**Goodale, Dora Read** 1866–1953  
American poet

Clear and simple in white and gold,  
Meadows blossom, of sunlit spaces, –

The field is full as it well can hold  
And white with the drift of the ox-eye daisies!

*All Round the Year: Verses from Sky Farm*

Daisies

G.P. Putnam's Sons. New York, New York, USA. 1881

**POND-LILY**

**Hawthorne, Nathaniel** 1804–64  
American novelist and short story writer

A perfect pond-lily is the most satisfactory of flowers.

*The Works of Nathaniel Hawthorne* Volume 6

*American Note-books*

August 13, 1842 (p. 84)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1868

**PANSY**

**Barrett-Browning, Elizabeth** 1806–61  
English poet

... for summer has a close,  
And pansies bloom not in the snows.

*The Complete Poetical Works of Elizabeth Barrett Browning*

Wisdom Unapplied, Stanza II

Houghton Mifflin Company. Boston, Massachusetts, USA. 1900

**PAPAW**

**Fosdick, William Whiteman** 1825–62  
American poet, writer, and song writer

And brown is the papaw's shade-blossoming cup,  
In the wood, near the sun-loving maize!

*Ariel and Other Poems*

The Maize

Bunce & Brother. New York, New York, USA. 1855

**PASSION FLOWER**

**de Vere, Sir Aubrey** 1788–1846  
Irish poet

Art thou a type of beauty, or of power,  
Of sweet enjoyment, or disastrous sin?  
For each thy name denoteth, Passion flower!

*A Song of Faith*

Devout Exercises and Sonnets

The Passion Flower

William Pickering. London, England. 1842

**PIMPERNEL**

**Thaxter, Celia** 1835–94  
American poet

The turf is warm beneath her feet,  
Bordering the beach of stone and shell,

And thick about her path the sweet  
Red blossoms of the pimpernel.

*The Poems of Celia Thaxter*

The Pimpernel

Houghton, Mifflin & Co. Boston, Massachusetts, USA. 1899

## POPPY

**Bridges, Robert Seymour** 1844–1930

English poet

A Poppy grows upon the shore  
Bursts her twin cup in summer late:  
Her leaves are glaucous green and hoar,  
Her petals yellow, delicate.

*Poetical Works of Robert Bridges* (Volume 2)

Book I, 9

Smith, Elder & Co. London, England. Year unknown

**Ruskin, John** 1819–1900

English writer, art critic, and social reformer

...a sudden doubt troubles me, whether all poppies have two petals smaller than the other two. Whereupon I take down an excellent little school-book on botany – the best I've yet found, thinking to be told quickly; and I find a great deal about opium; and, apropos of opium, that the juice of common celandine is of a bright orange colour; and I pause for a bewildered five minutes, wondering if a celandine is a poppy, and how many petals it has: going on again – because I must, without making up my mind, on either question – I am told to “observe the floral receptacle of the Californian genus *Eschscholtzia*.” Now I can't observe anything of the sort, and I don't want to; and I wish California and all that's in it were at the deepest bottom of the Pacific. Next I am told to compare the poppy and waterlily; and I can't do that, neither – though I should like to; and there's the end of the article; and it never tells me whether one pair of petals is always smaller than the other, or not.

*Proserpina* (Volume 1)

Lecture IV, 12 (p. 72)

John Wiley & Sons. New York, New York, USA. 1886

**Taylor, Bayard** 1825–78

American journalist and author

And far and wide, in a scarlet tide,  
The poppy's bonfire spread.

*The Poetical Works of Bayard Taylor*

The Poet in the East, Stanza 4

Houghton, Osgood & Co, Boston, Massachusetts, USA. 1880

**Wright, Mabel Osgood** 1859–1934

American author

Look steadily at a mass of these glowing flowers blending their multicolours in the full sunlight. At first their brilliancy is blinding; then as the petals undulate on the slender stems, your attention is riveted as if a hundred

eyes returned your gaze, and drowsiness steals over you, for each flower bears the spell of the hypnotic pod, whose seeds bring sleep.

*The Garden of a Commuter's Wife*

Chapter VIII (p. 244)

The Macmillan Co. New York, New York, USA. 1905

## PRIMROSE

**Disraeli, Benjamin, First Earl of**

**Beaconsfield** 1804–81

English prime minister, founder of Conservative Party, and novelist

“I could have brought you some primroses, but I do not like to mix violets with anything.”

“They say primroses make a capital salad,” said Lord St. Jerome.

*Lothair*

Chapter XIII (p. 57)

Longmans, Green & Company. London, England. 1920

**Wilson, Andrew** 1852–1912

No biographical data available

As Huxley has remarked, it would not have roused Peter a whit from his apathy had he been informed that “the primrose is a Dicotyledonous Exogen, with a monopetalous corolla and a central placentation.” Whilst if the botanist continued his encyclopaedic chant, he might afford Peter the additional satisfaction of knowing that the flower belongs to the natural order Primulaceae; that it has oblongeolate, wrinkled, radical leaves; an inferior, gamosepalous calyx; pentandrous stamens; and a syncarpous, superior pistil!

*Leisure-time Studies: Chiefly Biological. A Series of Essays and Lectures*

Science-Culture for the Masses (p. 33)

Chatto & Windus. London, England. 1879

**Wordsworth, William** 1770–1850

English poet

A primrose by a river's brim  
A yellow primrose was to him,  
And it was nothing more.

*The Complete Poetical Works of William Wordsworth*

Peter Bell, Part I, Stanza 12

Houghton Mifflin Company. Boston, Massachusetts, USA. 1900

## RED CLOVER

**Beecher, Henry Ward** 1813–87

American Congregational preacher and orator

We confess to a homely enthusiasm for clover – not the white clover, beloved of honey-bees – but the red clover.... We go through a field of red clover, like Solomon in a garden of spices.

*Star Papers*

Experiences of Nature, I (p. 96)

J.B. Ford & Co. New York, New York, USA. 1873

**REED**

**Barrett-Browning, Elizabeth** 1806–61  
English poet

Those tall flowering-reeds which stand  
In Arno, like a sheaf of sceptres left  
But some remote dynasty of dead gods  
To suck the stream for ages and get green ...  
*The Complete Poetical Works of Elizabeth Barrett Browning*  
Aurora Leigh, Book VII, l. 937–940  
Houghton Mifflin Company, Boston, Massachusetts, USA. 1900

**RHODORA**

**Emerson, Ralph Waldo** 1803–82  
American lecturer, poet, and essayist

In May, when sea-winds pierced our solitudes,  
I found the fresh Rhodora in the woods,  
Spreading its leafless blooms in a damp nook,  
To please the desert and the sluggish brook.  
*The Complete Works of Ralph Waldo Emerson* (Volume 9)  
*The Rhodora* (p. 37)  
Houghton Mifflin Company, Boston, Massachusetts, USA. 1904

**ROSE**

**Beecher, Henry Ward** 1813–87  
American Congregational preacher and orator

A contest of roses is better than of horses.  
*Star Papers*  
A Discourse of Flowers (p. 93)  
J.B. Ford & Co. New York, New York, USA. 1873

**Bryant, William Cullen** 1794–1878  
American poet

Loveliest of lovely things are they,  
On earth that soonest pass away.  
The rose that lives its little hour  
Is prized beyond the sculptured flower ...  
*Poems*  
A Scene on the Banks of the Hudson  
D. Appleton & Company, New York, New York, USA. 1874

**Collins, Wilkie** 1824–89  
English novelist

I haven't much time to be fond of anything.... But when  
I have a moment's fondness to bestow, most times...the  
roses get it.  
*The Moonstone*  
First Period, Chapter XII (p. 86)  
International Collectors Library, Garden City, New York, USA. 1900

**Embury, Emma** 1806–63  
American author

The gathered rose and the stolen heart  
Can charm but for a day.  
*The Poems of Emma C. Embury*  
Ballad  
Hurd & Houghton, New York, New York, USA. 1869

**Flammarion, Camille** 1842–1925  
French astronomer and writer

When I breathe the perfume of a rose, when I admire the  
beauty of form, the smoothness of colouring, the grace  
of this flower in its freshly opening bloom, what strikes  
me most is the work of the hidden, unknown, mysterious  
force which rules over the plant's life and can direct it  
in the maintenance of its existence, which chooses the  
proper molecules of air, water, and earth for its nour-  
ishment, and which knows above all how to assimilate  
those molecules and group them so delicately as to  
form this graceful stem, these dainty little green leaves,  
these soft pink petals, these exquisite tints and delicious  
fragrance.  
Translated by Augusta Rice Stetson  
*Urania*  
Chapter IV (pp. 223–224)  
Chatto & Windus, London, England. 1891

**MacDonald, George** 1824–1905  
Scottish novelist and poet

The flaming rose gloomed swarthy red;  
The borage gleams more blue;  
Dim starred with white flowers, a flowering bed  
Glimmer the rich dusk through.  
*The Poetical Works of George MacDonald*  
Songs of the Summer Night, Part III  
Chatto & Windus, London, England. 1893

**ROSMARY**

**Moore, Thomas** 1779–1852  
Irish poet

... the humble rosemary  
Whose sweets so thanklessly are shed  
To scent the desert and the dead ...  
*The Poetical Works of Thomas Moore*  
Lalla Rookh  
Light of the Harem (p. 259)  
Lee & Shepard, Boston, Massachusetts, USA. 1873

**Shakespeare, William** 1564–1616  
English poet, playwright, and actor

There's rosemary...for remembrance; pray, love, remem-  
ber; and...pansies, that's for thoughts.  
In *Great Books of the Western World* (Volume 27)  
*The Plays and Sonnets of William Shakespeare* (Volume 2)  
*Hamlet, Prince of Denmark*  
Act IV, Scene v, l. 75–77  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**SAFFLOWER**

**Ingelow, Jean** 1820–97  
English poet and novelist

And the saffron flower  
Clear as a flame of sacrifice breaks out.

*Poems*

The Doom, Book II  
Longmans, Green, Reader & Dyer. London, England. 1867

**SHAMROCK**

**Lover, Samuel** 1797–1868  
Irish songwriter and novelist

I seek a four-leaf shamrock in all the fairy dells,  
And if I find the charmed leaves, O h how I'll weave my  
spells!

*Poems of Ireland*

The Four-leaved Shamrock  
Publisher undetermined

**SNOW-DROP**

**Montgomery, James** 1771–1854  
Scottish poet and journalist

The morning star of flowers.

*Poetical Works of James Montgomery* (Volume 2)

The Snow-Drop  
Printed for Longman, Rees, Orme, Brown, Green & Longman. London,  
England. 1836

**Wordsworth, William** 1770–1850  
English poet

Now will I then thy modest grace forget,  
Chaste Snowdrops, venturous harbinger of Spring,  
And pensive monitor of fleeting years!

*The Complete Poetical Works of William Wordsworth*

To a Snow-Drop  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1900

**SPIRAEA**

**Goodale, Dora Read** 1866–1953  
American poet

And near the unfrequented road,  
By waysides scorched with barren heat,  
In clouded pink or softer white  
She holds the Summer's generous light, —  
Our native meadow sweet!

*All Round the Year: Verses from Sky Farm*

Spiraea  
G.P. Putnam's Sons. New York, New York, USA. 1881

**SUN-FLOWER**

**Blake, William** 1757–1827  
English poet, painter, and engraver

Ah Sun-flower! weary of time,  
Who countest the steps of the Sun:  
Seeking after that sweet golden clime  
Where the traveler's journey is done.

*The Complete Poetry and Prose of William Blake*

Ah! Sun-Flower  
University of California Press. Berkeley, California, USA. 1982

**Moore, Thomas** 1779–1852  
Irish poet

But one, the lofty followers of the Sun,  
Sad when he sets, shuts up her yellow leaves  
Drooping all night; and, when the warm returns,  
Points her enamour'd bosom to his ray.

*The Poetical Works of Thomas Moore*

Summer, l. 216–219  
Lee & Shepard. Boston, Massachusetts, USA. 1873

**SWEET BASIL**

**Leland, Charles G.** 1824–1903  
American writer

I pray your Highness mark this curious herb:  
Touch it but lightly, stroke it softly, Sir,  
And it gives forth and odour sweet and rare;  
But crush it harshly and you'll make a scent  
Most disagreeable.

*The Music-Lesson of Confucius*

Sweet Basil, Stanza 6  
J.R. Osgood & Company. Boston, Massachusetts, USA. 1872

**SWEET PEA**

**Keats, John** 1795–1821  
English Romantic lyric poet

Here are sweet peas, on tiptoe for a flight;  
With wings of gentle flush o'er delicate white,  
And taper fingers catching at all things,  
To bind them all about with tiny rings.

*The Complete Poetical Works and Letters of John Keats*

I Stood Tiptoe Upon a Little Hill, l. 57–60  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1890

**THISTLE**

**Beecher, Henry Ward** 1813–87  
American Congregational preacher and orator

The thistle is a prince. Let any man that has an eye for beauty take a view of the whole plant, and where will he see more expressive grace and symmetry; and where is there a more kingly flower? To be sure, there are sharp objections to it in a bouquet.

*Star Papers*

Experiences of Nature, I (p. 96)

J.B. Ford & Co. New York, New York, USA. 1873

## THORN

**Wordsworth, William** 1770–1850

English poet

There is a Thorn – it looks so old,  
In truth, you'd find it hard to say  
How it could ever have been young,  
It looks so old and gray.

*The Complete Poetical Works of William Wordsworth*

The Thorn, Stanza I

Houghton Mifflin Company. Boston, Massachusetts, USA. 1900

## THYME

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

I know a bank where the wild thyme blows.

In *Great Books of the Western World* (Volume 26)

*The Plays and Sonnets of William Shakespeare* (Volume 1)

*A Midsummer-Night's Dream*

Act II, scene I, 1.249

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## TRAILING ARBUTUS

**Terry, Rose** 1827–92

American writer

Darlings of the forest!  
Blossoming alone  
When Earth's grief is sorest  
For her jewels gone –  
Ere the last snow-drift melts, your tender buds have  
blown.

*Poems*

Trailing Arbutus

Ticknor & Fields. Boston, Massachusetts, USA. 1861

## TRILLIUM

**Goodale, Dora Read** 1866–1953

American poet

Now about the rugged places  
And along the ruined way,  
Light and free in sudden graces

Comes the careless trend of May, –  
Born of tempest, wrought in power,  
Stirred by sudden hope and fear,  
You may find a mystic flower  
In the spring-time of the year!

*All Round the Year: Verses from Sky Farm*

Trillium

G.P. Putnam's Sons. New York, New York, USA. 1881

## TUBEROSE

**Moore, Thomas** 1779–1852

Irish poet

The tuberose, with her silvery light,  
That in the gardens of Malay  
Is call'd the Mistress of the Night,  
So like a bride, scented and bright;  
She comes out when the sun's away.

*The Poetical Works of Thomas Moore*

Lalla Rookh

Light of the Harem

Lee & Shepard. Boston, Massachusetts, USA. 1873

## TULIP

**Montgomery, James** 1771–1854

Scottish poet and journalist

Dutch tulips from the beds  
Flaunted their stately heads.

*Poetical Works of James Montgomery* (Volume 2)

The Adventure of a Star

Printed for Longman, Rees, Orme, Brown, Green & Longman. London, England. 1836

**Moore, Thomas** 1779–1852

Irish poet

Like tulip-beds of different shape and dyes,  
Bending beneath the invisible west-wind's sighs.

*The Poetical Works of Thomas Moore*

Lalla Rookh

The Veiled Prophet of Khorassan

Lee & Shepard. Boston, Massachusetts, USA. 1873

## VEBENA

**Barrett-Browning, Elizabeth** 1806–61

English poet

... sweet verbena which, being brushed against,  
Will hold us three hours after by the smell  
In spite of long walks on the windy hills.

*The Complete Poetical Works of Elizabeth Barrett Browning*

Aurora Leigh, Book VIII, 1.439–441

Houghton Mifflin Company. Boston, Massachusetts, USA. 1900

## VERONICA

**Ruskin, John** 1819–1900  
English writer, art critic, and social reformer

Lastly, and for a high worthiness, in my estimate, note that it [Veronica] is *wild*, of the wildest, and proud in pure descent of race; submitting itself to no follies of the cur-breeding florist. Its species, though many resembling each other, are severally constant in aspect, and easily recognizable; and I have never seen it provoked to glare into any gigantic impudence at a flower show. Fortunately, perhaps, it is scentless, and so despised.

*Proserpina: Studies of Wayside Flowers* (Volume 2)  
Book VIII, Chapter III (p. 74)  
George Allen. London, England. 1882

## VIOLET

**Bryant, William Cullen** 1794–1878  
American poet

I know where the young May violet grows,  
In its lone and lowly nook.

*Poems*  
An Indian Story, Stanza 3  
Harper & Brothers. New York, New York, USA. 1940

**Disraeli, Benjamin, First Earl of Beaconsfield** 1804–81  
English prime minister, founder of Conservative Party, and novelist

I could have brought you some primroses, but I do not like to mix violets with anything.  
“They say primroses make a capital salad,” said Lord St. Jerome.

*Lothair*  
Chapter XIII (p. 57)  
Longmans, Green & Company. London, England. 1920

**Hood, Thomas** 1799–1845  
English poet and editor

The violet is a nun ...  
*The Poetical Works of Thomas Hood* (Volume 1)  
Flowers, Stanza I  
Houghton, Mifflin & Co. Boston, Massachusetts, USA. 1856

**Ruskin, John** 1819–1900  
English writer, art critic, and social reformer

Nobody in the world could draw them [violet’s flower stalk], they are so mixed up together, and crumpled and hacked about, as if some ill-natured child had snipped them with blunt scissors, and an ill-natured cow chewed them a little afterwards and left them, proved for too tough or too bitter.

*Proserpina: Studies of Wayside Flowers* (Volume 2)  
Part VII, Chapter I (p. 17)  
George Allen. London, England. 1882

## WATER-LILY

**Shelley, Percy Bysshe** 1792–1822  
English poet

And nearer to the river’s trembling edge  
There grew broad flag-flowers, purple  
prankt with white;  
And starry river buds among the sedge;  
And floating water-lilies broad and bright.

*The Complete Poetical Works of Percy Bysshe Shelley*  
The Question, Stanza IV  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

**Tennyson, Alfred (Lord)** 1809–92  
English poet

... the water-lily starts and slides  
Upon the level in little puffs of wind,  
Tho’ anchor’d to the bottom ...  
*The Complete Poetical Works of Tennyson*  
The Princess, IV, l. 236  
Houghton Mifflin Co. Boston, Massachusetts, USA. 1898

## WINDFLOWER

**Bryant, William Cullen** 1794–1878  
American poet

The little wind-flower, whose just opened eye  
Is blue as the spring heaven it gazes at ...  
*Poems* (6th edition)  
A Winter Piece  
Harper & Brothers. New York, New York, USA. 1940

## WOLF FLOWER

### Book entry

[*Mariphasa lupina lumina*] The essence of the Mariphasia blossom squeezed into the wrist through the thorn at the base of the stem is the only preventive [for Lycanthrophobia] known to man.  
*Werewolf of London*  
Film (1935)

## WOODBINE

**Tennyson, Alfred (Lord)** 1809–92  
English poet

And the woodbine spices are wafted abroad,  
And the musk of the rose is blown.

*The Complete Poetical Works of Tennyson*  
Maud, Part XXII, Stanza I  
Houghton Mifflin Co. Boston, Massachusetts, USA. 1898

**WORMWOOD**

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

Among the signs of autumn I perceive  
The Roman wormwood (called by learned men  
*Ambrosia elatior*, food for gods, –  
For to impartial science the humblest weed  
Is as immortal once as the proudest flower – )  
Sprinkles its yellow dust over my shoes.  
In Robert Bly  
*The Winged Life. The Poetic Voice of Henry David Thoreau*  
Part Two. Tall Ambrosia (p. 29)  
Sierra Club Books. San Francisco, California, USA. 1986

**FUNGUS**

**Ajello, Libero** 1916–2004  
Mycologist

Some fungi produce a mycosis  
Like blaster or histoplasmosis  
But for musical sake  
The one I will take  
Is coccidioidomycosis.  
In George W. Hudler  
*Magical Mushrooms, Mischievous Molds*  
Coccidioidomycosis (p. 109)  
Princeton University Press. Princeton, New Jersey, USA. 1998

**Author undetermined**

When Flora's lovelier tribes give place,  
The Mushroom's scorn'd but curious race  
Bestud the moist autumnal earth;  
A quick but perishable birth,  
Inlaid with many a brilliant die  
Of Nature's high-wrought tapestry.  
*The British Months: A Poem, in Twelve Parts*  
September (p. 345)  
J.W. Parker. London, England. 1835

**Dickens, Charles** 1812–70  
English novelist

Mildew and mould began to lurk in closets. Fungus trees  
grew in corners of the cellars. Dust accumulated, nobody  
knew whence nor how; spiders, moths, and grubs were  
heard of every day.  
*Dombey and Sons* (Volume 1)  
Chapter XXIII (p. 334)  
James R. Osgood & Co. Boston, Massachusetts, USA. 1875

**Doyle, Sir Arthur Conan** 1859–1930  
Scottish writer

The rain had ceased at last, and a sickly autumn sun  
shone upon a land which was soaked and sodden with  
water. Wet and rotten leaves reeked and festered under  
the foul haze which was soaked and sodden with water.

The fields were spotted with monstrous fungi of a size  
and colour never matched before – scarlet and mauve and  
liver and black.

*Sir Nigel*  
Chapter 1 (p. 2)  
Smith, Elder & Co. London, England. 1906

**Holmes, Oliver Wendell** 1809–94  
American physician, poet, and humorist

There's a thing that grows by the fainting flower,  
And springs in the shade of the lady's bower;  
The lily shrinks, and the rose turns pale,  
When they feel its breath in the summer gale,  
And the tulip curls its leaves in pride,  
And the blue-eyed violet starts aside:  
But the lily may flaunt, and the tulip stare,  
For what does the honest toadstool care?  
*The Complete Poetical Works of Oliver Wendell Holmes*  
The Toadstool, Stanza 1  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1899

**Money, Nicholas P.**  
No biographical data available

If fungi can rot bone in a patient's leg, feast on some-  
one's brain, or devour a child's face, is the naked ape  
king of the jungle, or the king's dinner?  
*Mr. Bloomfield's Orchard: The Mysterious World of Mushrooms, Molds,*  
*and Mycologists*  
Chapter 2 (p. 21)  
Oxford University Press. New York, New York, USA. 2004

**Nicholson, Norman** 1914–87  
English poet

The toadstool towers infest the shore:  
Stink-horns that propagate and spore  
Wherever the wind blows.  
*A Local Habitation*  
Windscale (p. 282)  
Faber & Faber Ltd. London, England. 1994

**Oppenheim, E. Phillips** 1866–1946  
English novelist

There was a thick carpet upon the floor, a sofa piled with  
cushions in one corner, and several other articles of furni-  
ture. The walls, however, were uncovered and were stained  
with damp. A great pink fungus stood out within a few  
inches of the bed, a grim mixture of exquisite colouring  
and loathsome imperfections. The atmosphere was fetid.  
*The Vanished Messenger*  
Chapter 32 (p. 302)  
Little, Brown & Co. Boston, Massachusetts, USA. 1914

**Peattie, Donald Culross** 1898–1964  
American botanist, naturalist, and author

The fungi are the underworld of plant life, that lives  
clandestinely, by its unconscious wits, taking to cover in  
unfavorable times, rioting at another.

*Flowering Earth*

Chapter 18 (p. 234)

G.P. Putnam's Sons. New York, New York, USA. 1939

**Phillpotts, Eden** 1862–1960

English novelist, poet, and dramatist

Beneath trees and hedgerows the ripe mosses gleamed, and coral and amber fungi, with amanita and other hooded folk. In companies and clusters they sprang, or arose misshapen, sinister, and alone. Some were orange and orange-tawny; others white and purple; not a few peered forth livid, blotched, and speckled, as with venom spattered from some reptile's jaw.

*Children of the Mist*

Book IV, Chapter VII (p. 440)

G.P. Putnam's Sons. New York, New York, USA. 1899

Now the ruin fades back into nature like a cloud and peers ill-favouredly from lush green things. Great umbel-bearing plants, blackthorns, and briars strive to bury each lower wall; hart's tongue ferns loll from the empty joint-holes; fungus lifts its livid cowls beneath.

*The Farm of the Dagger*

Chapter I (p. 5)

Dodd, Mead &amp; Co. New York, New York, USA. 1904

**Shelley, Percy Bysshe** 1792–1822

English poet

And plants at whose name the verse feels loath,  
Fill'd the place with a monstrous undergrowth,  
Prickly and pulpous, and blistering, and blue, Livid, and  
starr'd with a lurid dew.

And agarics, and fungi, with mildew and mould,  
Started like mist from the wet ground cold; Pale, fleshy,  
as if the decaying dead

With a spirit of growth had been animated.

*The Poetical Works of Percy Bysshe Shelley*

The Sensitive Plant (p. 256)

Edward Moxon. London, England. 1839

**Spenser, Edmund** 1552–99

English poet

Working her formall rowmes in wexen frame,  
The grieslie Tode-stoole growne there mought I se  
And loather Paddocks lording on the same.

In Thomas Humphry Ward

*The English Poets: Selections With Critical Introductions* (Volume 1)

The Complaint of Age

The Macmillan Co. New York, New York, USA. 1920

**Verne, Jules** 1828–1905

French novelist

In truth, I was simply in the presence of a very ordinary product of the earth, of singular and gigantic proportions. My uncle unhesitatingly called them by their real names. "It is only," he said, in his coolest manner, "a forest of mushrooms."

*A Journey to the Center of the Earth*

Chapter XXVII

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

We crawled through stony ravines – amidst fungi that ripped like thin bladders at our thrust, emitting a watery humour, over a perfect pavement of things like puff-balls, and beneath intermingable thickets of scrub. And ever more hopelessly our eyes sought for our abandoned sphere.

*The First Men in the Moon*

Chapter XI (p. 115)

Houghton Mifflin &amp; Co. New York, New York, USA. 1917

And all this time the lunar plants were growing around us, higher and denser and more entangled, every moment thicker and taller, spiked plants, green cactus masses, fungi, fleshy and lichenous things, strangest radiate and sinuous shapes.

*The First Men in the Moon*

Chapter IX (p. 104)

George Newnes, Ltd. London, England. 1901

**MUSHROOM****Ford, John** 1586–1640

English poet and dramatist

I am... a mushroom

On whom the dew of heaven drops now and then.

*The Dramatic Works of John Ford* (Volume 1)

The Broken Heart (p. 132)

John Murray. London, England. 1831

**TOADSTOOL****Learned, Walter** 1847–915

American poet

Five little white heads peeped out of the mold,  
When the dew was damp and the night was cold;  
And they crowded their way through the soil pride;  
"Hurrah! We are going to be mushrooms!" they cried.

But the sun came up, and the sun shone down,  
And the little white heads were withered and brown;  
Long were their faces, their pride had a fall –  
They were nothing but toad-stools, after all.

*Between Times* (3rd edition)

Five Little White Heads

Frederick A. Stokes Co. New York, New York, USA. 1841

**GRASS****Hudson, William Henry**

Argentinean/English ornithologist, naturalist, and author

I am not a lover of lawns; on the contrary, I regard them, next to gardens, as the least interesting adjuncts of the country-house. Grass, albeit the commonest, is yet one of the most beautiful things in Nature when allowed to grow

as Nature intended, or when not too carefully trimmed and brushed. Rather would I see daisies in their thousands, ground ivy, hawkweed, and even the hated plantain with tall stems, and dandelions with splendid flowers and fairy down, than the too-well-tended lawn grass.

*The Book of A Naturalist*

Chapter XXIX (p. 337)

George H. Doran Co. New York, New York, USA. 1919

**Ingalls, John James** 1833–1900

American politician and author

Forests decay, harvests perish, flowers vanish, but grass is immortal.

In David Josiah Brewer

*The World's Best Essays, from the Earliest Period to the Present Time*

(Volume 6)

Blue Grass (p. 2293)

Ferd P. Kaiser. St. Louis, Missouri, USA. 1910

Beleaguered by the sullen hosts of winter, it [grass] withdraws into the impregnable fortress of its subterranean vitality, and emerges upon the first solicitation of spring.

In David Josiah Brewer

*The World's Best Essays, from the Earliest Period to the Present Time*

(Volume 6)

Blue Grass (p. 2293)

Ferd P. Kaiser. St. Louis, Missouri, USA. 1910

Grass is the forgiveness of nature – her constant benediction. Fields trampled with battle, saturated with blood, torn with the ruts of cannon, grow green again with grass, and carnage is forgotten.

In David Josiah Brewer

*The World's Best Essays, from the Earliest Period to the Present Time*

(Volume 6)

Blue Grass (p. 2293)

Ferd P. Kaiser. St. Louis, Missouri, USA. 1910

## HAWKWEED

**Gissing, George** 1857–1903

English novelist

For scientific classification I have little mind; it does not happen to fall in with my habits of thought; but I like to be able to give its name (the “trivial” by choice) to every flower I meet in my walks. Why should I be content to say, “Oh, it’s a hawkweed”? That is but one degree less ungracious than if I dismissed all the yellow-rayed as “dandelions.” I feel as if the flower were pleased by my recognition of its personality. Seeing how much I owe them, one and all, the least I can do is to greet them severally. For the same reason I had rather say “hawkweed” than “hieracium”; the homelier word has more of kindly friendship.

*The Private Papers of Henry Ryecroft* (pp. 147–148)

E.P. Dutton & Co. New York, New York, USA. 1903

## LICHEN

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

...lichens which are so thin are described in the *dry* state, as they are most commonly, not most truly seen. They are, indeed, *dryly* described.

In Harrison Gray Otis Blake (ed.)

*The Writings of Henry David Thoreau*

March 23, 1853 (p. 215)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1893

## RADISH

**Raspe, Rudolph E.**

No biographical data available

In making war, their principal weapons are radishes, which are used as darts. Those who are wounded by them die immediately. Their shields are made of mushrooms, and their darts (when radishes are out of season) of the tops of asparagus.

*Baron Munchausen's Narrative of his Marvellous Travels and Campaigns in Russia, etc.*

Chapter XVIII (p. 72)

Trübner & Co

London, England. 1859

## SEA-WEED

**Ruskin, John** 1819–1900

English writer, art critic, and social reformer

The loosest weed that drifts and waves under the heaving of the sea, or hangs heavily on the brown and slippery shore, has a marked strength, structure, elasticity, gradation of substance; its extremities are more finely fibred than its centre, its centre than its root: every fork of its ramification is measured and proportioned; every wave of its languid lines is love. It has its allotted size, and place, and function: it is a specific creature.

*The Seven Lamps of Architecture*

Chapter IV (pp. 111–112)

George Allen. Kent, England. 1880.

## TREE

**Abbey, Edward** 1927–89

American environmentalist and nature writer

...unless the need were urgent, I could no more sink the blade of an ax into the tissues of a living tree than I could drive it into the flesh of a fellow human.

*The Journey Home: Some Words in Defense of the American West*

Chapter 19 (p. 208)

E.P. Dutton. New York, New York, USA. 1977

**Author undetermined**

At that awful hour of the Passion, when the Savior of the world felt deserted in His agony, when –  
The sympathizing sun, his light withdrew, and wonder'd how the stars their dying Lord could view – when earth shaking with horror, rung the passing bell for Deity, and universal nature groaned, then from the loftiest tree to the lowliest flower all felt a sudden thrill, and trembling, bowed their heads, all save the proud and obdurate aspen, which said, “Why should we weep and tremble, we trees, and plants, and flowers are pure and never sinned!”  
Ere it ceased to speak, an involuntary trembling seized its every leaf, and the word went forth that it should never rest, but tremble on until the day of judgment.

Legend [of the quaking aspen tree]

*Notes and Queries*, First Series, Volume 6, Number 161

**Bailey, William Whitman** 1843–1914

American botanist

Nature is especially fond of tassels. With them she clothes many of her noblest trees.

Willows: “Pussy” and Other

*The American Botanist*, Volume VI, Number 2, February, 1904 (p. 23)

**Beecher, Henry Ward** 1813–87

American Congregational preacher and orator

Of all formal things in the world, a clipped hedge is the most formal; and of all the informal things in the world, a forest-tree is the most informal.

*Royal Truths*

Royal Truths (p. 89)

Fords, Howard & Hulbert. New York, New York, USA. 1887

**Borland, Hal** 1900–78

American writer

Trees are the oldest living things we know. Rooted in the earth and reaching for the stars, they partake of immortality.

*Our Natural World*

The Woodlands (p. 4)

J.B. Lippincott Company. Philadelphia, Pennsylvania, USA. 1969

Only the unobservant sees nothing but trees in a forest. Any woodland is a complex community of plants and animal life with its own laws of growth and survival. But if you would know strength and majesty and patience, welcome the company of trees.

*Beyond Your Doorstep: A Handbook to the Country*

Chapter 4 (p. 75)

Alfred A. Knopf. New York, New York, USA. 1962

**Bronte, Emily** 1818–48

English novelist

My love for Linton is like the foliage in the woods. Time will change it, I'm well aware, as winter changes

the trees – my love for Heathcliff resembles the eternal rocks beneath – a source of little visible delight, but necessary.

*Wuthering Heights*

Chapter IX (p. 88)

J.M. Dent & Sons Ltd. London, England. 1907

**Meredith, Owen (Edward Robert Bulwer-Lytton, First Earl Lytton)** 1831–91

English statesman and poet

Trees that, like the poplar, lift upwards all their boughs, give no shade and no shelter, whatever their height. Trees that most lovingly shelter and shade us, when, like the willow, the higher soar their summits, the lowlier droop their boughs.

*What Will He Do with It?* (Volume 2)

Book XI, Chapter X, Introductory lines (p. 359)

P.F. Collier & Son. New York, New York, USA. 1902

**Burns, Robert** 1759–96

English author

Green, slender, leaf-clad holly-boughs  
Were twisted graceful', round her brows;  
I took her for some Scottish Muse,  
By that same token;  
And come to stop those reckless vows,  
Would soon be broken.

*The Complete Poetical Works of Robert Burns*

The Vision, Duan First, Stanza 9

Houghton Mifflin Company. Boston, Massachusetts, USA. 1897

**Byron, George Gordon, 6th Baron Byron** 1788–1824

English Romantic poet and satirist

Dark tree – still sad when others' grief is fled,  
The only constant mourner o'er the dead!

*The Complete Poetical Works of Byron*

The Giaour, l. 286

Houghton Mifflin Company. Boston, Massachusetts, USA. 1933

**Comstock, Anna Botsford** 1854–1930

American illustrator, writer, and educator

The mortal who has never enjoyed a speaking acquaintance with some individual tree is to be pitied; for such an acquaintance, once established, naturally ripens into a friendliness that brings serene comfort to the human heart, whatever the heart of the tree may or may not experience. To those who know them, the trees, like other friends, seem to have their periods of reaching out for sympathetic understanding. How often this outreaching is met with repulse will never be told; for tree friends never reproach us – but wait with calm patience for us to grow into comprehension.

*Trees at Leisure*

Comstock Publishing Company. Ithaca, New York, USA. 1916

**Dampier-Whetham, William** 1867–1952  
English scientific writer

There was a young man who said, “God  
To you it must seem very odd  
That a tree as a tree simply ceases to be  
When there’s no one about in the Quad.”...  
Young man, your astonishment’s odd,  
I am always about in the Quad  
And that’s why the tree continues to be  
As observed by, Yours faithfully, God.  
In Joseph Needham and Walter Pagel (eds.)  
*Background to Modern Science*  
From Aristotle to Galileo (pp. 40–41)  
The Macmillan Company. New York, New York, USA. 1938

**Dickens, Charles** 1812–70  
English novelist

They whirled past the dark trees, as feathers would be swept before a hurricane. Houses, gates, churches, haystacks, objects of every kind they shot by, with a velocity and noise like roaring waters suddenly let loose. Still the noise of pursuit grew louder, and still my uncle could hear the young lady wildly screaming, “Faster! Faster!”  
*The Posthumous Papers of the Pickwick Club*  
Chapter XLIX (p. 597)  
Dodd, Mead & Company. New York, New York, USA. 1944

The earth covered with a sable pall as for the burial of yesterday; the clumps of dark trees, its giant plumes of funeral feathers, waving sadly to and fro: all hushed, all noiseless, and in deep repose, save the swift clouds that skim across the moon, and the cautious wind, as, creeping after them upon the ground, it stops to listen, and goes rustling on, and stops again, and follows, like a savage on the trail.  
*Martin Chuzzlewit*  
Chapter XV (p. 232)  
Dodd, Mead & Company. New York, New York, USA. 1944

**Downing, Andrew Jackson** 1815–52  
American writer

If our ancestors found it wise and necessary to cut down vast forests, it is all the more needful that their descendants should plant trees. We shall do our part, therefore, towards awakening again, that natural love of trees, which this long warfare against them – this continual laying the axe at their roots...has, in so many places, well nigh extinguished.  
*Rural Essays*  
*Trees*  
Chapter IV (p. 304)  
Leavitt & Allen. New York, New York, USA. 1858

**Forster, E. M. (Edward Morgan)** 1879–1970  
English novelist

What is the good of your stars and trees, your sunrise and the wind, if they do not enter into our daily lives?

*Howards End*  
Chapter XVI (p. 143)  
Vintage Books. New York, New York, USA. 1954

The tree rustled. It had made music before they were born, and would continue after their deaths, but its song was of the moment.  
*Howards End*  
Chapter XL (p. 315)  
Vintage Books. New York, New York, USA. 1954

**Gerard, Olf**  
No biographical data available

Graft, set, plant and nourish fruit trees in every corner of your grounds, and God shall reward your mind and diligence.  
Quoted in J.C. Austin  
President’s Annual Address  
*The Minnesota Horticulturalist*, Volume 27, Number 8, August, 1899 (p. 284)

**Hardy, Thomas** 1840–1928  
English poet and regional novelist

To dwellers in a wood almost every species of tree has its voice as well as its feature. At the passing of the breeze the fir-trees sob and moan no less distinctly than they rock; the holly whistles as it battles with itself; the ash hisses amid its quiverings; the beech rustles while its flat boughs rise and fall.  
*Under the Greenwood Tree; or The Mellstock Quire*  
Part the First, Chapter I (p. 3)  
Harper & Brothers. New York, New York, USA. 1939

The instinctive act of humankind was to stand and listen, and learn how the trees on the right and the trees on the left wailed or chaunted to each other in the regular antiphonies of a cathedral choir; how hedges and other shapes to leeward then caught the note, lowering it to the tenderest sob; and how the hurrying gust then plunged into the south, to be heard no more.  
*Far from the Madding Crowd*  
Chapter 2 (p. 9)  
Harper & Row, Publishers. New York, New York, USA. No date

**Hay, John**  
No biographical data available

They [trees] hang on from a past no theory can recover. They will survive us. The air makes their music. Otherwise they live in savage silence, though mites and nematodes and spiders teem at their roots, and though the energy with which they feed on the sun and are able to draw water sometimes hundreds of feet up their trunks and into their twigs and branches calls for a deafening volume of sound.  
*The Undiscovered Country*  
Living with Trees (p. 110)  
W.W. Norton & Company, Inc. New York, New York, USA. 1981

**Herbert, George** 1593–1633  
English metaphysical poet

Great trees are good for nothing but shade.

*Outlandish Proverbs*

Printed by T. Maxey for T. Garthwait. London, England. 1651

**Howitt, William** 1792–1879

English author

David in his psalms, Solomon in his songs and proverbs, the Prophets in the sublime outpourings of their awful inspiration, and Christ in his parables, those most beautiful and perfect of all allegories, luxuriate in signs and similes drawn from the fair trees of the East.

*The Book of the Seasons*

October (p. 356)

Henry Colburn & Richard Bentley. London, England. 1831

**Hutton, W.**

No biographical data available

Trees – Those stupendous specimens of creating art spread not their wide extended roots, nor lift their lofty heads in vain. Beneath their cooling shades, our flocks and herds find a comfortable asylum from the scorching rays of the summer sun; the wild stragglers of the forest have a place of refuge among their woods and thickets; whilst the feathery songsters of the grove build their little dwellings in security, and sing among their branches ...

*The Book of Nature Laid Open, in a Popular Survey of the Phenomena and Constitution of the Universe*

Chapter IV (p. 30)

J. Milligan. Georgetown, District of Columbia. 1822

**Irving, Washington** 1783–1859

American essayist and short story writer

It was...a fine autumnal day; the sky was clear and serene, and nature wore that rich and golden livery which we always associate with the idea of abundance. The forests had put on their sober brown and yellow, while some trees of the tenderer kind had been nipped by the frosts into brilliant dyes of orange, purple, and scarlet.

*Essays from the Sketch Book*

The Legend of Sleepy Hollow (p. 55)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1891

Woodman, spare that tree!  
Touch not a single bough!  
In youth it sheltered me,  
And I'll protect it now.

*Poems*

Woodman, Spare that Tree

Charles Scribner's Sons. New York, New York, USA. 1853

**Muir, John** 1838–1914

American naturalist

I never saw a discontented tree. They grip the ground as though they liked it; and though fast rooted, they travel about as far as we do.

In Linnie Marsh Wolfe (ed.)

*John of the Mountains*

Chapter VII, Section 2, June-July 1890 (p. 313)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1938

When a man plants a tree he plants himself.

*Steep Trails*

Chapter X (p. 141)

Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

We all travel the milky way together, trees and men; but it never occurred to me until this stormday, while swinging in the wind, that trees are travelers, in the ordinary sense. They make many journeys, not extensive ones, it is true; but our own little journeys, away and back again, are only little more than tree wavings, many of them not so much.

*Mountains of California*

Chapter X (p. 256)

The Century Company. New York, New York, USA. 1911

The mighty trees getting their food are seen to be wide awake, every needle thrilling in the welcome nourishing storms, chanting and bowing low in glorious harmony, while every raindrop and snowflake is seen as a beneficent messenger from the sky.

*Our National Parks*

Chapter I (p. 26)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

As far as man is concerned [trees] are the same yesterday, today, and forever, emblems of permanence.

*Our National Parks*

Chapter IX (p. 269)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

...many of nature's five hundred kinds of wild trees had to make way for orchards and cornfields.

*Our National Parks*

Chapter IX (p. 335)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

...God has cared for these trees, saved them from drought, disease, avalanches, and a thousand straining, leveling tempests and floods; but he cannot save them from fools, only Uncle Sam can do that.

*Our National Parks*

Chapter X (p. 365)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

**Peattie, Donald Culross** 1898–1964

American botanist, naturalist, and author

...it is not in the sapwood or the heartwood or the bark that the life of a tree resides. But wherever and whatever that life is, it must be of such a nature that it is possible to kill it all at the same time, and instantly. A head, a heart, a central organization of any sort, nerves, and consciousness, a tree does not own. But something runs in it that is vital, that, when it disintegrates, leaves the great body untenanted, a corpse, and departing sets the gates ajar to every sort of invader that will then march in for the sack, waving the dingy cobweb banners of decay.

*Flowering Earth*

Chapter 5 (p. 52)

G.P. Putnam's Sons. New York, New York, USA. 1939

A Tree in its old age is like a bent but mellowed and wise old man; it inspires our respect and tender admiration; it is too noble to need our pity.

*An Almanac for Moderns*

October Twenty-Seventh (p. 241)

G.P. Putnam's Sons. New York, New York, USA. 1935

**Pownall, Thomas** 1722–1805

English statesman and soldier

The individual Trees of those Woods grow up, have their Youth, their old Age, and a Period to their Life, and die as we Men do. You will see many a Sapling growing up, many an old Tree tottering to its Fall, and many fallen and rotting away, while they are succeeded by others of their Kind, just as the Race of Man is: By this Succession of Vegetation this Wilderness is kept cloathed with Woods just as the human Species keeps the Earth peopled by its continuing Succession of Generations.

*A Topographical Description of the Dominions of the United States*

Section I, On the Face of the Country (p. 24)

University of Pittsburgh Press. Pittsburgh, Pennsylvania, USA. 1949

**Proust, Marcel** 1871–1922

French novelist

We have nothing to fear and a great deal to learn from trees, that vigorous and pacific tribe which without stint produces strengthening essences for us, soothing balms, and in whose gracious company we spend so many cool, silent and intimate hours.

Translated by Louise Varèse

*Pleasures and Regrets*

Regrets, Reveries, Changing Skies, Chapter XXVI (p. 165)

Crown Publishers. New York, New York, USA. 1948

**Ruskin, John** 1819–1900

English writer, art critic, and social reformer

...perhaps the first question which an intelligent child would think of asking about a tree: "Mamma, how does it make its trunk?", and you may open one botanical work after another, and good ones too, and by sensible men – you shall not find this child's question fairly put, much less fairly answered.

*Modern Painters* (Volume 5)

Part VI, Chapter 7

John Wiley & Sons. New York, New York, USA. 1879

**Shelley, Mary Wollstonecraft** 1797–1851

English Romantic writer

But I am a blasted tree; the bolt has entered my soul; and I felt then that I should survive to exhibit what I shall soon cease to be – a miserable spectacle of wrecked humanity, pitiable to others and intolerable to myself.

*Frankenstein*

Chapter 19 (p. 114)

Running Press. Philadelphia, Pennsylvania, USA. 1990

**St. Bernard of Clairvaux** 1091–1153

French monk

Believe me who have tried. Thou wilt find something more in woods than in books. Trees and rocks will teach what thou canst not hear from a master.

*Epistle 106*

Source undetermined

**The Bible (King James Version)**

I will plant in the wilderness the cedar, the shittah tree, and the myrtle, and the oil tree; I will set in the desert the fir tree, and the pine, and the box tree together: ...

Isaiah 41:19

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

On every side there is something to soothe and refresh this sense. Look up at the tree-tops and see how finely Nature finishes off her work there. See how the pines spire without end higher and higher, and make a graceful fringe to the earth. And who shall count the finer cobwebs that soar and float away from their utmost tops, and the myriad insects that dodge between them. Leaves are of more various forms than the alphabets of all languages put together; of the oaks alone there are hardly two alike, and each expresses its own character.

*A Week on the Concord and Merrimack Rivers*

Monday (p. 115)

Charles Scribner's Sons. New York, New York, USA. 1921

Trees are but rivers of sap and woody fibre flowing from the atmosphere and emptying in to the earth by their trunks – as their roots flow upward to the surface.

In Robert Sattelmeyer (ed.)

*Journal 1842–1848* (Volume 2)

Tuesday September 3 (p. 33)

The Faerie Queene

Book I, Canto VII, Stanza 32

Houghton Mifflin Company. Boston, Massachusetts, USA. 1908

**APPLE****Beecher, Henry Ward** 1813–87

American Congregational preacher and orator

The apple-tree is tough as an Indian, patient as an ox, and fruitful as the Jewish Rachael.

In William Drysdale (ed.)

*Proverbs from Plymouth Pulpit*

Nature (p. 9)

D. Appleton &amp; Co. New York, New York, USA. 1887

**Hawthorne, Nathaniel** 1804–64

American novelist and short story writer

And what is more melancholy than the old apple-trees  
that linger about the spot where once stood a homestead,  
but where there is now only a ruined chimney rising out

of a grassy and weed-grown cellar? They offer their fruit to every wayfarer – apples that are bitter-sweet with the moral of time’s vicissitude.

*Mosses from an Old Manse: The Procession of Life*  
The Old Manse (p. 8)

A.L. Burt Company, Publishers. New York, New York, USA. No date

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

It is remarkable how closely the history of the apple tree is connected with that of man.

*The Writings of Henry David Thoreau* (Volume 9)  
Wild Apples (p. 356)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

## APRICOT

**Tennyson, Frederick** 1807–98

English poet

Rich apricots, that breathed of mountain flowers.

*Daphne, etc.*

*Hesperides, Hesperia*

Macmillan & Co. New York, New York, USA. 1891

## ASH

**Lowell, James Russell** 1819–91

American poet, critic, and editor

The ash her purple drops forgivingly  
And sadly, breaking not the general hush;  
The maple’s swamps glow like a sunset sea,  
Each leaf a ripple with its separate flush;  
All round the wood’s edge creeps the skirting blaze,  
Of bushes low, as when, on cloudy days,  
Ere the rain falls, the cautious farmer burns his brush.

*The Poetical Works of James Russell Lowell*

An Indian-Summer Reverie, 11

Houghton Mifflin Company. Boston, Massachusetts, USA. 1890

## ASPEN

**Ingemann, Bernhard S.** 1789–1862

Danish poet and novelist

What whispers so strange at the hour of midnight,  
From the aspen leaves trembling so wildly?  
Why in the lone wood sings it sad, when the bright  
Full moon beams upon it so mildly?

In George Barrow

*The Songs of Scandinavia and Other Poems and Ballads* (Volume 2)

The Aspen

Constable & Company Ltd. London, England. 1923

**Leyden, John** 1775–1811

Scottish poet

Beneath a shivering canopy reclined,  
Of aspen leaves that wave without a wind,

I love to lie, when lulling breezes stir  
The spiry cones that tremble on the fir.

*The Poetical Works of Dr. John Leyden*

Scenes of Infancy

W.P. Nimmo. London, England. 1875

**Moore, Thomas** 1779–1852

Irish poet

And the wind, full of wantonness, woos like a lover  
The young aspen-trees till they tremble all over.

*The Poetical Works of Thomas Moore*

Lalla Rookh, Light of the Harem

Lee & Shepard. Boston, Massachusetts, USA. 1873

## BANYON

**Bryant, Alice Franklin** 1900–77

No biographical data available

Like a cathedral in some old world town  
Rising above all mundane buildings, rears  
The banyan tree, a growth of long slow years,  
Towering above the palms. Its verdant crown  
Fashions a far-spread roof, from which falls down  
A diamond and tinted light with jeweled spears  
Of sunbeam piercing through. The whole appears  
An ornate Gothic pile of world renown.

The Banyan Tree

*Nature Magazine*, Volume 50, Number 5, May, 1957 (p. 265)

## BAOBAB

**de Saint-Exupéry, Antoine** 1900–44

French aviator and writer

Now there were some terrible seeds on the planet that was the home of the little prince; and these were the seeds of the baobab. The soil of that planet was infested with them. A baobab is something you will never, never be able to get rid of if you attend to it too late. It spreads over the entire planet. It bores clear through it with its roots. And if the planet is too small, and the baobabs are too many, they split it to pieces...

Translated by Katherine Woods

*The Little Prince*

Chapter V (p. 21)

Harcourt, Brace & Company. New York, New York, USA. 1943

## BEECH

**Campbell, Thomas** 1777–1844

Scottish poet

Oh, leave this barren spot to me!  
Spare, woodman, spare the beechen tree!

*The Complete Poetical Works*

The Beech-Tree’s Petition, Stanza I

Chadwyck-Healey. Cambridge, England. 1992

**BUR OAK**

**Leopold, Aldo** 1886–1948  
American naturalist

Have you ever wondered why a thick crust of corky bark covers the whole tree (bur oak), even to the smallest twigs? This cork is armor. Bur oaks were the shock troops sent by the invading forest to storm the prairie; fire is what they had to fight.... Engineers did not discover insulation; they copied it from these old soldiers of the prairie war.

*A Sand County Almanac*

April (pp. 26–27)

Oxford University Press. New York, New York, USA. 1987

**BIRCH**

**Lowell, James Russell** 1819–91  
American poet, critic, essayist, editor, and diplomat

Rippling through thy branches goes the sunshine,  
Among thy leaves that palpitate forever,  
And in the, a pining nymph had prisoned.  
The soul, once of some tremulous inland river,  
Quivering to tell her woe, but ah! Dumb, dumb forever.

*The Poetical Works of James Russell Lowell*

The Birch Tree

Houghton Mifflin Co. Baltimore, Maryland, USA. 1891

**CHERRY**

**Longfellow, Henry Wadsworth** 1807–82  
American poet

Sweet is the air with the budding haws, and the valley  
stretching for miles below  
Is white with blossoming cherry-trees, as if just covered  
with lightest snow.

*The Complete Writings of Henry Wadsworth Longfellow* (Volume 5)

Christus, Golden Legend

Part IV (p. 265)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904–1917

**CHESTNUT**

**Ingelow, Jean** 1820–97  
English poet and novelist

And when I see the chestnut letting  
All her lovely blossoms falter down, I think  
“Alas the day!”

*Poems*

The Warbling of Blackbirds

Longmans, Green, Reader & Dyer. London, England. 1867

**COCONUT**

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910  
American author and humorist

I once heard a grouchy Northern invalid say that a coconut tree might be poetical, possibly it was; but it looked like a feather-duster struck by lightning.

*Roughing It* (Volume 2)

Chapter XVIII (p. 215)

Harper & Brothers. New York, New York, USA. 1899

**DURIAN**

**Hamilton, Alexander** 1755–1804  
American political philosopher

The *Durean* is another excellent Fruit, but offensive to some Peoples Noses, for it smell very much like human Excrements, but when once tasted, the Smell vanishes.

*A New Account of the East Indies* Volume 2

Chapter XXXIX (p. 82)

Printed by John Mosman. Edinburgh, Scotland. 1727

**ELM**

**Tennyson, Alfred (Lord)** 1809–92  
English poet

In crystal vapour everywhere  
Blue isles of heaven laugh'd between,  
And far, in forest-deeps unseen,  
The topmost elm-tree gather'd green  
From draughts of balmy air.

*Alfred Tennyson's Poetical Works*

Sir Lancelot and Queen Guinevere, Stanza I

Oxford University Press, Inc. London, England. 1953

**EVERGREEN**

**Joubert, Joseph** 1754–1824  
French moralist

I never like evergreen trees. There is something black in their green and cold in their shade, something dry, pointed and prickly in their leaves. As besides, they lose nothing and have nothing to fear, they seem to me without feeling, and therefore interest me little.

Translated by Katharine Lyttelton

*Joubert*

#12 (p. 118)

Dodd, Mead & Co. New York, New York, USA. 1899

**HEMLOCK**

**Longfellow, Henry Wadsworth** 1807–82  
American poet

O hemlock-tree!  
O hemlock-tree!  
how faithful  
are thy branches!  
Green not alone in summer time,  
But in the winter's frost and rime!  
O hemlock-tree! O hemlock-tree! how faithful  
are thy branches!

*The Complete Writings of Henry Wadsworth Longfellow (Volume 6)*  
The Hemlock Tree  
Stanza 1  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1904–1917

**LARCH**

**Hemans, Felicia D.** 1793–1835  
English poet

I have looked on the hills of the stormy North,  
And the larch has hung all his tassels forth...  
*The Poetical Works of Mrs. Felicia Hemans*  
The Voice of Spring, Stanza 3  
Crosby, Nichols, Lee & Company. Boston, Massachusetts, USA. 1860

**LIME**

**Heine, Heinrich** 1797–1856  
German poet

If thou lookest on the lime-leaf,  
Thou a heart's form wilt discover;  
Therefore are the lindens ever  
Chosen seats of each fond lover.  
*The Book of Songs*  
New Spring, Number 23, Stanza 3 (p. 110)  
The Roycrofters. East Aurora, New York, USA. 1903

**LINDEN**

**Morris, William** 1834–96  
Poet

And at the corners stood great linden-trees,  
Humed over by innumerable bees.  
*The Life and Death of Jason: A Poem*  
Line 489–490 (p. 31)  
Bell & Daldy. London, England. 1868

**LOTOS**

**Hayne, Paul H.** 1830–1886  
American poet

Where drooping lotos-flowers, distilling balm,

Dream by the drowsy streamlets sleep hath crown'd,  
While Care forgets to sigh, and Peace hath balsamed  
Pain.

*Sonnets, and Other Poems*  
Pent in this Common Sphere  
Harper & Calvo. Charleston, South Carolina, USA. 1857

**Pope, Alexander** 1688–1744  
English poet

A spring there is, whose silver waters show  
Clear as a glass the shining sands below:  
A flowering lotos spreads its arms above,  
Shades all the banks, and seems itself a grove.

*The Complete Poetical Works*  
Sappho to Phaon, l. 177  
Houghton Mifflin Company. New York, New York, USA. 1903

**MAHOGANY**

**Thackeray, William Makepeace** 1811–63  
English writer

Christmas is here;  
Winds whistle shrill,  
Icy and chill,  
Little care we;  
Little we fear  
Weather without,  
Sheltered about  
The Mahogany-Tree.  
*The Complete Poems of W.M. Thackeray*  
The Mahogany-Tree  
White, Stokes & Allen. New York, New York, USA. 1884

**MANGROVE**

**Arnold, Sir Edwin** 1832–1904  
English poet and journalist

Maple-trees are the cows of trees (spring-milked), plain,  
good, useful, but not adorable.  
*The Voyage of Ithobal*  
The Fourth Day  
John Murray. London, England. 1901

**MAPLE**

**Beecher, Henry Ward** 1813–87  
American Congregational preacher and orator

Maple-trees are the cows of trees (spring-milked), plain,  
good, useful, but not adorable.  
In William Drysdale (ed.)  
*Proverbs from Plymouth Pulpit*  
Nature (p. 10)  
D. Appleton & Co. New York, New York, USA. 1887

**English, Thomas Dunn** 1819–1902  
American lawyer, physician, and poet

That was a day of delight and of wonder,  
While lying the shade of the maple-trees under –  
He felt the soft breeze at its frolicsome play;  
He smelled the sweet odor of newly mown hay...

*The Select Poems of Dr. Thomas Dunn English*

Under the Trees

Published by private subscription. Newark, New Jersey, USA. 1894

## OAK

**Dryden, John** 1631–1700

English poet, dramatist, and literary critic

The monarch oak, the patriarch of the trees,  
Shoots rising up, and spreads by slow degrees.  
Three centuries he grows, and three he stays  
Supreme in state; and in three more decays.

*The Poetical Works of Dryden*

Tales from Chaucer, Palamon and Arcite, Book III, l. 1058

The Riverside Press. Cambridge, Massachusetts, USA. 1949

**King, Thomas Starr** 1824–64

American Unitarian clergyman

The oak roars when a high wind wrestles with it; the  
beech shrieks; the elm sends forth a long, deep groan; the  
ash pours out moans of thrilling anguish.

*The White Hills: Their Legends, Landscape, and Poetry*

The Pemigewasset Valley and Franconia (p. 91)

Crosby & Ainsworth. Boston, Massachusetts, USA. 1866

**Muir, John** 1838–1914

American naturalist

I have seen oaks of many species in many kinds of expo-  
sure and soil, but those of Kentucky excel in grandeur  
all I had ever before beheld. They are broad and dense  
and green. In the leafy bowers and caves of their long  
branches dwell magnificent avenues of shade, and every  
tree seems to be blessed with a double portion of strong  
exulting life.

*A Thousand Mile Walk to the Gulf*

Chapter I (p. 2)

Houghton Mifflin Company. Boston Massachusetts, USA. 1916

## PALM

**Bailey, Liberty Hyde** 1858–1954

American horticulturist and botanist

The heavier palms are the big game of the plant world.

*Gentes Herbarium*

Palms, and Their Characteristics, 3, Fasc. 1

L.H. Bailey Hortorium of the New York State College of Agriculture  
and Life Sciences. Ithaca, New York, USA.

**Bomhard, Miriam L.** 1898–1952

No biographical data available

If the plant kingdom were a monarchy in which but a  
single family of plants had the heredity right to rule, the  
palms would unquestionably hold this honored position.

*Annual Report of the Board of Regents of the Smithsonian Institution*  
(1936)

The Wax Palms (p. 303)

Government Printing Office. Washington, D.C. 1937

## PINE

**Burroughs, John** 1837–1921

American naturalist and essayist

The pine has but one idea, and that is to mount heaven-  
ward by regular steps – tree of fate, tree of dark shadows  
and of mystery.

*Signs and Seasons*

Chapter II (p. 44)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1904

**Heine, Heinrich** 1797–1856

German poet

A pine tree standeth lonely

On a far norland height:

It slumbereth, while round it

The snow falls thick and white.

*The Book of Songs*

Lyrical Interlude, Number 34 (pp. 63–64)

The Roycrofters. East Aurora, New York, USA. 1903

**Lowell, James Russell** 1819–91

American poet, critic, and editor

The pine is the mother of legends.

*The Poetical Works of James Russell Lowell*

The Growth of a Legend

Houghton Mifflin Company. Boston, Massachusetts, USA. 1890

**Muir, John** 1838–1914

American naturalist

Few are altogether deaf to the preaching of pine trees.  
Their sermons on the mountains go to our hearts; and  
if people in general could be got into the woods, even  
for once, to hear the trees speak for themselves, all  
difficulties in the way of forest preservation would  
vanish.

The National Parks and Forest Reservations

*Sierra Club Bulletin*, Volume 1, Number 7, January, 1896

[The Sugar Pine is] the largest, noblest, and most beauti-  
ful of all the seventy or eighty species of pine trees in the  
world....

*Our National Parks*

Chapter IV (p. 109)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

**Taylor, Bayard** 185–78

American poet

Ancient pines!

Ye bear no record of the years of man.

Spring is your sole historian.

*The Poems*

The Pine Forest of Monterey

Ticknor & Fields. Boston, Massachusetts, USA. 1866

**REDWOOD**

**Steinbeck, John** 1902–68  
American novelist

The redwoods once seen, leave a mark or create a vision that stays with you always. . . . It's not only their unbelievable stature, nor the color which seems to shift and vary under your eyes, no, they are not just like any trees we know, they are ambassadors from another time.

*Travels with Charley: In Search of America*

Part Three (p. 168)

The Viking Press. New York, New York, USA. 1962

**SEQUOIA**

**Muir, John** 1838–1914  
American naturalist

The Big Tree (*Sequoia gigantea*) is Nature's forest masterpiece, and, so far as I know, the greatest of living things.

*Our National Parks*

Chapter IX (p. 268)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

Resolute, consummate, determined in form, always beheld with wondering admiration, the Big Tree always seems unfamiliar, standing alone, unrelated, with peculiar physiognomy, awfully solemn and earnest.

*Our National Parks*

Chapter IX (p. 272)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

...they never lose their god-like composure, never toss their arms or bow or wave like the pines, but only slowly, solemnly nod and sway, standing erect, making no sign of strife, none of rest, neither in alliance nor at war with the winds, too calmly unconsciously noble and strong to strive with or bid defiance to anything.

*Our National Parks*

Chapter IX (pp. 283–284)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

There is something wonderfully attractive in this king tree, even when beheld from afar, that draws us to it with indescribable enthusiasm; its superior height and massive smoothly rounded outlines proclaiming its character in any company; and when one of the oldest attains full stature on some commanding ridge it seems the very god of the woods.

*Our National Parks*

Chapter IX (p. 287)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

...Sequoias, kings of their race, growing close together like grass in a meadow, poised their brave domes and spires in the sky, three hundred feet above the ferns and lilies that enameled the ground; towering serene through the long centuries, preaching God's forestry fresh from heaven.

*Our National Parks*

Chapter IX (p. 334)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

**SPICE**

**Sterling, John** 1808–44  
Irish-born writer and clergyman

The Spice Tree lives in the garden green,  
Beside it the fountain flows;  
And a fair Bird sits the boughs between,  
And sings his melodious woes.

*Poems*

The Spice Tree, Stanza 1

Edward Moxon. London, England. 1839

**TULIP**

**Bryant, William Cullen** 1794–1878  
American poet

The tulip-tree, high up,  
Opened, in airs of June, her multitude  
Of golden chalices to humming-birds  
And silken-winged insects of the sky.

*Poems*

The Fountain, Stanza 3

D. Appleton & Company. New York, New York, USA. 1874

**WILLOW**

**Hamerton, Philip Gilbert** 1834–94  
English artist and art critic

I wonder how it is that so cheerful-looking a tree as the willow should ever have become associated with ideas of sadness.

*The Sylvan Year: Leaves from the Note Book of Raoul Dubois*

Chapter XIV (p. 73)

Roberts Brothers. Boston, Massachusetts, USA. 1886

**Thackeray, William Makepeace** 1811–63  
English writer

Know ye the willow-tree,  
Whose grey leaves quiver,  
Whispering gloomily  
To yon pale river?

*The Complete Poems of W.M. Thackeray*

The Willow-Tree

White, Stokes & Allen. New York, New York, USA. 1884

**VENUS FLYTRAP**

**Butler, Samuel** 1835–1902  
British writer

There is a kind of plant that eats organic food with its flowers: when a fly settles upon the blossom, the petals

close upon it and hold it fast till the plant has absorbed the insect into its system; but they will close on nothing but what is good to eat; of a drop of rain or a piece of stick they will take no notice. Curious! that so unconscious a thing should have such a keen eye to its own interest.

*Erewhon, or, Over the Range*

Chapter XXIII (p. 238)

A.C. Fifield. London, England. 1908

**Peattie, Donald Culross** 1898–1964

American botanist, naturalist, and author

...the stimuli [to plants] are perceived and acted upon. You may see this without benefit of lens or camera, when an insect alights on the creased blade of a Venus flytrap. The blade folds along the crease, while the insect struggles in the fatal sweet gleaming droplets that allured it. By the time that Iron Maiden of a leaf again expands, only a smear, limper than a spider's victim, is left.

*Flowering Earth*

Chapter 4 (p. 43)

G.P. Putnam's Sons. New York, New York, USA. 1939

## WEED

### Author undetermined

Weeds are useless flowers.

In John Burroughs

*Birds and Bees Essays*

Introduction (p. 6)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1914

**Bailey, William Whitman** 1843–1914

American botanist

Weeds are active enemies, not to be despised so much as hated. They are cut down or uprooted whenever found. So great a pest are they that man has taken them for a type of rank, rapid and useless growth. Yet, when curiosity leads us to observe them, we find beauty even in the meanest.

*The American Botanist*, Volume I, Number 4, October, 1901 (p. 50)

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

What is a weed? A plant whose virtues have not yet been discovered...

*The Complete Works of Ralph Waldo Emerson* (Volume 11)

*Miscellanies*

Chapter XXX (p. 512)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

**Hawthorne, Nathaniel** 1804–64

American novelist and short story writer

Perhaps, if we could penetrate Nature's secrets, we should find that what we call weeds are more essential to the well-being of the world than the most precious fruit or grain.

*Passages from the American Note-books of Nathaniel Hawthorne*

(Volume 2)

1843 (p. 176)

Smith, Elder & Co. London, England. 1868

**Larcom, Lucy** 1824–93

American writer

I like these plants that you call weeds

Sedge, hardhack, mullein, yarrow, –

That knit their roots and sow their seeds

Where any grassy wheel-track leads

Through country by-ways narrow.

I Like These Plants that You Call Weeds: Historicizing American

Women's Nature Writing

*Nineteenth Century*, Volume 58, June, 2003

**Leopold, Aldo** 1886–1948

American naturalist

To live in harmony with plants is, or should be, the ideal of good agriculture. To call every plant a weed which cannot be fed to livestock or people is, I fear, the actual practice of agricultural colleges.

In Susan L. Flader and J. Baird Callicott

*The River of the Mother of God*

What is a Weed? (p. 306)

The University of Wisconsin Press. Madison, Wisconsin, USA. 1991

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

Now 'tis the spring and weeds are shallow rooted;

Suffer them now and they'll outgrow the garden

And choke the herbs for lack of husbandry.

In *Great Books of the Western World* (Volume 26)

*The Plays and Sonnets of William Shakespeare* (Volume 1)

*The Second Part of King Henry the Sixth*

Act III, Scene I

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Thaxter, Celia** 1835–94

American poet

With the first faint green lines that are visible along the flower beds come the weeds, yea, and even before them; a wild, vigorous, straggling army, full of health, of strength, and a most marvelous power of growth. These must be dealt with at once and without mercy; they must be pulled up root and branch, without a moment's delay.

*An Island Garden* (p. 30)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1896

**Warner, Charles Dudley** 1829–1900

American editor and author

I scarcely dare trust myself to speak of the weeds. They grow as if the devil was in them. I know a lady, a member of the church, and a very good sort of woman, considering the subject condition of that class, who says that the weeds work on her to that extent that, in going through her garden, she has the greatest difficulty in keeping

the ten commandments in anything like an unfractured condition. I asked her which one, but she said, all of them: one felt like breaking the whole lot.

*My Summer in a Garden*

Fifth Week (pp. 44–45)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1897

## PLASMA

**Alfven, Hannes** 1908–95

Swedish physicist

The same objects [the planets] are now again in the center of science – only the questions we ask are different. We now ask how to go there, and we also ask how these bodies once were formed. And if the night sky on which we observe them is at a high latitude... we may also see in the sky an aurora, which is a cosmic plasma, reminding us of the time when our world was born out of plasma. Because in the beginning was the plasma.

*Les Prix Nobel. The Nobel Prizes in 1970*

Plasma Physics, Space Research and the (p. 316)

Origin of the Solar System

Nobel Foundation. Stockholm, Sweden. 1971

## PLASTIC

**Barthes, Roland** 1915–80

French literary critic

Despite having names of Greek shepherds (Polystyrene, Polyvinyl, Polyethylene), plastic... is in essence the stuff of alchemy.

In Ben Highmore

*The Everyday Life Reader*

Plastic (p. 306)

Routledge. London, England. 2002

In the hierarchy of the major poetic substances, it [plastic] figures as a disgraced material, lost between the effusiveness of rubber and the flat hardness of metal ...

In Ben Highmore

*The Everyday Life Reader*

Plastic (p. 306)

Routledge. London, England. 2002

...more than a substance, plastic is the very idea of its infinite transformation; as its everyday name indicates, it is ubiquity made visible.

In Ben Highmore

*The Everyday Life Reader*

Plastic (p. 306)

Routledge. London, England. 2002

## PLATE TECTONICS

**Bailey, Edward Battersby** 1881–1965

English geologist

Even those who have more sympathy with man's endeavor than with the affairs of Nature may take an interest in the Science of Tectonics. Knowledge, after all, is of human creation; and, as a rule, the knowledge of the structure of a mountain chain comes as the reward of glorious struggle, both physical and mental.

*Tectonic Essays*

Introduction (p. 1)

At The Clarendon Press. Oxford, England. 1935

**King, B. C.**

No biographical data available

**King, G. C. P.**

No biographical data available

They [plates] can't curl down; they must curl up

To form a kind of dish

To stop the oceans spilling out

And losing all the fish.

Letters to Nature

*Nature*, Volume 232, Number 5305, July 2, 1971 (p. 37)

**Ovid** 43 BCE–17 AD

Roman poet

I have myself seen what once was solid land changed into sea; and again I have seen land made from the sea.

Translated by Frank Justus Miller

*Metamorphoses* (Volume 2)

Book XV, l. 263 (p. 383)

William Heinemann. London, England. 1916

**Ward, Peter D.**

American paleontologist

**Brownlee, Donald**

American astronomer

Plate tectonics plays at least three crucial roles in maintaining animal life: It promotes biological productivity; it promotes diversity (the hedge against mass extinction); and it helps maintain equable temperatures, a necessary requirement for animal life. It may be that plate tectonics is the central requirement for life on a planet and that it is necessary for keeping a world supplied with water.

*Rare Earth: Why Complex Life Is Uncommon in the Universe*

Most Crucial Element of the Rare Earth Hypothesis? (p. 220)

Springer-Verlag. New York, New York, USA. 2000

**Wilson, John Tuzo** 1908–93

Canadian geologist and geophysicist

Formerly, most scientists of the earth thought of as one rigid body with fixed continents and permanent ocean basins, rather scientists now consider the earth to be broken into six large plates and several smaller ones, which very slowly move and jostle one another like blocks of ice on a river that is breaking up in the spring thaw.... Each continent does not constitute one plate, but rather

each is incorporated with the surrounding ocean floor into a plate that is larger than the continent, just as a raft of logs may be frozen into a sheet of ice.

In *Scientific American*

*Readings from Scientific American*

Continents Adrift and Continents Aground

Preface (p. v)

W.H. Freeman & Company, San Francisco, California, USA. 1976

## PLAUSIBLE

### Friedman, C. S.

Writer

When one is in the presence of the seemingly impossible, that which is merely unlikely becomes more plausible by contrast.

*Black Sun Rising*

1991

## PMS

### Bates, Rhonda

No biographical data available

My doctor said “I’ve got good news and I got bad news. The good news is you don’t have Premenstrual Syndrome. The bad news is – you’re a bitch!”

In Roz Warren

*Glibquips* (p. 122)

Crossing Press, Freedom, California, USA. 1994

### Hankla, Susan

Professional writer

God grant me the serenity to change the things about me and others I cannot stand

And to stand the things about me and others I cannot change

And the insight to know the difference

Between a PMS day and a normal day

So no one gets hurt.

In Roz Warren

*Glibquips* (p. 122)

Crossing Press, Freedom, California, USA. 1994

## POINT

### Berlinski, David 1942–

American mathematician

...a point, it must be remembered, is *not* a number; holding place without size and arising whimsically whenever two straight lines are crossed, it is a geometrical object, a kind of fathomless atom out of which the line is ultimately created.

*A Tour of the Calculus*

Chapter 3 (p. 17)

Pantheon Books, New York, New York, USA. 1995

### Warner, Sylvia Townsend 1893–1978

English novelist and poet

He took out his pocket knife and whittled the end of the stick. Then he tried again.

“What is this?”

“A smaller hole.”

“Point,” said Mr. Fortune suggestively.

“Yes, I mean a smaller point.”

“No, not quite. It is a point. but it is not smaller. Holes may be of different sizes, but no point is larger or smaller than another point.”

*Mr. Fortune’s Maggot*

Mr. Fortune’s Maggot (p. 108)

New York Review of Books, New York, New York, USA. 1927

...if a given point were not in a given place it would not be there at all.

*Mr. Fortune’s Maggot*

Mr. Fortune’s Maggot (p. 110)

New York Review of Books, New York, New York, USA. 1927

## POINT OF VIEW

### Mach, Ernst 1838–1916

Austrian physicist and philosopher

No point of view has absolute, permanent validity. Each has importance only for some given end.

*The Analysis of Sensations and the Relation of the Physical to the Psychological*

Chapter I (p. 37)

The Open Court Publishing Company, Chicago, Illinois, USA. 1914

He who knows only one view or one form of a view does not believe that another has ever stood in its place, or that another will ever succeed; he neither doubts nor tests.

*History and Root of the Principle of the Conservation of Energy*

Chapter I (p. 17)

The Open Court Publishing Company, Chicago, Illinois, USA. 1911

## POLAR REGION

### Nansen, Fridtjof 1861–1930

Norwegian explorer, scientist, and diplomat

Unseen and untrodden under their spotless mantle of ice the rigid polar regions slept the profound sleep of death from the earliest dawn of time. Wrapped in his white shroud, the mighty giant stretched his clammy ice-limbs abroad, and dreamed his age-long dreams. Ages passed – deep was the silence.

*Farthest North* (Volume 1)

Chapter I (p. 1)

Harper & Brothers Publishers, New York, New York, USA. 1898

**POLARITY****Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

Polarity, or action and reaction, we meet in every put of nature; in darkness and light; in heat and cold; in the ebb and flow of waters; in male and female; in the inspiration and expiration of plants and animals; in the equation of quantity and quality in the fluids of the animal body; in the systole and diastole of the heart; in the undulations of fluids and of sound; in the centrifugal and centripetal gravity; in electricity, galvanism, and chemical affinity.

*The Works of Ralph Waldo Emerson**Essays*

Essay III (p. 78)

Macmillan &amp; Company Ltd. London, England. 1883

**POLARIZATION****Dirac, Paul Adrien Maurice** 1902–84

English theoretical physicist

When we make the photon meet a tourmaline crystal, we are subjecting it to an observation. We are observing whether it is polarised parallel or perpendicular to the optic axis. The effect of making the observation is to force the photon entirely into the state of perpendicular polarisation. It has to make a sudden jump from being partly in each of these two states to being entirely in one or other of them. Which of the two states it will jump into cannot be predicted, but is governed only by probability laws. If it jumps into the perpendicular state it passes through the crystal and appears on the other side preserving this state of polarisation.

*The Principles of Quantum Mechanics*

Chapter I (p. 7)

Oxford University Press. Oxford, England. 1981

**POLLUTION****Abbey, Edward** 1927–89

American environmentalist and nature writer

Our world is so full of beautiful things: fruit and ideas and women and good men and banjo music and onions with purple skins. A virtual Paradise. But even Paradise can be damned, flooded, overrun, generally mucked up by fools in pursuit of paper profits and plastic happiness.

*Down the River*

Part II, Chapter 8 (p. 233)

E.P. Dutton. New York, New York, USA. 1982

**Ames, Bruce** 1928–

American biochemist

We are living in a sea of chemicals that have not been tested for mutagenicity or carcinogenicity.

In Roger Lewin

*Cancer Hazards in the Environment**New Scientist*, Volume 69, Number 984, January 22, 1976 (p. 168)**Carson, Rachel** 1907–64

American marine biologist and author

These sprays, dusts, and aerosols are now applied almost universally to farms, gardens, forests, and homes – nonselective chemicals that have the power to kill every insect, the “good” and the “bad,” to still the song of birds and the leaping of fish in the streams, to coat the leaves with a deadly film, and to linger on in soil – all this though the intended target may be only a few weeds or insects. Can anyone believe it is possible to lay down such a barrage of poisons on the surface of the earth without making it unfit for all life? They should not be called “insecticides,” but “biocides.”

*Silent Spring*

Chapter 2 (pp. 7–8)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1961

For the first time in the history of the world, every human being is now subjected to contact with dangerous chemicals, from the moment of conception until death.

*Silent Spring*

Chapter 3 (p. 15)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1961

As crude a weapon as a cave man’s club, the chemical barrage has been hurled against the fabric of time.

*Silent Spring*

Chapter 17 (p. 297)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1961

**Dubos, René Jules** 1901–82

French-born American microbiologist and environmentalist

...there are no harmless chemicals, only harmless use of chemicals.

In Robert M. Hutchins and Mortimer J. Adler

*The Great Ideas Today* 1964*Biological Sciences and Medicine* (p. 264)

Encyclopaedia Britannica, Inc. Chicago, Illinois, USA. 1964

**Eliot, T. S. (Thomas Stearns)** 1888–1965

American expatriate poet and playwright

There are flood and drouth  
Over the eyes and in the mouth,  
Dead water and dead sand  
Contending for the upper hand.  
The parched eviscerate soil  
Gapes at the vanity of toil,  
Laughs without mirth.  
This is the death of earth.

*The Collected Poems and Plays 1909–1950*

Little Gidding, Part II, stanza 2 (p. 140)

Harcourt, Brace &amp; World, Inc. New York, New York, USA. 1952

**Flammarion, Camille** 1842–1925

French astronomer and writer

Without an atmosphere, without this gaseous envelope whence organised beings incessantly draw what nourishes their own existence, it is impossible for us to conceive anything but immobility and the silence of death.

Translated by John Ellard Gore

*Popular Astronomy: A General Description of the Heavens*

Book II, Chapter V (p. 133)

Chatto &amp; Windus. London, England. 1907

**Heyerdahl, Thor** 1914–2002

Norwegian ethnographer and adventurer

Sea and soil, fumes and sewage, are all here to ride with us forever, in some form or another, on the thin crust of our spinning sphere.

In Alon Tal

*Speaking of Earth*

If Man is to Survive (p. 35)

Rutgers University Press. New Brunswick, Maine, USA. 2006

**Hornaday, William Temple** 1854–1937

American naturalist

Except within our conservation areas, an earthly paradise is being turned into an earthly Hades; and it is not savages nor primitive men who are doing this, but men and women who boast of their civilization.

*Our Vanishing Wild Life: Its Extermination and Preservation*

Foreword (p. vii)

Charles Scribner's Sons. New York, New York, USA. 1913

**Jeans, Sir James Hopwood** 1877–1946

English physicist and mathematician

Old Mother Earth must regard man as a very recent apparition indeed; he has just appeared to burrow into her, burn her forests, put her waterfalls into pipes, and generally mar the beauty of her features.

*EOS or The Wider Aspects of Cosmogony*

The Position of Man in the Universe (p. 10)

English scientist

There is only one pollution...people.

*Gaia: A New Look at Life on Earth*

Chapter 7 (p. 114)

Oxford University Press, Inc. Oxford, England. 2000

**Peacock, Thomas Love** 1785–1866

English writer

They have poisoned the Thames and killed the fish in the river. A little further development of the same wisdom and science will complete the poisoning of the air, and

kill the dwellers on the banks...I almost think it is the destiny of science to exterminate the human race.

*Gryll Grange*

Chapter 1 (p. 11)

Penguin Books. Harmondsworth, England. 1949

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

...this most excellent canopy, the air, look you, this brave o'erhanging firmament, this majestic roof fretted with golden fire, why, it appears no other thing to me than a foul and pestilent congregation of vapours.

In *Great Books of the Western World* (Volume 27)*The Plays and Sonnets of William Shakespeare* (Volume 2)*Hamlet, Prince of Denmark*

Act II, Scene ii, l. 311–315

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Taylor, John**

No biographical data available

Then by the Lords Commissioners, and also  
By my good King (whom all true subjects call so),  
I was commanded with the Water Baylie,  
To see the rivers cleaned, both night and dayly.  
Dead Hogges, Dogges, Cates and well flayed Carryon  
Horses,

Their Noysom Corpses soyled the Water Courses;  
Both Swines' and Stable dynges, beasts' guts and garbage,  
Street dirt, with Gardners' Weeds and Rotten Herbage.  
And from those Waters' filthy putrifaction  
Our Meat and Drinke were made, which bred Infection.

Myself and partner, with cost paines and Travell,

Saw all made clean, from Carryon, Mud and Gravell,

And now and then was punisht a Delinquent,

By which good meanes away the filth and stink went.

Unknown, An Echo from the Past

*The American Biology Teacher*, Volume 35, Number 4, April, 1973

(p. 208)

**Toffler, Alvin** 1928–

American writer and futurist

...industrial vomit...fills our skies and seas. Pesticides and herbicides filter into our foods. Twisted automobile carcasses, aluminum cans, non-returnable glass bottles and synthetic plastics form immense kitchen middens in our midst as more and more of our detritus resists decay. We do not even begin to know what to do with our radioactive wastes – whether to pump them into the earth, shoot them into outer space, or pour them into the oceans. Our technological powers increase, but the side effects and potential hazards also escalate.

*Future Shock*

Chapter 19 (p. 380)

Random House, Inc. New York, New York, USA. 1979

## POLYGON

**Abbott, Edwin A.** 1838–1926  
English schoolmaster and theologian

Next above these [the straight line, the triangle, quadrilateral, and the pentagon] come the Nobility, of whom there are several degrees, beginning at Six-sided Figures, or Hexagons, and from thence rising in the number of their sides till they receive the honorable title of Polygonal, or many-sided.

*Flatland: A Romance of Many Dimensions*  
Dedication (p. 19)  
Little, Brown & Co. Boston, Massachusetts, USA. 1899

## POPULATION

**Malthus, Thomas Robert** 1776–1834  
English economist and sociologist

Population, when unchecked, increases in a geometrical ratio. Subsistence increases only in an arithmetical ratio. A slight acquaintance with numbers will show the immensity of the first power in comparison of the second.

In E.A. Wrigley and David Souden (eds.)  
*The Works of Thomas Malthus* (Volume 1)  
*An Essay on the Principle of Population* (p. 9)  
Houghton Mifflin Company. Boston, Massachusetts, USA, 1885–1886

## POSITION

**Ridley, B. K.**  
No biographical data available

Imagine a billiard ball as the only inhabitant of the universe. What position does it have? The question has no meaning, for position can only be defined with respect to another position, which we call an origin, and there is nothing to define where the origin is.

*Time, Space and Things*  
Chapter 3 (p. 41)  
Cambridge University Press. Cambridge, England. 1984

**Wren, Sir Christopher** 1632–1723  
English designer, astronomer, and geometer

Position is necessary for perfecting beauty. There are only two beautiful positions of strait lines, perpendicular and horizontal; this is from nature, and consequently necessity, no other than upright being firm.

*Lives of Eminent Persons*  
Sir Christopher Wren (p. 30)  
Baldwin & Cradock. London, England. 1833

## POSITRON

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

A positron is a hole from which an electron has been removed; it is a bung-hole which would be evened up

with its surroundings if an electron were inserted.... You will see that the physicist allows himself even greater liberty than the sculptor. The sculptor removes material to obtain the form he desires. The physicist goes further and adds material if necessary – an operation which he describes as removing negative. He fills up a bung-hole, saying he is removing a positron.

*The Philosophy of Physical Science*  
Chapter VIII, Section II (pp. 120–121)  
The Macmillan Company. New York, New York, USA. 1939

**Hacking, Ian** 1936–  
Canadian-born philosopher of science

Now how does one alter the charge on the niobium ball? “Well at that stage,” said my friend, “we spray it with positrons to increase the charge or with electrons to decrease the charge.” From that day forth I’ve been a scientific realist. So far as I’m concerned, if you can spray them then they are real.

*Representing and Intervening* (p. 23)  
Cambridge University Press. Cambridge, England. 1983

## POSSIBLE

**Dewar, Redcote**  
No biographical data available

...we know nothing of possibilities and impossibilities, but only about what has and has not taken place.

*From Matter to Man: A New Theory of the Universe*  
Chapter IV (p. 50)  
Chapman & Hall, Ltd. London, England. 1898

Everything is possible, but only the actual happens.

*From Matter to Man: A New Theory of the Universe*  
Chapter XIII (p. 213)  
Chapman & Hall, Ltd. London, England. 1898

## POSSIBILITY

**Armstrong, David Malet** 1926–  
Australian philosopher

The Naturalist theory of possibility now to be advanced will be called a Combinatorial theory. It traces the very idea of possibility to the idea of the combinations – all the combinations – of given, actual elements.

*A Combinatorial Theory of Possibility*  
Part II, Chapter 3, Section I (p. 37)  
Cambridge University Press. Cambridge, England. 1989

**Eliot, George (Mary Ann Evans Cross)** 1819–80  
English novelist

We know what a masquerade all development is, and what effective shapes may be disguised in helpless embryos – In fact, the world is full of hopeful analogies and handsome dubious eggs called possibilities.

*Middlemarch*  
Book I, Chapter X (p. 82)  
Clarendon Press. Oxford, England. 1986

## POSTAGE STAMP

**Hogben, Lancelot** 1895–1975  
English zoologist

With full responsibility for my words as a professional biologist, I do not hesitate to say that all existing and genuine scientific knowledge about the way in which the physical characteristics of human communities are related to their cultural capabilities can be written out on the back of a postage stamp.

*Dangerous Thoughts*

Chapter 3 (p. 47)

W.W. Norton & Co. New York, New York, USA. 1940

## POSTULATE

**Douglas, Norman** 1868–1952  
British writer

“The older I get,” observed Mr. van Koppen, “the more I realize that everything depends upon what a man postulates. The rest is plain sailing.”

*South Wind*

Chapter XL (p. 441)

Secker. London, England. 1934

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

The method of “postulating” what we want has many advantages; they are the same as the advantages of theft over honest toil. Let us leave them to others and proceed with our honest toil.

*Introduction to Mathematical Philosophy*

Chapter VII (p. 71)

Dover Publications, Inc. New York, New York, USA. 1993

## POWER

**Boulton, Matthew** 1728–1809  
English engineer

“Ha! Boulton,” said the king. “It is long since we have seen you at court. Pray, what business are you now engaged in?”

“I am engaged, your Majesty, in the production of a commodity which is the desire of kings.”

“And what is that? What is that?”

“POWER, your majesty!”

In Ralph Stein

*The Great Inventions*

The Steam Engine (p. 24)

Playboy Press. Chicago, Illinois, USA. 1976

**Morison, George S.** 1842–1903  
Civil engineer

Fire, animal strength, and written language have in turn advanced men and nations; something like a new

capacity was developed with the discovery of explosives and again in the invention of printing; but the capacity of man has always been limited to his own individual strength and that of the men and animals he could control. His capacity is no longer so limited; man has now learned to manufacture power, and with the manufacture of power a new epoch began.

*The New Epoch as Developed by the Manufacture of Power*

Chapter I (p. 4)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1903

## PRACTICAL

**Thomson, Sir John Arthur** 1861–1933  
Scottish naturalist

To be wholly practical is to grub for edible roots and see no flowers upon the earth, no stars overhead.

*Introduction to Science*

Chapter I (p. 11)

Henry Holt & Co. New York, New York, USA. 1911

## PRACTITIONER

**Flexner, Abraham** 1866–1959  
American educator

We have indeed in America medical practitioners not inferior to the best elsewhere; but there is probably no other country in the world in which there is so great a distance and so fatal a difference between the best, the average, and the worst.

*Medical Education in the United States and Canada*

Chapter II (p. 20)

The Carnegie Foundation. New York, New York, USA. 1910

The one person for whom there is no place in the medical school, the university, or the college, is precisely he who has hitherto generally usurped the medical field – the scientifically dead practitioner, whose knowledge has long since come to a standstill and whose lectures, composed when he first took his chair, like pebbles rolling in a brook get smoother and smoother as the stream of time washes over them.

*Medical Education in the United States and Canada*

Chapter IV (p. 57)

The Carnegie Foundation. New York, New York, USA. 1910

**Latham, Peter Mere** 1789–1875  
English physician

...he who would be a first-rate practitioner must lay his foundations broad and deep in the knowledge of morbid processes; otherwise, although he may sometimes prognosticate truly concerning life and death, he can never give an accurate diagnosis concerning the nature of diseases of which he can understand nothing. Above all, he must never hope to benefit mankind by advancing the knowledge of his profession a single step.

*Lectures on Subjects Connected With Clinical Medicine*  
Lecture IV (p. 112)  
Longman, Rees, Orme, Brown, Green & Longman. London, England.  
1836

## PRAGMATISM

**Pagels, Heinz R.** 1939–88  
American physicist and science writer

I suppose my mind had been ruined for philosophy by studying too much physics, with its simple (some would say naive) pragmatism.

*The Dreams of Reason*  
Chapter 1 (p. 22)  
Simon & Schuster. New York, New York, USA. 1988

## PRAYER

**Ayres, Clarence Edwin** 1891–1972  
No biographical data available

I believe in atoms, molecules, and electrons, matter of heaven and earth, and electrical energy its only form. I believe in modern science, conceived by Copernicus and borne out by Newton, which suffered under the Inquisition, was persecuted and anathematized, but rose to be the right hand of civilization as a consequence of the fact it rules the quick and the dead. I believe in the National Research Council, the communion of scientists, the publication of discoveries, the control of nature, and progress everlasting. Amen.

*Science: The False Messiah*  
Chapter X (p. 129)

What is the thing we call Common Sense? It is prayer practically applied, assistance given hope.

*Sinner Sermons: A Selection of the Best Paragraphs of E.W. Howe* (p. 7)  
Girard, Kansas, USA. 1926

**Kepler, Johannes** 1571–1630  
German astronomer

It remains only that I should now lift up to Heaven my eyes and hands from the table of my pursuits, and humbly and devoutly supplicate the Father of lights. O thou, who by the light of nature dost enkindle in us a desire after the light of grace, that by this thou mayst translate us into the light of glory; I give thee thanks, O Lord and Creator, that thou hast gladdened me by thy creation, when I was enraptured by the work of thy hands. Behold, I have here completed a work of my calling, with as much of intellectual strength as thou hast granted me. I have declared the praise of thy works to the men who will read the evidences of it, so far as my finite spirit could comprehend them in their infinity. My mind endeavored to its utmost to reach the truth by philosophy; but if anything unworthy of thee has been taught by me – a worm born and nourished in sin – do thou teach me that I may correct it. Have I been seduced into presumption by the admirable beauty of thy works, or have I sought my own glory among men, in the construction of a work designed for thine honour? O then graciously and mercifully forgive me; and finally, grant me this favour, that this work may never be injurious, but may conduce to thy glory and the good of souls.

*Christian Observer*  
A Layman on Scriptural Geology with Observations Thereon  
August, 1834 (p. 495)

I thank thee, O Lord, our Creator, that thou hast permitted me to look at the beauty in thy work of creation; I exult in the works of thy hands. See, I have here completed the work to which I felt called; I have earned interest from the talent that thou hast given me. I have proclaimed the glory of thy works to the people who will read these demonstrations, to the extent that the limitations of my spirit would allow.

*Harmony of the World*

**Pasteur, Louis** 1822–95  
French chemist

God grant that by my persevering labours I may bring a little stone to the frail and ill-assured edifice of our knowledge of those deep mysteries of Life and Death where all our intellects have so lamentably failed.  
In René Vallery-Radot

*The Life of Pasteur*

Chapter V (p. 88)

Doubleday, Page & Co. New York, New York, USA. 1919

**Plato** 428 BCE–347 BCE  
Greek philosopher

...I call upon God, and beg him to be our savior out of a strange and unwanted enquiry, and to bring us to the heaven of probability.

*Timaeus*

Section 48 (p. 456)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Ross, Sir Ronald** 1857–1932  
Scottish physician

This day relenting God Hath placed within my hand A wondrous thing [the discovery of the cause of malaria]; and God Be praised. At His command, Seeking His secret deeds, With tears and toiling breath, I find thy cunning seeds, O million-murdering Death. I know this little thing A myriad men will save. O Death, where is thy sting?

Thy victory, O Grave?

Quoted in Richard Arman Gregory

*Discovery, Or, The Spirit and Service of Science*

Chapter VIII (p. 227)

Macmillan & Co Ltd. London, England. 1916

**Southgate, Theresa**  
No biographical data available

I am like a chemical compound in Your Laboratory of Life, O Lord, a compound from which the element Perfection has not yet been isolated, a compound in which the properties of the element Perfection are disguised by combination with earthly vanities. Take me then, O Lord, analyze me according to my good and evil constituents and isolate the pure element Perfection, as a chemist analyzes and separates from a substance all foreign matter. Analyze me that I may learn to know myself and that I may emerge a pure element, worthy to be included in the group of elements already freed from the bonds of their earthy life.

First, grind me in the mortar of childish whims, that I may emerge a composite sample of Your Likeness. Weigh me on the balance of Your generosity and decide how great a sample I shall be in Your Laboratory of Life. Then, ignite me in the furnace of Your love, that the carbon dioxide of earthly vanities be driven off. Cool me with the balm of Your mercy. Dissolve me in Your grace and filter me through the fine mesh of earthly trials so that Imperfections may be banished. Precipitate my evil tendencies with the strong precipitate the gelatinous silicate of earthly attachments which draw me from You. Imprison me in Your love with the mordant of sacrifice. Digest me in the length of my life, that my good deeds

will grow and that self-satisfaction shall not be occluded with them. Blast out any impurities that may be introduced and finally, seal me forever, a pure substance in the container of your Eternal Happiness.

A Chemist's Prayer

*Journal of Chemical Education*, Volume 23, Number 10, October, 1946 (p. 507)

**Tukey, John W.** 1915–2000  
American statistician

The physical sciences are used to “praying over” their data, examining the same data from a variety of points of view. This process has been very rewarding, and has led to many extremely valuable insights. Without this sort of flexibility, progress in physical science would have been much slower. Flexibility in analysis is often to be had honestly at the price of a willingness not to demand that what has already been observed shall establish, or prove, what analysis suggests. In physical science generally, the results of praying over the data are thought of as something to be put to further test in another experiment, as indications rather than conclusions.

The Future of Data Analysis

*The Annals of Mathematical Statistics*, Volume 33, Number 1, March, 1962 (p. 46)

**Turgenev, Ivan** 1818–83  
Russian novelist and dramatist

Whatever a man pray for he prays for a miracle. Every prayer reduces to this: ‘Great God, grant that twice two be not four.’

Translated by Constance Garnett

*Dream Tales and Prose Poems*

Prayer (p. 323)

William Heinemann. London, England. 1914

**Wheelock, John Hall** 1754–1817  
College president

Oh, Lord, we thank thee for the Oxygen Gas; we thank Thee for the Hydrogen Gas; and for all the gases. We thank Thee for the Cerebrum; we thank Thee for the Cerebellum; and for the Medulla Oblongata. Amen.

In Oliver Payson Hubbard

*The Early History of the New Hampshire Medical Institution* (p. 15)

The Globe Printing and Publishing House. Washington, D.C. 1880

## PRECIOUS STONE

**Burroughs, John** 1837–1921  
American naturalist and essayist

The difference between a precious stone and a common stone is not an essential difference – not a difference of substance, but of arrangement of the particles – the crystallization.

*Studies in Nature and Literature*

Style and the Man (p. 82)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1908

**de Sales, F. Francis** 1567–1622  
Catholic Bishop

All kinds of Precious Stones, cast into honey, become more brilliant thereby, each one according to its colour, and all persons become more acceptable in their vocation, when they join devotion with it: household cares are thereby rendered tranquil, the love of husband and wife more sincere, the service of the prince more faithful, and all kinds of business more easy and pleasant.

*An Introduction to a Devout Life*

Chapter III (p. 7)

M.H. Gill & Sons. Dublin, Ireland. 1708

## PRECISE

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

Everything is vague to a degree you do not realize till you have tried to make it precise ...

*The Collected Papers of Bertrand Russell*

*The Philosophy of Logical Atomism*

Facts and Propositions (p. 160)

Routledge. London, England. 1986

## PRECISION

**Augustine, Norman R.**  
American businessman

The weaker the data available upon which to base one's conclusion, the greater the precision which should be quoted in order to give the data authenticity.

*Augustine's Laws*

Law Number XXXV (p. 231)

American Institute of Aeronautics & Astronautics, Inc. Reston, Virginia, USA. 1986

**Davy, Sir Humphry** 1778–1829  
English chemist

Simplicity and precision ought to be the characteristics of a scientific nomenclature: words should signify things, or the analogies of things, and not opinions.

*Elements of Chemical Philosophy*

Part I, Volume 1, Introduction (p. 46)

Printed for J. Johnson & Company. London, England. 1812

**Herschel, Sir John Frederick William** 1792–1871

English astronomer and chemist

[Precision] is the very soul of science; and its attainment afford the only criterion, or at least the best, of the truth of theories, and the correctness of experiments.

*A Preliminary Discourse on the Study of Natural Philosophy*

Part II, Chapter IV, Section 115 (p. 122)

Printed for Longman, Rees, Orme, Brown & Green. London, England. 1831

**Queneau, Raymond** 1903–76  
French poet, novelist, and publisher

In a bus of the S-line, 10 meters long, 3 wide, 6 high, at 3 km 600 m from its starting point, loaded with 48 people, at 12.17 p.m., a person of the masculine sex aged 27 years 3 months and 8 days, 1 m 72 cm tall and weighing 65 kg and wearing a hat 35 cm in height round the crown of which a ribbon 60 cm long, interpolated a man aged 48 years 4 months and 3 days, 1 m 68 cm tall and weighing 77 kg, by means of 14 words whose enunciation lasted 5 seconds and which alluded to some involuntary displacements of from 15 to 20 mm. Then he went and sat down about 1 m 10 cm away. 57 minutes later he was 10 meters away from the suburban entrance to the gare Saint-Lazare and was walking up and down over a distance of 30 m with a friend aged 28, 1 m 70 cm tall and weighing 71 kg who advised him in 15 words to move by 5 cm in the direction of the zenith a button which was 3 cm in diameter.

*Exercises in Style*

Precision (pp. 37–38)

New Direction Publishing Corporation. New York, New York, USA. 1981

**Thompson, Sir D'Arcy Wentworth** 1860–1948  
Scottish zoologist and classical scholar

Dream apart, numerical precision is the very soul of science.

*On Growth and Form* (Volume 1)

Chapter I (p. 2)

At The University Press. Cambridge, England. 1951

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

...the anxious precision of modern mathematics is necessary for accuracy... [I]t is necessary for research. It makes for clearness of thought, and thence for boldness of thought and for fertility in trying new combinations of ideas. When the initial statements are vague and slipshod, at every subsequent stage of thought, common sense has to step in to limit applications and to explain meanings. Now in creative thought common sense is a bad master. Its sole criterion for judgment is that the new ideas shall look like the old ones. In other words it can only act by suppressing originality.

*An Introduction to Mathematics*

Chapter XI (p. 157)

Henry Holt & Co. New York, New York, USA. 1911

## PREDETERMINED

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

I think it incredible that the wider scheme of Nature which includes life and consciousness can be completely

predetermined; yet I have not been able to form a satisfactory conception of any kind of law or causal sequence which shall be other than deterministic.

*The Nature of the Physical World*

Chapter XIV (p. 293)

The University Press. New York, New York, USA. 1929

## PREDICT

**Whewell, William** 1794–1866

English philosopher and historian

...to predict what has not been observed, is to attempt ourselves to use the legislative phrases of nature; and when she responds plainly and precisely to that which we thus utter, we cannot but suppose that we have in a great measure made ourselves masters of the meaning and structure of her language.

*The Philosophy of the Inductive Sciences, Founded Upon Their History*  
(2nd edition)

Book XI, Chapter V (pp. 64–65)

John W. Parker. London, England. 1867

## PREDICTION

**Armstrong, Neil A.** 1930–

American astronaut

Science has not yet mastered prophecy. We predict too much for the next year and yet far too little for the next ten.

Address to Joint Sessions of Congress, September 16, 1969

**Asimov, Isaac** 1920–92

American author and biochemist

It is one thing to be able to make predictions. It is another to listen to the predictions you have made and to act upon them.

*The Road to Infinity*

Chapter 1 (p. 3)

Avon Books. New York, New York, USA. 1979

**Bohr, Niels Henrik David** 1886–1962

Danish physicist

It is very difficult to make an accurate prediction, especially about the future.

In Timothy Ferris (ed.)

*The Mind's Sky: Human Intelligence in a Cosmic Context*

The Manichean Heresy (p. 181)

Bantam Books. New York, New York, USA. 1992

**Comte, Auguste** 1798–1857

French philosopher

The aim of every science is foresight (prevoyance). For the laws of established observation of phenomena are generally employed to foresee their succession. All men, however little advanced make true predictions, which are

always based on the same principle, the knowledge of the future from the past.

In Bertrand de Jouvenel

*The Art of Conjecture*

Chapter 11 (p. 111)

Basic Books, Inc. New York, New York, USA. 1967

**Darwin, Charles Robert** 1809–82

English naturalist

Anyone who attempts to predict the history of the next ten years is a rash man, and if he attempts to make his forecast for a century he is very properly regarded as so foolhardy as not to be worth listening to at all.

*The Next Million Years*

Introduction (p. 13)

Doubleday & Company, Inc. Garden City, New York, USA. 1953

**Dewey, John** 1859–1952

American philosopher and educator

Factual science may collect statistics and make charts. But its predictions are, as has been well said, but past history reversed.

*Art as Experience*

Chapter 14 (p. 360)

Perigee Books. New York, New York, USA. 2005

**du Noüy, Pierre Lecomte** 1883–1947

French scientist

The aim of science is not so much to search for truth, or even truths, as to classify our knowledge and to establish relations between observable phenomena in order to be able to predict the future in a certain measure and to explain the sequence of phenomena in relation to ourselves.

*Between Knowing and Believing*

The Road to Reason (p. 188)

McKay. New York, New York, USA. 1967

The aim of science is to foresee, and not, as has often been said, to understand. Science describes facts, objects and phenomena minutely, and tries to join them by what we call laws, so as to be able to predict events in the future.

*Human Destiny*

Chapter 2 (p. 13)

Longmans, Green & Company. London, England. 1947

**Dyson, Freeman J.** 1923–

American physicist and educator

In the long run, qualitative changes always outweigh quantitative ones. Quantitative predictions of economic and social trends are made obsolete by qualitative changes in the rules of the game. Quantitative predictions of technological progress are made obsolete by unpredictable new inventions. I am interested in the long run, the remote future, where quantitative predictions are meaningless. The only certainty in that remote future is that radically new things will be happening.

*Disturbing the Universe*

Chapter 17 (p. 192)

Basic Books, Inc. New York, New York, USA. 1979

### Gregory, Bruce

No biographical data available

If we want to know whether a particular way of talking about the world is valuable, we look for the predictions the theory makes and compare these with observations.

*Inventing Reality: Physics as Language* (p. 187)

John Wiley & Sons. New York, New York, USA. 1990

### Hacking, Ian 1936–

Canadian-born philosopher of science

Cutting up fowl to predict the future is, if done honestly and with as little interpretation as possible a kind of randomization. But chicken guts are hard to read and invite flights of fancy or corruption.

*The Emergence of Probability*

An Absent Family of Ideas (p. 3)

Cambridge University Press. Cambridge, England. 1975

### Kaplan, Abraham 1918–93

American philosopher of science, author, and educator

...if we can predict successfully on the basis of a certain explanation, we have good reason, and perhaps the best of reason, for accepting the explanation.

*The Conduct of Inquiry: Methodology for Behavioral Science*

Chapter IX, Section 40 (p. 350)

Chandler Publishing Company. San Francisco, California, USA. 1964

### Kendrew, John 1917–99

English biochemist

Scientists cannot predict the future any better than anyone else – even about their own field of research.

*The Thread of Life*

Chapter 10 (p. 110)

Harvard University Press. Cambridge, Massachusetts, USA. 1966

### Kluckhohn, Clyde 1905–60

American anthropologist

...it is one thing to be able to make some useful predictions as to what is likely to happen.... It is quite another thing to interfere, willfully to introduce new complications into an already tortuous social maze.

*Mirror for Man: The Relation of Anthropology to Modern Life*

Chapter X (p. 263)

McGraw-Hill Book. New York, New York, USA. 1949

### Le Guin, Ursula K. 1929–

American writer of science fiction and fantasy

Legends of prediction are common through the whole Household of Man. Gods speak, spirits speak, computers speak, Oracular ambiguity or statistical probability provides loopholes, and discrepancies are expunged by Faith.

*The Left Hand of Darkness*

Chapter 5 (p. 57)

Waller & Co. New York, New York, USA. 1994

### Mill, John Stuart 1806–73

English political philosopher and economist

Of all truths relating to phenomena, the most valuable to us are those which relate to the order of their succession. On a knowledge of these is founded every reasonable anticipation of future facts, and whatever power we possess of influencing those facts to our advantage. Even the laws of geometry are chiefly of practical importance to us as being a portion of the premises from which the order of the succession of phenomena may be inferred.

*A System of Logic, Ratiocative and Inductive*

Book III, Chapter 5, Section 1 (p. 212)

Longmans, Green, Reader & Dyer. London, England. 1906

### Rowling, J. K. 1965–

English author

The consequences of our actions are always so complicated, so diverse, that predicting the future is a very difficult business indeed.

*Harry Potter and The Prisoner of Azkaban*

Chapter Twenty-Two (p. 426)

Scholastic Press. New York, New York, USA. 1999

### Russell, Bertrand Arthur William 1872–1970

English philosopher, logician, and social reformer

Science is the attempt to discover, by means of observation, and reasoning based upon it, first, particular facts about the world, and then laws connecting facts with one another and (in fortunate cases) making it possible to predict future occurrences.

*Religion and Science*

Grounds of Conflict (p. 8)

Henry Holt & Company. New York, New York, USA. 1935

Simon & Schuster. New York, New York, USA. 1986

## PREHISTORIC MAN

**Aeschylus** 525 BCE–426 BCE

Greek playwright

How, first beholding, they beheld in vain,  
And hearing, heard not, but, like shapes in dreams,  
Mixed all things wildly down the tedious time,  
Nor knew to build a house against the sun  
With wickered sides, nor any woodcraft knew,  
But lived, like silly ants, beneath the ground  
In hollow caves unsunned.

There, came to them

No steadfast sign of winter, nor of spring  
Flower-perfumed, nor of summer full of fruit,  
But blindly and lawlessly they did all things...

In Elizabeth Barrett-Browning

*Prometheus Bound and Other Poems*

Prometheus Bound

Scene: At the Rocks

C.S. Francis & Co. New York, New York, USA. 1852

**James, William** 1842–1910

American philosopher and psychologist

Bone of our bone and flesh of our flesh are these half-brutish pre-historic brothers. Girdled about with the immense darkness of this mysterious universe even as we are, they were born and died, suffered and struggled. Given over to fearful crime and passion, plunged in the blackest ignorance, preyed upon by hideous and grotesque delusions, yet steadfastly serving the profoundest of ideals in their fixed faith that existence in any form is

better than non-existence, they ever rescued triumphantly from the jaws of ever-imminent destruction the torch of life, which, thanks to them, now lights the world for us.

*The Will to Believe, and Other Essays in Popular Philosophy and Human Immortality*

Human Immortality (p. 33)

Dover Publications, Inc. New York, New York, USA. 1956

**Leakey, Richard Erskine** 1944–

Kenyan paleoanthropologist and politician

Needless to say, language and consciousness, which are among the most prized features of *Homo Sapiens*, leave no trace in the prehistoric record.

*The Origin of Humankind*

Preface (p. xiv)

Basic Books, Inc. New York, New York, USA. 1994

## PREHISTORY

**Clark, Grahame** 1907–95

English archaeologist

The study of prehistory stands in no more need of justification than exploration of the physical nature and mathematical properties of the universe, the investigation of all the multifarious forms of life, or for that matter the practice of the arts or the cultivation of speculative philosophy. Each in its own way enlarges the range of human experience and enriches the quality of human life.

*Aspects of Prehistory*

Chapter 1 (p. 4)

University of California Press. Berkeley, California, USA. 1970

**Coleridge, Samuel Taylor** 1772–1834

English lyrical poet, critic, and philosopher

Antecedently to all history, and long glimmering through it as a holy tradition, there presents itself to our imagination an indefinite period, dateless as eternity; a state rather than a time. For even the sense of succession is lost in the uniformity of the stream.

*The Complete Works of Samuel Taylor Coleridge* (Volume 2)

Essay One (p. 19)

Harper & Brothers Publishers. New York, New York, USA. 1884

**Dunnell, Robert C.** 1942–

American archaeologist

Like its sister discipline, sociocultural anthropology, prehistory has a tendency to invent a term for its own sake and then argue about what it means for twenty years rather than defining the term in the first place.

*Systematics In Prehistory*

Introduction (p. 4)

The Free Press. New York, New York, USA. 1971

**Peale, Rembrandt** 1778–1860

American neoclassical painter

The revolutions which have happened on our earth, by which its original appearance has been successively

changed, have, at all times, commanded the attention of the learned, and excited various speculations concerning the time, cause and manner; and although we may never learn much on a subject so extensive, so remote and so wonderful, yet as far as facts will authorize us, we may safely proceed....

*An Historical Disquisition on the Mammoth*

Introduction (p. 1)

Printed for E. Lawrence. London, England. 1803

**Wilson, Sir Daniel** 1816–92

English-born Canadian archaeologist

In the application of the term Prehistoric – introduced, if I mistake not, for the first time in this work – it was employed originally in reference to races which I then assigned reasons for believing had preceded the oldest historical ones in Britain and Northern Europe. But since then the term has become identified with a comprehensive range of speculative and inductive research, in which the archaeologist labours hand in hand with the geologist and ethnologist, in solving some of the most deeply interesting problems of modern science.

*Prehistoric Annals of Scotland* (Volume 1)

Preface (p. xiv)

Macmillan & Company Ltd. London, England. 1863

## PRESCRIPTION

**Chekhov, Anton Pavlovich** 1860–1904

Russian author and playwright

What did your uncle die of?

Instead of fifteen Butkin drops, as the doctor prescribed, he took sixteen.

*Note-Book of Anton Chekhov* (p. 37)

B.W. Huebsch, Inc. New York, New York, USA. 1921

**Helmuth, William Tod** 1833–1902

American physician

Term pain “neuralgia,” or if the man be stout,  
Cry out, “Dear Sir, you have rheumatic gout.”  
Tap on the chest – some awful sounds they hear,  
Then satisfied, declare, “The case is clear,”  
Draw forth a paper, seize the magic quill,  
And write in mystic signs, “Cathartic pill.”

*Scratches of a Surgeon*

Medical Pomposity (p. 11)

W.A. Chatterton & Company. Chicago, Illinois, USA. 1879

**Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

Pliny says, in so many words, that the cerates and cataplasms, plasters, collyria, and antidotes, so abundant in his time, as in more recent days, were mere tricks to make money.

*Currents and Counter-Currents in Medical Science*

Address

Massachusetts Medical Society at the Annual Meeting, May 30, 1860  
Ticknor & Fields. Boston, Massachusetts, USA. 1861

Part of the blame of over-medication must, I fear, rest with the profession, for yielding to the tendency to self-delusion, which seems inseparable from the practice of the art of healing.

*Currents and Counter-Currents in Medical Science*

Address

Massachusetts Medical Society at the Annual Meeting, May 30, 1860

Ticknor & Fields. Boston, Massachusetts, USA. 1861

**Latham, Peter Mere** 1789–1875

English physician

To bring many important remedies together, and unite them by a lucky combination, and compress them within a small compass, and so place them within the common reach, all this gives a facility of prescribing which is hurtful to the advance of medical experience. The facility of prescribing is a temptation to prescribe; and, under this temptation, there is a lavish expenditure continually going on of important remedies in the mass, of which the prescribers have made no sufficient experiment in detail.

In William B. Bean

*Aphorisms From Latham* (p. 60)

Prairie Press. Iowa City, Iowa, USA. 1962

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

There are sure to be two prescriptions diametrically opposite. Stuff a cold and starve a cold are but two ways.

*The Writings of Henry David Thoreau* (Volume 1)

*A Week on the Concord and Merrimac Rivers*

Wednesday (p. 338)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

**Twain, Mark (Samuel Langhorne**

**Clemens)** 1835–1910

American author and humorist

It would be a good thing for the world at large, however unprofessional it might be, if medical men were required by law to write out in full the ingredients named in their prescriptions. Let them adhere to the Latin, or Fejee, if they choose, but discard abbreviations, and form their letters as if they had been to school one day in their lives, so as to avoid the possibility of mistakes on that account.

Damages Awarded

*San Francisco Morning Call*, 10/1/1864

**Wynter, Dr.**

The Macmillan Co. New York, New York, USA. 1922

## PRESERVATION

**Hornaday, William Temple** 1854–1937

American naturalist

Now that man's heedless and ignorant destructiveness has accomplished the extinction during our own times of a score of important animal species, and today is threatening to annihilate many others, zoological knowledge has suddenly become a practical necessity. Both to the statesman and the citizen the protection of wild life has become a solemn duty. Ignorance is dangerous alike to our forests and streams and to our wild life.

In Francis Rolt-Wheeler

*The Science-history of the Universe*

Introduction (p. xi)

The Current Literature Publishing Co. New York, New York, USA. 1910

The preservation of animal and plant life, and of the general beauty of Nature, is one of the foremost duties of the men and women of today. It is an imperative duty, because it must be performed at once, for otherwise it will be too late. Every possible means of preservation – sentimental, educational and legislative – must be employed.

*Our Vanishing Wild Life: Its Extermination and Preservation*

Foreword (p. vii)

Charles Scribner's Sons. New York, New York, USA. 1913

We no longer destroy great works of art. They are treasured, and regarded as of priceless value; but we have yet to attain the state of civilization where the destruction of a glorious work of Nature, whether it be a cliff, a forest, or a species of mammal or bird, is regarded with equal abhorrence.

*Our Vanishing Wild Life: Its Extermination and Preservation*

Foreword (p. vii)

Charles Scribner's Sons. New York, New York, USA. 1913

**Linnaeus, Carl (von Linné)** 1707–78

Swedish botanist

To perpetuate the established course of nature in a continued series, the divine wisdom has thought fit, that all living creatures should constantly be employed in producing individuals, that all natural things should contribute and lend a helping hand towards preserving every species, and lastly that the death and destruction of one thing should always be subservient to the restitution of another.

Translated by B. Stillingfleet

Viking Penguin. New York, New York, USA. 1990

**Bombieri, Enrico** 1940–

Italian mathematician

To me, that the distribution of prime numbers can be so accurately represented in a harmonic analysis is absolutely amazing and incredibly beautiful. It tells of an arcane music and a secret harmony composed by the prime numbers.

*The Sciences*

Prime Territory: Exploring the Infinite Landscape at the Base of the

Number System, Sept/Oct 1992

**Crandall, Robert W.** 1940–

Economist

**Pomerance, Carl**

Number theorist

Prime numbers belong to an exclusive world of intellectual conceptions. We speak of those marvelous notions that enjoy simple, elegant description, yet lead to extreme – one might say unthinkable – complexity in the details. The basic notion of primality can be accessible to a child, yet no human mind harbors anything like a complete picture. In modern times, while theoreticians continue to grapple with the profundity of the prime numbers, vast toil and resources have been directed toward the computational aspect, the task of finding, characterizing, and applying the primes in other domains.

*Prime Numbers: A Computational Perspective*

Chapter 1 (p. 1)

Springer-Verlag. New York, New York, USA. 2001

**Davis, Philip J.** 1923–  
American mathematician

**Hersh, Reuben** 1927–  
American mathematician

Some order begins to emerge from this chaos when the primes are considered not in their individuality but in the aggregate; one considers the social statistics of the primes and not the eccentricities of the individuals.

*The Mathematical Experience*

The Prime Number Theorem (p. 213)  
Birkhäuser. Boston, Massachusetts, USA. 1981

**Doxiadis, Apostolos** 1953–  
Writer

The seeming absence of any ascertained organizing principle in the distribution of the succession of the primes had bedeviled mathematicians for centuries and given Number Theory much of its fascination. Here was a great mystery indeed, worthy of the most exalted intelligence: since the primes are the building blocks of the integers and the integers the basis of our logical understanding of the cosmos, how is it possible that their form is not determined by law? Why isn't "divine geometry" apparent in their case?

*Uncle Petros and Goldbach's Conjecture* (p. 84)  
Faber & Faber Ltd. London, England. 2000

**du Sautoy, Marcus**  
English mathematician and writer

The primes are jewels studded throughout the vast expanse of the infinite universe of numbers that mathematicians have explored down the centuries. For mathematicians they instill a sense of wonder: 2, 3, 5, 7, 11, 13, 17, 19, 23... – timeless numbers that exist in the same world independent of our physical reality. They are Nature's gift to the mathematician.

*The Music of the Primes*

Chapter 1 (p. 5)  
HarperCollins Publisher, Inc. New York, New York, USA. 2003

...despite their apparent simplicity and fundamental character, prime numbers remain the most mysterious objects studied by mathematicians. In a subject dedicated to finding patterns and order, the primes offer the ultimate challenge.

*The Music of the Primes*

Chapter 1 (p. 5)  
HarperCollins Publisher, Inc. New York, New York, USA. 2003

Prime numbers present mathematicians with one of the strangest tensions in their subject. On the one hand a number is either prime or it isn't. No flip of a coin will suddenly make a number divisible by some smaller number. Yet there is no denying that the list of primes looks like a randomly chosen sequence of numbers. Physicists have grown used to the idea that a quantum die decides

the fate of the universe, randomly choosing at each throw where scientists will find matter. But it is something of an embarrassment to have to admit that these fundamental numbers on which mathematics is based appear to have been laid out by Nature flipping a coin, deciding at each toss the fate of each number. Randomness and chaos are anathema to the mathematician. Despite their randomness, prime numbers – more than any other part of our mathematical heritage – have a timeless, universal character. Prime numbers would be there regardless of whether we had evolved sufficiently to recognise them.

*The Music of the Primes*

Chapter 1 (p. 6)  
HarperCollins Publisher, Inc. New York, New York, USA. 2003

Riemann's insight followed his discovery of a mathematical looking-glass through which he could gaze at the primes. Alice's world was turned upside down when she stepped through her looking-glass. In contrast, in the strange mathematical world beyond Riemann's glass, the chaos of the primes seemed to be transformed into an ordered pattern as strong as any mathematician could hope for. He conjectured that this order would be maintained however far one stared into the never-ending world beyond the glass. His prediction of an inner harmony on the far side of the mirror would explain why outwardly the primes look so chaotic. The metamorphosis provided by Riemann's mirror, where chaos turns to order, is one which most mathematicians find almost miraculous. The challenge that Riemann left the mathematical world was to prove that the order he thought he could discern was really there.

*The Music of the Primes*

Chapter 1 (p. 9)  
HarperCollins Publisher, Inc. New York, New York, USA. 2003

The search for the secret source that fed the primes had been going on for over two millennia. The yearning for this elixir had made mathematicians all too susceptible to Bombieri's [April Fools announcement of a proof of the Riemann Hypothesis in 1997]. For years, many had simply been too frightened to go anywhere near this notoriously difficult problem.

*The Music of the Primes*

Chapter 1 (p. 13)  
HarperCollins Publisher, Inc. New York, New York, USA. 2003

...Gauss liked to call [number theory] "the Queen of Mathematics." For Gauss, the jewels in the crown were the primes, numbers which had fascinated and teased generations of mathematicians.

*The Music of the Primes*

Chapter 2 (p. 22)  
HarperCollins Publisher, Inc. New York, New York, USA. 2003

It seems paradoxical that the fundamental objects on which we build our order-filled world of mathematics should behave so wildly and unpredictably.

*The Music of the Primes*

Chapter 2 (p. 45)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

Armed with his prime number tables, Gauss began his quest. As he looked at the proportion of numbers that were prime, he found that when he counted higher and higher a pattern started to emerge. Despite the randomness of these numbers, a stunning regularity seemed to be looming out of the mist.

*The Music of the Primes*

Chapter 2 (p. 47)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

The revelation that the graph appears to climb so smoothly, even though the primes themselves are so unpredictable, is one of the most miraculous in mathematics and represents one of the high points in the story of the primes. On the back page of his book of logarithms, Gauss recorded the discovery of his formula for the number of primes up to  $N$  in terms of the logarithm function. Yet despite the importance of the discovery, Gauss told no one what he had found. The most the world heard of his revelation were the cryptic words, "You have no idea how much poetry there is in a table of logarithms."

*The Music of the Primes*

Chapter 2 (p. 50)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

Gauss had heard the first big theme in the music of the primes, but it was one of his students, Riemann, who would truly unleash the full force...of the hidden harmonies that lay behind the cacophony of the primes.

*The Music of the Primes*

Chapter 2 (p. 58)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

Riemann had found a passageway from the familiar world of numbers into a mathematics which would have seemed utterly alien to the Greeks who had studied prime numbers two thousand years before. He had innocently mixed imaginary numbers with his zeta function and discovered, like some mathematical alchemist, the mathematical treasure emerging from this admixture of elements that generations had been searching for. He had crammed his ideas into a ten-page paper, but was fully aware that his ideas would open up radically new vistas on the primes.

*The Music of the Primes*

Chapter 2 (p. 58)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

For centuries, mathematicians had been listening to the primes and hearing only disorganised noise. These numbers were like random notes wildly dotted on a mathematical stave with no discernible tune. Now Riemann had found new ears with which to listen to these mysterious tones. The sine-like waves that Riemann had created from the zeros in his zeta landscape revealed some hidden harmonic structure.

*The Music of the Primes*

Chapter 4 (p. 93)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

[The Riemann] zeros did not appear to be scattered at random. Riemann's calculations indicated that they were lining up as if along some mystical ley line running through the landscape.

*The Music of the Primes*

Chapter 4 (p. 99)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

Littlewood's proof...revealed that prime numbers are masters of disguise. They hide their true colours in the deep recesses of the universe of numbers, so deep that witnessing their true nature may be beyond the computational power of humankind. Their true behavior can be seen only through the penetrating eyes of abstract mathematical proof.

*The Music of the Primes*

Chapter 5 (p. 130)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

Littlewood wrote to Hardy about [Ramanujan]: "it is not surprising that he would have been [misled], unsuspecting as he presumably is of the diabolical malice inherent in the primes."

*The Music of the Primes*

Chapter 6 (p. 139)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

We have all this evidence that the Riemann zeros are vibrations, but we don't know what's doing the vibrating.

*The Music of the Primes*

Chapter 11 (p. 280)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

Maybe we have become so hung up on looking at the primes from Gauss's and Riemann's perspective that what we are missing is simply a different way to understand these enigmatic numbers. Gauss gave an estimate for the number of primes, Riemann predicted that the guess is at worst the square root of  $N$  off its mark, Littlewood showed that you can't do better than this. Maybe there is an alternative viewpoint that no one has found because we have become so culturally attached to the house that Gauss built.

*The Music of the Primes*

Chapter 12 (p. 312)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

The primes have been a constant companion in our exploration of the mathematical world yet they remain the most enigmatic of all numbers. Despite the best efforts of the greatest mathematical minds to explain the modulation and transformation of this mystical music, the primes remain an unanswered riddle.

*The Music of the Primes*

Chapter 12 (pp. 314-315)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

**Erdős, Paul** 1913–96  
Hungarian mathematician

God may not play dice with the universe, but something strange is going on with the prime numbers.

In D. Mackenzie  
Homage to an Itinerant Master  
*Science*, Volume 275, Number 5301, 7 February, 1997 (p. 759)

**Euler, Leonhard** 1707–83  
Swiss mathematician and physicist

Mathematicians have tried in vain to this day to discover some order in the sequence of prime numbers, and we have reason to believe that it is a mystery into which the human mind will never penetrate. To convince ourselves, we have only to cast a glance at tables of primes, which some have taken the trouble to compute beyond a hundred thousand, and we should perceive at once that there reigns neither order nor rule.

*Collected Works*  
Serial 1, (Volume 2) (p. 241)

As archetypes of our representation of the world, numbers form, in the strongest sense, part of ourselves, to such an extent that it can legitimately be asked whether the subject of study of arithmetic is not the human mind itself. From this a strange fascination arises: how can it be that these numbers, which lie so deeply within ourselves, also give rise to such formidable enigmas? Among all these mysteries, that of the prime numbers is undoubtedly the most ancient and most resistant.

Translated by Philip G. Spain

*The Prime Numbers and Their Distribution* (p. 1)

American Mathematical Society. Providence, Rhode Island, USA. 2000

One of the remarkable aspects of the distribution of prime numbers is their tendency to exhibit global regularity and local irregularity. The prime numbers behave like the “ideal gases” which physicists are so fond of. Considered from an external point of view, the distribution is – in broad terms – deterministic, but as soon as we try to describe the situation at a given point, statistical fluctuations occur as in a game of chance where it is known that on average the heads will match the tail but where, at anyone moment, the next throw cannot be predicted.

Translated by Philip G. Spain

*The Prime Numbers and Their Distribution* (p. 51)

American Mathematical Society. Providence, Rhode Island, USA. 2000

Prime numbers try to occupy all the room available (meaning that they behave as randomly as possible), given that they need to be compatible with the drastic constraint imposed on them, namely to generate the ultra-regular sequence of integers. This idea underpins the majority of conjectures concerning prime numbers: everything which is not trivially forbidden should actually happen.

Translated by Philip G. Spain

*The Prime Numbers and Their Distribution* (p. 51)

American Mathematical Society. Providence, Rhode Island, USA. 2000

**Weyl, Hermann** 1885–1955  
German mathematician

The mystery that clings to numbers, the magic of numbers, may spring from this very fact, that the intellect, in the form of the number series, creates an infinite manifold of well-distinguished individuals. Even we enlightened scientists can still feel it, e.g., in the impenetrable law of the distribution of prime numbers.

*Philosophy of Mathematics and Natural Science*

I hope that...I have communicated a certain impression of the immense beauty of the prime numbers and the endless surprises which they have in store for us.

The First 50 Million Prime Numbers

*The Mathematical Intelligencer*, Volume 0, August, 1977

...there is no apparent reason why one number is prime and another not. To the contrary, upon looking at these numbers one has the feeling of being in the presence of one of the inexplicable secrets of creation.

The First 50 Million Prime Numbers

*The Mathematical Intelligencer*, Volume 0, August, 1977

## PRIMORDIAL

**de Maupassant, Guy** 1850–93  
French writer

Nothing is more impressive, nothing more disquieting, more terrifying occasionally, than a fen. Why should a vague terror hang over these low plains covered with water? Is it the low rustling of the rushes, the strange Will-o'-the-wisp light, the silence which prevails on calm nights, the still mists which hang over the surface like a shroud; or is it the almost inaudible splashing, so slight and so gentle, yet sometimes more terrifying than the cannons of men of the thunders of skies, which make these marshes resemble countries which none has dreamed of, terrible countries concealing an unknown and dangerous secret?

No, something else belongs to it – another mystery, profounder and graver, floats amid these thick mists, perhaps the mystery of the creation itself! For was it not in stagnant and muddy water, amid the heavy humidity of moist land under the heat of the sun, that the first germ of life pulsed and expanded to the day?

*A Selection From the Writings of Guy de Maupassant* (Volume 1)

Chapter 7, Love

Princeton Publishing Company, New York, New York, USA. 1903

**Newman, Joseph S.** 1892–1960  
American poet

A highly speculative void  
Divides the germ and anthropoid  
But we've discovered certain clues  
In fossilized primordial ooze  
Where ancient polyps lived and died  
And countless myriads multiplied.

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## PRIMORDIAL GERM

**Tyndall, John** 1820–93  
Irish-born English physicist

In the case of Mr. Darwin, observation, imagination, and reason combined have run back with wonderful sagacity and success over a certain length of the line of biological succession. Guided by analogy, in his "Origin of Species" he placed at the root of life a primordial germ, from which he conceived the amazing variety of the organisms now upon the earth's surface might be deduced. If this hypothesis were even true, it would not be final. The human mind would infallibly look behind the germ, and, however hopeless the attempt, would inquire into the history of its genesis.

*Fragments of Science: A Series of Detached Essays, Addresses, and Reviews* (Volume 2)

Chapter 8 (p. 127)

D. Appleton & Co. New York, New York, USA. 1896

## PRINCIPLE

**Adams, John** 1735–1826  
2nd president of the USA

The reasoning of mathematicians is founded on certain and infallible principles. Every word they use conveys a determinate idea, and by accurate definitions they excite the same ideas in the mind of the reader that were in the mind of the writer. When they have defined the terms they intend to make use of, they premise a few axioms, or self-evident principles, that every man must assent to as soon as proposed. They then take for granted certain

postulates, that no one can deny them, such as, that a right line may be drawn from any given point to another, and from these plain, simple principles they have raised most astonishing speculations, and proved the extent of the human mind to be more spacious and capacious than any other science.

English theoretical physicist

**Tipler, Frank J.** 1947–

American physicist

In a randomly infinite Universe, any event occurring here and now with finite probability must be occurring simultaneously at an infinite number of other sites in the Universe. It is hard to evaluate this idea any further, but one thing is certain: if it is true then it is certainly not original!

*The Anthropic Cosmological Principle*

Chapter 4.6 (p. 249)

Clarendon Press. Oxford, England. 1986

**Barry, Frederick** 1876–1943

Historian of science

In short, these fundamental elements of scientific knowledge assimilate and grow, coalesce and separate and recombine, shrink and wane, die and come to life again; and while they persist they are never more than probable.

*The Scientific Habit of Thought: An Informal Discussion of the Source and Character of Dependable Knowledge* (p. 139)

Columbia University Press. New York, New York, USA. 1927

**Blake, William** 1757–1827

English poet, painter, and engraver

...all is to them a dull round of probabilities and possibilities.

*The Complete Poetry and Prose of William Blake*

...it is always probable that something improbable will happen.

Warren v. Purcell, 63 *Georgia Reports* 428, 430 (1879)

**Boole, George** 1815–64

English mathematician

Probability is expectation founded upon partial knowledge. A perfect acquaintance with all the circumstances affecting the occurrence of an event would change expectation into certainty, and leave neither room nor demand for a theory of probabilities.

*Collected Logical Works* (Volume 2)

An Investigation of the Law of Thought, Chapter XVI (p. 258)

The Open Court Publishing Company. La Salle, Illinois, USA. 1952

**Borel, Félix Edouard Justin Emile** 1871–1956

French mathematician

The principles on which the calculus of probabilities is based are extremely simple and as intuitive as the reasonings which lead an accountant through his operations.

Translated by Maurice Baudin

*Probabilities and Life*

Introduction (p. 1)

Dover Publications. New York, New York, USA. 1962

...just as price is not the sole element of our decision when we make a purchase, probability alone must not dictate our decision in the matters of a risk.

Translated by Maurice Baudin

*Probabilities and Life*

Chapter 3, Section 6 (p. 32)

Dover Publications. New York, New York, USA. 1962

Probabilities must be regarded as analogous to the measurement of physical magnitudes; that is to say, they can never be known exactly, but only within certain approximation.

Translated by Maurice Baudin

*Probabilities and Life*

Chapter Three, Section 6 (pp. 32–33)

Dover Publications. New York, New York, USA. 1962

**Born, Max** 1882–1970

German-born English physicist

As far as I can see, the only foundation of the doctrine of probability, which (though not satisfactory for a mind devoted to the “absolute”) seems at least not more mysterious than science as a whole, is the empirical attitude: The laws of probability are valid just as any other physical law in virtue of the agreement of their consequences with experience.

*Experiment and Theory in Physics* (pp. 26–27)

Cambridge University Press. Cambridge, England. 1944

If Gessler had ordered William Tell to shoot a hydrogen atom off his son's head by means of a particle and had given him the best laboratory instruments in the world instead of a cross-bow, Tell's skill would have availed him nothing. Hit or miss would have been a matter of chance.

In Sir Arthur Stanley Eddington

Chapter 2, Part I (p. 28)  
Penguin Books. Baltimore, Maryland, USA. 1960

**Cohen, Morris Raphael** 1880–1947  
American philosopher

Judged by its indispensable role in our daily practical judgments, as well as in the procedure of natural science, the concept of probability is one of the most important in the whole field of philosophy. Since the failure of the romantic Naturphilosophie to derive infallible knowledge of nature a priori, and since the discovery that other than Euclidean geometry may be true in the physical world, it has become generally evident that all our factual knowledge (that is, all except purely formal or mathematical considerations) is only probable in the sense that we cannot prove the contrary to be absolutely impossible.

*A Preface to Logic*  
Chapter VI (p. 102)  
Routledge. London, England. 1946

**Coolidge, Julian L.** 1873–1954  
American professor of mathematics

However the formulae [of mathematical probability] may be derived, they frequently prove remarkably trustworthy in practice. The proper attitude is not to reject laws of doubtful origin, but to scrutinize them with care, with a view to reaching the true principles underneath. It seems to me that, in the last analysis, probability is a

statistical, that is to say, an experimental science, and the mathematical problem is to establish rules which yield correct and valuable results.

