Harm by Other Students Admitted Under Special Programs*,” 14 *J. Coll. & Univ. Law* 591 (1988).)

The difference in outcomes of these cases appears to rest on whether the particular harm that ensued was foreseeable. This was the rationale for the court’s ruling in *Nero v. Kansas State University*, 861 P.2d 768 (Kan. 1993). In *Nero*, the Supreme Court of Kansas considered whether the university could be found negligent for permitting a student who had earlier been charged with sexual assault on campus to live in a coeducational residence hall, where he sexually assaulted the plaintiff, a fellow student. The court reversed a summary judgment for the university, declaring that a jury would have to determine whether the attack was foreseeable, given that, although the university knew that the student had been accused of the prior sexual assault, he not yet been convicted. If the jury found that the second assault was foreseeable, then it would address the issue of whether the university had breached a duty to take reasonable steps to prevent the second attack.

Foreseeability was again the issue in a pair of cases involving violent crimes against students in academic facilities. In *Jesik v. Maricopa County Community College District*, 611 P.2d 547 (Ariz. 1980), a student, during registration at the college, reported to a security guard employed by the college that, following an argument, another individual had threatened to kill him. The security guard took no steps to protect the student. About an hour after the report, the assailant returned to campus carrying a briefcase. The student pointed out the assailant to the same security guard, and the guard assured him that he would be protected. The guard then questioned the assailant, turned to walk away, and the assailant shot and killed the student.

The plaintiff, the father of the murdered student, sued the president and the individual members of the governing board of the community college district, the executive dean and dean of students at Phoenix College, the security guard (Hilton), and the community college district. The trial court summarily dismissed the case against all defendants except the security guard. The plaintiff appealed this dismissal to the Arizona Supreme Court, which first considered the potential liability of the officials and administrators. The plaintiff argued that “[the individual] defendants controlled an inadequate and incompetent security force [and thus should be] liable for any breach of duty by that security force.” To establish the “duty” that had been breached, the plaintiff relied on a series of Arizona statutes that required the community college district’s governing board, where necessary, to appoint security officers (Ariz. Rev. Stat. Ann. §§ 15-679(A)(3) and (9)); “to adopt rules and regulations for the maintenance of public order” (§ 13-1093); and to prevent “trespass upon the property of educational institutions [or] interference with its lawful use” (§ 13-1982). The court rejected this argument, finding that the statutes in question did not establish any specific standard of care but “only set forth a general duty to provide security to members of the public on school property.”

Having discovered no specific legal duty chargeable to the individual defendants (excluding the security officer, whose potential liability the trial court had

not rejected), the Arizona court next considered the liability of the community college district itself. Rejecting the plaintiff's request to adopt two liability principles from the *Restatement (Second) of Torts*,<sup>51</sup> the court found this principle controlling in Arizona:

A public school district in Arizona is liable for negligence when it fails to exercise ordinary care under the circumstances. [Arizona cases have] established that students are invitees and that schools have a duty to make the premises reasonably safe for their use. If a dangerous condition exists, the invitee must show that the employees of the school knew of or created the condition at issue [611 P.2d at 550].

The court then determined that the *respondeat superior* doctrine applies to governmental defendants under Arizona law, so that the community college district could be held liable for the negligence of its employees. Therefore, if the plaintiff could show at trial that the district's security guard had breached the duty set out above, while acting within the scope of employment, the district would be liable (along with the employee) for the death of the plaintiff's son.

The *Jesik* court also discussed an Arizona statute (Ariz. Rev. Stat. Ann. § 15442(A)(16)) that imposes a standard of care on public school districts and community college districts (see 611 P.2d at 550 (original opinion) and 551 (supplemental opinion)). The court did not base its decision on this statute, since the statute was not yet in effect at the time the crime was committed. But the court's discussions provide a useful illustration of how state statutes may affect liability questions about campus security. In a later case, *Peterson v. San Francisco Community College District*, 205 Cal. Rptr. 842 (Cal. 1984), the court did rely on a statutory provision to impose liability on the defendant. The plaintiff was a student who had been assaulted while leaving the campus parking lot. Her assailant had concealed himself behind "unreasonably thick and untrimmed foliage and trees." Several other assaults had occurred at the same location and in the same manner. Community college officials had known of these assaults but did not publicize them. The court held that the plaintiff could recover damages under Section 835 of the California Tort Claims Act (Cal. Govt. Code § 810 *et seq.*), which provides that "a public entity is liable for injury caused by a dangerous condition of its property" if the dangerous condition was caused by a public employee acting in the scope of his employment or if the entity "had actual or constructive notice of the dangerous condition" and failed to correct it. The court concluded that the failure to trim the foliage or to warn students of the earlier assaults constituted the creation of such a dangerous condition.

If the crime victim has engaged in misconduct that could have contributed to the injury, at least in part, the institution may escape liability. In *Laura O. v. State*,

---

<sup>51</sup>Section 318 of the Restatement deals with the duty of a possessor of land to control the conduct of persons permitted to use the land. Section 344 deals with the duty of a possessor of land held open to the public for business purposes to protect members of the public from physical harm caused by third persons.

610 N.Y.S.2d 826 (N.Y. App. Div. 1994), the court held that a university in New York was not liable to a student who was raped in a campus music building after hours. She had been practicing the piano at a time when students were not allowed in the building. Although the student claimed that university officials knew that students used non-dormitory buildings after closing hours, the court stated that the university's security procedures were appropriate. Since the building was not a residence hall and the student was not a campus resident, the university did not owe the student a special duty of protection.

(For further analysis of institutional liability with regard to rapes that occur on campus, see R. Fossey & M. C. Smith, "Institutional Liability for Campus Rapes: The Emerging Law," 24 *J. Law & Educ.* 377 (1995).)

The cases in this Section illustrate a variety of campus security problems and a variety of legal theories for analyzing them. Each court's choice of theories depended on the common and statutory law of the particular jurisdiction and the specific factual setting of the case. The theories used in *Nero*, where the security problem occurred in campus housing and the institution's role was comparable to a landlord's, differ from the theories used in *Jesik*, where the security problems occurred elsewhere and the student was considered the institution's "invitee." Similarly, the first theory used in *Mullins*, establishing a standard of care specifically for postsecondary institutions, differs from theories in the other cases, which apply standards of care for landlords or landowners generally. Despite the differences, however, a common denominator can be extracted from these cases that can serve as a guideline for postsecondary administrators: when an institution has foreseen or ought to have foreseen that criminal activity will likely occur on campus, it must take reasonable, appropriate steps to safeguard its students and other persons whom it has expressly or implicitly invited onto its premises. In determining whether this duty has been met in a specific case, courts will consider the foreseeability of violent criminal activity on the particular campus, the student victim's own behavior, and the reasonableness and appropriateness of the institution's response to that particular threat.

**8.6.3. Federal statutes and campus security.** Following what appears to be an increase in violent crime on campus, the legislatures of several states and the U.S. Congress passed laws requiring colleges and universities to provide information on the numbers and types of crimes on and near campus. The federal legislation, known as the "Crime Awareness and Campus Security Act" (Title II of Pub. L. No. 101-542 (1990)), amends the Higher Education Act of 1965 (this book, Section 8.3.2) at 20 U.S.C. § 1092(f). The Campus Security Act, in turn, was amended by the Higher Education Amendments of 1992 (Pub. L. No. 102-325) and imposes requirements on colleges and universities for preventing, reporting, and investigating sex offenses that occur on campus. The Campus Security Act, passed in response to activism by parents of a student murdered in her college residence hall room and others with similar concerns, is also known as the "Clery Act," named after the young woman who was murdered.

The Campus Security Act, as amended by the Higher Education Amendments of 1992, requires colleges to report, on an annual basis,

statistics concerning the occurrence on campus, during the most recent calendar year, and during the 2 preceding calendar years for which data are available, of the following criminal offenses reported to campus security authorities or local police agencies—

- (i) criminal homicide;
- (ii) sex offenses, forcible or nonforcible;
- (iii) robbery;
- (iv) aggravated assault;
- (v) burglary;
- (vi) motor vehicle theft;
- (vii) arson;
- (viii) arrests or persons referred for campus disciplinary action for liquor law violations, drug-related violations, and illegal weapons possession.

The law also requires colleges to develop and distribute to students, prospective students and their parents, and the Secretary of Education,

- (1) a statement of policy regarding—
  - (i) such institution's campus sexual assault programs, which shall be aimed at prevention of sex offenses; and
  - (ii) the procedures followed once a sex offense has occurred.

The law also requires colleges to include in their policy (1) educational programs to promote the awareness of rape and acquaintance rape, (2) sanctions that will follow a disciplinary board's determination that a sexual offense has occurred, (3) procedures students should follow if a sex offense occurs, and (4) procedures for on-campus disciplinary action in cases of alleged sexual assault.

The Campus Security Act also requires colleges to provide information on their policies regarding the reporting of other criminal actions and regarding campus security and campus law enforcement. They must also provide a description of the type and frequency of programs designed to inform students and employees about campus security.

In one of its most controversial provisions, the law defines "campus" as

- (i) any building or property owned or controlled by the institution of higher education within the same reasonably contiguous geographic area and used by the institution in direct support of, or related to its educational purposes; or
- (ii) any building or property owned or controlled by student organizations recognized by the institution.

The second part of the definition would, arguably, make fraternity and sorority houses part of the "campus," even if they are not owned by the college and are not on land owned by the college.

Regulations implementing the Campus Security Act appear at 34 C.F.R. § 668.46. These regulations require that crimes reported to counselors be included in the college's year-end report, but they do not require counselors to report crimes to the campus community at the time that they learn of them if the student victim requests that no report be made. The regulations require other college officials, however, to make timely reports to the campus community about crimes that could pose a threat to other students.

Colleges must report on their security policies and crime statistics annually, and must distribute these reports to all enrolled students and current employees, to prospective students upon request, to prospective employees upon request, and to the U.S. Department of Education. Additional information about reporting requirements and other provisions of the Campus Security Act can be found at <http://ifap.ed.gov>. Another helpful Web site is at <http://www.securityoncampus.org/schools/cleryact>.

In September 1996, the U.S. Department of Education issued its first charge against a college for violating the Campus Security Act. The department released a report citing Moorhead State University for violating the Act by compiling inaccurate crime statistics and not making annual crime reports public. The department did not impose any sanctions but threatened possible penalties if the university did not comply with the law within thirty days (Karla Haworth, "Education Department Finds a College Violated U.S. Crime-Reporting Law," *Chron. Higher Educ.*, September 27, 1996, A44). In 2000, the department levied a \$25,000 fine against Mount St. Clare College (Iowa) for failing to comply with the reporting requirements of the Campus Security Act ("Education Dept. Fines College on Crime Law," *Chron. Higher Educ.*, July 14, 2000, A33).

Several states have promulgated laws requiring colleges and universities either to report campus crime statistics or to open their law enforcement logs to the public. For example, a Massachusetts law (Mass. Ann. Laws ch. 41 § 98F (1993)) has the following requirement:

Each police department and each college or university to which officers have been appointed pursuant to the provisions of [state law] shall make, keep and maintain a daily log, written in a form that can be easily understood[, of] . . . all responses to valid complaints received [and] crimes reported. . . . All entries in said daily logs shall, unless otherwise provided by law, be public records available without charge to the public.

Pennsylvania law requires colleges to provide students and employees, as well as prospective students, with information about crime statistics and security measures on campus. It also requires colleges to report to the Pennsylvania State Police all crime statistics for a three-year period (24 Pa. Cons. Stat. Ann. § 2502 (1992)).

These federal and state requirements to give "timely warning" may be interpreted as creating a legal duty for colleges to warn students, staff, and others about persons on campus who have been accused of criminal behavior. If the college does not provide such a warning, its failure to do so could result in successful negligence claims against it in the event that a student or staff member

is injured by someone who one or more administrators know has engaged in allegedly criminal behavior in the past. (For analysis of institutional liability and potential defenses, see Section 3.3.2.1.)

In 2000, Congress enacted the Campus Sex Crimes Prevention Act (CSCPA), Pub. L. 106-386, 114 Stat. 1464, which became effective on October 28, 2002. The CSCPA adds subsection (j) to the Jacob Wetterling Crimes Against Children and Sexually Violent Offender Registration Act, 42 U.S.C. § 14071, which requires individuals who have been convicted of criminal sexually violent offenses against minors, and who have been determined by a court to be “sexually violent predators,” to register with law enforcement agencies. The CSCPA requires individuals subject to the Wetterling Act to provide the notice required in the statute if he or she is an employee, “carries on a vocation,” or is a student at any institution of higher education in the state, as well as providing notice of any change in status. The law enforcement agency that receives the information then notifies the college or university. The CSCPA also amends the Campus Security Act at 20 U.S.C. § 1092(f)(1), requiring colleges to include in their annual security report a statement as to where information about registered sex offenders who are employees or students may be found (see 34 C.F.R. § 668.46 (b)(12)). It also amends FERPA (Section 9.7.1 of this book) to provide that FERPA does not prohibit the release of information about registered sex offenders on campus. Guidelines implementing the CSCPA may be found at 67 Fed. Reg. 10758 (2002).

## ***Sec. 8.7. Other Support Services***

**8.7.1. Overview.** In addition to financial aid services (Section 8.3), housing (Section 8.4), information technology services (Section 8.5), and security services (Section 8.6), institutions provide various other support services to students. Health services, auxiliary services for students with disabilities, services for foreign (international) students, child care services, and legal services are prominent examples that are discussed in this Section. Other examples include academic and career counseling services, placement services, resident life programming, entertainment and recreational services, parking, food services, and various other student convenience services (see generally Section 15.3.1). An institution may provide many of these services directly through its own staff members; other services may be performed by outside third parties under contract with the institution (see Sections 15.2.2 & 15.3.1) or by student groups subsidized by the institution (see Section 10.1.3). Funding may come from the institution’s regular budget, from mandatory student fees, from revenues generated by charging for the service, from government or private grants, or from donated and earmarked funds. In all of these contexts, the provision of support services may give rise to a variety of legal issues concerning institutional authority and students’ rights, as well as legal liability (see generally Section 2.1), some of which are illustrated in subsections 8.7.2 through 8.7.5 below.

**8.7.2. Health services.** Health services provided by colleges and universities continually expanded during the latter half of the twentieth century. There

were many contributors to these developments—for example, an increased demand for mental health services; the need to respond to public health emergencies such as AIDS; the expanding presence of women on campus, which stimulated the need for women’s health services; the expanding presence of students with disabilities having special health needs; increased emphasis on preventive medicine and wellness programs; the increased visibility of alcohol abuse, drug abuse, and other risky student behaviors with medical implications; and pressures in the nation’s health care system leading to increasing numbers of students without health insurance or other means of access to health care. Paralleling the expansion (and the diversification) of campus health care services has been an expansion of the legal requirements applicable to student health services offices and practitioners.

Traditionally, the primary body of law applicable to health care providers was negligence law (see Sections 3.3.2 & 4.7.2.2 of this book, and especially Section 3.3.2.5 on student suicide), including malpractice (see Sections 4.7.2.2 & 12.5.5 of this book), along with state statutes and regulations regarding licensure of practitioners and facilities (see Section 12.5.5). Adding to that base, health services facilities and health care practitioners are now also subject to a variety of other bodies of law, including various laws prohibiting discrimination in access to campus health services (discussed below); occupational health and safety laws (see Section 4.6.1 of this book); environmental protection laws (see Section 13.2.10 of this book); various record-keeping laws, including FERPA (see Section 9.7.1 of this book), and also including HIPAA (Section 13.2.14) *if* the medical clinic also serves patients other than students and qualifies as a “covered provider”; and laws governing research (see Sections 12.5.5 & 13.2.3) for health services offices that participate in research projects. In addition, health services offices may be subject to the accreditation requirements of the Accreditation Association for Ambulatory Health Care (AAAHC).

The federal civil rights spending statutes (see Section 13.5 of this book) prohibit postsecondary institutions that are federal fund recipients from discriminating by race, national origin, sex, disability, or age in the provision of health services and benefits. The Title IX regulations, for example, provide that institutions must not exclude students from, or deny students the benefits of, health services on grounds of sex, and must not discriminate by sex in the provision of any “medical, hospital, accident, or life insurance benefit, service, policy, or plan to any of its students” (34 C.F.R. § 106.39). Likewise, the Title IX regulations prohibit discrimination in health services on the basis of pregnancy or childbirth, or, in some situations, on the basis of “parental, family, or marital status” (34 C.F.R. § 106.40). And the regulations for Section 504 of the Rehabilitation Act provide that institutions may not exclude disabled students from participation in health insurance programs or deny them the benefits of such programs (34 C.F.R. § 104.43), and that institutions must provide disabled students “an equal opportunity for participation in” health services and personal counseling services (34 C.F.R. § 104.37).

The numerous day-to-day applications of these civil rights statutes, and of the various other laws noted above, have seldom resulted in noteworthy

litigation. Rather, the legal issues that have resulted in court battles and appellate court opinions, or have attracted the attention of Congress, usually involve special applications of these laws (for example, the Title IX sex discrimination law's application to abortion services, as discussed below), or the invocation of other laws (for example, federal antitrust law as in one of the cases below), or constitutional challenges to health services policies (as in several cases below).

Health services and health insurance involving birth control—that is, abortion, sterilization, or the distribution of contraceptive devices—provide a primary example of issues that have attracted Congress's attention and have also resulted in litigation. The problem may be compounded when the contested service is funded by a student activities fee or other mandatory fee. Students who oppose abortion on grounds of conscience, for instance, may object to the mandatory fees and the use of their own money to fund such services. The sparse law on this point suggests that such challenges will not often succeed. In *Erzinger v. Regents of the University of California*, 187 Cal. Rptr. 164 (Cal. Ct. App. 1982), for instance, students objected to the defendants' use of mandatory fees to provide abortion and pregnancy counseling through campus student health services. The court rejected the students' claim that such use infringed their free exercise of religion. (See generally Thomas Antonini, Note, "First Amendment Challenges to the Use of Mandatory Student Fees to Help Fund Student Abortions," 15 *J. Coll. & Univ. Law* 61 (1988).)

Similarly, in another case about birth control services, *Goehring v. Brophy*, 94 F.3d 1294 (9th Cir. 1996), the court relied in part on the *Erzinger* decision to uphold a University of California at Davis mandatory student registration fee used to subsidize a university health insurance program that covered the cost of abortion services. The university required that all its graduate and professional students have health insurance. Students could acquire this insurance through the Graduate Student Health Insurance Program, which provided a subsidy of \$18.50 per insured student, per quarter, to reduce the cost of the premiums; funds generated by the mandatory student fees covered the cost of the subsidy. Students could opt out of this program by proving that they have health insurance from another provider. The plaintiffs claimed that the university's use of their mandatory fees to subsidize health insurance that covered abortion services violated their free exercise of religion. Their sincerely held religious beliefs, they argued, prevented them financially contributing in any way to abortion services.

In analyzing this claim, the appellate court looked to the Religious Freedom Restoration Act (RFRA), 42 U.S.C. § 2000bb. Although RFRA has since been invalidated by the U.S. Supreme Court (see Section 1.6.2), the *Goehring* court's reasoning would still be useful in free exercise cases under the First Amendment or state constitutions.<sup>52</sup> The court held that the plaintiffs had failed to

---

<sup>52</sup>A college or university's first line of defense against a free exercise claim, however, would usually be to argue that the student health insurance or health services requirements are "neutral" and "generally applicable" under *Employment Division, Dept. of Human Resources of Oregon v. Smith*, 494 U.S. 872 (1990) (Section 1.6.2 of this book), and thus subject only to minimal scrutiny by the courts.

“establish that the university’s subsidized health insurance program imposes a substantial burden on a central tenet of their religion.” Several factors were critical to the court’s conclusion:

The plaintiffs are not required to purchase the University’s subsidized health insurance—undergraduate students are not required to have health insurance and graduate students may purchase insurance from any provider. Moreover, the student health insurance subsidy is not a substantial sum of money and the subsidy, taken from registration fees, is distributed only for those students who elect to purchase University insurance. Furthermore, the plaintiffs are not required to accept, participate in, or advocate in any manner for the provision of abortion services. Abortions are not provided on the University campus. Students who request abortion services are referred to outside providers [94 F.3d at 1299–1300].

The court also concluded that “even if the plaintiffs were able to satisfy the substantial burden requirement, the University’s health insurance system nonetheless survives constitutional attack because it . . . is the least restrictive means of furthering a compelling government interest.”<sup>53</sup> Three “compelling” university interests supported the health insurance program: (1) providing students with affordable health insurance that many would be unable to obtain if it was not available through the university; (2) helping prevent the spread of communicable disease among students who must eat, sleep, and study in close quarters; and (3) protecting students from the distractions of undiagnosed illnesses and unpaid medical bills that could interfere with their studies. Relying on cases that rejected free exercise challenges to the federal government’s collection and expenditure of tax dollars, the court determined that exempting students from paying the portion of the mandatory fee that subsidized the insurance program would not be a viable alternative:

[T]he fiscal vitality of the University’s fee system would be undermined if the plaintiffs in the present case were exempted from paying a portion of their student registration fee on free exercise grounds. Mandatory uniform participation by every student is essential to the insurance system’s survival. . . . [T]here are few, if any, governmental activities to which one person or another would not object [94 F.3d at 1301].

Other questions concerning campus abortion services have arisen under federal statutes and regulations. During Congress’s consideration of the Civil Rights Restoration Act of 1987 (see Section 13.5.7.4 of this book), an issue arose concerning whether an institution’s decision to exclude abortions from its campus medical services or its student health insurance coverage could be considered

---

<sup>53</sup>This is a classical strict scrutiny standard. Under the federal free exercise clause, this standard would not apply if the insurance program is “neutral” and “generally applicable” within the meaning of the *Employment Division v. Smith* case (see footnote 51 above, and see generally Section 1.6.2 of this book.)

sex discrimination under the Title IX regulations (see 34 C.F.R. §§ 106.39 & 106.40). Congress responded by including two “abortion neutrality” provisions in the 1987 Act: Section 3(a), which adds a new Section 909 (20 U.S.C. § 1688) to Title IX, and Section 8 (20 U.S.C. § 1688 note). Under these provisions, neither Title IX nor the Civil Rights Restoration Act may be construed (1) to require an institution to provide abortion services, (2) to prohibit an institution from providing abortion services, or (3) to permit an institution to penalize a person for seeking or receiving abortion services related to a legal abortion.

Another development concerning abortion services arose from the 1988 amendments to the Department of Health and Human Services’ (HHS) regulations for Title X of the Public Health Service Act (42 U.S.C. §§ 300–300a-6), which provides federal funds for family planning clinics. These amendments (53 Fed. Reg. 2922 (February 2, 1988)), an initiative of the Reagan administration, prohibited fund recipients (some of whom were campus health clinics or university-affiliated hospitals) from providing counseling or referrals regarding abortion. In *Rust v. Sullivan*, 500 U.S. 173 (1991), the U.S. Supreme Court upheld these regulations, popularly known as the “Gag Rule,” against a challenge that they violated the free speech rights of physicians and the privacy rights of pregnant women. After President Clinton took office, however, he directed the Secretary of HHS to suspend the regulations (58 Fed. Reg. 7455 (1993)) and initiate a new rule-making process aimed at reinstating regulations similar to those in effect prior to the 1988 amendments. The regulations, subsequently adopted, and codified at 42 C.F.R. §§ 59.1–59.12, repeal the Gag Rule. Under these regulations, hospitals and health clinics operating a Title X funded family planning project may provide clients with information on pregnancy termination, upon request, if done in a neutral, nondirective manner and presented as an option along with prenatal care and delivery, infant care, foster care, and adoption. Project staff, however, may not perform abortions for project patients (42 C.F.R. § 59.5).

Other issues concerning health services and health insurance are illustrated by *Lee v. Life Insurance Co. of North America*, 23 F.3d 14 (1st Cir. 1994). Three University of Rhode Island (URI) students challenged a URI requirement that all undergraduate students pay a fixed fee for the use of the university’s on-campus medical clinic, and that they also carry supplementary health insurance. Students had the option of obtaining the additional insurance from the Life Insurance Company of North America (LINA) or from another insurance provider, except that URI would not accept coverage by either Rhode Island Blue Cross or health maintenance organizations based in Rhode Island. Students who did not purchase supplementary coverage were billed for LINA coverage and were not permitted to register for the following semester until the LINA bill had been paid. The students claimed that URI’s practice of conditioning matriculation on payment of the student health fee and the LINA insurance premium was an illegal “tying arrangement” under the Sherman Antitrust Act (see generally Section 13.2.8 of this book). They also claimed that the practice violated the Fourteenth Amendment’s due process clause (because it infringed their right to select their own physicians) and equal protection clause (because the fee and

premiums paid by male and female students were equal, despite the fact that male students did not use gynecological services).

The district court dismissed all of the students' claims, and the appellate court affirmed. Because URI lacked "appreciable economic power" in either the higher education "market" or the health care "market," the students could not claim that the university had created a monopoly. Despite the fact that, in some ways, an education at URI is "unique," said the court, the students had a wide selection of other colleges that would provide a similar type and quality of education. Furthermore, the students could transfer courses from URI to other colleges, and so had not been injured by the alleged tying arrangement should they decide not to return to URI. Because the students knew before they enrolled at URI that this policy existed, they could not use antitrust jurisprudence to argue that they were "locked in" to an economic situation that they did not desire. Moreover, since the students knew about the health clinic fee and health insurance requirement before they enrolled, there was no due process violation; and since the students could not demonstrate that the university had intended to burden male students in a discriminatory fashion, there was no equal protection violation.

Institutions with health services offices will find useful guidance in the American College Health Association (ACHA) publication, *Guidelines for a College Health Program* (1999) (for availability, see <http://www.acha.org>); in the "College Health Programs" section of the *CAS Professional Standards for Higher Education* issued by the Council for the Advancement of Standards in Higher Education (for availability, see <http://www.cas.edu>); and in the most recent edition of the *Accreditation Handbook for Ambulatory Health Care* published by the Accreditation Association for Ambulatory Health Care (AAHC), available at <http://www.aaahc.org>.

**8.7.3. Services for students with disabilities.** When students need support services in order to remove practical impediments to their full participation in the institution's educational program, provocative questions arise concerning the extent of the institution's legal obligation to provide such services. Courts have considered such questions most frequently in the context of auxiliary aids for students with disabilities—for example, interpreter services for hearing-impaired students. *University of Texas v. Camenisch*, 451 U.S. 390 (1981), is an early, and highly publicized, case regarding this type of problem. A deaf graduate student at the University of Texas alleged that the university had violated Section 504 of the Rehabilitation Act of 1973 by refusing to provide him with sign-language interpreter services, which he claimed were necessary to the completion of his master's degree. The university had denied the plaintiff's request for such services on the grounds that he did not meet the university's established criteria for financial assistance to graduate students and should therefore pay for his own interpreter. The district court had issued a preliminary injunction ordering the university to provide the interpreter services, irrespective of the student's ability to pay for them, and the U.S. Court of Appeals affirmed the district court (616 F.2d 127 (5th Cir. 1980)). The U.S.

Supreme Court vacated the judgment in favor of the plaintiff, however, holding that the issue concerning the propriety of the preliminary injunction had become moot because the plaintiff had graduated. Thus, the *Camenisch* case did not furnish definitive answers to questions concerning institutional responsibilities to provide interpreter services and other auxiliary aids to disabled students. A regulation promulgated under Section 504 (34 C.F.R. § 104.44(d)) however, does obligate institutions to provide such services, and this obligation apparently is not negated by the student's ability to pay. But the courts have not ruled definitively on whether this regulation, so interpreted, is consistent with the Section 504 statute. That is the issue raised but not answered in *Camenisch*.

A related issue concerns the obligations of federally funded state vocational rehabilitation (VR) agencies to provide auxiliary services for eligible college students. The plaintiff in *Camenisch* argued that the Section 504 regulation (now § 104.44(d)) does not place undue financial burdens on the universities because "a variety of outside funding sources," including the VR agencies, "are available to aid universities" in fulfilling their obligation. This line of argument suggests two further questions: whether the state VR agencies are legally obligated to provide auxiliary services to disabled college students and, if so, whether their obligation diminishes the obligation of universities to pay the costs (see J. Orleans & M. A. Smith, "Who Should Provide Interpreters Under Section 504 of the Rehabilitation Act?" 9 *J. Coll. & Univ. Law* 177 (1982-83)).

Two cases decided shortly after *Camenisch* provide answers to these questions. In *Schornstein v. New Jersey Division of Vocational Rehabilitation Services*, 519 F. Supp. 773 (D.N.J. 1981), *affirmed*, 688 F.2d 824 (3d Cir. 1982), the court held that Title I of the Rehabilitation Act of 1973 (29 U.S.C. § 100 *et seq.*) requires state VR agencies to provide eligible college students with interpreter services they require to meet their vocational goals. In *Jones v. Illinois Department of Rehabilitation Services*, 504 F. Supp. 1244 (N.D. Ill. 1981), *affirmed*, 689 F.2d 724 (7th Cir. 1982), the court agreed that state VR agencies have this legal obligation. But it also held that colleges have a similar obligation under Section 104.44(d) and asked whose responsibility is primary. The court concluded that the state VR agencies have primary financial responsibility, thus diminishing universities' responsibility in situations in which the student is eligible for state VR services. There is a catch, however, in the application of these cases to the *Camenisch* problem. As the district court in *Schornstein* noted, state VR agencies may consider the financial need of disabled individuals in determining the extent to which the agency will pay the costs of rehabilitation services (see 34 C.F.R. § 361.47). Thus, if a VR agency employs a financial need test and finds that a particular disabled student does not meet it, the primary obligation would again fall on the university, and the issue raised in *Camenisch* would again predominate.

Disputes have continued, however, over whether state vocational rehabilitation agencies must pay for support services, as well as tuition and books, for disabled students. New York courts resolved two cases in which student clients of the state Office of Vocational and Educational Services for Individuals with Disabilities demanded that the agency pay their tuition and fees for law school. In *Murphy v. Office of Vocational and Educational Services for Individuals with*

*Disabilities*, 705 N.E.2d 1180 (N.Y. 1998), and in *Tourville v. Office of Vocational and Educational Services for Individuals with Disabilities*, 663 N.Y.S.2d 368 (N.Y. App. Div. 1997), the courts rejected the claims of students that, despite the fact that the agency had paid for their undergraduate education, it was legally bound to pay for their law school expenses as well. Although *Tourville* was decided on procedural grounds (the plaintiff had not entered an individualized written rehabilitation program (IWRP) plan with the agency), the *Murphy* court decided that the plaintiff had been prepared for the career that she agreed to in her IWRP, and the agency was not required to pay for additional education that was not contemplated by her plan.

In *Murdy v. Bureau of Blindness and Visual Services*, 677 A.2d 1280 (Pa. Commw. Ct. 1996), a blind student (Murdy) had entered an agreement with the bureau under which it agreed to pay for eight semesters of undergraduate education and to provide support services, assuming that Murdy maintained satisfactory academic progress. Murdy needed a ninth semester to complete his undergraduate degree, and the bureau refused to pay his tuition or to pay for support services. The court upheld the bureau's determination because it found that the student was aware that the bureau would cover only eight semesters, and the reasons that the student needed the ninth semester did not fit the agency's criteria for extending support beyond the standard time limit.

These cases suggest that, although state vocational rehabilitation or similar agencies may have the primary responsibility to provide funding for their student clients, colleges and universities will be asked to provide additional support services, or will be asked to provide more extensive services when a student's eligibility for state-funded services expires. State vocational rehabilitation agencies are attempting to shift the funding responsibility for student support services to colleges and universities, a trend that, if it continues, may dissuade colleges from recruiting students with disabilities. (For a discussion of the state agency-higher education conflict, see Jeffrey Selingo, "States and Colleges Wrangle over Paying for Services to Disabled Students," *Chron. Higher Educ.*, June 19, 1998, A37. For a discussion of the effects of this dispute on students, see Debra Hamilton, "Deaf College Students and Sign Language Costs: Why Postsecondary Education Must Confront the VR System," 28 *Coll. L. Dig.* 9 (April 16, 1998), 230-39.)

Public colleges and universities that have established offices serving students with disabilities may now be required to provide additional services to disabled students in compliance with the National Voter Registration Act (NVRA), known as the "motor voter law" (42 U.S.C. § 1973gg-5(a)(2)(B)). This law requires states to designate as voter registration agencies "all offices in the State that provide State-funded programs primarily engaged in providing services to persons with disabilities" (42 U.S.C. § 1973gg-5(a)(2)(B)). In *National Coalition for Students with Disabilities Education and Legal Defense Fund v. Gilmore*, 152 F.3d 283 (4th Cir. 1998), the National Coalition sued the state of Virginia under the NVRA after a student with disabilities had been rebuffed in her attempt to register to vote at the Office of Disability Support Services at George Mason University, a public college in Virginia.

The primary dispute between the parties concerned the meaning of the word “office” in the NVRA. The coalition argued that any subdivision of a government department providing services to individuals with disabilities was obligated to comply with the NVRA. The state responded that the NVRA only required a state to provide voter registration assistance at agencies created by the state legislature and funded by appropriations specifically earmarked for services to individuals with disabilities. The appellate court ruled that the plain meaning of the statutory language, the type of “offices” suggested by the statute as additional sites for providing voter registration services (public libraries, fishing and hunting license bureaus, unemployment compensation offices), and with the dictionary definition of “office,” supported the coalition’s position. Since the trial court record demonstrated that the offices providing services to students with disabilities at Virginia Polytechnic Institute and the University of Virginia were within this broader definition of “office,” the appellate court held that they are subject to the NVRA. Since the record did not contain sufficient facts about the Office of Disability Support Services office at George Mason University, the court remanded this matter to the trial court to determine the sources, nature, and handling of funding for that office.

**8.7.4. Services for international students.** International students, as noncitizens, have various needs that are typically not concerns for students who are U.S. citizens. Postsecondary institutions with significant numbers of foreign students face policy issues concerning the nature and extent of the services they will provide for foreign students, and the structures and staffing through which they will provide these services (for example, a network of foreign student advisers or an international services office). Simultaneously, institutions will face legal issues concerning their legal obligations regarding foreign students enrolled in their academic programs. This section focuses primarily on the status of foreign students under federal immigration laws—a critical matter that institutions must consider both in determining how they will assist foreign students and prospective students with their immigration status, and in fulfilling the reporting requirements and other legal requirements imposed on them by the laws and regulations. Other matters concerning employment of foreign nationals, which is pertinent when institutions provide part-time employment for international students, is addressed in Section 4.6.5. Matters concerning admissions and in-state tuition, primarily of interest to state institutions, are addressed in Sections 8.2.4.6 and 8.3.6 above. Matters concerning federal taxation of foreign nationals, and the institution’s tax withholding obligations, are briefly addressed in Section 13.3.1.

The immigration status of international students has been of increasing concern to higher education as the proportion of applicants and students from foreign countries has grown. In 1980 there were approximately 312,000 nonresident alien students on American campuses. Over the decade this figure grew steadily, reaching 407,000 nonresident alien students in 1990 and 548,000 in 2000, at which time international students comprised approximately 3.5 percent of all students enrolled in U.S. colleges (*Digest of Education Statistics* (National

Center for Education Statistics, 2002), 483). This escalating growth slowed, however, after the federal government adopted new visa restrictions in the aftermath of the 9/11 tragedy, and by 2004 the numbers had declined more than 2 percent from the previous year (Burton Bollag, “Enrollment of Foreign Students Drops in U.S.,” *Chron. Higher Educ.*, November 19, 2004, A1).

Foreign nationals may qualify for admission to the United States as students under one of three categories: bona fide academic students (8 U.S.C. § 1101(a)(15)(F)), students who plan to study at a vocational or “nonacademic” institution (8 U.S.C. § 1101(a)(15)(M)), or “exchange visitors” (8 U.S.C. § 1101(a)(15)(J)). In each category the statute provides that the “alien spouse and minor children” of the student may also qualify for admission “if accompanying him or following to join him.”

The first of these three student categories is for aliens in the United States “temporarily and solely for the purpose of pursuing [a full] course of study . . . at an established college, university, seminary, conservatory, . . . or other academic institution or in a language training program” (8 U.S.C. § 1101(a)(15)(F)(i)). This category is called “F-1,” and the included students are “F-1’s.” There is also a more recently created “F-3” subcategory for citizens of Canada and Mexico who live near the U.S. border and wish to commute to a U.S. institution for part-time study. The second of the three student categories is for aliens in the United States “temporarily and solely for the purpose of pursuing a full course of study at an established vocational or other recognized nonacademic institution (other than a language training program)” (8 U.S.C. § 1101(a)(15)(M)(i)). This category is called “M-1,” and the included students are “M-1’s.” The spouses and children of students in these first two categories are called “F-2’s” and “M-2’s,” respectively. The third of the student categories, exchange visitor, is known as the “J” category. It includes, among others, any alien (and the family of any alien) “who is a bona fide student, scholar, [or] trainee, . . . who is coming temporarily to the United States as a participant in a program designated by the Director of the United States Information Agency, for the purpose of . . . studying, observing, conducting research . . . or receiving training” (8 U.S.C. § 1101(a)(15)(J)). Exchange visitors who will attend medical school, and the institutions they will attend, are subject to additional requirements under 8 U.S.C. § 1182(j).

Visa holders in other nonimmigrant categories not based on student status may also be able to attend higher educational institutions during their stay in the United States. G-4 visa holders are one such example (see Section 8.3.6.1 of this book); H-1 visa holders (temporary workers) are another. The rules for these visa holders who become students may be different from those described below with respect to students on F-1, M-1, and J-1 visas.

The Department of State’s role in regulating international students is shaped by its power to grant or deny visas to persons applying to enter the United States. Consular officials verify whether an applicant alien has met the requirements under one of the pertinent statutory categories and the corresponding requirements established by State Department regulations. The State Department’s regulations for academic student visas and nonacademic or vocational

student visas are in 22 C.F.R. § 41.61. Requirements for exchange visitor status are in 22 C.F.R. § 41.62.

The Department of Homeland Security's Bureau of Citizenship and Immigration Services (CIS) has authority to approve the schools that international students may attend and for which they may obtain visas from the State Department (8 C.F.R. § 214.3). The CIS is also responsible for ensuring that foreign students do not violate the conditions of their visas once they enter the United States. In particular, the CIS must determine that holders of F-1 and M-1 student visas are making satisfactory progress toward the degree or other academic objective they are pursuing. The regulations under which the CIS fulfills this responsibility are now located in 8 C.F.R. § 214.2(f) for academic students and 8 C.F.R. § 214.2(m) for vocational students.

The Department of Homeland Security's Bureau of Immigration and Custom Enforcement (ICE) operates the Student and Exchange Visitors Information System (SEVIS) that colleges must use to enter and update information on every student with a student or exchange visitor visa.<sup>54</sup> The SEVIS regulations, 8 C.F.R. Parts 103 and 214, require each college or university to have a "Designated School Official" (DSO) who is responsible for maintaining and updating the information on F-1, F-3, and M-1 students (8 C.F.R. § 214.3) and a "Responsible Officer" for J-1 (exchange visitor) students (8 C.F.R. § 214.2).

In order to obtain an F-1 visa, the student must demonstrate that he or she has an "unabandoned" residence outside the United States and will be entering the United States in order to enroll in a full-time program of study. The student must present a SEVIS Form I-20 issued in his or her own name by a school approved by the CIS for attendance by F-1 foreign students. The student must have documentary evidence of financial support in the amount indicated on the SEVIS Form I-20. And, for students seeking initial admission only, the student must attend the school specified in the student's visa.

The regulations specify the periods of time for which foreign students may be admitted into the country and the circumstances that will constitute a "full course of study." In addition, the regulations establish the ground rules for on-campus employment of foreign students, off-campus employment (much more restricted than on-campus employment), transfers to another school, temporary absences from the country, and extensions of stay beyond the period of initial admission.

Given the complexity of the immigration legislation and regulations, and the substantial consequences of noncompliance (including the real possibility that international students may be required to return to their home countries before they have completed their studies), there is no substitute for experienced, informed staff and for expert legal advice. Training for new staff and professional development programming for established staff are also critically important, as is information technology support sufficient to implement the SEVIS requirements and other reporting and record-keeping requirements.

---

<sup>54</sup>SEVIS is authorized by Section 641 of IIRIRA, 8 U.S.C. § 1372(a), as amended by Section 416 of the U.S.A. PATRIOT Act, 8 U.S.C. § 1227(a), and supplemented by the Enhanced Border Security and Visa Entry Reform Act, Section 501, 116 Stat. 543, 8 U.S.C. § 1701.

Helpful guidance on legal requirements is available on the Citizenship and Information Services Web site (<http://www.uscis.gov>) and the Immigration and Customs Enforcement Web site (<http://www.ice.gov>). In addition, the Association of International Educators maintains a Web site (<http://nafsa.org>) with much useful information, including the organization's *NAFSA Adviser's Manual of Federal Regulations Affecting Foreign Students and Scholars*, a comprehensive and frequently updated reference on federal requirements for students and visitors; and the NAFSA report on "Internationalizing the Campus 2003: Profiles of Success at Colleges and Universities," which will be helpful with broader strategies for international student services.

Due to SEVIS and the expanded reporting requirements for institutions, as well as the increased access of federal investigators to information concerning international students, their privacy has been a growing concern. While the Family Educational Rights and Privacy Act (FERPA) (Section 9.7.1 of this book) continues to protect the privacy of international students' student records, the federal government may now waive some FERPA requirements as needed to operate SEVIS (see Illegal Immigration Reform and Immigrant Responsibility Act (IIRIRA), § 641(c)(2), 8 U.S.C. § 1372 (c)(2)), and to fight terrorism (see USA PATRIOT Act, § 507, 20 U.S.C. § 1232g(j)). (For guidance on the interplay between FERPA and immigration statutes and regulations, see Laura W. Khatcheressian, "FERPA and the Immigration and Naturalization Service: A Guide for University Counsel on Federal Rules for Collecting, Maintaining and Releasing Information about Foreign Students," 29 *J. Coll. & Univ. Law* 457 (2003).)

**8.7.5. Child care services.** Child care is another context in which a court has addressed a claim for support services needed to overcome some practical impediment to education. In *De La Cruz v. Tormey*, 582 F.2d 45 (9th Cir. 1978), several low-income women brought suit challenging the lack of child care facilities on the campuses of the San Mateo Community College District. The plaintiffs alleged that the impact of the district's decision not to provide child care facilities fell overwhelmingly on women, effectively barring them from the benefits of higher education and thus denying them equal educational opportunity. The women claimed that the policy constituted sex discrimination in violation of the federal Constitution's equal protection clause and Title IX of the Education Amendments of 1972, 20 U.S.C. § 1681 *et seq.* The district court dismissed the case for failure to state any claim on which relief could be granted, and the plaintiffs appealed. The appellate court, reversing the district court, ruled that the complaint could not be summarily dismissed on the pleadings and remanded the case for a trial on the plaintiffs' allegations.

Although the district's policy did not rest on an explicit gender classification, the appellate court acknowledged that a facially neutral policy could still violate equal protection if it affected women disproportionately and was adopted or enforced with discriminatory intent. And while Title IX would similarly require proof of disproportionate impact, "a standard less stringent than intentional discrimination" may be appropriate when a court is

considering a claim under that statute. Regarding disproportionate impact, the court explained:

There can be little doubt that a discriminatory effect, as that term is properly understood and has been used by the Supreme Court, has been adequately alleged. The concrete human consequences flowing from the lack of sufficient child care facilities, very practical impediments to beneficial participation in the District's educational programs, are asserted to fall overwhelmingly upon women students and would-be students.

[T]he essence of the plaintiffs' grievance is that the absence of child care facilities renders the *included* benefits less valuable and less available to women; in other words, that the effect of the District's child care policy is to render the entire "package" of its programs of lesser worth to women than to men. . . . Were the object of their challenge simply a refusal to initiate or support a program or course of particular interest and value to women—women's studies, for instance—the case might be a much easier one [582 F.2d at 53, 56–57].

After remand, the parties in *De La Cruz* agreed to an out-of-court settlement that provided for the establishment of child care centers on the defendant's campuses. A trial was never held. It is therefore still not known whether the novel claim raised in *De La Cruz*, or similar claims regarding discrimination regarding child care services, would be recognized by the courts. It is now clear, however, that a plaintiff must allege and prove discriminatory intent in order to prevail on any such claim in court, not only under the equal protection clause, but also under Title IX (see Sections 13.5.7.2 & 13.5.9 of this book). In contrast, in the administrative enforcement process, when relying on the Title IX regulations, proof of discriminatory intent may not be necessary to make out a showing of noncompliance (see Sections 13.5.7.2 & 13.5.8 of this book).

As with other services such as health care (subsection 8.7.2 above) and campus security (Section 8.6 above), the legal risks associated with providing child care are considerable. (For a checklist of matters to address to minimize legal risk, and a process for determining whether to contract out or "self-operate" child care services, see Goldstein, Kempner, Rush, & Bookman, *Contract Management or Self-Operation: A Decision-Making Guide for Higher Education* (Council of Higher Education Management Associations, 1993), 49–53).

**8.7.6. Legal services.** In the context of student legal services, the case of *Student Government Ass'n. v. Board of Trustees of the University of Massachusetts*, 868 F.2d 473 (1st Cir. 1989), illustrates complex questions concerning the provision of student legal services. The university had terminated its existing campus legal services office (LSO), which represented students in criminal matters and in suits against the university. Students challenged the termination as a violation of their First Amendment free speech rights. In order for students' access to legal services to be protected under the First Amendment, the legal services office must be considered a "public forum" (see Section 9.5.2) that provides a "channel of communication" between students and other persons (868 F.2d at 476). Here the students sought to communicate with two groups through the LSO: persons with whom they have disagreements, and the attorneys

staffing the LSO. Since the court system, rather than the LSO itself, was the actual channel of communication with the first group, the only channel of communication the LSO provided was with the LSO attorneys in their official capacities. The court did not extend First Amendment public forum protection to this channel because the university was not *regulating* communication in the marketplace of ideas, but only determining whether to *subsidize* communication. Having only extended a subsidy to the LSO, the university could terminate this subsidy unless the plaintiffs could prove that the university was doing so for a reason that itself violated the First Amendment—for instance, to penalize students who had brought suits against the university, or to suppress the assertion (in legal proceedings) of ideas the university considered dangerous or offensive. The court determined that the termination was “nonselective,” applying to all litigation rather than only to litigation that reflected a “particular viewpoint,” and thus did not serve to penalize individual students or suppress particular ideas. The termination therefore did not violate the free speech clause of the First Amendment. (See Patricia Shearer, Jon A. Ward, & Mark A. Wattley, Comment, “*Student Government Association v. Board of Trustees of the University of Massachusetts: Forum and Subsidy Analysis Applied to University Funding Decisions*,” 17 *J. Coll. & Univ. Law* 65 (1990).)

Since the appellate court’s decision in the *University of Massachusetts* case, the U.S. Supreme Court has decided two cases that bear importantly on issues concerning student legal services at public institutions: *Rosenberger v. Rector and Visitors of University of Virginia*, 515 U.S. 819 (1995) (discussed in Sections 10.1.5 & 10.3.2 of this book), and more particularly, *Legal Services Corporation v. Velazquez*, 531 U.S. 533 (2001). Both cases support the application of First Amendment viewpoint discrimination principles to cases like the *University of Massachusetts* case. *Velazquez* specifically establishes that “advice from the attorney to the client and the advocacy by the attorney to the courts” is private speech protected by the First Amendment. *Velazquez* also illustrates how viewpoint discrimination principles would apply to cases in which a public institution has limited the types of problems or cases covered by a student legal services program, rather than terminating an entire program.

## Selected Annotated Bibliography

### *General*

“Joint Statement on Rights and Freedoms for Students,” 52 *AAUP Bulletin* 365 (1967).

A set of model guidelines for implementing students’ rights on campus, drafted by the Association of American Colleges, the American Association of University Professors, the National Student Association, the National Association of Student Personnel Administrators, and the National Association of Women Deans and Counselors, and endorsed by a number of other professional organizations. (See discussion of the Joint Statement by William Van Alstyne in Grace W. Holmes (ed.), *Student Protest and the Law* (Institute of Continuing Legal Education, 1969), 181–86.) In the early 1990s, a larger group of associations affirmed the Joint Statement and updated it with a set of interpretive notes (see “Report: Joint Statement on Rights and Freedoms of Students,” *Academe* (July–August 1993), 47).

Young, D. Parker, & Gehring, Donald D. *The College Student and the Courts* (College Administration Publications, 1973, and periodic supp.). Briefs and supporting comments on court cases concerning students, with new cases added in quarterly supplements.

### **Sec. 8.1 (The Legal Status of Students)**

Beh, Hazel G. "Downsizing Higher Education and Derailing Student Educational Objectives: When Should Student Claims for Program Closures Succeed?" 33 *Ga. L. Rev.* 155 (1998). Discusses several theories of the student-institution relationship in the context of program and institution closure. Suggests that the implied-in-law contract theory is the most likely to balance the legitimate interests of both students and the institution when dealing with program closure.

Cherry, Robert L., Jr. "The College Catalog as a Contract," 21 *J. Law & Educ.* 1 (1992). A review of litigation regarding the contractual status of college catalogs. Discusses disclaimers, reservation of rights clauses, and other significant drafting issues.

LaTourette, Audrey Wolfson, & King, Robert D. "Judicial Intervention in the Student-University Relationship: Due Process and Contract Theories," 65 *U. Detroit L. Rev.* 199 (1988). Reviews constitutional and contract law disputes between students and colleges. Authors conclude that heightened judicial scrutiny of institutional due process has strengthened students' procedural rights, but that courts remain deferential to substantive academic judgments. Includes a comprehensive analysis of due process in academic and disciplinary decisions, as well as an overview of the application of contract law to student-institution relationships.

Meleaeer, K. B., & Beckham, Joseph C. *Collegiate Consumerism: Contract Law and the Student-University Relationship* (College Administration Publications, 2003). Discusses a variety of contractual issues related to admission, grading, academic dismissal, and educational malpractice.

Olswang, Steven G., Cole, Elsa Kircher, & Wilson, James B. "Program Elimination, Financial Emergency, and Student Rights," 9 *J. Coll. & Univ. Law* 163 (1982–83). Analyzes one particular aspect of the contract relationship between institution and student: the obligations the institution may have to the student when the institution has slated an academic program for elimination.

See also, regarding sexual harassment, the Cole entry, the Cole & Hustoles entry, the Dziech & Hawkins entry, and the Sandler & Shoop entry in the Selected Annotated Bibliography for Chapter 5, Section 5.3; and the Fitzgerald entry and the Paludi entry in the Selected Annotated Bibliography for Chapter 6, Section 6.4.

### **Sec. 8.2 (Admissions)**

Bowen, William, Kurzweil, Martin, & Tobin, Eugene. *Equity and Excellence in American Higher Education* (University of Virginia, 2005). Chapter 6, "Race in American Higher Education: The Future of Affirmative Action," addresses the role and effects of race-conscious admissions programs, the *Grutter* case and its aftermath, and suggestions for the future. Chapter 7, "Broadening the Quest for Equity at the Institutional Level," compares race preferences in admissions with other preferences now in use (for example, preferences for legacies) and advocates use in some circumstances of preferences based on low socioeconomic status.

- Coleman, Arthur & Palmer, Scott. *Diversity in Higher Education: A Strategic Planning and Policy Manual Regarding Federal Law in Admission, Financial Aid, and Outreach* (2d ed., College Entrance Examination Board, 2004). This report, updated after the Supreme Court's decisions in *Grutter* and *Gratz*, distills the basic principles from these cases and applies them to race-conscious decision making in admissions, financial aid, and outreach programs. Also provides guidelines for institutional self-assessments in these areas and provides suggestions on the consideration of race-neutral alternatives.
- Hurley, Brigid. Note, "Accommodating Learning Disabled Students in Higher Education: Schools' Legal Obligations Under Section 504 of the Rehabilitation Act," 32 *B.C. L. Rev.* 1051 (1991). Reviews statutory and regulatory provisions of Section 504 of the Rehabilitation Act of 1973, as well as judicial interpretations of Section 504 for higher education. Examines the reasonable accommodation requirement, the feasibility of the "undue financial burden" defense on behalf of the college, and the practice of "flagging" disabled students in institutional records.
- Johnson, Alex M., Jr. "Bid Whist, Tonk and *United States v. Fordice*: Why Integrationism Fails African-Americans Again," 81 *Cal. L. Rev.* 1401 (1993). Criticizes the Supreme Court's *Fordice* opinion regarding the present effects of former *de jure* segregation in public colleges and universities, particularly the potential effect of the opinion on traditionally black colleges.
- Justiz, Manuel J., Wilson, Reginald, & Bjork, Lars G. *Minorities in Higher Education* (ACE-Oryx, 1994). Includes nineteen articles written by higher education leaders, which discuss how minority enrollment can be increased, financial aid policies that encourage minority enrollment, the effect of new technology on minority students, achievement of minority students, racial/ethnic implications of assessing students, minorities in graduate education, and faculty diversity.
- Leonard, James. "Judicial Deference to Academic Standards Under Section 504 of the Rehabilitation Act and Titles II and III of the Americans With Disabilities Act," 75 *Neb. L. Rev.* 27 (1996). Provides an overview of Section 504 of the Rehabilitation Act and Titles II and III of the ADA, analyzing judicial interpretations of the "otherwise qualified" requirement in the laws. Summarizes constitutional and common law principles used by courts when asked to review academic judgments, and examines the standards used by lower courts to evaluate student requests for program modifications. Concludes that deference to academic judgment is warranted.
- Loewe, Eugene Y. (ed). *Promise and Dilemma: Perspectives on Racial Diversity and Higher Education* (Princeton University Press, 1999). Contains essays concerning minority student achievement and affirmative action policy by Randall Kennedy, Richard J. Light, L. Scott Miller, Mamphela Ramphele, Neil J. Smelser, Claude M. Steele, Chang-Lin Tien, and Philip Uri Treisman. The Steele essay on "stereotype threat" discusses research on the causes of the "test gap" between minority and nonminority students.
- Loewy, Arnold. "Taking *Bakke* Seriously: Distinguishing Diversity from Affirmative Action in the Law School Admissions Process," 77 *N. Carolina L. Rev.* 1479 (1999). Argues that diversity and affirmative action are different concepts, and that diversity is broader than the racial or ethnic categories used for many campus affirmative action programs. Argues that decisions based on diversity rationales are sounder than those based upon affirmative action rationales.
- Meers, Elizabeth, & Thro, William. *Race-Conscious Admissions and Financial Aid Programs* (National Association of College and University Attorneys, 2004). Reviews

the U.S. Supreme Court's decisions in the *Grutter* and *Gratz* affirmative action cases, and analyzes the validity of race-conscious admissions and financial aid policies in light of principles from these two cases and other legal sources. Discusses enforcement of the limits on affirmative action through private lawsuits and through the Office of Civil Rights, U.S. Department of Education. Also contains guidelines and suggestions for institutions.

- Mumper, Michael. "Higher Education in the Twenty-First Century: The Future of College Access: The Declining Role of Public Higher Education in Promoting Equal Opportunity," 585 *Annals Am. Acad. Pol. & Soc. Sci.* 97 (2003). Argues that higher education opportunity for low-income individuals has declined because of declining state support for higher education, increases in tuition, and federal student aid policies. Asserts that these trends are undermining the role of public higher education in promoting equal opportunity.
- O'Neil, Robert M. "Preferential Admissions Revisited: Some Reflections on *DeFunis* and *Bakke*," 14 *J. Coll. & Univ. Law* 423 (1987). Presents an analysis of the state of the law after *DeFunis* and *Bakke*, and the first round of subsequent lower court cases, and includes perceptive reflections on the current and future prospects of race-preferential admissions policies. See also *Discriminating Against Discrimination: Preferential Admissions and the DeFunis Case* (Indiana University Press, 1976), a detailed examination of the *DeFunis* case and the continuing issues emerging from it. Author argues in favor of special admissions programs for minorities, considering and rejecting various nonracial alternatives in the process.
- Sindler, Allan P. *Bakke, DeFunis, and Minority Admissions: The Quest for Equal Opportunity* (Longman, 1978). A thought-provoking analysis of the various issues raised by affirmative admissions policies. Traces the issues and their implications through the U.S. Supreme Court's pronouncement in *Bakke*.
- Stokes, Jerome W. D., & Groves, Allen W. "Rescinding Offers of Admission When Prior Criminality Is Revealed," 105 *Educ. Law Rptr.* 855 (February 22, 1996). Reviews two high-profile cases in which institutions withdrew admission offers after applicants' prior criminal behavior was revealed. Discusses theories of potential liability if a fellow student is injured by a student who has committed violence in the past.
- Sullivan, Kathleen M. "After Affirmative Action," 59 *Ohio St. L.J.* 1039 (1998). Examines the issue of class-based, rather than race-based, affirmative action and discusses how legal challenges to such programs might be defended. Concludes that race-neutral proxies for increasing racial diversity are constitutional.
- "Symposium: *Regents of the University of California v. Bakke*," 67 *Cal. L. Rev.* 1 (1979). Contains articles, comments, and a book review on issues relating to *Bakke*. Lead articles, all by noted legal scholars, are Derrick A. Bell, Jr., "*Bakke*, Minority Admissions, and the Usual Price of Racial Remedies"; Vincent Blasi, "*Bakke* as Precedent: Does Mr. Justice Powell Have a Theory?"; Robert G. Dixon, Jr., "*Bakke*: A Constitutional Analysis"; R. Kent Greenawalt, "The Unresolved Problems of Reverse Discrimination"; Louis Henkin, "What of a Right to Practice a Profession?"; Robert M. O'Neil, "*Bakke* in Balance: Some Preliminary Thoughts"; and Richard A. Posner, "The *Bakke* Case and the Future of Affirmative Action."
- Tribe, Lawrence. "Perspectives on *Bakke*: Equal Protection, Procedural Fairness, or Structured Justice?" 92 *Harvard L. Rev.* 864 (1978). A theoretical discussion of *Bakke's* ramifications. Draws on broad themes of constitutional law of particular interest to lawyers.

Williams, Wendy M. (ed.). "Special Theme: Ranking Ourselves: Perspectives on Intelligence Testing, Affirmative Action, and Educational Policy," 6 *Psychol. Pub. Pol'y. & L.* 5 (2000). A special journal issue devoted to the relationship between intelligence testing and college admissions. Includes twenty-one articles from legal, psychometric, historical, economic, and sociological perspectives.

### **Sec. 8.3 (Financial Aid)**

Butler, Blaine B., & Rigney, David P. *Managing Federal Student Aid Programs* (National Association of College and University Attorneys, 1993). An overview of the federal student aid programs. Discusses institutional eligibility for participation in these programs, federal oversight of institutional participation, and the audit process. A primer for attorneys unfamiliar with federal student aid programs and their complexity.

Douvanis, Gus. "Is There a Future for Race-Based Scholarships?" *Coll. Board Rev.*, no. 186 (Fall 1998), 18–23, 29. Recommends that institutions review their use of racial preferences in awarding financial aid. Reviews federal and state legislation, regulations, and litigation. Suggests ways that institutions may be able to justify continued use of race-based financial aid.

Fossey, Richard, & Bateman, Mark (eds.). *Condemning Students to Debt* (Teachers College Press, 1998). Examines the shift in federal policy from student grants to student loans, and the implications for lower- and middle-class students and their families. Warns that women and minorities are disadvantaged by this shift, and discusses the risk involved in accumulating large student loan debts.

Hoke, Julia R. *The Campus as Creditor: A Bankruptcy Primer for Administrators and Counsel* (National Association of College and University Attorneys, 2005). Reviews bankruptcies filed under Chapter 7 and Chapter 13, provides recommendations for dealing with student loan debtors who have filed bankruptcy, and provides guidance on the matter of withholding transcripts of students or former students who have defaulted on loans.

Jennings, Barbara M., & Olivas, Michael A. *Prepaying and Saving for College: Opportunities and Issues* (The College Board, 2000). Discusses the history of and later developments in state prepaid tuition plans. Raises issues of enhancing student choice, the implications of a financial downturn, and suggests the need for closer evaluation of the outcomes of these programs.

King, Jacqueline E. (ed.). *Financing a College Education: How It Works, How It's Changing* (ACE-Oryx, 1999). Includes essays on how families pay for college, how the federal needs analysis system works, the implications of student loan borrowing for undergraduates, student aid after tax reform, and the debate between merit- and need-based aid policies, among other topics.

McDaniel, Diane L., & Tanaka, Paul. *The Permissibility of Withholding Transcripts Under the Bankruptcy Law* (2d ed., National Association of College and University Attorneys, 1995). Discusses provisions of the bankruptcy law relevant to an institution's right to withhold a transcript during or following a bankruptcy action.

National Association of College and University Business Officers. *Student Loan Programs: Management and Collection* (2d ed., NACUBO, 1997). Discusses regulatory requirements regarding student loan programs, default standards,

requirements for audits, and student loan consolidation issues. Includes sample forms, federal regulations, and a glossary of terms.

- Olivas, Michael A. “*Plyler v. Doe, Toll v. Moreno, and Postsecondary Admissions: Undocumented Adults and ‘Enduring Disability,’*” 15 *J. Coll. & Univ. Law* 19 (1986). Examines the impact of two important U.S. Supreme Court cases on the rights of undocumented aliens to attend and receive resident status at public higher education institutions. Proposes that the Court’s treatment of undocumented alien elementary school students in Texas (in *Plyler v. Doe*) may be extended to other jurisdictions as well as to the higher education arena. Includes a table, with accompanying explanatory text, of the regulatory or policy-making entities that formulate higher education residency requirements in each of the states.
- Olivas, Michael A. “Administering Intentions: Law, Theory, and Practice of Postsecondary Residency Requirements,” 59 *J. Higher Educ.* 263 (1988). Traces the legal basis for resident and nonresident tuition charges through examination of the statutes, regulations, and administrative practices governing the fifty state systems and the District of Columbia. Explores seven types of alternative models for making residency determinations and sets out suggestions for reform. Includes four helpful tables organizing and summarizing data.
- Roots, Roger. “The Student Loan Debt Crisis: A Lesson in Unintended Consequences,” 29 *Sw. U. L. Rev.* 501 (2000). Analyzes federal student aid policy and describes its effect on student indebtedness. Argues that the availability of federal student loans have contributed to increases in college tuition.
- St. John, Edward P. *Refinancing the College Dream: Access, Equal Opportunity, and Justice for Taxpayers* (Johns Hopkins University Press, 2003). Argues that changes in federal student aid policy have reduced higher education opportunity for low-income students, and that moderate changes to these policies could result in enhanced access without unduly burdening taxpayers.
- Somers, Patricia, & Hollis, James M. “Student Loan Discharge Through Bankruptcy,” 4 *Am. Bankr. Inst. L. Rev.* 457 (1996). Reviews the major issues raised in bankruptcy cases involving law and their implications for the discharge of student loans. Does not include changes to federal student loan programs resulting from the Higher Education Amendments of 1998.
- Wellmann, Jane. *Accounting for State Student Aid: How State Policy and Student Aid Connect* (Institute for Higher Education Policy, December 2002). Available at <http://www.ihep.org>. Reviews student aid policy in eleven states; provides profiles of individual states compiled from published and unpublished documents and interviews with state-level policy makers.
- Williams, Rosemary E. *Bankruptcy Practice Handbook* (2d ed., Clark, Boardman, Callaghan, 1995). “Takes you through a sample case from initial contact and interview through conclusion under each chapter of the Code.” Written for attorneys on both sides of a bankruptcy case. Includes forms, sample letters, and checklists as well as discussion of the roles of trustees, examiners, and attorneys representing creditors.
- Woodcock, Raymond L. “Burden of Proof, Undue Hardships, and Other Arguments for the Student Debtor Under 11 U.S.C. § 523(a)(8)(B),” 24 *J. Coll. & Univ. Law* 377 (1998). Discusses theories that favor student debtors seeking discharge of federal student loans, reviews litigation in which courts have accepted or rejected these theories, and suggests approaches for courts and financial institutions that would support the social policy undergirding the federal student loan program.
- See also Meers & Thro entry in Selected Annotated Bibliography for Section 8.2 above.

### ***Sec. 8.4 (Student Housing)***

- Christman, Dana E. "Change and Continuity: A Historical Perspective of Campus Search and Seizure Issues," 2002 *BYU Educ. & L.J.* 141 (2002). Discusses constitutional issues related to residence hall searches, with particular emphasis on public institutions of higher education.
- Delgado, Richard. "College Searches and Seizures: Students, Privacy and the Fourth Amendment," 26 *Hastings L.J.* 57 (1975). Discusses the legal issues involved in dormitory searches and analyzes the validity of the various legal theories used to justify such searches.
- Gehring, Donald D. (ed.). *Administering College and University Housing: A Legal Perspective* (rev. ed., College Administration Publications, 1992). An overview of legal issues that can arise in the administration of campus housing. Written in layperson's language and directed to all staff involved with campus housing. Contains chapters by Gehring, Pavela, and others, covering the application of constitutional law, statutory and regulatory law, contract law, and tort law to the residence hall setting, and provides suggestions for legal planning. Includes an appendix with a "Checklist of Housing Legal Issues" for use in legal audits of housing programs.

### ***Sec. 8.5 (Campus Computer Networks)***

- EDUCAUSE/Cornell Institute for Computer Policy and Law. Web site, available at <http://www.educause.edu/icpl/>, provides a collection of computer use policies from institutions throughout the country, information on computer policy development, and links to other sites on topics such as computer privacy, First Amendment issues, and service providers' liability. To access these materials, click on "library resources."
- Kaplin, William, & Pavela, Gary. "Sexual Harassment and Cyberspace Speech on Campus," available at [http://law.edu/Fac\\_Staff/KaplinW/rick.cfm](http://law.edu/Fac_Staff/KaplinW/rick.cfm), or at <http://www.collegepubs.com/ref/sfxcsestdyricksrevenge.shtml>. Contains a case study ("Rick's Revenge") on cyberspace sexual harassment effectuated by campus Web sites and e-mail, along with commentary on the case study and on recent cases delineating Title IX's applicability to sexual harassment. A fuller version of the case study, including a mediation exercise complete with role instructions, is available from the Center for Dispute Resolution at Willamette University College of Law.
- Office of Information Technology, University of Maryland. "NEThics," available at <http://www.inform.umd.edu/CompRes/NEThics/>. Collects information—including suggestions, resources, and links to other sites—on law, policy, and ethics issues regarding computer use on campus.
- O'Neil, Robert M. "The Internet in the College Community," 17 *N. Ill. U. L. Rev.* 191 (1997). Using three real-life case studies as a base, this article explores the application of First Amendment principles to cyberspace and, especially, to campus problems regarding the Internet. Takes the position that, in general, "[s]peech in cyberspace should be as free from government restraint as is the printed or spoken word."
- Symposium, "Emerging Media Technology and the First Amendment," 104 *Yale L.J.* 1613 (1994), provides various perspectives on the role of freedom of expression in the technological revolution. Contains a foreword by Owen Fiss, "In Search of a New Paradigm," followed by seven commentaries: (1) Jerry Berman & Daniel J.

Weitzner, “Abundance and User Control: Renewing the Democratic Heart of the First Amendment in the Age of Interactive Media”; (2) Anne Wells Branscomb, “Anonymity, Autonomy, and Accountability: Challenges to the First Amendment in Cyberspace”; (3) M. Ethan Katsh, “Rights, Camera, Action: Cyberspatial Settings and the First Amendment”; (4) Thomas G. Krattenmaker & L. A. Powe, Jr., “Converging First Amendment Principles for Converging Communications Media”; (5) Lawrence Lessig, “The Path of Cyberlaw”; (6) Cass R. Sunstein, “The First Amendment in Cyberspace”; and (7) Eugene Volokh, “Cheap Speech and What It Will Do.”

Sermersheim, Michael. *Computer Access: Selected Legal Issues Affecting Colleges and Universities* (2d ed., National Association of College and University Attorneys, 2003). A monograph addressing issues regarding students’ and faculty members’ access to computers and the Internet. Provides suggestions and guidelines for institutions developing or revising computer access policies. Also includes discussion of the USA PATRIOT Act’s impact on computer access.

### Sec. 8.6 (Campus Security)

Burling, Philip. *Crime on Campus: Analyzing and Managing the Increasing Risk of Institutional Liability* (2d ed., National Association of College and University Attorneys, 2003). Discusses theories of legal liability when crime occurs on campus, discusses legislation requiring colleges to report crime statistics and other information, and suggests steps that institutions can take to reduce the impact of crime on campus. Discusses event management, campus disciplinary procedures that involve violations of both the student code of conduct and criminal law.

Fisher, Bonnie S., Hartman, Jennifer L., Cullen, Francis T., & Turner, Michael G. “Making Campuses Safer for Students: The Clery Act as a Symbolic Legal Reform,” 32 *Stetson L. Rev.* 61 (2002). Reviews the history of the Clery Act and assesses whether it has met its goal of providing accurate information on campus crime. Concludes that the achievements of the Clery Act have been more symbolic than substantive.

Giles, Molly. Comment, “Obscuring the Issue: The inappropriate Application of *in loco parentis* to the Campus Crime Victim Duty Question,” 39 *Wayne L. Rev.* 1335 (1993). Reviews the propensity for crime victims and/or their parents to attempt to hold the university liable for the acts of third parties or the negligence of the students themselves.

Gregory, Dennis E., & Janosik, Steven M. “The Clery Act: How Effective Is It? Perceptions from the Field—The Current State of the Research and Recommendations for Improvement,” 32 *Stetson L. Rev.* 7 (2002). Reviews media and scholarly commentary on the effectiveness of the Clery Act and its contribution to reducing crime on campus. Provides recommendations for increasing safety on campuses.

Jacobson, Jeffrey S. *Campus Police Authority: Understanding Your Officers’ Territorial Jurisdiction* (National Association of College and University Attorneys, 2006). Discusses variations in state laws regarding the authority of campus police to effect off-campus arrests or other police actions. Provides suggestions for expanding campus officers’ territorial authority and for minimizing institutional liability for officers’ actions. Includes court cases and links to state statutes.

National Association of College and University Business Officers. *Campus Crime Reporting: A Guide to Clery Act Compliance* (ACE-NACUBO Advisory Report

2002-02). Reviews requirements of the federal laws requiring that campus crime statistics be reported to all enrolled students and current employees, as well as to the U.S. Department of Education. Includes definitions of terms. Forms, helpful Web pages, and other resources are included.

Smith, Michael Clay. *Crime and Campus Police: A Handbook for Campus Police Officers and Administrators* (College Administration Publications, 1989). Discusses risk management, the proper procedure for searches and seizures and arrests on campus, campus judicial procedures, frequent problems encountered by campus police and administrators, white-collar crime on campus, and alcohol issues.

Smith, Michael Clay, & Fossey, Richard. *Crime on Campus: Legal Issues and Campus Administration* (ACE-Oryx, 1995). Includes discussion of college liability issues, response to crimes, buildings and crime, and strategies for coping with alcohol abuse on campus. Provides suggestions for complying with the Student Right-to-Know and Campus Security Acts.

### ***Sec. 8.7 (Other Support Services)***

National Association of College and University Business Officers. *Child Care Services: A Guide for Colleges and Universities* (NACUBO, 1993). A monograph providing advice to administrators on establishing and operating child care programs for the benefit of students and others. Includes discussion of licensing and accreditation.

See Hurley entry in Selected Annotated Bibliography for Section 8.2.

## **VOLUME I**

### **PART ONE PERSPECTIVES AND FOUNDATIONS 1**

<b>1 Overview of Higher Education Law</b>	<b>3</b>
1.1 How Far the Law Reaches and How Loud It Speaks	3
1.2 Evolution of Higher Education Law	9
1.3 The Governance of Higher Education	22
1.3.1 <i>Basic concepts and distinctions</i>	22
1.3.2 <i>Internal governance</i>	24
1.3.3 <i>External governance</i>	25
1.4 Sources of Higher Education Law	29
1.4.1 <i>Overview</i>	29
1.4.2 <i>External sources of law</i>	30
1.4.2.1 <i>Federal and state constitutions</i>	30
1.4.2.2 <i>Statutes</i>	30
1.4.2.3 <i>Administrative rules and regulations</i>	31
1.4.2.4 <i>State common law</i>	32
1.4.2.5 <i>Foreign and international law</i>	32

1.4.3	<i>Internal sources of law</i>	35
1.4.3.1	<i>Institutional rules and regulations</i>	35
1.4.3.2	<i>Institutional contracts</i>	35
1.4.3.3	<i>Academic custom and usage</i>	35
1.4.4	<i>The role of case law</i>	37
1.5	<b>The Public-Private Dichotomy</b>	40
1.5.1	<i>Overview</i>	40
1.5.2	<i>The state action doctrine</i>	42
1.5.3	<i>Other bases for legal rights in private institutions</i>	54
1.6	<b>Religion and the Public-Private Dichotomy</b>	57
1.6.1	<i>Overview</i>	57
1.6.2	<i>Religious autonomy rights of religious institutions and their personnel</i>	59
1.6.3	<i>Governmental support for religious institutions</i>	61
1.6.4	<i>Religious autonomy rights of individuals in public postsecondary institutions</i>	71
1.7	<b>The Relationship Between Law and Policy</b>	75
	<b>Selected Annotated Bibliography</b>	81
<b>2</b>	<b>Legal Planning and Dispute Resolution</b>	<b>90</b>
2.1	<b>Legal Liability</b>	90
2.1.1	<i>Overview</i>	90
2.1.2	<i>Types of liability</i>	91
2.1.3	<i>Agency law</i>	91
2.1.4	<i>Enforcement mechanisms</i>	92
2.1.5	<i>Remedies for legal violations</i>	93
2.1.6	<i>Avoiding legal liability</i>	93
2.2	<b>Litigation in the Courts</b>	93
2.2.1	<i>Overview</i>	93
2.2.2	<i>Access to court</i>	95
2.2.2.1	<i>Jurisdiction</i>	95
2.2.2.2	<i>Other technical doctrines</i>	100
2.2.2.3	<i>Statutes of limitations</i>	102
2.2.2.4	<i>Exhaustion of remedies</i>	103
2.2.3	<i>Pretrial and trial issues</i>	105
2.2.3.1	<i>Class action suits</i>	105
2.2.3.2	<i>Pretrial discovery</i>	107
2.2.3.3	<i>Issues regarding evidence</i>	108
2.2.3.4	<i>Summary judgments and motions to dismiss</i>	113
2.2.3.5	<i>Standards of judicial review and burdens of proof</i>	114
2.2.3.6	<i>Final judgments</i>	118
2.2.4	<i>Judicial remedies</i>	121
2.2.4.1	<i>Overview</i>	121
2.2.4.2	<i>Money damages</i>	121
2.2.4.3	<i>Injunctions</i>	122
2.2.4.4	<i>Attorney's fees</i>	123
2.2.4.5	<i>Contempt of court</i>	125
2.2.5	<i>Judicial (academic) deference</i>	126
2.2.6	<i>Managing litigation and the threat of litigation</i>	132
2.3	<b>Alternative Dispute Resolution</b>	134
2.3.1	<i>Overview</i>	134
2.3.2	<i>Types of ADR</i>	135
2.3.3	<i>Applications to colleges and universities</i>	138

2.4	Legal Services	140
2.4.1	<i>Organizational arrangements for delivery of legal services</i>	140
2.4.2	<i>Treatment law and preventive law</i>	144
2.4.3	<i>Ethical issues</i>	150
2.5	Institutional Management of Liability Risk	150
2.5.1	<i>Overview and suggestions</i>	150
2.5.2	<i>Risk avoidance and risk control</i>	151
2.5.3	<i>Risk transfer</i>	152
2.5.3.1	<i>Liability insurance</i>	152
2.5.3.2	<i>Hold-harmless and indemnification agreements</i>	153
2.5.3.3	<i>Releases and waivers</i>	156
2.5.4	<i>Risk retention</i>	157
2.5.5	<i>Legal limits on authority to transfer risk</i>	157
	Selected Annotated Bibliography	160

## **PART TWO THE COLLEGE AND ITS GOVERNING BOARD, PERSONNEL, AND AGENTS 165**

<b>3</b>	<b>The College and Its Trustees and Officers</b>	<b>167</b>
3.1	The Question of Authority	167
3.2	Sources and Scope of Authority and Liability	171
3.2.1	<i>Trustees</i>	171
3.2.1.1	<i>Overview</i>	171
3.2.1.2	<i>Trustees of public colleges</i>	172
3.2.1.3	<i>Trustees of private colleges</i>	174
3.2.2	<i>Other officers and administrators</i>	181
3.2.3	<i>Campus organizations</i>	187
3.2.4	<i>Trustee liability</i>	188
3.3	Institutional Tort Liability	189
3.3.1	<i>Overview</i>	189
3.3.2	<i>Negligence</i>	195
3.3.2.1	<i>Premises liability</i>	198
3.3.2.2	<i>Liability for injuries related to on-campus instruction</i>	201
3.3.2.3	<i>Liability for injuries in off-campus courses</i>	203
3.3.2.4	<i>Liability for cocurricular and social activities</i>	206
3.3.2.5	<i>Student suicide</i>	210
3.3.2.6	<i>Liability for injuries related to outreach programs</i>	212
3.3.3	<i>Educational malpractice</i>	213
3.3.4	<i>Defamation</i>	217
3.3.5	<i>Other sources of tort liability</i>	222
3.4	Institutional Contract Liability	225
3.5	Institutional Liability for Violating Federal Constitutional Rights (Section 1983 Liability)	230

3.6	Captive and Affiliated Organizations	241
3.6.1	Overview	241

3.6.3	Taxation issues	244
3.6.4	Application of regulatory laws	246
3.6.5	“State action” issues	248
3.6.6	Liability issues	249
	Selected Annotated Bibliography	250
<b>4</b>	<b>The College and Its Employees</b>	<b>255</b>
4.1	Overview of Employment Relationships	255
4.2	Defining the Employment Relationship	258
4.2.1	Employees versus independent contractors	258
4.2.2	Where is the workplace?	261
4.3	Employment Contracts	261
4.3.1	Defining the contract	261
4.3.2	The at-will doctrine	262
4.3.3	Sources, scope, and terms of the contract	263
4.3.3.1	Sources of the contract	263
4.3.3.2	Contract interpretation	263
4.3.3.3	Employee handbooks as contracts	265
4.3.3.4	Other contract claims	266
4.3.3.5	Contract rescission	267
4.3.3.6	Drug testing and medical screening	267
4.3.3.7	Executive contracts	270
4.3.4	Amendment of the contract	271
4.3.5	Waiver of contract rights	272
4.3.6	Legal planning with contracts	273
4.4	Civil Service Rules	275
4.5	Collective Bargaining	277
4.5.1	Overview	277
4.5.2	The public-private dichotomy in collective bargaining	278
4.5.2.1	Bargaining at private colleges	279
4.5.2.2	Collective bargaining in religiously affiliated institutions	282
4.5.2.3	Bargaining at public colleges	286
4.5.3	Organization, recognition, and certification	287
4.5.4	Bargainable subjects	293
4.5.5	Collective bargaining and antidiscrimination laws	298
4.5.6	Students and collective bargaining	301
4.6	Other Employee Protections	303
4.6.1	Occupational Safety and Health Act	303
4.6.2	Fair Labor Standards Act	305
4.6.3	Employee Retirement Income Security Act	311
4.6.4	Family and Medical Leave Act	313
4.6.5	Immigration laws	317
4.6.6	Workers’ compensation laws	320
4.6.7	Unemployment compensation laws	325
4.6.8	Whistleblower protections	327
4.6.9	Uniformed Services Employment and Reemployment Rights Act	330

4.7	Personal Liability of Employees	332
4.7.1	<i>Overview</i>	332
4.7.2	<i>Tort liability</i>	332
4.7.2.1	<i>Overview</i>	332
4.7.2.2	<i>Negligence</i>	334
4.7.2.3	<i>Defamation</i>	337
4.7.2.4	<i>Other tort claims</i>	342
4.7.3	<i>Contract liability</i>	344
4.7.4	<i>Constitutional liability (personal liability under Section 1983)</i>	346
4.7.4.1	<i>Qualified immunity</i>	346
4.7.4.2	<i>Issues on the merits: State-created dangers</i>	353
4.8	Performance Management Issues	357
4.8.1	<i>Pre-hire issues</i>	357
4.8.2	<i>Evaluation</i>	359
4.8.3	<i>Discipline</i>	360
4.8.4	<i>Promotion</i>	362
4.8.5	<i>Termination</i>	363
	Selected Annotated Bibliography	365
<b>5</b>	<b>Nondiscrimination and Affirmative Action in Employment</b>	<b>371</b>
5.1	The Interplay of Statutes, Regulations, and Constitutional Protections	371
5.2	Sources of Law	374
5.2.1	<i>Title VII</i>	374
5.2.2	<i>Equal Pay Act</i>	383
5.2.3	<i>Title IX</i>	386
5.2.4	<i>Section 1981</i>	389
5.2.5	<i>Americans With Disabilities Act and Rehabilitation Act of 1973</i>	391
5.2.6	<i>Age Discrimination in Employment Act</i>	399
5.2.7	<i>Constitutional prohibitions against employment discrimination</i>	403

## Rights and Responsibilities of Individual Students

### *Sec. 9.1. Disciplinary and Grievance Systems*

**9.1.1. Overview.** Colleges and universities develop codes of student conduct (discussed in Section 9.2) and standards of academic performance (discussed in Section 9.3), and expect students to conform to those codes and standards. Sections 9.1 through 9.4 discuss student challenges to institutional attempts to discipline students for violations of these codes and standards. Section 9.1 presents the guidelines for disciplinary and grievance systems that afford students appropriate statutory and constitutional protections. Section 9.2 analyzes the courts' responses to student challenges to colleges' disciplinary rules and regulations, emphasizing the different standards that public and private institutions must meet. Section 9.3 addresses "academic" matters, such as students' challenges to grades, graduates' challenges to degree revocation, students' allegations of sexual harassment by faculty, and the special issues raised by students with disabilities who request accommodations of an academic nature. Section 9.4 reviews the guidelines courts have developed in reviewing challenges to the *procedures* used by colleges when they seek to discipline or expel a student for either social or academic misconduct.

Section 9.5 discusses a variety of legal limitations on institutions' authority to discipline students for social or academic misconduct, with particular attention to the differences between public and private institutions. Sections 9.5 and 9.6 focus on the parameters of student free speech and expressive conduct, with special emphasis on student protests, free speech zones, and the phenomenon of "hate speech." Section 9.7 addresses federal (and some state) protections for the privacy of student records and the interplay between such protections and

state open records and open meetings laws. (The latter laws are also discussed in Section 12.5.)

**9.1.2. Establishment of systems.** Postsecondary institutions have extensive authority to regulate both the academic and the nonacademic activities and behavior of students. This power is summarized in an often-cited judicial statement:

In the field of discipline, scholastic and behavioral, an institution may establish any standards reasonably relevant to the lawful missions, processes, and functions of the institution. It is not a lawful mission, process, or function of . . . [a public] institution to prohibit the exercise of a right guaranteed by the Constitution or a law of the United States to a member of the academic community in the circumstances. Therefore, such prohibitions are not reasonably relevant to any lawful mission, process, or function of . . . [a public] institution.

Standards so established may apply to student behavior on and off the campus when relevant to any lawful mission, process, or function of the institution. By such standards of student conduct the institution may prohibit any action or omission which impairs, interferes with, or obstructs the missions, processes, and functions of the institution.

Standards so established may require scholastic attainments higher than the average of the population and may require superior ethical and moral behavior. In establishing standards of behavior, the institution is not limited to the standards or the forms of criminal laws [“General Order on Judicial Standards of Procedure and Substance in Review of Student Discipline in Tax-Supported Institutions of Higher Education,” 45 F.R.D. 133, 145 (W.D. Mo. 1968)].

It is not enough, however, for an administrator to understand the extent and limits of institutional authority. The administrator must also skillfully implement this authority through various systems for the resolution of disputes concerning students. Such systems should include procedures for processing and resolving disputes, substantive standards or rules to guide the judgment of the persons responsible for dispute resolution, and mechanisms and penalties with which decisions are enforced. The procedures, standards, and enforcement provisions should be written and made available to all students. Dispute resolution systems, in their totality, should create a two-way street; that is, they should provide for complaints by students against other members of the academic community as well as complaints against students by other members of the academic community.

The choice of structures for resolving disputes depends on policy decisions made by administrators, preferably in consultation with representatives of various interests within the institution. Should a single system cover both academic and nonacademic disputes, or should there be separate systems for different kinds of disputes? Should there be a separate disciplinary system for students, or should there be a broader system covering other members of the academic community as well? Will the systems use specific and detailed standards of student conduct, or will they operate on the basis of more general rules and policies? To what extent will students participate in establishing the rules governing their

conduct? To what extent will students, rather than administrators or faculty members, be expected to assume responsibility for reporting or investigating violations of student conduct codes or honor codes? To what extent will students take part in adjudicating complaints by or against students? What kinds of sanctions can be levied against students found to have been engaged in misconduct? Can the students be fined, made to do volunteer work on campus, suspended or expelled from the institution, given a failing grade in a course or denied a degree, or required to make restitution? To what extent will the president, provost, or board of trustees retain final authority to review decisions concerning student misconduct?

Devices for creating dispute resolution systems may include honor codes or codes of academic ethics; codes of student conduct; bills of rights, or rights and responsibilities, for students or for the entire academic community; the use of various legislative bodies, such as a student or university senate; a formal judiciary system for resolving disputes concerning students; the establishment of grievance mechanisms for students, such as an ombuds system or a grievance committee; and mediation processes that provide an alternative or supplement to judiciary and grievance mechanisms. On most campuses, security guards or some other campus law enforcement system may also be involved in the resolution of disputes and regulation of student behavior.

Occasionally, specific procedures or mechanisms will be required by law. Constitutional due process, for instance, requires the use of certain procedures before a student is suspended or dismissed from a public institution (see Section 9.4). The Title IX regulations (Section 13.5.3) and the Family Educational Rights and Privacy Act (FERPA) regulations (Section 9.7.1) require both public and private institutions to establish certain procedures for resolving disputes under those particular statutes. Even when specific mechanisms or procedures are not required by law, the procedures or standards adopted by an institution will sometimes be affected by existing law. A public institution's rules regarding student protest, for instance, must comply with First Amendment strictures protecting freedom of speech (Section 9.5). And its rules regarding administrative access to or search of residence hall rooms, and the investigatory techniques of its campus police, must comply with Fourth Amendment strictures regarding search and seizure (Section 8.4.2). Though an understanding of the law is thus crucial to the establishment of disciplinary and grievance systems, the law by no means rigidly controls such systems' form and operation. To a large extent, the kind of system adopted will depend on the institution's history and campus culture.

Fair and accessible dispute resolution systems, besides being useful administrative tools in their own right, can also insulate institutions from lawsuits. Students who feel that their arguments or grievances will be fairly considered within the institution may forgo resort to the courts. If students ignore internal mechanisms in favor of immediate judicial action, the courts may refer the students to the institution. Under the "exhaustion-of-remedies" doctrine (see Section 2.2.2.4), courts may require plaintiffs to exhaust available remedies within the institution before bringing the complaint to court. In *Pfaff v. Columbia-Greene Community*

*College*, 472 N.Y.S.2d 480 (N.Y. App. Div. 1984), for example, the New York courts dismissed the complaint of a student who had sued her college, contesting a C grade entered in a course, because the college had an internal appeal process and the student “failed to show that pursuit of the available administrative appeal would have been fruitless.”

**9.1.3. Codes of student conduct.** Three major issues are involved in the drafting or revision of codes of student conduct: the type of conduct the code will encompass, the procedures to be used when infractions of the code are alleged, and the sanctions for code violations.

Codes of student conduct typically proscribe both academic and social misconduct, whether or not the misconduct violates civil or criminal laws, and whether or not the misconduct occurs on campus. Academic misconduct may include plagiarism, cheating, forgery, or alteration of institutional records. In their review of sanctions for academic misconduct, and of the degree of procedural protection required for students accused of such misconduct, courts have been relatively deferential (see Section 9.4.3).

Social misconduct may include disruption of an institutional function (including teaching and research) and abusive or hazing behavior (but limitations on speech may run afoul of free speech protections, as discussed in Section 9.6). It may also encompass conduct that occurs off campus,<sup>1</sup> particularly if the misconduct also violates criminal law and the institution can demonstrate that the restrictions are directly related to its educational mission or the campus community’s welfare (*Krasnow v. Virginia Polytechnic Institute*, 551 F.2d 591 (4th Cir. 1977); *Wallace v. Florida A&M University*, 433 So. 2d 600 (Fla. Dist. Ct. App. 1983)).

Sanctions for code violations may range from a warning to expulsion, with various intermediate penalties, such as suspension or community service requirements. Students who are expelled may seek injunctive relief under the theory that they will be irreparably harmed; some courts have ruled that injunctive relief is not appropriate for sanctions short of expulsion (*Boehm v. University of Pennsylvania School of Veterinary Medicine*, 573 A.2d 575 (Pa. Super. Ct. 1990), but see *Jones v. Board of Governors*, 557 F. Supp. 263 (W.D.N.C.), *affirmed*, 704 F.2d 713 (4th Cir. 1983)). Students at public institutions may assert constitutional claims related to deprivation of a property and/or liberty interest (see Section 6.6.2), while students at both public and private institutions may file actions based on contract law.

If a code of conduct defines the offenses for which a student may be penalized by a public institution, that code must comply with constitutional due process requirements concerning vagueness. The requirement is a minimal one: the code must be clear enough for students to understand the standards with which their conduct must comply, and it must not be susceptible to arbitrary enforcement. A public institution’s code of conduct must also comply with the constitutional

---

<sup>1</sup>Cases and authorities are collected in Dale R. Agthe, Annot., “Misconduct of College or University Students Off Campus as Grounds for Expulsion, Suspension, or Other Disciplinary Action,” 28 A.L.R.4th 463.

doctrine of overbreadth in any area where the code could affect First Amendment rights. Basically, this doctrine requires that the code not be drawn so broadly and vaguely as to include protected First Amendment activity along with behavior subject to legitimate regulation (see Sections 9.5.2 & 9.6). Finally, a public institution's student conduct code must comply with a general requirement of evenhandedness; that is, the code cannot arbitrarily discriminate in the range and types of penalties, or in the procedural safeguards, afforded various classes of offenders. *Paine v. Board of Regents of the University of Texas System*, 355 F. Supp. 199 (W.D. Tex. 1972), *affirmed per curiam*, 474 F.2d 1397 (5th Cir. 1973), concerned such discriminatory practices. The institution had given students convicted of drug offenses a harsher penalty and fewer safeguards than it gave to all other code offenders, including those charged with equally serious offenses. The court held that this differential treatment violated the equal protection and due process clauses.

The student codes of conduct at some institutions include an "honor code" that requires fellow students to report cheating or other misconduct that they observe. In *Vargo v. Hunt*, 581 A.2d 625 (Pa. Super. 1990), a state appellate court affirmed the ruling of a trial court that a student's report of cheating by a fellow student was subject to a conditional privilege. The Allegheny College honor code explicitly required students to report "what appears to be an act of dishonesty in academic work" to an instructor or a member of the honor committee. When Ms. Hunt reported her suspicions that Mr. Vargo was cheating, he was charged with, and later found guilty of, a violation of the disciplinary code, was suspended from the college for one semester, and received a failing grade in the course. Vargo then sued Hunt for defamation. The court ruled that Hunt had acted within the boundaries of the honor code and had not communicated the allegedly defamatory information beyond the appropriate individuals, and that the academic community had a common interest in the integrity of the academic process.

Sometimes a state law requires students to report wrongdoing on campus. A Texas anti-hazing law contains provisions that require anyone who has "firsthand knowledge of the planning of a specific hazing incident . . . or firsthand knowledge that a specific hazing incident has occurred," to report the incident to a college official (§ 37.152, Tex. Educ. Code). Failure to do so can result in a fine or imprisonment. Students charged with failure to report hazing, as well as with hazing and assault, challenged the law, arguing that compliance with the reporting provisions of the law required them to incriminate themselves in the alleged hazing incident, a violation of their Fifth Amendment rights. In *The State of Texas v. Boyd*, 2 S.W.3d 752 (Ct. App. Tex. 1999), a state appellate court affirmed the ruling of a trial court that held this provision of the law unconstitutional. The Court of Criminal Appeals of Texas, however, reversed, noting that the anti-hazing law also provides for immunity from prosecution for anyone who testifies for the prosecution in such a case (38 S.W.3d 155 (Tex. Crim. App. 2001)).

As noted above, codes of conduct can apply to the off-campus actions as well as the on-campus activity of students. But the extension of a code to off-campus activity can pose significant legal and policy questions. In the *Paine* case above, the institution automatically suspended students who had been put on probation

by the criminal courts for possession of marijuana. The court invalidated the suspensions partly because they were based on an off-campus occurrence (court probation) that did not automatically establish a threat to the institution. More recent cases, however, suggest that courts are more likely to uphold the suspension or expulsion of students who were arrested and found guilty of a criminal offense, in particular drug possession or use. (See, for example, *Krasnow v. Virginia Polytechnic Institute*, 551 F.2d 591 (4th Cir. 1977); *Sohmer v. Kinnard*, 535 F. Supp. 50 (D. Md. 1982).) In *Woodis v. Westark Community College*, 160 F.3d 435 (8th Cir. 1998), the plaintiff, a nursing student expelled from the college after she pleaded *nolo contendere* to a charge of attempting to obtain a controlled substance with a forged prescription, asserted that the college's code of conduct was unconstitutionally vague. She also argued that the college's disciplinary procedure denied her procedural due process because the vice president of student affairs had too much discretion to determine the punishment for students who violated the code. A trial court awarded summary judgment to the college, and the student appealed.

The college's code stated that students were expected to "conduct themselves in an appropriate manner and conform to standards considered to be in good taste at all times" (160 F.3d at 436). The code also required students to "obey all federal, state, and local laws." The appellate court therefore rejected the student's vagueness claim, ruling that drug offenses are criminal violations, and that she was on notice that criminal conduct was also a violation of college policy. With respect to the student's due process claim, the court also rejected the student's claim and affirmed the ruling of the trial court that had used the principles developed in *Esteban v. Central Missouri State College* (Section 9.2.2): adequate notice, a clear indication of the charges against the student, and a hearing that provides an opportunity for the student to present her side of the case. Even if the vice president's discretion had been too broad (an issue that the court did not determine), the student had the right to appeal the vice president's decision to an independent disciplinary board and also to the president. The student had also been given a second hearing after her *nolo contendere* plea, at which she was permitted to consult with counsel, examine the evidence used against her, and participate in the hearing. These procedures provided the student with sufficient due process protections to meet the *Esteban* standard.

The degree to which the institution can articulate a relationship between the off-campus misconduct and the interests of the campus community will improve its success in court. In the *Woodis* case discussed above, the fact that it was a nursing student who had used a forged prescription very likely strengthened the institution's argument that her off-campus conduct was relevant to institutional interests. In *Ray v. Wilmington College*, 667 N.E.2d 39 (Ohio Ct. App. 1995), for instance, the court stated:

An educational institution's authority to discipline its students does not necessarily stop at the physical boundaries of the institution's premises. The institution has the prerogative to decide that certain types of off-campus conduct [are] detrimental to the institution and to discipline a student who engages in that conduct [667 N.E.2d at 711].

As long as the college can articulate a reasonable relationship between the off-campus misconduct and the well-being of the college community, reviewing courts will not overturn a disciplinary action unless they find that the action was arbitrary, an abuse of discretion, or a violation of a student's constitutional rights. And if the college includes language in its student code of conduct specifying that off-campus conduct that affects the well-being of the college community is expressly covered by the code of conduct, defending challenges to discipline for off-campus misconduct may be more successful.

(For legal and policy analysis of the institution's authority to regulate student misconduct off campus, see Gary Pavela (ed.), "Responding to Student Misconduct Off-Campus," Parts I & II, *Synfax Weekly Report*, December 13, 1999, and December 20, 1999. Part II (December 20, 1999), at page 927, makes the point that the policy issues regarding off-campus conduct are more difficult than the legal issues, and questions the extension of campus codes of conduct to off-campus settings.)

To avoid problems in this area, administrators should ascertain that an off-campus act has a direct detrimental impact on the institution's educational functions before using that act as a basis for disciplining students. (See, for example, the Opinion of the Attorney General of Maryland, upholding the right of the state university to discipline "for off-campus conduct detrimental to the interests of the institution, subject to the fundamental constitutional safeguards that apply to all disciplinary actions by educational officials" (74 *Opinions of the Attorney General* 1, Opinion No. 89-002 (Md. 1989)).)

Private institutions not subject to the state action doctrine (see Section 1.5.2) are not constitutionally required to follow these principles regarding student codes. Yet the principles reflect basic notions of fairness, which can be critical components of good administrative practice; thus, administrators of private institutions may wish to use them as policy guides in formulating their codes.

A question that colleges and universities, irrespective of control, may wish to consider is whether the disciplinary code should apply to student organizations as well as to individual students. Should students be required to assume collective responsibility for the actions of an organization, and should the university impose sanctions, such as withdrawal of institutional recognition, on organizations that violate the disciplinary code? (For a model student disciplinary code that includes student organizations within its ambit, see Edward N. Stoner & John Wesley Lowery, "Navigating Past the 'Spirit of Insubordination': A 21st Century Model for a Student Conduct Code with a Model Hearing Script," 31 *J. Coll. & Univ. Law* 1 (2004).)

(For additional information about honor codes and other resources, see the Center for Academic Integrity Web site at <http://www.academicintegrity.org>. A useful publication designed to assist institutions in evaluating their disciplinary rules and procedures is "Reviewing Your Student Discipline Policy: A Project Worth the Investment," available from United Educators at <http://www.ue.org>. For a student-oriented analysis of appropriate disciplinary procedures, see *Guide to Due Process and Fair Procedure on Campus*, published by the Foundation for Individual Rights in Education, and available at <http://www.thefireguides.org>.)

**9.1.4. Judicial systems.** Judicial systems that adjudicate complaints of student misconduct must be very sensitive to procedural safeguards. The membership of judicial bodies, the procedures they use,<sup>2</sup> the extent to which their proceedings are open to the academic community, the sanctions they may impose, the methods by which they may initiate proceedings against students, and provisions for appealing their decisions should be set out in writing and made generally available within the institution.

Whenever the charge could result in a punishment as serious as suspension, a public institution's judicial system must provide the procedures required by the due process clause (see Section 9.4.2). The focal point of these procedures is the hearing at which the accused student may present evidence and argument concerning the charge. The institution, however, may wish to include preliminary stages in its judicial process for more informal disposition of complaints against students. The system may provide for negotiations between the student and the complaining party, for instance, or for preliminary conferences before designated representatives of the judicial system. Full due process safeguards need not be provided at every such preliminary stage. *Andrews v. Knowlton*, 509 F.2d 898 (2d Cir. 1975), dealt with the procedures required at a stage preceding an honor code hearing. The court held that due process procedures were not required at that time because it was not a "critical stage" that could have a "prejudicial impact" on the final determination of whether the student violated the honor code. Thus, administrators have broad authority to construct informal preliminary proceedings—as long as a student's participation in such stages does not adversely affect his or her ability to defend the case in the final stage.

Although the due process requirements for student disciplinary systems are relatively modest (see Sections 9.1.2 & 9.1.3), public institutions that do not follow their own rules and regulations may face charges of constitutional due process violations. Depending on the severity of the deviation from the rules, the courts may side with the student. For example, in *University of Texas Medical School v. Than*, 901 S.W.2d 926 (Tex. 1995), the Texas Supreme Court ruled that a medical student's procedural due process rights were violated when members of the hearing board that subsequently recommended his dismissal for academic dishonesty inspected the testing location without allowing Than to be present.

A question receiving increased attention is whether the judicial system will permit the accused student to have an attorney present. Several models are possible: (1) neither the college nor the student will have attorneys; (2) attorneys may be present to advise the student but may not participate by asking questions or making statements; or, (3) attorneys may be present and participate fully in questioning and making opening and closing statements. A federal appellate court was asked to rule on whether a judicial system at Northern Illinois University that followed the second model—attorney present but a nonparticipant—violated

---

<sup>2</sup>Cases and authorities related to student judicial procedures are collected in Jay M. Zitter, Annot., "Admissibility of Hearsay Evidence in Student Disciplinary Proceedings," 30 A.L.R.4th 935.

a student's due process rights. In *Osteen v. Henley*, 13 F.3d 221 (7th Cir. 1993), the court wrote:

Even if a student has a constitutional right to *consult* counsel . . . we don't think he is entitled to be represented in the sense of having a lawyer who is permitted to examine or cross-examine witnesses, to submit and object to documents, to address the tribunal, and otherwise to perform the traditional function of a trial lawyer. To recognize such a right would force student disciplinary proceedings into the mold of adversary litigation. The university would have to hire its own lawyer to prosecute these cases and no doubt lawyers would also be dragged in—from the law faculty or elsewhere—to serve as judges. The cost and complexity of such proceedings would be increased, to the detriment of discipline as well as of the university's fisc [13 F.3d at 225].

The court then, citing *Mathews v. Eldridge* (see Section 6.7.2.3), balanced the cost of permitting lawyers to participate against the risk of harm to students if lawyers were excluded. Concluding that the risk of harm to students was “trivial,” the court refused to rule that attorneys were a student's constitutional right.

Occasionally, a campus judicial proceeding may involve an incident that is also the subject of criminal court proceedings. The same student may thus be charged in both forums at the same time. In such circumstances, the postsecondary institution is not legally required to defer to the criminal courts by canceling or postponing its proceedings. As held in *Paine* (Section 9.1.4) and other cases, even if the institution is public, such dual prosecution is not double jeopardy because the two proceedings impose different kinds of punishment to protect different kinds of state interests. The Constitution's double jeopardy clause applies only to successive criminal prosecutions for the same offense. Nor will the existence of two separate proceedings necessarily violate the student's privilege against self-incrimination. In several cases—for instance, *Grossner v. Trustees of Columbia University*, 287 F. Supp. 535 (S.D.N.Y. 1968)—courts have rejected student requests to stay campus proceedings on this ground pending the outcome of criminal trials. One court emphasized, however, that if students in campus proceedings “are forced to incriminate themselves . . . and if that testimony is offered against them in subsequent criminal proceedings, they can then invoke . . . [Supreme Court precedents] in opposition to the offer” (*Furutani v. Ewigleben*, 297 F. Supp. 1163 (N.D. Cal. 1969)). In another case, the court rejected as speculative a student's claim that his being identified in campus disciplinary proceedings would jeopardize the fairness of his criminal trial (*Nzuve v. Castleton State College*, 335 A.2d 321 (Vt. 1975)).

The Supreme Court of Maine has addressed the issue of double jeopardy in a situation in which a student was subject to criminal and college penalties for an offense he committed. In *State of Maine v. Sterling*, 685 A.2d 432 (Me. 1996), Sterling, a football team member and recipient of an athletic scholarship, had assaulted a teammate on campus. The university held a hearing under the student conduct code, determined Sterling had violated the code, and suspended him for the summer. In addition, the football coach withdrew the portion of Sterling's scholarship that covered room and board. Shortly thereafter, criminal charges were brought against Sterling. He pleaded not guilty and filed a motion to dismiss the criminal charges, stating that the prosecution of the criminal

complaint constituted double jeopardy because he had already received a penalty through the revocation of his scholarship. A trial court agreed, and dismissed the criminal proceedings. The state appealed.

The Supreme Court of Maine reversed, determining that the withdrawal of the scholarship was not a punishment because it was done to further the purposes of the student disciplinary code and to protect the integrity of the public educational system. The court explained that protection from double jeopardy was available if each of three requirements were met:

1. the sanction in each forum was for the same conduct;
2. the non-criminal sanction and the criminal prosecution were imposed in separate proceedings; and
3. the non-criminal sanction constitutes punishment [685 A.2d at 434].

Although Sterling's situation satisfied elements 1 and 2, the court refused to characterize the withdrawal of the scholarship as "punishment," stating that the scholarship was a privilege that could be withdrawn for valid reasons.

A Wisconsin appellate court addressed a similar issue in *City of Oshkosh v. Winkler*, 557 N.W.2d 464 (Wis. Ct. App. 1996). Winkler, a student at the University of Wisconsin-Oshkosh, was arrested by the city police for participating in a student riot near the university campus. The university also filed charges against Winkler under its disciplinary code. He was found guilty by a Student Conduct Hearing Committee and placed on disciplinary probation. When the city attempted to prosecute Winkler under its disorderly conduct ordinance, Winkler claimed that the criminal prosecution was barred by the double jeopardy doctrine. A trial court ruled in Winkler's favor, and the city appealed.

The city had argued that the university's student conduct code was not punitive but designed to maintain order on campus, and thus the double jeopardy doctrine did not apply in Winkler's case. Although some provisions of the university's code of conduct were very similar to the language of the Oshkosh ordinances prohibiting disorderly conduct, the appellate court refused to apply the double jeopardy standard. It noted that Wisconsin's administrative code requires the university system to "identify basic standards of nonacademic conduct necessary to protect the community" (Wis. Adm. Code § UWS 17.01 (1966)). Thus, the university's sanction was not punitive, according to the court, but was designed to maintain institutional order.

The court in *Winkler* relied, in part, on an opinion of the U.S. Supreme Court in *United States v. Halper*, 490 U.S. 435 (1989), which stated that if both the civil and the criminal proceedings were punitive in nature, then the double jeopardy doctrine was triggered. However, in *Hudson v. United States*, 522 U.S. 93 (1997), the U.S. Supreme Court criticized the method of analysis used in *Halper*. In an opinion to which five Justices subscribed, and in which there were four separate concurring opinions, the Court held that bank officers who had been assessed civil monetary penalties by the Office of the Comptroller of the Currency could also be indicted for criminal violations based on the same transactions for which they had been assessed civil penalties. The majority stated that, despite the fact

that civil monetary penalties had a deterrent effect, they could not be construed as so punitive that they had the effect of a criminal sanction because they were not disproportionate to the nature of the misconduct. *Hudson* suggests that it may now be more difficult for students to claim double jeopardy, particularly if the noncriminal proceeding occurs before the criminal proceeding (as is often the case in campus disciplinary actions). As always, those institutions that can demonstrate that their student codes of conduct and judicial systems are designed for educational purposes and to maintain order rather than to punish will be in the best position to defend against double jeopardy claims, whether they are used in the campus disciplinary case or a criminal matter.

While neither double jeopardy nor self-incrimination need tie the administrator's hands, administrators may nevertheless choose, for policy reasons, to delay or dismiss particular campus proceedings when the same incident is in the criminal courts. It is possible that the criminal proceedings will adequately protect the institution's interests. Or, as *Furutani* and *Nzuve* suggest, student testimony at a campus proceeding could create evidentiary problems for the criminal court.

If a public institution proceeds with its campus action while the student is subject to charges still pending in criminal court, the institution may have to permit the student to have a lawyer with him or her during the campus proceedings. In *Gabrilowitz v. Newman*, 582 F.2d 100 (1st Cir. 1978), a student challenged a University of Rhode Island rule that prohibited the presence of legal counsel at campus disciplinary hearings. The student obtained an injunction prohibiting the university from conducting the hearing without permitting the student the advice of counsel. The appellate court, affirming the lower court's injunction order, held that when a criminal case based on the same conduct giving rise to the disciplinary proceeding is pending in the courts, "the denial to [the student] of the right to have a lawyer of his own choice to consult with and advise him during the disciplinary proceeding would deprive [him] of due process of law."

The court emphasized that the student was requesting the assistance of counsel to consult with and advise him during the hearing, not to conduct the hearing on the student's behalf. Such assistance was critical to the student because of the delicacy of the legal situation he faced:

Were the appellee to testify in the disciplinary proceeding, his statement could be used as evidence in the criminal case, either to impeach or as an admission if he did not choose to testify. Appellee contends that he is, therefore, impaled on the horns of a legal dilemma: if he mounts a full defense at the disciplinary hearing without the assistance of counsel and testifies on his own behalf, he might jeopardize his defense in the criminal case; if he fails to fully defend himself or chooses not to testify at all, he risks loss of the college degree he is within weeks of receiving, and his reputation will be seriously blemished [582 F.2d at 103].

If a public institution delays campus proceedings, and then uses a conviction in the criminal proceedings as the basis for its campus action, the institution must

take care to protect the student's due process rights. In the *Paine* case, a university rule required the automatic two-year suspension of any student convicted of a narcotics offense. The court held that the students must be given an opportunity to show that, despite their conviction and probation, they posed "no substantial threat of influencing other students to use, possess, or sell drugs or narcotics." Thus, a criminal conviction does not automatically provide the basis for suspension; administrators should still ascertain that the conviction has a detrimental impact on the campus, and the affected student should have the opportunity to make a contrary showing.

Given the deferential review by courts of the outcomes of student disciplinary proceedings (assuming that the student's constitutional or contractual rights have been protected), student challenges to these proceedings are usually unsuccessful. Even if the student is eventually exonerated, the institution that follows its rules and provides procedural protections will very likely prevail in subsequent litigation. For example, a state trial court rejected a student's attempt to state a negligence claim against a university for subjecting him to disciplinary proceedings for an infraction he did not commit. In *Weitz v. State of New York*, 696 N.Y.S.2d 656 (Ct. Claims N.Y. 1999), the plaintiff was an innocent bystander during a brawl in his residence hall that involved individuals who did not live in the residence hall. In addition to claims of negligence with respect to the security of the residence hall, the student claimed that the university was negligent in prosecuting him for violating the institution's code of conduct when he had not done so. The court noted that there was no cause of action in New York for negligent prosecution, and that it could find no public policy reason for creating such a cause of action simply because the student charged with a violation was ultimately found to be innocent.

## ***Sec. 9.2. Disciplinary Rules and Regulations***

**9.2.1. Overview.** Postsecondary institutions customarily have rules of conduct or behavior that students are expected to follow. It has become increasingly common to commit these rules to writing and embody them in codes of conduct that are binding on all students (see Section 9.1.3). Although the trend toward written codes is a sound one, legally speaking, because it gives students fairer notice of what is expected from them and often results in a better-conceived and administered system, written rules also provide a specific target to aim at in a lawsuit.

Students have challenged institutional attempts to discipline them by attacking the validity of the rule they allegedly violated or by attacking the nature of the disciplinary proceeding that determined that the alleged violation occurred. This Section discusses student challenges to the validity of institutional rules and regulations; Section 9.4 discusses challenges to the procedures used by colleges to determine whether, in fact, violations have occurred.

**9.2.2. Public institutions.** In public institutions, students frequently contend that the rules of conduct violate some specific guarantee of the Bill of

Rights, as made applicable to state institutions by the Fourteenth Amendment (see Section 1.5.2). These situations, the most numerous of which implicate the free speech and press clauses of the First Amendment, are discussed in Section 9.1 and various other Sections of this chapter. In other situations, the contention is a more general one: that the rule is so vague that its enforcement violates due process; that is (as was noted in Section 9.1.3), the rule is unconstitutionally “vague” or “void for vagueness.”

*Soglin v. Kauffman*, 418 F.2d 163 (7th Cir. 1969), is illustrative. The University of Wisconsin had expelled students for attempting to block access to an off-campus recruiter as a protest against the Vietnam War. The university had charged the students under a rule prohibiting “misconduct” and argued in court that it had inherent power to discipline, which need not be exercised through specific rules. Both the U.S. District Court and the U.S. Court of Appeals held that the misconduct policy was unconstitutionally vague. The appellate court reasoned:

The inadequacy of the rule is apparent on its face. It contains no clues which could assist a student, an administrator, or a reviewing judge in determining whether conduct not transgressing statutes is susceptible to punishment by the university as “misconduct.”

. . . We do not require university codes of conduct to satisfy the same rigorous standards as criminal statutes. We only hold that expulsion and prolonged suspension may not be imposed on students by a university simply on the basis of allegations of “misconduct” without reference to any preexisting rule which supplies an adequate guide [418 F.2d at 167–68].

While similar language about vagueness is often found in other court opinions, the actual result in *Soglin* (the invalidation of the rule) is unusual. Most university rules subjected to judicial tests of vagueness have survived, sometimes because the rule at issue is less egregious than the “misconduct” rule in *Soglin*, sometimes because a court accepts the “inherent power to discipline” argument raised by the *Soglin* defendants and declines to undertake any real vagueness analysis, and sometimes because the student conduct at issue was so contrary to the judges’ own standards of decency that they tended to ignore the defects in the rules in light of the obvious “defect” in behavior. *Esteban v. Central Missouri State College*, 415 F.2d 1077 (8th Cir. 1969), the case most often cited in opposition to *Soglin*, reveals all three of these distinctions. In this case, students contested their suspension under a regulation prohibiting “participation in mass gatherings which might be considered as unruly or unlawful.” In upholding the suspension, the court emphasized the need for “flexibility and reasonable breadth, rather than meticulous specificity, in college regulations relating to conduct” and recognized the institution’s “latitude and discretion in its formulation of rules and regulations.” The approach has often been followed in later cases—for instance, in *Jenkins v. Louisiana State Board of Education*, 506 F.2d 992 (5th Cir. 1975), where the court upheld a series of regulations dealing with disorderly assembly and disturbing the peace on campus.

In addition to *procedural* due process challenges, institutional rules and their application may be challenged under *substantive* due process theories. Such

challenges are possible when the institution may have violated fundamental privacy rights of a student or may have acted arbitrarily or irrationally (see generally William Kaplin, *American Constitutional Law* (Carolina Academic Press, 2004), Ch. 11, Secs. B & C). The latter argument, for instance, has been made in situations in which a college or school has enacted “zero tolerance” rules with respect to possession of controlled substances and weapons, a practice that requires punishment for possession despite the factual circumstances. In *Seal v. Morgan*, 229 F.3d 567 (6th Cir. 2000), a high school student was expelled after a knife was found in the glove compartment of his car. The student said that the knife belonged to a friend, and that he was not aware that the knife was in the car. Under the school’s zero tolerance rules, the student was expelled anyway. The trial and appellate courts rejected the school district’s argument that the serious problem of weapons at school justified its summary action, stating that if the student had been unaware that he was “in possession” of a knife, then he could not have used it to harm anyone. Thus, said the court, the expulsion without an opportunity to determine if the student had actual knowledge of his “possession” was a violation of substantive due process. The court remanded the case for trial on the issue of the student’s credibility.

Despite the outcome in *Seal*, courts are reluctant to create new substantive due process protections, particularly where students have remedies under other legal theories. For example, in *Dacosta v. Nwachukwa*, 304 F.3d 1045 (11th Cir. 2002), *cert. denied*, 538 U.S. 908 (2003), an instructor at the Georgia Military College injured a student when he shoved her and slammed a door in her face. The student filed a claim under 42 U.S.C. § 1983 (see Section 4.7.4 of this book), asserting a breach of her substantive due process rights. Noting that the student had a cause of action against the instructor for intentional battery, a tort under Georgia law, the court ruled that the instructor was protected by qualified immunity from constitutional claims.

Although the judicial trend suggests that most rules and regulations will be upheld, administrators should not assume that they have a free hand in promulgating codes of conduct. *Soglin* signals the institution’s vulnerability when it has no written rules at all or when the rule provides no standard to guide conduct. And even the *Esteban* court warned: “We do not hold that any college regulation, however loosely framed, is necessarily valid.” To avoid such pitfalls, disciplinary rules should provide standards sufficient to guide both the students in their conduct and the disciplinarians in their decision making. A rule will likely pass judicial scrutiny if the standard “conveys sufficiently definite warning as to the proscribed conduct when measured by common understanding and practices” (*Sword v. Fox*, 446 F.2d 1091 (4th Cir. 1971), upholding a regulation that “demonstrations are forbidden in any areas of the health center, inside any buildings, and congregating in the locations of fire hydrants”). Regulations need not be drafted by a lawyer—in fact, student involvement in drafting may be valuable to ensure an expression of their “common understanding”—but it would usually be wise to have a lawyer play a general advisory role in the process.

Once the rules are promulgated, institutional officials have some latitude in interpreting and applying them, as long as the interpretation is reasonable.

In *Board of Education of Rogers, Ark. v. McCluskey*, 458 U.S. 966 (1982), a public school board's interpretation of one of its rules was challenged as unreasonable. The board had held that its rule against students being under the influence of "controlled substances" included alcoholic beverages. The U.S. Supreme Court, quoting *Wood v. Strickland* (see Section 4.7.4), asserted that "federal courts [are] not authorized to construe school regulations" unless the board's interpretation "is so extreme as to be a violation of due process" (458 U.S. at 969–70).

**9.2.3. Private institutions.** Private institutions, not being subject to federal constitutional constraints (see Section 1.5.2), have even more latitude than public institutions do in promulgating disciplinary rules. Courts are likely to recognize a broad right to make and enforce rules that is inherent in the private student-institution relationship or to find such a right implied in some contractual relationship between student and school. Under this broad construction, private institutional rules will not be held to specificity standards such as those in *Soglin* (discussed in Section 9.2.2). Thus, in *Dehaan v. Brandeis University*, 150 F. Supp. 626 (D. Mass. 1957), the court upheld the plaintiff's suspension for misconduct under a policy where the school "reserves the right to sever the connection of any student with the university for appropriate reason"; and in *Carr v. St. John's University, New York*, 231 N.Y.S.2d 410 (N.Y. App. Div. 1962), *affirmed*, 187 N.E.2d 18 (N.Y. 1962), the courts upheld the dismissal of four students for off-campus conduct under a regulation providing that "in conformity with the ideals of Christian education and conduct, the university reserves the right to dismiss a student at any time on whatever grounds the university judges advisable."

Despite the breadth of such cases, the private school administrator, like his or her public counterpart, should not assume a legally free hand in promulgating disciplinary rules. Courts can now be expected to protect private school students from clearly arbitrary disciplinary actions (see Section 1.5.3). When a school has disciplinary rules, courts may overturn administrators' actions taken in derogation of the rules. And when there is no rule, or if the applicable rule provides no standard of behavior, courts may overturn suspensions for conduct that the student could not reasonably have known was wrong. Thus, in *Slaughter v. Brigham Young University*, 514 F.2d 622 (10th Cir. 1975), though the court upheld the expulsion of a graduate student for dishonesty under the student code of conduct, it first asked "whether the . . . [expulsion] was arbitrary" and indicated that the university's findings would be accorded a presumption of correctness only "if the regulations concerned are reasonable [and] if they are known to the student or should have been." To avoid such situations, private institutions may want to adhere to much the same guidelines for promulgating rules as are suggested above for public institutions, despite the fact that they are not required by law to do so.

**9.2.4. Disciplining students with psychiatric illnesses.** Research conducted in 2002 indicated that the number of students seeking help for psychiatric disorders has increased dramatically on college campuses (Erica Goode,

“More in College Seek Help for Psychological Problems,” *New York Times*, February 3, 2003, p. A11). Students with mental or psychological disabilities are protected against discrimination by the Rehabilitation Act and the Americans With Disabilities Act (ADA) (see Sections 8.2.4.3. & 13.5.4, and for student employees, Section 5.2.5). Yet a student’s misconduct may disrupt campus activities, or the student may be dangerous to herself or to other students, faculty, or administrators. Opinion is divided among educators and mental health professionals as to whether students suffering from mental disorders who violate the institution’s code of student conduct should be subject to the regular disciplinary procedure or should be given a “medical withdrawal” if their presence on campus becomes disruptive or dangerous.<sup>3</sup>

Several issues arise in connection with mentally ill students who are disruptive or dangerous. If campus counseling personnel have gained information from a student indicating that he or she is potentially dangerous, the teachings of *Tarasoff v. Regents of the University of California* (Section 4.7.2 of this book) and its progeny (as well as many state statutes codifying *Tarasoff*) regarding a duty to warn the potential target(s) of the violence would apply. If administrators or faculty know that the student is potentially dangerous and that student subsequently injures someone, negligence claims based on the foreseeability of harm may arise (Section 3.3.2). On the other hand, potential violations of the federal Family Educational Rights and Privacy Act (discussed in Section 9.7.1) could also be implicated if institutional officials routinely warned a student’s family or others of medical or psychological conditions.

Furthermore, college counseling staff may face tort claims for their alleged negligence in treating or advising students with psychiatric disorders (see, for example, *Williamson v. Liptzin*, 539 S.E.2d 313 (N.C. 2000), in which the court rejected the claim by a student who shot two individuals that the negligence of the university psychiatrist who treated him was the proximate cause of his criminal acts and subsequent injuries). Or the student may claim that disclosure by a counselor of his psychiatric condition constitutes “malpractice” (see *Jarzynka v. St. Thomas University School of Law*, 310 F. Supp. 2d 1256 (S.D. Fla. 2004), in which the court rejected the plaintiff’s malpractice claim because the counselor was not a mental health therapist).

Federal and state disability discrimination laws require colleges and universities, as places of public accommodation, to provide appropriate accommodations for otherwise qualified students with disabilities. But if a student’s misconduct is related to the nature of the disability, and the conduct would otherwise violate the college’s code of student conduct, administrators must face a difficult choice. This issue was addressed squarely in a case that has implications for higher education even though it involves a private elementary school. In *Bercovitch v. Baldwin School*, 133 F.3d 141 (1st Cir. 1998), a student with attention deficit disorder (ADD) performed acceptably in his studies, but consistently violated the school’s code of conduct. The school made numerous

---

<sup>3</sup>Cases and authorities are collected in J. M. Zitter, Annot., “Physical or Mental Illness as Basis of Dismissal of Student from School, College or University,” 17 A.L.R.4th 519.

attempts to accommodate his disruptive behavior even before it was aware of the diagnosis of ADD. After the diagnosis and medication, the student's disruptive behavior continued, and the school suspended the student. The parents brought a claim under Title III of the Americans With Disabilities Act. Although a trial court ruled that the school had to reinstate the student and make greater efforts to accommodate him, the appellate court disagreed. The student was not otherwise qualified for ADA purposes if he could not comply with the school's code of conduct, said the court. Furthermore, the student's disorder did not qualify for protection under the ADA because it did not substantially limit his ability to learn. (The court explained that this private school was not subject to the Individuals With Disabilities Education Act (IDEA) (20 U.S.C. § 1400 *et seq.*), as are public schools, and had no obligation to provide an individualized educational plan or to provide accommodations that modified its disciplinary code or its academic programs.)<sup>4</sup>

But if a court determines that following the rules is an essential function of being a student, then the student may not be "otherwise qualified" and thus unprotected by disability discrimination law. A federal trial court rejected the claim of a graduate student that the university should have considered his learning disability when enforcing its code of conduct against him. In *Childress v. Virginia Commonwealth University*, 5 F. Supp. 2d 384 (E.D. Va. 1998), the plaintiff was charged with multiple violations of the honor code when he committed several acts of plagiarism. The honor board found him guilty of the violations and recommended his expulsion. The student appealed, but his appeal was denied and he was expelled from the university. He filed discrimination claims under the Americans With Disabilities Act and Section 504 of the Rehabilitation Act.

The court assumed without deciding that the plaintiff had a learning disability that qualified for protection under the ADA and Section 504. The court then turned to the issue of whether the plaintiff was a qualified individual with a disability—whether he could perform the essential functions of a graduate student. The court determined that complying with the honor code was an essential function of being a graduate student. Furthermore, said the court, the honor board had taken the plaintiff's disability into consideration when determining whether he had violated the honor code, thus complying with the ADA's requirement that an individualized determination be made as to whether the individual is qualified. (For another case decided in a similar fashion, see *El Kouni v. Trustees of Boston University*, 169 F. Supp. 2d 1 (D. Mass. 2001).)

Students with disabilities who challenge disciplinary sanctions as discriminatory must establish that the college was aware of the student's disability and that the discipline resulted from that knowledge. In *Rosenthal v. Webster*

---

<sup>4</sup>On the other hand, if a student has a record of otherwise acceptable academic performance and behavior, and the alleged code violation is not a serious one, a court may require the school to take the disability into consideration when determining whether to discipline the student. In *Thomas v. Davidson Academy*, 846 F. Supp. 611 (M.D. Tenn. 1994), a federal trial court enjoined a private secondary school from expelling a student with an autoimmune disorder for misconduct related to an injury she incurred at school. The court ruled that the student's prior good academic and disciplinary record established that she was "otherwise qualified," and that her expulsion was an ADA violation.

*University*, 2000 U.S. App. LEXIS 23733 (8th Cir. 2000) (unpublished), a federal appellate court rejected a student's ADA and Rehabilitation Act claims that the university discriminated against him on the basis of his bipolar disorder by suspending him. The court found that the university was not aware of his disability before it suspended him, but took that action because the plaintiff had carried a gun onto campus and had threatened to use it.

These cases suggest that the courts will follow the analysis used by the U.S. Supreme Court in the *Sutton* trilogy (see Section 5.2.5). If other courts rule that the ability to comply with a reasonable code of conduct is an "essential function" of being a student, then students whose misconduct is linked to their disability will have considerable difficulty demonstrating that they should be exempt from that code of conduct under the ADA or Section 504.

Given the potential for constitutional claims at public institutions and discrimination and contract claims at all institutions, administrators who are considering disciplinary action against a student with a mental or emotional disorder should provide due process protections (see Section 9.4.2). If the student has violated the institution's code of conduct and is competent to participate in the hearing, some experts recommend subjecting the student to the same disciplinary proceedings that a student without a mental or emotional impairment would receive (see, for example, Gary Pavela, *The Dismissal of Students with Mental Disorders* (College Administration Publications, 1985)). If the student is a danger to himself/herself or others, summary suspension may be appropriate, but postsuspension due process or contractual protections should be provided if possible. (For an analysis of the issues facing public colleges and universities in these circumstances, and recommended actions, see Jeanette DiScala, Steven G. Olswang, & Carol S. Niccolls, "College and University Responses to the Emotionally or Mentally Impaired Student," 19 *J. Coll. & Univ. Law* 17 (1992).)

## **Sec. 9.3. Grades, Credits, and Degrees**

**9.3.1. Overview.** Fewer legal restrictions pertain to an institution's application of academic standards to students than to its application of behavioral standards. Courts are more deferential to academia when evaluation of academic work is the issue, believing that such evaluation resides in the expertise of the faculty rather than the court.

Despite the fact that judicial review of academic judgments is more deferential than judicial review of discipline for student misconduct, courts hold institutions to their rules, policies, and procedures, and examine the foundations for the academic decision to determine whether it is based on academic standards. Faculty and administrators should ensure that they can document the basis for their academic judgments, that they follow institutional rules and procedures, and that the student is fully informed of his or her rights with respect to opportunities for appealing the decision.

**9.3.2. Awarding of grades and degrees.** When a student alleges that a grade has been awarded improperly or a degree has been denied unfairly, the

courts must determine whether the defendant's action reflected the application of academic judgment or an arbitrary or unfair application of institutional policy. In one leading case, *Connelly v. University of Vermont*, 244 F. Supp. 156 (D. Vt. 1965), a medical student challenged his dismissal from medical school. He had failed the pediatrics-obstetrics course and was excluded, under a College of Medicine rule, for having failed 25 percent or more of his major third-year courses. The court described its role, and the institution's legal obligation, in such cases as follows:

Where a medical student has been dismissed for a failure to attain a proper standard of scholarship, two questions may be involved; the first is, was the student in fact delinquent in his studies or unfit for the practice of medicine? The second question is, were the school authorities motivated by malice or bad faith in dismissing the student, or did they act arbitrarily or capriciously? In general, the first question is not a matter for judicial review. However, a student dismissal motivated by bad faith, arbitrariness, or capriciousness may be actionable. . . .

This rule has been stated in a variety of ways by a number of courts. It has been said that courts do not interfere with the management of a school's internal affairs unless "there has been a manifest abuse of discretion or where [the school officials'] action has been arbitrary or unlawful" . . . or unless the school authorities have acted "arbitrarily or capriciously" . . . or unless they have abused their discretion . . . or acted in "bad faith" [citations omitted].

The effect of these decisions is to give the school authorities absolute discretion in determining whether a student has been delinquent in his studies, and to place the burden on the student of showing that his dismissal was motivated by arbitrariness, capriciousness, or bad faith. The reason for this rule is that, in matters of scholarship, the school authorities are uniquely qualified by training and experience to judge the qualifications of a student, and efficiency of instruction depends in no small degree upon the school's faculty's freedom from interference from other noneducational tribunals. It is only when the school authorities abuse this discretion that a court may interfere with their decision to dismiss a student [244 F. Supp. at 159-60].

The plaintiff had alleged that his instructor decided before completion of the course to fail him regardless of the quality of his work. The court held that these allegations met its requirements for judicial review. They therefore stated a cause of action, which if proven at trial would justify the entry of judgment against the college.

In 1975, a federal appeals court issued an important reaffirmation of the principles underlying the *Connelly* case. *Gaspar v. Bruton*, 513 F.2d 843 (10th Cir. 1975), concerned a nursing student who had been dismissed for deficient performance in clinical training. In rejecting the student's suit against the school, the court held that:

[t]he courts are not equipped to review academic records based upon academic standards within the particular knowledge, experience, and expertise of academicians. Thus, when presented with a challenge that the school authorities

suspended or dismissed a student for failure re: academic standards, the court may grant relief, as a practical matter, only in those cases where the student presents positive evidence of ill will or bad motive [513 F.2d at 850–51].

The U.S. Supreme Court has twice addressed the subject of the standard of review of academic judgments. It first considered this subject briefly in *Board of Curators of the University of Missouri v. Horowitz*, 435 U.S. 78 (1978) (discussed in Section 9.4.3). A dismissed medical student claimed that the school applied stricter standards to her because of her sex, religion, and physical appearance. Referring particularly to *Gaspar v. Bruton*, the Court rejected the claim in language inhospitable to substantive judicial review of academic decisions:

A number of lower courts have implied in dictum that academic dismissals from state institutions can be enjoined if “shown to be clearly arbitrary or capricious.” . . . Courts are particularly ill equipped to evaluate academic performance. The factors discussed . . . with respect to procedural due process [see Section 9.4.3] speak *a fortiori* here and warn against any such judicial intrusion into academic decision making [435 U.S. at 91–92].

In a case in which the Court relied heavily on *Horowitz*, a student filed a substantive due process challenge to his academic dismissal from medical school. The student, whose entire record of academic performance in medical school was mediocre, asserted that the school’s refusal to allow him to retake the National Board of Medical Examiners examination violated his constitutional rights because other students had been allowed to retake the exam. In *Regents of the University of Michigan v. Ewing*, 474 U.S. 214 (1985), the Court assumed without deciding the issue that Ewing had a property interest in continued enrollment in medical school. The Court noted that it was not the school’s procedures that were under review—the question was “whether the record compels the conclusion that the University acted arbitrarily in dropping Ewing from the Inteflex program without permitting a reexamination” (474 U.S. at 225). The court then stated:

Ewing’s claim, therefore, must be that the University misjudged his fitness to remain a student in the Inteflex program. The record unmistakably demonstrates, however, that the faculty’s decision was made conscientiously and with careful deliberation, based on an evaluation of the entirety of Ewing’s academic career [474 U.S. at 225].

Citing *Horowitz*, the Court emphasized:

When judges are asked to review the substance of a genuinely academic decision, such as this one, they should show great respect for the faculty’s professional judgment. Plainly, they may not override it unless it is such a substantial departure from accepted academic norms as to demonstrate that the person or committee responsible did not actually exercise professional judgment [474 U.S. at 225].

Citing *Keyishian* (discussed in Section 7.1.1), the Court reminded the parties that concerns about institutional academic freedom also limited the nature of judicial review of substantive academic judgments.

Although the result in *Ewing* represents the standard to be used by lower courts, the Court's willingness to assume the existence of a property or liberty interest is questionable in light of a subsequent Supreme Court ruling. In *Siegert v. Gilley*, 500 U.S. 226 (1991), the Court ruled that when defendants who are state officials or state agencies raise a defense of qualified immunity (see Section 4.7.4), federal courts must determine whether a property or liberty interest was "clearly established" at the time the defendant acted. Applying *Siegert*, the Supreme Court of Hawaii in *Soong v. University of Hawaii*, 825 P.2d 1060 (Haw. 1992), ruled that a student had no clearly established substantive constitutional right to continued enrollment in an academic program.

The *Ewing* case has guided courts in subsequent challenges to academic dismissals of students. In *Frabotta v. Meridia Huron Hospital School*, 657 N.E.2d 816 (Ohio Ct. App. 1995), a nursing student who was dismissed six days prior to graduation challenged her dismissal as arbitrary and capricious, and a violation of her due process and equal protection guarantees. The court, citing *Ewing*, stated:

Courts should not intervene in academic decision-making where a student is dismissed unless the dismissal is clearly shown to be arbitrary and capricious. . . . In this case, Frabotta was dismissed because of her failing performance in the clinical portion of her Nursing 303 class. . . . Thus, there is no dispute that Frabotta's dismissal was clearly an academic decision. It being an academic decision, Frabotta had the burden of proving that the decision was arbitrary and capricious [657 N.E.2d at 819].

Simply because the student believed she deserved a second chance, or an additional opportunity to improve her performance, did not render the school's actions either arbitrary or capricious, according to the court, nor was the school's refusal to give her additional opportunities to improve her performance a denial of due process. The student had been warned of her deficiencies, said the court; even though the school cut short her opportunity to improve her performance, that was a subjective, academic judgment that the court could not overturn absent clear evidence of bad faith on the part of the instructor.<sup>5</sup>

A Texas appellate court did find considerable evidence of bad faith on the part of faculty members who voted to dismiss a doctoral student on purported academic grounds. In *Alcorn v. Vaksman*, 877 S.W.2d 390 (Tex. Ct. App. 1994), an *en banc* court upheld the findings of a trial court that several faculty members had voted to dismiss Vaksman from the doctoral program at the University of Houston not because of poor academic performance but because of his unpopular ideas and his tendency to publicize those ideas. Vaksman had never been informed that his academic performance was sufficiently poor to justify

---

<sup>5</sup>Although *Ewing* may protect an institution against constitutional challenges if a student is dismissed just prior to graduation, one student used contract law to receive damages for forgone income when he was dismissed for academic reasons just prior to graduation. See *Sharik v. Southeastern University of the Health Sciences*, 780 So. 2d 136 (Fla. Dist. Ct. App. 2000), *rev. dismissed*, 822 So. 2d 1290 (Fla. 2002), discussed in Section 8.1.3.

any academic sanction, and he had not been given an opportunity to discuss the alleged academic deficiencies with the graduate committee that recommended his dismissal. In addition to ordering the university to reinstate Vaksman to the doctoral program in history and pay him \$32,500 in actual damages, the trial judge ordered the two faculty members, the department chair, and a member of the graduate committee, who voted to dismiss Vaksman, to pay \$10,000 each toward the damage award. The appellate court held that, although the university's officers were immune from liability for money damages in their official capacities, the actions of the two faculty members, whose conduct "intentionally inflicted emotional distress" upon Vaksman, were not taken in good faith and, thus, the award of individual judgments against the two faculty members was appropriate.

Courts may resolve legal questions concerning the award of grades, credits, or degrees not only by applying standards of arbitrariness or bad faith but also by applying the terms of the student-institution contract (Section 8.1.3). A 1979 Kentucky case, *Lexington Theological Seminary v. Vance*, 596 S.W.2d 11 (Ky. Ct. App. 1979), illustrates the deference that may be accorded postsecondary institutions—especially church-related institutions—in identifying and construing the contract. The case also illustrates the problems that may arise when institutions attempt to withhold academic recognition from students because of their homosexuality.

The Lexington Theological Seminary, a seminary training ministers for the Disciples of Christ and other denominations, had denied Vance, a student who had successfully completed all his academic requirements, a Master of Divinity degree because of his admitted homosexuality. Three years after he first enrolled, he advised the dean of the school and the president of the seminary of his homosexuality. In January 1976, the student was informed that his degree candidacy would be deferred until he completed one additional course. In May 1976, after he had successfully completed the course, the faculty voted to grant the Master of Divinity degree. The seminary's executive committee, however, voted not to approve the faculty recommendation, and the board of trustees subsequently ratified the committee's decision. The student brought suit, seeking conferral of the degree.<sup>6</sup>

The trial court dealt with the suit as a contract case and held that the seminary had breached its contract with the plaintiff student. The Kentucky Court of Appeals, although it overruled the trial court, also agreed to apply contract principles to the case: "The terms and conditions for graduation from a private college or university are those offered by the publications of the college at the time of enrollment and, as such, have some of the characteristics of a contract."

The appellate court relied on various phrases from the seminary's catalog—such as "Christian ministry," "gospel transmitted through the Bible," "servants of the Gospel," "fundamental character," and "display traits of character and personality which indicate probable effectiveness in the Christian ministry"—that it

---

<sup>6</sup>See generally Annot., "Student's Right to Compel School Officials to Issue Degree, Diploma, or the Like," 11 A.L.R.4th 1182.

determined to be contract terms. It held that these terms created “reasonably clear standards” and interpreted them to permit the seminary to bar a homosexual student from receiving a degree. The court found that the seminary, being a religious institution preparing ministers to preach the gospel, had “a most compelling interest” in allowing only “persons possessing character of the highest Christian ideals” to graduate and that it had exercised sound discretion in denying the degree.

The court’s reasoning sparked a strong dissenting opinion, which examined not only the language in the seminary catalog but also the conduct of the seminary’s dean, president, and faculty. To the dissenting judge, “Since neither the dean, the president, nor the faculty understood the catalogue to clearly exclude homosexuals, their view certainly cloud[ed] any contrary meaning.” The dissent also argued that the language used in the catalog was not sufficiently clear: “In the future, the board should consider revising the catalogue to be more explicit on what is meant by ‘fundamental character.’ The board might also make it clear that applications for degree candidacy will not only be ‘evaluated by the faculty’ but will also be reviewed by the board.”

The *Lexington Theological Seminary* case illustrates that courts may resolve questions of academic credits or degrees by viewing the school catalog as a contract binding on both student and institution. The majority opinion also illustrates the flexibility that courts may accord postsecondary institutions in drafting and interpreting this contract, and the special deference that may be accorded church-related institutions in enforcing terms dealing with morality. The dissent in this case, however, deserves as much attention as the majority opinion. It cautions administrators against construing ambiguous catalog or policy language in a way that is inconsistent with their prior actions (see Section 1.4.2.3) and illustrates the potential for ambiguity that resides in general terms such as “fundamental character.” Even if administrators could confidently expect broad deference from the courts, the dissent’s cautions are still valuable as suggestions for how institutions can do better, of their own accord rather than through judicial compulsion, in ordering their own internal affairs. Statements in the catalog reserving the institution’s right to make changes in programs, graduation requirements, or grading policy provide important protections in breach of contract claims (see, for example, *Bender v. Alderson-Broaddus College*, 575 S.E.2d 112 (W. Va. 2002), in which the court rejected a nursing student’s claim that the college’s decision to change its grading policy was arbitrary and capricious).

An example of a court’s refusal to defer to a college’s interpretation of its catalog and policy documents is *Russell v. Salve Regina College*, 890 F.2d 484 (1st Cir. 1989). Sharon Russell had been asked to withdraw from the nursing program at the college because the administrators believed her obesity was unsatisfactory for a nursing student. Russell’s academic performance in all but one course was satisfactory or better; the instructor in one clinical course gave her a failing grade, which the jury found was related to her weight, not to her performance. Although the nursing program’s rules specified that failing a clinical course would result in expulsion, the college promised Russell that she could remain in the program if she would sign a contract promising to lose weight on a regular basis. She did so,

and attended Weight Watchers during that year, but did not lose weight. At the end of her junior year, Russell was asked to withdraw from Salve Regina, and she transferred to a nursing program at another college, where she was required to repeat her junior year because of a two-year residency requirement. She completed her nursing degree, but in five years rather than four.

Although the trial judge dismissed her tort claims of intentional infliction of emotional distress and invasion of privacy (stemming from administrators' conduct regarding her obesity), the contract claim had been submitted to the jury, which had found for Russell and had awarded her approximately \$144,000. On appeal, the court discussed the terms of the contract:

From the various catalogs, manuals, handbooks, etc., that form the contract between student and institution, the district court, in its jury charge, boiled the agreement between the parties down to one in which Russell on the one hand was required to abide by disciplinary rules, pay tuition, and maintain good academic standing, and the College on the other hand was required to provide her with an education until graduation. The court informed the jury that the agreement was modified by the "contract" the parties signed during Russell's junior year. The jury was told that, if Russell "substantially performed" her side of the bargain, the College's actions constituted a breach [890 F.2d at 488].

The college had objected to the trial court's use of commercial contract principles of substantial performance rather than using a more deferential approach, such as was used in *Slaughter v. Brigham Young University* (discussed in Sections 9.2.3 & 9.4.4). But the appellate court disagreed, noting that the college's actions were based not on academic judgments but on a belief that the student's weight was inappropriate, despite the fact that the college knew of the student's obesity when it admitted her to both the college and the nursing program:

Under the circumstances, the "unique" position of the College as educator becomes less compelling. As a result, the reasons against applying the substantial performance standard to this aspect of the student-college relationship also become less compelling. Thus, Salve Regina's contention that a court cannot use the substantial performance standard to compel an institution to graduate a student merely because the student has completed 124 out of 128 credits, while correct, is inapposite. The court may step in where, as here, full performance by the student has been hindered by some form of impermissible action [890 F.2d at 489].

Unlike the student in the *Lexington Theological Seminary* case, Russell was not asking the court to award her a degree; she was asking for contract damages, which included one year of forgone income (while she attended the other college for the extra year). The appellate court found that this portion of the award, \$25,000, was appropriate.<sup>7</sup>

---

<sup>7</sup>The U.S. Supreme Court subsequently reversed and remanded the appellate court's decision (499 U.S. 255 (1991)); on remand the appellate court reinstated its prior judgment and opinion (938 F.2d 315 (1st Cir. 1991)).

Although infrequent, challenges to grades or examination results have been brought by students. For example, in *Olsson v. Board of Higher Education of the City of New York*, 402 N.E.2d 1150 (N.Y. 1980), a student had not passed a comprehensive examination and therefore had not been awarded the M.A. degree for which he had been working. He claimed that his professor had misled him about the required passing grade on the examination. The professor had meant to say that a student must score three out of a possible five points on four of the five questions; instead, the professor said that a student must pass three of five questions. The student invoked the “estoppel” doctrine—the doctrine that justifiable reliance on a statement or promise estops the other from contradicting it if the reliance led directly to a detriment or injustice to the promisee. He argued that (1) he had justifiably relied on the professor’s statement in budgeting both his study and test time, (2) he had achieved the grade the professor had stated was necessary, and (3) injustice would result if the university was not estopped from denying the degree.

The trial court and the intermediate appellate court both accepted the student’s argument. The state’s highest appellate court, however, did not. Defering to the academic judgment of the institution, and emphasizing that the institution had offered the student an opportunity to retake the exam, the court refused to grant a “degree by estoppel.” Although conceding that principles of apparent authority and agency law would be relevant in a noneducational context, the court stated that:

such hornbook rules cannot be applied mechanically where the “principal” is an educational institution and the result would be to override a determination concerning a student’s academic qualifications. Because such determinations rest in most cases upon the subjective professional judgment of trained educators, the courts have quite properly exercised the utmost restraint in applying traditional legal rules to disputes within the academic community. . . .

This judicial reluctance to intervene in controversies involving academic standards is founded upon sound considerations of public policy. When an educational institution issues a diploma to one of its students, it is, in effect, certifying to society that the student possesses all of the knowledge and skills that are required by his chosen discipline. In order for society to be able to have complete confidence in the credentials dispensed by academic institutions, however, it is essential that the decisions surrounding the issuance of these credentials be left to the sound judgment of the professional educators who monitor the progress of their students on a regular basis. Indeed, the value of these credentials from the point of view of society would be seriously undermined if the courts were to abandon their longstanding practice of restraint in this area and instead began to utilize traditional equitable estoppel principles as a basis for requiring institutions to confer diplomas upon those who have been deemed to be unqualified [402 N.E.2d at 1152–53].

Although the court refused to apply the estoppel doctrine to the particular facts of this case, it indicated that in other, more extreme, circumstances estoppel could apply to problems concerning grading and other academic judgments. The court compared Olsson’s situation to that of the plaintiff in *Blank v. Board*

of *Higher Education of the City of New York*, 273 N.Y.S.2d 796 (see Section 3.2.2), in which the student had completed all academic requirements for his bachelor's degree but had not spent his final term "in residence." The student demonstrated reliance on the incorrect advice of several advisers and faculty members, and had failed only to satisfy a technical requirement rather than an academic one. The court explained:

The outstanding feature which differentiates *Blank* from the instant case is the unavoidable fact that in *Blank* the student unquestionably had fulfilled the academic requirements for the credential he sought. Unlike the student here, the student in *Blank* had demonstrated his competence in the subject matter to the satisfaction of his professors. Thus, there could be no public policy objection to [the court's] decision to award a "diploma by estoppel" [402 N.E.2d at 1154].<sup>8</sup>

The *Olsson* case thus provides both an extensive justification of "academic deference"—that is, judicial deference to an educational institution's academic judgments—and an extensive analysis of the circumstances in which courts, rather than deferring, should invoke estoppel principles to protect students challenging academic decisions. Synthesizing its analysis, the court concluded:

It must be stressed that the judicial awarding of an academic diploma is an extreme remedy which should be reserved for the most egregious of circumstances. In light of the serious policy considerations which militate against judicial intervention in academic disputes, the courts should shun the "diploma by estoppel" doctrine whenever there is some question as to whether the student seeking relief has actually demonstrated his competence in accordance with the standards devised by the appropriate school authorities. Additionally, the courts should be particularly cautious in applying the doctrine in cases such as this, where a less drastic remedy, such as retesting, may be employed without seriously disrupting the student's academic or professional career [402 N.E.2d at 1154].

A challenge to grades in two law school courses provided the New York courts with an opportunity to address another issue similar to that in *Olsson*—the standard of review to be used when students challenge particular grades. In *Susan M v. New York Law School*, 544 N.Y.S.2d 829 (N.Y. App. Div. 1989), *reversed*, 556 N.E.2d 1104 (N.Y. 1990), a law student dismissed for inadequate academic performance sought judicial review of her grades in her constitutional law and corporations courses. The student claimed that she had received poor grades because of errors made by the professors in both courses. In the constitutional law

---

<sup>8</sup>Another case in which the court ordered the award of a degree is *Kantor v. Schmidt*, 423 N.Y.S.2d 208 (N.Y. App. Div. 1979), a *mandamus* proceeding under New York law. The State University of New York at Stony Brook had withheld the degree because the student had not made sufficient progress, within established time limits, toward completion of the degree. A New York trial court ordered the defendant to award a B.A. degree to the student because the university had not complied with the state commissioner of education's regulations on student progress and informing students of progress. The appellate court affirmed but, on reargument, vacated its decision and dismissed the appeal as moot (432 N.Y.S.2d 156 (1980)).

course, she alleged, the professor gave incorrect instructions on whether the exam was open book; in the corporations course, the professor evaluated a correct answer as incorrect. The law school asserted that these allegations were beyond judicial review because they were a matter of professional discretion.

Although Susan M's claims were dismissed by the trial court, the intermediate appellate court disagreed with the law school's characterization of both grade disputes as beyond judicial review. It agreed that the dispute over the constitutional law examination was "precisely the type of professional, educational judgment the courts will not review" (544 N.Y.S.2d at 830); but the student's claim regarding her answer in the corporations exam, for which she received no credit, was a different matter. The court ruled that the student's allegation that the professor's decision had been arbitrary and capricious required the court to determine whether the professor's justification for giving the student no credit for one of her answers was "rational." The court remanded this issue to the law school for further consideration of petitioner's grade in the corporations course. The law school appealed, and the state's highest court unanimously reversed the appellate division's holding, reinstating the outcome in the trial court.

The court strongly endorsed the academic deference argument made by the law school, stating in the opinion's first paragraph: "Because [the plaintiff's] allegations are directed at the pedagogical evaluation of her test grades, a determination best left to educators rather than the courts, we conclude that her petition does not state a judicially cognizable claim" (556 N.E.2d at 1105). After reviewing the outcomes in earlier challenges to the academic determinations of colleges and universities, the state's highest court stated:

As a general rule, judicial review of grading disputes would inappropriately involve the courts in the very core of academic and educational decision making. Moreover, to so involve the courts in assessing the propriety of particular grades would promote litigation by countless unsuccessful students and thus undermine the credibility of the academic determinations of educational institutions. We conclude, therefore, that, in the absence of demonstrated bad faith, arbitrariness, capriciousness, irrationality or a constitutional or statutory violation, a student's challenge to a particular grade or other academic determination relating to a genuine substantive evaluation of the student's academic capabilities, is beyond the scope of judicial review [556 N.E.2d at 1107].

Concluding that the plaintiff's claims concerned substantive evaluation of her academic performance, the court refused to review them.

Students' attempts to challenge course requirements have also met with judicial rejection. In *Altschuler v. University of Pennsylvania Law School*, 1997 U.S. Dist. LEXIS 3248 (S.D.N.Y. March 21, 1997), *affirmed without opinion*, 201 F.3d 430 (3d Cir. 1999), for example, a law student who had just graduated challenged a failing grade he received in his first year. The grade resulted from the plaintiff's refusal to argue a "mock" case in a legal writing class on the grounds of moral and ethical objections. The plaintiff claimed that the professor "promised" him that he could argue and brief the opposite side but later

retracted her promise. When the plaintiff refused to argue the assigned side, he received a failing grade in the course. The court dismissed all contract and tort claims based on the failing grade, saying that the professor's "breach of promise" was an academic decision, which had been reviewed by a faculty committee and found to be appropriate. (For a more recent and successful challenge to a course requirement on first amendment grounds, see the *Axson-Flynn* case, discussed in Section 8.1.4.)

In *Disesa v. St. Louis Community College*, 79 F.3d 92 (8th Cir. 1996), the court rejected a student's challenge to a particular grade based on alleged "administrative deficiencies" in the testing process, including typographical errors in the materials and test questions, testing on materials not covered in class, an inability to review quizzes after they were graded, and arbitrary implementation of a class policy prohibiting erasure marks. Despite the plaintiff's argument that these were not "academic" decisions per se, the court disagreed and deferred to the college's actions.

Courts also have refused to review certain challenges to grades on the basis that the claims were "frivolous." (See, for example, *Banks v. Dominican College*, 35 Cal. App. 4th 1545 (1995) (granting \$18,000 in sanctions against the plaintiff); and *Dilworth v. Dallas Community College Dist.*, 81 F.3d 616 (5th Cir. 1996) (finding there was no controversy sufficient to rise to the level of federal jurisdiction).) But in *Sylvester v. Texas Southern University*, 957 F. Supp. 944 (S.D. Tex. 1997), a federal district court ordered a law student's grade changed to a "Pass" from a D because the law school had not followed its procedures for adjudicating a grade dispute.

The law school's rules provided that, if a student appealed a grade to the Academic Standing Committee, the committee was required to review the disputed grade. Neither the professor who gave the disputed grade nor the Academic Standing Committee complied with university regulations. The court criticized the institution and the professor for flouting the institution's own policies and procedures: "Between active manipulation and sullen intransigence, the faculty, embodying arbitrary government, have mistreated a student confided to their charge. This violates their duty to conduct the public's business in a rationally purposeful manner" (957 F. Supp. at 947).

The type of "bad faith" referred to in *Susan M* and its progeny is often alleged in the context of a retaliation claim. In *Ross v. Saint Augustine's College*, 103 F.3d 338 (4th Cir. 1996), a federal appeals court upheld a jury award of \$180,000 against a college for harassing an honors student who testified on behalf of a professor in a reverse discrimination suit against the institution. The court held that Leslie Ross "experienced a sudden reversal of fortune at Saint Augustine's College" when her grade point average fell from 3.69/4.0 to 2.2/4.0. The administration called a sudden student body meeting to impeach Ross as class president, and ultimately Ross was not able to graduate. Although the case involved only monetary damages, there is no indication that courts would afford deference to the academic decisions made under those circumstances had the student challenged the college's failure to award her a degree. (For additional cases in which students challenged specific course grades using retaliation theories,

see *Davis v. Goode*, 995 F. Supp. 82 (E.D.N.Y. 1998) (court denied college's motion for summary judgment); and *Mostaghim v. Fashion Institute of Technology*, 2002 U.S. Dist. LEXIS 10968 (S.D.N.Y. 2002), *affirmed*, 57 Fed. Appx. 497 (2d Cir. 2003) (court rejected student's claim that course requirement to design women's wear rather than men's wear constituted a Title IX violation, and that his subsequent grade of C and suspension from the institution were a form of retaliation under Title IX.)

(For a summary of legal challenges to academic judgments and a review of the *Susan M* case, see Note, "Student Challenges to Grades and Academic Dismissals: Are They Losing Battles?" 18 *J. Coll. & Univ. Law* 577 (1992). See also F. Faulkner, "Judicial Deference to University Decisions Not to Grant Degrees, Certificates, and Credit—The Fiduciary Alternative," 40 *Syracuse L. Rev.* 837 (1990); and T. A. Schweitzer, "'Academic Challenge' Cases: Should Judicial Review Extend to Academic Evaluations of Students?" 41 *Am. U. L. Rev.* 267 (1992). *Susan M* is also humorously reviewed in verse by R. E. Rains in 40 *J. Legal Educ.* 485 (1990), and 43 *J. Legal Educ.* 149 (1993).)

Although students apparently may not obtain academic credentials through litigation, they occasionally obtain them fraudulently, either by claiming degrees from "diploma mills" or by altering transcripts to make it appear that they completed a degree. (For analysis of this issue, see J. Van Tol, "Detecting, Deterring and Punishing the Use of Fraudulent Academic Credentials: A Play in Two Acts," 29 *Santa Clara L. Rev.* 1 (1990).)

Finally, a college or university may decide not to award a degree, even if the student has completed all academic requirements satisfactorily, because the student has violated the institution's disciplinary code. (For cases rejecting students' challenges to the denial of their degrees on these grounds, see *Harwood v. Johns Hopkins University*, 747 A.2d 205 (Ct. App. Md. 2000), discussed in Section 8.1.3; and *Dinu v. Harvard College*, 56 F. Supp. 2d 129 (D. Mass. 1999).)

**9.3.3. Degree revocation.** Generally, both public and private colleges and universities have authority to revoke improperly awarded degrees when good cause for doing so, such as discovery of fraud or misrepresentation, is shown.<sup>9</sup> Public institutions must afford the degree recipient notice and an opportunity for a hearing before making a decision on whether to revoke a degree, following due process guidelines (see Section 9.4.2). Private institutions, although generally not subject to constitutional requirements, are subject to contract law, and generally must use procedures that will protect the degree recipient from potentially arbitrary or capricious conduct by the institution (see Section 9.4.4).

Degree revocations by both public and private institutions have been challenged in lawsuits. In *Waliga v. Board of Trustees of Kent State University*, 488 N.E.2d 850 (Ohio 1986), the Ohio Supreme Court upheld the university's right to rescind a degree. Two individuals had been awarded baccalaureate degrees, one in 1966 and one in 1967, from Kent State University. University officials

---

<sup>9</sup>Cases and authorities are collected in Lori J. Henkel, Annot., "College's Power to Revoke Degree," 57 A.L.R.4th 1243.

discovered, more than ten years later, discrepancies such as credits granted for courses the students never took, and grades on official records different from those reported by course professors. The university rescinded the degrees on the grounds that the students had not completed the appropriate number of credits for graduation.

The students sought a declaratory judgment on the university's power to rescind a degree. The Ohio Supreme Court found such power under two theories. First, the court interpreted Ohio law as permitting any action necessary for operating the state university unless such action was expressly prohibited by statute. As long as a fair hearing had been held, the university had the power to rescind a degree procured by fraud. Second, the court addressed the significance of the public's confidence in the integrity of degrees awarded by colleges and universities:

Academic degrees are a university's certification to the world at large of the recipient's educational achievement and the fulfillment of the institution's standards. To hold that a university may never withdraw a degree, effectively requires the university to continue making a false certification to the public at large of the accomplishment of persons who in fact lack the very qualifications that are certified [488 N.E.2d at 852].

Just as a university has the power to refuse to confer a degree if a student does not complete the requirements for graduation, it also has the power, the court ruled, to rescind a degree awarded to a student who did not complete those requirements.

Given an institution's power to rescind a degree, what procedural protections must the institution give the student? If the institution is public, the Fourteenth Amendment's due process clause may require certain protections, particularly if the court finds a property interest in the student's possession of the degree. In *Crook v. Baker*, 813 F.2d 88 (6th Cir. 1987), a federal appeals court addressed this issue.

After awarding Crook an M.A. in geology, the University of Michigan determined that the data he had used in his master's thesis were fabricated, and notified him that a hearing would be held to determine whether the degree should be revoked. Crook filed a complaint in federal court, asserting that the university lacked the power to rescind a degree and, if such power were present, that the procedures used by the university violated his due process rights because they did not permit him to cross-examine witnesses.

The court first considered whether the university had the power to rescind the degree. Summarizing the opinion in *Waliga* at some length, the court determined that "there is nothing in Michigan constitutional, statutory or case law that indicates that the Regents do not have the power to rescind the grant of a degree" (813 F.2d at 92), and noted that the state constitution gave the university significant independence in educational matters.

Turning to the student's procedural claims, the court applied the teachings of *Goss v. Lopez* (Section 9.4.2) to evaluate the sufficiency of the procedural protections afforded Crook. Although the trial court had ruled that the hearing

violated Crook's right to due process, the appellate court found that the university had given Crook sufficient notice of the charges against him and that the hearing—at which he was permitted to have counsel present, to present witnesses in his behalf, and to respond to the charges against him—complied with the requirements of *Goss*. The appellate court characterized the hearing as “informal,” in that hearing panel members asked questions and neither the university nor Crook was permitted to ask questions of the witnesses. Citing its earlier opinion in *Frumkin v. Board of Trustees* (see Section 6.7.2.3), the court found that Crook had no procedural due process right to have his attorney examine and cross-examine witnesses, and that the procedures provided by the university were sufficient for due process purposes.

Crook had also claimed violation of his substantive due process rights, alleging no rational basis for the rescission of his degree. Citing *Ewing* (see Section 9.3.1), the court found that the hearing committee had exercised professional judgment and that the committee's determination that Crook's data were fabricated was neither arbitrary nor capricious.

*Waliga* and *Crook* establish the power of a public institution to rescind a degree, and *Crook* discusses the type of procedural protection required to meet constitutional due process standards. When private institutions are involved, however, constitutional requirements typically do not apply. Unless the institution can meet the “state action” test (see Section 1.5.2), constitutional protections are not available to the student (*Imperiale v. Hahnemann University*, 966 F.2d 125 (3d Cir. 1992)).

In a lawsuit filed against Claremont University Center by a student whose doctoral degree was revoked on the grounds that his dissertation was plagiarized, a California appellate court analyzed the university's actions under a deferential standard of review—whether or not the university abused its discretion. In *Abalkhail v. Claremont University Center*, 2d Civ. No. B014012 (Cal. Ct. App. 1986), the court detailed the procedures used to determine whether the degree should be revoked. The university had received a report that portions of the dissertation might have been plagiarized, and it appointed a committee of investigation to determine whether plagiarism had occurred and degree revocation was warranted.

After the committee concluded that plagiarism might have occurred, the graduate school dean informed Abalkhail that a hearing would be held and described the procedures that would be followed. Abalkhail did not receive a copy of the letter that instigated the investigation until the day of the hearing, but he was given the opportunity to respond to the charges against him and was asked if there were additional procedures necessary to give him a fair hearing. The hearing committee met again with Abalkhail to inform him of additional evidence against him and to permit him to respond to that evidence by a particular time. After the time for response had elapsed, the committee found that much of Abalkhail's dissertation was plagiarized and recommended that his degree be rescinded. The university did so, and Abalkhail filed a complaint, alleging deprivation of due process and fairness protections.

Applying the California common law doctrine of fair procedures required of nonprofit groups, the court ruled that Abalkhail was entitled to “the minimum

requisites of procedural fairness” (2d Civ. No. B014012 at 15). These “minimum requisites” included notice of the charges and the probable consequences of a finding that the charges would be upheld, a fair opportunity to present his position, and a fair hearing. These had been provided to the plaintiff, according to the court.

(For analysis of *Waliga, Crook, and Abalkhail*, see B. Reams, Jr., “Revocation of Academic Degrees by Colleges and Universities,” 14 *J. Coll. & Univ. Law* 283 (1987). For a case in which a court confirmed a public university’s right to revoke a degree for criminal misconduct (embezzlement) but allowed breach of contract and other claims to go forward because of alleged procedural due process violations, see *Goodreau v. Rector and Visitors of the University of Virginia*, 116 F. Supp. 2d 694 (W.D. Va. 2000).)

Although institutions of higher education appear to have the authority to revoke degrees, the revocation must be an act of the same entity that has the authority to award the degree. In *Hand v. Matchett*, 957 F.2d 791 (10th Cir. 1992), a federal appellate court affirmed a federal trial court’s award of summary judgment to a former student who challenged his degree revocation. The Board of Regents of New Mexico State University had not acted on the degree revocation, but had delegated that decision to the graduate dean and, when the student appealed the dean’s decision, to the executive vice president. Although the university had developed a procedure that involved both faculty and external experts in the determination that the plaintiff’s dissertation had been plagiarized, the court, interpreting New Mexico law, said that the board could not delegate its authority to revoke a degree to a subordinate individual or body.

**9.3.4. Sexual harassment of students by faculty members.** Whether one is addressing students’ sexual harassment complaints against faculty members, as in this Section, or students’ sexual harassment complaints against other students (as in Section 8.1.5),<sup>10</sup> it is important to begin with a general understanding of what type of behaviors constitute sexual harassment.<sup>11</sup> The following definitions and examples will provide a foundation for this understanding.

In guidelines issued by the U.S. Department of Education, sexual harassment is defined as “unwelcome [verbal, nonverbal, or physical] conduct of a sexual nature” (“Revised Sexual Harassment Guidance: Harassment of Students by School Employees, Other Students, or Third Parties,” Part II, (January 19, 2001), available at <http://www.ed.gov/offices/OCR/archives/index.html>). In two studies by the American Association of University Women (AAUW), sexual harassment is defined as “unwanted and unwelcome sexual behavior [both physical and nonphysical] that interferes with the [victim’s] life” (*Hostile Hallways: The AAUW Survey on*

---

<sup>10</sup>Other types of harassment may also create problems on campus and become the subject of internal complaints or litigation. The most important of these other types of harassment are discussed at the end of this subsection.

<sup>11</sup>When a student’s sexual harassment complaint against a faculty member concerns the faculty member’s classroom statements or classroom conduct, academic freedom arguments may also come into play. This problem is discussed in Section 7.2.2, most specifically with reference to the *Cohen, Silva, and Bonnell* cases.

*Sexual Harassment in America's Schools* (AAUW Education Foundation, 1993), 6, 8; see also *Hostile Hallways: Bullying, Teasing, and Sexual Harassment in School* (AAUW Education Foundation, 2001), 9–11). And in a report by the National Coalition for Women and Girls in Education, sexual harassment is defined as “unwanted and unwelcome sexual behavior that creates a hostile environment, limiting full access to education” (*Title IX at 30: Report Card on Gender Equity*, June 2002, 40). Examples of sexual harassment, from the above sources, include: sexual advances; requests for sexual favors; sexual taunting; spreading sexual rumors; drawing graffiti of a sexual nature; making jokes, gestures, or comments of a sexual nature; showing sexually explicit photographs or illustrations; sending sexual notes or messages; pulling clothing down or off in a sexual way; forced kissing; touching, grabbing, or pinching in a sexual way; flashing; and intentionally brushing up against someone, blocking someone’s path, or cornering someone in a sexual way. Consistent with the three general definitions, such behaviors must be “unwelcome” before they would be considered to be sexual harassment.

Harassment victims can be both male and female, just as perpetrators are both female and male. Moreover, sexual harassment can occur not only when the victim and perpetrator are of the opposite sex but also when they are of the same sex. Thus, as the Education Department’s Sexual Harassment Guidance emphasizes, a female’s harassment of another female or a male’s harassment of another male is sexual harassment whenever the harasser’s conduct is sexual in nature (“Revised Sexual Harassment Guidance,” Part III).

Sexual harassment by faculty members (or other employees) may be divided into two categories: “*quid pro quo* harassment” and “hostile environment harassment.” The Education Department’s Sexual Harassment Guidance, for instance, distinguishes the categories as follows:

*Quid pro quo* harassment occurs if a teacher or other employee conditions an educational decision or benefit on the student’s submission to unwelcome sexual conduct, [regardless of whether] the student resists and suffers the threatened harm or submits and avoids the threatened harm. . . .

By contrast, [hostile environment] harassment . . . does not explicitly or implicitly condition a decision or benefit on submission to sexual conduct [but does nevertheless] limit a student’s ability to participate in or benefit from the school’s program based on sex.

Teachers and other employees can engage in either type of harassment. Students . . . are not generally given responsibility over other students and, thus, generally can only engage in hostile environment harassment [“Revised Sexual Harassment Guidance,” Part V.A].

Student complaints alleging harassment by a faculty member may implicate grades in two basic ways. In the first way, akin to *quid pro quo* harassment, a student may complain that she was denied a deserved grade because she refused the instructor’s sexual advances, or that she was awarded a grade only after having submitted unwillingly to the instructor’s advances. In *Crandell v. New York College of Osteopathic Medicine*, 87 F. Supp. 2d 304 (S.D.N.Y. 2000), for example, a female medical student claimed she was harassed by a medical resident who

supervised her in a six-week rotation at a teaching hospital. She claimed she was subjected to numerous sexual comments, incidents of touching, and a threat to give her a failing grade for the rotation if she did not spend time with him on a regular basis. In context, the student interpreted this demand to be sexual in nature. The court determined that this conduct constituted *quid pro quo* harassment. (The *Alexander v. Yale University* case, discussed below, is also this type of case.) In the second way, akin to hostile environment harassment, a student may complain that she received (or is in danger of receiving) a low grade because the instructor's sexual conduct has interfered with her ability to do her course work. In *Hayut v. State University of New York*, 352 F.3d 733 (2d Cir. 2003), for example, a student was in an undergraduate political science course in which the professor gave her the nickname "Monica," in light of "her supposed physical resemblance to Monica Lewinsky, a former White House intern who at that time was attaining notoriety for her involvement in a widely-covered sex scandal with then-President William Clinton." The professor's "use of this nickname persisted even after [the student] requested that he stop. Despite her protestations, [the professor] would occasionally, in dramatic fashion, attempt to locate [the student] in the classroom by sitting in front of his desk and screaming the name 'Monica.'" His comments "occurred at least once per class period throughout the rest of the semester." His conduct "was not limited to using the 'Monica' nickname, but included other comments as well. These added context to the nickname by associating [the student] with some of the more sordid details of the Clinton/Lewinsky scandal." The student claimed that the "Monica" comments "humiliat[ed] her in front of her peers, caus[ed] her to experience difficulty sleeping, and ma[de] it difficult for her to concentrate in school and at work." The court determined that, on these facts, a reasonable jury could conclude that the professor's actions constituted hostile environment sexual harassment. (See also *Kracunas and Pallett v. Iona College*, 119 F.3d 80 (2d Cir. 1997).) This second type of claim may also extend to situations when the student is harassed for having received a low grade, as in *Kadiki v. Virginia Commonwealth University*, 892 F. Supp. 746 (E.D. Va. 1995), where a professor spanked a student; or when a low grade precedes rather than follows the harassment (see *Kracunas and Pallett v. Iona College*, 119 F.3d 80 (2d Cir. 1997)); or when the harasser is a patient, client, or coworker in a clinical or internship setting, rather than the instructor (see, for example, *Murray v. New York University College of Dentistry*, 57 F.3d 243 (2d Cir. 1995)).

In such situations, students may assert sex discrimination claims under Title IX of the Education Amendments of 1972 (see Section 13.5.3 of this book) or under a comparable state civil rights law. Section 1983 claims (see Sections 3.5 & 4.7.4 of this book) alleging a violation of the federal equal protection clause may also be brought in some circumstances. In addition, if the student works for the college or university and is harassed by a supervisor or coworker, the student may assert an employment discrimination claim under Title VII (see Section 5.2.1 of this book) or the state's fair employment statute.<sup>12</sup> (See, for

---

<sup>12</sup>Various tort and contract claims may also be brought under state law, as discussed later in this subsection.

example, *Karibian v. Columbia University*, 14 F.3d 773 (2d Cir. 1994), where the university was held liable for the sexual harassment of a student employee by her supervisor; and see also *Lipsett v. University of Puerto Rico*, 864 F.2d 881 (1st Cir. 1988).) Depending on the source of law used, claims may be assertable against the college or university itself, against the alleged harasser(s), or against other institutional employees who have some role in supervising the alleged harasser or protecting against harassment on campus.

For all such claims, it is important, as a threshold matter, to focus on the claim's legal elements. The case of *Waters v. Metropolitan State University*, 91 F. Supp. 2d 1287 (D. Minn. 2000), provides a good shorthand description of these elements that would fit most statutes that cover hostile environment sexual harassment. According to that case, challenged conduct must have been "unwelcome," it must have been "based on sex," and it must have been "sufficiently severe as to alter the conditions of [the student's] education and create an abusive educational environment" (91 F. Supp. 2d at 1291). Further specificity on these elements is provided by the excellent analysis of Judge Calabresi in *Hayut v. State University of New York*, 352 F.3d 733 (2d Cir. 2003) (discussed above and below in this subsection), in which he carefully reviewed the severity requirement, a related pervasiveness requirement, the "on the basis of sex" or "because of sex" requirement, and the hostile or abusive educational environment requirement, as they applied to the student's claim in that case (352 F.3d at 746–49). The court in *Hayut* also reviewed the requirement that the educational environment be hostile not only from the victim's subjective perspective but also from the objective perspective of a reasonable person or reasonable fact finder (352 F.3d at 746). In addition, the court demonstrated how Title VII still provides important guidance for making hostile environment determinations under Title IX and Section 1983, even though Title IX's standards for determining institutional liability for an employee's acts are different from Title VII's (352 F.3d at 744).

First Amendment free speech law sometimes must also be taken into account in determining the parameters of sexual harassment,<sup>13</sup> since sexual harassment (whether of the *quid pro quo* or the hostile environment variety) is usually effectuated in large part through the spoken or written word or by symbolic gestures. This was strikingly true in the *Hayut* case, as well as in other cases cited above. Because much of the conduct alleged to be harassment is also expressive conduct, institutions and faculty members may seek to defend themselves against harassment claims by asserting that the challenged conduct is protected by the First Amendment. The cases discussed in Section 7.2.2 of this book, especially

---

<sup>13</sup>Free exercise and establishment issues may also become involved in sexual harassment cases when the defendant is a religious institution or a religious figure. For an example, see *Bollard v. California Providence of the Society of Jesus*, 196 F.3d 940 (9th Cir. 1999), in which a student priest alleged that his instructor, his superior priest, had sexually harassed him while he was attending the seminary. The defendant argued that the free exercise and establishment clauses compelled the court to dismiss the case; the appellate court disagreed, because religious reasons for the harassment and religious doctrine were not involved in the case, nor would a decision in the plaintiff's favor interfere with the defendant's freedom to select its ministers.

the *Silva*, *Cohen*, and *Bonnell* cases, all present such issues in the context of academic freedom claims; and these cases, taken together, do provide some First Amendment protection for faculty members. This does not mean, however, that there is a viable free speech issue whenever a harasser uses expression as part of the harassment. In some cases, *Hayut* being a major example, the faculty member's classroom comments are so far removed from any legitimate purpose that a free expression claim becomes marginalized or is not even addressed in the case (352 F.3d at 745–49). (See generally Sangree, "Title VII Prohibitions Against Hostile Environment Sexual Harassment and the First Amendment: No Collision in Sight," 47 *Rutgers L. Rev.* 461 (1995).)

The case of *Trejo v. Shoben*, 319 F.3d 878 (7th Cir. 2003), illustrates how courts may summarily dismiss free speech claims when they arise in contexts concerning a faculty member's conduct with respect to students. In this case, a professor had been denied reappointment, largely on the basis of various complaints and charges against him that suggested a "pattern of unwelcome, inappropriate, boorish behavior." The professor's oral statements were a major component of much of this behavior. For example, at an academic conference, while attending a private dinner party along with his graduate students, the professor made extended statements about "pregnancy, orgasms, and extramarital affairs and went on to advocate sex outside marriage. . . ."

The professor had also accompanied his statements with "the use of hand gestures to demonstrate various parts of the female anatomy." At the same conference, he made various "sexually charged comments in the presence of male and female professors and students." In addition, on and around the campus, the professor had extended "unwelcome invitations" to his graduate students to meet with him to play cards or engage in other activities, and had made various sexual comments about his female graduate students. The professor claimed that his various comments were protected speech under the First Amendment. The court rejected this contention. Regarding the academic conference, the court determined that the professor's "statements were simply parts of a calculated type of speech designed to further [his] private interest in attempting to solicit female companionship . . ."; and that "the record is barren of any evidence besides Trejo's self-serving statements that [his] remarks were designed to serve any truly pedagogic purpose." Regarding other comments by the professor, on and off campus, the court determined that they were primarily "casual, idle, and flirtatious chit-chat. . . ." The court concluded that these comments, and the comments at the academic conference, "were focused almost exclusively on matters of private concern" and did not merit protection either under the *Pickering/Connick* line of cases or under *Keyishian* (see Sections 7.1.1 & 7.1.4).

Of the various types of harassment claims, Title IX claims have received the greatest attention from the courts. Title IX harassment claims are the primary focus of the rest of this Section. Such claims are assertable only against institutions, and not against their individual officers or employees (see Section 13.5.9). In an early case, *Alexander v. Yale University*, 631 F.2d 178 (2d Cir. 1980), five female students alleged that Yale's practices and procedures for dealing with

sexual harassment of students violated Title IX of the Education Amendments of 1972. One of the plaintiffs alleged that a faculty member had “offered to give her a grade of ‘A’ in the course in exchange for her compliance with his sexual demands” and that, when she refused, he gave her a C, which “was not the result of a fair evaluation of her academic work, but the result of her failure to accede to [the professor’s] sexual demands.” The remaining plaintiffs made other allegations concerning acts of harassment and the inadequacies of campus procedures to deal with them. The district court entered judgment for Yale, and the U.S. Court of Appeals affirmed. With the exception of the lowered-grade claim of one plaintiff, all the various claims and plaintiffs were dismissed for technical reasons: the plaintiffs had graduated and their claims were therefore “moot”; Yale had already adopted procedures for dealing with sexual harassment and thus, in effect, had already granted the primary remedy requested in the suit; other claims of harm were too “speculative” or “uncertain.” The lowered-grade claim was dismissed because the plaintiff, at trial, did not prove the allegations.

Although all claims were rejected, the *Alexander* litigation by no means shut the door on Title IX actions alleging that the integrity of grading or other academic processes has been compromised by a faculty member’s sexual harassment of students. Both the district and appellate courts made clear that the grade claim was a “justiciable claim for relief under Title IX.” A denial or threatened denial of earned academic awards would be a deprivation of an educational benefit protected by Title IX; and when imposed for sexual reasons, that deprivation becomes sex discrimination prohibited by Title IX. As the district court held, and the appellate court quoted with apparent approval, “[A]cademic advancement conditioned upon submission to sexual demands constitutes sex discrimination in education” (459 F. Supp. at 4; 631 F.2d at 182).

Nevertheless, the lower courts in cases after *Alexander* expressed differing views on when, and the extent to which, Title IX would cover sexual harassment. It was not until 1992 that the U.S. Supreme Court resolved this matter in *Franklin v. Gwinnett County Public Schools*, 503 U.S. 60 (1992). The plaintiff, a high school student in Georgia, sued the school board under Title IX, seeking relief from both hostile environment and *quid pro quo* sexual harassment by a teacher. Her complaint alleged that the teacher, also a sports coach, had harassed her continually beginning in the fall of her sophomore year. The student accused the teacher of engaging her in sexually oriented conversations, forcibly kissing her on the mouth on school property, telephoning her at home, and asking her to see him socially. She also alleged that during her junior year, this teacher went to her class, asked the classroom teacher to excuse her, and then took her to a private office where he raped her. According to the student’s complaint, school officials and teachers were aware of these occurrences, and although the school board eventually investigated them, it took no action to stop the harassment and agreed to let the teacher resign in return for dropping all harassment charges.