*An Introduction to Mathematical Probability*

Preface (p. vi)

Dover Publications, Inc. New York, New York, USA. 1962

**Crichton, Michael** 1942–

American novelist

Harry sighed irritably, pulled out a sheet of paper. It's a probability equation? He wrote:  $p = \text{fjnhffifc}$  "What it means," Harry Adams said, "is that the probability,  $p$ , that intelligent life will evolve in any star system is a function of the probability that the star will have planets, the number of habitable planets, the probability that simple life will evolve on a habitable planet, the probability that intelligent life will evolve from simple life, and the probability that intelligent life will attempt interstellar communication within five billion years. That's all the equation says."

*Sphere: A Novel*

The Briefing (pp. 28–29)

Ballantine Books. New York, New York, USA. 1987

But the point is that we have no facts," Harry said. "We must guess at every single one of these probabilities."

*Sphere: A Novel*

The Briefing (p. 29)

Ballantine Books. New York, New York, USA. 1987

**Crofton, M. W.**

British mathematician

The mathematical theory of probability is a science which aims at reducing to calculation, where possible, the amount of credence due to propositions or statements, or to the occurrence of events, future or past, more especially as contingent or dependent upon other propositions or events the probability of which is known.

*Encyclopædia Britannica* (9th edition)

Probability

**Dampier-Whetham, William** 1867–1952

English scientific writer

Indeed the intellectual basis of all empirical knowledge may be said to be a matter of probability, expressible only in terms of a bet.

*A History of Science*

Chapter III (p. 155)

The Macmillan Company. New York, New York, USA. 1936

**Darwin, Charles Robert** 1809–82

English naturalist

As for a future life, every man must judge for himself between conflicting vague probabilities.

In Francis Darwin (ed.)

### **Evanovich, Janet** 1943–

American writer

I graduated from Douglass College without distinction. I was in the top 98% of my class and damn glad to be there.

I slept in the library and daydreamed my way through history lecture. I failed math twice, never fully grasping probability theory. I mean, first off, who cares if you pick a black ball or a white ball out of the bag? And second, if you're bent over about the color, don't leave it to chance. Look in the damn bag and pick the color you want.

*Hard Eight* (pp. 227–228)

St. Martin's Press. New York, New York, USA. 2002

### **Feller, William** 1906–70

Yugoslavian-born American mathematician

Probability is a mathematical discipline with aims akin to those, for example, of geometry or analytical mechanics. In each field we must carefully distinguish three aspects of the theory: (a) the formal logical content, (b) the intuitive background, (c) the applications. The character, and the charm, of the whole structure cannot be appreciated without considering all three aspects in their proper relation.

*An Introduction to Probability Theory and Its Applications* (Volume 1)

Introduction (p. 1)

American theoretical physicist

Nature permits us to calculate only probabilities.

*QED: The Strange Theory of Light and Matter*

Chapter I (p. 19)

Princeton University Press. Princeton, New Jersey, USA. 1985

Philosophers have said that if the same circumstances don't always produce the same results, predictions

are impossible and science will collapse. Here is a circumstance – identical photons are always coming down in the same direction to the piece of glass – that produces different results. We cannot predict whether a given photon will arrive at A or B. All we can predict is that out of 100 photons that come down, an average of 4 will be reflected by the front surface. Does this mean that physics, a science of great exactitude, has been reduced to calculating only the probability of an event, and not predicting exactly what will happen? Yes. That's a retreat, but that's the way it is: Nature permits us to calculate only probabilities. Yet science has not collapsed.

*QED: The Strange Theory of Light and Matter*

Introduction (p. 19)

Princeton University Press. Princeton, New Jersey, USA. 1985

A philosopher once said “It is necessary for the very existence of science that the same conditions always produce the same results.” Well, they do not.

Chapter VI (p. 145)

D. van Nostrand Company. Princeton, New Jersey, USA. 1965

**Galloway, Thomas** 1796–1851

Scottish mathematician

The doctrine of probability is an extensive and very important branch of mathematical science, the object of which is to reduce to calculation the reasons which we have for believing or expecting any contingent event, or for assenting to any conclusion which is not necessarily true. When it is considered that the whole edifice of human science, with the exception of a few self-evident truths, such as the axioms of geometry, is nothing more than an assemblage of propositions which can only be pronounced to be more or less probable, the importance of a calculus which enables us to appreciate exactly the degree of probability existing in each case, will be readily understood.

**Hunter, Evan** 1926–2005  
American writer

Now, your Honor; in much the same way that there are laws governing our society, there are also laws governing chance, and these are called the laws of probability, and it is against these that we must examine the use of an identical division number.

*The Paper Dragon*  
Tuesday, Chapter 6  
Delacorte Press. New York, New York, USA. 1966

**Huxley, Aldous** 1894–1963  
English writer and critic

Magic and devils offend our sense of probabilities.

*Proper Studies*  
Varieties of Intelligence (p. 7)  
Chatto & Windus. London, England. 1957

**Huxley, Thomas Henry** 1825–95  
English biologist

The scientific imagination always restrains itself within the limits of probability.

*Collected Essays* (Volume 5)

Science and Pseudo-Science (p. 124)  
Macmillan & Company Ltd. London, England. 1904

**Huygens, Christiaan** 1629–95  
Dutch mathematician, astronomer, and physicist

We know nothing very certainly, but everything only probably, and the probability has degrees that are widely different.

*Oeuvres*

Complètes de Christiaan Huygens (p. 298)

Publisher undetermined

In such noble and sublime Studies as these, 'tis a Glory to arrive at Probability, and the search itself rewards the pains. But there are many degrees of Probable, some nearer Truth than others, in the determining of which lies the chief exercise of our Judgment.

*The Celestial Worlds Discover'd, or, Conjectures Concerning the Planetary Worlds, Their inhabitants and Productions*

Book the First. Conjectures Not Useless, Because Not Certain (p. 10)

Printed for T. Childe. London, England. 1698

**James, P. D.** 1920–

English writer

Juries hate scientific evidence.

They think they won't be able to understand it so naturally they can't understand it. As soon as you step into the box you see a curtain of obstinate incomprehension clanging down over their minds. What they want is certainty. Did this paint particle come from this car body? Answer yes or Number None of those nasty mathematical probabilities we're so fond of.

*Death of an Expert Witness*

Book II, Chapter III (p. 96)

Warner Books, Inc. New York, New York, USA. 1992

**Jefferson, Thomas** 1743–1826

3rd president of the USA

Perhaps an editor might begin a reformation in some way as this. Divide his paper into four chapters, heading the first, Truth. Second, Probabilities. Third, Possibilities. Fourth, Lies.

*The Writings of Thomas Jefferson* (Volume 9)

Letter to John Norvell, June 11, 1807

G.P. Putnam's Sons. New York, New York, USA. 1898

**Jevons, William Stanley** 1835–82

English economist and logician

It [probability] is the very guide of life, and hardly can we take a step or make a decision of any kind without correctly or incorrectly making an estimation of probabilities.

*The Principles of Science: A Treatise on Logic and Scientific Method*

Chapter X (p. 217)

Macmillan & Company Ltd. London, England. 1892

**Kac, Mark** 1914–84

Polish mathematician

To the author the main charm of probability theory lies in the enormous variability of its applications. Few mathematical disciplines have contributed to as wide a spectrum of subjects, a spectrum ranging from number theory

to physics, and even fewer have penetrated so decisively the whole of our scientific thinking.

*Lectures in Applied Mathematics* (Volume 1)

Probability and Related Topics in Physical Sciences, Preface (p. ix)

Interscience Publishers, Ltd. London, England. 1959

**Kasner, Edward** 1878–1955

American mathematician

**Newman, James Roy** 1911–66

Mathematician and mathematical historian

Equiprobability in the physical world is purely a hypothesis. We may exercise the greatest care and the most accurate of scientific instruments to determine whether or not a penny is symmetrical. Even if we are satisfied that it is, and that our evidence on that point is conclusive, our knowledge, or rather our ignorance, about the vast number of other causes which affect the fall of the penny is so abysmal that the fact of the penny's symmetry is a mere detail. Thus, the statement "head and tail are equiprobable" is at best an assumption.

*Mathematics and the Imagination*

Chance and Chanceability (p. 251)

Simon & Schuster. New York, New York, USA. 1940

**Keynes, John Maynard** 1883–1946

British economist

Part of our knowledge we obtain direct; and part by argument. The Theory of Probability is concerned with that part which we obtain by argument, and it treats of the different degrees in which the results so obtained are conclusive or inconclusive.

*A Treatise on Probability*

Chapter I (p. 3)

Macmillan & Company Ltd. London, England. 1921

...others have suggested seriously a "barometer of probability."

*A Treatise on Probability*

Chapter III (p. 20)

Harper & Row, Publishers. New York, New York, USA. 1962

Probability is, so far as measurement is concerned, closely analogous to similarity.

*A Treatise on Probability*

Chapter III (p. 28)

Harper & Row, Publishers. New York, New York, USA. 1962

It is difficult to find an intelligible account of the meaning of "probability," or of how we are ever to determine the probability of any particular proposition; and yet treatises on the subject profess to arrive at complicated results of the greatest precision and the most profound practical importance.

*A Treatise on Probability*

Chapter IV (p. 51)

Harper & Row, Publishers. New York, New York, USA. 1962

It has been pointed out already that no knowledge of probabilities, less in degree than certainty, helps us to

know what conclusions are true, and that there is no direct relation between the truth of a proposition and its probability. Probability begins and ends with probability.

*A Treatise on Probability*

Part V (p. 322)

Harper & Row, Publishers. New York, New York, USA. 1962

**Kolmogorov, Andrei N.** 1903–87

Russian physicist and mathematician

The theory of probability as mathematical discipline can and should be developed from axioms in exactly the same way as *Geometry and Algebra*.

*Foundations of the Theory of Probability*

Chapter 1. Elementary Theory of Probability (p. 1)

Chelsea Publishing Company. New York, New York, USA. 1956

**Kosko, Bart**

American engineer

Probability has turned modern science into a truth casino.

*Fuzzy Thinking*

Chapter 1 (p. 12)

Hyperion. New York, New York, USA. 1993

Which is easier to believe in, probability or God?...The ultimate fraud is the scientific atheist who believes in probability.

*Fuzzy Thinking*

Chapter 3 (p. 50)

Hyperion. New York, New York, USA. 1993

**Kyburg, Jr., H. E.**

No biographical data available

**Smokler, H. E.**

No biographical data available

...there is no problem about probability: it is simply a nonnegative, additive set function, whose maximum value is unity.

*Studies in Subjective Probability*

Introduction (p. 3)

John Wiley & Sons, Inc. New York, New York, USA. 1964

**Laplace, Pierre Simon** 1749–1827

French mathematician, astronomer, and physicist

The regularity which astronomy shows us in the movements of the comets doubtless exists in all phenomena.

The curve described by a simple molecule or air or vapour is regulated in a manner just as certain as the planetary orbits; the only difference between them is that which comes from our ignorance.

*A Philosophical Essay on Probabilities*

Chapter II (p. 6)

Dover Publications, Inc. New York, New York, USA. 1951

The theory of probabilities holds to considerations so delicate that it is not surprising that with the same data two persons arrive at different results,

*A Philosophical Essay on Probabilities*

Chapter II (p. 10)

John Wiley & Sons. London, England. 1902

The probability of events serves to determine the hope or the fear of persons interested in their existence.

*A Philosophical Essay on Probabilities*

Chapter IV (p. 20)

Dover Publications, Inc. New York, New York, USA. 1951

The calculation of probabilities can make appreciable the advantages and the disadvantages of the speculative sciences. Thus in order to recognize the best of the treatments in use in the healing of a malady, it is sufficient to test each of them on an equal number of patients, making all the conditions exactly similar; the superiority of the most advantageous treatment will manifest itself more and more in the measure that the number is increased; and

the calculation will make apparent the corresponding probability of its advantage and the ratio according to which it is superior to the others.

Translated by Frederick Wilson Truscott and Frederick Lincoln Emory

*A Philosophical Essay on Probabilities*

Part II, Chapter IX (pp. 104–105)

John Wiley & Sons. New York, New York, USA. 1902

We are so far from recognizing all the agents of nature and their divers modes of action that it would be unphilosophical to deny the phenomena solely because they are inexplicable in the present state of our knowledge. But we ought to examine them with an attention as much the more scrupulous as it appears the more difficult to admit them; and it is here that the calculation of probabilities becomes indispensable in determining to just what point it is necessary to multiply the observations or the experiences in order to obtain in favor of the agents which they indicate, a probability superior to the reasons which can be obtained elsewhere for not admitting them.

*A Philosophical Essay on Probabilities*

Part II, Chapter IX (p. 105)

John Wiley & Sons. New York, New York, USA. 1902

Probability based upon a daily experience, or exaggerated by fear and by hope, strikes us more than a superior probability but it is only a simple result of calculus. Thus we do not fear in return for small advantages to expose our life to dangers much less improbable than the drawing of a quint in the lottery of France; and yet no one would wish to procure for himself the same advantages with the certainty of losing his life if this quint should be drawn.

Translated by Frederick Wilson Truscott and Frederick Lincoln

*A Philosophical Essay on Probabilities*

Chapter XVI (p. 160)

John Wiley & Sons. New York, New York, USA. 1902

One of the great advantages of the calculus of probabilities is to teach us to distrust first opinions.

Translated by Frederick Wilson Truscott and Frederick Lincoln  
*A Philosophical Essay on Probabilities*  
 Chapter XVI (p. 164)  
 John Wiley & Sons. New York, New York, USA. 1902

It is remarkable that a science, which commenced with the consideration of games of chance, should be elevated to the rank of the most important subjects of human knowledge.

*A Philosophical Essay on Probabilities*  
 Chapter XVII (p. 195)  
 Dover Publications, Inc. New York, New York, USA. 1951

**Leibniz, Gottfried Wilhelm** 1646–1716  
 German philosopher and mathematician

...the art of weighing probabilities is not yet even partly explained, though it would be of great importance in legal matters and even in the management business.

*Philosophical Papers and Letters* (Volume 1)  
 Letter to John Frederick, Duke of Brunswick Hanover (p. 399)  
 The University of Chicago Press. Chicago, Illinois, USA. 1956

**Lewis, C. S. (Clive Staples)** 1898–1963  
 British author, scholar, and popular theologian

We may not be able to get certainty, but we can get probability, and half a loaf is better than no bread.

*Christian Reflections*  
 Historicism (p. 111)  
 William B. Erdmanns Publishing. Grand Rapids, Michigan, USA. 1997

**Lewis, Clarence Irving** 1883–1964  
 American philosopher

The only knowledge a priori is purely analytic; all empirical knowledge is probable only.

*Mind and the World-Order: Outline of a Theory of Knowledge*  
 Chapter X (p. 309)  
 Charles Scribner's Sons. New York, New York, USA. 1929

There is no such thing as *the* probability of four aces in one hand, or *the* probability of anything else. Given all the relevant data which there are to be known, everything is either certainly true or certainly false.

*Mind and the World-Order: Outline of a Theory of Knowledge*  
 Chapter X (p. 330)  
 Charles Scribner's Sons. New York, New York, USA. 1929

A “poor evaluation” of the probability of anything may reflect ignorance of relevant data which “ought” to be known...

*Mind and the World-Order: Outline of a Theory of Knowledge*  
 Chapter X (p. 331)  
 Charles Scribner's Sons. New York, New York, USA. 1929

...empirical knowledge is exclusively a knowledge of probabilities...

*Mind and the World-Order: Outline of a Theory of Knowledge*  
 Chapter XI (p. 345)  
 Charles Scribner's Sons. New York, New York, USA. 1929

**Lincoln, Abraham** 1809–65  
 16th president of the USA

The probability that we may fall in the struggle ought not to deter us from the support of a cause we believe to be just; it shall not deter me.

*The Sub-Treasury*  
 Speech, Springfield, Illinois, December 26, 1839

 American statistician

Are we probabilists, believers, or fuzzifiers?

Comment: A Tale of Two Wells  
*Statistical Science*, Volume 2, Number 1, February, 1987 (p. 38)

**Locke, John** 1632–1704  
 English philosopher and political theorist

Probability is the appearance of agreement upon fallible proofs.

In *Great Books of the Western World* (Volume 35)  
*An Essay Concerning Human Understanding*  
 Book IV, Chapter XV, Section 1 (p. 365)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Probability is likelihood to be true...

In *Great Books of the Western World* (Volume 35)  
*An Essay Concerning Human Understanding*  
 Book IV, Chapter XV, Section 3 (p. 365)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

The mind ought to examine all the grounds of probability, and upon a due balancing the whole, reject or receive it proportionably to the preponderancy of probability on the one side or the other.

In S. Austin Allibone  
*Prose Quotations from Socrates to Macaulay*  
 Probability  
 J.B. Lippincott. Philadelphia, Pennsylvania, USA. 1903

**Ludlum, Robert** 1927–2001  
 American author

It wasn't a probability anymore, it was a reality.

*The Bourne Supremacy*  
 Chapter 18 (p. 256)  
 Random House, Inc. New York, New York, USA. 1986

It was a desperate strategy, based on probabilities, but it was all he had left.

*The Bourne Supremacy*  
 Chapter 24 (p. 365)  
 Random House, Inc. New York, New York, USA. 1986

**Masters, Dexter** 1908–89  
 American writer

If absolutes had disappeared under the inquiries of science, and apparently they had, ...then the only rational procedure, the only procedure consistent with man's development, was to follow where the probabilities led.

*The Accident*

Part I, Chapter 3 (p. 19)

Alfred A. Knopf, New York, New York, USA. 1955

**Meyer, Agnes** 1887–1970

American author and journalist

We can never achieve absolute truth but we can live hopefully by a system of calculated probabilities. The law of probability gives to natural and human sciences – to human experience as a whole – the unity of life we seek.

*Education for a New Morality*

Chapter 3 (p. 21)

Macmillan Publishing Company, New York, New York, USA. 1957

**Moroney, Michael Joseph** 1918–90

English statistician

There are certain notions which it is impossible to define adequately. Such notions are found to be those based on universal experience of nature. Probability is such a notion. The dictionary tells me that “probable” means “likely.” Further reference gives the not very helpful information that “likely” means “probable.”

*Facts from Figures*

The Laws of Chance (p. 4)

Penguin Books Ltd, Harmondsworth, England. 1951

**Muggeridge, Malcolm** 1903–90

English journalist and social critic

The probability is, I suppose that the Monarchy has become a kind of ersatz religion. Chesterton once remarked that when people [cease] to believe in God they do not believe in nothing, but in anything.

*New Statesman*, 1955**Osler, Sir William** 1849–1919

Canadian physician and professor of medicine

...errors in judgment must occur in the practice of an art which consists largely in balancing probabilities ...

French mathematician and physicist

But is it probable that probability gives assurance?

In *Great Books of the Western World* (Volume 33)*Pensées*

Section XIV, 908

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Probability – Each one can employ it; no one can take it away.

In *Great Books of the Western World* (Volume 33)*Pensées*

Section XIV, 913

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Take away probability, and you can no longer please the world; give probability, and you can no longer displease it.

In *Great Books of the Western World* (Volume 33)*Pensées*

Section XIV, 918

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Pearl, Judea**

Computer scientist and statistician

Probabilities are summaries of knowledge that is left behind when information is transferred to a higher level of abstraction.

*Probabilistic Reasoning in Intelligent Systems: Network of Plausible Inference*

Chapter 1 (p. 21)

Morgan Kaufmann Publishers, Inc. San Mateo, California, USA. 1988

**Pearson, E. S.** 1895–1980

English statistician

Hitherto the user has been accustomed to accept the function of probability theory laid down by the mathematicians; but it would be good if he could take a larger share in formulating himself what are the practical requirements that the theory should satisfy in applications.

The Choice of Statistical Test Illustrated on the Interpretation of Data

Classed in a 2 x 2 Table

*Biometrika*, Volume 34, Number 35, 1948 (p. 142)**Pearson, Karl** 1857–1936

English mathematician

That a certain sequence has occurred and recurred in the past is a matter of experience to which we give expression in the concept *causation*; that it will continue to recur in the future is a matter of belief to which we give expression in the concept *probability*.

*The Grammar of Science* (2nd edition)

Chapter IV (p. 113)

Adam &amp; Charles Black, London, England. 1900

**Peirce, Charles Sanders** 1839–1914

American scientist, logician, and philosopher

This branch of mathematics [probability] is the only one, I believe, in which good writers frequently get results entirely erroneous.

*Writings of Charles S. Peirce* (Volume 3)

The Doctrine of Chances, II (p. 279)

Indiana University Press, Bloomington, Indiana, USA. 1986

The relative probability of this or that arrangement of Nature is something which we should have a right to talk about if universes were as plenty as blackberries, if we could put a quantity of them in a bag, shake them well up, draw out a sample, and examine them to see what proportion of them had one arrangement and what proportion another. But, even in that case, a higher universe would contain us, in regard to whose arrangements the conception of probability could have no applicability.

The Probability of Induction  
*Popular Science Monthly*, Volume 12, April, 1878 (p. 714)

...it may be doubtful if there is a single extensive treatise on probabilities in existence which does not contain solutions absolutely indefensible.

*Writings of Charles Sanders Peirce* (Volume 3)  
 The Doctrine of Chances, II (p. 279)  
 Indiana University Press. Bloomington, Indiana, USA. 1986

**Planck, Max** 1858–1947  
 German physicist

Nature prefers more probable to less probable states.... Heat flows from a body of high temperature to a body of lower temperature, because the state of equal temperature is more probable than a state of unequal distribution of temperature.

Translated by R. Jones and D.H. Williams  
*A Survey of Physics: A Collection of Lectures and Essays*  
 The Unity of the Physical Universe (p. 15)  
 Methuen & Company Ltd. London, England. 1925

**Plato** 428 BCE–347 BCE  
 Greek philosopher

I know too well that these arguments from probabilities are impostors, and unless great caution is observed in the use of them, they are apt to be deceptive.

In *Great Books of the Western World* (Volume 7)  
*Phaedo*  
 Section 92 (p. 238)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Poincaré, Jules Henri** 1854–1912  
 French mathematician and theoretical astronomer

No matter how solidly founded a prediction may appear to us, we are never absolutely sure that experiment will not contradict it, if we undertake to verify it.... It is far better to foresee even without certainty than not to foresee at all.

*The Foundations of Science*  
*Science and Hypothesis*, Part IV  
 Chapter IX (p. 129)  
 The Science Press. New York, New York, USA. 1913

The very name calculus of probabilities is a paradox. Probability opposed to certainty is what we do not know, and how can we calculate what we do not know?

*The Foundations of Science*  
*Science and Hypothesis*, Part IV  
 Chapter XI (p. 155)  
 The Science Press. New York, New York, USA. 1913

Predicted facts...can only be probable.

*The Foundations of Science*  
*Science and Hypothesis*, Part IV  
 Chapter XI (p. 155)  
 The Science Press. New York, New York, USA. 1913

**Popper, Karl R.** 1902–94  
 Austrian/British philosopher of science

The most important application of the theory of probability is to what we may call “chance-like” or “random” events, or occurrences. These seem to be characterized by a peculiar kind of incalculability which makes one disposed to believe – after many unsuccessful attempts – that all known rational methods of prediction must fail in their case. We have, as it were, the feeling that not a scientist but only a prophet could predict them. And yet, it is just this incalculability that makes us conclude that the calculus of probability can be applied to these events.

*The Logic of Scientific Discovery*  
 Part II, Chapter VII, Section 49 (p. 150)  
 Basic Books, Inc. New York, New York, USA. 1959

I think that we shall have to get accustomed to the idea that we must not look upon science as a “body of knowledge” but rather as a system of hypotheses; that is to say, as a system of guesses or anticipations which in principle cannot be justified, but with which we work as long as they stand up to tests, and of which we are never justified in saying that we know that they are “true” or “more or less certain” or even “probable.”

*The Logic of Scientific Discovery*  
 New Appendices, Two Notes on Induction and Demarcation 1933–1934 (p. 317)  
 Basic Books, Inc. New York, New York, USA. 1959

**Pratchett, Terry** 1948–  
 English author

“You haven’t heard of probability math? You, and tomorrow you become Chairman of the Board of Widdershins and heir to riches untold? Then first we will talk, and then we will eat.”

*The Dark Side of the Sun* (p. 13)  
 St. Martin’s Press. New York, New York, USA. 1976

I can’t pretend to understand probability math. But if the universe is so ordered, so – immutable – that the future can be told by a handful of numbers, then why need we go on living?

*The Dark Side of the Sun* (p. 22)  
 St. Martin’s Press. New York, New York, USA. 1976

Understanding is the first step towards control. We now understand probability...

*The Dark Side of the Sun* (p. 37)  
 St. Martin’s Press. New York, New York, USA. 1976

**Prior, Matthew** 1664–1721  
 English poet and diplomat

In this case probability must atone for want of Truth.

*The Literary Works of Matthew Prior*  
 Solomon, Preface (p. 309)  
 Clarendon Press. Oxford, England. 1959

**Ramsey, Frank Plumpton** 1903–30

English mathematician

I think I perceive or remember something but am not sure; this would seem to give me some ground for believing it, contrary to Mr. Keynes' theory, by which the degree of belief in it which it would be rational for me to have is that given by the probability relation between the proposition in question and the things I know for certain.

In R.B. Braithwaite (ed.)

*The Foundation of Mathematics and Other Logical Essays*

Truth and Probability (p. 189)

Kegan, Paul, Trench, Trubner &amp; Company. London, England. 1931

**Redfield, Roy A.**

No biographical data available

Good and bad come mingled always. The long-time winner is the man who is not unreasonably discouraged by persistent streaks of ill fortune, [who is] not at other times made reckless with the thought that he is fortune's darling. He keeps a cool head and trusts in the mathematics of probability, or as often said, the law of averages.

*Factors of Growth in a Law Practice* (p. 168)

Callaghan &amp; Company, Mundelein, Illinois, USA. 1962

**Reichenbach, Hans** 1891–1953

German philosopher of science

To say that observations of the past are certain, whereas predictions are merely probable, is not the ultimate answer to the question of induction; it is only a sort of intermediate answer, which is incomplete unless a theory of probability is developed that explains what we should mean by "probable" and on what ground we can assert probabilities.

*The Rise of Scientific Philosophy*

Chapter 5 (p. 93)

University of California Press. Berkeley, California, USA. 1951

The study of inductive inference belongs to the theory of probability, since observational facts can make a theory only probable but will never make it absolutely certain.

*The Rise of Scientific Philosophy*

Chapter 14 (p. 231)

University of California Press. Berkeley, California, USA. 1951

**Rota, Gian-Carlo** 1932–99

Italian-born American mathematician

Conditional probability tends to be viewed as one technique for calculating probabilities. Actually, there is more to it than meets the eye: it has an interpretation which is ordinarily passed over in silence. Philosophers take notice.

*Indiscrete Thoughts*

Chapter XX (p. 227)

Birkhäuser. Boston, Massachusetts, USA. 1997

The distance between probability and statistical mechanics is diminishing, and soon we won't be able to tell which

is which. We will be rid of the handwaving arguments with which mathematically illiterate physicists have been pestering us.

*Indiscrete Thoughts*

Chapter XX (p. 228)

Birkhäuser. Boston, Massachusetts, USA. 1997

According to quantum mechanics, it cannot be known what an atom will do in given circumstances; there are a definite set of alternatives open to it, and it chooses sometimes one, sometimes another. We know in what proportion of cases one choice will be made, in what proportion a second, or a third, and so on. But we do not know any law determining the choice in an individual instance. We are in the same position as a booking-office clerk at Paddington, who can discover, if he chooses, what proportion of travelers from that station go to Birmingham, what proportion to Exeter, and so on, but knows nothing of the individual reasons which lead to one choice in one case and another in another.

*Religion and Science*

Determinism (p. 152)

Henry Holt &amp; Company. New York, New York, USA. 1935

**Sartre, Jean-Paul** 1905–80

French existentialist philosopher and novelist

When we want something, we always have to reckon with probabilities.

*The Philosophy of Existentialism*

Part 1. The Humanism of Existentialism (p. 46)

Philosophical Library, New York, New York, USA; 1965

...all views are only probable, and a doctrine of probability which is not bound to a truth dissolves into thin air. In order to describe the probable, you must have a firm hold on the true. Therefore, before there can be any truth whatsoever, there must be absolute truth.

*The Philosophy of Existentialism*

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

'Tis pretty, sure, and very probable...

In *Great Books of the Western World* (Volume 26)*The Plays and Sonnets of William Shakespeare* (Volume 1)*As You Like It*

Act III, Scene v, l. 11

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Sherwood, Thomas**

No biographical data available

It is a nice idea, of course, that numbers must prove something true: after all, one patient is a case-report, two are a series. But all that numbers can do is tell us what is probable, and probability can lead us into terrible mistakes – like Bertrand Russell's chicken. Day in, day out, throughout its life, the chicken got breakfast as the farmer arrived in the morning. Thus it had clearly discovered a highly probable natural law: farmer=food – until, that is, the morning when the farmer very naturally arrived to wring its neck instead.

Science in Radiology

No biographical data available

That is accounted probable which has better arguments producible for it than can be brought against it.

In S. Austin Alibone  
*Prose Quotations from Socrates to Macaulay*  
Probability  
J.B. Lippincott. Philadelphia, Pennsylvania, USA. 1903

**Stoppard, Tom** 1937–

Czech-born English playwright

If we postulate...that within un-, sub- or supernatural forces the probability is that the law of probability will not operate as a factor, then we must accept that the probability of the first part will not operate as a factor within un-, sub- or supernatural forces. And since it obviously hasn't been doing so, we can take it that we are not held within un-, sub- or supernatural forces after all; in all probability, that is.

*Rosencrantz and Guildenstern Are Dead*  
Act One (p. 17)  
Grove Press, Inc. New York, New York, USA. 1967

**The Bible (King James Version)**

For we know in part, and we prophesy in part. ...  
I Corinthians 13:9

**Tillotson, John** 1630–94

Archbishop of Canterbury

Though moral certainty be sometimes taken for a high degree of probability, which can only produce a doubtful assent, yet it is also frequently used for a firm assent to a thing upon such grounds as fully satisfy a prudent man.

In S. Austin Allibone  
*Prose Quotations from Socrates to Macaulay*  
Probability  
J.B. Lippincott. Philadelphia, Pennsylvania, USA. 1903

**Titchener, Edward Bradford** 1867–1927

English-born American psychologist

...an argument from probability is like an India-rubber ball; you hit it, and it may fly away, or it may return to you, all the more vigorously the harder you hit.

Were the Earliest Organic Movements Conscious or Unconscious?  
*The Popular Science Monthly*, Volume LX, March, 1902 (p. 469)

**Toffler, Alvin** 1928–

American writer and futurist

The management of changes is the effort to convert certain possibles into probables, in pursuit of agreed-on preferables.

*Future Shock*  
Chapter 20 (p. 407)  
Random House, Inc. New York, New York, USA. 1979

**Voltaire (François-Marie Arouet)** 1694–1778

French writer

From generation to generation skepticism increases; and probability diminishes; and soon probability is reduced to zero.

*The Portable Voltaire*  
Philosophical Dictionary, Truth (p. 217)  
The Viking Press. New York, New York, USA. 1959

He who has heard the thing told by twelve thousand eye-witnesses, has only twelve thousand probabilities, equal to one strong probability, which is not equal to certainty.

*The Portable Voltaire*  
Philosophical Dictionary, Truth (p. 217)  
The Viking Press. New York, New York, USA. 1959

One must take a stand, but one should not take it at random. It is therefore necessary to our weak and blind human nature, always subject to error, to study probability with as much care as we learn arithmetic and geometry.

*Oeuvres* (Volume 28)  
Essays on Probabilities Applied to the Law (p. 497)

**von Clausewitz, Carl** 1780–1831

Prussian soldier

In short, absolute, so-called mathematical factors never find a firm basis in military calculations. From the very start there is an interplay of possibilities, probabilities, good luck and bad that weaves its way throughout the length and breadth of the tapestry. In the whole range the human activities war most closely resembles a game of cards.

*On War*  
Chapter 1, 21 (p. 86)  
The Modern Library. New York, New York, USA. 1943

**von Humboldt, Alexander** 1769–1859

German naturalist and explorer

Whatever must be characterized as mere probability lies beyond the domain of physical description of the universe; science must not wander into the cloudland of cosmological dreams.

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 4)  
Conclusion (p. 230)  
Harper & Brothers. New York, New York, USA. 1869

**von Mises, Richard** 1883–1953  
Austrian-born American mathematician

The theory of probability can never lead to a definite statement concerning a single event.

*Probability, Statistics, and Truth*  
First Lecture (p. 33)

Dover Publications, Inc. New York, New York, USA. 1981

...if one talks of the probability that the two poems known as the Iliad and the Odyssey have the same author, no reference to a prolonged sequence of cases is possible and it hardly makes sense to assign a numerical value to such a conjecture.

*Mathematical Theory of Probability and Statistics* (pp. 13–14)  
Academic Press. New York, New York, USA. 1964

**Walker, Marshall John**  
American physicist

One can locate an octopus by giving the coordinates of his beak, but it would be unwise to forget that neighboring coordinates for two or three yards out in all directions have a considerable probability of being occupied by octopus at a given instant.

*The Nature of Scientific Thought*  
Chapter V (p. 65)

Prentice-Hall, Inc. Englewood Cliffs, New Jersey, USA. 1963

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

...Positivistic science is solely concerned with observed fact, and must hazard no conjecture as to the future. If observed fact be all we know, then there is no other knowledge. Probability is relative to knowledge. There is no probability as to the future within the doctrine of Positivism.

*Adventures of Ideas*  
Chapter VIII (p. 160)

The Macmillan Company. New York, New York, USA. 1956

**Whyte, Lancelot Law** 1896–1972  
Scottish physicist

Only a certain probability remains of a one-to-one association of any spatial feature now with a similar feature a moment later. It is sheer luck, in a sense, that any physical apparatus stays put, for the laws of quantum mechanics allow it a finite, though small, probability of dispersing while one is not looking, or even while one is.

*Essay on Atomism: From Democritus to 1960*  
Chapter 2 (pp. 25–26)

Wesleyan University Press. Middletown, Connecticut, USA. 1961

If the universe is a mingling of probability clouds spread through a cosmic eternity of space-time, how is there as much order, persistence, and coherent transformation as there is?

*Essay on Atomism: From Democritus to 1960*  
Chapter 2 (p. 27)

Wesleyan University Press. Middletown, Connecticut, USA. 1961

**Wilde, Oscar** 1854–1900  
Irish wit, poet, and dramatist

GILBERT: No ignoble consideration of probability, that cowardly concession to the tedious repetitions of domestic or public life, effect it ever.

*Complete Writings of Oscar Wilde* (p. 143)

Nottingham Society. New York, New York, USA. 1907

**Wilder, Thornton** 1897–1975  
American playwright and novelist

Ashley had no competitive sense and no need for money, but he took great interest in the play of numbers. He drew up charts analyzing the elements of probability in the various games. He had a memory for numbers and symbols.

*The Eighth Day*

II. Illinois to Chile (p. 123)

Harper & Row, Publishers, New York, New York, USA. 1967

**Woodward, Robert Simpson** 1849–1924  
American scientist and teacher

The theory of probabilities and the theory of errors now constitute a formidable body of knowledge of great mathematical interest and of great practical importance. Though developed largely through the applications to the more precise sciences of astronomy, geodesy, and physics, their range of applicability extends to all the sciences; and they are plainly destined to play an increasingly important role in the development and in the applications of the sciences of the future. Hence their study is not only a commendable element in a liberal education, but some knowledge of them is essential to a correct understanding of daily events.

*Probability and Theory of Errors*

Author's Preface (p. 4)

John Wiley & Sons, Inc. New York, New York, USA. 1906

It is a curious circumstance that a science so profoundly mathematical as the theory of probability should have originated in the games of chance which occupy the thoughtless and the profligate.

*Probability and Theory of Errors* (4th edition)

Introduction (p. 7)

John Wiley & Sons. New York, New York, USA. 1906

## PROBABILITY HAZE

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

But it is necessary to insist more strongly than usual that what I am putting before you is a model – the Bohr model atom – because later I shall take you to a profounder level of representation in which the electron instead of being

confined to a particular locality is distributed in a sort of probability haze all over the atom.

*New Pathways in Science*

Chapter II (p. 34)

At the University Press. Cambridge, England. 1935

## PROBABILITY THEORY

**Paulos, John Allen** 1945–

American mathematician

Zealots, true believers, fanatics, and fundamentalists of all types seldom hold any truck with anything as wishy-washy as probability. May they all burn in hell for  $10^{10}$  years (just kidding), or be forced to take a course in probability theory.

*Innumeracy: Mathematical Illiteracy And Its Consequences* (p. 178)

## PROBABLE ERROR

**Herschel, Sir John Frederick**

**William** 1792–1871

English astronomer and chemist

The probable error of the whole (0.0032) shews that the mean specific gravity of this our planet is, in all human probability, quite as well determined as that of an ordinary hand-specimen in a mineralogical cabinet – a marvellous result, which should teach us to despair of nothing which lies within the compass of number, weight, and measure.

*Monthly Notices of the Royal Astronomical Society*, Volume VI, Number 10, February 9, 1838 (p. 109)

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

Who ever heard a theologian preface his creed, or a politician conclude his speech with an estimate of the probable error of his opinion.

In Edwin Hubble

*The Nature of Science and Other Lectures*

Part I. The Nature of Science (p. 10)

The Huntington Library. San Marino, California, USA. 1954

## Student (William Sealy Gossett)

An experiment may be regarded as forming an individual of a “population” of experiments which might be performed under the same conditions. A series of experiments is a sample drawn from this population. Now any series of experiments is only of value in so far as it enables us to form a judgment as to the statistical constants of the population to which the experiments belong. In a great number of cases the question finally turns on the value of a mean, either directly, or as the mean difference between the two quantities.

The Probable Error of a Mean

*Biometrika*, Volume 6, 1908

## PROBLEM

**Ackerman, Diane** 1948–

American writer

Part of the irony of environmentalism is questing for solutions when you know you’re part of the problem.

*The Rarest of the Rare: Vanishing Animals, Timeless Worlds*

Insect Love (p. 156)

Vintage Books. New York, New York, USA. 1997

**Agnew, Ralph Palmer**

American mathematician

Working a problem is like cutting down a tree and reading a problem is like looking at a tree. We spend part of our time swinging axes to develop our muscles, and we spend part of our time looking around to keep us from being dolts. The mathematical and scientific forests really are interesting, and we should all enjoy chopping and looking at the scenery.

*Differential Equations*

Chapter 1 (p. 6)

McGraw-Hill Book Company. New York, New York, USA. 1972

**Alger, John R. M.**

American engineer

**Hays, Carl V.**

...a problem in the stage of being “recognized” is a highly emotional subject.

*Creative Synthesis in Design* (p. 13)

Prentice-Hall. Englewood Cliffs, New Jersey, USA. 1964

**Anderson, Poul** 1926–2001

American science fiction writer

I have yet to see any problem, however complicated, which, when you looked at it in the right way, did not become still more complicated.

In William Thorpe article

Reduction v. Organicism

*New Scientist*, Volume 43, Number 66, 25 September, 1969 (p. 638)

**Bach, Richard** 1936–

American writer

There is no such thing as a problem without a gift for you in its hands. You seek problems because you need their gifts.

*Illusions: The Adventures of a Reluctant Messiah* (p. 71)

**Bahn, Paul G.**

English archaeologist and writer

It takes very special qualities to devote one’s life to problems with no attainable solutions and to poking around in dead people’s garbage: words like “masochistic”, “nosy”, and “completely batty” spring readily to mind.

*Bluff Your Way in Archaeology* (p. 7)

Ravette Books. West Sussex, England. 1989

**Ball, Sir Robert Stawell** 1840–1913  
Irish astronomer

...the genuine student of Nature loves to get to the heart of a great problem like this; he loves to be able to follow it, not through mere formulae or abstract principles, but so as to be able to visualize its truth and feel its certainty.

*Essays in Astronomy*

Atoms and Sunbeams (p. 4)

D. Appleton & Co. New York, New York, USA. 1900

**Bateson, William** 1861–1926  
English geneticist

Though the problem [of evolution] is all unsolved and the old questions stand unanswered, there are those who have taken on themselves the responsibility of giving to the ignorant, as a gospel, in the name of Science, the rough guesses of yesterday that tomorrow should forget.

*Materials for the Study of Variation Treated With Especial Regard to Discontinuity in the Origins of Species*

Preface (p. xii)

Macmillan & Co Ltd. London, England. 1894

**Berkeley, Edmund C.** 1909–88  
American computer theoretician

Most problems have either many answers or no answer. Only a few problems have a single answer.

Right Answers – A Short Guide for Obtaining Them

*Computers and Automation*, Volume 18, Number 10, September, 1969 (p. 20)

**Beveridge, William Ian Beardmore** 1908–  
Australian zoologist

Too often I have been able to [do] little more than indicate the difficulties likely to be met – yet merely to be forewarned is often help.

*The Art of Scientific Investigation*

Preface (p. ix)

W.W. Norton & Company, Inc. New York, New York, USA. 1957

**Bloch, Arthur** 1948–  
American humorist

Inside every large problem is a small problem struggling to get out.

*Murphy's Law*

Hoare's Law of Large Problems (p. 50)

Price/Stern/Sloan, Publishers. Los Angeles, California, USA. 1981

**Bragg, Sir William Lawrence** 1890–1971  
Australian-born English physicist

I am sure that when the first circumnavigators of the world returned from their voyage they were told by friends that some Greek philosopher...had held that the world was round and that they might have spared their trouble. The world is either round or flat, and endless discussion might have been carried on for ages between opposing schools who held one view or the other. The real contribution to settling the problem was made by the circumnavigators.

The Physical Sciences

*Science*, Volume 79, Number 2046, March 16, 1934 (p. 240)

**Chambers, Robert** 1802–71  
Scottish journalist and geologist

Man is seen to be an enigma only as an individual; in mass, he is a mathematical problem.

*Vestiges of the Natural History of Creation* (p. 333)

W.R. Chambers. Edinburgh, Scotland. 1884

**Chesterton, G. K. (Gilbert Keith)** 1874–1936  
English author

It isn't that they can't see the solution. It is that they can't see the problem.

*The Scandal of Father Brown*

The Point of the Pin (p. 949)

Dodd, Mead & Company. New York, New York, USA. 1935

**Churchill, Winston Spencer** 1882–1965  
British prime minister, statesman, soldier, and author

In the course of a few bewildering years we have found ourselves the master or indeed the servants of gigantic powers which confront us with problems never known before.

In R. James (ed.)

*Winston S. Churchill – His Complete Speeches 1897–1963*

Volume 8 (p. 8563)

Chelsea House Publishers. New York, New York, USA. 1974

**Clarke, Arthur C.** 1917–  
English science and science fiction writer

Sorry to interrupt the festivities, but we have a problem.

*2001: A Space Odyssey*

IV Abyss, Chapter 21 (p. 120)

New American Library, New York, New York, USA. 1968

American civil rights leader and author

...you're either part of the solution or part of the problem.

Speech

San Francisco, 1968

**Cohen, I. Bernard** 1914–2003  
American physicist and science historian

The fundamental postulate of the history of science is that the scientists of the past were just as intelligent as we are and that, therefore, the problems that baffled them would have baffled us too, had we been living then.

*Franklin and Newton*

Chapter Two (p. 39)

Harvard University Press. Cambridge, Massachusetts, USA. 1966

**Collingwood, Robin George** 1889–1943  
English historian and philosopher

You can only solve a problem which you recognize to be a problem.

*The New Leviathan; or Man, Society, Civilization and Barbarism*

Part I, Chapter I, aphorism 2.66 (p. 13)

At The Clarendon Press. Oxford, England. 1942

**Commoner, Barry** 1917–  
American biologist, ecologist, and educator

The freedom to choose his own problem is often the scientist's most precious possession.  
Is Science Getting Out of Hand?  
*The Science Teacher*, Volume 30, October, 1963

**Compton, Karl Taylor** 1887–1954  
American educator and physicist

Neither curiosity nor ingenuity is a modern impulse.... The distinctive feature of science and technology at the present time is the accelerated pace of their development. This is partly due to continually improved techniques and organization, and it is partly due to the great accumulation of knowledge and art, because the more information and tools we have at our disposal, the more powerful can be the attack on any new problem.

*A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton During the Years 1930–1949* (pp. 1–2)  
Undergraduate Association, Massachusetts Institute of Technology.  
Cambridge, Massachusetts, USA. 1955

**Condorcet, Marie Jean** 1743–94  
French philosopher and mathematician

If a scholar poses himself a new problem, he can attack it fortified by the pooled resources of all his predecessors.  
In Maurice Daumas  
*Scientific Instruments of the 17th and 18th Centuries and Their Makers*  
Eulogy for J. de Vaucanson before the Academie of Sciences (p. 119)

**Cross, Hardy** 1885–1959  
American professor of civil and structural engineering

In general the problems of civil engineers are given to them by God Almighty. They are the problems of nature. On the other hand mechanical and electrical work has problems which man, to a certain extent, has created for himself.  
In Lenox H. Lohr  
*Centennial of Engineering: History and Proceedings of Symposia: 1852–1952*  
Professional Aspects of Mechanical Engineering (p. 150)  
Centennial of Engineering. Chicago, Illinois. 1952

**Dantzig, George Bernard** 1914–2005  
American mathematician

If I had known that the problems were not homework but were in fact two famous unsolved problems in statistics, I probably would not have thought positively, would have become discouraged, and would never have solved them.  
In D. Albers, G. Alexanderson and C. Reid  
*More Mathematical People: Contemporary Conversations* (p. 68)  
Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

**Darbishire, Arthur Dukinfield** 1879–1915  
Statistician

...problems originate in our mind, but no sooner have they taken shape than, all unknown to us because we will not turn the eye inwards and keep guard on our mind, they are swept out, by the current of our interest, to the sea of things. When they have arrived there we become conscious of them for the first time, and so we think that we have found them there.

*An Introduction to a Biology*  
Chapter I (pp. 8–9)  
Funk & Wagnalls Co. New York, New York, USA. 1917

**Darwin, Charles Galton** 1809–82  
English naturalist

It has often and confidently been asserted, that man's origin can never be known: but ignorance more frequently begets confidence than it does knowledge: it is those who know little, and not those who know much, who so positively assert that this or that problem will never be solved by science.  
&

...it is those who know little, and not those who know much who so positively assert that this or that problem will never be solved by science.

### **Enriques, Federigo** 1871–1946

Italian mathematician

In a broad sense there are no insoluble problems, since every problem corresponds to a feeling, often obscure,

which may be satisfied by the discovery of some new fact that increases our power over the external world. There are only problems not yet suitably expressed, and idle discussions, void of sense, in which through defect of method, we at times wander far from our actual goal, because we do not know how to set it clearly before us, and so are seeking an answer to ill formulated questions.

*Problems of Science*

Introduction (p. 5)

The Open Court Publishing Co. Chicago, Illinois, USA. 1914

**Euler, Leonhard** 1707–83

Swiss mathematician and physicist

There must be a double method for solving mechanical problems: one is the direct method founded on the laws of equilibrium or of motion; but the other one is by knowing which formula must provide a maximum or a minimum. The former way proceeds by efficient causes: both ways lead to the same solution, and it is such a harmony which convinces us of the truth of the solution, even if each method has to be separately founded on indubitable principles. But is often very difficult to discover the formula which must be a maximum or minimum, and by which the quantity of action is represented.

American paleontologist and evolutionary biologist

...without a commitment to science and rationality in its proper domain, there can be no solution to the problems that engulf us. Still, the Yahoos never rest.

*Ever Since Darwin: Reflections in Natural History*

Chapter 17 (p. 146)

W.W. Norton & Company, Inc. New York, New York, USA. 1977

**Halmos, Paul R.** 1916–2006

Hungarian-born American mathematician

A teacher who is not always thinking about solving problems – ones he does not know the answer to – is psychologically simply not prepared to teach problem solving to his students.

*I Want to Be a Mathematician*

Chapter 14 (p. 322)

Springer-Verlag. New York, New York, USA. 1985

**Hardy, G. H. (Godfrey Harold)** 1877–1947

English pure mathematician

Chess problems are the hymn-tunes of mathematics.

*A Mathematician's Apology*

Section 10 (p. 87)

Cambridge University Press. Cambridge, England. 1967

**Hawkins, D.**

No biographical data available

There are many things you can do with problems besides solving them. First you must define them, pose them. But then of course you can also refine them, depose them, or expose them or even dissolve them! A given problem

may send you looking for analogies, and some of these may lead you astray, suggesting new and different problems, related or not to the original. Ends and means can get reversed. You had a goal, but the means you found didn't lead to it, so you found a new goal they did lead to. It's called play. Creative mathematicians play a lot; around any problem really interesting they develop a whole cluster of analogies, of playthings.

In Necia Grant Cooper (ed.)

*From Cardinals to Chaos*

The Spirit of Play (p. 44)

Cambridge University Press. Cambridge, England. 1988

### **Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

...only those revolutions in science will prove fruitful and beneficial whose investigators try to change as little as possible and limit themselves to the solution of a particular and clearly defined problem. Any attempt to make a clean sweep of everything or to change things arbitrarily leads to utter confusion.

*Physics and Beyond: Encounters and Conversations*

Chapter 12 (p. 148)

Harper & Row, Publishers. New York, New York, USA. 1971

### **Heller, Joseph** 1923–99

American writer

He was pinched perspiringly in the epistemological dilemma of the skeptic, unable to accept solutions to problems he was unable to dismiss as unsolvable. He was never without misery and never without hope.

*Catch-22*

Chapter 25 (p. 275)

Dell Publishing Company, Inc. New York, New York, USA. 1985

### **Herschel, Sir John Frederick William** 1792–1871

English astronomer and chemist

The great problems which offer themselves on all hands for solution, problems which the wants of the age force upon us as practically interesting, and with which its intellect feels itself competent to deal, are far more complex in their conditions, and depend on data which to be of use must be accumulated in far greater masses, collected over an infinitely wider field, and worked upon with a greater and more systematized power than has sufficed for the necessities of astronomy. The collecting, arranging, and duly combining these data are operations which, to be carried out to the extent of the requirements of modern science, lie utterly beyond the reach of all private industry, mean, or enterprise. Our demands are not merely for a slight and casual sprinkling to refresh and invigorate an ornamental or luxurious product, but for a copious, steady, and well-directed stream, to call forth from a soil ready to yield it, an ample, healthful, and remunerating harvest.

*Essays from the Edinburgh and Quarterly Reviews with Addresses and Other Pieces*

Terrestrial Magnetism (pp. 110–111)

Longman, Brown, Green, Longmans & Roberts. London, England. 1857

### **Herstein, I. N.**

No biographical data available

The value of a problem is not so much in coming up with the answer as in the ideas and attempted ideas it forces on the would-be solver.

*Topics in Algebra*

Preface (p. vi)

Xerox College Publishing. Waltham, Massachusetts, USA, 1964

### **Hertz, Heinrich** 1857–94

German physicist

The most direct, and in a sense the most important, problem which our conscious knowledge of nature should enable us to solve is the anticipation of future events, so that we may arrange our present affairs in accordance with such anticipation.

Translated by Daniel Evan Jones and John Thomas Walley

*The Principles of Mechanics Presented in a New Form*

Introduction (p. 1)

Macmillan & Company Ltd. London, England. 1899

### **Hilbert, David** 1862–1943

German mathematician

As long as a branch of science offers an abundance of problems, so long is it alive; a lack of problems foreshadows extinction of the cessation of independent development. Just as every human undertaking pursues certain objects, so also mathematical research requires its problems. It is by the solution of problems that the investigator tests the temper of his steel; he finds new methods and new outlooks, and gains a wider and freer horizon.

Mathematical Problems

*Bulletin of the American Mathematical Society*, Volume 8, July 1902 (p. 438)

It is difficult and often impossible to judge the value of a problem correctly in advance; for the final award depends upon the gain which science obtains from the problem.

Mathematical Problems

*Bulletin of the American Mathematical Society*, Volume 8, July 1902 (p. 438)

### **Hodnett, Edward** 1901–84

Illustration historian

...being able to predict which problems you are not likely to solve is good for your peace of mind.

*The Art of Problem Solving*

Part I, Chapter 1 (p. 6)

Harper & Brothers. New York, New York, USA. 1955

You have to identify the real problem, and you have to identify the total problem.

*The Art of Problem Solving*

Part I, Chapter 2 (p. 12)

Harper & Brothers. New York, New York, USA. 1955

An unstated problem cannot be solved. Many problems go unsolved for centuries for lack of adequate statement.

*The Art of Problem Solving*

Part I, Chapter 3 (p. 19)

Harper & Brothers. New York, New York, USA. 1955

Problems often boil down to the simple form of a dilemma. A dilemma presents a choice of two solutions to a problem, both of which are unsatisfactory.

*The Art of Problem Solving*

Part II, Chapter 8 (p. 63)

Harper & Brothers. New York, New York, USA. 1955

**Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

It is almost a matter of principle that in any difficult unsolved problem the right method of attack has not been found; failure to solve important problems is rarely due to the inadequacy in the handling of technical details.

*Man in the Universe*

Chapter 2 (p. 20)

Columbia University Press. New York, New York, USA. 1966

**Huxley, Julian** 1887–1975

English biologist, philosopher, and author

The time has gone by when the intelligent public needs to be reminded of the practical utility of science, or of the fact that the investigation of any problem, however apparently remote from everyday life, may be fraught with the most valuable consequences.

Searching for the Elixir of Life

*The Century Illustrated Monthly Magazine*, Volume 103, Number 4,

February, 1922 (p. 629)

**Ingle, Dwight J.** 1907–78

Biologist and endocrinologist

When you are trying to solve problems and are searching for new and creative ideas, let your mind be freewheeling. Enjoy unbridled fancy. After you get an idea that seems important and plausible, it can be tested by evidence and reason.

*Is It Really So?: A Guide to Clear Thinking*

Chapter 18 (p. 129)

The Westminster Press. Philadelphia, Pennsylvania, USA. 1976

**Jevons, William Stanley** 1835–82

English economist and logician

In truth men never can solve problems fulfilling the complex circumstances of nature. All laws and explanations are in a certain sense hypothetical, and apply exactly to nothing which we can know to exist.

*The Principles of Science: A Treatise on Logic and Scientific Method*

Book IV, Chapter XXI (p. 458)

Macmillan & Co Ltd. London, England. 1877

The faculties of the human mind, even when aided by the wonderful powers of abbreviation conferred by analytical methods, are utterly unable to cope with the complications of any real problem.

*The Principles of Science: A Treatise on Logic and Scientific Method*

Chapter XXI (p. 461)

Macmillan & Co Ltd. London, England. 1887

**Kaplan, Abraham** 1918–1993

American philosopher of science, author, and educator

Give a small boy a hammer and he will find that everything he encounters needs pounding. It comes as no particular surprise that a scientist formulates problems in a way which requires for their solution just those techniques in which he himself is skilled...

*The Conduct of Inquiry: Methodology for Behavioral Science* (p. 28)

Chandler Publishing Company. San Francisco, California, USA. 1964

**Kaplansky, Irving** 1917–2006

Canadian-born American mathematician

Sometimes when you work through an example, you suddenly get an insight which you wouldn't have got if you'd just been working abstractly with the hypothesis of your future theorem. I guess both of these are obvious pieces of advice, but they are ignored more often than they should be... if the problem is worthwhile, give it a good try. Take months, maybe years if necessary, before you announce to the world, "This is as far as I can go..."

In D. Albers, G. Alexanderson and C. Reid

*More Mathematical People: Contemporary Conversations* (p. 131)

Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

**Kettering, Charles Franklin** 1876–1958

American engineer and inventor

A problem is not solved in a laboratory. It is solved in some fellow's head. All the apparatus is for is to get his head turned around so that he can see the thing right.

In T.A. Boyd

*Professional Amateur*

Part II Chapter XII (pp. 102–103)

E.P. Dutton & Company, Inc. New York, New York, USA. 1957

But in picking that problem be sure to analyze it carefully to see that it is worth the effort. It takes just as much effort to solve a useless problem as a useful one.

*Short Stories of Science and Invention: A Collection of Radio Talks by*

*C.F. Kettering*

Research Is a State of Mind (p. 11)

General Motors, Detroit, Michigan, USA. 1955

I often think we have so many facilities that we lose track of the problem. Problems, as you know, are solved in the mind of some intensely interested person.

*Short Stories of Science and Invention: A Collection of Radio Talks by*

*C.F. Kettering*

Christmas Lecturer (p. 57)

General Motors, Detroit, Michigan, USA. 1955

No one should pick a problem, or make a resolution, unless he realizes that the ultimate value of it will offset the inevitable discomfort and trouble that always goes along with the accomplishment of anything worthwhile. So let us not waste our time and effort on some trivial thing.

*Short Stories of Science and Invention: A Collection of Radio Talks by C.F. Kettering*  
Patience (p. 59)  
General Motors. Detroit, Michigan, USA. 1955

As long as we try and patiently do our best to solve the problem, although we may not get the answer we are looking for, we always get something – even if it is only the valuable experience.

*Short Stories of Science and Invention: A Collection of Radio Talks by C.F. Kettering*  
Purple Dye, Sun Glasses and Malaria (p. 115)  
General Motors. Detroit, Michigan, USA. 1955

### Kiepenheuer, Karl

American philosopher of science

...unsolved problems generally count as genuine problems only when they are no longer unsolved.

*Progress and Its Problems*  
Chapter One (p. 18)  
University of California Press. Berkeley, California, USA.

### Lewis, Gilbert Newton 1875–1946

American chemist

Indeed it seems hardly likely that much progress can be made in the solution of the difficult problems relating to chemical combination by assigning in advance definite laws of force between the positive and negative constituents of an atom, and then on the basis of these laws building up mechanical models of the atom.

*The Atom and the Molecule*  
*Journal of the American Chemical Society*, Volume 38, Number 1, 1916 (p. 773)

### Mach, Ernst 1838–1916

Austrian physicist and philosopher

There is no problem in all mathematics that cannot be solved by direct counting. But with the present implements of mathematics many operations can be performed in a few minutes which without mathematical methods would take a lifetime.

*Popular Scientific Lectures*

*The Economical Nature of Physical Inquiry* (p. 197)  
The Open Court Publishing Company. Chicago, Illinois, USA. 1898

It is characteristic of the naïve and sanguine beginnings of thought in youthful men and nations, that all problems are held to be soluble and fundamentally intelligible on the first appearance of success.

Translated by Thomas J. McCormack  
*Popular Scientific Lectures* (2nd edition)  
The Part Played by Accident in Invention and Discovery (p. 259)  
The Open Court Publishing Co. Chicago, Illinois, USA. 1897

No man should dream of solving a great problem unless he is so thoroughly saturated with his subject that everything else sinks into comparative insignificance.

*Popular Scientific Lectures*  
The Part Played by Accident in Invention and Discovery (pp. 273–274)  
The Open Court Publishing Company. Chicago, Illinois, USA. 1898

Every real problem can and will be solved in due course without supernatural divination, entirely by accurate observation and close, searching thought.

*Popular Scientific Lectures*  
On Sensations of Orientation (p. 308)  
The Open Court Publishing Company. Chicago, Illinois, USA. 1898

### Maddox, John Royden 1925–

Welsh chemist and physicist

The problems that remain unsolved are gargantuan. They will occupy our children and their children and on and on for centuries to come, perhaps even for the rest of time.

*What Remains to Be Discovered*  
Conclusion (p. 378)  
The Free Press. New York, New York, USA. 1998

### Maschke, Heinrich

German mathematician

...it is the *man*, not the *method*, that solves the problem.

Volume 1  
On Present Problems of Algebra and Analysis (p. 530)  
Houghton Mifflin & Co. Boston, Massachusetts, USA. 1905

### Michener, James A. 1907?–97

American novelist

At NACA [fictional space agency] we solve everything eventually. That's our job, and now it's yours.... At NACA...there are no insoluble problems. Only time-consuming ones.

*Space*  
Chapter III (p. 175)  
Random House, Inc. New York, New York, USA. 1982

### Mitchel, Ormsby MacKnight 1805–62

American astronomer

I shall...fearlessly attempt such an exposition of the processes and trains of reasoning by which great truths have been elicited, as to show every intelligent mind that the problem is not impossible; by simplicity of language, by

familiar illustrations, to fling light enough upon these mysterious propositions, to show a pathway, though it be dim and rugged, still a pathway, which if pursued shall certainly lead to a full and perfect solution.

*The Planetary and Stellar Worlds: A Popular Exposition of the Great Discoveries and Theories of Modern Astronomy*  
Lecture I (p. 21)

Baker & Scribner. New York, New York, USA. 1848

**Nehru, Jawaharlal** 1889–1969

Former prime minister of India

It is science alone that can solve the problems of hunger and poverty, of insanitation and illiteracy, of superstition and deadening custom and tradition, of vast resources running to waste, of a rich country inhabited by starving people.

Speech

*Proceedings of the National Institute of Science of India*, Volume 27,  
1960 (p. 564)

**Newcomb, Simon** 1835–1909

Canadian-American astronomer

Great and numerous as are the unsolved problems of our science, knowledge is now advancing into regions which, a few years ago, seemed inaccessible. Where it will stop none can say.

*Side-Lights on Astronomy and Kindred Fields of Popular Science*  
Chapter I (p. 17)

Harper & Brothers Publishers. New York, New York, USA. 1906

**Nietzsche, Friedrich Wilhelm** 1844–1900

German philosopher

There are dreadful people who, instead of solving a problem, complicate it for those who deal with it and make it harder to solve. Whoever does not know how to hit the nail on the head should [be] entreated not [to] hit it at all.

*The Complete Works of Friedrich Nietzsche* (Volume Seven)

Human, All Too Human

The Wanderer and His Shadow, Part Two, Number 326

Macmillan Publishing Company. New York, New York, USA. 1924

**Oppenheimer, James Robert** 1904–67

American theoretical physicist

... we probably have no very good idea today of the range of problems that will be accessible to science.

*The Flying Trapeze: Three Crises for Physicists*

Space and Time (p. 2)

Oxford University Press, Inc. London, England. 1964

**Osborn, Henry Fairfield** 1857–1935

American paleontologist and geologist

As in every other branch of science, problems multiply like the heads of hydra; no sooner is one laid low than a number of new ones appear; yet we stand on the shoulders of preceding generations, so that if our philosophical vision be correct, we gain a wider horizon, while the horizon itself is constantly expanding by discovery.

*Congress of Arts and Science: Universal Exposition, St. Louis, 1904*  
Volume 4

The Present Problems of Paleontology (p. 566)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1906

**Pagels, Heinz R.** 1939–88

American physicist and science writer

... I solve problems, rarely through a rationally deductive process. Instead I value a free association of ideas, a jumble of three or four ideas bouncing around in my mind. As the urge for resolution increases, the bouncing around stops and I settle on just one idea or strategy.

*The Dreams of Reason*

Chapter 5 (p. 97)

Simon & Schuster. New York, New York, USA. 1988

**Pallister, William Hales** 1877–1946

Canadian physician

Science solves life's problems, but she must solve them one-at-a-time. Her course and methods are evolutionary. She cannot solve insoluble problems; they must first become soluble. She grows, like every other plant, only from powdered rock, uses only the chemical constituents which are soluble.

*Poems of Science*

The Nature of Things (p. 14)

Playford Press. New York, New York, USA. 1931

**Pearse, A. S.**

No biographical data available

A scientist has his circulating medium in problems. He deals in and develops problems as a broker deals in stocks and bonds. When his problems are completed he "sells" them to the scientific world by publication, usually at his own expense.

Adventure, Romance and Science

*Science*, Volume 58, Number 1492, 3 August, 1923 (p. 78)

**Pendry, John** 1944–

English theoretical physicist

It has been said that tackling a new scientific problem is like going into a darkened room. First you fall over the furniture, then you collide with other people in the room; arguments might develop. With time things settle down, as you learn where most of the furniture is and don't fall over so often. Eventually someone finds the light switch and everything becomes obvious.

Positively Negative

*Nature*, Volume 423, Number 6935, May 1, 2003 (p. 22)

**Poe, Edgar Allan** 1809–49

American short story writer

The great problem is at length solved! The air, as well as the earth and the ocean, has been subdued by science, and will become a common and convenient highway for mankind.

In H. Beaver (ed.)

*The Science Fiction of Edgar Allan Poe*

The Balloon Hoax (p. 11)

Penguin Books. Hammondsworth, England. 1976

**Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

We have had prophets of evil. They blithely reiterate that all problems capable of solution have already been solved and that nothing is left but gleaning. Happily the case of the past reassures us. Often it was thought all problems were solved or at least an inventory was made of all admitting solutions. And then the sense of the word solution enlarged, and insoluble problems became the most interesting of all, and others unforeseen presented themselves.... The pessimists thus found themselves always outflanked, always forced to retreat, so that at present I think there are no more.

In G.B. Halsted (trans.)

*The Foundations of Science**Science and Method*, Book I

Chapter II (p. 369)

The Science Press. New York, New York, USA. 1913

To give a complete mechanical explanation of electrical phenomena, reducing the laws of physics to the fundamental principles of dynamics is a problem that has attracted many investigators.... If the problem admitted of only one solution, the possession of this solution, which would be the truth, could not be bought too dearly.

In Frederick Vreeland

Part One, Chapter I (p. 1)

McGraw Publishing Company. New York, New York, USA. 1904

**Pólya, George** 1887–1985

Hungarian mathematician

Solving problems is a practical art, like swimming, or skiing, or playing a piano; you can learn it only by imitation and practice...

*Mathematical Discovery; or Understanding, Learning, and Teaching**Problem Solving* (Volume 1)

Preface (p. v)

John Wiley &amp; Sons, Inc. New York, New York, USA. 1966

**Popper, Karl R.** 1902–94

Austrian/British philosopher of science

Science never pursues the illusory aim of making its answers final or even probable. Its advance is rather toward an infinite yet attainable aim: that of ever discovering new, deeper, and more general problems.

*The Logic of Scientific Discovery*

Part II, Chapter X, Section 85 (p. 281)

Basic Books, Inc. New York, New York, USA. 1959

...a young scientist who hopes to make discoveries is badly advised if his teacher tells him: "Go round and observe" and...well advised if his teacher tells him: "Try to learn what people are discussing nowadays in science. Find out where difficulties arise, and take an interest in disagreements. These are the questions which you should

take up." In other words, you should study the problems of the day. This means that you pick up, and try to continue, a line of inquiry which has the whole background of the earlier development of science behind it.

*Conjectures and Refutations: The Growth of Scientific Knowledge*

Chapter 4 (p. 129)

Harper &amp; Row, Publishers. New York, New York, USA. 1963

...science should be visualized as progressing from problem to problem – to problems of ever increasing depth.... Problems crop up especially when we are disappointed in our expectations, or when our theories involve us in difficulties, in contradictions; and these may arise either within a theory, or between two different theories, or as the result of a clash between our theories and our observations.... Thus science starts from problems, and not from observations; though observations may give rise to a problem, especially if they are unexpected; that is to say, if they clash with our expectations or theories.

*Conjectures and Refutations: The Growth of Scientific Knowledge*

Chapter 10, Section VI (p. 222)

Harper &amp; Row, Publishers. New York, New York, USA. 1963

...I think there is only one way to science – or to philosophy, for that matter: to meet a problem, to see its beauty and fall in love with it; to get married to it, and to live with it happily, till death do ye part – unless you should meet another and even more fascinating problem, or unless, indeed, you should obtain a solution. But even if you do obtain a solution, you may then discover, to your delight, the existence of a whole family of enchanting though perhaps difficult problem children for whose welfare you may work, with a purpose, to the end of your days.

*Realism and the Aim of Science*

Preface, 1956 (p. 8)

Rowman &amp; Littlefield. Totowa, New Jersey, USA.

**Porter, George** 1920–2002

English chemist

To solve a problem is to create new problems, new knowledge immediately reveals new areas of ignorance, and the need for new experiments.

O’Riley. Beijing, China. 2001

**Rigutti, Mario**  
No biographical data available

An unsolvable problem is not a mystery; it is just a problem that cannot be solved. Practically speaking, unsolvable problems and mysteries may be the same thing; but psychologically they are quite different. Confronted with a mystery, people stutter, quake, fall to their knees, build golden idols. Confronted with an unsolvable problem, at worst people give up trying, accept their limitations, and turn to more constructive activities. They do not need to invent all-powerful gods and end up feeling like powerless pawns in a game whose rules they will never know. They can keep their humanity.

Translated by Mirella Giacconi

Chapter I (p. 10)  
Doubleday & Company, Inc. Garden City, New York, USA; 1969

**Rudin, Mary Ellen** 1924–  
American mathematician

I say that there are lots of problems in mathematics that are interesting but have not been solved, and every time you solve one you think up a new one. Mathematics, therefore, is something that expands rather than contracts. And I tell that these questions are interesting just because you’ve followed a line of reasoning up to a certain point and the next natural thing to ask is what you’re looking at. But that’s really not explaining to them what kinds of things might be interesting to me. Sometimes that’s pretty hard to explain – even to another mathematician.

The Technical Problem (p. lxxxiii)

Brentano's. New York, New York, USA. 1920

**Sherlock Holmes (Fictional character)**

Every problem is absurdly simple when it is explained to you.

*The Adventure of Sherlock Holmes**The Dancing Men*

Television series 1984

**Simon, Herbert Alexander** 1916–2001

American social scientist

Problem formulation in science is to be understood by looking at the continuity of the whole stream of scientific endeavor.

In Robert G. Colodny (ed.)

*Mind and Cosmos*

Scientific Discovery and the Psychology of Problem Solving (p. 37)

University of Pittsburgh Press. Pittsburgh, Pennsylvania, USA. 1966

**Simon, Herbert Alexander** 1916–2001

American social scientist

The capacity of the human mind for formulating and solving complex problems is very small compared with the size of problems whose solution is required for objectively rational behavior in the real world – or even for a reasonable approximation to such objective rationality.

*Models of Man: Social and Rational; Mathematical Essays on Rational Human Behavior in a Social Setting*

Part IV (p. 198)

John Wiley &amp; Sons, Inc. New York, New York, USA. 1957

The more difficult and novel the problem, the greater is likely to be the amount of trial and error required to find a solution. At the same time, the trial and error is not completely random or blind; it is, in fact, rather highly selective. The new expressions that are obtained by transforming given ones are examined to see whether

they represent progress toward the goal. Indications of progress spur further search in the same direction; lack of progress signals the abandonment of a line of search. Problem solving requires selective trial and error.

*The Sciences of the Artificial*

Chapter 4 (pp. 95–96)

The MIT Press. Cambridge, Massachusetts, USA. 1969

...human problem solving, from the most blundering to the most insightful, involves nothing more than varying mixtures of trial and error and selectivity.

*The Sciences of the Artificial*

Chapter 4 (p. 97)

The MIT Press. Cambridge, Massachusetts, USA. 1969

**Simpson, N. F.** 1919–

English playwright

And suppose we solve all the problems it presents? What happens? We end up with more problems than we started with. Because that's the way problems propagate their species. A problem left to itself dries up or goes rotten. But fertilize a problem with a solution – you'll hatch out dozens.

*New English Dramatists 2*

A Resounding Tinkle, Act I, Scene 1 (pp. 80–81)

Penguin Books. London, England. 1960

**Spottiswoode, William** 1825–83

English mathematician and physicist

That which is at present beyond our ken may, at some period and in some manner as yet unknown to us, fall within our grasp; but our science teaches us, while ever yearning with Goethe for "Light, more light," to concentrate our attention upon that of which our powers are capable, and contentedly to leave for future experience the solution of problems to which we can at present say neither yea nor nay.

*Report of the Forty-eighth Meeting of the British Association for the Advancement of Science*

Address of William Spottiswoode (p. 32)

John Murray. London, England. 1879

**Szent-Györgyi, Albert** 1893–1986

Hungarian-born American biochemist

Somehow, problems get into my blood and they don't give me peace, they torture me. I have to get them out of my system, and there is but one way to get them out – by solving them. A problem solved is no problem at all, it just disappears.

On Scientific Creativity

*Perspectives in Biology and Medicine*, Volume 5, Number 2, Winter 1962 (p. 176)**Tatum, Edward** 1909–75

American biochemist

As in any scientific research, a problem clearly seen is already half solved.

*Nobel Lectures, Physiology or Medicine 1942–1962*

Nobel lecture for award received in 1958  
A Case History in Biological Research (p. 610)  
Elsevier Publishing Company. Amsterdam, Netherlands. 1964

**Thurstone, Louis Leon** 1887–1955  
American pioneer of psychometrics and psychophysics

Every scientific problem can be stated most clearly if it is thought of as a search for the nature of the relation between two definitely stated variables. Very often a scientific problem is felt and stated in other terms, but it cannot be so clearly stated in any way as when it is thought of as a function by which one variable is shown to be dependent upon or related to some other variable.

*The Fundamentals of Statistics* (p. 187)  
The Macmillan Company. New York, New York, USA. 1925

It's the same mathematics, whether it's applied or not. It's just important to think of a problem in a general context. I really think all mathematics is applicable.

In D. Albers, G. Alexanderson and C. Reid  
*More Mathematical People: Contemporary Conversations* (p. 326)  
Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

**Trefil, James** 1938–  
American physicist

Science is drawn by its own internal logic, by the development of instruments and ideas, so it's not always possible to predict when specific problems will be solved or specific knowledge acquired.

*The Nature of Science*  
Introduction (p. xx)  
Houghton, Mifflin, Harcourt.. New York, New York, USA. 2003

**Urquhart, Alexander**  
No biographical data available

It is possible for a vast aggregate of thinking to be performed around a particular problem without advancing its solution.

*Odd Hours With Nature*  
The Cunning of Trout (p. 61)  
Fisher Unwin. London, England. 1913

**von Baer, Carl Ernst**  
No biographical data available

Every great scientific problem is like a fortification, to which one can only approach slowly by running trenches. Generally people think at first that it is possible to take it by assault, but it very soon becomes clear that it is not the real thing, but only the appearance of it, only the image in our mind's eye which has been understood. Let us, however, go to work and sap slowly onwards, protected by the gabions of criticism, and at last we shall, in time, slowly get nearer and see the end more clearly before us, and meanwhile have got a firm footing in the outer work. If we can never completely take the fortress by digging trenches, the reason may be, to stick to our metaphor, that nature is no craven commander who surrenders as soon as the outworks are taken.

In James Hunt  
*Addresses*  
Address Given at the Second Annual Meeting of the Anthropological Society of London (p. 3)  
Trübner & Co. London, England. 1863–1867

**von Goethe, Johann Wolfgang** 1749–1832  
German poet, novelist, playwright, and natural philosopher

In the sphere of natural science let us remember that we have always to deal with an insoluble problem. Let us prove keen and honest in attending to anything which is in any way brought to our notice, most of all when it does not fit in with our previous ideas. For it is only thereby that we perceive the problem, which does indeed lie in nature, but still more in man.

Translated by Thomas Bailey Saunders  
*The Maxims and Reflections of Goethe*  
#515 (p. 183)  
The Macmillan Co. New York, New York, USA. 1906

Man is born not to solve the problems of the universe, but to find out where the problem begins, and then to restrain himself within the limits of the comprehensible.

Translated by John Oxenford  
*Conversations of Goethe With Eckermann and Soret*  
October 15, 1825 (p. 161)  
George Bell & Sons. London, England. 1875

**Weil, Simone** 1909–43  
French philosopher and mystic

Our science is like a store filled with the most subtle intellectual devices for solving the most complex problems, and yet we are almost incapable of applying the elementary principles of rational thought.

In George A. Panichas (ed.)  
*The Simone Weil Reader*  
The Power of Words (p. 271)  
McKay. New York, New York, USA. 1977

**Wiesner, Jerome Bert** 1915–94  
Educational administrator

Some problems are just too complicated for rational logical solutions. They admit of insights, not answers.

In D. Lang  
Profiles: A Scientist's Advice, II  
*New Yorker*, 26 January, 1963

**Wilson, Edmund Beecher** 1856–1939  
American zoologist

Laying aside all merely speculative attempts to solve this problem, we must admit that our actual knowledge concerning it is still in a very backward state.

*The Physical Basis of Life* (p. 22)  
Yale University Press. New Haven, Connecticut, USA. 1923

**Wilson, Jr., E. Bright** 1908–92  
American physical chemist

Many scientists owe their greatness not to their skill in solving problems but to their wisdom in choosing them.

It is therefore worth considering the points on which this choice can be based.

*An Introduction to Scientific Research*

Chapter 1 (p. 1)

McGraw-Hill Book Company, Inc. New York, New York USA. 1952

**Yalow, Rosalyn** 1921–

American medical physicist

We bequeath to you, the next generation, our knowledge but also our problems. While we still live, let us join hands, hearts and minds to work together for their solution so that your world will be better than ours and the world of your children even better.

*Les Prix Nobel. The Nobel Prizes in 1977*

Nobel banquet speech for award received in 1977

Nobel Foundation. Stockholm, Sweden. 1978

**Young, Charles Augustus** 1834–1908

American astronomer

In the present state of science many of the questions thus suggested seem to be hopelessly beyond the reach of investigation, while others appear like problems which time and patient work will solve, and others yet have already received clear and decided answers.

*A Text-book of General Astronomy for Colleges and Scientific Schools*

Chapter XXII (p. 566)

Ginn & Co. Boston, Massachusetts, USA. 1898

**PROBLEM, STATISTICAL**

**Goschen, Georg Joachim** 1752–1828

Publisher and printer

There is no study which requires more continuous and undisturbed attention than the study of complicated statistical problems.

The Increase of Moderate Incomes

*Journal of the Royal Statistical Society*, Volume L, Part IV December, 1887 (p. 589)

**PROBLEMS**

**Stewart, Ian** 1945–

English mathematician

Our world is not static: new problems constantly arise, and old answers often stop working. Like Lewis Carroll's Red Queen, we must run very fast in order to stand still.

*Nature's Numbers*

Chapter 2 (p. 29)

BasicBooks. New York, New York, USA. 1995

**PROCESS**

**Kelvin, Lord William Thomson** 1824–1907

Scottish engineer, mathematician, and physicist

Every process has laws, known or unknown, according to which it must take place. A consciousness of them is so

far from being necessary to the process, that we cannot discover what they are, except by analyzing the results it has left us.

*An Outline of the Necessary Laws of Thought*

Introduction (p. 17)

Sheldon & Co. New York, New York, USA. 1866

**PROCESSION**

**Kipling, Rudyard** 1865–1936

British writer and poet

One fine morning in the middle of the Precession of the Equinoxes.... That very next morning, when there was nothing left of the Equinoxes, because the Precession had preceded according to precedent...

*Just So Stories for Little Children*

The Elephant Child (pp. 66, 67)

Doubleday, Page & Co. Garden City, New York, USA. 1921

**PRODUCTION**

**Mendeleev, Dmitry Ivanovich** 1834–1907

Russian chemist

...an individual production is only significant in virtue of that which has preceded and that which is contemporary with it, it resembles a mirror which in reflecting exaggerates the size and clearness of neighbouring objects, and causes a person near it to see reflected most plainly those objects which are on the side to which it is directed.

Translated by George Kamensky

In Thomas Atkinson Lawson

*The Principles of Chemistry* (Volume I)

Author's Preface (p. vii)

Longmans, Green & Co. London, England. 1891

**PROFESSION**

**Latham, Peter Mere** 1789–1875

English physician

The different professions have one way of glorifying themselves, which is common to all. It is by setting forth a vast array of preparatory studies, and pretending they are indispensable in order to fit a man for the simple exercise of the practical duties that belong to them.

**Serres, Michel** 1930–  
French philosopher

But, irresistibly, I cannot help thinking that this idea is the equivalent of those ancient diagrams we laugh at today, which place the Earth at the center of everything, or our galaxy at the middle of the universe, to satisfy our narcissism. Just as in space we situate ourselves at the center, at the navel of things in the universe, so for time, through progress, we never cease to be at the summit, on the cutting edge, at the state-of-the-art of development. It follows that we are always right, for the simple, banal, and naïve reason that we are living in the present moment. The curve traced by the idea of progress thus seems to me to sketch or project into time the vanity and fatuousness expressed spatially by that central position. Instead of inhabiting the heart or the middle of the world, we are sojourning at the summit, the height, the best of truth.

**Stoppard, Tom** 1937–  
Czech-born English playwright

Don't confuse progress with perfectibility. A great poet is always timely. A great philosopher is an urgent need. There's no rush for Isaac Newton. We were quite happy with Aristotle's cosmos. Personally, I preferred it. Fifty-five crystal spheres geared to God's crankshaft is my idea of a satisfying universe.

*Arcadia*  
Act II, Scene Five (p. 61)  
Faber & Faber Ltd. London, England. 1993

**Tilden, Sir William Augustus** 1842–1926  
English chemist

...until men began to observe and interrogate Nature for the sake of learning her ways, and without concentrating their attention on the expectation of useful applications of such knowledge, little or no progress was made. In other words, until a sufficient foundation of pure science has

been successfully laid there can be no applied science. Real progress comes from the pursuit of knowledge for its own sake.

Quoted in Richard Arman Gregory  
*Discovery, Or, The Spirit and Service of Science*  
Chapter IX (p. 237)  
Macmillan & Co Ltd. London, England. 1916

**von Liebig, Justus** 1803–73  
German organic chemist

To resolve an enigma, we must have a perfectly clear conception of the problem. there are many ways to the highest pinnacle of a mountain, but those only can hope to reach it who keep the summit constantly in view. All our labour and all our efforts, if we strive to attain it through a morass, only serve to cover it more completely with mud; our progress is impeded by difficulties of our own creation, and at last even the greatest strength must give way when so absolutely wasted.

*Animal Chemistry*  
Part II  
The Metamorphosis of Tissues (p. 125)  
Johnson Reprint Corporation. New York, New York, USA. 1964

**Walker, Kenneth** 1882–1966  
No biographical data available

We travel through life with so much mental luggage that it is advisable occasionally to pause and take stock of it in order that we may get rid of those ideas which impede our progress.

*Meaning and Purpose*  
Chapter I (p. 14)  
Jonathan Cape. London, England. 1944

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

Too many apples from the tree of systematized knowledge lead to the fall of progress.

*Modes of Thought*  
Chapter I, Lecture Three (p. 79)  
The Macmillan Company. New York, New York, USA. 1938

## PROJECTILE MOTION

**Galilei, Galileo** 1564–1642  
Italian physicist and astronomer

I have succeeded in proving; and what I consider more important, there have been opened up to this vast and most excellent science, of which my work is merely the beginning, ways and means by which other minds more acute than mine will explore its remote corners.

Translated by Henry Crew and Alfonso de Salvio  
*Dialogues Concerning Two New Sciences*  
Third Day (pp. 153–154)  
The Macmillan Co. New York, New York, USA. 1914

## PROJECTIVE GEOMETRY

**Keyser, Cassius Jackson** 1862–1947  
American mathematician

...Projective Geometry: a boundless domain of countless fields where reals and imaginaries, finites and infinities, enter on equal terms, where the spirit delights in the artistic balance and symmetric interplay of a kind of conceptual and logical counterpoint – an enchanted realm where thought is double and flows throughout in parallel streams.

*The Human Worth of Rigorous Thinking: Essays and Addresses*  
Chapter XI (p. 278)  
Columbia University Press. New York, New York, USA. 1916

## PROLIX

**Poe, Edgar Allan** 1809–49  
American short story writer

...it is better to be a good deal prolix than even a very little obscure.

*Poems and Essays of Edgar Allan Poe*  
Eureka (p. 128)  
W.J. Widdleton, Publisher. New York, New York, USA. 1881

## PROOF

**Atiyah, Sir Michael** 1922–  
English mathematician

I think it is said that Gauss had ten different proofs for the law of quadratic reciprocity. Any good theorem should have several proofs, the more the better. For two reasons: usually, different proofs have different strengths and weaknesses, and they generalize in different directions – they are not just repetitions of each other.

24th of May, 2004 prior to the Abel prize celebrations  
Interview with Michael Atiyah and Isadore Singer  
Martin Raussen and Christian Skau are the interviewers

**Auster, Paul** 1947–  
American writer

I had made an empirical discovery and it carried all the weight of a mathematical proof.

*The Book of Illusions* (pp. 9–10)  
Picador. New York, New York, USA. 2002

## Author undetermined

The virtue of a logical proof is not that it compels belief but that it suggests doubts. The proof tells us where to concentrate our doubts.

Quoted in Morris Kline  
*Mathematics: The Loss of Certainty*  
Chapter XIV (p. 315)  
Oxford University Press. New York, New York, USA. 1982

**Bell, E. T. (Eric Temple)** 1883–1960  
Scottish-American mathematician and educator

There is a sharp disagreement among competent men as to what can be proved and what cannot be proved, as well as an irreconcilable divergence of opinions as to what is sense and what is nonsense.

*Debunking Science* (p. 18)  
University of Washington Book Store. Seattle, Washington, USA. 1930

**Bernal, John Desmond** 1901–71  
Irish-born physicist and X-ray crystallographer

...the cardinal rule in science is that a statement must be provable – but that does not mean that it has to be proved now.

In S.W. Fox (ed.)  
*The Origins of Prebiological Systems and of Their Molecular Matrices*  
The Folly of Probability, Discussion (pp. 53–55)  
Academic Press. New York, New York, USA. 1965

**Blake, William** 1757–1827  
English poet, painter, and engraver

What is now proved was once only imagined.

*The Complete Poetry and Prose of William Blake*  
The Marriage of Heaven and Hell  
University of California Press. Berkeley, California, USA. 1982

**Buchanan, Scott** 1895–1968  
American educator and philosopher

The best proofs in mathematics are short and crisp like epigrams, and the longest have swings and rhythms that are like music.

*Poetry and Mathematics*  
Chapter 1 (p. 36)  
The University of Chicago Press. Chicago, Illinois, USA. 1975

...anything worth discovering in mathematics does not need proof; it needs only to be seen or understood.

*Poetry and Mathematics*  
Chapter 1 (p. 37)  
The University of Chicago Press. Cambridge, England. 1975

**Cabell, James Branch** 1879–1958  
American essayist and novelist

“But I can prove it by mathematics, quite irrefutably. I can prove anything you require of me by whatever means you may prefer,” said Jurgen, modestly, “for the simple reason that I am a monstrous clever fellow.”

*Jurgen: A Comedy of Justice*  
Chapter 32 (p. 236)  
Robert M. McBride & Company. New York, New York, USA. 1925

**Carroll, Lewis (Charles Dodgson)** 1832–98  
English writer and mathematician

Like the goblin ‘Puck,’ it has led me “up and down, up and down,” through many a wakeful night: but always, just as I thought I had it [the proof], some unforeseen fallacy was sure to trip me up, and the tricky sprite would “leap out, laughing ho, ho, ho!”

*Curiosa Mathematica* Part I (3rd edition)  
Introduction (p. xxi)  
Macmillan & Co Ltd. London, England. 1890

## Catherine (Fictional character)

[Reading Robert’s Notebook] “Let X equal the quantity of all quantities of X. Let X equal the cold. It is cold in December. The months of cold equal November through February. There are four months of cold, and four of heat, leaving four months of indeterminate temperature. In February it snows. In March the Lake is a lake of ice. In September the students come back and the bookstores are full. Let X equal the month of full bookstores. The number of books approaches infinity as the number of months of cold approaches four. I will never be as cold now as I will in the future. The future of cold is infinite. The future of heat is the future of cold. The bookstores are infinite and so are never full except in September...”

*Proof*  
Film (2005)

## Collins, Frederick Howard

*An Epitome of the Synthetic Philosophy* (p. 44)  
D. Appleton & Co. New York, New York, USA. 1889

## Colton, Charles Caleb

1780–1832  
English sportsman and writer

He that, standing on the shore, foretells, with truth, many of the undiscovered treasures of the ocean of science, even before the vessel that is to navigate it, can be fully equipped for the voyage, gives us a convincing proof of exalted wisdom, and of profound penetration.

*Lacon: Or, Many Things in Few Words*  
CXLI (p. 81)  
Longman, Rees, Orme, Brown & Green. London, England. 1826

## Davis, Philip J.

1923–  
American mathematician

## Hersh, Reuben

1927–  
American mathematician

He rests his faith on rigorous proof; he believes that the difference between a correct proof and an incorrect one is an unmistakable and decisive difference. He can think of no condemnation more damning than to say of a student, “He doesn’t even know what a proof is.”

*The Mathematical Experience*  
The Ideal Mathematician (p. 34)  
Birkhäuser. Boston, Massachusetts, USA. 1981

Proof is for cosmetic purposes and also to reduce somewhat the edge of insecurity on which one always lives.

*The Mathematical Experience*  
A Physical Look at Mathematics (p. 48)  
Birkhäuser. Boston, Massachusetts, USA. 1981

Proof serves many purposes simultaneously.... Proof is respectability. Proof is the seal of authority. Proof, in its best instance, increases understanding by revealing the heart of the matter. Proof suggests new mathematics.... Proof is mathematical power, the electric voltage of the subject which vitalizes the static assertions of the theorems.

*The Mathematical Experience*

Proof (p. 151)

Birkhäuser. Boston, Massachusetts, USA. 1981

### **de Morgan, Augustus** 1806–71

English mathematician and logician

Would Mathematics – forsooth –  
If true, have failed to prove truth?  
Would not they – if they could – submit  
Some overwhelming proofs of it?

*A Budget of Paradoxes*

The Moon's Rotation (p. 262)

Longmans, Green. London, England. 1872

Proof requires a person who can give and a person who can receive...

*A Budget of Paradoxes*

The Moon's Rotation (p. 262)

Longmans, Green. London, England. 1872

### **Dedekind, Richard** 1831–1916

German mathematician

In science nothing capable of proof ought to be accepted without proof.

Translated by Wooster Woodruff Beman

*Essays on the Theory of Numbers*

The Nature and Meaning of Numbers

Preface to the First Edition (p. 31)

The Open Court Publishing Company. Chicago, Illinois, USA. 1901

### **Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

Proof is an idol before whom the pure mathematician tortures himself. In physics we are generally content to sacrifice before the lesser shrine of plausibility.

*The Nature of the Physical World*

Chapter XV (p. 337)

The Macmillan Company. New York, New York, USA. 1930

### **Euclid of Alexandria** 325 BCE–265 BCE

Greek mathematician

Author

“You can't prove it isn't so!” is as good as Q.E.D. in folk logic.

*The Natural History of Nonsense*

Chapter 19 (p. 264)

Alfred A. Knopf. New York, New York, USA. 1947

### **Gleason, Andrew M.**

Mathematician

...proofs really aren't there to convince you that something is true – they're there to show why it is true.

In D. Albers, G. Alexanderson, and C. Reid (eds.)

*More Mathematical People: Contemporary Conversations*

Andrew M. Gleason (p. 86)

Harcourt Brace Jovanovich. New York, New York, USA. 1990

Often enough mathematicians have been caught off base with some pathological wrinkle in some funny function or something so, you know, you do have to do the proof, but still in the end that much more important function of a proof in my view is to figure out why it works.

In D. Albers, G. Alexanderson and C. Reid

*More Mathematical People: Contemporary Conversations* (p. 97)

Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

### **Hamming, Wesley Richard** 1915–98

American mathematician

Some people believe that a theorem is proved when a logically correct proof is given; but some people believe a theorem is proved only when the student sees why it is inevitably true. The author tends to belong to this second school of thought.

*Coding and Information Theory*

Chapter 9 (p. 155)

Prentice-Hall, Inc. Englewood Cliffs, New Jersey, USA. 1980

### **Hardy, G. H. (Godfrey Harold)** 1877–1947

English pure mathematician

...there is, strictly, no such thing as mathematical proof; that we can::: do nothing but *point*; that proofs are what Littlewood and I call *gas*, rhetorical flourishes designed to affect psychology, pictures on the board in the lectures, devices to stimulate the imagination of pupils.

*Musings of the Masters: An Anthology of Mathematical Reflections*

Mathematical Proof (p. 59)

Mathematical Association of America. Washington, D.C. 2004

...it is not disputed that mathematics is full of proofs, of undeniable interest and importance, whose purpose is not in the least to secure conviction. Our interest in these proofs depends on their formal and aesthetic properties. Our object is *both* to exhibit the pattern and to obtain assent. We cannot exhibit the pattern completely, since it is far too elaborate; and we cannot be content with parallel streams.

*Musings of the Masters: An Anthology of Mathematical Reflections*

Mathematical Proof (p. 59)

Mathematical Association of America. Washington, D.C. 2004

### **Hilbert, David** 1862–1943

German mathematician

...it is an error to believe that rigor in the proof is the enemy of simplicity...

A proof only becomes a proof after the social act of “accepting it as a proof”.

*A Course in Mathematical Logic*  
 Part I, Chapter II (p. 48)  
 Springer-Verlag. New York, New York, USA. 1977

...a good proof is one that makes us wiser.

*A Course in Mathematical Logic* (p. 51)  
 Springer-Verlag. New York, New York, USA. 1977

**Nicholas Bourbaki**  
 Mathematical discussion group

Indeed every mathematician knows that a proof has not been “understood” if one has done nothing more than verify step by step the correctness of the deductions of which it is composed and has not tried to gain a clear insight into the ideas which have led to the construction of this particular chain of deductions in preference to every other one.

Quoted in Douglas M. Campbell and John C. Higgins  
*Mathematics: People, Problems, Results* (Volume 3)  
 In Richard A. de Millo, Richard J. Lipton and Alan J. Perlos  
 Social Processes and Proofs of Theorems and Programs (p. 25)  
 Wadsworth, Inc. Belmont, California, USA. 1984

**Pearson, Karl** 1857–1936  
 English mathematician

...we must remember that because a proposition has not yet been proved, we have no right to infer that its converse must be true.

*The Grammar of Science*  
 Chapter IV, Section 17 (p. 179)  
 Charles Scribner’s Sons. London, England. 1892

**Platt, John R.**  
 No biographical data available

There is no such thing as proof in science – because some later alternative explanation may be as good or better – so that science advances only by disproofs. There is no point in making hypotheses that are not falsifiable, because such hypotheses do not say anything: it must be possible for an empirical scientific system to be refuted by experience.

Strong Inference  
*Science*, Volume 146, Number 3641, 16 October, 1964 (p. 350)

**Popper, Karl R.** 1902–94  
 Austrian/British philosopher of science

In point of fact, no conclusive disproof of a theory can ever be produced; for it is always possible to say that the

experimental results are not reliable or that the discrepancies which are asserted to exist between the experimental results and the theory are only apparent and that they will disappear with the advance of our understanding. If you insist on strict proof (or strict disproof) in the empirical sciences, you will never benefit from experience, and never learn from it how wrong you are.

*The Logic of Scientific Discovery*  
Part I, Chapter 2 (p. 28)  
Routledge, London, England. 2002

### **Shakespeare, William** 1564–1616

English poet, playwright, and actor

Be sure of it: give me the ocular proof. . .

In *Great Books of the Western World* (Volume 27)  
*The Plays and Sonnets of William Shakespeare* (Volume 2)  
*Othello, The Moor of Venice*  
Act III, Scene iii, l. 360  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

And this may help to thicken other proofs  
That do demonstrate thinly.

In *Great Books of the Western World* (Volume 27)  
*The Plays and Sonnets of William Shakespeare* (Volume 2)  
*Othello, The Moor of Venice*  
Act III, Scene iii, l. 429–431  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### **Stewart, Ian** 1945–

English mathematician and science writer

Proofs knit the fabric of mathematics together, and if a single thread is weak, the entire fabric may unravel.

*Nature's Numbers: The Unreal Reality of Mathematical Imagination*  
Chapter 3 (p. 45)  
Basic Books, Inc. New York, New York, USA. 1995

An intuitive proof allows you to understand why the theorem must be true; the logic merely provides firm grounds to show that it is true.

*Concepts of Modern Mathematics*  
Chapter 1 (p. 5)  
Dover Publications, Inc. New York, New York, USA. 1995

### **Sylvester, James Joseph** 1814–97

English mathematician

*Divide et impera*: is as true in algebra as in statecraft; but no less true and even more fertile is the maxim *auge et impera*. The more to do or to prove, the easier the doing or the proof.

*The Collected Mathematical Papers of James Joseph Sylvester*  
(Volume 3)  
Proof of the Fundamental Theorem of Invariants (1878) (p. 126)  
At The University Press. Cambridge, England. 1904–1912

It always seems to me absurd to speak of a complete proof, or of a theorem being rigorously demonstrated. An incomplete proof is no proof, and a mathematical truth not rigorously demonstrated is not demonstrated at all.

*The Collected Mathematical Papers of James Joseph Sylvester*  
(Volume 2) (p. 200)  
At The University Press. Cambridge, England. 1904–12

### **Teller, Edward** 1908–2003

Hungarian-born American nuclear physicist

A proof in science does more than eliminate doubt. It eliminates inconsistencies and provides the underlying logical basis of the statement.

*The Pursuit of Simplicity*  
Chapter I (p. 20)  
Pepperdine University Press. Malibu, California, USA. 1981

### **Thurston, William Paul** 1946–

American mathematician

Why do we try to prove things anyway? I think because we want to understand them. We also want a sense of certainty. Mathematics is a very deep field. It's results are stacked very high, and they depend on each other a lot. You build a tower of blocks but if one block is a bit wobbly, you can't build the tower very high before it will fall over. So I think mathematicians are concerned about rigor, which gives us certainty. That's one reason that we concentrate so much more on proof than do other scientists. But I also think proofs are so that we can understand. I guess I like explanations rather than step-by-step rigorous demonstrations.

In D. Albers, G. Alexanderson and C. Reid  
*More Mathematical People: Contemporary Conversations* (pp. 340–341)  
Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

### **Truzzi, Marcello** 1935–2003

Danish-born American sociology professor

And when such claims are extraordinary, that is, revolutionary in their implications for established scientific generalizations already accumulated and verified, we must demand extraordinary proof.

Editorial  
*Zetetic Scholar*, Volume 1, Number 1, Fall/Winter, 1976 (p. 4)

### **Tymoczko, Thomas** 1943–86

Logician

A proof is a construction that can be looked over, reviewed, verified by a rational agent. We often say that a proof must be perspicuous or capable of being checked by hand. It is an exhibition, a derivation of the conclusion, and it needs nothing outside itself to be convincing. The mathematician surveys the proof in its entirety and thereby comes to know the conclusion.

The Four Color Problems

A teacher once, having some fun,

In presenting that two equals one,

Remained quite aloof

From his rigorous proof;

But his class was convinced and undone.

*Mathematical Magazine*, Volume 64, Number 2, April, 1991 (p. 91)**PROPHECY****Clarke, Arthur C.** 1917–

English science and science fiction writer

With monotonous regularity, apparently competent men have laid down the law about what is technically possible or impossible – and have been proved utterly wrong, sometimes while the ink was scarcely dry from their pens.

*Profiles of the Future: An Inquiry into the Limits of the Possible*

Chapter 1 (p. 1)

Harper &amp; Row, Publishers. New York, New York, USA. 1973

Before one attempts to set up in business as a prophet, it is instructive to see what success others have made of this dangerous occupation – and it is even more instructive to see where they have failed.

*Profiles of the Future: An Inquiry into the Limits of the Possible*

Chapter 1 (p. 1)

Harper &amp; Row, Publishers. New York, New York, USA. 1973

...if we have learned one thing from the history of invention and discovery, it is that, in the long run – and often in the short one – the most daring prophecies seem laughably conservative.

*The Exploration of Space*

Chapter 11 (p. 111)

Harper &amp; Brothers Publishers. New York, New York, USA. 1951

**PROPORTION****Dalton, John** 1766–1844

English chemist and physicist

The doctrine of definite proportions appears to me mysterious unless we adopt the atomic hypothesis. It appears like the mystical ratios of Kepler, which Newton so happily elucidated. The prosecution of the investigation can terminate, I conceive, in nothing but in the system which I adopt of particle applied to particle, as exhibited in my diagrams.

In Henry Enfield Roscoe and Arthur Harden

*A New View of the Origin of Dalton's Atomic Theory*

Chapter V (p. 159)

Macmillan &amp; Co Ltd. London, England. 1896

**Duke of Argyll (George Douglas****Campbell)** 1823–1900

English statesman and writer on science, religion, and politics

The active principles of these two substances [tea and strychnine], “theine” and “strychnine,” are identical so far as their elements are concerned, and differ from each other only in the proportions in which they are combined. Such is the power of numbers in the laboratory of Nature! What havoc in this world, so full of life, would be made by blind chance gambling with such powers as these! What confusion, unless they were governed by laws whose certainty makes them capable of fine adjustment, and therefore subject to accurate control!

*The Reign of Law* (4th American edition)

George Routledge &amp; Sons. New York, New York, USA. 1873

**Swift, Jonathan** 1667–1745

Irish-born English writer

What vexes me most is, that my female friends, who could bear me very well a dozen years ago, have now forsaken me, although I am not so old in proportion to them as I formerly was: which I can prove by arithmetic, for then I was double their age, which now I am not.

*The Works of Alexander Pope, Esq.* Volume 9

Letter from Alexander Pope (p. 200)

Printed for J.&amp;P. Knapton. London, England. 1751

**PROPORTIONAL****Lanchester, Frederick William** 1868–1946

English polymath and engineer

...the *fighting strength* of a force may be broadly defined as proportional to *the square of its numerical strength multiplied by the fighting value of its individual units.*

*Aircraft In Warfare*

Chapter V (p. 48)

Constable &amp; Co. London, England. 1916

## PROPOSITION

**Cohen, Morris Raphael** 1880–1947

American philosopher

Propositions have been treated linguistically as declarative sentences, psychologically as judgments, and logically as that which is true or false. The division of intellectual workers into grammarians, psychologists and logicians has tended to make us treat these supplementary modes of approach as if they were mutually exclusive. And this tendency to emphasize one element to the exclusion of others shows itself in the strife between nominalists, conceptualists or mentalists, and logical realists.

*A Preface to Logic*

Chapter II (p. 23)

Routledge. London, England. 1946

**de Morgan, Augustus** 1806–71

English mathematician and logician

In all matters we have learnt to say that we do not know what things *are*, we only know something *about them*: that is, we have subjects with attributes, and therefore propositions which can be affirmed.

*Transactions of the Cambridge Philosophical Society*

On Infinity: and on the Sign of Equality (p. 151)

At the University Press. Cambridge, England. 1871

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

For my part, I am quite unable to say whether the proposition is true or not. I can deduce it by trustworthy reasoning from certain other propositions or axioms, which are supposed to be still more elementary. If these axioms are true, the proposition is true; if the axioms are not true, the proposition is not true universally. Whether the axioms are true or not I cannot say, and it is outside my province to consider.

*Space, Time and Gravitation*

Prologue (p. 1)

At the University Press. Cambridge, England. 1921

**Keyser, Cassius Jackson** 1862–1947

American mathematician

If he contend, as sometimes he will contend, that he has defined all his terms and proved all his propositions, then either he is a performer of logical miracles or he is an ass; and, as you know, logical miracles are impossible.

*Mathematical Philosophy: A Study of Fate and Freedom*

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

The belief or unconscious conviction that all propositions are of the subject-predicate form – in other words, that every fact consists in some thing having some

quality – has rendered most philosophers incapable of giving any account of the world of science and daily life.

*Our Knowledge of the External World*

Lecture II (p. 45)

The Open Court Publishing Company. Chicago, Illinois. 1914

...it is undesirable to believe a proposition when there is no ground whatever for supposing it true.

*Sceptical Essays*

Introduction (p. 1)

George Allen & Unwin. London, England. 1928

...I wish to propose for the reader's favourable consideration a doctrine which may, I fear, appear wildly paradoxical and subversive. The doctrine in question is this: that it is undesirable to believe a proposition when there is no ground whatever for supposing it true...

*Skeptical Essays*

Chapter I (p. 11)

W.W. Norton & Company, Inc. New York, New York, USA. 1928

**Shaw, George Bernard** 1856–1950

Irish comic dramatist and literary critic

My method for examining any proposition is to take its two extremes, both of them impracticable; make a scale between them; and try to determine at what point on the scale it can best be put into practice. A mother who has to determine the temperature of her baby's bath has two fixed limits to work between. The baby must not be boiled and must not be frozen.

*Everybody's Political What's What?*

Chapter 20 (p. 162)

Dodd, Mead & Company. New York, New York, USA. 1944

**Stewart, Dugald** 1753–1828

Scottish philosopher

...the speculative propositions of mathematics do not relate to facts; and that all we are convinced of by any demonstration in the science, is of a necessary connexion subsisting between certain suppositions and certain conclusions. When we find these suppositions actually take place in a particular instance, the demonstration forces us to apply the conclusion.

*Elements of the Philosophy of the Human Mind*

Part Third, Chapter I, Section III (p. 180)

Carey, Lea & Carey. Philadelphia, Pennsylvania, USA. 1827

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

It is more important that a proposition be interesting than that it be true. This statement is almost a tautology. For the energy of operation of a proposition in an occasion of experience is its interest and is its importance. But of course a true proposition is more apt to be interesting than a false one.

*Process and Reality: An Essay in Cosmology*

Part III, Chapter IV, Section II (pp. 395–396)

The Macmillan Company. New York, New York, USA. 1929

**PROTEIN**

**Asimov, Isaac** 1920–92  
American author and biochemist

You see, proteins, as I probably needn't tell you, are immensely complicated groupings of amino acids and certain other specialized compounds, arranged in intricate three-dimensional patterns that are as unstable as sunbeams on a cloudy day. It is this instability that is life, since it is forever changing its position in an effort to maintain its identity – in the manner of a long rod balanced on an acrobat's nose.

*Pebbles in the Sky*

Chapter 3 (p. 33)

Doubleday & Co. Garden City, New York, USA. 1950

**PROTON**

**Ball, Philip** 1962–  
English science writer

As far as atoms are concerned, protons and electrons are like knives and forks at the dinner table; no matter how big the table, there are equal numbers of each.

*Life's Matrix: A Biography of Water*

Part One, Chapter 1 (p. 7)

Farrar, Straus & Giroux. New York, New York, USA. 2000

**Dyson, Freeman J.** 1923–  
American physicist and educator

The most serious uncertainty affecting the ultimate fate of the universe is the question whether the proton is absolutely stable against decay into lighter particles. If the proton is unstable, all matter is transitory and must dissolve into radiation.

Time Without End: Physics and Biology in an Open Universe

*Reviews of Modern Physics*, Volume 51, Number 3, July 1979

**PROTOPLASM**

**Bradley, Jr., John Hodgdon** 1898–1962  
American geologist

Life carries on. Through all the tortures inflicted by a changing earth, through glacial cold and desert thirst, through flood and famine, the protoplasm has climbed with unabating vigor toward the future.

*Parade of the Living*

Part III, Chapter XVIII (p. 248)

Coward-McCann, Inc. New York, New York, USA. 1930

**Peattie, Donald Culross** 1898–1964  
American botanist, naturalist, and author

Like most mysterious things this vital stuff is under our noses and yet we do not perceive it. But with intricate differential stains, with special illuminations and lenses, men at the microscope have sighted it, distant in

the perspectives of the minute. Chemists have assayed it delicately in vitro, and physicists have predicted its structure. It is colorless, neither solid nor fluid, yet a blind man touching what is composed of it, recognizes its unique quality. For it is the body of life, and its name is protoplasm.

*Flowering Earth*

Chapter 5 (p. 52)

G.P. Putnam's Sons. New York, New York, USA. 1939

Protoplasm, the almost invisible, is the organizer of all the inconceivable multiplicity of life's organisms. In the fantastic lip of the orchid, the two microscopic atoms of the diatom, the lashing sperms of the bull kelp, in the lonely wind-contorted cypress, in the banyan's hundred stems, protoplasm is present, directing, determining. For in one cell-full of that translucent ambiguous stuff lies the complete authority for an organism's future. So, sucking at the same breasts of earth, putting out leaves to catch the same sunlight, a windflower and a walking-fern hold to their small discrete identities.

*Flowering Earth*

Chapter 5 (p. 53)

G.P. Putnam's Sons. New York, New York, USA. 1939

**PROVE**

**Mellor, Joseph William** 1863–1938  
Chemist

Untutored minds are very prone to mistake inferences for observations, and prepossessions for facts; their observations and their judgments are alike vitiated by dogma and prejudice; they do not seek to investigate, they seek to prove.

*A Comprehensive Treatise on Inorganic and Theoretical Chemistry*  
(Volume 1)

Chapter I (p. 7)

Longman, Green & Co. London, England. 1922

**von Goethe, Johann Wolfgang** 1749–1832  
German poet, novelist, playwright, and natural philosopher

It would be foolish for a man not to believe in his mistress's love because she could not prove it to him mathematically. She can mathematically prove her dowry, but not her love.

*Conversations of Goethe With Eckermann and Soret*

Wed., Dec. 20 (p. 181)

George Bell & Sons. London, England. 1883

**PROVINCIAL REGION**

**Forbes, Edward** 1815–54  
English naturalist

Everyone knows that the same animals and plants are not found everywhere...but that they are distributed so as to be gathered together in distinct zoological and botanical

provinces, of greater or less extent, according to their degree of limitation by physical conditions, whether features of the earth's outline or climate.

*The Natural History of the European Seas*

Chapter 1 (p. 1)

John van Voorst. London, England. 1859

## PSEUDOSCIENCE

**de Morgan, Augustus** 1806–71

English mathematician and logician

The pseudomath is a person who handles mathematics as the monkey handled the razor.

*A Budget of Paradoxes*

Pseudomath, Philomath, and Graphomath (p. 473)

Longmans, Green. London, England. 1872

**Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

A Pseudo-science consists of a *nomenclature*, with a self-adjusting arrangement, by which all positive evidence, or such as favors its doctrines, is admitted, and all negative evidence, or such as tells against it, is excluded.

*The Professor at the Breakfast-table*

A Short Lecture on Phrenology (p. 283)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1916

**Sagan, Carl** 1934–96

American astronomer and author

Pseudoscience is embraced, it might be argued, in exact proportion as real science is misunderstood.

*The Demon-Haunted World: Science as a Candle in the Dark*

Chapter 1 (p. 15)

Random House, Inc. New York, New York, USA. 1995

I worry that, especially as the Millennium edges nearer, pseudoscience and superstition will seem year by year more tempting, the siren song of unreason more sonorous and attractive. Where have we heard it before? Whenever our ethnic or national prejudices are aroused, in times of scarcity, during challenges to national self-esteem or nerve, when we agonize about our diminished cosmic place and purpose, or when fanaticism is bubbling up around us-then, habits of thought familiar from ages past reach for the controls. The candle flame gutters. Its little pool of light trembles. Darkness gathers. The demons begin to stir.

*Demon-Haunted World: Science As a Candle in the Dark*

Chapter 2 (pp. 26–27)

Random House, Inc. New York, New York, USA. 1995

## PSYCHICAL CONSTITUTION

**Pavlov, Ivan Petrovich** 1849–1936

Russian physiologist

Essentially only one thing in life interests us: our psychical constitution, the mechanism of which was and is

wrapped in darkness. All human resources, art, religion, literature, philosophy and historical sciences, all of them join in bringing light in this darkness.

*Nobel Lectures, Physiology or Medicine 1901–1921*

Nobel lecture for award received in 1904

Physiology of Digestion (pp. 154–155)

Elsevier Publishing Company. Amsterdam, Netherlands. 1967

## PUBLIC SPEAKING

**Sylvester, James Joseph** 1814–97

English mathematician

When called upon to speak in public [the mathematician] feels as a man might...who has passed all his life in peering through a microscope, and is suddenly called upon to take charge of an astronomical observatory. He has to get out of himself, as it were, and change the habitual focus of his vision.

*The Collected Mathematical Papers of James Joseph Sylvester*

(Volume 3)

An Inquiry into Newton's Rule for the Discovery of Imaginary Roots

(p. 73)

University Press. Cambridge, England. 1904–1912

## PUBLICATION

**Anderson, Martin** 1936–

[E]very article authored in a prestigious journal in a scholars field of study is like a notch in the six-gun of an Old West gun-fighter, a proof of talent and visible building block of the academic intellectual's reputation pyramid.

*Imposters in the Temple* (p. 81)

**Brewster, George**

No biographical data available

It has long been our impression, and is so still, that no author should appear before the public in the publication of any work unless he can produce, first. SOMETHING NEW. Second. SOMETHING IMPORTANT. Third. SOMETHING TRUE. Fourth. SOMETHING INTELLIGIBLE.

*A New Philosophy of Matter, Showing the Identity of All the*

*Imponderables* (3rd edition)

Chapter 1 (p. 14)

Edward H. Fletcher. New York, New York, USA. 1858

**Buckle, Henry Thomas** 1821–62

English historian

The publications of our scientific institutions, and of our scientific authors, overflow with minute and countless details, which perplex the judgment, and which no memory can retain. In vain do we demand that they should be generalized, and reduced into order. Instead of that, the heap continues to swell. We want ideas, and get more facts. We hear constantly what nature is doing, but we rarely hear what man is thinking.

*History of Civilization in England* (Volume 2), Part II  
Chapter VI (p. 396)  
Hearst's International Library Co. New York, New York, USA. 1913

**Colton, Charles Caleb** 1780–1832  
English sportsman and writer

The learned have often amused themselves by publishing the follies of the dunces; but if the dunces would retaliate by publishing the blunders of the learned, they might for once put forth a volume that would not be dull, although it would be large.

*Lacon: Or, Many Things in Few Words*  
CCCCIII (p. 176)  
Longman, Rees, Orme, Brown & Green. London, England. 1826

**Glaisher, James Whitbread Lee** 1848–1928  
English mathematician

In other branches of science, where quick publication seems to be so much desired, there, may possibly be some excuse for giving to the world slovenly or ill-digested work, but there is no such excuse in mathematics. The form ought to be as perfect as the substance and the demonstrations as rigorous as those of Euclid. The mathematician has to deal with the most exact facts of nature, and he should spare no effort to render his interpretation worthy of his subject, and to give to his work its highest degree of perfection. ‘*l’aura sed maturii*’ was Gauss’s motto.

*Report of the Sixtieth Meeting of the British Association for the Advancement of Science*  
Presidential address (p. 725)  
John Murray. London, England. 1891

**Logan, Wilson** 1907–1990  
American teacher and university administrator

There is the necessity of bringing results to light in the form of publication, for in the academic scheme of things results unpublished are little better than those never achieved.

*The Academic Man* (p. 197)

**Poincaré, Jules Henri** 1854–1912  
French mathematician and theoretical astronomer

It would seem that in this situation I should abstain from all publication so long as I have not solved the problem, but after fruitless efforts for many months it seems to me wisest to let the whole problem ripen during several years. That would indeed be well, were I sure of someday being able to take it up again, but at my age I cannot go bail for this. On the other hand, the importance of the subject is great...and the totality of results so far obtained is too considerable for me to resign myself to definitively allowing them to become unfruitful. I may hope that the mathematicians who interest themselves in the problem

and who will be more fortunate than I without doubt will find some means to resolve it.

In James Byrnie Shaw  
*Henri Poincare as An Investigator*  
*Popular Science Monthly*, March, 1913 (p. 223)

## PUBLISH

**Heald, Franklin Hermann**  
No biographical data available

...I do not care to longer delay the copyrighting of present discoveries, lest some more active fellow mortal should anticipate me and carry my message to Garcia.

*The Procession of Planets* (2nd edition) (p. 8)  
Franklin H. Head. 1901

**Pliny (C. Plinius Secundus)** 23–79  
Roman savant and author

It is madness to harass the mind, as some have done, with attempts to measure the world, and to publish these attempts

In John Bostock and H.T. Riley  
*Natural History*  
Book II, Chapter 1  
Taylor & Francis. London, England. 1855

## PUBLISH OR PERISH

**Douglas, George H.** 1934–

[T]he old edict “publish or perish” has something rather comical about it. For the most part, professors don’t publish a great deal, but they usually don’t perish either.

*Education without Impact*  
Chapter 10 (p. 91)  
Carol Publishing Group. New York, New York, USA. 1992.

**Pelikan, Jaroslav** 1923–

...the scholarly record is ultimately a written one: this is the foundation for the principle, often maligned and sometimes abused of “publish or perish.”

*Scholarship and Its Survival*  
Chapter V (p. 61)  
The Carnegie Foundation for the Advancement of Teaching. Princeton, New Jersey, USA. 1983

**Smith, Page** 1917–1995  
No biographical data available

Under the publish-or-perish standard, the university is perishing. Research *and* publication are not necessarily related.

*Killing the Spirit*  
Chapter 13 (p. 180)  
Journal of Chemical Education. Easton Pennsylvania, USA. 1956  
Viking Penguin. New York, New York, USA. 1990

**PURITY****Nilson, Lars Fredrik**

No biographical data available

On the purity of substances depends the perfection of the whole.

In Mary Elvira Weeks

*The Discovery of the Elements* (p. 407)

Journal of Chemical Education. Easton Pennsylvania, USA. 1956

**PURPOSE****Einstein, Albert** 1879–1955

German-born physicist

How strange is the lot of us mortals! Each of us is here for a brief sojourn; for what purpose he knows not, though he sometimes thinks he senses it. But without deeper reflection one knows from daily life that one exists for other people – first of all for those upon whose smiles and well-being our own happiness is wholly dependent, and then for the many, unknown to us, to whose destinies we are bound by the ties of sympathy. A hundred times every day I remind myself that my inner and outer life are based on the labors of other men, living and dead, and that I must exert myself in order to give in the same measure as I have received and am still receiving.

Chapter XXXI (p. 407)

Harper & Brothers Publishers. New York, New York, USA. 1906

## PYTHAGORAS

**Browne, Sir Thomas** 1605–82

English author and physician

I have often admired the mystical way of Pythagoras, and the secret magic of numbers.

*Religio Medici*

12

Elliot Stock. London, England. 1883

**James, Jamie**

No biographical data available

Pythagoras defies categorization: a primary thinker in philosophy, mathematics, music and cosmology, he may in fact be best thought of as one who challenges the legitimacy of categories. Anyone who conceives of Pythagoras as the inventor of a geometric theorem, the formulator of laws of music theory, and the utterer of cryptic aphorisms will miss the essence of his thought entirely, for the

whole point of what he taught is the interrelatedness of all human knowledge.

*The Music of the Spheres: Music, Science, and the Natural Order of the Universe*

Chapter 2 (p. 23)

Springer. New York, New York, USA. 1995

**Koestler, Arthur** 1905–83

Hungarian-born English writer

The sixth century scene evokes the image of an orchestra expectantly tuning up, each player absorbed in his own instrument only, deaf to the caterwaulings of the others. Then there is a dramatic silence, the conductor enters the stage, raps three times with his baton, and harmony emerges from the chaos. The maestro is Pythagoras of Samos, whose influence on the ideas, and thereby on the destiny, of the human race was probably greater than that of any single man before or after him.

*The Sleepwalkers*

Part I, Chapter I (p. 25)

The Macmillan Co. New York, New York, USA. 1968

**Thompson, William Irvin**

No biographical data available

If you listen to Werner Heisenberg lecturing about Pythagoreanism in his own work on the quantum theory, you will hear him emphasize that the basic building blocks of nature are number and pattern, that the universe is not made out of matter but out of music. The historians of science I worked with in the University regarded Pythagoras as a magician, a shamanistic madman from the cults of the Near East; Yet both Whitehead and Heisenberg regarded him as a genius of the highest order who laid the foundation upon which our entire Western civilization is based.

*Darkness and Scattered Light* (p. 110)

Anchor Books. London, England. 1978

## PYTHAGOREAN THEOREM

**Smith, David Eugene** 1860–1945

Mathematician

Before Mars was, or the Earth, or the Sun, and long after each has ceased to exist; there and here and in the most remote regions of stellar space – the square on the hypotenuse was and is, and ever shall be equivalent to the sum of the squares on the sides. All our little theories of life, all our childish speculations as to death, all our trivial bickerings of the schools – all these are but vanishing motes in the sunbeam compared with the double eternity, past and future, of such a truth as this.

*Mathematics in the Training for Citizenship*

*Teachers College Record*, Volume XVIII, Number 3, May, 1917 (p. 218)

## Q

### QUACK

**Aesop** ca. 620 BCE–560 BCE  
Greek fabulist and author

A frog once upon a time came forth from his home in the marsh and proclaimed to all the beasts that he was a learned physician, skilled in the use of drugs and able to heal all diseases. A Fox asked him, “How can you pretend to prescribe for others when you are unable to heal your own lame gait and wrinkled skin?”

*The Quack Frog*

SeaStar Books. New York, New York, USA. 2000

**Ames, Nathaniel** 1708–64  
American almanac maker

Where silly quacks are most respected, there honest doctors are neglected. Petty Attorneys and Quack Doctors are like Wolves and scabbed Sheep among the Flock. One devours and the other breeds the rot.

*An Astronomical Diary, or, an Almanac for...1734*

Printed for the Booksellers and sold at their shops. Boston, Massachusetts, USA. 1734

**Bernstein, Al**  
American writer and stage performer

You can usually tell a quack doctor by his bill.  
*Quote, the Weekly Digest, July 28, 1968 (p. 77)*

**Bishop, Samuel**  
No biographical data available

When quacks, as quacks may by good luck, to be sure,  
Blunder out at haphazard a desperate cure,  
In the prints of the day, with due pomp and parade,  
Case, patient, and doctor are amply display'd.  
And this is quite just – and no mortal can blame it;  
If they save a man's life, they've a right to proclaim it  
But there's reason to think they might save more lives still,  
Did they publish a list of the numbers they kill!

In William Davenport Adams

*English Epigrams*

Audi Alteram Partem, cclxxxv

G. Routledge. London, England. 1878

**Browne, Borden Parker** 1847–1910  
American Christian philosopher and theologian

... science acts like an enchantment to disarm criticism;  
and mental quacks perceiving this, hasten to call their  
nostrums science.

*Studies in Theism*

Chapter II (p. 86)

Phillips & Hunt. New York, New York, USA. 1879

**Clowes, William** 1540–1604  
Surgeon and medical author

Yea, nowadays, it is too apparent to see how tinkers, tooth-drawers, peddlers, ostlers, carters, porters, horse-gelders, and horse-leeches, idiots, apple-squires, broom-men, bawds, witches, conjurers, soothsayers and sow-gelders, rogues, ratcatchers, runagates and proctors of Spittle-houses, with such other like rotten and stinking weeds do in town and country, without order, honesty or skill, daily abuse both Physic and Surgery, having no more perseverance, reason or knowledge in this art than has a goose, but only a certain blind practice, without wisdom or judgment, and most commonly use one remedy for all diseases and one way of curing to all persons, both old and young, men, and women and children, which is as possible to perform or to be true as for a shoemaker with one last to make a shoe fit for every man's foot, and this is one principal cause [why] so many perish.

*Selected Writings*

Of Blind Buzzards and Cracking Cumbatters (pp. 77–78)

Harvey & Blythe. London, England. 1948

**Colton, Charles Caleb** 1780–1832  
English sportsman and writer

It is better to have recourse to a quack, if he can cure the disorder, although he cannot explain it, than to a physician, if he can explain our disease, but cannot cure it.

*Lacon; or Many Things in a Few Words*

1:170

William Gowans. New York, New York, USA. 1849

**Crabbe, George** 1754–1832  
English poet

A potent quack, long versed in human ills,  
Who first insults the victim whom he kills...

*The Poetical Works of George Crabbe*

The Village L. 282–283 (p. 15)

Oxford University Press, Inc. London, England. 1908

**Graves, Richard**  
No biographical data available

A doctor, who, for want of skill,  
Did sometimes cure – and sometimes kill;  
Contriv'd at length, by many a puff,  
And many a bottle fill'd with stuff,  
To raise his fortune, and his pride;  
And in a coach, forsooth! must ride.  
His family coat long since worn out,  
What arms to take, was all the doubt.  
A friend, consulted on the case,  
Thus answer'd with a sly grimace:  
“Take some device in your own way,  
Neither too solemn nor too gay;  
Three ducks, suppose; white, grey, or black;  
And let your motto be, Quack! quack!”

In William Davenport Adams

*English Epigrams*

A Doctor's Motto, cclxxxii

G. Routledge. London, England. 1878

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

The charlatan is always the pioneer. From the astrologer came the astronomer, from the alchemist the chemist, from the mesmerist the experimental psychologist. The quack of yesterday is the professor of to-morrow.

The Leather Funnel

*McClure's Magazine*, Volume 20, Number 1, November, 1902 (p. 19)

**Hood, Thomas** 1799–1845

English poet and editor

Not one of these self-constituted saints,

Quacks – not physicians – in the cure of souls.

*The Complete Poetical Works of Thomas Hood*

Ode to Rae Wilson ESQ.

Greenwood Press, Publishers. Westport, Connecticut, USA. 1980

**Jenner, Edward** 1749–1823

English physician

I've dispatc'd, my dear madam, this scrap of a letter,  
To say that Miss –

– is very much better.

A Regular Doctor no longer she lacks,

And therefore I've sent her a couple of Quacks.

In William Davenport Adams

*English Epigrams*

Sent to a Patient, with the Present of a Couple of Ducks, cclxxxiii

G. Routledge. London, England. 1878

**Lydston, George Frank** 1858–1923

American urologist

The quack doesn't find out what the matter is but, to the patient's cost, he does find a lot of things that do not exist, and all because the reputable physician flouted as imaginary conditions which, to the patient's sensitive and morbid mind, are always terribly real.

Sexual Neurasthenia and the Prostate

*Medical Record*, Volume 81, 1912

**Massinger, Philip** 1583–1640

English dramatic poet

Out, you impostors!

Quacksalving, cheating mountebanks! your skill

Is to make sound men sick, and sick men kill.

*The Plays of Philip Massinger* (Volume 1)

The Virgin-Martyr, Act IV, Scene I (p. 78)

G. & W. Nicol. London, England. 1805

**Shaw, George Bernard** 1856–1950

Irish comic dramatist and literary critic

Did I hear from the fireside armchair the bow-wow of the old school defending its drugs? Ah, believe me, Paddy,

the world would be healthier if every chemist's shop in England were demolished. Look at the papers! full of scandalous advertisements of patent medicines! a huge commercial system of quackery and poison. Well, whose fault is it? Ours. I say, ours. We set the example. We spread the superstition. We taught the people to believe in bottles of doctor's stuff; and now they buy it at the stores instead of consulting a medical man.

*The Doctor's Dilemma*

Act I (p. 27)

Brentano's. New York, New York, USA. 1920

**Wycherley, William** 1640–1760

English dramatist

A quack is as fit for a pimp as a midwife for a bawd: they are still but in their way, both helpers of nature.

*The Country Wife*

Act I (p. 5)

Random House, Inc. New York, New York, USA. 19 –

## QUADRATIC

### Author undetermined

Beneath the great pyramid, upon a gorgeous throne cast in the furnaces of Tubal-Cain, sat the Grand Quadratic, surrounded by the Dukes, Marshals, Tetrarchs and Captains of the realm. The majesty of an hundred kings clothed him as a garment. The Lord High Coefficient, stood at his right hand, the First Fluxion of the Empire at his left, both in magnificent apparel, and holding certain singular emblems appertaining to the crown.

The Symbol of Darkness

*The Knickerbocker*, Volume 34, Number 3, September, 1849 (p. 213)

## QUALITIES

**Darwin, Charles Robert** 1809–82

English naturalist

I am inclined to agree with Francis Galton in believing that education and environment produce only a small effect on the mind of anyone, and that most of our qualities are innate.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 1)

Chapter I (p. 21)

D. Appleton & Company. New York, New York, USA. 1896

**Gregory, Sir Richard Arman** 1864–1952

British science writer and journalist

The only qualifications required for the study of Nature's story-book are devotion to truth, and sincerity of spirit; all the other qualities will come to the possessor of these, and a habit of mind will be developed that tries to face all facts squarely and honestly, despises shams and false conventions, and exposes superstition whenever it is encountered.

*Discovery; or, The Spirit and Service of Science*  
Chapter III (p. 44)  
Macmillan & Company Ltd. London, England. 1918

## QUANTIFICATION

### Platt, John R.

No biographical data available

Today we preach that science is not science unless it is quantitative. We substitute correlation for causal studies., and physical equations for organic reasoning. Measurements and equations are supposed to sharpen thinking, but...they more often tend to make the thinking non-causal and fuzzy.

Strong Inference

*Science*, Volume 146, Number 3641, 16 October, 1964 (pp. 351–352)

### Sagan, Carl 1934–96

American astronomer and author

Quantify. If whatever it is you're explaining has some measure, some numerical quantity attached to it, you'll be much better able to discriminate among competing hypotheses. What is vague and qualitative is open to many explanations.

*The Demon-Haunted World: Science as a Candle in the Dark*  
Chapter 12 (p. 211)

Random House, Inc. New York, New York, USA. 1995

### Whitehead, Alfred North 1861–1947

English mathematician and philosopher

Elegant intellects which despise the theory of quantity are but half developed.

*The Aims of Education*

Presidential Address

Mathematical Association of England, 1916

## QUANTITY

### Hamilton, William 1788–1856

Scottish philosopher

In Mathematics, quantity, when not divorced from form, is itself really presented to the intellect in a lucid image of phantasy, or in a sensible diagram; and the quantities which cannot thus be distinctly construed to imagination and sense, are, as only syntheses of unity, repetitions of identity, adequately, though conventionally, denoted in the vicarious combination of a few simple symbols.

*Discussions on Philosophy and Literature, Education and University Reform*

On the Study of Mathematics as an Exercise of the Mind (p. 274)

Harper & Brothers Publishers. New York, New York, USA. 1861

## QUANTUM

### Bohr, Niels Henrik David 1886–1962

Danish physicist

There is no quantum world. There is only an abstract quantum physical description. It is wrong to think that the task of physics is to find out how nature is. Physics concerns what we can say about nature.

Quoted in A. Petersen

*The Philosophy of Niels Bohr*

*Bulletin of Atomic Scientists*, Volume 19, Number 7, 1963 (p. 12)

### Wheeler, John Archibald 1911-

American physicist and educator

The quantum is the crack in the armor that covers the secret of existence.

In Denis Brian

*The Voice of Genius*

Chapter Six (p. 122)

Perseus Publishing. Cambridge, Massachusetts, USA. 1995

## QUANTUM FIELD THEORY

### Witten, Edward 1951–

American theoretical physicist

The Quest to understand string theory may well prove to be a central theme in physics of the twenty-first century. To understand this quest in mathematical terms and reap the full fruits, it will be necessary to develop QFT as a mathematical subject.

Physical Law and the Quest for Mathematical Understanding

*Bulletin of the American Mathematical Society*, Volume 40, Number 1, October 2, 2002 (p 24).

## QUANTUM MECHANICS

### Abbey, Edward 1927–89

American environmentalist and nature writer

Quantum mechanics provides us with an approximate, plausible, conjectural explanation of what actually is, or was, or may be taking place inside a cyclotron during a dark night in February.

*A Voice Crying in the Wilderness: Notes from a Secret Journal*

Chapter 10 (p. 93)

St. Martin's Press. New York, New York, USA. 1989

### Barrow, John D. 1952–

English theoretical physicist

We live in the in-between world...betwixt the "devil" of the quantum world and the "deep blue sea" of curved space.

*The World Within the World* (p. 161)  
Clarendon Press. Oxford, England. 1988

**Belinfante, Frederik Jozef** 1913–1991  
Dutch-born American physicist

If I get the impression that Nature itself makes the decisive choice what possibility to realize, where quantum theory says that more than one outcome is possible, then I am ascribing personality to Nature, that is to something that is always everywhere. Omnipresent eternal personality which is omnipotent in taking the decisions that are left undetermined by physical law is exactly what in the language of religion is called God.

In John D. Barrow  
*The World Within the World* (p. 157)  
Clarendon Press. Oxford, England. 1988

**Bohr, Niels Henrik David** 1886–1962  
Danish physicist

Anyone who is not shocked by quantum theory has not understood it.

In N.C. Panda  
*Maya in Physics* (p. 73)  
Motilal Banarsdass Publishers. Delhi, India. 1991

If anybody says he can think about quantum problems without getting giddy, that only shows he has not understood the first thing about them.

In Ruth Moore  
*Niels Bohr* (p. 127)  
MIT Press. Cambridge, Massachusetts, USA. 1985

There is no quantum world. There is only an abstract quantum physical description. It is wrong to think that the task of physics is to find out how nature is. Physics concerns what we can say about nature.

The Philosophy of Niels Bohr  
*Bulletin of the Atomic Scientists*, Volume 19, Number 7, September, 1963 (p. 12)

...the fundamental postulate of the indivisibility of the quantum is itself from the classical point of view, an irrational element which inevitably requires us to forgo a causal mode of description and which, because of the coupling between phenomena and their observation, forces us to adopt a new mode of description designated as complementary in the sense that any given application of classical concepts precludes the simultaneous use of other classical concepts which in a different connection are equally necessary for the elucidation of the phenomena.

*Atomic Theory and the Description of Nature*  
Introductory Survey (p. 10)  
Cambridge University Press. Cambridge, England. 1934

[Quantum mechanics requires] a final renunciation of the classical ideal of causality and a radical revision of our attitude towards the problem of physical reality.

*Atomic Physics and Human Knowledge*

Unity of Knowledge (p. 60)  
John Wiley & Sons. New York, New York, USA. 1958

...in quantum mechanics, we are not dealing with an arbitrary renunciation of a more detailed analysis of atomic phenomena, but with a recognition that such an analysis is in principle excluded.

*Atomic Physics and Human Knowledge*  
Unity of Knowledge (p. 62)  
John Wiley & Sons. New York, New York, USA. 1958

**Born, Max** 1882–1970  
German-born English physicist

[In quantum mechanics] we have the paradoxical situation that observable events obey laws of chance, but that the probability for these events itself spreads according to laws which are in all essential features causal laws.

*Natural Philosophy of Cause and Chance*  
Chapter IX (p. 103)  
At The Clarendon Press. Oxford, England. 1949

**Bridgman, Percy Williams** 1882–1961  
American physicist

The explanatory crisis which now confronts us in relativity and quantum phenomena is but a repetition of what has occurred many times in the past.... Every kitten is confronted with such a crisis at the end of nine days.

*The Logic of Modern Physics*  
Chapter II (p. 42)  
The Macmillan Company. New York, New York, USA. 1927

**Calvin, William H.** 1939–  
Theoretical neurophysiologist

Quantum mechanics is probably essential to consciousness in about the same way as crystals were once essential to radios, or spark plugs are still essential to traffic jams. Necessary, but not sufficient.