The student filed a complaint with the U.S. Department of Education’s Office for Civil Rights (OCR), which investigated her charges. OCR determined that

verbal and physical sexual harassment had occurred, and that the school district had violated the student's Title IX rights. But OCR concluded that, because the teacher and the school principal had resigned and the school had implemented a grievance procedure, the district was in compliance with Title IX. The student then went to federal court, and ultimately the U.S. Supreme Court ruled in her favor. (The Court's reasoning and legal analysis are further discussed in Section 13.5.9.) The teacher's actions were sexual harassment, and the district, in failing to intervene, had intentionally discriminated against her, in violation of Title IX.

The *Franklin* case clearly established that sexual harassment, including hostile environment harassment, may be the basis for a sex discrimination claim under Title IX, and that student victims of harassment by a teacher may sue their schools for money damages under Title IX. But other important issues remained unresolved by the Court's *Franklin* opinion—in particular the issue of when, and under what theories, courts would hold schools and colleges liable for money damages under Title IX for a faculty member's or other employee's sexual harassment of a student. In *Franklin*, the school administrators had actual knowledge of the teacher's misconduct. The Supreme Court did not address whether a school could be found liable only if it had such actual knowledge of the misconduct but failed to stop it, or whether a school could be liable even absent actual knowledge because an employee's intentional discrimination could be imputed to the school. (Under agency law, the employer may be held responsible for the unlawful conduct of its agent (called *respondeat superior*) even if the employer does not have actual knowledge of the conduct; see Section 2.1 of this book.)<sup>14</sup>

The institutional liability questions left open by *Franklin* were extensively discussed in the lower courts in *Franklin*'s aftermath. No pattern emerged; different courts took different approaches in determining when liability would accrue to an educational institution for the actions of its teachers or other employees. Some courts determined that an educational institution could be vicariously liable on the basis of common law agency principles of *respondeat superior* (see, for example, *Kracunas and Pallett v. Iona College*, 119 F.3d 80 (2d Cir. 1997)). Other courts determined that an educational institution should be liable under a constructive notice, or “knew or should have known,” standard (see, for example, *Doe v. Petaluma School District*, 949 F. Supp. 1415 (N.D. Cal. 1996)); or could be liable only in certain narrow circumstances where it had knowledge of the harassment and failed to respond (see, for example, *Rosa H. v. San Elizario*

---

<sup>14</sup>Another unresolved issue after *Franklin* was whether plaintiffs must always show that the discrimination (the sexual harassment) was intentional, or whether unintentional discrimination may also be actionable upon a showing of discriminatory effect or impact (see Section 13.5.7.2). Although *Franklin* did not address this issue, federal district courts in cases subsequent to *Franklin* generally required that plaintiffs demonstrate intentional discrimination. See, for example, *R.L.R. v. Prague Public School District I-103*, 838 F. Supp 1526 (W.D. Okla. 1993). The U.S. Supreme Court's later decision in *Alexander v. Sandoval*, discussed in Sections 13.5.7.2 and 13.5.9, appears to resolve this point, requiring intentional discrimination.

*Independent School District*, 106 F.3d 648 (5th Cir. 1997) (harassment)); or should not be liable at all, at least for hostile environment harassment (see *Bougher v. University of Pittsburgh*, 713 F. Supp. 139 (W.D. Pa. 1989), *affirmed on other grounds*, 882 F.2d 74 (3rd Cir. 1989)). The U.S. Department of Education also weighed in on these liability issues. The department's Office for Civil Rights published the first version of its sexual harassment guidelines ("Sexual Harassment Guidance: Harassment of Students by School Employees, Other Students, or Third Parties," 62 Fed. Reg. 12034 (March 13, 1997), also available at <http://www.ed.gov/about/offices/list/ocr/docs/sexhar00.html>). The Guidance provided that liability for harassment by teachers or other employees of a school or college should be governed by agency principles:

A school will . . . be liable for hostile environment sexual harassment by its employees . . . if the employee—(1) acted with apparent authority (i.e., because of the school's conduct, the employee reasonably appears to be acting on behalf of the school, whether or not the employee acted with authority); or (2) was aided in carrying out the sexual harassment of students by his or her position of authority with the institution . . . [62 Fed. Reg. at 12039].

The U.S. Supreme Court resolved these Title IX liability issues in *Gebser v. Lago Vista Independent School District*, 524 U.S. 274 (1998), where the issue was the extent to which "a school district may be held liable in damages in an implied right of action under Title IX . . . for the sexual harassment of a student by one of the district's teachers." In a 5-to-4 decision, the Court majority held that Title IX damages liability is based neither on common law agency principles of *respondeat superior* nor upon principles of constructive notice. Distinguishing Title IX from Title VII of the Civil Rights Act of 1964 (Section 5.2.1 of this book), which does utilize such principles, the Court insisted that "[i]t would 'frustrate the purposes' of Title IX to permit a damages recovery against a school district for a teacher's sexual harassment of a student based on [such] principles . . . , i.e., without actual notice to a school district official" (524 U.S. at 285). Thus, the Court held that students may not recover damages from a school district under Title IX for teacher-student sexual harassment "unless an official [of the school district], who at a minimum, has authority to address the alleged discrimination and to institute corrective measures on the [district's] behalf has actual knowledge of discrimination and fails adequately to respond" (524 U.S. at 276). Moreover, the official's response to the harassment:

. . . must amount to deliberate indifference to discrimination. The administrative enforcement scheme presupposes that an official who is advised of a Title IX violation refuses to take action to bring the recipient into compliance. The premise, in other words, is an official decision by the recipient not to remedy the violation. That framework finds a rough parallel in the standard of deliberate indifference. Under a lower standard, there would be a risk that the recipient would be liable in damages not for its own official decision but instead for its employees' independent actions [524 U.S. at 290].

Putting aside the U.S. Department of Education's Sexual Harassment Guidance (see above) that had applied agency principles to teacher-student sexual

harassment, the Court made clear that it would listen only to Congress (and not to the Department of Education) on these questions: “[U]ntil Congress speaks directly on the subject . . . , we will not hold a school district liable in damages under Title IX for a teacher’s sexual harassment of a student absent actual notice and deliberate indifference” (524 U.S. at 292). In so doing, and in contrast with its methodology in other situations (see, for example, *Martin v. Occupational Safety and Health Review Commission*, 499 U.S. 144 (1991)), the Court refused to accord any deference to the decisions of the administrative agency authorized to implement the statute, as Justice Stevens emphasized in his dissent (524 U.S. at 300).

Applying these principles to the student’s claim, the Court determined that the student had not met the standards and therefore affirmed the lower court’s entry of summary judgment for the school district. In reaching this decision, the Court acknowledged that the school district had not implemented any sexual harassment policy or any grievance procedure for enforcing such a policy as required by the Department of Education’s regulations (34 C.F.R. §§ 106.8(b) & 106.9(a)). But the Court nevertheless held that the school district’s failure in this regard was not evidence of “actual notice and deliberate indifference,” nor did this failure “itself constitute ‘discrimination’ under Title IX” (524 U.S. at 292).

Four Justices vigorously dissented from the majority’s holdings in *Gebser*. Point by point, the dissenting Justices refuted the majority’s reasons for rejecting the application of agency principles under Title IX and for concluding that Title IX is based upon a different model of liability than Title VII. In addition, the dissenting Justices provided an extended argument to the effect that the refusal to provide meaningful protection for students subjected to harassment flies in the face of the purpose and meaning of Title IX. According to Justice Stevens:

Congress included the prohibition against discrimination on the basis of sex in Title IX [in order] to induce school boards to adopt and enforce practices that will minimize the danger that vulnerable students will be exposed to such odious behavior. The rule that the Court has crafted creates the opposite incentive. As long as school boards can insulate themselves from knowledge about this sort of conduct, they can claim immunity from damages liability. Indeed, the rule that the Court adopts would preclude a damages remedy even if every teacher at the school knew about the harassment but did not have “authority to institute corrective measures on the district’s behalf.” *Ante*, at 277.

\* \* \* \*

As a matter of policy, the Court ranks protection of the school district’s purse above the protection of immature high school students. . . . Because those students are members of the class for whose special benefit Congress enacted Title IX, that policy choice is not faithful to the intent of the policymaking branch of our Government [524 U.S. at 300–301, 306 (Stevens, J. dissenting)]; see generally 524 U.S. at 293–306 (Stevens, J., dissenting)].

The *Gebser* case thus establishes a two-part standard for determining institutional liability in damages for a faculty member's (or other employee's) sexual harassment of a student:<sup>15</sup>

1. An official of the school district: (a) must have had "actual knowledge" of the harassment; and (b) must have authority to "institute corrective measures" to resolve the harassment problem.
2. If such an official did have actual knowledge, then the official:
  - (a) must have "fail[ed] to adequately respond" to the harassment;
  - and (b) must have acted with "deliberate indifference."

In these respects, the *Gebser* test stands in stark contrast to the liability standards under Title VII. In two cases decided in the same court term as the *Gebser* case, the Supreme Court determined that liability under Title VII is based upon agency principles and a *respondeat superior* model of liability (*Faragher v. City of Boca Raton*, 524 U.S. 775 (1998); and *Burlington Industries v. Ellerth*, 524 U.S. 742 (1998), both discussed in Section 5.3.3.3). Thus, under Title VII, but not under Title IX, an employer may be liable in damages for a supervisor's acts of harassment even though the employer did not have either actual knowledge or constructive notice of the harassment. It is therefore much more difficult for students to meet the Title IX liability standards than it is for employees to meet the Title VII standards, and consequently students have less protection against harassment under Title IX than employees have under Title VII. While Title IX, as a spending statute, is structured differently from Title VII, a regulatory statute, and while courts interpreting and applying Title IX are not bound by Title VII judicial precedents and administrative guidelines, the result in *Gebser* nevertheless seems questionable. Students may be at a more vulnerable age than many employees, and may be encouraged by the academic environment to have more trust in teachers than would usually be the case with supervisors in the work environment. It is thus not apparent, either as a matter of policy or of law, why students should receive less protection from harassment under Title IX than employees do under Title VII.

In practice, the *Gebser* two-part liability standard provides scant opportunity for student victims of harassment to succeed with Title IX damages actions against educational institutions. The difficulty of proving "actual knowledge" is compounded by the difficulty of proving "deliberate indifference" (see, for example, *Wills v. Brown University*, 184 F.3d 20 (1st Cir. 1999)). In addition, since "actual knowledge" must be possessed by an official with authority to take corrective

---

<sup>15</sup>*Gebser* standards may also be applicable to student-student harassment in certain narrow circumstances in which the institution has granted a student some kind of authority over other students. In *Morse v. Regents of the University of Colorado*, 154 F.3d 1124 (10th Cir. 1998), for instance, the court applied *Gebser* to a Title IX claim against the university brought by female Reserve Officer Training Corps (ROTC) cadets who were allegedly harassed by a higher-ranking male cadet. The university could be liable for the actions of the male cadet, said the court, if he was "acting with authority bestowed by" the university-sanctioned ROTC program.

action, there are difficulties in proving that the officials or employees whom the victim notified had such authority.<sup>16</sup> In *Liu v. Striuli*, 36 F. Supp. 2d 452, 465–66 (D.R.I. 1999), for instance, a court applying *Gebser* rejected a graduate student’s Title IX claim because neither the director of financial aid nor the director of the graduate history department, whom the student had notified, had “supervisory authority” over the alleged harasser. Therefore neither official had authority to correct the alleged harassment. Similarly, in *Delgado v. Stegall*, 367 F.3d 668 (7th Cir. 2004), a student confided to a professor that she had been harassed by another professor and had also discussed the matter with a counselor. But her Title IX harassment claim failed because neither the professor nor the counselor had authority to take corrective action, and neither they nor the student had reported the harassment to a university official who did have such authority.

In *Hayut v. State University of New York*, 352 F.3d 733 (2d Cir. 2003), the court had no difficulty determining that a jury could conclude that a professor’s classroom behavior was “hostile educational environment sexual harassment.” But the university was not liable for the professor’s misconduct because its authorized officials did not have knowledge of the harassment until after it had ceased. The student plaintiff also could not meet the deliberate indifference test. Although the court acknowledged that “deliberate indifference may be found . . . when remedial action only follows after a ‘lengthy and unjustified delay;’” there was no such delay in this case. Once the student did report the alleged harassment to the dean, the dean’s response thereafter was timely and adequate.

In *Oden v. Northern Marianas College*, 284 F.3d 1058 (9th Cir. N. Mariana Islands 2002), the plaintiff-student did have evidence of a lengthy delay, but her Title IX claim failed nevertheless. The student had complained to college officials that her music professor had sexually harassed her on various occasions with various inappropriate acts. Once the student had reported the harassment, college personnel helped the student draft a formal internal complaint, provided counseling for her, began an investigation, and took other actions, culminating in a hearing by the college’s Committee on Sexual Harassment, which determined that the professor’s actions constituted sexual harassment. The student, dissatisfied with various aspects of the college’s response, filed her Title IX suit, claiming that the college had acted with deliberate indifference. Her primary contention was that almost ten months had passed between the date of her formal complaint to the date of her hearing. In the context of the various actions that the college had taken in responding to the student’s harassment allegations, the court declined to consider the delay as deliberate indifference:

Although there was a lengthy delay, there were also valid reasons for the delay: [the College] had a number of administrative hurdles to jump, including

---

<sup>16</sup>It is important that institutions do not overemphasize such technical questions concerning legal liability. In resolving students’ harassment complaints through campus grievance mechanisms, for instance, the primary focus of attention should be on whether harassment occurred, not on whether the institution could be liable in court if it did occur. Moreover, much of the institution’s policy and practice regarding sexual harassment may be driven more by educational and ethical concerns than by legal concerns, as discussed later in this subsection.

the formation of a sexual harassment hearing committee; [the student] had difficulty retaining an attorney; and . . . had relocated to the State of New Mexico. At most, [the College] is guilty of bureaucratic sluggishness. We decline to equate bureaucratic sluggishness with “deliberate indifference,” especially where the school authorities began turning their bureaucratic wheels immediately after being notified of the alleged misconduct [284 F.3d at 1061].<sup>17</sup>

In the *Delgado* case (above), although the court rejected the student’s claim, it did provide clarification of the actual notice standard that could prove helpful to student victims in subsequent cases. Specifically, the court explained that the university could have been liable under Title IX if university officials had foreknowledge that the alleged harasser (the professor) had harassed *other* students. It was not necessary, for purposes of the “actual knowledge” requirement, that officials knew of the professor’s harassment of the plaintiff (the complaining student). “So if, for example, [the professor] had been known to be a serial harasser, [university officials] might well be found to have had a sufficient approximation to actual knowledge that [the plaintiff] would be harassed.” This argument did not work for the student in this case because, even though the professor “had made advances to three other woman students, . . . they had never filed complaints” (367 F.3d at 670). The professor therefore “was not known by anyone in the university administration . . . to be harassing other students” (367 F.3d at 672).

On the other hand, although the new *Gebser* standards are very difficult for plaintiffs to meet, these standards do not create an insurmountable barrier for students challenging a faculty member’s harassment. For example, in *Chontos v. Rhea*, 29 F. Supp. 2d 931 (N.D. Ind. 1998), a student filed a Title IX claim against Indiana University, claiming that a professor of physical education had forcibly kissed and fondled her. The university had received three other complaints about this professor from three different women students over the prior seven years. After the first incident, he received a written reprimand and was warned that if he repeated the behavior he could be fired. After the second incident, the professor was sent for psychological counseling, but the university did not follow up to ascertain whether the counseling was successful. After the third incident (which, in contrast to the others, was limited to verbal harassment), the faculty member was told to “clean up his act.” A sealed report was placed in his personnel file, but no disciplinary action was taken. After the fourth incident, which was the subject of this litigation, he was suspended and offered the choice of a dismissal proceeding or resignation. The professor resigned with full benefits. Ruling that a reasonable jury could find that the university was deliberately indifferent, the court rejected the university’s motion for summary judgment. With respect to the university’s defense that the students did not want to pursue formal complaints, which meant that, under university rules, they would not confront the professor in a formal termination

---

<sup>17</sup>The judgment in this case was later vacated by the U.S. Supreme Court on technical grounds having nothing to do with the lower court’s analysis of the sexual harassment issues (*Oden v. Northern Marianas College*, 539 U.S. 924 (2003)).

hearing, the court replied that the university had other sanctions available short of dismissal, but chose “to do nothing.”

The *Gebser* court did not utilize the distinction between *quid pro quo* harassment and hostile environment harassment that previous courts had sometimes invoked. Although the *Gebser* liability standard clearly applies to hostile environment claims, it is not entirely clear whether it would apply in the same way to *quid pro quo* harassment—or, as courts increasingly put it, to harassment that involves a “tangible” adverse action against the victim. Thus, it is not entirely clear whether earlier cases applying a different liability standard (easier for plaintiffs to meet) to *quid pro quo* claims (see, for example, *Kadiki v. Virginia Commonwealth University*, above) are still good law. So far, the answer is apparently “No.” The court in *Burtner v. Hiram College*, 9 F. Supp. 2d 852 (N.D. Ohio 1998), *affirmed without opinion*, 194 F.3d 1311 (6th Cir. 1999), applied the *Gebser* actual knowledge standard to both types of harassment; the court in *Liu v. Striuli*, 36 F. Supp. 2d 452 (D.R.I. 1999), applied the actual notice standard to *quid pro quo* harassment; and the court in *Klemencic v. Ohio State University*, 10 F. Supp. 2d 911 (S.D. Ohio 1998), *affirmed*, 263 F. 3d 504 (6th Cir. 2001), applied the actual notice and the deliberate indifference standards to *quid pro quo* harassment. Similarly, in the administrative realm, the Department of Education’s Sexual Harassment Guidance “moves away from specific labels for types of sexual harassment,” using the distinction between *quid pro quo* and hostile environment harassment only for explanatory purposes (“Revised Sexual Harassment Guidance,” Part V.A, and Preamble, under “Harassment by Teachers and Other School Personnel”).

After *Gebser*, lawsuits against institutions for money damages are not the only way students may enforce their Title IX rights. There are two other ways: (1) suing the institution in court and seeking injunctive or declaratory relief rather than money damages;<sup>18</sup> and (2) in lieu of or in addition to suit, filing an administrative complaint against the institution with the U.S. Department of Education and seeking administrative compliance. (See generally William Kaplin, “A Typology and Critique of Title IX Sexual Harassment Law After *Gebser* and *Davis*,” 26 *J. Coll. & Univ. Law* 615, 632–34, 636–38 (2000).) The first alternative, since it does not itself seek monetary damages, is apparently not directly governed by the *Gebser* case—whose factual context is limited to monetary liability and whose legal rationale seems dependent on the negative impact of monetary damage awards upon educational institutions. It is therefore not clear what the liability standard would be for a Title IX harassment claim seeking only injunctive or declaratory relief. Even if the actual knowledge standard did apply, it would likely be easily met, since the lawsuit itself would

---

<sup>18</sup>Title IX suits for monetary, injunctive, or declaratory relief are suits against the institution, not against individuals. See, for example, *Soper v. Hoben*, 195 F. 3d 845 (6th Cir. 1999), discussed in Section 13.5.3. Suits against individuals for sexual harassment may be brought under Section 1983 (see Section 4.7.4.1 of this book) if the individuals are acting under color of law; see Laura Oren, “Section 1983 and Sex Abuse in Schools: Making a Federal Case of It,” 72 *Chi-Kent L. Rev.* 747 (1997).

have provided such notice well before the court would order the institution to comply with Title IX.

The second alternative—the administrative complaint—is apparently not governed at all by *Gebser*. In the administrative process, the U.S. Department of Education is presumably free to use standards of institutional noncompliance that differ from the *Gebser* liability standards, as long as its standards are consistent with the nondiscrimination prohibitions in the Title IX statute and regulations. Since the institution would always receive notice of its noncompliance and the opportunity to make appropriate adjustments before any administrative penalty is imposed, and since an administrative proceeding would never result in a monetary damages remedy against the institution, it appears that the U.S. Department of Education may continue to apply its own Sexual Harassment Guidance (see above) to administrative complaints, compliance investigations, and fund cut-off hearings (see *Gebser* at 287, 292). Indeed, in the aftermath of *Gebser* and the successor *Davis* case on peer sexual harassment (see Section 8.1.5), the department issued a revised guidance (66 Fed. Reg. 5512 (January 2001)) that reaffirms the department’s own separate standards that it had first articulated in the 1997 Guidance (above). (See “Revised Sexual Harassment Guidance: Harassment of Students by School Employees, Other Students, or Third Parties,” 66 Fed. Reg. 5512 (January 19, 2001), available at <http://www.ed.gov/offices/OCR/archives/shguide/index.html>.)

Colleges and universities have considerable leeway in fulfilling their legal obligations under the *Gebser* case (as well as the *Davis* case that deals with peer harassment; see Section 8.1.5). The monetary liability standards in these cases are not onerous and should be viewed as the minimum or floor—not the full extent—of the institution’s responsibilities regarding sexual harassment. The standards for injunction and declaratory relief cases may be a bit stricter for institutions, but these cases are seldom pursued by students (see Section 13.5.9). The standards for compliance in the Department of Education’s Sexual Harassment Guidance are stricter for institutions but nevertheless leave considerable discretion in the hands of institutions. Thus, as is true in other legal contexts as well, educational and ethical standards can be as important as Title IX legal standards in guiding institutional planning, and nonlegal solutions to campus problems can be as viable as legal solutions—or more so.

Since sexual harassment can do substantial harm to the victims and have substantial adverse consequences for the campus community, and since sexual harassment is such a sensitive matter to deal with, institutions will likely engage in considerable institutional planning and educational programming. A highly pertinent perspective and useful starting point for doing so is contained in the “Preamble” accompanying the Department of Education’s Revised Sexual Harassment Guidance. The Preamble emphasizes that a central concern of Title IX is whether schools can recognize when harassment has occurred and take “prompt and effective action calculated to end the harassment, prevent its recurrence, and, as appropriate, remedy its effects” (“Revised Sexual

Harassment Guidance,” Preamble, under “Enduring Principles from the 1997 Guidance,” available at <http://www.ed.gov/offices/OCR/archives/shguide/index.html>). In this regard, the preamble makes two key points. First,

If harassment has occurred, doing nothing is always the wrong response. However, depending on the circumstances, there may be more than one right way to respond. The important thing is for school employees or officials to pay attention to the school environment and not to hesitate to respond to sexual harassment in the same reasonable, commonsense manner as they would to other types of serious misconduct [Id.].

Second, it is critically important:

[to have] well-publicized and effective grievance procedures in place to handle complaints of sex discrimination, including sexual harassment complaints. . . . Strong policies and effective grievance procedures are essential to let students and employees know that sexual harassment will not be tolerated and to ensure that they know how to report it [Id.; see also Parts V.D & X of Revised Sexual Harassment Guidance].

Following these two key points, there are numerous initiatives that colleges and universities might undertake. They include educational programs for students; workshops and other training programs for instructors, staff, and leaders of student organizations; counseling and support programs for victims; counseling programs for perpetrators; and alternative dispute resolution programs that provide mediation and other nonadversarial means for resolving some sexual harassment complaints. Institutions should also make sure that sexual harassment is covered clearly and specifically in their student disciplinary codes and faculty ethics codes. It is equally important to ensure that *retaliation* against persons complaining of sexual harassment is clearly covered and prohibited in such codes. In addition, institutions should make sure that mechanisms are in place for protecting the confidentiality of students who report that they—or others—have been sexually harassed (see “Revised Sexual Harassment Guidance,” Part VII.B); and for protecting the due process rights and free speech rights of anyone accused of harassment. Through such initiatives, colleges and universities can work out harassment problems in a multifaceted manner that lessens the likelihood of lawsuits against them in court. Effectuating such initiatives will require good teamwork between administrators and college counsel (see Section 2.4.2).

(For further guidance, see Judith Brandenburg, *Confronting Sexual Harassment: What Schools and Colleges Can Do* (Teachers College Press, 1997), especially 49–82; Susan Hippensteele & Thomas C. Pearson, “Responding Effectively to Sexual Harassment: Victim Advocacy, Early Intervention, and Problem Solving,” *Change*, January–February 1999, 48–53; and “Sexual Harassment: Suggested Policy and Procedures for Handling Complaints,” in *AAUP Policy Documents and Reports* (9th ed., 2001), 113–15, which includes due process protections for the accused and provides for a faculty committee as fact finder.

Another related decision institutions may face in drafting and enforcing sexual harassment policies is whether to prohibit all sexual relationships between students and faculty members, consensual or not. Proponents of a total ban argue that the unequal power relationships between student and faculty member mean that no relationship is truly consensual. Opponents of total bans, on the other hand, argue that students are usually beyond the legal age for consent, and that institutions may infringe on constitutional rights of free association or risk invasion of privacy claims if they attempt to regulate the personal lives of faculty and students. (For discussion of this difficult issue, see R. Carlson, "Romantic Relationships Between Professors and Their Students: Morality, Ethics, and Law," 42 *S. Tex. L. Rev.* 493 (2001); M. Chamallas, "Consent, Equality and the Legal Control of Sexual Conduct," 61 *S. Cal. L. Rev.* 777 (1988); P. DeChiara, "The Need for Universities to Have Rules on Consensual Sexual Relationships Between Faculty Members and Students," 21 *Columbia J.L. & Soc. Probs.* 137 (1988); and E. Keller, "Consensual Amorous Relationships Between Faculty and Students: The Constitutional Right to Privacy," 15 *J. Coll. & Univ. Law* 21 (1988).)

Sexual harassment claims may also be brought under Section 1983, which is used to enforce the Fourteenth Amendment equal protection clause against both institutions and individuals (see Laura Oren, "Section 1983 and Sex Abuse in Schools: Making a Federal Case of It," 72 *Chi-Kent L. Rev.* 747 (1997)). Unlike Title IX claims, Section 1983 claims can be brought only against public institutions and individuals employed by public institutions. Moreover, claims against the institution can succeed only if the challenged actions were taken pursuant to an established institutional policy or custom (see Section 3.5 of this book). Claims against individuals can succeed only if the plaintiff can defeat the qualified immunity defense typically asserted by individuals who are Section 1983 defendants (see Section 4.7.4). In *Oona R.S. v. McCaffrey*, 143 F.3d 473 (9th Cir. 1998), for instance, a student who was allegedly harassed by a student teacher used Section 1983 to sue school officials who were allegedly responsible for permitting the harassment. The court held that the student had stated a valid equal protection claim for gender discrimination and rejected the officials' qualified immunity defense.

In *Hayut v. State University of New York*, 352 F.3d 733 (2d Cir. 2003), a student filed a Section 1983 claim against a professor whom she alleged had harassed her and against three administrators whom she claimed were supervisors of the professor at the time of the harassment. The court acknowledged that a hostile environment sexual harassment claim may also be an equal protection claim that can be brought under Section 1983 if the professor and the supervisors were acting "under color of law" (see Section 3.5 of this book). Since the student's evidence concerning the professor's classroom conduct was sufficient to sustain a Section 1983 claim, the appellate court reversed the district court's entry of summary judgment in the professor's favor. The student's failure to report the professor's harassment to a supervisor until after the course was over was not fatal to the student's claim. "Given the power disparity between teacher and student a factfinder could reasonably conclude that a student-victim's inaction, or counter-intuitive reaction does not reflect the true

impact of objectionable conduct. . . . ‘What students will silently endure is not the measure of what a college must tolerate’” (*Hayut*, 352 F.3d at 749, quoting *Vega v. Miller* 273 F.3d 460, 468 (2d Cir. 2001)). Regarding the administrators, however, the appellate court affirmed summary judgment in their favor because the student had not introduced any evidence of their “personal involvement” in the harassment. To bring a Section 1983 claim against supervisory personnel for the actions of a subordinate, the plaintiff must have shown that the supervisors participated in the harassment, failed to take corrective action after being notified of the harassment, created “a policy or custom to foster the unlawful conduct,” committed “gross negligence in supervising subordinates” who commit the harassment, or are deliberately indifferent “to the rights of others by failing to act on information regarding the [harassment].”

In *Lipsett v. University of Puerto Rico*, above, the plaintiff also sued university officials under Section 1983 in their individual capacities (see Section 4.7.4 of this book). The court held that individuals can be liable for a subordinate’s actions (including harassment) in certain circumstances:

A state official . . . can be held liable . . . if (1) the behavior of such subordinates results in a constitutional violation and (2) the official’s action or inaction was “affirmative[ly] link[ed],” *Oklahoma City v. Tuttle*, 471 U.S. 808 . . . (1985), to that behavior in the sense that it could be characterized as “supervisory encouragement, condonation, or acquiescence” or “gross negligence amounting to deliberate indifference” [864 F.2d at 902].

Since the plaintiff had discussed the harassment numerous times with the dean, the director of surgery, and the director of the surgical residency program, the court concluded that “supervisory encouragement” could be found and that Section 1983 liability could attach.

Another possibility for a student harassment victim is a claim brought under a state nondiscrimination law. In *Smith v. Hennepin County Technical Center*, 1988 U.S. Dist. LEXIS 4876 (D. Minn. 1988), two students brought suit under Minnesota’s statute, charging their instructor in a dental laboratory with offensive touching and retaliation when they complained of his conduct. The court ruled that, under the state law, the plaintiff must show that “she was subject to unwelcome harassment,” that “the harassment was based on sex,” and that “the harassment had the purpose or effect of unreasonably interfering with her education or created an intimidating, hostile, or offensive learning environment.” In addition, using the federal Title VII law by analogy, the court determined that the educational institution would be liable for the acts of its employees if it “knew or should have known of the harassment and failed to take proper remedial action.” Because the instructor was an employee of the institution, the court ruled that the institution would be directly liable for his acts of its employee if it should have known of them and could have prevented them through the exercise of reasonable care.

State tort law claims challenging harassment can be brought against both institutions and individual employees, either public or private, but public institutions and their officials will sometimes be immune from suit (see Section 3.3.1). The types of tort claims that could cover harassment include

intentional (or negligent) infliction of emotional distress, assault, battery, negligent hiring, negligent supervision, and negligent retention. In *Chontos v. Rhea*, 29 F. Supp. 2d 931 (N.D. Ind. 1998), for example, the court allowed a student to proceed with a negligent retention claim against a university based on the university's awareness of a professor's prior harassment of students. But in *Wills v. Brown University*, 184 F.3d 20 (1st Cir. 1999), the court determined that a student complaining of a professor's harassment had not established viable claims of intentional infliction or negligent hiring against the university.

Contract claims are also a possibility. In *George v. University of Idaho*, 822 P.2d 549 (Idaho Ct. App. 1991), a law student, who had ended a consensual relationship with a law professor, filed a breach of contract claim against the university, asserting that the professor's efforts to resume the relationship, and his retaliation in the form of actions disparaging her character within the law school and the legal community, constituted breach of an implied contract. The court denied summary judgment for the university, noting the existence of several questions of fact concerning the nature and scope of the university's responsibility to the student. First of all, the court noted, the university had an implied contract with the student—as evidenced by the university's sexual harassment policy and by its statement in the faculty handbook that it would “fulfill its responsibilities in pursuit of the academic goals and objectives of all members of the university community.” Furthermore, when the student brought the professor's actions to the attention of the school, a written agreement had been executed, in which the professor promised to stop harassing the plaintiff if she would drop claims against him and the law school. The court found that the university had an obligation under that agreement independent of its implied contract with the plaintiff, an obligation that extended beyond her graduation, to take reasonable measures to enforce the agreement.

Sexual harassment, of course, is not the only form of harassment that is a problem on college campuses or that may be actionable under the law. It is, however, the type of harassment most often associated with problems concerning grades and credits earned by students, and the type of harassment that is most often addressed in court opinions. Other forms of harassment, all of which would apparently fall within the scope of pertinent civil rights statutes, include racial harassment, harassment on the basis of national origin, harassment of students with disabilities, and harassment on the basis of age. Regarding racial harassment, the U.S. Department of Education has determined that it is within the scope of Title VI, and has issued guidelines for dealing with racial harassment issues under that statute. See *Racial Incidents and Harassment Against Students at Educational Institutions: Investigative Guidance*, 59 Fed. Reg. 11448 (March 10, 1994). This Guidance preceded the Sexual Harassment Guidance that is discussed above, and it articulates liability standards in a slightly different way; but the policy is still comparable to the sexual harassment guidance, and like that Guidance, its standards are much tougher on institutions than the judicial standards for sexual harassment articulated in the *Gebser* case.

Another form of harassment that has created substantial problems for colleges and universities, as well as elementary and secondary schools, is harassment on

the basis of sexual orientation. As indicated at the beginning of this Section, same-sex harassment may sometimes be covered under Title IX as a form of sexual harassment. In other circumstances, it now seems clear that same-sex harassment is also covered by the equal protection clause of the Fourteenth Amendment, in which case victims of such harassment in public postsecondary institutions may use Section 1983 (see above) to sue individual instructors, administrators, staff persons, and other students who have participated in the harassment. In two public school cases concerning peer harassment, two federal courts of appeals have ruled that local school personnel may be held personally liable for failing to protect gay students from persistent patterns of peer harassment, including verbal and physical abuse (see *Nabozny v. Podlesny*, 92 F.3d 446 (7th Cir. 1996); and *Flores v. Morgan Hill Unified School District*, 324 F.3d 1130 (9th Cir. 2003)).

### 9.3.5. Evaluating students with disabilities

**9.3.5.1 Overview.** As noted in Section 8.2.4.3, the Rehabilitation Act and the Americans With Disabilities Act of 1990 require colleges and universities to provide reasonable accommodations for students with disabilities. Although the laws do not require institutions to change their academic criteria for disabled students, institutions may need to change the format of tests; to provide additional time, or readers or aides, to help students take examinations; or to change minor aspects of course requirements.

Lawsuits filed by students who assert that a college or university has not accommodated their disabilities have mushroomed. Although courts have addressed claims involving a wide range of disabilities, the largest proportion involve alleged learning disabilities and academic accommodations, such as additional time on tests (or a different test format), waiver of required courses or prerequisites, and, in some cases, waiver of certain portions of the curriculum. Students in elementary and secondary education have been entitled to accommodations for physical, psychological, and learning disorders since the 1975 enactment of the Education for All Handicapped Children Act (Pub. L. No. 94-142), which was renamed the Individuals With Disabilities Education Act (IDEA) in 1990 and was most recently amended by the Individuals With Disabilities Education Improvement Act of 2004, Pub. L. No. 108-446. The IDEA is codified in 20 U.S.C. §§ 1400 *et seq.* Many of the students who have received special services and other accommodations under this law are now enrolled in college and, due to their experiences with IDEA services, may have heightened expectations about receiving services at the postsecondary level as well.<sup>19</sup>

Although the IDEA does not apply to a disabled student once he or she has completed high school or has reached the age of twenty-one (whichever occurs

---

<sup>19</sup>According to a report published in 2000, approximately one out of every eleven college students reports having a disability. Of those, 41 percent reported a learning disability (American Council on Education, "More College Freshmen Report Disabilities, New ACE Study Shows," 49 *Higher Educ. & Nat'l. Aff.* 2 (January 17, 2000), available at <http://www.ace.net.edu>, cited in Laura Rothstein, "Disability Law and Higher Education: A Road Map for Where We've Been and Where We May Be Heading," 63 *Maryland L. Rev.* 122 (2004)).

first), such students continue to be protected in higher education by Section 504 of the Rehabilitation Act of 1973 and by the Americans With Disabilities Act (ADA). As is the case with disputes over the admission of students with disabilities (see Section 8.2.4.3), issues related to classroom accommodations, testing issues, and accommodations for licensing examinations have expanded in recent years, in part because of the expectations and aspirations of students who have grown up with IDEA.

In 2001, the U.S. Supreme Court ruled that the employment provisions of the ADA are subject to Eleventh Amendment immunity in *University of Alabama v. Garrett*, 531 U.S. 356 (2001) (discussed in Section 5.2.5). This means that public institutions cannot be sued for money damages under the ADA in federal court. Federal appellate courts have applied the reasoning of *Garrett* to lawsuits brought against a university under Title II of the ADA, which forbids discrimination by places of public accommodation. For example, in *Robinson v. University of Akron School of Law*, 307 F.3d 409 (6th Cir. 2002), the student brought claims under both the ADA and the Rehabilitation Act, alleging that the law school had failed to provide accommodations to which the student was entitled as a result of his learning disability. The court ruled that the university had waived sovereign immunity against Rehabilitation Act claims, but that it was protected from ADA suits in federal court under the result in *Garrett*. (For a similar ruling, see *Shepard v. Irving*, 77 Fed. Appx. 615 (4th Cir. 2003) (unpublished).)

**9.3.5.2. The concept of disability.** In order to receive the protections of either Section 504 or the ADA, the student must demonstrate that he or she has a disability that meets the statutory requirements. The ADA defines disability as “a physical or mental impairment that substantially limits one or more of the major life activities” of the individual, or “a record of such an impairment,” or “being regarded as having such an impairment” (42 U.S.C. § 12102(2)). Whether or not an individual is disabled for ADA purposes is to be determined on an individualized basis (29 C.F.R. § 1630.21(j)). The definition of disability used in Section 504 is the same as the ADA definition (34 C.F.R. § 104.3(j)). Although most cases do not involve this issue (in contrast to employment litigation under the ADA, in which a frequent employer defense is that the individual’s disorder does not meet the ADA definition—see Section 5.2.5), it is useful to remember that the institution is entitled to inquire into the nature of the disability, to require documentation of the disability, and to reach its own determination as to whether the disorder is a disability that requires accommodation under the ADA or Section 504.

Courts evaluating whether students met the laws’ definition of disability initially struggled with the issue of whether an individual whose disability was mitigated, fully or in part, by either medication or self-accommodation was entitled to reasonable accommodations under the law. For example, in *McGuinness v. University of New Mexico School of Medicine*, 170 F.3d 974 (10th Cir. 1998), a federal appellate court considered whether a medical student with test anxiety in math and chemistry classes was disabled for ADA purposes. The student had challenged his marginal first-year grades but refused to retake the exams or repeat the first year of instruction. Although the medical school did not dispute

the student's claim that he had an "anxiety disorder," the court emphasized that "[j]ust as eyeglasses correct impaired vision, so that it does not constitute a disability under the ADA, an adjusted study regimen can mitigate the effects of test anxiety" (170 F.3d at 979). The court then ruled that this disorder did not meet the ADA definition of disability because it did not substantially limit one or more major life activities.

The question of whether to consider "mitigating measures" in determining whether an individual has an ADA-protected disability was resolved by three decisions announced by the U.S. Supreme Court in 1999. In *Sutton v. United Air Lines*, 527 U.S. 471; *Murphy v. United Parcel Service*, 527 U.S. 516; and *Albertson's v. Kirkingburg*, 527 U.S. 555 (1999) (all discussed in Section 5.2.5), the Court addressed the employment discrimination claims of three individuals under the ADA. In each of these cases, the individual had a disorder that could be minimized or corrected by a device (such as prescription lenses) or by medication. The Court ruled that such "mitigating measures" must be taken into account in determining whether the individuals were disabled. Although the trio of cases is in the employment context, the Court interpreted the ADA's definition of "disability," which applies to all titles of the ADA.

The potential fallout of these three cases is illustrated by *New York State Board of Law Examiners v. Bartlett*, 527 U.S. 1031 (1999). Bartlett had sought accommodations in taking the New York State Bar Examination because of her learning disabilities. The board of law examiners had refused to provide those accommodations because they had found that Bartlett's self-accommodations had permitted her to read at an average level. The U.S. Court of Appeals for the Second Circuit had followed the Equal Employment Opportunity Commission (EEOC) Guidance that required the determination of a disability to be made without regard to mitigating measures, and found that Bartlett's learning disorder qualified as a disability for purposes of the ADA. It had remanded the case to the trial court to determine what accommodations should be provided and the damages due Bartlett (*Bartlett v. New York State Board of Law Examiners*, 156 F.3d 321 (2d Cir. 1998)). The board appealed, and the U.S. Supreme Court vacated the appellate court's decision and remanded it for further consideration in light of the three ADA cases it had recently decided. On remand, the trial court that had originally heard the case determined that Bartlett's dyslexia substantially limited her in the major life activities of reading and working, and that she was entitled to reasonable accommodations in the form of double the normally allotted time to take the bar examination, the use of a computer, additional accommodations, and compensatory damages (2001 U.S. Dist. LEXIS 11926 (S.D.N.Y. 2001)).

Despite the eventual outcome in *Bartlett*, the Supreme Court's rulings in the mitigation cases have made it more difficult for students whose disabilities are somehow mitigated to state ADA claims. For example, in *Gonzales v. National Board of Medical Examiners*, 225 F.3d 620 (6th Cir. 2000), *cert. denied*, 532 U.S. 1038 (2001), a federal appellate court rejected a medical student's request for a preliminary injunction to force the National Board of Medical Examiners to allow him extra time on a licensing examination. The court ruled that the student did

not meet the ADA's definition of disability because he had performed successfully without accommodation on other timed standardized tests.

Similarly, a surgical resident's subsequent academic and professional success after being dismissed from a residency program by the University of Cincinnati persuaded a court that he was not disabled. In *Swanson v. University of Cincinnati*, 268 F.3d 307 (6th Cir. 2001), the federal appellate court rejected the former resident's ADA and Rehabilitation Act claims against the university, observing that the limitations posed by his depression were not the reason for his termination from the residency program, and his subsequent success at another university's residency program demonstrated that his depression did not substantially limit his ability to work.

The ADA also protects students against discrimination when they are erroneously regarded as disabled. In *Lee v. Trustees of Dartmouth College*, 958 F. Supp. 37 (D.N.H. 1997), a student contended that his professors and academic advisors regarded him as disabled and caused him to be dismissed from his medical residency. The plaintiff, a resident in neurosurgery, developed a disorder that mimicked the symptoms of multiple sclerosis (MS). Although the resident provided medical documentation that his condition was not MS, and also disputed the defendants' contention that he could not perform surgery, he was dismissed from the residency program. The court found that the medical school had not followed its own procedures, which included a meeting with the student to discuss his performance problems and a three-month probationary period. In addition, said the court, issues of material fact existed as to whether the defendants regarded the plaintiff as disabled and as to whether he could perform the physical demands of the neurosurgical residency. The summary judgment motion of the defendants was denied. (For a case in which an appellate court ruled that the university had regarded a student as disabled but had not discriminated against that student, see *Betts v. Rector and Visitors of the University of Virginia*, 198 F. Supp. 2d 787 (W.D. Va. 2002).)

In addition to satisfying the laws' definition of disability, students must also be able to demonstrate that they are "qualified" to meet the institution's academic standards. For example, regulations implementing Section 504 of the Rehabilitation Act define a "qualified" individual with a disability as one who "meets the academic and technical standards requisite to admission or participation" (34 C.F.R. § 104.3(l)(3)). *Zukle v. Regents of the University of California*, 166 F.3d 1041 (9th Cir. 1999), addresses this issue. Zukle, a medical student who had learning disabilities and who had received numerous accommodations but still could not meet the school's academic standards, was unable to convince the court that she could meet the eligibility requirements of the medical school, even with reasonable accommodations. The court ruled that the student's requested accommodation—lengthening the time during which she could complete her medical degree—would lower the school's academic standards, which is not required by either the ADA or the Rehabilitation Act (see Section 9.3.5.4).

**9.3.5.3. Notice and documentation of disabilities.** Courts have generally ruled that, unless the institution has knowledge of the student's disability, there is no duty to accommodate. For example, in *Goodwin v. Keuka College*, 929 F.

Supp. 90 (W.D.N.Y. 1995), the plaintiff alleged that she had been improperly terminated from an occupational therapy program due to her mental disability. Under the school's policy, if a student failed to complete two field placements, he or she was automatically terminated from the program. The school policy also provided that a student would automatically fail a field placement if he or she left the assignment without prior permission. After failing one field assignment, passing another, and having a third incomplete, the plaintiff walked off her fourth field assignment after an argument with her supervisor. Nearly three weeks later, the plaintiff sent a letter to the college explaining that she was seeking an evaluation to determine if she had a learning disability and was eligible for accommodation. The college responded that she had been terminated from the program based on her actions, not on the basis of any disability. Although the plaintiff subsequently produced a psychiatric report that she did have a disability, the college refused to reinstate her. The court dismissed the plaintiff's suit, finding that she could not make out a *prima facie* case under either the Rehabilitation Act or the ADA because she could not allege she was dismissed on the basis of her disability. For a school to dismiss a student based on her disability, it must first be aware of that disability.

In addition to the institution having knowledge of the disability, courts have ruled that the ADA requires the student to demonstrate that the university has actually denied a specific request for an accommodation. In *Tips v. Regents of Texas Tech University*, 921 F. Supp. 1515 (N.D. Tex. 1996), the court dismissed the plaintiff's claim because it found that she had not requested the accommodation. After examining the relevant legislative history and regulations, the court held that the duty to accommodate is triggered only upon a request by (or on behalf of) the disabled student. Because the plaintiff did not make her request for accommodation until after her dismissal from the program, the court held that the plaintiff could not make out a case of disability discrimination. A similar result was reached in *Gill v. Franklin Pierce Law Center*, discussed in 8.2.4.3. And in *Scott v. Western State University College of Law*, 1997 U.S. App. LEXIS 9089 (9th Cir. 1997) (unpublished), the appellate court affirmed a trial court's summary judgment on behalf of the law school. The college had dismissed Scott for academic reasons after his first year of law school. After he was dismissed, Scott asserted that he had a disability. The court ruled that the law school's action was unrelated to Scott's disability, since it had no notice of the alleged disability, and that, furthermore, Scott was not "otherwise qualified" for Rehabilitation Act purposes.

Institutions are entitled to require students who seek accommodation to provide recent documentation from a qualified health care provider or other appropriate diagnostician not only of the disability, but also the restrictions or limitations placed on the student by the disability. This issue arose in a widely publicized case, *Guckenberger v. Boston University*, 957 F. Supp. 306 (D. Mass. 1997) (*Guckenberger I*), which ultimately resulted in three lengthy opinions by the district court. Students asserted that Boston University's new policy requiring students to present recent (no more than three years old) documentation of learning disabilities was in violation of state and federal nondiscrimination laws.

They also challenged the evaluation and appeal procedure for requesting academic accommodations, as well as the university's "blanket prohibition" against course substitutions for mathematics and foreign language requirements. Furthermore, the students claimed that negative comments by the university's president about learning-disabled students had created a hostile learning environment for them.

The district court granted class action certification to the plaintiffs (all students with learning disabilities and/or attention deficit disorders currently enrolled at Boston University), thus avoiding mootness concerns. In addition, the court examined the viability of a "hostile academic environment" claim based on disability, concluding that such a claim was possible, but that the allegations of the plaintiffs' complaint fell short of such a claim. Although statements made by the university's president may have been offensive, the court considered the First Amendment concerns at hand and found that these remarks were not "sufficiently directed" toward the plaintiffs to constitute a hostile academic environment.

In a subsequent opinion, *Guckenberger v. Boston University*, 974 F. Supp. 106 (D. Mass. 1997) (*Guckenberger II*), the district court addressed the plaintiffs' claims that the university violated the ADA and Section 504 by requiring students with learning disabilities to be retested every three years by a physician, a clinical psychologist, or a licensed psychologist; and by refusing to modify the requirement that students in the College of Arts and Sciences complete one semester of mathematics and four semesters of a foreign language. The court ruled that the university's previous policy and its application had, in several respects, violated the disability discrimination laws. But the university had changed its policy and some of its practices after the litigation began, and some of those changes had cured some of the violations.

The court ruled that requiring new documentation of a learning disability every three years, without regard to whether the updated information was medically necessary, violated the law because the requirements screened out or tended to screen out students with specific disabilities, and because the university did not demonstrate that the requirements were necessary to provide educational services or accommodations. The university's new policy permits a waiver of the three-year retesting regulation when medically unnecessary; this change, said the court, cured the violation.

The court also ruled that the university's requirement that it would accept documentation only from professionals with certain types of doctorates violated the law because professionals with other degrees (doctorates in education and certain master's degrees) were also qualified to assess individuals for learning disabilities. The court did note, however, that for the assessment of attention deficit disorder, it was appropriate to require that the assessor have a doctorate.

The university's decision to implement the policy in the middle of the academic year, without advance notice to affected students, also violated the ADA and Section 504, according to the court. Furthermore, the court ruled that the president and his staff, who lacked "experience or expertise in diagnosing learning disabilities or in fashioning appropriate accommodations" (974 F. Supp. at

118) had personally administered the policy on the basis of “uninformed stereotypes about the learning disabled.” The university’s new policy, which delegated the evaluation of accommodation requests to a licensed psychologist, cured that violation. (The third *Guckenberger* opinion is discussed in Section 9.3.5.4 below.)

**9.3.5.4. Requests for programmatic or instructional accommodations.<sup>20</sup>**

Although both Section 504 and the ADA require colleges and universities to provide reasonable accommodations to qualified disabled students, they need not do so if the accommodation will fundamentally alter the nature of the academic program (see *Southeastern Community College v. Davis*, Section 8.2.4.3).<sup>21</sup>

The question of how much change is required arose in *Wynne v. Tufts University School of Medicine*, 976 F.2d 791 (1st Cir. 1992). A medical student dismissed on academic grounds asserted that the medical school had refused to accommodate his learning disability by requiring him to take a multiple choice test rather than an alternative that would minimize the impact of his learning disability. Initially, the trial court granted summary judgment for Tufts, but the appellate court reversed on the grounds that the record was insufficient to enable the court to determine whether Tufts had attempted to accommodate Wynne and whether Tufts had evaluated the impact of the requested accommodation on its academic program (932 F.2d 19 (1st Cir. 1991, *en banc*)).

On remand, the university provided extensive evidence to the trial court that it had permitted Wynne to repeat his first year of medical school, had paid for the neuropsychological testing of Wynne that had identified his learning disabilities, and had provided him with tutors, note takers, and other assistance. It had permitted him to take make-up examinations for courses he failed, and had determined that there was not an appropriate alternative method of testing his knowledge in the biochemistry course.

On the strength of the school’s evidence of serious consideration of alternatives to the multiple choice test, the district court again awarded summary judgment for Tufts, and the appellate court affirmed. In deferring to the school’s judgment on the need for a certain testing format, the court said:

[T]he point is not whether a medical school is “right” or “wrong” in making program-related decisions. Such absolutes rarely apply in the context of subjective decision-making, particularly in a scholastic setting. The point is that Tufts, after undertaking a diligent assessment of the available options, felt itself obliged to make “a professional, academic judgment that [a] reasonable accommodation [was] simply not available” [976 F.2d at 795].

---

<sup>20</sup>Cases and other authorities are collected at Richard E. Kaye, Annot., “What Constitutes Reasonable Accommodation Under Federal Statutes Protecting Rights of Disabled Individual, as Regards Educational Program or School Rules as Applied to Learning Disabled Student,” 166 A.L.R. Fed. 503.

<sup>21</sup>For the pertinent regulations on accommodation, see 28 C.F.R. § 35.130(h)(7) (ADA Title II), 28 C.F.R. §36.302(a) (ADA Title III), and 34 C.F.R. § 104.44 (Section 504). For the pertinent regulations defining “qualified” disabled student, see 28 C.F.R. § 35.104 (ADA Title II) and 34 C.F.R. § 104.3(k)(4) (Section 504).

Given the multiple forms of assistance that Tufts had provided Wynne, and its ability to demonstrate that it had evaluated alternate test forms and determined that none would be an appropriate substitute for the multiple choice format, the court was satisfied that the school had satisfied the requirements of the Rehabilitation Act.

In *Halasz v. University of New England*, 816 F. Supp. 37 (D. Maine 1993), a federal trial court relied on *Wynne* to review the challenge of a student, dismissed from the University of New England on academic grounds, that the school had failed to provide him with necessary accommodations and had discriminated against him on the basis of his disability. The school had a special program for students with learning disabilities who lacked the academic credentials necessary for regular admission to the university. The program provided a variety of support services for these students, and gave them an opportunity for regular admission to the university after they completed the special one-year program. Despite the special services, such as tutoring, taped texts, untimed testing, and readers for some of his classes, the plaintiff was unable to attain an academic record sufficient for regular admission to the university. His performance in the courses and tests that he took during his year in the special program indicated, the university alleged, that he was not an “otherwise qualified” student with a disability and thus was not protected by the Rehabilitation Act. The university was able to demonstrate the academic rationale for its program requirements and to show that the plaintiff had been given the same amount and quality of assistance that had been given to other students who later were offered admission to the university’s regular academic program.

The decisions in *Wynne* and *Halasz* demonstrate the significance of an institution’s consideration of potential accommodations for students with disabilities. Given the tendency of courts to defer to academic judgments, but to hold colleges and universities to strict procedural standards, those institutions that can demonstrate, as could Tufts, that they gave careful consideration to the student’s request, and reached a decision on *academic* grounds that the accommodation was either unnecessary or unsuitable, should be able to prevail against challenges under either the Rehabilitation Act or the ADA.

The scope of the accommodation requirement was also addressed in the *Guckenberger* trilogy (Section 9.3.5.3), and the case is particularly instructive because of the court’s scrutiny of the process used by the university to make an academic determination concerning the requested accommodations. The students had challenged the university’s refusal to waive the foreign language requirement in the College of Arts and Sciences, or to permit substitution of other courses taught in English, as a violation of the ADA. In *Guckenberger II*, the court agreed in principle that the university was not required to lower its academic standards or require substantial alteration of academic programs. The court found, however, that the university had not even considered the alternatives suggested by the students (or any other alternatives) that would have provided an appropriate accommodation while maintaining academic standards and programmatic integrity. Said the court: “[T]he University simply relied on the status quo as the rationale” (974 F. Supp. at 115). The court awarded

damages for breach of contract and emotional distress to several of the students whose accommodations were delayed or denied because of the policy and its application by university officials. It also ordered the university to develop a “deliberative procedure” for considering whether other courses could be substituted for the foreign language requirement of the liberal arts college without fundamentally altering the nature of its liberal arts degree program.

The university turned to a faculty committee that advised the dean of arts and sciences on curricular and programmatic issues. That committee heard the views of some of the student plaintiffs during its deliberations; no administrators were committee members, nor did they attend the meetings. At the conclusion of its deliberations, the committee stated that the foreign language requirement was “fundamental to the nature of the liberal arts degree at Boston University” and recommended against permitting course substitutions as an alternative to the foreign language requirement. The president accepted the committee’s recommendation. Then, in a third ruling, *Guckenberger v. Boston University*, 8 F. Supp. 2d 82 (D. Mass. 1998) (*Guckenberger III*), the court ruled that the university had complied with its order, approved the procedure that had been used, and dismissed the plaintiffs’ challenge to the process and the outcome of the committee’s work.

In determining whether the university used the appropriate process and standards to decide whether a requested accommodation was reasonable, the district court in *Guckenberger III* looked to the opinion of the U.S. Court of Appeals for the First Circuit in *Wynne v. Tufts University School of Medicine*, discussed earlier in this subsection.

“If the institution submits undisputed facts demonstrating that the relevant officials within the institution considered alternative means, their feasibility, cost and effect on the academic program, and came to a rationally justifiable conclusion that the available alternatives would result either in lowering academic standards or requiring substantial program alteration, the court could rule as a matter of law that the institution had met its duty of seeking reasonable accommodation” [8 F. Supp. 2d at 87, quoting *Wynne I* at 26].

The *Guckenberger III* court first engaged in fact finding to determine whether Boston University had exercised “reasoned deliberation.” It examined who the decision makers were, whether the deliberative group addressed why the foreign language requirement was unique, and whether it considered possible alternatives to the requirement. Although the committee had not kept minutes of its meetings in the past, it had been ordered by the court to do so; review of those minutes was an important factor in the court’s determination. The minutes reflected that the committee had discussed why the foreign language requirement was important, and why alternatives to the foreign language requirement would not meet the goals which the requirement was enacted to fulfill. The committee was insulated from those officials whose comments and decisions had been criticized by the court in earlier rulings, and the committee gave students an opportunity to provide information and their perspective on the issue. The court concluded that “the Committee’s reliance on only its own academic

judgment and the input of College students was reasonable and in keeping with the nature of the decision” (8 F. Supp. 2d at 87–88).

The court then evaluated “whether the facts add up to a professional, academic judgment that reasonable accommodation is simply not available” (8 F. Supp. 2d at 89, quoting *Wynne I* at 27–28). Despite the fact that the committee did not consult external experts, and the fact that many elite universities, such as Harvard, Yale, and Columbia, have no similar foreign language requirement, the court ruled that the process used was appropriate and the outcome was rationally justifiable. The court stated:

[S]o long as an academic institution rationally, without pretext, exercises its deliberate professional judgment not to permit course substitutions for an academic requirement in a liberal arts curriculum, the ADA does not authorize the courts to intervene even if a majority of other comparable academic institutions disagree [8 F. Supp. 2d at 90].

Determinations of whether accommodation requests would fall short of fundamental academic standards must be based on professional academic judgments.

Much of the litigation concerning conflicts between the accommodations sought by the student and the accommodations the institution is willing to grant occur with medical students or other students for whom a clinical experience is required. Most federal courts are deferential to a determination by faculty or academic administrators that a requested accommodation is either inappropriate for educational reasons or that the student cannot satisfactorily complete the required curriculum even with accommodation. For example, in *Zukle v. The Regents of the University of California*, 166 F.3d 1041 (9th Cir. 1999), the court treated as a matter of first impression the question of “judicial deference to an educational institution’s academic decisions in ADA and Rehabilitation Act cases” (166 F.3d at 1047). Although the Tenth Circuit had rejected a deferential approach in *Pushkin v. Regents of the University of Colorado* (Section 8.2.4.3), the Ninth Circuit determined that deference was appropriate, following the lead of the First, Second, and Fifth Circuits. In *Zukle*, a medical student with learning disorders that made reading slow and difficult, requested to be relieved of the requirement to complete several of her clinical rotations until after other academic requirements had been completed. The medical school refused. The court ruled that the medical school had offered the plaintiff “all of the accommodations that it normally offers learning disabled students,” such as double time on exams, note-taking services, and textbooks on audiocassettes. But *Zukle*’s request that she delay the completion of several clinical rotations and retake a portion of them at a later time was a “substantial alteration” of the curriculum, and thus the medical school was not required to acquiesce to her request. Because the student could not demonstrate that she could meet the academic requirements of the medical school, even with the accommodations it did provide, the court ruled that she was not qualified, and thus had not established a *prima facie* case of disability discrimination.

In a somewhat similar case from the Sixth Circuit, the court ruled that the Ohio College of Podiatric Medicine (OPM) had provided sufficient accommodations for a student. In *Kaltenberger v. Ohio College of Podiatric Medicine*, 162

F.3d 432 (6th Cir. 1998), the plaintiff challenged her academic dismissal on ADA grounds. The student had not performed well academically during her first semester at OPM, and sought a diagnosis for possible learning disorders. She was eventually diagnosed with attention deficit/hyperactive disorder (ADHD). Although by the time the student was properly diagnosed she had been dismissed for academic reasons, she appealed the dismissal on the grounds that she had ADHD, and she was reinstated to a five-year program that provided a lighter course load. She was also provided with the five accommodations that the diagnosing professional had recommended for the student. The student did not take advantage of several of the accommodations (individual tutoring, additional academic counseling), and continued to perform poorly in courses she was required to retake. She was dismissed at the end of her second academic year. As in *Zukle*, the Sixth Circuit deferred to the academic judgment of the plaintiff's professors and advisors. It rejected the plaintiff's assertion that she should be allowed to substitute less demanding courses for the required curriculum, and ruled that the college had provided sufficient reasonable accommodations to the student.

Another Ninth Circuit case addressed the standard used by courts to review an institution's claim that it could not provide academic accommodations. In *Wong v. Regents of the University of California*, 192 F.3d 807 (9th Cir. 1999), a medical student with learning disabilities had been dismissed on academic grounds, primarily because he had difficulties completing his clinical rotations successfully. The trial court had ruled that accommodations provided by the university were reasonable, and that the plaintiff was not qualified to continue as a medical student. The appellate court disagreed.

Although the medical school dean had approved several accommodations for the student over a period of years, he had rejected the student's final accommodation requests. The court explained the standard of review appropriate to accommodation decisions of academic institutions:

In the typical disability discrimination case in which a plaintiff appeals a district court's entry of summary judgment in favor of the defendant, we undertake this reasonable accommodation analysis ourselves as a matter of course, examining the record and deciding whether the record reveals questions of fact as to whether the requested modification substantially alters the performance standards at issue or whether the accommodation would allow the individual to meet those requirements. In a case involving assessment of the standards of an academic institution, however, we abstain from an in-depth, de novo analysis of suggested accommodations that the school rejected if the institution demonstrates that it conducted such an inquiry itself and concluded that the accommodations were not feasible or would not be effective [192 F.3d at 818].

Because the university had not submitted evidence that the dean had made a reasoned determination that the accommodations requested by Wong were unreasonable, particularly since they were very similar to earlier accommodations that the dean had approved, and given the fact that the prior accommodations enabled Wong to perform very well (circumstances very different from

those in *Zukle*), the court refused to defer to the university's determination "because it did not demonstrate that it conscientiously exercised professional judgment in considering the feasibility" of the requested accommodations. The court then addressed the issue of Wong's qualifications to continue as a medical student. Again the court rejected the deferential standard of review, because "the school's system for evaluating a learning disabled student's abilities and its own duty to make its program accessible to such individuals fell short of the standards we require to grant deference . . ." (192 F.3d at 823). Because Wong had performed well when given additional time to prepare for each clinical rotation, the court ruled that he should be allowed to establish at trial that he was qualified.

The court concluded with some advice to institutions, and a warning:

The deference to which academic institutions are entitled when it comes to the ADA is a double-edged sword. It allows them a significant amount of leeway in making decisions about their curricular requirements and their ability to structure their programs to accommodate disabled students. On the other hand, it places on an institution the weighty responsibility of carefully considering each disabled student's particular limitations and analyzing whether and how it might accommodate that student in a way that would allow the student to complete the school program without lowering academic standards or otherwise unduly burdening the institution. . . . We will not sanction an academic institution's decision to refuse to accommodate a disabled student and subsequent dismissal of that student when the record contains facts from which a reasonable jury could conclude that the school made those decisions for arbitrary reasons unrelated to its academic standards [192 F.3d at 826].<sup>22</sup>

On remand, the trial court determined that the student was not disabled (an issue that the earlier opinions had not addressed) because he had been able to achieve earlier academic success without accommodations; the appellate court affirmed that ruling (379 F.3d 1097 (1994)).

In another case, *Doe v. University of Maryland Medical System Corporation*, 50 F.3d 1261 (4th Cir. 1995), an HIV-infected neurosurgical resident had rejected the medical school's proposed accommodation and attempted to force the school to permit him to continue performing surgery. The third-year resident was stuck with a needle while treating an HIV-positive patient, and the resident later tested HIV-positive himself. The hospital permanently suspended Doe from surgical practice, offering him residencies in pathology and psychiatry. Doe rejected these alternatives and filed claims under the Rehabilitation Act and the ADA. The court ruled that he was not otherwise qualified because he

---

<sup>22</sup>After the appellate court ruling, but before remanded case came to trial, the U.S. Supreme Court released its opinion in *Toyota Motor Mfg. Kentucky, Inc. v. Williams*, 534 U.S. 184 (2002), which interpreted the ADA's definition of "disability" very narrowly. The trial court determined that, under the *Toyota* standard, Wong was not disabled because his overall academic performance prior to the final year of medical school had been very successful, and the appellate court affirmed, thus ending Wong's case (379 F.3d 1097 (9th Cir. 2004)).

posed a significant risk to patient safety that could not be eliminated by reasonable accommodation, and that the accommodations proposed by the medical school were reasonable.

As is the case with ADA claims by employees, students may ask to “telecommute” to college. In *Maczaczynj v. State of New York*, 956 F. Supp. 403 (W.D.N.Y. 1997), a federal trial court was asked to order Empire State College to permit the plaintiff to “attend” required weekend class sessions by telephone from his home, an accommodation that the college had refused to allow. The plaintiff, who suffered from panic attacks (a psychiatric disorder), had rejected the offer of the program faculty to modify certain program requirements, such as excusing him from social portions of the class sessions, providing an empty room for him to use when he became agitated, allowing him to bring along a friend of his choice, and allowing him to select the location on campus where the sessions would take place. The court credited the college’s argument that attendance was required for pedagogical reasons, and that the course was not designed to be delivered through distance learning or telecommunication technologies. Finding that telephone “attendance” would therefore not be the academic equivalent of the required class sessions, the court denied the plaintiff’s request.

As study abroad programs become more popular, students with disabilities have sought to participate, and many institutions have worked to accommodate the individualized needs of students with mobility or other impairments. Although the Office of Civil Rights, U.S. Department of Education has ruled that Section 504 of the Rehabilitation Act and Title II of the ADA do not apply outside the United States,<sup>23</sup> students have attempted to state both federal and state law claims challenging their institutions’ alleged failure to accommodate them on study abroad trips.

In *Bird v. Lewis & Clark College*, 303 F.3d 1015 (9th Cir. 2002), *cert. denied*, 538 U.S. 923 (2003), a student who used a wheelchair participated in the college’s study abroad program in Australia after college representatives assured her and her parents that she would be fully accommodated. Although the college made numerous accommodations for the student, she was unable to participate in several activities with her classmates, and sued the college upon her return, claiming ADA violations and breach of the college’s fiduciary duty to her, a state law claim. The college argued that neither Section 504 nor Title III of the ADA had extraterritorial application (see Section 13.5.7.6), but the court did not rule on that issue because it determined that the college had reasonably accommodated the student. However, the court affirmed the jury’s finding that the college breached its fiduciary duty to the student, based upon the assurances and representations that the college had made to the student and her parents, and its award of \$5,000 in damages.

As the court opinions (particularly *Guckenberger* and *Wong*) in this Section illustrate, process considerations are of great importance in administering the institution’s system for reviewing student requests for accommodation.

---

<sup>23</sup>OCR Region VIII, Case #08012047, December 3, 2001 (Arizona State University).

The institution will need to consider such requests on an individualized, case-by-case basis. Documentation that is submitted by students or obtained by the institution will need to be prepared or evaluated by professionals with appropriate credentials. Determinations of whether accommodation requests would fall short of fundamental academic standards must be based on professional judgments of faculty and academic administrators. On the other hand, once the institution can show that it has in effect, and has relied upon, a process meeting these requirements, it can expect to receive considerable deference from the courts if its determination is challenged (see especially the *Zukle* case).

This area of the law continues to develop rapidly. Although the 1999 decisions of the U.S. Supreme Court (Section 9.3.5.2 above) clarify one aspect of the ADA's interpretation, and other cases in Section 9.3.5 clarify other aspects, many other issues related to students with disabilities remain. How substantial must a requested change in an academic program be before it is considered an undue hardship for the institution? What should be the institution's response if a faculty member argues that a requested accommodation infringes his or her academic freedom rights? Can an institution require a student to receive counseling or to take medication as part of the accommodation agreement? These and other issues will challenge administrators, faculty, and university counsel as they seek to act within the ADA's requirements while maintaining the academic integrity of their programs.

### ***Sec. 9.4. Procedures for Suspension, Dismissal, and Other Sanctions***

**9.4.1. Overview.** As Sections 9.2 and 9.3 indicate, both public and private postsecondary institutions have the clear right to dismiss, suspend, or impose lesser sanctions on students for behavioral misconduct or academic deficiency. But just as that right is limited by the principles set out in those Sections, so it is also circumscribed by a body of procedural requirements that institutions must follow in effecting disciplinary or academic sanctions. These procedural requirements tend to be more specific and substantial than the requirements set out above, although they do vary depending on whether behavior or academics is involved and whether the institution is public or private (see Section 1.5.2).

At the threshold level, whenever an institution has established procedures that apply to the imposition of sanctions, the law will usually require that these procedures be followed. In *Woody v. Burns*, 188 So. 2d 56 (Fla. 1966), for example, the court invalidated an expulsion from a public institution because a faculty committee had "circumvented . . . [the] duly authorized [disciplinary] committee and arrogated unto itself the authority of imposing its own penalty for appellant's misconduct." And in *Tedeschi v. Wagner College*, 49 N.Y.2d 652 (N.Y. 1980), New York's highest court invalidated a suspension from a private institution, holding that "when a university has adopted a rule or guideline establishing the procedure to be followed in relation to suspension or expulsion, that procedure must be substantially observed."

There are three exceptions, however, to this "follow the rules" principle. *First*, an institution may be excused from following its own procedures if the student

knowingly and freely waives his or her right to them, as in *Yench v. Stockmar*, 483 F.2d 820 (10th Cir. 1973), where the student neither requested that the published procedures be followed nor objected when they were not. *Second*, deviations from established procedures may be excused when they do not disadvantage the student, as in *Winnick v. Manning*, 460 F.2d 545 (2d Cir. 1972), where the student contested the school's use of a panel other than that required by the rules, but the court held that the "deviations were minor ones and did not affect the fundamental fairness of the hearing." And *third*, if an institution provides more elaborate protections than constitutionally required, failure to provide nonrequired protections may not imply constitutional violations (see Section 9.4.3).

This Section focuses on challenges to the fairness of the procedures that colleges use to determine whether a student has violated a campus rule or code of conduct, as well as the fairness of the sanction, if any, levied against the student. Because public colleges are subject to constitutional regulation as well as statutory and common law, disciplinary decisions at public colleges are discussed separately from those at private colleges. And sanctions based on student academic misconduct are discussed separately for public institutions from those based upon student social (or criminal) misconduct, although the distinctions between academic and disciplinary sanctions seem to be blurring as some courts are viewing academic misconduct as behavior rather than as a violation of academic standards, and are applying standards developed in student discipline cases to academic misconduct cases.

(For a thoughtful critique of college disciplinary procedures and suggestions for enhancing the fairness of such discipline, see Curtis J. Berger & Vivian Berger, "Academic Discipline: A Guide to Fair Process for the University Student," 99 *Columbia L. Rev.* 289 (1999).)

**9.4.2. Public institutions: Disciplinary sanctions.** State institutions may be subject to state administrative procedure acts, state board of higher education rules, or other state statutes or administrative regulations specifying particular procedures for suspensions or expulsions. In *Mary M. Clark*, 473 N.Y.S.2d 843 (N.Y. App. Div. 1984), the court refused to apply New York State's Administrative Procedure Act to a suspension proceeding at State University of New York-Cortland; but in *Mull v. Oregon Institute of Technology*, 538 P.2d 87 (Or. 1975), the court applied that state's administrative procedure statutes to a suspension for misconduct and remanded the case to the college with instructions to enter findings of fact and conclusions of law as required by one of the statutory provisions.

The primary external source of procedural requirements for public institutions, however, is the due process clause of the federal Constitution, which prohibits the government from depriving an individual of life, liberty, or property without certain procedural protections.<sup>24</sup> Since the early 1960s, the concept of procedural due process has been one of the primary legal forces shaping the

---

<sup>24</sup>Cases are collected in Daniel A. Klein, Annot., "Expulsion, Dismissal, Suspension, or Other Discipline of Student of Public School, College, or University as Violating Due Process Clause of Federal Constitution's Fourteenth Amendment—Supreme Court Cases," 88 L. Ed. 2d 1015.

administration of postsecondary education. For purposes of due process analysis, courts typically assume, without deciding, that a student has a property interest in continued enrollment at a public institution (see, for example, *Marin v. University of Puerto Rico*, 377 F. Supp. 613, 622 (D.P.R. 1974)). One court stopped short of finding a property interest, but said that the Fourteenth Amendment “gives rights to a student who faces expulsion for misconduct at a tax-supported college or university” (*Henderson State University v. Spadoni*, 848 S.W.2d 951 (Ark. Ct. App. 1993)). As did the court in *Marin*, the U.S. Supreme Court has assumed a property interest in continued enrollment in a public institution (for example, in *Ewing* and *Horowitz*, discussed in Sections 9.3.1 and 9.4.3 respectively), but has not yet directly ruled on this point.

A landmark 1961 case on suspension procedures, *Dixon v. Alabama State Board of Education*, 294 F.2d 150 (5th Cir. 1961), is still very instructive. Several black students at Alabama State College had been expelled during a period of intense civil rights activity in Montgomery, Alabama. The students, supported by the National Association for the Advancement of Colored People (NAACP), sued the state board, and the court faced the question “whether [the] due process [clause of the Fourteenth Amendment] requires notice and some opportunity for hearing before students at a tax-supported college are expelled for misconduct.” On appeal this question was answered in the affirmative, with the court establishing standards by which to measure the adequacy of a public institution’s expulsion procedures:

The notice should contain a statement of the specific charges and grounds which, if proven, would justify expulsion under the regulations of the board of education. The nature of the hearing should vary depending upon the circumstances of the particular case. The case before us requires something more than an informal interview with an administrative authority of the college. By its nature, a charge of misconduct, as opposed to a failure to meet the scholastic standards of the college, depends upon a collection of the facts concerning the charged misconduct, easily colored by the point of view of the witnesses. In such circumstances, a hearing which gives the board or the administrative authorities of the college an opportunity to hear both sides in considerable detail is best suited to protect the rights of all involved. This is not to imply that a full-dress judicial hearing, with the right to cross-examine witnesses, is required. Such a hearing, with the attending publicity and disturbance of college activities, might be detrimental to the college’s educational atmosphere and impractical to carry out. Nevertheless, the rudiments of an adversary proceeding may be preserved without encroaching upon the interests of the college. In the instant case, the student should be given the names of the witnesses against him and an oral or written report on the facts to which each witness testifies. He should also be given the opportunity to present to the board, or at least to an administrative official of the college, his own defense against the charges and to produce either oral testimony or written affidavits of witnesses in his behalf. If the hearing is not before the board directly, the results and findings of the hearing should be presented in a report open to the student’s inspection. If these rudimentary elements of fair play are followed in a case of misconduct of this particular type, we feel that the requirements of due process of law will have been fulfilled [294 F.2d at 158–59].

Since the *Dixon* case, courts at all levels have continued to recognize and extend the due process safeguards available to students charged by college officials with misconduct. Such safeguards must now be provided for all students in publicly supported schools, not only before expulsion, as in *Dixon*, but before suspension and other serious disciplinary action as well (unless the student is a danger to the campus community and must be removed, in which case a postremoval hearing would be required). In 1975, the U.S. Supreme Court itself recognized the vitality and clear national applicability of such developments when it held that even a secondary school student faced with a suspension of less than ten days is entitled to “some kind of notice and . . . some kind of hearing” (*Goss v. Lopez*, 419 U.S. 565, 579 (1975)).

Although the Court in *Goss* was not willing to afford students the right to a full-blown adversary hearing (involving cross-examination, written transcripts, and representation by counsel), it set out minimal requirements for compliance with the due process clause. The Court said:

We do not believe that school authorities must be totally free from notice and hearing requirements. . . . [T]he student [must] be given oral or written notice of the charges against him and, if he denies them, an explanation of the evidence the authorities have and an opportunity to present his side of the story. The [Due Process] Clause requires at least these rudimentary precautions against unfair or mistaken findings of misconduct and arbitrary exclusion from school [419 U.S. at 581].

In cases subsequent to *Goss*, most courts have applied these “minimal” procedural standards and, for the most part, have ruled in favor of the college.

Probably the case that has set forth due process requirements in greatest detail and, consequently, at the highest level of protection, is *Esteban v. Central Missouri State College*, 277 F. Supp. 649 (W.D. Mo. 1967) (see also later litigation in this case, discussed in Section 9.2.2 above). The plaintiffs had been suspended for two semesters for engaging in protest demonstrations. The lower court held that the students had not been accorded procedural due process and ordered the school to provide the following protections for them:

1. A written statement of the charges, for each student, made available at least ten days before the hearing;
2. A hearing before the person(s) having power to expel or suspend;
3. The opportunity for advance inspection of any affidavits or exhibits the college intends to submit at the hearing;
4. The right to bring counsel to the hearing to advise them (but not to question witnesses);
5. The opportunity to present their own version of the facts, by personal statements as well as affidavits and witnesses;
6. The right to hear evidence against them and question (personally, not through counsel) adverse witnesses;

7. A determination of the facts of each case by the hearing officer, solely on the basis of the evidence presented at the hearing;
8. A written statement of the hearing officer's findings of fact; and
9. The right, at their own expense, to make a record of the hearing.

The judicial imposition of specific due process requirements rankles many administrators. By and large, courts have been sufficiently sensitive to avoid such detail in favor of administrative flexibility (see, for example, *Moresco v. Clark*, 473 N.Y.S.2d 843 (N.Y. App. Div. 1984); *Henson v. Honor Committee of the University of Virginia*, 719 F.2d 69 (4th Cir. 1983), discussed in Section 9.4.2.2). Yet for the internal guidance of an administrator responsible for disciplinary procedures, the *Esteban* requirements provide a useful checklist. The listed items not only suggest the outer limits of what a court might require but also identify those procedures most often considered valuable for ascertaining facts where they are in dispute. Within this framework of concerns, the constitutional focus remains on the notice-and-opportunity-for-hearing concept of *Dixon*.

Although the federal courts have not required the type of protection provided at formal judicial hearings, deprivations of basic procedural rights can result in judicial rejection of an institution's disciplinary decision. In *Weidemann v. SUNY College at Cortland*, 592 N.Y.S.2d 99 (N.Y. App. Div. 1992), the court annulled the college's dismissal of a student who had been accused of cheating on an examination, and ordered a new hearing. Specifically, the court found these procedural defects:

1. Evidence was introduced at the hearing of which the student was unaware.
2. The student was not provided the five-day written notice required by the student handbook about evidence supporting the charges against him, and had no opportunity to defend against that evidence.
3. The hearing panel contacted a college witness after the hearing and obtained additional evidence without notifying the student.
4. The student was given insufficient notice of the date of the hearing and the appeal process.
5. The student was given insufficient notice (one day) of his right to appeal.
6. The student's attorney had advised college officials of these violations, but the letter had been ignored.

In addition to possible due process problems listed above, a long delay between the time a student is charged and the date of the hearing may disadvantage the student. Although a federal trial court rejected a student's claim that a nine-month delay in scheduling his disciplinary hearing was a denial of due process (*Cross v. Rector and Visitors of the University of Virginia*, 84 F. Supp.

2d 740 (W.D. Va. 2000), *affirmed without opinion*, 2000 U.S. App. LEXIS 22017 (August 28, 2000)), ensuring that hearings are held in a timely fashion should discourage such due process claims.

A case brought against Indiana University is illustrative of both notice and hearing aspects of the student disciplinary process. In *Reilly v. Daly*, 666 N.E.2d 439 (Ind. App. 1996), a student who was dismissed from the university for cheating claimed a variety of constitutional violations. Reilly, a student at Indiana University School of Medicine, was accused of cheating on a final examination by two professors who believed she had been copying from another student.

The professors compared the test papers of the two students. A statistician advised the professors that there was 1 chance in 200,000 that Reilly and the other student could have had the same incorrect answers on their multiple choice questions without cheating having occurred. The professors gave Reilly an F on the exam, sending her a letter that outlined the suspicious behavior and the statistical comparisons. Reilly sent a letter of protest to the professors, who reaffirmed their decision. Reilly was permitted to bring a lawyer with her to meet with the professors to rebut their charges. As a result of that meeting, the professors had a second statistical analysis run on the two test papers, which resulted in a lower, but still significantly high probability that the similarities were not a result of chance.

Because Reilly had received a grade of F in another course, also as the result of cheating on a final exam, she was informed that she was entitled to a hearing before the Student Promotions Committee prior to dismissal from medical school. She was permitted the assistance of her attorney and was allowed to present her version of the facts. The committee voted to recommend her dismissal. Reilly appealed the committee's decision, but it reaffirmed its recommendation. The dean then dismissed Reilly from medical school.

In court, Reilly alleged that the university denied her due process and equal protection. The alleged due process violations were her lack of opportunity to question the course professors at the hearing, the vagueness of a rule that forbids "the appearance of cheating," and the committee's failure to use the "clear and convincing" standard of proof. The court did not address whether the dismissal was on academic or disciplinary grounds because it found that the medical school had afforded her sufficient due process for either type of dismissal. Even had the dismissal been on disciplinary grounds, said the court, she had no right to formally cross-examine her accusers; she was fully aware of the evidence against her; and she had been given the opportunity to discuss it with the professors.

The court disposed of the vagueness claim by noting that Reilly had been dismissed because the committee had determined that she cheated, so the "appearance of cheating" rule was irrelevant to her dismissal. And the court stated that only "substantial evidence" was necessary to uphold the dismissal; the committee was not required to use the "clear and convincing" standard of proof.

Reilly also challenged her dismissal on equal protection grounds, asserting that students in other units of the university were given certain rights that she,

as a medical student, was not, including the right to cross-examine witnesses and the use of the clear and convincing evidence standard. The court noted that the equal protection clause does not require that all persons be treated identically, but only that an individual be treated the same as “similarly situated” persons. Reilly was treated the same as other medical students, said the court; she was not “similarly situated” to undergraduates or students in the law school. The court affirmed the trial court’s denial of the preliminary injunction sought by Reilly.

Because of the potential for constitutional or other claims, administrators should ensure that the staff who handle disciplinary charges against students, and the members of the hearing panels who determine whether the campus code of conduct have been violated, are trained in the workings of the disciplinary system and the protections that must be afforded students. Judicial review of the outcomes of disciplinary hearings is typically deferential *if* the institution has followed its own procedures carefully, and if those procedures comport with constitutional requirements.

**9.4.2.1. Notice.** Notice should be given of both the conduct with which the student is charged and the rule or policy that allegedly proscribes the conduct.<sup>25</sup> The charges need not be drawn with the specificity of a criminal indictment, but they should be “in sufficient detail to fairly enable . . . [the student] to present a defense” at the hearing (*Jenkins v. Louisiana State Board of Education*, 506 F.2d 992 (5th Cir. 1975)), holding notice in a suspension case to be adequate, particularly in light of information provided by the defendant subsequent to the original notice). Factual allegations not enumerated in the notice may be developed at the hearing if the student could reasonably have expected them to be included.

There is no clear constitutional requirement concerning how much advance notice the student must have of the charges. As little as two days before the hearing has been held adequate (*Jones v. Tennessee State Board of Education*, 279 F. Supp. 190 (M.D. Tenn. 1968), *affirmed*, 407 F.2d 834 (6th Cir. 1969); see also *Nash v. Auburn University*, 812 F.2d 655 (11th Cir. 1987)). *Esteban* required ten days, however, and in most other cases the time has been longer than two days. In general, courts handle this issue case by case, asking whether the amount of time was fair under all the circumstances. And, of course, if the college’s written procedures for student discipline provide for deadlines for notice to be given, or provide periods of time for the student to prepare for the hearing, those procedures should be followed in order to avoid potential breach of contract or constitutional claims.

**9.4.2.2. Hearing.** The minimum requirement is that the hearing provide students with an opportunity to speak in their own defense and explain their side of the story. Since due process apparently does not require an open or a public hearing, the institution has the discretion to close or partially close the hearing or to leave the choice to the accused student. But courts usually will accord students

---

<sup>25</sup>Cases and authorities are collected at E. H. Schopler, Annot., “Right of Student to Hearing on Charges Before Suspension or Expulsion from Educational Institution,” 58 A.L.R.2d 903.

the right to hear the evidence against them and to present oral testimony or, at minimum, written statements from witnesses. Formal rules of evidence need not be followed. Cross-examination, the right to counsel, the right to a transcript, and an appellate procedure have generally not been constitutional essentials, but where institutions have voluntarily provided these procedures, courts have often cited them approvingly as enhancers of the hearing's fairness.

When the conduct with which the student is charged in the disciplinary proceeding is also the subject of a criminal court proceeding, the due process obligations of the institution will likely increase. Since the student then faces additional risks and strategic problems, some of the procedures usually left to the institution's discretion may become constitutional essentials. In *Gabrilowitz v. Newman*, 582 F.2d 100 (1st Cir. 1978) (discussed in Section 9.1.4), for example, the court required that the institution allow the student to have a lawyer present to advise him during the disciplinary hearing.

The person(s) presiding over the disciplinary proceedings and the person(s) with authority to make the final decision must decide the case on the basis of the evidence presented and must, of course, weigh the evidence impartially. Generally the student must show malice, bias, or conflict of interest on the part of the hearing officer or panel member before a court will make a finding of partiality. In *Blanton v. State University of New York*, 489 F.2d 377 (2d Cir. 1973), the court held that—at least where students had a right of appeal—due process was not violated when a dean who had witnessed the incident at issue also sat on the hearing committee. And in *Jones v. Tennessee State Board of Education*, 279 F. Supp. 190 (M.D. Tenn. 1968), *affirmed*, 407 F.2d 834 (6th Cir. 1969), the court even permitted a member of the hearing committee to give evidence against the accused student, in the absence of proof of malice or personal interest. But other courts may be less hospitable to such practices, and it would be wise to avoid them whenever possible.

A federal appellate court considered the question of the neutrality of participants in the hearing and discipline process. In *Gorman v. University of Rhode Island*, 837 F.2d 7 (1st Cir. 1988), a student suspended for a number of disciplinary infractions charged that the university's disciplinary proceedings were defective in several respects. He asserted that two students on the student-faculty University Board on Student Conduct were biased against him because of earlier encounters; that he had been denied the assistance of counsel at the hearing; that he had been denied a transcript of the hearing; and that the director of student life had served as adviser to the board and also had prepared a record of the hearing, thereby compromising the board's independence.

Finding no evidence that Gorman was denied a fair hearing, the court commented:

[T]he courts ought not to extol form over substance, and impose on educational institutions all the procedural requirements of a common law criminal trial. The question presented is not whether the hearing was ideal, or whether its procedure could have been better. In all cases the inquiry is whether, under the particular circumstances presented, the hearing was fair, and accorded the individual the essential elements of due process [837 F.2d at 16].

In some cases, the institution may determine that a student must be removed from campus immediately for his or her own safety or the safety of others. Even if the institution determines that a student is dangerous and that a summary suspension is needed, the student's due process rights must be addressed. While case law on these points has been sparse, the U.S. Supreme Court's 1975 ruling in *Goss v. Lopez* explains that:

[a]s a general rule notice and hearing should precede removal of the student from school. We agree . . . , however, that there are recurring situations in which prior notice and hearing cannot be insisted upon. Students whose presence poses a continuing danger to persons or property or an ongoing threat of disrupting the academic process may be immediately removed from school . . . [and notice and hearing] should follow as soon as practicable [419 U.S. at 583 (1975)].

In *Ashiegbu v. Williams*, 1997 U.S. App. LEXIS 32345 (6th Cir. 1997) (unpublished), a student from Ohio State University (OSU) alleged that he had been called to the office of the vice president for student affairs, handed a letter stating that he was being suspended "because of a continuing pattern of threats and disruptions to the OSU community," and ordered not to return to campus until he had obtained both a psychiatric evaluation and OSU's consent to his return. Ruling that the indefinite suspension was the equivalent of a permanent expulsion, the court stated that the vice president should have provided Ashiegbu with notice, an explanation of the evidence against him, and an opportunity to present his side of the story. The court also ruled that Ashiegbu had the right to a preexpulsion (but not necessarily a presuspension) hearing. Given these due process violations, the appellate court ruled that the trial court's dismissal of Ashiegbu's civil rights action was improper.

On the other hand, a federal trial court rejected a student's claim that his suspension prior to a hearing violated due process guarantees. In *Hill v. Board of Trustees of Michigan State University*, 182 F. Supp. 2d 621 (W.D. Mich. 2001), Hill, a Michigan State University student, was caught on videotape participating in a riot after a basketball game and vandalizing property. Because Hill was already on probation for recent violations of the alcohol policy, an administrator suspended Hill and offered him a hearing before a student-faculty hearing panel the following week. The court ruled that the administrator was justified in using his emergency power of suspension prior to a hearing because of Hill's violent conduct, and that the subsequent hearing held a week later, at which Hill was represented by counsel who participated in the questioning, was timely and impartial.

Some victims of alleged violence by fellow students, or other witnesses, may be reluctant to actually "face" the accused, and have requested that either they or the accused be allowed to sit behind screens in order not to be seen by the accused. In *Gomes v. University of Maine System*, 304 F. Supp. 2d 117 (D. Maine 2004), the university had suspended two students for allegedly committing a sexual assault. The students challenged their suspensions on both substantive and procedural due process grounds. Although the trial court awarded summary

judgment to the university on the students' substantive due process claims, finding that the university's decision was within the protections of the Fourteenth Amendment, it refused to side with the university on the students' procedural due process claims. The students and their attorneys had been required to sit behind screens so that neither the students nor their attorneys could see the accuser or the hearing panel. The court agreed with the students that such a walling off could have interfered with their counsels' ability to cross-examine witnesses, and ruled that the procedural due process claim would have to be tried.

(For analyses of student rights in disciplinary hearings, see J. M. Picozzi, "University Disciplinary Process: What's Fair, What's Due and What You Don't Get," 96 *Yale L.J.* 2132 (1987); and D. R. Richmond, "Students' Right to Counsel in University Disciplinary Proceedings," 15 *J. Coll. & Univ. Law* 289 (1989).)

When students are accused of academic misconduct, such as plagiarism or cheating, conduct issues become mixed with academic evaluation issues (compare the *Napolitano* case in Section 9.4.4). Courts typically require some due process protections for students suspended or dismissed for academic misconduct, but not elaborate ones. For example, in *Easley v. University of Michigan Board of Regents*, 853 F.2d 1351 (6th Cir. 1988), the court found no constitutional deprivation in a law school's decision to suspend a student for one year after finding that he had plagiarized a course paper. The school had given the student an opportunity to respond to the charges against him, and the court also determined that the student had no property interest in his law degree because he had not completed the degree requirements.

But in *Jaksa v. Regents of the University of Michigan*, 597 F. Supp. 1245 (E.D. Mich. 1984), a trial court noted that a student challenging a one-semester suspension for cheating on a final examination had both a liberty interest and a property interest in continuing his education at the university. Applying the procedural requirements of *Goss v. Lopez*, the court ruled that the student had been given a meaningful opportunity to present his version of the situation to the hearing panel. It rejected the student's claims that due process was violated because he was not allowed to have a representative at the hearing, was not given a transcript, could not confront the student who charged him with cheating, and was not provided with a detailed statement of reasons by the hearing panel.

If an institution has developed due process procedures for investigating allegations of plagiarism or other forms of academic misconduct on the part of faculty, their use when graduate students are accused of academic misconduct should protect them from constitutional claims. In *Pugel v. Board of Trustees of the University of Illinois*, 378 F.3d 659 (7th Cir. 2004), the university initiated an investigation of data that a graduate student had submitted to a scholarly journal and had presented at a conference. The university used its standard investigative process, submitting the issue to an "Inquiry Team," which issued a report recommending that a full investigation be conducted. The investigation concluded that the graduate student had fabricated data in her article and presentation. The university had notified the student at the beginning of the

investigative process. After receiving the report of the Inquiry Team, an Investigation Panel was created that held hearings at which the student was permitted to testify and to present witnesses to testify on her behalf. Her doctor testified that she had attention deficit/hyperactivity disorder (ADHD) and thus was not guilty of academic misconduct. The Investigative Panel concluded that the student had committed academic misconduct. The next level of review was the chancellor, who concurred with the panel's conclusions and dismissed the student from the university. She appealed that decision to the president of the university, who denied her appeal on all grounds but one—the severity of the sanction. He referred that issue to the Senate Committee on Student Discipline, which met and determined that the sanction was warranted. The lawsuit followed. The trial court dismissed the student's constitutional claims, and the appellate court affirmed, stating that the student had been given ample notice, an opportunity to be heard and to clear her name, and three opportunities to appeal the outcome of the hearing.

Although the appellate court cited *Goss* as authority for somewhat less formal procedures than required by *Loudermill* (see Section 6.7.2.3), it noted that dismissal from graduate school was a more severe sanction than the discipline at issue in *Goss*, and thus required procedural protections more extensive than those outlined in *Goss*. Nevertheless, according to the court, the student received appropriate notice and a pretermination hearing, both of which fully complied with procedural due process requirements.

**9.4.3. Public institutions: Academic sanctions.** As noted above, the Fourteenth Amendment's due process clause also applies to students facing suspension or dismissal from publicly supported schools for deficient academic performance. But even though academic dismissals may be even more damaging to students than disciplinary dismissals, due process affords substantially less protection to students in the former situation. Courts grant less protection because they recognize that they are less competent to review academic evaluative judgments than factually based determinations of misconduct and that hearings and the attendant formalities of witnesses and evidence are less meaningful in reviewing grading than in determining misconduct.

*Gaspar v. Bruton*, 513 F.2d 843 (10th Cir. 1975), was apparently the first case to provide any procedural due process rights to a student facing an academic suspension or dismissal. The plaintiff was a forty-four-year-old high school graduate pursuing practical nurse training in a vocational-technical school. After completing more than two-thirds of the program, she was dismissed for deficient performance in clinical training. She had been on probation for two months owing to such deficiencies and had been informed that she would be dismissed if they were not corrected. When they were not, she was notified of dismissal in a conference with the superintendent and some of her instructors and was subsequently offered a second conference and an opportunity to question other staff and faculty members who had participated in the dismissal decision.

The trial and appellate courts upheld the dismissal, rejecting the student's contention that before dismissal she should have been confronted with and

allowed to challenge the evidence supporting the dismissal and permitted to present evidence in her defense. Although the appellate court recognized a “property interest” in continued attendance, it held that school officials had only minimal due process obligations in this context:

We hold that school authorities, in order to satisfy due process prior to termination or suspension of a student for deficiencies in meeting minimum academic performance, need only advise that student with respect to such deficiencies in any form. All that is required is that the student be made aware prior to termination of his failure or impending failure to meet those standards [513 F.2d at 850–51].

More significant protection was afforded in *Greenhill v. Bailey*, 519 F.2d 5 (8th Cir. 1975), where another U.S. Court of Appeals invalidated a medical student’s dismissal because he had not been accorded procedural due process. The school had dismissed the student for “lack of intellectual ability or insufficient preparation” and had conveyed that information to the liaison committee of the Association of American Medical Colleges, where it was available to all other medical schools. The court ruled that:

the action by the school in denigrating Greenhill’s intellectual ability, as distinguished from his performance, deprived him of a significant interest in liberty, for it admittedly “imposed on him a stigma or other disability that foreclose[s] his freedom to take advantage of other . . . opportunities” [*Board of Regents v. Roth*, 408 U.S. at 573, 92 S. Ct. at 2707].

The next year the same U.S. Court of Appeals extended its *Greenhill* ruling in another medical school case, *Horowitz v. Board of Curators of the University of Missouri*, 538 F.2d 1317 (8th Cir. 1976). But on appeal, the U.S. Supreme Court clipped this court’s wings and put an apparent halt to the development of procedural due process in academic disputes (*Board of Curators of the University of Missouri v. Horowitz*, 435 U.S. 78 (1978)). The university had dismissed the student, who had received excellent grades on written exams, for deficiencies in clinical performance, peer and patient relations, and personal hygiene. After several faculty members repeatedly expressed dissatisfaction with her clinical work, the school’s council on evaluation recommended that Horowitz not be allowed to graduate on time and that, “absent radical improvement” in the remainder of the year, she be dropped from the program. She was then allowed to take a special set of oral and practical exams, administered by practicing physicians in the area, as a means of appealing the council’s determination. After receiving the results of these exams, the council reaffirmed its recommendation. At the end of the year, after receiving further clinical reports on Horowitz, the council recommended that she be dropped from school. The school’s coordinating committee, then the dean, and finally the provost for health sciences affirmed the decision.

Though there was no evidence that the reasons for the dismissal were conveyed to the liaison committee, as in *Greenhill*, the appellate court held that

“Horowitz’s dismissal from medical school will make it difficult or impossible for her to obtain employment in a medically related field or to enter another medical school.” The court concluded that dismissal would so stigmatize the student as to deprive her of liberty under the Fourteenth Amendment and that, under the circumstances, the university could not dismiss the student without providing “a hearing before the decision-making body or bodies, at which she shall have an opportunity to rebut the evidence being relied upon for her dismissal and accorded all other procedural due process rights.”

The Supreme Court found it unnecessary to decide whether Horowitz had been deprived of a liberty or property interest. Even assuming she had, Horowitz had no right to a hearing:

Respondent has been awarded at least as much due process as the Fourteenth Amendment requires. The school fully informed respondent of the faculty’s dissatisfaction with her clinical progress and the danger that this posed to timely graduation and continued enrollment. The ultimate decision to dismiss respondent was careful and deliberate. These procedures were sufficient under the due process clause of the Fourteenth Amendment. We agree with the district court that respondent was afforded full procedural due process by the [school]. In fact, the court is of the opinion, and so finds, that the school went beyond [constitutionally required] procedural due process by affording [respondent] the opportunity to be examined by seven independent physicians in order to be absolutely certain that their grading of the [respondent] in her medical skills was correct [435 U.S. at 85].

The Court relied on the distinction between academic and disciplinary cases that lower courts had developed in cases prior to *Horowitz*, finding that distinction to be consistent with its own due process pronouncements, especially in *Goss v. Lopez* (Section 9.4.2):

The Court of Appeals apparently read *Goss* as requiring some type of formal hearing at which respondent could defend her academic ability and performance. . . .

A school is an academic institution, not a courtroom or administrative hearing room. In *Goss*, this Court felt that suspensions of students for disciplinary reasons have a sufficient resemblance to traditional judicial and administrative fact finding to call for a “hearing” before the relevant school authority. . . .

Academic evaluations of a student, in contrast to disciplinary determinations, bear little resemblance to the judicial and administrative fact-finding proceedings to which we have traditionally attached a full hearing requirement. In *Goss*, the school’s decision to suspend the students rested on factual conclusions that the individual students had participated in demonstrations that had disrupted classes, attacked a police officer, or caused physical damage to school property. The requirement of a hearing, where the student could present his side of the factual issue, could under such circumstances “provide a meaningful hedge against erroneous action.” The decision to dismiss respondent, by comparison, rested on the academic judgment of school officials that she did not have the necessary clinical ability to perform adequately as a medical doctor and was

making insufficient progress toward that goal. Such a judgment is by its nature more subjective and evaluative than the typical factual questions presented in the average disciplinary decision. Like the decision of an individual professor as to the proper grade for a student in his course, the determination whether to dismiss a student for academic reasons requires an expert evaluation of cumulative information and is not readily adapted to the procedural tools of judicial or administrative decision making [435 U.S. at 85–90].

*Horowitz* signals the Court's lack of receptivity to procedural requirements for academic dismissals. Clearly, an adversary hearing is not required. Nor are all the procedures used by the university in *Horowitz* required, since the Court suggested that Horowitz received more due process than she was entitled to. But the Court's opinion does not say that no due process is required. Due process probably requires the institution to inform the student of the inadequacies in performance and their consequences on academic standing. Apparently, due process also generally requires that the institution's decision making be "careful and deliberate." For the former requirements, courts are likely to be lenient on how much information or explanation the student must be given and also on how far in advance of formal dismissal the student must be notified. For the latter requirement, courts are likely to be very flexible, not demanding any particular procedure but rather accepting any decision-making process that, overall, supports reasoned judgments concerning academic quality. Even these minimal requirements would be imposed on institutions only when their academic judgments infringe on a student's "liberty" or "property" interest.

Since courts attach markedly different due process requirements to academic sanctions than to disciplinary sanctions, it is crucial to be able to place particular cases in one category or the other. The characterization required is not always easy. The *Horowitz* case is a good example. The student's dismissal was not a typical case of inadequate scholarship, such as poor grades on written exams; rather, she was dismissed at least partly for inadequate peer and patient relations and personal hygiene. It is arguable that such a decision involves "fact finding," as in a disciplinary case, more than an "evaluative," "academic judgment." Indeed, the Court split on this issue: five Justices applied the "academic" label to the case, two Justices applied the "disciplinary" label or argued that no labeling was appropriate, and two Justices refused to determine either which label to apply or "whether such a distinction is relevant." (For an analysis of *Horowitz*, and a criticism of its deference to the university's academic judgment, see W. G. Buss, "Easy Cases Make Bad Law: Academic Expulsion and the Uncertain Law of Procedural Due Process," 65 *Iowa L. Rev.* 1 (1979).)

Two federal appellate courts weighed in on the "academic" side in cases involving mixed issues of misconduct and poor academic performance. In *Mauriello v. University of Medicine and Dentistry of New Jersey*, 781 F.2d 46 (3d Cir. 1986), the court ruled that the dismissal of a medical student who repeatedly failed to produce thesis data was on academic rather than disciplinary grounds. And in *Harris v. Blake*, 798 F.2d 419 (10th Cir. 1986), in reviewing a student's involuntary withdrawal for inadequate grades, the court held that a professor's letter to a student's file, charging the student with incompetent performance (including absence from

class) and unethical behavior in a course, concerned academic rather than disciplinary matters.

Although there is no bright line separating the type of “academic” conduct to which a deferential standard of review should be applied from academic misconduct (such as cheating) to which due process protections should be provided, the Supreme Court of Texas has provided some guidance. In *University of Texas Medical School at Houston v. Than*, 901 S.W.2d 926 (Tex. 1995), a medical student, Than, was dismissed for allegedly cheating on an examination. The University of Texas (UT) Medical School provided Than with the opportunity to challenge his dismissal before a hearing board. Than’s hearing itself met due process requirements, but at the hearing’s end, the hearing officer and the medical school official, who presented the case against Than, inspected the room in which the test had been administered. Than was not allowed to accompany them; he asserted that this decision was a denial of due process. The court said:

UT argues that Than’s dismissal was not solely for disciplinary reasons, but was for academic reasons as well, thus requiring less stringent procedural due process than is required under *Goss* for disciplinary actions. . . . This argument is specious. Academic dismissals arise from a failure to attain a standard of excellence in studies whereas disciplinary dismissals arise from acts of misconduct. . . . Than’s dismissal for academic dishonesty unquestionably is a disciplinary action for misconduct [901 S.W.2d at 931].

The court ruled that the exclusion of Than from the posthearing inspection violated his procedural due process rights.

A federal district court rejected the contentions of a defendant college that it was not required to follow its disciplinary procedures in cases of expulsion for “academic misconduct.” In *Siblerud v. Colorado State Board of Agriculture*, 896 F. Supp. 1506 (D. Colo. 1995), Robert Siblerud, a former student who was trying to complete his dissertation, was dismissed from the Ph.D. program in physiology after he twice submitted manuscripts to journals that included a footnote in which he represented himself as a student. He was not given a hearing, but was permitted to appeal his dismissal by using the graduate school’s grievance process. Although the graduate school committee was divided, the provost affirmed the dismissal. Siblerud asserted that his dismissal was disciplinary, not academic, and the trial court agreed. Although the case was dismissed because the claim was time barred, the judge criticized the university’s handling of the situation and characterized it as a disciplinary action, rather than one sounding in academic judgment.

The boundary between academic and disciplinary dismissals, examined in *Siblerud* and *Than*, was also at issue in a 1999 U.S. Court of Appeals case. In *Wheeler v. Miller*, 168 F.3d 241 (5th Cir. 1999), the plaintiff had been dismissed from a doctoral program after receiving four grades of C and failing two sets of oral examinations. The program director gave the student two opportunities to remediate his academic deficiencies, but the student was unable to do so. The appellate court upheld the grant of summary judgment to the university, ruling that Wheeler’s due process claim was without merit because “the school’s

decision to terminate him from the doctoral program was careful and deliberate, following a protracted series of steps to rate [his] academic performance, identify and inform him of his weak performance, and . . . provide [him] with a specially tailored remedial plan” (168 F.3d at 248). These actions were not disciplinary, but designed to help him overcome his prior academic failure. To Wheeler’s claim that one professor gave him a C in a course because he fell asleep in class, turned in assignments late, and exhibited behavior that caused her to question his commitment to school psychology, the court responded that these issues were academic ones and were not conduct for which he was being disciplined.

In many cases an academic dismissal decision is based on both academic failure and problematic behavior, particularly for students in professional or clinical programs.<sup>26</sup> Observing that courts have struggled with the academic/disciplinary distinction and that students deserve to be given a reasonable opportunity to respond to charges whether the context be academic or disciplinary failure, one commentator suggests that a “consolidated” standard that is sensitive to the type of expertise required of the decision-maker be adopted by the courts (Fernand N. Dutile, “Disciplinary Versus Academic Sanctions in Higher Education: A Doomed Dichotomy?” 29 *J. Coll. & Univ. Law* 619 (2003)).

When dismissal or other serious sanctions depend more on disputed factual issues concerning conduct than on expert evaluation of academic work, the student should be accorded procedural rights akin to those for disciplinary cases (Section 9.4.2), rather than the lesser rights for academic deficiency cases. Of course, even when the academic label is clearly appropriate, administrators may choose to provide more procedural safeguards than the Constitution requires. Indeed, there may be good reason to provide some form of hearing prior to academic dismissal whenever the student has some basis for claiming that the academic judgment was arbitrary, in bad faith, or discriminatory (see Section 9.3.1). The question for the administrator, therefore, is not merely what procedures are constitutionally required but also what procedures would make the best policy for the particular institution.

Overall, two trends are emerging from the reported decisions in the wake of *Horowitz*. First, litigation challenging academic dismissals has usually been decided in favor of the institutions. Second, courts have read *Horowitz* as a case whose message has meaning well beyond the context of constitutional due process and academic dismissal. Thus, *Horowitz* also supports the broader concept of “academic deference,” or judicial deference to the full range of an academic institution’s academic decisions. Both trends help insulate postsecondary institutions from judicial intrusion into their academic evaluations of students

---

<sup>26</sup>See, for example, *Ku v. State of Tennessee*, 322 F.3d 431 (6th Cir. 2003), in which a student was dismissed for failing a required test, for his “lack of professional demeanor with his colleagues,” and for being “a possible risk to patients in a clinical setting.” The court ruled that the dismissal was for academic reasons and that fully informing the student of the “faculty’s dissatisfaction with the student’s academic progress,” and a “careful and deliberate” decision process, were sufficient to meet due process requirements.

by members of the academic community. But just as surely, these trends emphasize the institution's own responsibilities to deal fairly with students and others and to provide appropriate internal means of accountability regarding institutional academic decision making.

**9.4.4. *Private institutions.*** Federal constitutional guarantees of due process do not bind private institutions unless their imposition of sanctions falls under the state action doctrine explained in Section 1.5.2. But the inapplicability of constitutional protections, as Sections 9.2 and 9.3 suggest, does not necessarily mean that the student stands procedurally naked before the authority of the school.

The old view of a private institution's authority is illustrated by *Anthony v. Syracuse University*, 231 N.Y.S. 435 (N.Y. App. Div. 1928), where a student's dismissal was upheld even though "no adequate reason [for it] was assigned by the university authorities." The court held that "no reason for dismissing need be given," though the institution "must . . . have a reason" that falls within its dismissal regulations. "Of course, the university authorities have wide discretion in determining what situation does and what does not fall within . . . [its regulations], and the courts would be slow indeed in disturbing any decision of the university authorities in this respect."

In more recent times, however, many courts have become faster on the draw with private schools. In *Carr v. St. John's University, New York* (see Section 9.2.3), a case limiting the impact of *Anthony* within New York State, the court indicated, although ruling for the university, that a private institution dismissing a student must act "not arbitrarily but in the exercise of an honest discretion based on facts within its knowledge that justify the exercise of discretion." In subsequently applying this standard to a discipline case, another New York court ruled that "the college or university's decision to discipline that student [must] be predicated on procedures which are fair and reasonable and which lend themselves to a reliable determination" (*Kwiatkowski v. Ithaca College*, 368 N.Y.S.2d 973 (N.Y. Sup. Ct. 1975)).

A federal appellate court has made it clear that private colleges and universities are not held to the same constitutional standards as are public institutions, even if state law requires them to promulgate disciplinary rules. In *Albert v. Carovano*, 851 F.2d 561 (2d Cir. 1988), students suspended by Hamilton College for occupying the college's administration building brought constitutional claims under a state action theory (see Section 1.5.2). Section 6450 of New York's Education Law required all institutions of higher education to adopt disciplinary rules, and to file them with the state, which the college had done. Although the college's rules and disciplinary procedures provided for a judiciary board that would review the charges and evidence and determine the sanctions to be levied, the procedures also reserved to the president the right to dispense with the written procedures. In dealing with the students, who continued to occupy the building even after the college had secured a court order enjoining the occupation, the president suspended them effective at the end of the semester, but invited them to state in writing their views on the situation to either the

trustees or himself. The students demanded a hearing before the judiciary board, which was not granted. The lawsuit ensued.

The *en banc* court provided a lengthy discussion of the state action doctrine. In this case, it noted, the state law required that the disciplinary rules be placed on file, but the state had made no attempt to evaluate the rules or to ensure that the colleges followed them. Given the lack of state action, the plaintiffs' constitutional claims were dismissed. The court remanded for further consideration the students' claim that the college's selective enforcement of its disciplinary regulations violated Section 1981's prohibitions against race discrimination (see Section 8.2.4.1).

As is true for public institutions, judges are more likely to require private institutions to provide procedural protections in the misconduct area than in the academic sphere. For example, in *Melvin v. Union College*, 600 N.Y.S.2d 141 (N.Y. App. Div. 1993), a breach of contract claim, a state appellate court enjoined the suspension of a student accused of cheating on an examination; the court took this action because the college had not followed all the elements of its written disciplinary procedure. But in *Ahlum v. Administrators of Tulane Educational Fund*, 617 So. 2d 96 (La. Ct. App. 1993), the appellate court of another state refused to enjoin Tulane University's suspension of a student found guilty of sexual assault. Noting that the proper standard of judicial review of a private college's disciplinary decisions was the "arbitrary and capricious" standard, the court upheld the procedures used and the sufficiency of the factual basis for the suspension. Since the court determined that Tulane's procedures exceeded even the due process protections required in *Goss v. Lopez*, it did not attempt to determine the boundaries of procedural protections appropriate for the disciplinary actions of private colleges and universities. A similar result was reached in *In re Rensselaer Society of Engineers v. Rensselaer Polytechnic Institute*, 689 N.Y.S.2d 292 (N.Y. App. Div. 1999), in which the court ruled that "judicial scrutiny of the determination of disciplinary matters between a university and its students, or student organizations, is limited to determining whether the university substantially adhered to its own published rules and guidelines for disciplinary proceedings so as to ascertain whether its actions were arbitrary or capricious" (689 N.Y.S.2d at 295).

In an opinion extremely deferential to a private institution's disciplinary procedure, and allegedly selective administrative enforcement of the disciplinary code, a federal appellate court refused to rule that Dartmouth College's suspension of several white students violated federal nondiscrimination laws. In *Dartmouth Review v. Dartmouth College*, 889 F.2d 13 (1st Cir. 1989), the students alleged that the college's decision to charge them with disciplinary code violations, and the dean's refusal to help them prepare for the hearing (which was promised in the student handbook), were based on their race. The court disagreed, stating that unfairness or inconsistency of administrative behavior did not equate to racial discrimination, and, since they could not demonstrate a causal link between their race and the administrators' conduct, the students' claims failed.

The emerging legal theory of choice for students challenging disciplinary or academic sanctions levied by private colleges is the contract theory. In

*Boehm v. University of Pennsylvania School of Veterinary Medicine*, 573 A.2d 575 (Pa. Super. Ct. 1990), the court, after reviewing case law, legal scholarship, and other sources, concluded that:

[a] majority of the courts have characterized the relationship between a private college and its students as contractual in nature. Therefore, students who are being disciplined are entitled only to those procedural safeguards which the school specifically provides. . . . The general rule, therefore, has been that where a private university or college establishes procedures for the suspension or expulsion of its students, substantial compliance with those established procedures must be had before a student can be suspended or expelled [573 A.2d at 579].

In *Fellheimer v. Middlebury College*, 869 F. Supp. 238 (D. Vt. 1994), a student challenged his suspension for a violation of a “disrespect for persons” provision of the college’s code of student conduct. The student had been charged with raping a fellow student. The hearing board found him not guilty of that charge, but guilty of the disrespect charge, a charge of which he had never received notice. The college accepted the hearing board’s determination and suspended Fellheimer for a year, requiring him to receive counseling prior to applying for readmission. Fellheimer then filed a breach of contract claim (Section 8.1.3), based upon his theory that the student handbook, which included the code of conduct, was a contract. The court agreed, ruling that the college was contractually bound to provide whatever procedural safeguards the college had promised to students.<sup>27</sup>

Although the court rejected Fellheimer’s argument that the college had promised to provide procedural protections “equivalent to those required under the Federal and State constitutions,” the handbook’s language did promise “due process. . . . The procedures outlined [in the handbook] are designed, however, to assure fundamental fairness, and to protect students from arbitrary or capricious disciplinary action” (869 F. Supp. at 243–44). Fellheimer, thus, did not have constitutional due process rights, but he did have the contractual right to be notified of the charges against him. He had never been told that there were two charges against him, nor was he told what conduct would violate the “disrespect for persons” language of the handbook. Therefore, the court ruled, the hearing was “fundamentally unfair.” The court refused to award Fellheimer damages until the college decided whether it would provide him with another hearing that cured the violation of the first hearing. It also rejected his emotional distress claim, ruling that, with the exception of the notice violation, the college substantially complied with its own procedures and thus its conduct was neither extreme nor outrageous.

On the other hand, the Massachusetts Supreme Court, while assuming that the student handbook was a contract, rejected a student’s claim based on alleged

---

<sup>27</sup>Cases and authorities are collected at Claudia G. Catalano, “Liability of Private School or Educational Institution for Breach of Contract Arising from Expulsion or Suspension of Student,”<sup>47</sup> A.L.R.5th 1.

violations of the handbook's provisions regarding student disciplinary hearings. In *Schaer v. Brandeis University*, 735 N.E.2d 373 (Mass. 2000), a student suspended after being found guilty of raping a fellow student challenged the discipline on the grounds that the institution's failure to follow its own policies and procedures was a breach of contract. The student had alleged that the university failed to investigate the rape charge, and that the disciplinary board did not make a record of the hearing, admitted irrelevant evidence and excluded relevant evidence, failed to apply the "clear and convincing evidence" standard set out in the student code, and failed to follow the institution's policies regarding instructing the hearing board on due process in a disciplinary hearing. Although the trial court had dismissed his complaint, the intermediate appellate court reversed and remanded, ruling that the college had made several procedural errors that had prejudiced Schaer and that could have constituted a breach of contract.

The college appealed, and the state's highest court, assuming without deciding that a contractual relationship existed between Schaer and Brandeis, ruled in a 3-to-2 opinion that Schaer had not stated a claim for which relief could be granted. The majority took particular exception to the intermediate appellate court's criticism of the conduct of the hearing and the admission of certain evidence, saying:

It is not the business of lawyers and judges to tell universities what statements they may consider and what statements they must reject. . . . A university is not required to adhere to the standards of due process guaranteed to criminal defendants or to abide by rules of evidence adopted by courts [735 N.E.2d at 380, 381].

Two of the five justices dissented vigorously, stating that "students should not be subject to disciplinary procedures that fail to comport with the rules promulgated by the school itself" (735 N.E.2d at 381), and that Schaer's allegations were sufficient to survive the motion to dismiss. The sharp differences of opinion in *Schaer* suggest that some courts will more closely scrutinize colleges' compliance with their own disciplinary rules and regulations.

Two trial court opinions on breach of contract claims by students challenging the outcomes of disciplinary hearings demonstrate the importance of careful drafting of procedural rules. In *Millien v. Colby College*, 2003 Maine Super. LEXIS 183 (Maine Super. Ct., Kennebec Co., August 15, 2003), the court rejected a student's breach of contract claim, in part because of a strong reservation of rights clause in the student handbook (see Section 8.1.3). The student complained that an additional appeal board not mentioned in the student handbook had reversed an earlier hearing panel decision in the student's favor. The court said that the handbook was not the only source of a potential contractual relationship between the college and the student, and ruled that the student was attempting to use a breach of contract claim to invite the court to review the merits of the appeal board's ruling, which the court refused to do.

But in *Ackerman v. President and Trustees of the College of Holy Cross*, 2003 Mass. Super. LEXIS 111 (Super. Ct. Mass. at Worcester, April 1, 2003), the court

ordered a student reinstated pending a hearing before the campus hearing board. Citing *Schaer*, the court closely read the words of the student handbook. Because the handbook provided that disciplinary charges against a student that could result in suspension would “normally” be heard by the hearing board, failure to provide the student a hearing under such circumstances could be a breach of contract.

Given the tendency of courts to find a contractual relationship between the college and the student with respect to serious discipline (suspension, expulsion), it is very important that administrators and counsel review student codes of conduct and published procedures for disciplinary hearings. Terms such as “due process,” “substantial evidence,” and “just cause” should not be used unless the private college intends to provide a hearing that will meet each of these standards. Protocols should be developed for staff who interview students charged with campus code violations, especially if the charges have the potential to support criminal violations. Members of campus hearing boards should be trained and provided with guidelines for the admission of evidence, for the evaluation of potentially biased testimony, for assigning the burden of proof between the parties (see Section 2.2.3.6), for determining the evidentiary standard that the board should follow in making its decision (see Section 2.2.3.5), and for determining what information should be in the record of the proceeding or in the board’s written ruling.

Even the most conscientious training of staff and hearing board members may not prevent alleged unfairness in the disciplinary process. The case of *Williams v. Lindenwood University*, 288 F.3d 349 (8th Cir. 2002), is instructive. Williams, an African American student, was expelled from the university for violating its alcohol policies and other school rules at a party. Three other students who had also violated the rules were expelled and then reinstated (two were white, one African American), but Williams was not reinstated because the dean determined that he had created a dangerous situation by “bringing criminals and gang members” to campus and because he had hosted the party. Williams brought race discrimination and breach of contract claims against the university. Although the trial court granted the university’s motion for summary judgment, the federal appellate court reversed, ruling that the student’s evidence that racially derogatory remarks by the dean of students (who recommended the expulsion), the university’s president, and the dean of admissions (who made the negative readmission decision) raised sufficient issues of material fact to permit a fact finder to conclude that racial discrimination was a motive for the university’s refusal to readmit the plaintiff.

In reviewing determinations of academic performance, rather than disciplinary misconduct, the courts have crafted lesser procedural requirements for private colleges. As is also true for public institutions, however, the line between academic and disciplinary cases may be difficult to draw. In *Napolitano v. Trustees of Princeton University*, 453 A.2d 263 (N.J. Super. Ct. App. Div. 1982), the court reviewed the university’s withholding of a degree, for one year, from a student whom a campus committee had found guilty of plagiarizing a term paper. In upholding the university’s action, the court determined that the

problem was one “involving academic standards and not a case of violation of rules of conduct.” In so doing, the court distinguished “academic disciplinary actions” from disciplinary actions involving other types of “misconduct,” according greater deference to the institution’s decisions in the former context and suggesting that lesser “due process” protection was required. The resulting dichotomy differs from the “academic/disciplinary” dichotomy delineated in Section 9.4.3 and suggests the potential relevance of a third, middle category for “academic disciplinary” cases. Because such cases involve academic standards, courts should be sufficiently deferential to avoid interference with the institution’s expert judgments on such matters; however, because such cases may also involve disputed factual issues concerning student conduct, courts should afford greater due process rights than they would in academic cases involving only the evaluation of student performance.

The Supreme Court of Iowa addressed the question of whether a medical student’s dismissal for failure to successfully complete his clinical rotations was on academic or disciplinary grounds. In *Lekutis v. University of Osteopathic Medicine*, 524 N.W.2d 410 (Iowa 1994), the student had completed his coursework with the highest grades in his class and had scored in the 99th percentile in standardized tests. The student had serious psychological problems, however, and had been hospitalized several times while enrolled in medical school. During several clinical rotations, his instructors had found his behavior bizarre, inappropriate, and unprofessional, and gave him failing grades. He was eventually dismissed from medical school.

The court applied the *Ewing* standard, reviewing the evidence to determine whether the medical school faculty “substantially departed from accepted academic norms [or] demonstrated an absence of professional judgment” (524 N.W.2d at 413). Although some evaluations had been delayed, the court found that the staff did not treat the student in an unfair or biased way, and that there was considerable evidence of his inability to interact appropriately with patients and fellow medical staff.

While the doctrinal bases for procedural rights in the public and private sectors are different, and while the law accords private institutions greater deference, the cases discussed in this Section demonstrate that courts are struggling with the notion that students who attend private colleges are entitled to something less than the notice and opportunity to be heard that are central to the concept of due process that students at public colleges enjoy. Because many student affairs personnel view student conduct codes and the disciplinary process as part of the educational purpose of the institution (rather than as law enforcement or punishment for a “crime”), the language of the student handbook and other policy documents should reflect that purpose and make clear the rights of the accused student, the disciplinary board, and the institution itself.

## ***Sec. 9.5. Student Protests and Freedom of Speech***

***9.5.1. Student free speech in general.*** Student free speech issues arise in many contexts on the campus as well as in the local community. Issues

regarding protests and demonstrations were among the first to receive extensive treatment from the courts, and these cases served to develop many of the basic general principles concerning student free speech (see below). Issues regarding student protests and demonstrations also remain among the most difficult for administrators and counsel, both legally and strategically. Subsections 9.5.3 through 9.5.5 and 9.5.7 below therefore focus on these First Amendment issues and the case law in which they have been developed and resolved. Other important free speech developments, of more recent origin, concern matters such as student communication via posters and leaflets (discussed in subsection 9.5.6 below), hate speech (discussed in Section 9.6), student communication via campus computer networks (discussed in Section 8.5.1), students' freedom to refrain from supporting student organizations whose views they oppose (discussed in Sections 10.1.2 & 10.1.3), and student academic freedom (discussed in Section 8.1.4). The closely related topic of students' freedom of the press is discussed in Section 10.3.

Freedom of expression for students is protected mainly by the free speech and press provisions in the First Amendment of the U.S. Constitution, which applies only to "public" institutions (see *Coleman v. Gettysburg College*, 335 F. Supp. 2d 586 (M.D. Pa. 2004), and see generally Section 1.5.2 of this book). In some situations, student freedom of expression may also be protected by state constitutional provisions (see Section 1.4.2.1 and the *Schmid* case in Section 11.6.3) or by state statutes (see, for example, Cal. Educ. Code §§ 66301 & 76120 (public institutions) and § 94367 (private institutions)). As the California statutes and the *Schmid* case both illustrate, state statutes and constitutional provisions sometimes apply to private as well as public institutions. In 1998, Congress also attempted to extend First Amendment free speech protections to students in private institutions by adding a new provision to the Higher Education Act. This provision, which applies to all institutions receiving federal financial assistance, appears as Section 112, "Protection of Student Speech and Association Rights," of the Higher Education Amendments of 1998, Pub. L. No. 105-244, 112 Stat. 1581, 1591 (October 7, 1998), codified at 20 U.S.C. § 1011a. The provision has had minimal impact, however, because it has no enforcement mechanism and, in effect, merely states the "sense of Congress" on this matter.

Student freedom of expression may also be protected by the institution's own bill of rights or other internal rules (see Section 1.4.2.3) in both public and private institutions. By this means, private institutions may consciously adopt First Amendment norms that have been developed in the courts and that bind public institutions, so that these norms sometimes become operative on private as well as public campuses. The following discussion focuses on these First Amendment norms and the case law in which they have been developed.

In a line of cases arising mainly from the campus unrest of the late 1960s and early 1970s, courts have affirmed that students have a right to protest and demonstrate peacefully—a right that public institutions may not infringe. This right stems from the free speech clause of the First Amendment as reinforced by that Amendment's protection of "the right of the people peaceably to assemble, and to petition the Government for a redress of grievances." The keystone

case is *Tinker v. Des Moines Independent Community School District*, 393 U.S. 503 (1969). Several high school students had been suspended for wearing black armbands to school to protest the United States' Vietnam War policy. The U.S. Supreme Court ruled that the protest was a nondisruptive exercise of free speech and could not be punished by suspension from school. The Court made clear that "First Amendment rights, applied in light of the special characteristics of the school environment, are available to teachers and students" and that students "are possessed of fundamental rights which the state must respect, just as they themselves must respect their obligations to the State."

Though *Tinker* involved secondary school students, the Supreme Court soon applied its principles to postsecondary education in *Healy v. James*, 408 U.S. 169 (1972), discussed further in Section 9.1.1. The *Healy* opinion carefully notes the First Amendment's important place on campus:

State colleges and universities are not enclaves immune from the sweep of the First Amendment. . . . [T]he precedents of this Court leave no room for the view that . . . First Amendment protections should apply with less force on college campuses than in the community at large. Quite to the contrary, "The vigilant protection of constitutional freedoms is nowhere more vital than in the community of American schools" (*Shelton v. Tucker*, 364 U.S. 479, 487 (1960)). The college classroom with its surrounding environs is peculiarly the "marketplace of ideas," and we break no new constitutional ground in reaffirming this Nation's dedication to safeguarding academic freedom [408 U.S. at 180–81].

In the *Tinker* case (above), the Court also made clear that the First Amendment protects more than just words; it also protects certain "symbolic acts" that are performed "for the purpose of expressing certain views." The Court has elucidated this concept of "symbolic speech" or "expressive conduct" in a number of subsequent cases; see, for example, *Virginia v. Black*, 538 U.S. 343, 358 (2003) (cross burning is symbolic speech); *Texas v. Johnson*, 491 U.S. 397, 404 (1989) (burning the American flag is symbolic speech). Lower courts have applied this concept to higher education and students' rights. In *Burnham v. Ianni*, 119 F.3d 668 (8th Cir. 1997) (*en banc*), for example, the dispute concerned two photographs that students had posted in a display case outside a departmental office (for further details, see Section 9.5.2 below). Citing *Tinker*, the court noted that the posting of the photographs was "expressive behavior" that "qualifies as constitutionally protected speech." According to the court:

Nonverbal conduct constitutes speech if it is intended to convey a particularized message and the likelihood is great that the message will be understood by those who view it, regardless of whether it is actually understood in a particular instance in such a way. *Spence v. Washington*, 418 U.S. 405, 411 (1969)]. [The two professors], through their photographs, were attempting, at least in part, to convey and advocate their scholarly and professorial interests in military history and in military weaponry's part in their vocation. [The two students], as well, were attempting to show their creativeness and interest in the scope of the

teaching mission of the history department. The display was [the students'] idea; they organized and exhibited it. Because these messages sufficiently satisfy the *Spence* test, the photographs and the display qualify as speech. *Id.* And, we do not understand that [the chancellor] disputes this conclusion [119 F. 3d at 674].

The free speech protections for students are at their peak when the speech takes place in a “public forum”—that is, an area of the campus that is, traditionally or by official policy, available to students, the entire campus community, or the general public for expressive activities. Since the early 1980s, the public forum concept has become increasingly important in student freedom of expression cases. The concept and its attendant “public forum doctrine” are discussed in Section 9.5.2 below.

Although *Tinker*, *Healy*, and *Widmar* apply the First Amendment to the campus just as fully as it applies to the general community, the cases also make clear that academic communities are “special environments,” and that “First Amendment rights . . . [must be] applied in light of the special characteristics of the school environment” (*Tinker* at 506). In this regard, “[a] university differs in significant respects from public forums such as streets or parks or even municipal theaters. A university’s mission is education, and decisions of this Court have never denied a university’s authority to impose reasonable regulations compatible with that mission upon the use of its campus and facilities” (*Widmar v. Vincent*, 454 U.S. 263, 268, n.5 (1981)). The interests that academic institutions may protect and promote, and the nature of threats to these interests, may thus differ from the interests that may exist for other types of entities and in other contexts. Therefore, although First Amendment principles do apply with full force to the campus, their application may be affected by the unique interests of academic communities.

Moreover, colleges and universities may assert and protect their interests in ways that create limits on student freedom of speech. The *Tinker* opinion recognizes “the need for affirming the comprehensive authority of the States and of school officials, consistent with fundamental constitutional safeguards, to prescribe and control conduct in the schools” (at 507). That case also emphasizes that freedom to protest does not constitute freedom to disrupt: “[C]onduct by the student, in class or out of it, which for any reason—whether it stems from time, place, or type of behavior—materially disrupts classwork or involves substantial disorder or invasion of the rights of others is . . . not immunized by the constitutional guarantee of freedom of speech” (at 513). *Healy* makes the same points.

**9.5.2. The “public forum” concept.** As indicated in Section 9.5.1 above, student expressive activities undertaken in a “public forum” receive more protection under the First Amendment than expressive activities undertaken in or on other types of government property. The public forum concept is therefore a key consideration in many disputes about freedom of speech on campus as well as in the local community.

Public forum issues arise, or may arise, when government seeks to regulate “private speech” activities that take place on its own property.<sup>28</sup> The “public forum doctrine” provides help in resolving these types of issues. The general questions addressed by the public forum doctrine are (1) whether a government’s status as *owner*, *proprietor*, or *manager* of the property affords it additional legal rationales (beyond traditional rationales such as incitement, fighting words, obscenity, or defamation) for regulating speech that occurs on this property; and (2) whether the free speech rights of the speaker may vary depending on the *character* of the government property on which the speech occurs. In other words, can government regulate speech on its own property that it could not regulate elsewhere and, if so, does the constitutionality of such speech regulations depend on the character of the government property at issue? These questions are sometimes framed as *access* questions: To what extent do private individuals have a First Amendment *right of access* to government property for purposes of expressive activity?

Since the right of access is based in the First Amendment, and since the property involved must be government property, public forum issues generally arise only at public colleges and universities. Such issues could become pertinent to a private college or university, however, if its students were engaging, or planning to engage, in speech activities on public streets or sidewalks that cut through or are adjacent to the private institution’s campus; or if its students were using other government property in the vicinity of the campus for expressive purposes.

The basic question is whether the property is “forum” property; some, but not all, government property will fit this characterization. The U.S. Supreme Court’s cases reveal three categories of forum property: (1) the “traditional” public forum; (2) the “designated” public forum; and (3) the “nonpublic” forum.<sup>29</sup> Government property that does not fall into any of these three categories is considered to be “nonforum” property, that is, “not a forum at all” (*Arkansas Educational Television Comm’n. v. Forbes*, 523 U.S. 666, 678 (1998)). For such property, the government, in its capacity as owner, proprietor, or manager, may exclude all private speech activities from the property and preserve the property solely for its intended governmental purposes.

Courts have long considered public streets and parks, as well as sidewalks and town squares, to be traditional public forums. A traditional public forum is

---

<sup>28</sup>“Private speech” is the speech of private individuals who are expressing their own ideas rather than those of the government. Private speech may be contrasted to “government speech,” by which government conveys its own message through its own officials or employees, or through private entities that government subsidizes for the purpose of promoting the governmental message. See *Rosenberger v. Rectors and Visitors of University of Virginia*, 515 U.S. 819, 833 (1995); and see generally William Kaplin, *American Constitutional Law* (Carolina Academic Press, 2004), Chap. 11, Sec. F. Student speech is typically considered to be private speech, as it was in the *Rosenberger* case.

<sup>29</sup>See generally *Perry Education Association v. Perry Local Educator’s Association*, 460 U.S. 37, 44–46 (1983); *Cornelius v. NAACP Legal Defense and Education Fund*, 473 U.S. 788, 800–802 (1985); *Arkansas Educational Television Comm’n. v. Forbes*, 523 U.S. 666, 677–78 (1998).

generally open to all persons to speak on any subjects of their choice. The government may impose restrictions regarding the “time, place, or manner” of the expressive activity in a public forum, so long as the restrictions are content neutral and otherwise meet the requirements for such regulations (see Section 9.5.3). But the government cannot exclude a speaker from the forum based on content or otherwise regulate the content of forum speech unless the exclusion or regulation “is necessary to serve a compelling state interest and . . . is narrowly drawn to achieve that interest” (*Arkansas Educational Television Comm’n.*, 523 U.S. at 677, quoting *Cornelius*, 473 U.S. at 800). (See generally Susan Williams, “Content Discrimination and the First Amendment,” 139 *U. Pa. L. Rev.* 615 (1991).) The traditional public forum category may also include a subcategory called “new forum” property or (ironically) “nontraditional forum” property that, according to some Justices, encompasses property that is the functional equivalent of, or a modern analogue to, traditional forum property.<sup>30</sup>

A designated public forum, in contrast to a traditional public forum, is government property that the government has, by its own intentional action, designated to serve the purposes of a public forum. Designated forum property may be land or buildings that provide physical space for speech activities, but it also may include different forms of property, such as bulletin boards, space in print publications, or (as in *Rosenberger*, above) even a student activities fund that a university uses to subsidize expressive activities of student groups. A designated forum may be just as open as a traditional forum, or access may be limited to certain classes of speakers (for example, students at a public university) or to certain classes of subject matter (for example, curriculum-related or course-related subjects). The latter type of designated forum is called a “limited public forum” or a “limited designated forum.” (See *Widmar v. Vincent*, 454 U.S. 263 (1981) (discussed in Section 10.1.5).) Thus, unlike traditional public forums, which must remain open to all, governments retain the choice of whether to open or close a designated forum as well as the choice of whether to limit the classes of speakers or classes of topics for the forum. However, for speakers who fall within the classes of speakers and topics for which the forum is designated, the constitutional rules are the same as for a traditional forum. Government may impose content-neutral time, place, and manner requirements on the speaker but may not regulate the content of the speech (beyond the original designation of permissible topics) unless it meets the compelling interest standard set out above. In addition, if government does limit the forum by designating permissible classes of speakers and topics, its distinction between the classes must be “reasonable in light of the purpose served by the forum” (*Cornelius*, 473 U.S. at 806) and must also be viewpoint neutral (*Rosenberger*, 515 U.S. at 829–30; see generally *Good News Club v. Milford Central School*, 533 U.S. 98, 106–7 (2001)). As the Court explained in *Rosenberger*: “In determining whether the . . . exclusion of a class of speech is legitimate, we have observed a distinction between . . . content discrimination, which may be permissible . . . and viewpoint discrimination,

---

<sup>30</sup>See especially *International Society for Krishna Consciousness, Inc. v. Lee*, 505 U.S. 672, 697–99 (1992) (Kennedy, J., concurring in the judgment).

which is presumed impermissible when directed against speech otherwise within the forum’s limitations” (515 U.S. at 829–30).

A nonpublic forum, in contrast to a traditional or designated forum, is open neither to persons in general nor to particular classes of speakers. It is open only on a selective basis for individual speakers. In other words, “the government allows selective access for individual speakers rather than general access for a class of speakers” (*Arkansas Educational Television Comm’n. v. Forbes*, 523 U.S. 666, 679 (1998)). Governments have more rationales for prohibiting or regulating speech activities in nonpublic forums, and governmental authority to exclude or regulate speakers is correspondingly greater, than is the case for traditional and designated forums. (See, for example, *International Society for Krishna Consciousness v. Lee*, 505 U.S. 672 (1992).) A reasonableness requirement and the viewpoint neutrality requirement, however, do limit government’s discretion in selecting individual speakers and regulating their speech in a nonpublic forum. The constitutional requirements for a nonpublic forum, therefore, are similar to the requirements that apply to the government’s designation of classes of speakers and topics for a limited designated forum. The nonpublic forum, however, is not subject to the additional strict requirements, noted above, that apply to a limited designated forum when government regulates the speech of persons who fall within classes designated for the forum.

When the public forum doctrine is applied to a public institution’s campus, its application will vary depending on the type of property at issue. The entire grounds of a campus would not be considered to be public forum property, nor would all of the buildings and facilities. (For analysis of this point, see *Roberts v. Haragan*, 346 F. Supp. 2d 853, 860–63 (N.D. Tex. 2004).) Even for a particular part of the grounds, or a particular building or facility, part of it may be a public forum while other parts are not. Thus, a public institution need not, and typically does not, open all of its grounds or facilities to expressive uses by students or others. In *State of Ohio v. Spingola*, 736 N.E.2d 48 (Ohio 1999), for example, the court considered Ohio University’s uses of its College Green—“an open, square-shaped area surrounded on three sides by academic buildings.” The court first held that “the green is not a traditional public forum” because “it does not possess the characteristics inherent in” such a forum, nor was there evidence that students or others had “traditionally used the green for public assembly and debate.” As to the remaining two options for characterizing the green, the court held that part of the green was in the designated forum category and part (the part called “The Monument”) was in the nonpublic forum category. The university “may designate portions of the green as a nontraditional public forum, but keep other areas of the green as nonpublic forums.” Since the university had done so, it could exclude demonstrators or other speakers from using the nonpublic forum parts of the green (specifically, the Monument) for their expressive activities.

Public forum property is not limited to grounds, as in *Spingola*, or to rooms in buildings, or comparable physical space. It may also be, for instance, a bulletin board (see Section 9.5.6 below), a table used for distribution of fliers, or a display case. In *Burnham v. Ianni*, 119 F.3d 668 (8th Cir. 1997) (*en banc*), for

example, two students in the history department at the University of Minnesota at Duluth (UMD) had prepared a photographic display of the history faculty's professional interests. The display included a photograph of Burnham dressed in a coonskin cap and holding a .45-caliber military pistol, and a photograph of another professor wearing a cardboard laurel wreath and holding a Roman short sword. The display case was located in a public hallway outside the history department offices and classrooms. Asserting reasons relating to campus safety, the university's chancellor (Ianni) ordered the two photographs removed from the display case.

In the ensuing lawsuit, the two students, along with the two faculty members, claimed that the removal of the photographs violated their free speech rights. The chancellor argued that the display case was a "nonpublic forum" that the university could regulate subject only to a reasonableness test that the chancellor's actions had met. A seven-judge majority of the U.S. Court of Appeals, sitting *en banc*, rejected this argument; three judges dissented. According to the majority:

In this case the nature of the forum makes little difference. Even if the display case was a nonpublic forum, . . . [the] Supreme Court has declared that "the State may reserve [a nonpublic] forum for its intended purposes, communicative or otherwise, as long as the regulation on speech is reasonable and not an effort to suppress expression merely because public officials oppose the speaker's view." Perry [*Education Ass'n. v. Perry Local Educator's Ass'n.*, 460 U.S. 37, 46]. . . . Here we find that the suppression was unreasonable both in light of the purpose served by the forum and because of its viewpoint-based discrimination.

The display case was designated for precisely the type of activity for which the [plaintiff students and professors] were using it. It was intended to inform students, faculty and community members of events in and interests of the history department. The University was not obligated to create the display case, nor did it have to open the case for use by history department faculty and students. However, once it chose to open the case, it was prevented from unreasonably distinguishing among the types of speech it would allow within the forum. Since the purpose of the case was the dissemination of information about the history department, the suppression of exactly that type of information was simply not reasonable.

We recognize that UMD "may legally preserve the property under its control for the use to which it is dedicated." *Lamb's Chapel [v. Center Moriches Union Free School District]*, 508 U.S. 384, at 390 (1993)]. However, as the Supreme Court has stated:

[A]lthough a speaker may be excluded from a nonpublic forum if he wishes to address a topic not encompassed within the purpose of the forum . . . or if he is not a member of the class of speakers for whose especial benefit the forum was created . . . , the government violates the First Amendment when it denies access to a speaker solely to suppress the point of view he espouses on an otherwise includible subject. *Id.* at 394 (quoting *Cornelius v. NAACP Legal Defense & Educ. Fund, Inc.*, 473 U.S. 788, 806 (1985)).

The suppression of this particular speech was also viewpoint-based discrimination. As the Supreme Court has noted, in determining whether the government may legitimately exclude a class of speech to preserve the limits of a forum, we have observed a distinction between, on the one hand, content discrimination, which may be permissible if it preserves the purposes of that limited forum, and, on the other hand, viewpoint discrimination, which is presumed impermissible when directed against speech otherwise within the forum's limitations. *Rosenberger v. Rector & Visitors of Univ. of Virginia*, 515 U.S. 819, 830 (1995) (citing *Perry*, 460 U.S. at 46). As *Rosenberger* illustrates, what occurred here was impermissible. The photographs of [the professors] expressed the plaintiffs' view that the study of history necessarily involves a study of military history, including the use of military weapons. Because other persons on the UMD campus objected to this viewpoint, or, at least, to allowing this viewpoint to be expressed in this particular way, [the chancellor] suppressed the speech to placate the complainants. To put it simply, the photographs were removed because a handful of individuals apparently objected to the plaintiffs' views on the possession and the use of military-type weapons and especially to their exhibition on campus even in an historical context. Freedom of expression, even in a nonpublic forum, may be regulated only for a constitutionally valid reason; there was no such reason in this case [119 F.3d at 676; compare 119 F.3d at 685 (McMillan, J., dissenting)].

The public forum concept is complex, and there is considerable debate among judges and commentators concerning its particular applications—including its applications to the campus. Characterizing the property at issue, and assigning it to its appropriate category, requires careful analysis of institutional policies and practices against the backdrop of the case law. Administrators should therefore work closely with counsel whenever public forum issues may become pertinent to decision making concerning student expression on campus. And counsel should be cautious in working with lower court opinions on the public forum doctrine, since it is not unusual for the U.S. Supreme Court precedents to be misconstrued or the analysis to be otherwise garbled in these opinions.

**9.5.3. Regulation of student protest.** It is clear, under the U.S. Supreme Court's decisions in *Tinker* and *Healy* (see Section 9.5.1 above), that postsecondary institutions may promulgate and enforce rules that prohibit disruptive group or individual protests. Lower courts have upheld disruption regulations that meet the *Tinker/Healy* guidelines. In *Khademi v. South Orange Community College District*, 194 F. Supp. 2d 1011 (C.D. Cal. 2002), for example, the court cited *Tinker* in affirming the proposition that “the [college] has a compelling state interest in preventing ‘the commission of unlawful acts on community college premises’ and ‘the substantial disruption of the orderly operation of the community college’” (194 F. Supp. 2d at 1027, quoting Cal. Educ. Code § 76120). Students may be suspended if they violate such rules by actively participating in a disruptive demonstration—for example, entering the stands during a college football game and “by abusive and disorderly acts and conduct” depriving the spectators “of the right to see and enjoy the game in peace and

with safety to themselves” (*Barker v. Hardway*, 283 F. Supp. 228 (S.D. W. Va. 1968), *affirmed*, 399 F.2d 638 (4th Cir. 1968)), or physically blocking entrances to campus buildings and preventing personnel or other students from using the buildings (*Buttny v. Smiley*, 281 F. Supp. 280 (D. Colo. 1968)).<sup>31</sup>

The critical problem in prohibiting or punishing disruptive protest activity is determining when the activity has become sufficiently disruptive to lose its protection under *Tinker* and *Healy*. In *Shamloo v. Mississippi State Board of Trustees*, 620 F.2d 516 (5th Cir. 1980), for example, the plaintiffs, Iranian nationals who were students at Jackson State University, had participated in two on-campus demonstrations in support of the regime of Ayatollah Khomeini in Iran. The university disciplined the students for having violated campus regulations that required advance scheduling of demonstrations and other meetings or gatherings. When the students filed suit, claiming that the regulations and the disciplinary action violated their First Amendment rights, the defendant argued that the protests were sufficiently disruptive to lose any protection under the First Amendment. The appellate court asked whether the demonstration had “materially and substantially interfered with the requirements of appropriate discipline in the operation of the school”—the standard developed in an earlier Fifth Circuit case and adopted by the U.S. Supreme Court in *Tinker*. Applying this standard to the facts of the case, the court rejected the defendant’s claim:

There was no testimony by the students or teachers complaining that the demonstration was disrupting and distracting. Shamloo testified that he did not think any of the classes were disrupted. Dr. Johnson testified that the demonstration was quite noisy. Dr. Smith testified that he could hear the chanting from his office and that, in his opinion, classes were being disrupted. The only justification for his conclusion is that there are several buildings within a close proximity of the plaza that students may have been using for purposes of study or for classes. There is no evidence that he received complaints from the occupants of these buildings.

The district court concluded that “the demonstration had a disruptive effect with respect to other students’ rights.” But this is not enough to conclude that the demonstration was not protected by the First Amendment. The court must also conclude (1) that the disruption was a *material* disruption of classwork or (2) that it involved *substantial* disorder or invasion of the rights of others. It must constitute a *material* and *substantial* interference with discipline. The district court did not make such a conclusion and we certainly cannot, especially in light of the conflicting evidence found in the record. We cannot say that the demonstration did not constitute activity protected under the First Amendment [620 F.2d at 522].

As *Shamloo* suggests, and *Tinker* states expressly, administrators seeking to regulate protest activity on grounds of disruption must base their action

---

<sup>31</sup>Cases are collected in Sheldon R. Shapiro, Annot., “Participation of Student in Demonstration on or Near Campus as Warranting Expulsion or Suspension from School or College,” 32 A.L.R.3d 864.

on something more substantial than mere suspicion or fear of possible disruption:

Undifferentiated fear or apprehension of disturbance is not enough to overcome the right to freedom of expression. Any departure from absolute regimentation may cause trouble. Any variation from the majority's opinion may inspire fear. Any word spoken, in class, in the lunchroom, or on the campus, that deviates from the views of another person may start an argument or cause disturbance. But our Constitution says we must take this risk (*Terminiello v. Chicago*, 337 U.S. 1 (1949)); and our history says that it is this sort of hazardous freedom—this kind of openness—that is the basis of our national strength and of the independence and vigor of Americans who grow up and live in this relatively permissive, often disputatious, society [*Tinker*, 393 U.S. at 508–9].

Yet substantial disruption need not be a *fait accompli* before administrators can take action. It is sufficient that administrators have actual evidence on which they can “reasonably . . . forecast” that substantial disruption is imminent (*Tinker*, 393 U.S. at 514).

In addition to determining that the protest is or will become disruptive, it is also important to determine whether the disruption is or will be created by the protesters themselves or by onlookers who are reacting to the protesters' message or presence. “[T]he mere possibility of a violent reaction to . . . speech is . . . not a constitutional basis on which to restrict [the] right to speech. . . . The First Amendment knows no heckler's veto” (*Lewis v. Wilson*, 253 F.3d 1077, 1081–82 (8th Cir. 2001)). In *Stacy v. Williams*, 306 F. Supp. 963 (N.D. Miss. 1969), for example, the court struck down a regulation limiting off-campus speakers at Mississippi state colleges because it allowed for such a “heckler's veto.” The court emphasized that “one simply cannot be restrained from speaking, and his audience cannot be prevented from hearing him, unless the feared result is likely to be engendered by what the speaker himself says or does.” Thus, either the protesters themselves must engage in conduct that is disruptive, as in *Barker* and *Buttney* above, or their own words and acts must be “directed to inciting or producing imminent” disruption by others and “likely to produce” such disruption (*Brandenburg v. Ohio*, 395 U.S. 444 (1969)), before an administrator may stop the protest or discipline the protesters. Where the onlookers rather than the protesters create the disruption, the administrator's proper recourse is against the onlookers.

Besides adopting regulations prohibiting disruptive protest, public institutions may also promulgate “reasonable regulations with respect to the time, the place, and the manner in which student groups conduct their speech-related activities” (*Healy*, 408 U.S. at 192–93). Students who violate such regulations may be disciplined even if their violation did not create substantial disruption. As applied to speech in a public forum, however, such regulations may cover only those times, places, or manners of expression that are “basically incompatible with the normal activity of a particular place at a particular time” (*Grayned v. Rockford*, 408 U.S. 104, 116 (1972)). Incompatibility must be determined by the

physical impact of the speech-related activity on its surroundings and not by the content or viewpoint of the speech as such.

The *Shamloo* case (above) also illustrates the requirement that time, place, and manner regulations be “content neutral.” The campus regulation at issue provided that “all events sponsored by student organizations, groups, or individual students must be registered with the director of student activities, who, in cooperation with the vice-president for student affairs, approves activities of a wholesome nature.” In validating this regulation, the court reasoned that:

regulations must be reasonable as limitations on the time, place, and manner of the protected speech and its dissemination (*Papish v. Board of Curators of the University of Missouri*, 410 U.S. 667 . . . (1973); *Healy v. James*, 408 U.S. 169 (1972)). Disciplinary action may not be based on the disapproved *content* of the protected speech (*Papish*, 410 U.S. at 670) . . .

The reasonableness of a similar university regulation was previously addressed by this court in *Bayless v. Martine*, 430 F.2d 872, 873 (5th Cir. 1970). In *Bayless* ten students sought injunctive relief from their suspension for violating a university regulation. The regulation in *Bayless* created a Student Expression Area that could be reserved forty-eight hours in advance for any nonviolent purpose. All demonstrations similar to the one held by the Iranian students were regulated to the extent that they could only be held at the Student Expression Area “between the hours of 12:00 noon to 1:00 P.M. and from 5:00 to 7:00 P.M.” but there was no limitation on the content of the speech. This court noted that the requirement of forty-eight hours advance notice was a reasonable method to avoid the problem of simultaneous and competing demonstrations and it also provided advance warning of the possible need for police protection. This court upheld the validity of the regulation as a valid exercise of the right to adopt and enforce reasonable nondiscriminatory regulations as to the time, place, and manner of a demonstration.

There is one critical distinction between the regulation examined in *Bayless* and the Jackson State regulation. The former made no reference to the *content* of the speech that would be allowed in the Student Expression Area. As long as there was no interference with the flow of traffic, no interruption of the orderly conduct of university affairs, and no obscene material, the students were not limited in what they could say. Apparently, the same cannot be said with respect to the Jackson State regulations, which provide that only “activities of a *wholesome* nature” will be approved. And if a demonstration is not approved, the students participating may be subjected to disciplinary action, including the possibility of dismissal.

Limiting approval of activities only to those of a “wholesome” nature is a regulation of *content* as opposed to a regulation of time, place, and manner. Dr. Johnson testified that he would disapprove a student activity if, in his opinion, the activity was unwholesome. The presence of this language converts what might have otherwise been a reasonable regulation of time, place, and manner into a restriction on the content of speech. Therefore, the regulation appears to be unreasonable on its face [620 F.2d at 522–23].

Since *Shamloo*, various U.S. Supreme Court cases have elucidated the First Amendment requirements applicable to time, place, and manner regulations of

speech in a public forum. *Clark v. Community for Creative Non-Violence*, 468 U.S. 288 (1984), and *Ward v. Rock Against Racism*, 491 U.S. 781 (1989), are particularly important precedents. In *Clark*, the Court upheld National Park Service regulations limiting protests in the parks. The Court noted that these regulations were “manner” regulations and upheld them because they conformed to this three-part judicial test: (1) “they are justified without reference to the content of the regulated speech . . . , (2) they are narrowly tailored to serve a significant governmental interest, and . . . (3) they leave open ample alternative channels for communication of the information” (468 U.S. at 293, numbering added). In *Ward*, the Court upheld a New York City regulation applicable to a bandstand area in Central Park. The Court affirmed that the city had a substantial interest in regulating noise levels in the bandstand area to prevent annoyance to persons in adjacent areas. It then refined the first two parts of the *Clark* test:

[A] regulation of the time, place, or manner of protected speech must be narrowly tailored to serve the government’s legitimate, content-neutral interests but . . . need not be the least restrictive or least intrusive means of doing so. Rather, the requirement of narrow tailoring is satisfied “so long as the . . . regulation promotes a substantial government interest that would be achieved less effectively absent the regulation” (quoting *United States v. Albertini*, 472 U.S. 675, 689 (1985)).

The overall effect of this *Ward* refinement is to create a more deferential standard, under which it is more likely that courts will uphold the constitutionality of time, place, and manner regulations of speech.

One particular type of time, place, and manner regulation that has been a focus of attention in recent years is the “free speech zone” or “student speech zone.” (See generally Thomas Davis, Note, “Assessing Constitutional Challenges to University Free Speech Zones Under Public Forum Doctrine,” 79 *Ind. L.J.* 267 (2004).) The 1970 case of *Bayless v. Martine*, discussed in the *Shamloo* case above, provides an early example. The court in *Bayless* upheld the creation of what Southwest Texas State University called a “Student Expression Area.” Another example of this regulatory technique is found in *Auburn Alliance for Peace and Justice v. Martin*, 684 F. Supp. 1072 (M.D. Alabama 1988), *affirmed without opinion*, 853 F.2d 931 (11th Cir. 1988) (see Section 9.5.4 below), in which Auburn University had created, and the court upheld, the campus “Open Air Forum.”

A more recent and more extended example is found in *Burbridge v. Sampson*, 74 F. Supp. 2d 940 (C.D. Cal. 1999), and *Khademi v. South Orange County Community College District*, 194 F. Supp. 2d 1011 (C.D. Cal. 2002)—twin cases involving student challenges to the free speech zones on the same community college campus. Under the district’s free speech policies, three “preferred areas” were set aside for speech activities that involved twenty or more persons or would involve the use of amplification equipment. None of these three areas included the area in front of the student center, which was an “historically popular” place for speech activities and the “most strategic location on campus”

(74 F. Supp. 2d at 951). In *Burbridge*, the court issued a preliminary injunction against enforcement of the preferred areas regulations because they were content-based prior restraints that did not meet a standard of strict scrutiny and were also overbroad (74 F. Supp. 2d at 949–52). Subsequently, the community college district amended its regulations, and students again challenged them. In *Khademi*, the court held that the new preferred areas regulations violated the students’ free speech rights because they granted the college president “unlimited discretion” to determine what expressive activities would be permitted in the preferred areas (194 F. Supp. 2d at 1030).

Free speech zones sometimes have been implemented by requirements that students reserve the zone in advance, as in *Bayless*, *Auburn Alliance*, *Burbridge*, and *Khademi*; or that students obtain prior approval for any use outside the hours specified in the institutional policy, as in *Auburn Alliance*. Any such regulatory system would have to meet the prior approval requirements in Section 9.5.4 below. In addition, even if the institution does not employ any prior approval requirement, the free speech zone must meet the requirements of the U.S. Supreme Court’s public forum cases (Section 9.5.2 above), including the three-part test for time, place, and manner regulations established in *Clark v. Community for Creative Non-Violence* (above). Free speech zones will raise serious difficulties under these requirements in at least two circumstances. *First*, if the institution’s regulations allow free speech only in the approved zone or zones, and if other parts of the campus that are unavailable for certain speech activities are considered traditional public forums, serious issues will arise because traditional public forum property cannot be entirely closed off to expressive uses. *Second*, if some but not all of the other campus areas that are public forums (besides the free speech zone or zones) are left open for some or all expressive activity, other serious issues may arise under the *Clark/Ward* three-part test (above). Specifically, there could be problems concerning (1) whether the institution selected other areas to be open and closed, or limited the expressive activity in the other open areas, on a content-neutral basis; (2) whether the closings of certain forum areas (or the limitations imposed on certain areas) were narrowly tailored to serve substantial interests of the institution; and (3) whether the areas that remain open are sufficient to provide “ample alternative channels for communication.” In *Roberts v. Haragan*, 2004 WL 2203130 (N.D. Tex. 2004), pp. 11–12, for example, the court invalidated provisions of a Texas Tech interim policy regulating speech in campus areas outside of six “forum areas” designated by the policy because these provisions of the policy were not “narrowly tailored.” (See also *Mason v. Wolf*, 356 F. Supp. 2d 1147 (D. Colo. 2005).)

Postsecondary administrators who are drafting or implementing protest regulations must be attentive not only to the various judicial requirements just discussed but also to the doctrines of “overbreadth” and “vagueness” (also discussed in Sections 6.6.1, 9.1.3, 9.2.2, & 9.6). The overbreadth doctrine provides that regulations of speech must be “narrowly tailored” to avoid sweeping within their coverage speech activities that would be constitutionally protected under the First Amendment. The vagueness doctrine provides that regulations of

conduct must be sufficiently clear so that the persons to be regulated can understand what is required or prohibited and conform their conduct accordingly. Vagueness principles apply more stringently when the regulations deal with speech-related activity: “Stricter standards of permissible statutory vagueness may be applied to a statute having a potentially inhibiting effect on speech; a man may the less be required to act at his peril here, because the dissemination of ideas may be the loser” (*Hynes v. Mayor and Council of Oradell*, 425 U.S. 610, 620 (1976), quoting *Smith v. California*, 361 U.S. 147, 151 (1959)). In the *Shamloo* case (above), the court utilized both doctrines in invalidating campus regulations prohibiting demonstrations that are not “of a wholesome nature.” Regarding the vagueness doctrine, the court reasoned that:

[t]he restriction on activities other than those of a “wholesome” nature raises the additional issue that the Jackson State regulation may be void for vagueness. . . . An individual is entitled to fair notice or a warning of what constitutes prohibited activity by specifically enumerating the elements of the offense (*Smith v. Goguen*, 415 U.S. 566 . . . (1974)). The regulation must not be designed so that different officials could attach different meaning to the words in an arbitrary and discriminatory manner (*Smith v. Goguen, supra*). But, of course, we cannot expect “mathematical certainty” from our language (*Grayned v. City of Rockford*, 408 U.S. 104 . . . (1972)). The approach adopted by this court with respect to university regulations is to examine whether the college students would have any “difficulty in understanding what conduct the regulations allow and what conduct they prohibit” [quoting *Jenkins v. Louisiana State Board of Education*, 506 F.2d 992, 1004 (5th Cir. 1975)].

The requirement that an activity be “wholesome” before it is subject to approval is unconstitutionally vague. The testimony revealed that the regulations are enforced or not enforced depending on the purpose of the gathering or demonstration. Dr. Johnson admitted that whether or not something was wholesome was subject to interpretation and that he, as the Vice-President of Student Affairs, and Dr. Jackson, Director of Student Activities, could come to different conclusions as to its meaning. . . . The regulation’s reference to wholesome activities is not specific enough to give fair notice and warning. A college student would have great difficulty determining whether or not his activities constitute prohibited unwholesome conduct. The regulation is void for vagueness [620 F.2d at 523–24].

The time, place, and manner tests and the overbreadth and vagueness doctrines, as well as principles concerning “symbolic” speech, all played an important role in another leading case, *Students Against Apartheid Coalition v. O’Neil*, 660 F. Supp. 333 (W.D. Va. 1987), and 671 F. Supp. 1105 (W.D. Va. 1987), *affirmed*, 838 F.2d 735 (4th Cir. 1988). At issue in this case was a University of Virginia (UVA) regulation prohibiting student demonstrations against university policies on investment in South Africa. In the first phase of the litigation, students challenged the university’s policy prohibiting them from constructing shanties—flimsy structures used to protest apartheid conditions in South Africa—on the university’s historic central grounds, “the Lawn.” The federal district court held that the university’s policy created an unconstitutional restriction on

symbolic expression in a public forum. Specifically, the court declared that the “current lawn use regulations . . . are vague, are too broad to satisfy the University’s legitimate interest in esthetics, and fail to provide the plaintiffs with a meaningful alternative channel for expression.”

UVA subsequently revised its policy to tailor it narrowly to the achievement of the university’s goals of historic preservation and aesthetic integrity. The students again brought suit to enjoin the enforcement of the new policy on the same constitutional grounds they had asserted in the first suit. The case was heard by the same judge, who this time held in favor of the defendant university and upheld the revised policy. The court determined that the amended policy applied only to “structures,” as narrowly defined in the policy; that the policy restricted such structures from only a small section of the Lawn; and that the policy focused solely on concerns of architectural purity. Applying the *Clark* test, the court held that:

[UVA] may regulate the symbolic speech of its students to preserve and protect the Lawn area as an architectural landmark. To be constitutionally permissible, the regulation must be reasonable in time, place and manner. The revised Lawn Use Policy lies within the constitutional boundaries of the first amendment. The new policy is content-neutral, precisely aimed at protecting the University’s esthetic concern in architecture, and permits students a wide array of additional modes of communication. The new policy is also sufficiently detailed to inform students as to the types of expression restricted on the Lawn [671 F. Supp. at 1108].

On appeal by the students, the U.S. Court of Appeals for the Fourth Circuit agreed with the reasoning of the district court and affirmed its decision.

The *O’Neil* case, together with the *Shamloo*, *Burbridge*, and *Khademi* cases (above), serve to illuminate pitfalls that administrators will wish to avoid in devising and enforcing their own campus’s demonstration regulations. The *O’Neil* litigation also provides a good example of how to respond to and resolve problems concerning the validity of campus regulations.

**9.5.4. Prior approval of protest activities.** Sometimes institutions have attempted to avoid disruption and disorder on campus by requiring that protest activity be approved in advance and by approving only those activities that will not pose problems. Under this strategy, a protest would be halted, or its participants disciplined, not because the protest was in fact disruptive or violated reasonable time, place, and manner requirements but merely because it had not been approved in advance. Administrators at public institutions should be extremely leery of such a strategy. A prior approval system constitutes a “prior restraint” on free expression—that is, a temporary or permanent prohibition of expression imposed before the expression has occurred rather than a punishment imposed afterward. Prior restraints “are the most serious and the least tolerable infringement of First Amendment rights” (*Nebraska Press Ass’n. v. Stuart*, 427 U. S. 539, 559 (1976)).

*Hammond v. South Carolina State College*, 272 F. Supp. 947 (D.S.C. 1967), provides a classic example of prior restraint. The defendant college had a rule

providing that “the student body is not to celebrate, parade, or demonstrate on the campus at any time without the approval of the Office of the President.” Several students were expelled for violating this rule after they held a demonstration for which they had not obtained prior approval. The court found the rule to be “on its face a prior restraint on the right to freedom of speech and the right to assemble” and held the rule and the expulsions under it to be invalid.

*Khademi v. South Orange County Community College District*, 194 F. Supp. 2d 1011 (C.D. Cal. 2002), provides a more recent example consistent with *Hammond*. The court in *Khademi* invalidated four provisions of the community college district’s regulations concerning student use of certain campus grounds and buildings for expressive purposes. Three of these provisions required students to obtain a reservation of the property in advance of any such use; and the other provision required an advance reservation for certain uses of amplification equipment. The decision of whether to grant a reservation was within the sole discretion of the college’s president. The court held that these provisions were prior restraints because:

they condition expression in certain areas of the District’s campuses upon approval of the administration. . . . The four sections identified here delegate completely unfettered discretion to the campus president to permit or prohibit expression. . . . Because these provisions provide the presidents with absolutely no standards to guide their decisions, they are unconstitutional and must be stricken [194 F. Supp. 2d at 1023].

The courts have not asserted, however, that all prior restraints on expression are invalid. In *Healy v. James* (Sections 9.5.1 & 10.1), the U.S. Supreme Court stated the general rule this way: “While a college has a legitimate interest in preventing disruption on campus, which under circumstances requiring the safeguarding of that interest may justify . . . [a prior] restraint, a ‘heavy burden’ rests on the college to demonstrate the appropriateness of that action” (408 U.S. at 184). More recently, the Court has made clear that prior restraints that are “content neutral”—based only on the time, place, and manner of the protest activity and not on the message it is to convey—are subject to a lesser burden of justification and will usually be upheld. The key case is *Thomas v. Chicago Park District*, 534 U.S. 316 (2002), in which the Court upheld a requirement that groups of fifty or more persons, and persons using sound amplification equipment, must obtain a permit before using the public parks. This “licensing scheme . . . is not subject-matter censorship, but content-neutral time, place, and manner regulation . . . ,” said the Court. “The Park District’s ordinance does not authorize a licensor to pass judgment on the content of speech: None of the [thirteen] grounds for denying a permit has anything to do with what a speaker might say” (534 U.S. at 322). Although *Thomas* is not a higher education case, courts have applied the same principles to public colleges and universities. In *Auburn Alliance for Peace and Justice v. Martin*, 684 F. Supp. 1072 (M.D. Ala. 1988), *affirmed without opinion*, 853 F.2d 931 (11 Cir. 1988), for instance, the trial and appellate courts upheld the facial validity of Auburn’s regulations for

the “Open Air Forum,” an area of the campus designated as a public forum for demonstrations; and also held that the university’s denial of a student-faculty group’s request for weeklong, round-the-clock use of this forum was an appropriate means of implementing time, place, and manner requirements.

If a prior restraint system would permit the decision maker to consider the message to be conveyed during the protest activity, however, it will be considered to be “content based,” and the “heavy burden” requirement of *Healy* clearly applies. To be justifiable under *Healy* and more recent cases, such a prior consideration of content must apparently be limited to factors that would likely create a substantial disruption on campus. It is therefore questionable whether a content-based prior approval mechanism could be applied to small-scale protests that have no reasonable potential for disruption. Also in either case, prior approval regulations would have to contain a clear definition of the protest activity to which they apply, precise standards to limit the administrator’s discretion in making approval decisions, and procedures for ensuring an expeditious and fair decision-making process. Administrators must always assume the burden of proving that the protest activity would violate a reasonable time, place, or manner regulation or would cause substantial disruption.<sup>32</sup> Given these complexities, prior approval requirements may invite substantial legal challenges. Administrators should carefully consider whether and when the prior approval strategy is worth the risk. There are always alternatives: disciplining students who violate regulations prohibiting disruptive protest; disciplining students who violate time, place, or manner requirements; or using injunctive or criminal processes, as set out in Section 9.5.5 below.

**9.5.5. Court injunctions and criminal prosecutions.** When administrators are faced with a mass disruption that they cannot end by discussion, negotiation, or threat of disciplinary action, they may want to seek judicial assistance. A court injunction terminating the demonstration is one option. Arrest and criminal prosecution is the other.<sup>33</sup> Although both options involve critical tactical considerations and risks, commentators favor the injunction for most situations, primarily because it provides a more immediate judicial forum for resolving disputes and because it shifts the responsibility for using law enforcement officials from administrators to the court. Injunctions may also be used in some instances to enjoin future disruptive conduct, whereas criminal prosecutions are limited to punishing past conduct. The use of the injunctive process does not legally foreclose the possibility of later criminal prosecutions; and injunctive orders or criminal prosecutions do not legally prevent the institution

---

<sup>32</sup>These prior restraint requirements have been established in bits and pieces in various court cases. *Healy* is a leading case on burdens of proof. *Kunz v. New York*, 340 U.S. 290 (1951), *Shuttlesworth v. Birmingham*, 394 U.S. 147 (1969), and *Forsyth County v. Nationalist Movement*, 505 U.S. 123 (1992), are leading cases on standards to guide administrative discretion. *Southeastern Promotions v. Conrad*, 420 U.S. 546 (1975), is a leading case on procedural requirements.

<sup>33</sup>Cases are collected in Sheldon R. Shapiro, Annot., “Participation of Student in Demonstration on or Near Campus as Warranting Imposition of Criminal Liability for Breach of Peace, Disorderly Conduct, Trespass, Unlawful Assembly, or Similar Offense,” 32 A.L.R.3d 551.

from initiating student disciplinary proceedings. Under U.S. Supreme Court precedents, none of these combinations would constitute double jeopardy. (For other problems regarding the relationship between criminal prosecutions and disciplinary proceedings, see Section 9.1.4.)

The legality of injunctions or criminal prosecutions depends on two factors. First, the conduct at issue must be unlawful under state law. To warrant an injunction, the conduct must be an imminent or continuing violation of property rights or personal rights protected by state statutory law or common law; to warrant a criminal conviction, the conduct must violate the state criminal code. Second, the conduct at issue must not constitute expression protected by the First Amendment. Both injunctive orders and criminal convictions are restraints on speech-related activity and would be tested by the principles discussed in Section 9.5.3 concerning the regulation of student protest. Since injunctions act to restrain future demonstrations, they may operate as prior restraints on expression and would also be subject to the First Amendment principles described in Section 9.5.4.

The U.S. Supreme Court has now provided substantial guidance on how to analyze the validity of court injunctions against protest activities. In *Schenck v. Pro-Choice Network of Western New York*, 519 U.S. 357 (1997), and its predecessor case *Madsen v. Women's Health Center*, 512 U.S. 753 (1994), the Court considered the validity of multifaceted injunctions limiting protest activity in the vicinity of abortion clinics. In each case, the Court acknowledged that the challenged injunctions were restraints on speech-related activity and thus subject to First Amendment analysis. Also in both cases, however, the Court acknowledged that the particular injunctions at issue were content-neutral rather than content-based injunctions and thus not subject to "strict scrutiny" review. Generally, content-neutral regulations of speech are subject to a less rigorous "time, place, and manner" scrutiny. But in *Madsen* the Court determined for the first time that its "standard time, place, and manner analysis is not sufficiently rigorous" for purposes of reviewing content-neutral injunctions. The Court thus established a new test to apply: "whether the challenged provisions of the injunction burden no more speech than necessary to serve a significant government interest" (*Madsen*, 512 U.S. at 765). The *Schenck* case reaffirms and applies this same test, using it (as the *Madsen* Court did) to invalidate some parts of the injunction at issue but uphold other parts.

The protest activities in *Schenck* included what the lower court called "constructive blockades" as well as "sidewalk counseling." The blockades, as described by the lower court, consisted of "demonstrating and picketing around the entrances of the clinics, and . . . harassing patients and staff entering and leaving the clinics" (519 U.S. at 365). Included in the blockades were "attempts to intimidate or impede cars from entering the parking lots, congregating in driveway entrances, and crowding around, yelling at, grabbing, pushing, and shoving people entering and leaving the clinics" (519 U.S. at 365). The sidewalk counseling was "aggressive" and included "occasional shoving and elbowing, trespassing into clinic buildings to continue counseling . . . and blocking of doorways and driveways" (519 U.S. at 365).

Two types of injunctive provisions were the particular focus of the Court in *Schenck*: the “fixed buffer zones” provisions and the “floating buffer zones” provisions. The fixed zones provisions banned the protesters from demonstrating within 15 feet of the driveways and doorways of the abortion clinics. The floating zones provisions banned the protesters from approaching within “a normal conversational distance” of individuals arriving at or departing from the clinics in order to leaflet or otherwise communicate messages to them. Using the new test from *Madsen*, the *Schenck* Court invalidated the floating buffer zones, even though they prohibited “classic forms of speech,” because “they burden more speech than is necessary to serve the relevant governmental interests” (519 U.S. at 377). Focusing on the dynamics of ingress to and egress from the clinics, the Court reasoned that, given the nature of the floating zones, “it would be quite difficult for a protester who wishes to engage in peaceful expressive activities to know how to remain in compliance with the injunction. This lack of certainty leads to a substantial risk that much more speech will be burdened than the injunction by its terms prohibits” (519 U.S. at 378). For the same reasons, the *Schenck* Court also invalidated the injunction provisions creating floating buffer zones around vehicles entering and leaving the clinic facilities.

In contrast, the Court in *Schenck* upheld the fixed buffer zones provisions because:

these buffer zones are necessary to ensure that people or vehicles trying to enter or exit the clinic property or clinic parking lots can do so. . . . [T]he record shows that protesters purposefully or effectively blocked or hindered people from entering and exiting the clinic doorways, from driving up to and away from clinic entrances, and from driving in and out of clinic parking lots [519 U.S. at 380].

Many of the dynamics of entry and exit described by the Court may be similar to those for entering and leaving campus buildings, roadways, parking areas, and other facilities. Much campus protest activity—or other expressive activity such as religious proselytizing—may also use tactics or have effects similar to those of the blockades and sidewalk counseling in *Schenck*. The *Schenck* and *Madsen* opinions, therefore, may often be the primary guidance for higher educational institutions considering injunctions as a means to manage campus protests and demonstrations.

When the assistance of the court is requested, public and private institutions are on the same footing. Since the court, rather than the institution, will ultimately impose the restraint, and since the court is clearly a public entity subject to the Constitution, both public and private institutions’ use of judicial assistance must comply with First Amendment requirements. Also, for both public and private institutions, judicial assistance depends on the same technical requirements regarding the availability and enforcement of injunctions and the procedural validity of arrests and prosecutions.

**9.5.6. Posters and leaflets.** Students routinely communicate by posters or fliers posted on campus and by leaflets or handbills distributed on campus. This means of communication is a classic exercise of free speech; “the distribution

of leaflets, one of the ‘historical weapons in the defense of liberty’ is at the core of the activity protected by the First Amendment” (*Giebel v. Sylvester*, 244 F.3d 1182, 1189 (9th Cir. 2001), quoting *Schneider v. State of New Jersey*, 308 U.S. 147, 162 (1939)).<sup>34</sup> The message need not be in the form of a protest, nor need it even express an opinion, to be protected. “[E]ven if [speech] is merely informative and does not actually convey a position on a subject matter,” First Amendment principles apply (*Giebel*, 244 F.3d at 1187). Among the most pertinent of these principles are those concerning “public forums” (see subsection 9.5.2 above). If posters appear on a bulletin board, wall, or other surface that is a public forum—usually meaning a *designated* public forum—these communications will receive strong First Amendment protection in public institutions. Similarly, if leaflets are distributed in an area that is a public forum, the communication will be strongly protected.

In *Khademi v. South Orange County Community College District*, 194 F. Supp. 2d 1011 (C.D. Cal. 2002), for example, the court considered the constitutionality of Board Policy 8000 (“BP 8000”) under which the district regulated student expression on its two campuses. Some of the regulations included in BP 8000 applied specifically to the posting and distribution of written materials. BP 8000 was based upon, and served to implement, a California statute (Cal. Educ. Code § 76120, discussed in Section 9.5.1 above) that directed community college districts to implement regulations protecting student freedom of expression, including “the use of bulletin boards [and] the distribution of printed materials or petitions. . . .” Section 76120, however, also listed certain exceptions to First Amendment protection, such as expression that causes “substantial disruption of the orderly operation of the community college.” One part of BP 8000 gave the district the absolute right to review writings after they are posted to determine if they comply with Section 76120. This part of BP 8000 also authorized the district to remove any writing that violates Section 76120 and to order persons to stop distributing any material found to violate Section 76120. The court in *Khademi* found that these parts of BP 8000 were “content-based” restrictions on student speech in the public forum and thus would be permissible only if they “are necessary to further a compelling interest . . . and are narrowly drawn to achieve that end” (194 F. Supp. at 1026, quoting *Burbridge v. Sampson*, 74 F. Supp. 2d 940, 950 (C.D. Cal. 1999)). Applying this strict scrutiny standard, the court determined that the district had not demonstrated “a compelling interest justifying the examination of the content of student expression to root out all speech prohibited by § 76120,” and that “the blanket enforcement of § 76120 is not narrowly tailored to those interests that the court finds compelling” (194 F. Supp. 2d at 1027, citing the *Tinker* case). The court therefore ruled that the regulations on student writings violated the First Amendment.

---

<sup>34</sup>*Schneider* is one of the foundational cases on the free speech clause and leafleting, and is usually paired with another leafleting case decided one year earlier: *Lovell v. Griffin*, 303 U.S. 444 (1938). Other key U.S. Supreme Court cases on leafleting are *Talley v. California*, 362 U.S. 60 (1960), discussed below; *Heffron v. International Society for Krishna Consciousness*, 452 U.S. 640 (1981); and *Lee v. International Society for Krishna Consciousness*, 505 U.S. 830 (1992).

If the place of posting or distribution is a “nonpublic forum” rather than a public forum, the communication may be protected to a lesser degree—but it will usually be very difficult for students to prevail in such cases. In *Desyllas v. Bernstine*, 351 F.3d 934 (9th Cir. 2003), for example, a student at Portland State University (PSU) challenged the university’s alleged removal of his fliers announcing a press conference. The court determined that the campus areas that were approved for posting under the university’s “Bulletin Board Posting Policy” are designated public forums; and that campus areas not approved for posting “are not designated public fora because the university did not intend to open them for expression, as manifested by the university’s . . . Policy.” The student’s fliers were posted in unapproved areas, which the court considered to be nonpublic forums. The university could therefore remove them if the action “is reasonable,” that is, “consistent with preserving the property” for its intended purposes, and is “not based on the speaker’s viewpoint.”<sup>35</sup> The university’s action met the second requirement because there was no proof that the defendants had selectively removed the student’s fliers “while allowing others to remain” or that the university’s action “was motivated by a desire to stifle [the student’s] particular perspective or opinion.” The second requirement was met because:

[t]he hallways, doorways and columns of the PSU campus are designated off-limits to fliers primarily for aesthetic reasons. The university’s policy states that handbills shall not be posted in those areas because doing so causes damage. Widner’s removal of Desyllas’s press conference fliers, along with other fliers posted on the columns near Smith Center, is consistent with the university’s purpose to preserve the appearance of campus structures [351 F.3d at 944].