*How Brains Think: Evolving Intelligence, Then and Now*  
Chapter 3 (p. 36)  
Basic Books, Inc. New York, New York, USA. 1996

### Captain Janeway (Fictional character)

Who wanted to muck around in the dirt when you could be studying quantum mechanics?

*STAR TREK: Voyager*  
Resolutions  
Television program  
Season 2, 1996

**Cole, K. C.** 1946–  
American science writer

The introduction of quantum theory in the early 1920s marked one of the greatest revolutions in all of physical science. It could not (cannot) adequately be described in metaphors borrowed from our previous view of reality, because many of those metaphors no longer apply. This inability to imagine quantum goings-on led to the

popular perception that the realm of the inner atom is fuzzy, elusive, murky, and uncertain. On the contrary, most physicists would agree that what quantum theory has brought to science is exactly the opposite – concreteness and clarity.

*First You Build a Cloud and Other Reflections on Physics as a Way of Life*

Chapter Seven (p. 113)

Harcourt Brace & Co. Orlando, Florida, USA. 1999

### **DeWitt, Bryce** 1923–2004

American theoretical physicist

### **Graham, Neill**

No biographical data available

No development of modern science has had a more profound impact on human thinking than the advent of quantum theory. Wrenched out of centuries-old thought patterns, physicists of generation ago found themselves compelled to embrace a new metaphysics. The distress which the reorientation caused continues to the present day. Basically physicists have suffered a severe loss: their hold on reality.

Resource IQM-1 on the Interpretation of Quantum Mechanics

*American Journal of Physics*, Volume 39, 1971

### **Dirac, Paul Adrien Maurice** 1902–84

English theoretical physicist

...the main object of physical science is not the provision of pictures, but in the formulation of laws governing phenomena and the application of these laws to the discovery of new phenomena. If a picture exists, so much the better; but whether a picture exists or not is a matter of only secondary importance. In the case of atomic phenomena no picture can be expected to exist in the usual sense of the word “picture,” by which is meant to model functioning essentially on classical lines. One may extend the meaning of the word “picture” to include any way of looking at the fundamental laws which make their self-consistency obvious. With this extension, one may acquire a picture of atomic phenomena by becoming familiar with the laws of quantum theory.

*The Principles of Quantum Mechanics* (2nd edition)

Chapter I, Section 4 (p. 10)

At The Clarendon Press. Oxford, England. 1935

### **Dirac, Paul Adrien Maurice** 1902–84

English theoretical physicist

The general theory of quantum mechanics is now almost complete, the imperfections that still remain being in connection with the exact fitting of the theory with relativity ideas. These give rise to difficulties only when high-speed particles are involved, and are therefore of no importance in the consideration of atomic and molecular structure and ordinary chemical reactions ...

In Richard Henry Dalitz (rd)

*The Collected Works of P.A.M. Dirac, 1924–1948*

Quantum Mechanics of Many Electron Systems (p. 391)

*Proceeding of the Royal Society*

Cambridge University Press. Cambridge, England. 1995

### **Dyson, Freeman J.** 1923–

American physicist and educator

...Dick Feynman told me about his “sum over histories” version of quantum mechanics. “The electron does anything it likes,” he said. “It goes in any direction at any speed, forward or backward in time, however it likes, and then you add up the amplitudes and it gives you the wave function.” I said to him, “You’re crazy.” But he wasn’t.

In Harry Woolf (ed.)

*Some Strangeness in the Proportion*

Chapter 23 (p. 376)

Addison-Wesley Publishing Company, Inc. Reading, Massachusetts,

USA. 1980

### **Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

Rather against my better judgment I will try to give a rough impression of the theory. It would probably be wiser to nail up over the door of the new quantum theory a notice, “Structural alterations in progress – No admittance except on business”, and particularly to warn the doorkeeper to keep out prying philosophers.

*The Nature of the Physical World*

Chapter X (p. 211)

The Macmillan Company. New York, New York, USA. 1930

A very useful kind of operator is the selective operator. In my schooldays a foolish riddle was current – “How do you catch lions in the desert?” Answer: “In the desert you have a lot of sand and a few lions; so you take a sieve and sieve out the sand and the lions remain.” I recall it because it describes one of the most usual methods used in quantum theory for obtaining anything that we wish to study.

*New Pathways in Science*

Chapter XII, Section III (p. 263)

The Macmillan Company. New York, New York, USA. 1935

### **Einstein, Albert** 1879–1955

German-born physicist

This theory [quantum theory] reminds me a little of the system of delusions of an exceedingly intelligent paranoiac, concocted of incoherent elements of thoughts.

In Arthur Fine

*The Shaky Game: Einstein, Realism, and the Quantum Theory*

Letter of July 5, 1952 to D. Lipkin (p. 1)

University of Chicago Press. Chicago, Illinois, USA. 1986

Quantum mechanics is certainly imposing. But an inner voice tells me that it is not yet the real thing. The theory says a lot, but does not bring us any closer to the secret of the Old One. I, at any rate, am convinced that He does not throw dice.

In Ronald W. Clark

*Einstein: The Life and Times*

Letter to Max Born, 1926 (p. 340)

The World Publishing Company. New York, New York, USA. 1971

The quantum theory gives me a feeling very much like yours. One really ought to be ashamed of its success, because it has been obtained with the Jesuit maxim: "Let not thy left hand know what thy right hand doeth."

*The Born–Einstein Letters: Correspondence Between Albert Einstein and Max and Hedwig Born from 1916 to 1955*

Letter to Max Born, June 4, 1919 (p. 11)

Walker & Company. New York, New York, USA. 1971

I cannot seriously believe in [the quantum theory] because it cannot be reconciled with the idea that physics should represent a reality in time and space, free from spooky actions at a distance.

*The Born–Einstein Letters: Correspondence Between Albert Einstein and Max and Hedwig Born from 1916 to 1955*

Letter to Max Born, March, 1948 (p. 158)

Walker & Company. New York, New York, USA. 1971

[Quantum theory] If this is correct, it signifies the end of physics as a science.

In L.I. Ponomarev

*The Quantum Dice* (p. 80)

Institute of Physics Publishing. Bristol, England. 1993

The more one chases after quanta, the better they hide themselves.

In Helen Dukas and Banesh Hoffman

*Albert Einstein: The Human Side: New Glimpses from His Archives*

Letter to Paul Ehrenfest, 12 July, 1924 (p. 69)

Princeton University Press. Princeton, New Jersey, USA. 1979

**Ekert, Artur** 1961

Polish/British quantum physicist

Possibly the best way to agitate a group of jaded but philosophically inclined physicists is to buy them a bottle of wine and mention interpretations of quantum mechanics. It is like opening a Pandora's box. I have been amused to discover that the number of viewpoints often exceeds the number of participants.

Pet Theories of Quantum Mechanics

*Physics World*, December 1995

**Ferris, Timothy** 1944–

American science writer

Gertrude Stein said of modern art, "A picture may seem extraordinarily strange to you and after some time not only does it not seem strange but it is impossible to find what there was in it that was strange." Quantum physics isn't like that. The longer you look at it, the stranger it gets.

Quantum Weirdness (p. 265)

Simon & Schuster. New York, New York, USA. 1996

**Feynman, Richard P.** 1918–88

American theoretical physicist

The theory of quantum electrodynamics describes Nature as absurd from the point of view of common sense. And it

agrees with experiment. So I hope you can accept Nature as She is – absurd.

*QED: The Strange Theory of Light and Matter*

Chapter 1 (p. 10)

Princeton University Press. Princeton, New Jersey, USA. 1985

There was a time when the newspapers said that only twelve men understood the theory of relativity. I do not believe that there ever was such a time. There might have been a time when only one man did, because he was the only guy who caught on, before he wrote his paper. But after people read the paper a lot of people understood the theory of relativity in some way or other, certainly more than twelve. On the other hand I think I can safely say that nobody understands quantum mechanics.... Do not keep saying to yourself, if you can possibly avoid it, "But how can it be like that?" because you will get "down the drain", into a blind alley from which nobody has yet escaped. Nobody knows how it can be like that.

*The Character of Physical Law*

Chapter 6 (p. 129)

BBC. London, England. 1965

American physicist

It is possible in quantum mechanics to sneak quickly across a region which is illegal energetically.

*The Feynman Lectures on Physics* (Volume 3)

Chapter 8–6 (p. 8–12)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1983

...there are certain situations in which the peculiarities of quantum mechanics can come out in a special way on a large scale.

*The Feynman Lectures on Physics* (Volume 3)

Chapter 21–1 (p. 21–1)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1983

**Gell-Mann, Murray** 1929–

American physicist

All of modern physics is governed by that magnificent and thoroughly confusing discipline called quantum mechanics, invented more than fifty years ago. It has survived all tests and there is no reason to believe that there is any flaw in it. We suppose that it is exactly correct. Nobody understands it, but we all know how to use it and how to apply it to problems; and so we have learned to live with the fact that nobody can understand it.

In Frank Durham and Robert D. Purrington (eds.)

*Some Truer Method: Reflections on the Heritage of Newton*

Chapter 2 (p. 51)

Columbia University Press. New York, New York, USA. 1990

**Harrison, Edward Robert** 1919–2007  
English-born American cosmologist

...in the impalpable and seemingly inconsequential entities of the quantum world, one finds the true music and magic of nature.

*Masks of the Universe*

Chapter 8 (p. 123)

Macmillan Publishing Company, New York, New York, USA. 1985

**Hawking, Stephen William** 1942–  
English theoretical physicist

You would have to fly around the world four hundred million times to add one second to your life; but your life would be reduced by more than that by all those airline meals.

*Black Holes and Baby Universes and Other Essays*

Chapter Eight (p. 72)

Bantam Books, New York, New York, USA. 1987

**Heisenberg, Werner Karl** 1901–76  
German physicist and philosopher

Quantum theory reminds us of the old wisdom that when searching for harmony in life we must forget that in the drama of existence we are ourselves both players and spectators.

In Denis Alexander

*Beyond Science*

Chapter Two (p. 48)

Lion Publishing, Berkhamsted, Herts, England. 1972

Quantum theory thus provides us with a striking illustration of the fact that we can fully understand a connection though we can only speak of it in images and parables.

*Physics and Beyond: Encounters and Conversations*

Chapter 17 (p. 210)

Harper & Row, Publishers, New York, New York, USA. 1971

The problem of quantum theory centers on the fact that the particle picture and the wave picture are merely two different aspects of one and the same physical reality.

*The Physical Principles of the Quantum Theory*

Translated by Carl Eckhart and Frank C. Hoyt (p. 177)

The University of Chicago Press, Chicago, Illinois, USA. 1930

If anything like mechanics were true then one would never understand the existence of atoms. Evidently there exists another [type of mechanics – ] “quantum mechanics.”

In Keith Hannabuss

*An Introduction to Quantum Theory*

Letter to Wolfgang Pauli, June 21, 1925 (p. 21)

Oxford University Press, Inc. Oxford, England. 1997

**Joyce, James** 1882–1941  
Irish-born author

I am working out a quantum theory about it for it is really most tantalizing state of affairs.

**Kramers, Hendrick Anthony** 1894–1952  
Physicist

The theory of quanta is similar to other victories in science; for some months you smile at it, and then for years you weep.

In L.I. Ponomarev

*The Quantum Dice* (p. 80)

Institute of Physics Publishing, Bristol, England. 1993

The theory of quanta can be likened to a medicine that cures the disease but kills the patient.

In L.I. Ponomarev

*The Quantum Dice* (p. 81)

Institute of Physics Publishing, Bristol, England. 1993

**Krauss, Lawrence M.** 1954–  
American theoretical physicist

...what we really should be discussing is “the interpretation of classical mechanics” – that is, how can the classical world we see – which is only an approximation of the underlying reality, which in turn is quantum mechanical in nature – be understood in terms of the proper quantum mechanical variables? If we insist on interpreting quantum mechanical phenomena in terms of classical concepts, we will inevitably encounter phenomena that seem paradoxical, or impossible.

*The Physics of Star Trek*

Chapter Nine (pp. 150–151)

Harp Perennial Publishers, New York, New York, USA. 1995

**Lawrence, D. H. (David Herbert)** 1885–1930  
English writer

I like relativity and quantum theories because I don't understand them and they make me feel as if space shifted about like a swan that can't settle, refusing to sit still and be measured; and as if the atom were an impulsive thing Always changing its mind.

In Vivian de Sola Pinto and Warren Roberts (eds.)

*The Complete Poems of D.H. Lawrence*

Relativity (p. 524)

Viking Press, New York, New York, USA. 1973

**Lindley, David** 1956–  
English astrophysicist and author

[I]t is misleading to say that “measurement affects the thing measured” because that can seem to imply that a quantum object was in some definite but unknown state, but was then disturbed by an act of measurement and is now in some other state. Rather, measurement gives definition to quantities that were previously indefinite; there is no meaning that can be given to a quantity until it is measured.

*Where Does the Weirdness Go? Why Quantum Mechanics Is Strange, but Not as Strange as You Think*

Which Way Did the Photon Go? (p. 60)

Basic Books, Inc. New York, New York, USA. 1996

Although quantum mechanics provides explanations of the results of experiments, those explanations tend not, in our minds, to add up to an understanding. But why should they? It’s the job of science to provide theories and models that give us an accurate picture of the way the world works, but we are not free also to demand that these theories should conform to our prior expectations of the way we would like the world to work, or think it ought to work. If science sometimes provides explanations without giving us what we would regard as an understanding, the deficiency belongs to us, not to science.

*Where Does the Weirdness Go? Why Quantum Mechanics Is Strange, but Not as Strange as You Think*

You Can Push It Around, But You Can’t Get Rid of It (p. 125)

Basic Books, Inc. New York, New York, USA. 1996

The Moon really is there, after all, when no one’s looking. In a general sense, Einstein’s comment was correct: quantum mechanics demands that a measurement be made in order for the Moon really to exist at a particular spot. But the new insight afforded by the decoherence argument is that the rain of solar photons onto the Moon’s surface is enough of a physical process to constitute a “measurement” – it’s enough to get rid of superposed states, which is what we want a measurement to accomplish. No actual observation is required, and the whole process carries on efficiently and relentlessly without any intervention of human action, let alone human consciousness. The world works in its own way, and doesn’t need us to look at it.

*Where Does the Weirdness Go? Why Quantum Mechanics Is Strange, but Not as Strange as You Think*

In Which Einstein’s Moon Is Restored (p. 204)

Basic Books. New York, New York, USA. 1996

The microworld is not a simple place, and physicists have therefore not been able to keep their theories of it simple.

### **Pauli, Wolfgang** 1900–58

Austrian-born physicist

Physics is a blind alley again. In any case, it has become too difficult for me, and I would prefer to be a comedian in the cinema, or something like that, and hear no more about physics.

In L.I. Ponomarev

*The Quantum Dice* (p. 81)

Institute of Physics Publishing. Bristol, England. 1993

I know a great deal. I know too much. I am a quantum ancient.

In Jeremy Bernstein

*Experiencing Science*

Part 1. Two Faces of Physics. Chapter 2. Rabi: The Modern Age (p. 102)

Basic Books, Inc. New York, New York, USA. 1978

### **Peat, F. David** 1938–

English holistic physicist and author

The choice before us is either to abandon any hope of knowing the nature of quantum reality or to accept a non-local universe.

*Einstein’s Moon* (p. 124)

Contemporary Books. Chicago, Illinois, USA. 1990

### **Planck, Max** 1858–1947

German physicist

My futile attempts to fit the elementary quantum of action somehow into the classical theory continued for a number of years and they cost me a great deal of effort. Many of my colleagues saw in this something bordering on a tragedy. But I feel differently about it, for the thorough enlightenment I thus received was all the more valuable. I now knew for a fact that the elementary quantum of action played a far more significant part in physics than I had originally been inclined to suspect, and this recognition made me see clearly the need for the introduction of totally new methods of analysis and reasoning in the treatment of atomic problems.

*Scientific Autobiography and Other Papers*

A Scientific Autobiography (pp. 44–45)

Philosophical Library. New York, New York, USA. 1949

### **Polkinghorne, John** 1930–

British physicist, Episcopal priest, and writer

Quantum theory is both stupendously successful as an account of the small-scale structure of the world and it is also the subject of unresolved debate and dispute about its interpretation. That sounds rather like being shown an impressively beautiful palace and being told that no one is quite sure whether its foundations rest on bedrock or shifting sand.

*The Quantum World*

Chapter 1 (p. 1)

Princeton University Press. Princeton, New Jersey, USA. 1984

### **Robinson, Arthur L.**

No biographical data available

In short, quantum mechanics, special relativity, and realism cannot all be true.

Quantum Mechanics Passes Another Test

*Science*, Volume 217, Number 4558, July 30, 1982 (p. 435)

### **Rota, Gian-Carlo** 1932–99

Italian-born American mathematician

Quantum mechanics is the imaginary square root of probability theory.

*Indiscrete Thoughts*

Chapter XX (p. 227)

Birkhäuser. Boston, Massachusetts, USA. 1997

### **Rothman, Tony** 1953–

American cosmologist

Quantum mechanics – the theory that explains phenomena on the size of atoms – is right. It is also so conceptually weird that physicists to this day feel uncomfortable with it.

*Instant Physics: From Aristotle to Einstein, and Beyond*

Chapter 7 (p. 159)

Ballentine Books. New York, New York, USA. 1995

### **Sagan, Carl** 1934–96

American astronomer and author

How can light simultaneously be a wave and a particle? It might be better to think of it as something else, neither a wave nor a particle, something with no ready counterpart in the everyday world of the palpable, that under some circumstances partakes of the properties of a wave, and, under others, of a particle. This wave-particle dualism is another reminder of a central humbling fact: Nature does not always conform to our predispositions and preferences, to what we deem comfortable and easy to understand.

*Billions & Billions: Thoughts on Life and Death at the Brink of the Millennium*

Chapter 4 (p. 37)

Random House, Inc. New York, New York, USA. 1997

### **Schrödinger, Erwin** 1887–1961

Austrian theoretical physicist

I don't like it, and I'm sorry I ever had anything to do with it.

In John Gribbin

*In Search of Schrödinger's Cat: Quantum Physics and Reality* (p. v)

Bantam Books. New York, New York, USA. 1984

If all this damned quantum jumping were really here to stay, I should be sorry I ever got involved with quantum theory.

In Werner Heisenberg

*Physics and Beyond: Encounters and Conversations*

Chapter 6 (p. 75)

Harper & Row, Publishers. New York, New York, USA. 1971

### **Stapledon, Olaf** 1886–1950

English author

...whenever a creature was faced with several possible courses of action, it took them all, thereby creating many distinct temporal dimensions and distinct histories of the cosmos. Since in every evolutionary sequence of the cosmos there were very many creatures, and each was constantly faced with many possible courses, and the combinations of all their courses were innumerable, an infinity of distinct universes exfoliated from every moment of every temporal sequence in this cosmos.

*Last and First Man and Star Maker*

Chapter XV, 2 (p. 426)

Dover Publications, Inc. New York, New York, USA. 1968

### **Stenger, Victor J.** 1935–

American physicist

This type of schizophrenic behavior is not confined to photons alone. Electrons, neutrons, and other entities that normally appear as localized particles also can't seem to decide whether they are waves or particles. It all depends on what you try to measure. If you look for localized electrons, neutrons, or photons, you find them. If, on the other hand, you set up an experiment designed to measure wave properties, you find these too. We look

at the world through colored glasses, and so it should not surprise us that the world appears a different color when we change to another pair.

*Physics and Psychics: The Search for a World Beyond the Senses*  
Chapter 10 (p. 215)  
Prometheus Books. Buffalo, New York, USA. 1990

**Trefil, James** 1938–  
American physicist

But...we recognize that the wave-particle duality does not arise because of anything paradoxical about the behavior of elementary particles, but simply from the fact that we have asked the wrong question. If we had asked "How does an elementary particle behave?" instead of asking "Does it behave like a particle or a wave?", we would have been able to give a perfectly sensible answer. An elementary particle is not a particle in the sense that a bullet is, and it is not a wave like the surf. It exhibits some properties that we normally associate with each of these kinds of things, but it is an entirely new kind of phenomenon.

*From Atoms to Quarks: An Introduction to the Strange World of Particle Physics* (Revised edition), 1994  
Charles Scribner's Sons. New York, New York, USA. 1980

**Wheeler, John Archibald** 1911–  
American theoretical physicist and educator

There may be no such thing as the "glittering central mechanism of the universe" to be seen behind a glass wall at the end of the trail. Not machinery but magic may be the better description of the treasure that is waiting.

In Nick Herbert  
*Quantum Reality: Beyond the New Physics*  
Chapter 2 (p. 29)  
Anchor Press. Garden City, New York, USA. 1985

Nothing is more important about quantum physics than this: it has destroyed the concept of the world as "sitting out there." The universe afterwards will never be the same.

Quoted by Jefferson Hane Weaver  
*The World of Physics* (Volume 2)  
N. 10 (p. 427)  
Simon & Schuster. New York, New York, USA. 1987

So the quantum, fiery creative force of modern physics, has burst forth in eruption after eruption and for all we know the next may be the greatest of all.

In Franco Selleri  
*Quantum Mechanics Versus Local Realism: The Einstein-Podolsky-Rosen Paradox*  
Chapter 1, Section 3 (p. 47)  
Plenum Press. New York, New York, USA. 1988

...if one really understood the central point and its necessity in the construction of the world, one ought to be able to state it in one clear, simple sentence. Until we see the quantum principle with this simplicity we can well believe that we do not know the first thing about the universe, about ourselves, and about our place in the universe.

In Francesco de Finis (ed.)

*Relativity, Quanta and Cosmology in the Development of the Scientific Thought of Albert Einstein* (Volume 2)  
The Quantum and the Universe

**Yang, Chen Ning** 1922–  
Chinese-born American theoretical physicist

To those of us who were educated after light and reason had struck in the final formulation of quantum mechanics, the subtle problems and the adventurous atmosphere of these pre-quantum mechanics days, at once full of promise and despair, seem to take on an almost eerie quality. We could only wonder what it was like when to reach correct conclusions through reasonings that were manifestly inconsistent constituted the art of the profession.

*Elementary Particles: A Short History of Some Discoveries in Atomic Physics*  
Chapter 1 (p. 9)  
Princeton University Press. Princeton, New Jersey, USA. 1962

**von Baeyer, Hans Christian** 1938–  
German-born physicist and author

That, in a nutshell, is the mystery of the quantum: When an electron is observed, it is a particle, but between observations its map of potentiality spreads out like a wave. Compared to the electron, even a platypus is banal.

*Taming the Atom*  
Chapter 3 (p. 51)  
Random House, Inc. New York, New York, USA. 1992

**Wolf, Fred Alan** 1934–  
American theoretical physicist, writer, and lecturer

The quantum is that embarrassing little piece of thread that always hangs from the sweater of space-time. Pull it and the whole thing unravels.

*Star Wave: Mind Consciousness of Quantum Physics*  
The Macmillan Company. New York, New York, USA. 1984

**Zee, Anthony**  
American physicist

Welcome to the strange world of the quantum, where one cannot determine how a particle gets from here to there. Physicists are reduced to bookies, posting odds on the various possibilities.

*Fearful Symmetry*  
Chapter 10 (p. 141)  
Macmillan Publishing Company. New York, New York, USA. 1986

## QUANTUM PHYSICS

**Goertzel, Ted George**  
No biographical data available

One might say that deriving the behavior of a molecule by quantum physics is like deriving the behavior of a group of people from a knowledge of the personalities of the individual people.

*Linus Pauling: A Life in Science and Politics*  
Chapter 4 (p. 73)  
Basic Books, Inc. New York, New York, USA. 1995

## QUANTUM THEORY

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

In Einstein's theory of relativity the observer is a man who sets out in quest of truth armed with a measuring-rod. In quantum theory he sets out armed with a sieve.

*New Pathways in Science*

Chapter XII (p. 267)

The Macmillan Co. New York, New York, USA. 1935

## QUARK

**Atkins, Peter William** 1940-  
English theoretical chemist

...quarks appear to be without spatial extent and to lack a deeper structure: they have character without extension and are substance without inside.

*The Creation*

Chapter 1 (p. 15)

W.H. Freeman & Co. Oxford, England. 1981

### Author undetermined

O! O! you eight colourful guys  
You won't let quarks materialize  
You're tricky, but now we realize  
You hold together our nucleus.

In Frank Wilczek and Betsy Devine

*Longing for the Harmonies*

Chapter 18 (p. 200)

W.W. Norton & Company, Inc. New York, New York, USA. 1988

**Heisenberg, Werner Karl** 1901–76  
German physicist and philosopher

Even if quarks should be found (and I do not believe that they will be), they will not be more elementary than other particles, since a quark could be considered as consisting of two quarks and one anti-quark, and so on. I think we have learned from experiments that by getting to smaller and smaller units, we do not come to fundamental units, or indivisible units, but we do come to a point where division has no meaning. This is a result of the experiments of the last twenty years, and I am afraid that some physicists simply ignore this experimental fact.

In Paul Buckley and F. David Peat

*Glimpsing Reality: Ideas in Physics and the Link to Biology*

Werner Heisenberg (p. 15)

University of Toronto Press. Toronto, Ontario, Canada. 1996

**Joyce, James** 1882–1941  
Irish-born author

Three quarks for Muster Mark!  
Sure he hasn't got much of a bark  
And sure any he has it's all beside the mark.

*Finnegans Wake*

Book II (p. 383)

The Viking Press. New York, New York, USA. 1939

**Melnechuk, Theodore**  
Neuroscientist

Poor Gell-Man seeks  
But fails to find  
The fractioned freaks  
He bore in mind.  
And yet a Quark,  
Yea, better, three,  
Exist in stark  
Reality.

The Hunting of the Quark

*The Physics Teacher*, Volume 7, Number 7, October, 1969 (p. 415)

**Stenger, Victor J.** 1935–  
American physicist

Today's quarks and leptons can be viewed as metaphors of the underlying reality of nature, though metaphors that are objectively and rationally defined and are components of theories that have great predictive power. And that's the difference between the metaphors of science and those of myth: scientific metaphors work.... In the pragmatic view of truth of William James, science is true because it works. Science may not be the only path to the truth, but it is the best one we have yet been able to discover.

*Physics and Psychics: The Search for a World Beyond the Senses*

Chapter 4 (p. 79)

Prometheus Books. Buffalo, New York, USA. 1990

**Taylor, Richard E.** 1929–  
Canadian-born American physicist

The quarks and the stars were here when you came, and they will be here when you go. They have no sense of humor so, if you want a world where more people smile, you will have to fix things yourselves.

*Les Prix Nobel. The Nobel Prizes in 1990*

Nobel banquet speech for award received in 1990

Nobel Foundation. Stockholm, Sweden. 1991

## QUASAR

**Chiu, Hong-Yee** 1932–  
Astronomer

So far, the clumsily long name "quasistellar radio sources" is used to describe these objects. Because the nature of these objects is entirely unknown, it is hard to prepare a short, appropriate nomenclature for them so that their essential properties are obvious from their name. For convenience, the abbreviated form "quasar" will be used throughout this paper.

Gravitational Collapse

*Physics Today*, Volume 17, May, 1964 (p. 21)

**Mundell, Carole**

English astronomer

...observing quasars is like observing the exhaust fumes of a car from a great distance and then trying to figure out what is going on under the hood.

A New Look at Quasars

*Scientific American*, Volume 278, Number 6, June, 1998 (p. 57)**National Research Council (U.S.)**

Quasars are the dinosaurs of the cosmos.

*The Decade of Discovery in Astronomy and Astrophysics*

The Life History of Galaxies (p. 40)

National Academy Press. Washing, District of Columbia. 1991

**QUATERNION****Bell, E. T. (Eric Temple)** 1883–1960

Scottish-American mathematician and educator

...Frenchmen, Germans, and Italians, urging their respective substitutes for quaternions, added to the din. By the second decade of the twentieth century there was a babble of conflicting vector algebras, each fluently spoken only by its inventor and his few chosen disciples. If, at any time in the brawling half-century after 1862, the bickering sects had stopped quarreling for half an hour to listen attentively to what Grassmann was doing his philosophical best to tell them, the noisy battle would have ended as abruptly as a thunderclap. Such, at any rate, seems to have been the opinion of Gibbs. In retrospect, the fifty-year war between quaternions and its rivals for scientific favor, appears as an interminable sequence of duels fought with stuffed clubs in a vacuum over nothing.

*The Development of Mathematics* (p. 208)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1945

**QUESTION****Adams, Douglas** 1952–2001

English author, comic radio dramatist, and musician

“I checked it very thoroughly,” said the computer, “and that quite definitely is the answer. I think the problem, to be quite honest with you, is that you’ve never actually known what the question is.”

*The Ultimate Hitchhiker’s Guide to the Galaxy**The Hitchhiker’s Guide to the Galaxy*

Chapter 28 (p. 121)

The Ballantine Book Company. New York, New York, USA. 2002

**Alvarez, Luis Walter** 1911–88

American experimental physicist

Much of the work we do as scientists involves filling in the details about matters that are basically understood already, or applying standard techniques to new specific cases. But occasionally there is a question that offers an

opportunity for a really major discovery.

*T. Rex and the Crater of Doom*

Chapter 2 (p. 42)

Princeton University Press. Princeton, New Jersey, USA. 1997

**Author undetermined**

Approach your problems from the right end and begin with the answers. Then one day, perhaps you will find the final question.

Source undetermined

Where would we be without rhetorical questions?

Source undetermined

**Beecher, Henry Ward** 1813–87

American Congregational preacher and orator

Never ask a question if you can help it; and never let a thing go unknown for the lack of asking a question if you can’t help it.

In James Orton

*Comparative Zoology, Structural and Systematic*

Preceding Chapter XXI (p. 222)

Harper &amp; Brothers. New York, New York, USA. 1877

**Berlinski, David** 1942–

American mathematician

The question belongs to the great good-hearted congregation of questions asked by the hopelessly lost.

*A Tour of the Calculus*

Chapter 5 (p. 33)

Pantheon Books. New York, New York, USA. 1995

**Bloor, David**

English sociologist and philosopher of science

To ask questions of the sort which philosophers address to themselves is usually to paralyze the mind...

*Knowledge and Social Imagery*

Chapter Three (p. 52)

The University of Chicago Press. Chicago, Illinois, USA. 1991

**Bohm, David** 1917–92

American physicist

...it is frequently realised that half the battle is over when we know what are the right questions to ask.

On the Relationship Between Methodology in Scientific Research and the Content of Scientific Knowledge

*British Journal for the Philosophy of Science*, Volume 12, Number 46, 12 August, 1961 (p. 105)**Boltzmann, Ludwig Edward** 1844–1906

Austrian physicist

If a general intends to conquer a hostile city, he will not consult his map for the shortest road leading there; rather he will be found to make the most various detours, and every hamlet, even if quite off the path, will become a valuable point of leverage for him, if only he can take it; impregnable places will be isolated. Likewise, the

scientist asks not what are the currently most important questions, but, “Which are at present solvable?”, or sometimes simply, “In which can we make some small but genuine advance?”

In Brian McGuinness (ed.)

*Theoretical Physics and Philosophical Problems. Selected Writings*

The Second Law of Thermodynamics (p. 13–14)

Reidel Publishing Company. Boston, Massachusetts, USA. 1974

...but all the more splendid is the success when, groping in the thicket of special questions, we suddenly find a small opening that allows a hitherto undreamt of outlook on the whole.

In Brian McGuinness (ed.)

*Theoretical Physics and Philosophical Problems. Selected Writings*

The Second Law of Thermodynamics (p. 14)

Reidel Publishing Company. Boston, Massachusetts, USA. 1974

### **Bombieri, Enrico** 1940–

Italian mathematician

When things get too complicated, it sometimes makes sense to stop and wonder: Have I asked the right question?

Prime Territory: Exploring the Infinite Landscape at the Base of the Number System

*The Sciences*, Volume 32, Number 5, 1992

### **Browne, Sir Thomas** 1605–82

 Chapter I (p. 3)  
 Harper & Row, Publishers. New York, New York, USA. 1970

**Geroch, Robert**  
 American theoretical physicist

To answer a physical question, one first translates that question into various objects ... in the mathematics, with various properties describing the physical setup. Then one manipulates these objects within the mathematics and translates results back into the physical terms. (These "translations" ultimately become automatic.)

*Mathematical Physics*  
 Chapter 15 (p. 86)  
 University of Chicago Press. Chicago, Illinois, USA. 1985

**Gore, George** 1826–1909  
 English electrochemist

The area of scientific discovery enlarges rapidly as we advance; every scientific truth now known yields many questions yet to be answered. To some of these questions it is possible to obtain answers at the present time, others may only be decided when other parts of science are more developed.

*The Art of Scientific Discovery*  
 Part I, Chapter III (p. 27)  
 Longmans, Green & Company. London, England. 1878

**Gould, Stephen Jay** 1941–2002  
 American paleontologist and evolutionary biologist

Questions are not neutral; they presuppose a list of assumptions that may be long and complex.

*Dinosaur in a Haystack: Reflections in Natural History*  
 Part Three, Chapter 11 (p. 136)  
 Random House, Inc. New York, New York, USA. 1995

Supporters assume that the greatness and importance of a work correlates directly with its stated breadth of achievement: minor papers solve local issues, while great works claim to fathom the general and universal nature of things. But all practicing scientists know in their bones that successful studies require strict limitations. One must specify a particular problem with an accessible solution, and then find a sufficiently simple situation where attainable facts might point to a clear conclusion. Potential greatness then arises from cascading implications toward testable generalities. You don't reach the generality by direct assault without proper tools. One might as well dream about climbing Mount Everest wearing a T-shirt and tennis shoes and carrying a backpack containing only an apple and a bottle of water.

Writing in the Margins  
*Natural History*, Volume 7, Number 9, 1998 (p. 19)

To the thoughtful mind the questions, *Whence? What? Why? and Whither?* spontaneously suggest themselves on every side.

*Creation Ex Nihilo*  
 Introduction (p. 9)  
 The Gorham Press. Boston, Massachusetts, USA. 1918

**Heisenberg, Werner Karl** 1901–76  
 German physicist and philosopher

We ask, “What does a proton consist of? Can an electron be divided or is it indivisible? Is a photon simple or compound?” But all these questions are wrongly put, because words such a “divide” or “consists of” have to a large extent lost their meaning. It must be our task to adapt our thinking and speaking – indeed our scientific philosophy – to the new situation created by the experimental evidence. Unfortunately this is very difficult. Wrong questions and wrong pictures creep automatically into particle physics and lead to developments that do not fit the real situation in nature.

The Nature of Elementary Particles  
*Physics Today*, Volume 29, Number 3, March, 1976 (p. 37)

Our scientific work in physics consists in asking questions about nature in the language that we possess and trying to get an answer from experiment by the means that are at our disposal. In this way quantum theory reminds us, as Bohr has put it, of the old wisdom that when searching for harmony in life one must never forget that in the drama of existence we are ourselves both players and spectators. It is understandable that in our scientific relation to nature our own activity becomes very important when we have to deal with parts of nature into which we can penetrate only by using the most elaborate tools.

*Physics and Philosophy: The Revolution in Modern Science*  
Chapter III (p. 58)  
Harper & Row, Publishers. New York, New York, USA. 1958

### Hoffer, Eric 1902–83

American longshoreman and philosopher

To spell out the obvious is often to call it in question.

*The Passionate State of Mind, and Other Aphorisms*  
No. 220  
Harper & Brothers. New York, New York, USA. 1955

### Horrobin, David F. 1939–2003

Medical researcher

One needs to be neither particularly observant nor particularly arrogant to realise that the majority of the human race is capable of understanding the nature of the universe in only the simplest and crudest terms. The truth about the universe is clearly beyond the comprehension of most men. Most human brains are incapable of framing appropriate questions, let alone of providing adequate answers.

*Science Is God*  
Chapter 2 (p. 16)  
Medical and Technical Publishing Company Ltd. Aylesbury, England. 1969

### Hoyle, Sir Fred 1915–2001

English mathematician and astronomer

...in science answers are not important, it is the questions that are important.

In Philip Morrison  
*Nothing Is Too Wonderful to Be True*

Less May Be More (p. 219)  
The American Institute of Physics. Woodbury, New York, USA. 1995

### Hutton, James 1726–97

Scottish geologist, chemist, and naturalist

It is only in science that any question concerning the origin and end of things is formed; and it is in science only that the resolution of those questions is to be attained.

*Theory of the Earth: With Proofs and Illustrations* (Volume 2)  
Chapter XIV (p. 563)  
H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

### Huxley, Elspeth 1907–97

English writer

The best way to find things out... is not to ask questions at all. If you fire off a question, it is like firing of a gun; bang it goes, and everything takes flight and runs for shelter. But if you sit quite still and pretend not to be looking, all the little facts will come and peck round your feet, situations will venture forth from thickets, and intentions will creep out and sun themselves on a stone; and if you are very patient you will see and understand a great deal more than a man with a gun.

*The Flame Trees of Thika*  
Chapter Twenty-Eight (p. 272)  
William Morrow & Company. New York, New York, USA. 1959

### Huxley, Thomas Henry 1825–95

English biologist

It is much easier to ask such questions than to answer them, especially if one desires to be on good terms with one's contemporaries; but, if I must give an answer, it is this: The growth of physical science is now so prodigiously rapid, that those who are actively engaged in keeping up with the present, have much ado to find time to look at the past, and even grow into the habit of neglecting it.

*Method and Results: Essays*  
Animal Automism (p. 202)  
D. Appleton & Co. New York, New York, USA. 1898

### J Jeans, Sir James Hopwood 1877–1946

English physicist and mathematician

It is frequently more difficult to frame a sensible question than to obtain an answer to a nonsensical one.

*The New Background of Science*  
Chapter II (p. 51)  
The University of Michigan Press. 1959

### Jevons, William Stanley 1835–82

English economist and logician

We must learn to distinguish between what we can know and cannot know – between the questions which admit of solution, and those which only seem to be solved.

*The Principles of Science: A Treatise on Logic and Scientific Method*  
Chapter XXI (p. 454)  
Macmillan & Co Ltd. London, England. 1887

**Kelvin, Lord William Thomson** 1824–1907  
Scottish engineer, mathematician, and physicist

Questions of personal priority...however interesting they may be to the persons concerned, sink into insignificance in the prospect of any gain of deeper insight into the secrets of nature.

In Silvanus P. Thompson  
*Annual Report of the Board of Regents of the Smithsonian Institution, 1908*  
The Kelvin Lecture: The Life and Work of Lord Kelvin (p. 752)  
Government Printing Office. Washington, D.C. 1909

**Kundera, Milan** 1929–  
Czech-born writer

...the only truly serious questions are the ones that even a child can formulate. Only the most naive of questions are truly serious. They are questions with no answers. A question with no answer is a barrier that cannot be breached. In other words, it is questions with no answers that set the limits of human possibilities, describe the boundaries of human existence.

Translated by Michael Henry Heim  
*The Unbearable Lightness of Being*  
Part Four, Section 6 (p. 139)  
Harper & Row, Publishers. New York, New York, USA. 1984

**Langer, Susanne Katherina Knauth** 1895–1985  
American philosopher

The “technique,” or treatment, of a problem begins with its first expression as a question. The way a question is asked limits and disposes the ways in which any answer to it – right or wrong – may be given.

*Philosophy in a New Key: A Study in the Symbolism of Reason, Rite, and Art*  
Chapter I (p. 3)  
Harvard University Press. Cambridge, Massachusetts, USA. 1942

A question is really an ambiguous proposition; the answer is its determination.

*Philosophy in a New Key: A Study in the Symbolism of Reason, Rite, and Art*  
Chapter I (p. 4)  
Harvard University Press. Cambridge, Massachusetts, USA. 1942

**Landau, Lev** 1908–68  
Russian physicist

Physicists have learned that certain questions cannot be asked, not because the level of our knowledge does not yet permit us to find the answer, but because such an answer simply isn't stored in nature.

In Alexandre Dorozynski  
*The Man They Wouldn't Let Die*  
Chapter 7 (p. 108)  
Secker & Warburg. London, England. 1966

**Leggett, A. J.**  
No biographical data available

In those exciting but frustrating fields of knowledge, or perhaps one should say ignorance, where physics tangles

with philosophy, the difficulties usually lie less in finding answers to well-posed questions than in formulating the fruitful questions in the first place.

*The Encyclopaedia of Ignorance: Everything You Ever Wanted to Know About the Unknown*  
The “Arrow of Time” and Quantum Mechanics (p. 102)  
Pergamon Press. Oxford, England. 1977

**Little, T. M.**  
No biographical data available

The purpose of an experiment is to answer questions. The truth of this seems so obvious, that it would not be worth emphasizing were it not for the fact that the results of many experiments are interpreted and presented with little or no reference to the questions that were asked in the first place.

Interpretation and Presentation of Results  
*Hortscience*, Volume 16, 1981 (pp. 637–640)

**Lull, Richard Swann** 1867–1957  
Lull, Richard Swann

The great problem of the whence and whither of man has been before the minds of thinkers from time immemorial. This has, of course, also extended to questions concerning animal and plant origins and that of the world and of the universe itself. These questions, after centuries of thought, are still far from their ultimate solution.

*The Ways of Life*  
Chapter X (p. 299)  
Harper & Brothers Publishers. New York, New York, USA. 1925

**MacRobert, Alan**  
Editor

Valid physical questions face us for which our physics is utterly inadequate. This can only be a sign that we stand at a great frontier of science, one that will form a cutting edge of inquiry for generations to come, with results we cannot guess.

Beyond the Big Bang  
*Sky & Telescope*, Volumes 65–66, March, 1983 (p. 213)

**Mach, Ernst** 1838–1916  
Austrian physicist and philosopher

The question, “Why?” which is always appropriate where the explanation of a contradiction is concerned, like all proper habitudes of thought, can overreach itself and be asked where nothing remains to be understood.

Translated by Thomas J. McCormack  
*Popular Scientific Lectures* (2nd edition)  
On the Economical Nature of Physical Inquiry (p. 199)  
The Open Court Publishing Co. Chicago, Illinois, USA. 1897

**Marett, Robert Randolph** 1866–1943  
Social anthropologist

In science the word is questionbegging; and the only sound rule in science is to beg as few philosophical questions as you possibly can.

*Anthropology*

Chapter I (p. 15)  
Henry Holt & Co. New York, New York, USA. 1912

**Marsh, George Perkins** 1801–82  
American diplomat, scholar, and conservationist

...the great question, whether man is of nature or above her.

*Man and Nature: or, Physical Geography as Modified by Human Action*  
Chapter VI (p. 549)  
Charles Scribner & Co. New York, New York, USA. 1865

**Maxwell, James Clerk** 1831–79  
Scottish physicist

There are some questions in Astronomy, to which we are attracted rather on account of their peculiarity, as the possible illustration of some unknown principle, than from any direct advantage which their solution would afford to mankind.

*On the Stability of the Motion of Saturn's Rings*  
Macmillan & Company Ltd. London, England. 1859

Some years ago I encountered a gentleman whose main object was to discover the musical relations of the number eleven. I hear on good authority that the question is not only more perplexed but more interesting than ever.

Quoted in Lewis Campbell and William Garnett  
*The Life of James Clerk Maxwell: With a Selection from His Correspondence and Occasional Writings*  
Chapter VIII (p. 233)  
Macmillan & Co Ltd. London, England. 1882

The mind of man has perplexed itself with many hard questions. Is space infinite, and if so, in what sense? Is the material world infinite in extent, and are all places within that extent equally full of matter? Do atoms exist, or is matter infinitely divisible?

A Discourse on Molecules  
*The London, Edinburgh and Dublin Philosophical Magazine and Journal of Science*, Volume XLVI, December, 1873 (p. 453)

**Medawar, Sir Peter Brian** 1915–87  
Brazilian-born English zoologist

I do not believe that there is any intrinsic limitation upon our ability to answer the questions that belong to the domain of natural knowledge and fall therefore within the agenda of scientific enquiry.

*The Strange Case of the Spotted Mice and Other Classic Essays on Science*  
On "The Effecting of All Things Possible"  
Oxford University Press, Inc. New York, New York, USA. 1996

**Midgley, Mary** 1919–  
English moral philosopher

The astonishing successes of western science have not been gained by answering every kind of question, but precisely by refusing to. Science has deliberately set narrow limits to the kinds of questions that belong to it, and further limits to the questions peculiar to each branch.

It has practiced an austere modesty, a rejection of claims to universal authority.

Can Science Save Its Soul?  
*New Scientist*, 1 August, 1992 (p. 25)

**Morris, Desmond** 1928–  
Zoologist and ethnologist

We never stop investigating. We are never satisfied that we know enough to get by. Every question we answer leads on to another question. This has become the greatest survival trick of our species.

*The Naked Ape*  
Chapter Four (p. 130)  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1967

**Moulton, Forest Ray** 1872–1952  
American astronomer

There are transcendental questions which, from their nature, can never be answered with certainty, but which the human mind ever persists in attacking. Among such questions is that of the infinity of the physical universe in space and in time.

*An Introduction to Astronomy*  
Chapter XIII, 3 (p. 548)  
The Macmillan Co. New York, New York, USA. 1916

**Payne-Gaposchkin, Cecilia** 1900–79  
British-American astronomer

Whenever we look in nature we can see spiral forms in the uncurling fern, the snail, the nautilus shell, the hurricane, the stirred cup of coffee, the water that swirls out of a wash bowl. Perhaps we shouldn't be surprised to see spirals in the great star systems whirling in space. Yet they remain a great, intriguing question.

Why Do Galaxies Have a Spiral Form?  
*Scientific American*, Volume 189, Number 3, September, 1953 (p. 89)

**Peirce, Charles Sanders** 1839–1914  
American scientist, logician, and philosopher

Who would have said, a few years ago, that we could ever know of what substances stars are made of whose light may have been longer in reaching us than the human race existed? Who can be sure of what we shall now know in a few hundred years? Who can guess what would be the result of continuing the pursuit of science for ten thousand years, with the activity of the last hundred? And if it were to go on for a million, or a billion, or any number of years you please, how is it possible to say that there is any question which might not ultimately be solved.

*Values in a Universe of Chance*  
How to Make Ideas Clear (p. 134)  
Stanford University Press. Stanford, California, USA. 1958

...all the followers of science are fully persuaded that the processes of investigation, if only pushed far enough, will give one certain solution to each question to which they can be applied .... This great law is embodied in

the conception of truth and reality. The opinion which is fated to be ultimately agreed to by all who investigate is what we mean by the truth, and the object represented in this opinion is the real.

In H.S. Thayer (ed.)

*Pragmatism: The Classic Writings*

How to Make Ideas Clear (p. 97)

New American Library. New York, New York, USA. 1970

### **Piccard, Auguste** 1884–1962

Swiss physicist, inventor and explorer

So many questions, so many mysteries.

Translated by Christina Stead

*Earth, Sky and Sea*

Part Three, Chapter 3 (p. 147)

Oxford University Press. New York, New York, USA. 1956

### **Popper, Karl R.** 1902–94

Austrian/British philosopher of science

...a young scientist who hopes to make discoveries is badly advised if his teacher tells him, “Go round and observe,” and he is well advised if his teacher tells him: “Try to learn what people are discussing nowadays in science. Find out where difficulties arise, and take an interest in disagreements. These are the questions which you should take up.”

*Conjectures and Refutations: The Growth of Scientific Knowledge*

Chapter 4 (p. 129)

Harper & Row, Publishers. New York, New York, USA. 1963

### **Ramsay, Sir William** 1852–1916

English chemist

Whosoever asks shall receive, but he must ask sensible questions in definite order, so that the answer to the first suggests a second, and the reply to the second suggests a third, and so on.

*Essays Biographical and Chemical*

Chemical Essays

How Discoveries Are Made (p. 128)

Archibald Constable & Company Ltd. London, England. 1908

### **Revelle, Richard**

No biographical data available

Every science worthy of the name progresses, once it has passed the pioneering stage, by asking the right questions of nature.

In Mary Sears

*Oceanography; Invited Lectures Presented at the International Oceanographic Congress Held in New York, 31 August–12 September, 1959*

Preface (p. v)

American Association for the Advancement of Science. Washington, D.C. 1961

### **Roscoe, Henry E.** 1833–1915

English chemist

...we must put a question to Nature for her to answer, and we shall always find that our question, if properly asked, is always clearly and certainly answered.

*Chemistry*

Fire, article 2 (p. 2)

D. Appleton & Co. New York, New York, USA. 1867

### **Sonneberg, Walter**

No biographical data available

Questions of science will only be settled when the last scientist is dead.

*Social Eccentricities*

Social Eccentricities (p. 45)

Broadway Publishing Co. New York, New York, USA. 1906

### **Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

Clearly our first problem must be to define the issue, since nothing is more prolific of fruitless controversy than an ambiguous question.

*Determinism and Physics*

*Proceeding of the University of Durham Philosophical Society*, 1936

### **Sagan, Carl** 1934–96

American astronomer and author

There are no forbidden questions in science, no matters too sensitive or delicate to be probed, no sacred truths.

*The Demon-Haunted World: Science as a Candle in the Dark*

Chapter 2 (p. 31)

Random House, Inc. New York, New York, USA. 1995

### **Seignobos, Charles** 1854–1942

French historian

It is useful to ask oneself questions, *but very dangerous to answer them.*

In Marc Bloch

*The Historian's Craft*

Introduction (p. 14)

Manchester University Press. Manchester, England. 2004

### **Shaw, George Bernard** 1856–1950

Irish comic dramatist and literary critic

No question is so difficult to answer as that to which the answer is obvious.

*Saturday Review*, January 26, 1895

### **Silver, Brian L.**

Israeli professor of physical chemistry

The Big Questions may be beyond the capabilities of the human computer, just as dogs will never understand jokes. We understand a very great deal about what forces do but are far from finalizing the discussion about what forces are. Maybe we never will. Newton very specifically refused to commit himself as to what gravitational force was, but he nevertheless accounted for the movements of Earth and Moon and deduced the masses of the Earth and the Sun by knowing only what gravity does. We have discovered forces that Newton never knew, but basically we still only define force by what it does.

*The Ascent of Science*

Part II, Chapter 3 (p. 30)

Solomon Press Book. New York, New York, USA. 1998

**Stein, Sherman K.**

No biographical data available

What one age considers a pressing question, another may not ask at all. The pure mathematics of one era may be applied in another, perhaps centuries later.

The Mathematician as an Explorer

*Scientific American*, Volume 204, Number 5, May, 1961 (p. 149)

**Steinbeck, John** 1902–68

American novelist

The literature of science is filled with answers found when the question propounded had an entirely different direction and end.

*Sea of Cortez*

Chapter 17 (pp. 179–180)

Paul P. Appel, Publisher. Mount Vernon, New York, USA. 1982

**Thurston, William Paul** 1946–

American mathematician

Personally I like to see lots of relations between lots of different things. I really enjoy that kind of integration you can have when you take very particular nitty-gritty questions and tie them together in very abstract theories.

In D. Albers, G. Alexanderson and C. Reid

*More Mathematical People: Contemporary Conversations* (p. 336)

Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

**Trefil, James** 1938–

American physicist

Great questions in science – questions like the ones Herschel raised about the structure of the universe – are seldom answered by ivory-tower types engaging in pure thought. They are answered by people who are willing to get down into the trenches and grapple with nature. If that means casting your own telescope mirrors, as Herschel did, so be it.

*Reading the Mind of God: In Search of the Principle of Universality*

Charles Scribner's Sons. New York, New York, USA. 1989

**Virchow, Rudolf Ludwig Karl** 1821–1902

German pathologist and archaeologist

If only people would finally stop finding points of disagreement in the personal characteristics and external circumstances of investigators! It does not matter at all whether someone is a professor of clinical medicine or of theoretical pathology, whether he is a practitioner or a hospital physician, if only he possesses material for observation. In addition, it is not of decisive significance whether he confronts an overwhelming or a modest amount of material, if only he understands how to exploit it. And to do this he must know what he wants: in other

words, he must be in a position to put the right questions and to find the right methods for answering them.

Translated by Lelland J. Rather

*Disease, Life, and Man*

Cellular Pathology (p. 77)

Stanford University Press. Stanford, California, USA. 1958

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

Ignorant people raise questions which were answered by the wise thousands of years ago.

Translated by Thomas Bailey Saunders

*The Maxims and Reflections of Goethe*

532 (p. 187)

The Macmillan Co. New York, New York, USA. 1906

**Walker, Kenneth** 1882–1966

Physician

We must accept the fact that the scientist can answer only a few of the questions we ask him and never the question of “why?.”

*Meaning and Purpose*

Chapter VIII (p. 80)

Jonathan Cape. London, England. 1944

**Weisskopf, Victor Frederick** 1908–2002

Austrian-American physicist

It was absolutely marvelous working for Pauli. You could ask him anything. There was no worry that he would think a particular question was stupid, since he thought all questions were stupid.

Working for Pauli

*American Journal of Physics*, Volume 45, Number 5, May, 1977

(p. 422)

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

I asked a question, devised some method of getting an answer, and got – a fresh question.

*Seven Science Fiction Novels of H. G. Wells*

*The Island of Dr. Moreau*

Chapter the Fourteenth (pp. 133–134)

Dover Publications, Inc. New York, New York, USA. 1934

**Whately, Richard** 1787–1863

English theologian

A fool can ask more questions than a wise man can answer; but a wise man cannot ask more questions than he will find a fool ready to answer.

*Thoughts and Apophthegms*

Section VI (p. 164)

Lindsay & Blakiston. Philadelphia, Pennsylvania, USA. 1856

**Wilde, Oscar** 1854–1900

Irish wit, poet, and dramatist

Questions are never indiscreet. Answers sometimes are.

*The Plays of Oscar Wilde*

*An Ideal Husband*

Act I (p. 10)

The Modern Library. New York, New York, USA. No date

**Wittgenstein, Ludwig Josef Johann** 1889–1951

Austrian-born English philosopher

As long as I continue to come across questions in more remote regions which I can't answer, it is understandable that I should still not be able to find my way around regions that are less remote. For how do I know that what stands in the way of an answer here is not precisely what is preventing me from clearing away the fog over there?

Translated by Peter Winch

*Culture and Value* (p. 66e)

The University of Chicago Press. Chicago, Illinois, USA. 1980

I may find scientific questions interesting, but they never really grip me. Only conceptual and aesthetic questions do that. At bottom I am indifferent to the solution of scientific problems; but not the other sort.

Translated by Peter Winch

*Culture and Value* (p. 79e)

The University of Chicago Press. Chicago, Illinois, USA. 1980

**Zinkernagel, Rolf M.** 1944–

Swiss immunologist and pathologist

To ask questions, to search for answers, to do research – I mean re-search in nature what is already there, but has not been revealed, so far is the most fascinating and the most exciting thing we can dream of doing and what we would like to continue doing.

*Les Prix Nobel. The Nobel Prizes in 1996*

Nobel banquet speech for award received in 1996

Nobel Foundation. Stockholm, Sweden. 1997

## QUESTION, SCIENTIFIC

**Gore, George** 1826–1909

English electrochemist

In every scientific question, even with the most intense meditation, men find that they soon come to the limits of new thoughts; a barrier, like a prison chamber, rises in every direction, which is impassable until new experiments are made, or new knowledge which bears upon the question is attained.

*The Art of Scientific Discovery*

Chapter XXXI (p. 304)

Longmans, Green & Co. London, England. 1878

## QUESTIONNAIRE

**Hauge, Bernt K.**

No biographical data available

[One] feature of questionnaires is that they give [an] excellent opportunity to gather useless information in such a way that it can be handled by data machines, a handling that can give a mysterious authority of exactness to the most incredible nonsense.

Etcetera

*The Physics Teacher*, Volume 15, Number 9, December, 1977 (p. 575)

## QUOTATION

**Disraeli, Isaac** 1766–1846

British writer and scholar

The wisdom of the wise, and the experience of ages, may be preserved by Quotation.

*Curiosities of Literature* Volume 3

Quotation (p. 168)

Riverside Press. Cambridge, England. 1864

It is generally supposed that where there is no Quotation, there will be found most originality.

*Curiosities of Literature* Volume 3

Quotation (p. 168)

Riverside Press. Cambridge, England. 1864

Quotation, like much better things, has its abuses. One may quote till one compiles.

*Curiosities of Literature* Volume 3

Quotation (p. 169)

Riverside Press. Cambridge, England. 1864

**Dubos, René Jules** 1901–82

French-born American microbiologist and environmentalist

History is replete with anecdotes and *bons mots* relating to statesmen, soldiers, artists, philosophers, and most other types of notables; but even a well-informed man finds it difficult to enliven talk with quotations from scientists.

*The Dreams of Reason*

Chapter 3 (p. 40)

Columbia University Press. New York, New York, USA. 1961

**Proctor, Richard Anthony** 1837–88

English astronomer

He quotes a passage...without comment, but, unfortunately, not without serious alteration.

*Nature*

*Explanatory*

*Nature*

Explanatory

December 12, 1878 (p. 121)

**Skeats, Walter W.**

No biographical data available

A quotation without a reference is like a geological specimen of unknown locality.

*Notes and Queries*

Sixth Series, Volume IX (p. 499)

**Swift, Jonathan** 1667–1745

Irish-born English writer

Quotations must be plentifully gathered, and booked in alphabet; to this end, though authors need lie little consulted, yet critics, and commentators, and lexicons carefully must. But above all, those judicious collectors of bright parts, and flowers, and *observandas*, are to be nicely dwelt on, by some called the sieves and boulders of learning; though it is left undetermined, whether they dealt in pearls or meal; and consequently, whether we are more to value that which passed through, or what staid behind.

*A Tale of a Tub*

A Digression on Praise of Digressions (pp. 134–135)

William Durell & Co. New York, New York, USA. 1812

## R

### RACISM

**Huntington, Ellsworth** 1876–1947  
American geographer

The climate of many countries seems to be one of the great reasons why idleness, dishonesty, immorality, stupidity, and weakness will prevail. If we can conquer climate, the whole world will become stronger and nobler.

*Civilization and Climate* (p. 294)  
University Press of the Pacific. Honolulu, Hawaii, USA. 2001

**Lewin, Roger Amos**  
Anthropologist

Racism, as we would characterize it today, was explicit in the writings of virtually all the major anthropologists of the first decades of this century, simply because it was the generally accepted world view. The language of the epic tale so often employed by Arthur Keith, Grafton Elliot Smith, Henry Fairfield Osborn, and their contemporaries fitted perfectly an imperialistic view of the world, in which Caucasians were the most revered product of a grand evolutionary march to nobility.

*Bones of Contention*  
Chapter 13, Man's Place in Nature (p. 307)  
Simon & Schuster Inc. New York, New York, USA. 1987

**Mandela, Nelson** 1918–  
First president of South Africa

The doctors and nurses treated me in a natural way as though they had been dealing with blacks on a basis of equality all their lives. It reaffirmed my long-held belief that education was the enemy of prejudice. These were men and women of science, and science had no room for racism.

*The Long Walk to Freedom: The Autobiography of Nelson Mandela* (p. 492)  
Little, Brown, Boston & Company. Boston, Massachusetts, USA. 1994

### RADAR

**Marconi, Guglielmo** 1874–1937  
Italian inventor

As was first shown by Hertz, electric waves can be completely reflected by conducting bodies. In some of my tests I have noticed the effects of reflection and deflection of these waves by metallic objects miles away.

It seems to me that it should be possible to design apparatus by means of which a ship could radiate or project a divergent beam of these rays in any desired direction, which rays, if coming across a metallic object, such as

another steamer or ship, would be reflected back to a receiver screened from the local transmitter on the sending ship, and thereby immediately reveal the presence and bearing of the other ship in fog or thick weather.

Radio Telegraphy  
*Proceedings of the Institute of Radio Engineers*, Volume 10, Number 4, August, 1922 (p. 237)

### RADIATION

**Bryson, Bill** 1951–  
American-born travel author

Incidentally, disturbance from cosmic background radiation is something we have all experienced. Tune your television to any channel it doesn't receive, and about 1% of the dancing static you see is accounted for by this ancient remnant of the Big Bang. The next time you complain that there is nothing on, remember that you can always watch the birth of the universe.

*A Short History of Nearly Everything*  
Chapter 1 (p. 12)  
Broadway Books. New York, New York, USA. 2003

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

It has been widely supposed that the ultimate fate of protons and electrons is to annihilate one another, and release the energy of their constitution in the form of radiation. If so it would seem that the universe will finally become a ball of radiation, becoming more and more rarefied and passing into longer and longer wavelengths. The longest waves of radiation are Hertzian waves of the kind used in broadcasting. About every 1500 million years this ball of radio waves will double its diameter; and it will go on expanding in geometrical progression forever. Perhaps then I may describe the end of the physical world as – one stupendous broadcast.

*New Pathways in Science*  
Chapter III, Section VI (p. 71)  
The Macmillan Company. New York, New York, USA. 1935

**Faraday, Michael** 1791–1867  
English physicist and chemist

The view which I am so bold as to put forth considers, therefore, radiation as a high species of vibration in the lines of force which are known to connect particles and also masses of matter together.

*Experimental Researches in Electricity* (Volume 3)  
May, 1846 (p. 451)  
Bernard Quaritch. London, England. 1855

**Gamow, George** 1904–68  
Russian-born American physicist

Radiation is like butter, which can be bought or returned to the grocery store only in quarter-pound packages,

although the butter as such can exist in any desired amount (not less, though, than one molecule!).

*Thirty Years That Shook Physics*

Chapter 1 (pp. 22–23)

Doubleday & Company, Inc. Garden City, New York, USA. 1966

**Lucretius** ca. 99 BCE–55 BCE

Roman poet

Perhaps too the sun as he shines aloft with rosy lamp has roundabout him much fire with heats that are not visible, and thus the fire may be marked by no radiance, so that fraught with heat it increases to such a degree the stroke of the rays.

Translated by H.A.J. Munro

*T. Lucreti Cari De rerum natura libri sex* (4th edition) (pp. 131–132)

Deighton Bell & Co. London, England. 1891

**Planck, Max** 1858–1947

German physicist

Either the quantum of action was a fictional quantity, then the whole deduction of the radiation law was in the main illusionary and represented nothing more than an empty nonsignificant play on formulae, or the derivation of the radiation law was based on sound physical conception.

In Jefferson Hane Weaver

*The World of Physics* (Volume 2) No. 1 (p. 284)

Simon & Schuster. New York, New York, USA. 1987

**Rutherford, Ernest** 1871–1937

English philosopher, logician, and social reformer

These experiments show that the uranium radiation is complex and that there are present at least two distinct types of radiation – one that is very readily absorbed, which will be termed for convenience the alpha-radiation, and the other of more penetrative character which will be termed the beta-radiation.

*Nobel Lectures, Chemistry 1901–1921*

*Philosophical Magazine*

Uranium Radiation and the Electrical Conduction Produced by It

Volume 47 1899

Elsevier Publishing Co. Amsterdam, The Netherlands. 1966

## RADICAL

**von Liebig, Justus** 1803–73

German organic chemist

**Dumas, Jean Baptiste-Andre** 1800–84

French biochemist

...in inorganic chemistry the radicals are simple; in organic chemistry they are compounds – that is the sole difference.

In William H. Brock

*Justus von Liebig*

Chapter 3 (p. 81)

Cambridge University Press. Cambridge, England. 1997

**Mark, Herman F.** 1898–1992

Polymer chemist

The concept of “free radicals” was not known in 1920 – well perhaps in politics, but not in chemistry.

*From Small Organic Molecules to Large: A Century of Progress*

Chemistry Study in Vienna (p. 15)

American Chemical Society, Washington, D.C. 1993

## RADIO

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

Be not afeared; the isle is full of noises,  
Sounds and sweet airs, that give delight and hurt not.  
Sometimes a thousand twangling instruments  
Will hum about mine ears, and sometimes voices...

*In Great Books of the Western World* (Volume 27)

*The Tempest*

Act III, sc ii

Encyclopaedia Britannica, Inc. Chicago, Illinois, USA. 1952

## RADIO ASTRONOMY

**Christiansen, Chris**

No biographical data available

Radio astronomy was not born with a silver spoon in its mouth. Its parents were workers. One parent was the radio-telescope, the other was radar.

*Daily Telegraph* (Sydney), August 25, 1952

## Commentary

It has been demonstrated that a receiving set of great delicacy in New Jersey will get a new kind of static from the Milky Way. This is believed to be the longest distance anybody ever went to look for trouble.

*The New Yorker Magazine*, June 17, 1933

**Davies, Paul Charles William** 1946–

British-born physicist, writer, and broadcaster

It is a striking thought that ten years of radio astronomy have taught humanity more about the creation and organization of the universe than thousands of years of religion and philosophy.

*Space and Time in the Modern Universe* (p. 211)

Cambridge University Press. Cambridge, England. 1977

**Gingerich, Owen** 1930–

American astronomer

But even if radio astronomy has not so much destroyed our older astronomical viewpoint, it has enormously enlarged and enriched it. It is like that magical moment in the old Cinerama, when the curtains suddenly opened still further, unveiling the grandeur of the wide screen.

Optical astronomy in the 1950s, on that narrow, central screen, offered a quiescent view of a slowly burning universe, the visible radiations from thermal disorder. But then the curtains abruptly parted, adding a grand and breathtaking vista, a panorama of swift and orderly motions that revealed themselves through the synchrotron radiation they generated – the so-called violent universe.

In W.T. Sullivan III

*The Early Years of Radio Astronomy: Reflections Fifty Years After Jansky's Discovery*

Radio Astronomy and the Nature of Science (p. 404)

Cambridge University Press. Cambridge, England. 1984

### **Kraus, John** 1910–2004

Radio astronomer

The radio sky is no carbon copy of the visible sky; it is a new and different firmament, one where the edge of the universe stands in full view and one which bears the tell-tale marks of a violent past.

*Big Ear*

Chapter 21 (p. 166)

Cygnus-Quasar Books. Powell, Ohio, USA. 1976

### **Mitton, Simon**

No biographical data available

During the last 20 years radio astronomers have led a revolution in our knowledge of the Universe that is paralleled only by the historic contributions of Galileo and Copernicus. In particular, the poetic picture of a serene Cosmos populated by beautiful wheeling galaxies has been replaced by a catalogue of events of astonishing violence: a primeval fireball, black holes, neutron stars, variable quasars and exploding galaxies.

Newest Probe of the Radio Universe

*New Scientist*, Volume 56, Number 816, October 19, 1972 (p. 138)

### **Unsold, Albrecht** 1905–95

Astrophysicist

The old dream of wireless communication through space has now been realized in an entirely different manner than many had expected. The cosmos' short waves bring us neither the stock market nor jazz from distant worlds. With soft noises they rather tell the physicist of the endless love play between electrons and protons.

In W.T. Sullivan, III

*Classics in Radio Astronomy*

Preface (p. xiii)

R. Reidel Publishing Company. Dordrecht, Netherlands. 1982

## **RADIOACTIVITY**

### **Rutherford, Ernest** 1871–1937

English philosopher, logician, and social reformer

This theory [spontaneous disintegration] is found to account in a satisfactory way for all the known facts of

radioactivity, and welds a mass of disconnected facts into one homogeneous whole. On this view, the continuous emission of energy from the active bodies is derived from the internal energy inherent in the atom, and does not in any way contradict the law of the conservation of energy.

*Radioactivity*

Chapter I (p. 2)

1905

## **RAIN FOREST**

### **Forsyth, Adrian**

American writer of natural history

### **Miyata, Kenneth** 1951–83

American writer of natural history

...the subtle beauty of a rain forest must be seen close up and in detail. The ecological and evolutionary messages conveyed by the flanges, folds, colors, and fragrances of tropical flowers can only be divined by intimate study.

*Tropical Nature*

Chapter 6 (p. 75)

Charles Scribner's Sons. New York, New York, USA. 1984

It is no simple task to unravel the messages that rain forest creatures hold in their appearance. Many things are not what they seem to be, and certain messages have different meanings to different receivers.

*Tropical Nature*

Chapter 11 (p. 187)

Charles Scribner's Sons. New York, New York, USA. 1984

### **Fuertes, Louis Agassiz** 1874–1920

American ornithologist

The principal sensation one gets in the tropical forests is the mystery of the unknown voices. Many of these remain forever mysteries unless one stays long and seeks diligently.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1915*

Impressions of the Voices of Tropical Birds (p. 313)

Government Printing Office. Washington, D.C. 1916

## **RAINBOW**

### **Burroughs, John** 1837–1921

American naturalist and essayist

...the rainbow is truly an apparition; you cannot approach it; you cannot grasp it, or find its end. I has no end, and no beginning. It is also born of the spray of cataracts, but sways not as the spray sways. It is one of the oldest and most striking phenomena in nature, and one of the most subtle and elusive.

*The Heart of Burroughs's Journals*

July 15, 1911 (p. 263)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1928

**Cicero (Marcus Tullius Cicero)** 106 BCE–43 BCE  
Roman orator, politician, and philosopher

But why should not the glorious Rainbow be included among the gods? It is beautiful enough, and its marvelous loveliness has given rise to the legend that Iris is the daughter of Thaumus. And if the rainbow is a divinity, what will you do about the clouds?

*De Natura Deorum*

3.20 (p. 335)

Putnam's Sons. New York, New York, USA. 1933

**Colton, Charles Caleb** 1780–1832  
English sportsman and writer

...beautiful as the rainbow – that smiling daughter of the storm ...

*Lacon: or, Many Things in Few Words*

Early Happiness (p. 178)

W.S. Trounce. London, England. 1865

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

A rainbow described in the symbolism of physics is a band of aethereal vibrations arranged in systematic order of wavelength from about 000040 cm to 000072 cm.

*The Nature of the Physical World*

Chapter XV (p. 328)

The University Press. New York, New York, USA. 1929

**Goodwin, Maud Wilder** 1856–1935

The artist shrugged his shoulders. "I have no taste for panoramic chromos of sunrise," he said; "I should as soon undertake to paint a rainbow, that section of aerial watermelon..."

*Claims and Counterclaims*

Chapter I (p. 6)

Doubleday, Page & Co. New York, New York, USA. 1907

**Hilliard, George Stillman** 1808–79  
American politician

Surely, the rainbow is a more glorious vision to him who comprehends the beautiful law by which its rich scarf is flung upon the dark skirts of the retiring storm.

*The Relation of the Poet to His Age*

Discourse (p. 38)

Charles C. Little & James Brown. Boston, Massachusetts, USA. 1843

**Huntley, H. E.**  
No biographical data available

If a poet sees beauty in a rainbow...so does the physicist in the laws governing its manifestation. The surface beauty of the rainbow...is appreciated by all men: it is given. But the buried beauty, uncovered by the industrious researches of the physicist, is understood only by the scientifically literate. It is acquired: education is essential.

*The Divine Proportion: A Study in Mathematical Beauty*

Chapter I (pp. 10–11)

Dover Publications. New York, New York, USA. 1970

**Lawrence, D. H. (David Herbert)** 1885–1930  
English writer

The arc [of the rainbow] bended and strengthened itself till it arched indomitable, making great architecture of light and colour and the space of heaven, its pedestals luminous in the corruption of new houses on the low hill, its arch the top of heaven.

*The Rainbow*

The Rainbow (p. 467)

B.W. Huebsch. New York, New York, USA. 1921

**MacDonald, George** 1824–1905  
Scottish novelist and poet

They climbed out of the earth; and, still climbing, rose above it. They were in the rainbow. Far abroad, over ocean and land, they could see through its transparent walls the earth beneath their feet. Stairs beside stairs wound up together, and beautiful beings of all ages climbed along with them. They knew that they were going up to the country where the shadows fail.

*Works of Fancy and Imagination* (Volume 9)

The Golden Key (p. 122)

Strahan & Co. Publishers. London, England. 1871

**Pliny (C. Plinius Secundus)** 23–79  
Roman savant and author

Those which we call Rainbows, are seen often without any Wonder, or betokening Portent: for they foretel not so much as rainy or fair Days, in a Manner that we can trust them. But it is manifest that the Sunbeams striking upon an hollow Cloud, when their Edge is repelled, are beaten back against the Sun: and thus ariseth a Variety of Colours by the Mixture of Clouds, Air, and fiery Light.

*Pliny's Natural History. In Thirty-seven Books*

Book II, Chapter LIX (pp. 97–98)

Printed for the Club by G. Barclay. London, England. 1847–1849

**Tennyson, Frederick** 1807–98  
English poet

A rainbow painted on a thundercloud...

*The Isles of Greece*

Eumenides (p. 89)

Macmillan & Company Ltd. London, England. 1890

**The Bible (King James Version)**

And God said, This is the token of the covenant which I make between me and you and every living creature that is with you, for perpetual generations:...

*Genesis 9:12*

**Thomson, James** 1700–48  
Scottish poet

Meantime, refracted from yon eastern cloud,  
Bestriding earth, the grand ethereal bow  
Shoots up immense; and every hue unfolds,  
In fair proportion running from the red

To where the violet fades into the sky.  
 Here, awful Newton, the dissolving clouds  
 Form, fronting on the sun, thy showery prism;  
 And to the sage-instructed eye unfold  
 The various twine of light, by thee disclosed  
 From the white mingling maze.

*The Seasons*

Spring

Longman, Brown, Green & Longmans. London, England. 1847

## Twain, Mark (Samuel Langhorne

**Clemens)** 1835–1910

American author and humorist

We have not the reverent feeling for the rainbow that the  
 savage has, because we know how it is made. We have  
 lost as much as we gained by prying into that matter.

*A Tramp Abroad*

Chapter XLIII (p. 318)

Penguin Books. New York, New York, USA. 1997

One can enjoy a rainbow without necessarily forgettingw  
 the forces that made it.

*Europe and Elsewhere*

Queen Victoria's Jubilee (p. 210)

Harper & Brothers. New York, New York, USA. 1923

## RAMAN EFFECT

**Raman, Chandrasekhar Venkata** 1888–1970

Indian physicist

**Krishnan, K. S.**

No biographical data available

If we assume that the X-ray scattering of the 'unmodi-  
 fied' type observed by Prof. Compton corresponds to  
 the normal or average state of the atoms and molecules,  
 while the 'modified' scattering of altered wavelength  
 corresponds to their fluctuations from that state, it would  
 follow that we should expect also in the case of ordinary  
 light two types of scattering, one determined by the nor-  
 mal optical properties of the atoms or molecules, and  
 another representing the effect of their fluctuations from  
 their normal state. It accordingly becomes necessary to  
 test whether this is actually the case. The experiments we  
 have made have confirmed this anticipation, and shown  
 that in every case in which light is scattered by the mol-  
 ecules in dust-free liquids or gases, the diffuse radiation  
 of the ordinary kind, having the same wavelength as the  
 incident beam, is accompanied by a modified scattered  
 radiation of degraded frequency.

A New Type of Secondary Radiation

*Nature*, Volume 121, Number 3048, March 31, 1928 (p. 501)

## RAMIFICATION

**Sylvester, James Joseph** 1814–97

English mathematician

The theory of ramification is one of pure colligation, for  
 it takes no account of magnitude or position; geometrical  
 lines are used, but these have no more real bearing on the  
 matter than those employed in genealogical tables have  
 in explaining the laws of procreation.

*The Collected Mathematical Papers of James Joseph Sylvester* (Volume 3)

On Recent Discoveries in Mechanical Conversion of Motion (p. 23)

University Press. Cambridge, England. 1904–1912

## RANDOM

### Author undetermined

Random is not haphazard.

Source undetermined

**Hillerman, Tony** 1925–2008

American author

...from where we stand the rain seems random. If we could  
 stand somewhere else, we would see the order in it.

*Coyote Waits*

Chapter 15 (p. 214)

Harper & Row, Publishers. New York, New York, USA. 1990

## RANDOMNESS

**Cohen, John**

No biographical data available

...nothing is so alien to the human mind as the idea of  
 randomness.

*Chance, Skill, and Luck*

Chapter 2, Part IV (p. 42)

Penguin Books. Baltimore, Maryland, USA. 1960

**Fisher, Sir Ronald Aylmer** 1890–1962

English statistician and geneticist

The postulate of randomness thus resolves itself into the  
 question, "of what population is this a random sample?"  
 which must frequently be asked by every practical stat-  
 istician.

On the Mathematical Foundation of Theoretical Statistics

*Philosophical Transactions of the Royal Society of London*, Volume  
 A222, 1922 (p. 313)

**James, William** 1842–1910

American philosopher and psychologist

If I should throw down a thousand beans at random upon  
 a table, I could doubtless, by eliminating a sufficient  
 number of them, leave the rest in almost any geometrical  
 pattern you might propose to me, and you might then say  
 that that pattern was the thing prefigured beforehand, and  
 that the other beans were mere irrelevance and packing  
 material. Our dealings with Nature are just like this.

*The Varieties of Religious Experience*

Lecture XVIII (p. 429)

The Modern Library. New York, New York, USA. 1967

**Leucippus** Fifth century BCE  
Greek philosopher of Atomism

Nothing occurs at random, but everything for a reason and by necessity.

In G.S. Kirk, J.E. Raven and M. Schofield (eds.)  
*The Pre-Socratic Philosophers: A Critical History with a Selection of Texts*  
Aetius I.25.4 (p. 420)  
At The University Press. Cambridge, England. 1963

**Peterson, Ivars**  
Mathematics and computer writer and editor

We are surrounded by jungles of randomness. With our mathematical and statistical machetes, we can hack out extensive networks of trails and clearings that provide for most of our day-to-day needs and make sense of some fraction of human experience. The vast jungle, however, remains close at hand, never to be taken for granted, never to reveal all its secrets – and always teasing the inquiring mind.

*The Jungle of Randomness: A Mathematical Safari*  
Chapter 10 (p. 203)  
John Wiley & Sons, Inc. New York, New York, USA. 1998

**Sophocles** 496 BCE–406 BCE  
Greek playwright

IOCLASTA: Nay, what should mortal[s] fear, for whom the degree of fortune are supreme, and who hath clear foresight of nothing? 'Tis best to live at random, as one may.  
In *Great Books of the Western World* (Volume 5)  
*The Plays of Sophocles*  
*Oedipus the King*, l. 997  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Szent-Györgyi, Albert** 1893–1986  
Hungarian-born American biochemist

The usual answer to this question is that there was plenty of time to try everything. I could never accept this answer. Random shuttling of bricks will never build a castle or a Greek temple, however long the available time. A random process can build meaningful structures only if there is some kind of selection between meaningful and nonsense mutations.

*Molecular Evolution: Prebiological and Biological*  
The Evolutionary Paradox and Biological Stability (p. 111)  
Plenum Press. New York, New York, USA. 1972

## RANDOM DIGITS

**Dickens, Charles** 1812–70  
English novelist

Anyone who considers arithmetical methods of producing random digits is, of course, in a state of sin.

*Oliver Twist*  
Chapter LI  
P.F. Collier & Son, Company. New York, New York, USA. 1912

## RATIOCINATION

**Keyser, Cassius Jackson** 1862–1947  
American mathematician

When the greatest of American logicians, speaking of the powers that constitute the born geometrician, had named Conception, Imagination, and Generalization, he paused. Thereupon from one of the audience there came the challenge, “What of reason?” The instant response, not less just than brilliant, was: “Ratiocination – that is but the smooth pavement on which the chariot rolls.”

In Columbia University  
*Lectures on Science, Philosophy and Art 1907–1908* (p. 31)  
New York, New York, USA. 1908

## RATIONAL ORDERING

**Planck, Max** 1858–1947  
German physicist

It is only when we have planted our feet on the firm ground which can be won only with the help of the experience of real life, that we have a right to feel secure in surrendering to our belief in a philosophy of the world based upon a faith in the rational ordering of this world.

Translated by W.H. Johnston  
*The Philosophy of Physics*  
Chapter IV (p. 125)  
W.W. Norton & Co. New York, New York, USA. 1936

## RATIONALE

**Lewis, George Cornwall** 1806–63  
British statesman and man of letters

There cannot be a body of rules without a rationale, and this rationale constitutes the science.

*A Treatise on the Methods of Observation and Reasoning in Politics*  
(Volume 2) (p. 148)  
John W. Parker & Son. London, England. 1852

## REACTION

**Baudrimont, A. E.**  
No biographical data available

A chemical reaction cannot take place without a movement of the atoms. Consequently a reaction...cannot and will never be able to indicate the arrangement of the atoms in a combination.... For a reaction, by establishing a molecular movement, destroys the preceding arrangements of the atoms. Therefore, being able to extract a compound substance from a combination does not mean that this compound already existed in this combination.

In S.C. Kapoor  
*The Origins of Laurent's Organic Classification*  
*Isis*, Volume 60, 1960 (p. 493)

**Hoffmann, Roald** 1937–

Polish-born American chemist

there was no question that the reaction  
but transient colors were seen  
in the slurry of sodium methoxide in dichloromethane  
and we got a whole lot of products  
for which we can't sort out the kinetics  
the next slide will show  
the most important part  
very rapidly  
within two minutes  
and I forgot to say on further warming  
we get in fact the ketone...

*The Metamict State*

Next Slide Please (p. 51)

University of Central Florida Press. Orlando, Florida, USA. 1987

**Lippmann, Walter** 1889–1974

American journalist and author

The reaction of one chemical element to another chemical element is always correct, is never misled by misinformation, by untruth, and by illusion.

*Essays in the Public Philosophy*

Chapter VIII (p. 92)

Little, Brown &amp; Company. Boston, Massachusetts, USA. 1955

**READ****Johnson, Samuel** 1696–1772

English critic, biographer, and essayist

People in general do not willingly read, if they can have anything else to amuse them.

*The Life of Samuel Johnson*

Chapter XX (p. 399)

Hutchinson &amp; Co. London, England. 1791

**READER****Coleridge, Samuel Taylor** 1772–1834

English lyrical poet, critic, and philosopher

Readers may be divided into four classes: (1) Sponges, who absorb all they read, and return it nearly in the same state, only a little dirtied. (2) Sand-glasses, who retain nothing, and are content to get through a book for the sake of getting through the time. (3) Strain-bags, who retain merely the dregs of what they read. (4) Mogul diamonds, equally rare and valuable, who profit by what they read, and enable others to profit by it also.

In John Payne Collier

*Seven Lectures on Shakespeare and Milton*

The Second Lecture (p. 13)

Chapman &amp; Hall, Ltd. London, England. 1856

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

I have much to fear from the expert philosophical critic, but I am filled with even more apprehension at the thought of readers who may look to see whether the book is “on the side of the angels” and judge its trustworthiness accordingly.

*The Nature of the Physical World*

Preface (p. viii)

The University Press. New York, New York, USA. 1929

**READING****Bacon, Sir Francis** 1561–1626

English lawyer, statesman, and essayist

Read not to contradict and confute, nor to believe and take for granted, nor to find talk and discourse, but to weigh and consider.

*Bacon's Essays*

Of Studies (p. 210)

Donohue, Henneberry &amp; Company. Chicago, Illinois, USA. 1883

**Fisher, Sir Ronald Aylmer** 1890–1962

English statistician and geneticist

Fairly large print is a real antidote to stiff reading.

In J.H. Bennett (ed.)

*Natural Selection, Heredity, and Eugenics*

Letter to K. Sisam, May 31, 1929 (p. 20)

Clarendon Press. Oxford, England. 1983

**Gore, George** 1826–1909

English electrochemist

Reading, however, is only a means towards research. The object is not to amass existing knowledge, but to apply it to facilitate the discovery of more. It is not usually the man who possesses the greatest amount of scientific knowledge who makes the most discoveries. Time occupied in reading and study cannot be employed in experimenting. An excess of reading and study usually also results in the production of an unnecessarily large number of questions and hypotheses, far more than any one man, or even many men, can satisfactorily examine.

*The Art of Scientific Discovery*

Part III, Chapter XXX (p. 295)

Longmans, Green &amp; Co. London, England. 1878

If a man reads inattentively or too rapidly, the chief effect is confusion; if he reads with moderate attention and is not occupied by preconceived opposite views, his mind is drawn into the groove of that of the author, whether the latter be right or wrong; but if he attentively considers what he is reading, with a determination to understand clearly the author's meaning, he acquires a proper basis of knowledge on which to raise hypotheses.

*The Art of Scientific Discovery*

Part III, Chapter XXX (p. 297)

Longmans, Green &amp; Co. London, England. 1878

**Huxley, Thomas Henry** 1825–95  
English biologist

I MUST adopt a fixed plan of studies, for unless this is done I find time slips away without knowing it – and let me remember this – that it is better to read a little and thoroughly, than cram a crude undigested mass into my head, though it be great in quantity.

*The Life and Letters of Thomas Henry Huxley* (Volume 1)  
Chapter I. 1  
Macmillan & Company Ltd. London, England. 1903

## REAL (BEING)

**Bianco, Margery Williams** 1880–1944  
Author

“What is REAL?” asked the Rabbit one day, when they were lying side by side near the nursery fender, before Nana came to tidy up the room. “Does it mean having things that buzz inside you and a stick-out handle?”

*The Velveteen Rabbit: Or How Toys Become Real*  
Athenaeum Books for Young Readers. New York, New York, USA. 2002

You become. It takes a long time. That’s why it doesn’t often happen to people who break easily, or have sharp edges, or who have to be carefully kept. Generally, by the time you are Real, most of your hair has been loved off, and your eyes drop out, and you get loose in the joints and very shabby. But these things don’t matter at all, because once you are Real you can’t be ugly, except to people who don’t understand.

*The Velveteen Rabbit: Or How Toys Become Real*  
Athenaeum Books for Young Readers. New York, New York, USA. 2002

**Einstein, Albert** 1879–1955  
German-born physicist

The important point for us to observe is that all these constructions and the laws connecting them can be arrived at by the principle of looking for the mathematically simplest concepts and the link between them. In the limited number of mathematically existent simple field types, and the simple equations possible between them, lies the theorist’s hope of grasping the real in all its depth.

*Ideas and Opinions*  
On the Methods of Theoretical Physics (p. 275)  
Crown Publishers, Inc. New York, New York, USA. 1954

## REALITY

**Bohr, Niels Henrik David** 1886–1962  
Danish physicist

The conception of the objective reality of the elementary particles has evaporated in a curious way, not into the fog of some new, obscure reality concept, but into the transparent clarity of a mathematics that represents no

longer the behavior of the elementary particles but rather our knowledge of this behavior.

*The Representation of Reality in Contemporary Physics*  
*Daedalus*, 87(3), 1958

...an independent reality in the ordinary physical sense can neither be ascribed to the phenomena nor to the agencies of observation.

*Atomic Theory and the Description of Nature*  
Chapter II (p. 54)  
Cambridge University Press. Cambridge, England. 1934

**Born, Max** 1882–1970  
German-born English physicist

The simple and unscientific man’s belief in reality is fundamentally the same as that of the scientist.

*Physics in My Generation*  
On the Meaning of Physical Theories (p. 16)  
Springer-Verlag New York, Inc. New York, New York, USA. 1969

**Bronowski, Jacob** 1908–74  
Polish-born English mathematician and polymath

Reality is not an exhibit for man’s inspection, labeled “Do not touch.” There are no appearances to be photographed, no experiences to be copied, in which we do not take part. Science, like art, is not a copy of nature but a re-creation of her.

*Science and Human Values*  
The Creative Mind (p. 20)  
Harper & Row, Publishers. New York, New York, USA. 1965

**Brooks, Harvey**  
No biographical data available

A more problematic example is the parallel between the increasingly abstract and insubstantial picture of the physical universe which modern physics has given us and the popularity of abstract and non-representational forms of art and poetry. In each case the representation of reality is increasingly removed from the picture which is immediately presented to us by our senses.

*Scientific Concepts and Cultural Change*  
*Daedalus*, Winter 1965

**Burt, E. A.**  
No biographical data available

Man begins to appear for the first time in the history of thought as an irrelevant spectator and insignificant effect of the great mathematical system which is the substance of reality.

*The Metaphysical Foundations of Modern Physical Science* (p. 80)  
Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1954

**Cerf, Bennett** 1898–1971  
American publisher and editor

The best of them was the conversation between Ginsberg, who demanded to know what reality was, and Garfinkle, who brazenly attempted to explain it to him.

*Try and Stop Me: A Collection of Anecdotes and Stories, Mostly Humorous*

Jokes About Relativity (p. 163)

Simon & Schuster. New York, New York, USA. 1944

**Chargaff, Erwin** 1905–2002

Austrian biochemist

Through each of the great scientific-technological exploits, the points of contact between humanity and reality are diminished irreversibly.

*Voices in the Labyrinth: Nature, Man and Science* (p. 33)

The Seabury Press. New York, New York, USA. 1977

**Cromer, Alan** 1935–

American physicist and educator

Reality has far more wonders than all the tales of Arabia, giving us in return for our lost feeling of omnipotence some knowledge of the external world, some control over and responsibility for our lives, and even a touch of humility.

*Uncommon Sense: The Heretical Nature of Science*

Chapter 10 (p. 207)

Oxford University Press, Inc. New York, New York, USA. 1993

**Daly, Reginald Aldworth** 1871–1957

Canadian-American geologist

Reality is never skin-deep.

*Annual Report of the Board of Regents of the Smithsonian Institution* (1929)

X-Raying the Earth (p. 261)

Government Printing Office. Washington, D.C. 1930

**Dampier-Whetham, William** 1867–1952

English scientific writer

The physicist analyzes matter into particles, and finds that their forces and motions can be described in mathematical terms. The materialist pushes this scientific result into philosophy, and says that there is no other reality.

In Lloyd William Taylor

*Physics: The Pioneer Science* (Volume 1)

Chapter 14 (p. 181)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1941

**Dilthey, Wilhelm** 1833–1911

German historian

On the whole, the question whether some aspect of reality can be treated scientifically is like the question whether the knife lying before me is sharp. One must simply try to cut with it.

In Rudolf A. Makkreel and Frithjof Rodi

*Introduction to the Human Sciences: Selected Works of William Dilthey*

Book 1, Chapter 13 (p. 134)

Princeton University Press. Princeton, New Jersey, USA. 1989

**Drees, Willem B.**

Dutch philosopher of science and religion

That natural reality is assumed rather than explained is not proof for the existence of a creator. Introducing god

as an explanatory notion only shifts the locus of the question: why would such a god exist? And, it is possible that the universe just happens to exist, without explanation.

In Victor J. Stenger

*Has Science Found God?: The Latest Results in the Search for Purpose in the Universe*

Chapter Seven (p. 163)

Prometheus Books. Amherst, New York, USA. 2003

**Dürrenmatt, Friedrich** 1921–90

Swiss playwright and novelist

Our researches are perilous, our discoveries are lethal. For us physicists there is nothing left but to surrender to reality.

Translated by James Kirkup

*The Physicists*

Act Two (p. 81)

Grove Press, Inc. New York, New York, USA. 1964

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

It is by looking into our own nature that we first discover the failure of the physical universe to be co-extensive with our experience of reality. The “something to which truth matters” must surely have a place in reality whatever definition of reality we may adopt.

*New Pathways in Science*

Chapter XIV, Section II (p. 317)

The Macmillan Company. New York, New York, USA. 1935

**Egler, Frank E.** 1911–96

American botanist and ecologist

Reality is not what is; it is what the layman wishes it to be.

*The Way of Science*

Science Concepts (p. 22)

Hafner Publishing Company. New York, New York, USA. 1970

**Einstein, Albert** 1879–1955

German-born physicist

Physics is an attempt conceptually to grasp reality as it is thought independently of its being observed. In this sense one speaks of “physical reality.”

In Paul Arthur Schlipp (ed.)

*Albert Einstein: Philosopher-Scientist*

Autobiographical Notes (p. 81)

The Library of Living Philosophers, Inc. Evanston, Illinois, USA. 1949

Pure logical thinking cannot yield us any knowledge of the empirical world; all knowledge of reality starts from experience and ends in it. Propositions arrived at by purely logical means are completely empty of reality.

In Paul Arthur Schlipp (ed.)

*Albert Einstein: Philosopher-Scientist*

Einstein’s Conception of Science (p. 391)

The Library of Living Philosophers, Inc. Evanston, Illinois, USA. 1949

Space has devoured ether and time; it seems to be on the point of swallowing up also the field and the

corpuscles, so that it alone remains as the vehicle of reality.

In R. Thiel

*And There Was Light* (p. 345)

New American Library. New York, New York, USA. 1960

All our science, measured against reality, is primitive and childlike – good yet it is the most precious thing we have.

*The Physics Teacher*, April, 1970 (p. 200)

**Einstein, Albert** 1879–1955

German-born physicist

**Infeld, Leopold** 1898–1968

Polish physicist

In our endeavor to understand reality we are somewhat like a man trying to understand the mechanism of a closed watch. He sees the face and moving hands, and even hears the ticking, but he has no way of opening the case. If he is ingenious enough he may form some picture of a mechanism which could be responsible for all the things he observes, but he may never be quite sure his picture is the only one which could explain his observations.

*The Evolution of Physics*

On Clew Remains (p. 31)

Simon & Schuster. New York, New York, USA. 1961

**Frankel, Felice** 1945–

Science photographer

**Whitesides, George M.**

American chemist

Our reality is illusion: We don't know for sure what's out there.

*On the Surface of Things: Images of the Extraordinary in Science*

Illusion (p. 121)

Chronicle Books. San Francisco, California, USA. 1997

**Frost, Robert** 1874–1963

American poet

You're searching, Joe

For things that don't exist.

I mean beginnings

Ends and beginnings

Ends and beginnings – there are no such things

There are only middles.

*Complete Poems of Robert Frost*

Mountain Interval

Henry Holt & Company. New York, New York, USA. 1949

**Gore, George** 1826–1909

English electrochemist

Realities are often very different from appearances; many phenomena which are essentially the same often exhibit no likeness, except to those who are disciplined in looking beneath the surface of things, and in detect-

ing fundamental truths. By the progress of science the most apparently remote phenomena are not unfrequently brought together, and shown to be due to the same cause, and apparently similar ones are shown to be essentially different.

*The Art of Scientific Discovery*

Part III, Chapter XXXV (p. 326)

Longmans, Green & Co. London, England. 1878

**Gregory, Bruce**

Astrophysicist

For better or for worse, there is little evidence that we have any idea of what reality looks like from an absolute point of view. We only know what the world looks like from our point of view.

*Inventing Reality: Physics as Language* (p. 184)

John Wiley & Sons. New York, New York, USA. 1990

**Gribbin, John**

English science writer and astronomer

Don't look here for any "eastern mysticism", spoon bending or ESP. Do look here for the true story of quantum mechanics, a truth far stranger than any fiction.... The question this book addresses is "What is reality?" The answer(s) may surprise you; you may not believe them.

*In Search of Schrödinger's Cat: Quantum Physics and Reality*

Introduction (p. xvi)

Bantam Books. New York, New York, USA. 1984

**Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

[The probability wave] meant a tendency for something. It was a quantitative version of the old concept of "Potentia" in Aristotelian philosophy. It introduced something standing in the middle between the idea of an event and the actual event, a strange kind of physical reality just in the middle between possibility and reality.

*Physics and Philosophy: The Revolution in Modern Science*

Chapter II (p. 41)

Harper & Row, Publishers. New York, New York, USA. 1958

**Hilbert, David** 1862–1943

German mathematician

It has become perfectly clear that physics does not deal with the material world or with the contents of reality, but rather, what it perceives is merely the formal constitutions of reality.

In Walter R. Fuchs

*Mathematics for the Modern Mind*

Chapter 10, Section 10. 1 (p. 240)

The Macmillan Company. New York, New York, USA. 1967

**Hubble, Edwin Powell** 1889–1953

American astronomer

...sometimes, through the strangely compelling experience of mystical insight, a man knows beyond the shadow

of a doubt, that he has been in touch with a reality that lies behind mere phenomena. He himself is completely convinced, but he cannot communicate the certainty. It is a private revelation. He may be right, but unless we share his ecstasy we cannot know.

*The Nature of Science and Other Lectures*

Part I, The Nature of Science (p. 19)

The Huntington Library, San Marino, California, USA. 1954

### **Jackson, Shirley** 1916–65

American author

No live organism can continue for long to exist sanely under conditions of absolute reality. Even larks and katydids are supposed, by some, to dream.

*The Haunting of Hill House*

Chapter 1 (p. 3)

Viking Press. New York, New York, USA. 1959

### **Jacobi, Abraham** 1830–1919

Pioneer of pediatrics

It is one thing to build an educational tower in the air at your library table, and another to face its actual appearance under the existing circumstances.

In R. Kagan (ed.)

*Leaders of Medicine*

Chapter IV (p. 41)

The Medico-Historical Press. Boston, Massachusetts, USA. 1941

### **J Jeans, Sir James Hopwood** 1877–1946

English physicist and mathematician

...the most outstanding achievement of twentieth-century physics is not the theory of relativity with its welding together of space and time, or the theory of quanta with its present apparent negation of the laws of causation, or the dissection of the atom with the resultant discovery that things are not what they seem; it is the general recognition that we are not yet in contact with ultimate reality.

*The Mysterious Universe*

Chapter V (pp. 150–151)

The Macmillan Company. New York, New York, USA. 1932

### **Kaufmann, William J., III** 1942–94

American astronomer

From the moment of birth, our daily experiences strongly enforce the notion that reality is comprehensible. The fact that a rock released from your hand always falls down or that the moon goes through its phases every 29 1/2 days implies order rather than chaos to the rational human mind. To discover this order, to understand the basic and underlying qualities of all physical objects, to comprehend the fundamental principles that dictate the behavior of reality: this is the business of science.

*Particles and Fields: Readings from "scientific American"* (p. 1)

W. H. Freeman & Co. New York, New York, USA. 1980

### **Leighton, Joseph Alexander**

No biographical data available

It is impossible to formulate a theory of truth or knowledge without formulating a theory of reality.

*Man and the Cosmos: An Introduction to Metaphysics*

Chapter 1 (p. 2)

D. Appleton & Co. New York, New York, USA. 1922

### **Lewis, Gilbert Newton** 1875–1946

American chemist

In every new and growing science there are many working hypotheses that never attain to any sort of reality. On the other hand, in the old and abstract sciences of mathematics, where it is hard to tell how much is mere definition or convention, the problem of reality is not so much doubtful as it is meaningless.

*The Anatomy of Science*

Chapter 1 (p. 19)

Yale University Press. New Haven, Connecticut, USA. 1926

### **Margenau, Henry** 1901–97

American physicist

A quest for the real inspires...the scientist with curiosity and zeal for new adventures; it sets the mind of the philosopher to a contemplation of past pinnacles of thought; it leads the historian to scrutinize the recorded deeds of man for constant patterns.

*The Nature of Physical Reality: A Philosophy of Modern Physics*

Chapter I (p. 1)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1950

In quantum mechanics the problem of reality seems to center in the meaning of states. Here it became clear for the first time, and not without a shock to the physicist, that even a physical state, previously regarded as a nice and tidy collection of possessed observables geared together and running like wheels in a clock, is in fact a composite of latent observables loosely coupled to Nature by rules of correspondence of a statistical sort.

*The Nature of Physical Reality: A Philosophy of Modern Physics*

Chapter 21 (p. 452)

McGraw-Hill Book Co., Inc. New York, New York, USA. 1950

### **Mead, George H.** 1863–1931

American philosopher, sociologist, and psychologist

...the ultimate touchstone of reality is a piece of experience found in an unanalyzed world. The approach to the crucial experiment may be a piece of torturing analysis, in which things are physically and mentally torn to shreds, so that we seem to be viewing the dissected tissues of objects in ghostly dance before us, but the actual objects in the experimental experience are the common things of which we say that seeing is believing, and of whose reality we convince ourselves by handling. We extravagantly advertise the photograph of the path of an electron, but in fact we could never have given as much reality to the

electrical particle as does now inhabit it if the photograph had been of naught else than glistening water vapour.

*The Philosophy of the Act*

Chapter II (p. 32)

The University of Chicago, Chicago, Illinois, USA; 1938

**Olson, Sigurd F.** 1899–1982

American conservationist

Flashes of insight or reality are sunbursts of the mind.

The sentimentalist himself; while art  
Is but a vision of reality.

*The Collected Poems of W.B. Yeats*

Ego Dominus Tuus (p. 159)

The Macmillan Company. New York, New York, USA. 1956

## REALITY CHECK

**Stewart, Ian** 1945–

English mathematician

**Cohen, Jack**

Scientists cannot make objects float skywards merely by agreeing among themselves that the force of gravity

acts up rather than down. There has to be a reality check. Science has more stringent reality checks than any other area of human activity, and applies them more frequently. Religion hinges upon faith, politics hinges upon who can tell the most convincing lies or maybe just shout the loudest, but science hinges upon whether its conclusions resemble what actually happens.

*Figments of Reality*

## REALITY, PHYSICAL

**Ellis, John** 1946–

English theoretical physicist

Physical reality is *neither* some objective truth “out there” nor a purely subjective experience “in here.” It is a uniquely human description of the *interaction* between humanity and Nature, involving elements of both inner and outer realms.

*The Hunting of the Quark*

Epilogue (p. 368)

Simon & Schuster. New York, New York, USA. 1987

## REASON

**Arago, Francois** 1786–1853

French physicist

He who, outside of pure mathematics, says a thing is impossible, speaks without reason.

Quoted in S. Sandaram Iyer

 Italian physicist and astronomer

...where the senses fail us, reason must step in ...

Translated by Henry Crew and Alfonso de Salvio  
*Dialogues Concerning Two New Sciences*  
 First Day (p. 60)  
 The Macmillan Co. New York, New York, USA. 1914

**Hobbes, Thomas** 1588–1679  
 English philosopher and political theorist

In sum, in what matter so ever there is place for “addition” and “subtraction.” there also is place for “reason;” and where these have no place, there “reason” has nothing to do at all.

*Leviathan, Or, The Matter, Form, and Power of a Commonwealth, Ecclesiastical and Civil* (2nd edition)  
 Chapter V (p. 27)  
 George Routledge & Sons. London, England. 1886

When a man “reasoneth,” he does nothing else but conceive a sum total, from “addition” of parcels; or conceive a remainder, from “subtraction” of one sum from another; which, if it be done by words, is conceiving of the consequence of the names of all the parts, to the name of the whole; or from the names of the whole and one part, to the name of the other part. And though in some things, as in numbers, besides adding and subtracting, men name other operations, as “multiplying” and “dividing,” yet they are the same; for multiplication is but adding together of things equal; and division but subtracting of one thing, as often as we can.

*Leviathan, Or, The Matter, Form, and Power of a Commonwealth, Ecclesiastical and Civil* (2nd edition)  
 Chapter V (p. 27)  
 George Routledge & Sons. London, England. 1886

**Hutton, James** 1726–97  
 Scottish geologist, chemist, and naturalist

...so far as we know our error, or the deficiency in our operation, we proceed in science, and shall conclude in reason.

*Theory of the Earth: With Proofs and Illustrations* (Volume 1)  
 Chapter I, Section IV (p. 187)  
 H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

...reason without data is nothing but delusion.

*Theory of the Earth: With Proofs and Illustrations* (Volume 1)  
 Chapter III (p. 281)  
 H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

**James, Henry** 1843–1916  
 American-born English author and literary critic

Reason is the light of science. Revelation is the light of philosophy.

*The Social Significance of Our Institutions* (p. 44)  
 Ticknor & Fields  
 Boston, Massachusetts, USA. 1861

**Kant, Immanuel** 1724–1804  
German philosopher

Human reason, in one sphere of its cognition, is called upon to consider questions, which it cannot decline, as they are presented by its own nature, but which it cannot answer, as they transcend every faculty of the mind.

Translated by J.M.D. Meiklejohn

*Critique of Pure Reason*

Preface to the First Edition (p. 13)

P.F. Collier & Son. New York, New York, USA. 1901

Reason, holding in one hand its principles, according to which concordant phenomena alone can be admitted as laws of nature, and in the other hand the experiment, which it has devised according to those principles, must approach nature, in order to be taught by it: but not in the character of a pupil, who agrees to everything the master likes, but as an appointed judge, who compels the witnesses to answer the questions which he himself proposes.

Translated by F. Max, Muller

*Immanuel Kant's Critique of Pure Reason*

Method of Transcendentalism, Chapter IV (p. 691)

The Macmillan Co. New York, New York, USA. 1896

When GALILEI experimented with balls of a definite weight on the inclined plane, when TORKIOKLLI caused the air to sustain a weight which he had calculated beforehand to be equal to that of a definite column of water, or when STAHL, at a later period, converted metals into lime, and reconverted lime into metal, by the addition and subtraction of certain elements; a light broke upon all natural philosophers. They learned that reason only perceives that which it produces after its own design; that it must not be content to follow, as it were, in the leading-strings of nature, but must proceed in advance with principles of judgment according to unvarying laws, and compel nature to reply to its questions.... Reason must approach nature with the view, indeed, of receiving information from it, not, however, in the character of a pupil, who listens to all that his master chooses to tell him, but in that of a judge, who compels the witnesses to reply to those questions which he himself thinks fit to propose. To this single idea must the revolution be ascribed, by which, after groping in the dark for so many centuries, natural science was at length conducted into the path of certain progress.

Translated by J.M.D. Meiklejohn

*Critique of Pure Reason*

Preface to the Second Edition (p. 24)

P.F. Collier & Son. New York, New York, USA. 1901

**Leibniz, Gottfried Wilhelm** 1646–1716  
German philosopher and mathematician

God forbid; we should have neither science nor law, nay, not even reason.

*New Essays Concerning Human Understanding*

Book I, Chapter II (p. 98)

The Open Court Publishing Co. Chicago, Illinois, USA. 1916

**McNair, Fred W.**  
No biographical data available

If you can teach your student to take vigorous hold of a problem, to first assemble all of the facts which bear on the question, then from the facts to reason logically to a sound and safe conclusion, you have started him well whether his aim be engineering or otherwise.

The Teaching of Mathematics to Students of Engineering

*Science*, New Series, Volume 28, Number 713, August, 1908 (p. 268)

**Mivart, St. George Jackson** 1827–1900  
English biologist

Reason cannot be satisfied until it has probed, to the utmost of its power, the depths of science itself, and either ascertained what is and must be its ultimate foundations, or assured itself that such fundamental knowledge is beyond the scope and power of human endeavor.

*The Groundwork of Science; A Study of Epistemology*

Chapter I (pp. 1–2)

G.P. Putnam's Sons. New York, New York, USA. 1898

**Pearson, Karl** 1857–1936  
English mathematician

The hard and stony path of classifying facts and reasoning upon them is the only way to ascertain truth. It is the reason and not the imagination which must ultimately be appealed to.

*The Grammar of Science* (2nd edition)

Chapter I (p. 17)

Adam & Charles Black. London, England. 1900

**Planck, Max** 1858–1947  
German physicist

In Physics...as in every other science, common sense alone is not supreme; there must also be a place for Reason.

Translated by W.H. Johnson

*The Universe in the Light of Modern Physics* (p. 10)

George Allen & Unwin. London, England. 1931

**von Helmholtz, Hermann** 1821–94  
German scientist and philosopher

*Reason* we call that faculty innate in us of discovering laws and applying them with thought.

Translated by E. Atkinson

*Popular Lectures on Scientific Subjects*

First Series

On the Conservation of Force (p. 319)

D. Appleton & Co. New York, New York, USA. 1897

**von Humboldt, Alexander** 1769–1859  
German naturalist and explorer

It would be a denial of the dignity of human nature and the relative importance of the faculties with which we are endowed, were we to condemn at one time austere reason engaged in investigating causes and their natural

connections, and at another that exercise of the imagination which prompts and excites discoveries by its creative powers.

Translated by E. C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)  
Introduction (p. 78)

Harper & Brothers Publishers. New York, New York, USA. 1858

## REASONING

**Abbey, Edward** 1927–89

American environmentalist and nature writer

Reason is the newest and rarest thing in human life, the most delicate child of human history.

*A Voice Crying in the Wilderness: Notes from a Secret Journal*  
Chapter 10 (p. 91)

St. Martin's Press. New York, New York, USA. 1989

**Arbuthnot, John** 1667–1735

Scottish mathematician and physician

...mathematical knowledge is a habit of clear, demonstrative, and methodical reasoning. We are contrived by nature to learn by imitation more than by precept; and I believe in that respect reasoning is much like other inferior arts – as dancing, singing, &c. – acquired by practice.

In Robert Chambers & Robert Carruthers

*Cyclopaedia of English Literature* (Volume 3) (3rd edition)  
Usefulness of Mathematical Learning (p. 362)

American Book Exchange. New York, New York, USA. 1879

**Arnauld, Antoine** 1612–94

French philosopher, lawyer, and mathematician

We use Reason for improving the Sciences; whereas we ought to use the Sciences for improving our Reason.

*The Port-Royal Logic*

Preface

Printed for T.B. and J. Taylor. London, England. 1696

**Barnett, Percy Arthur** 1858–1941

English educator

...the reasoning of mathematics is a type of perfect reasoning.

*Common Sense in Education and Teaching*

Chapter IX (p. 222)

Longmans, Green & Company. London, England. 1899

**Beaumarchais, Pierre-Augustin Caron de** 1732–99

French dramatist

It is not necessary to believe things in order to reason about them.

*The Barber of Seville*

Act V, Scene 4

Pioneer Classics. Long Beach, California, USA. 1994

**Beck, Lewis White** 1913–97

American scholar in German philosophy

In the logic of science there is a principle as important as that of parsimony: it is that of sufficient reason.

The "Natural Science Ideal" in the Social Sciences

*The Scientific Monthly*, Volume LXVIII, June, 1949 (p. 393)

**Bernard, Claude** 1813–78

French physiologist

Reasoning will always be correct when applied to accurate notions and precise facts; but it can lead only to error when the notions or facts on which it rests were originally tainted with error or inaccuracy.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Introduction (p. 2)

Henry Schuman, Inc. New York, New York, USA. 1927

Pile up facts or observations as we may, we shall be none the wiser. To learn, we must necessarily reason about what we have observed, compare the facts and judge them by other facts used as controls.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Part One, Chapter I, Section iv (p. 16)

Henry Schuman, Inc. New York, New York, USA. 1927

**Beveridge, William Ian Beardmore** 1908–

Australian zoologist

The role of reason in research is not so much in exploring the frontiers of knowledge as in developing the findings of the explorers.

*The Art of Scientific Investigation*

Chapter Seven (p. 91)

W.W. Norton & Company, Inc. New York, New York, USA. 1957

Every experience and history teach us that in the biological and medical sciences reason seldom can progress far from the facts without going astray.

*The Art of Scientific Investigation*

Chapter Seven (p. 81)

W.W. Norton & Company, Inc. New York, New York, USA. 1957

A useful habit for scientists to develop is that of not trusting ideas based on reason only.... Practically all reasoning is influenced by feelings, prejudice and past experience, albeit often subconsciously.

*The Art of Scientific Investigation*

Chapter Seven (p. 87)

W.W. Norton & Company, Inc. New York, New York, USA. 1957

**Brophy, Brigid** 1929–95

English novelist

Reason is necessarily the language of moral, political, and scientific argument: not because reason is holy or on some elevated plane, but because it isn't; because it is accessible to all humans; because, as well as working, it can be seen to work.

In Stanley and Rosiland Godlovitch and John Harris (eds.)

*Animals, Men and Morals: An Enquiry into the Maltreatment of Non-Humans*  
In Pursuit of Fantasy (p. 126)

Taplinger Publishing Company. New York, New York, USA. 1972

**Browne, Sir Thomas** 1605–82  
English author and physician

Every man's own reason is his best Oedipus.

*Religio Medici*  
Part I, Section 6

Elliot Stock. London, England. 1883

**Bryant, William Cullen** 1794–1878  
American poet

I would make  
Reason my guide.

*Poems*

Conjunction of Jupiter and Venus

D. Appleton & Company. New York, New York, USA. 1874

**Burton, Sir Richard Francis** 1821–90  
English explorer

Reason is Life's sole arbiter, the magic Laby'rinth's  
single clue...

*The Kasidah of Haji Abdu El-Yezdi*

Part vii, Stanza xxxi

Citadel Press. New York, New York, USA. 1965

**Chrysostom, John** 349–c.407  
Archbishop of Constantinople and preacher

...there is nothing that has been created without some  
reason, even if human nature is incapable of knowing  
precisely the reason for them all.

*Homilies on Genesis*

7. 14

Catholic University of American Press. Washington, D.C. 1986

**Congreve, William** 1670–1729  
English dramatist

...error lives  
Ere reason can be born.

*The Mourning Bride*

Act III, Scene I

J. Dicks. London, England. 1883

**Darwin, Charles Robert** 1809–82  
English naturalist

It is a fatal fault to reason whilst observing, though so  
necessary beforehand and so useful afterwards.

*The Autobiography of Charles Darwin, 1809–1882: With Original  
Omissions Restored*

Appendix, Quotations (p. 159)

Harcourt, Brace. New York, New York, USA. 1959

**Descartes, René** 1596–1650  
French philosopher, scientist, and mathematician

Those long chains of reasoning, simple and easy as they  
are, of which geometricians make use in order to arrive  
at the most difficult demonstrations, had caused me to  
imagine that all those things which fall under the cogni-  
zance of man might very likely be mutually related in the  
same fashion...

In *Great Books of the Western World* (Volume 31)  
*Discourse on the Method of Rightly Conducting the Reason*  
Part II (p. 47)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

I believe that all those to whom God has given the use  
of reason are bound to use it mainly to know Him and to  
know themselves. This is where I endeavored to begin  
my own research, and I can say that I would have been  
unable to find the foundation of physics had I not sought  
after them in this way

In William R. Shea

*The Magic of Numbers and Motion: The Scientific Career of René  
Descartes*

Chapter Eight (p. 166)

Science History Publications Canton, Massachusetts, USA. 1991

**Dewey, John** 1859–1952  
American philosopher and educator

Reason is experimental intelligence, conceived after the  
pattern of science, and used in the creation of social arts;  
it has something to do. It liberates man from the bond-  
age of the past, due to ignorance and accident hardened  
into custom. It projects a better future and assists man  
in its realization. And its operation is always subject to  
test in experience...The principles which man projects  
as guides...are not dogmas. They are hypotheses to be  
worked out in practice, and to be rejected, corrected and  
expanded as they fail or succeed in giving our present  
experience the guidance it requires. We may call them  
programmes of action, but since they are to be used in  
making our future acts less blind, more directed, they are  
flexible. Intelligence is not something possessed once for  
all. It is in constant process of forming, and its retention  
requires constant alertness in observing consequences, an  
open-minded will to learn and courage in re-adjustment.

*Reconstruction in Philosophy*

Chapter IV (p. 96)

Beacon Press. Boston, Massachusetts, USA. 1920

**Doyle, Sir Arthur Conan** 1859–1930  
Scottish writer

You reasoned it out beautifully, I exclaimed in unfeigned  
admiration. It is so long a chain, and yet every link rings  
true.

In William S. Baring-Gould (ed.)

*The Annotated Sherlock Holmes* (Volume 1)

*The Red Headed League* (p. 438)

Wings Books. New York, New York, USA. 1967

Like all Holmes's reasoning the thing seemed simplicity  
itself when it was once explained.

In William S. Baring-Gould (ed.)

*The Annotated Sherlock Holmes* (Volume 2)

*Stockbroker's Clerk* (p. 154)

Wings Books. New York, New York, USA. 1967

Ah! my dear Watson, there we come into those realms of  
conjecture where the most logical mind may be at fault.

In William S. Baring-Gould (ed.)  
*The Annotated Sherlock Holmes* (Volume 2)  
*The Adventure of the Empty House* (p. 348)  
 Wings Books. New York, New York, USA. 1967

I can see nothing, said I, handing it back to my friend.  
 On the contrary, Watson, you can see everything. You fail, however, to reason from what you see. You are too timid in drawing your inferences.

In William S. Baring-Gould (ed.)  
*The Annotated Sherlock Holmes* (Volume 2)  
*The Adventure of the Blue Carbuncle* (p. 453)  
 Wings Books. New York, New York, USA. 1967

I feel that there is reason lurking in you somewhere, so we will patiently grope round for it.

*The Lost World*  
 Chapter IV (p. 52).  
 The Colonial Press. Clinton, Massachusetts, USA. 1959

### **Drummond, William, Sir**

...he who will not reason is a bigot; he who cannot is a fool; and he who dares not is a slave.

*Academical Questions*  
 Preface (p. xv)  
 Scholar's Facsimiles & Reprints. Delmar, New York, USA. 1984

### **Dubos, René Jules** 1901–82

French-born American microbiologist and environmentalist

Reason dreams of an empire of knowledge, a mansion of the mind. Yet sometimes we end up living in a hotel by its side.

*The Dreams of Reason: The Computer and the Rise of the Sciences of Complexity*  
 Chapter 14 (p. 333)  
 Simon & Schuster. New York, New York, USA. 1988

### **Edgeworth, Francis Ysidro** 1845–1926

Irish economist and statistician

...our reasoning appears to become more accurate as our ignorance becomes more complete; that when we have embarked upon chaos we seem to drop down into a cosmos.

*The Philosophy of Chance*  
*Mind*, Volume 9, 1884 (p. 229)

### **Einstein, Albert** 1879–1955

German-born physicist

We have thus assigned to pure reason and experience their places in a theoretical system of physics. The structure of the system is the work of reason: the empirical contents and their mutual relations must find their representation in the conclusions of the theory. In the possibility of such a representation lie the sole value and justification of the whole system, and especially of the concepts and fundamental principles which underlie it. Apart from that, these latter are free inventions of human intellect, which

cannot be justified either by the nature of that intellect or in any other fashion a priori.

*Ideas and Opinions*  
 On the Methods of Theoretical Physics (p. 272)  
 Crown Publishers, Inc. New York, New York, USA. 1954

### **Eldridge, Paul** 1888–1982

American educator

Reason is the shepherd trying to corral life's vast flock of wild irrationalities.

*Maxims for a Modern Man*  
 2194  
 T. Yoseloff. New York, New York, USA. 1965

### **Epictetus** ca. 55–135

Greek philosopher

Since it is Reason which shapes and regulates all other things, it not ought itself to be left in disorder.

*Discourses*  
 Chapter XVII  
 G. Bell & Sons. London, England. 1908

### **Fersman, A. E.** 1883–1945

Geochemist and mineralogist

There are no bounds to fantasy, no limits to the penetration of reason, and none to the technical powers that conquer nature.

 Verso. London, England. 1978

### **Galilei, Galileo** 1564–1642

Italian physicist and astronomer

SALVIATI: Now, since I wish to convince you by demonstrative reasoning rather than to persuade you by mere probabilities, I shall suppose that you are familiar with present-day mechanics...

In *Great Books of the Western World* (Volume 28)  
*Dialogues Concerning the Two New Sciences*  
 First Day (p. 133)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

In science the authority embodied in the opinion of thousands is not worth a spark of reason in one man.

In Pedro Redondi  
*Galileo: Heretic*  
 Chapter 2 (p. 37)  
 Princeton University Press. Princeton, New Jersey, USA. 1987

**Gay-Lussac, Joseph Louis** 1778–1850  
French chemist and physicist

The scientific glory of a country may be considered in some measure, as an indication of its innate strength. The exaltation of Reason must necessarily be connected with the exaltation of the other faculties of the mind; and there is one spirit of enterprise, vigor and conquest in science, arts, and arms.

In Maurice Crosland  
*Gay-Lussac: Scientist and Bourgeois*  
Chapter 4 (p. 80)  
Cambridge University Press. Cambridge, England. 1978

**Gore, George** 1826–1909  
English electrochemist

That which is beyond reason at present may not be so in the future; but it has now no place in science for want of a basis of verified truth.

*The Art of Scientific Discovery*  
Chapter III (p. 25)  
Longmans, Green & Company. London, England. 1878

**Grew, Nehemiah** 1641–1712  
Scientific writer and journalist

He that speaketh Reason may be rather satisfied in being understood, than believed.

*The Anatomy of Vegetables Begun*  
Preface  
Printed for Spencer Hickman. London, England. 1672

**Hamilton, William** 1788–1856  
Scottish philosopher

The art of reasoning *right* is assuredly not to be taught by a process in which there is no reasoning *wrong*. We do not learn to swim in water by previous practice in a pool of quicksilver. Yet, if mathematics are to be recommended as counteracting our natural tendency to err, why not also propose the mercury as counteracting our natural tendency to sink?

*Discussions on Philosophy and Literature, Education and University Reform*  
On the Study of Mathematics as an Exercise of the Mind (p. 278)  
Harper & Brothers Publishers. New York, New York, USA. 1861

**Hubbard, Elbert** 1856–1915  
American editor, publisher, and author

REASON: The arithmetic of the emotions.

*The Roycroft Dictionary Concocted by Ali Baba and the Bunch on Rainy Days* (p. 126)  
The Roycrofters. East Aurora, New York, USA. 1914

**Hutton, James** 1726–97  
Scottish geologist, chemist, and naturalist

In reasoning...from appearances which are particular, care must be taken how we generalise; we should be cautious not to attribute to nature, laws which may perhaps

be only of our own invention.

*Theory of the Earth: With Proofs and Illustrations* (Volume 1)  
Chapter I, Section III (p. 143)  
H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

...to reason without data is nothing but delusion.

*The Theory of the Earth* (Volume 1)  
Part I, Chapter III (p. 281)  
Messrs. Cadwell, Junior & Davies. London, England. 1795

**John of Salisbury** ca. 1115–80  
English author and diplomatist

Reason, therefore, is a mirror in which all things are seen...

In John van Laarhoven (ed.)  
*Entheticus Maior and Minor* (Volume 1)  
Part II, Section I, Notes from Epicurus, I. 657  
E.J. Brill. Leiden, Netherlands. 1987

**Johnson, Samuel** 1696–1772  
English critic, biographer, and essayist

We may take fancy for a companion, but must follow Reason as our guide.

*The Life of Samuel Johnson* (Volume 1)  
Letter to Boswell, 1774 (p. 474)  
Sir Isaac Pitman & Sons, Ltd. London, England. 1907

Memory is the purveyor of reason, the power which places those images before the mind upon which the judgment is to be exercised, and which treasures up the determinations that are once passed, as the rules of future action, or grounds of subsequent conclusions.

*The Rambler* (Volume 1)  
No. 41, August 7, 1750 (p. 296)  
Edward Earle. Philadelphia, Pennsylvania, USA. 1812

**Joos, Georg** 1894–1959  
German physicist

As soon as we inquire into the reasons for the phenomena, we enter the domain of theory, which connects the observed phenomena and traces them back to a single “pure” phenomena, thus bringing about a logical arrangement of an enormous amount of observational material.

*Theoretical Physics*  
Introduction (p. 1)  
Blackie & Son Ltd. London, England. 1968

**Kant, Immanuel** 1724–1804  
German philosopher

Human reason has this peculiar fate that in one species of its knowledge it is burdened by questions which, as prescribed by the very nature of reason itself, it is not able to ignore, but which, as transcending all its powers, it is also not able to answer.

In *Great Books of the Western World* (Volume 42)  
*Critique of Pure Reason*  
Preface to First Edition (p. 1)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Mathematics and physics are the two theoretical sciences of reason, which have to determine their objects a priori.

In *Great Books of the Western World* (Volume 42)

*Critique of Pure Reason*

Preface to the Second Edition (p. 5)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Kasner, Edward** 1878–1955

American mathematician

**Newman, James Roy** 1911–66

Mathematician and mathematical historian

One of the difficulties arising out of the subjective view of probability results from the principle of insufficient reasons. This principle...holds that if we are wholly ignorant of the different ways an event can occur and therefore have no reasonable ground for preference, it is as likely to occur one way as another.

*Mathematics and the Imagination*

Chance and Chanceability (p. 229)

Simon & Schuster. New York, New York, USA. 1940

**Lamarck, Jean-Baptiste Pierre Antoine** 1744–1829

French biologist

Reason is not a faculty; still less is it a torch or entity of any kind; but it is a special condition of the individual's intellectual faculties; a condition that is altered by experience, gradually improves and controls the judgments, according as the individual exercises his intellect.

Translated by Hugh Elliot

*Zoological Philosophy: An Exposition with Regard to the Natural History of Animals*

Chapter VIII (p. 401)

The University of Chicago Press. Chicago, Illinois, USA. 1984

**Lambert, Johann Heinrich** 1728–77

Swiss-German mathematician and astronomer

Reason hates the false décor by which advocates of error try to make her more impressive. She recognizes that one should doubt where reasons are not sufficient, that one should present each reason stripped of all that makes it apparent, and then she will assist if proper tools are on hand, and reserve for herself to pronounce the sentence, or if she suspends it, to indicate what is required to proceed to the conclusion.

Translated by Stanley Jaki

*Cosmological Letters on the Arrangement of the World-Edifice*

Twentieth Letter (p. 186)

Science History Publications. New York, New York, USA. 1976

**Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

...scientific reasoning is a kind of dialogue between the possible and the actual, what might be and what is in fact the case...

*Induction and Intuition in Scientific Thought*

Chapter III, Section 1 (p. 48)

American Philosophical Society. Philadelphia, Pennsylvania, USA. 1969

**Miller, Hugh** 1802–56

Scottish geologist and theologian

In the geologic, as in other departments,

What can we reason but from what we know?

*The Old Red Sandstone*

Geological Evidences in Favour of Revealed Religion (p. 280)

J.M. Dent & Sons Ltd. London, England. 1922

**Minnick, Wayne C.** 1915–2006

Professor of communications

This kind of reasoning has weaknesses, of course, as do all forms of reasoning. If the correspondence between two things compared is not complete, that is, if significant differences can be shown to exist, then the argument collapses.

*The Art of Persuasion* (p. 16)

Houghton Mifflin Company. New York, New York, USA. 1968

**Moulton, Forest Ray** 1872–1952

American astronomer

...reason and the laws of nature...have become a sort of intellectual telescope, as it were, with which modern science looks back across the geological ages and discerns, at least in outline, the chief steps of the evolution of the inanimate and of the organic world; and, similarly, penetrates the future to a time when this earth will cease to be suited for the abode of life.

In H.H. Newman (ed.)

*The Nature of the World and of Man*

Astronomy (p. 2)

The University of Chicago Press. Chicago, Illinois, USA. 1927

**Newton, Sir Isaac** 1642–1727

English physicist and mathematician

A Vulgar Mechanick can practice what he has been taught or seen done, but if he is an error he knows not how to find it out and correct it, and if you put him out of his road, he is at a stand; Whereas he that is able to reason nimbly and judiciously about figure, force and motion is never at rest till he gets over every rub.

In Richard S. Westfall

English poet

What can we reason but from what we know?

*The Complete Poetical Works* (Volume 2)

An Essay on Man

Epistle I, l. 18

Houghton Mifflin Company. New York, New York, USA. 1903

**Price, Bartholomew** 1818–98

English mathematician and educator

...the reasoning process [employed in mathematics] is not different from that of any other branch of knowledge...but there is required, and in a great degree, that attention of mind which is in some part necessary for the acquisition of all knowledge, and in this branch [it] is indispensably necessary. This must be given in

its fullest intensity.... [T]he other elements especially characteristic of a mathematical mind are quickness in perceiving logical sequence, love of order, methodical arrangement and harmony, distinctness of conception.

*Treatise on Infinitesimal Calculus* (Volume 3) (p. 6)

At The Clarendon Press. Oxford, England. 1868

**Recorde, Robert** 1510?–58

English mathematician and writer

If reasons reache transcende the skye,  
Why shoulde it then to earthe be bounde?  
The witte is wronged and leadde awrye,  
If mynde be maried to the grounde.

*The Castle of Knowledge*

The Preface

Imprinted by R. Wolfe. London, England. 1556

...who so ever will travail in the sciences with profit, must lean rather to reason, than to authority, else he may be deceived.

*The Castle of Knowledge*

The Fourth Treatise (p. 182)

Imprinted by R. Wolfe. London, England. 1556

You are to farre deceived, and therefore I interrupt your wordes, for all things are to be governed by reason.

*The Castle of Knowledge*

The Fourth Treatise (p. 243)

Imprinted by R. Wolfe. London, England. 1556

**Robinson, James Harvey** 1863–1936

American historian and educator

...most of our so-called reasoning consists in finding arguments for going on believing as we already do.

*The Mind in the Making*

Chapter II (p. 41)

Harper & Brothers Publishers. New York, New York, USA. 1921

**Romanoff, Alexis Lawrence** 1892–1980

Russian soldier and scientist

Reasoning goes beyond the analysis of facts.

*Encyclopedia of Thoughts*

Aphorisms 1973

Ithaca Heritage Books. Ithaca, New York, USA. 1975

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

Reason is a harmonizing, controlling force rather than a creative one.

*Our Knowledge of the External World*

Lecture I (p. 21)

The Open Court Publishing Company. Chicago, Illinois. 1914

Supposing you got a crate of oranges that you opened, and you found all the top layer of oranges bad, you would not argue, “The underneath ones must be good, so as to redress the balance”; You would say, “Probably the

whole lot is a bad consignment”; and that is really what a scientific person would say about the universe.

*Why I Am Not a Christian: And Other Essays on Religion and Related Subjects*

Why I Am Not A Christian (p. 13)

Watts. London, England. 1927

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

FOOL: “The reason why the seven stars are no more than seven is a pretty reason.”

LEAR: “Because they are not eight?”

FOOL: “Yes, indeed. Thou wouldst make a good fool.”

In *Great Books of the Western World* (Volume 27)

*King Lear*

Act I, Scene v, l. 38–40

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Good reason must, of force, give place to better.

In *Great Books of the Western World* (Volume 26)

*The Plays and Sonnets of William Shakespeare* (Volume 1)

*Julius Caesar*

Act IV, Scene iii, l. s03

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

His reasons are as two grains of wheat hid in two bushels of chaff: you shall seek all day ere you find them, and when you have them, they are not worth the search.

In *Great Books of the Western World* (Volume 26)

*The Plays and Sonnets of William Shakespeare* (Volume 1)

*The Merchant of Venice*

Act I, Scene i, l. 115

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Simmons, Charles** 1798–1856

American clergy and litterateur

Reasoning from analogy is often most plausible and most deceptive.

*A Laconic Manual and Brief Remarker* (p. 36)

Charles Simmons. North Wrentham, Massachusetts, USA. 1852

**Spencer-Brown, George** 1923–

English mathematician and polymath

The concept of randomness arises partly from games of chance. The word “chance” derives from the Latin *cadentia* signifying the fall of a die. The word “random” itself comes from the French *randir* meaning to run fast or gallop.

*Probability and Scientific Inference*

Chapter VII (p. 35)

Longmans, Green & Company. London, England. 1957

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

Reason is applied to what is developing, practical understanding to what is developed. The former does not ask, What is the Purpose? and the latter does not ask, What is

the source? Reason takes pleasure in development; practical understanding tries to hold things fast so that it can use them.

*Scientific Studies* (Volume 12)

Chapter VIII (p. 308)

Suhrkamp. New York, New York, USA. 1988

The texture of this world is made up of necessity and chance. Human reason holds the balance between them, treating necessity as the basis of existence, but manipulating and directing chance, and using it.

In Eric A. Blackall (ed.)

*Wilhelm Meister's Apprenticeship*

Book One, Chapter Seventeen (p. 38)

Princeton University Press. Princeton, New Jersey, USA. 1995

**von Helmholtz, Hermann** 1821–94

German scientist and philosopher

The iron labor of conscious logical reasoning demands great perseverance and great caution; it moves on but slowly, and is rarely illuminated by brilliant flashes of genius. It knows little of that facility with which the most varied instances come thronging into the memory of the philologist or historian. Rather is it an essential condition of the methodical progress of mathematical reasoning that the mind should remain concentrated on a single point, undisturbed alike by collateral ideas on the one hand, and by wishes and hopes on the other, and moving on steadily in the direction it has deliberately chosen.

*Vorträge and Reden*

Ueber das Verhältniss der Naturwissenschaften zur Gesamtheit der

Wissenschaft, Bd. 1, 1896 (p. 178)

English novelist, historian, and sociologist

Friedrich Viewig & Sohn. Brunswick, Germany. 1896

**von Helmholtz, Hermann** 1821–94

German scientist and philosopher

Meanwhile solitary inquirers are always from time to time appearing who become so deeply entangled in complicated trains of reasoning that they can no longer discover their mistakes and believe they have solved the problem.

Translated by E. Atkinson

*Popular Lectures on Scientific Subjects*

Second Series

On the Origin and Significance of Geometrical Axioms (p. 32)

Longmans, Green & Co. London, England. 1903

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

“It’s against reason?” said Filby.

“What reason?” said the Time Traveler.

In Robert M. Hutchins and Mortimer J. Adler (eds.)

*The Great Ideas Today* 1971

*The Time Machine*

Chapter One (p. 451)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1971

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

The art of reasoning consists in getting hold of the subject at the right end, of seizing on the few general ideas that illuminate the whole, and of persistently organizing all subsidiary facts round them. Nobody can be a good reasoner unless by constant practice he has realized the importance of getting hold of the big ideas and hanging on to them like grim death.

In W.W. Sawyer

*Prelude to Mathematics*

Presidential Address to the London Branch of the Mathematical Association, 1914 (p. 183)

Penguin Books Limited, London, England, 1960

**Wigner, Eugene Paul** 1902–95  
Hungarian-born American physicist

The great mathematician fully, almost ruthlessly, exploits the domain of permissible reasoning and skirts the impermissible. That his recklessness does not lead him into a morass of contradiction is a miracle in itself. Certainly it is hard to believe that our reasoning power was brought, by Darwin's process of natural selection, to the perfection which it seems to possess.

The Unreasonable Effectiveness of Mathematics in Natural Science  
*Communications on Pure and Applied Mathematics*, Volume 13, Number 1, 1960 (p. 3)

**Wright, Frances** 1795–1852  
Scottish-born American reformer

The best road to correct reasoning is by physical science; the way to trace effects to causes is through physical science; the only corrective, therefore, of superstition is physical science.

*Course of Popular Lectures*

Lecture 3

Published by the author. Philadelphia, Pennsylvania, USA. 1836

## RECKON

**Gauss, Johann Carl Friedrich** 1777–1855  
German mathematician, physicist, and astronomer

I could reckon before I could talk.

Apocryphal

Carl Friedrich Gauss

*Nature*, April 19, 1877 (p. 534)

## RECOGNITION

**Oppenheimer, James Robert** 1904–67  
American theoretical physicist

Whatever the individual motivation and belief of the scientist, without the recognition from his fellow men of the value of his work, in the long term science will perish.

Atomic Weapons

*Proceeding of the American Philosophical Society*, Volume 90, Number 1, 1946

**Tait, Peter Guthrie** 1831–1901  
Scottish physicist and mathematician

...it a duty to bring forward the claims of a true prophet, be his nationality what it may; if these have suffered from his own modesty or carelessness, or from the neglect or disparagement of others.

*Lectures on Some Recent Advances in Physical Science, With a Special Lecture on Force* (3rd edition)

Preface to the Third edition (p. xi)

Macmillan & Co Ltd, London, England, 1885

## RECORD

**Coues, E.**

No biographical data available

Don't trust your memory; it will trip you up; what is clear now will grow obscure; what is found will be lost. Write down everything while it is fresh in your mind; write it out in full. Time so spent will be time saved in the end, when you offer your researches to the discriminating public.

*Field Ornithology* (pp. 44–45)

Naturalist's Agency, Salem, Massachusetts, USA. 1874

Chapter XV (p. 217)

P.F. Collier & Son, New York, New York, USA. 1911

**Grove, Sir William** 1811–96  
English chemist

It would be vain to attempt specifically to predict what may be the effect of Photography on future generations. A Process by which the most transient actions are rendered permanent, by which facts write their own annals in a language that can never be obsolete, forming documents which prove themselves, – must interweave itself not only with science but with history and legislature.

Lecture

Progress of Physical Science since the opening of the London Institution (January 19, 1842)

## RECOVERY

**Byron, George Gordon, 6th Baron Byron** 1788–1824  
English Romantic poet and satirist

Despair of all recovery spoils longevity,  
And makes men's miseries of alarming brevity.

*The Complete Poetical Works of Byron*

Don Juan

Canto II, Stanza LXIV

Houghton Mifflin Company, Boston, Massachusetts, USA. 1933

**Massinger, Philip** 1583–1640  
English dramatic poet

O my Doctor,  
I never shall recover.

*The Bondman*  
Act I, Scene I

Printed for A. Bettesworth. London, England. 1719

**Petrarch (Francesco Petrarca)** 1304–74  
Italian poet and humanist

I once heard a physician of high standing in his profession say: ...If a hundred men, or a thousand of the same age and general constitution and accustomed to the same diet, should all fall victim to a disease at the same time, and if half of them should follow the prescriptions of our contemporary doctors, and if the other half should be guided by their natural instinct and common sense, with no doctors at all, I have no doubt that the latter group would do better.

In M. Bishop

*Letters from Petrarch*  
Book V, 3 (p. 250)

Indiana University Press. Bloomington, Indiana, USA. 1966

## RECTANGLE

**Frere, John Hookham** 1769–1846  
British diplomat and man of letters

Alas! that partial Science should approve  
The sly RECTANGLE'S too licentious love!

In Charles Edmonds

*Poetry of the Anti-Jacobin*

The Loves of the Triangle, Canto II, l. 75–76

Printed for J. Wright, by W. Bulmer & Company. London, England. 1801

## RECURSION

**Papert, Seymour** 1928–  
South African mathematician

Of all ideas I have introduced to children, recursion stands out as the one idea that is particularly able to evoke an excited response.

*Mindstorms: Children, Computers and Powerful Ideas*

Chapter 3 (p. 71)

Basic Books, Inc. New York, New York, USA. 1980

**Young, Louise B.**  
Science writer

Whatever can be done once can always be repeated.

*The Mystery of Matter*

Introduction (p. 15)

Oxford University Press, Inc. New York, New York, USA. 1965

## RED SHIFT

**Boas, Jr., Ralph P.** 1913–92  
Mathematician

Consider the Pitiful Plight  
Of a runner who wasn't too bright,  
But sprinted so fast  
He vanished at last  
By red-shifting himself out of sight.

Reprinted in Ralph P. Boas, Jr.

*Lion Hunting & Other Mathematical Pursuits* (p. 103)

Mathematical Association of America. Washington, D.C. 1995

**Gamow, George** 1904–68  
Russian-born American physicist

The discovery of the red shift in the spectra of distant stellar galaxies revealed the important fact that our universe is in the state of uniform expansion, and raised an interesting question as to whether the present features of the universe could be understood as the result of its evolutionary development.... We conclude first of all that the relative abundance of various atomic species (which were found to be essentially the same all over the observed region of the universe) must represent the most ancient archaeological document pertaining to the history of the universe.

The Evolution of the Universe

*Nature*, Volume 162, Number 4122, October, 1948 (p. 680)

**Gray, George W.**  
Free lance science writer

...just as the shifting of bookkeeping accounts into the red measures disintegrating, scattering, dissipating financial resources, so the shifting of starlight into the red indicates disintegrating, scattering, dissipating physical resources. It says that the universe is running down.... To entertain this preposterous idea of all these massive star systems racing outward was to accept a radically new picture of the cosmos – a universe in expansion, a vast bubble blowing, distending, scattering, thinning out into gossamer, losing itself. The snug, tight, stable world of Einstein had room for no such flights.

Universe in the Red

*The Atlantic Monthly*, Volume 1151, Number 2, February, 1933 (p. 233, 236)

**Jeans, Sir James Hopwood** 1877–1946  
English physicist and mathematician

Another possibility... is that the universe retains its size, while we and all material bodies shrink uniformly. The red shift we observe in the spectra of the nebulae is then due to the fact that the atoms which emitted the light millions of years ago were larger than the present-day atoms with which we measured the light – the shift is, of course, proportional to distance.

Contributions to a British Association Discussion on the Evolution of the Universe

*Supplement to Nature*, Volume 128, Number 3234, November, 1931 (pp. 703–704)

**Stapledon, Olaf** 1886–1950  
English author

I noticed that the sun and all the stars in his neighborhood were ruddy. Those at the opposite pole of the heaven were of an icy blue. The explanation of this strange phenomenon flashed upon me. I was still traveling, and traveling so fast that light itself was not wholly indifferent to my passage. The overtaking undulations took long to catch me. They therefore affected me as slower pulsations than they normally were, and I saw them therefore as red. Those that met me on my head-long flight were congested and shortened, and were seen as blue.

*Last and First Men and Star Maker*  
Star Maker, Chapter III (p. 262)  
Dover Publications, Inc. New York, New York, USA. 1968

## REDUCTIONISM

**Commoner, Barry** 1917–  
American biologist, ecologist, and educator

There is, indeed, a specific fault in our system of science, and in the resultant understanding of the natural world.... This fault is reductionism, the view that effective understanding of a complex system can be achieved by investigating the properties of its isolated parts. The reductionist methodology, which is so characteristic of much of modern research, is not an effective means of analyzing the vast natural systems that are threatened by degradation.

*The Closing Circle: Nature, Man and Technology*  
Chapter 10 (p. 189)  
Alfred A. Knopf. New York, New York, USA. 1971

**d'Abro, Abraham**  
No biographical data available

...in spite of its achievements, thermodynamics suffers from the limitations common to all phenomenological theories. Because it restricts its attention to the macroscopic properties of bodies, it fails to anticipate many phenomena which find their interpretation in the interplay of underlying microscopic processes, and which have since been clarified by the more speculative theories of the hidden-occurrence type.

*The Rise of the New Physics* (Volume 1)  
Chapter XXI (pp. 371–372)  
Dover Publications, Inc. New York, New York, USA. 1951

**Dyson, Freeman J.** 1923–  
American physicist and educator

My message is that science is a human activity, and the best way to understand it is to understand the individual human beings who practice it. Science is an art form and not a philosophical method. The great advances in

science usually result from new tools rather than from new doctrines. If we try to squeeze science into a single philosophical viewpoint such as reductionism, we are like Procrustes chopping off the feet of his guests when they do not fit onto his bed.

*The Scientist as Rebel*  
*New York Times Book Review*, May 25, 1995

**Eiseley, Loren C.** 1907–77  
American anthropologist, educator, and author

In the end, science as we know it has two basic types of practitioners. One is the educated man who still has a controlled sense of wonder before the universal mystery, whether it hides in a snail's eye or within the light that impinges on that delicate organ. The second kind of observer is the extreme reductionist who is so busy stripping things apart that the tremendous mystery has been reduced to a trifle, to intangibles not worth troubling one's head about.

*The Star Thrower*  
Science and the Sense of the Holy (p. 190)  
Times Books. New York, New York, USA. 1978

## REFEREE

**Broad, William** 1951–  
Science writer

**Wade, Nicholas**  
British-born scientific writer

The ultimate gatekeeper of science is neither peer reviews, nor referees, nor replication, nor the universalism implicit in all three mechanisms. It is time. In the end, bad theories don't work, fraudulent ideas don't explain the world so well as true ideas do. The ideal mechanisms by which science should work are applied to a large extent in retrospect .... Time and the invisible boot that kicks out all useless science are the true gatekeepers of science. But these inexorable mechanisms take years, sometimes more than a millennium, to operate. During the interval, fraud may flourish, particularly if it can find shelter under the mantle of immunity that scientific elitism confers.

*Betrayers of the Truth* (p. 106)  
Simon & Schuster. New York, New York, USA. 1982

**Magueijo, Joao** 1967–  
Theoretical physicist and cosmologist

Peer review is an unpaid and usually anonymous activity. Perhaps for this reason the average referee report is sloppy and sleazy. Reports usually reveal that the referee has not read the paper. Acceptance or rejection often reflects the personal relationship between authors and referee. Publishers have always been reluctant to open their files to historians of science and sociologists. Clearly they are

embarrassed to reveal how little science, and how much sociology, there is in their files.

*Electronic Archives and the Death of Journals*  
<http://theory.ic.ac.uk/~magueijo/com.pdf>

### Zoman, John M.

No biographical data available

The referee is the lynchpin about which the whole business of Science is pivoted.

*Public Knowledge: An Essay Concerning the Social Dimension of Science*

Chapter 6 (p. 111)

At The University Press. Cambridge, England. 1968

## REFORM

### Hilbert, David 1862–1943

German mathematician

We have reformed mathematics, the next thing is to reform physics, and then we'll go on to chemistry.

*Hilbert – Courant*

Hilbert

Chapter XVI (p. 129)

Springer-Verlag. New York, New York, USA. 1986

## REFUTABLE

### Friedlander, Michael W.

Physicist

A theory which is not refutable by any conceivable event is nonscientific. Irrefutability is not a virtue of a theory (as people often think) but a vice.

*At the Fringes of Science* (p. 45)

Westview Press. Boulder, Colorado, USA. 1998

## REFUTE

### Medawar, Sir Peter Brian 1915–87

Brazilian-born English zoologist

All scientists know of colleagues whose minds are so well equipped with the means of refutation that no new idea has the temerity to seek admittance. Their contribution to science is accordingly very small.

*The Uniqueness of the Individual*

Chapter 3 (p. 74)

Basic Books, Inc. New York, New York, USA. 1957

## REGRESSION

### Cardozo, Benjamin N. 1870–1938

American jurist

Where the line is to be drawn the important and the trivial cannot be settled by a formula.

*Jacob & Youngs v. Kent*, 230

*New York Reports* 239, 243, 1921

### Fiedler, Edgar R. 1916–2003

American economist

Most economists think of God as working great multiple regressions in the sky.

The Three R's of Economic Forecasting – Irrational, Irrelevant and Irreverent

*Across the Board*, June, 1977

### Juster, Norton 1929–

American architect and author

Once upon a time, there was a sensible straight line who was hopelessly in love with a dot.

*The Dot and the Line: A Romance in Lower Mathematics*

Film (1965)

## RELATION

### Buchanan, Scott 1895–1968

American educator and philosopher

Science is an allegory that asserts that the relations between the parts of reality are similar to the relations between terms of discourse.

*Poetry and Mathematics*

Chapter 5 (pp. 96–97)

The University of Chicago Press. Chicago, Illinois, USA. 1975

### Dingle, Herbert 1890–1978

English astrophysicist

...if, as we must surely do, we wish to characterize science by the elements in it that persist and grow, and not by that which continually changes, we must recognize...the progressive discovery of relations between the various constituents of our experience.... Amid all the changes of theories and pictures and conceptions, the relations remain and steadily accumulate. Franklin found that lightning was a manifestation of the electric ether revealed in laboratory experiments. The electric ether has disappeared, and other theories of electricity have in turn succeeded it and disappeared also, but the relation between lightning and laboratory sparks remains. Maxwell established a relation between light and electromagnetic oscillations. His ether also has gone, but the relation stays. All permanent advances in science are discoveries of relations between phenomena, and the factor in science that shows a steady uninterrupted growth is the extent of the field of related observations.

*The Scientific Adventure: Essays in the History and Philosophy of Science*  
 Chapter One (p. 40)

Pitman. London, England. 1952

### Durant, William James 1885–1981

American historian and essayist

Science tells us how to heal and how to kill; it reduces the death rate in retail and then kills us wholesale in war;

but only wisdom – desire coordinated in the light of all experience – can tell us when to heal and when to kill. For a fact is nothing except in relation to a purpose and a whole.

*The Story of Philosophy*

Introduction (p. 2)

Simon & Schuster. New York, New York, USA. 1953

**Fiske, John** 1842–1901

American philosopher and historian

The ability to imagine relations is one of the most indispensable conditions of all precise thinking. No subject can be named in the investigation of which it is not imperatively needed; but it can be nowhere else so thoroughly acquired as in the study of mathematics.

*Darwinism and Other Essays* (p. 296)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1993

Chapter XVII (p. 94)

E.P. Dutton & Company, Inc. New York, New York, USA. 1927

**Schukarev, A. N.**

No biographical data available

At present one can consider it universally acknowledged that among the phenomena of inanimate nature there is no arbitrary will; here the unshakable connection between phenomena rule with complete authority – relations which we call laws. In the invariance of these relations we are even inclined to see the characteristic sign which differentiates the inanimate from the living.

In Michael D. Gordin

*A Well-Ordered Thing: Dmitrii Mendeleev and the Shadow of the Periodic Table*

Chapter 2 (p. 15)

Basic Books, Inc. New York, New York, USA. 2004

## RELATIONSHIP

**Mivart, St. George Jackson** 1827–1900

English biologist

Everything which can be an object of study has multitudinous relations, of most varied orders, to other objects and to the mind which studies it. A sphere of crystal, as being a single object, solid, transparent, spherical, of a definite weight, of a certain chemical composition, of a certain temperature, capable of projection in various directions and at definite velocities, as a manufactured object, made in a certain locality, for a definite purpose, etc., obviously possesses numerous relations, and cannot be fully understood save from many points of view and by the aid of abstract ideas of very different orders.

*The Groundwork of Science; A Study of Epistemology*

Chapter II (p. 16)

G.P. Putnam's Sons. New York, New York, USA. 1898

## RELATIVITY

**Asimov, Isaac** 1920–92

American author and biochemist

No physicist who is even marginally sane doubts the validity of special relativity.

In Timothy Ferris (ed.)

*The World Treasury of Physics, Astronomy and Mathematics*

The Two Masses (p. 186)

Little Brown & Company. Boston, Massachusetts, USA. 1991

Special relativity is so much a part not only of physics but also of everyday life, that it is no longer appropriate to view it as the special “theory” of relativity. It is a fact...

*Was Einstein Right?* (p. 246)

Basic Books, Inc. New York, New York, USA.

**Davies, Paul Charles William** 1946–

British-born physicist, writer, and broadcaster

**Gribbin, John** 1946–

English science writer and astronomer

All the implications of special relativity... have been confirmed by direct experiments. There are still people who believe it is “just a theory.” But they are wrong.

*The Matter Myth: Dramatic Discoveries That Challenge Our Understanding of Physical Reality* (p. 85)

Simon & Shuster. New York, New York, USA. 1992

**Durell, Clement V.** 1882–1968

English mathematician

Relativity without mathematics may be compared with “Painless Dentistry,” or “Skiing without Falling,” or “Reading without Tears.”

*Readable Relativity*

Preface (p. ix)

Harper & Brothers. New York, New York, USA. 1960

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

Results of measurements are the subject-matter of physics; and the moral of the theory of relativity is that we can only comprehend what the physical quantities stand for if we first comprehend what they are.

*The Mathematical Theory of Relativity*

Conclusion (p. 240)

At The University Press. Cambridge, England. 1930

We walk the stage of life, performers of a drama for the benefit of the cosmic spectator. As the scene proceeds, he notices that the actors are growing smaller and the action quicker. When the last act opens the curtain rises on midgets rushing through their parts at frantic speed.

*The Expanding Universe*

Chapter III, Section VI (pp. 91–92)

The University Press. Cambridge. 1933

**Einstein, Albert** 1879–1955  
German-born physicist

There is something attractive in presenting the evolution of a sequence of ideas in as brief a form as possible, and yet with a completeness sufficient to preserve throughout the continuity of development. We shall endeavor to do this for the Theory of Relativity, and to show that the whole ascent is composed of small, almost self-evident steps of thought.

A Brief Outline of the Development of the Theory of Relativity  
*Nature*, Volume 106, Number 2677, February 17, 1921 (p. 782)

When you are courting a nice girl an hour seems like a second. When you sit on a red-hot cinder a second seems like an hour. That's relativity.  
*News Chronicle*, March 14, 1949

Ought we to smile at the man and say that he errs in his conclusion? I do not believe we ought to if we wish to remain consistent; we must rather admit that his mode of grasping the situation violates neither reason nor known mechanical laws. Even though it is being accelerated with respect to the "Galilean space" first considered, we can nevertheless regard the chest as being at rest. We have thus good grounds for extending the principle of relativity to include bodies of reference which are accelerated with respect to each other, and as a result we have gained a powerful argument for a generalised postulate of relativity.

Translated by Robert W. Lawson  
*Relativity: The Special and General Theory*  
Part II, Chapter 20 (p. 88)  
Pi Press. New York, New York, USA. 2005

I sometimes ask myself how it came about that I was the one to develop the theory of relativity. The reason, I think, is that a normal adult never stops to think about problems of space and time. These are things which he has thought of as a child. But my intellectual development was retarded, as a result of which I began to wonder about space and time only when I had already grown up.

In John D. Barrow  
*Theories of Everything: The Quest for Ultimate Explanation*  
Chapter Three (p. 68)  
The Clarendon Press. Oxford. London. 1991

The meaning of relativity...has been widely misunderstood. Philosophers play with the word, like a child with a doll. Relativity, as I see it, merely denotes that certain physical and mechanical facts, which have been regarded as positive and permanent, are relative with regard to certain other facts in the sphere of physics and mechanics. It does not mean that everything in life is mischievously topsy-turvy.

What Life Means to Einstein: An Interview by George Sylvester Viereck  
*The Saturday Evening Post*, October 26, 1929 (p. 17)

...the theory of relativity is like a house with two separate stories, the special relativity theory and the general theory of relativity.

Time, Space and Gravitation  
*Science*, Volume LI, Number 1305, January 2, 1920 (p. 8)

It is known that Maxwell's electrodynamics – as usually understood at the present time – when applied to moving bodies, leads to asymmetries which do not appear to be inherent in the phenomena.

Translated by Anna Beck  
*The Collected Papers of Albert Einstein: The Swiss Years, Writings, 1900–1909* Volume 2

On the Electrodynamics of Moving Bodies (p. 140)  
Princeton University Press. Princeton, New Jersey, USA. 1989

**Greene, Brian** 1963–  
American physicist

...general relativity and quantum mechanics, when combined, begin to shake, rattle, and gush with steam like a red-lined automobile.

*The Elegant Universe*  
Chapter 1 (p. 4)  
W.W. Norton & Company, Inc. New York, New York, USA. 2003

**Haldane, R. B.** 1856–1928  
British liberal and labor politician

It is only a world embodying the principle of relativity, in the form which the doctrine entails, that can be said to exhibit the character of mind, with its exclusion of disconnected fragments and relations.

*The Reign of Relativity* (p. 138)  
Yale University Press. New Haven, Connecticut, USA. 1921

**Harrison, B.**  
No biographical data available

**Thorne, Kip S.** 1940–  
American theoretical physicist

If one intends to abandon Relativity, here is the place [black holes] to do so. Otherwise one is on the way to a new world of physics, both classical and quantum. Here we go!

In Jean-Pierre Luminet  
*Black Holes* (p. 117)  
Cambridge University Press. New York, New York, USA. 1992

**Holton, Gerald** 1922–  
Research professor of physics and science history

Relativity theory, of course, does not find that truth depends on the point of view of the observer but, on the contrary, reformulates the laws of physics so that they hold good for all observers, no matter how they move or where they stand. Its central meaning is that the most valued truths in science are independent of the point of view.... Einstein did not prove the work of Newton

wrong; he provided a larger setting within which some limitations, contradictions, and asymmetries in the earlier physics disappeared.

*Einstein, History, and Other Passions: The Rebellion Against Science at the End of the Twentieth Century*

Part 1, Chapter 2 (p. 48)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

The cliché became, erroneously, “everything is relative”; whereas the point is that out of the vast flux one can distill the very opposite: “some things are invariant.”

*Einstein, History, and Other Passions: The Rebellion Against Science at the End of the Twentieth Century*

Part 1, Chapter 6 (p. 131)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

**Krauss, Lawrence M.** 1954–

American theoretical physicist

Einstein was thus faced with the following apparent problem. Either give up the principle of relativity, which appears to make physics possible by saying that the laws of physics are independent of where you measure them, as long as you are in a state of uniform motion; or give up Maxwell’s beautiful theory of electromagnetism and electromagnetic waves. In a truly revolutionary move, he chose to give up neither.... It is a testimony to his boldness and creativity not that he chose to throw out existing laws that clearly worked, but rather that he found a creative way to live within their framework. So creative, in fact, that it sounds nuts.

*Fear of Physics: A Guide for the Perplexed*

Chapter 3 (p. 78)

Basic Books, Inc. New York, New York, USA. 1993

Indeed, long before the Star Trek writers conjured up warp fields, Einstein warped spacetime, and, like the Star Trek writers, he was armed with nothing other than his imagination. Instead of imagining twenty-second-century starship technology, however, Einstein imagined an elevator. He was undoubtedly a great physicist, but he probably never would have sold a screenplay.

*The Physics of Star Trek*

Chapter Three (p. 31)

Harp Perennial Publishers. New York, New York, USA. 1995

**L. L. Cool J.** 1968–

American hip hop artist and actor

Grab hold of a hot pan and a second can seem like an hour. Put your hands on a hot woman and an hour can seem like a second.

*Deep Blue Sea*

Film (1999)

**Lindley, David** 1956–

English astrophysicist and author

Relativity removes from physics the authoritarian rule of classical physics, with its absolute space and

time, and replaces it not with anarchy, in which all participants have their own rules, but with perfect democracy, in which the same rules govern all.... It may seem unsatisfactory to respond that there can be only one correct theory of space and time, and that Einstein’s happens to be it, but for the physicist such an answer has to suffice. Relativity, like other physical theories, is a set of rules based on a number of crucial assumptions, and experiment and observation bear it out. That is all we ever ask of physical theories, and to ask for some further statement of why the special theory of relativity supplanted absolute Newtonian spacetime is to search for a truth beyond the domain of science.

*The End of Physics: The Myth of a Unified Theory*

Part I, Chapter 2 (pp. 60, 61)

Basic Books, Inc. New York, New York, USA. 1993

**Lindon, J. A.**

English writer of comic verse

When they questioned her, answered Miss Bright,  
“I was there when I got home that night;  
So I slept with myself,  
Like two shoes on a shelf,  
Put-up relatives shouldn’t be tight!”

In Martin Gardner

*Time Travel and Other Mathematical Bewilderments*

Chapter One (p. 9)

W.H. Freeman & Company. New York, New York, USA. 1988

**Mach, Ernst** 1838–1916

Austrian physicist and philosopher

I can accept the theory of relativity as little as I can accept the existence of atoms and other such dogmas.

In Stephen Pile

*The Book of Heroic Failures*

Routledge & Kegan Paul. London, England. 1979

**Nabokov, Vladimir Vladimirovich** 1899–1977

Russian-born American novelist

At this point, I suspect, I should say something about my attitude to “Relativity.” It is not sympathetic. What many cosmogonists tend to accept as an objective truth is really the flaw inherent in mathematics which parades as truth.

*Ada or Ardor: A Family Chronicle*

Part Four (p. 543)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1969

**Oppenheimer, James Robert** 1904–67

American theoretical physicist

General relativity has very few connections with any other part of physics and, as I said, is something that we might just now be beginning to discover...

*The Flying Trapeze: Three Crises for Physics*

Space and Time (p. 23)

Oxford University Press, Inc. London, England. 1964

**Page, Leigh** 1884–1952  
American physicist

The rotating armatures of every generator and motor in this age of electricity are steadily proclaiming the truth of the relativity theory to all who have ears to hear.

Filler material

*American Journal of Physics*, Volume 43, Number 4, April, 1975 (p. 330)

German writer

Relativity has taught us to be wary of time.

*Essential Relativity* (p. 203)

van Nostrand Company, Inc. New York, New York, USA. 1969

**Rogers, Eric**  
No biographical data available

Since Relativity is a piece of mathematics, popular accounts that try to explain it without mathematics are almost certain to fail.

*Physics for the Inquiring Mind*

Chapter 31 (p. 472)

Princeton University Press. Princeton, New Jersey, USA. 1960

**Rothman, Tony** 1953–  
American cosmologist

Relativity does not mean everything is relative. And the brilliance of Einstein's discoveries is so great that no amount of journalistic overkill has managed to dim it. Einstein and Bach are the only two people who deserve their reputations.

*Instant Physics: From Aristotle to Einstein, and Beyond*

Chapter 5 (p. 115)

Ballantine Books. New York, New York, USA. 1995

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

Einstein's theory of relativity is probably the greatest synthetic achievement of the human intellect up to the present time.

*The New York Times*, April 19, 1955

**Sciamia, Dennis** 1926–99  
English physicist

General relativity contains within itself the seeds of its own destruction.

In John D. Barrow

*The World Within the World* (p. 306)

Clarendon Press. Oxford, England. 1988

**Shaw, George Bernard** 1856–1950  
Irish comic dramatist and literary critic

The orbit of the electron observes no law: it chooses one path and rejects another: it is as capricious as the planet Mercury, who wanders from his road to warm his hands at the sun. All is caprice: the calculable world has become incalculable.

*Bernard Shaw's Plays*

*Too True to Be Good: A Political Extravaganza*

Act III

W.W. Norton & Company, Inc. New York, New York, USA. 1970

**Thomson, Sir Joseph John** 1856–1940  
English physicist

It [relativity] was not a discovery of an outlying island, but of a whole continent of new scientific ideas of the greatest importance to some of the most fundamental questions connected with physics.

Eclipse Showed Gravity Variation: Hailed as Epochmaking

*The New York Times*, November 9, 1919 (p. 6)

**Weyl, Hermann** 1885–1955  
German mathematician

It is as if a wall which separated us from Truth has collapsed. Wider expanses and greater depths are now exposed to the searching eye of knowledge, regions of which we had not even a presentiment. It has brought us much nearer to grasping the plan that underlies all physical happening.

Translated by Henry L. Brose

*Space – Time – Matter*

Preface to the First Edition (p. ix)

Dover Publications, Inc. New York, New York, USA. 1922

**Williams, W.**  
No biographical data available

You hold that time is badly warped,  
That even light is bent;  
I think I get the idea there,  
If this is what you meant;  
The mail the postman brings me today,  
Tomorrow will be sent.

In Ronald W. Clark

Part Four, Chapter 12 (p. 330)

The World Publishing Company. New York, New York, USA. 1971

## RELATIVITY, THEORY OF

**Einstein, Albert** 1879–1955  
German-born physicist

It is not easy to talk about how I reached the idea of the theory of relativity; there were so many hidden complexities to motivate my thought, and the impact of each thought was different at different stages in the development of the idea.

Translated by Yoshimasa A. Ono

How I Created the Theory of Relativity

*Physics Today*, August, 1982 (p. 46)

**Noll, Walter**  
Mathematician

I believe the coordinate-free approach fosters the cultivation of intuition, a scarce commodity in relativity because

the phenomena this theory is intended to describe are as yet rather remote from our daily experience.

Euclidean Geometry and Minkowskian Chronometry  
*The American Mathematical Monthly*, February, 1964 (p. 129)

## RELEVANCE

### National Research Council (USA)

Relevance is not always obvious at first, and its discovery requires serious intellectual effort from both scientists and potential users of science.

*Physics in Perspective* (Volume 1)  
Chapter 2 (p. 23)  
National Academy of Sciences. Washington, D.C. 1972

## RELIABILITY

**Adams, George** 1750–95  
English instrument maker

The mind of man admits with reluctance the truth of every testimony concerning matters of fact, which happen to be repugnant to the uniform experience of his senses; hence the general backwardness to believe the miracles in the Bible: and hence the Dutchman, who informed the king of Siam that water in his country would sometimes in cold weather be found so hard, that men walked upon it, and that it would bear an elephant, was esteemed a person unworthy of credit. Hitherto, says the king, I have believed the strange things you told me, because I looked upon you as a sober man, but now I am sure you lie.

*Lectures on Natural and Experimental Philosophy* (Volume 1)  
Lecture VI (pp. 279–280)  
Printed by R. Hindmarsh. London, England. 1794

## RELIC

**Grove, William Robert** 1811–96  
Judge and physical scientist

The relic is to the past as is the germ to the future.

*The Correlation and Conservation of Forces*  
Introductory Remarks (p. 12)  
D. Appleton & Co. New York, New York, USA. 1885

## RELIGION

**Barrow, John D.** 1952–  
English theoretical physicist

If a “religion” is defined to be a system of ideas that contains unprovable statements, then Gödel has taught us that, not only is mathematics a religion, it is the only religion that can prove itself to be one.

*Between Inner Space and Outer Space* (p. 88)  
Oxford University Press, Inc. New York, New York, USA. 1999

**Einstein, Albert** 1879–1955  
German-born physicist

It is quite clear to me that the religious paradise of youth, which [I] lost, was a first attempt to free myself from the chains of the “merely personal,” from an existence which is dominated by wishes, hopes, and primitive feelings.

In Gerald Holton  
*Einstein, History, and Other Passions: The Rebellion Against Science at the End of the Twentieth Century*  
Part Two, Chapter 8 (p. 172)  
Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

[My] deep religiosity...found an abrupt ending at the age of twelve, through the reading of popular scientific books.

In Gerald Holton  
*Einstein, History, and Other Passions: The Rebellion Against Science at the End of the Twentieth Century*  
Part Two, Chapter 8 (p. 172)  
Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

**Ferrer, Francisco** 1849–1909  
Spanish anarchist

When the masses become better informed about science, they will feel less need for help from supernatural Higher Powers. The need for religion will end when man becomes sensible enough to govern himself.

In James A. Haught (ed.)  
*2000 Years of Disbelief: Famous People with the Courage to Doubt*  
Part Six: The Early Twentieth Century Chapter 52 (p. 224)  
Prometheus Books. Amherst, New York, USA. 1996

**Gould, Stephen Jay** 1941–2002  
American paleontologist, evolutionary biologist, and historian of science

I do get discouraged when some of my colleagues tout their private atheism (their right, of course, and in many ways my own suspicion as well) as a panacea for human progress against a caricature of “religion,” erected as a straw man for rhetorical purposes.... If these colleagues wish to fight superstition, irrationalism, philistinism, ignorance, dogma, and a host of other insults to the human intellect, then God bless them – but don’t call this enemy “religion.”

*Rocks of Ages*  
The Two False Paths of Irenics (pp. 209–210)  
The Ballantine Publishing Group. New York, New York, USA. 1999

## RENORMALIZATION

**Berry, Sir Michael Victor** 1941–  
English mathematical physicist

In The Renormalization Group method you take a structure you don’t understand and convert it to another structure you don’t understand. You keep doing it until you finally understand.

2002 Gibbs Lecture, San Diego, California, January 6, 2002

**REPAIR****Adams, Douglas** 1952–2001

English author, comic radio dramatist, and musician

The major difference between a thing that might go wrong and a thing that cannot possibly go wrong is that when a thing that cannot possibly go wrong goes wrong, it usually turns out to be impossible to get at and repair.

*The Ultimate Hitchhiker's Guide to the Galaxy**Mostly Harmless*

Chapter 12 (p. 720)

Ballantine Books. New York, New York, USA. 2002

**REPLICA****Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

For, whereas you can make a replica of an ancient statue, there is no possible replica of an ancient state of mind. There can be no nearer approximation [of one] than that which a masquerade bears to real life.

*Science and the Modern World*

Chapter IX (p. 200)

The Macmillan Company. New York, New York, USA. 1929

**REPORT****Kettering, Charles Franklin** 1876–1958

American engineer and inventor

Some technical reports are so dry and dusty...that if you put a pile of them in a hydraulic press and apply millions of pounds of pressure to it, not a drop of juice will run out.

*Professional Amateur*

Part III, Chapter XXI (p. 215)

E.P. Dutton &amp; Company, Inc. New York, New York, USA. 1957

**REPRODUCTION****Bateson, William** 1861–1926

English biologist and geneticist

I know nothing which to a man well trained in scientific knowledge and method brings so vivid a realisation of our ignorance of the nature of life as the mystery of cell-division.... It is this power of spontaneous division which most sharply distinguishes the living from the non-living.... The greatest advance I can conceive in biology would be the discovery of the instability which leads to the continued division of the cell. When I look at a dividing cell I feel as an astronomer might do if he beheld the formation of a double star: that an original act of creation is taking place before me.

In Louise B. Young (ed.)

*The Mystery of Matter*

Aspects of Immortality, Death, and Reproduction (p. 403)

Oxford University Press, Inc. New York, New York, USA. 1965

**Fisher, Sir Ronald Aylmer** 1890–1962

English statistician and geneticist

We can set no limit to human potentialities; all that is best in man can be bettered...The ordinary social reformer sets out with a belief that no environment can be too good for humanity; it is without contradicting this that the eugenist may add that man can never be too good for his environment.

Some Hopes of a Eugenist

*Eugenics Review*, 5:309, 1914**Fletcher, Joseph** 1905–91

Anglican theologian and founder of the theory of situational ethics

Our basic ethical choice as we consider man's new control over himself, over his body and his mind as well as over his society and environment, is still what it was when primitive men holed up in caves and made fires. Chance versus control. Should we leave the fruits of human reproduction to take shape at random, keeping our children dependent on accidents of romance and genetic endowment, of sexual lottery or what one physician calls "the meiotic roulette of his parents' chromosomes?" Or should we be responsible about it, that is, exercise our rational and human choice, no longer submissively trusting to the blind worship of raw nature?

*The Ethics of Genetic Control: Ending Reproductive Roulette*

Chapter I. Trying to be Natural (p. 36)

Prometheus Books. Buffalo, New York, USA. 1988

**Harvey, William** 1578–1657

English physician

All animals are in some sort produced out of an egge ...

*Exercitations Concerning the Generation of Living Creatures* (p. 381)

1653

**Huxley, Julian** 1887–1975

English biologist, philosopher, and author

The pioneers of Eugenic Insemination by Donor...will be accused of mortal sin, of theological impropriety, of immoral and unnatural practices. But they can take heart from what has happened in the field of birth control, and can be confident that the rational control of reproduction aimed at the prevention of human suffering and frustration and the promotion of human well-being and fulfillment will in the not too distant future come to be recognized as a moral imperative.

*Eugenics Review*, Volume 54, 1963 (p. 123)**Pearson, Karl** 1857–1936

English mathematician

A majority of the community would probably also admit today that the physical characters of man are inherited with practically the same intensity as the like characters in cattle and horses. But few, however..., apply the

results which flow from such acceptance to their own conduct in life.

On the Laws of Inheritance in Man  
*Biometrika*, Volume 3, 1904 (p. 131)

**Peattie, Donald Culross** 1898–1964

American botanist, naturalist, and author

One snowflake is not born of another. For true reproduction is the genius only of life. There is nothing, in all the ponderous and vasty world of rock and star, comparable with the rhythm of man, sperm, babe, man. The distance to the farthest galaxy does not so stir me as the ages between the simplicity of two fused cells and the potential king who is lifted out of the whirlwind and agony and slapped into breathing.

*Flowering Earth*

Chapter 4 (p. 46)

G.P. Putnam's Sons, New York, New York, USA. 1939

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

...impregnation will be regarded in an entirely different manner, more in the light of a surgical operation, so that it will be thought not ladylike to have it performed in the natural manner.

*The Scientific Outlook*

Chapter XVI (p. 262)

George Allen & Unwin Ltd, London, England. 1931

**Zihlman, Adrienne**

American paleoanthropologist

As with most things in life, the debate centers on two themes: food and sex; or to give it a proper academic tone: diet and reproduction.

Sex, Sexes and Sexism in Human Origins

*Yearbook of Physical Anthropology*, Volume 30, April 12, 1985 (p. 11)

**RESEARCH**

**Abbe, Cleveland** 1838–1916

American meteorologist

The ultimate goal of scientific research is not the collection of facts furnished by explorations and surveys, not even the exact data furnished by the most laborious measurements as in astronomy, geodesy, chemistry, and physics. Neither is it the framing of a few generalizations and inductions, such as the general idea of evolution; nor is it the establishment of some isolated fundamental laws, such as the attraction of gravitation, the conservation of energy, the mechanical equivalent of heat, the atomic weights and their periodic law. Research aims to go deeper than all this and show how these laws and phenomena result necessarily from a few simple premises – not premises in the sense of assumption, but axioms that are just as truly the basis of the physical universe as Euclid's axioms are the basis of geometry.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1907*

The Progress of Science as Illustrated by the Development of Meteorology (p. 287)

Government Printing Office, Washington, D.C. 1908

**Adams, George** 1750–95

English instrument maker

The more diligent our search, the more accurate our scrutiny, the more we are convinced that our labours can never finish, and that subjects inexhaustible remain behind still unexplored.

*Lectures on Natural and Experimental Philosophy* (Volume 1)

Lecture X (p. 421)

Printed by R. Hindmarsh, London, England. 1794

The best directed and most successful researches only inform us how little is known, and give us no cause to be satisfied with the discoveries they have made.

*Lectures on Natural and Experimental Philosophy* (Volume 3)

Chapter XXXV (p. 512)

Printed by R. Hindmarsh, London, England. 1794

**Agnew, Neil McK.**

Leaping to Conclusions (p. 128)

Prentice-Hall, Inc. Englewood Cliffs, New Jersey, USA. 1969

**Asimov, Isaac** 1920–92

American author and biochemist

...One can appreciate and take pleasure in the achievements of science even though he does not himself have a bent for creative work in science.... Initiation into the magnificent world of science brings great aesthetic satisfaction, inspiration to youth, fulfillment of the desire to know, and a deeper appreciation of the wonderful potentialities and achievements of the human mind.

*Asimov's New Guide to Science*

What Is Science? (p. 15)

Basic Books, Inc. New York, New York, USA. 1984

**Author undetermined**

Great cabinets may be unlocked by little keys.

Astronomical Observations

*Nature*, Volume 4, May 11, 1871 (p. 31)

Research is like gold-finding. When a new auriferous region is first opened up the nuggets lie on or near the surface and may be secured with little preparation, skill, or effort. By degrees the placers are exhausted, and gold is obtained only by crushing quartz reef and extracting the precious metal by processes which require ample capital, costly machinery, and technical skill. Just so it is or has been the case in chemical research. A century ago important facts as yet undetected lay, so to speak, on the surface, and might be stumbled upon by random experimentalists. Rough and simple apparatus was quite sufficient. In our days all this is changed. Truth lies now at the bottom of very deep wells.

Science as the Enemy of Truth (pp. 226–227)

The Macmillan Company. New York, New York, USA. 1931

### **Betjeman, John** 1906–84

English poet

Research is the curse of our age. “Research” is the first step on the way to expertdom. There is so much research going on nowadays that teachers are becoming scarce. Already in the universities complaints are being made about there being too many research students and research fellowships. And what, you may ask, is all this research for? Goodness knows.

*First and Last Loves* (p. 62)

### **Beveridge, William Ian Beardmore** 1908–

Australian zoologist

Research is one of those highly complex and subtle activities that usually remain quite unformulated in the minds of those who practice them. This is probably why most scientists think that it is not possible to give any formal instruction in how to do research.

*The Art of Scientific Investigation*

Preface (pp. ix–x)

W.W. Norton & Company, Inc. New York, New York, USA. 1957

The research worker remains a student all his life.

*The Art of Scientific Investigation*

Chapter One (p. 1)

W.W. Norton & Company, Inc. New York, New York, USA. 1957

Anyone with an alertness of mind will encounter in the course of an investigation numerous interesting side issues that might be pursued. It is a physical impossibility to follow up all of these. The majority are not worth following, a few will reward investigation and the occasional one provides the opportunity of a lifetime. How to

distinguish the promising clues is the very essence of the art of research.

*The Art of Scientific Investigation*

Chapter Three (p. 35)

W.W. Norton & Company, Inc. New York, New York, USA. 1957

People in most other walks of life can allow themselves the indulgence of fixed ideas and prejudices which make thinking so much easier...but the research worker must try to keep his mind malleable and avoid holding set ideas in science. We have to strive to keep our mind receptive and to examine suggestions made by others fairly and on their own merits, seeking arguments for as well as against them. We must be critical, certainly, but beware lest ideas be rejected because an automatic reaction causes us to see only the arguments against them. We tend especially to resist ideas competing with our own.

*The Art of Scientific Investigation*

Chapter Seven (p. 86)

A man may do research for the fun of doing it but he cannot expect to be supported for the fun of doing it.

The Biological Approach to Bacteriology

*Journal of Bacteriology*, Volume 18, Number 1, January, 1932 (p. 9)

### **Browning, Robert** 1812–89

English poet

...as is your sort of mind,

So is your sort of search: you'll find

What you desire.

*The Poems and Plays of Robert Browning*

Easter Day, Part vii, l. 3 (p. 501)

The Modern Library. New York, New York, USA. 1934

### **Bunge, Mario** 1919–

Argentine philosopher and physicist

Most scientists are prepared to grant that the chief theoretical (that is, nonpragmatic) aim of scientific research is

to answer, in an intelligible, exact, and testable way, five kinds of questions, namely those beginning with what (or how), where, when, whence, and why.... [T]he Five W's of Science. (Only radical empiricists deny that science has an explanatory function, and restrict the task of scientific research to the description and prediction of observable phenomena.) Also, most scientists would agree that all five W's are gradually (and painfully) being answered through the establishment of scientific laws, that is, general hypotheses about the patterns of being and becoming.

*Causality: The Place of the Causal Principle in Modern Science*

Chapter 10 (p. 248)

Harvard University Press. Cambridge, Massachusetts, USA. 1959

### **Bush, Vannevar** 1890–1974

American electrical engineer and physicist

Basic research leads to new knowledge. It provides scientific capital. It creates the fund from which the practical applications of knowledge must be drawn. New products and new processes do not appear full-grown. They are founded on new principles and new conceptions, which in turn are painstakingly developed by research in the purest realms of science.

*Endless Horizons*

Chapter 5 (pp. 52–53)

Public Affairs Press. Washington, D.C. 1946

In these circumstances it is not at all strange that the workers sometimes proceed in erratic ways. There are those who are quite content, given a few tools, to dig away, unearthing odd blocks, piling them up in the view of fellow workers and apparently not caring whether they fit anywhere or not.... Some groups do not dig at all, but spend all their time arguing as to the exact arrangement of a cornice or an abutment. Some spend all their days trying to pull down a block or two that a rival has put in place. Some, indeed, neither dig nor argue, but go along with the crowd, scratch here and there, and enjoy the scenery. Some sit by and give advice, and some just sit.

*Endless Horizons*

Chapter 17 (p. 180)

Public Affairs Press. Washington, D.C. 1946

### **Campbell, Norman R.** 1880–1949

English physicist and philosopher

Men of his own [Faraday] and of the preceding era had founded 'natural philosophy': they had made discoveries and had elaborated theories which still form part of the frame-work of the physical sciences. But their work has little interest for us today. Their aims, their conceptions, their whole attitude toward the problems which they investigated differ so widely from our own, that, while their results may be the basis of modern research, their methods afford little inspiration for it.

*Modern Electrical Theory*

Part I, Chapter 1 (p. 1)

University Press. Cambridge, England. 1907

**Capra, Fritjof** 1939–  
Austrian-born American physicist

Scientists, therefore, are responsible for their research not only intellectually but also morally...the results of quantum mechanics and relativity theory have opened up two very different paths for physics to pursue. They may lead us – to put it in extreme terms – to the Buddha or to the bomb, and it is up to each of us to decide which path to take.

*The Turning Point*

Chapter II (p. 87)

A Bantam Book. New York, New York, USA. 1983

**Carrel, Alexis** 1873–1944

French surgeon and biologist

In researches dealing with physics and chemistry, and also with physiology, one always attempts to isolate relatively simple systems, and to determine their exact conditions.

*Man the Unknown*

Chapter 2, Section 5 (pp. 50–51)

Harper & Brothers. New York, New York, USA. 1939

**Carroll, Lewis (Charles Dodgson)** 1832–98

English writer and mathematician

Now this field of Mathematical research, with all its wealth of hidden treasure, is all too apt to yield nothing to our research: for it is haunted by certain *ignes fatui* – , delusive phantoms, that float before us, and seem so fair, and are all but in our grasp, so nearly that it never seems to need more than one step further, and the prize shall be ours!

*Curiosa Mathematica* Part I (3rd edition)

Introduction (p. xvi)

Macmillan & Co Ltd. London, England. 1890

**Caullery, Maurice** 1868–1958

French biologist

The double danger of research into this type of phenomenon lies, on the one hand, in bringing...preconceived ideas of too subjective a nature, bordering on an illusory anthropomorphism, and on the other hand, trying to reduce complex facts to simple elementary reactions.

Translated by Averil M. Lysaght

*Parasitism and Symbiosis*

Chapter I (p. 2)

Sidgwick & Jackson Limited. London, England. 1952

**Chesterton, G. K. (Gilbert Keith)** 1874–1936

English author

Research is the search of people who don't know what they want.

*The G.K. Chesterton Calendar*

May 25

Cecil Palmer & Hayward. London, England. 1916

**Coulter, John Merle** 1851–1928

American botanist and educator

Research is like the exploration of a new country. It must be traversed throughout; all trails must be followed and mapped. Some trails will lead to rich lands and valuable mines; others will not. No one can tell until everything has been explored.

The Social, Educational, and Scientific Value of Botanic Gardens

*Science*, N.S. Volume 45, Number 1174, June 29, 1917 (p. 647)

**Crampton, Henry Edward** 1875–1956

American paleontologist

So widely the impelling energy of research has driven the soldiers of investigation that only when, as in the present series of addresses, they return to the council-fires of an intellectual bivouac can they come to realize how far-flung indeed are the battle-lines of the armies of science – how rich and diversified is the territory from which knowledge has driven ignorance and superstition.

*Lectures on Science, Philosophy and Art, 1907–1908*

Zoology (pp. 5–6)

The Columbia University Press. New York, New York, USA. 1908

**Crichton, Michael** 1942–

American novelist

...scientific research was much like prospecting: you went out and you hunted, armed with you maps and your instruments, but in the end your preparations did not matter, or even your intuition. You needed your luck, and whatever benefits accrued to the diligent, through sheer, grinding hard work.

*The Andromeda Strain*

Chapter 20 (p. 222)

HarperCollins Publishers. New York, New York, USA. 2003

**Crick, Francis Harry Compton** 1916–2004

English biochemist

In research the front line is almost always in a fog.

*What Mad Pursuit: A Personal View of Scientific Discovery*

Chapter 3 (p. 35)

Basic Books, Inc. New York, New York, USA. 1988

**Cussler, Clive**

American author

**Dirgo, Craig**

No biographical data available

Research is the key. You can never do enough research. This is so vital I'll repeat it. You can never to enough research.... Research can either lower the odds or tell you it's hopeless.

*The Sea Hunters*

Introduction (p. 28)

Simon & Schuster. New York, New York, USA. 1996

**da Vinci, Leonardo** 1452–1519

Italian High Renaissance painter and inventor

Nothing can be written as the result of new researches.

*Leonardo da Vinci's Note Books* (p. 53)  
Duckworth & Company. London, England. 1906

**Dampier, Sir William Cecil** 1867–1952

English scientific writer

The more we learn, the more various and intricate are the new avenues of research which open before us.

*The Recent Development of Physical Science*  
Chapter I (p. 16)  
John Murray. London, England. 1904

**Dantzig, George Bernard** 1914–2005

American mathematician

I find it amusing that there could be these two very different ways to organize research – one anarchistic, the other dictatorial, and yet both highly efficient. Apparently any form of government can be made to work if the people are motivated enough.

In D. Albers, G. Alexanderson and C. Reid  
*More Mathematical People: Contemporary Conversations* (p. 77)  
Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

**Dawkins, Richard** 1941–

English ethologist, evolutionary biologist, and popular science writer

Existing science must be overthrown not by casual anecdotes but by the most rigorous research, repeated, dissected, and repeated again.

Putting Away Childish Things  
*Skeptical Inquirer*, Jan/Feb 1995 (p. 31)

**Day, R. A.**

No biographical data available

The goal of scientific research is publication. Scientists, starting as graduate students, are measured primarily not by their innate knowledge of either broad or narrow scientific subjects, and certainly not by their wit or charm; they are measured, and become known (or remain unknown), by their publications.

*How to Write and Publish a Scientific Paper* (3rd edition) (p. vii)  
Oryx Press. Phoenix, Arizona, USA. 1988

**Dessauer John** 1792–1871

English astronomer and chemist

All the efforts of the researcher to find other models, conceptions, different mathematical forms, better linguistic modes of expression, to do justice to newly discovered layers of being mean self-transformation. The researcher in his place is the human being in self-transformation to more profound insight into what is given.

*Universitas: A Quarterly German Review of the Arts and Sciences*,  
Volume 26, Number 4, April 6, 1984 (p. 316)

**Dr. Gil**

No biographical data available

There! Little Research, don't you cry –  
You'll be a paper by and by.  
Three observations – half a page of notes,  
Will bring prostration to seven other blokes.

The Professor Sings to His Brain Child  
*Industrial and Engineering Chemistry: News Edition*, Volume 11, Number 9, May 19, 1933 (p. 149)

**Dylan, Bob** 1941–

American pop-folk singer, composer, and musician

Well the world of research is going berserk

Too much paperwork

Released August 29, 2006 by Sony BMG  
*Modern Times*  
Nettue Moore

**Einstein, Albert** 1879–1955

German-born physicist

When a man after long years of searching chances upon a thought which discloses something of the beauty of this mysterious universe, he should not therefore be personally celebrated. He is already sufficiently paid by his experience of seeking and finding.

*The New York Times*, 128:18, Section 4, November 10, 1978

**Einstein, Albert** 1879–1955

German-born physicist

**Infeld, Leopold** 1896

Polish physicist

The results of scientific research very often force a change in the philosophical view of problems which extend far beyond the restricted domain of science itself.

*The Evolution of Physics*  
The Philosophical Background (p. 55)  
Simon & Schuster. New York, New York, USA. 1936

**Eisenhower, Dwight David** 1890–1969

34th president of the USA

Scientific research has never been amenable to rigorous cost accounting in advance. Nor, for that matter, has exploration of any sort. But if we have learned one lesson, it is that research and exploration have a remarkable way of paying off – quite apart from the fact that they demonstrate that man is alive and insatiably curious. And we all feel richer for knowing what explorers and scientists have learned about the universe in which we live.

Introduction to Outer Space

**Freeman, R. Austin** 1862–1943

British physician and mystery novelist

...in scientific research there is no...division of function. The investigator is at once judge, jury, and witness.

His knowledge is first-hand, and hence he knows the exact value of his evidence. He can hold a suspended judgment. He can form alternative opinions and act upon both alternatives. He can construct hypotheses and try them out. He is hampered by no rules but those of his own making. Above all, he is able to interrogate things as well as persons.

*A Certain Dr. Thorndyke*

Thorndyke Connects the Links (pp. 277–278)

Dodd, Mead & Company. New York, New York, USA. 1928

### **Frothingham, Octavius Brooks** 1822–95

American clergyman and author

The actual Jesus is, thus understood, inaccessible to scientific research.

*The Cradle of the Christ: A Study in Primitive Christianity*

Chapter IV (p. 53)

G.P. Putnam's Sons. New York, New York, USA. 1887

*The Scientist in Action: A Scientific Study of His Methods*

Four Qualities of Scientific Research (p. 29)

Williams & Norgate Ltd. London, England. 1936

### **Gibbs, J. Willard** 1839–1903

American mathematician

One of the principal objects of theoretical research in any department of knowledge is to find the point of view from which the subject appears in its greatest simplicity.

In G. K. Batchelor

Preoccupations of a Journal Editor

*Journal of Fluid Mechanics*, Volume 106, 1981

### **Gies, William J.** 1872–1956

US biochemist and dentist

Research without *imagination* is pursuit rather than enquiry.

Research in Dentistry

*Journal of Dental Research*, Volume 3, Number 3, September, 1921 (p. xcvi)

Research is inquisitiveness *in action* guided by common sense, and dominated by good judgment.

Research in Dentistry

*Journal of Dental Research*, Volume 3, Number 3, September, 1921 (p. xciv)

Through research we seek to *learn* more in order that we may *do* more and *be* more.

Research in Dentistry

*Journal of Dental Research*, Volume 3, Number 3, September, 1921 (p. xciv)

### **Gore, George** 1826–1909

English electrochemist

Next in importance to the skilful use of a gifted mind in research comes dexterous employment of the human hand.

*The Art of Scientific Discovery*

Chapter XXXIII (p. 313)

Longmans, Green & Co. London, England. 1878

...the most extensive research is never complete, and never can be until it extends to the utmost bounds of knowledge.

*The Art of Scientific Discovery*

Chapter XLIII (p. 397)

Longmans, Green & Co. London, England. 1878

### **Green, Celia** 1935–

English philosopher and psychologist

Research is a way of taking calculated risks to bring about incalculable consequences.

*The Decline and Fall of Science*

Aphorisms (p. 1)

Hamilton. London, England. 1976

The way to do research is to attack the facts at the point of greatest astonishment.

*The Decline and Fall of Science*

Aphorisms (p. 1)

Hamilton. London, England. 1976

### **Gregg, Alan** 1890–1957

American medical educator and philosopher

Research has been defined as a guerrilla warfare on the unknown. In the rigorous uncertainties of such campaigns the investigator must be prepared to swap horses in mid-stream and to discard some very dear items of accumulated baggage of belief or personal pride, whenever intellectual honesty calls for such sacrifices.

*The Furtherance of Medical Research*

Chapter III (pp. 87–88)

Yale University Press. New Haven, Connecticut, USA. 1941

### **Hardy, G. H. (Godfrey Harold)** 1877–1947

English pure mathematician

There are many highly respected motives which may lead men to prosecute research, but three which are much more important than the rest. The first (without which the rest must come to nothing) is intellectual curiosity, desire to know the truth. Then, professional pride, anxiety to be satisfied with one's performance, the shame that overcomes any self-respecting craftsman when his work is unworthy of his talent. Finally, ambition, desire for reputation, and the position, even the power or the money, which it brings.

*A Mathematician's Apology*

Section 7 (pp. 78–79)

Cambridge University Press. Cambridge, England. 1967

### **Hastings, Horace Lorenzo** 1831–99

No biographical data available

There are none so blind as those who will not see; and no man searches honestly for that which he is afraid to find.

*Atheism & Arithmetic: Or, Mathematical Law in Nature*

Chapter I (p. 12)

H.L. Hastings. Boston, Massachusetts, USA. 1889

**Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

If I were asked what was Christopher Columbus' greatest achievement in discovering America, my answer would not be that he took advantage of the spherical shape of the earth to get to India by the western route – this idea had occurred to others before him – or that he prepared his expeditions meticulously and rigged his ships most expertly – that, too, others could have done equally well. His most remarkable feat was the decision to leave the known regions of the world and to sail westward, far beyond the point from which provisions could have gotten him back home again.

*Physics and Beyond: Encounters and Conversations*

Chapter 6 (p. 70)

Harper & Row, Publishers. New York, New York, USA. 1971

...the subject matter of research is no longer nature in itself, but nature subjected to human questioning...

In Aldous Huxley

*Literature and Science*

Chapter 25 (p. 76)

Harper & Row, Publishers. New York, New York, USA. 1963

**Heschel, Abraham J.** 1907–72

Jewish theologian

Scientific research is an entry into the endless, not a blind alley; Solving one problem, a greater one enters our sight. One answer breeds a multitude of new questions; explanations are merely indications of greater puzzles. Everything hints at something that transcends it; the detail indicates the whole, the whole, its idea, the idea, its mysterious root. What appears to be a center is but a point on the periphery of another center. The totality of a thing is actual infinity.

*Analog Science Fiction/Science Fact Magazine*, Volume CIV, Number 12, December, 1984 (p. 63)

**Herschel, Friedrich Wilhelm****(Sir William)** 1738–1822

English astronomer

When I pursued these researches [pertaining to the existence of a self-luminous fluid]...I was in the situation of a natural philosopher who follows the various species of animals and insects from the height of their perfection down to the lowest ebb of life; when arriving at the vegetable kingdom, he can scarcely point out the precise boundary where the animal ceases and the plant begins, and may even go so far as to suspect them not to be essentially different. But recollecting himself, he compares, for instance, one of the human species with a tree, and all doubt upon the subject vanishes before him. In the same manner we pass by gentle steps from a coarse cluster down through others more remote, and therefore of finer texture, without any hesitation, till we

find ourselves brought to an object such as the nebula in Orion, when we are still inclined to remain in our once adopted idea of stars exceedingly remote and inconceivably crowded, as being the occasion of that remarkable occurrence. It seems, therefore, to require a more dissimilar object to bring us right again. A glance like that of the naturalist, who casts his eye from the perfect vegetable to the perfect animal, is wanting to remove the veil from the mind of astronomers.

Quoted in Dionysius Lardner

*Popular Lectures on Science and Art* (Volume 2)

The Stellar Universe (Second Lecture) (p. 394)

Greeley & McElrath. New York, New York, USA. 1846

**Hillery, George A.**

No biographical data available

The process of scientific research is a curious mixture of careful planning and accident, of cold logic and extreme passion, of startling flashes of insight and laborious, soul-wearying labor. Scientific research does not go "by the book," and yet the "book" is necessary. We need a conception of what "should" be done, if only to remind us of where to go and what to do next after we have violated most if not all of the prescriptions.

*A Research Odyssey: Developing and Testing a Community Theory*

Introduction (p. 1)

Transaction Publishers

New Brunswick, New Jersey, USA. 1982

**Holbach, Paul Henri Thiry** 1723–89

French philosopher

Man seeks to range out of his sphere: notwithstanding the reiterated checks his ambitious folly experiences, he still attempts the impossible; strives to carry his researches beyond the visible world; and hunts out misery in imaginary regions.

Translated by H.D. Robinson

*The System of Nature, Or, Laws of the Moral and Physical World* (Volume 1)

Author's Preface (p. 2 )

J.P. Mendum. Boston, Massachusetts, USA. 1889

**Hubble, Edwin Powell** 1889–1953

American astronomer

Research men attempt to satisfy their curiosity, and are accustomed to use any reasonable means that may assist them toward the receding goal. One of the few universal characteristics is a healthy skepticism toward unverified speculations. These are regarded as topics for conversation until tests can't be devised. Only then do they attain the dignity of subjects for investigation.

*The Realm of the Nebulae*

Introduction (p. 6)

Dover Publications, Inc. New York, New York, USA. 1958

**Hurston, Zora Neale** 1891–1960

American author and anthropologist

Research is formalized curiosity. It is poking and prying with a purpose.

*Dust Tracks on a Road*

Chapter X (p. 174)

University of Illinois Press. Urbana, Illinois, USA. 1984

**Jaffe, Bernard** 1896–1968

American science writer

There is no last word or ultimate solution in the adventure of scientific research.

**Oppenheimer, James Robert** 1904–67  
American theoretical physicist

Research is action; and the question I want to leave in a very raw and uncomfortable form with you is how to communicate this sense of action to our fellow men who are not destined to devote their lives to the professional pursuit of new knowledge.

*The Open Mind*  
Chapter VII (p. 129)  
Simon & Schuster. New York, New York, USA. 1955

We have done the devil's work. Now we have come back to our real job, which is to devote ourselves exclusively to research.

In Karl Jasper  
*La Bombe Atomique et l' Avenir de L'Homme* (p. 360)  
Buchet-Chassel. Paris, France. 1963

**Osler, Sir William** 1849–1919  
Canadian physician and professor of medicine

Observe, record, tabulate, communicate.

In W.S. Thayer

*Sir William Osler, Bart.: Brief Tributes to His Personality, Influence and Public Service*

Osler, The Teacher (p. 51)

The Johns Hopkins Press. Baltimore, Maryland, USA. 1920

**Peabody, A. P.**  
No biographical data available

No man becomes proficient in any science who does not transcend system, and gather up new truth for himself in the boundless field of research.

In James Orton

*Comparative Zoology, Structural and Systematic*

Preceding Chapter XXI (p. 222)

Harper & Brothers. New York, New York, USA. 1877

**Perutz, Max F.** 1914–2002  
Austrian-born English biochemist

...research consists of formulation of imaginative hypotheses that are open to falsification by experiment.

*Is Science Necessary?*

How to Become a Scientist (p. 199)

E.P. Dutton & Company, Inc. New York, New York, USA. 1989

**Planck, Max** 1858–1947  
German physicist

Conscientiousness and truth are as necessary in research in pure science as in practical life. The experimenter must not be blinded by the first results of a new intellectual discovery and must not neglect to prove conscientiously and thoroughly the results obtained in his researches.

Translated by R. Jones and D.H. Williams

*A Survey of Physical Theory*

Dynamical Laws and Statistical Laws (p. 56)

Courier Dover Publications, New York, USA. 1990

**Platt, Sir Robert** 1900–78  
English physician

The conventional picture of the research worker is that of a rather austere man in a white coat with a background of complicated glassware. My idea of a research worker, on the other hand, is a man who brushes his teeth on the left side of his mouth only so as to use the other side as a control and see if tooth-brushing has any effect on the incidence of caries.

*British Medical Journal*, Volume 1, 1953 (p. 577)

**Preston, Thomas** 1860–1900  
Irish scientist

It is but a short time since the pursuit of experimental research was regarded merely as a matter of individual curiosity; but owing to the high commercial value and important bearings of many of the recent discoveries in

the fields of science, the public mind has now become awakened to the conviction that knowledge is wealth, and that the scientific education of the people is a matter of national importance.

*The Theory of Heat* (2nd edition)

Preface to the First Edition (p. v)

Macmillan & Co Ltd. London, England. 1904

**Recordé, Robert** 1510?–58  
English mathematician and writer

The time seemeth longe (bee it never so shorte indeed) to hym that desirously looketh for anything: for as the obtaining of it bringeth great pleasure, namelye the thinge itselfe being profitable, so the wante thereof causeth displeasure and cotinuall grief tyll the desire be eyther fully satisfied, other partly (at the least) accomplished.

*The Castle of Knowledge*

The First Treatise (p. 1)

Imprinted by R. Wolfe. London, England. 1556

**Reichenbach, Hans** 1891–1953  
German philosopher of science

The reliance on the concrete is the basis of both the charm and the power of physical research.

*Atom and Cosmos*

Chapter 4 (p. 75)

The Macmillan Company. New York, New York, USA. 1933

**Richards, Herbert Maul** 1871–1928  
No biographical data available

...the world demands research, and any fact no matter how humble, if accurately established, helps on the cause.

*Lectures on Science, Philosophy and Art, 1907–1908*

Botany (p. 36)

The Columbia University Press. New York, New York, USA. 1908

**Richet, Charles** 1850–1935  
French physiologist

The gift for investigation appears at an early age: the demon of research speaks to men whilst they are still young.

*The Natural History of a Savant*

Chapter VI (pp. 38–39)

J.M. Dent & Sons Ltd. London, England. 1927

Understand this clearly; that the right method, even for obtaining a useful practical result, is not to worry about the practice, but to concentrate intensely on pure investigation, without being hampered by any parasitic considerations other than whatever conduces to greater facility for research.

*The Natural History of a Savant*

Chapter XII (p. 134)

J.M. Dent & Sons Ltd. London, England. 1927

**Robinson, James Harvey** 1863–1936  
American historian

Research is mainly looking for things that are not there and attempting processes that will not occur.

*The Humanizing of Knowledge*

Chapter II (p. 32)

George H. Doran Company. New York, New York, USA. 1923

**Romanoff, Alexis Lawrence** 1892–1980

Russian soldier and scientist

Scientific research provides the shortest route to useful practice.

*Encyclopedia of Thoughts*

Aphorisms 112

Ithaca Heritage Books. Ithaca, New York, USA. 1975

Scientific research is based chiefly on creative thinking.

*Encyclopedia of Thoughts*

Aphorisms 219

Ithaca Heritage Books. Ithaca, New York, USA. 1975

**Sarewitz, Daniel**

No biographical data available

A lone scientist, frizzy-haired and bespectacled – the absent-minded, benevolent genius lost in thought; or perhaps the dedicated experimentalist clad in a white coat and laboring madly among the condensers, van de Graaf generators, computers, and even electrode-covered cadavers: These are typical public images of scientific research.

*Frontiers of Illusion*

Chapter 3 (p. 31)

Temple University Press. Philadelphia, Pennsylvania, USA. 1996

**Sarnoff, David** 1891–1971

Russian-born American broadcasting executive

The wonderful thing about research is that the more of it you do, the more of it there is left to do.

Address to the Board of Directors of the Stanford Research Institute

*Research and Industry: Partners in Progress*, November 14, 1951 (p. 13)

**Scalera, Mario**

No biographical data available

There is no practical purpose here. There is simply man's insatiable curiosity, his abhorrence of the unknown – the desire to see, in the confusing phenomena of nature, the law, the order, that underlies them. This kind of urge has its own reward...the reward that comes to a man who suddenly sees order shaping out of chaos – this is what we call fundamental research.

An Industrial Research Director Views Fundamental Research

*Chemical and Engineering News*, April 21, 1958 (p. 85)

**Schild, Alfred** 1921–77

Physicist

If one can tell ahead of time what one's research is going to be, the research problem cannot be very deep and may be said to be almost nonexistent.

On the Matter of Freedom: The University and the Physical Sciences Bulletin

*Canadian Association of University Teachers*, Volume 11, Number 4, 1963

**Schön, Donald A.** 1930–97

American philosopher of practice and learning theory

He emphasizes the key issue of the starting point of research. In real-world practice, problems do not present themselves to the practitioner as givens. They must be constructed from the materials of problematic situations which are puzzling, troubling and uncertain. In order to convert a problematic situation to a problem, a practitioner must do a certain kind of work.

*The Reflective Practitioner: How Professionals Think in Action* (p. 40)

Basic Books, Inc. New York, New York, USA. 1983

**Singer, Ignatius**

No biographical data available

**Berens, Lewis Henry**

No biographical data available

At last, after years of patient plodding in dim regions, where the footprints are few and the pitfalls many, the time has arrived when we are enabled to place before the world of science the first-fruits of our explorations.

*Some Unrecognized Laws of Nature*

Preface (p. v)

D. Appleton & Co. New York, New York, USA. 1897

**Smith, Homer W.**

Renal physiologist

On every scientist's desk there is a drawer labeled UNKNOWN in which he files what are at the moment unsolved questions, lest through guess-work or impatient speculation he come upon incorrect answers that will do him more harm than good. Man's worst fault is opening the drawer too soon. His task is not to discover final answers but to win the best partial answers that he can, from which others may move confidently against the unknown, to win better ones.

*From Fish to Philosopher*

Chapter XIII (p. 210)

Little, Brown & Company. Boston, Massachusetts, USA. 1953

**Smith, Theobald** 1859–1934

American pathologist

The joy of research must be found in doing, since every other harvest is uncertain.

Letter from Dr. Theobald Smith,

*Journal of Bacteriology*, Volume 27, Number 1, January, 1934 (p. 20)

...it is the care we bestow on apparently trifling, unattractive and very troublesome minutiae which determines the results.

*New York Medical Journal*, Volume lii, 1890 (p. 485)

**Stewart, Ian** 1945–

English mathematician and science writer

The really important breakthroughs are always unpredictable. It is their very unpredictability that makes them

important: they change our world in ways we didn't see coming.... There is nothing wrong with goal-oriented research as a way of achieving specific feasible goals. But the dreamers and the mavericks must be allowed some free rein, too. Our world is not static: new problems constantly arise, and old answers often stop working. Like Lewis Carroll's Red Queen, we must run very fast in order to stand still.

*Nature's Numbers: The Unreal Reality of Mathematical Imagination*  
Chapter 2 (p. 29)  
Basic Books, Inc. New York, New York, USA. 1995

**Sutherland, Jr., Earl W.** 1915–74

American pharmacologist and physiologist

I am fully convinced that medical research can offer one a happy and productive life. And if one has a little Viking spirit he can explore the world and people as no one else can do. The whole medical research area is wide open for exploration.

*Les Prix Nobel. The Nobel Prizes in 1971*  
Nobel banquet speech for award received in 1971  
Nobel Foundation. Stockholm, Sweden. 1972

**Szent-Györgyi, Albert** 1893–1986

Hungarian-born American biochemist

Research means going out into the unknown with the hope of finding something new to bring home.... The unknown is the unknown because one does not know what is there. If one knows what one will do and find in it, then it is not research anymore and is not worth doing.

Research Grants  
*Perspectives in Biology and Medicine*, Volume 18, Number 1, Autumn, 1974 (p. 41)

**Terence** 190 BCE–158 BCE

Roman comic dramatist

Nothing is so difficult but that it may be found out by seeking.

Translated by Alexander Harvey  
*Heauton Timorumenos*  
Act iv, Scene 2, l. 675  
Haldeman-Julius Company. Girard, Kansas, USA. 1925

**The Bible (King James Version)**

... seek, and ye shall find; knock, and it shall be opened unto you: ...  
Matthew 7:7

**Thomas, Lewis** 1913–93

American physician and biologist

In science in general, one characteristic feature is the awareness of error in the selection and pursuit of a problem. This is the most commonplace of criteria: if a scientist is going to engage in research of any kind, he has to have it on his mind, from the outset, that he may be

onto a dud. You can tell a world-class scientist from the run-of-the-mill investigator by the speed with which he recognizes that he is heading into a blind alley. Blind alleys and garden paths leading nowhere are the principal hazards in research.

*Late Night Thoughts on Listening to Mahler's Ninth Symphony*  
Viking Press. New York, New York, USA. 1983

**Thompson, Elihu** 1853–1937

American electrical engineer

Physical research by experimental methods is both a broadening and a narrowing field. There are many gaps yet to be filled, data to be accumulated, measurements to be made with great precision, but the limits within which we must work are becoming, at the same time, more and more defined.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1899*  
The Field of Experimental Research (p. 119)  
Government Printing Office. Washington, D.C. 1901

**Thorne, Kip S.** 1940–

American theoretical physicist

In scientific research, as in life, many themes are pursued simultaneously by many different people; and the insights of one decade may spring from ideas that are several decades old but were ignored in the intervening years.

*Black Holes and Time Warps: Einstein's Outrageous Legacy*  
Preface (p. 18)  
W.W. Norton & Company, Inc. New York, New York, USA. 1994

**Thwing, Charles Franklin** 1853–1937

American educator and writer

The duty of research in the USA is urgent. The peril of a democracy is that it will search for truth not for truth's own sake, but for the sake of what truth will do or bring. It makes investigation into electricity to get light, or heat, or power, not to discover the laws, nature, and relations of electricity. Let it ever be known that truth is primary, and the search for truth for its own sake is a primary duty. The great thinker who gave as a reason for his passion for the theory of numbers that it is a pure virgin that never has been and never can be prostituted to any practical application whatsoever represents the type of the wisest investigator. This lesson of the value of truth for its own sake is a lesson that every democracy should learn.

*A History of Higher Education in America*  
Chapter XXII (p. 471)  
D. Appleton & Co. New York, New York, USA. 1906

**Veblen, Thorstein** 1857–1929

Economist, social critic, and author

...the outcome of any serious research can only be to make two questions grow where only one grew before.

*The Place of Science in Modern Civilization and Other Essays*  
The Evolution of the Scientific Point of View (p. 33)  
The Viking Press, Inc. New York, New York, USA. 1942

**von Braun, Wernher** 1912–77

German-American rocket scientist

Basic research is when I'm doing what I don't know I'm doing.

In Jefferson Hane Weaver

*The World of Physics* (Volume 2)

K.6 (p. 63)

Simon &amp; Schuster. New York, New York, USA. 1987

**von Liebig, Justus** 1803–73

German organic chemist

We were the first pioneers in unknown regions, and the difficulties in the way of keeping on the right path were sometimes insuperable. Now, when the paths of research are beaten roads, it is a much easier matter; but all the wonderful discoveries which recent times have brought forth were then our own dreams, whose realization we surely and without doubt anticipated.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1891*

Autobiography (p. 267)

Government Printing Office. Washington, D.C. 1893

**Weber, Robert L.**

No biographical data available

Much of the misunderstanding of scientists and how they work is due to the standard format of articles in scientific journals. With their terse accounts of successful experiments and well-supported conclusions they show little of the untidy nature of research at the frontiers of knowledge.

*A Random Walk in Science*

Introduction (p. xv)

Institute of Physics Publishing. Bristol, England. 1973

**Weiskopf, Victor Frederick** 1908–2002

Austrian-American physicist

It is difficult to distinguish clearly between fundamental and applied science, and any considerations of this kind can lead to dangerous oversimplifications. The success of basic research derives to a large extent from the close cooperation of basic and applied science. This close relation – often within the same scientist – provided tools of high quality, without which many fundamental discoveries could not have been made.

*Physics in the Twentieth Century: Selected Essays*

The Significance of Science (pp. 354–355)

The MIT Press. Cambridge, Massachusetts, USA. 1972

**Wells, Carolyn** 1862–1942

American writer

I think, for the rest of my life, I shall refrain from looking up things. It is the most ravenous time-snatcher I know. You pull one book from the shelf, which carries a hint or a reference that sends you posthaste to another book, and that to successive others. It is incredible, the number of books you hopefully open and disappointedly close, only to take down another with the same results.

*The Rest of My Life*

Chapter 8

J.B. Lippincott. Philadelphia, Pennsylvania, USA. 1937

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

The whole difference of modern scientific research from that of the Middle Ages, the secret of its immense success, lies in its collective character, in the fact that every fruitful experiment is published, every new discovery of relationships explained.

*New Worlds For Old*

Chapter II (p. 22)

The Macmillan Company. New York, New York, USA. 1918

In a sense scientific research is a triumph over natural instinct, over that mean instinct that makes men secretive, that makes a man keep knowledge to himself and use it slyly to his own advantage.

*New Worlds for Old*

Chapter II (pp. 22–23)

The Macmillan Company. New York, New York, USA. 1918

**Wheeler, John Archibald** 1911–

American physicist and educator

There is an age-old longing to understand the inner mystery of this strange and beautiful world of ours and our own little place in the scheme of things. Whoever knows a little and can give a little to the search wants to know more and give more.

*At Home in the Universe*

Be the Best to Give the Most (p. 80)

The American Institute of Physics. Woodbury, New York, USA. 1994

**Whitney, Willis Rodney** 1868–1958

American chemical and electrical engineer

The valuable attributes of [researchers] are conscious ignorance and active curiosity.

The Stimulation of Research in Pure Science Which Has Resulted from the Needs of Engineers and of Industry

*Science*, Volume LXXV, Number 1862, March 25, 1927 (p. 289)**Wilson, Jr., E. Bright** 1908–92

American physical chemist

Though the road may seem long and arduous, with many stretches of pure drudgery, when the end of a particular stage is reached, where the bits of evidence all fall together into a clear and unexpected pattern, there are few other human activities which can provide as much satisfaction; especially if, as is so often the case, the results turn out later to have applications in all sorts of unanticipated directions and help to give a clearer picture of the universe we live in and to make life in that universe more worthwhile.

*An Introduction to Scientific Research*

Conclusion (p. 364)

McGraw-Hill Book Company, Inc. New York, New York USA. 1952

**Wittig, Georg** 1897–1987  
German chemist

Chemical research and mountaineering have much in common. If the goal or the summit is to be reached, both initiative and determination as well as perseverance are required. But after the hard work it is a great joy to be at the goal or the peak with its splendid panorama.

*Nobel Lectures, Chemistry 1971–1980*

Nobel lecture for award received in 1979

From Diyls to Ylides to My Idyll (p. 368)

World Scientific Publishing Company, Singapore. 1993

**Wordsworth, William** 1770–1850  
English poet

Lost in the gloom of uninspired research.

*The Complete Poetical Works of William Wordsworth*

The Excursion, Despondency Corrected, l. 626

Crowell. New York, New York, USA. 1888

**Yang, Chen Ning** 1922–  
Chinese-born American theoretical physicist

The necessary tendency toward bigness is unfortunate, as it hinders free and individual initiative. It makes research less intimate, less inspiring, and less controllable. However, it must be accepted as a fact of life. Let us take courage then in the knowledge that despite their physical bigness, the machines, the detectors, and indeed the experiments themselves are still based on ideas that have the same simplicity, the same intimacy and controllability that have always made research so exciting and inspiring.

*Elementary Particles: A Short History of Some Discoveries in Atomic Physics*

Chapter 2 (p. 40)

Princeton University Press, Princeton, New Jersey, USA. 1962

**Yeats, William Butler** 1865–1939  
Irish poet and playwright

I had discovered, early in my researches, that their doctrine was no mere chemical fantasy, but a philosophy they applied to the world, to the elements, and to man himself.

*Stories of Red Hanrahan, the Secret Rose, Rosa Alchemica*

Rosa Alchemica (p. 192)

The Macmillan Company. New York, New York, USA. 1914

## RESEARCH ORGANIZATION

**Ziman, John M.** 1925–2005  
English physicist

*Any research organization requires generous measures of the following: (1) Social space for personal initiative and creativity; (2) Time for ideas to grow to maturity; (3)*

*Openness to debate and criticism; (4) Hospitality towards novelty; and (5) Respect for specialized expertise.*

*Prometheus Bound*

Chapter 9 (p. 276)

Cambridge University Press, Cambridge, England. 1994

## RESEARCH PLAN

**van Noordwijk, A. J.** 1949  
Dutch-Canadian genetical ecologist

...however excellent multiannual planning, research-project management, and time recording may be, the scientist should always have some opportunity to test the idea that he got that morning while shaving.

The Bioassyst

*Perspectives in Biology and Medicine*, Volume 29, Number 2, Winter

1986 (p. 307)

**Richter, Curt P.** 1894–1988  
American psychobiologist

...good researchers use research plans merely as starters and are ready to scrap them at once in the light of actual findings...

Free Research versus Design Research

*Science*, Volume 118, Number 3056, July 24, 1953 (p. 92)

**Waksman, Selman A.** 1888–1973  
Ukrainian-born American biochemist

...a new problem has arisen – namely “planned research” versus the “individual investigator.” There is a place for planned research. It can take a defined body of knowledge and lay out a set of experiments which will exploit this knowledge to its foreseeable limits. It can take a set of postulates and drive them home to their logical conclusions. It can do this with exhaustive thoroughness, economy, and speed. Within its limitations, it is efficient, expeditious, and authoritative. But there is a place also and a more important place for the random investigator. The role of planned research is to consolidate ground already won; the role of the random investigator is to seek out new worlds to conquer.

Searchers and Researchers

*Perspectives in Biology and Medicine*, Volume 7, Number 3, Spring

1964 (p. 311)

Good scientists use research plans merely as outlines to begin their investigations and are ready to give them up once they are not justified by actual findings. Experimental designs tend to give rise to “team research”, which serves a purpose in developing and applying ideas; it rarely produces new ideas.

Searchers and Researchers

*Perspectives in Biology and Medicine*, Volume 7, Number 3, Spring

1964 (p. 312)

## RESEARCH, INDUSTRIAL

### National Research Council (USA)

The benefit to the nation's industry as a whole, resulting from any typical piece of industrial research, can usually be shown to be considerably greater than the benefit received by the particular industry that supported this research.

*Physics in Perspective* (Volume 1)

Chapter 2 (p. 24)

National Academy of Sciences. Washington, D.C. 1972

## RESEARCHER

### Rickert, Heinrich 1863–1936

German philosopher

It would no doubt be generally agreed today among philosophers and those engaged in specialized research that the various sciences can be divided into two main branches and that a common interest unites theologians and jurists, historians and philologists, on the one hand, and, in like manner, physicists and chemists, anatomists and physiologists, biologists and geologists, on the other. But while those who cultivate the field of the natural sciences will never be in doubt about what name should be given to the domain that they all have in common, in the case of the other group unanimity among individual scientists in regard to what their joint enterprise is to be called is not so readily forthcoming.

Translated by George Goddard

*Science and History*

Chapter 1 (p. 1)

D. van Nostrand Company. Princeton, New Jersey, USA. 1962

## RESIDUAL

### Herschel, Sir John Frederick William 1792–1871

English astronomer and chemist

Almost all the greatest discoveries in astronomy have resulted from the consideration of what we have elsewhere termed RESIDUAL PHENOMENA, of a quantitative or numerical kind, that is to say, of such portions of the numerical or quantitative results of observations as remain outstanding and unaccounted for after subtracting and allowing for all that would result from the strict application of known principles.

*Outlines of Astronomy*

Part III, Chapter XVI (856) (p. 584)

Longman, Brown, Green & Longmans. London, England. 1849

## RESPIRATION

### Lavoisier, Antoine Laurent 1743–94

French chemist

Of all the phenomena of animal economy, none are more striking, nor more worthy of attention from physicists and physiologists than those accompanying respiration. If, on the other hand, we know little of the object of this singular function, we know, on the other hand, that it is so essential to life that it cannot be suspended for any time without exposing the animal to danger of immediate death.

*Experiments on the Respiration of Animals and the Changes Which Happen to Air in Its Passage Through Their Lungs*

Read to the Academie des Sciences

May 3, 1777

## RESPONSIBILITY

### Teller, Edward 1908–2003

Hungarian-born American nuclear physicist

Beyond the scientific responsibility to search the horizon of human knowledge, the responsibilities of scientists cannot be any greater than those of any other citizen in our democratic society. The consequences of scientific discoveries are the responsibility of the people.

*Better a Shield than a Sword: Perspectives in Defense and Technology*

Chapter 9 (p. 85)

The Free Press. New York, New York, USA. 1987

## REST

### Born, Max 1882–1970

German-born English physicist

It is odd to think that there is a word for something which, strictly speaking, does not exist, namely, "rest."

*The Restless Universe*

Chapter 1 (p. 1)

Dover Publications, Inc. New York, New York, USA. 1951

### Huxley, Thomas Henry 1825–95

English biologist

...the more we learn of the nature of things, the more evident is it that what we call rest is only unperceived activity; that seeming peace is silent but strenuous battle. In every part, at every moment, the state of the cosmos is the expression of a transitory adjustment of contending forces; a scene of strife, in which all the combatants fall in turn.

*Collected Essays*

Evolution And Ethics (p. 49)

Macmillan & Co Ltd. London, England. 1894

## RESULT

### Adams, Douglas 1952–2001

English author, comic radio dramatist, and musician

He decided not to mind the fact that with the extraordinary jumble of rules of thumb, wild approximations and

arcane guesswork he was using he would be lucky to hit the right galaxy; he just went ahead and got a result.

*So Long, and Thanks for All the Fish*

Chapter 17 (p. 93)

Harmony Books. New York, New York, USA. 1984

**Dante, Alighieri** 1265–1321

Italian poet

Great flame follows a little spark.

In *Great Books of the Western World* (Volume 21)

*The Divine Comedy of Dante Alighieri*

Paradise

Canto I, l. 34

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Gauss, Johann Carl Friedrich** 1777–1855

German mathematician, physicist, and astronomer

I have had my results for a long; but I do not yet know how I am to arrive at them.

In L. Nelson

*Socratic Method and Critical Philosophy*

Attributed

Chapter IV (p. 89)

Yale University Press. New Haven, Connecticut, USA. 1949

**Gay-Lussac, Joseph Louis** 1778–1850

French chemist and physicist

I only present these conclusions with the greatest reserve, knowing myself how I have still to vary my experiments and how easy it is to err in the interpretation of results.

In Maurice Crosland

*Gay-Lussac: Scientist and Bourgeois*

Chapter 4 (p. 87)

Cambridge University Press. Cambridge, England. 1978

**Gregory, Sir Richard Arman** 1864–1952

English scientific writer and journalist

A truthful mind is necessary for the discovery of truth in Nature. There is often a vast difference between the result an investigator expects to find and what he does obtain, but he must put his hopes aside and follow the new light if he is to be a worthy contributor to scientific knowledge. By this method alone are the conclusions and principles reached which form the refined gold of science.

*Discovery, Or, The Spirit and Service of Science*

Chapter II (p. 25)

Macmillan & Co Ltd. London, England. 1916

**Jordan, David Starr** 1851–1931

American scientist and university administrator

Knowing the law, and knowing the facts, we should foretell the results. To be able in some degree to do this is the art of life.

*Evolution and Animal Life*

Chapter I (p. 9)

D. Appleton & Co. New York, New York, USA. 1907

**Maxwell, James Clerk** 1831–79

Scottish physicist

The first process therefore in the effectual study of science must be one of simplification and reduction of results of previous investigation to a form in which the mind can grasp them. The results of this simplification may take the form of a purely mathematical formula or of a physical hypothesis.

On Faraday's Lines of Force

*Transactions of the Cambridge Philosophical Society*, 1856

**Pauli, Wolfgang** 1900–58

Austrian-born physicist

Never work too closely with experimenters. Allow the results to settle.

In Silvan S. Schweber

*QED and the Men Who Made It: Dyson, Feynman, Schwinger, and Tomonaga*

Chapter 10 (p. 594)

Princeton University Press. Princeton, New Jersey, USA. 1994

**Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

To obtain a result of real worth it will not suffice to grind it out or to have a machine for putting our facts in order. It is not alone order but the unexpected order which is of real worth. The machine may grind upon the mere fact, but the soul of the fact will always escape it.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1909*

The Future of Mathematics (p. 127)

Government Printing Office. Washington, D.C. 1910

**Sagan, Carl** 1934–96

American astronomer and author

Every scientist feels an affection for his or her ideas and scientific results. You feel protective of them. But you don't reply to critics: "Wait a minute, wait a minute; this is a really good idea. I'm very fond of it. It's done you no harm. Please don't attack it." That's not the way it goes. The hard but just rule is that if the ideas don't work, you must throw them away. Don't waste any neurons on what doesn't work. Devote those neurons to new ideas that better explain the data. Valid criticism is doing you a favor.

Wonder and Skepticism

*Skeptical Inquirer*, January/February, 1995 (p. 24)

**Wilson, Jr., E. Bright** 1908–92

American physical chemist

One of the most difficult decisions which an experimenter has to make is whether or not to reject a result which seems unreasonably discordant.... The best procedure to use depends on what is known about the frequency of occurrence of wild values, on the cost of additional

observations, and on the penalties for the various types of errors.... There is often a desire to disregard negative results on the grounds that conditions were not right or that the operator was not in the right mood. This is undoubtedly responsible for much pseudo science, psychic phenomena, and similar material.

*An Introduction to Scientific Research*

Chapter 9 (pp. 256, 257)

McGraw-Hill Book Company, Inc. New York, New York USA. 1952

## RESULTANT

**Huxley, Thomas Henry** 1825–95

English biologist

...throughout Nature, [there is not] a law of wider application than this, that a body impelled by two forces takes the direction of their resultant.

*Darwiniana*

The Origin of Species (p. 32)

D. Appleton & Co. New York, New York, USA. 1894

## RESULTS

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

...I shall mix together results which may prove to be of scientific importance and results that are probably no more than mathematical curiosities. The plan is to set down anything that seems worthy of note, even though we cannot see that it has any ultimate importance in nature.

*The Expanding Universe*

Chapter III, Section I (p. 66)

At the University Press. Cambridge, England. 1952

## RETROGRADE MOTION

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

HELENA: Monsieur Parolles, you were born under a charitable star.

PAROLLES: Under Mars, I.

HELENA: I especially think, under Mars.

PAROLLES: Why under Mars?

HELENA: The wars have so kept you under that you must needs be born under Mars.

PAROLLES: When he was predominant.

HELENA: When he was retrograde, I think, rather.

PAROLLES: Why think you so?

HELENA: You go so much backward when you fight.

In *Great Books of the Western World* (Volume 27)

*The Plays and Sonnets of William Shakespeare* (Volume 2)

*All's Well That Ends Well*

Act I, Scene I

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## REVOLUTION

**Krauss, Lawrence M.** 1954–

American theoretical physicist

Physics progresses not by revolutions, which do away with all that went before, but rather by evolutions, which exploit the best about what is already understood. Newton's laws will continue to be as true a million years from now as they are today, no matter what we discover at the frontiers of science.

*The Physics of Star Trek*

Chapter One (p. 8)

Harp Perennial Publishers. New York, New York, USA. 1995

## REVIEWER

**Coleridge, Samuel Taylor** 1772–1834

English lyrical poet, critic, and philosopher

The crying sin of modern criticism is that it is overloaded with personality. If an author commit an error, there is no wish to set him right for the sake of truth, but for the sake of triumph – that the reviewer may show how much wiser, or how much abler he is than the writer.

In John Payne Collier

*Seven Lectures on Shakespeare and Milton*

The First Lecture (p. 4)

Chapman & Hall, Ltd. London, England. 1856

## REWARD

### Author undetermined

A woman scientist had been working for some time with a chimpanzee teaching it to carry out various tasks such as opening a box and rewarding it with fruit. One day, after a session with the chimpanzee, she came into the coffee room half laughing and half crying, obviously very emotional. Her colleagues, a little alarmed, finally managed to get out of her what had happened. She had decided to leave the laboratory area temporarily, and had undone the bolt on the door – whereupon the chimpanzee had solemnly handed her a stick of celery.

In Ian Stewart and Jack Cohen

*Figments of Reality*

Chapter 1 (p. 5)

Cambridge University Press. Cambridge, England. 1997

**Davy, Sir Humphry** 1778–1829

English chemist

No motive for exertion is so strong as that founded upon the sympathy of the good and the wise; no reward so sweet as that of being held up to public admiration as a benefactor of the species; no glory so pure, so calculated to awaken great minds, as that of immortality.

In John Davy (ed.)  
*Memoirs of the Life of Sir Humphry Davy* (Volume 1)  
 Chapter III (p. 213)  
 Longman, Rees, Orme, Brown, Green & Longman. London, England.  
 1836

## RHETORIC

**Cicero (Marcus Tullius Cicero)** 106 BCE–43 BCE  
 Roman orator, politician, and philosopher

Whatever be the subject of a speech, therefore, in whatever art or branch of science, the orator, if he has made himself master of it, as of his client's case, will speak on it better and more elegantly than even the very originator and author of it can.

Translated by J. S. Watson  
*On Oratory & Orators*  
 Book I, Chapter XII (p. 19)  
 Harper & Brothers Publishers. New York, New York, USA. 1878

## RHYTHM

**Barrell, Joseph** 1869–1919  
 American geologist

Nature vibrates with rhythms, climatic and diastrophic, those finding stratigraphic expression ranging in period from the rapid oscillation of surface waters, recorded in ripple-mark, to those long-deferred stirrings of the deep imprisoned titans which have divided earth history into periods and eras. The flight of time is measured by the weaving of composite rhythms – day and night, calm and storm, summer and winter, birth and death – such as these are sensed in the brief life of man. But the career of the Earth recedes into a remoteness against which these lesser cycles are as unavailing for the measurement of that abyss of time as would be for human history the beating of an insect's wing. We must seek out, then, the nature of those longer rhythms whose very existence was unknown until man by the light of science sought to understand the Earth. The larger of these must be measured in terms of the smaller, and the smaller must be measured in terms of years. Sedimentation is controlled by them, and the stratigraphic series constitutes a record, written on tablets of stone, of these lesser and greater waves of change which have pulsed thru geologic time

Rhythm and the Measurement of Geologic Time  
*Bulletin of the Geographical Society of America*, Volume 28, 1917 (p. 746)

**Stewart, Ian** 1945–  
 English mathematician

Nature is nothing if not rhythmic, and its rhythms are many and varied.

Chapter 7 (p. 91)  
 BasicBooks. New York, New York, USA. 1995

## RIDDLE

**Einstein, Albert** 1879–1955  
 German-born physicist

Out yonder there was this huge world, which exists independently of us human beings and which stands before us like a great, eternal riddle...

Translated by Paul Arthur Schlipp  
*Albert Einstein: Autobiographical Notes* (p. 5)  
 Open Court. La Salle, Illinois, USA. 1979

## RIEMANN HYPOTHESIS

**Berry, Sir Michael Victor** 1941–  
 English mathematical physicist

**Keating, Jonathan P.**  
 Niversity professor

If the Riemann Hypothesis is true...the function  $f(u)$  constructed from the primes has discrete spectrum; that is, the support of its Fourier transform is discrete. If the Riemann Hypothesis is false this is not the case. The frequencies then are reminiscent of the decomposition of a musical sound into its constituent harmonics. Therefore there is a sense in which we can give a one-line non technical statement of the Riemann hypothesis: "The primes have music in them."

The Riemann Zeros and Eigenvalue Asymptotics  
*SIAM Review*, 41, Number 2, 1999 (p. 238)

**Bombieri, Enrico** 1940–  
 Italian mathematician

The failure of the Riemann hypothesis would create havoc in the distribution of prime numbers. This fact alone singles out the Riemann hypothesis as the main open question of prime number theory.

Prime Territory: Exploring the Infinite Landscape at the Base of the Number System  
*The Sciences*, September/October 1992

**Conrey, J. Brian**  
 American mathematician

The Riemann Hypothesis (RH) has been around for more than 140 years, and yet now is arguably the most exciting time in its history to be working on RH. Recent years have seen an explosion of research stemming from the confluence of several areas of mathematics and physics.

*The Riemann Hypothesis*  
 Notices of the AMS (March, 2003)

**du Sautoy, Marcus** 1965–  
 English mathematician and writer

As mathematicians navigate their way across the mathematical terrain, it as though all paths will necessarily lead

at some point to the same awesome vista of the Riemann Hypothesis.

*The Music of the Primes*

Chapter 1 (p. 10)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

A solution to the Riemann Hypothesis offers the prospect of charting the misty waters of the vast ocean of numbers. It represents just a beginning in our understanding of Nature's numbers. If we can only find the secret of how to navigate the primes, who knows what else lies out there, waiting for us to discover?

*The Music of the Primes*

Chapter 1 (p. 18)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

As we shall see, Riemann's Hypothesis can be interpreted as an example of a general philosophy among mathematicians that, given a choice between an ugly world and an aesthetic one, Nature always chooses the latter.

*The Music of the Primes*

Chapter 2 (p. 55)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

In an interview, Hilbert explained that he believed the Riemann Hypothesis to be the most important problem "not only in mathematics but absolutely the most important."

*The Music of the Primes*

Chapter 5 (p. 114)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

We have all this evidence that the Riemann zeros are vibrations, but we don't know what's doing the vibrating.

*The Music of the Primes*

Chapter 11 (p. 280)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

Until [the RH is proved], we shall listen enthralled by this unpredictable mathematical music, unable to master its twists and turns. The primes have been a constant companion in our exploration of the mathematical world yet they remain the most enigmatic of all numbers. Despite the best efforts of the greatest mathematical minds to explain the modulation and transformation of this mystical music, the primes remain an unanswered riddle. We still await the person whose name will live forever as the mathematician who made the primes sing.

*The Music of the Primes*

Chapter 12 (p. 312)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

### **Erdős, Paul** 1913–96

Hungarian mathematician

To conclude, a somewhat daunting quote about the prime numbers from someone who was as familiar with them as anyone has ever been: "It will be millions of years before we'll have any understanding, and even then it won't be a complete understanding, because we're up against the infinite."

Interview with P. Hoffman

*Atlantic Monthly*, November, 1987 (p. 74)

### **Heath-Brown, R.**

Mathematician

[The Riemann Hypothesis has] no longer just analytic number theorists involved, but all mathematicians know about the problem, and many realize that they may have useful insights to offer. As far as I can see, a solution is as likely to come from a probabilist, geometer or mathematical physicist, as from a number theorist.

In K. Sabbagh

*The Riemann Hypothesis: The Greatest Unsolved Problem in Mathematics*

Chapter 17 (pp. 267–268)

Farrar, Straus & Giroux. New York, New York, USA. 2002

### **Ivic, A.**

No biographical data available

...I don't believe or disbelieve the Riemann Hypothesis. I have a certain amount of data and a certain amount of facts. These facts tell me definitely that the thing has not been settled. Until it's been settled it's a hypothesis, that's all. I would like the Riemann Hypothesis to be true, like any decent mathematician, because it's a thing of beauty, a thing of elegance, a thing that would simplify many proofs and so forth, but that's all.

In K. Sabbagh

*The Riemann Hypothesis: The Greatest Unsolved Problem in Mathematics*

Chapter 17 (p. 269)

Farrar, Straus & Giroux. New York, New York, USA. 2002

### **Klarreich, E.**

No biographical data available

Proving the Riemann hypothesis won't end the story. It will prompt a sequence of even harder, more penetrating questions. Why do the primes achieve such a delicate balance between randomness and order? And if their patterns do encode the behavior of quantum chaotic systems, what other jewels will we uncover when we dig deeper? Those who believe mathematics holds the key to the Universe might do well to ponder a question that goes back to the ancients: What secrets are locked within the primes?

Prime Time

*New Scientist*, November 11, 2000

### **Montgomery, H.**

No biographical data available

So if you could be the Devil and offer a mathematician to sell his soul for the proof of one theorem – what theorem would most mathematicians ask for? I think it would be the Riemann Hypothesis.

In K. Sabbagh

*The Riemann Hypothesis: The Greatest Unsolved Problem in Mathematics*

Chapter 2 (p. 36)

Farrar, Straus & Giroux. New York, New York, USA. 2002

Sometimes I think that we essentially have a complete proof of the Riemann Hypothesis except for a gap. The problem is, the gap occurs right at the beginning, and so

it's hard to fill that gap because you don't see what's on the other side of it.

In K. Sabbagh

*The Riemann Hypothesis: The Greatest Unsolved Problem in Mathematics*  
Chapter 17 (p. 267)

Farrar, Straus & Giroux. New York, New York, USA. 2002

### Motohashi, Yoichi

No biographical data available

...the Riemann Hypothesis will be settled without any fundamental changes in our mathematical thoughts, namely, all tools are ready to attack it but just a penetrating idea is missing.

In K. Sabbagh

*The Riemann Hypothesis: The Greatest Unsolved Problem in Mathematics*  
Chapter 17 (p. 268)

Farrar, Straus & Giroux. New York, New York, USA. 2002

### Sabbagh, K.

No biographical data available

For many mathematicians working on it, \$1m is less important than the satisfaction that would come from finding a proof. Throughout my researches among the mathematicians' tribe (I have interviewed 30 in the past year), Riemann's Hypothesis was often described to me in awed terms. Hugh Montgomery of the University of Michigan said this was the proof for which a mathematician might sell his soul. Henryk Iwaniec, a Polish-American mathematician, sounded as if he were already discussing terms with Lucifer.

"I would trade everything I know in mathematics for the proof of the Riemann Hypothesis. It's gorgeous stuff. I'm only worried that I'll be unable to understand it. That would be the worst..."

Beautiful Mathematics

*Prospect*, January, 2002

### Sarnak, P. 1953–

South African-born American mathematician

Right now, when we tackle problems without knowing the truth of the Riemann hypothesis, it's as if we have a screwdriver. But when we have it, it'll be more like a bulldozer.

In E. Klarreich

Prime Time

*New Scientist*, November 11, 2000

If [the Riemann Hypothesis is] not true, then the world is a very different place. The whole structure of integers and prime numbers would be very different to what we could imagine. In a way, it would be more interesting if it were false, but it would be a disaster because we've built so much round assuming its truth.

In K. Sabbagh

*The Riemann Hypothesis: The Greatest Unsolved Problem in Mathematics*  
Chapter 2 (p. 37)

Farrar, Straus & Giroux. New York, New York, USA. 2002

The Riemann Hypothesis is the central problem and it implies many, many things. One thing that makes it rather unusual in mathematics today is that there must be over five hundred papers – somebody should go and count – which start Assume the Riemann Hypothesis, and the conclusion is fantastic. And those [conclusions] would then become theorems...With this one solution you would have proven five hundred theorems or more at once.

In K. Sabbagh

*The Riemann Hypothesis: The Greatest Unsolved Problem in Mathematics*  
Chapter 14 (p. 222)

Farrar, Straus & Giroux. New York, New York, USA. 2002

### Stewart, Ian 1945–

English mathematician and science writer

One of the biggest problems of mathematics is to explain to everyone else what it is all about.

*The Problems of Mathematics*

Chapter 1 (p. 5)

Oxford University Press, Inc. Oxford, England. 1987

## RIGHT

### Darbishire, Arthur Dukinfield 1879–1915

Statistician

The more certain a man is that he is right the more probable is it that he is wrong; because it means that facts are as soft clay in his hands, and his certainty moulds them to his purpose.

*An Introduction to a Biology*

Chapter I (p. 32)

Funk & Wagnalls Co. New York, New York, USA. 1917

## RIGOR

### Hilbert, David 1862–1943

German mathematician

The requirement of rigor, which has become proverbial in mathematics corresponds to a universal philosophic necessity of our understanding; and, on the other hand, only by satisfying this requirement do the thought content and the suggestiveness of the problem attain their full effect. Besides, it is an error to believe that rigor in the proof is the enemy of simplicity. On the contrary we find it confirmed by numerous examples that the rigorous method is at the same time the simpler and the more easily comprehended. The very effort for rigor forces us to find out simpler methods of proof.

Quoted by G.B. Halsted

The Message of Non-Euclidean Geometry

*Proceedings of the American Association for the Advancement of Science*, December 1903–January 1904 (p. 360)

**Keyser, Cassius Jackson** 1862–1947  
American mathematician

...the ideal of thought is rigor; mathematics is the name that usage employs to designate, not attainment of the ideal, for it cannot be attained, but its devoted pursuit and close approximation.

*The Human Worth of Rigorous Thinking: Essays and Addresses*  
The Human Significance of Mathematics (p. 50)  
Columbia University Press. New York, New York, USA. 1916

**Poincaré, Jules Henri** 1854–1912  
French mathematician and theoretical astronomer

In mathematics rigor is not everything, but without it there would be nothing; a demonstration which is not rigorous is void.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1909*  
The Future of Mathematics (p. 127)  
Government Printing Office. Washington, D.C. 1910

## RIP CURRENT

**Hite, M. P.**

No biographical data available

It [a rip current] is a sort of river, a stream showing on the surface deep and powerful, easily perceptible, running with the velocity of a mill race. So swift and powerful is it that a motorboat could not stem its sweeping current. It will carry brick, large rocks and even chunks of lead far out to sea. The most powerful swimmer will find himself helpless as a babe in its rushing grasp.

*Science*  
Discussion and Correspondence  
Volume 63, Number 1592, July 3, 1925 (p. 32)

## RISK

**Fisher, Irving** 1867–1947  
American economist

Risk varies inversely with knowledge.

*The Theory of Interest*  
Chapter IX (p. 221)  
Porcupine Press. Philadelphia, Pennsylvania, USA. 1977

**Florman, Samuel C.** 1925–  
Author and professional engineer

Good intentions and high moral standards do not help an engineer establish the limits of acceptable risk.

*Blaming Technology*  
Moral Blueprints (p. 173)  
St. Martin's Press. New York, New York, USA. 1981

**Scott, Sir Walter** 1771–1832  
Scottish historical novelist and poet

One hour of life, crowded to the full with glorious action, and filled with noble risks, is worth whole years of those mean observances of paltry decorum...

*Tales of My Landlord* (Volume 3)  
Chapter I (pp. 8–9)  
Printed for Robert Cadell. Edinburgh, Scotland. 1832

## RIVER

**Abbey, Edward** 1927–89  
American environmentalist and nature writer

For the rest of the afternoon, keeping to the shady side, we drift down the splendid river, deeper and deeper and deeper into the fantastic.

*Desert Solitaire*  
Down the River (p. 205)  
Ballantine Books. New York, New York, USA. 1968

**Burroughs, John** 1837–1921  
American naturalist and writer

The river idealizes the landscape. It multiplies and heightens the beauty of the day and season. A fair day it makes more fair, and a wild, tempestuous day it makes more wild. The face of winter makes it doubly rigid and corpse-like, and to the face of spring it adds new youth and sparkle.

*The Heart of Burroughs's Journals*  
May 2, 1883 (p. 94)  
Houghton Mifflin Co. Boston, Massachusetts, USA. 1928

**Coleridge, Samuel Taylor** 1772–1834  
English lyrical poet, critic, and philosopher

From dark and icy caverns called you forth,  
Down those precipitous, black, jagged rocks,  
Forever shattered, and the same forever?  
Who gave you your invulnerable life,  
Your strength, your speed, your fury and your joy,  
Unceasing thunder and eternal foam?

*A Library of Poetry*  
Hymn, Before Sunrise In the Vale of Chamouni, l. 41–46  
J.B. Ford & Company. New York, New York, USA. 1874

**Confucius** 551 BCE–479 BCE  
Chinese philosopher and reformer

Men of practical knowledge find their gratification among rivers.

In Lionel Giles (ed.)  
*The Analects of Confucius*  
Chinese University Press. Hong Kong. 1983

**Conrad, Joseph** 1857–1924  
Polish-born English novelist

Going up that river was like travelling back to the earliest beginnings of the world, when vegetation rioted on the earth and the big trees were kings.

*Youth: And Two Other Stories*  
*Heart of Darkness*  
Chapter II (pp. 92–93)  
Doubleday, Doran & Co., Inc. Garden City, New York, USA. 1928

**Dyer, John** 1700?–58  
Welsh clergyman and poet

And see the rivers how they run  
Through woods and meads, in shade and sun,  
Sometimes swift, sometimes slow, –  
Wave succeeding wave, they go  
A various journey to the deep,  
Like human life to endless sleep!

In Thomas Campbell  
*Specimens of the British Poets*  
Granger Hill, l. 93  
John Murray. London, England. 1841

**Eliot, T. S. (Thomas Stearns)** 1888–1965  
American expatriate poet and playwright

I do not know much about gods; but I think that the river  
Is a strong brown god – sullen, untamed and intractable  
Patient to some degree, at first recognized as a frontier;  
Useful, untrustworthy as a conveyor of commerce;  
Then only a problem confronting the builder of bridges.  
The problem once solved, the brown god is almost forgotten

By the dwellers in cities – ever, however, implacable,  
Keeping his seasons and rages, destroyer, reminder  
Of what men choose to forget.

Unhonoured, unpropitiated

By worshippers of the machine.

Woodnotes  
Part ii, Line 272 (p. 57)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

**Fort, Charles** 1874–1932  
American writer

A river...is water expressing the gravitational relation of  
different levels.

*The Book of the Damned*  
Chapter III (p. 39)  
Boni & Liveright. New York, New York, USA. 1919

**Gilpin, Laura** 1891–1971  
American photographer

A river seems a magic thing. A magic, moving, living  
part of the very earth itself – for it is from the soil, both  
from its depth and from its surface, that a river has its  
beginning.

*The Rio Grande, River of Destiny* (p. xi)  
Duell, Sloan and Pearce. NEW York, New York, USA. 1949

**Lubbock, John, First Baron Avebury** 1834–1919  
English banker, politician, biologist, and archaeologist

It is as difficult for a river as for a man to get out of a  
groove.

*The Beauties of Nature and the Wonders of the World We Live In*  
Chapter VIII (p. 279)  
The Macmillan Company. New York, New York, USA. 1893

**Maury, Matthew Fontaine** 1806–73  
American hydrographer and naval officer

There is a river in the ocean. In the severest droughts  
it never fails, and in the mightiest floods it never over-  
flows. Its banks and its bottoms are of cold water, while  
its current is of warm. The Gulf of Mexico is its foun-  
tain, and its mouth is in the Arctic Seas. It is the Gulf  
Stream. There is in the world no other such majestic flow  
of waters. Its current is more rapid than the Mississippi  
or the Amazon.

*The Physical Geography of the Sea*  
Chapter I (p. 25)  
Harper & Brothers. New York, New York, USA. 1855

**Muir, John** 1838–1914  
American naturalist

Tracing rivers to their fountains makes the most charm-  
ing of travels. As the life blood of the landscapes, the best  
of the wilderness comes to their banks, and not one dull  
passage is found in all their eventful histories.

*Steep Trails*  
Chapter V (p. 101)  
Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

**Murray, Richard William**  
No biographical data available

It seems to me that the river is like a human life; it is  
going on without pausing for one moment, without the  
possibility of turning to retrace one step; straight on it  
must go in the way marked out for it, straight on to the  
ocean – the ocean of eternity.

*The Milners, Or, The River Diggings*  
Chapter XV (p. 126)  
Chapman & Hall, Ltd. London, England. 1891

**Palmer, Tim** 1948–  
No biographical data available

Rivers are exquisite in their abilities to nurture life, sub-  
lime in functioning detail, impressive in contributions of  
global significance.

*Lifelines: The Case for River Conservation*  
Chapter One (p. 10)  
Island Press. Washington, D.C. 1994

...rivers are magnets for the imagination, for conscious  
pondering and subconscious dreams, thrills, fears. People  
stare into the moving water, captivated, as they are when  
gazing into a fire. What is it that draws and holds us?

The rivers' reflections of our lives and experiences are endless.

*Lifelines: The Case for River Conservation*  
Chapter One (p. 8)  
Island Press. Washington, D.C. 1994

**Pascal, Blaise** 1623–62  
French mathematician and physicist

Rivers are roads which move, and which carry us whither we desire to go.

In *Great Books of the Western World* (Volume 33)  
*Pensées*  
Section I, 17  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Playfair, John** 1748–1819  
Scottish geologist, physicist, and mathematician

A river, of which the course is both serpentine and deeply excavated in the rock, is among the phenomena by which the slow waste of the land, and also the cause of that waste, are most directly pointed out.

*Illustrations of the Huttonian Theory of the Earth*  
Section 101 (p. 104)  
Dover Publications, Inc. New York, New York, USA. 1964

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

Rivers are the natural highways of all nations, not only leveling and removing obstacles from the path of the traveler – quenching his thirst – and bearing him on their bosom, but conducting him through the most interesting scenery of a country most rich in natural phenomena, through the most populous portions of the globe where the animal and vegetable kingdoms attain the greatest perfection.

In Robert Sattelmeyer (ed.)  
*Journal 1842–1848* Volume 2  
Tuesday (p. 30)  
Princeton University Press. Princeton, New Jersey, USA. 1984

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910  
American author and humorist

The face of the water, in time, became a wonderful book... which told its mind to me without reserve, delivering its most cherished secrets as clearly as if it uttered them with a voice. And it was not a book to be read once and thrown aside, for it had a new story to tell every day.

*Life on the Mississippi*  
Chapter IX (p. 77)  
Harper & Row, Publishers. New York, New York, USA. 1951

**Wallace, Alfred Russel** 1823–1913  
English humanist, naturalist, and geographer

These various-coloured waters may, we believe, readily be accounted for by the nature of the country the stream flows through. The fact that the most purely black-water

rivers flow through districts of dense forest, and have granite beds, seems to show that it is the percolation of the water through decaying vegetable matter which gives it its peculiar colour. Should the stream, however, flow through any extent of alluvial country, or through any districts where it can gather much light-coloured sedimentary matter, it will change its aspect, and we shall have the phenomenon of alternating white and black water rivers. The Rio Branco and most of its tributaries rise in an open, rocky country, and the water there is pure and uncoloured; it must, therefore, be in the lower part of its course that it obtains the sediment that gives it so remarkably light a colour; and it is worthy of note, that all the other white-water tributaries of the Rio Negro run parallel to the Rio Branco, and, therefore, probably obtain their sediment from a continuation of the same deposits; only as they flow entirely through a forest district producing brown water, the result is not such a strikingly light tint as in the case of that river.

*Journal of the Royal Geographical Society*, Volume 23, 1853 (p. 213)

**Walton, Izaak** 1593–1683  
English writer

**Cotton, Charles** 1630–87  
English writer and poet

And an ingenious Spaniard says, that “rivers and the inhabitants of the watery element were made for wise men to contemplate and fools to pass by without consideration.”

*The Complete Angler*  
Part I, First Day (p. 31)  
Routledge, Warnes & Routledge. London, England. 1859

## AFTON

**Burns, Robert** 1759–96  
English author

Flow gently, sweet Afton, Among thy green braes,

Flow gently, I'll sing thee a song in thy praise.

In Allan Cunningham (ed.)  
*The Works of Robert Burns*  
Afton Water  
Henry G. Bohn. London, England. 1845

## ALPH

**Coleridge, Samuel Taylor** 1772–1834  
English lyrical poet, critic, and philosopher

In Xanadu did Kubla Khan  
A stately pleasure-dome decree;  
Where Alph, the sacred river ran,  
Through caverns measureless to man  
Down to a sunless sea.

In W.G.T. Shedd (ed.)  
*The Complete Works of Samuel Taylor Coleridge* Volume 7  
 Kubla Khan  
 Harper & Brothers Publishers. New York, New York, USA. 1884

## ARNO

**Akenside, Mark** 1721–70  
 English poet and physician

At last the Muses rose...And scattered...As they flew,  
 Their blooming wreaths from fair Valelusa's bowers  
 To Arno's myrtle border.

*Select Works of the British Poets* (10th edition)  
 The Pleasures of the Imagination  
 J. Wetham & Son. Philadelphia, Pennsylvania, USA. 1841

## AVON

**Webster, Daniel** 1782–1852  
 American statesman

The Avon to the Severn runs,  
 The Severn to the sea,  
 And Wickliff's dust shall spread abroad  
 Wide as the waters be.

In Edward Everett (ed.)  
*The Works of Daniel Webster* (Volume 2) 18th Festival of the Sons of  
 New Hampshire (p. 515) Co  
 Little, Brown, & Co. Boston, Massachusetts, USA. 1881

## AYR

**Burns, Robert** 1759–96  
 English author

Ayr, gurgling, kiss'd his pebbled shore,  
 O'erhung with wild woods, thick'ning green;  
 The fragrant birch and hawthorn hoar  
 Twin'd am'rous round the raptur'd scene.

In Robert Aris Willmott (ed.)  
*The Poetical Works of Robert Burns*  
 To Mary in Heaven  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1882

## BRONX

**Drake, Joseph Rodman** 1795–1820  
 American poet

Yet I will look upon thy face again,  
 My own romantic Bronx, and it will be  
 A face more pleasant than the face of men.  
 Thy waves are old companions ...

*The Culprit Fay*  
 Bronx  
 van Norden & King. New York, New York, USA. 1847

## CHATTAHOOCHEE

**Lanier, Sidney** 1842–81  
 American musician and poet

Out of the hills of Habersham,  
 Down the valleys of Hall,  
 I hurry amain to reach the plain;  
 Run the rapid and leap the fall,  
 Split at the rock, and together again  
 Accept my bed, or narrow or wide,  
 And flee from folly on every side  
 With a lover's pain to attain the plain,  
 Far from the hills of Habersham,  
 Far from the valleys of Hall.

In Mary Day Lanier (ed.)  
*Poems of Sidney Lanier*  
 Song of the Chattahoochee  
 Charles Scribner's Sons. New York, New York, USA. 1922

## CLYDE

**Park, Andrew**  
 No biographical data available

How sweet to move at summer's eve  
 By Clyde's meandering stream,  
 When Sol in joy is seen to leave  
 The earth with crimson beam;  
 When islands that wandered far  
 Above his sea couch lie,  
 And here and there some gem-like star  
 Re-opes its sparkling eye.

The Banks of Clyde

## COLORADO

**Abbey, Edward** 1927–89  
 American environmentalist and nature writer

Floating down a portion of Rio Colorado in Utah a rare  
 month in spring, twenty-two years ago, a friend and  
 I found ourselves passing through a world so beautiful  
 it seemed and had to be eternal. Such perfection of being,  
 we thought – these glens of sandstone, these winding cor-  
 ridors of mystery, leading each to its solitary revelation –  
 could not possibly be changed.

*Down the River*  
 Part IV, Chapter 19 (p. 231)  
 E.P. Dutton. New York, New York, USA. 1982

**Ives, Joseph Christmas** 1828–68  
 American soldier, botanist, and explorer

The region last explored [the Grand Canyon] is, of course,  
 altogether valueless. It can be approached only from the  
 south, and after entering it there is nothing to do but to  
 leave. Ours has been the first, and will doubtless be the

last...to visit this profitless locality. It seems intended by nature that the Colorado river, along the greater portion of its lonely and majestic way, shall be forever unvisited and undisturbed.

*Report Upon the Colorado River of the West*  
Chapter VIII (p. 110)  
Government Printing Office. Washington, D.C. 1861

**van Dyke, John Charles** 1856–1932  
American art historian and critic

You may see on the face of the globe numerous muddy Missouris, blue Rhones, and yellow Tibers; but there is only one red river and that is the Colorado.

*The Desert*  
Chapter IV (p. 66)  
Charles Scribner's Sons. New York, New York, USA. 1930

## DEE

**Tait, John** 1748–1817  
Poet

Flow on, lovely Dee, flow on, thou sweet river,  
Thy banks' purest stream shall be dear to me ever.

In James Grant Wilson (ed.)  
*The Poets and Poetry of Scotland: From Thomas Campbell to Marquis of Lorne* Volume 2  
The Banks of Dee  
Harper & Brothers Publishers. New York, New York, USA. 1876

## DOON

**Burns, Robert** 1759–96  
English author

Ye banks and braes o' bonny Doon,  
How can ye bloom sae fresh and fair;  
How can ye chant, ye little birds,  
And I sae weary fu' o' care!

*The Poetical Works of Robert Burns* (Volume 3)  
The Banks of Doon  
Little, Brown & Company. Boston, Massachusetts, USA. 1863

## DOVE

**Cotton, Charles** 1630–87  
English writer and poet

Oh, my beloved nymph, fair Dove,  
Princess of rivers, how I love  
Upon thy flowery banks to lie,  
And view thy silver stream,  
When gilded by a summer's beam!

In Jr. R. Tutin (ed.)  
*Poems*  
The Retirement. 34  
Published by the editor 1903

## ISAR

**Campbell, Thomas** 1777–1844  
Scottish poet

Oh Linden, when the sun was low,  
All bloodless lay the untrodden snow,  
And dark as winter was the flow  
Of Isar, rolling rapidly.

*The Poetical Works of Thomas Campbell: including Theodric Hohenlinden*  
J. Crissy & J. Grigg. Philadelphia, Pennsylvania, USA. 1835

## LEE

**Father Prout (Francis Mahoney)** 1804–66  
Irish humorist

On this I ponder  
Where'er I wander,  
And thus grow fonder,  
Sweet Cork, of thee, –  
With thy bells of Shandon,  
That sound so grand on  
The pleasant waters  
Of the river Lee.

In Daphne Dale (ed.)  
*Living Thoughts in Words That Burn, from Poet, Sage and Humorist*  
The Shandon Bells  
Elliott & Beezley. Philadelphia, Pennsylvania, USA. 1891

## NIAGARA

**Brooks, Maria** 1794–1845  
American poet

Niagara! Wonder of this western world,  
And half the world beside! Hail, beautiful queen  
Of cataracts!

*The Female Poets of America*  
To Niagara  
J.J. Little & Co. New York, New York, USA. 1878

## NILE

**Hunt, Leigh** 1784–1859  
English poet

It flows through old hushed Egypt and its sands,  
Like some grave mighty thought threading a dream.

In Leigh Hunt and Samuel Adams Lee (eds.)  
*The Book of the Sonnet* (Volume 1)  
The Nile  
Robert Brothers. Boston, Massachusetts, USA. 1867

## RHINE

**Longfellow, Henry Wadsworth** 1807–82  
American poet

Beneath me flows the Rhine, and like the stream of Time,  
it flows amid the ruins of the Past.

*Hyperion*

Book I, Chapter III

Houghton, Mifflin & Co. Boston, Massachusetts, USA. 1883

## ROBOT

**Hey, Nigel S.** 1936–

American science writer

The craft is a space robot that is invested with the equivalents of eyes, ears, voice, and muscle. Each spacecraft takes with it the hopes and dreams of thousands of scientists and engineers and, most importantly, the special sense of wonder and imagination that is so great a part of human nature.

*Solar System*

Chapter 5 (p. 120)

Weidenfield & Nicolson. London, England. 2002

## ROBOTS, THREE LAWS OF

**Asimov, Isaac** 1920–92

American author and biochemist

One, a robot may not injure a human being, or through inaction, allow a human being to come to harm;

Two, a robot must obey the orders given it by human beings except where such orders would conflict with the First Law;

Three, a robot must protect its own existence as long as such protection does not conflict with the First or Second Laws.

*I Robot*

1950

## ROCK

**Abbey, Edward** 1927–89

American environmentalist and nature writer

Rocks, like louseworts and snail darters and pupfish and third-world black, lesbian, feminist, militant poets, have rights, too. Especially the right to exist.

*A Voice Crying in the Wilderness: Notes from a Secret Journal*

Chapter 9 (p. 86)

St. Martin's Press. New York, New York, USA. 1989

**Alvarez, Luis Walter** 1911–88

American experimental physicist

Rocks are the key to Earth history, because solids remember but liquids and gasses forget. Retrieving these long-lost memories is the business of geologists and paleontologists, of people who have chosen to be the historians of the Earth.

*T. Rex and the Crater of Doom*

Chapter I (p. 17)

Princeton University Press. Princeton, New Jersey, USA. 1997

## Author undetermined

There are no books like a rock,

And nothing looks like a rock;

There are no meals like a rock,

And nothing feels like a rock;

Nothing stays like a rock,

Or decays like a rock.

There is nothing wrong with any man here

That can't be cured by putting him near

A lithic, igneous, metamorphic, sedimentary rock.

Roquiescat (Sung to "There Is Nothing Like a Dame")

*The Pick and Hammer Club*, Washington, D.C., May 2, 1952

**Bradley, Jr., John Hodgdon** 1898–1962

American geologist

Rocks are the graveyards of the past, and the student of fossil shells and bones sees the grim phenomenon in every guise.

*Parade of the Living*

Part III, Chapter XVII (p. 238)

Coward-McCann, Inc. New York, New York, USA. 1930

**Burroughs, John** 1837–1921

American naturalist and writer

Even if we do not know our geology, there is something in the face of a cliff and in the look of a granite boulder that gives us pause and draws us thitherward in our walk. We linger beneath the cliff, or muse and dream amid its ruins as amid the ruins of some earth temple; we pause beside the huge boulder, or rest upon it and survey the landscape from its coign of vantage; we lay our hand upon it as upon some curious relic from a world that we know not of. The elemental, the primordial, the silence of ages, the hush and repose of a measureless antiquity look out upon us from the face of the rocks.

*Under the Apple-Trees*

Chapter II (p. 41)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1916

Rocks have literally come down to us from a foreworld. The youth of the earth is in the soil and in the trees and verdure that springs from it; its age is in the rocks; in the great stone book of the geologic strata its history is written. Even if we do not know our geology, there is something in the face of a cliff and in the look of a granite boulder that gives us pause and draws us thitherward in our walk.

*Under The Apple Tree*

The Friendly Rocks (pp. 40–41)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1916

Rocks do not recommend the land to the tiller of the soil, but they recommend it to those who reap a harvest of another sort – the artist, the poet, the walker, the student and lover of all primitive open-air things.

*The Writings of John Burroughs* (Volume 19)

Chapter II (p. 40)

Houghton, Mifflin. Boston, Massachusetts, USA. 1916

...its [the Earth's] age is in the rocks; in the great stone book of the geologic strata its history is written.

*The Writings of John Burroughs* (Volume 19)

Chapter II (pp. 40–41)

Houghton, Mifflin. Boston, Massachusetts, USA. 1916

Next to the trees, rocks are points of interest in the landscape. Slumbering here and there upon the turf, they enhance the sense of repose. How expressionless and uninteresting the landscape in one of the prairie States ...

*The Writings of John Burroughs* (Volume 19)

Chapter II (pp. 41–42)

Houghton, Mifflin. Boston, Massachusetts, USA. 1916

A landscape without rocks lacks something. Without the outcropping ledge, the faces of the hills lack eyebrows; without a drift boulder here and there, the fields lack the rugged elemental touch.

*Under the Apple-Trees*

Chapter II (p. 41)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1916

...they [rocks] are veterans of many battles; they have most of them marched in the ranks of vast stone brigades during the ice age; they have been torn from the hills, recruited from the mountain-tops, and marshaled on the plains and in the valleys; and now the elemental war is over, there they lie waging a gentle but incessant warfare with time, and slowly, oh, so slowly, yielding to its attacks!

*Under the Apple-Trees*

Chapter II (p. 42)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1916

The rocks have a history; gray and weather-worn, they are veterans of many battles; they have most of them marched in the ranks of vast stone brigades during the ice age; they have been torn from the hills, recruited from the mountain-tops, and marshaled on the plains and in the valleys; and now the elemental war is over, there they lie waging a gentle but incessant warfare with time, and slowly, oh, so slowly, yielding to its attacks!

*Under the Apple-Trees*

Chapter II (p. 42)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1916

### **Daly, Reginald Aldworth** 1871–1957

Canadian-American geologist

A final philosophy of the Earth's crust must be largely founded upon the unshakable facts known about igneous rocks.

*Igneous Rocks and the Depths of the Earth: Containing Some Revised Chapters of "Igneous Rocks and their Origin"*

Chapter I (p. 1)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1933

Rocks are like human beings; they will bend before force, if you give them time enough and are not too rough with them.

*Our Mobile Earth*

Chapter VI (p. 223)

Charles Scribner's Sons. New York, New York, USA. 1926

### **Darwin, Charles Robert** 1809–82

English naturalist

On first examining a new district nothing can appear more hopeless than the chaos of rocks; but by recording the stratification and nature of the rocks and fossils at many points, always reasoning and predicting what will be found elsewhere, light soon begins to dawn on the district, and the structure of the whole becomes more or less intelligible.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 1)

Chapter II (p. 52)

D. Appleton & Company. New York, New York, USA. 1896

### **de Saint-Exupéry, Antoine** 1900–44

French aviator and writer

A rock pile ceases to be a rock pile the moment a single man contemplates it, bearing within him the image of a cathedral.

Translated by Bernard Lamotte

*Flight to Arras*

Chapter XXII (p. 219)

Reynal & Hitchcock. New York, New York, USA. 1942

### **Fort, Charles** 1874–1932

American writer

"I shall be scientific about it." Said Sir Isaac Newton – or virtually said he – "If there is no change in the direction of a moving body, the direction of a moving body is not changed." "But," continued he, "if something be changed, it is changed as much as it is changed." How do geologists determine the age of rocks? By the fossils in them. And how do they determine the age of fossils? By the rocks they're in. Having started with the logic of Euclid, I go on to the wisdom of Newton.

*The Books of Charles Fort*

Lo! (pp. 547–548)

Henry Holt & Company. New York, New York, USA. 1941

### **Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

The hips and elbows and other bones of Nature stick out here and there in the shape of rocks which give character to the scenery ...

*The Writings of Oliver Wendell Holmes*

*Pages from an Old Volume of Life*

Chapter II (p. 74)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1891

### **Hutton, James** 1726–97

Scottish geologist, chemist, and naturalist

A rock or stone is not a subject that, of itself, may interest a philosopher to study; but, when he comes to see

the necessity of those hard bodies, in the constitution of this earth, or for the permanency of the land on which we dwell, and when he finds that there are means wisely provided for the renovation of this necessary decaying part, as well as that of every other, he then, with pleasure, contemplates this manifestation of design, and thus connects the mineral system of this earth with that by which the heavenly bodies are made to move perpetually in their orbits.

*Theory of the Earth: With Proofs and Illustrations* (Volume 1)  
Chapter III (p. 276)

H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

### **Kingsley, Charles** 1819–75

English clergyman and author

These rocks, at least, tell me no lies, as men do.

*Alton Locke*

Chapter XVIII (p. 143)

Macmillan & Co Ltd. London, England. 1862

### **Le Guin, Ursula K.** 1929–

American writer of science fiction and fantasy

The first thing about rocks is, they're old.... Rocks are in time in a different way than living things are, even the ancient trees. But then, the other thing about rocks is that they are place. Rocks are what a place is made of to start with and after all.... The stone is at the center.

*Buffalo Gals and Other Animal Presences*

Capra Press. Santa Barbara, California, USA. 1987

### **LeConte, John** 1818–91

American physician and physicist

Here, then, we have the oldest known rocks. Are they, then, absolutely the oldest – the primitive rocks, as some imagine? By no means. They are stratified rocks, and therefore consolidated sediments, and therefore, also, the debris of still older rocks, of which we know nothing. Thus, we seek in vain for the absolutely oldest, the primitive crust.

*A Compend of Geology*

Part III, Chapter II (pp. 263–264)

American Book Company. New York, New York, USA. 1884

### **Levenson, Thomas**

No biographical data available

Rock is the ultimate historian – what it is, and what remnants it contain are the only records of what the earth was like through virtually its entire lifetime.

The materials from which the geologist draws his conclusions are rocks.

*Fundamentals of Geology*

Chapter II (p. 12)

Oliver & Boyd. Edinburgh, Scotland. 1963

### **Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

The Record of the Rocks is like a great book that has been carelessly misused. All its pages are torn, worn, and defaced, and many are altogether missing.

*The Outline of History* (Volume 1)  
Book I, Chapter III, Section 3 (p. 29)  
Garden City Books. Garden City, New York, USA. 1961

**White, Bailey** 1950–  
American writer

My Aunt Belle loves rocks. Her whole house used to be filled with rocks. Every flat surface was covered with slabs of amethyst crystal, piles of rainbow-colored labradorite, bowls full of fossilized sharks' teeth as big as a child's hand, and agate geodes lined with quartz crystals.... Every afternoon my Aunt Belle takes a bagful of rocks down to Shoney's Restaurant where she spreads them out on the Formica tabletop and says incantations over them while she drinks iced tea.

*Sleeping at the Starlite Motel and Other Adventures on the Way Back Home*  
Rocks (p. 63)  
Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1995

## ROCK FORMATIONS

**Lapworth, Charles** 1842–1920  
English Geologist

It is as true now, as it was in the days when Werner first drew his far-reaching inferences before his charmed listeners, that on the characteristic phenomena and varying distribution of the grand mineral masses of the rock-formations, almost all that concerns the relative habitability of a land depends.

*The Relations of Geology*  
*Scottish Geographical Magazine*, Volume XIX, Number 8, August, 1902 (p. 409)

## ROCK PILE

**de Saint-Exupéry, Antoine** 1900–44  
French aviator and writer

A rock pile ceases to be a rock pile the moment a single man contemplates it, bearing within him the image of a cathedral.

*Flight to Arras* (p. 129)  
Harcourt, Brace & Co. Orlando, Florida, USA. 1942

## ROCKS, MOTION OF

**Burroughs, John** 1837–1921  
American naturalist and essayist

It is hard even for the rocks to keep still in this world of motion, but it takes the hour-hand of many years to mark their progress.

*The Writings of John Burroughs* (Volume 19)  
Chapter II (p. 42)  
Houghton, Mifflin. Boston, Massachusetts, USA. 1916

When a rock, loosened from its ties in the hills, once becomes a wanderer, it is restless ever after, and stirs in its sleep. Heat and cold expand and contract it, and make it creep down an incline. Hitch your rock to a sunbeam, and come back in a hundred years, and see how much it has moved.

*The Writings of John Burroughs* (Volume 19)  
Chapter II (p. 42)  
Houghton, Mifflin. Boston, Massachusetts, USA. 1916

I know a great platform of rock weighing hundreds of tons, and large enough to build a house upon, that has slid down the hill from the ledges above, and that is pushing a roll of turf before it as a boat pushes a wave, but stand there till you are gray, and you will see no motion; return in a century, and you will doubtless find that the great rock raft has progressed a few inches. What a sense of leisure such things give us hurrying mortals!

*The Writings of John Burroughs* (Volume 19)  
Chapter II (p. 43)  
Houghton, Mifflin. Boston, Massachusetts, USA. 1916

## ROCKET

**Clarke, Arthur C.** 1917–  
English science and science fiction writer

We do not have to wait until someone produces “anti-gravity” before we can travel to the planets: the means is already at hand. It is the rocket.

*The Exploration of Space*  
Chapter 2 (p. 16)  
Harper & Brothers Publishers. New York, New York, USA. 1951

The crossing of space... may do much to turn men's minds outwards and away from their present tribal squabbles. In this sense, the rocket, far from being one of the destroyers of civilisation, may provide the safety-value that is needed to preserve it.”

*The Exploration of Space*  
Chapter 18 (p. 194)  
Harper & Brothers Publishers. New York, New York, USA. 1951

We stand now at the turning point between two eras. Behind us is a past to which we can never return.... The coming of the rocket brought to an end a million years of isolation... the childhood of our race was over and history as we know it began.

*The Exploration of Space*  
Chapter 18 (p. 195)  
Harper & Brothers Publishers. New York, New York, USA. 1951

**Goddard, Robert H.** 1882–1945  
American physicist

... I still seem to be alone in my enthusiasm for liquid-fueled rockets, but have a hunch that the time is coming when a good many will want to get aboard the bandwagon...

*The Papers of Robert H. Goddard* (Volume 3)  
R.H. Goddard to T.E. Thompson

March 7, 1941 (p. 1386)  
 McGraw-Hill Book Company, Inc. New York, New York, USA. 1970

**Woolley, Richard** 1906–1986  
 Astronomer Royale of England

The whole procedure [of shooting rockets into space]... presents difficulties of so fundamental a nature, that we are forced to dismiss the notion as essentially impracticable, in spite of the author's insistent appeal to put aside prejudice and to recollect the supposed impossibility of heavier-than-air flight before it was actually accomplished.

Reviewing P.E. Cleator's "Rockets in Space"  
*Nature*, March 14, 1936

## ROCKFALL

**Muir, John** 1838–1914  
 American naturalist

The sound was inconceivably deep and broad and earnest, as if the whole earth, like a living creature, had at last found a voice and were calling to her sister planets.