Even if the place of posting or distribution is a public forum (traditional or designated), there is still some room for public colleges and universities to regulate these activities and to remove nonconforming posters and terminate nonconforming leafleting. To be valid, such regulations and enforcement actions must be not only “viewpoint neutral” (see *Desyllas*, above; and see also *Giebel v. Sylvester*, above, 244 F.3d at 1188–89) but also “content neutral,” meaning that they must be based only on the “time, place, and manner” of the posting or distribution and not on the subject matter or information expressed. The three-part test that the U.S. Supreme Court has crafted for time, place, and manner regulations of speech is discussed in Section 9.5.3 above with reference to *Clark v. Community for Creative Non-Violence* and *Ward v. Rock Against Racism*. Permissible types of time, place, and manner regulations may include prior institutional approvals for postings and leafleting on campus, so long as the approval process “does not authorize [the decision maker] to pass judgment on the content of the speech” (*Thomas v. Chicago Park District*, 534 U.S. 316 (2002)) and otherwise meets the three-part test.

---

<sup>35</sup>The court was quoting from its own prior opinion in *DiLoreto v. Downey Unified School District Board of Education*, 196 F.3d 958, 965, 967 (9th Cir. 1999). The court also relied on *Rosenberger v. Rector and Visitors of University of Virginia*, 515 U.S. 819 (1995), which is discussed in Sections 10.1.4 and 10.3.2 of this book.

In addition to such content-neutral regulations, the institution may also, in narrow circumstances, regulate the content of posters and handbills in a public forum. The two most likely possibilities are regulations concerning obscenity and defamation (see generally Sections 10.3.4 & 10.3.5). These types of regulations, called “content-based” regulations, must be very clear and specific, such that they meet constitutional requirements regarding “overbreadth” and “vagueness,” as discussed in Section 9.5.3 above. Such regulations must also usually be implemented without using a prior approval process, since a prior approval process that takes the content of the speech into account will often be considered to be an unconstitutional prior restraint (see Section 9.5.4 above).

One problematic type of poster and handbill regulation is a requirement that posters and handbills identify the student or student organization that sponsors, or that distributed, the message. From one perspective, if such a requirement is applied across the board to all postings and distributions, the requirement is a content-neutral requirement that will be upheld if it meets the three-part test. From another perspective, however, such a requirement could “chill” the expression of controversial viewpoints, and to that extent could be considered to be a “content-based” regulation. The U.S. Supreme Court took the latter approach in the classic case of *Talley v. California*, 362 U.S. 60 (1960), in which it invalidated a city ordinance requiring that all handbills include the name and address of the speaker. The Court reasoned that such an identification requirement could lead to “fear of reprisal” that would “deter perfectly peaceful discussions of public matters of importance.” The Court thus, in effect, recognized a right to anonymous speech. At the same time, however, the Court left some room carefully drafted identification requirements that can be shown to be necessary to the prevention of fraud, libel, or other similar harms. In *Spartacus Youth League v. Board of Trustees of Illinois Industrial University*, 502 F. Supp. 789 (N.D. Ill. 1980), the court relied on *Talley* in upholding some of the institution’s identification requirements for handbills and postings while invalidating others (502 F. Supp. at 803–4).

**9.5.7. Protests in the classroom.** Student protest occasionally occurs in the classroom during class time. In such circumstances, general First Amendment principles will continue to apply. But the institution’s interests in maintaining order and decorum are likely to be stronger than when the protest occurs in other areas of the campus, and student free speech interests are likely to be lessened because the classroom during class time is usually not considered a “public forum” (see *Bishop v. Aronov*, 926 F.2d 1066, 1071 (11th Cir. 1991); and see generally Section 9.5.2 above). If the speech is by class members and is pertinent to the class discussion and subject matter of the course, it would usually be protected if it is not expressed in a disruptive manner. Moreover, if the classroom protest is by students enrolled in the course, and is silent, passive, and nondisruptive—like the black armband protest in *Tinker v. Des Moines School District* (Section 9.5.1 above)—it will usually be protected by the First Amendment even if it is not pertinent to the class. Otherwise, however, courts will not usually protect classroom protest.

In *Salehpour v. University of Tennessee*, 159 F.3d 199 (6th Cir. 1998), for instance, the court rejected the free speech claim of a first-year dental student, a native of Iran with American citizenship who was studying dentistry as a second career. The student disagreed with a “last row rule” imposed by two professors who prohibited first-year students from occupying the last row of seats in their classrooms. The student addressed his concerns about this rule to the professors and to the associate dean; he also protested the rule, on several occasions, by sitting in the last row in the professors’ classes and remaining there after being asked to change seats. Ultimately the school took disciplinary action against the student, and he filed suit claiming that the school had retaliated against him for exercising his free speech rights. The court rejected this claim because:

[the student’s] expression appears to have no intellectual content or even discernable purpose, and amounts to nothing more than expression of a personal proclivity designed to disrupt the educational process. . . . The rights afforded to students to freely express their ideas and views without fear of administrative reprisal, must be balanced against the compelling interest of the academicians to educate in an environment that is free of purposeless distractions and is conducive to teaching. Under the facts of this case, the balance clearly weighs in favor of the University [159 F.3d at 208].

The court relied on the *Tinker* case to support its reasoning, especially the passage in the opinion about “conduct by the student, in class or out of it, which . . . materially disrupts classwork . . .” (see Section 9.5.1 above).

As for students who are not class members, their rights to protest inside a classroom, or immediately outside, during class time are no greater than, and will often be less than, the rights of class members. Students who are not enrolled in the course would not likely have any right to be present in the classroom. Moreover, the presence of uninvited non-class members in the classroom during class time would be likely to create “a material disruption” of the class within the meaning of the *Tinker* case. And protest activity outside the classroom would often create noise that is projected into the classroom or would block ingress and egress to the classroom, thereby also creating a “material disruption” within the meaning of *Tinker*. In *Furumoto v. Lyman*, 362 F. Supp. 1267 (N.D. Cal. 1973), an example drawn from the civil rights era, students who were not class members had entered the classroom of Professor William Shockley at Stanford University. The uninvited students challenged the professor’s views on eugenics, which the students claimed were racist views; the students did not leave the classroom when asked to do so; and the scheduled business for the class was not completed. After campus hearings, the students were indefinitely suspended. Citing the *Tinker* case, the court rejected the students’ argument that the suspension violated their First Amendment free speech rights. The court also upheld the validity of the Stanford campus disruption policy (362 F. Supp. at 1280–84), which provided that “[i]t is a violation of University policy for a member of the . . . student body to (1) prevent

or disrupt the effective carrying out of a University function . . . , such as lectures [or] meetings. . . .”<sup>36</sup>

(For further discussion of students’ free speech rights in the classroom, see Section 8.1.4 of this book (“Student Academic Freedom”).)

## ***Sec. 9.6. Speech Codes and the Problem of Hate Speech***<sup>37</sup>

**9.6.1. Hate speech and the campus.** Since the late 1980s, colleges and universities have frequently confronted the legal, policy, and political aspects of “hate speech” and its potential impacts on equal educational opportunity for targeted groups and individuals. Responding to racist, anti-Semitic, homophobic, and sexist incidents on campus, as well as to developments in the courts, institutions have enacted, revised, and sometimes revoked policies for dealing with these problems. (For state-by-state and institution-by institution summaries of such policies, see <http://www.speechcodes.org>, a Web site maintained by the Foundation for Individual Rights in Education (FIRE); and for analysis of particular institutional policies on harassing and abusive behavior directed against minority group members, see Richard Page & Kay Hunnicutt, “Freedom for the Thought We Hate: A Policy Analysis of Student Speech Regulation at America’s Twenty Largest Public Universities,” 21 *J. Coll. & Univ. Law* 1, 38–56 (1994).) Typically, institutional policies have been directed at harassment, intimidation, or other abusive behavior targeting minority groups. When such harassment, intimidation, or abuse has been conveyed by the spoken, written, or digitalized word, or by symbolic conduct, difficult legal and policy issues have arisen concerning students’ free speech and press rights.

Beginning in the mid-1990s, after the courts had decided a number of cases limiting postsecondary institutions’ authority to regulate hate speech (see subsection 9.6.2 below), and institutions had responded by developing more nuanced policies for dealing with hate speech, there was a period of relative quiet regarding these issues. In the aftermath of the terrorist attacks of September 11, 2001, however, and in light of continuing terrorist threats against the United States, the war in Iraq, and continuing violence associated with the Israeli/Palestinian conflict, the debate and controversy about hate speech and campus speech codes reemerged. (See, for example, Katherine Mangan, “Proposal for Speech Code at Harvard Law School Sets Off Debate,” *Chron. Higher*

---

<sup>36</sup>In an earlier part of its opinion, the court had concluded that, Stanford being a private university, its action did not constitute “state action” for purposes of applying the First Amendment (see Section 1.5.2). The court’s First Amendment analysis, therefore, was an alternative analysis showing that the plaintiffs would lose “[e]ven if state action were present in this case” (362 F. Supp. at 1280).

<sup>37</sup>Some portions of this Section were extracted and adapted (without further attribution) from William Kaplin, “A Proposed Process for Managing the First Amendment Aspects of Campus Hate Speech,” 63 *J. Higher Educ.* 517 (1992), copyright © 1992 by the Ohio State University Press; and from William Kaplin, “Hate Speech on the College Campus: Freedom of Speech and Equality at the Crossroads,” 27 *Land & Water L. Rev.* 243 (1992), copyright © 1992 by the University of Wyoming. All rights reserved.

*Educ.*, December 6, 2002, A37; Judith Rodin, “We Must Defeat Hate, Not Simply Ban It,” *Chron. Higher Educ.*, November 1, 2002, A14.) Renewed concerns over “political correctness” on campus, and a push for an “Academic Bill of Rights” (see Section 8.1.4 of this book) also provided stimulus for the renewed debate about speech codes.<sup>38</sup>

“Hate speech” is an imprecise catch-all term that generally includes verbal and written words and symbolic acts that convey a grossly negative assessment of particular persons or groups based on their race, gender, ethnicity, religion, sexual orientation, or disability. Hate speech is thus highly derogatory and degrading, and the language is typically coarse. The purpose of the speech is more to humiliate or wound than it is to communicate ideas or information. Common vehicles for such speech include epithets, slurs, insults, taunts, and threats. Because the viewpoints underlying hate speech may be considered “politically incorrect,” the debate over hate speech codes has sometimes become intertwined with the political correctness phenomenon on American campuses (see, for example, the *Levin* case in Section 7.3).

Hate speech is not limited to a face-to-face confrontation or shouts from a crowd. It takes many forms. It may appear on T-shirts, posters, classroom blackboards, bulletin boards (physical or virtual) or Web logs, or in flyers and leaflets, phone calls, letters, or e-mail messages. It may be a cartoon appearing in a student publication or a joke told on a campus radio station or at an after-dinner speech, a skit at a student event, an anonymous note slipped under a dormitory door, graffiti scribbled on a wall or sidewalk, or a posting in an electronic chat room. It may be conveyed through defacement of posters or displays; through symbols such as burning crosses, swastikas, KKK insignia, and Confederate flags; and even through themes for social functions, such as blackface Harlem parties or parties celebrating white history week.

When hate speech is directed at particular individuals, it may cause real psychic harm to those individuals and may also inflict pain on the broader class of persons who belong to the group denigrated by the hate speech. Moreover, the feelings of vulnerability, insecurity, and alienation that repeated incidents of hate speech can engender in the victimized groups may prevent them from taking full advantage of the educational, employment, and social opportunities on the campus and may undermine the conditions necessary for constructive dialogue with other persons or groups. Ultimately, hate speech may degrade the intellectual environment of the campus, thus harming the entire academic community.

---

<sup>38</sup>Similar issues may arise concerning the hate speech of faculty members and staff members. See, for example, *Dambrot v. Central Michigan University*, 55 F.3d 1177 (6th Cir. 1995); *Barrett v. University of Colorado Health Sciences Center*, 61 Fair Empl. Prac. Cases 369 (Colo. 1993). Institutions will generally have more constitutional leeway to regulate faculty and staff hate speech than they do for student hate speech; see the *Pickering/Connick* line of cases in Section 7.1.1 of this book, and see also *Martin v. Parrish* and *Bonnell v. Lorenzo* in Section 7.2.2 and *Jeffries v. Harleston* in Section 7.5. In the faculty cases, students may be targets of the alleged hate speech. Their rights as victims, rather than as speakers, would then be at stake. See Sections 7.2.2, 8.1.4, and 9.3.4 for perspectives on students’ rights as the victims of hate speech and harassing speech.

Since hate speech regulations may prohibit and punish particular types of messages, they may raise pressing free expression issues not only for public institutions (see Section 1.5.2) but also for private institutions that are subject to state constitutional provisions or statutes employing First Amendment norms (see Section 9.5.1 above) or that voluntarily adhere to First Amendment norms. The free expression values that First Amendment norms protect may be in tension with the equality values that institutions seek to protect by prohibiting hate speech. The courts have decided a number of important cases implicating these values since 1989, as discussed in the next subsection.

**9.6.2. The case law on hate speech and speech codes.** Some of the hate speech cases have involved college or university speech codes; others have involved city ordinances or state statutes that covered hate speech activities or that enhanced the penalties for conduct undertaken with racist or other biased motivations. All of the college and university cases except one are against public institutions; the exception—the *Corry* case discussed below—provides an instructive illustration of how hate speech issues can arise in private institutions.

The U.S. Supreme Court’s 1992 decision in *R.A.V. v. City of St. Paul*, 505 U.S. 377 (1992), addresses the validity of a city ordinance directed at hate crimes. This ordinance made it a misdemeanor to place on public or private property any symbol or graffiti that one reasonably knew would “arouse anger, alarm or resentment in others on the basis of race, color, creed, religion or gender.” *R.A.V.*, a juvenile who had set up and burned a cross in the yard of a black family, challenged the ordinance as overbroad (see Section 9.5.3 of this book). The lower courts upheld the validity of the statute by narrowly construing it to apply only to expression that would be considered fighting words or incitement. The U.S. Supreme Court disagreed and invalidated the ordinance, but the majority opinion by Justice Scalia did not use overbreadth analysis. Instead, it focused on the viewpoint discrimination evident in the ordinance and invalidated the ordinance because its restriction on speech content was too narrow rather than too broad:

Although the phrase in the ordinance, “arouses anger, alarm or resentment in others,” has been limited by the Minnesota Supreme Court’s construction to reach only those symbols or displays that amount to “fighting words,” the remaining, unmodified terms make clear that the ordinance applies only to “fighting words” that insult, or provoke violence, “on the basis of race, color, creed, religion or gender.” Displays containing abusive invective, no matter how vicious or severe, are permissible unless they are addressed to one of the specified disfavored topics. Those who wish to use “fighting words” in connection with other ideas—to express hostility, for example, on the basis of political affiliation, union membership, or homosexuality—are not covered. The First Amendment does not permit St. Paul to impose special prohibitions on those speakers who express views on disfavored subjects [505 U.S. at 391].

The Court did note several narrow exceptions to this requirement of viewpoint neutrality but found that the St. Paul ordinance did not fall into any of these narrow exceptions (505 U.S. at 386–90). The Court also determined that the city could not justify its narrow viewpoint-based ordinance. The city did have a compelling interest in promoting the rights of those who have traditionally been subject to discrimination. But because a broader ordinance without the viewpoint-based restriction would equally serve this interest, the law was not “reasonably necessary” to the advancement of the interest and was thus invalid.

The Supreme Court revisited the hate speech problem again in *Wisconsin v. Mitchell*, 508 U.S. at 476 (1993). At issue was the constitutionality of a state law that enhanced the punishment for commission of a crime when the victim was intentionally selected because of his “race, religion, color, disability, sexual orientation, national origin or ancestry” (Wis. Stat. § 939.645(1)(b)). The state had applied the statute to a defendant who, with several other black males, had seen and discussed a movie that featured a racially motivated beating and thereupon had brutally assaulted a white male. Before the attack, the defendant had said, among other things, “There goes a white boy; go get him.” A jury convicted the defendant of aggravated battery, and the court enhanced his sentence because his actions were racially motivated.

The Court unanimously upheld the statute because it focused on the defendant’s motive, traditionally a major consideration in sentencing. Unlike the *R.A.V.* case, the actual crime was not the speech or thought itself, but the assault—“conduct unprotected by the First Amendment.” Moreover, the statute did not permit enhancement of penalties because of “mere disagreement with offenders’ beliefs or biases” but rather because “bias-inspired conduct . . . is thought to inflict greater individual and societal harm.” The Court did caution, moreover, “that a defendant’s abstract beliefs, however obnoxious to most people, may not be taken into consideration by a sentencing judge.” Thus, in order for a penalty-enhancing statute to be constitutionally applied, the prosecution must show more than the mere fact that a defendant is, for example, a racist. Such evidence alone would most likely be considered irrelevant and unduly prejudicial by a trial judge. Instead, the prosecution must prove that the defendant’s racism motivated him to commit the particular crime; there must be a direct connection between the criminal act and a racial motive. This showing will generally be difficult to make and may necessitate direct evidence such as that in *Mitchell*, where the defendant’s own contemporaneous statements indicated a clear and immediate intent to act on racial or other proscribed grounds.

In *Virginia v. Black*, 538 U.S. 343 (2003), the U.S. Supreme Court considered the constitutionality of a state statute prohibiting the use of a particular “symbol of hate”: cross burnings (538 U.S. at 357). The Virginia statute at issue made it a crime to burn a cross in public with “an intent to intimidate a person or group of persons” (Va. Code Ann. § 18.2-423). In its opinion, the Court considered the First Amendment status of “true threats,” a concept that arose from the earlier case of *Watts v. United States*, 394 U.S. 705 (1969) and was further developed in *R.A.V.* (505 U.S. at 388). Consistent with those cases, the Court in *Virginia v.*

*Black* reaffirmed that “the First Amendment . . . permits a state to ban a ‘true threat’” and defined a true threat as a statement “where the speaker means to communicate a serious expression of an intent to commit an act of unlawful violence to a particular individual or group of individuals” (538 U.S. at 359). The Court then determined that intimidation may be included within the category of true threats, so long as the intimidation is limited to statements in which “a speaker directs a threat to a person or a group of persons with the intent of placing the victim in fear of bodily harm or death” (538 U.S. at 360). According to the Court, such intentional statements, whether termed as threats or intimidation, are “constitutionally proscribable” and thus outside the scope of the First Amendment (538 U.S. at 365). Applying these principles to the cross burning, the Court determined that “the burning of a cross is symbolic expression,” but it is also “a particularly virulent form of intimidation.” The Court therefore upheld the constitutionality of Section 18.2-423’s prohibition of cross burning because a “ban on cross burning carried out the intent to intimidate is fully consistent with our holding in *R.A.V.* and is proscribable under the First Amendment” (538 U.S. at 363).<sup>39</sup>

Although no case involving campus hate speech has yet reached the U.S. Supreme Court, there have been several important cases in the lower courts. The first was *Doe v. University of Michigan*, 721 F. Supp. 852 (E.D. Mich. 1989). The plaintiff, a graduate student, challenged the university’s hate speech policy, whose central provision prohibited “[a]ny behavior, verbal or physical, that stigmatizes or victimizes an individual on the basis of race, ethnicity, religion, sex, sexual orientation, creed, national origin, ancestry, age, marital status, handicap, or Vietnam-era veteran status.” The policy prohibited such behavior if it “[i]nvolves an express or implied threat to” or “[h]as the purpose or reasonably foreseeable effect of interfering with” or “[c]reates an intimidating, hostile, or demeaning environment” for individual pursuits in academics, employment, or extracurricular activities. This prohibition applied to behavior in “educational and academic centers, such as classroom buildings, libraries, research laboratories, recreation and study centers.” Focusing on the wording of the policy and the way in which the university interpreted and applied this language, the court held that the policy was unconstitutionally overbroad on its face because its wording swept up and sought to punish substantial amounts of constitutionally protected speech. In addition, the court held the policy to be unconstitutionally vague on its face. This fatal flaw arose primarily from the words “stigmatize” and “victimize” and the phrases “threat to” or “interfering with,” as applied to an individual’s academic pursuits—language that was so vague that students would not be able to discern what speech would be protected and what would be prohibited.

---

<sup>39</sup>The Court declined, however, to uphold the constitutionality of another provision in the Virginia cross-burning statute that made the burning itself *prima facie* evidence of an intent to intimidate. The Court splintered on its treatment of this particular provision, but ultimately a majority determined that the provision, as interpreted by the trial court’s jury instruction, was unconstitutional because it served to make all cross burnings a crime even though some burnings could be engaged in as “core political speech” rather than as intimidation (538 U.S. at 365 (plurality opinion of Justice O’Connor)).

Similarly, in *UWM Post, Inc. v. Board of Regents of the University of Wisconsin System*, 774 F. Supp. 1163 (E.D. Wis. 1991), the court utilized both overbreadth and vagueness analysis to invalidate a campus hate speech regulation. The regulation applied to “racist or discriminatory comments, epithets, or other expressive behavior directed at an individual” and prohibited any such speech that “intentionally” (1) “demean[s]” the race, sex, or other specified characteristics of the individual, and (2) “create[s] an intimidating, hostile, or demeaning environment for education.” The court held this language to be overbroad because it encompassed many types of speech that would not fall within any existing exceptions to the principle that government may not regulate the content of speech. Regarding vagueness, the court rejected the plaintiffs’ argument that the phrase “discriminatory comments, epithets, or other expressive behavior” and the word “demean” were vague. But the court nevertheless held the regulation unconstitutionally vague because another of its provisions, juxtaposed against the language quoted above, created confusion as to whether the prohibited speech must actually demean the individual and create a hostile educational environment, or whether the speaker must only *intend* those results and they need not actually occur.

A third case, *Iota Xi Chapter of Sigma Chi Fraternity v. George Mason University*, 993 F.2d 386 (4th Cir. 1993), was decided (unlike *Doe* and *UWM Post*) after the U.S. Supreme Court’s decision in *R.A.V. v. City of St. Paul*. In this case a fraternity had staged an “ugly woman contest” in which one member wore blackface, used padding and women’s clothes, and presented an offensive caricature of a black woman. After receiving numerous complaints about the skit from other students, the university imposed heavy sanctions on the fraternity. The fraternity, relying on the First Amendment, sought an injunction that would force the school to lift the sanctions. The trial court granted summary judgment for the fraternity, and the appellate court affirmed the trial court’s ruling.

Determining that the skit was “expressive entertainment” or “expressive conduct” protected by the First Amendment, and that the sanctions constituted a content-based restriction on this speech, the court applied reasoning similar to that in *R.A.V.*:

The mischief was the University’s punishment of those who scoffed at its goals of racial integration and gender neutrality, while permitting, even encouraging, conduct that would further the viewpoint expressed in the University’s goals and probably embraced by a majority of society as well. . . .

The University, however, urges us to weigh Sigma Chi’s conduct against the substantial interests inherent in educational endeavors. . . . The University certainly has a substantial interest in maintaining an environment free of discrimination and racism, and in providing gender-neutral education. Yet it seems equally apparent that it has available numerous alternatives to imposing punishment on students based on the viewpoints they express. We agree wholeheartedly that it is the University officials’ responsibility, even their obligation, to achieve the goals they have set. On the other hand, a public university has many constitutionally permissible means to protect female and minority students. We must emphasize, as have other courts, that “the manner of [its action] cannot

consist of selective limitations upon speech.” [R.A.V., 505 U.S. at 392] . . . The First Amendment forbids the government from “restrict[ing] expression because of its message [or] its ideas.” *Police Department v. Mosley*, 408 U.S. 92, 95 (1972). The University should have accomplished its goals in some fashion other than silencing speech on the basis of its viewpoint [993 F.2d at 393].<sup>40</sup>

In *Corry v. Stanford University*, No. 740309 (Cal. Superior Ct., Santa Clara Co., February 27, 1995), a state trial court judge invalidated Stanford’s Policy on Free Expression and Discriminatory Harassment. Since Stanford is a private university, the First Amendment did not directly apply to the case, but it became applicable through a 1992 California law, the “Leonard Law” (Cal. Educ. Code § 94367) that subjects private institutions’ student disciplinary actions to the strictures of the First Amendment. Applying U.S. Supreme Court precedents such as *Chaplinsky v. New Hampshire*, 315 U.S. 568 (1942) (the “fighting words” case), and *R.A.V. v. City of St. Paul* (above), the court held that the Stanford policy did not fall within the scope of the “fighting words” exception to the First Amendment’s application and also constituted impermissible “viewpoint discrimination” within the meaning of *R.A.V.* Stanford did not appeal. The court’s opinion in *Corry* is thoughtfully “described and critiqued” in an article by one of the primary drafters of the Stanford policy (see Thomas C. Grey, “How to Write a Speech Code Without Really Trying: Reflections on the Stanford Experience,” 29 *U.C. Davis L. Rev.* 891 (1996) (esp. at 896–97 & 910–31)).

The more recent disputes about hate speech and speech codes, especially in the aftermath of 9/11 (see beginning of this Section), have been more varied than the earlier disputes exemplified by the *Doe v. University of Michigan* case and the *UWM Post, Inc. v. Board of Regents* case discussed above. (See, for example, Harvey Silverglate & Greg Lukianoff, “Speech Codes: Alive and Well at Colleges,” *Chron. Higher Educ.*, August 1, 2003, B7; and compare Robert O’Neil, “. . . but Litigation Is the Wrong Response,” *Chron. Higher Educ.*, August 1, 2003, B9.) These newer disputes may not focus only on hate speech directed against minority groups as such, but instead may concern other types of speech considered hurtful to individuals or detrimental to the educational process. In *Bair v. Shippensburg University*, 280 F. Supp. 2d 357 (M.D. Pa. 2003), for example, the plaintiffs successfully challenged speech policies that not only prohibited “acts of intolerance directed at others for ethnic, racial, gender, sexual orientation, physical, lifestyle, religious, age, and/or political characteristics,” but also prohibited communications that “provoke, harass, intimidate, or harm another” (regardless of that other’s identity), and “acts of intolerance that demonstrate malicious intentions towards others” (regardless of the other’s identity). The court ruled that

---

<sup>40</sup>In a strong concurring opinion, one judge agreed with the decision only because the university had “tacitly approv[ed]” of the skit without giving any indication that the fraternity would be punished, and then imposed sanctions only after the skit had been performed. More generally, the concurring judge asserted that the university had “greater authority to regulate expressive conduct within its confines as a result of the unique nature of the educational forum” (see Section 9.5.2 of this book) and therefore could regulate certain offensive speech that interferes with its ability to “provide the optimum conditions for learning” and thus “runs directly counter to its mission.”

such language made the university's speech policies unconstitutionally overbroad. Similarly, the institutional policies involved in these more recent disputes may not be hate speech codes as such, but instead may be speech policies covering a broader range of expression, or conduct codes focusing primarily on behavior and only secondarily on expression, or mission statements drawn from various institutional documents, or even unwritten policies and ad hoc decisions implicating expression. In the *Bair* case (above), for example, the provisions being challenged were found in the preamble to and various sections of the Code of Conduct, and in the university's Racism and Cultural Diversity Policy.<sup>41</sup> And the settings in which the more recent disputes arise may be more particularized than in the earlier disputes. The setting, for example, may be student speech in the classroom (see Gary Pavela, "Classroom 'Hate Speech' Codes," Parts I & II, *Synfax Weekly Report*, October 11 and October 18, 2004), or student speech on the institution's computer network (see Section 8.5).

The four earlier campus cases, combined with *R.A.V.*, *Mitchell*, and *Virginia v. Black*, demonstrate the exceeding difficulty that any public institution would face if it attempted to promulgate hate speech regulations that would survive First Amendment scrutiny. Read against the backdrop of other Supreme Court cases on freedom of speech, both before and after *R.A.V.*, the hate speech cases reflect and confirm five major free speech principles, that together, severely constrain the authority of government to regulate hate speech.

Under the first free speech principle—the "content discrimination" principle—regulations of the content of speech (that is, regulations of the speaker's subject matter or message) are suspect. As the U.S. Supreme Court has frequently stated, "[A]bove all else, the First Amendment means that government has no power to restrict expression because of its message, its ideas, its subject matter, or its content. . . . There is an 'equality of status in the field of ideas,' and government must afford all points of view an equal opportunity to be heard" (*Police Department v. Mosley*, 408 U.S. 92, 95–96 (1972), quoting A. Meiklejohn, *Political Freedom: The Constitutional Powers of the People* (1948; reprinted by Greenwood Press, 1979), 27). This principle applies with extra force whenever a government restricts a speaker's message because of its *viewpoint* rather than merely because of the subject matter being addressed. As the *R.A.V.* case makes clear, and as other cases such as *Rosenberger v. Rector and Visitors of University of Virginia* (see Section 10.1.5) have confirmed, "viewpoint discrimination" against private speakers is virtually always unconstitutional (see *R.A.V.*, 505 U.S. at 391–92). In addition to *R.A.V.*, the *Iota Xi Chapter* case and the *Corry* case above also rely on viewpoint discrimination analysis.

Under the second free speech principle—the "emotive content" principle—the emotional content as well as the cognitive content of speech is protected

---

<sup>41</sup>The court in the *Bair* case issued a preliminary injunction against the enforcement of the challenged speech provisions. Subsequently, the parties settled the case, with the university agreeing to rewrite portions of its conduct code and diversity policy. See Eric Hoover, "Shippensburg U. Agrees to Change Conduct Code in Settlement with Advocacy Group," *Chron. Higher Educ.*, March 5, 2004, A31.

from government regulation. As the U.S. Supreme Court explained in *Cohen v. California*, 403 U.S. 15 (1971):

[M]uch linguistic expression serves a dual communicative function: it conveys not only ideas capable of relatively precise, detached explication, but otherwise inexpressible emotions as well. In fact, words are often chosen as much for their emotive as their cognitive force. We cannot sanction the view that the Constitution, while solicitous of the cognitive content of individual speech, has little or no regard for that emotive function which, practically speaking, may often be the more important element of the overall message [403 U.S. at 26].

Under the third free speech principle—the “offensive speech” principle—speech may not be prohibited merely because persons who hear or view it are offended by the message. In a flag-burning case, *Texas v. Johnson*, 491 U.S. 397 (1989), the U.S. Supreme Court reaffirmed that “[i]f there is a bedrock principle underlying the First Amendment, it is that the government may not prohibit the expression of an idea simply because society finds the idea itself offensive or disagreeable.”

Under the fourth free speech principle—the “overbreadth and vagueness” principle—government may not regulate speech activity with provisions whose language is either overbroad or vague and would thereby create a “chilling effect” on the exercise of free speech rights. As the U.S. Supreme Court has stated: “Because First Amendment freedoms need breathing space to survive, government may regulate in the area only with narrow specificity” (*NAACP v. Button*, 371 U.S. 415, 433 (1963)). The concurring opinion in *R.A.V.* also provides an instructive example of how overbreadth analysis applies to hate speech regulations (505 U.S. at 397–415 (White, J., concurring)). The speech codes in the *Doe*, *UWM Post*, and *Bair* cases were all invalidated on overbreadth grounds, and the first three of the cases were invalidated on vagueness grounds as well. Another good example comes from *Dambrot v. Central Michigan University*, 55 F.3d 1177 (6th Cir. 1995), in which the appellate court invalidated the defendant university’s “discriminatory harassment policy” on its face. Since the policy expressly applied to “verbal behavior,” “written literature,” and the use of “symbols, [epithets], or slogans,” it clearly covered First Amendment speech. But the policy’s language did not clearly specify when such speech would be considered “discriminatory harassment” and thus be prohibited. The policy was therefore unconstitutionally overbroad and unconstitutionally vague. (Although *Dambrot* concerned a basketball coach’s speech rather than a student’s speech, its overbreadth and vagueness analysis is equally applicable to student hate speech policies.)

Application of the overbreadth doctrine to speech codes may sometimes be combined with public forum analysis (see Section 9.5.2 above). Restrictions on student speech in a public forum are more likely to be found unconstitutional than restrictions on speech in a nonpublic forum; thus, the more public forum property a speech code covers, the more vulnerable it may be to an overbreadth challenge. In *Roberts v. Haragan*, 2004 WL 2203130 (N.D. Tex. 2004), for instance, the court determined that the “application of [Texas Tech University’s] Speech Code to the public forum areas on campus would suppress [substantial

amounts of] speech that, no matter how offensive,” is protected by the First Amendment. The court therefore held the Speech Code to be “unconstitutional as to the public forum areas of the campus.” In addition, since the policy covered only certain “racial or ethnic content” and left untouched other harassing speech, it constituted “impermissible viewpoint discrimination” within the meaning of *R.A.V. v. St. Paul* (see discussion of first free speech principle above).

And under the fifth free speech principle—the “underbreadth” principle—when government regulates what is considered an unprotected type, or proscribable category, of speech—for example, fighting words or obscenity—it generally may not restrict expression of certain topics or viewpoints in that unprotected area without also restricting expressions of other topics and viewpoints within that same area. For example, if government utilizes the “fighting words” rationale for regulation, it must generally regulate all fighting words or none; it cannot selectively regulate only fighting words that convey disfavored messages. This principle, sometimes called the “underbreadth” principle, is an addition to First Amendment jurisprudence derived from the *R.A.V.* case. There is an exception to this principle created by the *R.A.V.* case, however, that permits regulation of a portion or “subset” of the proscribable category if the regulation focuses on the most serious occurrences of this type of speech and does so in a way that does not involve viewpoint discrimination. The Court in *Virginia v. Black* (above) invoked this exception when using the true threats or intimidation category of proscribable speech to uphold the Virginia cross-burning statute. “[A] State [may] choose to prohibit only those forms of intimidation that are most likely to inspire fear of bodily harm,” the Court reasoned; therefore, “[i]nstead of prohibiting all intimidating messages Virginia may choose to regulate this subset of intimidating messages in light of cross burning’s long and pernicious history as a signal of impending violence” (538 U.S. at 344; compare 538 U.S. at 380–387 (Souter J., dissenting in part)).

**9.6.3. Guidelines for dealing with hate speech on campus.** In light of the imposing barriers to regulation erected by the five free speech principles in subsection 9.6.2 above, it is critical that institutions (public and private alike) emphasize *nonregulatory* approaches for dealing with hate speech. Such approaches do not rely on the prohibition of certain types of speech or the imposition of involuntary sanctions on transgressors, as do regulatory approaches. Moreover, nonregulatory initiatives may reach or engage a wider range of students than regulatory approaches can. They also may have more influence on student attitudes and values and may be more effective in creating an institutional environment that is inhospitable to hate behavior. Thus, nonregulatory initiatives may have a broader and longer-range impact on the hate speech problem. Nonregulatory initiatives may also be more in harmony with higher education’s mission to foster critical examination and dialogue in the search for truth. (See generally S. Sherry, “Speaking of Virtue: A Republican Approach to

University Regulation of Hate Speech,” 75 *Minn. L. Rev.* 933, 934–36, 942–44 (1991).) Nonregulatory initiatives, moreover, do not raise substantial First Amendment issues. For these reasons, institutions should move to regulatory options only if they are certain that nonregulatory initiatives cannot suitably alleviate existing or incipient hate speech problems.

In addition to nonregulatory initiatives, institutions may regulate hate *conduct* or *behavior* (as opposed to speech) on their campuses. Hateful impulses that manifest themselves in such behavior or conduct are not within the constitutional protections accorded speech (that is, the use of words or symbols to convey a message). Examples include kicking, shoving, spitting, throwing objects at persons, trashing rooms, and blocking pathways or entryways. Since such behaviors are not speech, they can be aggressively prohibited and punished in order to alleviate hate problems on campus.

If an institution also deems it necessary to regulate speech itself, either in formulating general policies or in responding to particular incidents, it should first consider the applicability or adaptability of regulations that are already in or could readily be inserted into its general code of student conduct. The question in each instance would be whether a particular type of disciplinary regulation can be applied to some particular type of hate speech without substantially intruding on free speech values and without substantial risk that a court would later find the regulation’s application to hate speech unconstitutional. Under this selective incremental approach, much hate speech must remain unregulated because no type of regulation could constitutionally reach it. But some provisions in conduct codes might be applied to some hate speech. The following discussion considers five potential types of such regulations. Any such regulation must be drafted with language that would meet the overbreadth and vagueness requirements discussed under the fourth free speech principle in subsection 9.6.2 above.

*First*, when hate speech is combined with nonspeech actions in the same course of behavior, institutions may regulate the nonspeech elements of behavior without violating the First Amendment. A campus building may be spray-painted with swastikas; homophobic graffiti may be chalked on a campus sidewalk; a KKK insignia may be carved into the door of a dormitory room; a student may be shoved or spit on in the course of enduring verbal abuse. All these behaviors convey a hate message and therefore involve speech; but all also have a nonspeech element characterizable as destruction of property or physical assault. While the institution cannot prohibit particular messages, it can prohibit harmful acts; such acts therefore may be covered under neutral regulations governing such nonspeech matters as destruction and defacement of property or physical assaults of persons.

*Second*, institutions may regulate the time or place at which hate speech is uttered or the manner in which it is uttered, as long as they use neutral regulations that do not focus on the content or viewpoint of the speech. For example, an institution could punish the shouting of racial epithets in a dormitory quadrangle in the middle of the night, as long as the applicable regulation

would also cover (for example) the shouting of cheers for a local sports team at the same location and time.

*Third*, institutions may regulate the content of hate speech that falls within one of the various exceptions to the principle forbidding content-based restrictions on speech. Thus, institutions may punish hate speech that constitutes a “true threat” or intimidation, as provided in *Virginia v. Black* (subsection 9.6.2 above), and may prohibit hate speech (and other speech) that constitutes fighting words, obscenity, incitement, or private defamation. (For an example of a higher education case adopting the fighting words rationale, see *State v. Hoshijo ex rel. White*, 76 P.3d 550, 564–65 (Hawaii Sup. Ct. 2003).) Any such regulation, however, must comply with the “underbreadth” principle, the fifth principle set out in subsection 9.6.2 above. Under this principle, an institution could not have a specific hate speech code prohibiting (for example) “fighting words” directed at minority group members, but it could have a broader regulation that applies to hate speech constituting fighting words as well as to all other types of fighting words.

*Fourth*, institutions probably may regulate hate speech that occurs on or is projected onto private areas, such as dormitory rooms or library study carrels, and thereby infringes on substantial privacy interests of individuals who legitimately occupy these places. For First Amendment purposes, such private areas are not considered “public forums” open to public dialogue (see Section 9.5.2); and the persons occupying such places may be “captive audiences” who cannot guard their privacy by avoiding the hate speech (see *Frisby v. Schultz*, 487 U.S. 474 (1988)). For these two reasons, it is likely that hate speech of this type could be constitutionally reached under provisions dealing generally with unjustified invasions of students’ personal privacy, so long as the regulation does not constitute viewpoint discrimination (see the first free speech principle discussed in subsection 9.6.2 above).

*Fifth*, institutions probably may regulate hate speech that furthers a scheme of racial or other discrimination. If a fraternity places a sign in front of its house reading “No blacks allowed here,” the speech is itself an act of discrimination, making it unlikely that black students would seek to become members of that fraternity. When such speech is an integral element of a pattern of discriminatory behavior, institutions should be able to cover it and related actions under a code provision prohibiting discrimination on the basis of identifiable group characteristics such as race, sex, or ethnicity. The *R.A.V.* majority opinion itself apparently supports such a rationale when it suggests that the nondiscrimination requirements of Title VII (the federal employment discrimination statute) could constitutionally be applied to sexual harassment accomplished in part through speech (505 U.S. at 409–10).

In addition to these five bases for regulating hate speech, institutions may also—as was suggested above—devise enhanced penalties under their conduct codes for hate *behavior* or *conduct* (such as the racially inspired physical attack in *Wisconsin v. Mitchell* above) that does not itself involve speech. An offense that would normally merit a semester of probation, for instance, might be punished by a one-semester suspension upon proof that the act was undertaken for racial reasons. Institutions must proceed most cautiously, however. The delicate inquiry into the

perpetrator's motives that penalty enhancement requires is usually the domain of courts, lawyers, and expert witnesses, guided by formal procedures and rules of evidence as well as a body of precedent. An institution should not consider itself equipped to undertake this type of inquiry unless its disciplinary system has well-developed fact-finding processes and substantial assistance from legal counsel or a law-trained judicial officer. Institutions should also assure themselves that the system's "judges" can distinguish between the perpetrator's actual motivation for the offense (which is a permissible basis for the inquiry) and the perpetrator's thoughts or general disposition (which, under *Mitchell*, is an impermissible consideration).

## **Sec. 9.7. Student Files and Records**

**9.7.1. Family Educational Rights and Privacy Act (FERPA).** The Family Educational Rights and Privacy Act of 1974 (20 U.S.C. § 1232g), popularly known as FERPA (or sometimes as the Buckley Amendment, after its principal senatorial sponsor), places significant limitations on colleges' disclosure and handling of student records. The Act and its implementing regulations, 34 C.F.R. Part 99, apply to all public and private educational agencies or institutions that receive federal funds from the U.S. Department of Education or whose students receive such funds (under the Federal Family Education Loan program, for example) and pay them to the agency or institution (34 C.F.R. § 99.1).<sup>42</sup> While FERPA does not invalidate common law or state statutory law applicable to student records (see Section 9.7.2 below), the regulations are so extensive and detailed that they are the predominant legal consideration in dealing with student records.<sup>43</sup>

FERPA establishes three basic rights for college students: the rights (1) to inspect their own education records; (2) to request that corrections to the records be made if the information in them was recorded inaccurately (and, if the school refuses, the right to a hearing by the school to determine whether the records should be corrected); and (3) to restrict the access of others (in some cases including even the students' own parents<sup>44</sup>) to personally identifiable records unless one of a number of enumerated exceptions is at issue. The regulations also require colleges to notify students annually of their rights under FERPA, and they provide

---

<sup>42</sup>Cases and authorities are collected in John E. Theuman, Annot., "Validity, Construction, and Application of Family Educational Rights and Privacy Act of 1974 (20 U.S.C.S. § 1232g)," 112 A.L.R. Fed. 1.

<sup>43</sup>The FERPA regulations provide that "[i]f an educational agency or institution determines that it cannot comply with the Act or [regulations] due to a conflict with State or local law, it shall notify the [Family Policy Compliance] Office within 45 days, giving the text and citation of the conflicting law" (34 C.F.R. § 99.61). Where such conflict exists, the federal law will take precedence unless the institution is willing to relinquish federal funding (see generally *Rosado v. Wyman*, 397 U.S. 397, 420–23 (1970)). The federal government would, however, allow a period of negotiation and encourage the institution to seek an official interpretation of the state law compatible with FERPA or an amendment of the state law.

<sup>44</sup>If a student is a dependent for federal income tax purposes, the institution may, but is not required to, disclose the student's education records to the student's parents.

a procedure for complaints to be filed with the Department of Education if a student believes that the college has not complied with FERPA.<sup>45</sup>

The Family Policy Compliance Office (FPCO) of the Education Department is charged with the development, interpretation, and enforcement of FERPA regulations. The FPCO maintains a Web site that provides an overview of FERPA at <http://www.ed.gov/policy/gen/guid/fpco/ferpa/index.html>. The Web site also contains the FERPA legislation and its implementing regulations at <http://www.ed.gov/policy/gen/leg/edpicks.jhtml?src=ln> (for the legislation) and <http://www.ed.gov/policy/gen/reg/ferpa/index.html> (for the regulations).

The education records that are protected under FERPA's quite broad definition are all "those records that are (1) [d]irectly related to a student; and (2) [m]aintained by an educational agency or institution or by a party acting for the agency or institution" (20 U.S.C. § 1232g(a)(4)(A); 34 C.F.R. § 99.3).<sup>46</sup> This section of the regulations contains five exceptions to this definition, which exclude from coverage certain personal and private records of institutional personnel,<sup>47</sup> certain campus law enforcement records, certain student employment records, certain records regarding health care, and "records . . . [such as certain alumni records] that only contain information about an individual after he or she is no longer a student at [the] . . . institution." There is also a partial exception for "directory information," which is exempt from the regulations' nondisclosure requirements under certain conditions (34 C.F.R. § 99.37).

Following a flurry of litigation concerning access by the press to campus law enforcement records involving students (considered, under FERPA's earlier definition, to be student education records and thus protected), Congress passed the Higher Education Amendments of 1992 (Pub. L. No. 102-325, codified at 20 U.S.C. § 1232g(a)(4)(B)(ii)), which amended FERPA to exclude from the definition of "education records" records that are both created and maintained by a law enforcement unit of an educational agency or institution for the purpose of law enforcement. This change enables institutions, under certain circumstances, to disclose information about campus crime contained in law enforcement unit records to parents, the media, other students, and

---

<sup>45</sup>The current regulations remove the previous rule that institutions adopt a formal written student records policy (although institutions may wish to retain their policies to help avoid inconsistent practices with respect to student records) (61 Fed. Reg. at 59295). An appendix to the 1996 amendments to the regulations includes a model notice of rights under FERPA for postsecondary institutions to use. The language of the model notice is advisory only and not part of the regulations (61 Fed. Reg. at 59297).

<sup>46</sup>It is important to recognize that the definition of "education record" is broader than a record of grades or student discipline. For example, student course evaluation scores for courses taught by graduate students fall within the definition of "education record." Therefore, posting student course evaluation scores for these instructors, either physically or on a Web site, would arguably be a violation of FERPA.

<sup>47</sup>For example, in *Klein Independent School District v. Mattox*, 830 F.2d 576 (5th Cir. 1987), a school district had been asked, under the Texas open records law, to produce the college transcript of one of its teachers. The court ruled that, since the teacher was an employee, not a student, of the school district, FERPA did not protect her transcript from disclosure as required under the Texas law, even though it would have protected her transcript from disclosure by her college.

other law enforcement agencies. Regulations specifying institutional responsibilities with respect to law enforcement records under FERPA are codified at 34 C.F.R. § 99.8.

Although FERPA provides substantial protection for the privacy of student records, it has been amended numerous times to address public (and parental) concerns about campus safety and the shield that FERPA provided to alleged student perpetrators of violent crimes, as well as various other issues and concerns. FERPA regulations currently list fifteen exceptions to the requirement of prior consent before the release of a personally identifiable education record (34 C.F.R. § 99.31). Several of these exceptions are discussed below.

In one such instance, the Education Department revised the FERPA regulations to clarify the definition of a disciplinary record and to specify the conditions for its release. Disciplinary records generally are considered “education records” and are thus subject to FERPA’s limitations on disclosure. However, the revised regulations permit the institution to disclose to the victim of an “alleged perpetrator of a crime of violence or non-forcible sex offense” the “final results” of a disciplinary proceeding involving the student accused of the crime (34 C.F.R. § 99.31(a)(13)).<sup>48</sup> Prior to this amendment, student press groups had sought access to disciplinary records, in some cases successfully, under state open records laws (see the discussion of *The Red and the Black* case, Section 12.5.3). The regulations also allow the institution to disclose the “final results” of a disciplinary proceeding to the general public if the student who is the subject of the proceeding is an “alleged perpetrator of a crime of violence or non-forcible sex offense” and the institution determines that the student has violated one or more institutional rules and policies. Under either exception, the institution may not disclose the names of other witnesses, including the alleged victim, without the relevant student’s or students’ consent (34 C.F.R. § 99.31(a)(14)).<sup>49</sup> Because of the specificity of these exceptions to the nondisclosure rule, most disciplinary records will still be protected by FERPA and may be disclosed only with permission of the student.

In 1994, Congress amended FERPA to permit disclosure to teachers and other school officials at *other* institutions of information about a disciplinary action taken against a student for behavior that posed a significant risk to the student or to others.<sup>50</sup> FERPA also permits an institution to disclose information otherwise protected by FERPA in order to comply with a judicial order or a lawfully issued subpoena, as long as either the institution makes a “reasonable effort” to notify the parent or eligible student of the order or subpoena in advance or the subpoena is for law enforcement purposes and prohibits disclosure on its face (34 C.F.R. § 99.31(a)(9)(ii)).

---

<sup>48</sup>In 1990, the Student Right-to-Know and Campus Security Act, discussed in Section 8.6.3, amended FERPA to permit this disclosure to the student victim of a violent crime. The FERPA regulations were amended in 1995 (60 Fed. Reg. 3464 (January 17, 1995)).

<sup>49</sup>The Higher Education Amendments of 1998 (Pub. L. No. 105-244, October 7, 1998) amended FERPA to permit this disclosure (20 U.S.C. § 1232g(b)(6)(C)).

<sup>50</sup>Improving America’s Schools Act of 1994 (IASA) (Pub. L. No. 103-382, enacted October 20, 1994).

The USA PATRIOT Act (Pub. L. No. 107-56; 115 Stat. 272, October 26, 2001) (discussed in Section 13.2.4 of this book) amended FERPA to permit an institution to disclose, without informing the student or seeking the student's consent, information about the student in response to an *ex parte* order issued by a court at the request of the U.S. Attorney General or his designee. In order to obtain such a court order, the Attorney General must demonstrate the need for this information in order to further investigation or prosecution of terrorism crimes as specified in 18 U.S.C. §§ 2332b(g)(5)(B) and 2331. The USA PATRIOT Act also amends the recordkeeping provisions of FERPA (20 U.S.C. § 1232g(b)(4); 34 C.F.R. § 99.32); the institution is not required to record the disclosure of information in a student's education record in response to an *ex parte* order issued under the circumstances described above. (An explanation of the USA PATRIOT Act amendments and other exceptions to the requirement of student notice and consent is contained in a technical assistance letter of April 12, 2002, from the Director of the Family Policy Compliance Office. It can be found at <http://www.ed.gov/policy/gen/guid/fpco/pdf/hterrorism.pdf>.)

Another FERPA exception allows colleges to give a student's parents or guardian information concerning the student's violation of laws or institutional policies governing the use or possession of alcohol or illegal drugs if the student is under twenty-one years of age, and if the college has determined that the student's conduct constituted a disciplinary violation (34 C.F.R. § 99.31(a)(15)).<sup>51</sup> (For an assessment of the impact of this FERPA exception in reducing underage student drinking, see Leo Reisberg, "2 Years After Colleges Started Calling Home, Administrators Say Alcohol Policy Works," *Chron. Higher Educ.*, January 19, 2001, A34–36.)

The Campus Sex Crimes Prevention Act (§ 1601 of the Victims of Trafficking and Violence Protection Act of 2000, Pub. L. 106-386) amends FERPA to permit the release of information provided to the college concerning sex offenders whom the law requires to register. This amendment to FERPA is codified at 20 U.S.C. § 1232g(b)(7).<sup>52</sup> Interpretive Guidance regarding this legislation and its implications for colleges may be found at <http://www.ed.gov/offices/OM/fpco>.

The key to success in dealing with FERPA is a thorough understanding of the implementing regulations. Administrators should keep copies of the regulations at their fingertips and should not rely on secondary sources to resolve particular problems. Counsel should review the institution's record-keeping policies and practices, and every substantial change in them, to ensure compliance with the regulations. Administrators and counsel should work together to maintain appropriate legal forms to use in implementing the regulations, such as forms for a student's waiver of his or her rights under the Act or regulations, forms for securing a student's consent to release personally identifiable information from

---

<sup>51</sup>Higher Education Amendments of 1998, codified at 20 U.S.C. § 1232g(i).

<sup>52</sup>A provision of the Student Right-to-Know Law and Campus Security Act (discussed in Section 8.6.3) requires colleges to include in their annual security reports, effective October 1, 2003, a discussion of how information concerning registered sex offenders living, working, or attending classes in the community may be found.

his or her records (34 C.F.R. § 99.30), and forms for notifying parties to whom information is disclosed of the limits on the use of that information (34 C.F.R. § 99.34). Questions concerning the interpretation or application of the regulations may be directed to the Family Policy Compliance Office at the U.S. Department of Education at <http://FERPA@ED.gov>.

A useful reference for FERPA compliance is Steven J. McDonald, *The Family Educational Rights and Privacy Act (FERPA): A Legal Compendium* (2d ed., National Association of College and University Attorneys, 2002). This compendium includes the statute and regulations, sample forms and policies, technical assistance letters from the Family Policy Compliance Office, and a list of additional resources.

Since FERPA has been in effect, litigation about disclosure of education records and questions about who has access, and to what types of records, have proliferated. For example, students at Harvard University who wished to examine the comments that admissions staff had made about them on “summary sheets” filed a complaint with the Department of Education when Harvard denied their request. Harvard had told the students that the summary sheets were kept in a file separate from the student’s academic records, that they included direct quotes from confidential letters of recommendation, and that they had no further significance once a student was admitted. Therefore, Harvard believed that these documents were not accessible under FERPA.

In an advisory letter, reprinted in *22 Coll. Law Dig.* 299 (July 16, 1992), the Department of Education ruled that the students had a right to examine the summary sheets. Applying FERPA’s broad definition of an “education record” (documents containing information related to a student that are maintained by an educational agency (20 U.S.C. § 1232g(a)(4)(A)), the Department of Education determined that the summary sheets met that definition. However, the department ruled that the university could redact from the documents any excerpts specifically derived from confidential letters of recommendation if the student had waived his or her right of access to these letters.

In 2002, the U.S. Supreme Court ruled that there is no private right of action under FERPA, putting an end to more than two decades of litigation over that issue. In *Gonzaga University v. Doe*, 536 U.S. 273 (2002), the Court ruled 7 to 2 that Congress had not created a private right of action under FERPA, and also ruled that the law created no personal rights enforceable under 42 U.S.C. § 1983. Doe, a former education student at Gonzaga University, a private institution in the State of Washington, had sued Gonzaga in state court, alleging violation of his FERPA rights for a communication between a university administrator and the state agency responsible for teacher certification. In that communication, the university administrator alleged that Doe had committed certain sex-based offenses against a fellow student, despite the fact that the alleged victim had not filed a complaint and no determination had been made as to the truth of the allegations, which the administrator had overheard from a third party. Doe also sued Gonzaga and the administrator under tort and contract theories. A jury found for Doe, awarding him more than \$1 million in compensatory and punitive damages, including \$450,000 in damages on the FERPA claim.

The Washington Court of Appeals reversed the outcome at the trial level, but, in *Doe v. Gonzaga University*, 24 P.3d 390 (Wash. 2001), the Washington Supreme Court reversed yet again, ruling that, although FERPA did not create a private cause of action, its nondisclosure provisions provided a right enforceable under Section 1983. Since the lower courts were divided as to the existence of FERPA's enforceability under Section 1983, the U.S. Supreme Court granted *certiorari* to resolve the conflict.

The Court compared the language of FERPA with that of Titles VI and IX (discussed in this book, Sections 13.5.2 & 13.5.3 respectively), which provide that “no person” shall be subject to discrimination. In FERPA, however, Congress focused on the obligation of the Secretary of Education to withhold federal funds from any institution that failed to comply with the law's nondisclosure provisions. This language, said the Court, did not confer the type of “individual entitlement” that can be enforced through Section 1983, citing *Cannon v. University of Chicago* (discussed in Section 13.5.9), a case that found a private right of action under Title IX. Furthermore, said the Court, FERPA provides for penalties for institutions that have a “policy or practice” of permitting the release of education records, rather than penalties for a single act of noncompliance. Furthermore, said the Court, FERPA's creation of an administrative enforcement mechanism through the Secretary of Education demonstrates that Congress did not intend for the law to create an individual right, either under FERPA itself or through Section 1983. The Court reversed the Washington Supreme Court's ruling.<sup>53</sup>

(For a discussion of *Gonzaga* and *Owasso*, and a review of non-FERPA-based privacy issues with respect to student records, see Margaret L. O'Donnell, “FERPA: Only a Piece of the Privacy Puzzle,” 29 *J. Coll. & Univ. Law* 679 (2003).)

A perennial issue that colleges face is whether the use of Social Security numbers as identifiers of students violates FERPA. Although an earlier ruling by a federal court<sup>54</sup> established that students could challenge the use of Social Security numbers as identification numbers on class rosters, identification cards, meal tickets, and other university documents under Section 1983 (a position since rejected by the U.S. Supreme Court in *Gonzaga*), the FPCO has taken the position that the use of even partial Social Security numbers to publicly post student grades is a FERPA violation (Letter re: Hunter College, FPCO May 29, 2001, available at <http://www.ed.gov/policy/gen/guid/fpc/doc/hunter.doc>). A New York law prohibits any public or private school or university from displaying a student's Social Security number for posting of grades, on class rosters, on student identification cards, in student directories, or for other purposes unless specifically authorized or required by law (N.Y.C.L.S. Educ. § 2-b (2003)).

---

<sup>53</sup>In a case decided a few months before *Gonzaga*, the U.S. Supreme Court ruled that peer grading in a classroom setting does not violate FERPA's nondisclosure requirements because unrecorded grades are not education records (*Owasso Independent School District v. Falvo*, 534 U.S. 426 (2002)). The issue of whether FERPA provided for a private right of action was not before the court in *Owasso*.

<sup>54</sup>*Krebs v. Rutgers, The State University of New Jersey*, 797 F. Supp. 1246 (D.N.J. 1992).

**9.7.2. State law.** In a majority of states, courts now recognize a common law tort of invasion of privacy, which, in some circumstances, protects individuals against the public disclosure of damaging private information about them and against intrusions into their private affairs. A few states have similarly protected privacy with a statute or constitutional provision. Although this body of law has seldom been applied to educational record-keeping practices, the basic legal principles appear applicable to record-keeping abuses by postsecondary institutions. This body of right-to-privacy law could protect students against abusive collection and retention practices where clearly intrusive methods are used to collect information concerning private affairs. In *White v. Davis*, 533 P.2d 222 (Cal. 1975) (see Section 11.5), for example, the court held that undercover police surveillance of university classes and meetings violated the right to privacy because “no professor or student can be confident that whatever he may express in class will not find its way into a police file.” Similarly, right-to-privacy law could protect students against abusive dissemination practices that result in unwarranted public disclosure of damaging personal information.

In addition to this developing right-to-privacy law, many states also have statutes or administrative regulations dealing specifically with record keeping. These include subject access laws, open record or public record laws, and confidentiality laws. Such laws usually apply only to state agencies, and a state’s postsecondary institutions may or may not be considered state agencies subject to record-keeping laws (see Section 12.5.3). Occasionally a state statute deals specifically with postsecondary education records. A Massachusetts statute, for instance, makes it an “unfair educational practice” for any “educational institution,” including public and private postsecondary institutions, to request information or make or keep records concerning certain arrests or misdemeanor convictions of students or applicants (Mass. Gen. Laws Ann. ch. 151C, § 2(f)).

Since state laws on privacy and records vary greatly from state to state, administrators should check with counsel to determine the law in their particular state. Since state open records requirements may occasionally conflict with FERPA regulations, counsel must determine whether any such conflict exists. While there have been several cases involving the conflict between FERPA’s confidentiality requirements and the demands of state public records laws, there is little agreement as to how a public institution can comply with both laws.

If a case is not brought under FERPA, but instead asserts only state law claims, federal courts may not have subject matter jurisdiction (Section 2.2.2.1). In *Gannett River States Publishing Corp. v. Mississippi State University*, 945 F. Supp. 128 (S.D. Miss. 1996), the federal district court refused to hear an action based on the Mississippi Public Records Act (Miss. Code Ann. §§ 25-61-1 through 25-61-17). The plaintiff had filed suit for disclosure of records in state court, but the university had removed the action to federal court based on federal question jurisdiction. The university argued that the plaintiff’s claims were federal in nature because it was FERPA that prevented the release of the records sought; even the plaintiff’s complaint explicitly mentioned FERPA and disputed its applicability to the records at hand. The federal court rejected this argument and remanded the case back to state court. Citing long-established precedents

concerning federal jurisdiction, the court held that state law, not FERPA, was the basis for the plaintiff's claim, and the suit thus did not "arise under" federal law. The references to FERPA did not convert the matter from one of federal law to one of state law; mentioning FERPA in the complaint was simply an "anticipation" of the university's defense. This case is an interesting reminder to institutional defendants that, in the absence of diversity jurisdiction, the substance of the plaintiff's complaint may determine the forum in which disclosure issues are decided.

Several state courts have ruled that public records laws trump the confidentiality provisions of FERPA, particularly with respect to disciplinary proceedings. Although the changes to FERPA made by the 1998 Higher Education Amendments will allow colleges to release limited information concerning the outcomes of student disciplinary hearings (Section 9.7.1), the law still does not provide for the complete release of transcripts, documentary evidence, or other records that meet FERPA's definition of "education records." Thus, the outcomes in the cases discussed below are still relevant to college administrators and, until and unless FERPA is once again amended, colleges may have to walk a tightrope in attempting to comply with conflicting state laws regarding public records and public meetings.

In a case whose rationale is similar to the *Red and Black* case (discussed in Section 12.5.3), a Connecticut appellate court addressed a claim under Connecticut's Freedom of Information law that audiotapes of a student disciplinary hearing were public records and thus subject to disclosure. In *Eastern Connecticut State University v. Connecticut Freedom of Information Commission*, No. CV96-0556097, 1996 Conn. Super. LEXIS 2554 (Conn. Super., September 30, 1996), a faculty member who had filed disciplinary charges against a student enrolled in his class requested audiotapes of the hearing that had been held to adjudicate those charges. The college had refused, citing FERPA's provision that protects records of disciplinary hearings from disclosure unless the student consents. Although the state Freedom of Information Commission (FOIC) had found the hearings to fall squarely within FERPA's protection, it also found that the faculty member had a legitimate educational interest in the student's behavior and thus was entitled to the information under another FERPA provision (20 U.S.C. § 1232g(h); 34 C.F.R. § 99.3). The court held that FERPA did not prevent a state legislature from enacting a law providing for access to public records, and that FERPA does not prohibit disclosing the student records, but that nondisclosure is "merely a precondition for federal funds." Taken to its logical conclusion, this ruling would elevate the interest of the public in access to public records over the ability of the state institution to be eligible to receive federal funds. (This unpublished opinion does not discuss an earlier Connecticut case, *University of Connecticut v. FOI Comm'n.* (discussed in Section 12.5.3), whose outcome was quite different.)

A second state court differed sharply with the result in the *Eastern Connecticut State University* case. In *Shreveport Professional Chapter of the Society of Professional Journalists v. Louisiana State University*, No. 393, 334 (1st Judicial Dist. Ct. Caddo Parish, La., March 4, 1994) (unpublished opinion at 17),

the court found that the results of a disciplinary hearing concerning theft of student government funds by student government members were more like education records (protected by FERPA) than law enforcement records (not protected by FERPA). The court rejected the plaintiffs' claim that FERPA did not prohibit disclosure of disciplinary hearing records, stating: "[T]he intent of Congress to withhold millions of federal dollars from universities that violate [FERPA] is ample prohibition, regardless of how the word 'prohibit' is construed by the plaintiffs." Although the court determined that the disciplinary hearing records were subject to the state's public records act, the court ruled that, given FERPA's requirements, the state constitution provided for an implied exception in the law for college disciplinary hearings. Distinguishing *Red and Black* (discussed in Section 12.5.3) on several grounds, the court held that the records should not be disclosed.

Despite the clarity of the FERPA regulations that include disciplinary records within the definition of education record, a lengthy legal battle pitting state courts against their federal counterparts resulted, eventually, in a determination that FERPA's privacy protections trumped state open records laws. In the state court litigation, the Supreme Court of Ohio held in *State ex rel Miami Student v. Miami University*, 680 N.E.2d 956 (Ohio 1997), that university disciplinary records are not education records under FERPA. The editor of the university's student newspaper had sought student disciplinary records, redacted of the students' names, Social Security numbers, and student identification numbers, or any other information that would identify individual students. The university provided the information but, in addition to the redactions that the editor had agreed to, also deleted information on the sex and age of the accused individuals, the date, time and location of the incidents, and memoranda, statements by students, and the disposition of some of the proceedings. The editor sought a writ of *mandamus* from the state supreme court. As in *Colonial School District*, the majority opinion did not cite or analyze the 1995 amendments to the FERPA regulations (Section 9.7.1) or, for that matter, any of the implementing regulations. Instead, the opinion analyzed the *Red and Black* case and determined that disciplinary records were not related to "student academic performance, financial aid, or scholastic probation," and thus could be disclosed without violating FERPA. Noting that the public records act was intended to be interpreted broadly, the court also noted that crime on campus was a serious problem and that the public should have access to the information requested by the student editor.

One justice dissented from the court's ruling that the information sought was not an education record, stating that the court's conclusion was "clearly contrary to the history, language and intent of FERPA." Noting that the *Red and Black* case was decided prior to the 1995 amendments (in which the Secretary of Education explicitly included disciplinary records within the definition of education records), the judge noted that *Shreveport* was a more recent analysis of the conflict, suggesting that it was the better authority.

The U.S. Supreme Court denied *certiorari* in the *Miami Student* case (522 U.S. 1022 (1997)). The U.S. Department of Education then brought a claim in a

federal district court in Ohio, seeking to enjoin the colleges from complying with the state supreme court's ruling to release the disciplinary records. The federal court issued the requested injunction, stating that the disciplinary records at issue clearly met the FERPA definition of "education records" and that the Ohio Supreme Court's interpretation of FERPA as pertaining only to academic records was incorrect (*United States v. Miami University*, No. C2:98-0097, February 12, 1998).

The federal district court then permitted the addition of the *Chronicle of Higher Education* as a codefendant to argue that disciplinary records are law enforcement records, rather than education records, and that FERPA does not preempt the Ohio Public Records Act (John Lowery, "Balancing Students' Right to Privacy and the Public's Right to Know," *Synthesis: Law and Policy in Higher Education*, Vol. 10, no. 2 (Fall 1998), 715).

The *Chronicle* asked the court to dismiss the Education Department's lawsuit for lack of subject matter jurisdiction, arguing that the department lacked standing to bring the action. The trial court ruled that FERPA expressly gave the Secretary of Education standing to enforce the law (20 U.S.C. § 1232g(f)), including enforcement by litigation (*United States of America v. The Miami University and The Ohio State University*, 91 F. Supp. 2d 1132 (S.D. Ohio 2000)). Additionally, said the court, the Secretary of Education had the authority to sue the recipients of federal funds to force them to comply with the terms of funding programs, one of which is compliance with FERPA. And, third, the court rejected the *Chronicle's* argument that FERPA does not prohibit colleges from releasing education records, but rather merely authorizes the Department of Education to withdraw federal funding from an institution that does not comply with FERPA. The court stated that the inclusion in the statute of several enforcement mechanisms, in addition to termination of funds for FERPA violations, demonstrated that Congress intended that the law apply directly to colleges. The federal district court also made an explicit ruling that student disciplinary records are education records under FERPA. Denying the *Chronicle's* motion to dismiss and awarding summary judgment to the Department of Education, the federal court issued a permanent injunction against Miami University and Ohio State University, forbidding the further release of student disciplinary records.

The intervening party, the *Chronicle of Higher Education*, appealed, and the U.S. Court of Appeals for the Sixth Circuit affirmed (294 F.3d 797 (6th Cir. 2002)). The *Chronicle* asserted that the Department of Education lacked standing to bring the action seeking to enjoin the release of the records, challenged the lower court's ruling as an implicit decision that FERPA preempts state open records laws, and asserted that the lower court was incorrect in ruling that disciplinary records were education records within the meaning of FERPA. The *Chronicle* also argued that FERPA violates the First Amendment because it limits access to otherwise publicly available records.

The appellate court ruled that the Department of Education had standing to seek the injunction on the same grounds that the trial court had relied upon. Furthermore, said the court, the Ohio Supreme Court's ruling that disciplinary records were not education records was incorrect; despite that ruling, the Ohio

court had allowed Miami to redact all personally identifiable information from the records before disclosing them, an action that complied with FERPA's requirements. The federal appellate court relied on the numerous exceptions to FERPA's prohibition against disclosure of education records to conclude that disciplinary records were, in fact, still included within the law's definition of education record, a result that complies with the position of the FPCO. With respect to the First Amendment claim, the court explained that student disciplinary proceedings were not criminal trials, and therefore, jurisprudence related to the public's access to criminal trials was not applicable to disciplinary hearings in which students lacked the panoply of protections available to litigants in the courts. Student disciplinary hearings at both universities were closed to the public, and press or public access to such hearings would complicate, not aid, the educational purpose that the hearings were designed to further. The court rejected the *Chronicle's* First Amendment claims. The court noted that the *Chronicle* could request student disciplinary records from which all individually identifying information had been redacted, as FERPA would not prohibit the release of such information.

Despite the first ruling of the federal trial court in the Miami University case (enjoining the release of the records prior to trial), the Court of Appeals of Maryland followed the lead of the Ohio Supreme Court. In *Kirwan v. The Diamondback*, 721 A.2d 196 (Md. Ct. App. 1998), the Maryland court ruled that Maryland's Public Information Act (Maryland Code § 10-611-28) authorizes the disclosure of information sought from the university by the student newspaper. The newspaper was seeking correspondence and parking violation records involving the basketball coach and several student players, which the university refused to provide. The university asserted that the parking violation records related to the coach were personnel records, which the law exempted from disclosure, and that the parking violation records related to the students were education records, protected from disclosure by FERPA. The court rejected both of the university's defenses.

The court held that the parking violation records of the student athletes were not education records because Congress had intended only that records related to a student's academic performance be covered by FERPA. In addition to attempting to protect student privacy through FERPA, said the court:

Congress intended to prevent educational institutions from operating in secrecy. Prohibiting disclosure of any document containing a student's name would allow universities to operate in secret, which would be contrary to one of the policies behind [FERPA]. Universities could refuse to release information about criminal activity on campus if students were involved, claiming that this information constituted education records, thus keeping very important information from other students, their parents, public officials, and the public [721 A.2d at 204].

The court upheld the ruling of the trial court that the university was required to release the information sought by the student newspaper.

But another state appellate court has ruled that, despite its finding that the “Undergraduate Court” at the University of North Carolina was a “public body” under North Carolina’s Open Meetings Law (N.C. Gen. Stat. § 143-318.9 *et seq.*), that body was entitled to hold closed disciplinary hearings in order to comply with the dictates of FERPA. In *DTH Publishing Corp. v. The University of North Carolina at Chapel Hill*, 496 S.E.2d 8 (N.C. Ct. App. 1998), the court applied language in the Open Meetings Law that allowed a public body to hold a closed session, if it was necessary, to prevent the disclosure of information that is “privileged or confidential.” The university had argued that FERPA’s prohibition of the nonconsensual release of personally identifiable student records rendered the records of student disciplinary hearings “privileged and confidential” for the purposes of state law. The court distinguished the *Miami Student* case, noting that the Ohio court had only ordered the release of “statistical data” from which student names had been deleted, and which included the location of the incident, age and sex of the student, nature of the offense, and the type of discipline imposed, but had not ordered the release of records from specific disciplinary hearings. The court also rejected arguments by the student newspaper that the state and federal constitutions required that judicial proceedings be open to the public, stating that the Undergraduate Court was not the type of court contemplated by these constitutions, and that there was no history at the university of open disciplinary hearings.

In *Caledonian-Record Publishing Company, Inc. v. Vermont State College*, 833 A.2d 1273 (Vt. 2003), Vermont’s highest court was asked to decide whether the press could have access to the daily security logs, student disciplinary records, and student disciplinary hearings at Lyndon State College and the entire Vermont State College System under the state’s Open Meeting Law and Public Records Act. The colleges provided the daily security logs compiled by their campus police departments, but refused to provide the requested student disciplinary records or to allow access to student disciplinary hearings.

The court found that Vermont’s Public Records Act exempts “student records at educational institutions funded wholly or in part by state revenue” (1 V.S.A. § 317(c)(11)) from disclosure. Because the plaintiffs had stated that they did not want to attend the hearings, but only to have access to the minutes or other records of the hearings, the court did not reach the issue of whether the media should be allowed to attend student disciplinary hearings. It also found that minutes or other records documenting the proceedings and outcome of student disciplinary hearings also fit the definition of “student records,” and thus were exempted from disclosure.

**9.7.3. The Federal Privacy Act.** The Privacy Act of 1974 (88 Stat. 1896, partly codified in 5 U.S.C. § 552a) applies directly to federal government agencies and, with two exceptions discussed below, does not restrict postsecondary education institutions. The Act accords all persons—including students, faculty members, and staff members—certain rights enforceable against the federal government regarding information about them in federal agency files, whether

collected from a postsecondary institution or from any other source. The Act grants the right to inspect, copy, and correct such information and limits its dissemination by the agency. Regulations implementing the Privacy Act are found at 34 C.F.R. Part 5b.<sup>55</sup>

Section 7 of the Act prohibits federal, state, and local government agencies from requiring persons to disclose their Social Security numbers. This provision applies to public but not to private postsecondary institutions (see the *Krebs* case in Section 9.7.1, which also discusses when an institution is considered a state agency for purposes of this provision) and thus may prevent public institutions from requiring either students or employees to disclose their Social Security numbers if they meet this definition. The two exceptions to this nondisclosure requirement permit an institution to require disclosure (1) where it is required by some other federal statute and (2) where the institution maintains “a system of records in existence and operating before January 1, 1975, if such disclosure was required under statute or regulation adopted prior to such date to verify the identity of an individual” (88 Stat. 1896 at 1903).

The second provision of the Act potentially relevant to some postsecondary institutions is Section 3(m) (5 U.S.C. § 552a(m)), which applies the Act’s requirements to government contractors who operate record-keeping systems on behalf of a federal agency pursuant to the contract.

(A reference guide to the Federal Freedom of Information Act and the Federal Privacy Act is published regularly by the U.S. Department of Justice. A description of this guide, *The Freedom of Information Act Guide and Privacy Act Overview*, and information on obtaining it, are available at <http://www.usdoj.gov/oip/foiapost/2004foiapost2.htm>.)

Many states have enacted privacy laws that regulate the actions of public colleges and universities, and sometimes private colleges as well. Administrators should consult with counsel for updated information on the existence of, or changes in, state privacy laws. For example, at least eight states prohibit the use of Social Security numbers by public agencies, which some of these laws define to include colleges and universities.

## Selected Annotated Bibliography

### *General*

Kaplin, William A. *American Constitutional Law: An Overview, Analysis, and Integration* (Carolina Academic Press, 2004). In Chapters 11 and 12, this book presents the foundational due process and free expression principles, and the leading U.S. Supreme Court cases, that undergird students’ federal constitutional rights. Chapter 14, Section E, provides an introduction to state constitutional rights regarding due process and freedom of expression.

---

<sup>55</sup>Cases and authorities are collected at George K. Chamberlin, Annot., “Applicability of § 3(b) of Privacy Act of 1974 (5 U.S.C.A. § 552a(b)), Requiring Individual’s Consent to Disclosure of Agency Records Maintained on Individual, to Disclosure of Information Otherwise Known to Federal Agency or Official,” 52 A.L.R. Fed. 579.

### ***Sec. 9.1 (Disciplinary and Grievance Systems)***

- Bach, Jason L. "Students Have Rights, Too: The Drafting of Student Conduct Codes," 2003 *BYU Educ. & L.J.* 1 (2003). Suggests a series of factors to be considered in drafting codes of student conduct; criticizes those who argue that formal due process protections are not necessary for campus judicial hearings; analyzes the procedural and substantive due process rights of students charged with violations of campus codes of student conduct.
- Baker, Thomas R. "Criminal Sanctions for Student Misconduct: Double Jeopardy Litigation in the 1990s," 130 *West's Educ. L. Rep.* 1 (1998). Discusses the problem of dealing with students whose campus code violation is also a criminal violation, and judicial responses to student attempts to challenge on-campus or criminal proceedings under the double jeopardy theory.
- Dannels, Michael. *From Discipline to Development: Rethinking Student Conduct in Higher Education*. ASHE-ERIC Higher Education Report, Vol. 25, no. 2 (ERIC Clearinghouse on Higher Education, 1997). Reviews the history of student discipline, examines the characteristics of students who violate disciplinary codes, and the role of institutions in preventing or facilitating student misconduct. Suggests models of student disciplinary codes and judicial proceedings that contribute to student development as well as improving conduct.
- Jameson, Jessica Katz. "Diffusion of a Campus Innovation: Integration of a New Student Dispute Resolution Center into the University," 16 *Mediation Q.* 129 (1998). Proposes guidelines for integrating dispute resolution programs into a college's existing culture while keeping in mind the educational and mediation goals of such programs.
- Pavela, Gary. "Applying the Power of Association on Campus: A Model Code of Academic Integrity," 24 *J. Coll. & Univ. Law* 97 (1997). Discusses the use of honor codes at colleges and universities; proposes a model honor code. Includes a list of Ten Principles of Academic Integrity.
- Pavela, Gary. "Limiting the Pursuit of Perfect Justice on Campus: A Proposed Code of Student Conduct," 6 *J. Coll. & Univ. Law* 137 (1980). A well-drafted sample code, including standards of conduct and hearing procedures, with comprehensive annotations explaining particular provisions and cites to relevant authorities. The code represents an alternative to the procedural complexities of the criminal justice model. See also Pavela's "Model Code of Student Conduct," available at <http://www.collegepubs.com>.
- Pavela, Gary. "Therapeutic Paternalism and the Misuse of Mandatory Psychiatric Withdrawals on Campus," 9 *J. Coll. & Univ. Law* 101 (1982–83). Analyzes the pitfalls associated with postsecondary institutions' use of "psychiatric withdrawals" of students. Pitfalls include violations of Section 504 (on disability discrimination) and of students' substantive and procedural due process rights. The article concludes with "Policy Considerations," including the limits of psychiatric diagnosis, the danger of substituting a "therapeutic" approach as a solution for disciplinary problems, and the "appropriate uses for a psychiatric withdrawal policy." For a later monograph adapted from this article, with model standards and procedures, hypothetical case studies, and a bibliography, see Gary Pavela, *The Dismissal of Students with Mental Disorders: Legal Issues, Policy Considerations, and Alternative Responses* listed in Section 9.4.

- Picozzi, James M. "University Disciplinary Process: What's Fair, What's Due, and What You Don't Get," 96 *Yale L.J.* 2132 (1987). Written by a defendant in a student disciplinary case. Provides a critical review of case law and institutional grievance procedures, concluding that the minimal due process protections endorsed by the courts are insufficient to protect students' interests.
- U.S. District Court, Western District of Missouri (*en banc*). "General Order on Judicial Standards of Procedure and Substance in Review of Student Discipline in Tax-Supported Institutions of Higher Education," 45 *Federal Rules Decisions* 133 (1968). A set of guidelines promulgated for the use of this district court in deciding students' rights cases. The guidelines are similarly useful to administrators and counsel seeking to comply with federal legal requirements.

### ***Sec. 9.2 (Disciplinary Rules and Regulations)***

- Brown, Valerie L. (ed.). *Student Disciplinary Issues: A Legal Compendium* (National Association of College and University Attorneys, 1997). A collection of law review articles, institutional policies, judicial opinions, and conference outlines related to student disciplinary rules and disciplinary systems. Issues related to both academic and nonacademic misconduct are included. A list of additional resources is also provided.
- Faulkner, Janet E., & Tribbensee, Nancy E. *Student Disciplinary Issues: A Legal Compendium* (National Association of College & University Attorneys, 2004). Collects articles, NACUA outlines, institutional policies, reports, and statutes related to (1) student due process and contract rights; (2) sanctions; (3) disclosure of conduct records, and (4) model codes of student conduct.
- Munsch, Martha Hartle, & Schupansky, Susan P. *The Dismissal of Students with Mental Disabilities* (National Association of College and University Attorneys, 2003). Provides guidance on upholding the institution's academic and disciplinary standards while complying with the laws protecting students with disabilities. Reviews applicable federal law; includes a question-and-answer section on common issues that arise when dealing with student misconduct related to a psychiatric or learning disability.
- Zirkel, Perry A. "Disciplining Students for Off-Campus Misconduct: Ten Tips," 163 *West's Educ. L. Rep.* 551 (2002). Discusses the problems inherent in applying student codes of conduct to off-campus misconduct, and provides suggestions for avoiding legal liability.

See the Selected Annotated Bibliography for Section 9.1.

### ***Sec. 9.3 (Grades, Credits, and Degrees)***

- Babbitt, Ellen M. (ed.). *Accommodating Students with Learning and Emotional Disabilities* (National Association of College and University Attorneys, 2005). Includes statutes, regulations, agency guidance, and Supreme Court decisions concerning students with learning and emotional disabilities; general principles of ADA analysis; special issues, with a particular focus on accommodating learning and emotional disabilities at professional schools, in athletics and for off-site and distance learning programs; and an extensive collection of additional resources, Web sites, and other materials.

Center for Academic Integrity. *The Fundamental Values of Academic Integrity* (Center for Academic Integrity, 1999). Describes the purpose and functions of the center, which is affiliated with the Kenan Ethics Program at Duke University. The center is a consortium of 200 colleges and universities, and 500 individual members, established “to identify and affirm the values of academic integrity and to promote their achievement in practice.” Further information is available at <http://www.academicintegrity.org>.

Flygare, Thomas J. *Students with Learning Disabilities: New Challenges for Colleges and Universities* (2d ed., National Association of College and University Attorneys, 2002). Discusses the development of institutional policies for dealing with students with learning disabilities, ensuring that admissions materials are reviewed for accessibility, and the process of determining which accommodations are appropriate.

Francis, Leslie Pickering. *Sexual Harassment as an Ethical Issue in Academic Life* (Rowan & Littlefield, 2001). Explores sexual harassment from ethical, legal, and policy perspectives. Part One of the book contains seven chapters on various topics prepared by the author; Part Two contains selected excerpts from the pertinent writings of other authors. There is also a chapter containing “illustrative” sexual harassment policies from various public and private postsecondary institutions, and a “Selected Bibliography” of sources. Reviewed at 28 *J. Coll. & Univ. Law* 243 (2001).

Johnston, Robert Gilbert, & Oswald, Jane D. “Academic Dishonesty: Revoking Academic Credentials,” 32 *J. Marshall L. Rev.* 67 (1998). Develops a “model code” for colleges and universities to guide them in the event that student academic misconduct is discovered after a degree is conferred. Includes discussion of due process protections and strategies for minimizing the risk of judicial rejection of the college’s degree revocation.

Kibler, William L., Nuss, Elizabeth M., Peterson, Brent G., & Pavela, Gary. *Academic Integrity and Student Development* (College Administration Publications, 1988). Examines student academic dishonesty from several perspectives: student development, methods for preventing academic dishonesty, and the legal issues related to student dishonesty. A model code of academic integrity and case studies are included in the appendix.

Leonard, James. “Judicial Deference to Academic Standards Under Section 504 of the Rehabilitation Act and Titles II and III of the Americans With Disabilities Act,” 75 *Nebraska L. Rev.* 27 (1996). Examines the role of judicial deference to academic decisions in Section 504 and ADA actions involving claims that a student is “otherwise qualified” to participate in a program. Reviews the constitutional and common law principles used by courts in deferring to academic decisions. Argues that deference to academic decisions is justified because courts are not competent to determine the appropriateness of academic standards.

Note, “Toward Reasonable Equality: Accommodating Learning Disabilities Under the Americans With Disabilities Act,” 111 *Harv. L. Rev.* 1560 (1998). Provides background information on learning disabilities; reviews a range of approaches taken by courts in reviewing claims individuals with learning disabilities, and provides suggestions for evaluating claims by individuals with learning disabilities.

Schweitzer, Thomas A. “‘Academic Challenge’ Cases: Should Judicial Review Extend to Academic Evaluations of Students?” 41 *Am. U. L. Rev.* 267 (1992). Compares judicial review of student discipline cases with “academic challenge” cases (in

which the student challenges an academic decision made by the institution). Provides a thorough and penetrating analysis of a variety of challenges to academic decisions, including degree revocation.

Wilhelm, Suzanne. "Accommodating Mental Disabilities in Higher Education: A Practical Guide to ADA Requirements," 32 *J. Law & Educ.* 217 (2003). Reviews the requirements of the ADA with respect to accommodating students with mental disorders; suggests guidelines and policies for accommodating these students.

Zirkel, Perry A., & Hugel, Paul S. "Academic Misguidance in Colleges and Universities," 56 *West's Educ. L. Rptr.* 709 (1989). Discusses the legal and practical implications of erroneous or inadequate academic advice by faculty and administrators. Reviews four legal theories used by students to seek damages when they are harmed, allegedly by "misguidance," and concludes that most outcomes favor the institution, not the student.

See the Neiger entry in the Selected Annotated Bibliography for Section 13.5 and the Paludi entry for Section 6.4.

### ***Sec. 9.4 (Procedures for Suspension, Dismissal, and Other Sanctions)***

Berger, Curtis J., & Berger, Vivian. "Academic Discipline: A Guide to Fair Process for the University Student," 99 *Columbia L. Rev.* 289 (1999). Argues that due process protections for students at private colleges should not differ from those for students attending public colleges, applying the contractual doctrine of the implied covenant of good faith and fair dealing as the contractual equivalent of constitutional due process.

Cole, Elsa Kircher. *Selected Legal Issues Relating to Due Process and Liability in Higher Education* (Council of Graduate Schools, 1994). A pamphlet designed for faculty and academic advisors that reviews the basics of due process in dealing with academic misconduct or discipline problems. Also covers termination of faculty, scientific misconduct, and privacy of student records.

Ford, Deborah L., & Strobe, John L., Jr. "Judicial Responses to Adverse Academic Decisions Affecting Public Postsecondary Institution Students Since *Horowitz* and *Ewing*," 110 *West's Educ. L. Rptr.* 517 (1996). Discusses judicial review of institutions' judgments regarding student academic performance, noting under what circumstances courts will defer to those judgments.

Jennings, Eileen K., & Strobe, John L., Jr. "Procedural Due Process in Academia: *Board of Curators v. Horowitz* Seven Years Later," 28 *West's Educ. L. Rptr.* 973 (1986). Reviews the outcome of *Horowitz* and discusses the required elements of due process in academic dismissals.

Paterson, Brent G., & Kibler, William L. (eds.). *The Administration of Campus Discipline: Student, Organization and Community Issues* (College Administration Publications, 1998). A collection of articles by student judicial affairs scholars, college attorneys, and student affairs professionals. Includes a model code for student discipline, a discussion of the differences between the criminal justice system and campus judicial systems, and a review of federal restrictions on the disclosure of student judicial records. Reviews issues related to adjudicating a variety of specific student conduct issues, issues related to disciplining student organizations, and academic misconduct issues. Includes ten case studies of student misconduct suitable for training programs.

Pavela, Gary. *The Dismissal of Students with Mental Disorders: Legal Issues, Policy Considerations, and Alternative Responses* (College Administration Publications, 1985).

Reviews the protections provided by the Rehabilitation Act of 1973 (Section 504) for students with mental disabilities. Recommends elements of an appropriate policy for psychiatric withdrawal, and provides a checklist for responding to students with mental disorders. Includes a case study about a disruptive student and suggests an appropriate institutional response. For related work by the same author, see Pavela, "Therapeutic Paternalism," entry for Section 9.1.

Stevens, Ed. *Due Process and Higher Education: A Systemic Approach to Fair Decision Making*. ASHE-ERIC Higher Education Report, Vol. 27, no. 2 (ERIC Clearinghouse on Higher Education, 1999). Reviews the development and refinement of due process in higher education for both academic and disciplinary sanctions. Suggests how policies and practices may be developed and monitored to ensure compliance with due process protections and requirements.

See Faulkner and Tribbensee entry for Section 9.2.

### ***Sec. 9.5 (Student Protests and Freedom of Speech)***

Blasi, Vincent. "Prior Restraints on Demonstrations," 68 *Mich. L. Rev.* 1482 (1970).

A comprehensive discussion of First Amendment theory and case law and the specific manner in which the law bears on the various components of a student demonstration.

Herman, Joseph. "Injunctive Control of Disruptive Student Demonstrations," 56 *Va. L. Rev.* 215 (1970). Analyzes strategic, constitutional, and procedural issues concerning the use of injunctions to control disruptive student protest.

### ***Sec. 9.6 (Speech Codes and the Problem of Hate Speech)***

Byrne, J. Peter. "Racial Insults and Free Speech Within the University," 79 *Georgetown L.J.* 399 (1991). Author argues that, to protect "the intellectual values of academic discourse," universities may regulate racial (and other similar) insults on campuses even if the state could not constitutionally enact and enforce the same type of regulation against society at large. He asserts, however, that public universities may not use such regulations "to punish speakers for advocating any idea in a reasoned manner." Article analyzes the evolution of relevant constitutional law and examines policies enacted at the University of Wisconsin, the University of Michigan, and Stanford University. Author was a member of a committee to formulate a "student speech and expression policy" at Georgetown University.

Coleman, Arthur L., & Alger, Jonathan R. "Beyond Speech Codes: Harmonizing Rights of Free Speech and Freedom from Discrimination on University Campuses," 23 *J. Coll. & Univ. Law* 91 (1996). Describes how an educational environment that is free from discrimination and therefore conducive to learning is mutually supportive of an educational environment in which a free and robust exchange of ideas takes place. The article provides a comprehensive review of free speech law, including the *R.A.V.* case, as well as antidiscrimination law. By applying this law to scenarios likely to arise in colleges and universities, article attempts to display how the goals of these two legal areas need not be mutually exclusive in the higher education setting.

- Dry, Murray. "Hate Speech and the Constitution," 11 *Const. Comment.* 501 (1994–95). Analyzes the U.S. Supreme Court's decisions in *R.A.V. v. St. Paul* and *Wisconsin v. Mitchell*. Seeks to explain the purported conflict between the two opinions of the Court as they impact colleges and universities.
- Grey, Thomas C. "How to Write a Speech Code Without Really Trying: Reflections on the Stanford Experience," 29 *U.C. Davis L. Rev.* 891 (1996). Provides a lively and thought-provoking critique of *Corry v. Stanford University*, the unreported case invalidating Stanford's policy on Free Expression and Discriminatory Harassment; and of *R.A.V. v. St. Paul* and *Chaplinsky v. New Hampshire*, the main U.S. Supreme Court precedents applied in *Corry*. Also includes the background of the Stanford policy's adoption, an analysis of the "politics" of campus hate speech, and the full text of the Stanford policy and the "Fundamental Standard" of which it was a part. A companion article—Elena Kagan, "When a Speech Code Is a Speech Code: The Stanford Policy and the Theory of Incidental Restraints," 29 *U.C. Davis* 957 (1996)—provides a counterpoint to Professor Grey's article.
- Heumann, Milton, & Church, Thomas W., with Redlawsk, David (eds.). *Hate Speech on Campus* (Northeastern University Press, 1997). Divided into three parts—Cases, Case Studies, and Commentary—with the editors providing a general introduction to the book and an introduction to each of the three parts. Covers basic free speech and hate speech history and principles, and provides focused analysis pertaining to the campus setting. Includes discussion of several universities' codes and regulations, as well as the potential advantages and dangers of regulating speech on campus. The Commentary section presents a variety of viewpoints and concerns.
- Kaplin, William. "A Proposed Process for Managing the Free Speech Aspects of Campus Hate Speech," 63 *J. Higher Educ.* 517 (1992). Describes a process for dealing with "hate speech" while preserving individuals' rights to free speech. Identifies key principles of First Amendment law that circumscribe the institution's discretion to deal with hate speech, suggests regulatory options that may be implemented consistent with these principles, and emphasizes the need to consider nonregulatory options prior to considering regulatory options.
- Lawrence, Charles R., III. "If He Hollers Let Him Go: Regulating Racist Speech on Campus," 1990 *Duke L.J.* 431 (1990). Develops an argument for the constitutionality of hate speech regulations based on an interpretation of *Brown v. Board of Education*, calls for carefully drafted hate speech regulations on the campuses, explores the injurious nature of hate speech, and criticizes the position of free speech libertarians.
- Massaro, Toni M. "Equality and Freedom of Expression: The Hate Speech Dilemma," 32 *Wm. & Mary L. Rev.* 211 (1991). Summarizes theoretical and practical aspects of the hate speech debate; critiques the approaches of "civil liberties theorists," "civil rights theorists," and "accommodationists"; and reviews various narrow approaches to regulating campus hate speech.
- Shiell, Timothy C. *Campus Hate Speech on Trial* (University Press of Kansas, 1998). A thorough exploration, by a philosopher, of the arguments for and against campus speech codes. Includes an analysis of recent experience with speech codes, both in and out of court; a proposal for a narrow regulatory response to campus hate speech; and some broader perspectives on campus speech problems generally. Reviewed by Robert O'Neil in *Academe* (January–February 1999), 65–66.

- Strossen, Nadine. "Regulating Racist Speech on Campus: A Modest Proposal?" 1990 *Duke L.J.* 484 (1990). Reviews the First Amendment principles and doctrines applicable to campus hate speech regulations; responds to Charles Lawrence's advocacy of hate speech regulations (see entry above); and argues that "prohibiting racist speech would not effectively counter, and could even aggravate, the underlying problem of racism," and that "means consistent with the first amendment can promote racial equality more effectively than can censorship." Includes substantial discussion of ACLU policies and activities regarding hate speech.
- Sunstein, Cass. "Liberalism, Speech Codes, and Related Problems," *Academe* (July–August 1993), 14. Traces the tension between academic freedom and hate speech and relates hate speech regulation to the "low-value speech" versus "high-value speech" dichotomy developed in U.S. Supreme Court precedents. Author's primary purpose is to "defend the constitutionality of narrowly drawn restrictions on hate speech, arguing in the process against the broader versions that have become popular in some institutions." (This is a condensed version of a lecture that is included in the Menand entry in the Selected Annotated Bibliography for Section 7.1.)

### ***Sec. 9.7 (Student Files and Records)***

- American Association of Collegiate Registrars and Admissions Officers. *The AACRAO 2001 FERPA Guide* (AACRAO, 2001). Provides an overview of the Act and discusses specific issues and problems that college administrators have encountered. Includes a discussion of the changes in FERPA compliance resulting from amendments to the FERPA regulations in 2000.
- Daggett, Lynn M. "Bucking up *Buckley I*: Making the Federal Student Records Statute Work," 46 *Cath. U. L. Rev.* 617 (1997). Reviews the history and enforcement of FERPA. Recommends a series of amendments to the law with respect to dealing with student violations of institutional substance abuse policies.
- McDonald, Steven J. (ed.). *The Family Educational Rights and Privacy Act (FERPA): A Legal Compendium* (2d ed., National Association of College and University Attorneys, 2002). Includes legislative and regulatory histories of FERPA, more than 30 of the most important technical assistance letters from the Education Department, and journal articles, outlines, memos, sample institutional policies and forms, and an annotated bibliography.
- O'Donnell, Margaret L. "FERPA: Only a Piece of the Puzzle," 29 *J. Coll. & Univ. Law* 679 (2003). Reviews two U.S. Supreme Court cases involving FERPA, and discusses how institutions of higher education might apply FERPA to digital records. Discusses a range of institutional options with respect to protecting the privacy of student records.
- Rosenzweig, Ethan M. "Please Don't Tell: The Question of Confidentiality in Student Disciplinary Records Under FERPA and the Crime Awareness and Campus Security Act," 51 *Emory L.J.* 447 (2002). Discusses the conflict between FERPA and the Campus Security Act; argues that student disciplinary processes and outcomes should be protected by FERPA; suggests strategies for accommodating the requirements of both laws.
- Sidbury, Benjamin F. "*Gonzaga University v. Doe* and Its Implications: No Right to Enforce Student Privacy Rights Under FERPA," 29 *J. Coll. & Univ. Law* 655 (2003).

Discusses the U.S. Supreme Court's *Gonzaga* case; addresses compliance with FERPA regulations, and reviews alternative remedies available to students for allegedly unauthorized release of student education records.

Tribbensee, Nancy. *The Family Educational Rights and Privacy Act: A General Overview* (National Association of College and University Attorneys, 2002). A brief review in question-and-answer format of the most common issues related to FERPA. Designed for faculty and staff with a limited knowledge of student records law. Includes discussion of directory information, which records are protected by FERPA, access to student records by faculty and campus officials, and disclosure of student education records.

# 10

## Rights and Responsibilities of Student Organizations and Their Members

### *Sec. 10.1. Student Organizations*

**10.1.1. The right to organize.** Student organizations provide college students with the opportunity to learn leadership skills, to supplement their formal education with extracurricular academic programming, and to pursue diverse nonacademic interests. While there are therefore many good reasons for institutions to support, and students to join, student organizations, it is also true—at least at public institutions—that students have a legal right to organize and join campus groups, and that administrators have a legal obligation to permit them to do so. Specifically, students in public postsecondary institutions have a general right to organize; to be recognized officially whenever the school has a policy of recognizing student groups;<sup>1</sup> and to use meeting rooms, bulletin boards, computer terminals, and similar facilities open to campus groups. Occasionally a state statute will accord students specific organizational rights (see *Student Ass’n. of the University of Wisconsin-Milwaukee v. Baum*, 246 N.W.2d 622 (Wis. 1976), discussed in Section 3.2.3). More generally, organizational rights are protected by the freedom of expression and freedom of association guarantees of the First Amendment. Public institutions retain authority, however, to withhold or revoke recognition in certain instances and to regulate evenhandedly the organizational use of campus facilities. While students at private institutions do not have a constitutional right to organize (see *Jackson v. Strayer College* at end of this subsection), many private institutions nevertheless provide organizational rights to

---

<sup>1</sup>See the cases and authorities collected in Dag E. Ytreberg, Annot., “Student Organization Registration Statement, Filed with Public School or State University or College, as Open to Inspection by Public,” 37 A.L.R.3d 1311.

students through institutional regulations; in such circumstances, the private institution's administrators may choose to be guided by First Amendment principles, as set out below, in their relations with student organizations.

The balance between the organization's rights and the institution's authority was struck in *Healy v. James*, 408 U.S. 169 (1972), the leading case in the field.<sup>2</sup> *Healy* concerned a state college's denial of a student organization's request for recognition. The request for recognition as a local Students for a Democratic Society (SDS) organization had been approved by the student affairs committee at Central Connecticut State College, but the college's president denied recognition, asserting that the organization's philosophy was antithetical to the college's commitment to academic freedom and that the organization would be a disruptive influence on campus. The denial of recognition had the effect of prohibiting the student group from using campus meeting rooms and campus bulletin boards and placing announcements in the student newspaper. The U.S. Supreme Court found the president's reasons insufficient under the facts to justify the extreme effects of nonrecognition on the organization's ability to "remain a viable entity" on campus and "participate in the intellectual give and take of campus debate." The Court therefore overruled the president's decision and remanded the case to the lower court, ruling that the college had to recognize the student group if the lower court determined that the group was willing to abide by all reasonable campus rules.

The associational rights recognized in *Healy* are not limited to situations where recognition is the issue. In *Gay Students Organization of the University of New Hampshire v. Bonner*, 509 F.2d 652 (1st Cir. 1974), for instance, the plaintiff, Gay Students Organization (GSO), was an officially recognized campus organization. After it sponsored a dance on campus, the state governor criticized the university's policy regarding GSO; in reaction, the university announced that GSO could no longer hold social functions on campus. GSO filed suit, and the federal appeals court found that the university's new policy violated the students' freedom of association and expression.<sup>3</sup> *Healy* was the controlling precedent, even though GSO had not been denied recognition:

[T]he Court's analysis in *Healy* focused not on the technical point of recognition or nonrecognition, but on the practicalities of human interaction. While the Court concluded that the SDS members' right to further their personal beliefs

---

<sup>2</sup>The later case of *Widmar v. Vincent*, discussed in subsection 10.1.5 below, affirms many of the principles of *Healy* and adds important new guidance on the particular question of when a student group may have access to meeting rooms and other campus facilities. See also *Gay Student Services v. Texas A&M University*, 737 F.2d 1317, 1331-33 (5th Cir. 1984), in which the court used *Widmar's* "public forum" analysis in invalidating the defendant's refusal to recognize the plaintiff groups; and *Rosenberger v. Rector and Visitors of the University of Virginia* (discussed in subsection 10.1.5), which extends *Widmar* to protection of student access to institutional funds available to student groups.

<sup>3</sup>Cases and authorities are collected in Jean F. Rydstrom, Annot., "Validity, Under First Amendment and 42 U.S.C. § 1983, of Public College or University's Refusal to Grant Formal Recognition to, or Permit Meetings of, Student Homosexual Organizations on Campus," 50 A.L.R. Fed. 516.

had been impermissibly burdened by nonrecognition, this conclusion stemmed from a finding that the “primary impediment to free association flowing from nonrecognition is the denial of use of campus facilities for meetings and other appropriate purposes.” The ultimate issue at which inquiry must be directed is the effect which a regulation has on organizational and associational activity, not the isolated and for the most part irrelevant issue of recognition per se [509 F.2d at 658–59].

*Healy* and related cases reveal three broad bases on which public institutions may decline to recognize, or limit the recognition of, particular student organizations without violating associational rights. *First*,

[A] college administration may impose a requirement . . . that a group seeking official recognition affirm in advance its willingness to adhere to reasonable campus law. Such a requirement does not impose an impermissible condition on the students’ associational rights. Their freedom to speak out, to assemble, or to petition for changes in school rules is in no sense infringed. It merely constitutes an agreement to conform to reasonable standards respecting conduct. This is a minimal requirement, in the interest of the entire academic community, of any group seeking the privilege of official recognition [*Healy*, 408 U.S. at 193].

Such standards of conduct, of course, must not themselves violate the First Amendment or other constitutional safeguards. Recognition, for instance, could not be conditioned on the organization’s willingness to abide by a rule prohibiting all peaceful protest demonstrations on campus (see Section 9.5.3) or requiring all student-run newspaper articles to be approved in advance by the administration (see Section 10.3.3). But as long as campus rules avoid such pitfalls, student organizations must comply with them, just as individual students must. If the organization refuses to agree in advance to obey campus law, recognition may be denied until such time as the organization does agree. If a recognized organization violates campus law, its recognition may be suspended or withdrawn for a reasonable period of time.

*Second*, “[a]ssociational activities need not be tolerated where they . . . interrupt classes, or substantially interfere with the opportunity of other students to obtain an education” (*Healy*, 408 U.S. at 189). Thus, administrators may also deny recognition to a group that would create substantial disruption on campus, and they may revoke the recognition of a group that has created such disruption. In either case, the institution has the burden of demonstrating with reasonable certainty that substantial disruption will or did in fact result from the organization’s actions—a burden that the college failed to meet in *Healy*. This burden is a heavy one, because “denial of recognition [is] a form of prior restraint” of First Amendment rights (*Healy*, 408 U.S. at 184).

*Third*, the institution may act to prevent organizational activity that is itself illegal under local, state, or federal laws, as well as activity that “is directed to inciting or producing imminent lawless action and is likely to incite or produce such action” (*Brandenburg v. Ohio*, 395 U.S. 444, 447 (1969), quoted in *Healy*, 408 U.S. at 188). While the GSO case (above) specifically supported this basis

for regulation, the court found that the institution had not met its burden of demonstrating that the group's activities were illegal or inciting. A similar conclusion was reached in *Gay Lib v. University of Missouri*, 558 F.2d 848 (8th Cir. 1977), reversing 416 F. Supp. 1350 (W.D. Mo. 1976). The trial court found, on the basis of the university's expert evidence, that recognition of the student group would lead to "increased homosexual activities, which . . . includes sodomy [as] one of the most prevalent forms of sexual expression in homosexuality." Relying on this finding and on the fact that sodomy is an illegal activity that can be prohibited, the trial court upheld the university's refusal to recognize the group. Overruling the trial court, the appellate court held that the university's proof was insufficient to demonstrate that the student organization intended to breach university regulations or advocate or incite imminent lawless acts. At most, the group intended peaceably to advocate the repeal of certain criminal laws—expression that constitutionally could not be prohibited. Thus, the appellate court concluded that the university's denial of recognition impermissibly penalized the group's members because of their status rather than their conduct. (To the same effect, see *Gay Activists Alliance v. Board of Regents of University of Oklahoma*, 638 P.2d 1116 (Okla. 1981); and see generally Note, "The Rights of Gay Student Organizations," 10 *J. Coll. & Univ. Law* 397 (1983–84).)

All rules and decisions regarding student organizations should be supportable on one or more of these three regulatory bases. Administrators should apply the rules evenhandedly, carefully avoiding selective applications to particular groups whose views or goals they find to be repugnant (see discussion immediately below). Decisions under the rules should be based on a sound factual assessment of the impact of the group's activity rather than on speculation or on what the U.S. Supreme Court has called "undifferentiated fear or apprehension" (*Tinker v. Des Moines Independent Community School District*, 393 U.S. 503, 508 (1969)). Decisions denying organizational privileges should be preceded by "some reasonable opportunity for the organization to meet the University's contentions" or "to eliminate the basis of the denial" (*Wood v. Davison*, 351 F. Supp. 543, 548 (N.D. Ga. 1972)). If a student committee makes decisions about recognizing student organizations, or the student government devises regulations for its operations or those of recognized student organizations, they are subject to the same First Amendment restrictions as the institution itself (see the *Southworth* litigation discussed in subsection 10.1.3 below). Keeping these points in mind, administrators can retain substantial yet sensitive authority over the recognition of student groups.

If a public institution denies funding to a student group because of the views its members espouse, it is a clear violation of constitutional free speech protections, even if a student government committee rather than an institutional official makes the decision. In *Gay and Lesbian Students Ass'n. v. Gohn*, 850 F.2d 361 (8th Cir. 1988), a committee of the student senate denied funds to an organization that provided education about homosexuality. The court, noting that the administration had upheld the committee's denial of funding, said: "The University need not supply funds to student organizations; but once having

decided to do so, it is bound by the First Amendment to act without regard to the content of the ideas being expressed” (850 F.2d at 362). After *Rosenberger v. Rector and Visitors of the University of Virginia*, 515 U.S. 819 (1995), these same general rules apply to an institution’s decisions regarding the funding of student religious organizations (see Section 10.1.5 of this book).

In a leading post-*Rosenberger* case, a federal appeals court invalidated the attempt of the Alabama legislature to deny funding to student organizations and other groups that advocate on behalf of homosexuality. In *Gay Lesbian Bisexual Alliance v. Pryor*, 110 F.3d 1543 (11th Cir. 1997), affirming *Gay Lesbian Bisexual Alliance v. Sessions*, 917 F. Supp. 1548 (M.D. Ala. 1996), the Alabama law at issue prohibited colleges and universities from using “public funds or public facilities . . . to, directly or indirectly, sanction, recognize, or support the activities or existence of any organization or group that fosters or promotes a lifestyle or actions prohibited by the sodomy and sexual misconduct laws (Ala. Code § 16-1-28(a)). The law also declared that no student organization (or other campus group) that uses public funds or facilities “shall permit or encourage its members or encourage other persons to engage in any such unlawful acts or provide information or materials that explain how such acts may be engaged in or performed” (Ala. Code § 16-1-28(b)). Confronted with this law, the University of South Alabama denied funding for, and withheld recognition from, the Gay and Lesbian Bisexual Alliance (GLBA). The Alliance then sued the university’s president and dean of students as well as the state attorney general.

The federal district court held the entire law unconstitutional, despite subsection (c) of the law, which provided that the law “shall not apply to any organization or group whose activities are limited solely to the political advocacy of a change in the sodomy and sexual misconduct laws of this state.” Relying almost exclusively on the U.S. Supreme Court’s decision in *Rosenberger*, the court held the Alabama statute to be “naked viewpoint discrimination” that violated the free speech clause and emphasized that:

[a] viewpoint may include not only *what* a person says but *how* she says it. For example, as the defendants admitted at oral argument, the State does not seek to ban discussion about sexually transmitted diseases; rather, it only seeks to limit how such diseases may be discussed. In other words, the State seeks to impose its viewpoint on how the discussion may proceed [917 F. Supp. at 1554 (emphasis in the original)].

The district court was not persuaded by the state’s argument that it was simply deterring crime, that is, homosexual acts. Quoting from *Healy v. James* (above), which in turn quoted *Brandenburg v. Ohio* (above), the court ruled that the statute did not draw the required distinction between mere advocacy and incitement. (In a separate reported decision, *Gay Lesbian Bisexual Alliance v. Sessions*, 917 F. Supp. 1558 (M.D. Ala. 1996), the district court reiterated and expounded upon its prior opinion and refused to limit its prior judgment or to stay the decision pending appeal.)

The U.S. Court of Appeals for the Eleventh Circuit affirmed the district court. Relying heavily on *Rosenberger*, the appellate court characterized the funding system for student organizations at the University of South Alabama (USA) as a limited public forum:

[The law] as applied to GLBA clearly runs afoul of . . . *Rosenberger*. USA's limited public forum does not prohibit discussion of the sodomy or sexual misconduct laws in general. Rather, based on [the law], USA prohibited funding to GLBA based on the Attorney General's unsupported assumption that GLBA fosters or promotes a violation of the sodomy or sexual misconduct laws. The statute discriminates against one particular viewpoint because state funding of groups which foster or promote compliance with the sodomy or sexual misconduct laws remains permissible. This is blatant viewpoint discrimination [110 F.3d at 1549].

Given their detailed application of *Rosenberger*, the opinions in *Gay Lesbian Bisexual Alliance* provide extensive guidance for both administrators and student groups. In particular, the opinions illustrate how the *Rosenberger* case joins with the *Healy* case to enhance the constitutional protection of student organizations at public postsecondary institutions. In light of this impact of *Rosenberger*, there is now an even stronger basis for the decisions in earlier cases such as the *GSO* case and the *Gay Lib* case above.

Although students at public colleges typically have a constitutionally protected right to organize, such is not the case for students at private colleges. In *Jackson v. Strayer College*, 941 F. Supp. 192 (D.D.C. 1996), *affirmed*, 1997 WL 411656 (D.C. Cir. 1997), for example, the court dismissed a student's constitutional claims based on allegations that the college had obstructed his efforts to form a student government. The court held that federal constitutional protections do not extend to the formation of a private college student government; in the absence of "state action" (see Section 1.5.2), the alleged actions of the college could not constitute a First Amendment violation. Furthermore, the court held that the student's First Amendment "peaceful assemblage" claim failed because the college's campus is private property upon which students have no constitutional right to assemble that they may assert against the college.

Some private institutions, however, are subject to state or local civil rights laws that may serve to prohibit various forms of discrimination against students. In such circumstances, student organizations in private institutions, or their members, may have some statutory protection for their right to organize. The case of *Gay Rights Coalition of Georgetown University Law Center v. Georgetown University*, 536 A.2d 1 (D.C. 1987), illustrates such statutory protection and also examines the difficult freedom of religion issues that may arise when these statutory protections are asserted against religiously affiliated institutions.

In the *Gay Rights Coalition* case, two student gay rights groups sought official recognition from the university. The university refused, citing Catholic doctrine that condemns homosexuality. Denial of recognition meant that the groups could not use the university's facilities or its mailing and labeling services, could not have a mailbox in the student activities office, and could not request

university funds. The student group sued under a District of Columbia law (D.C. Code § 1-2520) that outlaws discrimination (in the form of denying access to facilities and services) on the basis of sexual orientation (among other characteristics). The university defended its actions on the grounds of free exercise of religion. The appellate court issued seven separate opinions, which—although none attracted a majority of the judges—reached a collective result of not requiring the university to recognize the groups but requiring it to give the group access to facilities, services, and funding.

By severing the recognition process from the granting of access to university facilities and funding, the court avoided addressing the university's constitutional claim with regard to recognition. In interpreting the D.C. statute, the court found no requirement that "one private actor . . . 'endorse' another" (536 A.2d at 5). For that reason, Georgetown's denial of recognition to the student groups did not violate the statute. But the statute did require equal treatment, according to the court. And, the court concluded, the District of Columbia's compelling interest in eradicating discrimination based on sexual preference outweighed any burden on the university's freedom of religion that providing equal access would impose. (For a critical analysis of this case and the conflicts it embodies, see F. N. Dutile, "God and Gays at Georgetown: Observations on *Gay Rights Coalition of Georgetown University Law Center v. Georgetown University*," 15 *J. Coll. & Univ. Law* 1 (1988).<sup>4</sup>)

**10.1.2. The right not to join, or associate, or subsidize.** The right-to-organize concept in subsection 10.1.1 above has a flip side. Students often are organized into large associations representing all students, all undergraduate students, all graduate students, or the students of a particular school (for example, the law school). Typically these associations are recognized by the institution as student governments. Mandatory student activities fees are often collected by the institution and channeled to the student government association. The student government may then allocate (or the institution may allocate) portions of the mandatory fee collections to other recognized student organizations that do not represent the student body but serve special purposes—for example, minority and foreign student associations, gay and lesbian student alliances, social action groups, sports clubs, academic interest

---

<sup>4</sup>In the wake of the *Gay Rights Coalition* case, the U.S. Congress, which has legislative jurisdiction over the District of Columbia, passed The Nation's Capitol Religious Liberty and Academic Freedom Act, 102 Stat. 2269 (1988). The law provided that the District government would not receive further appropriations unless it adopted legislation authorizing religiously affiliated institutions to deny endorsement or benefits in a situation like that in the *Gay Rights Coalition* case. The constitutionality of the law was challenged by D.C. City Council members in *Clarke v. United States*, 886 F.2d 404 (D.C. Cir. 1989). Although a panel of the appellate court affirmed a trial court's ruling that the law was an unconstitutional burden on the free speech of city council members (*Clarke v. United States*, 886 F.2d 404 (D.C. Cir. 1989)), the full court vacated the panel opinion as moot in *Clarke v. United States*, 915 F.2d 699 (D.C. Cir. 1990) (*en banc*), because the appropriation act had expired. The next year's appropriations act did not contain a funding limitation because Congress used its power under the District of Columbia Self-Government and Governmental Reorganization Act (Pub. L. No. 93-198 (1973)) to amend the District of Columbia law directly to permit religious institutions to discriminate on the basis of sexual orientation.

societies (premed society, French club, and so forth), religious organizations, and student publications. In public colleges and universities, such arrangements may raise various issues under the First Amendment. Regarding student government associations, the primary focus of concern has been whether institutions may require that students be members of the association or that they pay the activities fee that supports the association. Regarding recognized special purpose organizations, the primary focus of concern has been whether the institution may require students to have any relationship with student organizations that they would prefer to avoid, and especially whether institutions may require students to pay the portions of their activities fees that are allocated to particular organizations if the students object to the views that the organization espouses. The issues regarding mandatory fee allocations for student organizations are discussed in subsections 10.1.3 and 10.1.5 below, and issues regarding mandatory fee allocations for student publications are discussed in Section 10.3.2.

An early case, *Good v. Associated Students of the Univ. of Washington*, 542 P.2d 762 (Wash. 1975), distinguished between a university's requirement that students be *members* of the student government and a requirement that students pay a mandatory student activities fee that supports the student government. The student government in the *Good* case, the Associated Students of the University of Washington (ASUW), was a nonprofit organization representing all of the university's students. The university required all students to be members. The court held that this requirement violated the First Amendment freedom of association (see Section 10.1.1 above) because "[f]reedom to associate carries with it a corresponding right to not associate." According to the court:

[W]e have no hesitancy in holding that the state, through the university, may not compel membership in an association, such as the ASUW, which purports to represent all the students at the university. . . . [The ASUW] expends funds for political and economic causes to which the dissenters object and promotes and espouses political, social and economic philosophies which the dissenters find repugnant to their own views. There is no room in the First Amendment for such absolute compulsory support, advocacy and representation. . . . Thus we hold that the university may not mandate membership of a student in the ASUW [542 P.2d at 768].

The mandatory fee requirement, however, was not unconstitutional; the university could collect, and the ASUW could use, the mandatory fees so long as the ASUW did not "become the vehicle for the promotion of one particular viewpoint, political, social, economic or religious" (542 P.2d at 769).

Since the *Good* case, it has been generally accepted that public institutions may not require students to be members of the student government association or any other student extracurricular organization (see, for example, *Carroll v. Blinken*, 957 F.2d 991, 1003 (2d Cir. 1992)). But for many years there were continuing disputes and uncertainties concerning mandatory student fee systems until the U.S. Supreme Court finally ruled on the matter in 2000, as discussed in the next subsection.

**10.1.3. Mandatory student activities fees.** Throughout the 1970s, 1980s, and 1990s, the state courts and lower federal courts decided numerous cases on mandatory student activities fees in public colleges and universities. These cases presented a variety of constitutional challenges to entire systems for funding student organizations (see, for example, *Smith v. Regents of the Univ. of California*, 844 P.2d 500 (Cal. 1993)), to the use of mandatory fees by student governments (see, for example, *Smith v. Regents of the Univ. of California*, 65 Cal. Rptr. 2d 813 (Cal. Ct. App. 1997)), and to the allocations of fees to particular student organizations (see, for example, *Rounds v. Oregon State Board of Higher Education*, 166 F.3d 1032 (9th Cir. 1999)). Other cases presented statutory challenges to public institutions' authority regarding particular aspects of student fee systems (see *Cortes v. State of Florida, Board of Regents*, 655 So. 2d 132 (Fla. Dist. Ct. App. 1995); *Smith v. Regents of the Univ. of California* (above), 844 P.2d at 851)). At least one case, *Associated Students of the Univ. of California at Riverside v. Regents of the Univ. of California*, 1999 WL 13711 (N.D. Cal 1999), turned the issues around—presenting a challenge by students who favored, rather than opposed, mandatory student fees, but who objected to a particular limitation on the use of the fees.

Finally, after such cases had bounced around the lower courts for many years, the constitutionality of mandatory student activities fees finally reached the U.S. Supreme Court in *Board of Regents of University of Wisconsin System v. Southworth*, 529 U.S. 217 (2000). The Court's ruling in *Southworth*, and a follow-up ruling by the U.S. Court of Appeals on remand (*Southworth v. Board of Regents of University of Wisconsin System*, 307 F.3d 566 (7th Cir. 2002)), serve to resolve most of the inconsistencies among lower court opinions and to establish a single analytical approach for freedom of speech and freedom of association issues concerning public institutions' imposition of mandatory student fees.

The *Southworth* case was brought by a group of students at the Madison campus who objected to the university's collection and allocation of mandatory fees, insofar as the fees were allocated to student organizations that expressed "political and ideological" views with which the objecting students disagreed. The student plaintiffs claimed that this use of the fees violated their First Amendment right to be free from governmental compulsion to support speech conflicting with their personal views and beliefs. When the case reached the U.S. Supreme Court, it upheld the university's authority to allocate the mandatory fees to student organizations for the "purpose of facilitating the free and open exchange of ideas by, and among, its students." At the same time, the Court recognized that objecting students have a right to "certain safeguards with respect to the expressive activities which they are required to support" (529 U.S. at 229). The primary requirement that a university must meet to assure that its fee system facilitates "free and open exchange of ideas," and the primary safeguard for objecting students, is "viewpoint neutrality"—a concept that the Court had relied on in its earlier *Rosenberger* ruling (see Section 10.1.5 below) and that it expanded upon in *Southworth*. Thus, the *Southworth* case establishes the "viewpoint neutrality principle" as the primary criterion to use in evaluating

the constitutionality of a public institution's mandatory fee system under the free speech clause.

Under the University of Wisconsin fee system challenged in *Southworth*, 20 percent of mandatory student fee collections went to registered student organizations (RSOs). The other 80 percent of student fees, not at issue in the case, were used for expenses such as student health services, intramural sports, and the maintenance and repair of student union facilities. Student fees were collected annually, and there was no opt-out provision by which students could decline to support certain RSOs and receive a pro rata refund of their fees. The collected fees were allocated to RSOs (of which there were more than six hundred at the time of the litigation) on the basis of applications from those RSOs requesting funding. Decisions on applications for funding were made by the student government, the Associated Students of Madison (ASM), through two of its committees, or by a student referendum in which the entire student body voted to fund or defund a particular RSO. Decisions to allocate funds were presented to the chancellor and the board of regents for final approval. RSOs generally received funding on a reimbursement basis, with reimbursement primarily paying for the organization's operating costs, the costs of sponsoring events, and travel expenses. According to university policy, reimbursements were not made for lobbying activities or for gifts or donations to other organizations; and RSOs with a primarily political mission could not be funded. The student plaintiffs in *Southworth* objected to the allocations to eighteen of the funded RSOs. These organizations included WISPIRG; the Lesbian, Gay Bisexual Campus Center; the UW Greens; Amnesty International; and La Colectiva Cultural de Aztlan.

Relying on *Abood v. Detroit Bd. of Education.*, 431 U.S. 209 (1977), and *Keller v. State Bar of California*, 496 U.S. 1 (1990), the U.S. District Court upheld the students' claim that the university's program violated their rights to free speech and association, and enjoined the board of regents from using its mandatory fee system to fund any RSO that engaged in ideological or political advocacy. The Seventh Circuit U.S. Court of Appeals affirmed in part, reversed in part, and vacated in part. Affirming the district court's reliance on *Abood* and *Keller*, the Seventh Circuit extended the analysis to include a three-part test articulated in *Lehnert v. Ferris Faculty Ass'n.*, 500 U.S. 507 (1991), a case concerning the expenditure of mandatory union dues in violation of the faculty members' First Amendment rights (see Section 4.5.3). Applying the *Lehnert* test, the appellate court determined that the educational benefits of the mandatory fee system did not justify the significant burden that the system placed on the free speech rights of the objecting students (*Southworth v. Grebe*, 151 F.3d 717, 732–33 (1998)). The U.S. Supreme Court then reversed the Seventh Circuit and remanded the case to the lower courts for further proceedings. Rather than applying the three-part test from the *Lehnert* case, the Court determined that the operation of the fee system was closely analogous to a public forum (see Section 9.5.2) and that the "standard of viewpoint neutrality found in the public forum cases provides the standard we find controlling."

Under the viewpoint neutrality standard, according to the U.S. Supreme Court, the university could allocate mandatory fee funds to RSOs via the student

government and its committees so long as “viewpoint neutrality [is] the operational principle.” But the university could not distribute these funds via a student referendum. “[I]t is unclear . . . what protection, if any, there is for viewpoint neutrality in [the referendum] process. . . . The whole theory of viewpoint neutrality is that minority views are treated with the same respect as are majority views” (529 U.S. at 235). The student referendum aspect of the program for funding speech and expressive activities thus “appears to be inconsistent with the viewpoint neutrality requirement” (529 U.S. at 230).

The university could include an “opt-out” or refund mechanism in its fee system if it wished. But it was not constitutionally obligated to do so. “The restriction could be so disruptive and expensive that the program to support extracurricular speech would be ineffective. The First Amendment does not require the University to put the program at risk” (529 U.S. at 232).

Because the plaintiffs and the university had stipulated early in the litigation that the student government and its committees operated in a viewpoint-neutral manner when allocating funds to RSOs, the Court did not need to make its own determination on this key issue. But the Court did remand the case to the court of appeals for “re-examin[ation] in light of the principles we have discussed,” and the court of appeals in turn remanded the case to the district court. After remand, the student plaintiffs moved to void their stipulation that the mandatory fee funds were allocated on a viewpoint-neutral basis, and the district court granted the motion. That court did not reexamine the referendum process, however, since the university had eliminated this method of funding RSOs and the issue therefore was moot. The district court then reexamined the university’s mandatory fee system to determine if it was viewpoint neutral, concluding that it was not because “the absence of express objective standards vests unfettered and unbridled discretion in the program decisionmakers . . .” (*Fry v. Board of Regents of Univ. of Wisconsin System*, 132 F. Supp. 2d 744 (W.D. Wis. 2000)). To allow the university time to revise its allocation procedures and policies to create “express objective standards” for making fee allocations, the district court deferred its judgment for two months.

The university administration, in conjunction with student government committees, then established criteria and procedures for students’ use in allocating funds and granting reimbursements in a viewpoint-neutral manner. The student government bylaws were amended to include a provision entitled “Viewpoint Neutrality Compliance,” which set procedures and guiding principles for student officers to follow and required student officers to take an oath to uphold the principle of viewpoint neutrality. An appellate process was also established by which an RSO could appeal a funding decision to the student judiciary and/or the chancellor and board of regents. This appellate process included procedural safeguards such as adequate and public notice and hearings on the record. While these changes to the mandatory fee system were substantial, the district court, upon further review, decided that the student government still retained too much discretion in allocating fees and enjoined the university from collecting fees from objecting students to support RSO expressive activities to which the students objected.

On appeal to the Seventh Circuit, the parties did not contest the referendum provision, since the university had deleted that method of funding from its fee allocation system. The appellate court did note in passing, however, that the “student referendum mechanism” was “constitutionally deficient” (307 F.3d at 594). The primary issue on appeal was “whether the unbridled discretion standard” that the district court relied on “is part of the constitutional requirement of viewpoint neutrality” (307 F.3d at 578). The appellate court sought to untangle the relationship between the viewpoint neutrality principle that the U.S. Supreme Court had applied in its *Southworth* decision and the “no unbridled discretion” principle that the Court had applied in earlier cases challenging governmental denials of a license or permit to speak in a public forum. It determined that the two standards were linked:

While the Supreme Court has never expressly held that the prohibition on unbridled discretion is an element of viewpoint neutrality, we believe that conclusion inevitably flows from the Court’s unbridled discretion cases. From the earliest unbridled discretion cases . . . , the Supreme Court has made clear that when a decisionmaker has unbridled discretion there are two risks: First, the risk of self-censorship, where the plaintiff may edit his own viewpoint or the content of his speech to avoid governmental censorship; and second, the risk that the decisionmaker will use its unduly broad discretion to favor or disfavor speech based on its viewpoint or content, and that without standards to guide the official’s decision an as-applied challenge will be ineffective to ferret out viewpoint discrimination. Both of these risks threaten viewpoint neutrality [307 F.3d at 578–79].

The appellate court thus held that “the prohibition against unbridled discretion is a component [or a ‘corollary’] of the viewpoint-neutrality requirement,” and “the unbridled discretion standard appropriately applies to the University’s mandatory fee system” (307 F.3d at 579–80).

Having established this framework for analysis, the appellate court then addressed the central issue in the case: “whether the University’s mandatory fee system does in fact vest the student government with unbridled discretion” and thus fails the viewpoint neutrality requirement. In resolving this issue, the appellate court reviewed every aspect of the university’s mandatory student fee allocation system, especially the various provisions the university had added to its policies after the district court had ruled, after trial, that the policies then in effect did not meet the constitutional requirements. In its thorough and detailed review of the university’s revised policies (307 F.3d at 581–88), the appellate court considered the university’s financial and administrative policies, as amended after the trial; the student government’s bylaws pertaining to mandatory student fee allocations for RSOs, as amended; and the rules of the student government’s finance committee, as amended. The court considered the principles embodied in these various documents, the criteria for allocating funds set forth in the documents, and the various procedures that they establish for applying for and challenging fund allocations. Grouping the various principles, criteria, and procedures together under the heading “Funding Standards,” the court determined that they

“greatly limit[ed] the discretion” of the student government and its committees in allocating the fees. The court took particular note of these features of the university’s and student government’s policies: (1) there were specific explicit statements requiring all persons involved in funding decisions to comply with the viewpoint neutrality requirement; (2) there was a requirement that every student involved in allocation decisions take an oath to support the viewpoint neutrality requirement, and there were provisions for removing from office any student who failed to do so; (3) there were “specific, narrowly drawn and clear criteria to guide the student government in their funding decisions”; (4) there were “detailed procedural requirements for the hearings” on funding applications; (5) there was a policy of full disclosure regarding all funding applications and the student government’s decisions on these applications; and (6) there was a “comprehensive appeals process” by which any student organization that was denied funding, or any student who objected to a funding decision, could appeal the decision to the student council and then to the chancellor for the campus, whenever “it is alleged that the decision was based on an organization’s extracurricular speech or expressive activities” (307 F.3d at 582). The court also highlighted “one particular aspect” of this appeal process:

In reviewing funding decisions, the appeals procedures require the Student Council to compare the grant amounts [the student government committees] allocated to various RSOs to determine whether similar RSO’s applications were treated equally. By comparing the funding decisions, the Student Council can determine whether the student government, while purporting to apply the Funding Standards in a viewpoint-neutral way, nonetheless treated similar RSOs with varying viewpoints differently. The Student Council can then rectify any differing treatment on appeal [307 F.3d at 588].

On the basis of this review, the court agreed with the university that the funding standards satisfied the constitutional requirements:

In conclusion, in addition to expressly prohibiting viewpoint discrimination, requiring student officials to attest to their commitment to viewpoint neutrality, and providing for sanctions against student officials who engage in viewpoint discrimination, the Funding Standards provide narrowly drawn, detailed, and specific guidelines directing the SSFC [Student Service Finance Committee] and ASM Finance Committee’s funding decisions as to all funding decisions other than travel grants. The SSFC and ASM Finance Committee’s discretion is further limited by the procedural rules governing the funding and appeals process. While the Funding Standards grant a certain amount of discretion, that discretion is no greater than necessary to allow the student government to evaluate the funding requests. Accordingly, we conclude that these Funding Standards sufficiently bridled the SSFC and ASM Finance Committee’s discretion to satisfy the First Amendment’s mandate of viewpoint neutrality and the prohibition on granting decisionmakers unbridled discretion . . . [307 F.3d at 592].

The court identified two exceptions, however, to this broad ruling supporting the university’s funding standards and also issued two cautions about the

scope of its ruling. The first exception concerned the criteria used by the ASM finance committee, which was responsible for awarding three types of grants to RSOs: events grants, operations grants, and travel grants. At the time of the trial, the university had provided the court with the criteria for awarding the events grants and the operations grants but did not provide any criteria for the travel grants. Absent any clear and specific criteria, such as those for the events and operations grants, the travel grant portion of the mandatory fee allocation system gave unbridled discretion to the ASM finance committee that awarded the grants. The student government therefore could not award the travel grants until such time as it had implemented constitutionally suitable criteria.

The second exception to the court's broad approval concerned two of the criteria that the student government committees used to allocate funds: a criterion providing for consideration of "the length of time that an RSO has been in existence," and a criterion providing for consideration of "the amount of funding the RSO received in prior years." These criteria were not viewpoint neutral, said the court, for two reasons (see 307 F.3d at 593–94). *First*, to the extent that current funding decisions are based on the length of time an RSO has been in existence, or the amount of funding that the RSO has received in the past, these current decisions could depend in part on "viewpoint-based decisions of the past." *Second*, considering the length of time in existence or the amount of prior funding serves to favor "historically popular viewpoints" and to disadvantage nontraditional or minority viewpoints. Therefore, as to these two criteria, the court concluded that they "are related to the content or viewpoint of the applying RSO, as well as based on a prior system which lacks the constitutional safeguard of viewpoint neutrality."

The first of the court's two cautions concerns another criterion for awarding mandatory fees: a criterion permitting the funding committees to consider the number of students participating in or benefiting from the speech activities for which funding is sought. Although the court acknowledged that there are various content-neutral reasons for considering such information, it cautioned that such information could also permit the committees to "use the popularity of the speech as a factor in determining funding," thus providing an advantage to majority viewpoints at the expense of minority viewpoints. Since this criterion could be applied in permissible content-neutral ways, it was not "facially invalid," but the court warned that "improper consideration of the popularity of the speech may justify an as-applied challenge" in some circumstances (307 F.3d at 595).

The court's second caution also concerned possible "as-applied" challenges to the university's funding standards. The court held that, on their face, the funding standards satisfied viewpoint neutrality and were thus "facially" constitutional. But such a ruling does not necessarily validate all applications of the funding standards to particular situations. Thus the court cautioned, at various points in its opinion, that the funding standards might be applied to particular circumstances in ways that contravene the requirements of viewpoint neutrality; and that, in such situations, the funding standards would be subject to "as-applied" challenges either through the university's own internal appeal process or through the courts.

When the Supreme Court's *Southworth* decision is put together with the Seventh Circuit's further elaboration, and these cases are viewed against the backdrop provided by the earlier *Rosenberger* case (see subsection 10.1.5 below) and by the public forum cases (see Section 9.5.2), the result is a much clearer picture of this area of the law than has ever existed previously. This picture reveals the following guidelines that public institutions may use to help assure that their systems for allocating mandatory student activities fees to student organizations are constitutional under the First Amendment:

1. The fee allocation system should be designed and used to “facilitate a wide range of [student extracurricular] speech” and a “free and open exchange of ideas by, and among, [the institution’s] students” (*Southworth*, 529 U.S. at 231, 229).
2. The fee allocation system, on paper and in operation, must comply with the “principle of viewpoint neutrality” (529 U.S. at 233–34) and the corollary principle of “no unbridled discretion” (307 F.3d at 575–81). These principles, at a minimum, require that the institution “may not prefer some [student] viewpoints over others” and must assure that “minority views are treated with the same respect as are majority views” (529 U.S. at 233, 235). As a safeguard for this required neutrality, the institution should have “specific, narrowly drawn, and clear criteria to guide the student government in their funding decisions” (307 F.3d at 588).
3. The institution should have an express written requirement that all mandatory student fee allocations to student organizations are subject to the viewpoint neutrality principle and that all student decision makers are bound to uphold this principle (307 F.3d at 581, 583). In conjunction with this requirement, the institution should implement various procedures to assure that the viewpoint neutrality principles will be met in practice. One procedural safeguard meriting particular attention is a requirement that the decision makers who allocate the funds, or those who review their decisions, must compare the amounts allocated to particular student organizations (307 F.3d at 588).
4. Institutions should be wary of using funding criteria that require or permit consideration of the number of prior years in which a student organization has received fee allocations, the amounts of funds an organization has received in the past, the size of the organization’s membership, or the number of nonmembers who have attended or are expected to attend the organization’s speech-related activities. If any such criteria are used, they must be carefully limited to content-neutral considerations (for example, considering the size of the organization’s membership or the size of the audience for an event in order to estimate the expenses of setting up and maintaining the type of room or facility needed for the organization’s meetings or events). Any such criteria should also be used in ways that do not give an advantage to

popular, traditional, or majoritarian viewpoints at the expense of controversial, nontraditional, or minority viewpoints (307 F.3d at 592–95).

5. A student referendum may not be used to make funding decisions regarding particular student groups—at least not when the referendum would “substitute[ ] majority determinations for viewpoint neutrality” and thus allow “majority views” to be “treated” with more “respect” than “minority views.” A mandatory fee allocation, in other words, cannot “depend upon majoritarian consent” (529 U.S. at 235).
6. An institution may choose to include in its fee allocation system an opt-out provision or refund mechanism to protect objecting students, but the Constitution does not require the inclusion of such a mechanism (529 U.S. at 235).
7. An institution may choose to distinguish between the on-campus and off-campus expressive activities of student organizations in its fee allocation system, but it may do so only if it implements the distinction through “viewpoint neutral rules.” The Constitution, however, does not require that the institution adopt any “territorial boundaries” for student speech activities or impose any “geographic or spatial restrictions” on student organizations’ “entitlement” to a fee allocation (529 U.S. at 234). (For pre-*Southworth* cases about off-campus student speech, see *Carroll v. Blinken*, 957 F.2d 991 (2d Cir. 1992) and 42 F.3d 122 (2d Cir. 1994); and *Rounds v. Oregon State Board of Higher Education*, 166 F.3d 1032 (9th Cir. 1999).)

**10.1.4. Principle of nondiscrimination.** While the law prohibits administrators from imposing certain restrictions on student organizations (as subsections 10.1.1–10.1.3 above indicate), there are other restrictions that administrators may be required to impose. The primary example concerns discrimination, particularly on the basis of race or sex. Just as institutions are usually prohibited from discriminating on these grounds, their student organizations are usually prohibited from doing so as well. Thus, institutions generally have an obligation either to prohibit race and sex discrimination by student organizations or to withhold institutional support from those that do discriminate.

In public institutions, student organizations may be subject to constitutional equal protection principles under the federal Fourteenth Amendment or comparable state constitutional provisions if they act as agents of the institution or are otherwise controlled by or receive substantial encouragement from the institution (see generally Section 1.5.2). In *Joyner v. Whiting*, 477 F.2d 456 (4th Cir. 1973) (also discussed in Section 10.3.3), for example, a minority-oriented student newspaper allegedly had a segregationist editorial policy and had discriminated by race in staffing and in accepting advertising. Although the court prohibited the university president from permanently cutting off the paper’s funds, because of the restraining effect of such a cut-off on free press, it did hold that the president could and must prohibit the discrimination in staffing and advertising: “The equal protection clause forbids racial discrimination in

extracurricular activities of a state-supported institution . . . and freedom of the press furnishes no shield for discrimination” (477 F.2d at 463).

*Uzzell v. Friday*, 625 F.2d 1117 (4th Cir. 1980) (*en banc*), presents a more complex illustration of the equal protection clause’s application and a possible affirmative action justification for some racial classifications. The case concerned certain rules of student organizations at the University of North Carolina. The Campus Governing Council, the legislative branch of the student government, was required under its constitution to have at least two minority students, two males, and two females among its eighteen members. The student Honor Court, under its rules, permitted defendants to demand that a majority of the judges hearing the case be of the same race (or the same sex) as the defendant. Eschewing the need for any extended analysis, the appellate court at first invalidated each of the provisions as race discrimination: “Without either reasonable basis or compelling interest, the composition of the council is formulated on the basis of race. This form of constituency blatantly fouls the letter and the spirit of both [Title VI] and the Fourteenth Amendment” (*Uzzell v. Friday*, 547 F.2d 801 (4th Cir. 1977)). (The sex discrimination aspects of the provisions were not challenged by the plaintiff students or addressed by the court.) In *Friday v. Uzzell*, 438 U.S. 912 (1978), the U.S. Supreme Court, seeing possible affirmative action issues underlying this use of racial considerations, vacated the appellate court’s judgment and remanded the case for further consideration in light of the *Bakke* decision (discussed in Section 8.2.5).<sup>5</sup> The appeals court then reconsidered its earlier decision and, by a vote of 4 to 3, again invalidated the rules (*Uzzell v. Friday*, 591 F.2d 997 (4th Cir. 1979) (*en banc*)):

The permeating defect in the organization of . . . the governing council is the imposition of an artificial racial structure upon this elective body that bars non-minority students from eligibility for appointment to the Council. This resort to race affronts *Bakke*. Although the regulation in question seeks to provide “protective representation,” its effect is to establish a racial classification, as it relies exclusively on race to preclude non-minority students from enjoying opportunities and benefits available to others [591 F.2d at 998].

The minority, reading *Bakke* more liberally, argued that more facts were necessary before the court could ascertain whether the student government rules were invalid race discrimination, on the one hand, or valid affirmative action, on the other. They therefore asserted that the case should be returned to the district court for a full trial:

---

<sup>5</sup>For another example of race classifications that institutions may seek to justify by invoking affirmative action considerations, see Wendy Hernandez, “The Constitutionality of Racially Restrictive Organizations Within the University Setting,” 21 *J. Coll. & Univ. Law* 429, 434–43 (1994); and Ben Gose, “A Place of Their Own,” *Chron. Higher Educ.*, December 8, 1995, A33. These articles address the issue of minority student organizations (or living accommodations groups) that restrict membership (or entrance to living accommodations) on the basis of race or ethnicity. As noted in the next footnote below in this subsection, such issues would now be governed by the *Grutter* and *Gratz* cases rather than *Bakke*.

The present record simply does not permit a firm conclusion as to the extent of discrimination at the University of North Carolina and the need for and efficacy of the present regulations. The majority's condemnation of the regulations because they impinge upon the rights of others is simplistic. *Bakke* teaches that as a necessary remedial measure a victimized group may be preferred at the expense of other innocent persons. What cries out for determination in the instant case is whether such preferment is justified under the principles of *Bakke* [591 F.2d at 1001].

In June 1980, the Fourth Circuit recalled its 1979 decision because the *en banc* court that had heard the appeal was improperly constituted: a senior judge sat as a member of the panel—a violation of a federal statute (28 U.S.C. § 46) requiring that an *en banc* panel consist only of active circuit court judges. The new rehearing *en banc* placed the matter before the appeals court for the third time (*Uzzell v. Friday*, 625 F.2d 1117 (4th Cir. 1980) (*en banc*)). On this occasion the court ruled 5 to 3 to remand the case to the district court for a full development of the record and reconsideration in light of *Bakke*. In so ruling, the court expressly adopted the views of the dissenting judges in the 1979 decision. The majority indicated that race-conscious actions that impinge on one class of persons in order to ameliorate past discrimination against another class are not unlawful per se, and that “the university should have the opportunity to justify its regulations so that the district court can apply the *Bakke* test: is the classification necessary to the accomplishment of a constitutionally permissible purpose?”<sup>6</sup>

Federal civil rights laws (see Section 13.5 of this book) may require private as well as public institutions to ensure, as a condition of receiving federal funds, that student organizations do not discriminate. The Title VI regulations (see Section 13.5.2 of this book) contain several provisions broad enough to cover student organizations; in particular, 34 C.F.R. § 100.3(b)(1) prohibits institutions from discriminating by race, either “directly or through contractual or other arrangements,” and 34 C.F.R. § 100.3(b)(4) prohibits institutions from discriminating by race in the provision of services or benefits that are offered “in or through a facility” constructed or operated in whole or part with federal funds. And the Title IX regulations (Section 13.5.3) prohibit institutions from “providing significant assistance” to any organization “which discriminates on the basis of sex in providing any aid, benefit, or service to students” (34 C.F.R. § 106.31(b)(6); see also § 106.6(c)). Title IX does not apply, however, to the membership practices of tax-exempt social fraternities and sororities (20 U.S.C. § 1681(a)6(A)). And more generally, under the Civil Rights Restoration Act (discussed in Section 13.5.7.4), all “programs” and “activities” of an institution

---

<sup>6</sup>Were similar issues to arise again in the future, the U.S. Supreme Court's decisions in *Grutter* and *Gratz*, the University of Michigan affirmative action cases discussed in Sections 8.2.5 and 8.3.4, would also become pertinent. Under these cases, strict scrutiny would still be the applicable standard of review. Under this standard, remedying the present effects of the institution's prior discrimination would be a compelling state interest, but considerable proof of the prior discrimination and its present effects would be required in order to rely on this justification.

receiving federal funds are subject to the nondiscrimination requirements of the civil rights statutes.

State statutes and regulations may also provide protection against discrimination by student organizations at both public and private institutions. In *Frank v. Ivy Club*, 576 A.2d 241 (N.J. 1990), for example, the court was asked to determine whether two private “eating clubs” affiliated with Princeton University, which at the time admitted only men to membership, were subject to a state law prohibiting nondiscrimination in places of public accommodation. The case began when Sally Frank, then an undergraduate at Princeton, filed a charge with the New Jersey Division on Civil Rights (the state’s human rights agency), asserting that she was denied membership in the clubs on the basis of her gender, and that this denial constituted unlawful discrimination by a place of public accommodation. She claimed that the university was responsible for supervising the clubs and therefore was partially responsible for their discriminatory activities. The university (and the clubs) contended that the clubs were private organizations not formally affiliated with the university. The Division on Civil Rights determined that the clubs were places of public accommodation and thus subject to the nondiscrimination requirements of state law. It also ruled that the clubs enjoyed a “symbiotic relationship” with the university, since the university had assisted them in their business affairs, a majority of upper-division Princeton students took their meals at the clubs (relieving the university of the responsibility of providing meals for them), and the clubs would not have come into being without the existence of the university. From these findings, the Division on Civil Rights concluded that probable cause existed to believe that the clubs had unlawfully discriminated against Frank on the basis of her gender.

After several appeals to intermediate courts and other procedural wrangling, the New Jersey Supreme Court affirmed the Division on Civil Rights’ jurisdiction over the case and accepted its findings and conclusions that the clubs must cease their discriminatory membership practices. The court reasoned that:

[w]here a place of public accommodation [the university] and an organization that deems itself private [the clubs] share a symbiotic relationship, particularly where the allegedly “private” entity supplies an essential service which is not provided by the public accommodation, the servicing entity loses its private character and becomes subject to laws against discrimination [576 A.2d at 257].<sup>7</sup>

In light of such constitutional and regulatory requirements, it is clear that administrators cannot ignore alleged discrimination by student organizations. In some areas of concern, race and sex discrimination being the primary

---

<sup>7</sup>While the state court proceedings were in progress, one of the clubs filed a claim in federal court, asserting that the state civil rights agency’s assertion of jurisdiction over its activities violated its freedom of association under the First Amendment of the U.S. Constitution. A federal appellate court affirmed a trial court’s finding that the club’s federal claims were not moot and could be litigated in federal court (*Ivy Club v. Edwards*, 943 F.2d 270 (3d Cir. 1991)).

examples, institutions' obligations to prohibit such discrimination are relatively clear. In other areas of concern, however, the law is either more sparse or less clear regarding the institution's obligations to prohibit discrimination. Religious discrimination and sexual orientation discrimination by student organizations are the primary contemporary examples. (See generally Burton Bollag, "Choosing Their Flock," *Chron. Higher Educ.*, January 28, 2005, A33.) The federal civil rights statutes (above), for instance, do not cover either of these types of discrimination, and federal constitutional law provides a lower standard of scrutiny for sexual orientation discrimination than for race or gender discrimination (see *Romer v. Evans*, 517 U.S. 620 (1996)).

Regarding religious discrimination, at least in public institutions, the First Amendment's free exercise clause actually provides a zone of protection for student organizations that have religious qualifications, based on sincere religious belief, for leadership positions, membership, or other prerogatives (see generally Section 1.6 of this book). The freedom of expressive association implicit in the First Amendment may also provide some protection for such student organizations (see *Boy Scouts of America v. Dale*, 530 U.S. 640 (2000)). Regarding sexual orientation discrimination, the free exercise clause may also provide some protection for student organizations that discriminate on the basis of sexual orientation if they do so based upon sincerely held religious beliefs; and the First Amendment freedom of association, as applied in the *Dale* case (above), may provide some protection to organizations discriminating by sexual orientation even when their policy is not based on religious belief. These developments do not mean that public institutions must forgo all regulation or oversight of religious or sexual orientation discrimination based on religious belief or expressive association, but they do mean that administrators should exercise particular care in this sensitive arena and involve counsel in all aspects of these matters. (For a review of litigation emerging in 2005, see Sara Lipka, "Arizona State U. Settles Lawsuit by Agreeing to Allow Christian Group to Bar Members on Sexual Grounds," *Chron. Higher Educ.*, September 16, 2005, A42; Elizabeth Farrell, "Federal Appeals Court Orders Illinois University to Recognize Christian Group, Pending Ruling," *Chron. Higher Educ.*, September 9, 2005, A36; and for periodically updated information on litigation, go to <http://www.clsnet.org>, and click on The Center.)

**10.1.5. Religious activities.** Numerous legal issues may arise concerning student organizations that engage in religious activities or have a religious purpose or a religious affiliation. The most significant issues usually arise under the free speech, free exercise, or establishment clauses of the First Amendment, or under parallel provisions of state constitutions, and are therefore of primary concern to public institutions. This subsection addresses constitutional problems concerning religious student organizations' use of campus facilities and receipt of student activities fee allocations. Subsection 10.1.4 above addresses student organizations' restrictive membership policies.

In *Widmar v. Vincent*, 454 U.S. 263 (1981), a case involving the University of Missouri-Kansas City (UMKC), the U.S. Supreme Court established important

rights for student religious groups at public postsecondary institutions that seek to use the institution's facilities. In 1972, the Board of Curators of UMKC promulgated a regulation prohibiting the use of university buildings or grounds "for purposes of religious worship or religious teaching." In 1977, UMKC applied this regulation to a student religious group called Cornerstone. This group was "an organization of evangelical Christian students from various denominational backgrounds. . . . [It] held its on-campus meetings in classrooms and in the student center. These meetings were open to the public and attracted up to 125 students. A typical Cornerstone meeting included prayer, hymns, Bible commentary, and discussion of religious views and experiences" (454 U.S. at 265, n.2). When UMKC denied Cornerstone permission to continue meeting in university facilities, eleven members of the organization sued the university, alleging that it had abridged their rights to free exercise of religion and freedom of speech under the First Amendment.

For the Supreme Court, as for the lower courts, the threshold question was whether the case would be treated as a free speech case. In considering this question, Justice Powell's opinion for the Court (with Justice White dissenting) characterized the students' activities as "religious speech," which, like other speech, is protected by the free speech clause. The university, by making its facilities generally available to student organizations, had created a "forum" open to speech activities, which the Court described both as a "limited public forum" and an "open forum." The free speech clause therefore applied to the situation. This clause did not require UMKC to establish a forum; but once UMKC had done so, the clause required it to justify any exclusion of a student group from this forum because of the content of its activities:

In order to justify discriminatory exclusion from a public forum based on the religious content of a group's intended speech, the university must satisfy the standard of review appropriate to content-based exclusions. It must show that its regulation is necessary to serve a compelling state interest and that it is narrowly drawn to achieve that end [454 U.S. at 269-70].

In attempting to justify its regulation under this standard, UMKC relied on the First Amendment's establishment clause and on the establishment clause in the Missouri state constitution. Its argument was that maintaining separation of church and state, as mandated by these clauses, was a "compelling state interest," which justified its no-religious-worship regulation under the free speech clause. Resorting to establishment clause jurisprudence, the Court rejected this argument. Although the Court agreed that maintaining separation of church and state was a compelling interest, it did not believe that an equal access policy violated the establishment clause. The Court relied on the three-part test of *Lemon v. Kurtzman*, 403 U.S. 602, 612-13 (1971): "First, the [governmental policy] must have a secular legislative purpose; second, its principal or primary effect must be one that neither advances nor inhibits religion . . . ; finally, the [policy] must not

foster an excessive government entanglement with religion.” Applying the test, the Court reasoned:

In this case two prongs of the test are clearly met. Both the District Court and the Court of Appeals held that an open-forum policy, including nondiscrimination against religious speech, would have a secular purpose and would avoid entanglement with religion. But the District Court concluded, and the University argues here, that allowing religious groups to share the limited public forum would have the “primary effect” of advancing religion.

The University’s argument misconceives the nature of this case. The question is not whether the creation of a religious forum would violate the Establishment Clause. The University has opened its facilities for use by student groups, and the question is whether it can now exclude groups because of the content of their speech (see *Healy v. James*, 408 U.S. 169 . . . (1972)). In this context we are unpersuaded that the primary effect of the public forum, open to all forms of discourse, would be to advance religion.

We are not oblivious to the range of an open forum’s likely effects. It is possible—perhaps even foreseeable—that religious groups will benefit from access to University facilities. But this Court has explained that a religious organization’s enjoyment of merely “incidental” benefits does not violate the prohibition against the “primary advancement” of religion [citations omitted].

We are satisfied that any religious benefits of an open forum at UMKC would be “incidental” within the meaning of our cases. Two factors are especially relevant.

First, an open forum in a public university does not confer any imprimatur of state approval on religious sects or practices. As the court of appeals quite aptly stated, such a policy “would no more commit the University . . . to religious goals” than it is “now committed to the goals of the Students for a Democratic Society, the Young Socialist Alliance,” or any other group eligible to use its facilities (*Chess v. Widmar*, 635 F.2d at 1317).

Second, the forum is available to a broad class of nonreligious as well as religious speakers; there are over 100 recognized student groups at UMKC. The provision of benefits to so broad a spectrum of groups is an important index of secular effect [citations omitted]. If the Establishment Clause barred the extension of general benefits to religious groups, “a church could not be protected by the police and fire departments, or have its public sidewalk kept in repair” (*Roemer v. Maryland Public Works Board*, 426 U.S. 736, 747 . . . (1976) (plurality opinion)). . . . At least in the absence of empirical evidence that religious groups will dominate UMKC’s open forum, we agree with the Court of Appeals that the advancement of religion would not be the forum’s “primary effect” [454 U.S. at 271–75].

With regard to the university’s argument that its interest in enforcing the Missouri constitution’s prohibition against public support for religious activities outweighed the students’ free speech claim, the Court stated:

Our cases have required the most exacting scrutiny in cases in which a state undertakes to regulate speech on the basis of its content (see, for example, *Carey v. Brown*, 447 U.S. 455 (1980); *Police Dept. v. Mosley*, 408 U.S. 92 . . . (1972)). On the other hand, the state interest asserted here—in achieving greater separation of church and State than is already ensured under the establishment clause of the Federal Constitution—is limited by the Free Exercise Clause and in this

case by the Free Speech Clause as well. In this constitutional context, we are unable to recognize the State's interest as sufficiently "compelling" to justify content-based discrimination against respondents' religious speech [454 U.S. at 276].

Since UMKC could not justify its content-based restriction on access to the forum it had created, the Court declared the university's regulation unconstitutional. The plaintiff students thereby obtained the right to have their religious group hold its meetings in campus facilities generally open to student groups. It follows that other student religious groups at other public postsecondary institutions have the same right to use campus facilities; institutions may not exclude them, whether by written policy or otherwise, on the basis of the religious content of their activities.<sup>8</sup>

*Widmar* has substantial relevance for public institutions, most of which have created forums similar to the forum at UMKC. The opinion falls far short, however, of requiring institutions to relinquish all authority over student religious groups. There are substantial limits to the opinion's reach:

1. *Widmar* does not require (nor does it permit) institutions to create forums especially for religious groups, or to give them any other preferential treatment. As the Court noted, "Because this case involves a forum already made generally available to student groups, it differs from those cases in which this Court has invalidated statutes permitting school facilities to be used for instruction by religious groups but not by others" (454 U.S. at 271, n.10; see also 454 U.S. at 273, n.13).

2. Nor does *Widmar* require institutions to create a forum for student groups generally, or to continue to maintain one, if they choose not to do so. The case applies only to situations where the institution has created and voluntarily continues to maintain a forum for student groups.

3. *Widmar* requires access only to facilities that are part of a forum created by the institution, not to any other facilities. Similarly, *Widmar* requires access only for students: "We have not held . . . that a campus must make all of its facilities equally available to students and nonstudents alike, or that a university must grant free access to all of its grounds or buildings" (454 U.S. at 268, n.5).

4. *Widmar* does not prohibit all regulation of student organizations' use of forum facilities; it prohibits only content-based restrictions on access. Thus, the Court noted that "a university's mission is education, and decisions of this Court have never denied a university's authority to impose reasonable regulations compatible with that mission upon the use of its campus and facilities" (454 U.S. at 268, n.5). In particular, according to the Court, the *Widmar* opinion "in

---

<sup>8</sup>In 1984, Congress passed and the President signed the Equal Access Act, Pub. L. No. 98-377, 98 Stat. 1302, giving limited statutory recognition to the principles underlying *Widmar*. By its terms, however, the Act extends these principles to, and applies only to, "public secondary school[s] . . . receiv[ing] federal financial assistance."

no way undermines the capacity of the university to establish reasonable time, place, and manner regulations” (454 U.S. at 276) for use of the forum. Such regulations must be imposed on all student groups, however, not just student religious organizations, and must be imposed without regard to the content of the group’s speech activities (see *Heffron v. International Society for Krishna Consciousness*, 452 U.S. 640 (1981)). If a student religious group or other student group “violate[s] [such] reasonable campus rules or substantially interfere[s] with the opportunity of other students to obtain an education” (454 U.S. at 277), the institution may prohibit the group from using campus facilities for its activities.

5. *Widmar* does not rule out every possible content-based restriction on access to a forum. The Court’s analysis quoted above makes clear that a content-based regulation would be constitutional under the First Amendment if it were “necessary to serve a compelling state interest and . . . narrowly drawn to achieve that end.” As *Widmar* and other First Amendment cases demonstrate, this standard is exceedingly difficult to meet. But the *Widmar* opinion suggests at least two possibilities, the contours of which are left for further development should the occasion arise. First, the Court hints that, if there is “empirical evidence that religious groups will dominate . . . [the institution’s] open forum” (454 U.S. at 275, also quoted above), the institution apparently may regulate access by these groups to the extent necessary to prevent domination. Second, if the student demand for use of forum facilities exceeds the supply, the institution may “make academic judgments as to how best to allocate scarce resources” (454 U.S. at 276). In making such academic judgments, the institution may apparently prefer the educational content of some group activities over others and allocate its facilities in accord with these academic preferences. Justice Stevens’s opinion concurring in the Court’s judgment contains an example for consideration:

If two groups of twenty-five students requested the use of a room at a particular time—one to view Mickey Mouse cartoons and the other to rehearse an amateur performance of *Hamlet*—the First Amendment would not require that the room be reserved for the group that submitted its application first. . . . [A] university should be allowed to decide for itself whether a program that illuminates the genius of Walt Disney should be given precedence over one that may duplicate material adequately covered in the classroom. . . . A university legitimately may regard some subjects as more relevant to its educational mission than others. But the university, like the police officer, may not allow its agreement or disagreement with the viewpoint of a particular speaker to determine whether access to a forum will be granted [454 U.S. at 278–80].

For a different example of a content-based restriction—approved by one federal appellate court subsequent to *Widmar*—see *Chapman v. Thomas*, 743 F.2d 1056 (4th Cir. 1984). In this case, the court ruled that North Carolina State University could prohibit a student from door-to-door canvassing in dormitories to publicize campus Bible study meetings, even though it permitted candidates for top student government offices to campaign door to door.

A subsequent Supreme Court case, *Rosenberger v. Rector and Visitors of the University of Virginia*, 515 U.S. 819 (1995), concerns religious student organizations' eligibility for funding from mandatory student fee assessments. A student group, Wide Awake Productions (WAP), had been recognized by the university and was entitled to use university facilities just as other organizations did. But the university's guidelines for allocating mandatory student fees excluded certain types of organizations, including fraternities and sororities, political and religious organizations, and organizations whose membership policies were exclusionary. The guidelines also prohibited the funding of, among others, religious and political activities. WAP published a journal containing articles written from a religious perspective, and its constitution stated that the organization's purpose included the expression of religious views. The student council, which had been delegated the authority to disburse the funds from student fees, had denied funding to WAP, characterizing its publication of the journal as "religious activity."

The student members of WAP sued the university, alleging that the denial of funding violated their rights to freedom of speech, press, association, religious exercise, and equal protection under both the federal and state constitutions. The district court rejected all of the plaintiffs' arguments and granted the university's motion for summary judgment on all claims. The appellate court, focusing particularly on the free speech and establishment clause issues, upheld the district court in all respects.

The U.S. Supreme Court then reversed the judgments of the district and appellate courts. By a 5-to-4 vote, the majority held that (1) the university's refusal to provide Student Activities Fund (SAF) funds to Wide Awake Productions violated the students' First Amendment free speech rights; and (2) university funding for WAP would not violate the First Amendment's establishment clause, and the university therefore could not justify its violation of the free speech clause by asserting a need to adhere to the establishment clause. Justice Kennedy wrote the opinion for the majority of five; Justice O'Connor wrote an important concurring opinion; and Justice Souter wrote the opinion for the four dissenters.

The tension between the free speech and establishment clauses of the First Amendment is clearly illuminated by the sharply divergent majority and dissenting opinions. The majority opinion addresses *Rosenberger* from a free speech standpoint, and finds no establishment clause justification for infringing the rights of a student publication that reports the news from a religious perspective. On the other hand, the dissent characterizes the students' publication as an evangelical magazine directly financed by the state, and regards such funding to be a clear example of an establishment clause violation. Justice O'Connor's narrow concurring opinion, tailored specifically to the facts of the case, serves to limit the majority's holding and reduce the gulf between the majority and the dissent.

As the Court explained the situation, the university had established a mandatory student activities fee, the income from which supported a student activities fund used to subsidize a variety of student organizations. All recognized

student groups had to achieve the status of a “Contracted Independent Organization” (CIO), after which some groups could then submit certain of its bills to the student council for payment from SAF funds. The eligible bills were those from “outside contractors” or “third-party contractors” that provided services or products to the student organization. Disbursement was made directly to the third party; no payments went directly to a student group. The university’s SAF guidelines prohibited the use of SAF funds for, among others, religious activities, defined by the guidelines as an activity that “primarily promotes or manifests a particular belief in or about a deity or an ultimate reality.” Wide Awake Productions was a CIO established to publish a campus magazine that “‘offers a Christian perspective on both personal and community issues’” (515 U.S. at 826, quoting from the magazine’s first issue). WAP applied for SAF funding—funding already provided to fifteen student “media groups”—to be used to pay the printer that printed its magazine. The university rejected the request on grounds that WAP’s activities were religious.

Explicating the majority’s free speech analysis, Justice Kennedy described the SAF as a forum “more in a metaphysical sense than in a spatial or geographic sense,” but nonetheless determined that the SAF, as established and operated by the university, is a “limited public forum” for First Amendment purposes. Having opened the SAF to the university community, the university

must respect the lawful boundaries it has itself set. [It] may not exclude speech where its distinction is not “reasonable in light of the purpose served by the forum” (citing *Cornelius v. NAACP Legal Defense & Education Fund*, 473 U.S. 788, 804–6 (1985)), nor may it discriminate against speech on the basis of its viewpoint (citing *Lamb’s Chapel v. Center Moriches Union Free School District*, 508 U.S. 384, 392 (1993)) [515 U.S. 827–28].

The majority then determined that the university had denied funding to WAP because of WAP’s perspective, or viewpoint, rather than because WAP dealt with the general subject matter of religion. Thus, although “it is something of an understatement to speak of religious thought and discussion as just a viewpoint,” “viewpoint discrimination is the proper way to interpret the university’s objection to Wide Awake”:

By the very terms of the SAF prohibition, the [u]niversity does not exclude religion as a subject matter but selects for disfavored treatment those student journalistic efforts with religious editorial viewpoints. Religion may be a vast area of inquiry, but it also provides, as it did here, a specific premise, a perspective, a standpoint from which a variety of subjects may be discussed and considered. The prohibited perspective, not the general subject matter, resulted in the refusal to make the third-party payments [to the printer], for the subjects discussed were otherwise within the approved category of publications [515 U.S. at 831].

Furthermore, the majority rejected the university’s contention that “no viewpoint discrimination occurs because the Guidelines discriminate against an

entire class of viewpoints.” Because of the “complex and multifaceted nature of public discourse . . . [i]t is as objectionable to exclude both a theistic and an atheistic perspective on the debate as it is to exclude one, the other, or yet another political, economic, or social viewpoint” (515 U.S. at 831).

Having determined that the university had violated the students’ free speech rights, the majority considered whether providing SAF funds to WAP would nevertheless violate the establishment clause. In order for a government regulation to survive an establishment clause challenge, it must be neutral toward religion (see Section 1.6 of this book). Relying on past decisions upholding governmental programs when “the government, following neutral criteria and evenhanded policies, extends benefits to recipients whose ideologies and viewpoints, including religious ones, are broad and diverse” (515 U.S. at 839), the Court held that the SAF is neutral toward religion:

There is no suggestion that the university created [the SAF] to advance religion or adopted some ingenious device with the purpose of aiding a religious cause. The object of the SAF is to open a forum for speech and to support various student enterprises, including the publication of newspapers, in recognition of the diversity and creativity of student life. . . . The category of support here is for “student news, information, opinion, entertainment, or academic communications media groups,” of which *Wide Awake* was 1 of 15 in the 1990 school year. WAP did not seek a subsidy because of its Christian editorial viewpoint; it sought funding as a student journal, which it was [515 U.S. at 840].

Thus, the WAP application for funding depended not on the religious editorial viewpoint of the publication, nor on WAP being a religious organization, but rather on the neutral factor of its status as a student journal. “Any benefit to religion is incidental to the government’s provision of secular services for secular purposes on a religion-neutral basis” (515 U.S. at 843–44).

In completing its establishment clause analysis, the majority distinguished another line of cases forbidding the use of tax funds to support religious activities and rejected the contention that the mandatory student activities fee is a tax levied for the support of a church or religion. Unlike a tax, which the majority describes as an exaction to support the government and a revenue-raising device, the student activity fee is used for the limited purpose of funding student organizations consistent with the educational purposes of the university. No public funds would flow directly into WAP’s coffers; instead, the university would pay printers (third-party contractors) to produce WAP’s publications. This method of third-party payment, along with university-required disclaimers stating that the university is not responsible for or represented by the recipient organization, evidenced the attenuated relationship between the university and WAP. The majority found no difference in “logic or principle, and no difference of constitutional significance, between a school using its funds to operate a facility to which students have access [as in *Widmar*], and a school paying a third-party contractor to operate the facility on its behalf.”

Justice O’Connor’s concurring opinion carefully limits her analysis to the facts of the case, emphasizing that “[t]he nature of the dispute does not admit

of any categorical answers, nor should any be inferred from the Court’s decision today.” Justice O’Connor based her concurrence on four specific considerations that ameliorate the establishment clause concerns that otherwise would arise from government funding of religious messages. *First*, at the insistence of the university, student organizations such as WAP are separate and distinct from the university. All groups that wish to be considered for SAF funding are required to sign a contract stating that the organization exists and operates independently of the university. Moreover, all publications, contracts, letters, or other written materials distributed by the group must bear a disclaimer acknowledging that, while members of the university faculty and student body may be associated with the group, the organization is independent of the “corporation which is the university and which is not responsible for the organizations’ contracts, acts, or omissions.” *Second*, no money is given directly to WAP. By paying a third-party vendor, in this case a printer that printed WAP’s journal, the university is able to ensure that the funding that it has granted is being used to “further the University’s purpose in maintaining a free and robust marketplace of ideas, from whatever perspective.” This method of funding, according to the concurrence, is analogous to a school providing equal access to a generally available physical facility, like a printing press on campus. *Third*, because WAP does not exist “in a vacuum,” it will not be mistakenly perceived to be university endorsed. This potential danger is greatly diminished by both the number and variety of other publications receiving SAF funding. O’Connor thus found it illogical to equate university funding of WAP with the endorsement of one particular viewpoint. And *fourth*, the “proceeds of the student fees in this case [may be distinguishable] from proceeds of the general assessments in support of religion that lie at the core of the prohibition against religious funding, . . . and from government funds generally”:

Unlike moneys dispensed from state or federal treasuries, the Student Activities Fund is collected from students who themselves administer the fund and select qualifying recipients only from among those who originally paid the fee. The government neither pays into nor draws out of this common pool, and a fee of this sort appears conducive to granting individual students proportional refunds.<sup>9</sup> The Student Activities Fund, then, represents not government resources, whether derived from tax revenue, sales of assets, or otherwise, but a fund that simply belongs to the students [515 U.S. at 851–52 (O’Connor, J., concurring)].

Although the first three of Justice O’Connor’s distinctions were also relied on by Justice Kennedy, Justice O’Connor states her conclusions more narrowly than does Kennedy and limits her reasoning more tightly to the unique facts of the case. Justice O’Connor also adds the fourth consideration regarding the character of the student fee proceeds. Since Justice O’Connor provides the critical

---

<sup>9</sup>[Author’s footnote] This issue of proportional refunds for objecting students, or an “opt-out” system, was later addressed by the Court in *Board of Regents of the University of Wisconsin System v. Southworth*, 529 U.S. 217 (2000), discussed in subsection 10.1.3 above.

fifth vote that forms the 5-to-4 majority, her opinion carries unusual significance. To the extent that her establishment clause analysis is narrower than Justice Kennedy's, it is her opinion rather than his that apparently provides the current baseline for understanding the establishment clause restrictions on public institutions' funding of student religious groups.

The four dissenting Justices disagreed with both the majority's free speech clause analysis and its establishment clause analysis. Regarding the former, Justice Souter insisted that the university's refusal to fund WAP was not viewpoint discrimination but rather a "subject-matter distinction," an educational judgment not to fund student dialogue on the particular subject of religion regardless of the viewpoints expressed. Regarding the establishment issue, which he termed the "central question in this case," Justice Souter argued that, because "there is no warrant for distinguishing among public funding sources for purposes of applying the First Amendment's prohibition of religious establishment, . . . the university's refusal to support petitioners' religious activities is compelled by the Establishment Clause." Emphasizing that WAP's publications call on Christians "'to live, in word and deed, according to the faith they proclaim . . . and to consider what a personal relationship with Jesus Christ means'" (551 U.S. at 868, quoting from WAP's first issue), Justice Souter likens the paper to an "evangelist's mission station and pulpit" (515 U.S. at 868). He thus argues that the use of public (SAF) funds for this activity is a "direct subsidization of preaching the word" and a "direct funding of core religious activities by an arm of the State" (515 U.S. at 863).

The majority's reasoning in *Rosenberger* generally parallels the Court's earlier reasoning in *Widmar v. Vincent* (above) and generally affirms the free speech and establishment principles articulated in that case. More important, both Justice Kennedy's and Justice O'Connor's opinions extend student organizations' First Amendment rights beyond access to *facilities* (the issue in *Widmar*) to include access to *services*. The Kennedy and O'Connor opinions also refine the *Widmar* free speech analysis by distinguishing between *content*-based restrictions on speech (the issue in *Widmar*) and *viewpoint*-based restrictions (the issue as the Court framed it in *Rosenberger*). The latter type of restriction, sometimes called "viewpoint discrimination," is the most suspect of all speech restrictions and the type least likely to be tolerated by the courts (see generally Sections 9.6.2 & 10.1.3). *Widmar* appears to reserve a range of discretion for a higher educational institution to make academic judgments based on the educational *content* of a student organization's activities; *Rosenberger* appears to prohibit any such discretion when the institution's academic judgment is based on consideration of the student group's *viewpoints* (see 515 U.S. at 845).

## **Sec. 10.2. Fraternities and Sororities**

**10.2.1 Overview.** Fraternal organizations have been part of campus life at many colleges and universities for more than a century. Some, such as Phi Beta Kappa, were founded to recognize academic achievement, while others have a predominantly social focus. Because of their strong ties to colleges and

universities, whether because the houses occupied by members are on or near the college's property or because their members are students at the college, the consequences of the individual and group behavior of fraternity and sorority members can involve the college in legal problems.

The legal issues that affect nonfraternal student organizations (see Section 10.1) may also arise with respect to fraternities and sororities. But because fraternal organizations have their own unique histories and traditions, are related to national organizations that may influence their activities, and play a significant social role on many campuses, they may pose unique legal problems for the college with which they are affiliated.

Supporters of fraternal, or "Greek," organizations argue that members perform more service to the college and the community and make larger alumni contributions than nonmembers, and that fraternity houses provide room and board to undergraduate students whom the college would otherwise be required to accommodate. Critics of fraternal organizations argue that they foster "elitism, sexism, racism and in worst instances, criminal activity" (V. L. Brown, "College Fraternities and Sororities: Tort Liability and the Regulatory Authority of Public Institutions of Higher Education," 58 *West's Educ. Law Rptr.* (1990)). Institutions have responded to problems such as hazing, alcohol and drug abuse, sexual harassment and assault, and the death or serious injury of fraternity members in various ways—for instance, by regulating social activities, suspending or expelling individual fraternities, or abolishing the entire Greek system on campus.

Fraternities and sororities may be chapters of a national organization or may be independent organizations. The local chapters, whether or not they are tied to a national organization, may be either incorporated or unincorporated associations. If the fraternity or sorority provides a house for some of its members, it may be located on land owned by the colleges or it may be off campus. In either case, the college may own the fraternity house, or an alumni organization (sometimes called a "house corporation") may own the house and assume responsibility for its upkeep.

Litigation concerning fraternal organizations has increased sharply in the past decade. Institutional attempts to regulate, discipline, or ban fraternal organizations have met with stiff resistance, both on campus and in the courts. Students or other individuals injured as a result of fraternal organizations' activities, or the activities of individual members of fraternal organizations, have sought to hold colleges legally responsible for those injuries. And fraternal organizations themselves are facing increasing legal liability as citizens and courts have grown less tolerant of the problems of hazing and other forms of misconduct that continue to trouble U.S. college campuses.

**10.2.2. Institutional recognition and regulation of fraternal organizations.** Recognition by a college is significant to fraternal organizations because many national fraternal organizations require such recognition as a condition of the local organization's continued affiliation with the national. The conditions under which recognition is awarded by the college are important

because they may determine the college's power to regulate the conduct of the organization or its members.

Some colleges and universities require, as a condition of recognition of fraternal organizations, that each local fraternity sign a "relationship statement." These statements outline the college's regulations and elicit the organization's assurance that it will obtain insurance coverage, adhere to fire and building codes, and comply with the institution's policy on the serving of alcohol.<sup>10</sup> Some of these statements also require members to participate in alcohol awareness programs or community service. Some statements include restrictions on parties and noise, and extend the jurisdiction of the college's student conduct code and disciplinary system to acts that take place where students live, even if they live off campus.

On some campuses, institutional regulation of fraternal organizations extends to their membership practices. Traditionally, fraternities and sororities have limited their membership to one gender, and in the past many of these organizations prohibited membership for nonwhite and non-Christian individuals. In more recent years, however, several colleges and universities, including Middlebury, Bowdoin, and Trinity (Conn.) Colleges, have required fraternities and sororities to admit members of both sexes (see N. S. Horton, "Traditional Single-Sex Fraternities on College Campuses: Will They Survive in the 1990s?" 18 *J. Coll. & Univ. Law* 419 (1992)) and, in general, to avoid discriminatory practices. (See, for example, Eric Hoover, "Black Student Breaks Color Barrier in U. of Alabama's Fraternity System," *Chron. Higher Educ.*, November 9, 2001, A31.)

Other colleges have banned fraternities altogether. For example, Colby College, a private liberal arts college, withdrew recognition of all its fraternities and sororities in 1984 because administrators believed that fraternal activities were incompatible with its goals for student residential life. When a group of students continued some of the activities of a banned fraternity, despite numerous attempts by the college's administration to halt them, the president and college dean imposed discipline on the "fraternity" members, ranging from disciplinary probation to one-semester suspensions.

In *Phelps v. President and Trustees of Colby College*, 595 A.2d 403 (Maine 1991), the students sought to enjoin the discipline and the ban on fraternities under Maine's Civil Rights Act, 5 M.R.S.A. §§ 4681 *et seq.* (2003), and the state constitution's guarantees of free speech and the right to associate. Maine's Supreme Judicial Court rejected the students' claims. It held that the state law, directed against harassment and intimidation, did not apply to the actions of the college because the law "stopped short of authorizing Maine courts to mediate disputes between private parties exercising their respective rights of free expression and association" (595 A.2d at 407). The court also held that the actions of private entities, such as the college, were not subject to state constitutional restrictions.

Although private institutions are not subject to constitutional requirements, their attempts to discipline fraternal organizations and their members are still

---

<sup>10</sup>Cases and authorities are collected in R. A. Vinluan, Annot., "Regulations as to Fraternities and Similar Associations Connected with Educational Institution," 10 A.L.R.3d 389.

subject to challenge. In *In re Rensselaer Society of Engineers v. Rensselaer Polytechnic Institute*, 689 N.Y.S.2d 292 (N.Y. Ct. App. 1999), the Society of Engineers, a fraternity, brought a state administrative law claim against Rensselaer Polytechnic Institute (RPI), challenging the institution's decision to suspend the fraternity for several years for various violations of RPI's code of student conduct. The fraternity was already on disciplinary probation for earlier infractions of the code of conduct. Ruling that the institution's conduct was neither arbitrary nor capricious, the court said: "Judicial scrutiny of the determination of disciplinary matters between a university and its students, or student organizations, is limited to determining whether the university substantially adhered to its own published rules and guidelines for disciplinary proceedings" (689 N.Y.S.2d at 295). The institution's actions were eminently reasonable, said the court; it followed its "detailed" grievance procedure in both making and reviewing the challenged disciplinary decision, and afforded the fraternity three levels of administrative review.

But the decision of another private institution to suspend a fraternity was vacated by a state appellate court, and the university was ordered to provide additional procedural protections to the fraternity. In *Gamma Phi Chapter of Sigma Chi Fraternity v. University of Miami*, 718 So. 2d 910 (Fla. Ct. App. 1998), the fraternity had sought an injunction to prevent the university's enforcement of sanctions against it. The fraternity claimed that the procedure used by the university to impose sanctions, including the suspension of rushing, was based on an *ex parte* fact-finding process (a process that did not allow the fraternity an opportunity to participate or to speak in its own behalf). The appellate court enjoined the sanctions and ordered the university to provide a fair hearing. The vice president for student affairs then appointed a panel consisting of two students, two faculty members, and an attorney not employed by the university. The fraternity, however, sought a second injunction to prevent the panel from hearing the case, arguing that the Interfraternity Council had the responsibility to decide such matters. The court denied the second injunction, ruling that, until the university had acted and the fraternity had pursued all internal remedies, the court would not exercise jurisdiction.