*Our National Parks*  
 Chapter VIII (p. 263)  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

## ROTATION, DIURNAL

**Herschel, Friedrich Wilhelm (Sir William)** 1738–1822  
 English astronomer

The reason why this [diurnal motion] has not been looked into is probably the difficulty of finding a proper standard to measure it by; since it is itself the standard by which we measure all the other motions.

Astronomical Observations on the Rotation of the Planets Round their Axes made with a View to determine whether the Earth's Diurnal Motion is perfectly Equable  
*Philosophical Transactions of the Royal Society of London*, Volume 71, 1781 (p. 116)

While every one of the motions of the earth that arise from the actions of the sun, moon, and planets, etc., have been investigated by astronomers, there is one motion which has hitherto escaped the scrutiny of observers – the diurnal rotation round its axis.

Astronomical Observations on the Rotation of the Planets Round their Axes made with a View to determine whether the Earth's Diurnal Motion is perfectly Equable  
*Philosophical Transactions of the Royal Society of London*, Volume 71, 1781 (p. 115)

## ROTATION OF EARTH

**Archimedes of Syracuse** 287 BCE–212 BCE  
 Sicilian mathematician

But Aristarchus of Samos brought out a book consisting of certain hypotheses, in which the premises lead to the

conclusion that the universe is many times greater than that now so called. His hypotheses are that the fixed stars and the sun remain motionless, that the earth revolves about the sun in the circumference of a circle, the sun lying in the middle of the orbit, and that the sphere of the fixed stars, situated about the same center as the sun, is so great that the circle in which he supposes the earth to revolve bears such a proportion to the distance of the fixed stars as the center of the sphere bears to its surface.

In *Great Books of the Western World* (Volume 11)  
*The Sand-Reckoner* (p. 520)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Bacon, Sir Francis** 1561–1626  
 English lawyer, statesman, and essayist

Nevertheless, in the system of Copernicus there are found many and great inconveniences; for both the loading of the earth with a triple motion is very incommodious, and the separation of the sun from the company of the planets, with which it has so many passions in common, is likewise a difficulty, and the introduction of so much immobility in nature, by representing the sun and stars as immovable, especially being of all bodies the highest and most radiant, and making the moon revolve about the earth in an epicycle, and some other assumptions of his, are the speculations of one who cares not what fictions he introduces into nature, provided his calculations answer.

*Descriptio Globi Intellectualis*  
 Source undetermined

**Blundeville, Thomas** fl. 1561  
 English author

Some also deny that the earth is in the midst of the world, and some affirm that it is moveable, as also Copernicus by way of supposition, and not for that he thought so in deede: who affirmeth that the earth turneth about, and that the sunne standeth still in the midst of the heavens, by help of which false supposition he hath made truer demonstrations of the motions and revolutions of the celestiall Sphaeres, than ever were made before...

*M. Blundeville His Exercises*  
 Source undetermined

**Brahe, Tycho** 1546–1601  
 Danish astronomer

If Nicolaus Copernicus, the distinguished and incomparable master, in this work had not been deprived of exquisite and faultless instruments, he would have left us this science far more well-established. For he, if anybody, was outstanding and had the most perfect understanding of the geometrical and arithmetical requisites for building up this discipline. Nor was he in any respect inferior to Ptolemy; on the contrary, he surpassed him greatly in certain fields, particularly as far as the device of fitness and compendious harmony in hypotheses is concerned. And his apparently absurd opinion that the Earth revolves

does not obstruct this estimate, because a circular motion designed to go on uniformly about another point than the very center of the circle, as actually found in the Ptolemaic hypotheses of all the planets except that of the Sun, offends against the very basic principles of our discipline in a far more absurd and intolerable way than does the attributing to the Earth one motion or another which, being a natural motion, turns out to be imperceptible. There does not at all arise from this assumption so many unsuitable consequences as most people think.

Letter to Christopher Rothman, January 20, 1587  
Source undetermined

**Plutarch** 46–119  
Greek biographer and author

Some think that the earth remains at rest. But Philolaus the Pythagorean believes that, like the sun and moon, it revolves around the fire in an oblique circle. Heraclides of Pontus and Ecphantus the Pythagorean make the earth move, not in a progressive motion, but like a wheel in rotation from west to east around its own center.

In Nicholas Copernicus  
*On the Revolutions of the Heavenly Spheres*  
Preface (p. 508)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## RUIN

**Macaulay, Rose** 1881–1958  
English writer

Of all ruins, possibly the most moving are those of long-deserted cities, fallen century by century into deeper decay, their forsaken streets grown over by forest and shrubs, their decadent buildings quarried and plundered down the years, gaping ruinous, the haunts of lizards and owls...the marble and gold of palaces, the laurel and jasmine of gardens, are now brambles and lagoons; the house built for Caesar is now dwelt in by lizards....

*Pleasure of Ruins*  
Chapter III (p. 255)  
Walker & Company. New York, New York, USA. 1953

## RULE

**Arnheim, Rudolf** 1904–  
German-born author, film theorist, and psychologist

An orgy of self-expression is no more productive than blind obedience to rules.

*Art and Visual Perception*  
Introduction (p. vii)  
University of California Press. Berkeley, California, USA. 1957

Ulysses, l. 22–23  
Oxford University Press, Inc. London, England. 1953

## S

### SACCHARIN

**Remsen, Ira** 1846–1927

American chemist and university president

Any practical man would unhesitatingly have condemned the work [a complicated chemical investigation] as being utterly useless, and I may add that some did condemn it. There was no hope, no thought entertained by us that anything practical would come of it. But lo! one day it appeared that one of the substances discovered in the course of the investigation is the sweetest thing on earth; and then it was shown that it can be taken into the system without injury; and finally that it can be manufactured at such a price as to furnish sweetness at a cheaper rate than it is furnished by the sugar cane or the beet. And soon a great demand for it was created, and today it is manufactured in surprising quantities and used extensively in all corners of the globe.

Quoted in Richard Arman Gregory

*Discovery, Or, The Spirit and Service of Science*

Chapter IX (p. 253)

Macmillan & Co Ltd. London, England. 1916

### SAFETY

**Agricola, Georgius** 1494–1555

German mineralogist

...there is no compensation which should be thought great enough to equalize the extreme dangers [in mining] to safety and life.

Translated by Herbert Hoover and Lou Henry Hoover

*De Re Metallica*

Book I (p. 6)

The Mining magazine

London, England. 1912

### SAGACITY

**Diderot, Denis** 1713–84

French encyclopedist and philosopher of materialism

I picture the vast realm of the sciences as an immense landscape scattered with patches of dark and light. The goal towards which we must work is either to extend the boundaries of the patches of light, or to increase their number. One of these tasks falls to the creative genius; the other requires a sort of sagacity combined with perfectionism.

In D. Adams (ed.)

*Thoughts on the Interpretation of Nature and Other Philosophical Works*

Section XIV (p. 42)

Clinamen Press. Manchester, England. 1999

**Locke, John** 1632–1704

English philosopher and political theorist

Those intervening ideas, which serve to show the agreement of any two others, are called proofs; and where the agreement or disagreement is by this means plainly and clearly perceived, it is called demonstration; it being shown to the understanding, and the mind made to see that it is so. A quickness in the mind to find out these intermediate ideas (that shall discover the agreement or disagreement of any other), and to apply them right, is, I suppose, that which is called sagacity.

In *Great Books of the Western World* (Volume 35)

*An Essay Concerning Human Understanding*

Book VI, Chapter II, Section 3 (p. 310)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Whewell, William** 1794–1866

English philosopher and historian

The Conceptions by which Facts are bound together, are suggested by the sagacity of discoverers. This sagacity cannot be taught. It commonly succeeds by guessing; and this success seems to consist in framing several tentative hypotheses and selecting the right one. But a supply of appropriate hypotheses cannot be constructed by rules, nor without inventive talent.

*The Philosophy of the Inductive Sciences Founded Upon Their History* (Volume 2)

Aphorisms, Aphorisms Concerning Science, VIII (pp. 467–468)

John W. Parker. London, England. 1847

### SAMPLE

**Bell, Joseph Asbury** 1904–68

American physician

The first problem was that of locating for observation a group of children to be vaccinated, identical, in all attributes, which might influence the occurrence and recognition of pertussis, with another group to receive no vaccine. It is impossible to select such identical groups because many of the attributes involved are not known, and many of those that are known cannot be quantitatively assessed; and, furthermore, even if such attributes could be made identical in the two groups at any one moment, they would not remain identical throughout the time necessary for adequate observation. Some attributes without apparent influence on the results may under certain circumstances be of real importance.... The only practical approach appeared to rest in the selection of two groups, each of which is a random sample of the combined groups in the exact sense of the word.

*Public Health Report*

Pertussis prophylaxis with two doses of alum-precipitated vaccine

Report 56, 1941

**Bloch, Arthur** 1948–  
American humorist

After painstaking and careful analysis of a sample, you are always told that it is the wrong sample and doesn't apply to the problem.

*Murphy's Law*

Fourth Law of Revision (p. 48)

Price/Stern/Sloan, Publishers. Los Angeles, California, USA. 1981

**Cochran, William G.** 1909–80  
Scottish-born American statistician

Our knowledge, our attitudes, and our actions are based to a very large extent on samples.

*Sampling Techniques* (p. 1)

John Wiley & Sons. New York, New York, USA. 1953

A person's opinion of an institution that conducts thousands of transactions every day is often determined by the one or two encounters which he has had with the institution in the course of several years.

*Sampling Techniques* (p. 1)

John Wiley & Sons. New York, New York, USA. 1953

**Cochran, William G.** 1909–80  
Scottish-born American statistician

**Mosteller, Frederick** 1916–2006  
American statistician

In 1905, a physicist measuring the thermal conductivity of copper would have faced, unknowingly, a very small systematic error due to the heating of his equipment and sample by the absorption of cosmic rays, then unknown to physics. In early 1946, an opinion poller, studying Japanese opinion as to who won the war, would have faced a very small systematic error due to the neglect of the 17 Japanese holdouts, who were discovered later north of Saipan. These cases are entirely parallel. Social, biological and physical scientists all need to remember that they have the same problem, the main difference being the decimal place in which they appear.

*Principles of Sampling*

*Journal of the American Statistical Association*, Volume 49, 1954 (p. 31)

**Deming, William Edwards** 1900–93  
American statistician, educator, and consultant

Sampling is the science and art of controlling and measuring the reliability of useful statistical information through the theory of probability.

*Some Theory of Sampling* (p. 3)

John Wiley & Sons. New York, New York, USA. 1950

If the cost of classifying a sampling unit were zero, one could always safely recommend fantastic plans of stratified sampling, with no worry about costs. The fact is, though, that there is always a price to pay...

*Sample Design in Business Research* (p. 320)

John Wiley & Sons. New York, New York, USA. 1960

A good sample-design is lost if it is not carried out according to plans.

*Some Theory of Sampling* (p. 241)

John Wiley & Sons. New York, New York, USA. 1950

**Diconis, Persi** 1945–  
American mathematician

**Mosteller, Frederick** 1916–2006  
American statistician

The law of truly large numbers states: With a large enough sample, any outrageous thing is likely to happen.

*Methods for Studying Coincidences*

*Journal of the American Statistical Association*, Volume 84, 1989 (p. 859)

English composer

I've got a little list – I've got a little list...

I've got him on the list...

They never would be missed – they never would be missed!

*The Complete Plays of Gilbert and Sullivan*

The Mikado

Act I

The Modern Library. New York, New York, USA. 1936

**Gissing, George** 1857–1903  
English novelist

He pointed to a heap of five or six hundred letters, and laughed consumedly.

"Impossible to read them all, you know. It seemed to me that the fairest thing would be to shake them together, stick my hand in, and take our one by chance. If it didn't seem very promising, I would try a second time."

*New Grub Street*

The Way Hither (p. 62)

The Modern Library. New York, New York, USA. 1926

**Jevons, William Stanley** 1835–82  
English economist and logician

To prove the exact similarity of two portions of commodity, we need not bring one portion beside the other. It is sufficient that we take a sample which exactly represents the texture, appearance, and general nature of one portion, and according as this sample agrees or not with the other, so will the two portions of commodity agree or differ. Whatever is true as regards the colour, texture, density, material of the sample will be true of the goods themselves.

*The Principles of Science: A Treatise on Logic and Scientific Method* (2nd edition)

Chapter I (p. 9)

Macmillan & Co Ltd. London, England. 1877

**McNemar, Quinn** 1900–86  
American statistician

One does not have to read much of the current research literature in psychology, particularly in individual and social psychology, to realize that there exists a great deal of confusion in the minds of investigators as to the necessity of obtaining a truly representative sample, describing carefully how the sample was secured, and restricting generalizations to the universe, often ill-defined, from which the sample was drawn.

Sampling in Psychological Research

*Journal of the American Statistical Association*, Volume 37, Number 6, June, 1940 (p. 33)

### Medical Research Council

Determination of whether a patient would be treated by streptomycin and bed-rest (S case) or by bed-rest alone (C case) was made by reference to a statistical series based on random sampling numbers drawn up for each sex at each centre by Professor Bradford Hill; the details of the series were unknown to any of the investigators or to the co-ordinator and were contained in a set of sealed envelopes, each bearing on the outside only the name of the hospital and a number. After acceptance of a patient by the panel, and before admission to the streptomycin centre, the appropriate numbered envelope was opened at the central office; the card inside told if the patient was to be an S or a C case, and this information was then given to the medical officer of the centre.... It was important for the success of the trial that the details of the control scheme remain confidential.

Medical Research Council. Streptomycin treatment of pulmonary tuberculosis: a Medical Research Council investigation  
*British Medical Journal*, Volume 2, 1948

**Mosteller, Frederick** 1916–2006  
American statistician

...weighing a sample appropriately is no more fudging the data than is correcting a gas volume for barometric pressure.

Principles of Sampling

*Journal of the American Statistical Association*, Volume 49, Number 265, 1964 (p. 33)

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

Supposing you got a crate of oranges that you opened, and you found all the top layer of oranges bad, you would not argue, 'The underneath ones must be good, so as to redress the balance'; You would say, 'Probably the whole lot is a bad consignment'; and that is really what a scientific person would say about the universe.

In Louis Greenspan and Stefan Anderson

*Russell on Religion: Selections from the Writings of Bertrand Russell*  
Why I Am Not A Christian (p. 84)  
Routledge. London, England. 1999

**Slonim, Morris James**  
No biographical data available

Everyone who has poured a highball into the nearest potted plant after taking one sip has had some experience in sampling.

*Sampling in a Nutshell* (p. 1)

Simon & Schuster. New York, New York, USA. 1960

Sampling is only one component, but undoubtedly the most important one, of that broad based field of scientific method known as statistics.

*Sampling in a Nutshell* (p. 7)

Simon & Schuster. New York, New York, USA. 1960

### SAMPLE SELECTION

**Fibiger, Johannes Andreas Grib** 1867–1928  
Danish pathologist

In many cases a trustworthy verdict can only be reached when a large number of randomly selected patients are treated with the new remedy and, at the same time, an equally large number of randomly selected patients are treated as usual.

The Controlled Clinical Trial Turns 100 Years: Fibiger's Trial of Serum Treatment of Diphtheria

*British Medical Journal*, Volume 317, October 31, 1998 (p. 1244)

### SAND

**Carson, Rachel** 1907–64  
American marine biologist and author

Sand is a substance that is beautiful, mysterious, and infinitely variable; each grain on a beach is the result of processes that go back into the shadowy beginnings of life, or of the earth itself.

*The Edge of the Sea*

Chapter IV (p. 125)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1955

Sanitation curiously enough, may push sanity to the extreme.

*Social Eccentricities*

Social Eccentricities (p. 11)

Broadway Publishing Co. New York, New York, USA. 1906

## SATELLITE

**van Allen, James** 1914–2006

American space scientist

The satellite is a natural extension of rockets, which are natural extensions of planes and balloons, which are natural extensions of man's climbing trees and mountains in order to get up higher and thus have a better view.

Science: Reach Into Space

*Time*, May 4, 1959

## SAVANT

**Richet, Charles** 1850–1935

French physiologist

For the savant, Science must be a religion. Everything that is discovered, be it great or small, has its origin in this faith.

Translated by Sir Oliver Lodge

*The Natural History of a Savant*

Chapter VI (p. 47)

J.M. Dent & Sons Ltd. London, England. 1927

## SAY WHAT

**Carey, Henry** 1687–1743

English poet and songwriter

Aldeborontiphoscophornio! Where left you Chrononhotonthologos?

*Chrononhotonthologos*

Act I, sc. I

London, England.

## Oswald, Felix Leopold

Our nearest relatives in the large family of the animal kingdom are undoubtedly the frugivorous four-handers, with some of their nocturnal congeners, but it would be difficult to classify the *Quadrumana* after the degree of that relationship: no naturalist could name the most man-like ape.

*Zoological Sketches*

Chapter I (p. 21)

W.H. Allen & Co. London, England. 1883

## SCATTERING

**Rutherford, Ernest** 1871–1937

English physicist

It was quite the most incredible event that has ever happened to me in my life. It was almost as incredible as if you fired a 15-inch shell at a piece of tissue paper and it came back and hit you. On consideration, I realized that this scattering backward must be the result of a single collision, and when I made calculations I saw that it was

impossible to get anything of that order of magnitude unless you took a system in which the greater part of the mass of the atom was concentrated in a minute nucleus. It was then that I had the idea of an atom with a minute massive center carrying a charge.

In Joseph Needham and W. Pagel (ed.)

## SCAVENGER

**Austin, Mary Hunter** 1868–1934

American novelist and essayist

Once at Red Rock, in a year of green pasture, which is a bad time for the scavengers, we saw two buzzards, five ravens, and a coyote feeding on the same carrion, and only the coyote seemed ashamed of the company.

*The Land of Little Rain*

The Scavengers (pp. 53–54)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1903

## SCENERY

**Muir, John** 1838–1914

American naturalist

The scenery is mostly of a comfortable, assuring kind, grand and inspiring without too much of that dreadful overpowering sublimity and exuberance which tend to discourage effort and cast people into inaction and superstition.

*Steep Trails*

Chapter XXI (p. 272)

Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

## SCHOLAR

**Everett, Edward** 1794–1865

Whig Party politician

Calm and pure the satisfactions of the scholar, who, aloof from the competitions and the prizes, the mean jealousies, the hollow pretences, the brutal vilifyings, the base intrigues, the measureless corruptions of public life, holds converse in his inoffensive seclusion with the unenviable wise and gifted of every country and every age.

*Inauguration of Washington University at Saint Louis, Missouri.*

April 23, 1857

Mr. Everett's Inaugural Address on Academical Education (p. 76)

Little, Brown & Co. Boston, Massachusetts, USA. 1857

## SCHOOL

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

A school may be regarded as a single individual who talks to himself for a hundred years, and takes an extraordinary pleasure in his own being, however, foolish and silly it may be.

Translated by Thomas Bailey Saunders

*The Maxims and Reflections of Goethe*

#569 (p. 198)

The Macmillan Co. New York, New York, USA. 1906

## SCHOOLMASTER

**Goldsmith, Oliver** 1728–74

Anglo-Irish writer, poet, and physician

Let schoolmasters puzzle their brain...

*Poetical Works*

Song

William Pickering. London, England. 1839

## SCIENCE

**Abbey, Edward** 1927–89

American environmentalist and nature writer

That which today calls itself science gives us more and more information, an indigestible glut of information, and less and less understanding.

*Down the River*

Part I

Down the River with Henry Thoreau

November 7, 1980 (p. 29)

E.P. Dutton & Company. New York, New York, USA. 1982

**Adams, Henry Brooks** 1838–1918

American man of letters

No sand-blast of science had yet skimmed off the epidermis of history, thought, and feeling.

In Ernest Samuels (ed.)

*The Education of Henry Adams*

Chapter VI (p. 90)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1974

Man has mounted science, and is now run away with. I firmly believe that before many centuries more, science will be the master of man. The engines he will have invented will be beyond his strength to control. Someday science may have the existence of mankind in its power, and the human race commit suicide by blowing up the world.

In Worthington Chauncey Ford

*A Cycle of Adams Letters, 1861–1865* (Volume 1)

Letter to Charles Francis Adams, Jr. (p. 135)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1920

**Adler, Mortimer Jerome** 1902–2001

American educator, philosopher, and popular author

Science, like philosophy, differs from opinion in that the scientist looks upon disagreement as a condition which can always be remedied by an examination of the

evidence. But unlike philosophy, science is like opinion in that the scientist looks upon instability and fluctuation as a condition which is intrinsic to the nature of scientific achievement.

*Art and Prudence*

Part III, Chapter 9 (p. 249)

Longmans, Green. New York, New York, USA. 1978

**Agassiz, Jean Louis Rodolphe** 1807–73

Swiss-born American naturalist, geologist, and teacher

...science cannot submit to dictation, it must build up what it seeks upon the premises which it finds.

*The Structure of Animal Life*

Lecture I (p. 2)

Sampson Low, Son & Marston. London, England. 1866

**Akenside, Mark** 1721–70

English poet and physician

Speak, ye, the pure delight, whose favour'd steps

The lamp of science, through the jealous maze

Of nature guides, when haply you reveal

Her secret honours.

*The Poetical Works of Mark Akenside*

The Pleasures of Imagination, Part II

Associated University Presses. Cranbury, New Jersey, USA. 1996

**Alfvén, Hannes** 1908–95

Swedish physicist

The center of gravity of the physical sciences is always moving. Every new discovery displaces the interest and the emphasis.

*Les Prix Nobel. The Nobel Prizes in 1970*

Plasma Physics, Space Research and the Origin of the Solar System (p. 306)

Nobel Foundation. Stockholm, Sweden. 1971

**Alighieri, Dante** 1265–1321

Italian poet and writer

...no Science demonstrates its own subject, but presupposes it.

*The Convivio of Dante Alighieri*

The Second Treatise, Chapter XIV (p. 114)

J.M. Dent & Sons Ltd. London, England. 1912

**Allport, Susan** 1950–

Naturalist and science writer

Science advances, it seems, less through scientific consensus than by means of a scientific melee, a free-for-all in which every scientist pushes his or her piece of the truth, knowing that only time will tell which piece best fits reality.

*Explorers of the Black Box: The Search for the Cellular Basis of Memory*

Chapter Ten (p. 263)

W.W. Norton & Company, Inc. New York, New York, USA. 1986

**Amiel, Henri-Frédéric** 1821–81

Swiss philosopher, poet, and critic

Society lives by faith, develops by science.

Translated by Mrs. Humphrey Ward

*Amiel's Journal*

May 7, 1870 (p. 216)

A.L. Burt Company, Publishers. New York, New York, USA. 1897

**Appleyard, Bryan** 1951–

English author and journalist

Science is not a neutral or innocent commodity which can be employed as a convenience.... Rather it is spiritually corrosive, burning away at ancient authorities and traditions. It has shown itself unable to coexist with anything.

*Understanding the Present: Science and the Soul of Modern Man*

Chapter 1 (p. 9)

Doubleday. New York, New York, USA. 1992

**Asimov, Isaac** 1920–92

American author and biochemist

Science does not promise absolute truth, nor does it consider that such a thing necessarily exists. Science does not even promise that everything in the Universe is amenable to the scientific process.

*"X" Stands for Unknown*

Introduction (p. 10)

Doubleday & Company, Inc. Garden City, New York, USA. 1984

Science doesn't purvey absolute truth. Science is a mechanism, a way of trying to improve your knowledge of nature.

In Carl Freedman

In Bill Moyer

*Conversations With Isaac Asimov*

*Isaac Asimov Speaks* (p. 143)

University Press of Mississippi. Jackson, Mississippi, USA. 2005

Science will not stand still. It is a panorama that subtly dissolves and changes even while we watch. It cannot be caught in its every detail at any one moment of time without leaving us behind at once.

*Asimov's New Guide to Science*

Preface (p. xv)

Basic Books, Inc. New York, New York, USA. 1984

## Author undetermined

Science has no fear for dissent or for heresy. She collects facts eagerly, steadily, from generation to generation, the labors of one investigator being added to those of another, the speculations of one coalescing with those of another, in virtue of a necessary and admirable solidarity. Then, from these facts patiently observed, brought together, coordinated, classified, science deduces a law, a positive law, which is the expression of reality, of truth itself.

Scientific Miscellany

*The Galaxy*, Volume 17, January, 1874 (p. 130)

...science has given us a new reading of nature, has opened the higher questions of life and human relations, has furnished a new method to the mind, and is fast becoming a new power in literature.

Scientific Miscellany  
*The Galaxy*, Volume 11, January, 1871 (p. 135)

The wonders of the heavens seem inexhaustible; each new adventure of science tasks the imagination and almost staggers the reason.

Scientific Miscellany  
*The Galaxy*, Volume 11, February, 1871 (p. 297)

I love science as other women love men. If I am to give up science, why not die?

A Woman Hater, Part VII  
*Blackwood's Edinburgh Magazine*, Volume 120, Number 784, December, 1876 (p. 657)

If there be any lesson which is taught us by Science it is this – that to be helped we must help ourselves; and that which is a meaningless accident to some, is the material of a discovery to those from whose eyes previous thought has removed the scales.

The Teaching of Science (Second Part)  
*The American Educational Monthly*, Volume VII, April, 1870 (p. 139)

No science can be constructed on the mere foundation of facts, and independently of metaphysics. Every science must set out from evident principles, which form the basis of all certain cognition.

In Charles George Herbermann  
*The Catholic Encyclopedia*  
Ethics (p. 557)  
The Encyclopedia Press, Inc. New York, New York, USA. 1913

The age in which we live is not less distinguished by a vigorous and successful cultivation of physical science, than by its numerous and important applications to the practical arts, and to the common purposes of life.

Introductory Remarks  
*The American Journal of Science*, Volume 1, Number 1, 1819 (p. 1)

Science may be likened to a forest-tree, which loses its beauty and vigor if we confine its roots, or bend and torture its branches.

Some Account of the Universities of Germany  
*The Gentleman's Magazine*, Volume I, Number 5, November, 1837 (p. 294)

The sciences progress to the limit of the senses, but there they must stop unless they intend to investigate more than the senses can teach.

*Matter and Some of Its Dimensions*  
Book cover  
Woodward & Lothrop. Washington, D.C. 1910

Today, science has withdrawn into realms that are hardly understood of the people. Biology means very largely histology, the study of the cell by difficult and elaborate microscopical processes. Chemistry has passed from the mixing of simple substances with ascertained reactions,

to an experimentation of these processes under varying conditions of temperature, pressure, and electrification – all requiring complicated apparatus and the most delicate measurement and manipulation. Similarly, physics has outgrown the old formulas of gravity, magnetism, and pressure; has discarded the molecule and atom for the ion, and may in its recent generalizations be followed only by an expert in the higher, not to say the transcendental mathematics.

Exit the Amateur Scientist  
*The Nation*, Volume 83, August 23, 1906

**Bacon, Sir Francis** 1561–1626  
English lawyer, statesman, and essayist

Those who have treated of the sciences have been either empirics or dogmatical. The former like ants only heap up and use their store, the latter like spiders spin out their own webs. The bee, a mean between both, extracts matter from the flower of the garden and the field, but works and fashions it by its own efforts.

In *Great Books of the Western World* (Volume 30)  
*Novum Organum*  
First Book, Aphorism 95 (p. 126)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Even the effects already discovered are due to chance and experiment, rather than to the sciences; for our present sciences are nothing more than peculiar arrangements of matters already discovered, and not methods for discovery or plans for new operations.

In *Great Books of the Western World* (Volume 30)  
*Novum Organum*  
First Book, Aphorism 8 (p. 107)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

All sciences are connected, and support each other with mutual aid, as parts of the same whole, of which each performs its work, not for itself alone, but for the others as well : as the eye directs the whole body, and the foot supports the whole; so that any part of knowledge taken from the rest is like an eye torn out or a foot cut off.

*Opus Tertium*  
Cap. Iv (p. 18)

**Bagehot, Walter** 1826–77  
English lawyer, statesman, and essayist

Science tries to find in each bit of earth the record of the causes which made it precisely what it is; those forces have left their trace, she knows, as much as the tact and hand of the artist left their mark on a classical gem.

*Physics and Politics*  
Chapter I (p. 2)  
D. Appleton & Co. New York, New York, USA. 1906

**Bailey, F. G.**  
No biographical data available

Science, it may be said by those who are not scientists, deals in objective truth. But the scientists themselves do

not see their work that way. They see it as dealing not with objective truth but with convenient fictions that are upheld so long as they continue to be useful.

*The Prevalence of Deceit* (p. xxi)  
Cornell University Press. Ithaca, New York, USA. 1991

**Barclay, John** 1758–1826  
Anatomist

Everything in Science ought to be real, ingenuous and open; every expression that indicates duplicity, or equivocation, reservation, wavering or inconsistency, is a reproach to it.

*A New Anatomical Nomenclature, Relating to the Terms Which Are Expressive of Position and Aspect in the Animal System* (p. 89)  
Edinburgh, Scotland. 1803

**Barnett, Lincoln Kinnear** 1909–79  
American science writer

The quick harvest of applied science is the useable process, the medicine, the machine. The shy fruit of pure science is Understanding.

*Life*, January 9, 1950

**Baruch, Bernard M.** 1870–1965  
American presidential advisor

Science has taught us how to put the atom to work. But to make it work for good instead of evil lies in the domain dealing with the principles of human duty. We are now facing a problem more of ethics than physics.

The Baruch Plan for Banning the Atom Bomb  
*Life*, June 24, 1946 (p. 35)

**Barzun, Jacques** 1907–  
French-born American educator, historian, and educator

It is not clear to anyone, least of all the practitioners, how science and technology in their headlong course do or should influence ethics and law, education and government, art and social philosophy, religion and life of the affections. Yet science is an all-pervasive energy, for it is at once a mode of thought, a source of strong emotion, and a faith as fanatical as any in history.

*Science: The Glorious Entertainment*  
To the Reader (p. 3)  
Harper & Row, Publishers. New York, New York, USA. 1964

**Bass, William M.**  
American forensic anthropologist

Always think of the consequences of your actions both in the field and in the laboratory.

*Human Osteology: A Laboratory and Field Manual of the Human Skeleton* (3rd edition)  
Missouri Archaeological Society. Columbia, Missouri, USA. 1987

**Bates, Marston** 1906–74  
American zoologist

Science has put man in his place; one among the millions of kinds of living things crawling around on the surface of a minor planet circling a trivial star.

*The Forest and the Sea: A Look at the Economy of Nature and the Ecology of Man*  
Chapter 1 (p. 5)  
Random House, Inc. New York, New York, USA. 1960

**Baudrillard, Jean** 1929–  
French cultural theorist

We can no longer say things appear unintelligible because science does not know enough about them. It seems that the more we know about them, the more unintelligible they become.

Translated by Chris Turner  
*Cool Memories*  
October, 1983 (p. 144)  
Verso. London, England. 1990

**Bauer, Henry H.** 1931–  
American chemist

Quite in general, it is not the case that, because science has changed its mind in the past, therefore it might change its mind again in any direction and by any amount.

*Scientific Literacy and the Myth of the Scientific Method*  
Chapter 4 (p. 66)  
University of Illinois Press. Urbana, Illinois, USA. 1992

Science may be better served when some scientists generate novel ideas while others carp at everything new than if all scientists could somehow become disinterestedly skeptical.

*Scientific Literacy and the Myth of the Scientific Method*  
Chapter 5 (p. 91)  
University of Illinois Press. Urbana, Illinois, USA. 1994

That science is not everything should not blind us to the fact that it is the very best of what we do have. Just as those who benefit from individual therapy can take pride from the persistent acts of will they exerted along the way, so humankind can take collective pride from the persistent determination to submit to reality therapy that has produced not only the science we now know but also an understanding of how to go about learning more.

*Scientific Literacy and the Myth of the Scientific Method*  
Chapter 7 (p. 150)  
University of Illinois Press. Urbana, Illinois, USA. 1992

**Beard, Charles A.** 1874–1948  
American historian

A revolution in thought is at hand, a revolution as significant as the Renaissance: the subjection of science to ethical and esthetic purpose. Hence the next great survey undertaken in the name of the social sciences may begin boldly with a statement of values agreed upon, and then utilize science to discover the conditions, limitations, and methods involved in realization.

Limitations to the Application of Social Science Implied in Recent Social Trends  
*Social Forces*, Volume 11, Number 4, May, 1933 (p. 510)

**Beattie, James** 1735–1803  
Scottish poet and essayist

‘Twas thus by the glare of false science betray’d,  
That leads, to bewilder; and dazzles, to blind...

*The Complete Poetical Works of Gray, Beattie, Blair, Collins, Thomson, and Kirke White*

The Hermit, Stanza 5

J. Blackwood. London, England. 1800

**Beebe, William** 1877–1962

American ornithologist

Thus was the ending still unfinished, the finale buried in the future – and in this we find the fascination of Nature and of Science. Who can be bored for a moment in the short existence vouchsafed us here; with dramatic beginnings barely hidden in the dust, with the excitement of every moment of the present, and with all of cosmic possibility lying just concealed in the future, whether of Betelgeuze, of Amoeba or – of ourselves?

*Edge of the Jungle*

Chapter XII (p. 294)

Garden City Publishing Company, Inc. Garden City, New York, USA. 1925

**Belloc, Hilaire** 1870–1953

French-born poet and historian

Life is a vale, its paths are dark and rough  
Only because we do not know enough.  
When Science has discovered something more  
We shall be happier than we were before.

*Lambkin's Remains*

The Only Hope of Humanity is in Science (p. 20)

The Proprietors of the J.C.R. at J. Vincent's. Oxford, England. 1900

**Bennett, William Cox** 1820–95

American poet

To what new realms of marvel, say,  
Will conquering science war its way?

*Poems*

To a Boy, Stanza 1

Chapman & Hall. London, England. 1850

**Bernal, John Desmond** 1901–71

Irish-born physicist and X-ray crystallographer

...it is not possible in any published book to speak freely and precisely about the way science is run. The law of liable, reasons of State, and still more the unwritten code of the scientific fraternity itself forbid particular examples being held up alike for praise or blame.

*The Social Function of Science* (p. xv)

The Macmillan Company. New York, New York, USA. 1939

**Bernard, Claude** 1813–78

French physiologist

...my idea of the science of life...it is a superb and dramatically lighted hall which may be reached only by passing through a long and ghastly kitchen.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Part One, Chapter III, Section iii (p. 15)

Henry Schuman, Inc. New York, New York, USA. 1927

Real science exists, then, only from the moment when a phenomenon is accurately defined as to its nature and rigorously determined in relation to its material conditions, that is, when its law is known. Before that, we have only groping and empiricism.

Translated by Henry C. Greene

*An Introduction to the Study of Experimental Medicine*

Chapter III

Henry Schuman, Inc. New York, New York, USA. 1927

Science has just the privilege of teaching us what we do not know, by replacing feeling with reason and experience and clearly showing us the present boundaries of our knowledge.

Translated by Henry C. Greene

*An Introduction to the Study of Experimental Medicine*

Chapter III

Henry Schuman, Inc. New York, New York, USA. 1927

Science does not grow successively and regularly. It goes by bounds and revolutions. It is the changes in theories that mark the bounds. Science is revolutionary.

Translated by Hebbel H. Hoff, Lucienne Guillemin and Roger Guillemin

*The Cahier Rouge of Claude Bernard* (p. 102)

Schenkman Publishing Co. Cambridge, Massachusetts, USA. 1967

**Billings, Josh (Henry Wheeler Shaw)** 1818–85

American writer and humorist

Science iz smart, but she kant tell yu what makes the flowers blush so menny different colors, but phaith can. Science on a deth bed iz a pigmy, but phaith iz a giant.

*Josh Billings' Wit and Humor*

Snails, Snaiks and Babys (p. 83)

George Routledge & Sons. London, England. 1874

**Birch, Arthur J.** 1915–95

Australian chemist

Some people derive satisfaction from accumulating data, whereas others are content to dream and leave experiments to colleagues. Still others flit from flower to flower rather than learning more and more about one situation. The difference in approach is a matter of temperament, and we all must understand our own strengths. All workers ultimately contribute to the matrix of facts, ideas, understandings, techniques, and visions that we know as science.

*To See the Obvious*

Random Conversations with the Editor (p. 195)

American Chemical Society. Washington, D.C. 1995

**Black, Joseph** 1728–99

Scottish chemist and physician

...if science be the discovery of the laws of nature, the knowledge of these laws will enable us to foresee what will be the result of any process, and must point out to us, in all cases, the means, and the best means, for producing any desired chemical effect: and here does our science repay, with a liberality unparalled in any other science, all her former obligations to the arts of life. From them

did she borrow the many facts which excited her to speculate; and her occupation has at last enabled her to repay her debts with large interest, while she has grown rich in knowledge almost beyond hope.

*Lectures on the Elements of Chemistry* (Volume 1)

Lectures on Chemistry

Definitions (p. 20)

Printed for Mathew Carey. Philadelphia, Pennsylvania, USA. 1807

**Blackstone, Sir William** 1723–80

English jurist

...sciences are of a sociable disposition, and flourish best in the neighborhood of each other: nor is there any branch of learning, but may be helped and improved by assistances drawn from other arts.

*Commentaries on the Laws of England* (Volume 1)

Introduction, section 33

English poet, painter, and engraver

Art is the Tree of Life; Science is the Tree of Death

*The Complete Poetry and Prose of William Blake*

The Laocoön

University of California Press. Berkeley, California, USA. 1982

**Blavatsky, Helena Petrovna** 1831–91

Russian-born American theosophist

If there were such a thing as a void, a vacuum in Nature, one ought to find it produced, according to a physical law, in the minds of helpless admirers of the “lights” of Science, who pass their time in mutually destroying their teachings.

*The Secret Doctrine*

Section 17

Theosophy Company. Los Angeles, California, USA. 1925

**Bloom, Allan** 1930–92

American philosopher

Science, in freeing men, destroys the natural condition that makes them human. Hence, for the first time in history, there is the possibility of a tyranny grounded not on ignorance, but on science.

*The Closing of the American Mind: How Higher Education Has Failed Democracy and Impoverished the Souls of Today's Students*

Part Three, Swift's Doubts (p. 295)

Simon & Schuster. New York, New York, USA. 1987

**Bohr, Niels Henrik David** 1886–1962

Danish physicist

The importance of physical science for the development of general philosophical thinking rests not only on its contributions to our steadily increasing knowledge of that nature of which we ourselves are part, but also on the opportunities which time and again it has offered for examination and refinement of our conceptual tools.

*Atomic Physics and Human Knowledge*

Introduction (p. 1)

John Wiley & Sons, Inc. New York, New York, USA. 1958

The task of science is both to extend the range of our experience and reduce it to order.

*Atomic Theory and the Description of Nature*

Introductory Survey (p. 1)

Cambridge University Press. Cambridge, England. 1934

It is, indeed, perhaps the greatest prospect of humanistic studies to contribute through an increasing knowledge of the history of cultural development to that gradual removal of prejudices which is the common aim of all science.

*Atomic Physics and Human Knowledge*

Natural Philosophy and Human Cultures (p. 31)

John Wiley & Sons, Inc. New York, New York, USA. 1958

...it is important to realize that science, which knows no national boundaries and whose achievements are the common possession of mankind, has through the ages united men in their efforts to elucidate the foundations of our knowledge.

On Atoms and Human Knowledge

*Daedalus*, Volume 87, Number 2, Spring, 1958 (p. 164)

**Bolton, Henry Carrington** 1843–1903

American chemist, bibliographer, and historian

So rapid are the strides made by science in this progressive age and so boundless is its range, that those who view its career from without find great difficulty in following its diverse and intricate pathways, while those who have secured a footing within the same road are often quite unable to keep pace with its fleet movements and would fain retire from the unequal contest. It is not surprising, then, that those actually contributing to the advancement of science, pressing eagerly upward and onward, should neglect to look back upon the labors of those who precede them and should sometimes lose sight of the obligations which science owes to forgotten generations.

Notes on the Early Literature of Chemistry

Reprinted from *The American Chemist*, November, 1875

**Bonaparte, Napoleon** 1769–1821

French soldier and emperor of France

The sciences, which have revealed so many secrets and destroyed so many prejudices, are destined to render us yet greater service. New truths, new discoveries will unveil secrets still more essential to the happiness of men – but only if we give our esteem to the scientists and our protection to the sciences.

In J. Christopher Herold (ed.)

*The Mind of Napoleon*

Science and the Arts (p. 135)

Columbia University Press. New York, New York, USA. 1955

**Bondi, Sir Hermann** 1919–2005

English mathematician and cosmologist

Throughout science there is a constant alternation between periods when a particular subject is in a state of order, with all known data falling neatly into their places, and a state of puzzlement and confusion, when new observations throw all neatly arranged ideas into disarray.

In Robert M. Hutchins and Mortimer J. Adler (eds.)

American educator

Science must be held superior to personal bias, and honor truth for its own sake.

*Science of Education*

Part II, Chapter XIII (pp. 177–178)

Charles Scribner's Sons. New York, New York, USA. 1904

**Born, Max** 1882–1970

German-born English physicist

Science has undoubtedly two aspects: it can be regarded from the social standpoint as a practical collective endeavor for the improvement of human conditions, but it can also be regarded from the individualistic standpoint, as a pursuit of mental desires, the hunger for knowledge and understanding, a sister of art, philosophy, and religion.

*Natural Philosophy of Cause and Chance*

Chapter X (p. 128)

Clarendon Press. Oxford, England. 1949

It is not nature that is economical but science. All our knowledge starts with collecting facts, but proceeds by summarizing numerous facts by simple laws, and these again by more general laws. This process is very obvious in physics.

*Physics in My Generation* (p. 75)

Pergamon Press. Oxford, England. 1956

**Bosler, Jean**

No biographical data available

As science advances, new questions appear before indeed the older ones, often badly put, are solved. But the latter often lose their interest, and as we proceed many untenable hypotheses which darkened our path are destroyed. And so, little by little, the knowledge we have of things progresses with a tidal motion which will doubtless end only with humanity.

...But science cannot complain, if we use its own language.

Aspects of Theism

*The New Englander*, Volume XXXI, Number 3, July, 1872 (p. 462)**Bowman, Isaiah** 1878–1950

Canadian-born American geographer

Science today, it should be remembered means not merely the physical and biological (including medical) sciences, but also the social sciences – modern economics, sociology, statistics, and related subjects – that we now seek to develop in a way as nearly objective as the nature of the human materials and the available techniques of investigation permit. In our time the highest hope of social advancement is based on a reasoned relationship of man to man, not a haphazard relationship. We have come to believe that the affairs of man are not subject to a malign fatalism as he goes forward in his “dark striving toward the good.” Science is in relentless pursuit of power to diminish the darkness of that striving and to “shape reality from hope’s vast dream”.

*A Design for Scholarship*

Other Men (p. 113)

Books for Libraries Press. Freeport, New York, USA. 1971

**Bradbury, Ray** 1920–

American writer

At base, science is no more than an investigation of a miracle we can never explain, and art is an interpretation of that miracle.

*Ray Bradbury: 100 of His Most Celebrated Tales*

June, 2001: And the Moon Still Be as Bright (p. 421)

HarperCollins Publishers, Inc. New York, New York, USA. 2003

**Branford, Benchara**

Mathematician

Science is born anew in the deliberate will and intention of each of us when we succeed in thinking about the principles of our work in a clear, logical, and systematic way, and courageously put our conclusions to the test of experiment; and the so-called sciences are the written records of such thinking, only more extensive, clear, systematic, and consistent, and more true to reality,

because they have been tested by countless experiments and experiences in the race.

In John Arthur Thomson

*Introduction to Science*

Chapter I (p. 32)

Henry Holt & Co. New York, New York, USA. 1911

### **Branford, Victor**

No biographical data available

If science cannot direct us, we must direct science.

*Science and Citizenship*

American physicist

Science is intelligence in action with no holds barred.

In Theodore Schick, Jr., and Lewis Vaughn

*How to Think About Weird Things*

Chapter 7 (p. 164)

The McGraw-Hill Companies. New York, New York, USA. 2002

The attitude which the man in the street unconsciously adopts toward science is capricious and varied. At one moment he scorns the scientist for a highbrow, at another anathematizes him for blasphemously undermining his religion; but at the mention of a name like Edison he falls into a coma of veneration.

*Reflections of a Physicist*

Chapter 10 (p. 167)

Philosophical Library. New York, New York, USA. 1955

### **Brieux, Eugène** 1858–1932

French dramatist

Science! science! science! – ah, ah! – One imagines a million things are the matter! – one wants to formulate laws of life – and is present, powerless, at one's own agony! We understand nothing that happens about us, we understand nothing that is happening within us. Why am I going to die? My arteries will begin to harden. Why? How? What is hardening of the arteries? Do you want me to tell you? We know nothing about it, nothing, nothing, nothing! – we have found nothing but words! (a small pause) I'm better again. I'm quite relieved.

Translated by Frederick Eisemann

*Blanchette, and The Escape* (p. 238)

John W. Luce & Co. Boston, Massachusetts, USA. 1913

### **Broad, William** 1951–

Science writer

### **Wade, Nicholas**

British-born scientific writer

In the acquisition of new knowledge, scientists are not guided by logic and objectivity alone, but also by such nonrational factors as rhetoric, propaganda, and personal prejudice. Scientists do not depend solely on rational thought, and have no monopoly on it. Science should not be considered the guardian of rationality in society, but merely one major form of its cultural expression.

*Betrayers of the Truth* (p. 9)

Simon & Schuster. New York, New York, USA. 1982

### **Bronowski, Jacob** 1908–74

Polish-born British mathematician and polymath

The world today is made, it is powered by science; and for any man to abdicate an interest in science is to walk with open eyes towards slavery.

*Science and Human Values*

The Creative Mind (p. 6)

Harper & Row, Publishers. New York, New York, USA. 1965

All science is the search for unity in hidden likenesses.

*Science and Human Values*

The Creative Mind (p. 13)

Harper & Row, Publishers. New York, New York, USA. 1965

Science has nothing to be ashamed of even in the ruins of Nagasaki. The shame is theirs who appeal to other

values than the human imaginative value which science has evolved.

*Science and Human Values*

The Sense of Human Dignity (p. 73)

Harper & Row, Publishers. New York, New York, USA. 1965

Like the voyages of the Spaniards into the fabulous West, Science even at its boldest does the will of history, and in turn helps to determine its movement.

*The Common Sense of Science*

Chapter VII, Section 1 (p. 97)

Harvard University Press. Cambridge, Massachusetts, USA. 1953

[Science] does not watch the world, it tackles it.

*The Common Sense of Science*

Chapter VII, Section 4 (p. 104)

Harvard University Press. Cambridge, Massachusetts, USA. 1953

**Bryan, William Jennings** 1860–1925

American lawyer, orator, and politician

Evolution seems to close the heart to some of the plainest spiritual truths while it opens the mind to the wildest guesses advanced in the name of science.

*The New York Times*, Letter, February 22, 1922

Christians desire that their children shall be taught all the sciences, but they do not want them to lose sight of the Rock of Ages while they study the age of rocks...

Speech

Prepared for the Scopes Trial, 1925

**Bryson, Bill** 1951–

American author

The remarkable position in which we find ourselves is that we don't actually know what we actually know.

*A Short History of Nearly Everything*

Chapter 23 (p. 362)

Broadway Books. New York, New York, USA. 2003

**Buchner, Ludwig** 1824–99

German physician and philosopher

Science has gradually taken all the positions of the childish belief of the peoples; it has snatched thunder and lightning from the hands of the gods; the eclipse of the stars, and the stupendous powers of the Titans of the olden time have been grasped by the fingers of man.

*Force and Matter*

Chapter VI (p. 34)

Trubner & Company. London, England. 1864

Science has gradually taken all the positions of the childish belief of the peoples; it has snatched thunder and lightning from the hands of the gods; the eclipse of the stars, and the stupendous powers of the Titans of the olden time, have been grasped by the fingers of man.

*Force and Matter*

Chapter VI (p. 34)

Trübner & Co. London, England. 1864

The power of spirits and gods dissolved in the hands of science.

*Force and Matter*

Chapter VI (p. 34)

Trübner & Co. London, England. 1864

**Buckham, John Wright**

No biographical data available

...the mind that has been trained simply or predominately in Science is an unconsciously meager and ill-furnished mind. The range of its interests is mainly technical and specialized. To look into a mind of this type is like looking into a laboratory. It is excellent as a workshop, but there are no pictures on the walls, no books, no flowers.... What are the resources of such a mind, its points of contact with human-kind?

The Passing of the Scientific Era

*The Century Illustrated Monthly Magazine*, August, 1929 (p. 435)

**Meredith, Owen (Edward Robert Bulwer-Lytton, First Earl Lytton)** 1831–91

English statesman and poet

...science is not a club, it is an ocean; it is open to the cockboat as the frigate. One man carries across it a freightage of ingots, another may fish there for herrings. Who can exhaust the sea? who say to intellect, "the deeps of philosophy are preoccupied?"

*The Caxtons*

Book IV, III

G. Routledge & Company. London, England. 1848

**Budiansky, Stephen**

No biographical data available

Science eschews the personal. Although it is commonplace to ascribe this tendency to some fundamental coldness on the part of scientists, in fact it is really one of the great intellectual triumphs of the 20th century that scientists have learned to discount the experiences of individuals when searching for cause and effect in the natural world.

*Washington Post Book World*

The Meat of the Matter

April 22, 1984

Edinburgh, Scotland

**Bulwer Lytton, Edward** 1831–91

English statesman and poet

...science is not a club, it is an ocean; it is open to the cockboat as the frigate. One man carries across it a freightage of ingots, another may fish there for herrings. Who can exhaust the sea?

*The Caxtons* (Volume 1)

Part IV, Chapter III (p. 122)

Little, Brown & Company. Boston, Massachusetts, USA. 1899

**Bunge, Mario** 1919–  
Argentine philosopher and physicist

The motto of science is not just *Pauca* but rather *Plurima ex paucissimis* – the most out of the least.

*The Myth of Simplicity: Problems of Scientific Philosophy*  
Chapter 5, Section 4 (p. 82)  
Prentice-Hall, Englewood Cliffs, New Jersey, USA. 1963

**Bunting, Basil** 1900–85  
English modernist poet

I hate Science. It denies a man's responsibility for his own deeds, abolishes the brotherhood that springs from God's fatherhood. It is a hectoring, dictating expertise, which makes the least lovable of the Church Fathers seem liberal by contrast. It is far easier for a Hitler or a Stalin to find a mock-scientific excuse for persecution than it was for Dominic to find a mock-Christian one.

In Victoria Forde

*The Poetry of Basil Bunting*

Chapter 6, Letter of January 1, 1947 to Louis Zukofsky (p. 156)  
Bloodaxe Books, Newcastle upon Tyne, England. 1991

**Burke, Edmund** 1729–97  
English statesman and philosopher

Nothing tends so much to the corruption of science as to suffer it to stagnate: *these waters must! if troubled before they can exert their virtues.*

In Chauncey Allen Goodrich

*Select British Eloquence*

Detached Sentiments and Maxims (p. 380)

Edmund

Harper & Brothers Publishers. New York, New York, USA. 1853

**Burroughs, John** 1837–1921  
American naturalist and writer

If we take science as our sole guide, if we accept and hold fast that alone which is verifiable, the old theology, with all its miraculous machinery, must go.

*The Light of Day*

Chapter III (p. 19)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1901

Science strips Nature to her bare bones; literature and philosophy clothe the bones with something analogous to flesh and blood and warmth and color.

*Under The Apple Tree*

Literature and Science (pp. 177–178)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1916

Science explains the rainbow, but literature sees it as a symbol and a promise. So with the sunset or the sunrise. Science knows all about the diamond, but knows not why it is so prized by us. It explains the pearl, but not the pearl necklace.

*Under The Apple Tree*

Literature and Science (p. 179)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1916

Science, as such, neither fears, nor dreads, nor wonders, nor trembles, nor scoffs, nor scorns; is not puffed up; thinketh no evil; has no prejudices; turns aside for nothing. Though all our gods totter and fall, it must go its way. It dispels our illusions because it clears our vision. It kills superstition because it banishes our irrational fears.

*Under the Apple-Trees*

Chapter XI (pp. 194–195)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1916

...one man's science must be another man's science; all science is a whole – a pushing farther and farther of the lines of knowledge into nature.

The Corroboration of Professor Huxley

*The North American Review*, Volume 149, Number 346, November, 1889 (p. 567)

Science has made or is making the world over for us. It has builded us a new house – builded it over our heads while we were yet living in the old, and the confusion and disruption and the wiping-out of the old features and the old associations, have been, and still are, a sore trial – a much finer, more spacious and commodious house... but new, new, all bright and hard and unfamiliar....

In the Noon of Science

*The Atlantic Monthly*, Volume 110, Number 3, September, 1912 (p. 327)

Science enables us to understand our own ignorance and limitations, and so puts us at our ease amid the splendors and mysteries of creation.

*The Writings of John Burroughs* (Volume 17)

The Summit of the Years

In the Noon of Science (pp. 65–66)

Houghton Mifflin Company. New York, New York, USA. 1913

Science puts great weapons in men's hands for good or for evil, for war or for peace, for beauty or for ugliness, for life or for death, and how these weapons are used depends upon the motives that actuate us.

*The Writings of John Burroughs* (Volume 17)

The Summit of the Years

In the Noon of Science (p. 67)

Houghton Mifflin Company. New York, New York, USA. 1913

**Bury, John Bagnell** 1861–1927  
English historian and classical scholar

Science has been advancing without interruption during the last three or four hundred years; every new discovery has led to new problems and new methods of solution, and opened up new fields for exploration. Hitherto men of science have not been compelled to halt, they have always found means to advance further. But what assurance have we that they will not come up against impassable barriers?

*The Idea of Progress: An Inquiry into Its Origin and Growth*

Introduction (p. 3)

Dover Publications. New York, New York, USA. 1955

**Bush, Vannevar** 1890–1974  
American electrical engineer and physicist

Science has a simple faith, which transcends utility. Nearly all men of science, all men of learning for that matter, and men of simple ways too, have it in some form and in some degree. It is the faith that it is the privilege of man to learn to understand, and that this is his mission. If we abandon that mission under stress we shall abandon it forever, for stress will not cease. Knowledge for the sake of understanding, not merely to prevail, that is the essence of our being. None can define its limits, or set its ultimate boundaries.

*Science Is Not Enough*  
Chapter X (p. 191)  
William Morrow & Company, Inc. New York, New York, USA. 1967

Science does not exclude faith.... Science does not teach a harsh materialism. It does not teach anything beyond its boundaries, and those boundaries have been severely limited by science itself.

*Modern Arms and Free Men*  
Threat and Bulwark (p. 183)  
The MIT Press, Cambridge, Massachusetts, USA. 1968

**Butler, Samuel** 1612–80  
English novelist, essayist, and critic

If [science] tends to thicken the crust of ice on which, as it were, we are skating, it is all right. If it tries to find, or professes to have found, the solid ground at the bottom of the water it is all wrong.

In Geoffrey Keynes and Brian Hill (eds.)  
*Samuel Butler's Notebooks*  
Science (p. 110)  
Jonathan Cape. London, England. 1951

**Buttimer, Anne**  
Geographer

Strange indeed sounds the language of poets and philosophers; stranger still the refusal of science to read and hear its message.

Grasping the Dynamism of Lifeworld  
*Annals of the Association of American Geographers*, Volume 66, 1976 (p. 277)

**Campbell, Norman R.** 1880–1949  
English physicist and philosopher

...science [is] the study of those judgments concerning which universal agreement can be obtained.

*What Is Science?*  
Chapter II (p. 32)  
Dover Publications. New York, New York, USA. 1952

An audience of children of all ages gapes amazedly while the lecturer discourses glibly of times reckoned in millions of years and distances in thousands of millions of miles. But science has something better to offer than sensational journalism; nothing could be less characteristic of its spirit. The mere fact that the interest of

the uninitiated can thus be easily stimulated with serious training suggests doubts of the value of the stimulus; nothing worth having in this world is to be had without effort.

*Physics: The Elements*  
Chapter VIII (p. 226)  
At The University Press. Cambridge, England. 1920

**Campbell, Thomas** 1777–1844  
Scottish poet

When Science from Creation's face  
Enchantment's veil withdraws,  
What lovely visions yield their place  
To cold material laws!

*The Complete Poetical Works*  
To the Rainbow, l. 13–16  
Chadwyck-Healey. Cambridge, England. 1992

Oh! star-eyed Science, hast thou wandered there,  
To waft us home the message of despair?

*The Complete Poetical Works*  
Pleasures of Hope, Part II, l. 325  
Chadwyck-Healey. Cambridge, England. 1992

**Camus, Albert** 1913–60  
Algerian-French novelist, author, essayist, and philosopher

At the final stage you teach me that this wondrous and multicolored universe can be reduced to the atom and that the atom itself can be reduced to the electron. All this is good and I wait for you to continue. But you tell me of an invisible planetary system in which electrons gravitate around a nucleus. You explain this world to me with an image. I realize then that you have been reduced to poetry: I shall never know. Have I the time to become indignant? You have already changed theories. So that science that was to teach me everything ends up in a hypothesis, that lucidity founders in metaphor, that uncertainty is resolved in a work of art.

Translated by Justin O'Brien  
*The Myth of Sisyphus and Other Essays*  
An Absurd Reasoning (pp. 19–20)  
Alfred A. Knopf. New York, New York, USA. 1961

**Carlyle, Thomas** 1795–1881  
English historian and essayist

This world, after all our science and sciences, is still a miracle; wonderful, inscrutable, magical and more, to whosoever will think of it.

*On Heroes and Hero Worship*  
Lecture I (p. 12)  
John B. Alden, Publisher. New York, New York, USA. 1887

Science rests on reason and experiment, and can meet an opponent with calmness.

In James Anthony Froude  
*Thomas Carlyle: A History of His Life in London, 1834–1881*  
(Volume 2) (4th edition)  
Chapter XXV (p. 244)  
Longmans, Green & Co. London, England. 1885

**Carpenter, William Benjamin** 1813–85

English physiologist and naturalist

But when Science, passing beyond its own limits, assumes to take the place of Theology, and sets up its own conception of the Order of Nature as a sufficient account of its Cause, it is invading a province of Thought to which it has no claim, and not unreasonably provokes the hostility of those who ought to be its best friends.

*Report of the Forty-second Meeting of the British Association for the Advancement of Science*

Address by the President (p. lxxxiv)

John Murray. London, England. 1872

**Carrel, Alexis** 1873–1944

French surgeon and biologist

There is a strange disparity between the sciences of inert matter and those of life. Astronomy, mechanics, and physics are based on concepts which can be expressed, tersely and elegantly, in mathematical language. They have built up a universe as harmonious as the monuments of ancient Greece. They weave about it a magnificent texture of calculations and hypotheses. They search for reality beyond the realm of common thought up to unutterable abstractions consisting only of equations of symbols. Such is not the position of biological sciences. Those who investigate the phenomena of life are as if lost in an inextricable jungle, in the midst of a magic forest, whose countless trees unceasingly change their place and their shape. They are crushed under a mass of facts, which they can describe but are incapable of defining in algebraic equations.

*Man, The Unknown*

Chapter I (p. 1)

Harper &amp; Brothers Publishers. New York, New York, USA. 1935

**Carroll, Lewis (Charles Dodgson)** 1832–98

English writer and mathematician

There is so much *written* Science that no living person has ever *read*: and there is so much *thought-out* Science that hasn't yet been *written*.

*Sylvie And Bruno*

Chapter 2 (pp. 22–23)

Macmillan &amp; Co Ltd. London, England. 1890

**Carson, Rachel** 1907–64

American marine biologist and author

There is one quality that characterizes all of us who deal with the science of the earth and its life – we are never bored.

In Paul Brooks

*The House of Life: Rachel Carson at Work*

The Closing Journey (p. 324)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1972

The winds, the sea, and the moving tides are what they are. If there is wonder and beauty and majesty in them,

science will discover these qualities. If they are not there, science cannot create them.

Acceptance Speech

1952 National Book Award

**Carus, Paul** 1852–1919

American philosopher

Science is not the monopoly of the naturalist or the scholar, nor is it anything mysterious or esoteric. Science is the search for truth, and truth is the adequacy of a description of facts.

*Philosophy as a Science: A Synopsis of Writings of Dr. Paul Carus*

Introduction (p. 2)

The Open Court Publishing Co. Chicago, Illinois, USA. 1909

**Cassell, Eric J.**

No biographical data available

The changes in medicine that are occurring today are part of a larger social upheaval.... This social movement... is marked by a turning away from science and technology – even, on occasion, from reason itself.... With time it will become apparent again that science and technology are not the enemies; and... “reason” is not inherently atomistic or reductionist, nor science the enemy of persons. Then the search for the solutions to the problems faced by medicine... will inevitably involve the development of new and exciting intellectual tools.

*The Place of the Humanities in Medicine* (pp. 6–7)

The Hastings Center. New York, New York, USA. 1984

**Cassirer, Ernst** 1874–1945

German philosopher

Science is the last step in man's mental development and it may be regarded as the highest and most characteristic attainment of human culture.

*An Essay on Man: An Introduction to a Philosophy of Human Culture*

Chapter XI (p. 207)

Yale University Press. New Haven, Connecticut, USA. 162

**Chadwick, John White** 1840–1904

American clergyman

It is Science which has damped down the fires of hell and despoiled the Almighty of those attributes which an English Churchman tells us made him “the most horrible being it is possible for the imagination to conceive.” It is only Orthodoxy as *transformed by Science* that has any beauty that the kind-hearted and the merciful should desire it for their own. If one had to choose between Orthodoxy as it was before the mystery of Science began working in its hideous bulk and Science in its most negative statement or its most painful implications, the man would be a fiend who would not choose the Science ten to one.

*The Possible Life: And Other Sermons*

Twenty-First Series, Chapter VI (p. 82)

Geo. H. Ellis. Boston, Massachusetts, USA. 1897

**Chandrasekhar, Subrahmanyan** 1910–95  
Indian-born American astrophysicist

I am convinced that one's knowledge of the Physical Sciences is incomplete without a study of the Principia in the same way that one's knowledge of Literature is incomplete without a study of Shakespeare.

On Reading Newton's Principia at Age Apat Eighty  
*Current Science*, Volume 67, Number 7, 10 October, 1994 (p. 499)

**Chargaff, Erwin** 1905–2002  
Austrian biochemist

To the scientist nature is like a mirror that breaks every thirty years; and who cares about the broken glass of past times?

*Voices in the Labyrinth: Nature, Man and Science*  
Chapter 3 (p. 24)  
The Seabury Press. New York, New York, USA. 1977

With very few exceptions, it is not the men that make science; it is science that makes the men.

*Voices in the Labyrinth: Nature, Man and Science* (p. 12)  
The Seabury Press. New York, New York, USA. 1977

The so-called exact sciences often are not as exact as is commonly believed. How often they infer the existence of a hat from the emergence of a rabbit!

*Voices in the Labyrinth: Nature, Man and Science*  
Chapter 3 (p. 20)  
The Seabury Press. New York, New York, USA. 1977

What counts in science is to be not so much the first as the last.

*Voices in the Labyrinth: Nature, Man and Science* (p. 24)  
The Seabury Press. New York, New York, USA. 1977

Science is a way to investigate, not to define, reality.

*Voices in the Labyrinth: Nature, Man and Science* (p. 52)  
The Seabury Press. New York, New York, USA. 1977

The sciences, like other professions, cannot endure if their practitioners are unable to know more than an ever smaller portion of what they must know in order to function properly.

*Voices in the Labyrinth: Nature, Man and Science* (p. 53)  
The Seabury Press. New York, New York, USA. 1977

A classic in science is a man who no longer has to be quoted.

*Voices in the Labyrinth: Nature, Man and Science* (p. 99)  
The Seabury Press. New York, New York, USA. 1977

In science you don't ask why, you ask how much.

*Voices in the Labyrinth: Nature, Man and Science*  
Ouroboros (p. 128)  
The Seabury Press. New York, New York, USA. 1977

Science has become an eye without a head, a desperate attempt to fill holes with gaps. It came up to a lock, so it looked for the key; but it was a lock without a key-hole. The priests of truth are soiled with blood; their discoveries have become inventions, their pledges far

from eternal. In a science in which one can say: "this is no longer true," nothing is true.

*Voices in the Labyrinth: Nature, Man and Science*  
Chimaera (p. 151)  
The Seabury Press. New York, New York, USA. 1977

What counts, however, in science is to be not so much the first as the last.

Preface to a Grammar of Biology  
*Science*, Volume 172, Number 3984, May, 1971 (p. 639)

...in most sciences the question Why? is forbidden and the answer is actually to the question, How? Science is much better in explaining than in understanding, but it likes to mistake one for the other.

*Voices in the Labyrinth*  
*Perspectives in Biology and Medicine*, Volume 18, Spring, 1975 (p. 322)

Science cannot be a mass occupation, anymore than the composing of music or the painting of pictures.

In Praise of Smallness – How Can We Return to Small Science  
*Perspectives in Biology and Medicine*, Volume 23, Number 3, Spring, 1980 (p. 373)

In science we always know much less than we believe we do.

Uncertainties Great, Is the Gain Worth the Risk?  
*Chemical and Engineering News*, May 30, 1977

The sciences are extremely pedigree-conscious, and the road to the top of Mount Olympus is paved with letters of recommendation, friendly whispers at meetings, telephone calls at night.

*Heraclitean Fire: Sketches from a Life Before Nature*  
Part I

No Hercules, No Crossroads (p. 32)  
Rockefeller University Press. New York, New York, USA. 1978

To be a pioneer in science has lost much of its attraction: significant scientific facts and, even more, fruitful scientific concepts pale into oblivion long before their potential value has been utilized. New facts, new concepts keep crowding in and are in turn, within a year or two, displaced by even newer ones.... Now, however, in our miserable scientific mass society, nearly all discoveries are born dead; papers are tokens in a power game, evanescent reflections on the screen of a spectator sport, news items that do not outlive the day on which they appeared.

*Heraclitean Fire: Sketches from a Life Before Nature*  
Part II

A Bouquet of Mortelles (pp. 78, 81)  
Rockefeller University Press. New York, New York, USA. 1978

In science there is always one more Gordian knot than there are Alexanders.

*Heraclitean Fire: Sketches from a Life before Nature* (p. 116)  
The Rockefeller University Press. New York, New York, USA. 1978

The vested interest in a scientific subject compresses as it intensifies; it restricts as it deepens.

*Heraclitean Fire: Sketches from a Life before Nature* (p. 137)  
The Rockefeller University Press. New York, New York, USA. 1978

Science is the attempt to learn the truth about those parts of nature that are explorable.

*Heraclitean Fire: Sketches from a Life before Nature* (p. 156)  
The Rockefeller University Press. New York, New York, USA. 1978

...never before has science become so alienated from the common man, and he, in turn, so suspicious of science.

*Heraclitean Fire: Sketches from a Life Before Nature*  
Part III  
The Great Dilemma of the Life Sciences (p. 158)  
Rockefeller University Press. New York, New York, USA. 1978

### **Chekhov, Anton Pavlovich** 1860–1904

Russian author and playwright

When one longs for a drink, it seems as though one could drink a whole ocean – that is faith; but when one begins to drink one can drink altogether two glasses – that is science.

Translated by S.S. Kotliansky and Leonard Woolf  
*Note-book of Anton Chekhov* (p. 104)  
B.W. Huebsch. New York, New York, USA. 1922

### **Chernin, Kim**

No biographical data available

Science is not neutral in its judgments, not dispassionate, nor detached....

*The Obsession: Reflections on the Tyranny of Slenderness*  
Chapter 3 (p. 37)  
Harper & Row, Publishers. New York, New York, USA. 1981

### **Chesterton, G. K. (Gilbert Keith)** 1874–1936

English author

When once one believes in a creed, one is proud of its complexity, as scientists are proud in the complexity of science. It shows how right it is in its discoveries. If it is right at all, it is a compliment to say that it is elaborately right. A stick might fit a hole or a stone a hollow by accident. But a key and a lock are both complex. And if a key fits a lock, you know it is the right key.

*Orthodoxy*  
Chapter VI (p. 152)  
John Lane Company. New York, New York, USA. 1918

Science, that nameless being, declared that the weakest must go to the wall; especially in Wall Street.

*The Well and the Shallows*  
The Return to Religion (p. 74)  
Sheed & Ward, Inc., New York, New York, USA. 1935

Science in the modern world has many uses; its chief use, however, is to provide long words to cover the errors of the rich.

*Heretics*  
Cells and Celtophiles (p. 171)  
Books for Libraries Press. Freeport, New York, USA. 1970

...physical science is like simple addition: it is either infallible or it is false.

*All Things Considered*  
Science and Religion (p. 187)  
John Lane Company. New York, New York, USA. 1908

### **Churchill, Winston Spencer** 1882–1965

British prime minister, statesman, soldier, and author

Science bestowed immense new powers on man and at the same time created conditions which were largely beyond his comprehension and still more beyond his control.

Speech  
March 31, 1949

Science has given to this generation the means of unlimited disaster or of unlimited progress. There will remain the greater task of directing knowledge lastingly towards the purpose of peace and human good.

Speech  
New Delhi, January 3, 1944

My experience – and it is somewhat considerable – is that in these matters when the need is clearly explained by military and political authorities, science is always able to provide something. “Seek and ye shall find” has been borne out.

In F.B. Czarnomski  
*The Wisdom of Winston Churchill*  
Speech, Commons, June 7, 1935 (p. 327)  
George Allen & Unwin Ltd. London, England. 1956

I have seldom seen a precise demand made upon science by the military which has not been met.

In F.B. Czarnomski  
*The Wisdom of Winston Churchill*  
Speech, Commons, March 16, 1950 (p. 327)  
George Allen & Unwin Ltd. London, England. 1956

It is arguable whether the human race have been gainers by the march of science beyond the steam engine. Electricity opens a field of infinite conveniences to ever greater numbers, but they may well have to pay dearly for them. But anyhow in my thought I stop short of the internal combustion engine which has made the world so much smaller. Still more must we fear the consequences of entrusting to a human race so little different from their predecessors of the so-called barbarous ages such awful agencies as the atomic bomb. Give me the horse.

In F.B. Czarnomski  
*The Wisdom of Winston Churchill*  
Speech, Royal College of Physicians, July 10, 1951 (p. 327)  
George Allen & Unwin Ltd. London, England. 1956

### **Clive, Colin**

American actor

This isn't science! It's more like black Magic.

*The Bride of Frankenstein*  
Film (1935)

### **Cobbe, Frances P.** 1822–1904

English author

Then the Sorcerer Science entered, and where e'er he waved his wand

Fresh wonders and fresh mysteries rose on every hand.

*The Pageant of Time*, Stanza 1  
Source undetermined

**Cohen, I. Bernard** 1914–2003  
American physicist and science historian

...all revolutionary advances in science may consist less of sudden and dramatic revelations than a series of transformations, of which the revolutionary significance may not be seen (except afterwards, by historians) until the last great step. In many cases the full potentiality and force of a most radical step in such a sequence of transformations may not even be manifest to its author.

*The Newtonian Revolution: With Illustrations of the Transformation of Scientific Ideas*

Chapter 4 (p. 162)

Cambridge University Press. Cambridge, England. 1980

**Colbert, Edwin H.** 1905–2001  
American vertebrate paleontologist

It is too easy to think of science as something large and impersonal, as something outside the understanding of most of us, as something rather distant, and removed from the affairs of the average person. Even in this day, when the lives of all of us are touched every hour, and almost every minute, by the products of technology, the handmaiden of science, we are still inclined to accept the impersonal view of science. Science is so manifestly complex, so compartmentalized by specialization, and to all but those who are initiated into the priesthoods of these specializations, so largely incomprehensible, that we can hardly think of it in other than impersonal terms.

*Men and Dinosaurs*

Preface (p. v)

E.P. Dutton & Company, Inc. New York, New York, USA. 1968

**Cole, K. C.**  
Science writer

Science... involves looking mostly at things we can never see.

*First You Build a Cloud and Other Reflections on Physics as a Way of Life*

Chapter One (p. 15)

Harcourt Brace & Co. Orlando, Florida, USA. 1999

**Coleridge, Samuel Taylor** 1772–1834  
English lyrical poet, critic, and philosopher

Science drives full tilt towards the destruction of personal responsibility: it relegates every act of man to the inevitable results of fore-ordained causes; we are all in the toils of a blind invincible law; we are cogs in an infinite machine over which we have no control; good and bad conduct are the results of equally irresistible impellers, and praise and blame are empty words. This is the world into which Science seeks to force us, and a dreary world it is.

*The Idolatry of Science*

Chapter II (pp. 6–7)

John Lane Co. London, England. 1920

**Coles, Abraham** 1813–91  
American physician, hymnist, and poet

I value science – none can prize it more –  
It gives ten thousand motives to adore.  
Be it religious, as it ought to be,  
The heart it humbles, and it bows the knee.

*The Microcosm: And Other Poems*

Christian Science

D. Appleton & Company. New York, New York, USA. 1880

**Collins, Wilkie** 1824–89  
English novelist

Oh, Science, be merciful to the fanatics, and the fools!

*Heart and Science*

Chapter LXII (p. 289)

Chatto & Windus. London, England. 1883

**Commoner, Barry** 1917–  
American biologist, ecologist, and educator

Science is triumphant with far-ranging success, but its triumph is somehow clouded by growing difficulties in providing for the simple necessities of human life on the earth.

*Science and Survival*

Chapter 2 (p. 9)

The Viking Press. New York, New York, USA. 1966

We seem to be entering a new world of technology, but the vehicle which is carrying us – science – shows dangerous signs of inadequacy for the voyage ahead.

*Science and Survival*

Chapter 4 (p. 63)

The Viking Press. New York, New York, USA. 1966

Science can reveal the depth of this [political] crisis, but only social action can resolve it. Science can now serve society by exposing the crisis of modern technology to the judgment of all mankind. Only this judgment can determine whether the knowledge that science has given us shall destroy humanity or advance the welfare of man.

*Science and Survival*

Chapter 7 (p. 132)

The Viking Press. New York, New York, USA. 1966

**Compton, Arthur H.** 1892–1962  
American physicist

For those who know science, its inhumanness is a fiction. It serves to satisfy the human hunger for a better understanding of man's place in his world.

*Annual Report of the Board of Regents of the Smithsonian Institution (1941)*

Science Shaping American Culture (p. 180)

Government Printing Office

Washington, D.C. 1942

**Compton, Karl Taylor** 1887–1954  
American educator and physicist

Fundamentally, science means simply knowledge of our environment. Combined with ingenuity, science becomes power.

*A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton During the Years 1930–1949* (p. 2)  
Undergraduate Association, MIT. Cambridge, Massachusetts, USA. 1955

**Condon, Edward Uhler** 1902–74

American physicist

Society is at this moment at the threshold of an undreamed-of mastery of our material environment, for science, which provides that mastery, is in its Golden Age.

*Selected Popular Writings of E.U. Condon*  
Science and the National Welfare (p. 145)  
Springer-Verlag. New York, New York, USA. 1991

The sciences, like those other truth-seeking activities of man, require a free environment, an environment, above all, free from fear, petty arbitrariness, and tyranny.

*Selected Popular Writings of E.U. Condon*  
Science and the National Welfare (p. 155)  
Springer-Verlag. New York, New York, USA. 1991

**Condorcet, Marie Jean** 1749–1827

French mathematician, astronomer, and physicist

In every century Princes have been found to love the sciences and even to cultivate them, to attract Savants to their palaces and to reward by their favors and their amity men who afforded them a sure and constant refuge from world-weariness, a sort of disease to which supreme power seems particularly prone.

*Eloge des académiciens de l'Académie royal des sciences*  
Forward, I  
Publisher undetermined

**Cooke, Josiah Parsons** 1827–94

American chemist

Science offers us not only a mass of phenomena to be observed, but also a body of truths which have been deduced from these observations; and, without the power of drawing correct inferences from the data acquired, exact observations would be of little value.

*Scientific Culture: And Other Essays* (2nd edition)  
Scientific Culture (p. 35)  
D. Appleton & Co. New York, New York, USA. 1855

**Cooper, Bernard** 1951–

Physicist

At the rate science proceeds, rockets and missiles will one day seem like buffalo – slow, endangered grazers in the black pasture of outer space.

*Harper's*, January, 1990

**Cooper, Leon** 1930–

American physicist

To say that science is logical is like saying that a painting is paint....

In George Johnson

*In the Palaces of Memory: How We Build the Worlds Inside Our Heads*  
The Memory Machine (p. 194)  
Alfred A. Knopf. New York, New York, USA. 1991

**Coulter, John Merle** 1851–1928

American botanist and educator

All science is one. Pure science is often immensely practical; applied science is often very pure science; and between the two there is no dividing line.

The Evolution of Botanical Research  
*Science*, Volume 51, Number 1305, January 2, 1920 (p. 2)

**Crichton, Michael** 1942–

American novelist

Finally, I would remind you to notice where the claim of consensus is invoked. Consensus is invoked only in situations where the science is not solid enough. Nobody says the consensus of scientists agrees that  $E = mc^2$ . Nobody says the consensus is that the sun is 93 million miles away. It would never occur to anyone to speak that way.

Lecture  
Aliens Cause Global Warming, California Institute of Technology, January 17, 2003

I expected science to be, in Carl Sagan's memorable phrase, "a candle in a demon haunted world." And here, I am not so pleased with the impact of science. Rather than serving as a cleansing force, science has in some instances been seduced by the more ancient lures of politics and publicity. Some of the demons that haunt our world in recent years are invented by scientists.

Lecture  
Aliens Cause Global Warming, California Institute of Technology, January 17, 2003

In recent years, much has been said about the post-modernist claims about science to the effect that science is just another form of raw power, tricked out in special claims for truth-seeking and objectivity that really have no basis in fact. Science, we are told, is no better than any other undertaking. These ideas anger many scientists, and they anger me. But recent events have made me wonder if they are correct.

Lecture  
Aliens Cause Global Warming, California Institute of Technology, January 17, 2003

**Crick, Francis Harry Compton** 1916–2004

English biochemist

One of the striking characteristics of modern science is that it often moves so fast that a research worker can see rather clearly whether his earlier ideas, or those of his contemporaries, were correct or incorrect.

*What Mad Pursuit: A Personal View of Scientific Discovery*  
Introduction (p. 3)  
Basic Books, Inc. New York, New York, USA. 1988

**Cromer, Alan** 1935–  
American physicist and educator

The notion that science and objective thinking are unnatural human activities seems quite radical at first. But when you think about it, monogamy, honesty, and democratic government are unnatural human behaviors as well. We are truly a species that has invented itself out of rather unpromising material. Our only claim to greatness is that we have at times gone against the grain of our own egocentrism to forge a higher vision of the world.

*Uncommon Sense: The Heretical Nature of Science*

Preface (p. ix)

Oxford University Press, Inc. New York, New York, USA. 1993

**Crothers, Samuel McChord** 1857–1927  
American clergyman and writer

Science will not tolerate half knowledge nor pleasant imaginings, nor sympathetic appreciations; it must have definite demonstrations. The knowledge of the best that has been said and thought may be consoling, but it implies an unscientific principle of selection. It can be proved by statistics that the best things are exceptional.

*The Gentle Reader*

The Hinter-Land of Science (p. 228)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1903

On the coasts of the Dark Continent of Ignorance the several sciences have gained a foothold. In each case there is a well-defined country carefully surveyed and guarded. Within its frontiers the laws are obeyed, and all affairs are carried on in an orderly fashion. Beyond it is a vague “sphere of influence,” a Hinter-land over which ambitious claims of suzerainty [foreign authority] are made; but the native tribes have not yet been exterminated, and life goes on very much as in the olden time.

*The Gentle Reader*

The Hinter-Land of Science (p. 231)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1903

**Crowley, Aleister** 1875–1947  
Poet and author

...science is always discovering odd scraps of magical wisdom and making a tremendous fuss about its cleverness!

*The Confessions of Aleister Crowley: An Autobiography*

Part Four, Chapter 64 (p. 593)

Arkana. 1989

**Crowther, James Arnold**  
No biographical data available

Science since its beginning has traveled many paths, and explored many territories. It has asked many questions, seeking to sift gold from dross, truth from illusion, and by its quest has brought to light many wonderful and precious things from the rich storehouse of nature.

In Francis Mason (ed.)

*The Great Design*

Radiation (p. 61)

The Macmillan Co. New York, New York, USA. 1934

**Cudmore, Lorraine Lee**  
American cell biologist

Almost anyone can do science; almost no one can do good science.

*The Center of Life: A Natural History of the Cell*

Biochemical Evolution (p. 35)

New York Times Book Company. New York, New York, USA. 1977

...good science is almost always so very simple. After it has been done by someone else, of course.

*The Center of Life: A Natural History of the Cell*

Biochemical Evolution (p. 36)

New York Times Book Company. New York, New York, USA. 1977

**Curie, Eve** 1904–  
French concert pianist and journalist

What does it matter to Science if her passionate servants are rich or poor, happy or unhappy, healthy or ill? She knows that they have been created to seek and to discover, and that they will seek and find until their strength dries up at its source. It is not in a scientist's power to struggle against his vocation: even on his days of disgust or rebellion his steps lead him inevitably back to his laboratory apparatus.

*Madame Curie*

Chapter XV (p. 193)

The Literary Guild of America, Inc. New York, New York, USA. 1937

**Curie, Marie Skłodowska** 1867–1934  
Polish-born French physicist and chemist

In science we must be interested in things, not in persons.

In Eve Curie

*Madame Curie*

Chapter XVI (p. 222)

The Literary Guild of America, Inc. New York, New York, USA. 1937

After all, science is essentially international, and it is only through lack of the historical sense that national qualities have been attributed to it.

*Memorandum*

Intellectual Cooperation, June 16, 1926

**da Vinci, Leonardo** 1452–1519  
Italian High Renaissance painter and inventor

All science which end in words are dead the moment they come to life, except for their manual part, that is to say, the writing, which is the mechanical part.

*The Literary Works of Leonardo da Vinci* (Volume 1)

7a1148 (p. 35)

University of California Press. Berkeley, California, USA. 1977

There is no human experience that can be termed true science unless it can be mathematically demonstrated.

Translated by Maurice Baring

*Thoughts on Art and Life*

Thoughts on Science (p. 141)

The Merrymount Press. Boston, Massachusetts, USA. 1906

...if thou sayest that sciences which begin and end in the mind are true, this cannot be conceded, but must

be denied for many reasons, and firstly because in such mental discourses experience is eliminated, and without experience there can be no certainty.

Translated by Maurice Baring

*Thoughts on Art and Life*

Thoughts on Science (p. 141)

The Merrymount Press. Boston, Massachusetts, USA. 1906

### Dahlke, Paul

Established the first German Buddhist monastery

Science in its relations to nature resembles an old body-servant who has studied his master's ways long enough to be able to prophesy with tolerable accuracy what his master will do then and then under this or other circumstances – provided only that he does not do something else!

Translated by the Bhikkhau Silacara

*Buddhism & Science*

Chapter 6 (p. 90)

Macmillan & Co Ltd. London, England. 1913

With her [science] hypotheses science acts like a man who, in order to relieve himself of troublesome daily disbursements, pays out one lump sum of money for the settlement of all these petty claims. So science, in the place of countless daily, hourly – yea, in the amplest sense of the words – continuous incomprehensibilities of life, pays out one single, great incomprehensibility in the shape of central forces, atoms, ethers, out of which all the trifling requirements of the day – the running expenses, so to say – can now be met.

Translated by the Bhikkhau Silacara

*Buddhism & Science*

Chapter 6 (pp. 98–99)

Macmillan & Co Ltd. London, England. 1913

...we moderns are accustomed to look upon science as the mediator betwixt us and truth, – as the high-priest of truth, so to speak, from whose hands we receive the sacred host.

Translated by the Bhikkhau Silacara

*Buddhism & Science*

Chapter 6 (p. 81)

Macmillan & Co Ltd. London, England. 1913

Science, to the question as to when she finally means to pay what she owes to humanity, a genuine world-conception, has always but this one answer, "Tomorrow!"

*Buddhism & Science*

Chapter 6 (p. 103)

Macmillan & Co Ltd. London, England. 1913

### Dampier, Sir William Cecil 1867–1952

English scientific writer

The different sciences are not even parts of a whole; they are but different aspects of a whole, which essentially has nothing in it corresponding to the divisions we make; they are, so to speak, sections of our model of Nature in certain arbitrary planes, cut in directions to suit our convenience.

*The Recent Development of Physical Science*

Chapter I (p. 16)

John Murray. London, England. 1904

### Darwin, Charles Robert 1809–82

English naturalist

As for myself, I believe that I have acted rightly in steadily following, and devoting my life to Science. I feel no remorse from having committed any great sin, but have often and often regretted that I have not done more direct good to my fellow creatures.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 2)

Chapter XVI (p. 530)

D. Appleton & Company. New York, New York, USA. 1896

### Darwin, Sir Francis 1848–1925

English botanist

But in science the credit goes to the man who convinces the world, not to the man to whom the idea first occurs.

First Galton Lecture Before the Eugenics Society

*Eugenics Review*, Volume 6, Number 1, 1914

### Data (Fictional character)

Captain, the most elementary and valuable statement in science: "The beginning of wisdom is 'I do not know.'"

*Star Trek: The Next Generation*

Where Silence Has Lease

Television program

Season 2, 1988

### Davies, Paul Charles William 1946–

British-born physicist, writer, and broadcaster

There is a popular misconception that science is an impersonal, dispassionate, and thoroughly objective enterprise. Whereas most other human activities are dominated by fashions, fads, and personalities, science is supposed to be constrained by agreed rules of procedure and rigorous tests. It is the results that count, not the people who produce them.

This is, of course, manifest nonsense.

In Richard Feynman

*Six Easy Pieces: Essentials of Physics Explained by Its Most Brilliant Teacher*

Preface (p. ix)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1995

Conventional science attempts to explain things exactly, in terms of general principles. Any sort of explanation for the shape of a snowflake or a coastline could not be of this sort.

*The Cosmic Blueprint: New Discoveries in Nature's Creative Ability to Order the Universe*

Chapter 3 (p. 22)

Simon & Schuster. New York, New York, USA. 1988

Science may explain all the processes whereby the universe evolves its own destiny, but that still leaves room for there to be a meaning behind it all.

*The Cosmic Blueprint: New Discoveries in Nature's Creative Ability to Order the Universe*  
Chapter 14 (p. 203)  
Simon & Schuster. New York, New York, USA. 1988

Science remains a sort of witchcraft, its practitioners regarded with a mixture of awe and suspicion...

*God and the New Physics*

Chapter 1 (p. 3)

Simon & Schuster. New York, New York, USA. 1983

...it is the job of science to solve mysteries without recourse to divine intervention.

*The Fifth Miracle: The Search for the Origin of Life*

Chapter 1 (p. 31)

Simon & Schuster. New York, New York, USA. 1996

### **Davies, Robertson** 1913–95

Canadian novelist

Science, during the past hundred and fifty years, has gained formidable new authority, and it is to Science that we owe the increased longevity of the race, and the control of many of the terrible ills that afflict mankind. Science may cure disease, but can it confer health? Like all powerful gods, Science seeks to be the One True God, and as it writhes about the staff of Hermes it seeks to diminish and perhaps drive out the other god, the god of Humanism.

*The Merry Heart*

Chapter 5 (p. 98)

McClelland & Stewart. Toronto, Ontario, Canada. 1996

### **Davis, Kenneth S.** 1912–99

American historian

In our time it has become all too easy to regard science as a vast impersonal force – a kind of Frankenstein's monster that, escaping human control, has forcibly seized us and carries us at terrifying speeds in directions we have not chosen towards ends unknown.

*The Cautionary Scientists: Priestley, Lavoisier, and the Founding of*

*Modern Chemistry*

Introduction (p. 7)

Putnam. New York, New York, USA. 1966

### **Davis, William Morris** 1850–1934

American geomorphologist

Science is therefore not final anymore than it is infallible.

In H. Shapley, H. Wright, and S. Rapport (eds.)

*Readings in the Physical Sciences*

The Reasonableness of Science (p. 25)

Appleton-Century-Crofts. New York, New York, USA. 1948

### **Davy, Sir Humphry** 1778–1829

English chemist

There is now before us a boundless prospect of novelty in science; a country unexplored, but noble and fertile in aspect; a land of promise in philosophy.

*The Collected Works of Sir Humphry Davy* (Volume 1)

*Memories of the Life of Sir Humphry Davy*

Chapter III (p. 117)

Smith, Elder & Company. London, England. 1839–1840

There are very few persons who pursue science with true dignity.

*Consolations in Travel, or the Last Days of a Philosopher*

Dialogue V (p. 226)

J. Murray. London, England. 1830

Science has done much for man, but it is capable of doing still more; its sources of improvement are not yet exhausted; the benefits that it has conferred ought to excite our hopes of its capability of conferring new benefits; and, in considering the progressiveness of our nature, we may reasonably look forwards to a state of greater cultivation and happiness than that which we at present enjoy.

*A Discourse, Introductory to a Course of Lectures on Chemistry* (p. 17)

Press of the Royal Institution of Great Britain. London. 1802

Science for its progression requires patronage, – but it must be a patronage bestowed, a patronage received, with dignity. It must be preserved independent. It can bear no fetters, not even fetters of gold, and least of all those fetters in which ignorance or selfishness may attempt to shackle it.

In John Davy (ed.)

*Memoirs of the Life of Sir Humphry Davy* (Volume 1)

Chapter III (pp. 209–210)

Longman, Rees, Orme, Brown, Green & Longman London, England.

1836

In all cases in science, it is our business to analyse every principle, and to ascertain to what expressions of facts it relates, or to what simpler laws it may be referred. It is our duty to separate propositions from human passions, and to reason on them as mere representations of things.

In John Davy (ed.)

*Memoirs of the Life of Sir Humphry Davy* (Volume 1)

Chapter III (p. 213)

Longman, Rees, Orme, Brown, Green & Longman London, England.

1836

...there are few persons who pursue science with true dignity; it is followed more as connected with objects of profit than those of fame, and there are fifty persons who take out patents for supposed inventions for one who makes a real discovery.

*Consolations in Travel: Or, The Last Days of a Philosopher*

Dialogue the Fifth (pp. 157–158)

Cassell & Co., Ltd. London, England. 1889

Science is in fact nothing more than the refinement of common sense making use of facts already known to acquire new facts.

*Consolations in Travel: Or, The Last Days of a Philosopher*

Dialogue the Fifth (p. 163)

Cassell & Co., Ltd. London, England. 1889

**Dawkins, Richard** 1941–

British ethologist, evolutionary biologist, and popular science writer

Science, like proper literary studies, can be hard and challenging but science is – also like proper literary studies – wonderful.

*Unweaving the Rainbow: Science, Delusion and the Appetite for Wonder*  
Chapter 2 (p. 25)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1998

Far from science not being useful, my worry is that it is so useful as to overshadow and distract from its inspirational and cultural value. Usually even its sternest critics concede the usefulness of science, while completely missing the wonder. Science is often said to undermine our humanity, or destroy the mystery on which poetry is thought to thrive.

*Science, Delusion and the Appetite for Wonder*

Richard Dimbleby Lecture, BBC1 Television, November 12th, 1996

**de Balzac, Honoré** 1799–1850

French novelist

Science is the language of the temporal world; love is that of the spiritual world. Man, indeed, describes more than he explains; while the angelic spirit sees and understands. Science saddens man; love enraptures the angel; science is still seeking, love has found. Man judges of nature in relation to itself; the angelic spirit judges of it in relation to heaven. In short to the spirits everything speaks.

*The Works of Honoré Balzac* (Volume 2)

*Seraphita*

Part II (p. 58)

Nottingham Society. New York, New York, USA. 1901

**de Bono, Edward** 1933–

Maltese psychologist and writer

When you have got somewhere interesting, that is the time to look back and pick out the surest way of getting there again. Sometimes it is very much easier to see the surest route to a place only after you have arrived. You may have to be at the top of a mountain to find the easiest way up.

*New Think: The Use of Lateral Thinking in the Generation of New Ideas*  
(p. 132)

Avon Books. New York, New York, USA. 1971

**de Gourmont, Rémy** 1858–1915

French critic and novelist

Science is the food of the intelligence.

Translated by Glenn S. Burne

*Selected Writings*

Art and Science (p. 171)

The University of Michigan Press, Ann Arbor, Michigan, USA. 1966

Science is the only truth and it is the great lie. It knows nothing, and people think it knows everything. It is misrepresented. People think that science is electricity, automobilism, and dirigible balloons. It is something

very different. It is life devouring itself. It is the sensibility transformed into intelligence. It is the need to know stifling the need to live. It is the genius of knowledge vivisectioning the vital genius.

Translated by Glenn S. Burne

*Selected Writings*

Art and Science (p. 172)

The University of Michigan Press, Ann Arbor, Michigan, USA. 1966

**de Morgan, Augustus** 1806–71

English mathematician and logician

The two eyes of exact science are mathematics and logic: the mathematical sect puts out the logical eye, the logical sect puts out the mathematical eye; each believing that it sees better with one eye than with two.

In Charles Lutwidge Dodgson

*Euclid and His Modern Rivals*

Appendix II (p. 246)

**de Unamuno, Miguel** 1864–1936

Spanish philosopher and writer

Science exists only in personal consciousness and thanks to it; astronomy, mathematics, have no other reality than that which they possess as knowledge in the minds of those who study and cultivate them.

Translated by J.E. Crawford Fritch

*The Tragic Sense of Life in Men and in Peoples*

The Starting-Point (pp. 30–31)

Macmillan & Company Ltd. London, England. 1921

True science teaches, above all, to doubt and be ignorant.

Translated by J.E. Crawford Fritch

*The Tragic Sense of Life in Men and in Peoples*

Chapter V (p. 93)

Macmillan & Company Ltd. London, England. 1921

**de Waal, Frans**

Professor of Scientific Communication

Instead of marching onward with perfect vision, science stumbles along behind leaders who occasionally take the wrong alley, after which it turns to other leaders who seem to know the way, then corrects itself again, until sufficient progress is made for the next generation to either thrust aside or build upon. In hindsight, the path taken may look straight, running from ignorance to profound insight, but only because our memory for dead ends is so much worse than that of a rat in a maze.

*The Ape and the Sushi Master: Cultural Reflections by a Primatologist*

Chapter 2 (p. 85)

Basic Books, Inc. New York, New York, USA. 2001

**del Rio, A. M.**

No biographical data available

It is impossible that he who has once imbibed a taste for science can ever abandon it.

Analysis of an Alloy of Gold and Rhodium from the Parting House at Mexico

*Annals of Philosophy*, Volume 10, Number 2, October, 1825

**Delbrück, Max** 1906–81

German-born American biologist

With science we can transcend our intuitions, just as with electronics we can transcend our eyes and ears. To the question of how such transcendence can have arisen in the course of biological evolution I have no satisfactory answer.

*Mind from Matter*

Twenty (p. 280)

Blackwell Scientific Publications, Inc. Palo Alto, California, USA. 1986

**Descartes, René** 1596–1650

French philosopher, scientist, and mathematician

The sciences are now masked, but when the masks are lifted, they will be seen in their beauty. Upon inspecting the chain of the sciences, it will not appear more difficult to remember them than a series of numbers.

In William R. Shea

*The Magic of Numbers and Motion: The Scientific Career of René**Descartes*

Chapter Five (p. 101)

Science History Publications Canton, Massachusetts, USA. 1991

Science is like a woman: if she stays faithful to her husband she is respected; if she becomes common property she grows to be despised.

In William R. Shea

*The Magic of Numbers and Motion: The Scientific Career of René**Descartes*

Chapter Five (p. 114)

Science History Publications. Canton, Massachusetts, USA. 1991

**Dewar, James** 1842–1923

English physicist and chemist

To serve in the scientific army, to have shown some initiative, and to be rewarded by the consciousness that in the eyes of his comrades he bears the accredited accolade of successful endeavor, is enough to satisfy the legitimate ambition of every earnest student of nature.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1902*

History of Cold and the Absolute Zero (p. 240)

Government Printing Office. Washington, D.C. 1903

In a legitimate sense all genuine scientific workers feel that they are ‘the inheritors of unfulfilled renown.’ The battlefields of science are the centres of a perpetual warfare, in which there is no hope of final victory, although partial conquest is ever triumphantly encouraging the continuance of the disciplined and strenuous attack on the seemingly impregnable fortress of Nature. To serve in the scientific army, to have shown some initiative, and to be rewarded by the consciousness that in the eyes of his comrades he bears the accredited accolade of successful endeavor, is enough to satisfy the legitimate ambition of every earnest student of Nature. The real warranty that the march of progress in the future will be as glorious

as in the past lies in the perpetual reinforcement of the scientific ranks by recruits animated by such a spirit, and proud to obtain such a reward.

*Report of the Seventy-second Meeting of the British Association for the Advancement of Science*

History of Cold and the Absolute Zero (p. 50)

John Murray. London, England. 1903

**Dewey, John** 1859–1952

American philosopher and educator

We define science as systematized knowledge, but the definition is wholly ambiguous. Does it mean the body of facts, the subject-matter? Or does it mean the processes by which something fit to be called knowledge is brought into existence, and order introduced into the flux of experience?

Science as Subject-Matter and as Method

*Science*, N.S. Volume 31, Number 787, January 28, 1910 (p. 125)**Dickens, Charles** 1812–70

English novelist

I don’t know where this here science is to stop, mind you; that’s what bothers me.

*Sketches*

Vauxhil-Gardens by Day (p. 126)

Leipzig, Germany. 1843

**Dickinson, Emily** 1830–86

American lyric poet

I climb the “Hill of Science,”

I view the landscape o’er;

such transcendental prospects,

I ne’er beheld before!

*The Complete Poems of Emily Dickinson*

No. 3 (p. 5)

Little, Brown &amp; Company. Boston, Massachusetts, USA. 1960

**Dickinson, G. Lowes** 1862–1932

English historian and political activist

Science hangs in a void of nescience, a planet turning in the dark.

*A Modern Symposium* (p. 159)

Doubleday, Page &amp; Company. Garden City, New York, USA. 1920

**Disraeli, Benjamin, First Earl****of Beaconsfield** 1804–81

English prime minister, founder of Conservative Party, and novelist

What Art was to the ancient world, Science is to the modern...

*Coningsby*

Book IV, Chapter I (p. 126)

J.M. Dent &amp; Sons Ltd. London, England. 1911

...the pursuit of science leads only to the insoluble.

*Lothair*

Chapter XVII (p. 70)

Longmans, Green &amp; Co. London, England. 1879

Science may prove the insignificance of this globe in the scale of creation...but it cannot prove the insignificance of man.

*Lothair*

Chapter LXXVII (p. 409)

Longmans, Green & Co. London, England. 1879

**Dobie, J. Frank** 1888–1964

American folklorist

Putting on the spectacles of science in expectation of finding the answer to everything looked at signifies inner blindness.

*The Voice of the Coyote*

Introduction (p. xvi)

Little, Brown & Company. Boston, Massachusetts, USA. 1949

**Dobzhansky, Theodosius** 1900–75

Russian-American scientist

Science does more than collect facts; it makes sense of them. Great scientists are virtuosi of the art of discovering the meaning of what otherwise might seem barren observations.

In Robert M. Hutchins and Mortimer J. Adler (eds.)

*The Great Ideas Today* 1974

Advancement and Obsolescence in Science (p. 56)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1974

Science has been called “the endless frontier.” The more we know, the better we realize that our knowledge is a little island in the midst of an ocean of ignorance.

In Robert M. Hutchins and Mortimer J. Adler (eds.)

*The Great Ideas Today* 1974

Advancement and Obsolescence in Science (p. 61)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1974

**Dott, Jr., Robert H.**

No biographical data available

**Batten, Henry L.**

No biographical data available

Science consists simply of the formulation and testing of hypotheses based on observational evidence; experiments are important where applicable, but their function is merely to simplify observation by imposing controlled conditions.

*Evolution of the Earth* (2nd edition)

Chapter 3 (p. 40)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1976

**Douglas, Mary** 1921–

No biographical data available

**Wildavsky, A.**

No biographical data available

In our modern world people are supposed to live and die subject to known, measurable natural forces, not subject to mysterious moral agencies. That mode of reasoning, indeed, is what makes modern man modern. Science wrought this change between us and nonmoderns. It is hardly true,

however, that their universe is more unknown than ours. For anyone disposed to worry about the unknown, science has actually expanded the universe about which we cannot speak with confidence.... This is the double-edge thrust of science, generating new ignorance with new knowledge. The same ability to detect causes and connections or parts per trillion can leave more unexplained than was left by cruder measuring instruments.

*Risk and Culture: An Essay on the Selection of Technical and Environmental Dangers*

Chapter III (p. 49)

University of California Press. Berkeley, California, USA. 1982

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

Science seeks knowledge. Let the knowledge lead us where it will, we still must seek it. To know once for all what we are, why we are, where we are, is that not in itself the greatest of all human aspirations?

*The Land of Mist; The Maracot Deep; and Other Stories*

When the World Screamed (p. 430)

Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1930

**Drew, Joseph**

No biographical data available

...let science remove the scales from our eyes, and lift the pall of ignorance from our minds, and we at once recognise the grandeur and the magnificence of the heavens. What bright vistas of imperishable glory are immediately opened up for our contemplation! Those rolling worlds and glittering atoms that congregate through the fields of space, begin at once to fascinate our minds and arrest our attention, and we feel desirous to know more of their secret history and their use.

*Our Home in the Stars*

Our Home in the Stars (p. 20)

Elliot Stock. London, England. 1872

**Dryden, John** 1631–1700

English poet, dramatist, and literary critic

Science distinguishes a Man of Honour from one of those Athletick Brutes whom undeservedly we call Heroes.

*Fables Ancient and Modern*

Dedication

Printed for Jacob Tonson. London, England. 1700

...science perfects genius; and also moderates that fury of the fancy which cannot contain itself within the bounds of reason; but often carries a man into dangerous extremes.

*The Works of John Dryden* (Volume 17)

The Art of Painting (p. 345)

Printed for William Miller. London, England. 1808

**du Noüy, Pierre Lecomte** 1883–1947

French scientist

Science is very young when compared to the moral, spiritual, and religious ideas of humanity. It enjoys the prestige

of a new toy. But we must not be misled. In spite of its youth and imperfections, it constitutes the best means of convincing us of the immensity and harmonious beauty of the universe, revealed by the infinite complexity of the apparently most simple phenomena. It is an orderly and confounding complexity which is a thousand times better qualified than ignorance to make us feel the omnipotence of the Creator.

*Between Knowing and Believing*

The Future of Spirit 1941 (p. 216)

McKay. New York, New York, USA. 1967

Either we have absolute confidence in our science and in the mathematical and other reasonings which enable us to give a satisfactory explanation of the phenomena surrounding us – in which case we are forced to recognize that certain fundamental problems escape us and that their explanation amounts to admitting a miracle – or else we doubt the universality of our science and the possibility of explaining all natural phenomena by chance alone; and we fall back on a miracle or a hyperscientific intervention.

*Human Destiny*

Chapter 3 (p. 36)

Longmans, Green & Company. London, England. 1947

### **Dubos, René Jules** 1901–82

French-born American microbiologist and environmentalist

Science is still the versatile, unpredictable hero of the play, creating endless new situations, opening romantic vistas and challenging accepted concepts.

*Louis Pasteur: Free Lance of Science*

Chapter I (p. 15)

Little, Brown & Company. Boston, Massachusetts, USA. 1950

Science knows no country, because knowledge belongs to humanity, and is the torch which illuminates the world. Science is the highest personification of the nation because that nation will remain the first which carries the furthest the works of thought and intelligence.

*Louis Pasteur: Free Lance of Science*

Chapter III (p. 85)

Little, Brown & Company. Boston, Massachusetts, USA. 1950

Science is not the product of lofty meditations and genteel behavior, it is fertilized by heartbreaking toil and long vigils – even if, only too often, those who harvest the fruit are but the laborers of the eleventh hour.

*Louis Pasteur: Free Lance of Science*

Chapter XIV (p. 389)

Little, Brown & Company. Boston, Massachusetts, USA. 1950

Science shows us what exists but not what to do about it.

*The Dreams of Reason: The Computer and the Rise of the Sciences of Complexity*

Chapter 14 (p. 325)

Simon & Schuster. New York, New York, USA. 1988

### **Duke of Argyll (George Douglas Campbell)** 1823–1900

English statesman and writer on science, religion, and politics

The bondage under which all true science lies to fact the necessity of groping among the detail of little and common things this is a hard lesson for the human intellect to learn conscious as that intellect is of its own great powers of its own high aims of its own large capacities of intuitive understanding. But it is a lesson which must be learned. There are no short cuts in Nature. Her results are always attained by method. Her purposes are always worked out by law.

*The Reign of Law* (4th American edition)

Chapter VII (p. 331)

George Routledge & Sons. New York, New York, USA. 1873

### **Durant, William James** 1885–1981

American historian and essayist

Every science begins as philosophy and ends as art; it arises in hypothesis and flows into achievement.

*The Story of Philosophy*

Introduction (p. 2)

Simon & Schuster Paperback. New York, New York, USA. 2005

### **Dyson, Freeman J.** 1923–

American physicist and educator

Science is even more unpredictable than history. Every important discovery in science is by definition unpredictable. If it were predictable, it would not be an important discovery. The purpose of science is to create opportunities for unpredictable things to happen. When nature does something unexpected, we learn something about how nature works.

*From Eros to Gaia*

Chapter 6 (p. 68)

Pantheon Books. New York, New York, USA. 1992

It used to be said, before the recent era of revolutionary discoveries, that science was organized common sense. In the modern era it would be more accurate to define science as organized unpredictability.

*From Eros to Gaia*

Chapter 6 (p. 68)

Pantheon Books. New York, New York, USA. 1992

### **Eakin, Richard M.**

American zoologist

If I had any advice to [give] you it is just this: love science but do not worship it. Put science in its proper place, ranking it along with philosophy and history, music and religion, literature and art. If I had my life to live again (Darwin says), I would make it a rule to read some poetry and listen to some music at least once every week.

*Great Scientists Speak Again*  
Chapter 6 (p. 107)  
University of California Press, Berkeley, California, USA, 1975

### **Eben, Aubrey**

No biographical data available

Science is not a sacred cow. Science is a horse. Don't worship it. Feed it.

*Reader's Digest*, March, 1963 (p. 67)

### **Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

To imagine that Newton's great scientific reputation is tossing up and down in these latter-day revolutions is to confuse science with omniscience.

*The Nature of the Physical World*

Chapter X (p. 202)

The Macmillan Company. New York, New York, USA. 1930

We need scarcely add that the contemplation in natural science of a wider domain than the actual leads to a far better understanding of the actual.

*The Nature of the Physical World*

Chapter XII (p. 267)

Cambridge University Press. Cambridge, England. 1928

Science has its showrooms and its workshops. The public today, I think rightly, is not content to wander round the showrooms where the tested products are exhibited; they demand to see what is going on in the workshops. You are welcome to enter; but do not judge what you see by the standards of the showroom. We have been going round a workshop in the basement of the building of science. The light is dim, and we stumble sometimes. About us is confusion and mess which there hasn't been time to sweep away. The workers and their machines are enveloped in murkiness. But I think that something is being shaped here – perhaps something rather big. I do not quite know what it will be when it is completed and polished for the showroom.

*The Expanding Universe*

Chapter IV, Section VII (p. 126)

The University Press. Cambridge, England. 1933

...unless science is to degenerate into idle guessing, the test of value of any theory must be whether it expresses with as little redundancy as possible the facts which it intended to cover.

*Space, Time and Gravitation: An Outline of the General Relativity Theory*  
Chapter I (p. 29)

At The University Press. Cambridge, England. 1921

...where science has progressed the farthest, the mind has but regained from nature that which the mind has put into nature.

*Space, Time and Gravitation: An Outline of the General Relativity Theory*

Chapter XII (pp. 200–201)

At The University Press. Cambridge, England. 1921

...science is no longer disposed to identify reality with concreteness. Materialism in its literal sense is long since dead. But its place has been taken by other philosophies which represent a virtually equivalent outlook. The tendency today is not to reduce everything to manifestations of matter – since matter now has only a minor place in the physical world – but to reduce it to manifestations of the operation of natural law.

*Science and the Unseen World*

Lecture V (p. 50)

The Macmillan Co. New York, New York, USA. 1929

### **Editor**

“Science” that is simply inquiring into the mysteries of the universe, is not science. True science has already inquired and knows. Science is knowledge.

*The Flaming Sword*

In the Editorial Perspective

December 3, 1897 (p. 10)

### **Editorial**

...Science cannot now be propelled on its onward course by the efforts of unassisted individuals only, and...the State must itself, sooner or later, put its shoulder vigorously to the wheel, that there is some danger least we should be thought to undervalue the force of private enterprise.

The Government of the Royal Society

*Nature*, Volume III, November 3, 1870 (p. 3)

### **Egler, Frank E.** 1911–96

American botanist and ecologist

...science...ever [reflects] a faith in the intelligibility of nature.

*The Way of Science*

The Nature of Science (p. 2)

Hafner Publishing Company. New York, New York, USA. 1970

### **Einstein, Albert** 1879–1955

German-born physicist

One thing I have learned in a long life: that all our science, measured against reality, is primitive and childlike – and yet it is the most precious thing we have.

In Banesh Hoffman

*Albert Einstein: Creator and Rebel*

Preface (p. v)

The Viking Press. New York, New York, USA. 1972

Science as something existing and complete is the most objective thing known to man. But science in the making, science as an end to be pursued, is as subjective and psychologically conditioned as any other branch of human endeavor – so much so, that the question “what is the purpose and meaning of science?” receives quite different answers at different times and from different sorts of people.

*The World as I See It*

Address at Columbia University, New York (p. 137)  
Philosophical Library, New York, New York, USA. 1949

Strange that science, which in the old days seemed harmless, should have evolved into a nightmare that causes everyone to tremble.

In G.J. Whitrow

*Einstein: The Man and His Achievement*

Chapter III (p. 89)

BBC. London, England. 1967

Science will stagnate if it is made to serve practical goals.

In Otto Nathan and Heinz Norden

*Einstein on Peace*

Chapter Thirteen (p. 402)

Simon & Schuster. New York, New York, USA. 1960

...science can only ascertain what is, but not what should be, and outside of its domain value judgments of all kinds remain necessary.

*Out of My Later Years*

Science and Religion, II (p. 25)

Thames & Hudson. London, England. 1950

The whole of science is nothing more than a refinement of everyday thinking.

*Out of My Later Years*

Physics and Reality, I (p. 59)

Thames & Hudson. London, England. 1950

...the fact that in science we have to be content with an incomplete picture of the physical universe is not due to the nature of the universe itself but rather to us.

In Max Planck

*Where Is Science Going?*

Prologue (p. 10)

W.W. Norton & Company, Inc. New York, New York, USA. 1932

The belief in an external world independent of the perceiving subject is the basis of all natural science.

*Essays in Science*

Clerk Maxwell's Influence on the Evolution of the Idea of Physical Reality (p. 40)

Philosophical Library. New York, New York, USA. 1934

**Einstein, Albert** 1879–1955

German-born physicist

**Infeld, Leopold** 1898–1968

Polish physicist

Science is not just a collection of laws, a catalogue of unrelated facts. It is a creation of the human mind, with its freely invented ideas and concepts.

*The Evolution of Physics*

Physics and Reality (p. 294)

Simon & Schuster. New York, New York, USA. 1961

**Eiseley, Loren C.** 1907–77

American anthropologist, educator, and author

Thus science, as it leads men further and further from the first world they inhabited, the world we call natural, into a new and unguessed domain, is beguiling them.

*The Invisible Pyramid*

Chapter Four (p. 106)

University of Nebraska Press. Lincoln, Nebraska, USA.

**Eisenschiml, Otto** 1880–1963

Austrian-American chemist and historian

Science seeks to build, not to destroy; to aid, not to hinder.

*The Art of Worldly Wisdom: Three Hundred Precepts for Success Based on the Original Work of Baltasar Gracian*

Part One (p. 8)

Duell, Sloan & Pearce. New York, New York, USA. 1947

**Eliot, George (Mary Ann Evans Cross)** 1819–80

English novelist

Men can do nothing without the make-believe of a beginning. Even Science, the strict measurer, is obliged to start with a make-believe unit, and must fix on a point in the stars' unceasing journey when his sidereal clock shall pretend that time is Nought.

*Daniel Deronda*

Book I, Chapter I (p. 3)

Harper & Brothers. New York, New York, USA. 1876

**Emelyanov, A. S.**

No biographical data available

Science provides mankind with a great tool of cognition which makes it possible to reach unprecedented heights of abundance and equality. This determines the most important and most fruitful aspect of the social role of science, and as a result the social responsibility of scientists is growing.

In Maurice Goldsmith and Alan Mackay (eds.)

*Society and Science*

Scientist and Public Affairs (p. 31)

Simon & Schuster. New York, New York, USA. 1965

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

All science has one aim, namely, to find a theory of nature.

*Ralph Waldo Emerson: Essays and Lectures*

*Nature: Addresses, and Lectures*

Introduction (p. 7)

The Library of America. New York, New York, USA. 1983

Empirical science is apt to cloud the sight, and, by the very knowledge of functions and processes, to bereave the student of the manly contemplation of the whole. The savant becomes unpoetic.

*Ralph Waldo Emerson: Essays and Lectures*

*Nature: Addresses, and Lectures*

Prospects (p. 43)

The Library of America. New York, New York, USA. 1983

What drops of all the sea of our science are baled up! and by what accident it is that these are exposed, when so many secrets sleep in nature!

*Ralph Waldo Emerson: Essays and Lectures*

*Essays: Second Series*

The Poet (p. 466)

The Library of America. New York, New York, USA. 1983

Science is a search after identity, and the scientific whim is lurking in all corners.

*Ralph Waldo Emerson: Essays and Lectures*

*The Conduct of Life*

Beauty (p. 1108)

The Library of America. New York, New York, USA. 1983

Intellectual science has been observed to beget invariably a doubt of the existence of matter.

*The Complete Works of Ralph Waldo Emerson* (Volume 1)

*Nature: Addresses and Lectures*

Nature (p. 56)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

Science is cold.

*The Complete Works of Ralph Waldo Emerson* (Volume 1)

*Nature: Addresses and Lectures*

An Address (p. 143)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

It is this domineering temper of the sensual world that creates the extreme need of the priests of science....

*The Complete Works of Ralph Waldo Emerson* (Volume 1)

*Nature: Addresses and Lectures*

Literary Ethics (p. 186)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

...as the power or genius of nature is ecstatic, so must its science or the description of it be.

*The Complete Works of Ralph Waldo Emerson* (Volume 1)

*Nature: Addresses and Lectures*

The Method of Nature (p. 213)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

When science is learned in love, and its powers are wielded by love, they will appear the supplements and continuations of the material creation.

*The Complete Works of Ralph Waldo Emerson* (Volume 2)

*Essays: First Series*

Art (p. 369)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

Something is wanting to science until it has been humanized.

*The Complete Works of Ralph Waldo Emerson* (Volume 4)

*Representative Men*

Chapter I (p. 10)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

It is the last lesson of modern science that the highest simplicity of structure is produced, not by few elements, but by the highest complexity.

*The Complete Works of Ralph Waldo Emerson* (Volume 4)

*Representative Men*

Goethe; or, The Writer (p. 290)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

Science in England, in America, is jealous of theory, hates the name of love and moral purpose. There's revenge for this humanity. What manner of man does science make?

The boy is not attracted. He says, I do not wish to be such a kind of man as my professor is.

*The Complete Works of Ralph Waldo Emerson* (Volume 6)

*The Conduct of Life*

Beauty (p. 284)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

Scraps of science, of thought, of poetry are in the coarsest sheet, so that in every house we hesitate to burn a newspaper until we have looked it through.

*The Complete Works of Ralph Waldo Emerson* (Volume 7)

*Society and Solitude*

Chapter II (p. 24)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

Science has shown the great circles in which Nature works....

*The Complete Works of Ralph Waldo Emerson* (Volume 7)

*Society and Solitude*

Chapter VI (p. 143)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

You must have eyes of science to see in the seed its nodes....

*The Complete Works of Ralph Waldo Emerson* (Volume 8)

*Letters and Social Aims*

Chapter I (p. 71)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

Science surpasses the old miracles of mythology, to fly with them over the sea, and to send their messages under it.

*Letters and Social Aims*

Progress of Culture (p. 207)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1904

Science...necessitates a faith commensurate with the grander orbits and universal laws which it discloses. Yet it does not surprise the moral sentiment. That was older, and awaited expectant these larger insights.

*Letters and Social Aims*

Progress of Culture (pp. 216-217)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1888

In science we have to consider two things: power and circumstance.

*The Conduct of Life*

Fate (p. 14)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1904

All our science lacks a human side. The tenant is more than the house. Bugs and stamens and spores, on which we lavish so many years, are not finalities, and man, when his powers unfold in order, will take Nature along with him, and admit light into all her recesses. The human heart concerns us more than the poring into microscopes, and is larger than can be measured by the pompous figures of the astronomer.

*The Conduct of Life*

Beauty (p. 222)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1894

Science is a search after identity, and the scientific whim is lurking in all corners.

*The Conduct of Life*

Illusions (p. 314)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1904

Science corrects the old creeds; sweeps away, with every new perception, our infantile catechisms; and necessitates a faith commensurate with the grander orbits and universal laws which it discloses.

*Works of Ralph Waldo Emerson* (Volume 4)

*Progress of Culture* (p. 183)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1880

The sciences, even the best, – mathematics, and astronomy, – are like sportsmen, who seize whatever prey offers, even without being able to make any use of it.

*Representative Men* (p. 65)

Bernard Tauchnitz. Leipzig, Germany 1907

When science is learned in love, and its powers are wielded by love, they will appear the supplements and continuation, of the material creation.

*Essays, Lectures and Orations*

Art (p. 192)

William S. Orr & Co. London, England. 1848

... every good reader will easily recall expressions or passages in works of pure science which have given him the same pleasure which he seeks in professed poets.

*Letters and Social Aims*

Poetry and Imagination (p. 50)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1904

**Emmeche, Claus** 1956–

Danish theoretical biologist

It has been said that science demystifies the world. It is closer to the truth to say that science, when it is at its best, opens the world up for us, bringing daily realities under a kind of magic spell and providing the means to see the limits of what we think we know, and the scope of what we do not at all understand.

Translated by Steven Sampson

*The Garden in the Machine: The Emerging Science of Artificial Life*

Chapter One (p. 13)

Princeton University Press. Princeton, New Jersey, USA. 1994

**Enriques, Federigo** 1871–1946

Italian mathematician

Science would never have reached its present state, had it not been constantly changing the form and the statement of its problems, adapting the scope of its researches to the changed conditions of thought.

Translated by Katharine Royce

*Problems of Science*

Introduction (p. 5)

The Open Court Publishing Co. Chicago, Illinois, USA. 1914

To the pride of spirit, which believes itself sole lord of a world of dreams, and would discover all laws within itself, science replies by showing a reality which spreads about and beyond us, and so escapes the vain claim that it should be subject to our sentiments or to our will.

*Problems of Science*

Introduction (p. 9)

The Open Court Publishing Co. La Salle, Indiana, USA. 1914

Science, considered as to its growth, not only rises to ever greater objectivity, but by contrast carries to a higher point the subjectivity of its representations which are its means of conquest.

*Problems of Science*

Introduction (p. 29)

The Open Court Publishing Co. La Salle, Indiana, USA. 1914

**Everett, Edward** 1794–1865

American statesman, educator, and orator

It usually happens in scientific progress, that when a great fact is at length discovered, it approves itself at once to all competent judges. It furnishes a solution to so many problems, and harmonizes with so many other facts, – that all the other data as it were crystallize at once about it.

*The Uses of Astronomy*

An Oration Delivered at Albany on the 28th of July, 1856 (p. 30)

Ross & Tousey. New York, New York, USA. 1856

Unspeaking are the attractions of patient enthusiastic science, now following the traces of creative wisdom, along the minutest fibres of microscopic life, and now clinging to the folds of the streaming robe of Omnipotence, as it floats over the transcendent galaxies of the highest heavens.

*Inauguration of Washington University at Saint Louis, Missouri. April 23, 1857*

An Address (p. 76)

Little, Brown & Co. Boston, Massachusetts, USA. 1857

**Farley, Harriet** 1817–1907

American writer and editor

Science has been beautifully compared to a Hill; may it not also be likened to a vast Garden? Its different branches are the various paths, and its facts, experiments and theories, are the many plants and flowers. This garden has been redeemed by much toil and care from the vast wastes of Ignorance, and its verge is now but too barren. The shades of the dark Forest of Mystery throw a gloom upon its borders, and but few of its walks give evidence of long continued cultivation.

*Shells from the Strand of the Sea of Genius*

The Garden of Science (p. 14)

J. Munroe and Co. Boston, Massachusetts, USA. 1847

### Feigl, H.

No biographical data available

...science, properly interpreted, is not dependent on any sort of metaphysics. It merely attempts to cover a maximum of facts by a minimum of laws.

Naturalism and Humanism

*American Quarterly*, Volume 1, Number 2, Summer, 1949 (p. 148)

### Ferré, Nels F. S. 1908–71

Swedish-American theologian

It is a sad experience to hear someone denounce science as the cause of modern chaos and destruction. Our technological advance may be abused and make of what could be a near heaven a near hell, but that is surely not the fault of science as such. Science has not failed man, but man has failed science.

*Faith and Reason*

Chapter II (p. 38)

Harper & Brothers. New York, New York, USA. 1946

Science is supposed by many to have banished every realm of the sacred; and behold, science becomes the sacred cow.

*Faith and Reason*

Chapter II (p. 43)

Harper & Brothers. New York, New York, USA. 1946

### Ferris, Timothy 1944–

American science writer

Far too many students accept the easy belief that they need not bother learning much science, since a revolution will soon disprove all that is currently accepted anyway. In such a climate it may be worth affirming that science really is progressive and cumulative, and that well-established theories, though they may turn out to be subsets of larger and farther-reaching ones – as happened when Newtonian mechanics was incorporated by Einstein into general relativity – are seldom proved wrong....

*The Whole Shebang: A State-of-the Universe's Report*

Preface (p. 13)

Simon & Schuster. New York, New York, USA. 1996

Science is not perfect, but neither is it just one more sounding board for human folly.

*The Whole Shebang: A State-of-the Universe's Report*

Preface (p. 13)

Simon & Schuster. New York, New York, USA. 1996

### Feyerabend, Paul K. 1924–94

Austrian-born American philosopher of science

Science is an essentially anarchistic enterprise....

*Against Method: Outline of an Anarchistic Theory of Knowledge*

Analytical Index (p. 10)

Verso. London, England. 1978

Science is neither a single tradition, nor the best tradition there is, except for people who have become accustomed to its presence, its benefits and its disadvantages. In a democracy it should be separated from the state just as churches are now separated from the state.

*Against Method: Outline of an Anarchistic Theory of Knowledge* (p. 238)  
Verso. London, England. 1978

Science is not a closed book that is understood only after years of training. It is an intellectual discipline that can be examined and criticised by anyone who is interested, and that looks difficult and profound only because of a systematic campaign of obfuscation carried out by many scientists...

In E.D. Klemke, Robert Hollinger and A. David Kline

*Introductory Reading in the Philosophy of Science*

How to Defend Society Against Science (p. 62)

Prometheus Books. Buffalo, New York, USA. 1980

### Feynman, Richard P. 1918–88

American theoretical physicist

...science is of value because it can produce something.

*What Do You Care What Other People Think?*

The Value of Science (p. 241)

W.W. Norton & Company, Inc. New York, New York, USA. 1988

We must, incidentally, make it clear from the beginning that if a thing is not a science, it is not necessarily bad. For example, love is not a science. So, if something is said not to be a science, it does not mean that there is something wrong with it; it just means that it is not a science.

*Six Easy Pieces: Essentials of Physics Explained by Its Most Brilliant Teacher*

The Relation of Physics to Other Sciences (p. 47)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1995

Is science of any value?

I think a power to do something is of value. Whether the result is a good thing or a bad thing depends on how it is used, but the power is a value.

Once in Hawaii I was asked to see a Buddhist temple. In the temple a man said, "I am going to tell you something that you will never forget." And then he said, "To every man is given the key to the gates of heaven. The same key opens the gates of hell."

*The Meaning of It All: Thoughts of a Citizen Scientist*

Chapter I (p. 6)

Perseus Books. Reading, Massachusetts, USA. 1998

And so it is with Science. In a way it is key to the gates of heaven, and the same key opens the gates of hell, and we do not have any instructions as to which is which gate. Shall we throw away the key and never have a way to enter the gates of heaven? Or shall we struggle with the problem of which is the best way to use the key? That is, of course, a very serious question, but I think that we cannot deny the value of the key to the gates of heaven.

*The Meaning of It All: Thoughts of a Citizen Scientist*  
Chapter I (pp. 6–7)  
Perseus Books. Reading, Massachusetts, USA. 1998

[An] aspect of science is its contents, the things that have been found out. This is the yield. This is the gold. This is the excitement, the pay you get for all the disciplined thinking and hard work. The work is not done for the sake of an application. It is done for the excitement of what is found out. ...it is almost impossible for me to convey in a lecture this important aspect, this exciting part, the real reason for science. And without understanding this you miss the whole point.

*The Meaning of It All: Thoughts of a Citizen Scientist*  
Chapter I (p. 9)  
Perseus Books. Reading, Massachusetts, USA. 1998

You cannot understand science and its relation to anything else unless you understand and appreciate [it as] the great adventure of our time. You do not live in your time unless you understand that this is...a wild and exciting thing.

*The Meaning of It All: Thoughts of a Citizen Scientist*  
Chapter I (p. 9)  
Perseus Books. Reading, Massachusetts, USA. 1998

Science alone of all the subjects contains within itself the lesson of the danger of belief in the infallibility of the greatest teachers in the preceding generation.... As a matter of fact, I can also define science another way: Science is the belief in the ignorance of experts.

In Jeffrey Robbins (ed.)  
*The Pleasure of Finding Things Out: The Best Short Works of Richard P. Feynman*  
Chapter 8 (p. 188)  
Perseus Books. Cambridge, Massachusetts, USA. 1999

If you thought before that science was certain – well, that is just an error on your part.

*The Character of Physical Law*  
Chapter 3 (p. 77)  
BBC. London, England. 1965

Although it is uncertain, it is necessary to make science useful. Science is only useful if it tells you about some experiment that has not been done; it is not good if it only tells you what just went on.

*The Character of Physical Law*  
Chapter 7 (p. 164)  
BBC. London, England. 1965

...it is imperative in science to doubt; it is absolutely necessary, for progress of science, to have uncertainty as a fundamental part of your inner nature.

*Engineering and Science*, Volume 19, 1956 (p. 21)

Science can be defined as a method for, and a body of information obtained by, trying to answer only questions which can be put into the form: If I do this, what will happen?

*Engineering and Science*, Volume 19, 1956 (p. 23)

**Fischer, Emil Hermann** 1852–1919  
German chemist

The sciences are not abstract constructions, but rather the result of human endeavor; they are closely connected with the personalities and the fates of the dedicated researchers who developed them.

In Rolf Huisgen  
*Adolf von Baeyer's Scientific Achievements – A Legacy*  
*Angewandte Chemie International Edition in English*, Volume 25, Number 4, April, 1986 (p. 297)

...science is and remains international.

In Albert Einstein  
*The World as I See It*  
*The International Science* (p. 50)  
Philosophical Library. New York, New York, USA. 1949

**Fiske, John** 1842–1901  
American philosopher and historian

...all human science is but the increment of the power of the eye....

*The Destiny of Man Viewed in the Light of His Origin*  
Chapter VII (p. 60)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1912

...there are moments when one passionately feels that this cannot be all. On warm June mornings in green country lanes, with sweet pine-odours, wafted in the breeze which sighs through the branches, and cloud-shadows flitting over far-off blue mountains, while little birds sing their love-songs, and golden-haired children weave garlands of wild roses; or when in the solemn twilight we listen to wondrous harmonies of Beethoven and Chopin that stir the heart like voices from an unseen world; at such times one feels that the profoundest answer which science can give to our questionings is but a superficial answer after all.

*The Unseen World, and Other Essays*  
I. The Unseen World, Part II (p. 56)  
Houghton Mifflin Company. New York, New York, USA. 1876

**Flaubert, Gustave** 1821–90  
French novelist

My kingdom is as wide as the universe and my desire has no limits. I am always going about enfranchising the mind and weighing the world, without hate, without fear, without love, and without God. I am called Science.

*Works: The Temptation of St. Anthony*  
Chapter V (p. 141)  
St. Dunstan Society. Akron, Ohio, USA. 1904

**Forbes, Edward** 1815–54  
English naturalist

People without independence have no business to meddle with science. It should never be linked with lucre.

In George Wilson and Archibald Geikie  
*Memoir of Edward Forbes, F.R.S.*  
Chapter XII (p. 392)  
Macmillan & Company Ltd. Cambridge, England. 1861

**Forel, Auguste** 1848–1931

Swiss neuroanatomist, psychiatrist, and entomologist

There is a growing tendency amongst the laity to tread not only the broad highways of science, but to explore its more fascinating by-paths.

*The Senses of Insects*

Translators Preface (p. vii)

Methuen &amp; Co. London, England. 1908

**Foster, Sir Michael** 1836–1907

English physiologist

Man does not live by bread alone, and science brings him more than bread. It is a great thing to make two blades of grass grow where before one alone grew; but it is no less great a thing to help a man to come to a just conclusion on the questions with which he has to deal.

The President's Address

*The Chemical News and Journal of Industrial Science*, Volume LXXX, Number 2077, September 15, 1899 (p. 130)**Fort, Charles** 1874–1932

American writer

Every science is a mutilated octopus. If its tentacles were not clipped to stumps, it would feel its way into disturbing contacts.

In Damon Knight

*Charles Fort: Prophet of the Unexplained*

A Charles Fort Sampler (p. vi)

Gollancz. London, England. 1971

**Fox, Robin** 1934–

English anthropologist, poet, and essayist

Since science has no value agenda of its own it is always subject to hijacking by fanaticism and idealism.

In Paul R. Gross, Norman Levitt, and Martin W. Lewis (eds.)

*The Flight from Science and Reason*

State of the Art/Science in Anthropology (p. 329)

New York Academy of Sciences. New York, New York, USA. 1996

The point that science can be used for evil purposes is beside the point. Art and music can be used for evil purposes, but no one proposes abandoning either. Anything can be used for evil purposes. I am not going to stop listening to Wagner just because Hitler liked him.

In Paul R. Gross, Norman Levitt, and Martin W. Lewis (eds.)

*The Flight from Science and Reason*

State of the Art/Science in Anthropology (p. 332)

New York Academy of Sciences. New York, New York, USA. 1996

**Franck, Georg** 1946–

No biographical data available

Success in science is rewarded with attention. You gain full membership in the scientific community only by receiving the attention of your fellow scientists. Earning this attention “income” is a prime motive for becoming a scientist and for practicing science. In order to maximize

this income, you have to employ your own attention in the most productive way. It does not pay to find things out anew that have been discovered already. Nor is reinvention rewarding in terms of the attention paid. It pays no pay attention to the work done by others.

Scientific Communication – A Vanity Fair?

*Science*, Volume 286, Number 5437, 1 October, 1999 (p. 53)**Freud, Sigmund** 1856–1939

Austrian neurologist and co-founder of psychoanalysis

No, our science is no illusion. But an illusion it would be to suppose that what science cannot give us we can get elsewhere.

*The Future of an Illusion*

Chapter X (p. 56)

W.W. Norton &amp; Company, Inc. New York, New York, USA. 1961

Science in her perpetual incompleteness and insufficiency is driven to hope for her salvation in new discoveries and new ways of regarding things. She does well, in order not to be deceived, to arm herself with skepticism and to accept nothing new unless it has withstood the strictest examination.

*Collected Papers*

The Resistance to Psycho-Analysis (p. 4121)

The Hogarth Press. London, England. 1953

**Friend, Julius W.**

European historian

**Feibleman, James K.** 1904–87

American philosopher

The modern world, which has lost faith in so many causes, still accepts science nearly unchallenged. Science today occupies the position held by the Roman Church in the Middle Ages: as the single great authority in a world divided on almost every object of loyalty.

*What Science Really Means*

Chapter I (p. 11)

George Allen &amp; Unwin Ltd. London, England. 1937

**French Apothegm***Le scepticisme est le vrai flambeau de la science.*

Doubt is the true torch of science.

In John Epps

*The Life of Dr. Walker*

Chapter IV (p. 101)

Whittaker, Treacher. London, England. 1831

**Frost, Robert** 1874–1963

American poet

And how much longer a story has science  
Before she must put out the light on the children  
And tell them the rest of the story is dreaming?

*Complete Poems of Robert Frost*

Too Anxious for Rivers

Henry Holt &amp; Company. New York, New York, USA. 1949

Where have those flowers and butterflies all gone  
That science may have staked the future on?  
He seems to say the reason why so much  
Should come to nothing must be fairly faced....

*Complete Poems of Robert Frost*

Pod of the Milkweed

Henry Holt & Company, New York, New York, USA. 1949

Sarcastic Science, she would like to know,  
In her complacent ministry of fear,  
How we propose to get away from here  
When she has made things so we have to go  
Or be wiped out.

*Complete Poems of Robert Frost*

Why Wait for Science

Henry Holt & Company, New York, New York, USA. 1949

**Frye, Northrop** 1912–91

Canadian literary critic

Science begins with the world we have to live in, accepting its data and trying to explain its laws. From there, it moves toward the imagination: it becomes a mental construct, a model of a possible way of interpreting experience. The further it goes in this direction, the more it tends to speak the language of mathematics, which is really one of the languages of the imagination, along with literature and music.

*The Educated Imagination*

The Motive for Metaphor (p. 6)

The House of Ansi. Toronto, Ontario, Canada. 2002

**Fulbright, James William** 1905–95

American politician

What a curious picture it is to find man, *Homo sapiens*, of divine origin, we are told, seriously considering going underground to escape the consequences of his own folly. With a little wisdom and foresight, surely it is not yet necessary to forsake life in the fresh air and in the warmth of the sunlight. What a paradox if our own cleverness in science should force us to live underground with the moles.