Although some colleges have banned fraternities altogether, others have sought less drastic methods of controlling them. The attempt of Hamilton College to minimize the influence of fraternities on campus was stalled temporarily by an unusual use of the Sherman Act, which outlaws monopolies that are in restraint of trade (see Section 13.2.8). Hamilton College announced a policy, to become effective in the 1995–96 academic year, of requiring all students to live in college-owned facilities and to purchase college-sponsored meal plans. The college made this change, it said, to minimize the dominance of fraternities over the social life of the college and to encourage more women applicants. Four fraternities that owned their own fraternity houses, and that had previously received approximately \$1 million in payment for housing and feeding their members, sought to enjoin the implementation of the new housing policy, arguing that it was an attempt by the college to exercise monopoly power over the market for student room and board. A trial court granted the college's

motion to dismiss the lawsuit, stating that the provision of room and board to students was not “trade or commerce,” and that there was no nexus between the college’s conduct and interstate commerce. The trial court did not rule on the issue of whether the product market at issue was the market for room and board for Hamilton students (as the fraternities claimed), or the market for highly selective liberal arts colleges with which Hamilton competes for students (as the college had claimed).

The appellate court reversed the dismissal, stating that the fraternities had alleged sufficient facts that, if they could be proven, could constitute a Sherman Act violation (*Hamilton Chapter of Alpha Delta Phi v. Hamilton College*, 128 F.3d 59 (2d Cir. 1997)). The plaintiffs had claimed that the college’s goal was to raise revenues by forcing students to purchase housing from the college, to raise its housing prices due to the lack of competition for housing, and to purchase the fraternity houses at below-market prices. Because Hamilton recruits students from throughout the United States, and because more than half of its room and board revenue was obtained from out-of-state students, there was clearly a nexus between Hamilton’s housing policy and interstate commerce. Therefore, since antitrust jurisdiction was established, the appellate court reversed the lower court’s judgment and remanded the case. On remand, the trial court ruled that the plaintiffs’ characterization of the product market was incorrect, and awarded summary judgment to the college (106 F. Supp. 2d 406 (N.D.N.Y. 2000)).

Dartmouth College’s decision to eliminate fraternities and sororities drew litigation not from students, but from alumni who had contributed to the college’s fund-raising campaign. Seven alumni sued the Dartmouth Trustees after the trustees used funds raised in a capital campaign to restructure the college’s residential life program, eliminating Greek organizations in the process. In *Brzica v. Trustees of Dartmouth College*, 791 A.2d 990 (N.H. 2002), the New Hampshire Supreme Court rejected the plaintiffs’ claim that the trustees had a fiduciary duty to the alumni, and found that there was no evidence that the trustees had conspired to eliminate Greek organizations prior to the fund-raising campaign.

Public colleges and universities face possible constitutional obstacles to banning fraternities, including the First Amendment’s guarantee of the right to associate (see Sections 9.5.1, 9.5.2, & 10.1). The U.S. Supreme Court, in *Roberts v. United States Jaycees*, 468 U.S. 609 (1983), and *Boy Scouts of America v. Dale*, 530 U.S. 640 (2000), established the parameters of constitutionally protected rights of association and provided the impetus for constitutional challenges to institutional attempts to suspend or eliminate fraternal organizations.

The U.S. Court of Appeals for the Third Circuit addressed the extent of a fraternity’s constitutionally protected rights of association in *Pi Lambda Phi Fraternity v. University of Pittsburgh*, 229 F.3d 435 (3d Cir. 2000). The local and national fraternity challenged the university’s decision to revoke the local chapter’s status as a recognized student organization after a drug raid at the fraternity house yielded cocaine, heroin, opium, and Rohypnol (the “date rape” drug). Four chapter members were charged with possession of controlled substances. The university followed the recommendation of a student judiciary panel that determined that the chapter had violated the university’s policy of

holding fraternal organizations accountable “for actions of individual members and their guests.” The local and national fraternities sued the university and several of its administrators under 42 U.S.C. § 1983 for violation of the chapter’s First Amendment rights of intimate and expressive association. The trial court awarded summary judgment to the university, ruling that the fraternity’s primary activities were social rather than either intimate or expressive, and thus unprotected by the First Amendment.

Although the appellate court affirmed the outcome, it performed a more extensive analysis of the fraternity’s freedom of association claims. The local chapter did not meet the test of *Roberts* for intimate association, said the court, because of the large number of members (approximately eighty) and the fact that the chapter “is not particularly selective in whom it admits” (229 F.3d at 442). With respect to the expressive association claim, the court applied the three-step test created by the Supreme Court in *Dale*. *First*, the court ruled that the fraternity’s purpose was not expressive because there was virtually no evidence that the chapter engaged in expressive activity (such as political advocacy or even extensive charitable activities). *Second*, the university’s act to revoke the fraternity’s charter had only an indirect or attenuated effect on its expressive activity. Furthermore, the reason for the university’s “burden” on the fraternity’s activities was punishing illegal drug activity, which was not a form of expression protected by the First Amendment. *And third*, the university’s interest in enforcing its rules and regulations, and in preventing student use of drugs, outweighed any possible burden on the fraternity’s expressive activity.

The court similarly rejected the fraternity’s equal protection claim, ruling that the university’s policy of holding fraternities accountable for the actions of their members and guests was virtually identical to a rule holding students living in residence halls responsible for the actions of their guests. And even if the university had treated fraternities differently from other student organizations, said the court, fraternities are not a suspect classification for constitutional purposes, and thus any differential treatment by a public university would be reviewed under the “rational basis” test, a relatively deferential standard for a public university to meet.

The unsuccessful legal challenges to the banning of fraternities stimulated congressional action. In the Higher Education Amendments of 1998 (Pub. L. No. 105-244), Congress added a nonbinding “sense of Congress” provision protecting the speech and association rights of students. The provision reads, in part:

It is the sense of Congress that no student attending an institution of higher education on a full- or part-time basis should, on the basis of participation in protected speech or protected association, be excluded from participation in, be denied the benefits of, or be subjected to discrimination or official sanction under any education program, activity, or division of the institution directly or indirectly receiving financial assistance under this Act, whether or not such program, activity, or division is sponsored or officially sanctioned by the institution [20 U.S.C. § 1011a(a)].

The provision does allow institutions to regulate disruptive conduct and to take “action to prevent violation of State liquor laws, to discourage binge

drinking and other alcohol abuse, to protect students from sexual harassment including assault and date rape, to prevent hazing, or to regulate unsanitary or unsafe conditions in any student residence” (20 U.S.C. § 1011a(b)(2)). The provision is not legally binding on colleges, and does not appear to have caused those institutions that have banned fraternal organizations to reinstate them.

Although a clear articulation of the college’s expectations regarding the behavior of fraternity members may provide a deterrent to misconduct, some courts have viewed institutional attempts to regulate the conduct of fraternity members as an assumption of a duty to control their behavior, with a correlative obligation to exercise appropriate restraint over members’ conduct. For example, in *Furek v. University of Delaware*, 594 A.2d 506 (Del. 1991), the state’s supreme court ruled that the university could be found liable for injuries a student received during fraternity hazing, since the university’s strict rules against hazing demonstrated that it had assumed a duty to protect students against hazing injuries. (See Section 10.2.3 below for further discussion of these liability issues.)

Because of the potential for greater liability when regulation is extensive (because a student, parent, or injured third party may claim that the college assumed a duty to regulate the conduct of the fraternity and its members), some institutions have opted for “recognition” statements such as those used to recognize other student organizations. Although this minimal approach may defeat a claim that the institution has assumed a duty to supervise the activities of fraternity members, it may limit the institution’s authority to regulate the activities of the organization, although the institution can still discipline individual student members who violate its code of student conduct.

A study that examined tort liability issues related to fraternal organizations (E. D. Gulland & M. B. Powell, *Colleges, Fraternities and Sororities: A White Paper on Tort Liability Issues* (American Council on Education, 1989), at 14–15) recommends that recognition statements include the following provisions:

1. Description of the limited purpose of recognition (no endorsement, but access to institutional facilities);
2. Specification of the lack of principal-agent relationship between college and fraternity;
3. Acknowledgment that the fraternity is an independently chartered corporation existing under state laws;
4. Confirmation that the college assumes no responsibility for supervision, control, safety, security, or other services;
5. Restrictions on use of the college’s name, tax identification number, or other representations that the fraternity is affiliated with the college;
6. Requirement that the fraternity furnish evidence that it carries insurance sufficient to cover its risks.

One area where institutional regulation of fraternal organizations is receiving judicial—and legislative—attention is the “ritual” of hazing, often included

as part of pledging activities. If an institution promulgates a policy against hazing, it may be held legally liable if it does not enforce that policy vigorously. A case not involving fraternal organizations is nevertheless instructive on the potential for liability when hazing occurs. In a case brought by a former student injured by hazing, the Supreme Court of Vermont affirmed a sizable jury verdict against Norwich University, a paramilitary college that entrusts to upper-class students the responsibility to “indoctrinate and orient” first-year students, called “rooks.” Although Norwich had adopted policies against hazing and had included precautions against hazing in its training for the upper-class “cadre,” who were entrusted with the “indoctrination and orientation” responsibility, the former student alleged that hazing was commonplace and tolerated by the university’s administration, and that it caused him both physical and financial injury.

In *Brueckner v. Norwich University*, 730 A.2d 1086 (Vt. 1999), the student, who withdrew from Norwich after enduring physical and psychological harassment, filed claims for assault and battery, negligent infliction of emotional distress, intentional infliction of emotional distress, and negligent supervision. A jury found Norwich liable on all counts and awarded the student \$488,600 in compensatory damages and \$1.75 million in punitive damages. On appeal, the state supreme court affirmed the liability verdicts, holding that cadre members were authorized by Norwich to indoctrinate and orient rooks, and Norwich was thus vicariously liable for the tortious acts of the cadre because these actions were within the “scope of their employment” (despite the fact that Norwich forbade such behavior). The court affirmed the compensatory damage award, but reversed the punitive damage award, stating that Norwich’s behavior was negligent but did not rise to the standard of malice required by that state’s case law on punitive damages. One justice dissented, arguing that Norwich’s behavior had demonstrated indifference and its tolerance for hazing constituted reckless disregard for the safety of its students.

Although an institution may not wish explicitly to assume a duty to supervise the conduct of fraternity members, it does have the power to sanction fraternal organizations and their members if they violate institutional policies against hazing or other dangerous conduct. In *Psi Upsilon v. University of Pennsylvania*, 591 A.2d 755 (Pa. Super. Ct. 1991), a state appellate court refused to enjoin the university’s imposition of sanctions against a fraternity whose members kidnapped and terrorized a nonmember as part of a hazing activity. The student filed criminal charges against the twenty students who participated in the prank, and the university held a hearing before imposing sanctions on the fraternity. After the hearing, the university withdrew its recognition of the fraternity for three years, took possession of the fraternity house without compensating the fraternity, and prohibited anyone who took part in the kidnapping from participating in a future reapplication for recognition.

In evaluating the university’s authority to impose these sanctions, the court first examined whether the disciplinary procedures met legal requirements. Noting that the university was privately controlled, the court ruled that the students were entitled only to whatever procedural protections university policies had

given them. The court then turned to the relationship statement that the fraternity had entered into with the university.

Characterizing the relationship statement as contractual, the court ruled that it gave ample notice to the members that they must assume collective responsibility for the activities of individual members, and that breaching the statement was sufficient grounds for sanctions. After reviewing several claims of unfairness in the conduct of the disciplinary proceeding, the court upheld the trial judge's denial of injunctive relief.

More than thirty states have passed laws outlawing hazing. Illinois's anti-hazing law (Ill. Rev. Stat. ch. 144, para. 221 (1989)) was upheld against a constitutional challenge in *People v. Anderson*, 591 N.E.2d 461 (Ill. 1992), as was Ohio's anti-hazing law in *Carpetta v. Pi Kappa Alpha Fraternity*, 100 Ohio Misc. 2d 42 (Ct. Common Pleas, Lucas Co. 1998). (See also Mass. Ann. Laws ch. 269, §§ 17–19 (Supp. 1987); Cal. Educ. Code § 32050 (West 1990); and Virginia Hazing, Civil and Criminal Liability, Va. Code Ann. § 18.2-56. Florida's anti-hazing law makes hazing a third-class felony, punishable by up to five years in prison (Fla. Stat. § 1006.63(2) (2005).) The Missouri anti-hazing statute survived a void for vagueness challenge. Where a student was convicted of hazing Kappa Alpha Psi pledges, resulting in the death of one of them, the Supreme Court of Missouri held that the anti-hazing statute was not void for vagueness, nor did it violate the equal protection clause, and the student was adequately informed of the charges against him (*State v. Allen*, 905 S.W.2d 874 (Mo. 1995)). And the Texas Court of Criminal Appeals upheld a Texas statute that requires individuals who are involved in or witness hazing to report it or face criminal sanctions, rejecting a claim that the law violated the Fifth Amendment's privilege against self-incrimination (*State v. Boyd*, 38 S.W.3d 155 (Tex. Crim. App. 2001)).

Although institutions may have the authority to sanction fraternities and their members for criminal conduct or violations of the campus conduct code, conduct that may be construed as antisocial but is not unlawful may be difficult to sanction. For example, some public institutions have undertaken to prohibit such fraternity activities as theme parties with ethnic or gender overtones or offensive speech. These proscriptions, however, may run afoul of the First Amendment's free speech guarantees. For example, George Mason University sanctioned Sigma Chi fraternity for holding an "ugly woman contest," a fundraising activity in which fraternity members dressed as caricatures of various types of women, including an offensive caricature of a black woman. (For a discussion of this case, see Section 9.6.) The fraternity sued the university under 42 U.S.C. § 1983 (see this book, Section 3.5), alleging a violation of its rights under the First and Fourteenth Amendments. In *Iota Xi Chapter of Sigma Chi Fraternity v. George Mason University*, 993 F.2d 386 (4th Cir. 1993), a federal appellate court affirmed an award of summary judgment to the fraternity on the grounds that the skit was "expressive entertainment" and "expressive conduct," both protected under First Amendment jurisprudence.

Although colleges are limited in their ability to sanction fraternities for offensive speech (or expressive conduct), they can hold individual student members to the same code of conduct expected of all students, particularly with regard

to social activities and the use of alcohol. The complexity of balancing the need for a college to regulate fraternal organizations with its potential liability for their unlawful acts is the subject of the next subsection.

### ***10.2.3. Institutional liability for the acts of fraternal organizations.***

Despite the fact that fraternal organizations are separate legal entities, colleges and universities have faced legal liability from injured students, parents of students injured or killed as a result of fraternity activity, or victims of violence related to fraternity activities.<sup>11</sup> Because most claims are brought under state tort law theories, the response of the courts has not been completely consistent. The various decisions suggest, however, that colleges and universities can limit their liability in these situations but that fraternities and their members face increased liability, particularly for actions that courts view as intentional or reckless.

As discussed in Section 3.3, liability may attach if a judge or jury finds that the college owed an individual a duty of care, then breached that duty, and that the breach was the proximate cause of the injury. Because colleges are legally separate entities from fraternal organizations, the college owes fraternities, their members, and others only the ordinary duty of care to avoid injuring others. But in some cases courts have found either that a special relationship exists between the college and the injured student or that the college has assumed a duty to protect the student.

In *Furek v. University of Delaware*, 594 A.2d 506 (Del. 1991), the Delaware Supreme Court reversed a directed verdict for the university and ordered a new trial on the issue of liability in a lawsuit by a student injured during a hazing incident. The court noted the following factors in determining that a jury could hold the institution at least partially responsible for the injuries: (1) The university owned the land on which the fraternity house was located, although it did not own the house. The injury occurred in the house. (2) The university prohibited hazing and was aware of earlier hazing incidents by this fraternity. The court said that the likelihood of hazing was foreseeable, as was the likelihood of injury as a result of hazing.

While *Furek* may be an anomaly among the cases in which colleges are sued for negligence (see subsection 3.3.2.4), the opinion suggests some of the dangers of institutional attempts to regulate the conduct of fraternities or their members—for instance, by assuming duties of inspecting kitchens or houses, requiring that fraternities have faculty or staff advisers employed by the college, providing police or security services for off-campus houses, or assisting these organizations in dealing with local municipal authorities. Such actions may suggest to juries deliberating a student’s negligence claim that the institution had assumed a duty of supervision (see Gulland & Powell, *Colleges, Fraternities and Sororities*, cited in Section 10.2.2).

---

<sup>11</sup>Cases and authorities are collected in Cheryl M. Bailey, Annot., “Tort Liability of College, University, or Fraternity or Sorority for Injury or Death of Member or Prospective Member by Hazing or Initiation Activity,” 68 A.L.R.4th 228.

Colleges and universities have been codefendants with fraternities in several cases. In most of these cases, the institution has escaped liability. For example, in *Thomas v. Lamar University-Beaumont*, 830 S.W.2d 217 (Tex. Ct. App. 1992), the mother of a student who died as a result of pledge hazing sued both the fraternity and the university, which owned the track that was used during the hazing incident. The plaintiff asserted that the university had waived its sovereign immunity because it had failed to supervise those who used its track. The trial court determined that the university had no duty of supervision and awarded summary judgment for the university. The appellate court affirmed.

In *Estate of Hernandez v. Board of Regents*, 838 P.2d 1283 (Ariz. Ct. App. 1991), the personal representative of a man killed in an automobile accident caused by an intoxicated fraternity member sued the University of Arizona and the fraternity. The plaintiff asserted that the university was negligent in continuing to lease the fraternity house to the house corporation when it knew that the fraternity served alcohol to students who were under the legal drinking age of twenty-one.

The plaintiff cited the "Greek Relationship Statement," which required all fraternities to participate in an alcohol awareness educational program, as evidence of the university's assumption of a duty to supervise. The statement also required an upper-division student to be assigned to each fraternal organization to educate its members about responsible conduct relating to alcohol. Furthermore, the university employed a staff member who was responsible for administering its policies on the activities of fraternities and sororities. Despite these attempts to suggest that the university had assumed a duty to supervise the activities of fraternities, the court applied Arizona's social host law, which absolved both the fraternity and the university of liability and affirmed the trial court's award of summary judgment.

The Supreme Court of Arizona reversed the trial court's award of summary judgment to the defendant fraternity and the individual fraternity members and pledges (866 P.2d 1330 (Ariz. 1994)). The court said that the lower courts had misinterpreted Arizona's social host law. It did not immunize nonlicensees (social hosts, as compared with bar owners) who served individuals who were under the legal drinking age. The immunity, said the court, applies only to entities that are licensed to serve alcohol, not social hosts. Moreover, the court also ruled that state tort law provided a liability theory for one who provides alcohol to an underage individual who then drives a car, stating that "a minor is similar to an adult who has diminished judgment and capacity to control his alcohol consumption" (866 P.2d at 1341).

On remand, the trial court entered summary judgment in favor of the national fraternity and various individual members and pledges of the local chapter. The appellate court then reversed the summary judgments that had been granted the individual fraternity members and pledges, noting that a jury could find that each individual knew that alcohol would be served to minors, and that his contribution to the fund to purchase the alcohol made him a participant in an illegal venture. Even those pledges who had not yet contributed to the fund were participants in the illegal venture, said the appellate court (924

P.2d 1036 (Ariz. Ct. App. 1995)). Regarding the national fraternity, the appellate court stated:

The national fraternity, having sponsored what amounts to a group of local drinking clubs, cannot disclaim responsibility for the risks of what it has sponsored. . . . That a duty exists in this circumstance was implicitly admitted by the act of the national fraternity in sending to local chapters instructions to abide by local laws and university regulations in serving alcohol at chapter functions. . . . The argument that the national fraternity had no power to control the activities of the local chapter or its members is belied by the much stricter alcohol policy adopted by the local chapter at the request of the national after the incident in this case [924 P.2d at 1038–39].

The court nevertheless affirmed summary judgment for the national fraternity on other grounds, including *respondeat superior* and landlord-tenant law.

The defendants appealed again, to the Arizona Supreme Court, which addressed only the arguments of the pledges. Reversing the intermediate appellate court's ruling with respect to the pledges, the Arizona Supreme Court reinstated the trial court's summary judgment on their behalf (*Hernandez-Wheeler v. Flavio*, 930 P.2d 1309 (Ariz. 1997)). The court noted that the pledges had no control over the arrangements for the party and did not contribute funds or purchase any alcohol, compared with the members of the fraternity who acted through a committee to purchase and distribute the alcohol to minors. The court therefore ruled as a matter of law that the pledges did not participate in the joint venture. The court left undisturbed the intermediate appellate court's rulings regarding the national fraternity and the individual members of the local chapter.

When the student's own behavior is a cause of the injury, the courts have typically refused to hold colleges or fraternities liable for damages. In *Whitlock v. University of Denver*, 744 P.2d 54 (Colo. 1987), the Colorado Supreme Court rejected a student's contention that the university had undertaken to regulate the use of a trampoline in the yard of a fraternity house, even though the university owned the land and had regulated other potentially dangerous activities in the past. Similarly, students injured in social events sponsored by fraternities have not prevailed when the injury was a result of the student's voluntary and intentional action. For example, in *Foster v. Purdue University*, 567 N.E.2d 865 (Ind. Ct. App. 1991), a student who became a quadriplegic after diving head-first into a fraternity's "water slide" was unsuccessful in his suit against both the university and the fraternity of which he was a member. Similarly, in *Hughes v. Beta Upsilon Building Ass'n.*, 619 A.2d 525 (Maine 1993), a student who was paralyzed after diving into a muddy field on the fraternity's property at the University of Maine was unsuccessful because the court ruled that the Building Association, landlord for the local fraternity chapter, was not responsible for the chapter's activities.

When, however, the injury is a result of misconduct by *other* fraternity members, individual and organizational liability may attach. Particularly in cases where pledges have been forced to consume large amounts of alcohol as part

of a hazing ritual, fraternities and their members have been held responsible for damages.<sup>12</sup> Because of the increasing tendency of plaintiffs to look to national fraternities for damages, several national fraternities have developed risk management information and training programs for local chapters. College administrators responsible for oversight of fraternal organizations should work with national fraternities to advance their mutual interest in minimizing dangerous activity, student injuries, and ensuing legal liability. Given the seriousness of injuries related to misconduct by fraternities and their members, administrators should examine their institutional regulations, their relationship or recognition statements, and their institutional code of student conduct to ascertain the extent of the college's potential liability. Educational programs regarding the responsible use of alcohol, swift disciplinary action for breaches of the code of student conduct, and monitoring (rather than regulation) of the activities of fraternal organizations may reduce the likelihood of harm to students or others and of liability for the college.

For example, a Louisiana appellate court upheld a jury award of liability against Louisiana Tech on the grounds of negligence, stemming from an injury incurred by a student who encountered hazing during the pledging process. In *Morrison v. Kappa Alpha Psi Fraternity*, 738 So. 2d 1105 (La. Ct. App. 1999), *appeal denied*, 749 So. 2d 634 (La. 1999), a student at Louisiana Tech had been beaten by the president of the local chapter of Kappa Alpha Psi during pledging activities. The student sustained serious head and neck injuries, and reported the assault to the campus police. After an investigation, both the university and the national chapter of the fraternity suspended the local chapter. The injured student sued the university, the national fraternity, the local chapter, and the assailant. A jury found the university, the national fraternity, and the assailant equally liable, and awarded \$312,000 in compensatory damages. (The charges against the local chapter were dismissed on procedural grounds.) The jury found that the university owed the student a duty to protect him against the tortious actions of fellow students. The university appealed.

The appellate court affirmed the jury verdict, ruling that the university's own actions and its knowledge of previous hazing incidents by the local chapter created a special relationship between the injured student and the institution. A university official had received written and oral complaints about hazing by the local chapter, and a local judge had called the official to express his concerns about hazing by chapter members that his son had experienced. Although the

---

<sup>12</sup>In *Ballou v. Sigma Nu General Fraternity*, 352 S.E.2d 488 (S.C. Ct. App. 1986), a state appellate court found that the national fraternity owes a duty of care to initiates not to injure them; the court therefore held that fraternity responsible for damages related to a pledge's wrongful death from alcohol poisoning. A student who sustained serious neurological damage after forced intoxication was similarly successful in *Quinn v. Sigma Rho Chapter*, 507 N.E.2d 1193 (Ill. App. Ct. 1987), as was the father of a student who died after being forced to drink as part of an initiation ritual for the lacrosse team at Western Illinois University. In that case, the students were found liable as individuals (*Haben v. Anderson*, 597 N.E.2d 655 (Ill. App. Ct. 1993)). For a review of the potential liability of national fraternities for hazing injuries, see Note, "Alcohol and Hazing Risks in College Fraternities: Re-evaluating Vicarious and Custodial Liability of National Fraternities," 7 *Rev. Litig.* 191 (1988).

university cited the ruling of the Louisiana Supreme Court in *Pitre* (Section 3.3.2.1), which denied that the university had a duty to protect students against the dangers of sledding down a hillside, the court replied that “the pledging process to join a fraternal organization is not an activity which an adult college student would regard as hazardous.” The court found that the university’s prior knowledge of hazing activity and the potential dangers of hazing justified the creation of a special relationship, which thus imposed a duty on the university to monitor the chapter’s behavior and to prevent further hazing incidents.

This ruling is directly contrary to a ruling by the Supreme Court of Idaho, which rejected the “special relationship” standard in *Coghlan v. Beta Theta Pi et al.*, 987 P.2d 300 (Idaho 1999). In *Coghlan*, a student at the University of Idaho sued three national fraternities whose local chapter parties she had attended, her own sorority, and the university for injuries she sustained when, after becoming intoxicated at fraternity parties, she returned to her sorority house and fell off a third-floor fire escape. She sought to hold the university liable under the “special relationship” doctrine, arguing that such a relationship created a duty to protect her from the risks associated with her own intoxication. The court rejected that claim, citing *Beach* and *Bradshaw* (Section 3.3.2). But the court was somewhat more sympathetic to the plaintiff’s claim that the university had assumed a duty to the student because of its own behavior. The student argued that because two university employees were present at one of the fraternity parties and should have known that underage students were being served alcohol, the university had assumed a duty to protect her. Although the court declined to conclude as a matter of law that the university had assumed such a duty, it remanded the case for further litigation, overturning the trial court’s dismissal of the action.

The majority rule, however, appears still to be that the college has no duty to protect an individual from injury resulting from a student’s or fraternal organization’s misconduct. For example, in *Lloyd v. Alpha Phi Alpha and Cornell University*, 1999 U.S. Dist. LEXIS 906 (N.D.N.Y., January 26, 1999), a student injured during hazing by a fraternity sued Cornell under three theories: negligent supervision and control, premises liability, and breach of implied contract. The court rejected all three claims. With respect to the negligent supervision claim, the court ruled that, despite the fact that Cornell published materials about the dangers of hazing and provided training to fraternities to help them improve the pledging process, it had not assumed a duty to supervise the student-plaintiff and prevent him from participating in the pledging process because “this involvement does not rise to the level of encouraging and monitoring pledge participation.” The court rejected the plaintiff’s premises liability claim because it found that Cornell had no knowledge that recent hazing activities had taken place in the fraternity house (which Cornell owned). The local chapter had been forbidden by the national fraternity from taking in new members, so Cornell was entitled to presume that no pledging, and thus no hazing, was occurring. And although Cornell required fraternities to have an advisor, that did not transform the advisor into an agent of Cornell. The court rejected the breach of contract claim because the university had not promised to protect

students from hazing. In fact, because hazing was a violation of Cornell's code of student conduct, it was the obligation of students, not the university, to refrain from hazing. Although Cornell argued that the plaintiff had assumed the risk of injury by participating in hazing activities, a theory that would bar a negligence claim, the court explicitly rejected this reasoning, which the Alabama Supreme Court had used in *Jones v. Kappa Alpha Order, Inc.* (Section 10.2.4), saying that New York law differed from Alabama law in this regard.

In *Rothbard v. Colgate University*, 652 N.Y.S.2d 146 (N.Y. App. Div. 1997), a New York intermediate appeals court rejected a fraternity member's claim that the university should be held liable for injuries resulting from his fall, while intoxicated, from the portico outside his window. University rules prohibited students from both underage drinking and from standing on roofs or porticos. The fraternity member claimed that the university should have been aware that both policies were routinely violated at the fraternity house and that the university's failure to enforce its own rules caused his injuries. The court held that the inclusion of rules in the student handbook did not impose a duty upon the university to supervise the plaintiff and take affirmative steps to prevent him from violating the rules. Quite succinctly, the court held that an institution has no duty to shield students from their own dangerous activities.

Although, for the most part, colleges appear to be shielded from a duty to supervise students and fraternal organizations, they may face liability under landlord-tenant law. A recent ruling by the Supreme Court of Nebraska held that the university has a duty to students to protect them from foreseeable risks when those students live in campus housing. In *Knoll v. Board of Regents of the University of Nebraska*, 601 N.W.2d 757 (1999), the state supreme court did not discuss the special relationship theory, but rather, the duty of a landowner to an invitee. In this case, which is discussed more fully in Section 8.6.2, a pledge was injured as the result of a fraternity's hazing activities. The court's analysis focused primarily on the fact that the student was abducted on university property, that the university considered fraternity houses to be student housing units that were subject to regulation by the university, and that university policy required that the plaintiff live in a university housing unit. The court ruled that the university had notice of earlier hazing activities by members of other fraternities, and also had notice of several criminal incidents perpetrated by members of the fraternity that abducted the plaintiff. Therefore, said the court, the abduction and hazing of the plaintiff were foreseeable and created "a landowner-invitee duty to students to take reasonable steps to protect" them against such actions and the resultant harm. The court returned the case to the trial court for determination of whether the university breached its duty to act reasonably and whether the university's inaction was the proximate cause of the plaintiff's injury.<sup>13</sup>

---

<sup>13</sup>For a case in which a court rejected a student's attempt to hold both the university and the fraternity responsible for a sexual assault that occurred in an off-campus house rented by a group of fraternity members, but not leased or owned by either the fraternity or the university, see *Ostrander v. Duggan*, 341 F.3d 745 (8th Cir. 2003).

Given the volume of litigation by students and others who allege injuries as a result of the actions of local fraternities or their members, colleges and national fraternities—both of which have been found liable in several of these cases—should work to reduce the amount of underage drinking and to educate students about the dangers of hazing. (These and other suggestions are contained in Gregory E. Rutledge, “Hell Night Hath No Fury Like a Pledge Scorned . . . and Injured: Hazing Litigation in U.S. Colleges and Universities,” 25 *J. Coll. & Univ. Law* 361 (1998).)

**10.2.4. Liability of fraternal organizations or their members.** Even if a college or university is not sued, fraternities and their members are facing litigation by students, the parents of students who died as a result of hazing incidents, or other individuals who were injured as a result of social events or hazing by members of fraternal organizations. The cases are fact sensitive, and often turn on whether the court views the excessive drinking or otherwise dangerous behavior as voluntary on the part of the injured student or coerced as part of a hazing ritual. Most of the cases involve excessive alcohol consumption, often by underage students.

The social host and alcohol control laws, which vary by state, cover some of the legal issues related to a fraternal organization’s liability for injuries resulting from serving alcohol at a fraternity.<sup>14</sup> Where a first-year coed was sexually assaulted by an alumni member in a fraternity house after a homecoming party at Indiana University, the court held that the local fraternity chapter and the national fraternity had no duty to protect the invitee from sexual assault, nor was the local chapter liable under Indiana’s Dram Shop Act (subsection 3.3.2.4). The court held that the attack was not foreseeable merely because alcohol was served to the alumni member, and that there was no actual evidence that the alumni member drank beer provided by the fraternity (*Motz v. Johnson*, 651 N.E.2d 1163 (Ind. App. 1995)). On appeal, the Indiana Supreme Court upheld the Dram Shop ruling for the fraternities, but reversed the trial court’s summary judgment award on the issue of duty (*Delta Tau Delta v. Johnson*, 712 N.E.2d 968 (Ind. 1999)). The fraternity did have a duty to an invitee to exercise reasonable care for her protection, said the court. Because of similar assaults at the fraternity house in the two previous years, and because the national fraternity had sent educational information about the correlation between underage drinking at fraternities and assault, a jury could reasonably decide that the assault on the plaintiff was foreseeable, and thus summary judgment was inappropriate.

Cases in which injured parties attempt to hold fraternities liable seem to turn on whether the dangerous conduct (usually, but not always, excessive drinking) was voluntary or coerced. If the conduct occurred during hazing, a

---

<sup>14</sup>If fraternity members serve alcohol to underage guests, they may face criminal liability. Cases and authorities are collected at Milton Roberts, Annot., “Criminal Liability of Member or Agent of Private Club or Association, or of Owner or Lessor of Its Premises, for Violation of State or Local Liquor or Gambling Laws Thereon,” 98 A.L.R.3d 694. For a summary of the *Hernandez* case, in which the Arizona Supreme Court interpreted its social host law to hold fraternity members who purchased alcohol for underage drinkers liable, see Section 10.2.3.

court may conclude that it was coerced. For example, in *Oja v. Grand Chapter of Theta Chi Fraternity, Inc.*, 684 N.Y.S.2d 344 (N.Y. Sup. Ct. App. Div. 1999), the parents of a student who died after consuming excessive amounts of alcohol during a hazing ritual sued the local chapter and several of its members. The appellate court affirmed the trial court's refusal to dismiss the parents' claims of negligence and violations of the anti-hazing statute. The court ruled that the plaintiffs had alleged facts that could support a finding that the deceased student's intoxication was not voluntary, and that the failure of the fraternity members to care for the student after he became intoxicated could also warrant a finding of liability.

In *Nisbet v. Bucher*, 949 S.W.2d 111 (Mo. Ct. App. 1997), parents of a student who died after a hazing ritual filed a wrongful death suit against the fraternities and another association, alleging that the students forced their son to consume alcohol, including a "heated preparation of grain alcohol and peas"; that they coerced him to drink until he became intoxicated and even after he became unconscious; and that they left him face down and unattended, delaying medical treatment for him. The appellate court rejected the defendants' argument that the student was the proximate cause of his own death, noting that participation in initiation activities was required for new members, and that the student was pressured to drink by the organization's members.

But not all courts view hazing as coerced behavior. In *Ex Parte Barran (Jones v. Kappa Alpha Order)*, 730 So. 2d 203 (Ala. 1998), the Supreme Court of Alabama rejected a former Auburn University student's tort claims against a fraternity he had pledged. The student had claimed negligence, assault and battery, negligent supervision, conspiracy, and the tort of outrage. He had endured the hazing for an entire academic year and had been suspended at the end of his first year for poor academic performance. The court noted that the student submitted voluntarily to the hazing, that 20 to 40 percent of the pledge class had withdrawn from the fraternity because of the hazing, and that the student had lied to university officials and to his parents when asked whether he was being hazed. Because the student could have stopped the hazing by withdrawing from the fraternity, the court ruled that he assumed the risk of injury by remaining.

In *Kenner v. Kappa Alpha Psi Fraternity*, 808 A.2d 178 (Pa. Super. 2002), a student seriously injured when he was beaten during a hazing ritual sued both the national fraternity and the members of the local chapter who beat him. Although the trial court awarded summary judgment to the fraternity and its members, the state appellate court ruled that the case must go to trial. The appellate court found that the fraternity owed the student a duty to protect him from harm because the national fraternity knew that there had been earlier incidents of hazing by the local chapter. The national fraternity had a policy against hazing, which created a duty to protect initiates from that behavior. The court went on to rule that the fraternity had not breached its duty to the plaintiff because it had suspended the local chapter for two years for violations of the national fraternity's hazing policy, which the members understood was punishment for previous hazing incidents. But the court ruled that the fraternity's chapter advisor may have breached his individual duty to protect the plaintiff from injury because the advisor had not warned chapter members

against hazing nor discussed the national fraternity's policy against hazing. Prohibition of hazing by another national fraternity resulted in a summary judgment in its favor in *Walker v. Phi Beta Sigma Fraternity*, 706 So. 2d 525 (La. Ct. App. 1997); the court ruled that the national was not in a position to control the day-to-day activities of its local chapters.

The Michigan Court of Appeals held that the Tau Kappa Epsilon national fraternity was not liable for a fatal accident involving alcohol supplied by the local chapter. In *Colangelo v. Theta Psi Chapter of Tau Kappa Epsilon*, 517 N.W.2d 289 (Mich. Ct. App. 1994), the court reasoned that the national fraternity had no duty to supervise the local chapter's daily activities, and that the national fraternity could not have foreseen that the local chapter would have a party that would result in intoxication and injury. The court further reasoned that the national fraternity was ill equipped to supervise the drinking and other activities carried on by local chapters, and that to impose a duty would result in fundamentally changing the role of national fraternities "from an instructor of the principles, rituals, and traditions of the fraternity to a central planning and policing authority" (517 N.W.2d at 292). A similar result, using similar reasoning, was reached in *Walker v. Phi Beta Sigma Fraternity*, 706 So. 2d 525 (La. Ct. App. 1997).

If a fraternal organization has undertaken to protect a pledge or member from harm, failure to do so may breach a duty. The Idaho Supreme Court reversed a summary judgment ruling for a sorority and remanded for trial on the issue of whether the sorority had assumed a duty to protect one of its new members. The plaintiff, a student at the University of Idaho, had fallen out of a third-story window of her sorority house after returning, highly intoxicated, from two fraternity parties at which alcohol was served. Because the sorority had encouraged the plaintiff, who was too young to drink legally, to attend the fraternity parties, had assigned an older sorority member as a "guardian angel" to supervise her at the party (but who refused to do so), and because sorority members had escorted the plaintiff home and left her, unattended and still intoxicated, a material issue of fact existed as to whether the sorority voluntarily assumed a duty of reasonable care to supervise and protect the plaintiff until she was no longer intoxicated (*Coghlan v. Beta Theta Pi Fraternity*, 987 P.2d 300 (Idaho 1999)).

Plaintiffs seeking to hold fraternal organizations liable for injuries to members have not been successful when the conduct was not coerced. For example, in *Prime v. Beta Gamma Chapter of Pi Kappa Alpha*, 47 P.3d 402 (Kan. 2002), the Kansas Supreme Court dismissed a negligence action against the local fraternity and several individual members. The plaintiff voluntarily drank the alcohol that led to his injuries, according to the court, and because he was not required to do so, liability did not attach. Similarly, the parents of a college junior who drowned in a river after drinking beer at a fraternity party were unsuccessful in holding the local and national fraternities responsible. In *Rocha v. Pi Kappa Alpha*, 69 S.W.3d 315 (Tex. Ct. App. 2002), the court ruled that the fraternities owed no duty to the deceased student; there was no evidence that the fraternity had planned the swimming trip, and simply because some of the individuals who participated in the swimming outing were fraternity members did not make the event a fraternity-sponsored social occasion. Nor, according to the Iowa Supreme Court, does a special relationship exist between a fraternity

and one of its members if the misconduct (here, excessive drinking) was not part of an initiation ritual or hazing (*Garofalo v. Lambda Chi Alpha*, 616 N.W.2d 647 (Iowa 2000)).

In addition to being sued under negligence theories, a few fraternities have faced litigation brought on the grounds of premises liability. For example, in *Brakeman v. Theta Lambda Chapter of Pi Kappa Alpha*, 2002 Iowa App. LEXIS 1258 (Iowa Ct. App. 2002) (unpublished), a student who fell out of the upper window of a bar at which a fraternity was sponsoring a party sued the fraternity. The court of appeals reversed a jury verdict for the plaintiff, ruling that the fraternity did not have the requisite control of the premises to incur liability, as the staff of the bar were present during the party and had the responsibility to ensure that they served only those of legal age. Similarly, an attempt by a woman assaulted at an off-campus house rented by several fraternity members to hold the fraternity responsible under a premises liability theory failed because the fraternity did not own or control the premises (*Ostrander v. Duggan*, 341 F.3d 745 (8th Cir. 2003)).

The U.S. Department of Justice has determined that fraternity or sorority houses owned and operated by a college or university are covered by Title III of the Americans With Disabilities Act (see Section 13.2.11). (See Technical Assistance Letter #488 (May 2002), available at <http://www.usdoj.gov/crt/foia/talindex.htm>.) This would require a new fraternity or sorority house to be constructed in compliance with Title III access specifications and would also be relevant to renovation of such a building.

### **Sec. 10.3. The Student Press**

**10.3.1. General principles.** In general, student newspapers and other student publications have the same rights and responsibilities as other student organizations on campus (see Section 10.1 above), and the student journalists have the same rights and responsibilities as other students.<sup>15</sup> The rights of student press organizations and their staffs (and contributors) will vary considerably, however, depending on whether the institution is public or private. This is because the key federal constitutional rights of freedom of the press and freedom of association protect the student press in its relations with public institutions; in private institutions these constitutional rights do not apply (see Section 1.5.2), and the student press' relationship with the institution is primarily a contractual relationship that may vary from institution to institution (see Section 8.1.3).<sup>16</sup>

---

<sup>15</sup>Regarding responsibilities, however, student journalists may be subject to ethical obligations that differ from those of other students. For examples and discussion, see Gary Pavela, "The Ethical Principles for College Journalists," *Synthesis, Law & Pol'y. Higher Educ.* Vol. 15, no. 2 (Fall 2003), pp. 1069-1070, 1088.

<sup>16</sup>If a student publication at a private institution is restricted by an outside governmental entity, however, it is protected by federal constitutional rights in much the same way as a student publication at a public institution would be protected. Examples would include a libel suit in which a private institution's student newspaper is a defendant subject to a court's jurisdiction (see Section 10.3.6 below) and a search of the office of a private institution's student newspaper by local police officers (see Section 11.5).

Sections 10.3.2 through 10.3.6 below focus primarily on the First Amendment free press rights of student publications at public institutions. Section 10.3.7 focuses on private institutions. Other First Amendment issues pertinent to student publications are discussed in Sections 8.1.4, 8.5.1, 9.5.6, and 9.6.

Fourth Amendment rights regarding searches and seizures may also become implicated in a public institution's relationship with student publications. In *Desyllas v. Bernstine*, 351 F.3d 934 (9th Cir. 2003), for example, the editor of a student newspaper claimed that the institution's public safety director and a campus police officer had violated his constitutional rights when they sought to recover some missing confidential student records that they believed were in the editor's possession. They had temporarily secured the newspaper office by locking the door with a "clam shell" lock; had allegedly detained the editor temporarily for questioning about the missing records; and had then convinced the editor to surrender the records. The court held that, under the circumstances (set out at length in the opinion), none of the actions—the locking of the office, the alleged detention of the editor, nor the recovery of the records—was an unlawful "seizure" under the Fourth Amendment. The court determined, moreover, that the First Amendment generally does not provide any additional protections from searches and seizures in such circumstances beyond what the Fourth Amendment already provides (see *Zurcher v. Stanford Daily*, 436 U.S. 547 (1978), discussed in Section 11.5), and that the student editor's position with the student newspaper did not accord him any greater rights under the Fourth Amendment than any other student would have in similar circumstances. (In circumstances in which a seizure directly "interfere[s] with the [newspaper's] publication of the news" (*Desyllas*, 351 F.3d at 942), however, the First Amendment would provide additional protections; see, for example, *Kincaid v. Gibson*, discussed in Section 10.3.3 below.)<sup>17</sup>

Freedom of the press is perhaps the most staunchly guarded of all First Amendment rights. The right to a free press protects student publications from virtually all encroachments on their editorial prerogatives by public institutions. In a series of forceful cases, courts have implemented this student press freedom, using First Amendment principles akin to those that would protect a big-city daily from government interference.<sup>18</sup>

The chief concern of the First Amendment's free press guarantee is censorship. Thus, whenever a public institution seeks to control or coercively influence the content of a student publication, it will have a legal problem

---

<sup>17</sup>For extensive resources on the rights of student journalists, see the Web site of the Student Press Law Center, available at <http://www.splc.org>.

<sup>18</sup>Cases are collected in Donald T. Kramer, Annot., "Validity, Under Federal Constitution, of Public School or State College Regulation of Student Newspapers, Magazines, or Other Publications—Federal Cases," 16 A.L.R. Fed. 182. The more recent cases in this line do suggest that an exception to the principle of broad protection may operate if the student publication is part of a course or other curriculum-related activity, or is otherwise characterized as a "non-public forum." See, for example, *Hosty v. Carter*, 412 F.3d 731 (7th Cir. 2005) (*en banc*), discussed in Section 10.3.3 below.

on its hands.<sup>19</sup> The problem will be exacerbated if the institution imposes a prior restraint on publication—that is, a prohibition imposed in advance of publication rather than a sanction imposed subsequently (see generally Section 9.5.4). Conversely, the institution’s legal problems will be alleviated if the institution’s regulations do not affect the message, ideas, or subject matter of the publication and do not permit prior restraints on publication. Such “neutral” regulations might involve, for example, the allocation of office space, procedures for payment of printing costs, or limitations on the time, place, or manner of distribution.

### **10.3.2. Mandatory student fee allocations to student publications.**

Objecting students have no more right to challenge the allocation of mandatory student fees to student newspapers that express a particular viewpoint than they have to challenge such allocations to other student organizations expressing particular viewpoints. These issues are now controlled, at least for public institutions and their recognized student organizations that produce publications, by the principles established by the U.S. Supreme Court in *Board of Regents, University of Wisconsin v. Southworth*, discussed in Section 10.1.2 above. Long before *Southworth*, however, lower federal courts had protected student newspapers from losing their student fee allocations because they had editorial viewpoints with which other students disagreed.

In *Larson v. Board of Regents of the University of Nebraska*, 204 N.W.2d 568 (Neb. 1973), for example, the court rejected a student challenge to mandatory fee allocations for a student newspaper whose views the students opposed. The next year, in *Arrington v. Taylor*, 380 F. Supp. 1348 (M.D.N.C. 1974), *affirmed without published opinion*, 526 F.2d 587 (4th Cir. 1975), the court rejected a challenge to the University of North Carolina’s use of mandatory fees to subsidize its campus newspaper, the *Daily Tar Heel*. Since the paper did not purport to speak for the entire student body and its existence did not inhibit students from expressing or supporting opposing viewpoints, the subsidy did not infringe First Amendment rights. Eight years later, the same court reconsidered and reaffirmed *Arrington* in *Kania v. Fordham*, 702 F.2d 475 (4th Cir. 1983); and in 1992 another U.S. Court of Appeals (citing *Kania*) reached the same result (*Hays County Guardian v. Supple*, 969 F.2d 111, 123 (5th Cir. 1992)).

*Stanley v. Magrath*, 719 F.2d 279 (8th Cir. 1983), provides another instructive example of a court rejecting an attempt to terminate a student newspaper’s mandatory fee allocations. The University of Minnesota had changed the funding mechanism of one of its student newspapers by eliminating mandatory

---

<sup>19</sup>Legal problems may also arise if a public institution seeks to regulate the distribution, on campus, of newspapers published off campus and not recognized or supported by the institution. Students may claim First Amendment rights to obtain such newspapers. In *Hays County Guardian v. Supple*, 969 F.2d 111 (5th Cir. 1992), for example, the court invalidated restrictions on distribution of a free newspaper distributed throughout the county. Other problems may arise when public institutions prohibit the sale of publications on campus; see *Spartacus Youth League v. Board of Trustees of Illinois Industrial University*, 502 F. Supp. 789, 799–803, 805–6 (appendix) (N.D. Ill. 1980). These types of problems would now likely be resolved using principles developed by the U.S. Supreme Court in *City of Cincinnati v. Discovery Network*, 507 U.S. 410 (1993).

student fees and instead allowing students to elect individually whether or not a portion of their fees would go to the *Minnesota Daily*. Implementation of this refundable fee system came on the heels of intense criticism from students, faculty, religious groups, and the state legislature over a satirical “Humor Issue” of the paper. Although the university argued that the change in funding mechanism came in response to general student objections about having to fund the paper (which the court assumed, *arguendo*, would be a legitimate motive for the change in funding), the court pointed to evidence suggesting that, at least in part, the change was impermissibly in retaliation for the content of the Humor Issue. Holding that the school failed to carry its burden of showing that the permissible motive would have produced the same result, even in the absence of the impermissible retaliatory motive, the court struck down the funding change.

Shortly before its decision in the *Southworth* case, the U.S. Supreme Court decided *Rosenberger v. Rector and Visitors of University of Virginia*, 515 U.S. 819 (1995) (further discussed in Section 10.1.5 above), its first pronouncement on mandatory student fee allocations for student publications. The Court’s reasoning in *Rosenberger* is consistent with the principles later developed in *Southworth*. But *Rosenberger* also went beyond the analysis in *Southworth*, and in the earlier lower court cases, in two important respects: (1) *Rosenberger* focuses specifically on viewpoint discrimination issues that may arise when a university or its student government decides to fund some student publications but not others; and (2) *Rosenberger* addresses the special situation that arises when a student publication has an editorial policy based on a religious perspective.

The plaintiffs in *Rosenberger* were students who published a magazine titled “Wide Awake: A Christian Perspective at the University of Virginia.” As described by the U.S. Supreme Court:

The paper’s Christian viewpoint was evident from the first issue, in which its editors wrote that the journal “offers a Christian perspective on both personal and community issues, especially those relevant to college students at the University of Virginia.” The editors committed the paper to a two-fold mission: “to challenge Christians to live, in word and deed, according to the faith they proclaim and to encourage students to consider what a personal relationship with Jesus Christ means.” The first issue had articles about racism, crisis pregnancy, stress, prayer, C. S. Lewis’ ideas about evil and free will, and reviews of religious music. In the next two issues, *Wide Awake* featured stories about homosexuality, Christian missionary work, and eating disorders, as well as music reviews and interviews with University professors. Each page of *Wide Awake*, and the end of each article or review, is marked by a cross. The advertisements carried in *Wide Awake* also reveal the Christian perspective of the journal. For the most part, the advertisers are churches, centers for Christian study, or Christian bookstores [515 U.S. at 826].

The university’s guidelines for student fee allocations (“Guidelines”) permitted “student news, information, opinion, entertainment, or academic communications media groups,” among other groups, to apply for allocations that

the university would then use to pay each group's bills from outside contractors that printed its publication. The Guidelines provided, however, that student groups could not use fee allocations to support "religious activity," defined as activity that "primarily promotes or manifests a particular belief in or about a deity or an ultimate reality." Fifteen student publications received funding, but the Wide Awake publication did not because the student council determined that it was a religious activity. Wide Awake's members challenged this denial as a violation of their free speech and press rights under the First Amendment.

The U.S. Supreme Court upheld Wide Awake's claim because the university's action was a kind of censorship based on the publication's viewpoint. The Court then addressed the additional considerations that arose in the case because Wide Awake published *religious* viewpoints rather than *secular* viewpoints based on politics or culture. Since Wide Awake sought to use public (university) funds to subsidize religious viewpoints, the First Amendment establishment clause also became a focus of the analysis. The Court, however, rejected the argument that funding Wide Awake would violate the establishment clause (see the discussion in Section 10.1.5 above). Concluding that the university funding would be "neutral toward religion," the Court emphasized that this funding was part of a broad program that "support[ed] various student enterprises, including the publication of newspapers, in recognition of the diversity and creativity of student life." The Court also emphasized that:

[the university's Guidelines] have a separate classification for, and do not make third-party payments on behalf of, "religious organizations," which are those "whose purpose is to practice a devotion to an acknowledged ultimate reality or deity." The category of support here is for "student news, information, opinion, entertainment, or academic communications media groups," of which Wide Awake was 1 of 15 in the 1990 school year. WAP did not seek a subsidy because of its Christian editorial viewpoint; it sought funding as a student journal, which it was [515 U.S. at 840].

**10.3.3. Permissible scope of institutional regulation.** Three classic 1970s cases—the *Joyner*, *Bazaar*, and *Schiff* cases, discussed below—illustrate the strength and scope of First Amendment protection accorded the student press in public institutions. These cases also illustrate the different techniques by which an institution may seek to regulate a student newspaper, and they explain when and why such techniques may be considered unconstitutional censorship.

In *Joyner v. Whiting*, 477 F.2d 456 (4th Cir. 1973), the president of North Carolina Central University had permanently terminated university financial support for the campus newspaper. The president asserted that the newspaper had printed articles urging segregation and had advocated the maintenance of an all-black university. The court held that the president's action violated the student staff's First Amendment rights:

It may well be that a college need not establish a campus newspaper, or, if a paper has been established, the college may permanently discontinue publication for reasons wholly unrelated to the First Amendment. But if a college has a

student newspaper, its publication cannot be suppressed because college officials dislike its editorial comment. . . .

The principles reaffirmed in *Healy* [see *Healy v. James*, discussed in Section 10.1 above] have been extensively applied to strike down every form of censorship of student publications at state-supported institutions. Censorship of constitutionally protected expression cannot be imposed by suspending the editors, suppressing circulation, requiring imprimatur of controversial articles, excising repugnant materials, withdrawing financial support, or asserting any other form of censorial oversight based on the institution's power of the purse [477 F.2d at 460].

The president also asserted, as grounds for terminating the paper's support, that the newspaper would employ only blacks and would not accept advertising from white-owned businesses. While such practices were not protected by the First Amendment and could be enjoined, the court held that the permanent cut-off of funds was an inappropriate remedy for such problems because of its broad effect on all future ability to publish.

In *Bazaar v. Fortune*, 476 F.2d 570, *rehearing*, 489 F.2d 225 (5th Cir. 1973), the University of Mississippi had halted publication of an issue of *Images*, a student literary magazine written and edited with the advice of a professor from the English department, because a university committee had found two stories objectionable on grounds of "taste." While the stories concerned interracial marriage and black pride, the university disclaimed objection on this basis and relied solely on the stories' inclusion of "earthy" language. The university argued that the stories would stir an adverse public reaction, and, since the magazine had a faculty adviser, their publication would reflect badly on the university. The court held that the involvement of a faculty adviser did not enlarge the university's authority over the magazine's content. The university's action violated the First Amendment because

speech cannot be stifled by the state merely because it would perhaps draw an adverse reaction from the majority of people, be they politicians or ordinary citizens, and newspapers. To come forth with such a rule would be to virtually read the First Amendment out of the Constitution and, thus, cost this nation one of its strongest tenets [476 F.2d at 579].

*Schiff v. Williams*, 519 F.2d 257 (5th Cir. 1975), concerned the firing of the editors of the *Atlantic Sun*, the student newspaper of Florida Atlantic University. The university's president based his action on the poor quality of the newspaper and on the editors' failure to respect university guidelines regarding the publication of the paper. The court characterized the president's action as a form of direct control over the paper's content and held that such action violated the First Amendment. Poor quality, even though it "could embarrass, and perhaps bring some element of disrepute to the school," was not a permissible basis on which to limit free speech. The university president in *Schiff* attempted to bolster his case by arguing that the student editors were employees of the state. The court did not give the point the attention it deserved. Presumably, if a

public institution chose to operate its own publication (such as an alumni magazine) and hired a student editor, the institution could fire that student if the technical quality of his or her work was inadequate. The situation in *Schiff* did not fit this model, however, because the newspaper was not set up as the university's own publication. Rather, it was recognized by the university as a publication primarily by and for the student body, and the student editors were paid from a special student activities fee fund under the general control of the student government association.

While arrangements such as those in *Schiff* may insulate a student newspaper from university control, it might nevertheless be argued that a newspaper's receipt of mandatory student fee allocations, and its use of university facilities and equipment, could constitute state action (see Section 1.5.2), thus subjecting the student editors themselves to First Amendment restraints when dealing with other students and with outsiders. In *Mississippi Gay Alliance v. Goude-lock*, 536 F.2d 1073 (5th Cir. 1976), however, the court rejected a state action argument (over a strong dissent) and upheld a student newspaper's refusal to print an ad for a gay counseling service. And in *Sinn v. The Daily Nebraskan*, 829 F.2d 662 (8th Cir. 1987), the court held that the newspaper was not engaged in state action when it refused to print sexual preferences in classified ads. In *Gay and Lesbian Students Ass'n. v. Gohn*, 850 F.2d 361 (8th Cir. 1988), however, the court distinguished *Sinn* and found state action in a situation where the student organization's activity was "not free from university control." Later, in *Leeds v. Meltz*, 85 F.3d 51 (2d Cir. 1996) (discussed further in Section 1.5.2), the court—like the courts in *Goude-lock* and *Sinn*—refused to find that a student newspaper was engaged in state action when it rejected an advertisement submitted to the paper.

In a more recent and highly important case, *Kincaid v. Gibson*, 236 F.3d 342 (6th Cir. 2001) (*en banc*), the court reaffirmed the strong protections of these earlier cases and also confirmed that a confiscation of the printed copies of a student publication will often be considered a classic First Amendment violation. In addition, moving beyond the reasoning in the earlier cases, the court emphasized the importance of "public forum" analysis (see generally Section 9.5.2) in First Amendment cases about student publications.

*Kincaid v. Gibson* concerned a student yearbook, *The Thorobred*, published by students at Kentucky State University (KSU). KSU administrators had confiscated the yearbook covering the 1992–93 and the 1993–94 academic years when the printer delivered it to the university for distribution. The vice president for student affairs (Gibson) claimed that the yearbook was of poor quality and "inappropriate," citing, in particular, the failure to use the school colors on the cover, the lack of captions for many photos, the inappropriateness of the "destination unknown" theme, and the inclusion of current events unrelated to the school. The yearbook's student editor and another student sued the vice president, the president, and members of the board of trustees, claiming that the confiscation violated their First Amendment rights.

Relying in part on *Hazelwood School District v. Kuhlmeier*, 484 U.S. 260 (1988), a case about a high school newspaper, the federal district court granted

the defendants' motion for summary judgment, holding that the yearbook was a "nonpublic forum" and that the university's action was consistent with the principles applicable to nonpublic forums. A three-judge panel of the Sixth Circuit upheld the district court's decision (191 F.3d 719 (6th Cir. 1999)); but on further review the full appellate court, sitting *en banc*, disagreed with the panel, reversed the district court, and ordered it to enter summary judgment for the students.

The *en banc* court applied the leading U.S. Supreme Court public forum cases but, unlike the district court and the three-judge panel, it determined that the yearbook was a "limited public forum." Specifically, the court noted that KSU had a written policy placing the yearbook under the management of the Student Publications Board (SPB) but lodging responsibility for the yearbook's content with the student editors. Although the SPB was to appoint a school employee to act as advisor of the publication, the policy provided that "[i]n order to meet the responsible standards of journalism, an advisor may require changes in the form of materials submitted by students, but such changes must deal only with the form or the time and manner of expressions rather than alteration of content." The written policy thus indicated to the court that the university's "intent" was "to create a limited public forum rather than reserve to itself the right to edit or determine [the yearbook's] content."

Following the teachings of the *Rosenberger* case (Section 10.3.2 above), the *en banc* court declined to follow the Court's decision in *Hazelwood*, the high school newspaper case. According to the court: "There can be no serious argument about the fact that, in its most basic form, the yearbook serves as a forum in which student editors present pictures, captions, and other written material, and that these materials constitute expression for purposes of the First Amendment." In particular, the yearbook was distinguishable from the newspaper in *Hazelwood* because it was not a "closely-monitored classroom activity in which an instructor assigns student editors a grade, or in which a university official edits content." Moreover, in a university setting, unlike a high school setting, the editors and readers of the yearbook "are likely to be young adults." Therefore, "there can be no justification for suppressing the yearbook on the grounds that it might be 'unsuitable for immature audiences'" (quoting *Hazelwood*, 484 U.S. at 271).

On the basis of these factors, the court concluded that the yearbook was a limited public forum open for student expression. In such a forum,

the government may impose only reasonable time, place and manner regulations, and content-based regulations that are narrowly drawn to effectuate a compelling state interest. . . . In addition, as with all manner of fora, the government may not suppress expression on the basis that state officials oppose a speaker's view [236 F.3d at 354].

The court then found that "KSU officials ran afoul of these restrictions" when they confiscated the copies of *The Thorobred* without notification or explanation and refused to distribute them. Such action

is not a reasonable time, place, or manner regulation of expressive activity. . . . Nor is it a narrowly crafted regulation designed to preserve a compelling state interest. . . . [There was] no other student forum for recording words and pictures to reflect the experience of KSU students during the 1992 through 1994 school years. Indeed, the likelihood of the existence of any such alternative forum at this late date, when virtually all of the students who were at KSU in the early 1990s will have surely moved on, is extraordinarily slim. Accordingly, the KSU officials' confiscation of the yearbooks violates the First Amendment, and the university has no constitutionally valid reason to withhold distribution of the 1992–94 *Thorobred* from KSU students from that era [236 F.3d at 354].

The *en banc* court especially emphasized that the university's confiscation was based on the yearbook's content, and that "[c]onfiscation ranks with forced government speech as amongst the purest forms of content alteration." According to the court:

[T]he record makes clear that Gibson sought to regulate the content of the 1992–94 yearbook: in addition to complaining about the yearbook's color, lack of captions, and overall quality, Gibson withheld the yearbooks because she found the yearbook theme of "destination unknown" inappropriate. Gibson also disapproved of the inclusion of pictures of current events, and testified that "[t]here were a lot of pictures in the back of the book that . . . to me, looked like a *Life* magazine." . . . And after the yearbooks came back from the printer, Gibson complained to Cullen that "[s]everal persons have received the book, and are thoroughly disappointed at the quality and content." Thus, it is quite clear that Gibson attempted to regulate the content of *The Thorobred* once it was printed [236 F.3d at 354–55].

The court also determined that, even if the yearbook were a nonpublic forum, rather than a limited public forum, the university's confiscation of the yearbooks would still have violated the First Amendment. This was because "suppression of the yearbook smacks of viewpoint discrimination as well," and "government may not regulate even a nonpublic forum based upon the speaker's viewpoint." According the court, "[A]n editor's choice of theme, selection of particular pictures, and expression of opinions are clear examples of the editor's viewpoint . . ." (236 F.3d at 356). (For further, detailed, discussion of *Kincaid v. Gibson*, see Richard Peltz, "Censorship Tsunami Spares College Media: To Protect Free Expression on Public Campuses, Lessons from the 'College Hazelwood' Case," 68 *Tenn. L. Rev.* 481 (2001).)

Thus *Kincaid*, like the earlier cases of *Joyner*, *Bazaar*, and *Schiff*, clearly demonstrates the very substantial limits on administrators' authority to regulate the student press at public institutions. But these cases do not stand for the proposition that *no* regulation is permissible. To the contrary, each case suggests narrow grounds on which student publications can be subjected to some regulation. The *Joyner* case indicates that the student press can be prohibited from racial discrimination in its staffing and advertising policies. *Stanley* suggests that institutions may alter the funding mechanisms for student publications as long as they do not do so for reasons associated with a publication's content. *Bazaar*

indicates that institutions may dissociate themselves from student publications to the extent of requiring or placing a disclaimer on the cover or format of the publication. (The court specifically approved the following disclaimer after it reheard the case: “This is not an official publication of the university.”) *Schiff* suggests enigmatically that there may be “special circumstances” where administrators may regulate the press to prevent “significant disruption on the university campus or within its educational processes.” And *Kincaid* indicates that institutions may impose content-neutral “time, place, and manner regulations” on the student press, and also suggests that institutions may regulate student publications that are part of a curricular activity or that are established to operate under the editorial control of the institution.

The latter points from *Kincaid* were further developed, and integrated with public forum analysis, in another highly important case decided by another U.S. Court of Appeals, also sitting *en banc*. *Hosty v. Carter*, 412 F.3d 731 (7th Cir. 2005 (*en banc*)), concerned the validity of a dean’s alleged order to halt the printing of a subsidized student newspaper until she had reviewed and approved the issues. The *en banc* court used the U.S. Supreme Court’s *Hazelwood* case as the “starting point” and the “framework” for its analysis. Following *Hazelwood*, the court held that, if a subsidized student newspaper falls within the category of a non-public forum, then it “may be open to reasonable regulation” by the institution, including content regulation imposed for “legitimate pedagogical reasons” (412 F.3d at 735, 737). The appellate court then remanded the case to the district court for further proceedings on the issue of whether the student newspaper was a nonpublic forum subject to such regulation or a public forum not subject to content regulation.

The clear lesson of the student publication cases, then, is not so much “Don’t regulate” as it is “Don’t censor.” So long as administrators avoid censorship, there will be some room for them to regulate student publications; and, in general, they may regulate publications by student organizations or individual students in much the same way that they may regulate other expressive activities of student organizations (see Section 10.1 above) or students generally (see Section 9.5). Even content need not be totally beyond an administrator’s concern. A disclaimer requirement can be imposed to avoid confusion about the publication’s status within the institution. If the publication were a nonpublic forum, some content regulation for pedagogical purposes would be permissible. Advertising content in a publication may also be controlled to some extent, as discussed in subsection 10.3.4 below. Content that is obscene or libelous as defined by the U.S. Supreme Court may also be regulated, as subsections 10.3.5 and 10.3.6 below suggest. And as the *Rosenberger* case in subsection 10.3.2 above suggests, religious content may be regulated to an extent necessary to prevent establishment clause violations.

**10.3.4. Advertising in student publications.** In *Pittsburgh Press Co. v. Pittsburgh Commission on Human Relations*, 413 U.S. 376 (1973), the U.S. Supreme Court upheld a regulation prohibiting newspapers from publishing “help-wanted” advertisements in sex-designated columns. And in *Virginia State*

*Bd. of Pharmacy v. Virginia Citizens Consumer Council*, 425 U.S. 748 (1976), while invalidating a statutory ban on advertising prescription drug prices, the Court affirmed the state's authority to regulate false or misleading advertising and advertising that proposes illegal transactions. These foundational cases suggest that there is at least some narrow room within which public institutions may regulate advertising in student newspapers.

Issues regarding advertising in student newspapers are considered at length in *Lueth v. St. Clair County Community College*, 732 F. Supp. 1410 (E.D. Mich. 1990). The plaintiff, a former editor of the student newspaper, sued the college because it had prohibited the publication of ads for an off-campus nude-dancing club. Concluding that the advertising was "commercial speech" (Section 11.6.4.1) and that the student-run newspaper was a public forum (Section 9.5.2), the court applied the First Amendment standards for commercial speech set out in *Central Hudson Gas & Electric Corp. v. Public Service Commission*, 447 U.S. 557 (1980), as modified by *Board of Trustees of the State University of New York v. Fox*, 492 U.S. 469 (1989) (both discussed in Section 11.6.4.1). Although the college had substantial interests in not fostering underage drinking or the degradation of women, the court held the advertising prohibition unconstitutional because the college had no advertising guidelines or other limits on its authority that would ensure that its regulation of advertising was "narrowly tailored" to achieve its interests. (To similar effect, see *The Pitt News v. Pappert*, 379 F.3d 96 (3d Cir. 2004), in which the court held a state statute regulating alcohol beverage advertising to be unconstitutional as applied to a student newspaper.)

As the *Lueth* and *Pitt News* cases suggest, advertising of alcoholic beverages has been a particular concern for colleges and universities for many years. Advertising of tobacco products, unlawful drugs, and firearms may raise similar concerns. The validity of regulations limiting such advertising has become more doubtful since the U.S. Supreme Court's decisions in *44 Liquormart v. Rhode Island*, 517 U.S. 484 (1996), invalidating certain state restrictions on advertising of alcoholic beverages, and *Lorillard Tobacco Co. v. Reilly*, 533 U.S. 525 (2001), invalidating certain state restrictions on advertising of tobacco products. Relying on *Lorillard*, the court in *Khademi v. South Orange County Community College District*, 194 F. Supp. 2d 1011, 1028–29 (C.D. Cal. 2002), invalidated campus regulations that prohibited advertising for alcoholic beverages, tobacco products, or firearms. The court, however, did uphold a campus regulation prohibiting advertising of "illegal substances as identified by the Federal Government, and/or by the State of California," because it was limited to products made illegal by criminal law. As to tobacco, alcohol, and firearms advertising regulations, they were content-based regulations of speech that did not meet the standard of justification required by the case law. It was not enough that some of the community college district's students were underage and, therefore, prohibited by state law from purchasing these products. According to the court, "sixty-eight percent of the District's students are legally of age to buy alcohol, tobacco, and firearms products," and a complete ban on advertising these products would therefore not be narrowly tailored to effectuate the community college's legitimate interests (194 F. Supp. 2d at 1029, n.13).

**10.3.5. Obscenity.** It is clear that public institutions may discipline students or student organizations for having published obscene material. Public institutions may even halt the publication of such material if they do so under carefully constructed and conscientiously followed procedural safeguards. A leading case is *Antonelli v. Hammond*, 308 F. Supp. 1329 (D. Mass. 1970), which invalidated a system of prior review and approval by a faculty advisory board, because the system did not place the burden of proving obscenity on the board, or provide for a prompt review and internal appeal of the board's decisions, or provide for a prompt final judicial determination. *Baughman v. Freienmuth*, 478 F.2d 1345 (4th Cir. 1973), which sets out prior review requirements in the secondary school context, is also illustrative. Clearly, the constitutional requirements for prior review regarding obscenity are stringent, and the creation of a constitutionally acceptable system is a very difficult and delicate task. (For U.S. Supreme Court teaching on prior review, see *Southeastern Promotions, Ltd. v. Conrad*, 420 U.S. 546 (1975).)

Moreover, institutional authority extends only to material that is actually obscene, and the definition or identification of obscenity is, at best, an exceedingly difficult proposition. In a leading Supreme Court case, *Papish v. Board of Curators of the University of Missouri*, 410 U.S. 667 (1973), the plaintiff was a graduate student who had been expelled for violating a board of curators bylaw prohibiting distribution of newspapers "containing forms of indecent speech." The newspaper at issue had a political cartoon on its cover that "depicted policemen raping the Statue of Liberty and the Goddess of Justice. The caption under the cartoon read: 'With Liberty and Justice for All.'" The newspaper also "contained an article entitled 'M——F—— Acquitted,' which discussed the trial and acquittal on an assault charge of a New York City youth who was a member of an organization known as 'Up Against the Wall, M——F——.'" After being expelled, the student sued the university, alleging a violation of her First Amendment rights. The Court, in a *per curiam* opinion, ruled in favor of the student:

We think [*Healy v. James*, Section 10.1.1 above] makes it clear that the mere dissemination of ideas—no matter how offensive to good taste—on a state university campus may not be shut off in the name alone of "conventions of decency." Other recent precedents of this Court make it equally clear that neither the political cartoon nor the headline story involved in this case can be labeled as constitutionally obscene or otherwise unprotected [410 U.S. at 670].

Obscenity, then, is not definable in terms of an institution's or an administrator's own personal conceptions of taste, decency, or propriety. Obscenity can be defined only in terms of the guidelines that courts have constructed to prevent the concept from being used to choke off controversial social or political dialogue. As the U.S. Supreme Court stated in the leading case, *Miller v. California*, 413 U.S. 15 (1973):

We now confine the permissible scope of . . . regulation [of obscenity] to works which depict or describe sexual conduct. That conduct must be specifically

defined by the applicable state law, as written or authoritatively construed. A state offense must also be limited to works which, taken as a whole, appeal to the prurient interest in sex, which portray sexual conduct in a patently offensive way, and which, taken as a whole, do not have serious literary, artistic, political, or scientific value [413 U.S. at 24 (1973)].

Although these guidelines were devised for the general community, the Supreme Court made clear in *Papish* that “the First Amendment leaves no room for the operation of a dual standard in the academic community with respect to the content of speech.” Administrators devising campus rules for public institutions are thus bound by the same obscenity guidelines that bind the legislators promulgating obscenity laws. Under these guidelines, the permissible scope of regulation is very narrow, and the drafting or application of rules is a technical exercise that administrators should undertake with the assistance of counsel, if at all.

**10.3.6. Libel.** As they may for obscenity, institutions may discipline students or organizations that publish libelous matter. Here again, however, the authority of public institutions extends only to matter that is libelous according to technical legal definitions. It is not sufficient that a particular statement be false or misleading. Common law and constitutional doctrines require that (1) the statement be false; (2) the publication serve to identify the particular person libeled; (3) the publication cause at least nominal injury to the person libeled, usually including but not limited to injury to reputation; and (4) the falsehood be attributable to some fault on the part of the person or organization publishing it. The degree of fault depends on the subject of the alleged libel. If the subject is a public official or what the courts call a “public figure,” the statement must have been made with “actual malice”; that is, with knowledge of its falsity or with “reckless disregard” for its truth or falsity. In all other situations governed by the First Amendment, the statement need only have been made negligently. Courts make this distinction in order to give publishers extra breathing space when reporting on certain matters of high public interest.<sup>20</sup>

A decision of the Virginia Supreme Court illustrates that a false statement of fact is at the heart of a defamation claim. The claim in *Yeagle v. Collegiate Times*, 497 S.E.2d 136 (Va. 1998), arose from the student newspaper’s publication of an article about a program facilitated by the plaintiff, a university administrator. Although otherwise complimentary of the administrator, the article included a large-print block quotation attributed to her and identifying her as “Director of Butt Licking.” The court rejected the defamation claim because the expression “cannot reasonably be understood as stating an actual fact about [the plaintiff’s] job title or her conduct, or that she committed a crime of moral

---

<sup>20</sup>The U.S. Supreme Court has developed these constitutional principles of libel law in a progression of decisions beginning with *New York Times v. Sullivan*, 376 U.S. 254 (1964). See also *Curtis Publishing Co. v. Butts*, 388 U.S. 130 (1967); *Associated Press v. Walker*, 389 U.S. 997 (1967); *Gertz v. Robert Welch, Inc.*, 418 U.S. 323 (1974); and *Time, Inc. v. Firestone*, 424 U.S. 448 (1976).

turpitude.” Although the phrase “Director of Butt Licking” is “disgusting, offensive, and in extremely bad taste,” in the circumstances of this case it was “no more than ‘rhetorical hyperbole.’” The court further rejected the plaintiff’s argument that “the phrase connotes a lack of integrity in the performance of her duties.” Explaining that “inferences cannot extend the statements by innuendo, beyond what would be the ordinary and common acceptance of the statement,” the court relied on the complimentary content of the article itself to find that there was no basis for the inference the plaintiff sought to draw.

An instructive illustration of the “public official” concept and the “actual malice” standard is provided by *Waterson v. Cleveland State University*, 639 N.E.2d 1236 (Ohio 1994). The plaintiff, then deputy chief of the campus police force at the defendant university, claimed that he had been defamed in an editorial published in the campus student newspaper and written by its then editor-in-chief, Quarles. The university claimed that the deputy chief was a “public official” within the meaning of the leading U.S. Supreme Court precedents and that he therefore could not prevail on a defamation claim unless he proved that Quarles or the university had acted with “actual malice” in publishing the editorial. The court accepted the university’s argument and categorized the plaintiff as a public official:

[T]he students and faculty of CSU [Cleveland State University] have a significant interest in the qualifications, performance and conduct of the officers of the CSU police department, as they rely on these officers for their campus security and are more likely to have day-to-day contact with them than with the officers of the greater Cleveland community. Further, the interest of the campus community in any individual officer’s performance is likely to increase with the authority and influence of the officer. At the time the editorial in question was published, . . . plaintiff was second in command in the department, ranking only below the Chief of Police, and was responsible for the continued training of the approximately thirty officers on the force. Plaintiff thus was in a position to wield considerable influence over the rank and file members of the department and to set the tone within the department on issues such as the appropriate use of force and ethnic sensitivity. Finally, the CSU community is the principal audience of the publication in which the editorial in question appeared, precisely the audience with the greatest interest in the performance of CSU police officers, including plaintiff [639 N.E.2d at 1238–39].

The plaintiff (the deputy chief) then argued that, even if he was a public official, he had met his burden of proof of demonstrating “actual malice.” Again, the court disagreed:

[T]he focus of an actual-malice inquiry is on the conduct and state of mind of the defendant. *Herbert v. Lando*, 441 U.S. 153 (1979). To prevail, a plaintiff must show that the false statements were made with a “high degree of awareness of their probable falsity . . .” *Garrison v. Louisiana*, 379 U.S. 64, 74 (1964). . . . The record in this case reveals that plaintiff presented no evidence of who Quarles’ sources for the editorial were, and hence no evidence of the reliability of those sources. Nor did plaintiff present any evidence as to what, if any, investigations Quarles undertook prior to publishing her editorial. In fact, plaintiff

presented no evidence whatsoever which would allow one to conclude that Quarles either knew that the allegations contained in her editorial were false or that she entertained serious doubts as to their veracity [639 N.E.2d at 1239–140].

The appellate court therefore affirmed the trial court's order dismissing the deputy chief's defamation claim.

Given the complexity of the libel concept, administrators should approach it most cautiously. Because of the need to assess both injury and fault, as well as identify the defamatory falsehood, libel may be even more difficult to combat than obscenity. Suppression in advance of publication is particularly perilous, since injury can only be speculated about at that point, and reliable facts concerning fault may not be attainable. Much of the material in campus publications, moreover, may involve public officials or public figures and thus be protected by the higher-fault standard of actual malice.

Though these factors might reasonably lead administrators to forgo any regulation of libel, there is a countervailing consideration: institutions or administrators may occasionally be held liable in court for libelous statements in student publications (see Sections 3.3.4). Such liability could exist where the institution sponsors a publication (such as a paper operated by the journalism department as a training ground for its students), employs the editors of the publication, establishes a formal committee to review the content of material in advance of publication, or otherwise exercises some control (constitutionally or unconstitutionally) over the publication's content. In any case, liability would exist only for statements deemed libelous under the criteria set out above.

Such potential liability, however, need not necessarily prompt increased surveillance of student publications. Increased surveillance would demand regulations that stay within constitutional limits yet are strong enough to weed out all libel—an unlikely combination. And since institutional control of the publication is the predicate to the institution's liability, increased regulation increases the likelihood of liability should a libel be published. Thus, administrators may choose to handle liability problems by lessening rather than enlarging control. The privately incorporated student newspaper operating independently of the institution would be the clearest example of a no-control/no-liability situation.

The decision of the New York State Court of Claims in *Mazart v. State*, 441 N.Y.S.2d 600 (N.Y. Ct. Cl. 1981), not only illustrates the basic steps for establishing libel but also affirms that institutional control over the newspaper, or lack thereof, is a key to establishing or avoiding institutional liability. The opinion also discusses the question of whether an institution can ever restrain in advance the planned publication of libelous material.

The plaintiffs (claimants) in *Mazart* were two students at the State University of New York-Binghamton who were the targets of an allegedly libelous letter to the editor published in the student newspaper, the *Pipe Dream*. The letter described a prank that it said had occurred in a male dormitory and characterized the act as prejudice against homosexuals. The plaintiffs' names appeared at the end of the letter, although they had not in fact written it, and the body of the letter identified them as "members of the gay community."

The court analyzed the case in three stages. *First*, applying accepted principles of libel law to the educational context in which the incident occurred, the court determined that this letter was libelous:

Did the letter in the *Pipe Dream* expose claimants to hatred, contempt, or aversion, or induce an evil or unsavory opinion of them in the minds of a substantial number of the [university] community? The answer to the question is far from simple. . . . According to the chairman of the English Department at the University, . . . sexual orientation had no more bearing in the classroom than religious affiliation. The Assistant Vice President for Finance, Management, and Control of the University opined that the published letter had a “[v]ery low, very little affect” [*sic*] on the campus community.

No doubt the impact of the published letter on the collective mind of the University was considerably less than it might have been had the letter been published in a conservative rural American village. Nonetheless, the court finds that an unsavory opinion of the claimants did settle in the minds of a substantial number of persons in the university community. . . . The question of homosexuality was a significant one on the university campus. . . . Both claimants testified that they were accosted by numerous fellow students after the event and queried about their sexual orientation, and the court finds their testimony, in this respect, credible. Deviant sexual intercourse and sodomy were crimes in the state of New York at the time the letter was published (Penal Law, §§ 130 and 130.38). Certainly those members of the University community who did not personally know the claimants would logically conclude that claimants were homosexual, since the letter identified them as being members of the “gay community.” The court finds that a substantial number of the University community would naturally assume that the claimants engaged in homosexual acts from such identification [441 N.Y.S.2d at 603–4].

*Second*, the court considered the state’s argument that, even if the letter was libelous, its publication was protected by a qualified privilege because the subject matter was of public concern. Again using commonly accepted libel principles, the court concluded that a privilege did not apply because

the editors of the *Pipe Dream* acted in a grossly irresponsible manner by failing to give due consideration to the standards of information gathering and dissemination. It is obvious that authorship of a letter wherein the purported author appears to be libeled should be verified. Not only was the authorship of the letter herein not verified but it appears that the *Pipe Dream*, at least in November of 1977, had no procedures or guidelines with regard to the verification of the authorship of any letters to the editor [441 N.Y.S.2d at 604].

*Third*, the court held that, although the letter was libelous and not privileged, the university (and thus the state) was not liable for the unlawful acts of the student newspaper. In its analysis the court considered and rejected two theories of liability:

(1) [that] the state, through the University, may be vicariously liable for the torts of the *Pipe Dream* and its editors on the theory of *respondeat superior* (that is, the University, as principal, might be liable for the torts of its agents, the student

paper and editors); and (2) [that] the state, through the University, may have been negligent in failing to provide guidelines to the *Pipe Dream* staff regarding libel generally, and specifically, regarding the need to review and verify letters to the editor [441 N.Y.S.2d at 600].

In rejecting the first theory, the court relied heavily on First Amendment principles:

[T]he state could be held vicariously liable if the University and the *Pipe Dream* staff operated in some form of agency relationship. However, it is characteristic of the relationship of principal and agent that the principal has a right to control the conduct of the agent with respect to matters entrusted to him. While this control need not apply to every detail of an agent's conduct and can be found where there is merely a right held by the principal to make management and policy decisions affecting the agent, there can be no agency relationship where the alleged principal has no right of control over the alleged agent. . . .

There are severe constitutional limitations on the exercise of any form of control by a state university over a student newspaper . . . (*Panarella v. Birenbaum*, 37 A.D.2d 987, 327 N.Y.S.2d 755, *affirmed*, 32 N.Y.2d 108, 343 N.Y.S.2d 333, 296 N.E.2d 238). . . . Censorship or prior restraint of constitutionally protected expression in student publications at State-supported institutions has been uniformly proscribed by the Courts. Such censorship or prior restraint cannot be imposed by suspending editors . . . , by suppressing circulation . . . , by requiring prior approval of controversial articles . . . , by excising or suppressing distasteful material . . . , or by withdrawing financial support . . . [441 N.Y.S.2d at 604–5 (most citations omitted)].<sup>21</sup>

Due to these strong constitutional protections for student newspapers at public institutions, the defendant university had no authority “to prevent the publication of the letter.” A “policy of prior approval of items to be published in a student newspaper, even if directed only to restraining the publication of potentially libelous material . . . , would run afoul of [the First Amendment]” (citing *Near v. State of Minnesota*, 283 U.S. 697 (1931)). The court therefore ruled that the university did not have a right of control over the *Pipe Dream* sufficient to sustain an agency theory:

The Court recognizes that the *Pipe Dream* and its staff may be incapable of compensating claimants for any damages flowing from the libel. But, in light of the university's eschewing control, editorial or otherwise, over the paper and the constitutionally imposed barriers to the exercise by the University of any editorial control over the newspaper, the Court must reluctantly conclude that the relationship of the university and the *Pipe Dream* is not such as would warrant the imposition of vicarious liability on the state for defamatory material appearing in the student newspaper (see “Tort Liability of a University for Libelous Material in Student Publications,” 71 *Mich. L. Rev.* 1061) [441 N.Y.S.2d at 604–6; most citations omitted].

---

<sup>21</sup>For discussion of these principles and illustrative cases, see subsection 10.3.3 of this Section.

The court then also rejected the plaintiffs' second liability theory. Focusing particularly on the tort law concept of "duty" (see generally Section 3.3.1), the court ruled that the university and state were not negligent "for failing to provide to the student editors guidelines and procedures designed to avoid the publication of libelous material." The issue, the court said, was "whether there was a duty on the part of the University administration" to furnish such guidelines; and the "constitutional limitations on the actual exercise of editorial control by the university," noted above, did "not necessarily preclude the existence of [such] a duty." But the courts, as well as the New York state legislature, regard college students as young adults and not children, and the *Pipe Dream* editors, as young adults, are therefore presumed to have "that degree of maturity and common sense necessary to comprehend the normal procedures for information gathering and dissemination."

The court must, therefore, find that the University had no duty to supply news gathering and dissemination guidelines to the *Pipe Dream* editors since they were presumed to already know those guidelines. Admittedly, it appears that the student editors of the *Pipe Dream* in 1977 either did not know or simply ignored commonsense verification guidelines with regard to the publication of the instant letter. But that was not the fault of the University. In either event, there was no duty on the part of the University. The editors' lack of knowledge of or failure to adhere to standards which are common knowledge (*Greenberg v. CBS, Inc.* [419 N.Y.S.2d 988 (N.Y. App. Div. 1979)],) and ordinarily followed by reasonable persons . . . was not reasonably foreseeable [441 N.Y.S.2d at 607].

The validity and importance of the *Mazart* case was reaffirmed in *McEvaddy v. City University of New York*, 633 N.Y.S.2d 4 (N.Y. App. Div. 1995). The *McEvaddy* court dismissed a defamation claim brought against City University of New York for an allegedly libelous article published in the student newspaper. Citing *Mazart*, the court held that "[t]he presence of a faculty advisor to the paper, whose advice is nonbinding, and the financing of the paper through student activity fees . . . , do not demonstrate such editorial control or influence over the paper by [the university] as to suggest an agency relationship." The New York Court of Appeals, the state's highest court, denied the claimant's motion for leave to appeal (664 N.E.2d 1258 (N.Y. 1996)). (For another, more recent, affirmation of the principles in *Mazart* and *McEvaddy*, see *Lewis v. St. Cloud State University*, 693 N.W.2d 466 (Minn. App. 2005).)

*Mazart v. State* is an extensively reasoned precedent in an area where there had been little precedent. The court's opinion, together with the later opinions in *McEvaddy* and *Lewis*, provide much useful guidance for administrators of public institutions. The reasoning in these opinions depends, however, on the particular circumstances concerning the campus setting in which the newspaper operated and the degree of control the institution exercised over the newspaper, and also, under *Mazart*, on the foreseeability of libelous actions by

the student editors. Administrators will therefore want to consult with counsel before attempting to apply the principles of these cases to occurrences on their own campuses. Moreover, tort concepts of duty applicable to colleges and universities have been evolving since the *Mazart* case (see Robert Bickel & Peter Lake, *The Rights and Responsibilities of the Modern University: Who Assumes the Risk of College Life?* (Carolina Academic Press, 1999)), and counsel will want to take these developments into consideration as well when applying the duty principles from the *Mazart* case.

**10.3.7. Obscenity and libel in private institutions.** Since the First Amendment does not apply to private institutions that are not engaged in state action (see Section 1.5.2), such institutions have a freer hand in regulating obscenity and libel. Yet private institutions should devise their regulatory role cautiously. Regulations broadly construing libel and obscenity based on lay concepts of those terms could stifle the flow of dialogue within the institution, while attempts to avoid this problem with narrow regulations may lead the institution into the same definitional complexities that public institutions face when seeking to comply with the First Amendment. Moreover, in devising their policies on obscenity and libel, private institutions will want to consider the potential impact of state law. Violation of state obscenity or libel law by student publications could subject the responsible students to damage actions, possibly to court injunctions, and even to criminal prosecutions, causing unwanted publicity for the institution. But if the institution regulates the student publications to prevent such problems, the institution could be held liable along with the students if it exercises sufficient control over the publication (see generally Sections 2.1.3 & 3.3.4).

## **Sec. 10.4. Athletics Teams and Clubs**

**10.4.1. General principles.** Athletics, as a subsystem of the postsecondary institution, is governed by the general principles set forth elsewhere in this chapter and this book. These principles, however, must be applied in light of the particular characteristics and problems of curricular, extracurricular, and intercollegiate athletic programs. A student athlete's eligibility for financial aid, for instance, would be viewed under the general principles in Section 8.3, but aid conditions related to the student's eligibility for or performance in intercollegiate athletics create a special focus for the problem (see subsection 10.4.5 below). The institution's tort liability for injuries to students would be subject to the general principles in Section 3.3, but the circumstances and risks of athletic participation provide a special focus for the problem (see subsection 10.4.9 below). Similarly, the due process principles in Section 9.4 may apply when a student athlete is disciplined, and the First Amendment principles in Section 9.5 may apply when student athletes engage in protest activities. But in each case the problem may have a special focus (see subsections 10.4.2 & 10.4.3 below). Moreover, as in many other areas of the law, there are various statutes that have special applications to athletics (see subsection 10.4.4 below).

Surrounding these special applications of the law to athletics, there are major legal and policy issues that pertain specifically to the status of “big-time” intercollegiate athletics within the higher education world. In addition to low graduation rates of athletes, the debate has focused on academic entrance requirements for student athletes; postsecondary institutions’ recruiting practices; alleged doctoring or padding of high school and college transcripts to obtain or maintain athletic eligibility; drug use among athletes and mandatory drug testing (subsection 10.4.8 below); other misconduct by student athletes, such as sexual assaults, and institutional responses to the alleged misconduct; alleged exploitation of minority athletes; improper financial incentives and rewards or improper academic assistance for student athletes; and the authority and practices of the National Collegiate Athletic Association (NCAA) and athletic conferences (see Section 14.4) regarding such matters. The overarching concern prompted by these issues is one of integrity: the integrity of individual institutions’ athletic programs, the integrity of academic standards at institutions emphasizing major intercollegiate competition, the integrity of higher education’s mission in an era when athletics has assumed such a substantial role in the operation of the system. (For discussion of these issues, see John R. Thelin, *Games Colleges Play: Scandal and Reform in Intercollegiate Athletics* (John Hopkins University Press, 1996) (exploring evolution of intercollegiate athletics from 1910 to 1990); Andrew Zimbalist, *Unpaid Professionals: Commercialism and Conflict in Big-Time College Sports* (Princeton University Press, 1999) (exploring current problems, need for reform, and recommendations for the future); and Timothy Davis, “Racism in Athletics: Subtle Yet Persistent,” 21 *U. Ark. Little Rock L. Rev.* 881 (1999) (exploring continuing problems of racism). For a study that reaches troubling conclusions about the effect of athletics on student and institutional academic performance, see James L. Shulman & William G. Bowen, *The Game of Life: College Sports and Educational Values* (Princeton University Press, 2001) (presenting numerous findings based on data from three databases). And for recommendations for reforming college athletics by two college presidents, see James J. Duderstadt, *Intercollegiate Athletics and the American University* (University of Michigan Press, 2000), and William G. Bowen & Sarah A. Levin, *Reclaiming the Game: College Sports and Educational Values* (Princeton University Press, 2003).)

**10.4.2. Athletes’ due process rights.** If a student athlete is being disciplined for some infraction, the penalty may be suspension from the team. In such instances, the issue raised is whether the procedural protections accompanying suspension from school are also applicable to suspension from a team. For institutions engaging in state action (see Sections 1.5.2 & 14.4.2), the constitutional issue is whether the student athlete has a “property interest” or “liberty interest” in continued intercollegiate competition sufficient to make suspension or some other form of disqualification a deprivation of “liberty or property” within the meaning of the due process clause. Several courts have addressed this question. (Parallel “liberty or property” issues also arise in the context of faculty dismissals (Section 6.6.2) as well as student suspensions and dismissals (Section 9.4.2).)

In *Behagen v. Intercollegiate Conference of Faculty Representatives*, 346 F. Supp. 602 (D. Minn. 1972), a suit brought by University of Minnesota basketball players suspended from the team for participating in an altercation during a game, the court reasoned that participation in intercollegiate athletics has “the potential to bring [student athletes] great economic rewards” and is thus as important as continuing in school. The court therefore held that the students’ interests in intercollegiate participation were protected by procedural due process and granted the suspended athletes the protections established in the *Dixon* case (Section 9.4.2). In *Regents of the University of Minnesota v. NCAA*, 422 F. Supp. 1158 (D. Minn. 1976), the same district court reaffirmed and further explained its analysis of student athletes’ due process rights. The court reasoned that the opportunity to participate in intercollegiate competition is a property interest entitled to due process protection, not only because of the possible remunerative careers that result but also because such participation is an important part of the student athlete’s educational experience.<sup>22</sup> The same court later used much the same analysis in *Hall v. University of Minnesota*, 530 F. Supp. 104 (D. Minn. 1982).

In contrast, the court in *Colorado Seminary v. NCAA*, 417 F. Supp. 885 (D. Colo. 1976), relying on an appellate court’s opinion in a case involving high school athletes (*Albach v. Odle*, 531 F.2d 983 (10th Cir. 1976)), held that college athletes have no property or liberty interests in participating in intercollegiate sports, participating in postseason competition, or appearing on television. The appellate court affirmed (570 F.2d 320 (10th Cir. 1978)). (The trial court did suggest, however, that revocation of an athletic scholarship would infringe a student’s property or liberty interests and therefore would require due process safeguards (see Section 10.4.5 below).) And in *Hawkins v. NCAA*, 652 F. Supp. 602, 609–11 (C.D. Ill. 1987), the court held that student athletes have no property interest in participating in postseason competition. Given the intense interest and frequently high stakes for college athletes, administrators at both public and private colleges should provide at least a minimal form of due process when barring college athletes from playing in games or postseason tournaments, and should provide notice and an opportunity for the student to be heard if a scholarship is to be rescinded.

Other forms of disqualification from competition may also implicate due process protections for students at public institutions of higher education. In *NCAA v. Yeo*, 114 S.W.3d 584 (Tex. App. 2003), *reversed*, 171 S.W.3d 863 (Tex. 2005), the Texas Supreme Court rejected a student athlete’s claim that she possessed a “constitutionally protected interest” in participation in athletic events. The Texas Court of Appeals, applying state rather than federal constitutional due process guarantees, had found that a student athlete’s athletic career was a protected interest requiring procedural due process protections when that student already had an “established athletic reputation” prior to her college matriculation. The due process claim stemmed from an athletic eligibility

---

<sup>22</sup>Although the appellate court reversed this decision, 560 F.2d 352 (8th Cir. 1977), it did so on other grounds and did not question the district court’s due process analysis.

dispute at the University of Texas (UT)-Austin. The athlete in this dispute, Joscelin Yeo, is a world-class swimmer who had competed in two Olympic Games for her native country, Singapore. Yeo began her college career at University of California-Berkeley, and then transferred to the University of Texas-Austin when her coach accepted a position at Texas. National Collegiate Athletic Association regulations required that “a transferring student-athlete refrain from athletic competition for two full long-semesters.” After completion of this one-year residency requirement at her new institution, Yeo could compete in swimming competitions.

Complications arose with the residency requirement when Yeo was training for the 2000 Olympic Games. Yeo had to obtain a waiver to take less than a full courseload while she was training for the Sydney Olympics, and UT-Austin’s athletic department obtained a waiver from the NCAA allowing Yeo to be “eligible for practice, competition, and athletically related financial aid for the fall 2000 term *without being enrolled in any courses at Texas*” (114 S.W.3d at 589). When Yeo attempted to compete for the University of Texas in the 2000–2001 academic year, the NCAA determined that the Olympic waiver did not operate as a waiver of its two-semester residency requirement. After the NCAA made the residency determination, the UT athletic director declared the athlete ineligible to swim in competitions, without consulting Yeo or allowing an opportunity for hearing. After the athletic director’s determination of ineligibility, Yeo’s only option was to request reinstatement. However, Yeo was not informed of her ineligibility until nearly six months after the determination, when she was told that she had to miss four additional collegiate competitions in 2002. Additionally, no one provided Yeo with the determinations made by the NCAA or the guidelines for appealing its decisions. When Yeo finally learned that her status was in dispute, she participated in a hearing to decide her eligibility for an upcoming swim meet, but she was not told that the hearing was nonappealable. After Yeo was informed of her ineligibility status in the hearing, days before a major swimming tournament, UT-Austin recommended that she seek independent legal counsel. As a result, Yeo sued in district court to compete in the NCAA championship tournament. The court granted her a temporary restraining order to permit her to swim in the competition, and Yeo obtained a permanent injunction against declaring her ineligible from competition.

In reviewing Yeo’s due process claim, the Texas Court of Appeals had first to determine whether Yeo’s interest in competing in intercollegiate sports created either a property or liberty interest, and, if so, what protections were due. The court refused to determine whether a liberty or property interest was at stake, preferring to call the interest a “protected interest” without deciding whether it was liberty or property. The court analogized Yeo’s circumstances to an injury of professional reputation, stating that “[r]eputation plays an important role in this calculation; when a person’s good name, reputation, honor, or integrity is at stake because of what the government is doing to her, due process protections are more likely to apply” (114 S.W.3d at 596). The court found that Yeo’s athletic reputation was a protected interest, since it was established prior to her college athletic career.

[T]he protected interest of constitutional dimension presented by this case is not her right to participate in intercollegiate athletics generally, but rather the right to protect her reputation and good name that would be adversely affected by a declaration of ineligibility made without an opportunity to be heard. . . . We recognize that interference by the courts in athletic eligibility determinations, if unfettered, would impede the efficient administration of academic and extracurricular programs and undercut the credibility of athletic competition and academic preparedness. We reaffirm that there is no constitutionally protected interest in extracurricular participation per se [114 S.W.3d at 597].

After establishing that Yeo had a protected interest, the court then analyzed what process she was entitled to. The court found several procedural flaws in the UT athletic director's determination of Yeo's ineligibility. There was no record of the decision, Yeo was given no notice of the decision, and as a result, Yeo could not participate in the hearing. Even though UT was aware of the impact such a determination would make on her career, Yeo was not advised to retain counsel until much later, after the determination of athletic ineligibility. Moreover, UT did not even suggest to Yeo at the outset that she could have avoided the entire athletic eligibility dispute by obtaining a waiver to participate from the University of California-Berkeley. The court found further flaws in the school's actions after the determination of athletic ineligibility. When UT attempted to add additional meets to the spring swim schedule to comply with the residency requirement, UT again failed to notify Yeo until the eligibility process was almost complete. According to the court, UT's failure to notify again foreclosed Yeo's ability to meaningfully participate in the second eligibility determination and retain counsel. The court then stated that:

[d]ue process generally involves a meaningful opportunity to be heard. It is not the NCAA reinstatement process that failed Yeo, but the fact that important decisions regarding her eligibility were made by UT-Austin without notice that a problem existed and with no opportunity for Yeo to advocate for her own position [114 S.W.3d at 600].

The court noted that a formal hearing was not necessary, but that UT should have given Yeo notice and an opportunity to communicate with officials informally prior to the final determination by the NCAA. According to the court, had the compliance staff notified Yeo of the eligibility problem in a timely way, and had they given her an opportunity to respond, she would have received the required due process protections.

The Texas Supreme Court rejected the reasoning and outcome of the appellate court. The state's high court refused to distinguish between nationally ranked student athletes and nonranked students. The court asserted: "The United States Supreme Court has stated, and we agree, that whether an interest is protected by due process depends not on its *weight* but on its *nature*" (citing *Board of Regents v. Roth*, discussed in Section 6.7.2). The court viewed an individual's interest in his or her good name as "the same no matter how good the reputation is." Citing a case it had decided twenty years earlier (*Spring*

*Branch I.S.D. v. Stamos*, 695 S.W.2d 556 (Tex. 1985)), the court reiterated that “students do not possess a constitutionally protected interest in their participation in extracurricular activities” (695 S.W.2d at 561). Furthermore, said the court, Yeo’s assertion that her future financial opportunities were substantial was “too speculative” to implicate constitutional protections. Said the court: “While student-athletes remain amateurs, their future financial opportunities remain expectations” (171 S.W.3d at 870). Comparing Yeo’s alleged liberty interest with that at issue in *University of Texas Medical School v. Than* (discussed in Section 9.4.3), the court said: “We decline to equate an interest in intercollegiate athletics with an interest in graduate education” (171 S.W.3d at 870).

**10.4.3. Athletes’ freedom of speech.** When student athletes are participants in a protest or demonstration, their First Amendment rights must be viewed in light of the institution’s particular interest in maintaining order and discipline in its athletic programs. An athlete’s protest that disrupts an athletic program would no more be protected by the First Amendment than any other student protest that disrupts institutional functions. While the case law regarding athletes’ First Amendment rights is even more sparse than that regarding their due process rights, *Williams v. Eaton*, 468 F.2d 1079 (10th Cir. 1972), does specifically apply the *Tinker* case (Section 9.5.1) to a protest by intercollegiate football players. Black football players had been suspended from the team for insisting on wearing black armbands during a game to protest the alleged racial discrimination of the opposing church-related school. The court held that the athletes’ protest was unprotected by the First Amendment because it would interfere with the religious freedom rights of the opposing players and their church-related institution. The *Williams* opinion is unusual in that it mixes considerations of free speech and freedom of religion. The court’s analysis would have little relevance to situations where religious freedom is not involved. Since the court did not find that the athletes’ protest was disruptive, it relied solely on the seldom-used “interference with the rights of others” branch of the *Tinker* case.

In *Marcum v. Dahl*, 658 F.2d 731 (10th Cir. 1981), the court considered a First Amendment challenge to an institution’s nonrenewal of the scholarships of several student athletes. The plaintiffs, basketball players on the University of Oklahoma’s women’s team, had been involved during the season in a dispute with other players over who should be the team’s head coach. At the end of the season, they had announced to the press that they would not play the next year if the current coach was retained. The plaintiffs argued that the institution had refused to renew their scholarships because of this statement to the press and that the statement was constitutionally protected. The trial court and then the appellate court disagreed. Analogizing the scholarship athletes to public employees for First Amendment purposes (see Sections 7.1 & 7.3), the appellate court held that (1) the dispute about the coach was not a matter of “general public concern” and the plaintiffs’ press statement on this subject was therefore not protected by the First Amendment, and (2) the plaintiffs’ participation in the dispute prior to the press statement, and the resultant disharmony, provided an independent basis for the scholarship nonrenewal.

Free speech issues may also arise when student athletes are the intended recipients of a message rather than the speakers. In such situations, the free speech rights at stake will be those of others—employees, other students, members of the general public—who wish to speak to athletes either individually or as a group. Sometimes the athlete’s own First Amendment right to receive information could also be at issue.

In *Dambrot v. Central Michigan University*, 55 F.3d 1177 (6th Cir. 1995), the head basketball coach at Central Michigan University was terminated when it became widely publicized that he had used the word “nigger” in at least one instance when addressing basketball team members in the locker room. In terminating the coach, the university relied on the institution’s discriminatory harassment policy. The coach and many of the team members sued the university, claiming that it had violated the coach’s free speech rights. Dambrot argued that he was using the N-word in a positive manner, urging his players to be “fearless, mentally strong, and tough.” Although the appellate court ruled that the university’s discriminatory harassment policy was unconstitutionally overbroad and vague (see Section 9.6.2), it also held that the coach was not wrongfully terminated because his speech neither touched a matter of public concern nor implicated academic freedom.

In *Crue v. Aiken*, 370 F.3d 668 (7th Cir. 2004), the question was whether students and faculty members of the University of Illinois could speak with prospective student athletes being recruited for the university’s athletic teams. The question arose because of a controversy concerning the university’s athletic “mascot” or “symbol,” called “Chief Illiniwek.” To some, Chief Illiniwek was a respectful representation of the Illinois Nations of Native Americans, or the “fighting spirit,” or “the strong, agile human body.” To others, Chief Illiniwek was an offensive representation of the Illinois Nations, or a “mockery” or distortion of tribal customs, or the source of a “hostile environment” for Native American students (370 F.3d at 673–74).<sup>23</sup> The plaintiffs wished to speak with prospective athletes about this controversy and the negative implications of competing for a university that uses the Chief Illiniwek symbol. The chancellor issued a directive prohibiting students and employees from contacting prospective student athletes without the express approval of the athletics director. The federal district court held that the university’s directive violated the free speech rights of university employees and students, and the U.S. Court of Appeals affirmed by a 2-to-1 vote. Neither court directly addressed the free speech rights of students apart from those of employees who were restrained by the directive, or the potential free speech rights of the prospective student athletes to “receive” the message.<sup>24</sup>

---

<sup>23</sup>For more on Chief Illiniwek, see 370 F.3d at 672–74; and for more on college athletic mascots, see 370 F.3d at 671–72. For a view of the continuing controversy over “Indian” mascots for athletic teams, including Chief Illiniwek, see Eric Wills, “Pride or Prejudice?” *Chron. Higher Educ.*, June 3, 2005, A29.

<sup>24</sup>A related issue in the case was whether the employees’ and students’ contacts with the student athlete recruits would violate NCAA rules. See 370 F.3d at 679–80 (majority) and 686–87 (dissent). For discussion of NCAA rule making and enforcement, see Section 14.4 of this book.

The most recent issue to arise concerning speech directed to (rather than the speech of) student athletes is one that involves the spectators at sporting events. The students in the student sections at intercollegiate basketball games, for instance, often have unique methods of communicating with the visiting team's athletes on the floor. In some situations, at some schools, the communicative activities of the student section have been considered by school officials, or by other spectators, to be profane or otherwise offensive.<sup>25</sup> The issue that then may arise is whether or not the university can limit the speech of students in the student section in ways that would not violate their First Amendment free speech rights. In Maryland, this issue was the subject of a memorandum from the State Attorney General's Office to the president of the University of Maryland (March 17, 2004), in which the attorney general's office concluded, without providing specific examples, that some regulation of student speech at university basketball games would be constitutionally permissible. In general, this delicate issue of student crowd speech at athletic events would be subject to the same five free speech principles, and the same suggestions for regulatory strategies, that are set out in Section 9.6.3 of this book concerning hate speech. There would likely be particular attention given to the problem of "captive audiences" that is mentioned in the fifth suggestion for regulating hate speech on campus. (For further legal and policy analysis of this problem, see Gary Pavela, "Incivility and Profanity at Athletic Events," Part 1 & Part 2, in *Synfax Weekly Report*, February 16, 2004, and February 23, 2004.)

Because issues concerning the free speech rights of persons wishing to address student athletes arise in such varied contexts, as the above examples indicate, and because there are substantial questions of strategy to consider along with the law, university administrators and counsel should be wary about drawing any fast and firm conclusions concerning problems that they may face. Instead, the analysis should depend on the specific context, including who the speaker is, where the speech takes place, the purpose of the speech, and its effect on others. If an institution chooses to regulate in this area, the cases make clear that the overbreadth and vagueness problem will be a major challenge for those drafting the regulations. In *Dambrot* (above), for example, even though the court upheld the termination of the coach, it invalidated the university's discriminatory harassment policy because it was overbroad and vague. (For a discussion of the tension between free speech and civility at athletics events, see Howard M. Wasserman, "Cheers, Profanity, and Free Speech," 31 *J. Coll. & Univ. Law* 377 (2005).)

**10.4.4. Pertinent statutory law.** Similarly, state and federal statutory law has some special applications to an institution's athletes or athletic programs.

---

<sup>25</sup>The opposite situation can also arise if student-athletes seek to communicate with spectators at a game. In *State v. Hoshijo ex rel. White*, 76 P.3d 550 (Hawaii S. Ct. 2003), for example, a student manager of the basketball team directed an offensive comment to a spectator during a game. A key question in the case that followed was whether the student manager's speech was protected by the First Amendment. The court concluded that the speech constituted "fighting words" (see Section 9.6.2) and was therefore not protected.

Questions have arisen, for example, about the eligibility of injured intercollegiate athletes for workers' compensation (see Section 4.6.6). Laws in some states prohibit agents from entering representation agreements with student athletes (see, for example, Mich. Comp. Laws Ann. § 750.411e) or from entering into such an agreement without notifying the student's institution (see, for example, Fla. Stat. Ann. § 468.454).<sup>26</sup> State anti-hazing statutes may have applications to the activities of athletic teams and clubs (see, for example, Ill. Comp. Stat. Ann. § 720 ILCS 120/5). An earlier version of this law was upheld in *People v. Anderson*, 591 N.E.2d 461 (Ill. 1992), a prosecution brought against members of a university lacrosse club. Regarding federal law, the antitrust statutes may have some application to the institution's relations with its student athletes when those relations are governed by athletic association and conference rules (Section 14.4.3). And the Student Right-to-Know and Campus Security Act, discussed below, contains separate provisions dealing with low graduation rates of student athletes in certain sports.

The Student Right-to-Know Act (Title I of the Student Right-to-Know and Campus Security Act, 104 Stat. 2381–84 (1990)), ensures that potential student athletes will have access to data that will help them make informed choices when selecting an institution. Under the Act, an institution of higher education that participates in federal student aid programs and that awards “athletically related student aid” must annually provide the Department of Education with certain information about its student athletes. Athletically related student aid is defined as “any scholarship, grant, or other form of financial assistance the terms of which require the recipient to participate in a program of intercollegiate athletics at an institution of higher education in order to be eligible to receive such assistance” (104 Stat. 2384, 20 U.S.C. § 1092(e)(8)).

Institutions must report the following information, broken down by race and gender: (1) the number of students receiving athletically related student aid in basketball, football, baseball, cross country/track, and all other sports combined (20 U.S.C. § 1092(e)(1)(A)); (2) the completion or graduation rates of those students (20 U.S.C. § 1092(e)(1)(C)); and (3) the average completion or graduation rate for the four most recent classes (20 U.S.C. § 1092(e)(1)(E)). The same types of information must be collected on students in general (20 U.S.C. § 1092(e)(1)(B, D, & F)). In addition to reporting to the Department of Education, institutions must provide this information to potential student athletes and their parents, guidance counselors, and coaches (20 U.S.C. § 1092(e)(2)). Other students may receive the information upon request.<sup>27</sup> The Secretary of Education may waive the annual reporting requirements if, in his or her opinion, an institution of higher education is a member of an athletic association or conference that publishes data “substantially comparable” to the information specified in the Act (20 U.S.C. § 1092(e)(6)). Regulations implementing the Act are published at 34 C.F.R. Part 668.

---

<sup>26</sup>For a discussion of these laws, see Diane Sudia & Rob Remis, “Statutory Regulation of Agent Gifts to Athletes,” 10 *Seton Hall J. Sports L.* 265 (2000).

<sup>27</sup>This information is in addition to other information institutions must provide to prospective and enrolled students under 20 U.S.C. § 1092. See Section 8.3.2, and see also Section 13.4.4.3.

In addition to the Student Right-to-Know Act, Congress also passed the Equity in Athletics Disclosure Act, 108 Stat. 3518, 3970, codified at 20 U.S.C. § 1092(g). This Act, like the earlier Student Right-to-Know Act, requires institutions annually to report certain data regarding their athletic programs to the U.S. Department of Education. Both Acts are implemented by regulations codified in 34 C.F.R. Part 668 (the Student Assistance General Provisions) under subpart D (Student Consumer Information Services). The particular focus of the Equity in Athletics Disclosure Act is 34 C.F.R. § 668.48, while the particular focus of the Student Right-to-Know Act is 34 C.F.R §§ 668.46 and 668.49.

The Equity in Athletics Disclosure Act applies to “each co-educational institution that participates in any [Title IV, HEA student aid] program . . . and has an intercollegiate athletic program” (20 U.S.C. § 1092(g)(1)). Such institutions must make a variety of athletic program statistics available to prospective and current students, and the public upon request, including the number of male and female undergraduate students; the number of participants on each varsity athletic team; the operating expenses of each team; the gender of each team’s head coach; the full- or part-time status of each head coach; the number and gender of assistant coaches and graduate assistants; statistics on “athletically-related student aid,” reported separately for men’s and women’s teams and male and female athletes; recruiting expenditures for men’s and for women’s teams; revenues from athletics for men’s and women’s teams; and average salaries for male coaches and for female coaches.

**10.4.5. Athletic scholarships.** An athletic scholarship will usually be treated in the courts as a contract between the institution and the student. Typically the institution offers to pay the student’s educational expenses in return for the student’s promise to participate in a particular sport and maintain athletic eligibility by complying with university, conference, and NCAA regulations (see generally Section 14.4). Unlike other student-institutional contracts (see Section 8.1.3), the athletic scholarship contract may be a formal written agreement signed by the student and, if the student is underage, by a parent or guardian. Moreover, the terms of the athletic scholarship may be heavily influenced by athletic conference and NCAA rules regarding scholarships and athletic eligibility (see Section 14.4).

In NCAA member institutions, a letter-of-intent document is provided to prospective student athletes. The student athlete’s signature on this document functions as a promise that the student will attend the institution and participate in intercollegiate athletics in exchange for the institution’s promise to provide a scholarship or other financial assistance. Courts have generally not addressed the issue of whether the letter of intent, standing alone, is an enforceable contract that binds the institution and the student athlete to their respective commitments. Instead, courts have viewed the signing of a letter of intent as one among many factors to consider in determining whether a contractual relationship exists. Thus, although the letter of intent serves as additional evidence of a contractual relationship, it does not yet have independent legal status and, in effect, must be coupled with a financial aid offer in order to bind

either party. (See generally Michael Cozzillio, "The Athletic Scholarship and the College National Letter of Intent: A Contract by Any Other Name," 35 *Wayne L. Rev.* 1275 (1989); and Robert N. Davis, "The Courts and Athletic Scholarships," 67 *Notre Dame L. Rev.* 163 (1991).)

Although it is possible for either the institution or the student to breach the scholarship contract and for either party to sue, as a practical matter the cases generally involve students who file suit after the institution terminates or withdraws the scholarship. Such institutional action may occur if the student becomes ineligible for intercollegiate competition, has fraudulently misrepresented information regarding his or her academic credentials or athletic eligibility, has engaged in serious misconduct warranting substantial disciplinary action, or has declined to participate in the sport for personal reasons. The following three cases illustrate how such issues arise and how courts resolve them.

In *Begley v. Corp. of Mercer University*, 367 F. Supp. 908 (E.D. Tenn. 1973), the university withdrew from its agreement to provide an athletic scholarship for Begley after realizing that a university assistant coach had miscalculated Begley's high school grade point average (GPA), and that his true GPA did not meet the NCAA's minimum requirements. Begley filed suit, asking the court to award money damages for the university's breach of contract. The court dismissed the suit, holding that the university was justified in not performing its part of the agreement, since the agreement also required Begley to abide by all NCAA rules and regulations. Because Begley, from the outset, did not have the minimum GPA, he was unable to perform his part of the agreement. Thus, the court based its decision on the fundamental principle of contract law that "where one party is unable to perform his part of the contract, he cannot be entitled to the performance of the contract by the other party" (quoting 17 Am. Jur. 2d at 791-92, *Contracts*, § 355). (For a more contemporary case involving issues of academic eligibility and the interpretation of NCAA rules, see *Williams v. University of Cincinnati*, 752 N.E.2d 367 (Ohio Ct. Claims 2001).)

In *Taylor v. Wake Forest University*, 191 S.E.2d 379 (N.C. Ct. App. 1972), the university terminated the student's scholarship after he refused to participate in the football program. Originally, the student had withdrawn from the team to concentrate on academics when his grades fell below the minimum that the university required for athletic participation. Even after he raised his GPA above the minimum, however, the student continued his refusal to participate. The student alleged that the university's termination of his athletic scholarship was a breach and asked the court to award money damages equal to the costs incurred in completing his degree. He argued that, in case of conflict between his educational achievement and his athletic involvement, the scholarship terms allowed him to curtail his participation in the football program in order to "assure reasonable academic progress." He also argued that he was to be the judge of "reasonable academic progress." The court rejected the student's argument and granted summary judgment for the university. According to the court, permitting the student to be his own judge of his academic progress would be a "strange construction of the contract." Further, by accepting the scholarship, the student was obligated to "maintain his athletic eligibility . . . both physically

and scholastically. . . . When he refused to [participate] in the absence of any injury or excuse other than to devote more time to his studies, he was not complying with his contractual agreements.”

In *Conard v. University of Washington*, 814 P.2d 1242 (Wash. Ct. App. 1991), after three years of providing financial aid, the university declined to renew the scholarships of two student athletes for a fourth year because of the students’ “serious misconduct.” Although the scholarship agreement stipulated a one-year award of aid that would be considered for renewal under certain conditions, the students argued that it was their expectation, and the university’s practice, that the scholarship would be automatically renewed for at least four years. The appellate court did not accept the students’ evidence to this effect because the agreement, by its “clear terms,” lasted only one academic year and provided only for the *consideration* of renewal (see generally Section 1.4.2.3). The university’s withdrawal of aid, therefore, was not a breach of the contract.

Due process issues may also arise if an institution terminates or withdraws an athletic scholarship. The contract itself may specify certain procedural steps that the institution must take before withdrawal or termination. Conference or NCAA rules may contain other procedural requirements. And for public institutions, the federal Constitution’s Fourteenth Amendment (or comparable state constitutional provision) may sometimes superimpose other procedural obligations upon those contained in the contract and rules.

In the *Conard* case above, for example, the Washington Court of Appeals held that the students had a “legitimate claim of entitlement” to the renewal of their scholarships because each scholarship was “issued under the representation that it would be renewed subject to certain conditions,” and because it was the university’s practice to renew athletic scholarships for at least four years. Since this “entitlement” constituted a property interest under the Fourteenth Amendment, the court held that any deprivation of this entitlement “warrants the protection of due process” (see Section 10.4.2).

The Washington Supreme Court reversed the court of appeals on the due process issue (834 P.2d 17 (Wash. 1992)). The students’ primary contention was that a “mutually explicit understanding” (see generally Section 6.7.2.1) had been created by “the language of their contracts and the common understanding, based upon the surrounding circumstances and the conduct of the parties.” The court rejected this argument, stating that “the language of the offers and the NCAA regulations are not sufficiently certain to support a mutually explicit understanding, [and] the fact that scholarships are, in fact, normally renewed does not create a ‘common law’ of renewal, absent other consistent and supportive [university] policies or rules.” Consequently, the court held that the students had no legitimate claim of entitlement to renewal of the scholarships, and that the university thus had no obligation to extend them due process protections prior to nonrenewal.

Occasionally student athletes have sued their institutions even when the institution has not terminated or withdrawn the athlete’s scholarship. Such cases are likely to involve alleged exploitation or abuse of the athlete, and may present not only breach of contract issues paralleling those in the cases above but

also more innovative tort law issues. The leading case, highly publicized in its day, is *Ross v. Creighton University*, 957 F.2d 410 (7th Cir. 1992). The plaintiff in this case had been awarded a basketball scholarship from Creighton even though his academic credentials were substantially below those of the average Creighton student. The plaintiff alleged that the university knew of his academic limitations but nevertheless lured him to Creighton with assurances that it would provide sufficient academic support so that he would “receive a meaningful education.” While at Creighton, the plaintiff maintained a D average; and, on the advice of the athletic department, his curriculum consisted largely of courses such as “Theory of Basketball.” After four years, he “had the overall language skills of a fourth grader and the reading skills of a seventh grader.”

The plaintiff based his suit on three tort theories and a breach of contract theory. The trial court originally dismissed all four claims. The appellate court agreed with the trial court on the tort claims but reversed the trial court and allowed the plaintiff to proceed to trial on the breach of contract claim. The plaintiff’s first tort claim was a claim of “educational malpractice” based on Creighton’s not providing him with “a meaningful education [or] preparing him for employment after college.” The court refused to recognize educational malpractice as a cause of action, listing four policy concerns supporting its decision: (1) the inability of a court to fashion “a satisfactory standard of care by which to evaluate” instruction, (2) its inability to determine the cause and nature of damage to the student, (3) the potential flood of litigation that would divert institutions’ attention from their primary mission, and (4) the threat of involving courts in the oversight of daily institutional operations. The plaintiff’s second claim was that Creighton had committed “negligent admission” because it owed a duty to “recruit and enroll only those students reasonably qualified to and able to academically perform at CREIGHTON.” The court rejected this novel theory because of similar problems in identifying a standard of care by which to judge the institution’s admissions decisions. The court also noted that, if institutions were subjected to such claims, they would admit only exceptional students, thus severely limiting the opportunities for marginal students. The plaintiff’s last tort claim was negligent infliction of emotional distress. The court quickly rejected this claim because its rejection of the first two claims left no basis for proving that the defendant had been negligent in undertaking the actions that may have distressed the plaintiff.

Although the court rejected all the plaintiff’s negligence claims, it did embrace his breach of contract claim. In order to discourage “any attempt to repackage an educational malpractice claim as a contract claim,” however, the court required the plaintiff to

do more than simply allege that the education was not good enough. Instead, he must point to an identifiable contractual promise that the defendant failed to honor. . . . [T]he essence of the plaintiff’s complaint would not be that the institution failed to perform adequately a promised educational service, but rather that it failed to perform that service at all.

Judicial consideration of such a claim is therefore not an inquiry “into the nuances of educational processes and theories, but rather an objective assessment of whether the institution made a good faith effort to perform on its promise.”

Following this approach, the court reviewed the plaintiff's allegations that the university failed (1) to provide adequate tutoring, (2) to require that the plaintiff attend tutoring sessions, (3) to allow the plaintiff to "red-shirt" for one year to concentrate on his studies, and (4) to afford the plaintiff a reasonable opportunity to take advantage of tutoring services. The court concluded that these allegations were sufficient to warrant further proceedings and therefore remanded the case to the trial court. (Soon thereafter, the parties settled the case.)

The court's disposition of the tort claims in *Ross* does not mean that student athletes can never succeed with such claims. In a similar case, *Jackson v. Drake University*, 778 F. Supp. 1490 (S.D. Iowa 1991), the court did recognize two tort claims—negligent misrepresentation and fraud—brought by a former student athlete. After rejecting an educational malpractice claim for reasons similar to those in *Ross*, the court allowed the plaintiff to proceed with his claims that "Drake did not exercise reasonable care in making representations [about its commitment to academic excellence] and had no intention of providing the support services it had promised." The court reasoned that the policy concerns "do not weigh as heavily in favor of precluding the claims for negligent misrepresentation and fraud as in the claim for [educational malpractice]."

But a student seeking to hold Clemson University responsible for the erroneous advice of an academic advisor, resulting in his ineligibility to play baseball under NCAA rules, was unsuccessful in his attempt to state claims of negligence, breach of fiduciary duty, and breach of contract. In *Hendricks v. Clemson University*, 578 S.E.2d 711 (S.C. 2003), a trial court had granted summary judgment to the university on the student's claims, but a state intermediate appellate court reversed, ruling that the case must proceed to trial. The state supreme court reinstated the summary judgment, ruling that no state law common law precedent could support the assumption by the university of a duty of care to advise the student accurately. Said the court: "We believe recognizing a duty flowing from advisors to students is not required by any precedent and would be unwise, considering the great potential for embroiling schools in litigation that such recognition would create" (578 S.E.2d at 715). In addition, said the court, it would not recognize, as a matter of first impression, a fiduciary relationship between the student and the advisor because such relationships are typically recognized between lawyers and clients, or for members of corporate boards of directors. And finally, according to the court, citing *Ross v. Creighton*, it would not allow the breach of contract claim to go forward because the plaintiff's claim involved an evaluation of the adequacy of the university's services, a claim specifically rejected by the court in *Ross*. Here, said the court, the university had not made any written promise to ensure the athletic eligibility of the student.

**10.4.6. Sex discrimination.** The equitable treatment of male and female college athletes remains a major issue in athletics programs. Despite the fact that Title IX has been in existence for more than thirty years, conflict remains as to whether it has provided appropriate standards for equalizing opportunities for men and women to participate in college sports. Litigation under Title IX

has focused on two primary issues: providing equal access to resources for both men's and women's sports, and equal treatment of athletes of both genders. Equal access litigation involves allegedly inequitable resource allocation to women's sports and the elimination of men's teams by some institutions in order to comply with Title IX's proportionality requirements. Equal treatment cases typically involve challenges to individual treatment of female athletes, including the availability of scholarships, the compensation of coaches, and related issues.

Before the passage of Title IX (20 U.S.C. § 1681 *et seq.*) (see Section 13.5.3), the legal aspects of this controversy centered on the Fourteenth Amendment's equal protection clause. As in earlier admissions cases (Section 8.2.4.2), courts searched for an appropriate analysis by which to ascertain the constitutionality of sex-based classifications in athletics. Since the implementation in 1975 of the Title IX regulations (34 C.F.R. Part 106), the equal protection aspects of sex discrimination in high school and college athletics have played second fiddle to Title IX. Title IX applies to both public and private institutions receiving federal aid and thus has a broader reach than equal protection, which applies only to public institutions (see Section 1.5.2). Title IX also has several provisions on athletics that establish requirements more extensive than anything devised under the banner of equal protection. And Title IX is supported by enforcement mechanisms beyond those available for the equal protection clause (see Sections 13.5.8 & 13.5.9).

In addition to Title IX, state law (including state equal rights amendments) also has significant applications to college athletics.<sup>28</sup> In *Blair v. Washington State University*, 740 P.2d 1379 (Wash. 1987), for example, women athletes and coaches at Washington State University used the state's equal rights amendment and the state nondiscrimination law to challenge the institution's funding for women's athletic programs. The trial court had ruled against the university, saying that funding for women's athletic programs should be based on the percentage of women enrolled as undergraduates. In calculating the formula, however, the trial court had excluded football revenues. The Washington Supreme Court reversed on that point, declaring that the state's equal rights amendment "contains no exception for football." It remanded the case to the trial court for revision of the funding formula. (See "Comment: *Blair v. Washington State University*: Making State ERAs a Potent Remedy for Sex Discrimination in Athletics," 14 *J. Coll. & Univ. Law* 575 (1988).)

Although the regulations interpreting Title IX with regard to athletics became effective in 1975, they were not appreciably enforced at the postsecondary level until the late 1980s—partly because the U.S. Supreme Court, in *Grove City College v. Bell* (discussed in Section 13.5.7.3), had held that Title IX's nondiscrimination provisions applied only to those programs that were direct recipients of federal aid. Congress reversed the result in *Grove City* in the Civil Rights

---

<sup>28</sup>The cases are collected in Jeffrey H. Ghent, Annot., "Application of State Law to Sex Discrimination in Sports," 66 A.L.R.3d 1262.

Restoration Act of 1987, making it clear that Title IX applies to all activities of colleges and universities that receive federal funds.

Section 106.41 of the Title IX regulations is the primary provision on athletics; it establishes various equal opportunity requirements applicable to “inter-scholastic, intercollegiate, club, or intramural athletics.” Section 106.37(c) establishes equal opportunity requirements regarding the availability of athletic scholarships. Physical education classes are covered by Section 106.34, and extracurricular activities related to athletics, such as cheerleading and booster clubs, are covered generally under Section 106.31. The regulations impose nondiscrimination requirements on these activities whether or not they are directly subsidized by federal funds (see this book, Section 13.5.7.4), and they do not exempt revenue-generating sports, such as men’s football or basketball, from the calculation of funds available for the institution’s athletic programs.

One of the greatest controversies stirred by Title IX concerns the choice of sex-segregated versus unitary (integrated) athletic teams. The regulations develop a compromise approach to this issue, which roughly parallels the equal protection principles that emerged from the earlier court cases.<sup>29</sup> Under Section 106.41(b):

[An institution] may operate or sponsor separate teams for members of each sex where selection for such teams is based upon competitive skill or the activity involved is a contact sport. However, where a recipient operates or sponsors a team in a particular sport for members of one sex but operates or sponsors no such team for members of the other sex, and athletic opportunities for members of that sex have previously been limited, members of the excluded sex must be allowed to try out for the team offered unless the sport involved is a contact sport. For the purposes of this part, contact sports include boxing, wrestling, rugby, ice hockey, football, basketball, and other sports the purpose or major activity of which involves bodily contact.

This regulation requires institutions to operate unitary teams only for noncontact sports where selection is not competitive. Otherwise, the institution may operate either unitary or separate teams and may even operate a team for one sex without having any team in the sport for the opposite sex, as long as the

---

<sup>29</sup>It is still somewhat an open question whether Title IX’s athletic regulations fully comply with constitutional equal protection and due process requirements. There is some basis for arguing that the Title IX regulations do not fully meet the equal protection requirements that courts have constructed or will construct in this area (see W. Kaplin & S. Marmor, “Validity of the ‘Separate but Equal’ Policy of the Title IX Regulations on Athletics,” a memorandum reprinted in 121 *Cong. Rec.* 1090, 94th Cong., 1st Sess. (1975)). One court has ruled on the question, holding Section 86.41(b) (now 106.41(b)) of the Title IX regulations unconstitutional as applied to exclude physically qualified girls from competing with boys in contact sports (*Yellow Springs Exempted Village School District v. Ohio High School Athletic Association*, 443 F. Supp. 753 (S.D. Ohio 1978)). On appeal, however, a U.S. Court of Appeals reversed the district court’s ruling (647 F.2d 651 (6th Cir. 1981)). The appellate court held that, because of the posture of the case and the absence of evidence in the record, “we believe it inappropriate for this court to make any ruling on the matter at this time.” The majority opinion and a concurring/dissenting opinion include extensive constitutional analysis of sex segregation in athletic teams.

institution's overall athletic program "effectively accommodate[s] the interests and abilities of members of both sexes" (34 C.F.R. § 106.41(c)(1)). In a non-contact sport, however, if an institution operates only one competitively selected team, it must be open to both sexes whenever the "athletic opportunities" of the traditionally excluded sex "have previously been limited" (34 C.F.R. § 106.41(b)).

Regardless of whether its teams are separate or unitary, the institution must "provide equal athletic opportunity for members of both sexes" (34 C.F.R. § 106.41(c)). While equality of opportunity does not require either equality of "aggregate expenditures for members of each sex" or equality of "expenditures for male and female teams," an institution's "failure to provide necessary funds for teams for one sex" is a relevant factor in determining compliance (34 C.F.R. § 106.41(c)). Postsecondary administrators grappling with this slippery equal opportunity concept will be helped by Section 106.41(c)'s list of ten nonexclusive factors by which to measure overall equality:

1. Whether the selection of sports and levels of competition effectively accommodate the interests and abilities of members of both sexes;
2. The provision of equipment and supplies;
3. Scheduling of games and practice time;
4. Travel and per diem allowance;
5. Opportunity to receive coaching and academic tutoring;
6. Assignment and compensation of coaches and tutors;
7. Provision of locker rooms and practice and competitive facilities;
8. Provision of medical and training facilities and services;
9. Provision of housing and dining facilities and services;
10. Publicity.

The equal opportunity focus of the regulations also applies to athletic scholarships. Institutions must "provide reasonable opportunities for such awards for members of each sex in proportion to the number of each sex participating in . . . intercollegiate athletics" (34 C.F.R. § 106.37(c)(1)). If the institution operates separate teams for each sex (as permitted in § 106.41), it may allocate athletic scholarships on the basis of sex to implement its separate-team philosophy, as long as the overall allocation achieves equal opportunity.

In 1979, after a period of substantial controversy, the Department of Health, Education and Welfare (now Department of Education) issued a lengthy "Policy Interpretation" of its Title IX regulations as they apply to intercollegiate athletics (44 Fed. Reg. 71413 (December 11, 1979)). This "Policy Interpretation," available on the Web site of the Office for Civil Rights (OCR) (<http://www.ed.gov/about/offices/list/ocr/docs/t9interp.html>), is still considered authoritative and is currently used by federal courts reviewing allegations of Title IX violations. It addresses each of the ten factors listed in Section 106.41(c) of the regulations, providing examples of information the Department of Education will

use to determine whether an institution has complied with Title IX. For example, “opportunity to receive coaching and academic tutoring” would include the availability of full-time and part-time coaches for male and female athletes, the relative availability of graduate assistants, and the availability of tutors for male and female athletes. “Compensation of coaches” includes attention to the rates of compensation, conditions relating to contract renewal, nature of coaching duties performed, and working conditions of coaches for male and female teams (44 Fed. Reg. at 71416). Also on the OCR Web site is a “Clarification of Intercollegiate Athletics Policy Guidance: The Three-Part Test” (available at <http://www.ed.gov/about/offices/list/ocr/docs/clarific.html>). This Clarification was issued in January 1996.

The debate over Title IX intensified during 2002–2003 when a Commission on Opportunities in Athletics, appointed by then U.S. Secretary of Education Rod Paige, deliberated about the possibility of changing the way that Title IX was enforced. The commission’s final report made various recommendations about the operation and enforcement of “three-prong test” and the Title IX athletics regulations (Secretary of Education’s Commission on Opportunity in Athletics, *Open to All: Title IX at Thirty* (U.S. Dept. of Education, February 28, 2003). On July 11, 2003, the U.S. Department of Education issued a “Further Clarification of Intercollegiate Athletics Policy Guidance Regarding Title IX Compliance” (available at <http://www.ed.gov/ocr/docs/clarific.html>). The ultimate outcome of the commission’s work and the Office of Civil Rights’ response to it was to ratify the “three-prong test” for determining whether an institution’s athletic program is complying with Title IX, a result that disappointed critics of the “proportionality” requirement that had apparently stimulated some institutions to drop certain men’s varsity sports in order to reallocate funding to women’s sports. In March 2005, the Office of Civil Rights issued an “Additional Clarification of Intercollegiate Athletics: Three-Part Test—Part Three” (available at <http://www.ed.gov/print/about/offices/list/ocr/docs/title9guidanceadditional.html>) that allows institutions to use a survey to measure student athletic interest. The NCAA and proponents of gender equity in college sports have criticized the new OCR policy. (For a thorough review and analysis of these “clarifications,” see Catherine Pieronek, “An Analysis of the New Clarification of Intercollegiate Athletics Policy Regarding Part Three of the Three-Part Test for Compliance with the Effective Accommodation Guidelines of Title IX,” 32 *J. Coll. & Univ. Law* 105 (2005).)

Most Title IX disputes have involved complaints to the Office for Civil Rights. In the past, this office has been criticized for its “lax” enforcement efforts and for permitting institutions to remain out of compliance with Title IX (*Gender Equity in Intercollegiate Athletics: The Inadequacy of Title IX Enforcement by the U.S. Office for Civil Rights* (Lyndon B. Johnson School of Public Affairs, University of Texas, 1993)). Perhaps partly for this reason, women athletes in recent years have chosen to litigate their claims in the courts.

Although the first major court challenge to an institution’s funding for intercollegiate athletics ended with a settlement rather than a court order (*Haffer v. Temple University*, 678 F. Supp. 517 (E.D. Pa. 1987)), this case set the tone for

subsequent litigation. In *Haffer*, a federal trial judge certified a class of “all current women students at Temple University who participate, or who are or have been deterred from participating because of sex discrimination[,] in Temple’s intercollegiate athletic program.” Although the case was settled, with the university agreeing to various changes in scholarships and support for women athletes, it encouraged women students at other colleges and universities to challenge the revenues allocated to women’s and men’s sports. (For discussion, see “Comment: *Haffer v. Temple University*: A Reawakening of Gender Discrimination in Intercollegiate Athletics,” 16 *J. Coll. & Univ. Law* 137 (1989).)

The leading case to date on Title IX’s application to alleged inequality in funding for women’s intercollegiate sports is *Cohen v. Brown University*, 991 F.2d 888 (1st Cir. 1993). In that case, a U.S. Court of Appeals upheld a district court’s preliminary injunction ordering Brown University to reinstate its women’s gymnastics and women’s volleyball programs to full varsity status pending the trial of a Title IX claim. Until 1971, Brown had been an all-male university. At that time it merged with a women’s college and, over the next six years, upgraded the women’s athletic program to include fourteen varsity teams. It later added one other such team. It thus had fifteen women’s varsity teams as compared to sixteen men’s varsity teams; the women had 36.7 percent of all the varsity athletic opportunities available at the university, and the men had 63.3 percent. (Brown’s student population is approximately 48 percent women.) In 1991, however, the university cut four varsity teams: two men’s teams (for a savings of \$15,795) and two women’s teams (for a savings of \$62,028). These cuts disproportionately reduced the budgeted funds for women, but they did not significantly change the ratio of athletic opportunities, since women retained 36.6 percent of the available slots.

In upholding the district court’s injunction, the appellate court first noted that an institution would not be found in violation of Title IX merely because there was a statistical disparity between the percentage of women and the percentage of men in its athletic programs. The court then focused on the ten factors listed in Section 106.41(c) of the Title IX regulations (see above) and noted that the district court based its injunction on the first of these factors: “Brown’s failure effectively to accommodate the interests and abilities of female students in the selection and level of sports.” To be in compliance with this factor, a university must satisfy at least one of three tests set out in the Title IX Policy Interpretation:

- (1) Whether intercollegiate level participation opportunities for male and female students are provided in numbers substantially proportionate to their respective enrollments; or
- (2) Where the members of one sex have been and are underrepresented among intercollegiate athletes, whether the institution can show a history and continuing practice of program expansion which is demonstrably responsive to the developing interest and abilities of the members of that sex; or
- (3) Where the members of one sex have been and are underrepresented among intercollegiate athletes, and the institution cannot show a continuing practice of program expansion such as that cited above, whether it can be

demonstrated that the interests and abilities of the members of that sex have been fully and effectively accommodated by the present program [44 Fed. Reg. at 71418].

The appellate court agreed with the district court that Brown clearly did not fall within the first option. Further, the district court did not abuse its discretion in deciding that, although the university had made a large burst of improvements between 1971 and 1977, the lack of continuing expansion efforts precluded the university from satisfying the second option. Thus, since the university could not comply with either of the first two options, “it must comply with the third benchmark. To do so, the school must fully and effectively accommodate the underrepresented gender’s interests and abilities, even if that requires it to give the underrepresented gender . . . what amounts to a larger slice of a shrinking athletic-opportunity pie.” The appellate court then focused on the word “fully” in the third option, interpreting it literally to the effect that the underrepresented sex must be “fully” accommodated, not merely proportionately accommodated as in the first option. Since Brown’s cuts in the women’s athletic programs had created a demand for athletics opportunities for women that was not filled, women were not “fully” accommodated. Thus, since Brown could meet none of the three options specified in the Policy Interpretation, the court concluded that the university had likely violated Title IX, and it therefore affirmed the district court’s entry of the preliminary injunction.<sup>30</sup>

Holding that the plaintiffs had made their required showing and that Brown had not, the court turned to the issue of remedy. Although the appellate court upheld the preliminary injunction, it noted the need to balance the institution’s academic freedom with the need for an effective remedy for the Title IX violation. The appellate court stated that, since the lower court had not yet held a trial on the merits, its order that Brown maintain women’s varsity volleyball and gymnastics teams pending trial was within its discretion. The appellate court noted, however, that a more appropriate posttrial remedy, assuming that a Title IX violation was established, would be for Brown to propose a program for compliance. In balancing academic freedom against Title IX’s regulatory scheme, the court noted:

This litigation presents an array of complicated and important issues at a crossroads of the law that few courts have explored. The beacon by which we must steer is Congress’s unmistakably clear mandate that educational institutions not use federal monies to perpetuate gender-based discrimination. At the same time, we must remain sensitive to the fact that suits of this genre implicate the discretion of universities to pursue their missions free from governmental interference and, in the bargain, to deploy increasingly scarce resources in the most advantageous way [991 F.2d at 907].

---

<sup>30</sup>The appellate court’s opinion also contained an important discussion of the plaintiff’s and defendant’s burdens of proof in presenting and rebutting a Title IX athletics claim (991 F.2d at 902). See also *Roberts v. Colorado State Board of Agriculture*, 998 F.2d 824, 831–32 (10th Cir. 1993); and compare *Cook v. Colgate University*, 802 F. Supp. 737 (N.D.N.Y. 1992), *vacated on other grounds*, 992 F.2d 17 (2d Cir. 1993).

After the appellate court remanded the case to the district court, that court held a full trial on the merits, after which it ruled again in favor of the plaintiffs and ordered Brown to submit a plan for achieving full compliance with Title IX. When the district court found Brown's plan to be inadequate and entered its own order specifying that Brown must remedy its Title IX violation by elevating four women's teams to full varsity status, Brown appealed again. In late 1996, the First Circuit issued another ruling in what it called "*Cohen IV*" (*Cohen II* being its earlier 1993 ruling, and *Cohen I* and *Cohen III* being the district court rulings that preceded *Cohen II* and *Cohen IV*). By a 2-to-1 vote in *Cohen IV*, 101 F.3d 155 (1st Cir. 1996), the appellate court affirmed the district court's ruling that Brown was in violation of Title IX. The court explicitly relied upon, and refused to reconsider, its legal analysis from *Cohen II*. The *Cohen II* reasoning, as further explicated in *Cohen IV*, thus remains the law in the First Circuit and the leading example of how courts will apply Title IX to the claims of women athletes.

One of Brown's major arguments in *Cohen IV* was that women were less interested in participating in collegiate sports, and that the trial court's ruling required Brown to provide opportunities for women that went beyond their interests and abilities. The court viewed this argument "with great suspicion" and rejected it:

Thus, there exists the danger that, rather than providing a true measure of women's interest in sports, statistical evidence purporting to reflect women's interest instead provides only a measure of the very discrimination that is and has been the basis for women's lack of opportunity to participate in sports. . . . [E]ven if it can be empirically demonstrated that, at a particular time, women have less interest in sports than do men, such evidence, standing alone, cannot justify providing fewer athletics opportunities for women than for men. Furthermore, such evidence is completely irrelevant where, as here, viable and successful women's varsity teams have been demoted or eliminated [101 F.3d at 179-80].

Regarding Brown's obligation to remedy its Title IX violation, however, the *Cohen IV* court overruled the district court, because that court "erred in substituting its own specific relief in place of Brown's statutorily permissible proposal to comply with Title IX by cutting men's teams until substantial proportionality was achieved." The appellate court "agree[d] with the district court that Brown's proposed plan fell short of a good faith effort to meet the requirements of Title IX as explicated by this court in *Cohen II* and as applied by the district court on remand." Nevertheless, it determined that cutting men's teams "is a permissible means of effectuating compliance with the statute," and that Brown should have the opportunity to submit another plan to the district court. This disposition, said the court, was driven by "our respect for academic freedom and reluctance to interject ourselves into the conduct of university affairs."<sup>31</sup>

---

<sup>31</sup>On remand from *Cohen IV*, the federal district court approved a settlement of the case. See Jim Naughton, "Settlement Approval in Brown Title IX Case," *Chron. Higher Educ.*, July 3, 1998, at A31. For cases reaching results similar to the *Cohen* case, see *Favia v. Indiana University of Pennsylvania*, 7 F.3d 332 (3d Cir. 1993); *Roberts v. Colorado State Board of Agriculture*, 998 F.2d 824 (10th Cir. 1993).

In *Pederson v. Louisiana State University*, 213 F.3d 858 (5th Cir. 2000), another federal appellate court ruled that the university had engaged in “systematic, intentional, differential treatment of women,” and affirmed a trial court’s ruling that the university had violated Title IX. The plaintiffs, representing a class of all women students at Louisiana State University (LSU) who wished to participate in varsity sports that were not provided by LSU, alleged that the university had

den[ied] them equal opportunity to participate in intercollegiate athletics, equal opportunity to compete for and to receive athletic scholarships, and equal access to the benefits and services that LSU provides to its varsity intercollegiate athletes, and by discriminating against women in the provision of athletic scholarships and in the compensation paid coaches [213 F.3d at 864].

Because the record not only contained evidence of a lack of opportunities for women to play varsity soccer and fast-pitch softball (the sports in question) and substantial differences in the financial resources afforded women’s sports compared with men’s, but also included a multitude of sexist comments to the women athletes by university sports administrators and admissions that they would only add women’s teams “if forced to,” the appellate court ruled that the discrimination was intentional and “motivated by chauvinist notions” (213 F.3d at 882).

Both in *Cohen* and in *Pederson*, the courts appeared to serve warning on institutions that do not provide equivalent funding for men’s and women’s sports. And *Cohen*, in particular, demonstrates that, for institutions that have either a stringently limited athletic budget or one that must be cut, compliance with Title IX can occur only if the institution reduces opportunities for men’s sports to the level available for women’s sports. Both appellate opinions deferred to the institution’s right to determine for itself how it will structure its athletic programs, but once the institution was out of Title IX compliance, these courts did not hesitate to order specific remedies. Financial problems do not exempt an institution from Title IX compliance.<sup>32</sup>

As noted above, individuals who believe that an institution is violating Title IX’s requirements of equity in athletics have two choices: they may file a complaint with the Education Department’s Office of Civil Rights, or they may file a lawsuit in federal court. The ruling of the U.S. Supreme Court in *Alexander v. Sandoval*, discussed in Sections 13.5.7.2 and 13.5.9 of this book, may complicate future litigation challenging the equity of athletics programs by gender. In *Alexander*, the Court ruled that there is no private right of action for disparate impact claims under Title VI (see Section 13.5.2 of this book). Because the language of Title IX is virtually identical to the language of Title VI, courts

---

<sup>32</sup>The cases are collected in Brian L. Porto, Annot., “Suits by Female College Athletes Against Colleges and Universities Claiming That Decisions to Discontinue Particular Sports or to Deny Varsity Status to Particular Sports Deprive Plaintiffs of Equal Educational Opportunities Required by Title IX (§§ 20 U.S.C.A. 1681–1688),” 129 A.L.R. Fed. 571.

have applied Title VI jurisprudence to claims brought under Title IX. Thus, the outcome in *Alexander* suggests that courts will reject the attempts of plaintiffs to bring disparate impact claims under Title IX. A federal district court has confirmed this interpretation of *Alexander* in *Barrett v. West Chester University*, 2003 U.S. Dist. LEXIS 21095 (E.D. Pa., November 12, 2003), but found that the university had intentionally discriminated against women students by eliminating the women's gymnastic team, by failing to provide equal coaching resources to male and female teams, and by paying coaches of women's teams less than coaches of men's teams. The court granted the plaintiffs' motion for an injunction, requiring the reinstatement of the women's gymnastic team. Had the plaintiffs been limited to a claim of disparate impact, rather than intentional discrimination, the court would have dismissed their claim.

Under *Alexander v. Sandoval*, therefore, plaintiffs may challenge discrimination in athletics in court only by asserting claims of intentional discrimination brought under § 901 of the Title IX *statute*, which has been interpreted to permit a private right of action. Should the Title IX regulations or ED policy interpretations be interpreted as prohibiting discriminatory actions that are unintentional, but which have a harsher impact on members of one gender, athletes with such disparate impact claims may assert them only in the institution's Title IX grievance process or in ED's administrative complaint process. In addition, under *Alexander*, plaintiffs will not be able to bring private causes of action claiming *intentional* violations of the Title IX regulations or the ED policy interpretations unless they can show that the cause of action is also grounded on the Title IX statute itself and not merely on the regulations and/or policy interpretation(s).

Although federal courts have analyzed cases involving equal access to athletics opportunities using one or more of the factors listed in the regulations (discussed above), the appellate courts are divided as to whether the burden of proof created by the U.S. Supreme Court in 1998 for plaintiffs suing under Title IX for sexual harassment should also be applied to Title IX litigation concerning athletics. In *Gebser v. Lago Vista Independent School District*, discussed in Section 9.3.4, the U.S. Supreme Court ruled that a plaintiff must prove that (1) the school had actual notice of the alleged discrimination, and (2) the school demonstrated "deliberate indifference" in its response to the student's claim. The U.S. Court of Appeals for the Fifth Circuit in *Pederson v. Louisiana State University*, discussed above, rejected the defendant's argument that the *Gebser* test should apply in a lawsuit regarding equal access to athletic opportunities, using instead the traditional three-part test from the OCR's Policy Interpretation.

The *Pederson* court reasoned that the institution itself had intentionally discriminated against the women athletes, so the *Gebser* framework, which addressed whether the school was on notice of discriminatory conduct by an employee, was not relevant. On the other hand, the U.S. Court of Appeals for the Eighth Circuit, in *Grandson v. University of Minnesota*, 272 F.3d 568 (8th Cir. 2001), *cert. denied*, 535 U.S. 1054 (2002), dismissed a Title IX lawsuit filed by a woman student seeking compensatory damages for the university's alleged failure to provide equitable funding for the women's soccer team, scholarships,

and other resources. The court, applying the *Gebser* test, ruled that the plaintiff had not proved that a responsible university individual had “actual notice” of the alleged discrimination, and that the plaintiff’s allegations of a funding disparity between men’s and women’s athletics was insufficient proof of intentional discrimination.

In addition to claims from women students that funding is inadequate, courts have also considered Title IX claims of men seeking reinstatement of men’s teams that their institutions had cut. An early example of such a case is *Kelley v. Board of Trustees of University of Illinois*, 35 F.3d 265 (7th Cir. 1994), in which a federal appellate court upheld the university’s discontinuance of the men’s swimming team. The appellate court accorded deference to the Title IX regulations and the Policy Interpretation on intercollegiate athletics. Because the university had done its cutting of teams in accordance with the regulations and the interpretation, seeking to achieve proportionality between men’s and women’s athletic teams, the court affirmed the district court’s grant of summary judgment for the university.

The same appellate court (the Seventh Circuit) later expanded upon its *Kelley* ruling in *Boulahanis v. Board of Regents*, 198 F.3d 633 (7th Cir. 1999). That case involved Illinois State University’s decision to cut the men’s soccer and wrestling teams in order to achieve compliance with Title IX. Reiterating its ruling in *Kelley*, the court rejected the plaintiffs’ attempt to distinguish their case from *Kelley* by arguing that the university in *Kelley* cut its men’s athletic teams for budgetary reasons while the university here did so for the sole purpose of Title IX compliance. The court quickly recognized that financial considerations cannot be “neatly separated” from Title IX considerations and that decisions regarding which athletic programs to retain are “based on a combination of financial and sex-based concerns that are not easily distinguished.”<sup>33</sup>

Another leading case on men’s teams is *Neal v. California State University*, 198 F.3d 763 (9th Cir. 1999). In that case, California State University at Bakersfield (CSUB), in the face of shrinking budgetary resources, was working to achieve compliance with Title IX under a consent decree entered in a previous Title IX suit. CSUB decided to limit the size of several of its male athletic teams. After it required the men’s wrestling team to reduce its roster, the wrestlers brought suit under Title IX, and the federal district court enjoined the reduction. On appeal, the Ninth Circuit vacated the injunction and upheld the university’s actions.

The wrestlers argued that the “substantially proportionate” requirement in the Policy Interpretation could be met by providing opportunities in proportion

---

<sup>33</sup>The *Boulahanis* court also had the opportunity to address an equal protection clause challenge to the Title IX regulations. Rejecting the argument that the regulations, if interpreted to permit elimination of men’s teams, would violate equal protection, the court explained that the university’s action met the standard of review applicable to gender discrimination under the equal protection clause: “[t]he elimination of sex-based discrimination in federally-funded educational institutions is an important government objective, and the actions of Illinois State University in eliminating the men’s soccer and the men’s wrestling programs were substantially related to that objective.”

to the interest levels of each gender, rather than in proportion to the actual enrollment figures. Rejecting this argument, the court determined that such an interest-based interpretation of the Policy Interpretation “‘limit[s] required program expansion for the underrepresented sex to the status quo level of relative interests’” (198 F.3d at 768, quoting *Cohen IV* (above), 101 F.3d at 174) and does so “‘under circumstances where men’s athletic teams have a considerable head start’” (198 F.3d at 768, quoting *Cohen II*, 991 F.2d at 900).

The appellate court also addressed the wrestlers’ argument that Title IX does not permit cutting of men’s teams as a means to remedy gender inequity in athletics, but provides only for increasing women’s teams. In responding to this argument, the court relied on the decisions of other circuits, such as the Seventh Circuit’s decision in *Kelley v. Board of Trustees* that had already approved of universities’ cutting men’s teams to comply with Title IX. The *Neal* court also asserted that the legislative history of Title IX indicates Congress was aware that compliance might sometimes be achieved only by cutting men’s athletics.

Finally, the appellate court in *Neal* explained that the district court had erred in not deferring to the U.S. Department of Education’s Policy Interpretation. Citing U.S. Supreme Court precedent, the court emphasized that “federal courts are to defer substantially to an agency’s interpretation of its own regulations,” unless that interpretation is plainly inconsistent with the statute or would raise “serious constitutional issues”—neither of which is the case with the Policy Interpretation.

Following *Boulahanis* and *Neal*, federal appellate courts rejected challenges to the elimination of varsity wrestling teams at the University of North Dakota (*Chalenor v. Univ. of N. Dakota*, 291 F.3d 1042 (8th Cir. 2002)), and Miami University (*Miami Wrestling Club v. Miami Univ.*, 302 F.3d 608 (6th Cir. 2002)). The National Wrestling Coaches Association brought a lawsuit against the U.S. Office for Civil Rights, challenging the 1996 “Clarification of Intercollegiate Athletics Policy Guidance: The Three Part Test” as well as the “Policy Interpretation” issued in 1979 (both of which are on the OCR’s Web site, noted above). The district court dismissed the case on the grounds that the plaintiffs did not have standing to pursue that claim, and the appellate court affirmed. *National Wrestling Coaches Assoc. v. U.S. Department of Educ.*, 263 F. Supp. 2d 82 (D.D.C. 2003), *affirmed*, 366 F.3d 930 (D.C. Cir. 2004). According to the appellate court, even if the two documents challenged by the Coaches Association were revoked, the law would still permit an institution to eliminate the men’s wrestling program in order to comply with Title IX’s gender equity mandate.

The plaintiffs filed a motion for an *en banc* review by the appellate court. The panel, in a 2-to-1 decision, rejected the coaches’ request for rehearing, stating that the coaches’ real dispute was with the institutions that had cut wrestling, not with the Department of Education (383 F.3d 1047 (D.C. Cir. 2004)). Rejecting the coaches’ argument that the U.S. Department of Education had “forced” colleges and universities to adopt policies with respect to proportionality that are unlawful under Title IX, the majority noted that the department’s policy statements are not regulations, and that universities are not required to follow them. Because the plaintiffs had a “fully adequate” private

cause of action against the institutions that dropped their wrestling teams, said the court, the coaches needed to look to the institutions for relief. As these cases suggest, male athletes are likely to have a much more difficult time contesting the cutting of men's teams than are female athletes in contesting the cutting of women's teams.

In addition to litigating the allocation of resources to men's and women's teams, individual athletes have occasionally used Title IX to gain a position on a varsity team. For example, in *Mercer v. Duke University*, 32 F. Supp. 2d 836 (M.D.N.C. 1998), *reversed*, 190 F.3d 643 (4th Cir. 1999), a student claimed that Duke University violated Title IX by excluding her from the university's intercollegiate football team. The student had been an all-state place kicker while in high school in New York State. During the first year of college, she sought to join the football team as a walk-on. Although she attended tryouts and practiced with the team for two seasons, the head coach ultimately excluded her from the team. The plaintiff alleged in the lawsuit that the university treated her differently from male walk-on place kickers of lesser ability and failed to give her full and fair consideration for team membership because of her gender. The district court held that, even if the student's allegations were true, the university would nevertheless prevail. Relying on the "contact sport" exception in applicable Title IX regulations prohibiting different treatment in athletics based on gender (34 C.F.R. § 106.41), the court granted the university's motion to dismiss. According to the court, since "football is clearly a 'contact sport,' a straightforward reading of this regulation demands the holding that, as a matter of law, Duke University had no obligation to allow Mercer, or any female, onto its football team."

On appeal, the U.S. Court of Appeals read the applicable regulation differently from the district court and reinstated the case for further proceedings. The appellate court determined that, contrary to providing a "blanket exemption for contact sports," subsection (b) of the regulation (34 C.F.R. § 106.41(b)) merely "excepts contact sports from the tryout requirement," that is, the requirement that members of the excluded sex be allowed to try out for a single-sex team. But "once an institution has allowed a member of one sex to try out for a team operated . . . for the other sex in a contact sport," the institution is subject to "the general anti-discrimination provision" in subsection (a) of the applicable regulation (34 C.F.R. § 106.41(a)). The appellate court therefore held that once a university has allowed tryouts, it is "subject to Title IX and therefore prohibited from discriminating against [the person trying out] on the basis of his or her sex."

The Title IX controversy about dropping and adding men's and women's teams has extended to the area of athletic scholarships. The pertinent regulation is 34 C.F.R. § 106.37(c), as interpreted in 44 Fed. Reg. 71413, 71415-23. This regulation, somewhat like the regulation at issue in *Cohen* (34 C.F.R. § 106.41(c)), uses a proportionality test to determine whether benefits are equitably distributed between men and women. In 1998, the U.S. Department of Education's Office for Civil Rights issued a clarification of its requirements for scholarships. And litigation by male athletes whose teams (and scholarships) have been cut in

order to comply with Title IX has been unavailing. (See, for example, *Harper v. Board of Regents, Illinois State University*, 35 F. Supp. 2d 1118 (C.D. Ill. 1999), *affirmed*, *Boulahanis et al. v. Board of Regents*, 198 F.3d 633 (7th Cir. 1999), in which the court awarded summary judgment to the university on grounds that elimination of men's teams and scholarships was not discriminatory; Title IX compliance was a legitimate nondiscriminatory reason for the action.)

**10.4.7. Discrimination on the basis of disability.** Under Section 504 of the Rehabilitation Act of 1973 and its implementing regulations (see Section 13.5.4 of this book), institutions must afford disabled students an equal opportunity to participate in physical education, athletic, and recreational programs. Like Title IX, Section 504 applies to athletic activities even if they are not directly subsidized by federal funds (see Section 13.5.7.4). The Department of Education's regulations set forth the basic requirements at 34 C.F.R. § 104.47(a), requiring institutions to offer physical education courses and athletic activities on a nondiscriminatory basis to disabled students.

By these regulations, a student in a wheelchair could be eligible to participate in a regular archery program, for instance, or a deaf student on a regular wrestling team (34 C.F.R. Part 104 Appendix A), because they would retain full capacity to play those sports despite their disabilities. In these and other situations, however, questions may arise concerning whether the student's skill level would qualify him to participate in the program or allow him to succeed in the competition required for selection to intercollegiate teams.

Litigation involving challenges under Section 504 by disabled athletes has been infrequent, although there are several cases involving student challenges to NCAA eligibility rulings, which are discussed in Section 14.4.5. In an early case, *Wright v. Columbia University*, 520 F. Supp. 789 (E.D. Pa. 1981), the court relied on Section 504 to protect a disabled student's right to participate in intercollegiate football. The student had been blind in one eye since infancy; because of the potential danger to his "good" eye, the institution had denied him permission to participate. In issuing a temporary restraining order against the university, the court accepted (pending trial) the student's argument that the institution's decision was discriminatory within the meaning of Section 504 because the student was qualified to play football despite his disability and was capable of making his own decisions about "his health and well-being."

But another federal trial court sided with the university in its determination that participation by a student was potentially dangerous. In *Pahulu v. University of Kansas*, 897 F. Supp. 1387 (D. Kan. 1995), the plaintiff was a football player who had sustained a blow to the head during a scrimmage and consequently experienced tingling and numbness in his arms and legs. After the team physician and a consulting neurosurgeon diagnosed the symptoms as transient quadriplegia caused by a congenitally narrow cervical cord, they recommended that the student be disqualified from play for his senior year—even though he obtained the opinions of three other specialists who concluded he was fit to play. The student then sought a preliminary injunction, claiming that the university's decision violated Section 504. The court disagreed, holding that the

plaintiff (1) was not disabled within the meaning of Section 504 and (2) was not “otherwise qualified” to play football even if he was disabled. As to (1), the court reasoned that the plaintiff’s physical impairment did not “substantially limit” the “major life activity” of learning, since he still retained his athletic scholarship, continued to have the same access to educational opportunities and academic resources, and could participate in the football program in some other capacity. As to (2), the court reasoned that the plaintiff did not meet the “technical standards” of the football program because he had failed to obtain medical clearance, and that the university’s position was reasonable and rational, albeit conservative.

*Knapp v. Northwestern University*, 101 F.3d 473 (7th Cir. 1996), uses reasoning similar to—but more fully developed than—that in *Pahulu* to deny relief to a basketball player who had been declared ineligible due to a heart problem. Applying the Section 504 definition of disability, the court ruled that (1) playing intercollegiate basketball is not itself a “major life activit[y],” nor is it an integral part of “learning,” which the Section 504 regulations do acknowledge to be a major life activity; (2) the plaintiff’s heart problem only precludes him from performing “a particular function” and does not otherwise “substantially limit” his major life activity of learning at the university; and (3) consequently, the plaintiff is not disabled within the meaning of Section 504 and cannot claim its protections. The court also ruled that the plaintiff could not claim Section 504 protection because he was not “otherwise qualified,” since he could not meet the physical standards. In reaching this conclusion, the court deferred to the university’s judgment regarding the substantiality of risk and the severity of harm to the plaintiff, stating that, as long as the university and its medical advisors used reasonable criteria to make the decisions, the court should not second-guess those judgments.

In addition to Section 504, the Americans With Disabilities Act (see Section 13.2.11) may also provide protections for student athletes subjected to discrimination on the basis of a disability in institutional athletic programs. Title II of the Act (public services) (42 U.S.C. §§ 12131–12134) would apply to students in public institutions, and Title III (public accommodations) (42 U.S.C. §§ 12181–12189) would apply to students in private institutions. (See generally C. Jones, “College Athletes: Illness or Injury and the Decision to Return to Play,” 40 *Buffalo L. Rev.* 113, 189–97 (1992).)

In addition to the right of disabled students to participate in a particular sport, an emerging issue concerns whether academic eligibility requirements for student athletes may discriminate against learning-disabled athletes. The cases thus far have arisen primarily under the Americans With Disabilities Act rather than under Section 504. Although these cases have focused on eligibility requirements of the NCAA (especially the “core course requirement”) (see Section 14.4.6.2) rather than separate requirements of individual institutions, many of the same legal issues would arise if a learning disabled athlete were to challenge his or her school’s own eligibility requirements or were to challenge the school for following NCAA requirements. These issues would include whether the learning disability is a “disability” within the meaning of the ADA (see the

*Tatum* case, discussed in Section 14.4.6.2); whether the institution's academic eligibility requirements are discriminatory because, for instance, they "screen out or tend to screen out" learning disabled students under Title III of the ADA, § 12182(b)(2)(A)(i) (see the *Ganden* case, discussed in Section 14.4.6.2); whether the student's requested modifications to the eligibility requirements were "reasonable" or, to the contrary, would fundamentally alter the intercollegiate athletic program or the institution's academic mission as it interfaces with athletics (see *Ganden* and also the *Bowers* case in Section 14.4.6.2); and whether the institution has conducted a suitable individualized assessment of the student's need for modifications (see *Bowers* in Section 14.4.6.2).

An emerging issue, albeit one that has yet to see litigation, is whether either Section 504 or the ADA requires a university to provide separate athletic teams for students with disabilities, as is required by Title IX for women students. (For a discussion of this issue that includes a range of opinions by legal experts and proponents of athletics opportunities for students with disabilities, see Welch Suggs, "'Varsity' with an Asterisk: Disabled Students Are Making a Case for Equal Access to College Athletics Budgets," *Chron. Higher Educ.*, February 13, 2004, A35 (available at <http://chronicle.com/weekly/v50/i23/23a03501.htm>). For a critical analysis of the judicial rulings discussed above, see Adam A. Milani, "Can I Play? The Dilemma of the Disabled Athlete in Interscholastic Sports," 49 *Ala. L. Rev.* 817 (1998).)

**10.4.8. Drug testing.** Drug testing of athletes has become a focus of controversy in both amateur and professional sports. Intercollegiate athletics is no exception. Legal issues may arise under the federal Constitution's Fourth Amendment search and seizure clause and its Fourteenth Amendment due process clause; under search and seizure, due process, or right to privacy clauses of state constitutions; under various state civil rights statutes; under state tort law (see generally Section 3.3.2); or under the institution's own regulations, including statements of students' rights. Public institutions may be subject to challenges based on any of these sources; private institutions generally are subject only to challenges based on tort law, their own regulations, civil rights statutes applicable to private action, and (in some states) state constitutional provisions limiting private as well as public action (see generally Section 1.5).

For public institutions, the primary concern is the Fourth Amendment of the federal Constitution, which protects individuals against unreasonable searches and seizures, and parallel state constitutional provisions that may provide similar (and sometimes greater) protections. In *Skinner v. Railway Labor Executives Ass'n.*, 489 U.S. 602, 619 (1989), the U.S. Supreme Court held that the collection of urine or blood for drug testing constitutes a search within the meaning of the Fourth Amendment, and that the validity of such a search is determined by balancing the legitimacy of the government's interest against the degree of intrusion upon the individual's privacy interest.

Drug-testing policies may provide for testing if there is a reasonable suspicion that a student may either have used drugs recently or may be currently impaired; or they may provide for random testing, where a reasonable suspicion of drug

use is not an issue. The courts have examined both types of policies. Although policies that require a reasonable suspicion are more likely to be upheld than those involving random testing, they are still subject to the standards set forth in *Skinner*.

*Derdeyn v. University of Colorado*, 832 P.2d 1031 (Colo. Ct. App. 1991), *affirmed*, 863 P.2d 929 (Colo. 1993), provides an example of a university drug-testing program held to be unreasonable under the *Skinner* standard. The university initiated a program for testing its student athletes when it had a “reasonable suspicion” that they were using drugs. As a condition to participation in intercollegiate athletics, all athletes were asked to sign a form consenting to such tests. The university initiated the program “because of a desire to prepare its athletes for drug testing in NCAA sanctioned sporting events, a concern for athletes’ health, an interest in promoting its image, and a desire to ensure fair competition” (832 P.2d at 1032). In a class action suit, student athletes challenged this program on several grounds. The Supreme Court of Colorado held that the program violated both the federal Constitution’s Fourth Amendment and a similar provision of the Colorado constitution. Applying the *Skinner* test, the court determined that the drug-testing program was unconstitutional. In addition, the court held that the university’s consent form was not sufficient to waive the athletes’ constitutional rights. The university bore the burden of proof in showing that the waiver was signed voluntarily. Relying on the trial testimony of several athletes, which “revealed that, because of economic or other commitments the students had made to the University, [the students] were not faced with an unfettered choice in regard to signing the consent” (832 P.2d at 1035), the Colorado Supreme Court invalidated the university’s program and prohibited its continuation.

The U.S. Supreme Court addressed the lawfulness of testing student athletes in K-12 settings twice since its *Skinner* ruling, and in both cases the Court upheld the testing program. *Vernonia School District 47J v. Acton*, 515 U.S. 646 (1995), involved a constitutional challenge to a public school district’s *random* drug testing of student athletes. Seventh grader James Acton and his parents sued the school district after James had been barred from the school football team because he and his parents refused to sign a form consenting to random urinalysis drug testing. In an attempt to control a “sharp increase” in drug use among students, the district had implemented a policy requiring that all student athletes be tested at the beginning of each season for their sport, and that thereafter 10 percent of the athletes be chosen at random for testing each week of the season. In a 6-to-3 decision, the U.S. Supreme Court reversed the U.S. Court of Appeals for the Ninth Circuit (23 F. 3d 1514 (9th Cir. 1994)) and upheld the policy.

The majority opinion by Justice Scalia relied on *Skinner v. Railway Labor Executives Association* to conclude that the collection of urine samples from students is a search that must be analyzed under the reasonableness test. The majority then examined three factors to determine the reasonableness of the search: (1) “the nature of the privacy interest upon which the search . . . intrudes”; (2) “the character of the intrusion that is complained of”; and

(3) “the nature and immediacy of the governmental concern at issue . . . , and the efficacy of [the drug test in] meeting it.” Regarding the first factor, the Court emphasized that “particularly with regard to medical examinations and procedures,” student athletes have even less of an expectation of privacy than students in general due to the “communal” nature of locker rooms and the additional regulations to which student athletes are subject on matters such as preseason physicals, insurance coverage, and training rules.

Regarding the second factor, the Court stated that urinalysis drug testing is not a significant invasion of the student’s privacy because the process for collecting urine samples is “nearly identical to those [conditions] typically encountered in restrooms”; the information revealed by the urinalysis (what drugs, if any, are present in the student’s urine) is negligible; the test results are confidential and available only to specific personnel; and the results are not turned over to law enforcement officials. And regarding the third factor, the Court determined that the school district has an “important, indeed perhaps compelling,” interest in deterring schoolchildren from drug use as well as a more particular interest in protecting athletes from physical harm that could result from competing in events under the influence of drugs; that there was evidence of a crisis of disciplinary actions and “rebellion . . . being fueled by alcohol and drug abuse,” which underscored the immediacy of the district’s concerns; and that the drug testing policy “effectively addressed” these concerns. The plaintiffs had argued that the district could fulfill its interests by testing when it had reason to suspect a particular athlete of drug use, and that this would be a less intrusive means of effectuating the interests. The Court rejected this proposal, explaining that it could be abused by teachers singling out misbehaving students, and it would stimulate litigation challenging such testing.

Although *Vernonia* is an elementary/secondary school case, its reasonableness test and the three factors for applying it will also likely guide analysis of Fourth Amendment challenges to drug testing of student athletes at colleges and universities. Some of the considerations relevant to application of the three factors would differ for higher education, however, so it is unclear whether the balance would tip in favor of drug-testing plans, as it did in *Vernonia*. The Court itself took pains to limit its holding to public elementary/secondary education, warning that its analysis might not “pass constitutional muster in other contexts.”

(On remand in *Vernonia*, the Ninth Circuit ruled on the merits that the defendant’s drug-testing program did not violate the Fourth Amendment or the Oregon constitution; 66 F.3d 217 (9th Cir. 1995).)

The Supreme Court issued another ruling in 2002, this time upholding a random drug-testing policy that covered any student who participated in extracurricular school activities, whether or not they involved athletics. In *Board of Education of Independent School District No. 92 v. Earls*, 536 U.S. 822 (2002), a 5-to-4 decision with a vigorous dissent, the Court, following the three-part test it had established in *Vernonia*, found the random drug-testing policy reasonable. *First*, said the Court, the students had a limited expectation of privacy, even though most nonathletic activities did not involve disrobing or regular

physical examinations. The limited expectation of privacy, according to the Court, did not depend upon communal undress, but on the custodial responsibilities of the school for the children in its care. *Second*, the Court found the invasion of the students' privacy to be minimally intrusive, and virtually identical to that found lawful in *Vernonia*. And *third*, the Court found that the policy had a close relationship to the school district's interest in protecting the students' health and safety. There was evidence of some drug use by students who participated in extracurricular activities, although the Court stated that "a demonstrated drug abuse problem is not always necessary to the validity of a testing regime." The dissenting justices found the school district's testing program to be unreasonable because it targeted students "least likely to be at risk from illicit drugs and their damaging effects" (536 U.S. at 843).

Although most of the litigation involving drug-testing policies has involved federal constitutional claims, two cases decided prior to the Supreme Court's *Vernonia* opinion illustrate that state constitutions or civil rights laws provide avenues to challenge these policies. In *Hill v. NCAA*, 273 Cal. Rptr. 402 (Cal. Ct. App. 1990), *reversed*, 865 P.2d 633 (Cal. 1994), Stanford University student athletes challenged the university's implementation of the NCAA's required drug-testing program. The constitutional clause at issue was not a search and seizure clause as such but rather a right to privacy guarantee (Cal. Const. Art. I, § 1). Both the intermediate appellate court and the Supreme Court of California determined that this guarantee covered drug testing, an activity designed to gather and preserve private information about individuals. Further, both courts determined that the privacy clause limited the information-gathering activities of private as well as public entities, since the language revealed that privacy was an "inalienable right" that no one may violate. Although the private entity designated as the defendant in the *Hill* case was an athletic conference (the NCAA) rather than a private university, the courts' reasoning would apply to the latter as well.

In *Hill*, the intermediate appellate court's privacy analysis differed from the Fourth Amendment balancing test of *Skinner* because the court required the NCAA "to show a compelling interest before it can invade a fundamental privacy right"—a test that places a heavier burden of justification on the alleged violator than does the Fourth Amendment balancing test. The Supreme Court of California disagreed on this point, holding that the correct approach "requires that privacy interests be specifically identified and carefully compared with competing or countervailing privacy and nonprivacy interests in a 'balancing test'" (865 P.2d at 655). Under this approach, "[i]nvasion of a privacy interest is not a violation of the state constitutional right to privacy if the invasion is justified by a legitimate and important competing interest" (865 P.2d at 655–56), rather than a compelling interest, as the lower court had specified. Using this balancing test, the California Supreme Court concluded that "the NCAA's decision to enforce a ban on the use of drugs by means of a drug testing program is reasonably calculated to further its legitimate interest in maintaining the integrity of intercollegiate athletic competition" and therefore does not violate the California constitution's privacy guarantee.

In addition to its illustration of state privacy concepts, the *Hill* case also demonstrates the precarious position of institutions that are subject to NCAA or conference drug-testing requirements. As the intermediate appellate court indicated, Stanford, the institution that the *Hill* plaintiffs attended, was in a dilemma: “as an NCAA member institution, if it refused to enforce the consent provision, it could be sanctioned, but if it did enforce the program, either by requiring students to sign or withholding them from competition, it could be sued.” To help resolve the dilemma, Stanford intervened in the litigation and sought its own declaratory and injunctive relief. These are the same issues and choices that other institutions will continue to face until the various legal issues concerning drug testing have finally been resolved.

In *Bally v. Northeastern University*, 532 N.E.2d 49 (Mass. 1989), a state civil rights law provided the basis for a challenge to a private institution’s drug-testing program. The defendant, Northeastern University, required all students participating in intercollegiate athletics to sign an NCAA student athlete statement that includes a drug-testing consent form. The institution’s program called for testing of each athlete once a year as well as other random testing throughout the school year. When a member of the cross-country and track teams refused to sign the consent form, the institution declared him ineligible. The student claimed that this action breached his contract with the institution and violated his rights under both the Massachusetts Civil Rights Act and a state right to privacy statute. A lower court granted summary judgment for Northeastern on the contract claim and for the student on the civil rights and privacy claims.

The Massachusetts Supreme Court reversed the lower court’s judgment for the student. To prevail on the civil rights claim, according to the statute, the student had to prove that the institution had interfered with rights secured by the Constitution or laws of the United States or the Commonwealth and that such interference was by “threats, intimidation, or coercion.” Although the court assumed *arguendo* that the drug-testing program interfered with the student’s rights to be free from unreasonable searches and seizures and from invasions of reasonable expectations of privacy, it nevertheless denied his claim because he had made no showing of “threats, intimidation, or coercion.” Similarly, the court denied the student’s claim under the privacy statute because “[t]he majority of our opinions involving a claim of an invasion of privacy concern the public dissemination of information,” and the student had made no showing of any public dissemination of the drug-testing results. In addition, because the student was not an employee, state case law precedents regarding employee privacy, on which the student had relied, did not apply.

Given the outcomes in *Vernonia* and *Earls*, students challenging random or for-cause drug testing policies in K–12 school districts have sought relief under state constitutions rather than the Fourth Amendment. The results have been mixed. For example, although the New Jersey Supreme Court upheld a random drug- and alcohol-testing program that covered all students participating in extracurricular activities under the state constitution in *Joye v. Hunterdon Central Regional High School Board of Education*, 826 A.2d 624 (N.J. 2003), the Pennsylvania Supreme Court struck a similar policy. In *Theodore v. Delaware*

*Valley School District*, 836 A.2d 76 (Pa. 2003), the state's high court pointed out that the state constitution's privacy protections went beyond those of the U.S. Constitution's Fourth Amendment. While the challenged random drug- and alcohol-screening policy at the Pennsylvania school district may have been permissible under the Fourth Amendment, said the court, the school district had not provided evidence of a drug problem at the high school sufficient to outweigh the students' privacy rights under the Pennsylvania constitution. The court also rejected the school district's explanation that the policy had been extended to the plaintiffs, honor students whose extracurricular activities were only academic, because they were "role models" for other students, stating that this rationale did not justify the invasion of their privacy.

Since the courts have not spoken definitively with respect to higher education, it is not clear what drug-testing programs and procedures will be valid. In the meantime, institutions (and athletic conferences) that wish to engage in drug testing of student athletes may follow these minimum suggestions, which are likely to enhance their program's capacity to survive challenge under the various sources of law listed at the beginning of this Section:

1. Articulate *and document* both the strong institutional interests that would be compromised by student athletes' drug use and the institution's basis for believing that such drug use is occurring in one or more of its athletic programs.
2. Limit drug testing to those athletic programs where drug use is occurring and is interfering with institutional interests.
3. Develop evenhanded and objective criteria for determining who will be tested and in what circumstances.
4. Specify the substances whose use is banned and for which athletes will be tested, limiting the named substances to those whose use would compromise important institutional interests.
5. Develop detailed and specific protocols for testing of individuals and lab analysis of specimens, limiting the monitoring of specimen collection to that which is necessary to ensure the integrity of the collection process, and limiting the lab analyses to those necessary to detect the banned substances (rather than to discover other personal information about the athlete).
6. Develop procedures for protecting the confidentiality and accuracy of the testing process and the laboratory results.
7. Embody all the above considerations into a clear written policy that is made available to student athletes before they accept athletic scholarships or join a team.