The Effect of the Atomic Bomb on American Foreign Policy

*Congressional Record*, November 2, 1945, Volume 91, Appendix

(p. A4654)

Science has radically changed the conditions of human life on earth. It has expanded our knowledge and our power but not our capacity to use them with wisdom.

*Old Myths and New Realities*

Conclusion (p. 142)

Random House, Inc. New York, New York, USA. 1964

**Gäbor, Dennis** 1900–79

Hungarian-English physicist

Science has never quite given man what he desired, not even in applied science. Man dreamt of wings; science gave him an easy chair which flies through the air.

*Inventing the Future*

The Future of the Uncommon Man (p. 162)

Secker & Warburg, London, England. 1963

**Garrod, Archibald** 1857–1936

English physician

Science is not, as so many seem to think, something apart, which has to do with telescopes, retorts, and test tubes, and especially with nasty smells, but it is a way of searching out by observation, trial, and classification; whether the phenomenon investigated be the outcome of human activities, or of the more direct workings of nature's laws. Its methods admit of nothing untidy or slipshod, its keynote is accuracy and its goal is truth.

In Alexander G. Bearn

*Archibald Garrod and the Individuality of Man*

Chapter 8 (p. 97)

Clarendon Press, Oxford, England. 1993

**Gerould, Katherine Fullerton** 1879–1944

American writer

Science has done great things for us; it has also pushed us hopelessly back. For, not content with filling its own place, it has tried to supersede everything else. It has challenged the super-eminence of religion; it has turned all philosophy out of doors except that which clings to its skirts; it has thrown contempt on all learning that does not depend on it; and it has bribed the skeptics by giving us immense material comforts.

*Modes and Morals*

The Extirpation of Culture (p. 85)

Charles Scribner's Sons, New York, New York, USA. 1920

**Gideonse, H. D.**

No biographical data available

Science, as usually taught to liberal arts students, emphasizes results rather than method, and tries to teach technique rather than to give insight into and understanding of the scientific habit of thought. What is needed, however, is not a dose of metaphysics but a truly humanistic teaching of science.

In Lloyd William Taylor

*Physics: The Pioneer Science* (Volume 2)

Chapter 36 (p. 529)

Houghton Mifflin Company, Boston, Massachusetts, USA. 1941

**Ginger, Ray** 1924–75

American historian

Science has explained everything it could explain, and it will continue to do so. Every effort to bar science from some areas on the ground that they were not susceptible to empirical investigation has had the effect of inhibiting science in other areas also. Man has progressed by exercising a humble confidence in the might of his own

mind, not by throwing up his hands and shrugging his shoulders.

*Six Days or Forever: Tennessee v. John Thomas Scopes*  
Chapter 11, Section III (p. 231)  
Quadrangle Books. Chicago, Illinois, USA. 1958

**Gissing, George** 1857–1903  
English novelist

Science brings forth its newest discoveries in earth and heaven; it speaks to the philosopher in his solitude, and to the crowd in the market-place.

*The Private Papers of Henry Ryecroft* (p. 59)  
E.P. Dutton & Co. New York, New York, USA. 1903

Somebody has been making a speech, reported at a couple of columns' length in the paper. As I glance down the waste of print, one word catches my eye again and again. It's all about "science – and therefore doesn't concern me. I wonder whether there are many men who have the same feeling with regard to "science" as I have?

*The Private Papers of Henry Ryecroft* (p. 252)  
E.P. Dutton & Co. New York, New York, USA. 1903

It [science] is something more than a prejudice; often it takes the form of a dread, almost a terror. Even those branches of science which are concerned with things that interest me – which deal with plants and animals and the heaven of stars – even these I cannot contemplate without uneasiness, a spiritual disaffection; new discoveries, new theories, however they engage my intelligence, soon weary me, and in some way depress.

*The Private Papers of Henry Ryecroft* (p. 252)  
E.P. Dutton & Co. New York, New York, USA. 1903

Oh, the generous hopes and aspirations of forty years ago! Science, then, was seen as the deliverer; only a few could prophesy its tyranny, could foresee that it would revive old evils and trample on the promises of its beginning. This is the course of things; we must accept it. But it is some comfort to me that I – poor little mortal – have had no part in bringing the tyrant to his throne.

*The Private Papers of Henry Ryecroft* (p. 254)  
E.P. Dutton & Co. New York, New York, USA. 1903

**Glass, H. Bentley** 1906–2005  
American geneticist

...the general citizen of his country, the man in the street, must learn what science is, not just what it can bring about. Surely this is our primary task. If we fail in this, then within a brief period of years we may expect either nuclear devastation or worldwide tyranny. It is not safe for apes to play with atoms. Neither can men who have relinquished their birthright of scientific knowledge expect to rule themselves.

In Hilary J. Deason  
*A Guide to Science Reading*  
Revolution in Biology (pp. 25–26)  
The New American Library. New York, New York, USA. 1966

**Goddard, Robert H.** 1882–1945  
American physicist

Each must remember that no one can predict to what heights of wealth, fame, or usefulness he may rise until he has honestly endeavored, and he should derive courage from the fact that all sciences have been, at some time, in the same condition as he, and that it has often proved true that the dream of yesterday is the hope of today and the reality of tomorrow.

*The Papers of Robert H. Goddard* (Volume 1)  
On Taking Things for Granted  
Graduation oration (p. 66)  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1970

**Gore, George** 1826–1909  
English electrochemist

Science, more than anything else, causes us to be obedient to law. It is recognition of law which distinguishes science from superstition, intelligent men from savages.

*The Art of Scientific Discovery*  
Part I, Chapter I (p. 5)  
Longmans, Green & Co. London, England. 1878

**Gorky, Maxim** 1868–1938  
Russian writer

Humanity has no force more powerful and victorious than science.

Compiled by V.V. Vorontsov  
*Words of the Wise: A Book of Russian Quotations*  
Translated by Vic Schneierson  
Progress Publishers. Moscow, Russia. 1979

**Gortner, Ross Aiken**  
No biographical data available

Science will stagnate only when all will agree that only one interpretation can be drawn from a given series of data.

*Selected Topics in Colloid Chemistry with Especial Reference to Biochemical Problems*  
Preface (p. vii)  
Cornell University Press. Ithaca, New York, USA. 1937

**Goss, John**  
No biographical data available

O Science, thou thought-clad leader of the company of pure and great souls that toil for their race and love their kind, measurer of the depths of earth and the recesses of heaven, apostle of civilization, handmaid of religion, teacher of human equality and human right, perpetual witness for the divine wisdom, be ever, am now, the great minister of peace! Let thy starry brow and benign front still gleam in the van of progress, brighter than the sword of the conqueror, and welcome as the light of heaven.

*Forensic Eloquence*  
Chapter III (pp. 107–108)  
Pacific Press. Oakland, California, USA. 1891

**Gould, Laurence M.** 1896–1995  
American polar explorer and geologist

Today, there is no other influence comparable with science in changing the foundations, indeed the very character of our lives. Science and its products determine our economy, dominate our industry, affect our health and welfare, alter our relations to all other nations, and determine the conditions of war and peace. Everyone who breathes is affected, and cannot remain impervious to them.

Science and the Culture of Our Times  
*UNESCO Courier*, February, 1968 (p. 4)

**Gould, Stephen Jay** 1941–2002  
American paleontologist and evolutionary biologist

Science does progress toward more adequate understanding of the empirical world, but no pristine, objective reality lies “out there” for us to capture as our technologies improve and our concepts mature.

*Dinosaur in a Haystack: Reflections in Natural History*  
Part Four, Chapter 16 (p. 214)  
Random House, Inc. New York, New York, USA. 1995

Humanity has in course of time had to endure from the hand of science two great outrages upon its naive self-love. The first was when it realized that our earth was not the center of the universe, but only a speck in a world-system of a magnitude hardly conceivable.... The second was when biological research robbed man of his particular privilege of having been specially created and relegated him to a descent from the animal world.

Chapter 1 (p. 1)  
Harvard University Press. Cambridge, Massachusetts, USA. 1987

**Grassé, Pierre P.** 1895–1985  
French zoologist

There is no law against day dreaming, but science must not indulge in it.

*Evolution of Living Organisms: Evidence for a New Theory of Transformation*  
Chapter IV (p. 104)  
Academic Press. New York, New York, USA. 1977

**Graubard, Stephen R.**  
No biographical data available

To say that science is a mystery for great numbers – that it appears to be largely inaccessible even to men and women who believe themselves educated – and that this condition is scarcely improving, is now commonly accepted.

Preface to the Issue: “Scientific Literacy”  
*Daedalus*, Volume 112, Number 2, Spring, 1983 (p. v)

**Gray, Thomas** 1716–71  
English poet

Here rests his head upon the lap of Earth,  
A youth to fortune and to fame unknown.  
Fair Science frown's not on his humble birth,  
And Melancholy mark's him for her own.  
*The Complete Poetical Works of Gray, Beattie, Blair, Collins, Thomson, and Kirke White*  
Elegy Written in a Country Churchyard, The Epitaph, Stanza 1  
J. Blackwood. London, England. 1800

**Gregory, Sir Richard Arman** 1864–1952  
British science writer and journalist

...science is not to be measured by practical service alone, though it may contribute to material prosperity: it is an intellectual outlook, a standard of truth and a gospel of light.

*Discovery; or, The Spirit and Service of Science*  
Preface (p. vi)  
Macmillan & Company Ltd. London, England. 1918

...I hope that my children, at least, if not I myself, will see the day, when ignorance of the primary laws and facts of science will be looked on as a defect, only second to ignorance of the primary laws of religion and morality.

*Discovery; or, The Spirit and Service of Science*  
Chapter V (p. 92)  
Macmillan & Company Ltd. London, England. 1918

Science advances by opening completely new fields of knowledge upon which the literary man or investigator may exercise their intellectual activities, and the directions in which these domains are to be found are rarely indicated with success in romantic or in scientific literature.

*Discovery; or, The Spirit and Service of Science*  
Chapter VI (p. 164)  
Macmillan & Company Ltd. London, England. 1918

When science permits itself to be controlled by the spirit of profitable application it becomes merely the galley-slave of short-sighted commerce.

*The Message of Science*  
*Science*, Volume LIV, Number 1402, November, 1921 (p. 448)

Like the gifts of God, those of science can be made either a blessing or a curse, to glorify the human race or to destroy it; and upon civilized man himself rests the decision as to the course to follow. With science as an ally, and the citadels of ignorance and self as the objective, he can transform the world, but if he neglects the guidance which knowledge can give, and prefers to be led by the phrases of rhetoricians, this planet will become a place of dust and ashes.

*The Message of Science*  
*Science*, Volume LIV, Number 1402, November, 1921 (p. 448)

**Grove, Sir William** 1811–96  
English chemist

For my part I must say that science to me generally ceases to be interesting as it becomes useful.

In H.B.G. Casimir

*Haphazard Reality: Half a Century of Science*

Chapter 8 (p. 226)

Harper & Row, Publishers. New York, New York, USA. 1983

It would be vain to attempt specifically to predict what may be the effect of Photography on future generations. A Process by which the most transient actions are rendered permanent, by which facts write their own annals in a language that can never be obsolete, forming documents which prove themselves, – must interweave itself not only with science but with history and legislature.

Lecture

Progress of Physical Science Since the Opening of the London Institution (January 19, 1842)

### **Gruenberg, Benjamin C.**

No biographical data available

To vast numbers of men and women science appears as something altogether too remote from their interests or capacities to justify even a glance or a hope of grasping. It is something for the “highbrows” or wizards.

*Science and the Public Mind*

Chapter XIV (p. 152)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1935

### **Guye, Charles Eugene**

Swiss scientist

It is because we do not possess “science” that we have “sciences.”

*Physico-Chemical Evolution* (p. 8)

Methuen & Company Ltd. London, England. 1925

### **Haggard, Howard W.**

Physician

There is another class of explorers whose exploits are rarely heralded by the waving of flags, to whom few monuments are erected, and whose names find small place in world history. They are the explorers in science. They change no maps, but they change our ways of living.

In Bernard Jaffe

*New World of Chemistry*

Chapter 10 (p. 113)

Silver, Burdett & Company. New York, New York, USA. 1935

### **Haldane, John Burdon Sanderson** 1892–1964

English biologist

Science is vastly more stimulating to the imagination than are the classics.

*Daedalu or Science and the Future*

Paper read to the Heretics, Cambridge, February 4, 1923

### **Hall, Alfred Rupert** 1920–

English historian of science

### **Hall, Marie Boas** 1919–

English historian of science

It is hardly too much to say that the Middle Ages studied science as though it were theology and Aristotle’s Physics as though it were the Bible.

*A Brief History of Science*

Chapter 6 (p. 78)

Iowa State University Press. Ames, Iowa, USA. 1988

### **Hamilton, Sir William Rowan** 1805–65

Anglo-Irish mathematician, physicist, and astronomer

...I think there is nothing that so exalts the mind, or so raises one man above his fellow-creatures, as the researches of Science. Who would not rather have the fame of Archimedes than that of his conqueror Marcellus, or than any of those learned commentators on the Classics, whose highest ambition was to be familiar with the thoughts of other men?

*Life of Sir William Rowan Hamilton* (Volume 1)

Letter from W.R. Hamilton to his Aunt Mary Hutton (p. 110)

Hodges, Figgis & Co. Dublin, Ireland. 1882

The design of physical science in general is to record and explain appearances; to classify and generalise facts; to discover the secret unity and constancy of nature, amid its seeming diversity and mutability; to construct, at least in part, a history of the outward world, adapted to the understanding of man; to account for past and to foresee future phenomena; to learn the language and interpret the oracles of the universe.

In Robert Perceval Graves

*Life of Sir William Rowan Hamilton*

Chapter XI (p. 501)

Hodges, Figgis & Co. Dublin, Ireland. 1882

### **Hammond, George S.** 1921–2005

American chemist

Through science, we have an automatic and absolutely necessary vehicle for outreach which joins the people of the world in a common enterprise perhaps unparalleled in its self-sustaining nature by any of the other many and important common enterprises of humankind.

*Science: A Resource for Humankind*

Welcome (p. 3)

National Academy of Sciences. Washington, D.C. October 10–14, 1976

### **Handler, Philip** 1917–81

No biographical data available

My own belief is that science remains the most powerful tool we have yet generated to apply leverage for our future. It is the instrument which is most useful for guiding our own destinies, for assuring the condition of man in the years to come. I have much to hope that we will not abandon that tool, leaving us to our own brute devices.

*Hearings*

1971 National Science Foundation Authorization, Subcommittee on Science, Research and Development, House Committee on Science and Astronautics, 91st Congress, 2nd Session 1970 (p. 16)

**Hanotaux, Gabriel** 1853–1944  
French statesman

Science begins by giving names; it then reasons on those names. It shuts itself up in abstractions as in a dark room; sometimes a sudden perception, like a flash of lightning, discovers a corner of reality; then Night, darker than ever, resumes its sway.

*Contemporary France* (Volume 2)  
Chapter XII, Section III (p. 641)  
Archibald Constable & Co. London, England. 1905

**Hardy, G. H. (Godfrey Harold)** 1877–1947  
English pure mathematician

...a science ... may be said to be ‘useful’ if its development increases, even indirectly, the material well-being and comfort of men...

*A Mathematician’s Apology*  
Section 19 (pp. 115–116)  
Cambridge University Press. Cambridge, England. 1967

**Hardy, Thomas** 1840–1928  
English poet and regional novelist

Well: what we gain by science is, after all, sadness, as the Preacher saith. The more we know of the laws & nature of the Universe the more ghastly a business we perceive it all to be – & the non-necessity of it.

In Richard Little Purdy and Michael Millgate (eds.)  
*The Collected Letters of Thomas Hardy* (Volume 3)  
Letter, February 27, 1902  
Clarendon Press. Oxford, England. 1978

**Harrison, Jane** 1850–1928  
English classical scholar

Science has given us back something strangely like a World-Soul...

*Ancient Art and Ritual*  
Chapter VII (p. 238)  
Henry H. Holt. New York, New York, USA. 2002

**Harvey, Moses** 1820–1901  
Irish clergyman, essayist, and naturalist

It [science] is a sealed volume: and only by patient study, and humble labour can the mystic seals be unloosed. The face of nature is veiled, and it is for man, who had been so wondrously endowed for the task by his Creator, reverently yet fearlessly to lift the veil, and gaze into that awful but lovely face which dimly yet truly mirrors the Omnipotent One.

Science and Religion  
*The Maritime Monthly*, Volume II, Number 5, November, 1873 (p. 478)

It [science] has largely dispersed that dread of nature, which is the offspring of ignorance, and the fruitful parent of superstition with its progeny of woes. It has taught man to look fearlessly into the face of nature, and

see there a divine order and beauty, not the features of a ferocious monster, “red in tooth and claw.”

Science and Religion  
*The Maritime Monthly*, Volume II, November, 1873 (p. 479)

We hail Science as man’s truest friend and noblest helper.

Science and Religion  
*The Maritime Monthly*, Volume II, November, 1873 (p. 479)

**Harvey, William** 1578–1657  
English physician

Although there is but one road to science, that, to wit, in which we proceed from things more known to things less known, from matters more manifest to matters more obscure; and universals are principally known to us, science bringing by reasoning from universals to particulars; still the comprehension of universals by the understanding is based upon the perception of individual things by the senses.

In *Great Books of the Western World* (Volume 28)  
*Anatomical Exercises on the Generation of Animals*  
Of the Manner and Order of Acquiring Knowledge (p. 332)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Havel, Václav** 1936–  
Czech dramatist and essayist

Modern science abolishes as mere fiction the innermost foundations of our natural world: it kills God and takes his place on the vacant throne so henceforth it would be science that would hold the order of being in its hand as its sole legitimate guardian and so be the legitimate arbiter of all relevant truth. People thought they could explain and conquer nature – yet the outcome is that they destroyed it and disinherited themselves from it.

In L. Wolpert  
*The Unnatural Nature of Science*  
Introduction (p. ix)  
Harvard University Press. Cambridge, Massachusetts, USA. 1992

**Hawking, Stephen William** 1942–  
English theoretical physicist

The whole history of science has been the gradual realization that events do not happen in an arbitrary manner, but that they reflect a certain underlying order, which may or may not be divinely inspired.

*A Brief History of Time: From the Big Bang to Black Holes*  
Chapter 8 (p. 122)  
Bantam Books. Toronto, Ontario, Canada. 1988

In effect, we have redefined the task of science to be the discovery of laws that will enable us to predict events up to the limits set by the uncertainty principle.

*A Brief History of Time: From the Big Bang to Black Holes*  
Chapter 11 (p. 173)  
Bantam Books. Toronto, Ontario, Canada. 1988

**Hazen, Robert M.**

No biographical data available

**Trefil, James** 1938–

American physicist

Science is not the only way, nor always the best way, to gain an understanding of the world in which we find ourselves.... You don't need calculus to tell you whether a symphony or a poem has meaning for you. Science complements these other ways of knowing.

*Science Matters* (p. 2)

Publisher undetermined

**Hazlitt, William Carew** 1834–1913

English bibliographer

The origin of all science is in the desire to know causes; and the origin of all false science and imposture is in the desire to accept false causes rather than none; or, which is the same thing, in the unwillingness to acknowledge our own ignorance.

*The Atlas*

February 15, 1829

Burke and the Edinburgh Phrenologists

This article is unsigned in the atlas but appears in P.P. Howe's *New Writings* by William Hazlitt, 1925

**Heidel, W. A.**

No biographical data available

It is an unwarranted assumption that ancient science differed in principle at any point from that of today.

In Julius W. Friend and James Feibleman

*What Science Really Means*

Chapter II (p. 26)

George Allen & Unwin Ltd. London, England. 1937

**Heinlein, Robert A.** 1907–88

American science fiction writer

If it can't be expressed in figures, it is not science; it is opinion.

*Time Enough for Love*

Intermission (p. 257)

G.P. Putnam's Sons. New York, New York, USA. 1973

The difference between science and the fuzzy subjects is that science requires reasoning, while those other subjects merely require scholarship.

*Time Enough for Love*

Second Intermission (p. 366)

G.P. Putnam's Sons. New York, New York, USA. 1973

**Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

The assumption [is] that in the end it will always be possible to understand nature, even in every new field of experience, but that we may make no a priori assumptions about the meaning of the word "understand."

In Heinrich O. Proskauer

*The Rediscovery of Color: Goethe versus Newton Today*

Preface (p. ix)

Anthroposophic Press. Spring Valley, New York, USA. 1986

Science no longer confronts nature as an objective observer, but sees itself as an actor in this interplay between man and nature. The scientific method of analysing, explaining, and classifying has become conscious of its limitations.... Method and object can no longer be separated.

*The Physicist's Conception of Nature*

Chapter I (p. 29)

Greenwood Press, Publishers. Westport, Connecticut, USA. 1958

Almost every progress in science has been paid by a sacrifice, for almost every new intellectual achievement previous positions and conceptions had to be given up. Thus, in a way, the increase of knowledge and insight diminishes continually the scientist's claim to "understand" nature.

In A. Sarlemijn and M.J. Sparnaay (eds.)

*Physics in the Making: Essays on Developments in 20th Century Physics: In Honour of H.B.G. Casimir on the Occasion of His 80th Birthday*

Chapter I (p. 9)

North-Holland Publishing Company. Amsterdam, Netherlands. 1989

In science...it is impossible to open up new territory unless one is prepared to leave the safe anchorage of established doctrine and run the risk of a hazardous leap forward. With his relativity theory, Einstein had abandoned the concept of simultaneity, which was part of the solid ground of traditional physics, and, in so doing, outraged many leading physicists and philosophers and turned them into bitter opponents. In general, scientific progress calls for no more than the absorption and elaboration of new ideas – and this is a call most scientists are happy to heed.

*Physics and Beyond: Encounters and Conversations*

Chapter 6 (p. 70)

Harper & Row, Publishers. New York, New York, USA. 1971

**Henderson, Lawrence** 1878–1942

American biochemist

Science has finally put the old teleology to death. Its dismembered spirit, freed from vitalism and all material ties, immortal, alone lives on, and from such a ghost, science has nothing to fear.

*The Fitness of the Environment: An Inquiry into the Biological Significance of the Properties of Matter*

Chapter VIII, Section III, B (p. 311)

The Macmillan Company. New York, New York, USA. 1913

**Henry Frankenstein (Fictional character)**

This isn't science! It's more like black magic.

*The Bride of Frankenstein*

Film (1935)

**Henry, Joseph** 1797–1878  
Scottish-born American scientist

...narrow minds think nothing of importance but their own favorite pursuit, but liberal views exclude no branch of science or literature...

Inscription on the National Museum of American History, Washington, D.C.

### Henry Rycroft (Fictional character)

I hate and fear “science” because of my conviction that, for long to come if not forever, it will be the remorseless enemy of mankind. I see it destroying all simplicity and gentleness of life, all the beauty of the world; I see it restoring barbarism under a mask of civilization; I see it darkening men’s minds and hardening their hearts; I see it bringing a time of vast conflicts, which will pale into insignificance “the thousand wars of old,” and, as likely as not, will whelm all the laborious advances of mankind in blood-drenched chaos.

In George Gissing

*The Private Papers of Henry Rycroft*

Winter (p. 253)

E.P. Dutton & Co. New York, New York, USA. 1903

**Herschel, Sir John Frederick William** 1792–1871  
English astronomer and chemist

Every student who enters upon a scientific pursuit, especially if at a somewhat advanced period of life, will find not only that he has much to learn, but much also to unlearn.

*Outlines of Astronomy* (2nd edition)

Part I, Introduction (p. 1)

Longman, Brown, Green & Longmans. London, England. 1849

...if science may be vilified by representing it as opposed to religion, or trammelled by mistaken notions of the danger of free enquiry, there is yet another mode by which it may be degraded from its native dignity, and that is by placing it in the light of a mere appendage to and caterer for our pampered appetites.

*A Preliminary Discourse on the Study of Natural Philosophy*

Part I, Chapter I, Section 7 (p. 10)

Printed for Longman, Rees, Orme, Brown & Green. London, England. 1831

**Herzen, Aleksandr** 1812–70  
Russian political author

Superficial dilettantism and the narrow specialization of the scientists ex officio are the two banks of science which prevent the fertilizing waters of this Nile from overflowing.

*Selected Philosophical Works*

Dilettantism in Science (p. 52)

Foreign Languages Publishing House. Moscow, Russia. 1956

Science, in the best sense of the word, shall come to be accessible to the people, and when it does it shall claim a voice in all practical matters.

*Selected Philosophical Works*

Dilettantism in Science (p. 69)

Foreign Languages Publishing House. Moscow, Russia. 1956

### Hill, Alexander

No biographical data available

[Science ] has no traffic with the unknowable; nor can it cross the border-line which separates the world of the senses from the world of consciousness, or barter its facts, gathered from the external universe, for the equally real facts which the individual learns by self-examination. further than knowledge.

*Introduction to Science*

Chapter I (p. 11)

The Macmillan Co. New York, New York, USA. 1900

Proficiency in science is shown by a masterly skill in cross-examining nature; and, as every lawyer knows, no case is proved as long as any antagonistic fact, however trivial, cannot be explained away.

*Introduction to Science*

Chapter I (p. 22)

The Macmillan Co. New York, New York, USA. 1900

### Hilts, Philip

No biographical data available

In all human activities, it is not ideas of machines that dominate; it is people. I have heard people speak of “the effect of personality on science.” But this is a backward thought. Rather, we should talk about the effect of science on personalities. Science is not the dispassionate analysis of impartial data. It is the human, and thus passionate, exercise of skill and sense on such data.

*Scientific Temperaments: Three Lives in Contemporary Science*

Preface (pp. 11–12)

Simon & Schuster. New York, New York, USA. 1982

Science is not an exercise in which objectivity is prized.

*Scientific Temperaments: Three Lives in Contemporary Science*

Preface (pp. 11–12)

Simon & Schuster. New York, New York, USA. 1982

**Hinshelwood, Sir Cyril** 1897–1967  
English chemist

Science is not the mere collection of facts, which are infinitely numerous and mostly uninteresting, but the attempt by the human mind to order these facts into satisfying patterns.

*On the Structure of Physical Chemistry*

Clarendon Press. Oxford, England. 1951

### Hinton, James

No biographical data available

Science, in a word, can teach us – it is her loftiest function and her greatest boon – not only respecting nature, but respecting ourselves, and so can enable us to look

with purged eyes on objects which only to our blinded senses can seem trivial.

*Life in Nature*

Introduction (p. xx)

Smith, Elder & Co. London, England. 1875

### **Hippocrates** 460 BCE–377 BCE

Greek physician

There are, indeed, two things, knowledge and opinion, of which the one makes its possessor really to know, the other to be ignorant.

In *Great Books of the Western World* (Volume 10)

*Hippocratic Writings*

The Law, 4 (p. 144)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### **Hoagland, Hudson** 1899–1982

American physiologist

The fictions – that is, the hypotheses and theories – of science are not sacrosanct.

Science and the New Humanism

*Science*, Volume 143, Number 3062, 10 January, 1964 (p. 112)

### **Hobbes, Thomas** 1588–1679

English philosopher and political theorist

As much experience, is “prudence;” so, is much science “sapience.”

*Leviathan, Or, The Matter, Form, and Power of a Commonwealth,*

*Ecclesiastical and Civil* (2nd edition)

Chapter V (p. 30)

George Routledge & Sons. London, England. 1886

...yet they that have no “science,” are in better and nobler condition, with their natural prudence, than men, that by misreasoning, or by trusting them that reason wrong, fall upon false and absurd general rules. For ignorance of causes, and of rules, does not set men so far out of their way, as relying on false rules, and taking for causes of what they aspire to, those that are not so, but rather causes of the contrary.

*Leviathan, Or, The Matter, Form, and Power of a Commonwealth,*

*Ecclesiastical and Civil* (2nd edition)

Chapter V (p. 30)

George Routledge & Sons. London, England. 1886

Science, like dress, has its fashions, and the changes in the one are almost as sudden and radical as in the other. Many a time has a theory become old and given place to a newer sensation, only to be later rehabilitated after its earlier service has been forgotten.

*Earthquakes: An Introduction to Seismic Geology*

Chapter I (p. 13)

D. Appleton & Co. New York, New York, USA. 1907

### **Hocking, R.**

No biographical data available

It is an oversimplification to compare the impersonal aspect of science with the impersonal aspects of industrial

society, and to deplore both in one breath. The former is an achievement of self-forgetful concentration upon truths about nature. The latter are deplorable to the extent that they exhibit crude power of men over men. By contrast, the selflessness of the scientific calling does silent honor to personal existence.

In T.J.J. Altizer, William A. Beardslee, and J. Harvey Young (eds.)

*Truth, Myth, and Symbol*

The Problem of Truth (p. 5)

Prentice-Hall, Inc. Englewood Cliffs, New Jersey, USA. 1962

### **Hodgson, Leonard** 1889–1969

English theologian

...science can only deal with what is, and can say nothing about what ought to be, which is the concern of ethics; science can tell us about means to ends, but not about what the ends should be.

*Theology in an Age of Science*

An Inaugural Lecture, November 3, 1944 (p. 9)

The Clarendon Press. Oxford, England. 1944

### **Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

Go on, fair science; soon to thee

Shall nature yield he idle boast;

He vulgar fingers formed a tree,

But thou hast trained it to a post.

*The Complete Poetical Works of Oliver Wendell Holmes*

The Meeting of the Dryads (p. 412)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1899

Science represents the thought of God discovered by man.

*The Writings of Oliver Wendell Holmes*

*Pages from an Old Volume of Life*

Chapter X (p. 331)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1891

### **Holton, Gerald James** 1922–

Research professor of physics and science history

Science has always had...a metaphoric function – that is, it generates an important part of a culture’s symbolic vocabulary and provides some of the metaphysical bases and philosophical orientations of our ideology. As a consequence the methods of argument of science, its conceptions and its models, have permeated first the intellectual life of the time, then the tenets and usages of everyday life. All philosophies share with science the need to work with concepts such as space, time, quantity, matter, order, law, causality, verification, reality.

*Einstein, History, and Other Passions*

The Public Image of Science (p. 43)

Harvard University Press. Cambridge, Massachusetts, USA. 2000

### **Holton, Gerald** 1922–

Research professor of physics and science history

**Roller, Duane H. D.** ?–1994

Science historian

...science has grown almost more by what it has learned to ignore than by what it has had to take into account.

*Foundations of Modern Physical Science*

Chapter 2 (p. 25)

Addison-Wesley Publishing Company, Reading, Massachusetts, USA. 1950

**Horgan, J.**

No biographical data available

...to pursue science in a speculative, postempirical mode: that I call ironic science. Ironic science resembles literary criticism in that it offers points of view, opinions, which are, at best, interesting, which provoke further comment. But it does not converge on the truth. It cannot achieve empirically verifiable surprises that force scientists to make substantial revisions in their basic description of reality.

*The End of Science: Facing the Limits of Knowledge in the Twilight of the Scientific Age*

Introduction (p. 7)

Addison-Wesley Publishing Company, Reading, Massachusetts, USA. 1996

**Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

Science progresses by extending the territory over which its theories hold good...

*Ten Faces of the Universe*

The Origin of the Universe (p. 105)

W.H. Freeman & Company, San Francisco, California, USA. 1977

**Hrdlicka, Ales** 1869–1943

Czech anthropologist

The phenomena of the universe, brought within the range of human understanding and preserved in memory or writing, constitute knowledge; and systematic search for knowledge, on the basis of the highest standards of learning, is science.

Physical Anthropology and Its Aims

*Science*, New Series, Volume 28, Number 706, July 10, 1908

**Hubbard, Elbert** 1856–1915

American editor, publisher, and author

SCIENCE: (1) The knowledge of the common people classified and carried one step further. (2) Accurate organized knowledge grounded on fact. (3) Classified superstition.

*The Roycroft Dictionary Concocted by Ali Baba and the Bunch on Rainy Days* (p. 134)

The Roycrofters, East Aurora, New York, USA. 1914

**Hubbard, Gardiner G.** 1822–97

American lawyer and educator

That which was unknown, science hath revealed.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1893*

Relations of Air and Water to Temperature and Life (p. 265)

Government Printing Office, Washington, D.C. 1894

**Hubbard, Ruth** 1924–

American biologist

To overturn orthodoxy is no easier in science than in philosophy, religion, economics, or any of the other disciplines through which we try to comprehend the world and the society in which we live.

*Women Look at Biology Looking at Women*

Have Only Men Evolved? (p. 10)

Schenkman Publishing Company, Cambridge, USA. 1979

**Hubble, Edwin Powell** 1889–1953

American astronomer

There is a unity in science, connecting all its various fields. Men attempt to understand the universe, and they will follow clues which excite their curiosity wherever the clues may lead.

*The Nature of Science and Other Lectures*

Part I. The Nature of Science (p. 6)

The Huntington Library, San Marino, California, USA. 1954

**Huggins, Sir William** 1824–1910

English astronomer

Scienza vince [science conquers], – whether it be on the field of battle, on the waves of the ocean, amid the din and smoke of the workshop, or on the broad acres under the light of heaven; and assuredly, in the future, even more than in the past, not only the prosperity, but even the existence of the Empire will be found to depend upon the “improvement of Natural Knowledge.” – that is, upon the more complete application of scientific knowledge and methods to every department of industrial and national activity.

*The Royal Society; Or, Science in the State and in the Schools*

Science in Education (pp. 116–117)

Methuen & Co. London, England. 1906

**Hugo, Victor** 1802–85

French author, lyric poet, and dramatist

Science says the first word on everything, and the last word on nothing.

*Victor Hugo's Intellectual Autobiography*

Things of the Infinite

Funk & Wagnalls, New York, New York, USA. 1907

Science has but the right to put a visa on facts; she should verify and distinguish.

Translated by Melville Best Anderson

*William Shakespeare*

Part I, Book I, Chapter V (p. 38)

A.C. McClurg & Co. Chicago, Illinois, USA. 1887

The unexpected ought always to be expected by Science. Her duty is to stop it in its course and search it, rejecting the chimerical, establishing the real.

Translated by Melville Best Anderson

*William Shakespeare*

Part I, Book I, Chapter V (p. 38)

A.C. McClurg & Co. Chicago, Illinois, USA. 1887

In Science, all tends to stir, to change, to form fresh surfaces. All denies, destroys, creates, replaces all. What was ground yesterday is put into the hopper again today. The colossal machine, Science, never rests. It is never satisfied; it is insatiable for improvement, of which the absolute knows nothing.

Translated by Melville Best Anderson

*William Shakespeare*

Part Second, Book I, Chapter IV (p. 105)

A.C. McClurg & Co. Chicago, Illinois, USA. 1887

...Claude – saddened, his faith in human affection shaken – threw himself with frenzied ardour into the arms of science, that sister who at least never laughs at you in derision, and who always repays you, albeit at times in somewhat light coin, for the care you have lavished on her.

Translated by Jessie Haynes

*Notre Dame de Paris*

Book IV, Chapter V (p. 156)

P.F. Collier & Son. New York, New York, USA. 1902

Oh, how hollow does science sound when a head full of passion strikes against it in despair!

Translated by Jessie Haynes

*Notre Dame de Paris*

Book VIII, Chapter III (p. 327)

P.F. Collier & Son. New York, New York, USA. 1902

### **Huizinga, Johan** 1872–1945

Dutch historian

Science, unguided by a higher abstract principle, freely hands over its secrets to a vastly developed and commercially inspired technology, and the latter, even less restrained by a supreme culture saving principle, with the means of science creates all the instruments of power demanded from it by the organization of Might.

Translated by J.H. Huizinga

*In the Shadow of Tomorrow*

Chapter 9 (p. 93)

W.W. Norton & Company, Inc. New York, New York, USA. 1936

### **Huxley, Aldous** 1894–1963

English writer and critic

We are living now, not in the delicious intoxication induced by the early successes of science, but in a rather grisly morning-after, when it has become apparent that what triumphant science has done hitherto is to improve the means for achieving unimproved or actually deteriorated ends.

*Ends and Means*

Chapter XIV (p. 268)

Chatto & Windus. London, England. 1938

Science is dangerous; we have to keep it most carefully chained and muzzled.

*Brave New World*

Chapter Sixteen (p. 270)

Harper & Brothers. New York, New York, USA. 1950

For Science in its totality, the ultimate goal is the creation of a monistic system in which – on the symbolic level and in terms of the inferred components of invisibility and intangibly fine structure – the world's enormous multiplicity is reduced to something like unity, and the endless successions of unique events of a great many different kinds get tidied and simplified into a single rational order. Whether this goal will ever be reached remains to be seen. Meanwhile we have the various sciences, each with its own system coordinating concepts, its own criterion of explanation.

*Literature and Science*

Chapter 3 (p. 9)

Harper & Row, Publishers. New York, New York, USA. 1963

Science is a matter of disinterested observation, patient ratiocination within some system of logically correlated concepts. In real-life conflicts between reason and passion the issue is uncertain. Passion and prejudice are always able to mobilize their forces more rapidly and press the attack with greater fury; but in the long run (and often, of course, too late) enlightened self-interest may rouse itself, launch a counterattack and win the day for reason.

*Literature and Science*

Chapter 23 (p. 68)

Harper & Row, Publishers. New York, New York, USA. 1963

To the twentieth century man of letters science offers a treasure of newly discovered facts and tentative hypotheses. If he accepts this gift and if, above all, he is sufficiently talented and resourceful to be able to transform the new materials into works of literary art, the twentieth century man of letters will be able to treat the age-old, and perennially relevant, theme of human destiny with a depth of understanding, a width of reference of which, before the rise of science, his predecessors (through no fault of their own, no defect of genius) were incapable.

*Literature and Science*

Chapter 29 (p. 87)

Harper & Row, Publishers. New York, New York, USA. 1963

Science sometimes builds new bridges between universes of discourse and experience hitherto regarded as separate and heterogeneous. But science also breaks down old bridges and opens gulfs between universes that, traditionally, had been connected.

*Literature and Science*

Chapter 37 (p. 111)

Harper & Row, Publishers. New York, New York, USA. 1963

...science has "explained" nothing; the more we know the more fantastic the world becomes and the profounder the surrounding darkness.

*Along the Road*

Part II. Views of Holland (p. 108)

Nan'-do. Tokyo, Japan. 1954

All science is based upon an act of faith – faith in the validity of the mind's logical processes, faith in the ultimate explicability of the world, faith that the laws of thought are laws of things.

*Ends and Means*

Chapter XIV (p. 258)

Chatto & Windus. London, England. 1938

**Huxley, Julian** 1887–1975

English biologist, philosopher, and author

Science...has not only turned her face outwards from man, but stripped him of all the robes of his divinity, turned him out of the palace that he had so laboriously built in the center of the world, and left him in rags, pitifully insignificant and suddenly transported to an outlying corner of the cosmos.

Will Science Destroy Religion

*Harper's Monthly Magazine*, April, 1926 (p. 535)

Science, like Empires, have their rise and their time of flourishing, though not their decay.

*What Dare I Think?: The Challenge of Modern Science to Human Action and Belief, Including the Henry La Barre Jayne Foundation Lectures*

Chapter I (p. 1)

Harper & Brothers. New York, New York, USA. 1931

**Huxley, Thomas Henry** 1825–95

English biologist

You have no idea of the intrigues that go on in this blessed world of science. Science is, I fear, no purer than any other region of human activity; though it should be. Merit alone is very little good; it must be backed by tact and knowledge of the world to do very much.

In Leonard Huxley

*Life and Letters of Thomas Henry Huxley* (Volume 1)

Chapter VII

Letter to his sister, March 5, 1852 (p. 105)

D. Appleton & Company. New York, New York, USA. 1901

Science in England does everything – but pay. You may earn praise but not pudding.

In Leonard Huxley

*Life and Letters of Thomas Henry Huxley* (Volume 1)

Chapter VII

Letter to his sister, April 17, 1852 (p. 108)

D. Appleton & Company. New York, New York, USA. 1901

Science reckons many prophets, but there is not even a promise of a Messiah.

In Leonard Huxley

*Life and Letters of Thomas Henry Huxley* (Volume 2)

Letter dated March, 1894 (p. 396)

D. Appleton and Company. New York, New York, USA. 1901

No delusion is greater than the notion that method and industry can make up for lack of mother-wit, either in science or in practical life.

*Collected Essays* (Volume 1)

*Method and Result*

The Progress of Science (p. 46)

Macmillan & Company Ltd. London, England. 1904

Nothing great in science has ever been done by men, whatever their powers, in whom the divine afflatus [inspiration] of the truth-seeker was wanting.

*Collected Essays* (Volume 1)

*Method and Result*

The Progress of Science (p. 56)

Macmillan & Company Ltd. London, England. 1904

In science, as in art, and, as I believe, in every other sphere of human activity, there may be wisdom in a multitude of counselors, but it is only [obvious] in one or two of them.

*Collected Essays* (Volume 1)

*Method and Result*

The Progress of Science (p. 57)

Macmillan & Company Ltd. London, England. 1904

...whatever evil voices may rage, Science, secure among the powers that are eternal, will do her work and be blessed.

*Collected Essays* (Volume 1)

*Method and Result*

Descartes' Discourse on Method (p. 198)

Macmillan & Company Ltd. London, England. 1904

Extinguished theologians lie about the cradle of every science as the strangled snakes beside that of Hercules...

*Collected Essays* (Volume 2)

*Darwiniana*

The Origin of Species (p. 52)

Macmillan & Company Ltd. London, England. 1904

Science commits suicide when it adopts a creed.

*Collected Essays* (Volume 2)

*Darwiniana*

The Darwin Memorial (p. 252)

Macmillan & Company Ltd. London, England. 1904

The vast results obtained by Science are won by no mystical faculties, by no mental processes, other than those which are practiced by everyone of us, in the humblest and meanest affairs of life. A detective policeman discovers a burglar from the marks made by his shoe, by a mental process identical with that by which Cuvier restored the extinct animals of Montmartre from fragments of their bones.

*Collected Essays* (Volume 3)

*Science and Education*

On the Educational Value of the National History Sciences (p. 45)

Macmillan & Company Ltd. London, England. 1904

Books are the money of Literature, but only the counters of Science.

*Collected Essays* (Volume 3)

*Science and Education*

Universities: Actual and Ideal (p. 213)

Macmillan & Company Ltd. London, England. 1904

Anybody who knows his business in science can make anything subservient to that purpose. You know it was said of Dean Swift that he could write an admirable poem upon a broomstick, and the man who has a real knowledge of science can make the commonest object in the

world subservient to an introduction to the principles and greater truths of natural knowledge.

*Collected Essays* (Volume 3)

*Science and Education*

Address on Behalf of the National Association for the Promotion of Technical Education (p. 432)

Macmillan & Company Ltd. London, England. 1904

Whatever happens, science may bide her time in patience and in confidence.

*Collected Essays* (Volume 5)

*Science and Christian Traditions*

An Episcopal Trilogy (p. 143)

Macmillan & Company Ltd. London, England. 1904

Of the affliction caused by persons who think that what they have picked up from popular exposition qualifies them for discussing the great problems of science, it may be said, as the Radical toast said of the power of the Crown in bygone days, that it "has increased, is increasing, and ought to be diminished." The oddities of "English as she is spoke" might be abundantly paralleled by those of "science as she is misunderstood" in the sermon, the novel, and the leading article; and a collection of the grotesque travesties of scientific conceptions in the shape of essays on such trifles as "the Nature of Life" and the "Origin of All Things," which reach me, from time to time, might well be bound up with them.

*Collected Essays* (Volume 8)

*Discourses, Biological and Geological*

Preface (p. viii)

Macmillan & Company Ltd. London, England. 1904

The whole of modern thought is steeped in science; it has made its way into the works of our best poets, and even the mere man of letters, who affects to ignore and despise science, is unconsciously impregnated with her spirit, and indebted for his best products to her methods.

*Collected Essays* (Volume 8)

*Discourses, Biological and Geological*

A Lobster; or, The Study of Zoology (p. 226)

Macmillan & Company Ltd. London, England. 1904

I believe that the greatest intellectual revolution mankind has yet seen is now slowly taking place by her agency. She is teaching the world that the ultimate court of appeal is observation and experiment, and not authority; she is teaching it to estimate the value of evidence; she is creating a firm and living faith in the existence of immutable moral and physical laws, perfect obedience to which is the highest possible aim of an intelligent being.

*Collected Essays* (Volume 8)

*Discourses, Biological and Geological*

A Lobster; or, The Study of Zoology (p. 226)

Macmillan & Company Ltd. London, England. 1904

Posterity will cry shame on us if we do not remedy this deplorable state of things. Nay, if we live twenty years longer, our own consciences will cry shame on us.

It is my firm conviction that the only way to remedy it is

to make the elements of physical science an integral part of primary education. I have endeavored to show you how that may be done for that branch of science which it is my business to pursue; and I can but add, that I should look upon the day when every schoolmaster throughout this land was a centre of genuine, however rudimentary, scientific knowledge as an epoch in the history of the country. But let me entreat you to remember my last words. Addressing myself to you, as teachers, I would say, mere book learning in physical science is a sham and a delusion-what you teach, unless you wish to be impostors, that you must first know; and real knowledge in science means personal acquaintance with the facts, be they few or many.

*Collected Essays* (Volume 8)

*Discourses, Biological and Geological*

A Lobster; or, The Study of Zoology (p. 227)

Macmillan & Company Ltd. London, England. 1904

Ecclesiasticism in science is only unfaithfulness to truth.

*Critiques and Addresses*

Chapter X (p. 240)

D. Appleton & Co. New York, New York, USA. 1881

The generalizations of science sweep on in ever-widening circles, and more aspiring flights, through limitless creation.

Letter

*London Times*, December 26, 1859

Many persons seem to believe that what is termed Science is of a widely different nature from ordinary knowledge, and that the methods by which scientific truths are ascertained involve mental operations of a recondite and mysterious nature, comprehensible only by the initiated, and as distinct in their character as in their subject matter, from the processes by which we discriminate between fact and fancy in ordinary life.

*The Crayfish: An Introduction to the Study of Zoology* (p. 1)

C. Kegan Paul & Co. London, England. 1880

The whole of modern thought is steeped in science; it even the mere man of letters, who affects to ignore and despise science, is unconsciously impregnated with her spirit, and indebted for his best products to her methods. I believe that the greatest intellectual revolution mankind has yet seen is now slowly taking place by her agency. She is teaching the world that the ultimate court of appeal is observation and experiment, and not authority; she is teaching it to estimate the value of evidence; she is creating a firm and living faith in the existence of immutable moral and physical laws, perfect obedience to which is the highest possible aim of an intelligent being.

*Collected Essays*

Prologue (p. 28)

D. Appleton & Co. New York, New York, USA. 1898

## Ines, George

No biographical data available

A generation or so ago the word "universe" had a significance faulty and meagre in comparison with its meaning today.

In Richard Anthony Proctor

*The Skies and the Earth*

General Introduction (p. viii)

Doubleday, Page & Co. New York, New York, USA. 1902

## Ingersoll, Robert Green 1833–99

American lawyer, public official, and orator

I do not know what science will do for us. I do not know that science did just take a handful of sand and make the telescope, and with it read all the starry leaves of heaven; I know that science took the thunderbolts from the hands of Jupiter, and now the electric spark, freighted with thought and love, flashes under waves of the sea; I know that science stole a tear from the cheek of unpaid labor, converted it into steam, and created a giant that turns with tireless arms the countless wheels of toil; I know that science broke the chains from human limbs and gave us instead the forces of nature for our slaves...

*Wit, Wisdom, Eloquence, and Great Speeches of Col. R. G. Ingersoll*

Liberty of Mind (p. 23)

Rhodes & McClure Publishing Co. Chicago, Illinois, USA. 1831

... it can be truthfully said that science was thrust into the brain of Europe upon the point of a Moorish lance.

*Wit, Wisdom and Eloquence of Col. R.G. Ingersoll*

A Government Duty (p. 182)

Rhodes & McClure Publishing Co. Chicago, Illinois, USA. 1894

## Jacob, François 1920–

French biologist

Science advances metaphorically. It does not proceed in an orthogenic fashion moving inexorably forward in a straight line. It does not radiate along many branches like a growing tree. It moves from one view to another by a large leap, preceded by a radical shift in the scientist's mode of thought.

Translated by Betty E. Spillmann

*The Logic of Life: A History of Heredity*

Pantheon Books. New York, New York, USA. 1974

For science, there are many possible worlds; but the interesting one is the world that exists and has already shown itself to be at work for a long time. Science attempts to confront the possible with the actual.

*The Possible and the Actual*

Myth and Science (p. 12)

Pantheon Books. New York, New York, USA. 1982

## Jacobi, Karl Gustav Jacob 1804–51

German mathematician

... Monsieur Fourier was of the opinion that the principal aim of Mathematics is to serve mankind and to explain natural phenomena; but a philosopher such as he ought to have known that the sole aim of science is the fulfillment of the human spirit, and that, accordingly, a question about numbers has as much significance as a question about the workings of the world.

*Gesammelte Werke* (Volume 1)

Letter to Legendre

July 2, 1830 (p. 454)

Publisher undetermined

## James, William 1842–1910

American philosopher and psychologist

Science herself consults her heart when she lays it down that the infinite ascertainment of fact and correction of false belief are the supreme goods for man.

*The Will to Believe and Other Essays in Popular Philosophy*

The Will to Believe

Section IX (p. 22)

Dover Publications, Inc. New York, New York, USA. 1956

Science as such assuredly has no authority, for she can only say what is, not what is not.

*The Will to Believe and Other Essays in Popular Philosophy*

Is Life Worth Living? (p. 56)

Dover Publications, Inc. New York, New York, USA. 1956

Science like life feeds on its own decay. New facts burst old rules; then newly developed concepts bind old and new together into a reconciling law.

*The Will to Believe and Other Essays in Popular Philosophy*

Psychical Research (p. 320)

Dover Publications, Inc. New York, New York, USA. 1956

Science... must be constantly reminded that her purposes are not the only purposes, and that the order of uniform causation which she has use for, and is therefore right in postulating, may be enveloped in a wider order, on which she has no claims at all.

*The Principles of Psychology* (Volume 2)

Chapter XXVIII (p. 676)

Henry Holt & Co. New York, New York, USA. 1916

## Jastrow, Joseph 1863–1944

Polish-born psychologist

Theories rise and fall as better, truer theories replace them; yet it is unwarranted to conclude that science is truth for a day.

In Joseph Jastrow (ed.)  
*The Story of Human Error*  
 Introduction (p. 34)  
 D. Appleton-Century Company, Inc. New York, New York, USA. 1936

Science, unlike the Bible, has no explanation for the occurrence of that extraordinary event. The universe, and everything that has happened in it since the beginning of time, are a grand effect without a known cause.

*Until the Sun Dies*  
 Chapter 2 (p. 21)  
 W.W. Norton & Company, Inc. New York, New York, USA. 1977

**Jeans, Sir James Hopwood** 1877–1946  
 English physicist and mathematician

To this present-day science adds that, at the farthest point she has so far reached, much, and possibly all, that was not mental has disappeared, and nothing new has come in that is not mental. Yet who shall say what we may find awaiting us round the next corner?

*The New Background of Science*  
 Chapter VIII (p. 307)  
 The University of Michigan Press. Ann Arbor, Michigan, USA. 1959

For as the wind bloweth where it listeth, so no one can control the direction in which science will advance; the investigator in pure science does not know himself whether his researches will result in a mere labor-saving device or a new industry.

*Annual Report of the Board of Regents of the Smithsonian Institution (1934)*  
 The New World-Picture of Modern Physics (p. 98)  
 Government Printing Office. Washington, D.C. 1935

The infinitely great is never very far from the infinitely small in science...

*Annual Report of the Board of Regents of the Smithsonian Institution, 1928*  
 The Wider Aspect of Cosmogony (p. 170)  
 Government Printing Office. Washington, D.C. 1929

Science usually advances by a succession of small steps, through a fog in which even the most keen-sighted explorer can seldom see more than a few paces ahead. Occasionally the fog lifts, an eminence is gained, and a wider stretch of territory can be surveyed – sometimes with startling results. A whole science may then seem to undergo a kaleidoscopic rearrangement, fragments of knowledge being found to fit together in a hitherto unsuspected manner. Sometimes the shock of readjustment may spread to other sciences; sometimes it may divert the whole current of human thought.

*Physics and Philosophy*  
 Chapter I (p. 1)  
 The University Press. Cambridge, England. 1943

...there is a wide measure of agreement which, on the physical side of science approaches almost unanimity, that the stream of knowledge is heading towards a non-mechanical reality; the universe begins to look more like a great thought than a great machine. Mind no longer appears as an accidental intruder into the realm of matter.

We are beginning to suspect that we ought rather to hail mind as the creator and governor of the realm of matter – not of course our individual minds, but the mind in which the atoms out of which our individual minds have grown, exist as thoughts.

*The Mysterious Universe*  
 Chapter V (p. 137)  
 At The University Press. Cambridge, England. 1944

**Jefferson, Thomas** 1743–1826  
 3rd president of the USA

The main objects of all science, the freedom and happiness of man...[are] the sole objects of all legitimate government.

In Andrew A. Lipscomb (ed.)  
*The Writings of Thomas Jefferson* (Volume 12) (p. 369)  
 G. Putnam's Sons. New York, New York, USA. 1892–99

**Jevons, William Stanley** 1835–82  
 English economist and logician

Science arises from the discovery of Identity amidst Diversity.

*The Principles of Science: A Treatise on Logic and Scientific Method*  
 Book I, Chapter I (p. 1)  
 Macmillan & Company. London, England. 1887

The whole value of science consists in the power which it confers upon us of applying to one object the knowledge acquired from like objects; and it is only so far, therefore, as we can discover and register resemblances that we can turn our observations to account.

*The Principles of Science: A Treatise on Logic and Scientific Method*  
 Introduction (p. 1)  
 Macmillan & Co Ltd. London, England. 1887

**Joad, Cyril Edwin Mitchinson** 1891–1953  
 English philosopher and broadcasting personality

Man by the light of science can see his hands, and can catch a glimpse of himself, his past, and the patch upon which he stands; but around him in place of that known comfort and beauty he had anticipated, and in the first few moments falsely thought that he saw, is darkness still.

*Philosophical Aspects of Modern Science*  
 Chapter XI (p. 342)  
 George Allen & Unwin Ltd. London, England. 1939

**Joffe, A. F.**  
 No biographical data available

Science with its strict analysis of the facts, its persevering search for new, more consummate truths, and its relentless struggle against discovered mistakes and prejudices – science must saturate all or techniques, our culture, and everyday life.

Compiled by V.V. Vorontsov  
*Words of the Wise: A Book of Russian Quotations*  
 Translated by Vic Schneiersson  
 Progress Publishers. Moscow, Russia. 1979

**Johnson, Samuel** 1696–1772  
English critic, biographer, and essayist

The Sciences having long seen their votaries labouring for the benefit of mankind without reward, put up their petitions to Jupiter for a more equitable distribution of riches and honor.... A synod of the celestials was therefore convened, in which it was resolved that Patronage should descend to the assistance of the Sciences.

*The Rambler* (Volume 2)

No. 91, January 29, 1751 (p. 231)

Edward Earle. Philadelphia, Pennsylvania, USA. 1812

In science, which, being fixed and limited, admits of no other variety than such as arises from new methods of distribution, or new arts of illustration, the necessity of following the traces of our predecessors is indisputably evident; but there appears no reason why imagination should be subject to the same restraint.... The roads of science are narrow, so that they who travel them, must either follow or meet one another; but in the boundless regions of possibility, which fiction claims for her dominion, there are surely a thousand recesses unexplored, a thousand flowers unplucked, a thousand fountains unexhausted, combinations of imagery yet unobserved, and races of ideal inhabitants not hitherto described.

*The Rambler* (Volume 3)

No. 121, May 14, 1751 (pp. 89–90)

Edward Earle. Philadelphia, Pennsylvania, USA. 1812

...science cannot be defined as distinct from faith without destroying it: there can be no science without conscious or unconscious forms of faith, – faith in the faculties, faith in nature, faith in law and in unity.

The Macmillan Company. New York, New York, USA. 1932

**Jones, Steve**

No biographical data available

This is the essence of science. Even though I do not understand quantum mechanics or the nerve cell membrane, I trust those who do. Most scientists are quite ignorant about most sciences but all use a shared grammar that allows them to recognize their craft when they see it. The motto of the Royal Society of London is “*Nul-lius in verba*”: trust not in words.

Review of *How the Mind Works* by Steve Pinker

*The New York Review of Books*, November 6, 1997 (p. 13)

**Jordan, David Starr** 1851–1931  
American scientist and educator

Science must stop where the facts stop, or thereabout, the limit of “thereabout” covering all legitimate diversions and excursions of philosophy.

In Frances Mason

*Creation by Evolution*

Evolution – Its Meaning (p. 4)

The Macmillan Company. New York, New York, USA. 1928

**Jung, Carl G.** 1875–1961

Swiss psychiatrist and founder of analytical psychology

Science is not indeed a perfect instrument, but it is a superb and invaluable tool that works harm only when it is taken as an end in itself. Science must serve; it errs when it usurps the throne. It must be ready to serve all its branches, for each, because of its insufficiency, has need of support from the others. Science is the tool of the western mind, and with it one can open more doors than with bare hands. It is part and parcel of our understanding, and the understanding it conveys is the only kind there is.

Translated by R.F.C. Hull

*Alchemical Studies*

Difficulties Encountered by a European in Trying to Understand the East (pp. 6–7)

Princeton University Press. Princeton, New Jersey, USA. 1967

**Kaczynski, Theodore** 1942–

American anarchist

Science marches on blindly...without regard to the real welfare of the human race or to any other standard, obedient only to the psychological needs of the scientists and of the government officials and corporate executives who provide the funds for research.

In Anne Eisenberg

The Unabomber and the Bland Decade

*Scientific American*, Volume 274, Number 4, April, 1998 (p. 35)

**Kapitza, Pyetr Leonidovich** 1894–1984

Russian physicist

The year that Rutherford died there disappeared forever the happy days of free scientific work which gave us such delight in our youth. Science has lost her freedom. Science has become a productive force. She has become rich but she has become enslaved and part of her is veiled in secrecy.

Address to the Royal Society in Honour of Lord Rutherford

*Nature*, Volume 210, Number 5038, May 17, 1966 (p. 783)

**Kauffman, Stuart A.**

American theoretical biologist

Paradise has been lost, not to sin, but to science.

*At Home in the Universe: The Search for Laws of Self-organization and Complexity*

Chapter 1 (p. 4)

Oxford University Press. New York, New York, USA. 1995

**Keller, Helen** 1880–1968

American author and lecturer

Science may have found a cure for most evils; but it has found no remedy for the worst of them all – the apathy of human beings.

*My Religion*

Swedenborg &amp; Foundation, Inc. New York, New York, USA. 1927

**Kellogg, Vernon Lyman** 1867–1937

American zoologist

Science does not assume that it knows – despite the great deal that it does know – more than a very small part of the order of nature.

Some Things Science Doesn't Know

*The World's Work*, March, 1926 (p. 528)**Kennedy, John F.** 1917–63

35th president of the USA

Science contributes to our culture in many ways, as a creative intellectual activity in its own right, as the light which has served to illuminate man's place in the universe, and as the source of understanding of man's own nature.

Address to the National Academy of Sciences

Washington, D.C., October 22, 1963

**Kettering, Charles Franklin** 1876–1958

American engineer and inventor

So that we might kill one another more expertly, science found wonderful ways to live more comfortably, richly, to communicate more rapidly. So that we might exterminate one another more successfully, science showed us how we might all live longer and stronger...

In Paul de Kruif

America Comes Through a Crisis

*Saturday Evening Post*, May 13, 1933 (p. 3)**Keyser, Cassius Jackson** 1862–1947

American mathematician

Science does not seek emancipation in order to become a drudge, she consents to serve indeed but her service aims at freedom as an end.

*Lectures on Science, Philosophy and Art, 1907–1908*

Mathematics (p. 43)

The Columbia University Press. New York, New York, USA. 1908

**Kingsley, Charles** 1819–75

English clergyman and author

...Science was the child of Courage, and Courage the child of Knowledge.

*Health and Education*

Science (p. 259)

W. Isbister &amp; Company London, England. 1874

For from blind fear of the unknown, science does certainly deliver man. She does by man as he does by an unbroken colt. The colt sees by the road side some quite new object – a cast-away boot, an old kettle, or what not. What a

fearful monster! What unknown terrific powers may it not possess! And the colt shies across the road, runs up the bank, rears on end; putting itself thereby, as many a man does, in real danger. What cure is there? But one, experience. So science takes us, as we should take the colt, gently by the halter; and makes us simply smell at the new monster; till after a few trembling sniffs, we discover, like the colt, that it is not a monster, but a kettle.

*Health and Education*

Science (p. 284)

W. Isbister &amp; Company London, England. 1874

For science is, I verily believe, like virtue, its own exceeding great reward.

*Health and Education*

Science (p. 289)

W. Isbister &amp; Company. London, England. 1874

...it is the childlike, simple, patient, reverent heart, which science at once demands and cultivates. To prejudice or haste, to self-conceit or ambition, she proudly shuts her treasuries – to open them to men of humble heart, whom this world thinks simple dreamers – her Newtons, and Owens, and Faradays.

*Alton Locke, Taylor and Poet*

Chapter XVIII (p. 141)

Macmillan &amp; Company Ltd. London, England. 1911

Science...is like virtue, its own exceeding great reward.

*Scientific Lectures and Essays* (pp. 253–254)

Macmillan &amp; Company Ltd. London, England. 1893

**Kipling, Rudyard** 1865–1936

British writer and poet

There are times when Science does not satisfy.

*With the Night Mail* (p. 24)

Doubleday, Page &amp; Company. New York, New York, USA. 1909

**Kirby, William** 1759–1850

Clergyman and entomologist

Mankind in general, not excepting even philosophers, are prone to magnify, often beyond its just merit, the science or pursuit to which they have addicted themselves, and to depreciate any that seems to stand in competition with their favorite: like the redoubted champions of romance, each thinks himself bound to take the field against every-one that will not subscribe to the peerless beauty and accomplishments of his own Dulcinea.

*An Introduction to Entomology; or, Elements of the Natural History of Insects*

Letter I (p. 1)

Longman, Green, Longman &amp; Roberts. London, England. 1860

**Kirkpatrick, Clifford** 1898–1970

American sociologist

Science recognizes no personal powers in the universe responsive to the prayers and needs of men.

*Religion in Human Affairs*

Chapter XVI (p. 470)

John Wiley &amp; Sons, Inc. New York, New York, USA. 1929

**Köhler, Wolfgang** 1887–1967  
American psychologist

It would be interesting to inquire how many times essential advances in science have first been made possible by the fact that the boundaries of special disciplines are not respected. ...at the present time it is of course quite customary for physicists to trespass on chemical ground, for mathematicians to do excellent work in physics, and for physicists to develop new mathematical procedures... trespassing is one of the most successful techniques in science.

*Dynamics in Psychology*

Retention and Recall (pp. 115–116)

Liveright Publishing Corporation. New York, New York, USA. 1940

**Kolb, Edward W. (Rocky)** 1951–  
American cosmologist

More often than not, the way science goes from point A to point B is by a random lurch through points X, Y, and Z. Even when great leaps of progress do occur, they only rarely come “out of the blue.” Advances are nearly always preceded by years, decades, or even centuries of patient accumulation of facts and data and ideas.

*Blind Watchers of the Sky*

Chapter Two (p. 25)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

Science does not proceed like a cookbook recipe in the making of a hypothesis, comparing its prediction with observations and either accepting or rejecting the hypothesis. There is always confusion at the leading edge of research, and there are always a few discrepant and contradictory pieces of information that can't be explained.

*Blind Watchers of the Sky*

Chapter Seven (pp. 193–194)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

**Koshland, Jr., Daniel E.** 1920–  
American biochemist

Science is not impressed with a conglomeration of data. It likes carefully constructed analysis of each problem.

Editorial

*Science*, Volume 263, Number 5144, January 14, 1994 (p. 155)

**Krauss, Lawrence M.** 1954–  
American theoretical physicist

There are times, such as when the state school board in Kansas in 1999 removed evolution from its science curriculum, when I am reminded of Lavoisier, and shudder at the damage that can be done by ignorance combined with power. Even the magnificent modern edifice called science, built up over half a millennium of small increments toward the truth, is not safe from the vicissitudes of the political world. If, as Carl Sagan claimed, science is a “candle in the dark,” banishing demons that haunted

the benighted eras of mankind, it burns tenuously at best. One generation of ignorance, steeped in myth and mysticism, is all that may be needed to snuff it out.

*Atom: An Odyssey from the Big Bang to Life on Earth...and Beyond*

Chapter 13 (p. 172)

Little, Brown & Company. Boston, Massachusetts, USA. 2001

**Kroeber, Alfred Louis** 1876–1960  
American anthropologist

Science has always promised two things not necessarily related – an increase first in our powers, second in our happiness or wisdom, and we have come to realize that it is the first and less important of the two promises which it has kept most abundantly.

*The Modern Temper*

Chapter Three (p. 43)

Harcourt, Brace & Company. New York, New York, USA. 1929

...the most important part of our lives – our sensations, emotions, desires, and aspirations – takes place in a universe of illusions which science can attenuate or destroy, but which it is powerless to enrich.

*The Modern Temper*

Chapter Three (p. 50)

Harcourt, Brace & Company. New York, New York, USA. 1929

**Kuhn, Thomas S.** 1922–96  
American historian of science

...science...often suppresses fundamental novelties because they are necessarily subversive of its basic commitments.

*The Structure of Scientific Revolutions*

Chapter I (p. 5)

The University of Chicago Press. Chicago, Illinois, USA. 1970

To understand why science develops as it does, one need not unravel the details of biography and personality that lead each individual to a particular choice, though that topic has vast fascination. What one must understand, however, is the manner in which a particular set of shared values interacts with the particular experiences shared by a community of specialists to ensure that most members of the group will ultimately find one set of arguments rather than another decisive.

*The Structure of Scientific Revolutions*

Postscript–1969 (p. 200)

The University of Chicago Press. Chicago, Illinois, USA. 1970

**Kusch, Polykarp** 1911–93  
German-American physicist

Science is the greatest creative impulse of our time. It dominates the intellectual scene and forms our lives, not only in the material things which it has given us, but also in that it guides our spirit. Science shows us truth and beauty and fills each day with a fresh wonder of the exquisite order which governs our world.

Address to University Students

December 10, 1955

**Lamb, Charles** 1775–1834

English essayist and critic

Science has succeeded to poetry, no less in the little walks of children than with men. Is there no possibility of averting this sore evil?

In Thomas Noon Talfourd

*The Works of Charles Lamb: To which are Prefixed His Letters, and a Sketch of His Life* (Volume 1)

Letter to S.T. Coleridge, October 23, 1802 (p. 118)

Harper &amp; Brothers, Publishers. New York, New York, USA. 1838

In everything that relates to science, I am a whole Encyclopaedia behind the rest of the world.

*Essays of Elia*

The Old and the New Schoolmaster (p. 38)

Little, Brown &amp; Company. Boston, Massachusetts. USA. 1896

**Landsberg, Peter Theodore** 1922–

No biographical data available

Everybody who takes up science has the ambition to become a successful scientist and make some discoveries. Most of us are disappointed because we do not make the really big and interesting discoveries. Or, if we do make them, we do not realize they are interesting, because other discoveries seem more important.

*Mathematics Today*, October, 1902 (p. 135)**Lang, Andrew** 1844–1912

Scottish scholar and man of letters

But science, like the spear of Achilles, can cure the wounds which herself inflicts.

*The Disentanglers*

Adventure of the Canadian Heiress (p. 399)

Longmans, Green Publishers. New York, New York, USA. 1902

**Lankester, Edwin Ray** 1847–1929

English zoologist

Through it [science] we believe that man will be saved from misery and degradation, not merely acquiring new material powers, but learning to use and to guide his life with understanding. Through Science he will be freed from the fetters of superstition; through faith in Science he will acquire a new and enduring delight in the exercise of his capacities; he will gain a zest and interest in life such as the present phase of culture fails to supply.

*The Advancement of Science*

Chapter II (pp. 108–109)

Macmillan &amp; Company Ltd. London, England. 1890

**Laplace, Pierre Simon** 1749–1827

French mathematician, astronomer, and physicist

The sciences, on the contrary, without bounds like nature herself, increase infinitely by the labours of successive generations the most perfect work; by raising them to a height from which they can never again descend, gives birth to new discoveries which new works which efface the former from which they originated.

*The System of the World*

Book V, Chapter V (pp. 343–344)

Printed for Richard Phillips. London, England. 1809

**Lapp, Ralph E.** 1917–2004

American nuclear physicist

No one – not even the most brilliant scientist alive today – really knows where science is taking us. We are aboard a train which is gathering speed, racing down a track on which are an unknown number of switches leading to unknown destinations. No single scientist is in the cab, and there may be demons at the switch. Most of society is in the caboose looking backward. Some passengers, fearful that they have boarded an express train to hell, want to jump off before it is too late

*The New Priesthood: The Scientific Elite and the Uses of Power*

Chapter 2 (p. 29)

Harper &amp; Row, Publishers. New York, New York, USA. 1965

**Lavoisier, Antoine Laurent** 1743–94

French chemist

Science still has many chasms, which interrupt the series of facts and often render it extremely difficult to reconcile them with each other...

In *Great Books of the Western World* (Volume 45)*Elements of Chemistry*

Preface (p. 2)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Lawrence, D. H. (David Herbert)** 1885–1930

English writer

Now all science starts gaily from the inland source of *I don't know*. Gaily it says: I don't know, but I'm going to know. It's like a little river bubbling up cheerfully in the determination to dissolve the whole world in its waves. And science, like the little river, winds wanderingly out again into the final *I don't know* of the ocean.

*Selected Critical Writings*

The Proper Study (p. 154)

Oxford University Press. Oxford, England. 1998

**Lebowitz, Fran** 1951–

American comedian

Science is not a pretty thing. It is unpleasantly proportioned, outlandishly attired and often over-eager. What then is the appeal of science? What accounts for its popularity? And who gives it its start?

*Metropolitan Life*

Science (p. 104)

Fawcett Crest. New York, New York, USA. 1978

**Leclerc, Georges-Louis, Comte de Buffon** 1707–88

French naturalist

The only good science is the knowledge of facts, and mathematical truths are only truths of definition, and completely arbitrary, quite unlike physical truths.

In L. Ducros  
*Les Encyclopedistes* (p. 326)  
 Publisher undetermined

**Leopold, Aldo** 1886–1948  
 American naturalist

If science cannot lead us to wisdom as well as power, it is surely no science at all.

In Susan L. Flader and J. Baird Callicott  
*The River of the Mother of God*  
 Ecology and Politics (p. 284)  
 The University of Wisconsin Press. Madison, Wisconsin, USA. 1991

 Chapter I (p. 52)  
 HarperCollins Books. New York, New York, USA. 1997

**Lowell, Percival** 1855–1916  
 American astronomer

Now in science there exists two classes of workers. There are men who spend their days in amassing material, in gathering facts. They are the collectors of specimens in natural history, the industrious takers of routine measurements in physics and astronomy or the mechanical accumulators of photographic plates. Very valuable such collections are. They may not require much brains to get, but they enable other brains to get a great deal out of them later.... The rarer they are the better. For the less mind

enters into them the more they are worth. When destitute altogether of informing intelligence, they become price-less, as they then convey nature's meaning unmeddled of man.... The second class of scientists are the architects of the profession. They are the men to whom the building up of science is due. In their hands, the acquired facts are put together to that synthesizing of knowledge from which new conceptions spring.... Though the gathering of material is good, without the informing mind to combine the facts they had forever remained barren of fruit.

In William Graves Hoyt

*Lowell and Mars*

Chapter 2 (p. 22)

University of Arizona Press, Tucson, Arizona, USA. 1976

### **Lubbock, John, First Baron Avebury** 1834–1919

English banker, politician, biologist, and archaeologist

Science, our Fairy Godmother, will, unless we perversely reject her help, and refuse her gifts, so richly endow us, that fewer hours of labour will serve to supply us with the material necessities of life, leaving us more time to ourselves, more leisure to enjoy all that makes life best worth living.

*The Beauties of Nature and the Wonders of the World We Live In*

Introduction (p. 37)

Macmillan & Company New York, New York, USA. 1893

The Nature of Knowledge (p. 10)

Pergamon Press, Oxford, England. 1977

### **MacArthur, Robert H.** 1930–72

American ecologist

[N]ot all naturalists want to do science; many take refuge in nature's complexity as a justification to oppose any search for patterns.... Doing science is not such a barrier to feeling or such a dehumanizing influence as is often made out. It does not take the beauty from nature.

*Geographical Ecology*

Introduction (p. 1)

Harper & Row, Publishers, New York, New York, USA. 1972

### **Macfie, Ronald Campbell** 1867–1931

Poet and physician

It is time that men knew that Science does not write with the cold finger of a starfish; it is time that men realized that true science is not a mere compilation of dead facts; it is time that men understood that Science is flamboyant and alive.

*Science, Matter and Immortality*

Chapter XXIII (p. 297)

William & Norgate, London, England. 1909

Conceived aright, science must always lead to belief in the unseen and to hope of immortality; but Science must learn to recognize her own limitations – must learn to recognize that her logic is not conclusive when her postulates are dubious – and that she can only become a ruler of men's souls and a brightener of men's lives if she takes Poetry and Philosophy by the hand, and dwells with them in the temple of Beauty and Reverence.

*Science, Matter and Immortality*

Chapter XXIII (p. 300)

William & Norgate, London, England. 1909

### **Mach, Ernst** 1838–1916

Austrian physicist and philosopher

All science has its origin in the needs of life.

*The Science of Mechanics* (5th edition)

Chapter V, Part II, Section 1 (p. 610)

The Open Court Publishing Company, La Salle, Illinois, USA. 1942

Everyone who busies himself with science recognizes how unsettled and indefinite the notions are which he has

brought with him from common life, and how, on a minute examination of things, old differences are effaced and new ones introduced.

*Popular Scientific Lectures*

The Forms of Liquids (pp. 1–2)

The Open Court Publishing Company. Chicago, Illinois, USA. 1898

Is science itself anything more than – a business? Is not its task to acquire with the least possible work, in the least possible time, with the least possible thoughts, the greatest possible part of eternal truth?

*Popular Scientific Lectures*

The Forms of Liquids (p. 16)

The Open Court Publishing Company. Chicago, Illinois, USA. 1898

Science does not create facts from facts, but simply orders known facts.

Translated by Thomas J. McCormack

*Popular Scientific Lectures* (2nd edition)

The Economical Nature of Physics (p. 211)

The Open Court Publishing Co. Chicago, Illinois, USA. 1897

The great results achieved by physical science in modern times – results not restricted to its own sphere but embracing that of other sciences which employ its help – have brought it about that physical ways of thinking and physical modes of procedure enjoy on all hands unwonted prominence, and that the greatest expectations are associated with their application.

*The Analysis of Sensations and the Relation of the Physical to the Psychological*  
Chapter I (p. 1)

The Open Court Publishing Company. Chicago, Illinois, USA. 1914

Science always has its origin in the adaptation of thought to some definite field of experience.

*The Analysis of Sensations and the Relation of the Physical to the Psychological*

Chapter I (p. 31)

The Open Court Publishing Company. Chicago, Illinois, USA. 1914

### **Mackay, Charles** 1814–89

Scottish poet, journalist, and song writer

Blessings on Science! When the earth seem'd old, When Faith grew dotting, and the Reason cold,  
'T was she discover'd that the world was young, And taught a language to its lisping tongue:  
'T was she disclosed a future to its view, And made old knowledge pale before the new.

American physicist

It is in fact obvious that science should be pressed to say all it can about any problem which is at all susceptible to scientific treatment.

*The Nature of Physical Reality: A Philosophy of Modern Physics*  
Chapter 2 (p. 12)  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1950

Science has no boundaries; it has an horizon which widens as science advances, placing in view more and more unknown terrain but never heaven.

*Open Vistas Philosophical Perspectives of Modern Science*  
Chapter 2 (p. 30)  
Yale University Press. New Haven, Connecticut, USA. 1961

The error of mistaking science for an exclusive catalogue of facts is symptomatic of a bias in other parts of our thinking, for it results in an underestimate and a disparagement of the power of theory to convince in the realm of international affairs; indeed, it may prove to be a tragic handicap in our struggle for supremacy in a world that probably no longer dares conduct military wars.

*Open Vistas Philosophical Perspectives of Modern Science*  
Chapter 2 (p. 33)  
Yale University Press. New Haven, Connecticut, USA. 1961

**Margulis, Lynn** 1938–  
American cell biologist and evolutionist

**Sagan, Dorion** 1959–  
American science writer

Science has become a social method of inquiring into natural phenomena, making intuitive and systematic explorations of laws which are formulated by observing nature, and then rigorously testing their accuracy in the form of predictions. The results are then stored as written or mathematical records which are copied and disseminated to others, both within and beyond any given generation. As a sort of synergetic, rigorously regulated group perception, the collective enterprise of science far transcends the activity within an individual brain.

*Microcosmos*  
Chapter 12 (p. 233)  
Summit Books. New York, New York, USA. 1986

**Maritain, Jacques** 1882–1973  
French philosopher

Since science's competence extends to observable and measurable phenomena, not to the inner being of things, and to the means, not to the ends of human life, it would be nonsense to expect that the progress of science will provide men with a new type of metaphysics, ethics, or religion.

Science and Ontology  
*Bulletin of the Atomic Scientists*, Volume 5, 1944 (p. 200)

**Marshall, Alfred** 1842–1924  
English economist

...the mathematico-physical group of sciences...have this point in common, that their subject-matter is constant and unchanged in all countries and in all ages. ...if the subject-matter of a science passes through different

stages of development, the laws which apply to one stage will seldom apply without modification to others; the laws of science must have a development corresponding to that of the things of which they treat.

In A.C. Pigou (ed.)  
*Memorials of Alfred Marshall*  
Chapter VI (p. 154)  
Macmillan & Company Ltd. London, England. 1925

**Marshall, Arthur Milnes** 1852–93  
English zoologist

Science has been aptly compared to a globe, similar to our own earth a globe with a solid hard crust bounded by an irregular surface. The solid crust represents ascertained facts, facts that have been confirmed and stowed away in their proper places; the irregularity of its surface indicates the unequal accumulation of facts in the various branches of knowledge. The atmosphere by which the whole globe is invested represents the world of speculation, of theories an atmosphere heavily laden with germs and particles of truth, but germs as yet immature, particles whose position relative to the solid crust is not yet a fixed and determined one.

*Biological Lectures and Addresses, Delivered by the Late Arthur Milnes Marshall*  
Chapter I (pp. 1–2)  
Nutt. London, England. 1894

**Mason, James** 1909–84  
English actor

Don't you see what's at stake here? The ultimate aim of all science – to penetrate the unknown. Do you realize we know less about the earth we live on than about the stars and the galaxies of outer space? The greatest mystery is right here, right under our feet.

*A Journey to the Center of the Earth*  
Film (1959)

**Masters, William H.** 1915–2001  
American gynecologist

Science by itself has no moral dimension. But it does seek to establish truth. And upon this truth morality can be built.

*Life*, June 24, 1966

**Matsen, F. Albert**  
No biographical data available

Science is defined as a set of observations and theories about observations.

The Role of Theory in Chemistry  
*Journal of Chemical Education*, Volume 62, Number 5, May, 1985 (p. 365)

**Maxwell, James Clerk** 1831–79  
Scottish physicist

It was a great step in science when men became convinced that, in order to understand the nature of things,

they must begin by asking, not whether a thing is good or bad, noxious or beneficial, but of what kind is it? and how much is there of it? Quality and quantity were then first recognised as the primary features to be observed in scientific inquiry. As science has been developed, the domain of quantity has everywhere encroached on that of quality, till the process of scientific inquiry seems to have become simply the measurement and registration of quantities, combined with a mathematical discussion of the numbers thus obtained.

*Nature*, September 22, 1870 (p. 420)

Science appears to us with a very different aspect after we have found out that it is not in lecture-rooms only, and by means of the electric light projected on a screen, that we may witness physical phenomena, but that we may find illustrations of the highest doctrines of science in games and gymnastics, in travelling by land and by water, in storms of the air and of the sea, and wherever there is matter in motion.

In Lewis Campbell and William Garnett

*The Life of James Clerk Maxwell*

Chapter XII (p. 355)

Macmillan & Company Ltd. London, England. 1882

...we have been led, along a strictly scientific path, very near to the point at which science must stop; not that science is debarred from studying the internal mechanism of a molecule which she cannot take to pieces, anymore than from investigating an organism which she cannot put together. But in tracing back the history of matter, Science is arrested when she assures herself, on the one hand, that the molecule has been made, and on the other, that it has not been made by any of the processes we call natural.

Quoted in Frederick Soddy

*The Interpretation of Radium and the Structure of the Atom*

Chapter X (pp. 215–216)

J. Murray. London, England. 1909

### **McCarthy, Mary** 1912–89

American writer

Modern neurosis began with the discoveries of Copernicus. Science made man feel small by showing him that the earth was not the center of the universe.

*On the Contrary*

Tyranny of the Orgasm (p. 168)

Farrar, Straus & Cudahy, New York, New York, USA, 1961

### **McLuhan, Marshall** 1911–80

Canadian educator, philosopher, and scholar

Current illusion is that science has abolished all natural laws.

In Matie Molinaro, Corinne McLuhan, and William Toye (eds.)

*Letters of Marshall McLuhan*

Letter to Ezra Pound

January, 1951

Oxford University Press, Inc. New York, New York, USA. 1987

### **McMorris, Neville** 1934–

American academic

The “scientific nature of science” is not a paradox to be resolved but a truism to be pondered.

*The Nature of Science*

Chapter 9 (p. 199)

Fairfield Dickinson University Press. 1989

### **McMurry, Charles Alexander** 1857–1929

American educator

The intrusive and masterful way in which natural science has been coming into our houses, factories, and industries of all sorts, compels us to pay considerable attention to the applications of science to life.

*Special Method in Elementary Science for the Common School*

Chapter III (p. 21)

The Macmillan Co. New York, New York, USA. 1905

### **Mead, Margaret** 1901–78

American anthropologist

...the negative cautions of science are never popular. If the experimentalist would not commit himself, the social philosopher, the preacher and the pedagogue tried the harder to give a short-cut answer.

*Coming of Age in Samoa*

Chapter 1 (p. 3)

The Modern Library. New York, New York, USA. 1953

### **Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

Science is no more a classified inventory of factual information than history a chronology of dates. The equation of science with facts and of the humane arts with ideas is one of the shabby genteelisms that bolster up the humanist's self-esteem.

Two Conceptions of Science

*Encounter*, 143, August, 1965

...science is a great and glorious enterprise – the most successful, I argue, that human beings have ever engaged in. To reproach it for its inability to answer all the questions we should like to put to it is no more sensible than to reproach a railway locomotive for not flying or, in general, not performing any other operation for which it was not designed.

*The Limits of Science*

Preface (p. xiii)

Harper & Row, Publishers. New York, New York, USA. 1984

Science can only proceed on a basis of confidence, so that scientists do not suspect each other of dishonesty or sharp practice, and believe each other unless there is very good reason to do otherwise.

*The Limits of Science*

An Essay on Scians [Science] (p. 6)

Harper & Row, Publishers. New York, New York, USA. 1984

Science will persevere just as long as we retain a faculty we show no signs of losing: the ability to conceive – in no

matter how imperfect or rudimentary a form – what the truth might be and retain also the inclination to ascertain whether our imaginings correspond to real life or not.

*The Limits of Science*

Chapter 4 (pp. 86–87)

Harper & Row, Publishers. New York, New York, USA. 1984

It is a layman's illusion that in science we caper from pinnacle to pinnacle of achievement and that we exercise a Method which preserves us from error. Indeed we do not; our way of going about things takes it for granted that we guess less often right than wrong, but at the same time ensures that we need not persist in error if we earnestly and honestly endeavor not to do so.

*The Limits of Science*

Notes, 3 (p. 101)

Harper & Row, Publishers. New York, New York, USA. 1984

...nowadays we all give too much thought to the material blessings or evils that science has brought with it, and too little to its power to liberate us from the confinements of ignorance and superstition. The greatest liberation of thought achieved by the scientific revolution was to have given human beings a sense of future in this world.

*The Art of the Soluble*

Introduction (p. 15)

Methuen & Company Ltd. London, England. 1967

If we accept, as I fear we must, that science cannot answer questions about first and last things or about purposes, there is yet no known or conceivable limit to its power to answer questions of the kind science can answer.... Science will dry up only if scientists lose or fail to exercise the power or incentive to imagine what the truth might be.

*Advice to a Young Scientist*

Chapter 11 (p. 90)

Basic Books, Inc. New York, New York, USA. 1979

One can envisage an end of science no more readily than one can envisage an end of imaginative literature or the fine arts.

*Advice to a Young Scientist*

Chapter 11 (p. 90)

Basic Books, Inc. New York, New York, USA. 1979

### **Mellor, Joseph William** 1863–1938

Chemist

...science aims at omniscience. The target, however, appears to recede with increasing knowledge.

*A Comprehensive Treatise on Inorganic and Theoretical Chemistry*

(Volume 1)

Chapter I (p. 10)

Longman, Green, & Co. London, England. 1922

Science is not a mass of empirical knowledge gained by observation and experiment, but it is an organized body of facts which have been co-ordinated and generalized into a system. Science tacitly assumes that nature is a harmonious unity, and that rational order pervades the universe.

Science seeks a complete knowledge of the multitude of inter-related parts of the universe which act and react on one another producing endless variety. In fine, science aims at omniscience. The target, however, appears to recede with increasing knowledge. As man grows in wisdom and knowledge, he begins dimly to realize that the unknown multiplies into boundless proportions.

*A Comprehensive Treatise on Inorganic and Theoretical Chemistry*

(Volume 1)

Chapter I (p. 10)

Longman, Green, & Co. London, England. 1922

...science cannot enter into the dark territory beyond the scope of man's faculties, and where verification, direct or indirect, is not possible. A vivid imagination can people this region with phantasms and be deluded with the hallucination that these creatures of the imagination are real, substantial, objective facts.

*A Comprehensive Treatise on Inorganic and Theoretical Chemistry*

Chapter I (p. 16)

Longman, Green & Co. London, England. 1922

### **Melville, Herman** 1819–91

American novelist

...however baby man may brag of his science and skill, and however much, in a flattering future, that science and skill may augment; yet forever and forever, to the crack of doom, the sea will insult and murder him, and pulverize the stateliest, stiffest frigate he can make; nevertheless, by the continual repetition of these very impressions, man has lost that sense of the full awfulness of the sea which aboriginally belongs to it.

In *Great Books of the Western World* (Volume 48)

*Moby Dick*

Chapter 58 (p. 204)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

After science comes sentiment.

*Typee, Omoo, Mardi*

*Mardi*

Chapter 38 (p. 785)

The Library of America. New York, New York, USA. 1982

Thou canst not tell where one drop of water or one grain of sand will be tomorrow noon; and yet with thy impotence thou insultest the sun! Science! Curse thee, thou vain toy...

*Moby Dick, Or, The White Whale*

Chapter CXVIII (pp. 466–467)

L.C. Page & Co. Boston, Massachusetts, USA. 1892

### **Mencken, H. L. (Henry Louis)** 1880–1956

American journalist and literary critic

The notion that science does not concern itself with first causes – that it leaves the field to theology or metaphysics, and confines itself to mere effects – this notion has no support in the plain facts. If it could, science would explain the origin of life on earth at once – and there is

every reason to believe that it will do so on some not too remote tomorrow. To argue that gaps in knowledge which will confront the seeker must be filled, not by patient inquiry, but by intuition or revelation, is simply to give ignorance a gratuitous and preposterous dignity.

*Treatise on the Gods*

Chapter 5 (p. 239)

Vintage Books. New York, New York, USA. 1963

There is, in fact, no reason to believe that any given natural phenomenon, however marvelous it may seem today, will remain forever inexplicable. Soon or late the laws governing the production of life itself will be discovered in the laboratory, and man may set up business as a creator on his own account. The thing, indeed, is not only conceivable; it is even highly probable.

*Treatise on the Gods*

Chapter 5 (p. 241)

Vintage Books. New York, New York, USA. 1963

### **Mendeleev, Dmitry Ivanovich** 1834–1907

Russian chemist

What has been sown for the field of science will grow up for the people's welfare.

Translated by George Kamensky

*Principles of Chemistry* (Volume 1)

Introduction

Longmans, Green & Company. London, England. 1891

In comparing the science of the past, the present, and the future, in placing the particulars of its restricted experiments side by side with its aspirations for unbounded and infinite truth, and in restraining myself from yielding to a bias towards following the most attractive representation, I have endeavored to incite in the reader a spirit of inquiry, which, unsatisfied with speculative reasonings alone, should subject every idea to experiment, excite the habit of stubborn work, necessitate a knowledge of the past, and a search for fresh threads to complete the bridge over the bottomless unknown.

*The Principles of Chemistry* (Volume 1)

Author's Preface to the Fifth Edition (p. viii)

Longmans, Green & Co. London, England. 1891

Knowing how contented, free and joyful is life in the realms of science, one fervently wishes that many would enter their portals.

*Principles of Chemistry* (Volume 1)

Preface (p. ix, fn 1)

Longmans, Green & Company. London, England. 1891

Without the material, the plan alone is but a castle in the air, a mere possibility, whilst the material without a plan is but useless matter; all depends on the concordance of the materials with the plan and execution, and the general harmony thereby attained. In the work of science, the artisan, architect, and creator are very often one and the same individual, but sometimes, as in other walks of

life, there is a difference between them; sometimes the plan is preconceived, sometimes it follows the preparation and accumulation of the raw material. Free access to the edifice of science is not only allowed to those who devised the plan, worked out the detailed drawings, prepared the materials, or piled up the brickwork, but also to all those who are desirous of making a close acquaintance with the plan, and wish to avoid dwelling in the vaults or in the garrets where the useless lumber is stored.

Translated by George Kamensky

*The Principles of Chemistry* (Volume 1)

Author's Preface to the Fifth Edition (p. ix)

Longmans, Green & Co. London, England. 1891

Science, which deals with the infinite, is itself without bounds.

Translated by George Kamensky

*The Principles of Chemistry* (Volume 1)

Author's Preface to the Fifth Edition (p. x)

Longmans, Green & Co. London, England. 1891

The time has come to turn aside from visionary contemplation, from platonic aspirations, and from classical verbosity, and to enter the regions of actual labour for the common weal, and to prove that the study of science is not only an excellent education for youth, but that it instills the virtues of labour and truth, and creates solid national wealth, material and mental, which without it would be unattainable.

Translated by George Kamensky

*The Principles of Chemistry* (Volume 1)

Author's Preface to the Fifth Edition (p. x)

Longmans, Green & Co. London, England. 1891

Science is a universal heritage, and therefore it is only just to give the highest honour in science, not to those who first enunciate a certain truth, but to those who are first able to convince others of its authenticity and establish it for the general welfare.

Translated by George Kamensky

In Thomas Atkinson Lawson

*The Principles of Chemistry* (Volume 1)

Introduction (p. 17)

Longmans, Green & Co. London, England. 1891

While science is pursuing a steady onward movement, it is convenient from time to time to cast a glance back on the route already traversed, and especially to consider the new conceptions which aim at discovering the general meaning of the stock of facts accumulated from day to day in our laboratories.

The Periodic Law of the Chemical Elements

*Journal of the Chemical Society*, Volume 55, 1889 (p. 634)

Science plays an auxiliary part in our lives, for it is merely a means to the attainment of wellbeing.

Compiled by V.V. Vorontsov

*Words of the Wise: A Book of Russian Quotations*

Translated by Vic Schneiersson

Progress Publishers. Moscow, Russia. 1979

**Mendelsohn, Everett**

**Elkana, Yehuda**

No biographical data available

...no cognitive area rests its case on an single source of knowledge.... And it is certainly wrong to say that... 'science rests its case on experience or experimental evidence'. Science does *not* rest its case on any one source of knowledge, but experience and experimental evidence, and clear and distinct ideas, aesthetic considerations, and analogy are all legitimate sources of knowledge.

*Sciences and Cultures: Anthropological and Historical Studies of the Sciences*

A Programmation Attempt at an Anthropology of Knowledge (p. 20)  
Reidel Publishing Co. Dordrecht, Holland. 1981

**Meredith, George** 1828–1909

English novelist and poet

Science is notoriously of slow movement.

*The Ordeal of Richard Feverel*

Chapter XLIV (p. 518)

The Modern Library. New York, New York, USA. 1927

**Meyer, Agnes** 1887–1970

American author and journalist

From the nineteenth century view of science as a god, the twentieth century has begun to see it as a devil. It behooves us now to understand that science is neither the one nor the other.

*Education for a New Morality*

Chapter 2 (p. 11)

The Macmillan Company. New York, New York, USA. 1957

**Mill, John Stuart** 1806–73

English political philosopher and economist

It is a common notion, or at least it is implied in many common modes of speech, that thoughts, feelings, and actions of sentient beings are not a subject of science.... This notion seems to involve some confusion of ideas, which it is necessary to begin by clearing up. Any facts are fitted, in themselves, to be a subject of science, which follows one another according to constant laws; although those laws may not have been discovered, nor even to be discoverable by our existing resources.

*A System of Logic, Rationative and Inductive* (Volume 2)

Book VI, Chapter 3, Section 1 (p. 426)

Longmans, Green, Reader & Dyer. London, England. 1868

It is unphilosophical to construct a science out of a few of the agencies by which the phenomena are determined, and leave the rest to the routine of practice or the sagacity of conjecture. We either ought not to pretend to scientific forms, or we ought to study all the determining agencies equally, and endeavor, so far as it can be done, to include all of them within the pale of the science; else we shall

infallibly bestow a disproportionate attention upon those which our theory takes into account, while we misestimate the rest, and probably underrate their importance.

*A System of Logic, Ratiocinative and Inductive*

Book VI, Chapter IX (p. 583)

Longmans, Green & Co. London, England. 1900

**Miller, Hugh** 1802–56

Scottish geologist and theologian

There is no science whose value can be adequately estimated by economists and utilitarians of the lower order. Its true quantities cannot be represented by arithmetical figures or monetary tables; for its effects on mind must be as surely taken into account as its operations on matter, and what it has accomplished for the human intellect, as certainly as what it has done for the comforts of society or the interests of commerce.

*The Old Red Sandstone*

Chapter IX (p. 177)

John B. Alden, Publisher. New York, New York, USA. 1892

**Millikan, Robert Andrews** 1868–1953

American physicist

We need science in education, and much more of it than we now have, not primarily to train technicians for the industries, which demand them, though that may be important, but much more to give everybody a little glimpse of the scientific mode of approach to life's problems, to give everyone some familiarity with at least one field in which the distinction between right and wrong is not always blurred and uncertain, to let him see that it is not true that "one opinion is as good as another"...

*The Relationship of Science to Industry*

*Science*, Volume 69, Number 1776, January 11, 1929 (p. 30)

The distinguishing feature of modern scientific thought lies in the fact that it begins by discarding all a priori conceptions about the nature of reality – or about the ultimate nature of the universe – such as had characterized practically all Greek philosophy and all medieval thinking as well, and takes instead, as its starting point, well-authenticated, carefully tested experimental facts, no matter whether these facts seen at the moment fit into any general philosophical scheme or not – that is, no matter whether they seem at the moment to be reasonable or not.

Professor Einstein at the California Institute of Technology

*Science*, Volume 73, Number 1893, April 10, 1931 (p. 376)

It is to lighten man's understanding, to illuminate his path through life, and not merely to make it easy, that science exists.

In Frederick Houk Law

*Science in Literature*

Modern Physics (p. 318)

Harper & Brothers. New York, New York, USA. 1929

...Science walks forward on two feet, namely theory and experiment...Sometimes it is one foot which is put forward first, sometimes the other, but continuous progress is only made by the use of both – by theorizing and then testing, or by finding new relations in the process of experimenting and then bringing the theoretical foot up and pushing it beyond, and so on in unending alternation.

*Nobel Lectures, Physics 1922–1941*

Nobel lecture for award received in 1923

The Electron and the Light-Quant from the Experimental Point of View (p. 55)

Elsevier Publishing Company. Amsterdam, Netherlands. 1965

A science grows in the main as does a planet by the process of infinitesimal accretion. Practically every experiment in physics is a modification of an experiment which has gone before.

The Significance of Radium

*Science (New Series)*, Volume 54, Number 1383, July 1, 1921 (p. 2)

**Minot, Charles Sedgwick** 1852–1914

American anatomist

The growth of science depends on three things: –

First. The unknown, which is discoverable. Second. Raw knowledge. Third. Assimilated knowledge.

*Biological Lectures Delivered at the Marine Biological Laboratory of Wood's Hole*

Tenth Lecture (p. 149)

Ginn & Co. Boston, Massachusetts, USA. 1896

**Mitchell, Maria** 1818–89

American astronomer and educator

The phrase “popular science” has in itself a touch of absurdity. That knowledge which is popular is not scientific.

In Phebe Mitchell Kendall

*Maria Mitchell: Life, Letters, and Journals*

Chapter VII (p. 138)

Lee & Shepard. Boston, Massachusetts, USA. 1896

**Mivart, St. George Jackson** 1827–1900

English biologist

Every science is a definitely organised system of recognised relations between thoughts and objects, between thoughts and thoughts, and between objects and objects; and no science can be learned save by the aid of language, spoken, written, or both.

*The Groundwork of Science; A Study of Epistemology*

Chapter II (p. 16)

G.P. Putnam's Sons. New York, New York, USA. 1898

The difference between science and ordinary knowledge is no difference of kind but merely one of degree. Science is nothing more than plain reason and common sense used in a methodical manner and applied to the examination of various objects around us, with as much exactness as possible.

*An Introduction to the Elements of Science*

Chapter I (p. 2)

Little, Brown & Co. Boston, Massachusetts, USA. 1894

**Monod, Jacques** 1910–76

French biochemist

In science, self-satisfaction is death. Personal self-satisfaction is the death of the scientist. Collective self-satisfaction is the death of the research. It is restlessness, anxiety, dissatisfaction, agony of mind that nourish science.

Obituary

*News Science*, Volume 109, June 5, 1976 (p. 359)

**Montagu, Ashley** 1905–99

English-born American anthropologist

As the god of contemporary man's idolatry, science is a two-handed engine, and as such science is too important a human activity to leave to the scientist.

Advertisement of Jacques Barzun's "Science: The Glorious Entertainment"

*New York Times Book Review*, April 26, 1964

**More, Louis Trenchard** 1870–1944

English physicist and biographer of Isaac Newton

Science has so many dazzling achievements to its credit; we have done so many things which seemed to be impossible, that the popular mind is apt to conclude that, if an explanation is given in the name of science, it must be true whether it be understood or not.

*The Dogma of Evolution*

Chapter Seven (p. 241)

Princeton University Press. Princeton, New Jersey, USA. 1925

The goal of science is mathematics, and while mathematics may be said to be the only true science since it has the only true scientific method, mathematics is not a science because it deals with abstractions and ignores concrete phenomena.

*The Limitations of Science*

Chapter V (p. 151)

Henry Holt & Co. New York, New York, USA. 1915

**Morgan, Lloyd** 1870–1944

English psychologist

Science...deals exclusively with changes of configuration, and traces the accelerations which are observed to occur, leaving to metaphysics to deal with the underlying agency, if it exists.

*The Interpretation of Nature*

Chapter V (p. 62)

The Knickerbocher Press. New York, New York, USA. 1906

**Morrow, James** 1947–

American novelist

Everybody thinks he's being oh-so-deep when he says science doesn't have all the answers.... Science *does*

have all the answers.... The problem is that we don't have all the science.

*Only Begotten Daughter* (p. 90)

Harcourt Incorporated. Orlando, Florida, USA. 1990

**Moscovici, S.** 1925–

Romanian-born French psychologist

Science has become involved in this adventure, our adventure, in order to renew everything it touches and warm all that it penetrates – the earth on which we live and the truths which enable us to live. At each turn it is not the echo of a demise, a bell tolling for a passing away that is heard, but the voice of rebirth and beginning, ever afresh, of mankind and materiality, fixed for an instant in their ephemeral permanence. That is why the great discoveries are not revealed on a deathbed like that of Copernicus, but offered like Kepler's on the road of dreams and passion.

*Social Influence and Social Change* (pp. 297–298)

Academic Press. London, England. 1980

**Moser, E. S.**

No biographical data available

Science has no business to halt by the wayside and inquire whether or not the truths found in the book of Nature will horrify those who are nursing some creed or dogma.

Immaterial Science

*The Popular Science Monthly*, Volume 44, November, 1893 (p. 86)

**Motto**

Science Finds – Industry Applies – Man Conforms

Chicago World's Fair, 1933

**Moulton, Forest Ray** 1872–1952

American astronomer

In an age when the world is so largely run by the results of scientific effort it is almost superfluous to speak of the value of science. If the things which science has contributed to our everyday use and which make life at the present time pleasant for us were removed, we should speedily understand the immense debt we owe to it.

Part I (p. 1)

American School of Correspondence. Chicago, Illinois, USA. 1912

**Mumford, Lewis** 1895–1990

American social philosopher

...however far modern science and techniques have fallen short of their inherent possibilities, they have taught mankind at least one lesson: Nothing is impossible.

*Technics and Civilization*

Chapter VIII, Section 13 (p. 435)

Routledge & Kegan Paul Ltd. London, England, 1934

**Munger, Theodore** 1830–1910

American clergyman

Science cannot determine origin, and so cannot determine destiny. As it presents only a sectional view of creation, it gives only a sectional view of everything in creation.

In Jefferson Hane Weaver

*The World of Physics* (Volume 3)

U. 1 (p. 212)

Simon & Schuster. New York, New York, USA. 1987

**Munroe, J.**

No biographical data available

Science has no longer a morbid hold on us. We are dragged from the shade of the Upas tree, and can survey it with impunity, finding in it a medicine instead of a poison. Without destroying the reverence, Science, when properly studied, only confirms the truth of the ancient saying, – “We are fearfully and wonderfully made.”

Science and the Sense of Beauty

*The Journal of Science, and Annals of Astronomy, Biology, Geology,*

Volume IV, (Third series), April, 1882 (p. 206)

So, after all our Science, we come to mystery in the end. Our reality lands us in ideality. All our Science can only stem back the unknown ocean of truth, mystic and awful, from the organism to the ultimate atom. We can only regard the universe, and man the microcosm, as a whole, whose wondrous construction we may gain some wise insight into, but whose material is an unfathomable mystery.

Science and the Sense of Beauty

*The Journal of Science, and Annals of Astronomy, Biology, Geology,*

Volume IV, (Third series), April, 1882 (p. 207)

**Needham, Joseph** 1900–95

English biochemist and sinologist

...our proper conclusion seems to me to be that the conceptual framework of Chinese associative or coordinative thinking was essentially something different from that of European causal and “legal” or nomothetic thinking. That it did not give rise to 17th-century theoretical science is no justification for calling it primitive.

*Science and Civilisation in China* (Volume 2) (p. 286)

At The University Press. Cambridge, England. 1954

**Nekrasov, Nikolai** 1821–78

Russian poet

There is no science for the sake of science, no art for the sake of art – they exist for the sake of society, for the ennoblement and exaltation of man, to enrich his knowledge and provide his material comforts.

Compiled by V.V. Vorontsov

*Words of the Wise: A Book of Russian Quotations*

Translated by Vic Schneierson

Progress Publishers. Moscow, Russia. 1979

**Newcomb, Simon** 1835–1909

Canadian-American astronomer

Its [science] animating spirit is love of truth. Its pride is to do the greatest good to the greatest number.

It embraces not only the whole human race but all nature in its scope.

*Side-Lights on Astronomy and Kindred Fields of Popular Science*  
Chapter XVIII (p. 298)  
Harper & Brothers Publishers. New York, New York, USA. 1906

Science has its competition, as keen as that which is the life of commerce. But its rivalries are over the question who shall contribute the most and the best to the sum total of knowledge; who shall give the most, not who shall take the most.

*Side-Lights on Astronomy and Kindred Fields of Popular Science*  
Chapter XVIII (p. 298)  
Harper & Brothers Publishers. New York, New York, USA. 1906

### **Newell, A.**

Physics professor and author

Science is not holy scripture, nor do its practitioners consider themselves priests protecting a glittering grail, forever unchanging and pure. What drives scientists on is the thirst to understand more and to use nature, to build rather than to exploit a comprehensible universe.

*What Makes Nature Tick?*  
Epilogue (p. 234)  
Harvard University Press. Cambridge, Massachusetts, USA. 1993

### **Nietzsche, Friedrich Wilhelm** 1844–1900

German philosopher

To the man who works and searches in it, science gives much pleasure; to the man who learns its results, very little.

Translated by Marion Faber  
*Human, All Too Human: A Book for Free Spirits*  
Section Five, Number 251  
Aphorism 205 (p. 153)  
University of Nebraska Press. Lincoln, Nebraska, USA. 1984

Oh, how much is today hidden by science! Oh, how much it is expected to hide!

Translated by William A. Haussmann  
*The Genealogy of Morals*  
What Do Ascetic Ideals Mean?  
Aphorism 23  
Macmillan Publishing Company. New York, New York, USA. 1907

Science offends the modesty of all real women. It makes them feel as though it were an attempt to peek under their skin – or, worse yet, under their dress and ornamentation!

*Beyond Good and Evil*  
Chapter IV, 127 (p. 83)  
The Modern Library. New York, New York, USA. 1917

Science rushes headlong, without selectivity, without “taste,” at whatever is knowable, in the blind desire to know all at any cost.

Translated by Marianne Cowan  
*Philosophy in the Tragic Age of the Greeks*  
Section 3 (p. 43)  
A Gateway Edition. Chicago, Illinois, USA. 1962

The old God was seized by mortal terror. Man himself had been his greatest blunder; he had created a rival to himself; science makes men godlike – it is all up with priests and gods when man becomes scientific – Moral: science is the forbidden per se; it alone is forbidden. Science is the first of sins, the germ of all sins, the original sin. This is all there is of morality. – “Thou shalt not know”: the rest follows from that.

Translated by H.L. Mencken  
*The Anti-Christ*  
Aphorism 48  
Macmillan Publishing Company. New York, New York, USA. 1911

### **Nobel Prize Medal**

*Inventas vitam iuvat excoluisse per artes.*  
Let us improve life through science and art.  
*Inscribed on Nobel Prize Medal*

### **Nordmann, Charles**

Astronomer

If love is, as Plato says, a soaring toward the infinite, where shall we find more love than in the impassioned curiosity which impels us, with bowed heads and beating hearts, against the wall of mystery that environs our material world? Behind that wall, we feel, there is something sublime. What is it? Science is the outcome of the search for that mysterious something.

Translated by Joseph McCabe  
*Einstein And The Universe: A Popular Exposition of The Famous Theory*  
Introduction (p. xiii)  
Henry Holt & Co. New York, New York, USA. 1922

...the very essence of the august and lofty grandeur of science that it is perpetually advancing. It is like a torch in the sombre forest of mystery.

Translated by Joseph McCabe  
*Einstein And The Universe: A Popular Exposition of The Famous Theory*  
Introduction (p. xvi)  
Henry Holt & Co. New York, New York, USA. 1922

### **Oberth, Hermann** 1894–1989

German mathematician and physicist

The present state of science and of technological knowledge permits the building of machines that can rise beyond the limits of the atmosphere of the earth.

After further development these machines will be capable of attaining such velocities that they – left undisturbed in the void of ether space – will not fall back to earth; furthermore, they will even be able to leave the zone of terrestrial attraction.

*The Rocket to the Interplanetary Spaces*

 American playwright

DARRELL: Happiness hates the timid! So does Science!

*Strange Interlude*  
 Act Four (p. 152)  
 Boni & Liveright. New York, New York, USA. 1928

**Oppenheimer, James Robert** 1904–67  
 American theoretical physicist

Science has changed the conditions of man's life. It has changed its material conditions; by changing them it has altered our labor and our rest, our power, and the limits of that power, as men and as communities of men, the means and instruments as well as the substance of our learning, the terms and the forms in which decisions of right and wrong come before us.

*Science and the Common Understanding*  
 Chapter I (p. 3)  
 Simon & Schuster. New York, New York, USA. 1966

We live today in a world in which poets and historians and men of affairs are proud that they wouldn't even begin to consider thinking about learning anything of science, regarding it as the far end of a tunnel too long for any wise man to put his head into.

*The Open Mind*  
 Chapter VII (p. 128)  
 Simon & Schuster. New York, New York, USA. 1955

A subject is much harder to understand when no one understands it. The world is really an open place, but we start with such crude and limited experience, and our minds are so determined by that experience, that when science carries us into new domains we are not always prepared for what we encounter, and we are floored by it.

In Edward Lueders  
*Writing on Life: Sixteen Close-Ups*  
 Physicist Oppenheimer (p. 358)  
 William Sloane Associates, Publishers. New York, New York, USA. 1951

One thing science can do, and rarely does: it can correct the inherited views that it has by accident at another stage given to common sense, and which turn out to be not true.

The Growth of Science and the Structure of Culture  
*Daedalus*, Winter 1958 (pp. 71–72)

A change in science, whether novelty or discovery, when properly understood, when the linguistic problem is

adequately solved, will even then provide only a hunch, a starting point for looking at an area of experience other than the science in which it was nourished and born.

The Growth of Science and the Structure of Culture  
*Daedalus*, Winter 1958 (pp. 74–75)

The day is long past – if indeed it ever existed except in legend – when the whole of science was the expert province of any one man.

The Age of Science – 1900–1950  
*Scientific American*, Volume 183, Number 3, September, 1950 (p. 21)

Science, for all the brilliance of its contemporary development, for all the ingenuity of its technical invention, is still continuous with man's long history of rational life, of which it is a part; it is still the inheritor of the hope, so deeply founded in both Eastern and Western cultures, that, by reason and by open-minded efforts at understanding, man could not only enrich his life but better cope with the decisions that it fell to him to make.

The Age of Science – 1900–1950  
*Scientific American*, Volume 183, Number 3, September, 1950 (p. 21)

**O'Rourke, P. J.** 1947–  
 American political satirist

...to mistrust science and deny the validity of the scientific method is to resign your job as a human. You'd better go look for work as a plant or wild animal.

*Parliament of Whores: A Lone Humorist Attempts to Explain the Entire US Government*  
 Dirt of the Earth (p. 197)  
 Vintage Books. New York, New York, USA. 1992

**Orr, Louis**  
 American Medical Association president

Science will never be able to reduce the value of a sunset to arithmetic. Nor can it reduce friendship or statesmanship to a formula. Laughter and love, pain and loneliness, the challenge of accomplishment in living, and the depth of insight into beauty and truth; these will always surpass the scientific mastery of nature.

Commencement Address, Emory University, June 6, 1960

**Osler, Sir William** 1849–1919  
 Canadian physician and professor of medicine

To the physician particularly, a scientific discipline is an incalculable gift, which leavens his whole life, giving exactness to habits of thought and tempering the mind with that judicious faculty of distrust which can alone, amid the uncertainties of practice, make him wise unto salvation. For perdition inevitably awaits the mind of the practitioner who has never had the full inoculation with the leaven, who has never grasped clearly the relations of science to his art, and who knows nothing and perhaps cares less, for the limitations of either.

*Aequanimitas, with Other Addresses to Medical Students, Nurses, and Practitioners of Medicine*  
The Leaven of Science (p. 92)  
The Blakiston Company. Philadelphia, Pennsylvania, USA. 1932

The future belongs to science. More and more she will control the destinies of the nations. Already she has them in her crucible and on her balances.

In Harvey Cushing

*The Life of Sir William Osler* (Volume 2) (p. 262)  
Clarendon Press. Oxford, England. 1925

**Ostwald, Carl Wilhelm Wolfgang** 1853–1932  
Latvian-born German chemist

Science is not like a chain which snaps when only a single link proves to be weak. It is like a tree, or, better still, like a forest, in which all sorts of changes or ravages go on without causing the whole to pass out of existence or cease to be active.

Translated by Thomas Seltzer

*Natural Philosophy*

Introduction (p. 6)

Henry Holt & Company. New York, New York, USA. 1910

...that is just what science is for, – to make practical things easier by letting us know what is important and what unimportant.

Translated by Harry Wheeler Morse

*Letters to a Painter on the Theory and Practice of Painting*

Letter I (p. 2)

Ginn & Co. Boston, Massachusetts, USA. 1907

**Ostwald, Friedrich Wilhelm** 1853–1932  
Latvian-born German chemist

The more perfect the theoretical evolution of the sciences becomes, the greater will be the scope of their explanations and at the same time the greater their practical importance.

On Chemical Energy

*The Journal of the American Chemical Society*, Volume 15, Number 8, August, 1893 (p. 430)

**Pagels, Heinz R.** 1939–88  
American physicist and science writer

This sense of the unfathomable beautiful ocean of existence drew me into science. I am awed by the universe, puzzled by it and sometimes angry at a natural order that brings such pain and suffering. Yet an emotion or feeling I have toward the cosmos seems to be reciprocated by neither benevolence nor hostility but just by silence. The universe appears to be a perfectly neutral screen unto which I can project any passion or attitude, and it supports them all.

*Perfect Symmetry: The Search for the Beginning of Time*

Part Four, Chapter 2 (p. 370)

Simon & Schuster. New York, New York, USA. 1985

Science is not the enemy of humanity but one of the deepest expressions of the human desire to realize that vision of infinite knowledge.

*The Cosmic Code: Quantum Physics as the Language of Nature*  
Part III, Chapter 2 (p. 348)  
Simon & Schuster. New York, New York, USA. 1982

**Paglia, Camille** 1947–  
American social critic, intellectual, and writer

Modern bodybuilding is ritual, religion, sport, art, and science, awash in Western chemistry and mathematics.

Defying nature, it surpasses it.

*Sex, Art, and American Culture*

Alice in Muscle Land (p. 82)

Vintage Books. New York, New York, USA. 1992

**Pallister, William Hales** 1877–1946  
Canadian physician

You are the sum of what we know,

You are our might and main;

You are the whole of what is so,

The little we retain:

Our fond beliefs all come and go,

And you alone remain.

*Poems of Science*

Science (p. 39)

Playford Press. New York, New York, USA. 1931

Science works by the slow method of the classification of data, arranging the detail patiently in a periodic system into groups of facts, in series like the strata of the rocks. For each series there must be a vocabulary of special words which do not always make good sense when used in another series. But the laws of periodicity seem to hold throughout, among the elements and in every sphere of thought, and we must learn to co-ordinate the whole through our new conception of the reign of relativity.

*Poems of Science*

Men and the Stars (p. 88)

Playford Press. New York, New York, USA. 1931

**Panunzio, Constantine** 1884–1964  
Italian sociologist

Science...involves active, purposeful search; it discovers, accumulates, sifts, orders, and tests data; it is a slow, painstaking, laborious activity; it is a search after bodies of knowledge sufficiently comprehensive to lead to the discovery of uniformities, sequential orders or so-called "laws"; it may be carried on by an individual, but it gains relevance only as it produces data which can be added to and tested by the findings of others.

*Major Social Institutions*

Chapter 20 (p. 322)

The Macmillan Company. New York, New York, USA. 1945

If science is to subserve human needs, it will continue to discover and catalogue "all the islands of the universe 300,000,000 or more light years distant," but it will not fiddle while Rome burns...

*Major Social Institutions*

Chapter 21 (p. 338)

The Macmillan Company. New York, New York, USA. 1945

**Parin, V. V.**

No biographical data available

Science breathes but one air – the oxygen of facts. New methods of research are the trees that clear its atmosphere of the carbon dioxide of inaccurate conclusions and saturate it with the oxygen of first discovered, seen and apprehended phenomena.

Compiled by V.V. Vorontsov

...if science can tell us nothing about it, science should be silent. I do not ask more, and I will not take less.

*Studies in Life*

Chapter III (p. 66)

Hodder & Stoughton. London, England. 1880

**Pavlov, Ivan Petrovich** 1849–1936

Russian physiologist

Only science, exact science about human nature itself, and the most sincere approach to it by the aid of the omnipotent scientific method, will deliver man from his present gloom, and will purge him from his contemporary shame in the sphere of interhuman relations.

Translated by Stephen G. Brush

*Lectures on Conditioned Reflexes*

Preface to the First Russian Edition (p. 41)

University of California Press. Berkeley, California, USA. 1964

Science moves in fits and starts, depending on the progress in methods of research. Every step forward in method takes us a step higher, affording a broader view of the horizon and of objects that were invisible before.

Compiled by V.V. Vorontsov

*Words of the Wise: A Book of Russian Quotations*

Translated by Vic Schneierman

Progress Publishers. Moscow, Russia. 1979

Remember that science demands from a man all his life. If you had two lives that would be not enough for you. Be passionate in your work and your searchings.

Bequest of Pavlov to the Academic Youth of his Country

*Science*, Volume 83, Number 2155, April 17, 1936 (p. 369)

Learn the ABC of science before you try to ascend to its summit. Never begin the subsequent without mastering the preceding. Never attempt to screen an insufficiency of knowledge even by the most audacious surmise and hypothesis.

Bequest of Pavlov to the Academic Youth of His Country

*Science*, Volume 83, Number 2155, April 17, 1936 (p. 369)

Here I now simply uphold and assert the absolute and incontestable right of natural science to operate wherever and whenever it is able to display its power. And who knows the limits to this!

*Experimental Psychology and Other Essays*

Natural Science and the Brain (p. 218)

Philosophical Library, New York, New York, USA. 1957

It is often said, and not without truth, that science advances by stages dependent upon the results accruing from particular methods. With each advance in technique we reach a higher level from which a wider field of view is open to us, and in which we see events previously out of range.

Translated by William Henry Thompson

*The Work of the Digestive Glands*

Lecture I (p. 4)

Charles Griffin & Co., Ltd. London, England. 1902

### **Payne, Roger**

Biologist

In my own experience I have found that at their best the revelations of science are as inspiring as art.... I feel that science has a role to play just in conservation (in my view the most important human activity) but also in the more spiritual parts of our lives.

*Among Whales*

Chapter 9 (p. 343)

Charles Scribner's Sons. New York, New York, USA. 1995

### **Peacock, Thomas Love** 1785–1866

English writer

Science is one thing and wisdom is another. Science is an edged tool with which men play like children and cut their own fingers. If you look at the results which science has brought in its train, you will find them to consist almost wholly in elements of mischief.... The day would fail if I should attempt to enumerate the evils which science has inflicted on mankind.

*Gryll Grange*

Chapter 19 (p. 127)

Penguin Books. Harmondsworth, England. 1949

I almost think it is the ultimate destiny of science to exterminate the human race.

*Gryll Grange*

Chapter 19 (p. 127)

Penguin Books. Harmondsworth, England. 1949

### **Pearson, Karl** 1857–1936

English mathematician

The science of the future, while agnostic as to the super-sensuous, will replace knowledge by belief in the perceptual sphere, and reserve the term knowledge for the conceptual sphere – the region of their own concepts and ideas – of ether, atom, organic corpuscle, and Loading...Loading...vital force – of physical and plasmic mechanics.

*The Grammar of Science* (2nd edition)

Preface to the Second Edition (pp. vii–viii)

Adam & Charles Black. London, England. 1900

Modern Science, as training the mind to an exact and impartial analysis of facts, is an education specially fitted to promote sound citizenship.

*The Grammar of Science* (2nd edition)

Chapter 1 (p. 9)

Adam & Charles Black. London, England. 1900

Good science will always be intelligible to the logically trained mind, if that mind can read and translate the language in which science is written.

*The Grammar of Science* (2nd edition)

Chapter 1 (p. 10)

Adam & Charles Black. London, England. 1900

Modern Science, as training the mind to an exact and impartial analysis of facts, is an education specifically fitted to promote sound citizenship.

*The Grammar of Science*

Introductory, Section 3 (p. 11)

Charles Scribner's Sons. London, England. 1892

When every fact, every present or past phenomenon of that universe, every phase or present or past life therein, has been examined, classified, and co-ordinated with the rest, then the mission of science will be completed. What is this but saying that the task of science can never end till man ceases to be, till history is no longer made, and development itself ceases?

*The Grammar of Science*

Introductory, Section 5 (p. 15)

Charles Scribner's Sons. London, England. 1892

Every great advance of science opens our eyes to facts which we have failed before to observe, and makes new demands on our powers of interpretation. This extension of the material of science into regions where our great-grandfathers could see nothing at all, or where they would have declared human knowledge impossible, is one of the most remarkable features of modern progress. Where they interpreted the motion of the planets of our own system, we discuss the chemical constitution of stars, many of which did not exist for them, for the telescopes could not reach them. Where they discovered the circulation of the blood, we see the physical conflict of living poisons within the blood, whose battles would have been absurdities for them.

*The Grammar of Science*

Introductory, Section 5 (p. 17)

Charles Scribner's Sons. London, England. 1892

Science in no case can demonstrate any inherent necessity in a sequence, nor prove, with absolute certainty that it must be repeated. Science for the past is a description, for the future a belief; it is not, and has never been, an explanation, if by this word is meant that science shows the “necessity” of any sequence of perceptions.

*The Grammar of Science* (2nd edition)  
Chapter IV (p. 113)  
Adam & Charles Black. London, England. 1900

Does science leave no mystery? On the contrary it proclaims mystery where others profess knowledge. There is mystery enough in the universe of sensation and in its capacity for containing those little corners of consciousness which project their own products, or order and law and reason, into an unknown and unknowable world. There is mystery enough here, only let us clearly distinguish it from ignorance within the field of possible knowledge. The one is impenetrable, the other we are daily subduing.

*The Grammar of Science*  
Chapter III, Conclusion (p. 134)  
Charles Scribner's Sons. London, England. 1892

Science for the past is a description, for the future a belief...

*The Grammar of Science*  
Chapter IV, Section 1 (p. 136)  
Charles Scribner's Sons. London, England. 1892

...science claims for its heritage the whole domain to which the word knowledge can be legitimately applied; that it refuses to admit any co-heirs to its possessions, and asserts that its own slow and laborious processes of research are the sole profitable modes of cultivation, the only tillage from which we can reach a harvest of truth unchoked by dogmatic tares.

*The Grammar of Science* (2nd edition)  
Chapter XII (p. 504)  
Adam & Charles Black. London, England. 1900

**Peattie, Donald Culross** 1898–1964  
American botanist, naturalist, and author

It is not for all men actively to practice a science and advance it. But its gifts are gratuitous, and there is no one who need go in want of them, nor anyone, I think, who may scorn them wholly and call himself a modern. For it speaks the universal language, and prevails upon the mysteries by friendship. It is the taste of dragon's blood upon the lips that makes us understand the speech of birds. Where it turns its gaze, it puts a new dimension in the scene, deepening it with marvelous perspectives. And though so marvelous, they are real – more real than the evidence of the unaided senses.

*Flowering Earth*  
Chapter 2 (p. 12)  
G.P. Putnam's Sons. New York, New York, USA. 1939

Of our windows on the universe, science is set with the clearest pane; it is not warped or waved to make the images appear to support any dogma; the glass is not rose-tinted, neither is it leaded with a picture that shuts out the sun and, coming between the light of day and you, enforces the credence of the past upon the young present.

*Flowering Earth*  
Chapter 18 (p. 244)  
G.P. Putnam's Sons. New York, New York, USA. 1939

**Peirce, Charles Sanders** 1839–1914  
American scientist, logician, and philosopher

Science, when it comes to understand itself, regards facts as merely the vehicle of eternal truth, while for Practice they remain the obstacles which it has to turn, the enemy of which it is determined to get the better.

*The Essential Peirce: Selected Philosophical Writings* (Volume 2)  
The First Rule of Logic (p. 55)  
Indiana University Press. Bloomington, Indiana, USA. 1998

It is a common observation that a science first begins to be exact when it is quantitatively treated. What are called the exact sciences are no other than the mathematical ones.

*Chance, Love and Logic: Philosophical Essays*  
The Doctrine of Chances (p. 61)  
Harcourt, Brace & Company, Inc. New York, New York, USA. 1923

[Science] advances by leaps; and the impulse for each leap is either some new observational resource, or some novel way of reasoning about the observations. Such novel way of reasoning might, perhaps, be considered as a new observation means, since it draws attention to reactions between facts which would previously have been passed by unperceived.

*Philosophical Writings of Peirce*  
Chapter 4 (p. 51)  
Dover Publications. New York, New York, USA. 1955

**Perl, Martin L.** 1927  
American physicist

I was following an old idea in science: "If you can't understand a phenomenon, look for more examples of that phenomenon..."

Electron, Muon, and Tau Heavy Lepton – Are These the Truly Elementary Particles?  
*The Science Teacher*, Volume 47, Number 9, December 1980  
(pp. 18–19)

**Perutz, Max F.** 1914–2002  
Austrian-born English biochemist

It seems to me that, just as the Church did in former times, science offers a safe niche where you can spend a quiet life classifying spiders, away from what E.M. Forster called the world of telegrams and anger.

*Is Science Necessary?*  
How to Become a Scientist (p. 193)  
E.P. Dutton & Company. New York, New York, USA. 1989

**Phelps, Almira Hart Lincoln** 1793–1884  
American educator and writer

If we had no sciences, nature would present exactly the same phenomena as at present. The heavenly bodies would move with equal regularity, and preserve the same relative situations, although no system of Astronomy had been formed. The laws of gravity and of motion, would operate in the same manner as at present, if we had no such science as Natural Philosophy.

The affinities of substances for each other were the same, before the science of Chemistry existed, as they are now. It is an important truth, and one which cannot be too much impressed upon the mind in all scientific investigations, that no systems of man can change the laws and operations of Nature; though by systems, we are enabled to gain a knowledge of these laws and relations.

*Familiar Lectures on Botany, Practical, Elementary and Physiological*  
Lecture I (p. 13)  
F.J. Huntington & Co. New York, New York, USA. 1837

**Pirsig, Robert M.** 1928–

American writer

Science values static patterns.

*Lila: An Inquiry Into Morals*  
Chapter 11 (p. 142)  
Bantam Books. New York, New York, USA. 1991

**Planck, Max** 1858–1947

German physicist

No doctrinal system in physical science, or indeed perhaps in any science, will alter its content of its own accord. Here we always need the pressure of outer circumstances. Indeed the more intelligible and comprehensive a theoretical system is the more obstinately it will resist all attempts at reconstruction or expansion.

Translated by James Murphy  
*Where is Science Going?*  
Chapter I (p. 40)  
George Allen & Unwin. London, England. 1933

No science can rest its foundation on the dependability of single human individuals.

Translated by James Murphy  
*Where is Science Going?* (p. 81)  
George Allen & Unwin. London, England. 1933

Science enhances the moral values of life because it furthers a love of truth and reverence – love of truth displaying itself in the constant endeavor to arrive at a more exact knowledge of the world of mind and matter around us, and reverence, because every advance in knowledge brings us face to face with the mystery of our own being.

Translated by James Murphy  
*Where is Science Going?*  
Chapter V (p. 169)  
George Allen & Unwin. London, England. 1933

That we do not construct the external world to suit our own ends in the pursuit of science, but that vice versa the external world forces itself upon our recognition with its own elemental power, is a point which ought to be categorically asserted again and again in these positivistic times. From the fact that in studying the happenings of nature we strive to eliminate the contingent and accidental and to come finally to what is essential and necessary,

it is clear that we always look for the basic thing behind the dependent thing, for what is absolute behind what is relative, for the reality behind the appearance and for what abides behind what is transitory. In my opinion, this is characteristic not only of physical science but all of science.

*Where Is Science Going?*  
Chapter VI (pp. 198–199)  
W.W. Norton & Company, Inc. New York, New York, USA. 1932

Science cannot solve the ultimate mystery of nature. And that is because, in the last analysis, we ourselves are part of nature and therefore part of the mystery that we are trying to solve.

*Where Is Science Going?*  
Epilogue (p. 217)  
W.W. Norton & Company, Inc. New York, New York, USA. 1932

Science does not mean an idle resting upon a body of certain knowledge; it means unrelenting endeavor and continually progressing development towards an aim, which the poetic intuition may apprehend, but which the intellect can never fully grasp.

Translated by W. H. Johnston  
*The Philosophy of Physics*  
Chapter II (p. 83)  
W.W. Norton & Company, Inc. New York, New York, USA. 1936

...I had always looked upon the search for the absolute as the noblest and most worthwhile task of science.

*Scientific Autobiography and Other Papers*  
A Scientific Autobiography (p. 46)  
Philosophical Library. New York, New York, USA. 1949

...science is not contemplative repose amidst knowledge already gained, but is indefatigable work and an ever progressive development.

*Scientific Autobiography and Other Papers*  
The Concept of Causality in Physics (p. 150)  
Philosophical Library. New York, New York, USA. 1949

**Plato** 428 BCE–347 BCE

Greek philosopher

As being is to becoming, so is pure intellect to opinion. And as intellect is to opinion, so is science to belief...

In *Great Books of the Western World* (Volume 7)  
*The Republic*  
Book VII, Section 534 (p. 398)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Playfair, Lyon** 1818–98

Scottish scientist and Parliamentarian

Science may see an horizon bounding her view; but as she proceeds onward the horizon constantly recedes, and shows the limit to be altogether illusory. In one time and generation a nation may, like Newton, pick up a few pebbles on the seashore, while the boundless ocean of science lies beyond, with all its vast and unexplored treasures.

*Records of the School of Mines and of Science Applied to the Arts*  
(Volume 1), Part I  
The Study of Abstract Science (p. 30)  
Longman, Brown, Green & Longmans. London, England. 1852

Science is truly catholic, and is bounded only by the universe.

Inaugural Address  
*Nature*, Volume 32, September 10, 1885 (p. 438)

Science is too lofty for measurement by the yard of utility; – too inestimable for expression by a money standard. These grovelling ideas of the objects of science, which constantly jar it in its intercourse with the world, ought to find no response in the breast of any devotee who would draw inspiration from its shrine.

*Records of the School of Mines and of Science Applied to the Arts*  
(Volume 1), Part I  
The Study of Abstract Science (p. 27)  
Longman, Brown, Green & Longmans. London, England. 1852

There is no vein of science too abstract for future industrial application; none yet thoroughly mined out and exhausted.

*Records of the School of Mines and of Science Applied to the Arts*  
(Volume 1), Part I  
The Study of Abstract Science (p. 32)  
Longman, Brown, Green & Longmans. London, England. 1852

**Poe, Edgar Allan** 1809–49  
American short story writer

Science! true daughter of old Time thou art  
Who alterest all things with thy peering eyes!  
Why prey'st thou thus upon the poet's heart,  
Vulture! whose wings are dull realities!

*The Raven and Other Poems*  
Sonnet – To Science  
Columbia University Press. New York, New York, USA. 1942

**Poincaré, Jules Henri** 1854–1912  
French mathematician and theoretical astronomer

Man, then, cannot be happy through science, but today he can be much less be happy without it.

*The Foundations of Science*  
*The Value of Science*, Introduction (p. 206)  
The Science Press. New York, New York, USA. 1913

...science is a rule of action which is successful...

*The Foundations of Science*  
*The Value of Science*, Part III, Chapter X (p. 324)  
The Science Press. New York, New York, USA. 1913

...if science is feared, it is above all because it cannot give us happiness.

Translated by George Bruce Halsted  
*The Value of Science*  
Introduction (p. 12)  
The Science Press. New York, New York, USA. 1907

There is no science other than disinterested science.

In Stefan Amsterdamski  
*Between History and Method*  
Chapter V Crisis of the Modern Ideal (p. 94)  
Kluwer Academic Publishers. Dordrecht, Netherlands. 1992

As science progress, it becomes more and more difficult to fit in the new facts when they will not fit in spontaneously. The older theories depend upon the coincidences of so many numerical results which cannot be attributed to chance. We should not separate what has been joined together.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1912*  
The Ether and Matter (pp. 209–210)  
Government Printing Office. Washington, D.C. 1913

...a science produced with a view single to its applications is impossible; truths are fruitful only if they are concatenated; if we cleave to those only of which we expect an immediate result, the connecting links will be lacking, and there will be no longer a chain.

The Relations of Analysis and Mathematical Physics  
*Bulletin of the American Mathematical Society*, Volume IV, Number 6, March, 1898 (p. 247)

**Polanyi, Michael** 1891–1976  
Hungarian-born English scientist, philosopher, and social scientist

This coherence of valuation throughout the whole range of science underlies the unity of science. It means that any statement recognized as valid in one part of science can, in general, be considered as underwritten by all scientists. It also results in a general homogeneity of and a mutual respect between all kinds of scientists, by virtue of which science forms an organic unity.

*Science, Faith and Society*  
Authority and Conscience (p. 49)  
The University of Chicago Press. Chicago, Illinois. 1964

**Pope, Alexander** 1688–1744  
English poet

Trace Science then, with Modesty thy guide;  
First strip off all her equipage of Pride.

*The Complete Poetical Works* (Volume 2)  
An Essay on Man  
Epistle II, l. 43–44  
Houghton Mifflin Company. New York, New York, USA. 1903

One science only will one genius fit,  
So vast is art, so narrow human wit...

*The Complete Poetical Works* (Volume 2)  
Essay on Criticism, Part I, l. 60–61  
Houghton Mifflin Company. New York, New York, USA. 1903

Far eastward cast thine eye, from whence the Sun  
And orient Science their brite course begun.

*The Complete Poetical Works* (Volume 4)  
Duncaid, Book III, l. 73–74  
Houghton Mifflin Company. New York, New York, USA. 1903

**Popper, Karl R.** 1902–94  
Austrian/British philosopher of science

The empirical basis of objective science has thus nothing “absolute” about it. Science does not rest upon solid bedrock. The bold structure of its theories rises, as it were, above a swamp. It is like a building erected on piles. The piles are driven down from above into the swamp, but not down to any natural or “given” base; and when we cease our attempts to drive our piles into a deeper layer, it is not because we have reached firm ground. We simply stop when we are satisfied that they are firm enough to carry the structure, at least for the time being.

*The Logic of Scientific Discovery*

Part II, Chapter V, Section 30 (p. 111)

Basic Books, Inc. New York, New York, USA. 1959

Science is not a system of certain, or well-established statements, nor is it a system which steadily advances towards a state of finality.... Like Bacon we might describe our own contemporary science...as consisting of “anticipations, rash and premature,” and as “prejudices.”

*The Logic of Scientific Discovery*

Part II, Chapter X, Section 85 (p. 278)

Basic Books, Inc. New York, New York, USA. 1959

I think that we shall have to get accustomed to the idea that we must not look upon science as a ‘body of knowledge’, but rather as a system of hypotheses; that is to say, as a system of guesses or anticipations which in principle cannot be justified, but with which we work as long as they stand up to tests, and of which we are never justified in saying that we know that they are ‘true’ or ‘more or less certain’ or even ‘probable’.

*The Logic of Scientific Discovery*

Appendix I (p. 317)

Basic Books, Inc. New York, New York, USA. 1959

Science does not aim, primarily, at high probabilities. It aims at a high informative content, well backed by experience. But a hypothesis may be very probable simply because it tells us nothing, or very little.

*The Logic of Scientific Discovery*

Appendix ix (p. 399)

Basic Books, Inc. New York, New York, USA. 1959

Science may be described as the art of systematic oversimplification.

*The Observer*, London, 1 August, 1982

...science is most significant as one of the greatest spiritual adventures that man has yet known...

*The Poverty of Historicism*

Chapter III, Section 19 (p. 56)

The Beacon Press. Boston, Massachusetts, USA. 1957

**Porter, Nash** 1811–92

American educator and philosopher

What science is, is not so easily stated as would seem likely from the freedom with which the term is used, or the readiness, not to say the flippancy, with which its authority is enforced.

*The Sciences of Nature Versus the Science of Man* (p. 21)

Dodd & Mead. New York, New York, USA. 1871

Science has penetrated the constitution of nature, and unrolled the mysterious pages of its history, and started again many, as yet, unanswered questions in respect to the mutual relations of matter and spirit, of nature and of God.

*Fifteen Years in the Chapel of Yale College*

Chapter XI (p. 241)

Charles Scribner’s Sons. New York, New York, USA. 1888

**Poteat, William Louis** 1856–1938

American educator

Science confers power, not purpose. It is a blessing, therefore, if the purpose which it serves is good; it is a curse, if the purpose is bad.

*Can a Man Be a Christian Today?*

Part I, Section 2 (p. 27)

The University of North Carolina Press. Chapel Hill, North Carolina, USA. 1925

**Pouchet, Félix Archimède** 1800–72

French biologist

...when man begins the study of the sciences, it is with profound astonishment that he recognizes that the marvels which they reveal to him far surpass the most audacious fictions of antiquity.

*The Universe: Or, The Infinitely Great and the Infinitely Little*

Book I, Chapter I (p. 731)

Blackie & Son. London, England. 1892

**Powers, Richard** 1957–

American novelist

Science is not about control. It is about cultivating a perpetual condition of wonder in the face of something that forever grows one step richer and subtler than our latest theory about it. It is about reverence, not mastery.

*The Gold Bug Variations*

Dialog (p. 411)

William Morrow & Company, Inc. New York, New York, USA. 1991

**Praed, Winthrop** 1802–39

English poet

Of science and logic he chatters,  
As fine and as fast as he can;  
Though I am no judge of such matters,  
I’m sure he’s a talented man.

*The Poems of Winthrop Mackworth Praed*

The Talented Man

Houghton Mifflin Company. Boston, Massachusetts, USA. 1909

**Pribram, Karl** 1919–  
Austrian neurosurgeon

For the first time in three hundred years science is admitting spiritual values into its explorations.

In Pamela Weintraub (ed.)

*The Omni Interviews*

Holographic Brain (p. 133)

Ticknor & Fields. New York, New York, USA. 1984

**Price, Don Krasher** 1910–95  
American political scientist

Only if a nation can induce scientists to play an active role in government, and politicians to take a sympathetic interest in science (or at least in scientific institutions) can it [the nation] enlarge its range of positive freedom, and renew its confidence that science can contribute progressively to the welfare of mankind.

*The Scientific Estate*

Science and Freedom (p. 278)

Harvard University Press. Cambridge, Massachusetts, USA. 1965

**Prior, Matthew** 1664–1721  
English poet and diplomat

Forc'd by reflective Reason I confess,  
That human Science is uncertain guess.

In John Aikin

*Select Works of the British Poets*

Solomon, Book 1, l. 740

Longman, Hurst, Reese, Orme & Brown. London, England. 1820

### **Professor Alvah Jesper(Frictional character)**

God have mercy on us if we ever thought we could really keep science secret – or wanted to. God have mercy on us if we haven't the sense to keep the world in peace.

*Cloak and Dagger*

Film (1946)

**Quinet, Edgar** 1803–75  
French historian

Science is Christian, not when it condemns itself to the letter of things, but when, in the infinitely little, it discovers as many mysteries and as much depth and power as in the infinitely great.

*Ultramontaniam, or the Roman Church and Modern Society*

The Roman Church and Science-Galileo

Lecture, May 7, 1844

**Rabelais, François** ca. 1490–1553  
French writer and physician

...knowledge [i.e., science] without conscience is but the ruin of the soul.

*Gargantua and Pantagruel*

Book II, VIII (p. 152)

G.P. Putnam's Sons. New York, New York, USA. 1905

**Ramsay, Sir William** 1852–1916  
English chemist

No process is so perfect that there is not plenty of room for improvement. There is no finality in science. And that which today is a scientific toy may be tomorrow the essential part of an important industry.

*Essays Biological and Chemical*

The Great London Chemists

Section I (p. 19)

Archibald Constable & Company Ltd. London, England. 1908

### **Randall, J. H.**

No biographical data available

[Science] swept man out of his proud position as the central figure and end of the universe, and made him a tiny speck on a third-rate planet revolving about a tenth-rate sun drifting in an endless cosmic ocean.

*The Making of the Modern Mind: A Survey of the Intellectual Background of the Present Age*

Chapter X (p. 226)

The Riverside Press. Cambridge, Massachusetts, USA. 1940

Science was born of a faith in the mathematical interpretation of Nature, held long before it had been empirically verified.

*Making of the Modern Mind*

Book III, Chapter XI (p. 235)

Columbia University Press. New York, New York, USA. 1976

**Raup, David Malcolm** 1933–  
American paleontologist

Perhaps the only thing that saves science from invalid conventional wisdom that becomes effectively permanent is the presence of mavericks in every generation – people who keep challenging convention and thinking up new ideas for the sheer hell of it or from an innate contrariness.

*The Nemesis Affair: A Story of the Death of Dinosaurs and the Ways of Science*

Chapter 12 (p. 196)

W.W. Norton & Co. New York, New York, USA. 1999

**Raymo, Chet** 1936–  
American physicist and science writer

Science cannot be a repository of ultimate faith: It is a fulcrum upon which we can hope to balance the treasure of our knowledge against the claims of ignorance.

*The Virgin and the Mousetrap: Essays in Search of the Soul of Science*

Chapter 21 (p. 199)

The Viking Press. New York, New York, USA. 1991

Science, like the play of children, satisfies a deep-seated need for escape from the boredom of fixity and the trauma of chaos.

Focal Point

*Sky and Telescope*, Volume 81, Number 5, May, 1991 (p. 460)

**Renan, Ernest** 1823–92  
French philosopher and Orientalist

Science and science alone is capable of restoring to humanity that without which it cannot live; a creed and a law.

Translated by Albert D. Vandam and C.B. Pitman  
*The Future of Science* (p. 24)  
 Chapman & Hall, Ltd. London, England. 1891

...science must pursue its road without minding with whom it comes in collision. Let the others get out of the way. If it appears to raise objections against received dogmas, it is not for science but the received dogmas to be on the defensive and to reply to the objections. Science should behave as if the world were free from preconceived opinions, and not heed the difficulties it starts.

*The Future of Science*  
 Chapter V (p. 83)  
 Roberts Brothers. Boston, Massachusetts, USA. 1893

...man's happiness and noble aims have rested before now on false foundations. The wisest thing to do, then, is to go on enjoying the supreme gifts vouchsafed to us, life and the faculty of seeing the reality. Science will always remain the gratification of the noblest craving of our nature; curiosity will always supply man with the sole means of improving his lot. It protects him against error, though it may not reveal the truth to him, but there is an advantage in being certain of not being duped.

In William Chatterton Coupland  
*Thoughts and Aspirations of the Ages*  
 Chapter XX (p. 617)  
 Swan Sonnenschein & Co. London, England. 1895

**Reynolds, William C.** 1933–2004  
 American mechanical engineer

**Perkins, Harry C.**  
 No biographical data available

Concepts form the basis for any science. These are ideas, usually somewhat vague (especially when first encountered), which often defy really adequate definition. The meaning of a new concept can seldom be grasped from reading a one-paragraph discussion. There must be time to become accustomed to the concept, to investigate it with prior knowledge, and to associate it with personal experience. Inability to work with details of a new subject can often be traced to inadequate understanding of its basic concepts.

*Engineering Thermodynamics*  
 Chapter 1 (p. 4)  
 McGraw-Hill Book Company, Inc. New York, New York, USA. 1977

**Richards, Ivor Armstrong** 1893–1979  
 English literary critic

For science, which is simply our most elaborate way of pointing to things systematically, tells us and can tell us nothing about the nature of things in any ultimate sense. It can never answer any question of the form: What is so and so? [I]t can only tell us how so and so behaves. And it does not attempt to do more than this.

*Science and Poetry*  
 Chapter V (pp. 52–53)  
 Kegan Paul, Trench, Trubner & Company Ltd. London, England. 1926

**Richet, Charles** 1850–1935  
 French physiologist

All...believe in the sovereignty of science; which like the grammar of Martine, rules even over kings, and imperiously subjects them to its laws.

*The Natural History of a Savant*  
 Chapter II (p. 13)  
 J.M. Dent & Sons Ltd. London, England. 1927

No one has the right to encumber science with premature assertions.

*The Natural History of a Savant*  
 Chapter X (p. 122)  
 J.M. Dent & Sons Ltd. London, England. 1927

To neglect science is to exclude fair hope, to condemn ourselves to live in a uniform monotonous existence.

*The Natural History of a Savant*  
 Chapter XIII (p. 147)  
 J.M. Dent & Sons Ltd. London, England. 1927

The future and the happiness of humanity depend on science.

*The Natural History of a Savant*  
 Chapter XIII (p. 155)  
 J.M. Dent & Sons Ltd. London, England. 1927

**Ridley, Matt** 1958–  
 English science writer

The fuel on which science runs is ignorance. Science is like a hungry furnace that must be fed logs from the forests of ignorance that surround us. In the process, the clearing we call knowledge expands, but the more it expands, the longer its perimeter and the more ignorance comes into view.... A true scientist is bored by knowledge; it is the assault on ignorance that motivates him – the mysteries that previous discoveries have revealed. The forest is more interesting than the clearing.

*Genome: The Autobiography of a Species in 23 Chapters*  
 Chapter 20 (p. 271)  
 HarperCollins Publishers. New York, New York, USA. 2000

**Roberts, Nora** 1950–  
 American author

She dealt in facts, and would stick with facts, no matter how tempting it was to leap to the next level. Instincts couldn't always be trusted. Science could.

*Homeport*  
 Chapter Three (p. 32)  
 G.P. Putnam's Sons. New York, New York, USA. 1998

Most people think of science as a series of steps forged in concrete, but it's not. It's a puzzle, and not all of the pieces will ever be firmly in place. When you're able to fit some of the together, to see an answer, it's thrilling.

*Homeport*  
 Chapter Thirteen (p. 171)  
 G.P. Putnam's Sons. New York, New York, USA. 1998

**Robinson, Sir Robert** 1886–1975  
English chemist

Science cannot be based on dogma or authority of any kind, nor on any institution or revelation, unless indeed it be of the Book of Nature that lies open before our eyes. We need not dwell on the processes of acquiring knowledge by observation, experiment, and inductive and deductive reasoning. The study of scientific method both in theory and practice is of great importance. It is inherent in the philosophy that the record may be imperfect and the conceptions erroneous; the potential fallibility of our science is not only acknowledged but also insisted upon.

Science and the Scientist  
*Nature*, Volume 176, Number 4479, September 3, 1955 (p. 434)

**Romanoff, Alexis Lawrence** 1892–1980  
Russian soldier and scientist

Science is advanced by husbands, but wives are often behind them.

*Encyclopedia of Thoughts*  
Aphorisms 91  
Ithaca Heritage Books. Ithaca, New York, USA. 1975

Into the life of a cultured man enter science, art, and poetic philosophy.

*Encyclopedia of Thoughts*  
Aphorisms 1220  
Ithaca Heritage Books. Ithaca, New York, USA. 1975

Pure science has no part in politics.

*Encyclopedia of Thoughts*  
Aphorisms 1281  
Ithaca Heritage Books. Ithaca, New York, USA. 1975

Dedication to pure science or fine arts often is incompatible with a desire for economic gain.

*Encyclopedia of Thoughts*  
Aphorism 1457  
Ithaca Heritage Books. Ithaca, New York, USA. 1975

Religions offer unbounded faith; science, logical preciseness; and the arts, creative imagination.

*Encyclopedia of Thoughts*  
Aphorisms 1471  
Ithaca Heritage Books. Ithaca, New York, USA. 1975

Science and technology may lead to self-destruction; humanities to sensible social recovery.

*Encyclopedia of Thoughts*  
Aphorisms 2937  
Ithaca Heritage Books. Ithaca, New York, USA. 1975

**Ross, Sir Ronald** 1857–1932  
English bacteriologist

We must not accept any speculations merely because they now appear pleasant, flattering, or ennobling to us. We must be content to creep upwards step by step, planting each foot on the firmest finding of the moment, using the compass and such other instruments as we many have,

observing without either despair or contempt the clouds and precipices above and beneath us. Especially our duty at present is to better our present foothold; to investigate; to comprehend the forces of nature, to set our State rationally in order; to stamp down disease in body, mind, and government; to lighten the monstrous misery of our fellows, not by windy dogmas, but by calm science.

In Sir Richard Arman Gregory  
*Discovery; or, The Spirit and Service of Science*  
Chapter VIII (p. 233)  
Macmillan & Company Ltd. London, England. 1918

**Rostand, Jean** 1894–1977  
French biologist

Science has made gods of us before we were ever worthy of being men.

In Loren Eiseley  
*The Indivisible Pyramid*  
Charles Scribner's Sons. New York, New York, USA. 1970

**Roszak, Theodore** 1933–  
American social critic

Science *uses* the senses but does not *enjoy* them; finally buries them under theory, abstraction, mathematical generalization

*Where the Wasteland Ends*  
Chapter 9 (p. 280)  
Doubleday & Company. Garden City, New York, USA. 1973

**Rothman, Tony** 1953–  
American cosmologist

Principle of Literary Oversight: Textbooks may be straightforward and succinct, but the path of science is crooked and tortuous.

*Instant Physics: From Aristotle to Einstein, and Beyond*  
Introduction (p. xi)  
Ballentine Books. New York, New York, USA. 1995

**Roux, Joseph** 1725–93  
French hydrographer

Science is for those who learn; poetry, for those who know.

*Meditations of a Parish Priest*  
Part I, Number 71 (p. 43)  
Thomas Y. Crowell & Company New York, New York, USA. 1886

**Rubin, Harry**  
No biographical data available

...one of the great pitfalls of science is the fallacy of misplaced concreteness. Scientists seem to prefer questionable explanations to no explanation at all.

Does Somatic Mutation Cause Most Cancers?  
*Journal of the National Cancer Institute*, Volume 64, Number 5, May 1980 (p. 999)

**Ruse, Michael** 1940–  
English historian and philosopher of science

Science, like most human cultural phenomena, has evolved. What was allowable in the early nineteenth

century is not necessarily allowable in the late twentieth century. Specifically, science today does not break with law. And this is what counts for us. We want criteria of science for today, not for yesterday.

Response to the Commentary: Pro Justice

*Science, Technology and Human Values*, Volume 7, Number 41, Fall 1982 (p. 21)

### **Ruskin, John** 1819–1900

English writer, art critic, and social reformer

Science does its duty, not in telling us the causes of spots in the sun, but in explaining to us the laws of our own life, and the consequences of their violation.

In Henry Attwell

*Thoughts from Ruskin*

33 (p. 29)

Longmans, Green & Company, New York, New York, USA; 1901

Science deals exclusively with things as they are in themselves; and art exclusively with things as they affect the human senses and human soul.

*The Stones of Venice*

Chapter II (p. 39)

John R. Alden, Publisher. New York, New York, USA. 1885

Science lives only in quiet places, and with odd people, mostly poor.

*Essays and Letters*

Fors Clavigera, Letter IV (p. 222)

Ginn & Co. Boston, Massachusetts, USA. 1894

...the step between practical and theoretic science is the step between the miner and the geologist, the apothecary and the chemist...

*Modern Painters* (Volume 1)

Chapter I (p. 17)

Charles E. Merrill & Co. New York, New York, USA. 1891

### **Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

Science, ever since the time of the Arabs, has had two functions: (1) to enable us to know things, and (2) to enable us to do things.

*The Impact of Science on Society*

Chapter II (p. 18)

Simon & Schuster. New York, New York, USA. 1938

Science has always prided itself on being empirical and believing only what could be verified.

In Robert E. Egner and Lester E. Denonn (eds.)

*The Basic Writings of Bertrand Russell*

Limitations on the Scientific Method (pp. 623–624)

Simon & Schuster. New York, New York, USA. 1961

In science men have discovered an activity of the very highest value in which they are no longer, as in art, dependent for progress upon the appearance of continually greater genius, for in science the successors stand upon the shoulders of their predecessors; where one man

of supreme genius has invented a method, a thousand lesser men can apply it.

*A Free Man's Worship and Other Essays*

Chapter 3 (first published as "The Free Man's Worship" in December, 1903)

George Allen & Unwin Ltd. London, England. 1917

A life devoted to science is therefore a happy life, and its happiness is derived from the very best sources that are open to dwellers on this troubled and passionate planet.

*Mysticism and Logic and Other Essays*

Chapter II, Section II (p. 45)

Longmans, Green & Company London, England. 1925

...the aspect of science as knowledge is being thrust into the background by the aspect of science as the power of manipulating nature.

*The Scientific Outlook*

Introduction (p. 10)

George Allen & Unwin. London, England. 1931

Science tells us what we can know, but what we can know is little, and if we forget how much we cannot know we become insensitive to many things of very great importance.

*A History of Western Philosophy* (p. xii)

Simon & Schuster. New York, New York, USA. 1945

Almost everything that distinguishes the modern world from earlier centuries is attributable to science...

*History of Western Philosophy*

Chapter 6 (p. 484)

Mathematics and Physics

Routledge. New York, New York, USA. 2004

We are on the threshold of utter disaster or unprecedented glorious achievement. No previous age has been fraught with problems so momentous; and it is to science that we must look for a happy issue.

In James R. Newmann

*What is Science?*

Science and Human Life (p. 17)

Simon & Schuster. New York, New York, USA. 1955

Science, whatever unpleasant consequences it may have by the way, is in its very nature a liberator, a liberator from the weight of destructive passions.

In James R. Newmann

*What is Science?*

Science and Human Life (p. 17)

Simon & Schuster. New York, New York, USA. 1955

In science men have discovered an activity of the very highest value in which they are no longer, as in art, dependent for progress upon the appearance of continually greater genius, for in science the successors stand upon the shoulders of their predecessors; where one man of supreme genius has invented a method, a thousand lesser men can apply it.

*Mysticism and Logic: And Other Essays*

Chapter II (p. 41)

Longmans, Green & Co. London, England. 1919

A life devoted to science is...a happy life, and its happiness is derived from the very best sources that are open to dwellers on this troubled and passionate planet.

*Mysticism and Logic: And Other Essays*

Chapter II (p. 45)

Longmans, Green & Co. London, England. 1919

It is...from science, rather than from ethics and religion, that philosophy should draw its inspiration.

*Mysticism and Logic: And Other Essays*

Chapter VI (p. 98)

Longmans, Green & Co. London, England. 1919

### **Sagan, Carl** 1934–96

American astronomer and author

There is no other species on Earth that does science. It is, so far, entirely a human invention, evolved by natural selection in the cerebral cortex for one simple reason: it works. It is not perfect. It can be misused. It is only a tool. But it is by far the best tool we have, self-correcting, ongoing, applicable to everything.

*Cosmos*

Chapter XIII (p. 333)

Random House, Inc. New York, New York, USA. 1980

Science may be hard to understand. It may challenge cherished beliefs. When its products are placed at the disposal of politicians or industrialists, it may lead to weapons of mass destruction and grave threats to the environment. But one thing you have to say about it. It delivers the goods.

*Demon-Haunted World: Science As a Candle in the Dark*

Chapter 2

Random House, Inc. New York, New York, USA. 1995

Cutting off fundamental, curiosity-driven science is like eating the seed corn. We may have a little more to eat next winter, but what will we plant so we and our children will have enough to get through the winters to come?

*The Demon-Haunted World: Science as a Candle in the Dark*

Chapter 23 (p. 400)

Random House, Inc. New York, New York, USA. 1995

[Science is not popular] is...the fault of the educational system. We do not teach how to think. This is a very serious failure that may even, in a world rigged with 60,000 nuclear weapons, compromise the human future.

The Burden of Skepticism

*Skeptical Inquirer*, Fall 1987

Science involves a seemingly self-contradictory mix of attitudes: On the one hand, it requires an almost complete openness to all ideas, no matter how bizarre and weird they sound, a propensity to wonder.... But at the same time, science requires the most vigorous and uncompromising skepticism, because the vast majority of ideas are simply wrong, and the only way you can distinguish

the right from the wrong, the wheat from the chaff, is by critical experiment and analysis.

Wonder and Skepticism

*Skeptical Inquirer*, Jan/Feb 1995 (p. 24)

Science demands a tolerance for ambiguity. Where we are ignorant, we withhold belief. Whatever annoyance the uncertainty engenders serves a higher purpose: It drives us to accumulate better data. This attitude is the difference between science and so much else. Science offers little in the way of cheap thrills. The standards of evidence are strict. But when followed they allow us to see far, illuminating even a great darkness.

*Pale Blue Dot: A Vision of the Human Future in Space*

Chapter 20 (p. 365)

Random House, Inc. New York, New York, USA. 1994

### **Sarnoff, David** 1891–1971

Russian-born American broadcasting executive

At their best, at their most creative, science and engineering are attributes of liberty – noble expressions of man's God-given right to investigate and explore the universe without fear of social or political or religious reprisals.

In Emily Davie (ed.)

*Profile of America: An Autobiography of the USA*

Electronics – Today and Tomorrow

Crowell. New York, New York, USA. 1954

### **Sarton, George** 1884–1956

Belgian-born American scholar and writer

Science, like art and religion – neither more nor less – is a form of man's reaction against nature. It is an attempt to explain nature in its own terms, that is, to evidence its unity, wholeness, and congruency.

*The History of Science and the New Humanism*

Chapter I (p. 38)

H. Holt & Co. New York, New York, USA. 1931

Science tends to destroy the darkness where evil and injustice breed, but there is also some element of beauty and poetry in that darkness.

*The History of Science and the New Humanism*

Chapter I (p. 59)

H. Holt & Co. New York, New York, USA. 1931

Science like religion implies disinterestedness, earnestness, austerity.

*The History of Science and the New Humanism*

Chapter III (p. 132)

H. Holt & Co. New York, New York, USA. 1931

### **Scatchard, George** 1892–1973

American physical chemist

Since science progresses by building block upon block, it is important to examine the structure from time to time to make sure that there are no badly fitted blocks, none

which are being made to carry more than their proper capacity and none which might be made more useful.

Equilibrium Thermodynamics and Biological Chemistry  
*Science*, Volume 95, Number 2454, January 9, 1942 (p. 27)

**Schiebinger, Londa** 1952–  
Science historian

Only recently have we begun to appreciate that who does science affects the kind of science that gets done. How, then, has our knowledge of nature been influenced by struggles determining who is included in science and who is excluded, which projects are pursued and which ignored, whose experiences are validated and whose are not, and who stands to gain in terms of wealth or well-being and who does not?

*Nature's Body: Gender in the Making of Modern Science*  
Introduction (p. 3)  
Beacon Press. Boston, Massachusetts, USA. 1993

**Schiller, Ferdinand Canning Scott** 1864–1937  
English philosopher

To Archimedes once came a youth, who for knowledge was thirsting,

Saying, "Initiate me into the science divine,  
Which for my country has borne forth fruit of such wonderful value,

And which the walls of the town 'gainst the Sambuca protects.

"Calls't thou the science divine? It is so," the wise man responded;

"But it was so, my son, ere it avail'd for the town.

Wouldst thou have fruit from her only, e'en mortals wit that can provide thee;

Wouldst thou the goddess obtain, seek not the woman in Her!"

In Edgar Alfred Bower  
*The Poems of Schiller*  
Archimedes and the Student (p. 262)  
John W. Parker & Son. London, England. 1851

Science: To one, she is the exalted and heavenly Goddess; to another she is a capable cow which keeps him supplied with butter.

In Folke Dovring  
*Knowledge and Ignorance: Essays on Lights and Shadows*  
Chapter Ten (p. 141)  
Praeger. Westport, Connecticut, USA. 1998

**Schleiden, Matthias Jacob** 1804–81  
German botanist

Youthful fancy lends to the rock, the tree, the flower, an animating genius, and in the thunder hears the voice of God. Then comes earnest science stripping Nature of that inspiring charm, and substituting the unvarying law of blind necessity.

*Poetry of the Vegetable World*  
Chapter III (p. 70)  
Moore, Anderson, Wilstach & Keys. Cincinnati, Ohio, USA. 1853

**Schrödinger, Erwin** 1887–1961  
Austrian theoretical physicist

...there is a tendency to forget that all science is bound up with human culture in general, and that scientific findings, even those which at the moment appear the most advanced and esoteric and difficult to grasp, are meaningless outside their cultural context.

Are There Quantum Jumps?  
*The British Journal for the Philosophy of Science*, Volume 3, 1952 (p. 109)

**Seifriz, William**  
No biographical data available

Let me give full credit to the young and enthusiastic research workers, full of high-energy phosphate bonds. What I deplore is their attitude of mind. Science has become tough and students learn to accept it that way.

A New University  
*Science*, Volume 120, Number 3107, July 16, 1954 (p. 89)

**Seymour Skinner (Fictional character)**

Ah, there's nothing more exciting than science! You get all the fun of sitting still, being quiet, writing down numbers, paying attention – Science has it all!

*The Simpsons*  
The Simpsons: Bart's Comet  
Television program (1995)

**Shapiro, Harry L.** 1902–90  
American physical anthropologist

Science, like organic life, has ramified by expanding into unoccupied areas and then adapting itself to the special requirements encountered there.

Symposium on the History of Anthropology, the History and Development of Physical Anthropology  
*American Anthropologist*, Volume 61, Number 3, 1959 (p. 371)

...as the diversified forms of animals, plants, and insects make evident by their morphology and their function the characteristics of ecological niches whose very existence might otherwise escape notice, so the diversity of techniques and concepts of scientific specialties by their very formulation reveal aspects of nature we would not have suspected. Anthropology, like other branches of science, has also embodied in its structure whole new worlds rich in insights into the development and nature of man.

Symposium on the History of Anthropology, the History and Development of Physical Anthropology  
*American Anthropologist*, Volume 61, Number 3, 1959 (p. 371)

**Shapiro, Robert** 1935–  
American DNA researcher and author

Science is not a given set of answers but a system for obtaining answers. The method by which the search is conducted is more important than the nature of the

solution. Questions need not be answered at all, or answers may be provided and then changed. It does not matter how often or how profoundly our view of the universe alters, as long as these changes take place in a way appropriate to science. For the practice of science, like the game of baseball, is covered by definite rules.

*Origins: A Skeptic's Guide to the Creation of Life on Earth*  
Chapter One (p. 33)  
Summit Books. New York, New York, USA. 1986

Science is not the place for those who want certainty, who wish the truths they learned in childhood to reassure them in their old age. Surprises occur, and alter our perception of reality – for example, the discovery of radioactivity or the genetic role of DNA.... When we treat each new observation and theory with skepticism, retaining our doubt until it has passed the test of experience, and then place it alongside our other acquisitions with the care of a collector who has acquired a valued object after a long search, then we can experience the joy of science. It is this joy, rather than an insistence on an immediate answer, that is likely to be our reward as we continue to search for the origin of life. But even in this conclusion, let us exercise some caution. We may be closer to the answer than we think.

*Origins: A Skeptic's Guide to the Creation of Life on Earth*  
Chapter Thirteen (p. 312)  
Summit Books. New York, New York, USA. 1986

**Shaw, George Bernard** 1856–1950  
Irish comic dramatist and literary critic

Science becomes dangerous only when it imagines that it has reached its goal.

*The Doctor's Dilemma*  
Preface on Doctors  
The Latest Theories (p. xc)  
Brentano's. New York, New York, USA. 1920

**Sheehan, Patrick Augustine** 1852–1913  
Catholic priest and author

I hate science, not because it is false; but because it is but a half-truth. And, as 'a lie that is half the truth is ever the worst of lies;' so the truth, which is only half-truth, becomes in one sense wholly false. That there are truths, or perhaps I should say facts, beyond the ken of intellect is an admitted doctrine, – never so much admitted as now, when the deeper we penetrate into the abyss of life, the closer and the more recondite does Nature keep its awful secrets. She retreats, as we advance, and gathers up her skirts, lest the very swish of them should reveal her hiding place.

*The Intellectuals; an Experiment in Irish Club-life*  
Session Seventeenth (p. 160)  
Longmans, Green & Co. London, England. 1911

**Shelley, Mary Wollstonecraft** 1797–1851  
English Romantic writer

You seek for knowledge and wisdom, as I once did; and I ardently hope that the gratification of your wishes may not be a serpent to sting you, as mine has been.

*Frankenstein*  
Letter 4 (p. 27)  
Running Press. Philadelphia, Pennsylvania, USA. 1990

The ambition of the enquirer seemed to limit itself to the annihilation of those visions on which my interest in science was chiefly founded. I was required to exchange chimeras of boundless grandeur for realities of little worth.

*Frankenstein*  
Chapter 3 (p. 38)  
Running Press. Philadelphia, Pennsylvania, USA. 1990

Life and death appeared to me ideal bounds, which I should first break through, and pour a torrent of light into our dark world.

*Frankenstein*  
Chapter 4 (p. 43)  
Running Press. Philadelphia, Pennsylvania, USA. 1990

"Man," I cried, "how ignorant art thou in thy pride of wisdom!"

*Frankenstein*  
Chapter 23 (p. 141)  
Running Press. Philadelphia, Pennsylvania, USA. 1990

**Shelley, Percy Bysshe** 1792–1822  
English poet

The cultivation of those sciences which have enlarged the limits of the empire of man over the external world, has, for want of the poetical faculty, proportionally circumscribed those of the internal world; and man, having enslaved the elements, remains himself a slave.

In Fanny Delisle  
*A Study of Shelley's "A Defence of Poetry"* (Volume 1)  
Line 1223 (p. 138)  
Institute für Englische Sprache und Literatur. Salzburg, Austria. 1974

**Shermer, Michael** 1954–  
American science writer

What separates science from all other human activities (and morality has never been successfully placed on a scientific basis) is its commitment to the tentative nature of all its conclusions. There are no final answers in science, only varying degrees of probability. Even scientific "facts" are just conclusions confirmed to such an extent that it would be reasonable to offer temporary agreement, but that assent is never final.

*Why People Believe Weird Things: Pseudoscience, Superstition, and Other Confusions of Our Time*  
Part 2, Chapter 8 (p. 124)  
Henry H. Holt. New York, New York, USA. 2002

Science is not the affirmation of a set of beliefs but a process of inquiry aimed at building a testable body of knowledge constantly open to rejection or confirmation.

In science, knowledge is fluid and certainty fleeting. That is at the heart of its limitations. It is also its greatest strength.

*Why People Believe Weird Things: Pseudoscience, Superstition, and Other Confusions of Our Time*

Part 2, Chapter 8 (p. 124)

Henry H. Holt. New York, New York, USA. 2002

### **Shu, Frank H.**

American theoretical astrophysicist

Science has a beauty and uplifting spirit which rivals any of the other cultural attainments of humanity. This aesthetic response arose in a recent congressional hearing. When asked how particle physics contributes to the defense of our country, Robert Wilson replied that it makes the country worth defending.

*The Physical Universe: An Introduction to Astronomy* (p. 101)

University Science Books. Mill Valley, California, USA. 1982

### **Siegel, Eli** 1902–78

American philosopher, poet, critic, and founder of Aesthetic Realism

Science comes from the knowing that you want to know.

*Damned Welcome*

Aesthetic Realism, Maxims, Part One, #298 (p. 68)

Definition Press. New York, New York, USA. 1972

### **Silver, Brian L.**

Israeli professor of physical chemistry

Science, man's greatest intellectual adventure, has rocked his faith and engendered dreams of a material Utopia. At its most abstract, science shades into philosophy; at its most practical, it cures disease. It has eased our lives and threatened our existence. It aspires, but in some very basic ways fails, to understand the ant and the Creation, the infinitesimal atom and the mind-bludgeoning immensity of the cosmos. It has laid its hand on the shoulders of poets and politicians, philosophers and charlatans. Its beauty is often apparent only to the initiated, its perils are generally misunderstood, its importance has been both over- and underestimated, and its fallibility, and that of those who create it, is often glossed over or malevolently exaggerated.

*The Ascent of Science*

Preface (p. xiii)

Solomon Press Book. New York, New York, USA. 1998

Science is not a harmless intellectual pastime. In the last two centuries we have moved from being simply observers of nature to being, in a modest but growing way, its controller. Concomitantly, we have occasionally disturbed the balance of nature in ways that we did not always understand. Science has to be watched. The layman can no longer afford to stand to one side, ignorant of the meaning of advances that will determine the kind of world that his children will inhabit – and the kind of children that he will have. Science has become part of

the human race's way of conceiving of and manipulating its future. The manipulation of the future is not a question to be left to philosophers. The answers can affect the national budget, the health of your next child, and the long-term prospects for life on this planet.

*The Ascent of Science*

Preface (p. xiv)

Solomon Press Book. New York, New York, USA. 1998

### **Simpson, George Gaylord** 1902–84

American paleontologist

The important distinction between science and those other systematizations [i.e., art, philosophy, and theology] is that science is self-testing and self-correcting. Here the essential point of science is respect for objective fact. What is correctly observed must be believed...the competent scientist does quite the opposite of the popular stereotype of setting out to prove a theory; he seeks to disprove it.

*Notes on the Nature of Science*

Notes on the Nature of Science by a Biologist (p. 9)

Harcourt, Brace & World, Inc. New York, New York, USA. 1962

### **Slichter, Charles S.**

Mathematician

...science is not sacrificing any of its strength nor compromising its ideals. It is *technology* that is changing – that is becoming less empirical, more systematic, more quantitative, more scientific.

The Teaching of Mathematics to Students of Engineering

*Science*, New Series, Volume 28, Number 713, August 28, 1908 (p. 262)

### **Slosson, Edwin E.** 1865–1929

American chemist and journalist

Science consists in learning from nature how to surpass nature.

Spun Logs

*The Scientific Monthly*, December, 1925

Most people think of science as a serious and solemn thing, a strain upon the strongest intellect.

So it is for the pioneers of scientific progress, but not for those who merely follow along behind.

*Chats on Science*

Introduction (p. 1)

G. Bell & Sons Ltd. London, England. 1924

One cannot, of course, become a scientist by merely reading science, however diligently and long. For a scientist is one who makes science, not one who learns science. A novelist is one who writes novels, not one who reads them. A contortionist is one who makes contortions, not one who watches them.

Science from the Side-Lines

*The Century: A Popular Quarterly*, Volume 103, November 1921 to April 1922 (p. 473)

**Smith, Goldwin** 1823–1910  
British-Canadian historian and journalist

Science finds no law for the thoughts which, with her aid, are ministered to man by the starry skies. Science can explain the hues of sunset, but she cannot tell from what urns of pain and pleasure its pensiveness is poured.

*The World's Best Orations: From the Earliest Period to the Present Time*

The Secret Beyond Science (p. 3476)

Ferd. P. Keiser. St. Louis, Missouri, USA. 1899

**Smith, Henry Preserved** 1847–1927  
American Biblical scholar

More and more, science has become not only increasingly necessary as a foundation for professional skill, but has come to be regarded as the most valuable instrument of culture.

In Lloyd William Taylor

*Physics: The Pioneer Science* (Volume 1)

Chapter 28 (p. 395)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1941

...whether as the new salvation or the new superstition, science has modeled the whole life of the modern world.... All modern production of wealth, all contemporary life, depend on the knowledge of nature acquired by science. But more than that, religion, politics, philosophy, art and literature have capitulated to science, or at least receded before her. There is no department of human activity today untouched with the spirit of experiment and of mathematics.

*A History of Modern Culture* (Volume 1)

Epilogue (p. 606)

Peter Smith. Gloucester, Massachusetts, USA. 1957

**Smith, Sydney** 1771–1845  
English clergyman, writer, and wit

Science is his forte, and omniscience his foible.

In Isaac Todhunter

Science can move mountains, but it cannot move mole-hills.

*Social Eccentricities*

Social Eccentricities (p. 1)

Broadway Publishing Co. New York, New York, USA. 1906

**Sorokin, Pitirim A.** 1889–1968  
Russian-born American sociologist

Any science, at any moment of its historical existence, contains not only truth but also much that is half-truth, sham-truth, and plain error.

*Fads and Foibles in Modern Sociology*

Preface (p. v)

Henry Regnery. Chicago, Illinois, USA. 1956

**Spark, Muriel** 1918–2006  
Scottish novelist

Art and religion first; then philosophy; lastly science. That is the order of the great subjects of life, that's their order of importance.

*The Prime of Miss Jean Brodie*

Chapter 2 (p. 39)

Macmillan & Company Ltd. London, England. 1961

**Spencer, Herbert** 1820–1903  
English social philosopher

Only when Genius is married to Science, can the highest results be produced.

*Education: Intellectual, Moral, and Physical*

Chapter I (p. 70)

A.L. Fowle. New York, New York, USA. 1860

...the highest Art of every kind is based upon Science – that without Science there can be neither perfect production nor full appreciation.... Only when Genius is married to Science can the highest results be produced.

*Education: Intellectual, Moral, and Physical*

Chapter I (pp. 75, 81)

D. Appleton & Co. New York, New York, USA. 1891

...it [science] alone can give us true conceptions of ourselves and our relation to the mysteries of existence. At the same time that it shows us all which can be known, it shows us the limits beyond which we can know nothing.... It realizes to us in a way which nothing else can, the littleness of human intelligence in the face of that which transcends human intelligence.

*Education: Intellectual, Moral, and Physical*

Chapter I (p. 78)

Willard Small. Boston, Massachusetts, USA. 1890

What knowledge is of most worth? – the uniform reply is – Science. This is the verdict on all counts. For direct self-preservation, or the maintenance of life and health, the all-important knowledge is – Science. For that indirect self-preservation which we call gaining a livelihood, the knowledge of greatest value is – Science. For the due discharge of parental functions, the proper guidance is to be found only in – Science. For that interpretation of national life, past and present, without which the citizen cannot rightly regulate his conduct, the indispensable key is – Science. Alike for the most perfect production and present enjoyment of art in all its forms, the needful preparation is still – Science, and for purposes of discipline – intellectual, moral, religious – the most efficient study is, once more – Science.

*Education: Intellectual, Moral, and Physical*

Chapter I (pp. 79–80)

Willard Small. Boston, Massachusetts, USA. 1890

So far from science being irreligious, as many think, it is the neglect of science that is irreligious – it is the refusal to study the surrounding creation that is irreligious.

*Education: Intellectual, Moral, and Physical*

Chapter I (p. 81)

D. Appleton & Co. New York, New York, USA. 1860

What knowledge is of most worth? – the uniform reply is – Science. This is the verdict on all counts.

*Education: Intellectual, Moral, and Physical*

Chapter I (p. 84)

A.L. Fowle. New York, New York, USA. 1860

For direct self-preservation, or the maintenance of life and health, the all-important knowledge is – Science. For the indirect self-preservation which we call gaining a livelihood, the knowledge of greatest value is – Science. For that interpretation of national life, past and present, without which the citizen cannot rightly regulate his conduct, the indispensable key is – Science. Alike for the most perfect production and highest enjoy-

ment of art in all its forms, the needful preparation is still – Science. And for the purposes of discipline – intellectual, moral, religious – the most efficient study is, once more – Science.

*Education: Intellectual, Moral, and Physical*

Chapter I (pp. 84–85)

A.L. Fowle. New York, New York, USA. 1860

But for science we should be still worshipping fetishes; or, with hecatombs of victims, propitiating diabolical deities.

*Education: Intellectual, Moral, and Physical*

Chapter I (p. 87)

D. Appleton & Co. New York, New York, USA. 1860

...it (science) alone can give us true conceptions of ourselves and our relation to the mysteries of existence. At the same time that it shows us all which can be known, it shows us the limits beyond which we can know nothing.... It realizes to us in a way which, nothing else can, the littleness of human intelligence in the face of that which transcends human intelligence.

*Education: Intellectual, Moral, and Physical*

Chapter I (pp. 92, 93)

D. Appleton & Co. New York, New York, USA. 1891

We conclude, then, that for discipline, as well as for guidance, science is of chiefest value. In all its effects, learning the meanings of things, is better than learning the meanings of words. Whether for intellectual, moral, or religious training, the study of surrounding phenomena is immensely superior to the study of grammars and lexicons.

*Education: Intellectual, Moral, and Physical*

Chapter I (p. 93)

D. Appleton & Co. New York, New York, USA. 1891

Thus to the question with which we set out – What knowledge is of most worth? – the uniform reply is – Science.

*Education: Intellectual, Moral, and Physical*

Chapter I (p. 93)

D. Appleton & Co. New York, New York, USA. 1891

Necessary and eternal as are its truths, all Science concerns all mankind for all time. Equally at present, and in the remotest future, must it be of incalculable importance for the regulation of their conduct, that men should understand the science of life, physical, mental, and social; and that they should understand all other science as a key to the science of life.

*Education: Intellectual, Moral, and Physical*

Chapter I (pp. 94–95)

D. Appleton & Co. New York, New York, USA. 1891

To the slowly growing acquaintance with the uniform co-existences and sequences of phenomena – to the establishment of invariable laws, we owe our emancipation from the grossest superstitions. But for science we should be still worshipping fetishes; or, with hecatombs of victims, propitiating diabolical deities.

*Education: Intellectual, Moral, and Physical*

Chapter I (p. 95)

D. Appleton & Co. New York, New York, USA. 1891

The more science familiarizes us with the constitution of things the more do we see in them an inherent self-sufficingness. A higher knowledge tends continually to limit our interference with the processes of life.

*Education: Intellectual, Moral, and Physical*

Chapter II (p. 111)

D. Appleton & Co. New York, New York, USA. 1891

Be there be or be there not any other revelation, we have a veritable revelation in Science – a continuous disclosure, through the intelligence with which we are endowed, of the established order of the Universe.

*First Principles of a New System of Philosophy*

Part I, Chapter I, section 5 (p. 20)

D. Appleton & Co. New York, New York, USA. 1892

From generation to generation Science has been proving uniformities of relation among phenomena which were before thought either fortuitous or supernatural in their origin – has been showing an established order and a constant causation where ignorance had assumed irregularity and arbitrariness.

*Essays, Scientific, Political, and Speculative* (Volume 1)

The Nebular Hypothesis (p. 109)

D. Appleton & Co. New York, New York, USA. 1898

Without further argument it will, we think, be admitted that the sciences are none of them separately evolved – are none of them independent either logically or historically; but that all of them have, in a greater or less degree, required aid and reciprocated it. Indeed, it needs but to throw aside hypotheses, and contemplate the mixed character of surrounding phenomena, to see at once that these notions of division and succession in the kinds of knowledge are simply scientific fictions: good, if regarded merely as aids to study; bad, if regarded as representing realities in Nature. No facts whatever are presented to our senses uncombined with other facts – no facts whatever but are in some degree disguised by accompanying facts: disguised in such a manner that all must be partially understood before anyone can be understood.

*Essays, Scientific, Political, and Speculative* (Volume 2)

The Genesis of Science (p. 65)

D. Appleton & Co. New York, New York, USA. 1907

The conceptions which developing science gives of the grandeur of creation, as well as the constancy and irresistibility of its Omnipresent Cause, make all feel the comparative littleness of human power...

*Essays, Scientific, Political, and Speculative* (Volume 3)

Representative Government – What Good is It For? (p. 313)

D. Appleton & Co. New York, New York, USA. 1892

The dull world outside thinks of Science as nothing but a matter of chemical analyses, calculations of distances and times, labelings of species, physiological experiments,

and the like; but among the initiated, those of higher type, while seeking scientific knowledge for its proximate value, have an ever-increasing consciousness of its ultimate value as a transfiguration of things, which, marvellous enough within the limits of the knowable, suggests a profounder marvel that cannot be known.

*An Autobiography* (Volume 1)

Chapter XXIV (p. 486)

D. Appleton & Co. New York, New York, USA. 1904

So vast is the accumulation of facts which men of science have before them, that only by dividing and subdividing their labors can they deal with it. To a complete knowledge of his own division, each adds but a general knowledge of the rest. Surely, then, science, cultivated even to a very moderate extent, affords adequate exercise for memory. To say the very least, it involves quite as good a training for this faculty as language does.

*The Greatest Works of the Greatest Authors, Ancient and Modern*

What Knowledge is of the Most Worth? (p. 252)

The H.W. Hagemann Publishing Co. New York, New York, USA. 1894

What is Science? To see the absurdity of the prejudice against it, we need only remark that Science is simply a higher development of common knowledge; and that if Science is repudiated, all knowledge must be repudiated along with it.

*First Principles of a New System of Philosophy*

Part I, Chapter I, Section 5 (p. 18)

D. Appleton & Co. New York, New York, USA. 1892

### **Stanislaus, Leszczynski (Stanislaus I)** 1677–1766

King of Poland

Science when well digested is nothing but good sense and reason.

*Maxims*

### **Stansfield, A.**

No biographical data available

Science is not like a house that is finished and complete, but resembles a tree that is constantly growing and renewing itself!

Samuel Gibson, *The Naturalist*

*City News Notes and Queries*, December 23, 1882 (p. 361)

### **Stansfield, William D.** 1930–

American biologist

Most scientific theories, however, are ephemeral. Exceptions will likely be found that invalidate a theory in one or more of its tenets. These can then stimulate a new round of research leading either to a more comprehensive theory or perhaps to a more restrictive (i.e., more precisely defined) theory. Nothing is ever completely finished in science; the search for better theories is endless. The interpretation of a scientific experiment should not be

extended beyond the limits of the available data. In the building of theories, however, scientists propose general principles by extrapolation beyond available data. When former theories have been shown to be inadequate, scientists should be prepared to relinquish the old and embrace the new in their never-ending search for better solutions. It is unscientific, therefore, to claim to have “proof of the truth” when all that scientific methodology can provide is evidence in support of a theory.

*The Science of Evolution*

Introduction (p. 8)

Macmillan Publishing Company, New York, New York, USA. 1977

**Stedman, Edmund Clarence** 1833–1908

American poet, critic, and essayist

Science has but one fashion – to lose nothing once gained...

Chapter VIII (p. 275)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1885

**Stenger, Victor J.** 1935–

American physicist

No one ever said science was easy, and nobody, scientist or not, should be expected to fall over and play dead when a challenge to existing knowledge is made. If a new idea has sufficient merit, it should ultimately overcome any resistance, no matter how strong.... Resistance to new ideas is part of the process of science. A worthy new idea must overcome barriers of doubt and skepticism, and even occasional irrational objections. But if an idea has merit, it will eventually climb over these barriers.

Macmillan & Company Ltd. London, England. 1900

Vain science! Thou assisted us in no case of this kind, and thou puzzlest us in everyone.

*Life & Opinions of Tristram Shandy, Gentleman*

Chapter XXVII (p. 365)

Derby & Jackson, New York, New York, USA. 1857

I met with distinction, somewhere, once, comparing science to wit, and art to humor; but it has more of fancy than philosophy in it.

*The Works of Laurence Sterne*

84 (p. 127)

Printed for J. Mozley, London, England. 1745

Science is intelligent curiosity, an organized thinking replacing a primitive wonder.

*Man and the Stars*

Chapter I (p. 4)

McGraw-Hill Book Co., Inc. New York, New York, USA. 1930

**Stevenson, Robert Louis** 1850–94

Scottish essayist and poet

Science writes of the world as if with the cold finger of a starfish; it is all true; but what is it when compared to the reality of which it discourses, where hearts beat high in April, and death strikes, and hills totter in the earthquake, and there is a glamour over all the objects of sight, and a thrill in all noises for the ear, and Romance herself has made her dwelling among men? So we come back to the old myth, and hear the goat-footed piper making the music which is itself the charm and terror of things; and when a glen invites our visiting footsteps, fancy that Pan leads us thither with a gracious tremolo; or when our hearts quail at the thunder of the cataract, tell ourselves that he has stamped his hoof in the high thicket.

*Virginibus Puerisque and Familiar Studies of Men and Books*

Pan's Pipe (p. 108)

J.M. Dent & Sons Ltd. London, England. No date

**Stillman, J. D. B.**

**Stoker, Bram** 1847–1912

English writer

There are mysteries which men can only guess at, which age by age they may solve only in part.

*Dracula*

Chapter XV (p. 217)

Ameron House, Mattituck, New York, USA. No date

**Sullivan, John William Navin** 1886–1937

Irish mathematician

Science, like everything else that man has created, exists, of course, to gratify certain human needs and desires. The fact that it has been steadily pursued for so many centuries, that it has attracted an ever-wider extent of attention, and that it is now the dominant intellectual interest of mankind, shows that it appeals to a very powerful and persistent group of appetites.

*The Limitations of Science*

Introduction (p. 7)

New American Library, New York, New York, USA. 1956

...science deals with but a partial aspect of reality, and there is no faintest reason for supposing that everything science ignores is less real than what it accepts... Why is

it that science forms a closed system? Why is it that the elements of reality it ignores never come in to disturb it? The reason is that all the terms of physics are defined in terms of one another. The abstractions with which physics begins are all it ever has to do with.

*The Limitations of Science*

Chapter 6, Section IV (p. 147)

New American Library. New York, New York, USA. 1956

### Swenson, Jr., Lloyd S.

No biographical data available

The interplay of thought and action, theory and experiment, individuals and institutions in science is both comic and tragic, despite the actors' common belief that their lines are delivered as if for a triumphal pageant rather than a tragicomic play.

*Genesis of Relativity: Einstein in Context*

Preface (p. xiii)

Burt Franklin & Company, Inc. New York, New York, USA. 1979

### Swift, Jonathan 1667–1745

Irish-born English writer

The sciences are found, like Hercules's oxen, by tracing them backward; and old sciences are unravelled like old stockings, by beginning at the foot,

*The Works* (Volume 24)

General Index (p. 388)

Printed for J. Johnson. London, England. 1803

### Tait, Peter Guthrie 1831–1901

Scottish physicist and mathematician

Descriptive botany, natural history, volumes of astronomical observations, etc., are collections of statements, often facts, from which scientific truth may ultimately be extracted, but they are not science. Science begins to dawn, but only to dawn, when a Copernicus, and after him a Kepler or a Galilei, sets to work on these raw materials, and sifts from them their essence. She bursts into full daylight only when a Newton extracts the quintessence. There has been, as yet, but one Newton; there have not been very many Keplers.

In Cargill Gilston Knott

*Life and Scientific Work of Peter Guthrie Tait*

Chapter VII (p. 294)

University Press. Cambridge, England. 1911

### Teller, Edward 1908–2003

Hungarian-born American nuclear physicist

Science, like music or art, is not something that can or should be practiced by everybody. But we want all children to be able to enjoy music, to be able to tell good music from poor music, so we teach them to appreciate music in a discriminating manner. That should be the aim in science education for the nonscientist.

*Better a Shield than a Sword: Perspectives in Defense and Technology*

Chapter 28 (p. 208)

The Free Press. New York, New York, USA. 1987

Science introduces consistency and simplicity into a world that without them appears confused and random.

*Better a Shield than a Sword: Perspectives in Defense and Technology*

Chapter 29 (p. 215)

The Free Press. New York, New York, USA. 1987

English poet

...nourishing a youth sublime

With the fairy tales of science, and the long result of time.

*Alfred Tennyson's Poetical Works*

Locksley Hall, Stanza 6

Oxford University Press, Inc. London, England. 1953

Science moves, but slowly, slowly, creeping on from point to point.

*Alfred Tennyson's Poetical Works*

Locksey Hall, Stanza 60

Oxford University Press, Inc. London, England. 1953

... When Science reaches forth her arms

To feel from world to world, and charms

Her secret from the latest moon?

*The Poetic and Dramatic Works of Alfred, Lord Tennyson*

In Memoriam

Houghton Mifflin Co. Boston, Massachusetts, USA. 1898

### Thom, René 1923–2002

French mathematician

If we admit a priori that science is just acquisition of knowledge, that is, building an inventory of all observable phenomena in a given disciplinary domain – then, obviously, any science is empirical.

In J. Casti and A. Karlqvist (eds.)

*Newton to Aristotle: Toward a Theory of Models for Living Systems*

Causality and Finality in Theoretical Biology

### Thomas, Lewis 1913–93

American physician and biologist

You either have science or you don't, and if you have it you are obliged to accept the surprising and disturbing pieces of information, even the overwhelming and upheaving ones, along with the neat and promptly useful bits. It is like that.

*The Medusa and the Snail: More Notes of a Biology Watcher*

The Hazard of Science (p. 73)

The Viking Press. New York, New York, USA. 1979

Science began by fumbling. It works because the people involved in it work, and work together. They become excited and exasperated, they exchange their bits of information at a full shout, and, the most wonderful thing of all, they keep at one another.

*Late Night Thoughts on Listening to Mahler's Ninth Symphony*

Alchemy

The Viking Press. New York, New York, USA. 1983

The essential wildness of science as a manifestation of human behavior is not generally perceived. As we extract

new things of value from it, we also keep discovering parts of the activity that seem in need of better control, more efficiency, less unpredictability.

*The Lives of a Cell: Notes of a Biology Watcher*

Natural Science (p. 100)

The Viking Press. New York, New York, USA. 1974

### Thompson, A. R.

No biographical data available

...science has not only helped to destroy popular traditions that might have nourished a modern spirit of admiration, but has fostered a wintry skepticism, making man appear not an imperfect angel, but a super-educated monkey.

In R. Foerster (ed.)

*Humanism and America: Essays on the Outlook of Modern Civilization*

The Dilemma of Modern Tragedy (p. 129)

Farrar & Rinehart Inc. New York, New York, USA. 1930

### Thomson, Sir John Arthur 1861–1933

Scottish naturalist

The study of Nature is as preoccupying as are the everyday interests of our life, yet in both fields we are still continuously pulling ourselves up and asking what it all means. At every corner there stands the great mark of interrogation, the Riddle of the Sphinx. Science has its own questions and answers: Whither, and How – but beyond science is the not less inevitable questions: WHY.

In Francis Mason (ed.)

*The Great Design*

Introduction (p. 12)

The Macmillan Co. New York, New York, USA. 1934

When science makes minor mysteries disappear, greater mysteries stand confessed. For one object of delight whose emotional value science has inevitably lessened – as Newton damaged the rainbow for Keats – science gives back double.

*The Outline of Science* (Volume 4 )

Chapter XXXVIII (p. 1176)

G.P. Putnam's Sons. New York, New York, USA. 1937

To the grand primary impression of the world power, the immensities, the pervading order, and the universal flux, with which the man of feeling has been nurtured from the old, modern science has added thrilling impressions of manifoldedness, intricacy, uniformity, inter-relatedness, and evolution. Science widens and clears the emotional window. There are great vistas to which science alone can lead, and they make for elevation of mind.

*The Outline of Science* (Volume 4 )

Chapter XXXVIII (pp. 1176–1177)

G.P. Putnam's Sons. New York, New York, USA. 1937

The opposition between science and feeling is largely a misunderstanding. As one of our philosophers has remarked, Science is in a true sense “one of the humanities.”

*The Outline of Science* (Volume 4 )

Chapter XXXVIII (p. 1177)

G.P. Putnam's Sons. New York, New York, USA. 1937

Great stores of wealth are awaiting the scientific “Open Sesame”; a great heightening of the standard of health will be attainable in a few generation if men of good-will take science as their torch.

*The Outline of Science* (Volume 4 )

Chapter XXXVIII (p. 1180)

G.P. Putnam's Sons. New York, New York, USA. 1937

Science expresses a quite specific endeavor to get phenomena under intellectual control, so that we can think of them economically and clearly in relation to the rest of our science, and so that we can use them as a basis for secure prediction and effective action.

*The System of Animate Nature* (Volume 1)

Lecture I (p. 8)

William & Norgate. London, England. 1920

Science makes so many permanent discoveries, which are never contradicted though often transcended, that she acquires an assured confidence which has only been equaled by that of Theology.

*The System of Animate Nature* (Volume 1)

Lecture I (p. 13)

William & Norgate. London, England. 1920

Science as science never asks the question Why? That is to say, it never inquires into the meaning, or significance, or purpose of this manifold Being, Becoming, and Having Been.... Thus science does not pretend to be a bedrock of truth.

In Bertrand Russell

*Religion and Science*

Mysticism (p. 175)

Henry Holt & Company. New York, New York, USA. 1935

...science aims at description in terms of the lowest common denominators available; while religion and philosophy aim at interpretation in terms of the greatest common measure.

The New World of Science

*The Atlantic Monthly*, June, 1930

Science is not wrapped up with any particular body of facts; it is characterized as an intellectual attitude. It is not tied down to any peculiar methods of inquiry; it is simply sincere critical thought, which admits conclusions only when these are based on evidence.

*Introduction to Science*

Chapter I (p. 27)

Williams & Norgate Ltd. London, England. 1916

What science knows it must know definitely; what it sees must be in focus.

*Introduction to Science*

Chapter I (p. 29)

Henry Holt & Co. New York, New York, USA. 1911

Science is not wrapped up with any particular body of facts; it is characterized as an intellectual attitude. It is not tied down to any peculiar methods of inquiry; it is simply sincere critical thought, which admits conclusions only when these are based on evidence.

*Introduction to Science*

Chapter III (p. 57)

Henry Holt &amp; Co. New York, New York, USA. 1911

It is part of “man’s chief end” not only to know Nature – which is Science, but to enjoy her forever. We are men of feeling, and Nature speaks to our heart, though we are not fond, unless we are poets, of saying much about it. But we listen with gladness, with awe, sometimes, perhaps, with fear, surely always with wonder.

*Introduction to Science*

Chapter VI (pp. 169–170)

Henry Holt &amp; Co. New York, New York, USA. 1911

Science never destroys wonder, but only shifts it, higher and deeper.

*Introduction to Science*

Chapter VI (p. 189)

Henry Holt &amp; Co. New York, New York, USA. 1911

Science always begins – not at the beginning, for that is impossible, but from something “given” which it does not explain.

*Introduction to Science*

Chapter VII (p. 205)

Henry Holt &amp; Co. New York, New York, USA. 1911

Is it science that satisfies man’s soul, or is it the attendant feeling and imagining which the study of Nature evokes?

*The System of Animate Nature* (Volume 1)

Lecture I (p. 27)

William &amp; Norgate. London, England. 1920

...science gives Man from time to time a greatly increased mastery over Nature; science, with its analytical triumphs, ever tends to diminish, in the shallow minded, the saving grace of wonder; and science is ever dispelling the darkness that oppresses the mind.

*The System of Animate Nature* (Volume 1)

Lecture I (pp. 41–42)

William &amp; Norgate. London, England. 1920

Science is not any particular body of facts: it is essentially the expression of an intellectual attitude or mood in relation to any order of phenomena. The distinctive feature is in the method, making sure of facts, classifying them, analysing them into their simplest adequate expression, observing their inter-relations, grouping them according to their likenesses of co-existence and sequence, and inventing descriptive formulae which sum them up in terms of our perceptual experience.

In James Edward Hand

*Ideals of Science & Faith*

A Biological Approach (p. 52)

Longmans, Green &amp; Co. New York, New York, USA. 1904

Although science is not in itself practical, anymore than artistic or emotional, there is a practical note in its ideal. Knowledge for knowledge’s sake is not a humanly satisfying motive, though the idea often fills the horizon for

an hour, or a day, a year, or a life-time, according to the nature of the man.

In James Edward Hand

*Ideals of Science & Faith*

A Biological Approach (p. 77)

Longmans, Green &amp; Co. New York, New York, USA. 1904

It may be granted, too, that science, like a child pulling a flower to bits, is apt and biology is one of the worst of the offenders to dissect more than it constructs, and to lose in its analysis the vision of unity and harmony which the artist has ever before his eyes.

In James Edward Hand

*Ideals of Science & Faith*

A Biological Approach (p. 77)

Longmans, Green &amp; Co. New York, New York, USA. 1904

Science reads the secret of the distant star and anatomises the atom; foretells the date of the comet’s return and predicts the kinds of chickens that will hatch from a dozen eggs; discovers the laws of the wind that bloweth where it listeth and reduces to order the disorder of disease. Science is always setting forth on Columbus voyages, discovering new worlds and conquering them by understanding. For Knowledge means Foresight and Foresight means Power.

In John Arthur Thomson

*The Outline of Science: A Plain Story Simply Told*

Introduction (p. 3)

G.P. Putnam’s Sons. New York, New York, USA. 1922

**Thomson, Sir John Arthur** 1861–1933

Scottish naturalist

From age to age science has given mankind a new world, and the latest newness – which will not be the last – is perhaps the strangest of all.

In Franz Montgomery and Luther N. Becklund

*Essays in Science and Engineering*

The New World of Science (p. 3)

Farrar &amp; Rinehart. New York, New York, USA. 1938

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

Science with its retorts would have put me to sleep; it was the opportunity to be ignorant that I improved. It suggested to me that there was something to be seen if one had eyes. It made a believer of me more than before. I believed that the woods were not tenantless, but choke-full of honest spirits as good as myself any day, – not an empty chamber, in which chemistry was left to work alone, but an inhabited house, – and for a few moments I enjoyed fellowship with them.

*The Writings of Henry David Thoreau* (Volume 3)*The Maine Woods, the Allegash and East Branch* (pp. 247–248)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

Let us consider under what disadvantages Science has hitherto labored before we pronounce thus confidently on her progress.

*The Writings of Henry David Thoreau* (Volume 4)  
*Paradise (to Be) Regained* (p. 301)  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

Already nature is serving all those uses which science slowly derives on a much higher and grander scale to him that will be served by her. When the sunshine falls on the path of the poet, he enjoys all those pure benefits and pleasures which the arts slowly and partially realize from age to age. The winds which fan his cheek waft him the sum of that profit and happiness which their lagging inventions supply.

*The Writings of Henry David Thoreau* (Volume 4)  
*Paradise (to Be) Regained* (p. 302)  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

What an admirable training is science for the more active warfare of life! Indeed, the unchallenged bravery which these studies imply, is far more impressive than the trumpeted valor of the warrior.

*The Writings of Henry David Thoreau* (Volume 9)  
*Natural History of Massachusetts* (p. 131)  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

**Thurber, James** 1894–1961  
 American writer and cartoonist

Science has zipped the atom open in a dozen places, it can read the scrawling on the Rosetta stone as glibly as a literary critic explains Hart Crane, but it doesn't know anything about playwrights.

*Collecting Himself: James Thurber on Writing and Writers, Humor and Himself*  
 Roaming in the Gloaming (p. 194)  
 Harper & Row, Publishers. New York, New York, USA. 1989

**Thwing, Charles Franklin** 1853–1937  
 American educator and writer

Every enlargement of the field of knowledge has resulted in the enrichment of the academic curriculum. Great is the difference, moreover, between knowledge as knowledge and knowledge as a tool of intellectual training. Time is required for the transmutation of pure science into a practical agency or condition of discipline.

*A History of Higher Education in America*  
 Chapter I (p. 25)  
 D. Appleton & Co. New York, New York, USA. 1906

**Tolstoy, Leo** 1828–1910  
 Russian writer

What is called science today consists of a haphazard heap of information, united by nothing, often utterly unnecessary, and not only failing to present one unquestionable truth, but as often as not containing the grossest errors, today put forward as truths, and tomorrow overthrown.

*What Is Religion?*  
 Chapter I (p. 3)  
 T.Y. Crowell. New York, New York, USA. 1899

The highest wisdom has but one science – the science

of the whole – the science explaining the whole creation and man's place in it.

In *Great Books of the Western World* (Volume 51)  
*War and Peace*  
 Book Five, Chapter II (p. 197)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Tucker, Wilson** 1914–2006  
 American mystery and science fiction writer

...Science tends to frighten those who are infrequently exposed to it, while the practitioners of science are often the most misunderstood people in the world....

*The Year of the Quiet Sun* (p. 78)  
 Ace. New York, New York, USA. 1970

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910  
 American author and humorist

[W]hat we most admire is the vast capacity of that intellect which, without effort, takes in at once all the domains of science – all the past, the present and the future, all the errors of two thousand years, all the encouraging signs of the passing times, all the bright hopes of the coming age.

*Is Shakespeare Dead?*  
 Chapter X (p. 124)  
 Oxford University Press, Inc. London, England. 1996

**Tyndall, John** 1820–93  
 Irish-born English physicist

Science must grow. Its development is as necessary and as irresistible as the motion of the tides, or the flowing of the Gulf-Stream.

*Heat a Mode of Motion* (6th edition)  
 Preface to the First Edition (p. xiv)  
 Longmans, Green & Co. London, England. 1875

Thus, having exhausted science and reached its very rim, the real mystery of existence still looms around us. And thus it will ever loom – ever beyond the bourne of man's intellect – giving the poets of successive ages just occasion to declare that,

We are such stuff  
 As dreams are made of, and our little life  
 Is rounded by a sleep.

*Heat a Mode of Motion* (6th edition)  
 Lecture XVII (p. 535)  
 D. Appleton & Co. New York, New York, USA. 1915

**Union Carbide and Carbon**

More Jobs Through Science  
 Advertising slogan

**Valéry, Paul** 1871–1945  
 French poet and critic

Science is feasible when the variables are few and can be enumerated; when their combinations are distinct and clear. We are tending toward the condition of science and

aspiring to do it. The artist works out his own formulas; the interests of science lies in the art of making science.

In Jackson Mathews (ed.)

*Analects* (p. 191)

Princeton University Press. Princeton, New Jersey, USA. 1971

Science means simply the aggregate of all the recipes that are always successful. All the rest is literature.

In Jackson Mathews (ed.)

*The Collected Works of Paul Valéry* (Volume 14)

*Analects*

Princeton University Press. Princeton, New Jersey, USA. 1971

Well, when it comes to choosing between science and profit, I'll choose profit every time.

*Star Trek: Deep Space Nine*

Q-Less

Television program

Season 1, 1993

### Verne, Jules 1828–1905

French novelist

[I]n the cause of science men are expected to suffer.

*A Journey to the Center of the Earth*

Chapter 6 (p. 33)

The Limited Editions Club. New York, New York, USA. 1966

When science has sent forth her fiat – it is only to hear and obey.

*A Journey to the Center of the Earth*

Chapter 11 (p. 73)

The Limited Editions Club. New York, New York, USA. 1966

Science, great, mighty and in the end unerring...science has fallen into many errors – errors which have been fortunate and useful rather than otherwise, for they have been the stepping stones to truth.

*A Journey to the Center of the Earth*

Chapter 28 (p. 182)

The Limited Editions Club. New York, New York, USA. 1966

We may brave human laws, but we cannot resist natural ones.

Translated by Mercier Lewis

*Twenty Thousand Leagues Under the Sea*

Part Two, Chapter 15 (p. 249)

Nelson Doubleday, Inc. Garden City, New York, USA. 1900

### Virchow, Rudolf Ludwig Karl 1821–1902

German pathologist and archaeologist

Science in itself is nothing, for it exists only in the human beings who are its bearers.

Translated by Lelland J. Rather

*Disease, Life, and Man. Selected Essays*

Standpoints in Scientific Medicine (1847) (pp. 29–30)

Stanford University Press. Stanford, California, USA. 1958

Has not science the noble privilege of carrying on its controversies without personal quarrels.

In F.H. Garrison

*Bulletin of the New York Academy of Medicine*, Volume 4, 1928 (p. 995)

### Voltaire (François-Marie Arouet) 1694–1778

French writer

True science necessarily carries tolerance with it.

Letter to Madame d'Épinay

*Correspondance de Voltaire*, 1881 edition, Volume 12, July 6, 1766 (p. 329)

### von Frisch, Karl 1886–1982

Austrian ethnologist

Science advances but slowly, with halting steps. But does not therein lie her eternal fascination? And would we not soon tire of her if she were to reveal her ultimate truths too easily?

*A Biologist Remembers*

To Munich for the Fifth Time (p. 178)

Pergamon Press. Oxford, England. 1967

Science is eternal in its out-gushing stream, bounded by neither time nor space, immeasurable in its activity, endless in its scope, its final goal ever unreachd.

Quoted in Martin Gumpert

*Trail Blazers of Science* (p. 1)

Funk & Wagnalls. New York, New York, USA. 1936

### von Goethe, Johann Wolfgang 1749–1832

German poet, novelist, playwright, and natural philosopher

Four epochs of science:

childlike,

poetic, superstitious;

empirical,

searching, curious;

dogmatic,

didactic, pedantic;

ideal,

methodical, mystical.

*Scientific Studies* (Volume 12)

Chapter VIII (pp. 304–305)

Suhrkamp. New York, New York, USA. 1988

Sciences destroy themselves in two ways: by the breadth they reach and by the depth they plumb.

*Scientific Studies* (Volume 12)

Chapter VIII (p. 305)

Suhrkamp. New York, New York, USA. 1988

A crisis must necessarily arise when a field of knowledge matures enough to become a science, for those who focus on details and treat them as separate will be set against those who have their eye on the universal and try to fit the particular into it.

*Scientific Studies* (Volume 12)

Chapter VIII (p. 305)

Suhrkamp. New York, New York, USA. 1988

Germans – and they are not alone in this – have a knack of making the sciences unapproachable.

*Scientific Studies* (Volume 12)  
Chapter VIII (p. 306)  
Suhrkamp. New York, New York, USA. 1988

In general the sciences put some distance between themselves and life, and make their way back to it only by a roundabout path.

*Scientific Studies* (Volume 12)  
Chapter VIII (p. 306)  
Suhrkamp. New York, New York, USA. 1988

A science, like every human creation and institution, is a Titanic structure of mingled false and true, of arbitrary and necessary. The common observations on nature and its procedure which we make from day to day, in whatever terms expressed, are really, after all, only symptoms which, if any real wisdom is to result from our studies, must be traced back to the physiological and pathological principles of which they are the exponents.

In John Stuart Blackie  
*The Wisdom of Goethe*  
Nature – Natural History (p. 185)  
William Blackwood & Sons. Edinburgh, Scotland. 1883

Science helps us before all things in this, that it somewhat lightens the feeling of wonder with which Nature fills us; then, however, as life becomes more and more complex, it creates new facilities for the avoidance of what would do us harm and the promotion of what will do us good.

Translated by Thomas Bailey Saunders  
*The Maxims and Reflections of Goethe*  
#589 (p. 202)  
The Macmillan Co. New York, New York, USA. 1906

**von Helmholtz, Hermann** 1821–94  
German scientist and philosopher

All that science can achieve is a perfect knowledge and a perfect understanding of the action of natural and moral forces.

Translated by E. Atkinson  
*Popular Lectures on Scientific Subjects*  
First Series  
On the Relation of Natural Science to General Science (p. 29)  
D. Appleton & Co. New York, New York, USA. 1897

**von Humboldt, Alexander** 1769–1859  
German naturalist and explorer

Science only begins for man from the moment his mind lays hold of matter, – when he strives to subject the mass accumulated by experience to rational combinations...

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)  
Introduction (p. 64)  
Longman, Brown, Green & Longmans. London, England. 1849

Science does not present itself to man until mind conquers matter in striving to subject the result of experimental investigation to rational combinations.

Translated by E. C. Otte  
*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)

Introduction (p. 76)  
Harper & Brothers Publishers. New York, New York, USA. 1858

The great and solemn spirit that pervades the intellectual labor [of science] arises from the sublime consciousness of striving toward the infinite, and of grasping all that is revealed to us amid the boundless and inexhaustible fullness of creation, development, and being.

Translated by E.C. Otte  
*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 3)  
Introduction (p. 8)  
D. Appleton & Co. New York, New York, USA. 1850

**von Liebig, Justus** 1803–73  
German organic chemist

It has been said that every science must pass through three periods of development. The first is that of presentiment, or of faith; the second is that of sophistry; and the third is that of sober research.

*Familiar Letters on Chemistry*  
Letter III (p. 60)  
Walton & Maberly. London, England. 1859

Through Nature herself, whose kingdom forms a united and compact whole, the natural sciences stand in a necessary mutual connection, so that no one of them can entirely dispense with all the others for its development. The extension of the individual branches of science by researches, has the inevitable result, that in a certain stage, or at a certain period, two of them, for example, come into contact at their boundaries. As a general rule, a new science arises on the debatable land between them, which combines in itself the objects and the modes of viewing the phenomena of both.

*Familiar Letters on Chemistry*  
Chapter XXII (p. 270)  
Walton & Maberly. London, England. 1859

Science confers power, not money; and power is the source of riches and of poverty, – of riches when it produces, and of poverty when it destroys...

In John Blyth  
*Letters on Modern Agriculture*  
Letter I (p. 7)  
Walton & Maberly. London, England. 1859

Science as a whole certainly cannot allow its judgment about facts to be distorted by ideas of what ought to be true, or what one may hope to be true.

*The Scientific Attitude*  
Science Is Not Neutral (p. 25)  
Penguin Books, Middlesex, England. 1941

**Wald, George** 1906–97  
American biologist and biochemist

Science goes from question to question; big questions, and little, tentative answers. The questions as they age grow ever broader, the answers are seen to be more limited.

*Les Prix Nobel. the Nobel Prizes in 1967*

Nobel banquet speech for award received in 1967  
Nobel Foundation. Stockholm, Sweden. 1968

The trouble with most of the things that people want is that they get them. No scientist needs to worry on that score. For him there is always the further horizon. Science goes from question to question; big questions, and little, tentative answers. The questions as they age grow ever broader, the answers are seen to be more limited.

*Les Prix Nobel. the Nobel Prizes in 1967*

Nobel banquet speech for award received in 1967  
Nobel Foundation. Stockholm, Sweden. 1968

**Waterman, Alan T.** 1892–1967

American physicist

Science, in its pure form, is not concerned with where discoveries may lead; its disciples are interested only in discovering the truth.

*Imagination of Science and Society*

*American Behavioral Scientist*, Volume VI, Number 4, December, 1962 (p. 3)

**Watson, David Lindsay** 1901–73

No biographical data available

Science sprawls over all the horizons of the modern mind like some vast cloudbank. The outlook and method of science penetrate relentlessly the strata of daily custom into the caverns of the unconscious mind itself. Science is by far the most powerful intellectual phenomenon of modern times, inexorably laying down the law in regions far from the laboratory, and subtly governing, by its techniques and devices, our modes of life and ways of thinking.

*Scientists Are Human*

Chapter I (p. 1)

Watts. London, England. 1938

**Weaver, Warren** 1894–1978

American mathematician

The desirable adjuncts of modern living, although in many instances made possible by science, certainly do not constitute science.

*Science and Imagination: Selected Papers*

Chapter 1

Basic Books, Inc. New York, New York, USA. 1967

Science is not technology, it is not gadgetry, it is not some mysterious cult, it is not a great mechanical monster! Science is an adventure of the human spirit. It is essentially an artistic enterprise, stimulated largely by the universe, served largely by disciplined imagination, and based largely on faith in the reasonableness, order, and beauty of the universe of which man is part.

In Walter Orr Robek

Science, a Well Spring of our Discontent

*American Scientist*, Volume 55, Number 1, March, 1957 (p. 3)

It is hardly necessary to argue, these days, that science is essential to the public. It is becoming equally true, as the support of science moves more and more to state and national sources, that the public is essential to science. The lack of general comprehension of science is thus dangerous both to science and the public, these being interlocked aspects of the common danger that scientists will not be given the freedom, the understanding, and the support that are necessary for vigorous and imaginative development.

In Hilary J. Deason

*A Guide to Science Reading*

Science and People (p. 38)

The New American Library. New York, New York, USA. 1966

**Weber, Max** 1864–1920

German founder of modern sociology and economic thinker

Science today is a “vocation” organized in special disciplines in the service of self-clarification and knowledge of interrelated facts. It is not the gift of grace of seers and prophets dispensing sacred values and revelations, nor does it partake of the contemplation of sages and philosophers about the meaning of the Universe.

In H.H. Gerth and C. Wright Mills (eds.)

*From Max Weber: Essays in Sociology*

Science as a Vocation (p. 152)

Oxford University Press, Inc. New York, New York, USA. 1970

**Weil, Simone** 1909–43

French philosopher and mystic

To us, men of the West, a very strange thing happened at the turn of the century; without noticing it, we lost science, or at least the thing that had been called by that name for the last four centuries. What we now have in place of it is something different, radically different, and we don't know what it is. Nobody knows what it is.

Translated by Richard Rees

*On Science, Necessity, and the Love of God*

Classical Science and After, Chapter I (p. 3)

Oxford University Press, Inc. London, England. 1968

Science today will either have to seek a source of inspiration higher than itself or perish.

*Gravity and Grace*

Intelligence and Grace (p. 119)

Routledge & Kegan Paul. London, England. 1952

Science only offers three kinds of interest: (1) Technical applications. (2) A game of chess. (3) A road to God. (Attractions are added to the game of chess in the shape of competitions, prizes, and medals.)

*Gravity and Grace*

Intelligence and Grace (p. 119)

Routledge & Kegan Paul. London, England. 1952

**Weinberg, Steven** 1933–

American nuclear physicist

...there is an essential element in science that is cold, objective, and nonhuman...the laws of nature are as

impersonal and free of human values as the rules of arithmetic.... Nowhere do we see human value or human meaning.

Reflections of a Working Scientist  
*Daedalus*, Volume 103, 1974 (p. 3)

**Weiss, Paul A.** 1898–1985  
Chemist

Science, to some, is Lady Bountiful, to others is the Villain of the Century. Some years ago, a book called it our “Sacred Cow,” and certainly to many it has at least the glitter of the “Golden Calf.” Glorification at one extreme, vituperation at the other...

*Within the Gates of Science and Beyond*

Science Looks at Itself (p. 25)

Hafner Publishing Company. New York, New York, USA. 1971

Science is usually understood to depict a universe of strict order and lawfulness, of rigorous economy – one whose currency is energy, convertible against a service charge into a growing common pool called entropy.

Organic Form: Scientific and Aesthetic Aspects

*Daedalus*, (p. 177)

**Weisskopf, Victor Frederick** 1908–2002  
Austrian-American physicist

Science cannot develop unless it is pursued for the sake of pure knowledge and insight. It will not survive unless it is used intensely and wisely for the betterment of humanity and not as an instrument of domination by one group over another.

*Physics in the Twentieth Century: Selected Essays*

The Significance of Science (p. 364)

The MIT Press. Cambridge, Massachusetts, USA. 1972

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

The science hangs like a gathering fog in a valley, a fog which begins nowhere and goes nowhere, an incidental, unmeaning inconvenience to passers-by.

*The Works of H.G. Wells* (Volume 9)

A Modern Utopia

Chapter 3, Section 3

Charles Scribner's Sons. London, England. 1924–27

**Weyl, Hermann** 1885–1955  
German mathematician

We must await the further development of science, perhaps for centuries, before we can design a true and detailed picture of the interwoven texture of Matter, Life and Soul. But the old classical determinism of Hobbes, and Laplace need not oppress us any longer.

*The Open World: Three Lectures in the Metaphysical Implications of Science*

Lecture II (p. 55)

Yale University Press. New Haven, Connecticut, USA. 1932

...science would perish without the continuous interplay between its facts and constructions on the one hand and the imagery of ideas on the other.

*Philosophy of Mathematics and Natural Science*

Preface (p. vi)

Princeton University Press. Princeton, New Jersey, USA. 1949

**Wheeler, John Archibald** 1911–  
American physicist and educator

...the human activity that we call science is not science unless it is the uncovering or discovery of something new.

*At Home in the Universe*

Be the Best to Give the Most (p. 76)

The American Institute of Physics. Woodbury, New York, USA. 1994

**Whetham, Sir William Cecil Dampier** 1867–1952  
English scientific writer

But beyond the bright searchlights of science,

Out of sight of the windows of sense,

Old riddles still bid us defiance,

Old questions of Why and of Whence.

*Recent Development of Physical Science* (p. 10)

John Murray. London, England. 1927

**Whewell, William** 1794–1866  
English philosopher and historian

Science begins with common observation of facts; but even at this stage, requires that the observations be precise. Hence the sciences which depend upon space and number were the earliest formed. After common observation, comes Scientific Observation and Experiment.

*The Philosophy of the Inductive Sciences Founded upon Their History* (Volume 2)

Aphorisms, Aphorisms Concerning Science, VII (p. 467)

John W. Parker. London, England. 1847

The tendency of the sciences has long been an increasing proclivity of separation and dismemberment. The mathematician turns away from the chemist; the chemist from the naturalist; between the mathematician and the chemist is to be interpolated a “physician” (we have no English name for him), who studies heat, moisture and the like.

*Quarterly Review*, Volume 51, 1834 (p. 59)

The principles which constituted the triumph of preceding stages of science may appear to be subverted and ejected by later discoveries, but in fact they are (so far as they are true) taken up into the subsequent doctrines and included in them. They continue to be an essential part of the science. The earlier truths are not expelled but absorbed, not contradicted but extended; and the history of each science which may thus appear like a succession of revolutions is, in reality, a series of developments.

*History of the Inductive Sciences, from the Earliest to the Present Time*

(Volume the First)

Introduction (p. 10)

John W. Parker. London, England. 1837

...two things are requisite to science – facts and ideas...

*History of the Inductive Sciences, from the Earliest to the Present Time*

(Volume 1)

Book I, Chapter III, Section 2 (p. 79)

John W. Parker. London, England. 1837

Man is the interpreter of Nature, Science is the right interpretation.

*The Philosophy of the Inductive Sciences Founded upon Their History*  
(Volume 2)

Aphorisms Concerning Ideas, Aphorism I (p. 443)  
John W. Parker. London, England. 1847

Deductive reasoners, those who cultivate science, of whatever kind, by means of mathematical and logical processes alone, may acquire an exaggerated feeling of the amount and value of their labours.

*Astronomy and General Physics*

Chapter V (p. 252)

Carey, Lea & Blanchard. Philadelphia, Pennsylvania, USA. 1833

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

A science which hesitates to forget its founders is lost.

*The Organisation of Thought*

Chapter VI (p. 115)

Greenwood Press Publishers. Westport, Connecticut, USA. 1974

Science has always suffered from the vice of overstatement. In this way conclusions true within strict limitations have been generalized dogmatically into a fallacious universality.

*The Function of Reason*

Chapter I (p. 22)

Beacon Press. Boston, Massachusetts, USA. 1929

Aristotle discovered all the half-truths which were necessary to the creation of science.

In Lucien Price

*Dialogues of Alfred North Whitehead*

Dialogue XLII, September 11, 1945 (p. 344)

Little Brown. Boston, Massachusetts, USA. 1954

To see what is general in what is particular and what is permanent in what is transitory is the aim of scientific thought.

*An Introduction to Mathematics*

Chapter I (p. 11)

Henry Holt & Co. New York, New York, USA. 1911

We may conceive humanity as engaged in an internecine conflict between youth and age. Youth is not defined by years, but by the creative impulse to make something. The aged are those who, before all things, desire not to make a mistake. Logic is the olive branch from the old to the young, the wand which in the hands of youth has the magic property of creating science.

*The Organization of Thought*

*Science*, Volume 44, Number 1134, September 29, 1916 (p. 419)

**Whitman, Walt** 1819–92

American poet, journalist, and essayist

Science, testing absolutely all thoughts, all works, has already burst well upon the world – a sun, mounting, most illuminating, most glorious – surely never again to set.

*Democratic Vistas*

Democratic Vistas (p. 61)

Walter Scott. London, England. 1888

**Whyte, Lancelot Law** 1896–1972

Scottish physicist

Science starts with an assumption which is always present, though it may be unconscious, may be forgotten, and may sometimes even be denied.

*Accent on Form: An Anticipation of the Science of Tomorrow*

Chapter IV (p. 59)

Harper & Brothers. New York, New York, USA. 1954

**Wigner, Eugene Paul** 1902–95

Hungarian-born American physicist

There is no natural phenomenon that is comparable with the sudden and apparently accidentally timed development of science, except perhaps the condensation of a super-saturated gas or the explosion of some unpredictable explosives. Will the fate of science show some similarity to one of these phenomena?

*Proceedings of the American Philosophical Society*, Volume 94, Number 5, 1950

**Wilde, Oscar** 1854–1900

Irish wit, poet, and dramatist

The advantage of the emotions is that they lead us astray, and the advantage of science is that it is not emotional.

*The Picture of Dorian Gray*

Chapter III (p. 59)

Charterhouse Press. New York, New York, USA. 1904

Science can never grapple with the irrational. That is why there is no future before it, in this world.

*The Plays of Oscar Wilde*

*An Ideal Husband*

Act I (p. 9)

The Modern Library. New York, New York, USA. No date

Romance should never begin with sentiment. It should begin with science and end with a settlement.

*An Ideal Husband* (p. 81)

Boni & Liveright. New York, New York, USA. 1919

**Williams, Henry Smith** 1863–1943

No biographical data available

**Williams, Edward Huntington**

...science, as the word is commonly used, implies these things: first, the gathering of knowledge through observation; second, the classification of such knowledge, and through this classification, the elaboration of general ideas or principles.

*A History of Science* (Volume 1)

Chapter I (p. 3)

Harper & Brothers Publishers. New York, New York, USA. 1901

**Wilson, Andrew** 1852–1912

No biographical data available

...science has also its warm, living aspect. The dry facts form, like the skeleton, the mere framework which gives support to the active, pulsating, life-retaining parts of the scientific organism.

*Leisure-time Studies: Chiefly Biological. A Series of Essays and Lectures*

Science-Culture for the Masses (p. 32)  
Chatto & Windus. London, England. 1879

When, therefore, you think of science, do not picture it to yourself as composed of nothing save the dry-as-dust technicalities of popular notions.... Think of true science as a living reality; as a faithful expounder of all that is worth knowing and that can be known; as an existing power, ever anxious in its unwearied march for the good and welfare of mankind; and best of all, perhaps, as an ever-willing instructor of all who will come to be taught.

*Leisure-time Studies: Chiefly Biological. A Series of Essays and Lectures*

Science-Culture for the Masses (pp. 34–35)  
Chatto & Windus. London, England. 1879

**Wilson, Edward O.** 1929–

American biologist and author

To a considerable degree science consists in originating the maximum amount of information with the minimum expenditure of energy. Beauty is the cleanness of line in such formulations along with symmetry, surprise, and congruence with other prevailing beliefs.

*Biophilia*

The Poetic Species (p. 60)  
Harvard University Press. Cambridge, Massachusetts. 1984

**Wolpert, Lewis** 1929–

British embryologist

When we come to face the problems before us – poverty, pollution, overpopulation, illness – it is to science that we must turn, not to gurus. The arrogance of scientists is not nearly as dangerous as the arrogance that comes from ignorance.

In Mary Midgley

Can Science Save Its Soul?

*New Scientist*, Volume 135, Number 1832, August 1, 1992 (p. 24)

**Wordsworth, William** 1770–1850

English poet

Science appears but what in truth she is,  
Not as our glory and our absolute boast,  
But as a succedaneum and a prop  
To our infirmity. No officious slave  
Art thou of that false secondary power  
By which we multiply distinctions, then  
Deem that our puny boundaries are things  
That we perceive, and not that we have made.

*The Complete Poetical Works of William Wordsworth*

The Prelude, Book II, l. 212–219

Crowell. New York, New York, USA. 1888

**Wright, Frank Lloyd** 1869–1959

American architect

I have seemed to belittle the nature of our time and the great achievements of science, but I have intended to do neither because I believe human nature still sound, and recognize that science has done a grand job as well; but well I know that Science cannot save us.

An Organic Architecture, Speech

London, England, May, 1939

**Yates, Frances** 1899–1981

English historian

Is not all science a gnosis, an insight into the nature of the All, which proceeds by successive revelations?

*Giordano Bruno and the Hermetic Tradition*

Chapter XXII (p. 452)

The University of Chicago Press. Chicago, Illinois, USA. 1964

**Ziman, John M.** 1925–2005

British physicist

Penicillin is not Science, anymore than a cathedral is Religion or a witness box is Law.

In E.D. Klemke, Robert Hollinger and A. David Kline

*Introductory Readings in the Philosophy of Science*

What Is Science? (p. 36)

Prometheus Books. Buffalo, New York, USA. 1980

In science, to echo Beethoven's dictum about music, "Everything should be both surprising and expected."

*Reliable Knowledge*

Chapter 3 (fn 17, p. 71)

Cambridge University Press. Cambridge, England. 1978

**Zinkernagel, Rolf M.** 1944–

Swiss immunologist and pathologist

...in science there are collectors, classifiers, compulsory tidiers-up and permanent contesters, detectives, some artists and many artisans, there are poet-scientists and philosophers and even a few mystics.

*Les Prix Nobel. The Nobel Prizes in 1996*

Nobel banquet speech for award received in 1996

Nobel Foundation. Stockholm, Sweden. 1997

**Zirkel, Ferdinand** 1838–1912

German geologist

No science can exist wholly for itself alone, exerting neither a passive nor an active influence. Each science must make some use of the results acquired by allied branches of knowledge for the furthering of its own advancement, and again each must contribute from its own results toward the advancement of other sciences.

Translated by Cleveland Abbey, Jr.

*Congress of Arts and Science: Universal Exposition, St. Louis, 1904*

The Relations Existing Between Petrography and Its Related Sciences (p. 591)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1906

**SCIENCE, ABC OF**

**Pavlov, Ivan Petrovich** 1849–1936  
Russian physiologist

Learn the ABC of science before you try to ascend to its summit. Never begin the subsequent without mastering the preceding. Never attempt to screen an insufficiency of knowledge even by the most audacious surmise and hypothesis.

Bequest of Pavlov to the Academic Youth of His Country  
*Science*, Volume 83, Number 2155, April 17, 1936 (p. 369)

**SCIENCE, ABRACADABRA OF**

**Coleridge, Samuel Taylor** 1772–1834  
English lyrical poet, critic, and philosopher

The abracadabra of Science accordingly, like the incantations and jargon of the astrologers and necromancers of the middle ages, fills the uninitiated with reverence and fosters this insensate idolatry.

*The Idolatry of Science*  
Chapter XII (pp. 92–93)  
John Lane Co. London, England. 1920

**SCIENCE, ACADEMY OF**

**Chargaff, Erwin** 1905–2002  
Austrian biochemist

What members of an academy of science have in common is a certain form of semi-parasitic living.

*Voices in the Labyrinth: Nature, Man and Science* (p. 41)  
The Seabury Press. New York, New York, USA. 1977

**SCIENCE, ACCIDENTAL CAUSES OF**

**Wright, Chauncey** 1830–75  
American philosopher of science

The accidental causes of science are only “accidents” relatively to the intelligence of a man.

*The Philosophical Writings of Chauncey Wright*  
The Genesis of Species (p. 37)  
The Liberal Arts Press. New York, New York, USA. 1958

**SCIENCE, ACHIEVEMENT OF**

**Kubie, L. S.**  
No biographical data available

The primary achievement of science is the humility and honesty with which it constantly corrects its own errors. It is this that makes science the greatest of the humanities.

The Fostering of Creative Scientific Productivity  
*Daedalus*, Volume 91, 1962 (p. 305)

**Roosevelt, Franklin Delano** 1882–1945  
32nd president of the USA

The great achievement of science and even of art can be used in one way or another to destroy as well as create; they are only instruments by which men try to do the things they most want to do. If death is desired, science can do that. If a full, rich, and useful life is sought, science can do that also.

Address before the Eighth Pan American Scientific Conference  
Washington, D.C. May 10, 1948

**SCIENCE, ADVANCE OF**

**Mach, Ernst** 1838–1916  
Austrian physicist and philosopher

The greatest advances of science have always consisted in some successful formulation, in clear, abstract, and communicable terms, of what was instinctively known long before and of thus making it the permanent possession of humanity.

Translated by Thomas J. McCormack  
*Popular Scientific Lectures* (2nd edition)  
The Economical Nature of Physics (p. 191)  
The Open Court Publishing Co. Chicago, Illinois, USA. 1897

**Pearson, Karl** 1857–1936  
English mathematician

Every great advance of science opens our eyes to facts which we had failed before to observe, and makes new demands on our powers of interpretation.

*The Grammar of Science* (2nd edition)  
Chapter I (p. 14)  
Adam & Charles Black. London, England. 1900

**Poincaré, Jules Henri** 1854–1912  
French mathematician and theoretical astronomer

The advance of science is not comparable to the changes of a city, where old edifices are pitilessly torn down to give place to new, but to the continuous evolution of zoologic types which develop ceaselessly and end by becoming unrecognizable to the common sight, but where an expert eye finds always traces of the prior work of the centuries past. One must not think then that the old-fashioned theories have been sterile or vain.

Translated by George Bruce Halsted  
*The Value of Science*  
Introduction (p. 14)  
The Science Press. New York, New York, USA. 1907

**Schuster, Sir Arthur** 1851–1934  
English physicist

The advance of science takes place through many channels, and each generation has its own part to play. Particular ideas, particular faculties are wanted at particular times, and no one can foretell where success will be.

The Influence of Mathematics on the Progress of Physics  
*van Nostrand's Engineering Magazine*, Volume XXVI, Number CLX,  
 April, 1882 (p. 318)

**Weld, Charles Richard** 1813–69  
 Historian

The advancement of science ought ever to be the aim of  
 philosophers, independent of all petty jealousies.

*A History of the Royal Society, With Memoirs of the Presidents* Volume 2  
 Chapter VIII (p. 235)  
 John Parker. London, England. 1848

## SCIENCE, ADVANCES IN

**Tait, Peter Guthrie** 1831–1901  
 Scottish physicist and mathematician

In considering what may be designated as ‘Recent  
 Advances in Physical Science,’ it is well to remember  
 that many things which have become almost popularly Si  
 known within the last twenty-five years are much older in  
 the minds and writings of the foremost scientific men.

*Lectures on Some Recent Advances in Physical Science, With a Special  
 Lecture on Force* (3rd edition)  
 Lecture I (p. 1)  
 Macmillan & Co Ltd. London, England. 1885

## SCIENCE, ADVANCEMENT OF

**Conant, James Bryant** 1893–1978  
 American educator and scientist

There is only one proved method of assisting the  
 advancement of pure science – that of picking men of  
 genius, backing them heavily, and leaving them to direct  
 themselves.

Letter  
*New York Times*, August 13, 1945

## SCIENCE, AESTHETICS OF

**Holton, Gerald James** 1922–  
 Research professor of physics and science history

Hence it will be useful to develop a field that can fairly be  
 called the aesthetics of science.

*Thematic Origins of Scientific Thought: Kepler to Einstein*  
 Einstein, Michelson, and the “Crucil” Experiment (p. 326)  
 Harvard University Press. Cambridge, Massachusetts, USA. 1979

## SCIENCE, AGE OF

**Compton, Karl Taylor** 1887–1954  
 American educator and physicist

We live in an age of science. I do not say “an age of  
 technology” for every age has been an age of technology.  
 We recognize this when we describe past civilizations as

the Stone Age, the Bronze Age, and the Age of Steam or  
 of Steel, thus implicitly admitting that the stage of civi-  
 lization is determined by the tools at man’s disposal – in  
 other words, by his technology....

*A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton*  
*During the Years 1930–1949* (p. 1)  
 Undergraduate Association, MIT. Cambridge, Massachusetts, USA. 1955

**Kronenberger, Louis** 1904–80  
 American author and critic

Nominally a great age of scientific inquiry, ours has actu-  
 ally become an age of superstition about the infallibility  
 of science; of almost mystical faith in its nonmystical  
 methods; above all...of external verities; of traffic-cop  
 morality and rabbit-test truth.

*Company Manners: A Cultural Inquiry into American Life*  
 Chapter 4 (p. 94)  
 The Bobbs-Merrill Company, Inc. Indianapolis, Indiana, USA. 1954

**Langer, Susanne Katherina Knauth** 1895–1985  
 American philosopher

...it becomes apparent that the age of science has begot-  
 ten a new philosophical issue, inestimably more pro-  
 found than its original empiricism: for in all quietness,  
 along purely rational lines, mathematics has developed  
 just as brilliantly and vitally as any experimental tech-  
 nique, and, step by step, has kept abreast of discovery  
 and observation; and ail at ‘once, the edifice of human  
 knowledge stands before us, not as a vast collection of  
 sense reports, but as a structure of *facts that are symbols*  
*and laws that are their meanings*.

*Philosophy in a New Key: A Study in the Symbolism of Reason, Rite,  
 and Art*  
 Chapter I (p. 21)  
 Harvard University Press. Cambridge, Massachusetts, USA. 1942

**Russell, Bertrand Arthur William** 1872–1970  
 English philosopher, logician, and social reformer

To say that we live in an age of science is a common  
 place, but like most common places, it is only partially  
 true. From the point of view of our predecessors, if they  
 could view our society, we should, no doubt, appear to be  
 very scientific, but from the point of view of our succes-  
 sors, it is probable that the exactly opposite would seem  
 to be the cause.

*The Scientific Outlook*  
 Introduction (p. 9)  
 George Allen & Unwin Ltd. London, England. 1931

[T]heoretical science...is an attempt to *understand* the  
 world. Practical science, which is an attempt to *change*  
 the world, has been important from the first, and has  
 continually increased in importance, until it has almost  
 ousted theoretical science from men’s thoughts....

*A History of Western Philosophy*  
 Book Three, Part I, Chapter I (pp. 492–493)  
 Simon & Schuster. New York, New York, USA. 1945

The triumph of science has been mainly due to its practical utility, and there has been an attempt to divorce this aspect from that of theory, thus making science more and more a technique, and less and less a doctrine as to the nature of the world. The penetration of this point of view to philosophers is very recent.

*A History of Western Philosophy*

Book Three, Part I, Chapter I (pp. 492–493)

Simon & Schuster. New York, New York, USA. 1945

## SCIENCE, AIM OF

### Hall, A. D.

No biographical data available

The true aim of science is the enrichment of life.

*Nature*, Volume 138, 1936 (p. 576)

### James, William 1842–1910

American philosopher and psychologist

The aim of “science” is to attain conceptions so adequate and exact that we shall never need to change them.

*The Principles of Psychology*

The Perception of Things (p. 109)

Dover Publications, Inc. New York, New York, USA. 1950

### Laudan, Larry 1945–

American philosopher of science

The aim of science is merely to secure theories with a high problem-solving effectiveness.

*New Scientist*, 1 August, 1892 (p. 26)

### Mellor, Joseph William 1863–1938

Chemist

It is a popular belief that the aim of science is to explain things: as a matter of fact, the so-called explanations of science do not usually get much beyond describing the observed facts in the simplest possible terms so as to make their relations with one another clear and intelligible.

*A Comprehensive Treatise on Inorganic and Theoretical Chemistry* (Volume 1)

Chapter I (p. 13)

Longman, Green, & Co. London, England. 1922

### Milne, Edward Arthur 1896–1950

English astrophysicist and cosmologist

The Christmas message – which is also the Christian message – is “*Gloria in excelsis Deo*”...Glory to God in the highest and on earth peace among men of goodwill.... This is not a bad definition of the aim of all true science: the aim of rejoicing in the splendid mysteries of the world and universe we live in, and of attempting so to understand those mysteries that we can improve our command over nature, improve our conditions of life and so ensure peace...

*Modern Cosmology and the Christian Idea of God*

Chapter I (p. 1)

At The Clarendon Press. Oxford, England. 1952

### Popper, Karl R. 1902–94

Austrian/British philosopher of science

...it is the aim of science to find satisfactory explanations, of whatever strikes us as being in need of explanation.

*Objective Knowledge: An Evolutionary Approach*

Chapter 5 (p. 191)

Clarendon Press. Oxford, England. 1972

## SCIENCE, ANTAGONISM OF

### Huxley, Thomas Henry 1825–95

English biologist

Scholarly and pious persons, worthy of all respect, favour us with allocutions upon the sadness of the antagonism of science to their mediaeval way of thinking, which betray an ignorance of the first principles of scientific investigation, an incapacity for understanding what a man of science means by veracity, and an unconsciousness of the weight of established scientific truths, which is almost comical.

*Science and Culture: and Other Essays*

Chapter I (p. 16)

Macmillan & Company Ltd. London, England. 1881

## SCIENCE, APPLICATIONS OF

### Playfair, Lyon 1818–98

Scottish scientist and Parliamentarian

The applications of science are not difficult, but without the science there are no applications.

*Records of the School of Mines and of Science Applied to the Arts*

(Volume 1), Part I

The Study of Abstract Science (p. 29)

Longman, Brown, Green & Longmans. London, England. 1852

## SCIENCE, APPLIED

### Bacon, Sir Francis 1561–1626

English lawyer, statesman, and essayist

Even when men build any science and theory upon experiment, yet they almost always turn with premature and hasty zeal to practise, not merely on account of the advantage and benefit to be derived from it, but in order to seize upon some security in a new undertaking of their not employing the remainder of their labor unprofitably, and by making themselves conspicuous, to acquire a greater name for their pursuit.

In *Great Books of the Western World* (Volume 30)

*Novum Organum*

First Book, Aphorism 70 (p. 116)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Compton, Karl Taylor** 1887–1954  
American educator and physicist

Applied science is not an end in itself, but it is the most powerful means ever discovered for supplying the opportunity to secure the finest things of life.

*A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton During the Years 1930–1949* (p. 9)  
Undergraduate Association, MIT, Cambridge, Massachusetts, USA. 1955

**Einstein, Albert** 1879–1955  
German-born physicist

Why does this magnificent applied science which saves work and makes life easier bring us so little happiness? The simple answer runs: Because we have not yet learned to make sensible use of it.

Einstein Seeks Lack in Applying Science  
*The New York Times*, February 17, 1931 (p. 6)

It is not enough that you should understand about applied science in order that your work may increase man's blessings. Concern for the man himself and his fate must always form the chief interest of all technical endeavors; concern for the great unsolved problems of the organization of labor and the distribution of our mind shall be a blessing and not a curse to mankind. Never forget this in the midst of your diagrams and equations.

Einstein Seeks Lack in Applying Science  
*The New York Times*, February 17, 1931 (p. 6)

**Huxley, Aldous** 1894–1963  
English writer and critic

Applied Science is a conjurer, whose bottomless hat yields impartially the softest of Angora rabbits and the most petrifying of Medusas.

*Tomorrow and Tomorrow and Tomorrow and Other Essays*  
The Desert (p. 82)  
Harper & Brothers, New York, New York, USA. 1956

**Huxley, Thomas Henry** 1825–95  
English biologist

What people call applied science is nothing but the application of pure science to particular classes of problems.

*Science and Education*  
Chapter VI (p. 137)  
American Home Library Co. New York, New York, USA. 1902

I often wish that this phrase “applied science,” had never been invented. For it suggests that there is a sort of scientific knowledge of direct practical use, which can be studied apart from another sort of scientific knowledge, which is of no practical utility, and which is termed “pure science.” But there is no more complete fallacy than this.

*Collected Essays* (Volume 3)  
*Science and Education*  
Science and Culture (p. 137)  
Macmillan & Company Ltd. London, England. 1904

**Jevons, Frank Byron** 1858–1936  
No biographical data available

...an applied science does not sit in judgment upon the pure science on which it is based; it accepts the truths which the pure science presents to all the world, and bases itself upon them.

*An Introduction to the Study of Comparative Religion*  
Introduction (p. 2)  
The Macmillan Co. New York, New York, USA. 1908

## National Academy of Sciences (USA)

Applied science is a working bee who builds cells of utility, and in them rears to maturity the larvae hatched from her sister's eggs.

*Biographical Memoirs*  
Biographical Memoir of George Hammell Cook (p. 138)  
National Academy of Sciences (USA). Washington, D.C. 1902

**Pasteur, Louis** 1822–95  
French chemist

There does not exist a category of science to which one can give the name applied science. There are science and the applications of science, bound together as the fruit of the tree which bears it.

*Revue Scientifique*  
Pourquoi la France n'a pas trouvé hommes supérieurs au mont du péril (1871)

**Porter, George** 1920–2002  
English chemist

To feed applied science by starving basic science is like economising on the foundations of a building so that it may be built higher.

Let the Edifice of Science Crumble  
*New Scientist*, Volume 111, Number 1524, September, 1986 (p. 16)

**Ritchie, Arthur David** 1891–1967  
Scottish philosopher and science history writer

The fact that the regions of nature actually covered by known laws are few and fragmentary is concealed by the natural tendency to crowd our experience into those particular regions and to leave the others to themselves. We seek out those parts that are known and familiar and avoid those that are unknown and unfamiliar. This is simply what is called “Applied Science.”

*Scientific Method: An Inquiry into the Character and Validity of Natural Law*  
Chapter VII (p. 201)  
Kegan Paul, Trench, Trubner & Co., Ltd. London, England. 1923

**Wheeler, Edgar C.**  
No biographical data available

...[researchers] cannot remain indefinitely in any field of pure research. For every time they come upon a new bit of knowledge, almost instantly they discover some practical

application. Thus the dividing line between pure science and applied science becomes thin.

Makers of Lightning

*The World's Work*, January, 1927 (p. 271)

## SCIENCE, ARCHES OF

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

There is a chasm between knowledge and ignorance which the arches of science can never span.

*The Writings of Henry David Thoreau* (Volume 1)

*A Week on the Concord and Merrimack Rivers*

Sunday (p. 125)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

## SCIENCE, ARMY OF

**Bradley, Jr., John Hodgdon** 1898–1962

American geologist

Thus along many battle fronts, the army of science advances on the strongholds of ignorance in the heart of earth. Speculations bristle like bayonets and collapse like papier-mâché. But though mistakes retard and darkness confuses, the army presses on.

*Autobiography of Earth*

Chapter VIII (p. 247)

Coward-McCann, Inc. New York, New York, USA. 1935

## SCIENCE, ASPECT OF

**Preston, Thomas** 1860–1900

Irish scientist

In the struggle for place it is not surprising that the nobler aspect of science, as an instrument of education and culture, should be lost sight of in the popular desire for a mere acquaintance with the facts demanded by the exigencies of the moment.

*The Theory of Heat* (2nd edition)

Preface to the First Edition (p. v)

Macmillan & Co Ltd. London, England. 1904

## SCIENCE, AVENUE OF

**Hume, David** 1711–76

Scottish philosopher and historian

The sweetest and most inoffensive path of life leads through the avenues of science and learning; and whoever can either remove any obstructions in this way, or open up any new prospect, ought so far to be esteemed a benefactor to mankind.

In *Great Books of the Western World* (Volume 35)

*An Enquiry Concerning Human Understanding*

Enquiries Concerning the Human Understanding and Concerning the Principles of Morals

Section 1

Of the Different Species of Philosophy (p. 453)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## SCIENCE, AVERSION OF

**Eusebius of Caesarea** ca. 263–ca. 339

Bishop of Caesarea Palaestina

It is not through ignorance of the things admired by them, but through contempt of their useless labour, that we think little of these matters, turning our souls to the exercise of better things.

Quoted in John Tyndall

*Six Lectures on Light Delivered in America in 1872–1873* (3rd edition)

Lecture I (p. 13)

D. Appleton & Co. New York, New York, USA. 1901

**Lactantius** ca. 240–ca. 320

Christian author

To search for the causes of things; to inquire whether the sun be as large as he seems; whether the moon is convex or concave; whether the stars are fixed in the sky, or float freely in the air; of what size and of what material are the heavens; whether they be at rest or in motion; what is the magnitude of the earth; on what foundations is it suspended or balanced; – to dispute and conjecture upon such matters is just as if we chose to discuss what we think of a city in a remote country, of which we never heard but the name.

Quoted in John Tyndall

*Six Lectures on Light Delivered in America in 1872–1873* (3rd edition)

Lecture I (p. 13)

D. Appleton & Co. New York, New York, USA. 1901

## SCIENCE, AXIOMS OF

**Bacon, Sir Francis** 1561–1626

English lawyer, statesman, and essayist

Science, being the wonder of the ignorant and unskillful, may be not absurdly called a monster. In figure and aspect it is represented as many-shaped, in allusion to the immense variety of matter with which it deals. It is said to have the face and voice of a woman, in respect of its beauty and facility of utterance. Wings are added because the sciences and the discoveries of science appeared and fly-aboard in an instant; the communication of knowledge being like that of one candle with another, which lights up at once. Claws, sharp and hooked, are ascribed to it with great elegance, because the axioms and arguments of science penetrate and hold fast the mind, so that it has no means of evasion or escape.

In Hugh Dick (ed.)

*Selected Writings of Francis Bacon*

Sphinx on Science (pp. 418–419)

Random House, Inc. New York, New York, USA. 1955

**SCIENCE, BEAUTY OF****Gruber, Howard E.** 1922–2005

American psychology scholar and professor

The power and the beauty of science do not rest upon infallibility, which it has not, but on corrigibility, without which it is nothing.

The Origin of “The Origin of Species”

*The New York Times Book Review*, 22 July, 1979 (p. 7)**SCIENCE, BEST****Lynch, Gary**

No biographical data available

What you really need to do the best science is a tremendous tolerance for ambiguity. You have to be able to tolerate ambiguity. Because we as creatures are set up for some reason to see cause-and-effect. And what you really wind up doing is tolerating the fact that you have all these assumptions and all these uncertainties, and living with them. And when you really go into a novel area, what do you have to guide you? The more novel it is, the fewer the constraints. For a human being that is a very uncomfortable feeling.

In George Johnson

*In the Palaces of Memory: How We Build the Worlds Inside Our Heads*

Mucking Around in the Wetware (pp. 91–92)

Alfred A. Knopf. New York, New York, USA. 1991

Preface (p. iii)

R. Wilks. London, England. 1815

**SCIENCE, BRANCH OF****Kemp, James Furman** 1859–1926

American geologist

...who will say that any branch of science stands alone, or that one is distinct from all the rest, when year by year the force of the old-time philosophical dictum “all is one” becomes the more apparent.

*Lectures on Science, Philosophy and Art, 1907–1908*

Geology (p. 17)

The Columbia University Press. New York, New York, USA. 1908

**SCIENCE, BUSINESS OF****von Liebig, Justus** 1803–73

German organic chemist

The business of science is to seek for causes, and like a light, to illuminate the surrounding darkness.

In John Blyth

*Letters on Modern Agriculture*

Letter 1 (p. 7)

Walton &amp; Maberly. London, England. 1859

**SCIENCE, CENTRAL TASK OF****Thomas, Lewis** 1913–93

American physician and biologist

The central task of science is to arrive, stage by stage, at a clearer comprehension of nature, but this does not mean, as it is sometimes claimed to mean, a search for mastery over nature.

*Late Night Thoughts on Listening to Mahler's Ninth Symphony*

Humanities and Science (p. 153)

Viking Press. New York, New York, USA. 1983

**SCIENCE, CHARACTERISTIC OF****Dublin, Max**

No biographical data available

It is characteristic of science, in its quest for objectivity, to exclude and avoid ethical considerations.

*Futurehype: The Tyranny of Prophecy* (p. 10)

The Viking Press. New York, New York, USA. 1989

**Prescott, William Hickling** 1796–1859

American historian

It is the characteristic of true science, to discern the impassable, but not very obvious, limits which divide the province of reason from that of speculation. Such knowledge comes tardily. How many ages have rolled away in which powers, that, rightly directed, might have revealed the great laws of nature, have been wasted in brilliant, but barren reveries on alchemy and astrology.

*History of the Conquest of Mexico* (Volume 1)

Book I, Chapter IV (p. 102)

J.B. Lippincott Company. Philadelphia, Pennsylvania, USA. 1891

## SCIENCE, COMMANDMENTS OF

**Sagan, Carl** 1934–96  
American astronomer and author

One of the great commandments of science is, “Mistrust arguments from authority.”

*The Demon-Haunted World: Science as a Candle in the Dark*  
Chapter 2 (p. 28)  
Random House, Inc. New York, New York, USA. 1995

## SCIENCE, COMMUNICATION OF

**Casimir, Hendrik B. G.** 1909–2000  
Dutch physicist

There exists today a universal language that is spoken and understood almost everywhere: it is Broken English. [It] is used by the waiters in Hawaii, prostitutes in Paris and ambassadors in Washington, by businessmen from Buenos Aires, by scientists at international meetings and by dirty-postcard peddlers in Greece – in short, by honorable people like myself all over the world.

*Haphazard Reality: Half a Century of Science*  
Chapter 4 (p. 122)  
Harper & Row, Publishers. New York, New York, USA. 1983

**Chargaff, Erwin** 1905–2002  
Austrian biochemist

There is no real popularization [of science] possible, only vulgarization that in most instances distorts the discoveries beyond recognition.

Bitter Fruits from the Tree of Knowledge  
*Perspectives in Biology and Medicine*, Volume 16, Summer, 1973 (p. 491)

...Scientists, like little fishes, swim in schools. When we open one of our scientific journals these days, we find a very uneven distribution of topics. Some important fields are almost entirely neglected, others seem to explode into bursts of unbelievable mediocrity. Really valuable contributions in the fields most in vogue at present probably are just as scarce as those dealing with the stepchildren of present-day biochemistry. But not all disciplines make it so easy to call each mush a “homogenate”, each soup a “partially purified extract”, and so to speak – when you have nothing whatever – of a “system.” There is a real danger that our science may suffocate in its own excrements.

*Essays on Nucleic Acids*  
Chapter 10 (p. 162)  
Elsevier Publishing Company. Amsterdam, Netherlands. 1963

**Chesterton, G. K. (Gilbert Keith)** 1874–1936  
English author

Scientific phrases are used like scientific wheels and piston-rods to make swifter and smoother yet the path of the comfortable.

*Orthodoxy*  
Chapter VIII (p. 230)  
John Lane Company. New York, New York, USA. 1918

**Dancoff, S. M.**  
American physicist

When you set out in a new field and choose a terminology you have the choice of using old, familiar words in new meanings or else you can make up new words for the new meanings. If you use old words you make the theory look homey and inviting, but you run the risk of confusing the issue every time the old word is used. If you use new words you make the thing look excessively highbrow and frighten off any who might be interested.

Does the Neutrino Really Exist?  
*Bulletin of the Atomic Scientists*, Volume 8, Number 5, June, 1952  
(p. 139)

**Dornan, Christopher** 1957–  
American journalism professor

Science is seen as an avenue of access to assured findings, and scientists – in the dissemination of these findings – as the initial sources. The members of the laity are understood purely as recipients of this information. Journalists and public relations personnel are viewed as intermediaries through which the scientific findings filter. The task for science communication is to transmit as much information as possible with maximum fidelity.

Some Problems of Conceptualizing the Issues of “Science and the Media”  
*Critical Studies in Mass Communication*, Volume 7, Number 1, March, 1990 (p. 51)

**Feynman, Richard P.** 1918–88  
American theoretical physicist

We have a habit in writing articles published in scientific journals to make the work as finished as possible, to cover all the tracks, to not worry about the blind alleys or describe how you had the wrong idea first, and so on. So there isn’t any place to publish, in a dignified manner what you actually did in order to do the work....

*Nobel Lectures, Physics 1963–1970*  
Nobel lecture for award received in 1965  
The Development of the Space-Time View of Quantum Electrodynamics (p. 155)

*Science Is Human*

Science and the Liberal Arts (p. 11)

University of Otago Press. Dunedin, New Zealand. 1972

**Huxley, Thomas Henry** 1825–95

English biologist

...there is assuredly no more effectual method of clearing up one's own mind on any subject than by talking it over so to speak, with men of real power and grasp, who have considered it from a totally different point of view.

*Collected Essays* (Volume 1)*Method and Result*

Animal Automatism (p. 202)

Macmillan &amp; Company Ltd. London, England. 1904

**Large, E. C.**

American author

[I]t was contended that...compartments labeled Chemistry, Mycology, Bacteriology...were never really fish-tanks for myopic specialists to swim about in, but merely convenient departments in one splendid and sunlit edifice of science, separated at the most by glass walls, decorated with the flags of all nations, and provided with innumerable intercommunicating doors. If so many stacks of old scientific papers got piled up on each side of the glass partitions that in the end no one could see through them, that was certainly regrettable; and if some of the doors were locked for periods ranging from a decade to a century, well, that also was a pity – but who wanted to work in a draught?

*The Advance of the Fungi*

Chapter XXIII (p. 317)

Henry Holt &amp; Company. New York, New York, USA. 1940

**Lemke, J.**

No biographical data available

True Dialogue occurs when teachers ask questions to which they do not presume to already know the “correct answer.”

*Talking Science: Language, Learning and Values*

Chapter 3 (p. 55)

Ablex Publishing Corporation. Norwood, New Jersey, USA. 1990

**Loomis, Frederic Brewster** 1873–1937

American geologist

Everyone, who is alert as he wanders about this world, wants to know what he is seeing and what it is all about. Here and there with the aid of capable guides a few have been introduced into the sphere that wide and fascinating knowledge of Nature which has been so rapidly accumulated during this and the latter part of the last century. It is a full treasure house constantly being enriched,

but unfortunately the few who have been initiated have soon acquired technical language and habit, so that their knowledge and new acquisitions are communicated to but a few.

*Field Book of Common Rocks and Minerals*

Preface (p. vii)

**MacDonald, Sharon**

No biographical data available

...science communication involves selection and definition, not just of which “facts” are presented to the public, but of what is to count as science and of what kind of entity or enterprise science is to be. That is, science communicators act as authors of science for the public. They may also, however, by dint of their own institutional status, give implicit stamps of approval or disapproval to particular visions or versions of science. That is, they may act as authors with special authority on science – as authorisers of science.

In Alan Irwin and Brian Wynne (eds.)

*Misunderstanding Science? The Public Reconstruction of Science and Technology*

Authorizing Science: Public Understanding of Science in Museums

(p. 152)

Cambridge University Press. Cambridge, England. 1996

**Mach, Ernst** 1838–1916

Austrian physicist and philosopher

Science is communicated by instruction, in order that one man may profit by the experience of another and be spared the trouble of accumulating it for himself; and thus, to spare posterity, the experiences of whole generations are stored up in libraries.

*The Science of Mechanics* (5th edition)

Chapter IV, Part IV, Section 1 (p. 578)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

Economy of communication and of apprehension is of the very essence of science. Herein lies its pacificatory, its enlightening, its refining element.

*The Science of Mechanics* (5th edition)

Introduction (p. 7)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

**Michelson, Albert Abraham** 1852–1931

German-American physicist

Science, when it has to communicate the results of its labor, is under the disadvantage that its language is but little understood. Hence it is that circumlocution is inevitable and repetitions are difficult to avoid.

*Light Waves and Their Uses*

Lecture I (p. 1)

The University of Chicago Press. Chicago, Illinois, USA. 1903

**Moore, John A.**

American writer and professor of genetics and biology

...recall some of the lectures you may have heard recently. Did you always know why the research had been done?

Was it clear what problem was being illuminated by the data presented?

*The Day the Earth Stood Still*

Film (1951)

### Oppenheimer, James Robert 1904–67

American theoretical physicist

The true responsibility of a scientist, as we all know, is to the integrity and vigor of his science. And because most scientists, like all men of learning, tend in part also to be teachers, they have a responsibility for the communication of the truths they have found. This is at least a collective, if not an individual responsibility. That we should see in this any insurance that the fruits of science will be used for man's benefit, or denied to man when they make for his distress or destruction, would be a tragic naiveté.

*The Open Mind*

Chapter V (p. 91)

Simon & Schuster. New York, New York, USA. 1955

Often the very fact that the words of science are the same as those of our common life and tongues can be more misleading than enlightening, more frustrating to understanding than recognizably technical jargon.

*Science and the Common Understanding*

Chapter 1 (p. 5)

Simon & Schuster. New York, New York, USA. 1954

It is proper to the role of the scientist that he not merely find new truth and communicate it to his fellows, but that he teach, that he try to bring the most honest and intelligible account of new knowledge to all who will try to learn.

*The Open Mind: Lectures*

Prospects in the Arts and Sciences (p. 138)

Simon & Schuster. New York, New York, USA. 1955

### Parton, H. N.

No biographical data available

Scientists have the duty to communicate, firstly with each other, that is with those who are interested in the same or allied problems, and secondly with laymen: by layman I mean anyone not familiar with their special science, for specialization has raised the level of scientific

achievement so much, that chemists, for example, are usually laymen in say, biology; we may hope, intelligent laymen.

*Science Is Human*

Science and the Liberal Arts (p. 12)

University of Otago Press. Dunedin. 1972

Aldous Huxley, in a lecture on his grandfather, said that all communication is literature, and even in scientific writing there is wide room for the exercise of art.

*Science Is Human*

Science and the Liberal Arts (p. 14)

University of Otago Press. Dunedin. 1972

### Pool, Ithiel de Sola 1917–84

No biographical data available

Computing and communication are becoming one...

*Technologies Without Boundaries: On Telecommunications in a Global Age*

Part I, Chapter I (p. 8)

Harvard University Press. Cambridge, Massachusetts, USA. 1990

### Priestley, Joseph 1733–1804

English theologian and scientist

When for the sake of a little more reputation, men can keep brooding over a new fact, in the discovery of which they might, possibly, have very little real merit, till they think they can astonish the world with a system as complete as it is new, and give mankind a high idea of their judgment and penetration; they are justly punished for their ingratitude to the fountain of all knowledge, and for their want of a genuine love of science and of mankind, in finding their boasted discoveries anticipated, and the field of honest fame pre-occupied, by men, who, from a natural ardour of mind engage in philosophical pursuits, with an ingenious simplicity immediately communicate to others whatever occurs to them in their inquiries.

*Experiment and Observations on Different Kinds of Air* (Volume 1)

The Preface (pp. xvii–cviii)

Printed by Thomas Pearson. Birmingham, England. 1740

### Roe, Anne 1904–1991

American psychologist

Nothing in science has any value to society if it is not communicated....

*The Making of a Scientist*

Chapter I (p. 17)

Greenwood Press, Publishers. Westport, Connecticut, USA. 1973

### Schrödinger, Erwin 1887–1961

Austrian theoretical physicist

Bohr's...approach to atomic problems...is really remarkable. He is completely convinced that any understanding in the usual sense of the word is impossible. Therefore the conversation is almost immediately driven into philosophical questions, and soon you no longer know whether

you really take the position he is attacking, or whether you really must attack the position that he is defending.

In W. Moore

*Schrodinger: Life and Thoughts*

Chapter 6, Letter to W. Wein, 1926 (p. 228)

Cambridge University Press. Cambridge, England. 1989

If you cannot – in the long run – tell everyone what you have been doing, your doing has been worthless.

*Science and Humanism: Physics in Our Time*

The Spiritual Bearing of Science on Life (pp. 8–9)

At The University Press. Cambridge, England. 1952

### **von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

The present age has a bad habit of being abstruse in the sciences. We remove ourselves from common sense without opening up a higher one; we become transcendent, fantastic, fearful of intuitive perception in the real world, and when we wish to enter the practical realm, or need to, we suddenly turn atomistic and mechanical.

*Scientific Studies* (Volume 12)

Chapter VIII (pp. 308–309)

Suhrkamp. New York, New York, USA. 1988

### **Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

Nobody has a right to speak more clearly than he thinks.

*Washingtonian*, Volume 15, Number 143, November, 1979

### **Wiener, Norbert** 1894–1964

American mathematician

[T]he more probable the message, the less information it gives. Clichés, for example, are less illuminating than great poems.

*The Human Use of Human Beings*

Chapter 1 (p. 21)

da Capo Press. New York, New York, USA. 1988

### **Ziman, John M.** 1925–2005

British physicist

The cliché of scientific prose betrays itself “Hence we arrive at the conclusion that....” The audience to which scientific publications are addressed is not passive; by its cheering or booing, its bouquets or brickbats, it actively controls the substance of the communications that it receives.

*Public Knowledge: An Essay Concerning the Social Dimension of Science*

Chapter 1 (p. 9)

Cambridge University Press. Cambridge, England. 1968

It is not enough to observe, experiment, theorize, calculate and communicate; we must also argue, criticize, debate, expound, summarize, and otherwise transform the information that we have obtained individually into reliable, well established, public knowledge.

Information, Communication, Knowledge

*Nature*, Volume 224, Number 5217, October 25, 1969 (p. 324)

## SCIENCE, CONCEPT OF

### **Temple, George Frederick James** 1901–92

English mathematician

...any serious examination of the basic concepts of any science is far more difficult than the elaboration of their ultimate consequences.

*Turning Points in Physics: A Series of Lectures Given at Oxford University in Trinity Term, 1958* (p. 68)

Interscience Publishers. New York, New York, USA. 1959

## SCIENCE, CONDUCT OF

### **Fox, Robin** 1934–

English anthropologist, poet, and essayist

The conduct of science can lead to boring triviality. Even great results can be used to evil ends.

In Paul R. Gross, Norman Levitt, and Martin W. Lewis (eds.)

*The Flight from Science and Reason*

State of the Art/Science in Anthropology (p. 329)

New York Academy of Sciences. New York, New York, USA. 1996

## SCIENCE, CREATIVE

### **Gould, Stephen Jay** 1941–2002

American paleontologist and evolutionary biologist

Creative science is always a mixture of facts and ideas. Great thinkers are not those who can free their minds from cultural baggage and think or observe objectively (for such a thing is impossible), but people who use their milieu creatively rather than as a constraint.

*An Urchin in the Storm: Essays About Books and Ideas*

Chapter 6 (p. 103)

W.W. Norton & Company, Inc. New York, New York, USA. 1987

## SCIENCE, CREED

### **Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

Science corrects the old creeds....

*The Complete Works of Ralph Waldo Emerson* (Volume 8)

*Letters and Social Aims*

Chapter VII (p. 228)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

### **Hall, Asaph** 1829–1907

American astronomer

The scientific creed is constantly growing and expanding, and we have no fears, but rejoice at its growth. We need no consistency of bishops, no synod of ministers, to tell us what to believe. Everything is open to investigation and criticism.

In Sir Richard Arman Gregory

*Discovery; or, The Spirit and Service of Science*

Chapter II (pp. 30–31)

Macmillan & Company Ltd. London, England. 1918

**Huxley, Thomas Henry** 1825–95  
English biologist

...science...commits suicide when it adopts a creed.

*Collected Essays* (Volume 2)

*Darwiniana*

The Darwin Memorial (p. 252)

Macmillan & Company Ltd. London, England. 1904

**LeShan, Lawrence**  
No biographical data available

**Margenau, Henry** 1901–97  
American physicist

1. We believe that the search for truth is a never-ending quest; yet we pledge ourselves to seek it.
2. We will not recognize or accept any kind of truth that pretends to be ultimate or absolute. We will consider and weigh all claims as provisional conclusions. If examination shows them to be stop signs on the road of inquiry, we will ignore them; if they are signposts, we will note them and move on.
3. We recognize no subjects and no facts that are alleged to be forever closed to inquiry or understanding; for science, every mystery is but a challenge.
4. We believe that new principles of understanding are constantly created through the efforts of man, and that a philosophy which sees the answers to all questions already implied in what is now called science is presumptuous and contrary to the spirit of science.
5. We are confident that scientific illumination can be made to penetrate not only the realms now affirmed as scientific, but also the shadowy regions that surround human consciousness, the essence of the mind, including features that are still obscure or occult and mysterious.

*Einstein's Space and van Gogh's Sky*

Chapter 4 (pp. 70–71)

The Macmillan Company. New York, New York, USA. 1982

## SCIENCE, DEFENDERS OF

**Lichtenberg, Georg Christoph** 1742–99  
German physicist and satirical writer

The most heated defenders of a science, who cannot endure the slightest sneer at it, are commonly those who have not made very much progress in it and are secretly aware of this defect.

Translated by R.J. Hollingdale

*Aphorisms*

Notebook F, aphorism 8

Penguin Classics. New York, New York, USA. 1990

## SCIENCE, DEFINITION OF

**Weil, Simone** 1909–43  
French philosopher and mystic

The true definition of science is this: the study of the beauty of the world.

Translated by Arthur Wills

*The Need for Roots: Prelude to a Declaration of Duties Toward Mankind* Part III (p. 261)

The Beacon Press. Boston, Massachusetts, USA. 1952

## SCIENCE, DEVELOPMENT OF

**Feynman, Richard P.** 1918–88  
American theoretical physicist

The rate of the development of science is not the rate at which you make observations alone but, much more important, the rate at which you create new things to test.

*The Meaning of It All*

Chapter I (p. 27)

Perseus Books. Reading, Massachusetts, USA. 1998

**Mach, Ernst** 1838–1916  
Austrian physicist and philosopher

They that know the entire course of the development of science, will, as a matter of course, judge more freely and more correctly of the significance of any present scientific movement than they, who limited in their views to the age in which their own lives have been spent, contemplate merely the momentary trend that the course of intellectual events takes at the present moment.

Translated by Thomas J. McCormack

*The Science of Mechanics: A Critical and Historical Account of Its Development*

Introduction (p. 7)

The Open Court Publishing Co. Chicago, Illinois, USA. 1919

...the entire course of the development of science will, as a matter of course, judge more freely and more correctly of the significance of any present scientific movement than they who, limited in their views to the age in which their own lives have been spent, contemplate merely the momentary trend that the course of intellectual events takes at the present moment.

*The Science of Mechanics* (5th edition)

Introduction (p. 8)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

**Wigner, Eugene Paul** 1902–95  
Hungarian-born American physicist

There is no natural phenomenon that is comparable with the sudden and apparently accidentally timed development of science, except perhaps the condensation of a super-saturated gas or the explosion of some unpredictable explosives.

The Limits of Science  
*Proceedings, American Philosophical Society*, Volume 94, Number 5,  
 October 19, 1950 (p. 422)

## SCIENCE, DEVOTION TO

**Spencer, Herbert** 1820–1903  
 English social philosopher

Devotion to science is a tacit worship – a tacit recognition of worth in the things one studies; and by implication in their cause. It is not a mere lip-homage, but a homage expressed in actions – not a mere professed respect, but a respect proved by the sacrifice of time, thought, and labour.

In Sir Richard Arman Gregory  
*Discovery; or, The Spirit and Service of Science*  
 Chapter III (p. 41)  
 Macmillan & Company Ltd. London, England. 1918

## SCIENCE, DISCOVERIES OF

**Gould, Stephen Jay** 1941–2002  
 American paleontologist and evolutionary biologist

No factual discovery of science (statements about how nature “is”) can, in principle, lead us to ethical conclusions (how we “ought” to behave) or to convictions about intrinsic meaning (the “purpose” of our lives).

Dorothy, It’s Really Oz  
*Time*, August 23, 1999 (p. 59)

**Bronowski, Jacob** 1908–74  
 Polish-born British mathematician and polymath

The discoveries of Science, the works of art are explorations – more, are explosions, of a hidden likeness.

*Science and Human Values*  
 The Creative Mind (p. 19)  
 Harper & Row, Publishers. New York, New York, USA. 1965

## SCIENCE, DIVISION OF

**Bacon, Sir Francis** 1561–1626  
 English lawyer, statesman, and essayist

The divisions of the sciences are not like different lines that meet in one angle, but rather like the branches of trees that join in one trunk.

In J.A. Thomson  
*Introduction to Science*  
 Chapter IV (p. 92)  
 Williams & Norgate Ltd. London, England. 1916

## SCIENCE, DOMAIN OF

**Marsh, Othniel Charles** 1831–99  
 American paleontologist

It is certainly within the domain of science to determine when the earth was first fitted to receive life, and in what form the earliest life began. To trace that life in its manifold changes through past ages to the present is a more difficult task, but one from which modern science does not shrink.

*Introduction and Succession of Vertebrate Life in America*  
 Introduction (p. 3)  
 Tuttle, Morehouse & Taylor, Printers. New Haven, Connecticut, USA. 1877

## SCIENCE, DUTY OF

**Lapworth, Charles** 1842–1920  
 English Geologist

It is true that the first duty of every science is to move incessantly forward from discovery to discovery along the straight path of unremitting investigation and research, following truth whithersoever it may lead, wholly unbiased by the question as to whether that discovery bears any relation whatever to the material wants of mankind.

The Relations of Geology  
*Scottish Geographical Magazine*, Volume XIX, Number 8, August,  
 1902 (p. 406)

## SCIENCE, EDIFICE OF

**Mendeleyev, Dmitry Ivanovich** 1834–1907  
 Russian chemist

The edifice of science not only requires material, but also a plan, and necessitates the work of preparing the materials, putting them together, working out the plans and the symmetrical proportions of the various parts. To conceive, understand, and grasp the whole symmetry of the scientific edifice, including its unfinished portions, is equivalent to tasting that enjoyment only conveyed by the highest forms of beauty and truth. Without the material, the plan alone is but a castle in the air – a mere possibility; whilst the material without a plan is but useless matter.

Translated by George Kamensky  
 In Thomas Atkinson Lawson  
*The Principles of Chemistry* (Volume 1)  
 Author’s Preface (p. ix)  
 Longmans, Green & Co. London, England. 1891

Free access to the edifice of science is not only allowed to those who devised the plan, worked out the detailed drawings, prepared the materials, or piled up the brickwork, but also to all those who are desirous of making a close acquaintance with the plan, and wish to avoid dwelling in the vaults or in the garrets where the useless lumber is stored.

Translated by George Kamensky  
 In Thomas Atkinson Lawson  
*The Principles of Chemistry* (Volume 1)  
 Author’s Preface (p. ix)  
 Longmans, Green & Co. London, England. 1891

**SCIENCE, EEL OF**

**Pope, Alexander** 1688–1744  
English poet

How Index-learning turns no student pale,

Yet holds the eel of science by the tail...

*The Complete Poetical Works* (Volume 4)

Duncaid, Book 1, l. 279–80

Houghton Mifflin Company. New York, New York, USA. 1903

**SCIENCE, ENEMY OF**

**Gladstone, William Ewart** 1809–98  
British Liberal Party statesman

To treat a man as the enemy of Science is to treat him as the enemy of Truth.

*Correspondence on Church and Religion of William Ewart Gladstone* (Volume 2)

Letter 274 (p. 98)

The Macmillan Co. New York, New York, USA. 1910

**Morley, John** 1838–1923  
British Liberal statesman

The worst enemy of science is also the bitterest enemy of democracy, *cest le clericalisme*. The interests of science and the interests of democracy are one.

Sir H. Maine on Popular Government

*The Eclectic Magazine of Foreign Literature, Science, and Art*, Volume 43, April, 1886 (p. 567)

**SCIENCE, ENGLISH**

**King, Thomas Starr** 1824–64  
American Unitarian clergyman

The triumphs of English science over nature, the hiss of her engines, the whirl of her wheels, the roar of her factory drums, the crackle of her furnaces, the beat of her hammers, the vast and chronic toil that mines her treasures, affect him with no wonder and arouse no exultant thrill of partnership.

*Substance and Show, and Other Lectures*

On the Privilege and Duties of Patriotism (p. 395)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1879

**SCIENCE, ESSENCE OF**

**Bronowski, Jacob** 1908–74  
Polish-born British mathematician and polymath

[This] is the essence of science: ask an impertinent question, and you are on the way to a pertinent answer.

*The Ascent of Man*

Chapter 4 (p. 153)

Little, Brown & Company. Boston, Massachusetts, USA. 1973

**SCIENCE, EVOLUTION OF**

**Roberts, Sir William**

The evolution of science differs fundamentally from that of literature and the fine arts. Science advances by a succession of discoveries. Each discovery constitutes a permanent addition to natural knowledge – and furnishes a post of vantage for, and a suggestion to, further discoveries. This mode of advance has no assignable limits; for the phenomena of nature – the material upon which science works – are practically infinite in extent and complexity.

*Science An Modern Civilization*

*Nature*, Volume 56, Number 1461, October 28, 1897

**SCIENCE, EXACT**

**Planck, Max** 1858–1947  
German physicist

Exact science – what wealth of connotation these two words have! They conjure up a vision of a lofty structure, of imperishable slabs of stone firmly joined together, treasure-house of all wisdom, symbol and promise of the coveted goal for a human race thirsting for knowledge, longing for the final revelation of truth.

*Scientific Autobiography and Other Papers*

The Meaning and Limits of Exact Science (p. 80)

Philosophical Library. New York, New York, USA. 1949

The roots of exact science feed in the soil of human life.

*Scientific Autobiography and Other Papers*

The Meaning and Limits of Exact Science, Part IV (p. 112)

Philosophical Library. New York, New York, USA. 1949

**Teller, Edward** 1908–2003  
Hungarian-born American nuclear physicist

**Teller, Wendy**

No biographical data available

If there ever was a misnomer, it is “exact science.” Science has always been full of mistakes. The present day is no exception. And our mistakes are good mistakes; they require a genius to correct them. Of course, we do not see our own mistakes.

*Conversations on the Dark Secrets of Physics*

Chapter 3 (p. 37)

Plenum Press. New York, New York, USA. 1991

**SCIENCE, FACTUAL BURDEN OF**

**Medawar, Sir Peter Brian** 1915–87  
Brazilian-born English zoologist

...the factual burden of a science varies inversely with its degree of maturity. As a science advances, particular facts are comprehended within, and therefore in a sense

annihilated by, general statements of steadily increasing explanatory powers and compass. In all sciences we are being progressively relieved of the burden of singular instances, the tyranny of the particular. We need no longer record the fall of every apple.

*The Art of the Soluble*

Two Conceptions of Science (p. 114)

Methuen & Company Ltd. London, England. 1967

## SCIENCE, FIELD OF

**Carus, Paul** 1852–1919

American philosopher

The field of science, however, is large, for it is nothing less than the whole world, the infinite universe in which we live; and the experiences which we make by studying the various phenomena of our surroundings are illimitable and inexhaustible.

Is All Science One?

*The Chautauquan: Organ of the Chautauqua Literary and Scientific Circle*, Volume XIX, Number 3, June, 1894 (p. 279)

**Dalton, John** 1766–1844

English chemist and physicist

The field of science is large; it is, therefore, impossible for any individual to cultivate the whole.

*John Dalton and the Rise of Modern Chemistry*

Chapter VIII (p. 167)

Macmillan & Co. New York, New York, USA. 1895

**Pearson, Karl** 1857–1936

English mathematician

The field of science is unlimited; its material is endless, every group of natural phenomena, every phase of social life, every stage of past or present development is material for science.

*The Grammar of Science* (2nd edition)

Chapter I (p. 12)

Adam & Charles Black. London, England. 1900

**Richardson, Samuel** 1689–1761

English novelist

Vast is the field of Science. The more a man knows, the more he will find he has to know.

*Sir Charles Grandison* (Volume 1)

Letter 11

Oxford University Press, Inc. Oxford, England. 1972

**Whately, Richard** 1787–1863

English theologian

The field of science may be compared to an American forest, in which the more trees a man cuts down, the greater is the expanse of wood he sees around him.

*Thoughts and Apothegms*

Section VI (p. 166)

Lindsay & Blakiston. Philadelphia, Pennsylvania, USA. 1856

## SCIENCE, FIRE OF

**Chesterton, G. K. (Gilbert Keith)** 1874–1936

English author

In the fires of science, burning with increasing heat every year, all the most dearly loved conventions are being melted down; and this is a process which is going continually to spread. In view of the inventions and discoveries which are being made for us, one might almost say every month, a unified direction of the war efforts of the three services would be highly beneficial.

In F.B. Czarnomski

*The Wisdom of Winston Churchill*

Speech, Commons, March 21, 1934 (p. 327)

George Allen & Unwin Ltd. London, England. 1956

## SCIENCE, FIRST POSTULATE OF

**Temple, Frederick** 1821–1902

Anglican prelate and archbishop of Canterbury

The regularity of nature is the first postulate of Science; but it requires the very slightest observation to show us that, along with this regularity, there exists a vast irregularity which Science can only deal with by exclusion from its province.

*The Relations Between Religion and Science* (p. 99)

Macmillan & Company. New York, New York, USA. 1884

## SCIENCE, FOUNDATION OF

**Chamberlin, Thomas Chrowder** 1843–1928

American geologist

Thinking men are profoundly interested in the question whether critical inspection today shows that the foundation stones of the intellectual structures thus far built are solid in substance and essence – though quite certainly affected by infelicities in selection, cutting, trimming and fitting – or whether such inspection shows that flaws and fissures seriously weaken the foundation stones and require their replacement before any higher superstructures are built upon them.

In Charles Lane Poor

*Gravitation Versus Relativity: A Non-technical Explanation of the Fundamental Principles of Gravitational Astronomy and a Critical Examination of the Astronomical Evidence Cited as Proof of the Generalized Theory of Relativity*

A Preliminary Essay (p. x)

Putnam's Sons. New York, New York, USA. 1922

## SCIENCE, FRAGMENTATION OF

**Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

**Hoyle, Geoffrey** 1942–  
English science fiction writer

The fragmentation of science is a source of difficulty to all teachers and to all students – the connection of one research area to another is not always apparent. This is because science is rather like a vast and subtle jig-saw puzzle, and the usual way to attack a jig-saw puzzle is to work simultaneously on several parts of it. Only at the end do we seek to fit the different parts of it together into a coherent whole.

In Eugene H. Kone and Helene J. Jordan (eds.)  
*The Greatest Adventure: Basic Research that Shapes Our Lives*  
Cosmology and Its Relation to the Earth (p. 22)  
Rockefeller University Press. New York, New York, USA. 1974

## SCIENCE, FREEDOM OF

**Ravetz, J. R.**  
No biographical data available

The obsolescence of the conception of science as the pursuit of truth results from several changes in the social activity of science. First, the heavy warfare with “theology and metaphysics” is over. Although a few sharp skirmishes still occur, the attacks on the freedom of science from this quarter are no longer significant. This is not so much because of the undoubted victory of science over its ancient contenders as for the deeper reason that the conclusions of natural science are no longer ideologically sensitive. What people, either the masses or the educated, believe about the inanimate universe or the biological aspects of humanity is not relevant to the stability of society as it was once thought to be.

*Scientific Knowledge and Its Social Problems*  
Chapter I (pp. 200–201)  
Clarendon Press. Oxford, England. 1971

## SCIENCE, FRONTIER OF

**Gray, George W.**  
Freelance science writer

The frontiers of science are man’s frontiers. They are his hard-won outposts against the darkness. And that darkness, the ignorance of the mysterious universe of things which surrounds us and of the equally mysterious universe of consciousness which pervades us, is the enemy, the only ultimate enemy.

*The Advancing Front of Science*  
Prologue (p. 6)  
McGraw-Hill Book Co., Inc. New York, New York, USA. 1937

## SCIENCE, FUNCTION OF

**Cossons, Sir Neil** 1939–  
Chairman of English Heritage

Science’s function is to describe how things work, not what they mean. That is a role for philosophers, artists, and writers.

*Lancet*, Volume 339, 1992

**Mach, Ernst** 1838–1916  
Austrian physicist and philosopher

The function of science, as we take it, is to replace experience. Thus, on the one hand, science must remain in the province of experience, but, on the other, must hasten beyond it, constantly expecting confirmation, constantly expecting the reverse. Where neither confirmation nor refutation is possible, science is not concerned...

*The Science of Mechanics* (5th edition)  
Chapter IV, Part IV, Section 7 (p. 587)  
The Open Court Publishing Company. La Salle, Illinois, USA. 1942

**Tyndall, John** 1820–93  
Irish-born English physicist

It is the function of science, not as some think to divest this universe of its wonder and its mystery, but, as in the case here before us, to point out the wonder and the mystery of common things.

*Fragments of Science for Unscientific People*  
Chapter IV (p. 84)  
D. Appleton & Co. New York, New York, USA. 1875

## SCIENCE, GLORY OF

**Teall, J. J. Harris** 1849–1924  
British geologist

The chief glory of science is, not that it produces an amelioration of the conditions under which we live, but that it continually enlarges our view, introduces new ideas, new ways of looking at things, and thus contributes in no small degree to the intellectual development of the human race.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1902*  
The Evolution of Petrological Ideas (p. 288)  
Government Printing Office. Washington, D.C. 1903

## SCIENCE, GOAL OF

**Bacon, Sir Francis** 1561–1626  
English lawyer, statesman, and essayist

...the real and legitimate goal of the sciences is the endowment of human life with new inventions and riches.

In *Great Books of the Western World* (Volume 30)  
*Novum Organum*  
First Book, Aphorism 81 (p. 120)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Pearson, Karl** 1857–1936  
English mathematician

Great as the advance of scientific knowledge has been, it has not been greater than the growth of the material to

be dealt with. The goal of science is clear – it is nothing short of the complete interpretation of the universe. But the goal is an ideal one – it marks the direction in which we move and strive, but never a stage we shall actually reach.

*The Grammar of Science* (2nd edition)

Chapter I (p. 14)

Adam & Charles Black. London, England. 1900

**Ziman, John M.** 1925–2005

English physicist

...he goal of science is a consensus of rational opinion over the widest possible field.

*Reliable Knowledge: An Exploration of the Grounds for Belief in Science*

Chapter 1 (p. 3)

Canto. 1991

## SCIENCE, GOD OF

**King, Jr., Martin Luther** 1929–68

American civil rights leader and clergyman

We have genuflected before the god of science only to find that it has given us the atomic bomb, producing fears and anxieties that science can never mitigate.

*Strength to Love*

Chapter XIII (p. 106)

Harper & Row, Publishers. New York, New York, USA. 1963

**Macfie, Ronald Campbell** 1867–1931

Poet and physician

The God of Science speaks in the thunder and smiles in the sunshine. He is so great that the stars eddy round his feet not ankle-high, yet so loving that He makes roses and sunsets for the human heart.

*Science, Matter and Immortality*

Chapter XVII (p. 207)

William & Norgate. London, England. 1909

## SCIENCE, GOLDEN AGE OF

**Iles, George**

No biographical data available

This is the golden age of science, a time of creative energy, broadening horizons, new revolutionary truth – an age which the race for centuries to come will esteem great and memorable as the epochs of Pericles, Augustus or Elizabeth.

In Richard Anthony Proctor

*The Skies and the Earth*

General Introduction (p. v)

Doubleday, Page & Co. New York, New York, USA. 1902

## SCIENCE, GOOD

**Watson, James D.** 1928–

American geneticist and biophysicist

...good science as a way of life is sometimes difficult. It often is hard to have confidence that you really know where the future lies. We must thus believe strongly in our ideas, often to point where they may seem tiresome and bothersome and even arrogant to our colleagues.

*Les Prix Nobel. The Nobel Prizes in 1962*

Nobel banquet speech for award received in 1962

Nobel Foundation. Stockholm, Sweden. 1963

## SCIENCE, GROWTH OF

**Pearson, Karl** 1857–1936

English mathematician

There are periods in the growth of science when it is well to turn our attention from its imposing superstructure and to carefully examine its foundations.

*The Grammar of Science* (2nd edition)

Preface to the First Edition (p. ix)

Adam & Charles Black. London, England. 1900

**Tatishchev, Vasilii Nikitich** 1686–1750

Russian historian and geographer

Freedom is not an essential and basic condition for the growth of science; the care and diligence of government authorities are the most important conditions for this development.

USA

*OMNI Magazine*, Volume 3, Number 1, October, 1980 (p. 41)

**Young, Charles Augustus** 1834–1908

American astronomer

...the growth of science is, on the whole, an orderly evolution. The germs of the future are now present in various stages of development, and many of them so far advanced that we can already form some idea of what the product is to be.

In George Isles

*The Skies and the Earth*

The Astronomical Outlook (p. 53)

Doubleday, Page & Co. New York, New York, USA. 1902

## SCIENCE, HALL OF

**Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

Look in [ the hall of science] with me, then, while I attempt to throw some rays into its interior, which shall illuminate a few of its pillars and cornices, and show at the same time how many niches and alcoves remain in darkness.

*The Writings of Oliver Wendell Holmes* (Volume 9)

*Medical Essays: 1842–1882*

Chapter IV (p. 211)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1911

## SCIENCE, HEALTHY

**Keller, Evelyn Fox** 1936–  
American scientist

A healthy science is one that allows for the productive survival of diverse conceptions of mind and nature and correspondingly diverse strategies.

*Reflections on Gender and Science*

Epilogue (p. 178)

Yale University Press. New Haven, Connecticut, USA. 1985

## SCIENCE, HEART OF

**Sagan, Carl** 1934–96  
American astronomer and author

At the heart of science is an essential tension between two seemingly contradictory attitudes – an openness to new ideas, no matter how bizarre or counterintuitive they may be, and the most ruthless skeptical scrutiny of all ideas, old and new. This is how deep truths are winnowed from deep nonsense.

*The Demon-haunted World*

Chapter 17 (p. 304)

## SCIENCE, HEIGHT OF

**Young, Charles Augustus** 1834–1908  
American astronomer

...the heights of science are not, like earthly mountaintops, barren and icy, but clothed with verdure and bathed in the light of heaven, where one breathes untainted air and enjoys most glorious prospects.

In Richard Anthony Proctor

*The Skies and the Earth*

The Astronomical Outlook (p. 55)

Doubleday, Page & Co. New York, New York, USA. 1902

## SCIENCE, HISTORY OF

**Appleton, Sir Edward** 1892–1965  
English physicist

...the history of science has proved that fundamental research is the lifeblood of individual progress and that the ideas which lead to spectacular advances spring from it.

In J. Edwin Holmstrom

*Records and Research in Engineering and Industrial Science*

Chapter One (p. 7)

Chapman & Hall. London, England. 1956

**Asimov, Isaac** 1920–92  
American author and biochemist

A number of years ago, when I was a freshly-appointed instructor, I met, for the first time, a certain eminent historian of science. At the time I could only regard him with tolerant condescension. I was sorry for a man who,

it seemed to me, was forced to hover about the edges of science.... In a lifetime of being wrong at many a point, I was never more wrong. It was I, not he, who was wandering in the periphery. It was he, not I, who lived in the blaze. I had fallen victim to the fallacy of the “growing edge”; the belief that only the very frontier of scientific advance counted; that everything that had been left behind by that advance was faded and dead.

*Adding a Dimension*

Introduction (p. 7)

Lancer Books. New York, New York, USA. 1969

## Author undetermined

As science advances we are rather apt to forget that what to us are mere elementary, and apparently self-evident truths, were at one time original and great discoveries. So the services of our predecessors are not unfrequently too much underrated, and the truth of the old maxim that “familiarity breeds contempt” is proved in a new way. It seems, therefore, a good thing now and then to consider how large a debt we really do owe to those who have gone before us; often men who with imperfect aids have indicated the clue to some of nature’s mysteries, which a more perfect knowledge of natural laws now enables us firmly to grasp.

Sir Charles Lyell and *Modern Geology*

*The Journal of Science, and Annals of Astronomy, Biology, Geology,*

*Industrial Arts, Manufactures, and Technology*, Volume 4, Number 13, January, 1867 (p. 7)

**Bernal, John Desmond** 1901–71  
Irish-born physicist and X-ray crystallographer

The whole history of modern science, has been that of a struggle between ideas derived from observation and practice, and pre-conceptions derived from religious training. It was not...that Science had to fight an external enemy, the Church; it was that the Church itself – its dogmas, its whole way of conceiving the universe – was within the scientists themselves.... After Newton, God ruled the visible world by means of Immutable Laws of Nature, set in action by one creative impulse, but He ruled the moral world by means of absolute intimations of moral sanctions, implanted in each individual soul, reinforced and illuminated by Revelation and the Church....

In W.H. Waddington

*Science and Ethics*

A Marxist Critique (pp. 115–116)

George Allen & Unwin Ltd. London, England. 1942

The role of God in the material world has been reduced stage by stage with the advance of Science, so much so that He only survives in the vaguest mathematical form in the minds of older physicists and biologists.

In W.H. Waddington

*Science and Ethics*

A Marxist Critique (pp. 115–116)

George Allen & Unwin Ltd. London, England. 1942

**Boutroux, Émile** 1845–1921  
French philosopher

The history of science proves that we are right in affirming a continuity between what we know and what we do not know. That is why the expression “scientifically inexplicable,” is, henceforward, devoid of meaning. A mysterious force, a miraculous fact, when we admit that the fact exists, is nothing else than a phenomenon which we do not succeed in explaining by the aid of laws that we know. If this impossibility is averred, science will be rid of it in order to seek other laws.

Translated by Jonathan Nield

*Science & Religion in Contemporary Philosophy*

Part II, chapter III (pp. 358–359)

The Macmillan Co. New York, New York, USA. 1911

**Butterfield, Herbert** 1900–79  
English historian and philosopher of history

The greatest obstacle to the understanding of the history of science is our inability to unload our minds of modern views about the nature of the universe.

*The History of Science, Origins and Results of the Scientific Revolution: A Symposium*

Dante's View of the Universe (p. 15)

Free Press. Glencoe, Illinois, USA. 1953

One of the safest speculations that we could make...[is] that very soon the history of science is going to acquire an importance...incommensurate with anything that it has hitherto possessed. It...is no longer merely an account of one of many human activities like the history of music or...of cricket.... Because it deals with one of the main constituents of the modern world and the modern mind, we cannot construct a respectable history of Europe or a tolerable survey of western civilization without it. It is going to be as important for us for the understanding of ourselves as Graeco-Roman antiquity was for Europe during a period of over a thousand years.

The History of Science and the Study of History

*Harvard Library Bulletin*, Volume 13, 1959 (pp. 330–331)

Free Press. Glencoe, Illinois, USA. 1953

[The scientific revolution] outshines everything since the rise of Christianity and reduces the Renaissance and Reformation to the ranks of mere episodes, mere internal displacements, within the system of medieval Christendom...it looms so large as the real origin of the modern world and the modern mentality that our customary periodization of European history has become an anachronism and an encumbrance.

*The Origins of Modern Science*

Introduction (pp. vii–viii)

The Macmillan Company. New York, New York, USA. 1961

**Calder, Ritchie** 1906–82  
Scottish author, journalist, and academic

The history of science is not a spoil heap of accidental discoveries and random ideas. Rather it is like an archae-

ological dig in which a potsherd is meaningful in terms of the chronological layer in which it is found; i.e., of the culture in which it has its origins.

*Man and the Cosmos: The Nature of Science Today*

Chapter II (p. 17)

Frederick A. Praeger, Publishers. New York, New York, USA. 1968

**Chamberlain, Owen** 1920–2006  
American physicist

The most that any scientist can ask is that he help to lay a few stones of a partially-built edifice that we call scientific knowledge. To him this edifice is a beautiful structure, although it will never be finished.

*Les Prix Nobel. the Nobel Prizes in 1959*

Nobel banquet speech for award received in 1959

Nobel Foundation. Stockholm, Sweden. 1960

**Cohen, I. Bernard** 1914–2003  
American physicist and science historian

History with the history of science, to alter slightly an apothegm of Lord Bacon, resembles a statue of Polyphemus without his eye – that very feature being left out which most marks the spirit and life of the person. My own thesis is complementary: science taught...without a sense of history is robbed of those very qualities that make it worth teaching to the student of the humanities and the social sciences.

In I. Bernard Cohen and Fletcher G. Watson (eds.)

*General Education in Science* (p. 71)

The History of Science and the Teaching of Science (p. 71)

Harvard University Press. Cambridge, Massachusetts, USA. 1952

**Comte, Auguste** 1798–1857  
French philosopher

...no science can be really understood apart from its special history, which again cannot be separated from the general history of Humanity.

Translated by John Henry Bridges, Frederic Harrison, Richard Congreve and Henry Dix Hutton

*System of Positive Polity*

General Introduction (p. 1)

Longmans, Green & Co. London, England. 1876

**Conant, James Bryant** 1893–1978  
American educator and scientist

We can put it down as one of the principles learned from the history of science that a theory is only overthrown by a better theory, never merely by contradictory facts.

*On Understanding Science*

Chapter II (p. 36)

Yale University Press. New Haven, Connecticut, USA. 1947

The history of science demonstrates beyond doubt that the really revolutionary and significant advances come not from empiricism but from new theories.

*Modern Science and Modern Man*

Science and Technology (p. 30)

Columbia University Press. New York, New York, USA. 1952

**Creighton, James Edwin** 1861–1924  
Canadian philosopher

The history of science shows that great discoveries are made by means of imaginative insight, but it also teaches that mere imagination without dependence upon known facts is frequently a source of much mischief.

*An Introductory Logic*

Part II, Chapter XVIII (p. 236)

The Macmillan Co. New York, New York, USA. 1902

**Darwin, Charles Robert** 1809–82  
English naturalist

Great is the power of steady misrepresentation – but the history of science shows how, fortunately, this power does not long endure.

In *Great Books of the Western World* (Volume 49)

*The Origin of Species by Means of Natural Selection*

Chapter XV (p. 239)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Draper, John William** 1811–82  
American scientist, philosopher, and historian

The history of science is not a mere record of isolated discoveries; it is a narrative of the conflict of two contending powers, the expansive force of the human intellect on one side, and the compression arising from traditionary faith and human interest on the other.

*History of the Conflict Between Religion and Science*

Preface (p. vi)

D. Appleton and Company. New York, New York, USA. 1898

**Duhem, Pierre-Maurice-Marie** 1861–1916  
French physicist and mathematician

...the history of science alone can keep the physicist from the mad ambitions of dogmatism as well as the despair of Pyrrhonian skepticism.

*The Aim and Structure of Physical Theory*

Part II, Chapter VII (p. 270)

Princeton University Press. Princeton, New Jersey, USA. 1954

**Feyerabend, Paul K.** 1924–94  
Austrian-born American philosopher of science

The history of science, after all, does not just consist of facts and conclusions drawn from facts. It also contains ideas, interpretations of facts, problems created by conflicting interpretations, mistakes, and so on. On closer analysis we even find that science knows no “bare facts” at all but that the “facts” that enter our knowledge are already viewed in a certain way and are, therefore, essentially ideational.

*Against Method: Outline of an Anarchistic Theory of Knowledge*

Introduction (p. 19)

Verso. London, England. 1978

...the history of science will be as complex, chaotic, full of mistakes, and entertaining as the ideas it contains, and these ideas in turn will be as complex, chaotic, full of mistakes, and entertaining as are the minds of those who invented them.

*Against Method: Outline of an Anarchistic Theory of Knowledge*

Introduction (p. 19)

Verso. London, England. 1978

**Fink, Karl** 1851–98  
Mathematician

If the history of a science possesses value for everyone whom calling or inclination brings into closer relations to it, – if the knowledge of this history is imperative for all who have influence in the further development of scientific principles or the methods of employing them to advantage, then acquaintance with the rise and growth of a branch of science is especially important to the man who wishes to teach the elements of this science or to penetrate as a student into its higher realms.

Translated by David Eugene Smith

*A Brief History of Mathematics* (2nd edition)

Preface (p. v)

The Open Court Publishing Co. Chicago, Illinois, USA. 1903

**Fisher, Sir Ronald Aylmer** 1890–1962  
English statistician and geneticist

More attention to the History of Science is needed, as much by scientists as by historians, and especially by biologists, and this should mean a deliberate attempt to understand the thoughts of the great masters of the past, to see in what circumstances or intellectual milieu their ideas were formed, where they took the wrong turning or stopped short on the right track.

Natural Selection from the Genetical Standpoint

*Australian Journal of Science*, Volume 22, 1959

**Foster, Sir Michael** 1836–1907  
English physiologist and educator

When we look into the past of science and trace our the first buddings of what afterwards grow to be umbrageous branches, it sometimes seems as if every time, and almost every year, marked an epoch.

*Annual Report of the Board of Regents of the Smithsonian Institution*, 1898

Recent Advances in Science, and Their Bearing on Medicine and Surgery (p. 345)

Government Printing Office. Washington, D.C. 1899

It is one of the lessons of the history of science that each age steps on the shoulders of the ages which have gone before.

In Lloyd William Taylor

*Physics: The Pioneer Science* (Volume 1)

Chapter 5 (p. 51)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1941

**Geikie, Sir Archibald** 1835–1924  
English geologist

In science, as in all other departments of inquiry, no thorough grasp of a subject can be gained, unless the history of its development is clearly appreciated. Nevertheless, students of Nature, While eagerly pressing forward in the search after her secrets, are apt to keep the eye to constantly fixed on the way that has to be travelled, and to lose sight and remembrance of the paths already trodden.

*The Founders of Geology* (2nd edition)  
Chapter I (p. 1)  
Macmillan & Co Ltd. London, England. 1905

...by enabling them [researchers] to comprehend how, foot by foot, the realms of science have been painfully conquered, it [history] furnishes suggestive lessons as to tracks that should be avoided, and fields that may hopefully be entered.

*The Founders of Geology* (2nd edition)  
Chapter I (p. 2)  
Macmillan & Co Ltd. London, England. 1905

**Gray, George W.**  
Freelance science writer

In the history of science, as in that of nations, are epochs and cycles. There are periods of plodding, periods of meteoric advance, periods of pause and consolidation. Today we are in the current of a very rapid advance. And although no mind is wise enough and no imagination penetrating enough to stake out the limits of discovery, we are capable of glimpses of our borderlands. The present seems a propitious time for a glance backward, to see by what trails we have come, and for a general survey of existing frontiers, to see where we stand in relation to the great unknowns of nature.

*The Advancing Front of Science*  
Chapter I (p. 11)  
McGraw-Hill Book Co., Inc. New York, New York, USA. 1937

**Hall, Alfred Rupert** 1920–  
English historian of science

The difficulty [in understanding science history] is the greater because the history of science is not, and cannot be, a tight unity. The different branches of science are themselves unlike in complexity, in techniques, and in their philosophy. They are not all affected equally, or at the same time, by the same historical factors, whether internal or external. It is not even possible to trace the development of a single scientific method, some formulation of principles and rules of operating which might be imagined as applicable to every scientific inquiry, for there is no such thing.

*The Scientific Revolution, 1500–1800*  
Introduction (p. xiv)  
Longmans, Green & Company. London, England. 1954

**Hall, Marie Boas** 1919–  
English historian of science

For the...student whose chief interest does lie in science, for whom history as a course of study so often seems to deal solely with subjects remote from his intellectual turn of mind, the history of science provides a valid and useful point of contact with history, through which he may learn to develop wider humanistic interests. For the non-scientist, bored and baffled by the technical problems of science, the history of science may provide some insight into the scientific point of view and prevent the feeling of isolation which too often makes the scientist and the humanist appear to move in separate worlds.

*History of Science* (p. 1)  
American Historical Association. Washington, D.C. 1958

**Hobbs, William Herbert** 1864–1952  
American geologist

If we are to gauge the generally accepted hypotheses of any science and arrive at individual conclusions respecting their value, we must be prepared to inquire into the ancestry of each – we must trace out the route by which each has come to its present position of eminence.

*Characteristics of Existing Glaciers*  
Introduction (p. 1)  
The Macmillan Co. New York, New York, USA. 1911

**Holton, Gerald** 1922–  
Research professor of physics and science history

And yet, on looking into the history of science, one is overwhelmed by evidence that all too often there is no regular procedure, no logical system of discovery, no simple, continuous development. The process of discovery has been as varied as the temperament of the scientist.

*Thematic Origins of Scientific Thought: Kepler to Einstein*  
Chapter 11 (pp. 384–385)  
Harvard University Press. Cambridge, Massachusetts, USA. 1973

**Hunter, Joseph**  
No biographical data available

I see not how the history of any science is to be conducted through the middle age period, but by the assistance of the works of science of the middle age writers, though the contents of them, as works of science, may have now become of little value.

*English Monastic Libraries*  
Preface (p. xi)  
Printed for J.B. Nichols & Son. London, England. 1831

**Huxley, Thomas Henry** 1825–95  
English biologist

Next to undue precipitation in anticipating the results of pending investigations, the intellectual sin which is commonest and most hurtful to those who devote themselves

to the increase of knowledge is the omission to profit by the experience of their predecessors recorded in the history of science and philosophy.

*Collected Essays*

Scientific and Pseudo-Scientific Realism (p. 59)

D. Appleton & Co. New York, New York, USA. 1898

...anyone acquainted with the history of science will admit that its progress has meant, in all ages and now more than ever, the extension of the province of matter and causation, and the gradual banishment from human thought of what we call spirit and spontaneity.

*Collected Essays* (Volume 1)

*Method and Result*

On the Physical Basis of Life (p. 159)

Macmillan & Company Ltd. London, England. 1904

**Keller, Evelyn Fox** 1936–

American physicist, author, and feminist

To know the history of science is to recognize the mortality of any claim to universal truth.

*Reflections on Gender and Science*

Epilogue (pp. 178–179)

Yale University Press. New Haven, Connecticut, USA. 1995

**Knickerbocker, William Skinkle** 1892–1972

American professor of English and author

...the history of science is as inspiring in its human values as are the legends of the saints. Contemplate the heroism of a Galileo, the patience of a Darwin, the humility of a Pasteur; a modern eleventh chapter of Hebrews might be written listing the names of all those men of faith who by quiet work, unremitting in their zeal, one by one discovered facts which made man's lot easier and happier in what was otherwise to him a hostile and unhappy universe.

*Classics of Modern Science*

Preface

Alfred A Knopf. New York, New York, USA. 1927

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

**Koestler, Arthur** 1905–83

Hungarian-born English writer

We are in the habit of visualizing man's political and social history as a wild zig-zag which alternates between progress and disaster, but the history of science as a steady, cumulative process, represented by a continuously rising curve, where each epoch adds some new item of knowledge to the legacy of the past, making the temple of science grow brick by brick to ever greater height.

*The Sleep Walkers: A History of Man's Changing Vision of the Universe*

Epilogue (p. 513)

The Macmillan Co. New York, New York, USA. 1959

**Kuhn, Thomas S.** 1922–96

American historian of science

Though the gap seems small, there is no chasm that more

needs bridging than that between the historian of ideas and the historian of science.

*International Encyclopedia of the Social Sciences* (Volume 14)

History of Science (p. 78)

The Macmillan Company. New York, New York, USA. 1968

**Lakatos, Imre** 1922–74

Hungarian-born philosopher

Philosophy of science without history of science is empty; history of science without philosophy of science is blind.

In R. Buck and R. Cohen (eds.)

*Boston Studies in the Philosophy of Science* (Volume 8)

History of Science and Rational Reconstructions (p. 91)

D. Reidel Publishing Company. Dordrecht, Netherlands.

**Lardner, Dionysius** 1793–1859

British physicist and astronomer

For the civil and political historian the past alone has existence – he present he rarely apprehends, the future never. To the historian of science it is permitted, however, to penetrate the depths of past and future with equal clearness and certainty; facts to come are to him as present, and not unfrequently more assured than facts which are passed.

*Popular Lectures on Science and Art* (Volume 1)

12th Halley's Comet (p. 171)

Greeley & McElrath. New York, New York, USA. 1850

**Lavoisier, Antoine Laurent** 1743–94

French chemist

...if I had allowed myself to enter into long dissertations on the history of the science, and the works of those who have studied it, I must have lost sight of the true object I had in view, and produced a work, the reading of which must have been extremely tiresome to beginners. It is not to the history of the science, or of the human mind, that we are to attend in an elementary treatise: Our only aim ought to be ease and perspicuity, and with the utmost care to keep everything out of view which might draw aside the attention of the student; it is a road which we should be continually rendering more smooth, and from which we should endeavor to remove every obstacle which can occasion delay.

*Elements of Chemistry in a New Systematic Order*

Preface of the Author (pp. xxxii–xxxiii)

Printed for William Creech. Edinburgh, Scotland. 1790

**Lévi-Strauss, Claude** 1908–

French social anthropologist and structuralist

...scientific knowledge advances haltingly and is stimulated by contention and doubt.

Translated by John and Doreen Weightman

*The Raw and the Cooked*

Overture (p. 7)

Harper & Row, Publishers. New York, New York, USA. 1975

**Libby, Walter** 1867–1955  
American science historian

The history of science is an aid in scientific research. It places the student in the current of scientific thought, and gives him a clue to the purpose and necessity of the theories he is required to master. It presents science as the constant pursuit of truth rather than the formulation of truth long since revealed; it shows science as progressive rather than fixed; dynamic rather than static, a growth to which each may contribute.

*An Introduction to the History of Science*

Preface (p. v)

Houghton Mifflin & Co. New York, New York, USA. 1917

The history of science has something to offer to the humblest intelligence. It is a means of imparting a knowledge of scientific facts and principles to unschooled minds.

*An Introduction to the History of Science*

Preface (p. v)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1917

The history of science studies the past for the sake of the future. It is a story of continuous progress. It is rich in biographical material. It shows the sciences in their interrelations, and saves the student from narrowness and premature specialization.

*An Introduction to the History of Science*

Preface (p. vi)

Houghton Mifflin & Co. New York, New York, USA. 1917

The history of science is hostile to the spirit of caste. It shows the sciences rising from daily needs and occupations, formulated by philosophy, enriching philosophy, giving rise to new industries, which react in turn upon the sciences.

*An Introduction to the History of Science*

Preface (p. vi)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1917

**Mach, Ernst** 1838–1916  
Austrian physicist and philosopher

The knowledge of the development of a science rests on the study of writings in their historical sequence and in their historical connection.

*The Science of Mechanics* (5th edition)

Chapter I, Part V, Section 9 (p. 97)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

[N]ot only a knowledge of the ideas that have been accepted and cultivated by subsequent teachers is necessary for the historical understanding of a science, but also that the rejected and transient thoughts of the inquirers, nay even apparently erroneous notions, may be very important and very instructive. The historical investigation of the development of a science is most needful, lest the principles treasured up in it become a system of half-understood prescripts, or worse, a system of prejudices.

*The Science of Mechanics* (5th edition)

Chapter II, Part VIII, Section 7 (p. 316)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

Historical investigation not only promotes the understanding of that which now is, but also brings new possibilities before us, by showing that which exists to be in great measure conventional and accidental. From the higher point of view at which different paths of thought converge we may look about us with freer vision and discover routes before unknown.

*The Science of Mechanics* (5th edition)

Chapter II, Part VIII, Section 7 (p. 316)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

**Macquer, Pierre Joseph** 1718–84  
French chemist

As the History of any Science ought to relate the labours, the discoveries, and the errors of the cultivators of that Science; and to shew the obstacles which they have been obliged to surmount, and the mistaken paths into which they have sometimes been misled; it cannot therefore fail of being very useful to persons engaged in the same pursuits.

*A Dictionary of Chemistry* (Volume 1)

A Preliminary Discourse Concerning the Origin and Progress of Chemistry (p. 1)

Printed for T. Caldwell & R.F. Elmsly. London, England. 1771

**Marmery, J. Villin**

No biographical data available

The history of science is a sealed book, generally speaking. To the multitude of readers, including in it scientific students, an historical thread conducting them through the bewildering field of science cannot fail to prove a welcome gain.

*Progress of Science: Its Origin, Course, Promoters, and Results*

Preface (p. vii)

Chapman & Hall, Ltd. London, England. 1895

**Maxwell, James Clerk** 1831–79  
Scottish physicist

The history of science shows that even during that phase of her progress in which she devotes herself to improving the accuracy of the numerical measurement of quantities with which she has long been familiar, she is preparing the materials for the subjugation of new regions, which would have remained unknown if she had been contented with the rough methods of her early pioneers.

In Lewis Campbell and William Garnett

*The Life of James Clerk Maxwell*

Chapter XII (p. 356)

Macmillan & Company Ltd. London, England. 1882

**Miller, George Abram** 1863–1951  
American mathematician

While the role of the history of science as an error exterminator is much more significant than its role as an error

breeder, it is necessary to consider it in both of these lights in order to understand its bearings completely.

The History of Science as an Error Breeder

*The Scientific Monthly*, Volume XII, Number 5, May, 1921 (p. 439)

### More, Louis Trenchard

American educator

If it be true that the permanent advances made in science have been the result of observing phenomena and of classifying them in laws which are as often as possible to be expressed by mathematical formulae; and if it be also true that we have persisted in the effort to explain the causes of phenomena without really advancing knowledge; then it will be most useful to compare our present state with that of an earlier time.

*The Limitations of Science*

Chapter III (p. 68)

Henry Holt & Co. New York, New York, USA. 1915

### Popper, Karl R. 1902–94

Austrian/British philosopher of science

The history of science, like the history of all human ideas, is a history of irresponsible dreams, of obstinacy, and of error.

*Conjectures and Refutations: The Growth of Scientific Knowledge*

Chapter 10, Section I (p. 216)

Harper & Row, Publishers. New York, New York, USA. 1963

### Richet, Charles 1850–1935

French physiologist

In the history of science, nobody has left his mark on the world unless he has been, in this sense, an innovator.

*The Natural History of a Savant*

Chapter VI (p. 38)

J.M. Dent & Sons Ltd. London, England. 1927

### Rostand, Jean 1894–1972

French biologist and philosopher

If there is one notion that clearly emerges from the history of science, and from which we can learn something, it is, I believe, the extreme diversity of the personal qualities and abilities that have contributed to the advancement of our knowledge.

*Humanly Possible: A Biologist's Note on the Future of Mankind*

On the History of Science (p. 180)

Saturday Review Press. New York, New York, USA. 1970

By showing us the extreme diversity of the factors involved in scientific creativity, the history of science teaches us that we should open the doors of our laboratories more widely. If we put that lesson into practice, our reflection on the past will have had a beneficial effect on the future.

*Humanly Possible: A Biologist's Note on the Future of Mankind*

On the History of Science (p. 182)

Saturday Review Press. New York, New York, USA. 1970

### Sarton, George 1884–1956

Belgian-born American scholar and writer

Between the old humanist and the scientist, there is but one bridge, the history of science, and the construction of that bridge is the main cultural need of our time. An immense task to be sure but one worth every pain it may cost. I do not know who is the poorer: the old humanist without understanding of science, or the scientist without appreciation of beauty, without urbanity, without reverence. I do not know which is worse: idealism without knowledge, or knowledge without idealism.

*The History of Science and the New Humanism*

Chapter I (p. 72)

H. Holt & Co. New York, New York, USA. 1931

The study of history, and especially of the history of science, may thus be regarded, not only as a source of wisdom and humanism, but also as a regulator for our consciences: it helps us not to be complacent, arrogant, too sanguine of success, and yet remain grateful and hopeful, and never to cease working quietly for the accomplishment of our own task.

*The History of Science and the New Humanism*

Chapter IV (p. 191)

Indiana University Press. Bloomington, Indiana, USA. 1962

The more science enters into our lives, the more it must be “humanized,” and there is no better way to humanize it than to study its history.

An Institute for the History of Science and Civilization

*Science*, N.S. Volume 40, Number 1100, January–June, 1917 (p. 284)

From the point of view of the history of science, transmission is as essential as discovery.

*Introduction to the History of Science (Volume 2)*

Introductory Chapter (p. 15)

The Williams & Wilkins Company. Baltimore, Maryland, USA. 1927

### Schlesinger, George N.

No biographical data available

The majority of thinkers agree that one of the important lessons of history is that in science there are no absolute guarantees. No matter how well founded a given belief may be, its truth cannot be established with ultimate certainty.

*The Range of Epistemic Logic* (p. 22)

Humanities Press. Atlantic Highlands, New Jersey, USA. 1985

### Schweizer, Karl W.

American professor of history

One of the obstructions to a genuine appreciation of history is the existence of a vague unformulated assumption that historical research merely seeks to disinter a fossilized past – merely digs into the memory to recover things which the human race once knew before. On the basis of such an assumption it is possible for people to have the

feeling that history can never produce anything which is fundamentally novel, but merely fills our minds with the lumber of bygone ages.

*Herbert Butterfield: Essays on the History of Science*

Chapter II (p. 19)

Edwin Mellon Press. Lewiston, New York, USA. 1998

### Silver, Brian L.

Israeli professor of physical chemistry

The essence of scientific history has been conflict.

*The Ascent of Science*

Preface (p. xiii)

Solomon Press Book. New York, New York, USA. 1998

...the history of science may be a trail littered with broken theories and discarded concepts, science is also a triumph of reason, luck, and above all imagination. There are few more successful, exciting, or strange journeys.

*The Ascent of Science*

Preface (p. xiv)

Solomon Press Book. New York, New York, USA. 1998

### Stewart, Ian 1945–

English mathematician and science writer

### Cohen, Jack

Reproductive biologist

The history of science, broadly speaking, is the tale of a lengthy battle to dig out the secret simplicities of a complicated world. It is an astonishing story of insignificant humanity's triumph over huge mysteries.

*The Collapse of Chaos: Discovering Simplicity in a Complex World*

Chapter 1 (p. 28)

Viking Press. New York, New York, USA. 1994

### Tannery, Paul 1843–1904

French mathematician and historian of science

The scientist in so far as he is a scientist is only drawn to the history of the particular science that he studies himself; he will demand that this history be written with every possible technical detail, for it is only thus that it can supply him with materials of any possible utility. But what he will particularly require is the study of the thread of ideas and the linking together of discoveries. His chief object is to rediscover in its original form the expression of his predecessors' actual thoughts, in order to compare them with his own; and to unravel the methods that served in the construction of current theories, in order to discover at what point and towards what goal an effort towards innovation may be made.

In A. Rupert Hall

Can the History of Science Be History?

*The British Journal for the History of Science*, Volume 4, Part III, Number 15, June, 1969 (p. 212)

### Turner, H. H. (Herbert Hall) 1861–1930

English astronomer

It is a familiar fact that there are epochs in the history of a science when it acquires new vigor; when new branches are put forth and old branches bud afresh or blossom more plenteously. The vivifying cause is generally to be found either in the majestic form of the discovery of a new law of nature, or in the humbler guise of the invention of a new instrument of research.

*Congress of Arts and Science: Universal Exposition, St. Louis, 1904* (Volume 4)

The Relations of Photography to Astrophysics (p. 431)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1906

### von Goethe, Johann Wolfgang 1749–1832

German poet, novelist, playwright, and natural philosopher

In the history of science and throughout the whole course of its progress we see certain epochs following one another more or less rapidly. Some important view is expressed, it may be original or only revived; sooner or later it receives recognition; fellow-workers spring up; the outcome of it finds its way into the schools; it is taught and handed down; and we observe, unhappily, that it does not in the least matter whether the view be true or false. In either case its course is the same; in either case it comes in the end to be a mere phrase, a lifeless word stamped on the memory.

Translated by Thomas Bailey Saunders

*The Maxims and Reflections of Goethe*

#519 (p. 184)

The Macmillan Co. New York, New York, USA. 1906

### von Humboldt, Alexander 1769–1859

German naturalist and explorer

The history of science teaches us the difficulties that have opposed the progress of this active spirit of inquiry. Inaccurate and imperfect observations have led, by false inductions, to the great number of physical views that have been perpetuated as popular prejudices among all classes of society. Thus by the side of a solid and scientific knowledge of natural phenomena there has been preserved a system of the pretended results of observation, which is so much the more difficult to shake, as it denies the validity of the facts by which it may be refuted.

Translated by E.C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)

Introduction (p. 38)

D. Appleton & Co. New York, New York, USA. 1850

### Weisskopf, Victor Frederick 1908–2002

Austrian-American physicist

It was a heroic period [about 1922–1930] without any parallel in the history of science, the most fruitful and interesting one of modern physics.... In this great period of physics, Bohr and his associates touched the nerve of the universe. The intellectual eye of man was opened to the inner workings of nature.

In A.P. French and P.J. Kennedy (eds.)  
*Niels Bohr: A Centenary Volume*  
 Niels Bohr, the Quantum, and the World (p. 22)  
 Harvard University Press. Cambridge, Massachusetts, USA. 1985

**Wells, H. G. (Herbert George)** 1866–1946  
 English novelist, historian, and sociologist

History is no exception amongst the sciences; as the gaps fill in, the outline simplifies; as the outlook broadens, the clustering multitude of details dissolve into general laws.

*The Outline of History*  
 Introduction (p. vi)  
 The Macmillan Company. New York, New York, USA. 1921

**Whewell, William** 1794–1866  
 English philosopher and historian

In an advanced Science, the history of the Language of the Science is the history of the Science itself.

*Novum Organon Renovatum*  
 Book IV (p. 355)  
 John W. Parker. London, England. 1858

The historian of science, from early periods to the present times, may hope for favour on the score of the mere subject of his narrative, and in virtue of the curiosity which the men of the present day may naturally feel respecting the events and persons of his story.

*History of the Inductive Sciences from the Earliest to the Present Time*  
 (Volume 1) (3rd edition)  
 Introduction (p. 4)  
 John W. Parker & Son. London, England. 1857

It will be universally expected that a history of Inductive Science should...afford us some indication of the most promising mode of directing our future efforts to add to its extent and completeness.

*History of the Inductive Sciences, from the Earliest to the Present Time*  
 (Volume the First)  
 Introduction (p. 5)  
 John W. Parker. London, England. 1837

We may best hope to understand the nature and conditions of real knowledge by studying the nature and conditions of the most certain and stable portions of knowledge which we already possess: and we are most likely to learn the best methods of discovering truth by examining how truths, now universally recognized, have really been discovered.

*The Philosophy of the Inductive Sciences Founded upon Their History*  
 (Volume 1)  
 Book I, Chapter I (p. 1)  
 John W. Parker. London, England. 1847

[T]here do exist among us doctrines of solid and acknowledged certainty, and truths of which the discovery has been received with universal applause. These constitute what we commonly term Sciences; and of these bodies of exact and enduring knowledge, we have

within our reach so large and varied a collection, that we may examine them, and the history of their formation, with good prospect of deriving from the study such instruction as we seek.

*The Philosophy of the Inductive Sciences Founded upon Their History*  
 (Volume 1)  
 Book I, Chapter I (p. 2)  
 John W. Parker. London, England. 1847

**White, Henry S.**

No biographical data available

The accepted truths of today, even the commonplace truths of any science, were the doubtful or the novel theories of yesterday. Some indeed of prime importance were long esteemed of slight importance and almost forgotten. The first effect of reading in the history of science is a naive astonishment at the darkness of past centuries, but the ultimate effect is a fervent admiration for the progress achieved by former generations, for the triumphs of persistence and of genius.

*Bulletin of the American Mathematical Society*, Volume 15, 1909 (p. 325)

**Williams, L. Pearce**

American historian of science

...the history of science is a professional and rigorous discipline demanding the same level of skills and scholarship as any other scholarly field. It is time for the scientists to realize that he studies nature and others study him. He is no more nor no less competent to comment on his own activities and the activities of his fellow scientist than is the politician. Critical political history is rarely written by the politician and the same is true of the history of science.

Letter to the Editor  
*Scientific American*, Volume 214, Number 6, June, 1966 (p. 8)

## SCIENCE, HOLY TRINITY OF

**Ingersoll, Robert Green** 1833–99

American lawyer, public official, and orator

Reason, Observation, and Experience – the Holy Trinity of Science.

*On the Gods and Other Essays*  
 The Gods (p. 54)  
 Prometheus Books. Buffalo, New York, USA. 1990

## SCIENCE, HOUSE OF

**Tyndall, John** 1820–93

Irish-born English physicist

In the house of science are many mansions, occupied by tenants of diverse kinds. Some of them execute with painstaking fidelity the useful work of observation, recording from day to day the aspects of Nature, or the

indications of instruments devised to reveal her ways. Others there are who add to this capacity for observation a power over the language of experiment, by means of which they put questions to Nature, and receive from her intelligible replies. There is, again, a third class of minds, that cannot rest content with observation and experiment, whose love of causal unity tempts them perpetually to break through the limitations of the senses, and to seek beyond them the roots and reasons of the phenomena which the observer and experimenter record. To such spirits adventurous and firm we are indebted for our deeper knowledge of the methods by which the physical universe is ordered and ruled.

*Fragments of Science: A Series of Detached Essays, Addresses, and Reviews* (Volume 1)  
Chapter 5 (p. 131)  
D. Appleton & Co. New York, New York, USA. 1897

## SCIENCE, HUMAN

**MacDonald, George** 1824–1905  
Scottish novelist and poet

... human science is but the backward undoing of the tapestry-web of God's science...

*Unspoken Sermons*  
Third The Truth (p. 62)  
Longmans, Green & Co. London, England. 1889

## SCIENCE, IGNORANCE OF

**Coggan, Frederick Donald** 1909–2000  
1st Archbishop of Canterbury

My ignorance of science is such that if anyone mentioned copper nitrate I should think he was talking about policemen's overtime.

*NY Journal-American*, September 20, 1961

**Pearson, Karl** 1857–1936  
English mathematician

The ignorance of science means the enforced ignorance of mankind.

*The Grammar of Science* (2nd edition)  
Chapter 1 (p. 21)  
Adam & Charles Black. London, England. 1900

## SCIENCE, IMPORTANCE OF

**Schneer, Cecil J.** 1923–  
American science historian and mineralogist

The primary importance of science and the characteristic that distinguished it from other philosophies and arts is its usefulness. The remarkable thing about science is the extent to which nature and the world appear to adhere to the rules and constructions of science.

*The Evolution of Physical Science*  
Grove Press, Inc. New York, New York, USA. 1960

## SCIENCE, IMPORTANT

**Wilson, Edward O.** 1929–  
American biologist and author

Important science is not just any similarity glimpsed for the first time. It offers analogues that map the gateways to unexplored terrain.

*Biophilia*  
The Poetic Species (p. 67)  
Harvard University Press. Cambridge, Massachusetts. 1984

## SCIENCE, IMPURE

**Calvin, Melvin** 1911–97  
American biochemist

There is not a "pure" science. By this I mean that physics impinges on astronomy, on the one hand, and chemistry and biology on the other. And not only does each support neighbors, but derives sustenance from them. The same can be said of chemistry. Biology is, perhaps, the example par excellence today of an "impure" Science.

In Shirley Thomas  
*Men of Space. Profiles of the Scientists Who Probe for Life in Space* (Volume 6)  
Melvin Calvin (p. 35)  
Chilton Books. Philadelphia, Pennsylvania, USA. 1963

## SCIENCE, INFANCY OF

**Richards, William Carey** 1818–92  
American magazine editor

Those were thine infant days, Philosophy;  
Ere thou had'st dared with eagle flight to soar,  
To pluck bright mystery from the silent sky,  
Or boldly sweep the wide Empyrean o'er –  
In kingly quest of Nature's precious lore.  
Thine altar was no Inquisition then –  
To drag the priests of Mystery before –  
And put them to the torture there, as men  
Search, with the merciless rack, for truths beyond their ken.

*Electron, or, The Pranks of the Modern Puck*  
The Infancy of Science (p. 10)  
D. Appleton & Co. New York, New York, USA. 1858

## SCIENCE, INFLUENCE OF

**Thomson, Sir George Paget** 1892–1975  
English physicist

The influence of science on men's lives comes in two rather different ways – one through the ideas themselves, and the other through their material consequences.

The New Industrial Revolution  
*Bulletin of the Atomic Scientists*, Volume 13, Number 1, January, 1957 (p. 9)

**SCIENCE, INSIDIOUSNESS OF**

**Gerould, Katherine Fullerton** 1879–1944  
American writer

The insidiousness of science lies in its claim to be not a subject, but a method. You could ignore a subject; no subject is all-inclusive. But a method can plausibly be applied to anything within the field of consciousness.

*Modes and Morals*

The Extirpation of Culture (p. 86)

Charles Scribner's Sons. New York, New York, USA. 1920

**SCIENCE, KINGDOM OF**

**Wright, Henrietta Christian** 1854–99  
American children's story writer

The kingdom of science may be likened to a meadow full of children at play. One child plucks flowers, another gathers the pebbles that lie on the shores of the little brook, a third watches the waves bearing away the bits of moss from the woods beyond, and a fourth listens to the songs of the birds, or gazes at the clouds floating in the blue sky far above him.

*Children's Stories of the Great Scientists*

Chapter VIII (p. 154)

Charles Scribner's Sons. New York, New York, USA. 1888

**SCIENCE, KNOWLEDGE OF**

**McMurry, Charles Alexander** 1857–1929  
American educator

The child who draws his knowledge of science directly from life, under usual conditions, will not have much difficulty in finding it again in life and applying it to life.

*Special Method in Elementary Science for the Common School*

Chapter III (p. 31)

The Macmillan Co. New York, New York, USA. 1905

**SCIENCE, LANTERN OF**

**Jeans, Sir James Hopwood** 1877–1946  
English physicist and mathematician

The lantern of science, throwing its light down the long corridors of time, enables us to trace out the gradual evolution of terrestrial life.

*Science and Music*

Chapter I (p. 1)

Dover Publications. New York, New York, USA. 1968

**SCIENCE, LAWS OF****Author undetermined**

The supreme law of science is not freedom, but truth.

In Charles George Herbermann

*The Catholic Encyclopedia*

Ethics (p. 557)

The Encyclopedia Press, Inc. New York, New York, USA. 1913

**Pearson, Karl** 1857–1936  
English mathematician

...the laws of science are products of the human mind rather than factors of the external world. Science endeavors to provide a mental *resume* of the universe, and its last great claim to our support is the capacity it has for satisfying our cravings for a brief description of the history of the world.

*The Grammar of Science* (2nd edition)

Chapter I (p. 36)

Adam & Charles Black. London, England. 1900

**SCIENCE, LESSON OF**

**Emerson, Ralph Waldo** 1803–82  
American lecturer, poet, and essayist

The lessons of science should be experimental also. The sight of the planet through a telescope is worth all the course on astronomy: the shock of the electric spark in the elbow outvalues all the theories; the taste of the nitrous oxide, the firing of an artificial volcano, are better than volumes of chemistry.

*Essays: Second Series*

New England Reformers (p. 223)

Henry Altamus. Philadelphia, Pennsylvania, USA. 1894

**SCIENCE, LIFE-BLOOD OF**

**Sagan, Carl** 1934–96  
American astronomer and author

Reasoned disputation is the lifeblood of science – as is, sadly, infrequently the case in the intellectually more anemic arena of politics.

*The Cosmic Connection: An Extraterrestrial Perspective*

Preface (p. ix)

Dell Publishing, Inc. New York, New York, USA. 1975

**SCIENCE, LIGHT OF****Editor**

If God ever spoke to man, science is the fiery bush; and if there is any light by which man can hope to illumine his path so as to make firm steps, it is the light of science.

The Late Professor Romanes's Thoughts on Religion

*The Monist*, Volume V, Number 3, April, 1895 (p. 400)

**Gore, George** 1826–1909  
English electrochemist

Science is systematic knowledge; without the light of science, all is vague.

*The Scientific Basis of Morality*

The Scope and Claims of Science (p. 3)

Swan Sonnenschein & Co. London, England. 1899

## SCIENCE, LIMIT OF

### Black, Hugh

No biographical data available

The limits of science are not limits of its methods, but limits of its spheres.

Our Made-Over World

*Everybody's Magazine*, November, 1914 (p. 710)

## SCIENCE, LOT OF

### Steward, J. H.

No biographical data available

It is the unhappy lot of science that it must clear the ground of flimsy and fanciful structures built upon false premises and errors of fact before it can build anew.

*Annual Report of the Board of Regents of the Smithsonian Institution*, 1936

Petroglyphs of the United States (p. 407)

Government Printing Office. Washington, D.C. 1937

## SCIENCE, LOVE OF

### Mitchell, Maria 1818–89

American astronomer and educator

There will come with the greater love of science greater love to one another. Living more nearly to Nature is living farther from the world and from its follies, but nearer to the world's people; it is to be of them, with them, and for them, and especially for their improvement.

In Phebe Mitchell Kendall

*Maria Mitchell: Life, Letters, and Journals*

Chapter IX (p. 186)

Lea & Shepard Publishers. Boston, Massachusetts, USA. 1896

## SCIENCE, MAN OF

### A. C. B.

The man of science does not always know what the business man wants, and the business man often does not understand what the man of science tells him.

Obituary of Lyon Playfair

*Proceedings of the Royal Society of London*, Volume LXIV, Number 411, March 9, 1899 (p. xi)

### Acton, John Emerich Edward Dalberg 1834–1902

English historian

It is they [men of science] who hold the secret of the mysterious property of the mind by which error minis-

ters to truth, and truth slowly but irrevocably prevails. Theirs is the logic of discovery, the demonstration of the advance of knowledge and the development of ideas, which as the earthly wants and passions of men remain almost unchanged, are the charter of progress, and the vital spark in history.

*Lectures on Modern History*

Inaugural Lecture on the Study of History (p. 21)

Macmillan & Company Ltd. London, England. 1906

### Agassiz, Jean Louis Rodolphe 1807–73

Swiss-born American naturalist, geologist, and teacher

The application of science to the useful arts requires other abilities, other qualities, other tools than his; and therefore I say that the man of science who follows his studies into their practical application is false to his calling. The practical man stands ever ready to take up the work where the scientific man leaves it, and to adapt it to the material wants and uses of daily life.

*Methods of Study in Natural History*

Chapter II (p. 23)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1896

### Armstrong, Henry Edward 1848–1937

English organic chemist

After all, we scientific workers...like women, are the victims of fashion: at one time we wear dissociated ions, at another electrons; and we are always loath to don rational clothing; some fixed belief we must have manufactured for us: we are high or low church, of this or that degree of nonconformity, according to the school in which we are brought up – but the agnostic is always rare of us and of late years the critic has been taboo.

'The Thirst of Salted Water or the Ions Overboard

*Science Progress*, Volume 3, 1909 (p. 643)

### Barrie, Sir James M. 1860–1937

Scottish journalist, writer, and dramatist

The man of science appears to be the only man who has something to say, just now – and the only man who does not know how to say it.

Quoted in Editorial

The Young Engineer and His English

*Engineering and Contracting*, Volume 55, Number 14, October 5, 1921

### Berkeley, George 1685–1753

Irish prelate and metaphysical philosopher

Query: Whether the difference between a mere computer and a man of science be not, that the one computes on principles clearly conceived, and by rules evidently demonstrated, whereas the other doth not?

In A. Luce and T. Jessop (eds.)

*The Works of George Berkeley, Bishop of Cloyne* (Volume 4)

The Analyst

Nelson. London, England. 1948

**Bernard, Claude** 1813–78  
French physiologist

The doubter is a true man of science; he doubts not only himself and his interpretations, but he believes in science.

Translated by Henry Copley Green  
*An Introduction to the Study of Experimental Medicine*  
Part One, Chapter 2 (p. 52)  
Henry Schuman, Inc. New York, New York, USA. 1949

Men of science, then, do not seek for the pleasure of seeking; they seek the truth to possess it, and they possess it already within the limits expressed in the present state of science.

Translated by Henry Copley Greene  
*An Introduction to the Study of Experimental Medicine*  
Part Three, Chapter IV, Section IV (p. 222)  
Henry Schuman, Inc. New York, New York, USA. 1927

...men of science must not halt on the road; they must climb ever higher and strive toward perfection; they must always seek as long as they see anything to be found.

Translated by Henry Copley Greene  
*An Introduction to the Study of Experimental Medicine*  
Part Three, Chapter IV, Section IV (p. 222)  
Henry Schuman, Inc. New York, New York, USA. 1927

**Boltzmann, Ludwig Edward** 1844–1906  
Austrian physicist

A closer look at the course followed by developing theory reveals for a start that it is by no means as continuous as one might expect, but full of breaks and at least apparently not along the shortest logical path. Certain methods often afforded the most handsome results only the other day, and many might well have thought that the development of science to infinity would consist in no more than their constant application. Instead, on the contrary, they suddenly reveal themselves as exhausted and the attempt is made to find other quite disparate methods. In that event there may develop a struggle between the followers of the old methods and those of the newer ones. The former's point of view will be termed by their opponents as out-dated and outworn, while its holders in turn belittle the innovators as corrupters of true classical science.

*Ludwig Boltzmann: Theoretical Physics and Philosophical Problems, Selected Writings*  
On the Development of the Methods of Theoretical Physics in Recent Times (p. 79)

**Bonney, Thomas George** 1833–1923  
English geologist

Perfect concordance among reformers is not to be expected; and men who are honestly struggling towards the light cannot hope to attain at one bound to the complete truth. There is always a danger lest the fascination of a new discovery should lead us too far. Men of science, being human, are apt, like lovers, to exaggerate the

perfections and be a little blind to the faults of the object of their choice.

The Anniversary Address of the President  
*The Quarterly Journal of the Geological Society of London*, Volume 41, 1885 (p. 55)

**Bradley, Omar** 1893–1981  
American Army general

With the monstrous weapons man already has, humanity is in danger of being trapped in this world by its moral adolescents. Our knowledge of science has already outstripped our capacity to control it. We have many men of science, too few men of God.

Address  
Boston, November 10, 1948

**Brooks, William Keith** 1848–1908  
American zoologist

...men of science repudiate the opinion that natural laws are rulers and governors over nature; looking with suspicion on all "necessary" or "universal" laws.

*The Foundations of Zoology*  
Lecture III (p. 77)  
Macmillan & Company Ltd. London, England. 1899

The man of science quarrels with no man's opinions; but he will not be held responsible for perplexities which are none of his making.

*The Foundations of Zoology*  
Lecture VI (p. 134)  
The Macmillan Co. New York, New York, USA. 1899

**Butler, Samuel** 1612–80  
English novelist, essayist, and critic

I do not know whether my distrust of men of science is congenital or acquired, but I think I should have transmitted it to descendants.

In Geoffrey Keynes and Brian Hill (eds.)  
*Samuel Butler's Notebooks*  
Myself and Distrust of Men of Science (p. 32)  
Jonathan Cape. London, England. 1951

If [men of science] are worthy of the name, [they] are indeed about God's path and about his bed and spy out all his ways.

In Geoffrey Keynes and Brian Hill (eds.)  
*Samuel Butler's Notebooks*  
Men of Science (p. 204)  
Jonathan Cape. London, England. 1951

**Chesterton, G. K. (Gilbert Keith)** 1874–1936  
English author

Far away in some strange constellation in skies infinitely remote, there is a small star, which astronomers may someday discover. At least, I could never observe in the faces or demeanor of most astronomers or men of science any evidence that they had discovered it; though as a matter of fact they were walking about on it all the

time. It is a star that brings forth out of itself very strange plants and very strange animals; and none stranger than the men of science.

*The Everlasting Man*

Chapter I (p. 1)

Dodd, Mead & Company. New York, New York, USA. 1925

...the ordinary scientific man is strictly a sentimentalist. He is a sentimentalist in this essential sense, that he is soaked and swept away by mere associations.

*Orthodoxy*

Chapter IV (pp. 94–95)

John Lane Company. New York, New York, USA. 1918

...the deputation of distinguished geologists and mineralogists from Paris and Berlin were there in the most magnificent and appropriate dress, for there are no men who like wearing their decorations so much as the men of science – as anybody knows who has ever been to a soiree of the Royal Society.

*The Wisdom of Father Brown*

The Fairy Tale of Father Brown (p. 309)

John Lane Co. New York, New York, USA. 1921

**Clarke, Frank Wigglesworth** 1847–1931

American chemist

The man of science deals with questions which commonly lie outside of the range of ordinary experience, which often have no immediately discernible relation to the affairs of everyday life, and which concentrate the mind upon apparent abstractions to an extraordinary degree.

The Man of Science in Practical Affairs

*Appletons' Popular Science Monthly*, Volume XLV, February, 1900 (p. 487)

The man of science may be grave or gay, moral or immoral, social or unsocial, keen or visionary – in short, he may exemplify any trait of human nature, except the traits of ignorance and stupidity.

The Man of Science in Practical Affairs

*Appletons' Popular Science Monthly*, Volume XLV, February, 1900 (pp. 487–488)

**Clifford, William Kingdon** 1845–79

English philosopher and mathematician

A man of science...explains as much as ever he can, and then he says, "This is all I can do; for the rest you must ask the next man."

In Leslie Stephen and Frederick Pollock (eds.)

*Lectures and Essays* (Volume 2)

Body and Mind (p. 32)

Macmillan & Company. London, England. 1879

**Coleridge, Samuel Taylor** 1772–1834

English lyrical poet, critic, and philosopher

The first man of science was he who looked into a thing, not to learn whether it could furnish him with food, or

shelter, or weapons, or tools, or ornaments, or *playwiths*, but who sought to know it for the gratification of knowing...

In Ernest Hartley Coleridge

*Anima Poetæ from the Unpublished Note-books of Samuel Taylor*

*Coleridge*

Chapter IX (p. 221)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1895

**Coleridge, Stephen** 1854–1936

English author, barrister, and opponent of vivisection

The man of letters whose mind is stored with all that the wise and eloquent and witty and inspired have written about the actions, aspirations and thoughts of men, unless he is dumb, must inevitably be the most agreeable of companions; whereas the man of Science with his mind stuffed with the changeless laws of physics and the dead phenomena of matter must ever be a dull companion; and man being a social creature, not the least desirable object of education must be to fit him for pleasant association with his fellows.

*The Idolatry of Science*

Chapter IV (p. 22)

John Lane Co. London, England. 1920

**Dantzig, Tobias** 1884–1956

Russian mathematician

The man of science will act as if this world were an absolute whole controlled by laws independent of his own thoughts or acts; but whenever he discovers a law of striking simplicity or one of sweeping universality or one which points to a perfect harmony in the cosmos, he will be wise to wonder what role his mind has played in the discovery, and whether the beautiful image he sees in the pool of eternity reveals the nature of this eternity, or is but a reaction of his own mind.

*Number: The Language of Science*

Chapter Eleven (p. 233)

Macmillan & Co Ltd. New York, New York, USA. 1954

**Darwin, Charles Robert** 1809–82

English naturalist

Children are one's greatest happiness, but often and often a still greater misery. A man of science ought to have none – perhaps not a wife; for then there would be nothing in this wide world worth caring for, and a man might (whether he could is another question) work away like a Trojan.

In Francis Darwin (ed.)

*More Letters of Charles Darwin* (Volume 1)

Letter 139, Darwin Asa Gray, July 11, 1862 (p. 202)

D. Appleton & Company. New York, New York, USA. 1903

...my success as a man of science, whatever this may have amounted to, has been determined, as far as I can judge, by complex and diversified mental qualities and conditions. Of these, the most important have been – the

love of science, unbounded patience in long reflecting over any subject, industry in observing and collecting facts, and a fair share of invention as well as of common-sense. With such moderate abilities as I possess, it is truly surprising that I should have influenced to a considerable extent the belief of scientific men on some important points.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 1)

Chapter II (p. 85)

D. Appleton & Company. New York, New York, USA. 1896

**Dumas, Jean Baptiste-Andre** 1800–84

French biochemist

The recollection of an already long life has permitted me to become acquainted with a great variety of personages. And if I call on memory to picture to me how the type of true happiness is realized on earth I do not see it under the form of the powerful man clothed in high authority, nor under that of the rich man to whom the splendors of luxury and the delicacies of well-being are granted, but under that of the man of science, who consecrates his life to penetrating the secrets of Nature and to the discovery of new truths.

In Sir Richard Arman Gregory

*Discovery; or, The Spirit and Service of Science*

Chapter I (p. 18)

Macmillan & Company Ltd. London, England. 1918

**Duncan, Robert Kennedy** 1919–88

American poet

...the man of science cannot hesitate. He cannot believe that there was actually a break between the inorganic and the organic evolutions bridged over by the direct action of the finger of God. He must believe that there has been no break whatever – that waving palm-trees and toddling children and wave-beaten rocks are alike the present natural outcome of an absolute sequence of cause and effect passing back to the blazing star that formed the elements that comprise them.

*Some Chemical Problems of Today*

Chapter V (p. 103)

Harper & Brothers Publishers. New York, New York, USA. 1911

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

Verily, it is easier for a camel to pass through the eye of a needle than for a scientific man to pass through a door. And whether the door be barn door or church door it might be wiser that he should consent to be an ordinary man and walk in rather than wait till all the difficulties involved in a really scientific ingress are resolved.

*The Nature of the Physical World*

Chapter XV (p. 342)

The Macmillan Company. New York, New York, USA. 1930

**Einstein, Albert** 1879–1955

German-born physicist

It has often been said, and certainly not without justification, that the man of science is a poor philosopher. Why then should it not be the right thing for the physicist to let the philosopher do the philosophizing? ...At a time like the present, when experience forces us to seek a newer and more solid foundation, the physicist cannot simply surrender to the philosopher the critical contemplation of the theoretical foundations; for, he himself knows best, and feels more surely where the shoe pinches. In looking for a new foundation, he must try to make clear in his own mind just how far the concepts which he uses are justified, and are necessities.

Physik and Realität

*Journal of the Franklin Institute*, Volume 221, 1936

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

We hearken to the man of science, because we anticipate the sequence in natural phenomena which he uncovers.

*The Complete Works of Ralph Waldo Emerson* (Volume 4)

*Representative Men*

Chapter IV (p. 170)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

**Foster, Sir Michael** 1836–1907

English physiologist

It is not so much the men of science who make science, as some spirit which, born of the truths already won, drives the man of science onward and uses him to win new truths in turn.

*Report of the Sixty-ninth Meeting of the British Association for the Advancement of Science*

President's Address (p. 14)

John Murray. London, England. 1900

The man of science cannot sit by himself in his own cave weaving out results by his own efforts, unaided by others, heedless of what others have done and are doing. He is but a bit of a great system, a joint in a great machine, and he can only work aright when he is in due touch with his fellow-workers.

The President's Address

*The Chemical News and Journal of Industrial Science*, Volume LXXX, Number 2077, September 15, 1899 (p. 131)

...there is written clearly on each page of the history of science, in characters which cannot be overlooked, the lesson that no scientific truth is born anew, coming by itself and of itself. Each new truth is always the offspring of something which has gone before, becoming in turn the parent of something coming after. In this aspect the man of science is unlike, or seems to be unlike, the poet and the artist. The poet is born, not made; he rises up, no man knowing his beginnings; when he goes away,

though men after him may sing his songs for centuries, he himself goes away wholly, having taken with him his mantle, for this he can give to none other. The man of science is not thus creative; he is created. His work, however great it be, is not wholly his own; it is in part the outcome of the work of men who have gone before.

Address by the President of the British Association for the Advancement of Science

*Science*, N.S. Volume 10, Number 249, October 6, 1899 (p. 474)

**Froude, James Anthony** 1818–94

English historian and biographer

The secrets of nature have been opened out to us on a thousand lines; and men of science of all creeds can pursue side by side their common investigations.

*Short Studies on Great Subjects* (Volume 1)

Times of Erasmus, Desiderius and Luther, Lecture I (p. 41)

Longmans, Green & Company. London, England. 1879

**Gregory, Sir Richard Arman** 1864–1952

English scientific writer and journalist

To the man of science discoveries signify extensions of the field of work, and he usually leaves their exploitation to prospectors who follow him.

The Message of Science

*Science*, Volume LIV, Number 1402, November, 1921 (p. 448)

To the popular mind, a man of science is a callous necromancer who has cut himself off from communion with his fellows, and has thereby lost the throbbing and compassionate heart of a full life: he is a Faust who has not yet made a bargain with Mephistopheles, and is therefore without human interest.

*Discovery; or, The Spirit and Service of Science*

Preface (p. v)

Macmillan & Company Ltd. London, England. 1918

Most men of science are neither suppliants at the feet of Nature nor fiery advocates of truth wrested from her. But by critical inquiry into the origin of her strength and weakness they hope to discover the means of subduing her.

*Discovery, Or, The Spirit and Service of Science*

Chapter I (p. 4)

Macmillan & Co Ltd. London, England. 1918

The scientific man has to work for truth so far as her ways can be comprehended by him, but he is never more than a trustee for posterity, and has no authority to define the functions or limit the freedom of those who follow him.

*Discovery; or The Spirit and Service of Science*

Chapter II (p. 30)

Macmillan & Company Ltd. London, England. 1918

The man of science, by virtue of his training, is alone capable of realising the difficulties – often enormous – of obtaining accurate data upon which just judgment may be based.

*Discovery; or, The Spirit and Service of Science*

Chapter III (p. 40)

Macmillan & Company Ltd. London, England. 1918

**Hall, Asaph** 1829–1907

American astronomer

When men are striving for the discovery of truth in its various manifestations, they learn that it is by correcting the mistakes of preceding investigators that progress is made, and they have charity for criticism. Hence persecution for difference of opinion becomes an absurdity. The labours of scientific men are forming a great body of doctrine that can be appealed to with confidence in all countries. Such labours bring people together, and tend to break down national barriers and restrictions.

In Sir Richard Arman Gregory

*Discovery; or, The Spirit and Service of Science*

Chapter II (pp. 30–31)

Macmillan & Company Ltd. London, England. 1918

**Hamerton, Philip Gilbert** 1834–94

English artist and art critic

The men of science are like the coral insects in the sea; they build on the work of their predecessors and rise ever higher and higher...

*Thoughts about Art*

Chapter VII (p. 100)

Roberts Brothers. Boston, Massachusetts, USA. 1888

**Holland, Josiah Gilbert** 1819–81

American novelist and poet

God pity the man of science who believes in nothing but what he can prove by scientific methods! We cannot imagine a sadder or more unfortunate man in the world. God pity him, we say, for if ever a human being needed divine pity, he does.

*Every-day Topics*, 2nd Series

Religion and the Churches (p. 5)

Charles Scribner's Sons. New York, New York, USA. 1882

**Huggins, Sir William** 1824–1910

English astronomer

In direct opposition to the narrowness of thought, which views all subjects through the distorting mirage of party prejudice, stands the absolute freedom of mind of the man of science, who knows, or ought to know, nothing of party, and stands with open arms to welcome truth in however strange or unexpected guise she may present herself. In his writings the man of science has no lower aim than the diffusion of truth so far as it is known, and no desire to make converts to any opinion or party. As opposed to the finality of party opinions, he proclaims that truth is but very partially attained by man on any subject, for we can see truth only imperfectly, as she appears altered by the perspective of our own standpoint.

Quoted in Richard Arman Gregory  
*Discovery, Or, The Spirit and Service of Science*  
Chapter II (p. 32)  
Macmillan & Co Ltd. London, England. 1916

**Hutton, James** 1726–97  
Scottish geologist, chemist, and naturalist

...the man of scientific observation, who looks into the chain of physical events connected with the present state of things, sees great changes that have been made, and foresees a different state that must follow in time, from the continued operation of that which actually is in nature.

*Theory of the Earth: With Proofs and Illustrations* (Volume 2)  
Chapter VIII (p. 238)  
H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

When men of science reason upon subjects where the ideas are distinct and definite, with terms appropriated to the ideas, they come to conclusions in which there is no difference of opinion.

*Theory of the Earth: With Proofs and Illustrations* (Volume 1)  
Chapter III (p. 286)  
H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

**Huxley, Thomas Henry** 1825–95  
English biologist

The man of science, in fact, simply uses with scrupulous exactness the methods which we all, habitually and at every moment, use carelessly...

*Science and Education: Essays*  
Of the Educational Value of the Natural History of Science (p. 46)  
D. Appleton & Co. New York, New York, USA. 1896

...the man of science, who, forgetting the limits of philosophical inquiry, slides from these formulae and symbols into what is commonly understood by materialism, seems to me to place himself on a level with the mathematician, who should mistake the x's and y's with which he works his problems, for real entities – and with this further disadvantage, as compared with the mathematician, that the blunders of the latter are of no practical consequence, while the errors of systematic materialism may paralyze the energies and destroy the beauty of a life.

*Method and Results: Essays*  
On the Physical Basis of Life (p. 165)  
D. Appleton & Co. New York, New York, USA. 1898

The man of science has learned to believe in justification, not by faith, but by verification.

*Collected Essays* (Volume 1)  
*Method and Result*  
On Improving Natural Knowledge (p. 41)  
Macmillan & Company Ltd. London, England. 1904

What men of science want is only a fair day's wages for more than a fair day's work...

*Collected Essays* (Volume 1)  
*Method and Result*  
Administrative Nihilism (p. 287)  
Macmillan & Company Ltd. London, England. 1904

**Kelvin, Lord William Thomson** 1824–1907  
Scottish engineer, mathematician, and physicist

The scientific man sees and feels beauty as much as any mere observer – as much as any artist or painter. But he also sees something underlying that beauty; he wishes to learn something of the actions and forces producing those beautiful results.

*Popular Lectures and Addresses*  
Address delivered on the occasion of the opening of the (p. 477)  
Physical and Chemical Laboratories in University College, Bangor, North Wales  
Macmillan & Co Ltd. London, England. 1894

**Laplace, Pierre Simon** 1749–1827  
French mathematician, astronomer, and physicist

The isolated man of science can dedicate himself without fear to dogmatism; he hears only from afar contradictions of his ideas. But in a scientific society the impact of dogmatic ideas soon results in their destruction, and the desire to win one another over to their point of view establishes necessarily among members the convention of admitting only the results of observations and calculation.

In Maurice Crosland  
*Gay-Lussac: Scientist and Bourgeois*  
Chapter 2 (p. 34)  
Cambridge University Press. Cambridge, England. 1978

**Lee, Frederic Schiller** 1878–1939  
American psychologist

The man of science who is not a doubter has no claim to honorable standing. He who doubts not is dead to science.

*Scientific Features of Modern Medicine*  
Chapter I (p. 2)  
The Columbia University Press. New York, New York, USA. 1911

**Lodge, Sir Oliver** 1851–1940  
English physicist

Take a scientific man who is not something more than a scientific man, one who is not a poet, or a philosopher, or a saint, and place him in the atmosphere habitual to the churches, and he must starve. He requires solid food, and he finds himself in air. He requires something to touch and define and know; but there everything is ethereal, indefinable, illimitable, incomprehensible, beautiful, and vague. He dies of inanition.

In James Edward Hand  
*Ideals of Science & Faith*  
A Physicist's Approach (p. 12)  
Longmans, Green & Co. New York, New York, USA. 1904

**Mather, Kirtley F.** 1888–1978  
American geologist

To the man of science every event in the history of the universe is a miracle. It is both awe-inspiring and significant, a "sign and wonder."

In Edward H. Cotton  
*Has Science Discovered God?*  
 Sermons from Stones (p. 3)  
 Thomas Y. Crowell Company, Publishers. New York, New York, USA.  
 1931

**Maxwell, James Clerk** 1831–79  
 Scottish physicist

But who will lead me into that still more hidden and dimmer region where Thought weds Fact; where the mental operation of the mathematician and the physical action of the molecules are Seen in their true relation? Does not the way to it pass through the very den of the metaphysician, strewn with the remains of former explorers, and abhorred by every man of Science?

Presidential address  
*Nature*, Volume 2, September 22, 1870 (p. 419)

**Melville, Herman** 1819–91  
 American novelist

...a man of true science...uses but few hard words, and those only when none other will answer his purpose; whereas the smatterer in science...thinks, that by mouthing hard words, he proves that he understands hard things.

*White Jacket*  
 Chapter LXIII (p. 277)  
 Northwestern University Press. Evanston, Illinois, USA. 1970

**Mivart, St. George Jackson** 1827–1900  
 English biologist

It is not enough for the true man of science to be acquainted with many sciences, and to reflect on the knowledge he so possesses. The rational mind sooner or later seeks to know what is the basis of his own knowledge and the ultimate groundwork of all science.

*The Groundwork of Science; A Study of Epistemology*  
 Chapter I (p. 2)  
 G.P. Putnam's Sons. New York, New York, USA. 1898

**More, Louis Trenchard**  
 American educator

Men of science have two principal functions to perform: first to observe the phenomena of the world; and when certain connections and differences are found in these phenomena, to classify them under laws.

*The Limitations of Science*  
 Chapter VI (p. 186)  
 Henry Holt & Co. New York, New York, USA. 1915

**Muller, Herbert Joseph** 1905–80  
 American historian and educator

...men of science, men given to "realism," are likely to make a clean sweep of old interests and sentiments as so much rubbish. They regard religion as superstition, metaphysics as moonshine, art as primitive pastime, and all ritual as monkey-business.

*Science and Criticism: The Humanistic Tradition in Contemporary Thought*  
 Chapter I (p. 6)  
 G. Braziller. New York, New York, USA. 1943

**Newcomb, Simon** 1835–1909  
 Canadian-American astronomer

The true man of science has no such expression in his vocabulary as *useful knowledge*. His domain is as wide as nature itself, and he best fulfills his mission when he leaves to others the task of applying the knowledge he gives to the world.

*Annual Report of the Board of Regents of the Smithsonian Institution (1904)*

Evolution of the Scientific Investigator (p. 233)  
 Government Printing Office. Washington, D.C. 1905

**Newell, Lyman C.**  
 Chemist

A man of science who ignores evidence from any source whatever is himself ignored.

*The Spirit of Science*  
*Mind*, Volume 7, Number 1, October, 1900 (p. 5)

**Pasteur, Louis** 1822–95  
 French chemist

A man of science should think of what will be said of him in the following century, not of the insults or the compliments of one day.

Translated by Erwin Frink Smith and Florence Hodges  
 In Emile Duclaux  
*Pasteur: The History of a Mind*  
 Aphorisms and Ideals of Pasteur (p. 343)  
 W.B. Saunders Co. Philadelphia, Pennsylvania, USA. 1920

**Pearson, Karl** 1857–1936  
 English mathematician

The scientific man has above all things to strive at self-elimination in his judgments, to provide an argument which is as true for each individual mind as for his own.

*The Grammar of Science* (2nd edition)  
 Chapter I (p. 6)  
 Adam & Charles Black. London, England. 1900

The man who classifies facts of any kind whatever, who sees their mutual relation and describes their sequences, is applying the scientific method and is a man of science.

*The Grammar of Science* (2nd edition)  
 Chapter I (p. 12)  
 Adam & Charles Black. London, England. 1900

**Pierce, Charles Sanders** 1839–1914  
 American logician, mathematician, philosopher, and scientist

It is the man of science, eager to have his every opinion regenerated, his every idea rationalized, by drinking at the fountain of fact, and devoting all the energies of his life to the cult of truth, not as he understands it, but as

he does not yet understand it, that ought properly to be called a philosopher.

*Annual Report of the Board of Regents of the Smithsonian Institution*  
The Century's Great Men in Science (p. 699)  
US Government Printing Office. Washington, D.C. 1901

**Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

The true man of science has no such expression in his vocabulary as useful science...if there can be no science for science's sake there can be no science.

In James Kip Finch  
Engineering and Science  
*Technology and Culture*, Fall 1961 (p. 330)

**Pope John Paul II** 1920–2005

Bishop of Rome

We are well aware...that the future of man and mankind is threatened, radically threatened, despite very noble intentions, by men of science. And it is menaced because the tremendous results of their discoveries, especially regarding the natural sciences, have been and continue to be exploited – for ends which have nothing to do with the prerequisites of science, but with the ends of destruction and death.

Speech  
Fiftieth Anniversary of the Pontifical Academy of Sciences  
Rome, October 28, 1968

**Popper, Karl R.** 1902–94

Austrian/British philosopher of science

...it is not his possession of knowledge, of irrefutable truth, that makes the man of science, but his persistent and recklessly critical quest for truth.

*The Logic of Scientific Discovery*  
Part II, Chapter X, Section 85 (p. 281)  
Basic Books, Inc. New York, New York, USA. 1959

**Renan, Ernest** 1823–92

French philosopher and Orientalist

With the saints, the heroes, the great men of all ages we may fearlessly compare our men of scientific minds, given solely to the research of truth, indifferent to fortune, often proud of their poverty, smiling at the honors they are offered, as careless of flattery as of obloquy, sure of the worth of that they are doing, and happy because they possess truth.

The Nobility of Science  
*Scientific American*, Volume 40, Number 20, New Series, May 17, 1879 (p. 310)

**Robinson, James Harvey** 1863–1936

American historian

**Beard, Charles A.** 1874–1948

American historian

It may well be that men of science, not kings, or warriors, or even statesmen are to be the heroes of the future.

*The Development of Modern Europe: An Introduction to the Study of Current History* (Volume 2)  
Chapter XXXI (p. 421)  
Ginn & Company. Boston, Massachusetts, USA. 1908

**Ross, Sir Ronald** 1857–1932

English bacteriologist

A witty friend of mine once remarked that the world thinks of the man of science as one who pulls out his watch and exclaims, "Ha! half an hour to spare before dinner: I will just step down to my laboratory and make a discovery." Who but men of science themselves are to blame for such a misconception? Out of the many memoirs...[o]ur books of science are records of results rather than of that sacred passion for discovery which leads to them. Yet many discoveries have really been the climax of an intense drama...in which the protagonists are man and nature, and the issue a decision for all the ages.

*Memoirs*  
Preface (pp. v–vi)  
Publisher undetermined

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

The man of science looks for facts that are significant, in the sense of leading to general laws; and such facts are frequently quite devoid of any intrinsic interest.

*The Scientific Outlook*  
Chapter I (p. 49)  
George Allen & Unwin. London, England. 1931

The man of science, whatever his hopes may be, must lay them aside while he studies nature...

*Mysticism and Logic: And Other Essays*  
Chapter I (p. 7)  
Longmans, Green & Co. London, England. 1919

The prudent man of science acquires a certain instinct as to the kind of uses which may be made of present scientific beliefs without incurring the danger of complete and utter refutation from the modifications likely to be introduced by subsequent discoveries.

*Mysticism and Logic: And Other Essays*  
Chapter VI (p. 103)  
Longmans, Green & Co. London, England. 1919

All the conditions of happiness are realized in the life of the man of science.

*The Conquest of Happiness*  
Chapter X (p. 146)  
Liverwright Publishing Corporation. New York, New York, USA. 1930

**Shelley, Mary Wollstonecraft** 1797–1851

English Romantic writer

If your wish is to become really a man of science, and not merely a petty experimentalist, I should advise you to apply to every branch of natural philosophy, including mathematics.

*Frankenstein: Or, The Modern Prometheus*  
Chapter III (p. 66)  
George Routledge & Sons. London, England. 1888

**Sowerby, William** 1827–1906  
Artist and botanist

The man of science may be likened to an artist or sculptor who spends a lifetime in producing one or two masterpieces of his art, which few are able to see or appreciate, while his statuettes or sketches please or satisfy the multitude who are his daily customers.

Article V  
*Transactions of the Bombay Geographical Society*, Volume XIX, 1894 (p. 122)

**Spencer, Herbert** 1829–1903  
English social philosopher

By accumulated experiences the man of science acquires a thorough belief in the unchanging relations of phenomena – in the invariable connection of cause and consequence – in the necessity of good or evil results.

*Education: Intellectual, Moral, and Physical*  
Chapter I (p. 82)  
D. Appleton & Co. New York, New York, USA. 1860

Only the sincere man of science (and by this title we do not mean the mere calculator of distances, or analyser of compounds, or labeler of species; but him who through lower truths seeks higher, and eventually the highest) – only the genuine man of science, we say, can truly know how utterly beyond, not only human knowledge, but human conception, is the Universal Power of which Nature, and Life, and Thought are manifestations.

*Education: Intellectual, Moral, and Physical*  
Chapter I (p. 93)  
D. Appleton & Co. New York, New York, USA. 1891

At present the most powerful and most instructed mind has neither the knowledge nor the capacity required for symbolizing in thought the totality of things. Occupied with one or other division of Nature, the man of science usually does not know enough of the other divisions even rudely to conceive the extent and complexity of their phenomena; and supposing him to have adequate knowledge of each, yet he is unable to think of them as a whole. Wider and stronger intellect may hereafter help him to form a vague consciousness of them in their totality.

*The Principles of Sociology* (Volume 3)  
Part VI, Chapter XVI (p. 174)  
D. Appleton & Co. New York, New York, USA. 1909

...the genuine man of science, we say, can truly know how utterly beyond, not only human knowledge, but human conception, is the Universal Power of which Nature, and Life, and Thought are manifestations.

Education  
*The Greatest Works of the Greatest Authors, Ancient and Modern*  
Intellectual Education (p. 254)  
The H.W. Hagemann Publishing Co. New York, New York, USA. 1894

**Strutt, John William (Lord Rayleigh)** 1842–1919  
English physicist

There are some great men of science whose charm consists in having said the first word on a subject, in having introduced some new idea which has proved fruitful; there are others whose charm consists perhaps in having said the last word on the subject, and who have reduced the subject to logical consistency and clearness.

*Life of John William Strutt: Third Baron Rayleigh*  
Chapter XVII (p. 310)  
University of Wisconsin Press. Madison, Wisconsin, USA. 1968

**Suits, C. G.**  
American physicist

I've never met that "coldly calculating man of science" whom the novelists extol.... I doubt that he exists; and if he did exist I greatly fear that he would never make a startling discovery or invention.

In Frederic Brownell  
Heed that Hunch  
*The American Magazine*, December, 1945 (p. 142)

**Sullivan, John William Navin** 1886–1937  
Irish mathematician

...outside their views on purely scientific matters there is nothing characteristic of men of science.

*Aspects of Science*  
Scientific Citizen (p. 120)  
J. Cape & H. Smith. New York, New York, USA. 1927

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

The man of science, who is not seeking for expression but for a fact to be expressed merely, studies nature as a dead language. I pray for such inward experience as will make nature significant.

*The Writings of Henry David Thoreau* (Volume 5)  
Chapter III (p. 135)  
Houghton Mifflin & Co. New York, New York, USA. 1906

He is not a true man of science who does not bring some sympathy to his studies, and expect to learn something by behavior as well as by application. It is childish to rest in the discovery of mere coincidences, or of partial and extraneous laws. The study of geometry is a petty and idle exercise of the mind if it is applied to no larger system than the starry one.

*The Writings of Henry David Thoreau* (Volume 1)  
*A Week on the Concord and Merrimack Rivers*  
Friday (p. 477)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

The true man of science will know nature better by his finer organization; he will smell, taste, see, hear, feel, better than other men. His will be a deeper and finer experience. We do not learn by inference and deduction and the application of mathematics to philosophy, but

by direct intercourse and sympathy. It is with science as with ethics, – we cannot know truth by contrivance and method; the Baconian is as false as any other, and with all the help of machinery and the arts, the most scientific will still be the healthiest and friendliest man, and possess a more perfect Indian wisdom.

*The Writings of Henry David Thoreau* (Volume 9)

*Natural History of Massachusetts* (pp. 161–162)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

### Thurston, Robert H.

No biographical data available

The man of science, – the philosopher whose task it is to create and to advance all human knowledge of the great kingdom of nature, – is, therefore, a discoverer of facts, an observer of phenomena, a student of nature's laws. He is a systematic recorder of fact and a codifier of laws. He gathers the pearls of truth and collects the silken threads that we term principles, spins them into the cords, and works them into the chains upon which he strings his pearls...

*Proceedings of the American Association for the Advancement of Science*  
Address (p. 44)

Published by the Permanent Secretary

Salam, Massachusetts, USA. 1879

### Tomlinson, C.

No biographical data available

The man of science is, in his day, the minister and interpreter of nature, and he delivers his message according to his light; his successor in the same department has a fuller message to reveal, and in its fullness the first man is more or less forgotten.

Poetry versus Science

*Notes and Queries*, Eighth Series, Volume II, Number 33, August 13, 1892 (p. 132)

### Twain, Mark (Samuel Langhorne

**Clemens)** 1835–1910

American author and humorist

The surest way for a nation's scientific men to prove that they were proud and ignorant was to claim to have found out something fresh in the course of a thousand years or so. Evidently the peoples of this book's day regarded themselves as children, and their remote ancestors as the only grown-up people that had existed. Consider the contrast: ...our own scientific men may and do regard themselves as grown people and their grandfathers as children. The change...is probably the most sweeping that has ever come over mankind in the history of the race. It is the utter reversal, in a couple of generations, of an attitude which had been maintained without challenge or interruption from the earliest antiquity.... The change from reptile to bird was not more tremendous, and it took longer.

*The Complete Humorous Sketches and Tales of Mark Twain*

A Majestic Literary Fossil (p. 534)

Hanover House. Garden City, New York, USA. 1961

### von Goethe, Johann Wolfgang

1749–1832

German poet, novelist, playwright, and natural philosopher

Scientific man is supposed to limit himself to his immediate surroundings. However if he should occasionally want to step forth as a poet, he certainly should not be prevented from doing so.

In Karl J. Fink

*Goethe's History of Science*

Chapter 9 (p. 125)

Cambridge University Press. Cambridge, England. 1991

### von Helmholtz, Hermann

1821–94

German scientist and philosopher

In fact, men of science form, as it were, an organised army, labouring on behalf of the whole nation, and generally under its direction and at its expense, to augment the stock of such knowledge as may serve to promote industrial enterprises, to increase wealth, to adorn life, to improve political and social relations, and to further the moral development of individual citizens.

*Popular Lectures on Scientific Subjects*

Lecture I

Volume 2, 1846 (p. 28)

D. Appleton & Company. New York, New York, USA. 1885

### von Lommel, Eugen

1837–99

German physicist

The deeds of a man of science are his scientific investigations. Truth once discovered does not remain shut up in the study or the laboratory. When the moment comes, it bursts its narrow bonds and joins the quick pulse of life. That which has been discovered in solitude, in the unselfish struggle for knowledge, his pure love of science, is often fated to be the mighty lever to advance the culture of our race.

Quoted in Richard Arman Gregory

*Discovery, Or, The Spirit and Service of Science*

Chapter VII (p. 184)

Macmillan & Co Ltd. London, England. 1916

### Wells, H. G. (Herbert George)

1866–1946

English novelist, historian, and sociologist

The training of a scientific man is a training in what an illiterate lout would despise as a weakness, it is a training in blabbing, in blurting things out, in telling just as plainly as possible and as soon as possible what it is he has found.

*New Worlds for Old*

Chapter II (p. 23)

The Macmillan Company. New York, New York, USA. 1918

### Whitehead, Alfred North

1861–1947

English mathematician and philosopher

No man of science wants merely to know. He acquires knowledge to appease his passion for discovery. He does

not discover in order to know, he knows in order to discover.

*The Organisation of Thought*

Chapter II (p. 37)

Greenwood Press Publishers. Westport, Connecticut, USA. 1974

**Whitney, Willis Rodney** 1868–1958

American chemical and electrical engineer

For the engineer “safety first” is a good slogan, but “safety last” is better for the man of research.

The Stimulation of Research in Pure Science Which Has Resulted from the Needs of Engineers and of Industry

*Science*, Volume 65, Number 1862, March 25, 1927 (p. 289)

**Williamson, William Crawford** 1816–95

English naturalist

...the man of science is not like the tunnel-constructing engineer. The latter can measure the lengths and heights of the otherwise unknown masses which he designs to penetrate; and he can define the exact point at which he will emerge into daylight, fully assured that the results will accord with his pre-conceived plan; but the scientific explorer, having no such definite guides as the theodolite and the measuring-chain, must fall back upon the more uncertain aid of hypothesis to direct his efforts to penetrate the unknown.

*Essays and Addresses*

Chapter VII (p. 200)

Macmillan & Co Ltd. London, England. 1874

**Willmott, Robert Eldridge Aris** 1809–63

English writer and poet

The history of men of science has one peculiar advantage, as it shows the importance of little things in producing great results.

*Pleasures, Objects, and Advantages, of Literature* (4th edition)

Chapter XXI (p. 129)

G. Routledge & Co. London, England. 1855

**Wordsworth, William** 1770–1850

English poet

We have no knowledge, that is, no general principles drawn from the contemplation of particular facts, but what has been built up by pleasure, and exists in us by pleasure alone. The Man of science, the Chemist and Mathematician, whatever difficulties and disgusts they may have had to struggle with, know and feel this.

*The Poems of William Wordsworth* (Volume 3)

Preface to the Second Edition of *Lyrical Ballads* (p. 491)

Methuen & Co. London, England. 1908

The Man of science seeks truth as a remote and unknown benefactor; he cherishes and loves it in his solitude...

In Nowell Charles Smith

*The Poems of William Wordsworth* (Volume 3)

Preface to the Second Edition of *Lyrical Ballads* (p. 492)

Methuen & Co. London, England. 1908

If the labours of men of Science should ever create any material revolution, direct or indirect, in our condition, and in the impressions which we habitually receive, the Poet will sleep then no more than at present, but he will be ready to follow the steps of the Man of Science, not only in those general indirect effects, but he will be at his side, carrying sensation into the midst of the objects of the Science itself. The remotest discoveries of the Chemist, the Botanist, or Mineralogist will be as proper objects of the Poet’s art as any upon which I can be employed, if the time should ever come when these things shall be familiar to us...

In R.L. Brett and A.R. Jones (eds.)

*Lyrical Ballads*

Preface (pp. 259–260)

Methuen & Company Ltd. London, England. 1963

**Wright, George Frederick** 1838–1921

American geologist

...men of science properly deal only with secondary causes, from observation of which they draw conclusions of more or less probability with reference to conditions both past and future. Their investigations never lead them to ultimate facts. It is still as true as ever that, however much you may lengthen the chain of natural causes, you cannot reach the ultimate link that fastens it to its permanent support.

In Levi Franklin Gruber

*Creation Ex Nihilo*

Foreword (p. 1)

The Gorham Press. Boston, Massachusetts, USA. 1918

## SCIENCE, MANIFESTATIONS OF

**Branford, Victor**

No biographical data available

There are two dominant moods or manifestations of science: the cosmic, the naturalistic or geographical mood, on the one hand; and on the other, the humanist, the historical, the idealist mood.

*Science and Citizenship*

Section III (p. 6)

George Allen. London, England. 1906

## SCIENCE, MARCH OF

**Lamb, Charles** 1775–1834

English essayist and critic

Can we unlearn the arts that pretend to civilize, and then burn the world? There is a march of science; but who shall beat the drums for its retreat?

In Thomas Noon Talfourd

*The Works of Charles Lamb: To which are Prefixed His Letters, and a Sketch of His Life* (Volume 1)

Letter to George Dyer, December 20, 1830 (p. 292)

Harper & Brothers, Publishers. New York, New York, USA. 1838

**Swann, William Francis Gray** 1884–1962  
Anglo-American physicist

The forerunners in the march of science do not often come heralded by much ceremony suggestive of the power that lies behind them. Often in apparent trivialities do they reveal themselves – trivialities so void of spectacular content that but few can be found who deem it worthwhile to listen to their story.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1928*

Three Centuries of Natural Philosophy (p. 237)  
Government Printing Office. Washington, D.C. 1929

## SCIENCE, MATERIAL OF

**Carson, Rachel** 1907–64  
American marine biologist and author

We live in a scientific age, yet we assume that knowledge of science is the prerogative of only a small number of human beings, isolated and priest-like in their laboratories. This is not true. The materials of science are the materials of life itself. Science is part of the reality of living; It is the what, the how and the why of everything in our experience.

In Paul Brooks

*The House of Life: Rachel Carson at Work*  
Fame (p. 128)

Houghton Mifflin. Boston, Massachusetts, USA. 1972

**Pearson, Karl** 1857–1936  
English mathematician

The material of science is coextensive with the whole physical universe, not only that universe as it now exists, but with its past history and the past history of all life therein.

*The Grammar of Science* (2nd edition)

Chapter I (p. 12)

Adam & Charles Black. London, England. 1900

## SCIENCE, MEANING OF

**Pesic, Peter**  
Musician

To seek the meaning of science is to seek its human significance.

The Bell & the Buzzer: On the Meaning of Science

*Daedalus*, Fall, 2003 (p. 35)

## SCIENCE, METHOD OF

**Jeans, Sir James Hopwood** 1877–1946  
English physicist and mathematician

Because we are human beings and not mere animals, we try to discover as much as we can about the world in which our lives are cast. We have seen that there is only one method of gaining such knowledge – the method of science, which consists in a direct questioning of nature by observation and experiment.

*Physics and Philosophy*

Chapter VII (p. 174)

The University Press. Cambridge, England. 1943

**Slosson, Edwin E.** 1865–1929  
American chemist and journalist

The method of science is economy of thought. The aim of science is control of the future.

Science from the Side-Lines

*The Century: A Popular Quarterly*, Volume 103, November 1921 to April 1922 (p. 473)

## SCIENCE, MISSION OF

**Balard, Antoine-Jérôme** 1802–76  
French chemist

Science appears to have as its mission not merely the satisfaction of man's need of learning and understanding everything, which characterizes the noblest of our faculties; it has another aim, doubtless less brilliant but perhaps more moral, I would almost say more sacred, which consists in coordinating the forces of nature to increase production and make men more nearly equal by the univ-ersality of comfort.

In Mary Elvira Weeks

*The Discovery of the Elements* (p. 438)

Journal of Chemical Education. Easton Pennsylvania, USA. 1956

**Hugo, Victor** 1802–85  
French author, lyric poet, and dramatist

The mission of Science is to study and sound every-thing.

Translated by Melville Best Anderson

*William Shakespeare*

Part I, Book I, Chapter V (p. 38)

A.C. McClurg & Co. Chicago, Illinois, USA. 1887

**Pearson, Karl** 1857–1936  
English mathematician

When every fact, every present or past phenomenon of that universe, every phase of present or past life therein, has been examined, classified, and co-ordinated with the rest, then the mission of science will be completed. What is this but saying that the task of science can never end till man ceases to be, till history is no longer made, and development itself ceases?

*The Grammar of Science* (2nd edition)

Chapter I (pp. 12–13)

Adam & Charles Black. London, England. 1900

**SCIENCE, MODERN**

**Chesterton, G. K. (Gilbert Keith)** 1874–1936  
English author

...modern science cares far less for pure logic than a dancing Dervish.

*Orthodoxy*

Chapter II (p. 36)

John Lane Company. New York, New York, USA. 1918

[Modern science moves] toward the supernatural with the rapidity of a railway train.

*Orthodoxy*

Chapter IX (p. 277)

John Lane Company. New York, New York, USA. 1918

**Compton, Karl Taylor** 1887–1954  
American educator and physicist

I believe that the advent of modern science is the most important social event in all history.

*A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton During the Years 1930–1949* (p. 2)

Undergraduate Association, MIT. Cambridge, Massachusetts, USA. 1955

**Disraeli, Benjamin, First Earl of Beaconsfield** 1804–81

English prime minister, founder of Conservative Party, and novelist

Modern science has vindicated the natural equality of man.

*Sybil; Or, The Two Nations*

Chapter V (p. 263)

Longmans, Green & Co. London, England. 1907

**Elliot, Hugh Samuel Roger** 1881–1930  
No biographical data available

Modern science, taking it as it stands without inquiring into the gradual steps by which it was cleared of traditional superstitions, baseless assumptions, and ignorant fancies, has arrived at a systematic interpretation of the phenomena which we call 'Nature' as a vast and orderly mechanism, the working of which we can to a large extent perceive, foresee and manipulate so as to bring about certain results and avoid others.

*Modern Science and the Illusions of Professor Bergson*

Preface (pp. ix–x)

Longmans, Green & Co. New York, New York, USA. 1912

**Gardner, Martin** 1914–  
American writer and mathematics games editor

...modern science should indeed arouse in all of us a humility before the immensity of the explored and a tolerance for crazy hypotheses.

*Science: Good, Bad and Bogus*

Chapter 22 (p. 246)

Prometheus Books. Buffalo, New York, USA. 1981

**Hayward, Jeremy**  
American physicist

Like Christianity, modern science teaches that these things of the world of senses are not really real, but that there is a more real reality, in Nature, behind these appearances, a permanent, unchanging reality in comparison to which the world of appearance is ever changing and is an accidental product of our sense organs. Unlike the "other world" of Christianity, which is world of spirit or mind, altogether without body, this "other world" of science is a world of matter, altogether without spirit, life, or mind. This ultimately real world is the world of particles (little bits of dead stuff), of space and time and of forces (gravitational, electromagnetic, and more recently the strong and weak nuclear forces).

*Shifting Worlds, Changing Minds: Where the Sciences and Buddhism Meet*

Chapter 1 (p. 14)

New Science Library Shambhala Publications, Inc. Boston, Massachusetts, USA. 1987

**Holmes, Oliver Wendell** 1809–94  
American physician, poet, and humorist

The attitude of modern Science is erect, her aspect serene, her determination inexorable, her onward movement unflinching...

*The Writings of Oliver Wendell Holmes*

*Pages from an Old Volume of Life*

Chapter VIII (p. 310)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1891

**Kennedy, John F.** 1917–63  
35th president of the USA

In the years since man unlocked the power stored up within the atom, the world has made progress, halting but effective, toward bringing that power under human control. The challenge may be our salvation. As we begin to master the destructive potentialities of modern science, we move toward a new era in which science can fulfill its creative promise and help bring into existence the happiest society the world has ever known.

Address

National Academy of Sciences

Washington, D.C., October 22, 1963

**Lebowitz, Fran** 1951–  
American comedian

...modern science was largely conceived of as an answer to the servant problem and...is generally practiced by those who lack the flair for conversation.

*Metropolitan Life*

Science (p. 104)

Fawcett Crest. New York, New York, USA. 1978

**Lippmann, Walter** 1889–1974  
American journalist and author

The radical novelty of modern science lies precisely in the rejection of the belief, which is at the heart of all

popular religion, that the forces which move the stars and atoms are contingent upon the preferences of the human heart.

*A Preface to Morals*

Chapter VII (p. 127)

Transaction Publishers. New Brunswick, New Jersey, USA. 1982

**Thomson, Sir John Arthur** 1861–1933

Scottish naturalist

The story of the triumphs of modern science is one of which Man may well be proud. Science reads the secret of the distant star and anatomises the atom; foretells the date of the comet's return and predicts the kinds of chickens that will hatch from a dozen eggs; discovers the laws of the wind that bloweth where it listeth and reduces to order the disorder of disease.

*The Outline of Science: A Plain Story Simply Told*

Introduction (p. 3)

G.P. Putnam's Sons. New York, New York, USA. 1922

**Thomson, Sir George Paget** 1892–1975

English physicist

[The method of science is] a collection of pieces of advice, some general, some rather special, which may help to guide the explorer in his passage through the jungle of apparently arbitrary facts.... In fact, the sciences differ so greatly that it is not easy to find any sort of rule which applies to all without exception.

*The Inspiration of Science*

Chapter II (p. 7)

Oxford University Press, Inc. London, England. 1961

**Weyl, Hermann** 1885–1955

German mathematician

Modern science, insofar as I am familiar with it through my own scientific work, mathematics and physics make the world appear more and more an open one.... Science finds itself compelled, at once by the epistemological, the physical and the constructive-mathematical aspect of its own methods and results, to recognize this situation. It remains to be added that science can do no more than show us this open horizon; we must not by including the transcendental sphere attempt to establish anew a closed (though more comprehensive) world.

*The Open World: Three Lectures in the Metaphysical Implications of Science*

Preface (p. v)

Yale University Press. New Haven, Connecticut, USA. 1932

**SCIENCE, MORSEL OF**

**Polanyi, Michael** 1891–1976

Hungarian-born English scientist, philosopher, and social scientist

The morsels of science which [the young scientist] picks up – even though often dry or else speciously varnished

– instill in him the intimation of intellectual treasures and creative joys far beyond his ken. His intuitive realization of a great system of valid thought and of an endless path of discovery sustain him in laboriously accumulating knowledge and urge him on to penetrate into intricate brain-racking theories. Sometimes he will also find a master whose work he admires and whose manner and outlook he accepts for his guidance. Thus his mind will become assimilated to the premise of science. The scientific institution of reality henceforth shapes his perception. He learns the methods of scientific investigation and accepts the standards of scientific value.

*Science, Faith and Society*

Authority and Conscience (p. 44)

The University of Chicago Press. Chicago, Illinois. 1964

**SCIENCE, MOTIVE OF**

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

The motive of science was the extension of man, on all sides, into Nature, till his hands should touch the stars, his eyes see through the earth, his ears understand the language of beast and bird, and the sense of the wind; and, through his sympathy, heaven and earth should talk with him.

*The Conduct of Life*

Beauty (p. 223)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1894

**SCIENCE, MOVEMENT OF**

**Martin, Geoffrey**

Chemist

Science, aided by thousands of busy brains, is striding onwards so swiftly that no single man can keep pace with her or prophesy into what unknown regions of fact and thought she will next launch us.

*Modern Chemistry and Its Wonders*

Chapter I (p. 21)

D. van Nostrand Co. New York, New York, USA. 1915

**SCIENCE, MYSTERY OF**

**Scoffern, John** 1814–82

Science writer

[S]cience teems with mysteries, but is devoid of mysticisms. None know so well as men of science how slow the march of induction; how limited the grasp of human reason. But the mysteries of science are of this sort: often beyond reason, but never opposed to reason.

*Stray Leaves of Science and Folk-lore*

Modern Mysticism and Modern Science (p. 286)

Tinsley Brothers. London, England. 1870

**Serviss, Garrett Putman** 1851–1921

American science fiction writer

To most minds mystery is more fascinating than science. But when science itself leads straight up to the ‘borders of mystery and there comes to a dead stop, saying, “At present I can no longer see my way,” the force of the charm is redoubled.

*Curiosities of the Sky*

Chapter I (p. 1)

Harper &amp; Brothers Publishers. New York, New York, USA. 1909

**SCIENCE, NAKED****Brown, Samuel** 1817–56

Chemist

...naked science is cold and repulsive, except to the initiated and the predestined votary; but, clothed with its own biography, it becomes instinct with the warmth of life for all.

*Lectures on the Atomic Theory and Essays Scientific and Literary*

(Volume 1)

The History of Science (p. 300)

Thomas Constable &amp; Co. Edinburgh, Scotland. 1858

**SCIENCE, NATURAL****Ardrey, Robert** 1908–80

American anthropologist

The contemporary revolution in the natural sciences has proceeded in something more striking than silence. It has proceeded in secret. Like our tiny, furry, squirrel-like, earliest primate ancestors, seventy million years ago, the revolution has found obscurity its best defence and modesty the key to its survival. For it has challenged larger orthodoxies than just those of science, and its enemies exist beyond counting. From seashore and jungle, from ant-heap and travertine cave have been collected the inflammable materials that must someday explode our most precious intellectual movement seeking light under darkest cover.

*African Genesis*

Chapter 1, Section 2 (p. 13)

Athenaeum. New York, New York, USA. 1968

**Author undetermined**

In every enlightened country, men illustrious for talent, worth, and knowledge, are ardently engaged in enlarging the boundaries of natural science; and the history of their labours and discoveries is communicated to the world chiefly through the medium of Scientific Journals.

Introductory Remarks

*The American Journal of Science*, Volume 1, Number 1, 1819 (p. 1)**Carpenter, William Benjamin** 1813–85

English physiologist and naturalist

As a means of intellectual discipline, the study of Natural Science is perhaps second to none. Habits of accurate, discriminating, unprejudiced observation; of cautious reasoning, and of sound judgment; together with a fearless love of Truth, are cultivated by it.

*Popular Cyclopaedia of Natural Science* (p. ii)

William S. Orr &amp; Co. London, England. 1843

**Chargaff, Erwin** 1905–2002

Austrian biochemist

The natural sciences are furiously writing on second volumes of which there exist neither the first nor the last.

*Voices in the Labyrinth: Nature, Man and Science* (p. 26)

The Seabury Press. New York, New York, USA. 1977

**Freund, Ida** 1863–1914

Austrian-born chemist

The object of all the Natural Sciences is the acquisition of knowledge concerning the natural objects surrounding us, as we apprehend them by our senses; of the changes occurring in these objects, together with the laws governing these changes; and of the more proximate or more ultimate causes to the operation of which are due the individual phenomena and the general laws comprising these.

*The Study of Chemical Composition*

Introduction (p. 1)

At The University Press. Cambridge, England. 1904

**Gorky, Maxim** 1868–1938

Russian writer

For us natural science is the Archimedes’ screw that alone can turn the world to face the sun of reason.

Compiled by V.V. Vorontsov

*Words of the Wise: A Book of Russian Quotations*

Translated by Vic Schneiersson

Progress Publishers. Moscow, Russia. 1979

**Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

Natural science does not simply describe and explain nature; it is part of the interplay between nature and ourselves; it describes nature as exposed to our method of questioning.

*Physics and Philosophy: The Revolution in Modern Science*

Chapter V (p. 81)

Harper &amp; Row, Publishers. New York, New York, USA. 1958

**Herrick, Charles Judson** 1868–1960

American neurologist

The operations of natural science are limited by definition to the domain of nature. We cannot talk rationally about the supernatural without first explaining what we mean by nature. All science is a human construction based on human experience, and it can go no further than the range of possible experience. This sets a logical and an actual

operational limit to nature as envisaged scientifically and practically.

*The Evolution of Human Nature*

Epilogue: The Unknown God (p. 462)

University of Texas Press. Austin, Texas, USA. 1956

**Jourdain, Philip E. B.** 1879–1919

English logician

Natural science is occupied very largely with the prevention of waste of the labour of thought and muscle when we want to call up, for some purpose or other, certain facts of experience.

*The Nature of Mathematics* (Revised edition)

Introduction (p. 11)

T.C. & E.C. Jack. London, England. 1919

**Kingsley, Charles** 1819–75

English clergyman and author

...Natural Science is a subject which a man cannot learn by paying for teachers. He must teach it himself, by patient observation, by patient common sense.

*Scientific Lectures and Essays*

Preface (p. 16)

Macmillan & Co Ltd. London, England. 1893

**Marsh, George Perkins** 1801–82

American diplomat, scholar, and conservationist

Natural science has become so vastly extended, its recorded facts and its unanswered questions so immensely multiplied, that every strictly scientific man must be a specialist, and confine the researches of a whole life within

*Man and Nature: Or, Physical Geography as Modified by Human Action*

Chapter I (p. 12)

Charles Scribner's Sons. New York, New York, USA. 1865

**Müller, Paul** 1899–1965

Swiss chemist

In the field of natural science only persistence and sustained hard work will produce results...

*Nobel Lectures, Physiology or Medicine 1942–1962*

Dichloro-Diphenyl-Trichloroethane and Newer Insecticides

Elsevier Publishing Co. Amsterdam, The Netherlands. 1964

**Nichols, Ernest Fox** 1869–1924

American physicist

...in the natural sciences as in more practical affairs, *how* we have arrived is as important as *where* we have arrived.

*Lectures on Science, Philosophy and Art, 1907–1908*

Physics (p. 6)

The Columbia University Press. New York, New York, USA. 1908

**Ruskin, John** 1819–1900

English writer, art critic, and social reformer

The foundation of every natural science is now at last firmly laid, not a day passing without some addition of

buttress and pinnacle to their already magnificent fabric.

*The Stones of Venice*

Chapter IV (p. 169)

John R. Alden, Publisher. New York, New York, USA. 1885

**Simon, Herbert Alexander** 1916–2001

American social scientist

The central task of a natural science is to make the wonderful commonplace: to show that complexity, correctly viewed, is only a mask for simplicity; to find pattern hidden in apparent chaos.

*The Sciences of the Artificial*

Chapter I (p. 1)

The MIT Press. Cambridge, Massachusetts, USA. 1969

**Wright, Julia McNair** 1840–1903

Writer

Natural science is so placed in the fore-front of the studies of the present age that no apology is needed for pressing it upon the schools. To object to this pursuit is simply to write oneself a laggard behind the times. We can do little that is better for our children than to teach them that the world is lawful to the core.

*Nature Readers: Sea-side and Way-side* Number 4

Note

D.C. Heath & Co. Boston, Massachusetts, USA. 1896

## SCIENCE, NATURE OF

**Bain, Alexander** 1818–1903

Scottish philosopher and psychologist

It is the nature of science to be more or less dry; until its commanding power is felt the path of the learner is thorny.

In Lamar Taney Beman

*Selected Articles on the Study of Latin and Greek*

Negative Discussion (p. 143)

The H.W. Wilson Co. New York, New York, USA. 1921

**Beck, Stanley D.**

No biographical data available

If we are to live in an age of science, and indeed we must, it is very important that we understand the nature of science itself.

*The Simplicity of Science*

Chapter I (p. 13)

Doubleday & Company, Inc. Garden City, New York, USA. 1959

## SCIENCE, NET OF

**Gould, Stephen Jay** 1941–2002

American paleontologist and evolutionary biologist

The net of science covers the empirical universe: What is it made of (fact) and why does it work this way (theory).

Non Overlapping Magisteria

*Natural History*, Volume 106, Number 2, March, 1997 (p. 61)

## SCIENCE, NORMAL

**Kuhn, Thomas S.** 1922–96

American historian of science

The practice of normal science depends on the ability, acquired from exemplars, to group objects and situations into similarity sets which are primitive in the sense that the grouping is done without an answer to the question, “similar with respect to what?”

*The Structure of Scientific Revolutions*

Postscript–1969 (p. 200)

The University of Chicago Press. Chicago, Illinois, USA. 1970

Normal science...is predicated on the assumption that the scientific community knows what the world is like. Much of the success of the enterprise derives from the community’s willingness to defend that assumption, if necessary at considerable cost.

*The Structure of Scientific Revolutions*

Chapter I (p. 5)

The University of Chicago Press. Chicago, Illinois, USA. 1970

## SCIENCE, OBJECT OF

**Lowe, Robert**

No biographical data available

The object of science is not to please or to conciliate. It has no policy. It knows no compromise. If false, no popularity can redeem it; if true, no unpopularity can hurt it.

Recent Attacks on Political Economy

*The Nineteenth Century*, Volume 4, November, 1878 (p. 862)

**Lyman, Theodore**

No biographical data available

The sole object of science thus becomes, to find out all the  $x$ ’s in the universe and all the  $y$ ’s, and to give to each  $x$  its proper  $y$ .

Force

*American Journal of Science*, Volume XXIX, Number 66, March, 1860

## SCIENCE, OSCARS OF

**Chargaff, Erwin** 1905–2002

Austrian biochemist

The Oscars of science do not set trends, but follow them.

*Voices in the Labyrinth: Nature, Man and Science* (p. 86)

The Seabury Press. New York, New York, USA. 1977

## SCIENCE, PACE OF

**Fromm, Erich** 1900–80

German psychoanalyst

The pace of science forces the pace of the technique. Theoretical physics forces atomic energy on us; the successful production of the fission bomb forces upon us the

manufacture of the hydrogen bomb. We do not choose our problems, we do not choose our products; we are pushed, we are forced – by what? By a system which has no purpose and goal transcending it, and which makes man its appendix.

*The Sane Society*

Chapter Five, Nineteenth-Century Capitalism (p. 83)

Fawcett Publications. Greenwich, Connecticut, USA. 1955

## SCIENCE, PARTS OF

**Holliday, Francis**

No biographical data available

Many...parts of science are founded only on probable conjectures, in the midst of which the mind not knowing where to fix, and wanting sufficient principles to direct its searches, wanders in the dark, and at length gives them over as useless and unsatisfactory.

In Francis Holliday

*Miscellanea Curiosa Mathematica* (Volume 1)

Preface (p. viii)

Printed for Edward Cave. London, England. 1749

## SCIENCE, PATH OF

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

...the path of science and of letters is not the way into nature. The idiot, the Indian, the child, and unschooled farmer’s boy, stand nearer to the light by which nature is to be read, than the dissector or the antiquary.

*Ralph Waldo Emerson: Essays and Lectures*

*Essays: First Series*

History (p. 256)

The Library of America. New York, New York, USA. 1983

**Guyot, Arnold** 1807–84

Swiss-born American geologist, geographer, and educator

Be pleased always to remember...that the path of science is often difficult and beset with rugged cliffs. The traveler doubtless gathers many flowers on the way. But the tree of Science, which bears the noblest fruits, is placed high up on precipitous rocks. It holds out to our view these precious fruits from afar. Happy he who by his efforts may pluck one of them, even were it the humblest. He values it, then, by what it has cost him.

*The Earth and Man*

Lecture I (p. 35)

Gould & Lincoln. Boston, Massachusetts, USA. 1860

## SCIENCE, PHILOSOPHY OF

**Carus, Paul** 1852–1919

American philosopher

Mankind has become more and more convinced of the efficiency of science, and in this sense the philosophy of

science prevails even now as a still latent but nevertheless potent factor in the life of mankind, manifesting itself in innumerable subconscious tendencies of the age.

*Philosophy as a Science: A Synopsis of Writings of Dr. Paul Carus*

Introduction (p. 2)

The Open Court Publishing Co. Chicago, Illinois, USA. 1909

## SCIENCE, PHYSICAL

**Brooks, William Keith** 1848–1908

American zoologist

The physical sciences deal with the external world, and in the laboratory we study the structure and activities of organisms by very similar methods; but if we stop here, neglecting the relation of the living being to its environment, our study is not biology or the science of life.

*The Foundations of Zoology*

Lecture III (p. 54)

The Macmillan Company. New York, New York, USA. 1899

**Chambers, George Frederick** 1841–1915

English amateur astronomer

It may, I fear, be taken as a truism that “the man in the street” (collectively, “the general public”) knows little and cares less for what is called physical science. Now and again when something remarkable happens, such as a great thunderstorm, or an earthquake, or a volcanic eruption, or a brilliant comet, or a total eclipse, something in fact which has become the talk of the town, our friend will condescend to give the matter the barest amount of attention, while he is filling his pipe or mixing a whisky and soda...

*The Story of Eclipses*

Chapter I (p. 9)

S.S. McClure Co. New York, New York, USA. 1909

**Condorcet, Marie Jean** 1749–1827

French mathematician, astronomer, and physicist

This adventure of the physical sciences...could not be observed without enlightened men seeking to follow it up in the other sciences; at each step it held out to them the model to be followed.

In K.M. Baker

*Condorcet: From Natural Philosophy to Social Mathematics*

Chapter 2 (p. 85)

The University of Chicago Press. Chicago, Illinois, USA. 1975

**Cooke, Josiah Parsons** 1827–94

American chemist

Physical science is noble because it does deal with thought, and with the very noblest of all thought. Nature at once manifests and conceals an Infinite Presence: Her methods and orderly successions are the manifestations of Omnipotent Will; Her contrivances and laws the embodiment of Omniscient Thought.

*Scientific Culture*

The Baconian Method

Henry S. King & Co. London, England. 1876

**d’Abro, Abraham**

No biographical data available

Practically the whole of physical science is thus one mass of inference based ultimately, but not immediately, on direct knowledge.

*The Rise of the New Physics* (Volume 1)

Chapter II (p. 15)

Dover Publications, Inc. New York, New York, USA. 1951

**Disraeli, Benjamin, First Earl**

**of Beaconsfield** 1804–81

English prime minister, founder of Conservative Party, and novelist

The world is devoted to physical science, because it believes these discoveries will increase its capacity of luxury and self-indulgence.

*Lothair*

Chapter XVII (p. 70)

Longmans, Green & Co. London, England. 1879

**Huxley, Thomas Henry** 1825–95

English biologist

Physical science, its methods, its problems, and its difficulties, will meet the poorest boy at every turn, and yet we educate him in such a manner that he shall enter the world as ignorant of the existence of the methods and facts of science as the day he was born. The modern world is full of artillery; and we turn out our children to do battle in it, equipped with the shield and sword of an ancient gladiator.

*Collected Essays* (Volume 8)

*Discourses, Biological and Geological*

A Lobster; or, The Study of Zoology (p. 226)

Macmillan & Company Ltd. London, England. 1904

Physical science is one and indivisible. Although, for practical purposes, it is convenient to mark it out into the primary regions of Physics, Chemistry, and Biology, and to subdivide these into subordinate provinces, yet the method of investigation and the ultimate object of the physical inquirer are everywhere the same.

*Method and Results: Essays*

The Progress of Science (p. 60)

D. Appleton & Co. New York, New York, USA. 1898

Physical science therefore rests on verified or uncontradicted hypotheses; and, such being the case, it is not surprising that a great condition of its progress has been the invention of verifiable hypotheses.

*Method and Results: Essays*

The Progress of Science (pp. 61–62)

D. Appleton & Co. New York, New York, USA. 1898

**Keeler, James E.** 1847–1900

American astrophysicist

The domains of the physical sciences are not, like the political divisions represented on a map, capable of being defined by boundary lines traced with mathematical precision. They pass into one another by imperceptible

gradations, the unity of nature opposing itself to rigid systems of classification. Thus there often exists between two allied sciences a broad ground, belonging to each, yet exclusively the property of neither, which may be so extensive and fertile as to justify the development of a new science for its special cultivation. And such a science not only subserves the purpose for which it was created, but it has the further special importance that, by promoting an exchange of knowledge between its previously established neighbors, by investigating the cause of disagreements between them, by comparing their methods, and possibly by detecting errors in their results, it tends to bring them into more perfect coordination.

The Importance of Astrophysical Research and Their Relation of Astrophysics to Other Physical Sciences  
*The Astrophysical Journal*, Volume 6, Number 4, November, 1897 (p. 271)

**Mach, Ernst** 1838–1916  
Austrian physicist and philosopher

Physical science does not pretend to be a *complete* view of the world; it simply claims that it is working toward such a complete view in the future. The highest philosophy of the scientific investigator is precisely this *toleration* of an incomplete conception of the world and the preference for it rather than an apparently perfect, but inadequate conception.

Translated by Thomas J. McCormack  
*The Science of Mechanics: A Critical and Historical Exposition of Its Principles*  
Chapter IV (p. 464)  
The Open Court Publishing Co. Chicago, Illinois, USA. 1893

Physical science makes no investigation at all into things that are absolutely inaccessible to exact investigation, or as yet inaccessible to it.

Translated by Thomas J. Macormack  
*The Science of Mechanics: A Critical and Historical Account of Its Development*  
Chapter IV (p. 465)  
The Open Court Publishing Co. Chicago, Illinois, USA. 1893

**Newman, John Henry** 1801–90  
Catholic Cardinal

...if Physical Science be dangerous, as I have said, it is dangerous, because it necessarily ignores the idea of moral evil...

*The Idea of a University Defined and Illustrated*  
Introductory (p. 7)  
Longmans, Green & Co. London, England. 1891

**O'Malley, Austin** 1858–1932  
American physician and humorist

Physical science reads through its sense of touch like a blind man, and the supply of books in braille type on the spiritual life is very small.

*Keystones of Thought* (p. 10)  
The Devin-Adair Co. New York, New York, USA. 1915

**Smith, Goldwin** 1823–1910  
British-Canadian historian and journalist

What is the sum of physical science? Compared with the comprehensible universe and with conceivable time, not to speak of infinity and eternity, it is the observation of a mere point, the experience of an instant.

*The World's Best Orations: From the Earliest Period to the Present Time* (Volume 9)  
The Secret Beyond Science (p. 3476)  
Ferd. P. Keiser. St. Louis, Missouri, USA. 1899

**Wells, David Ames** 1828–98  
American economist

The principles of physical science are so intimately connected with the arts and occupations of every-day life, with our very existence and continuance as sentient beings, that public opinion, at the present time, imperatively demands that the course of instruction on this subject should be as full, thorough, and complete as opportunity and time will permit. With this view, the author has endeavored to render the work, in all its arrangements and details, eminently practical, and, at the same time, interesting to the student. The illustrations and examples have been multiplied to a greater extent than is usual in works of like character, and have been derived, in most cases, from familiar and common objects.

*Well's Natural Philosophy*  
Preface (p. iii)  
Iverson, Blakeman, Taylor, & Co. New York, New York, USA. 1873

## SCIENCE, POPULAR

**Mitchell, Maria** 1818–89  
American astronomer and educator

The phrase 'popular science' has in itself a touch of absurdity. That knowledge which is popular is not scientific.

In Phebe Mitchell Kendall  
*Maria Mitchell: Life, Letters, and Journals*  
Chapter IX (p. 185)  
Lea & Shepard Publishers. Boston, Massachusetts, USA. 1896

## SCIENCE, POPULARIZER OF

**Sagan, Carl** 1934–96  
American astronomer and author

It is a supreme challenge for the popularizer of science to make clear the actual, tortuous history of its great discoveries and the misapprehensions and occasional stubborn refusal by its practitioners to change course.

*The Demon-Haunted World: Science as a Candle in the Dark*  
Chapter 1 (p. 22)  
Random House, Inc. New York, New York, USA. 1995

**SCIENCE, PORT OF**

**Gregory, Sir Richard Arman** 1864–1952  
British science writer and journalist

The port of science – whether pure or applied – is free, and a modest yawl can find a berth in it as readily as a splendid merchantman, provided that it has a cargo to discharge.

The Message of Science  
*Science*, Volume LIV, Number 1402, November, 1921 (p. 447)

**SCIENCE, POSITION OF**

**Coleridge, Samuel Taylor** 1772–1834  
English lyrical poet, critic, and philosopher

The positions of science must be tried in the jeweller's scales, not like the mixed commodities of the market, on the weigh-bridge of common opinion and vulgar usage.

*Hints Towards the Formation of a More Comprehensive Theory of Life*  
The Nature of Life (p. 21)

John Churchill. London, England. 1847

**SCIENCE, POTENTIALITIES OF**

**Lewis, Wyndham** 1882–1957  
English author and painter

The puritanic potentialities of science have never been forecast. If it evolves a body of organized rites, and is established as a religion, hierarchically organized, things more than anything else will be done in the name of “decency.” The coarse fumes of tobacco and liquors, the consequent tainting of the breath and staining of white fingers and teeth, which is so offensive to many women, will be the first things attended to.

*The Art of Being Ruled*

Chapter 7 (p. 210)

Chatto & Windus. London, England. 1926

**SCIENCE, POWER OF**

**Podolsky, Boris** 1896–1966  
American physicist

In recent years the power of Science has received such popular recognition that the adjective scientific attached to merchandise or statement is known to give to such merchandise or to a statement prestige having definite advertising value. As a consequence the words science and scientific are frequently abused by those who find it profitable to borrow reputation instead of earning it.

What Is Science?

*The Physics Teacher*, Volume 3, Number 2, February, 1965 (p. 71)

**SCIENCE, PRACTICAL**

**Aquinas, St. Thomas** 1227?–74  
Dominican philosopher and theologian

Practical sciences proceed by building up; theoretical sciences by resolving into components.

Translated by Thomas Gilby

*Philosophical Texts* (p. 4)

1982

**Playfair, Lyon** 1818–98

Scottish scientist and Parliamentarian

Practical, like abstract science, has no limits.

*Records of the School of Mines and of Science Applied to the Arts*  
(Volume 1), Part I

The Study of Abstract Science (p. 30)

Longman, Brown, Green & Longmans. London, England. 1852

**National Academy of Sciences (USA)**

Practical science may...be compared to intelligent parentage, which not only conceives and bears, but nourishes and rears its progeny, foreseeing the end from the beginning.

*Biographical Memoirs*

Biographical Memoir of George Hammell Cook (p. 138)

National Academy of Sciences (USA). Washington, D.C. 1902

**SCIENCE, PRACTITIONER OF**

**Chargaff, Erwin** 1905–2002  
Austrian biochemist

The practitioner of a science must know much more than he can know. Ignorance is no handicap in the arts – Renoir did not have to have seen all the nudes that were painted before him.

*Voices in the Labyrinth: Nature, Man and Science* (p. 149)

The Seabury Press. New York, New York, USA. 1977

**Eiseley, Loren C.** 1907–77

American anthropologist, educator, and author

In the end, science as we know it has two basic types of practitioners. One is the educated man who still has a controlled sense of wonder before the universal mystery, whether it hides in a snail's eye or within the light that impinges on that delicate organ. The second kind of observer is the extreme reductionist who is so busy stripping things apart that the tremendous mystery has been reduced to a trifle, to intangibles not worth troubling one's head about.

*The Star Thrower*

Science and the Sense of the Holy (p. 190)

Times Books. New York, New York, USA. 1978

**SCIENCE, PRINCIPLES OF**

**McMurry, Charles Alexander** 1857–1929  
American educator

A child does not want the alphabet (that is, the simple principles) of science anymore than he wants the names of the letters of the alphabet when learning to read.

*Special Method in Elementary Science for the Common School*  
Chapter III (p. 30)  
The Macmillan Co. New York, New York, USA. 1905

**SCIENCE, PROCESS OF**

**Asimov, Isaac** 1920–92  
American author and biochemist

The process of science... involves a slow forward movement through the reachable portions of the Universe – a gradual unfolding of parts of the mystery.

*"X" Stands for Unknown*  
Introduction (p. 10)  
Doubleday & Company, Inc. Garden City, New York, USA. 1984

**Kolb, Edward W. (Rocky)** 1951–  
American cosmologist

The process of science involves heroic ideas as well as its share of stupidity.

*Blind Watchers of the Sky*  
Preface (p. x)  
Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

**SCIENCE, PROGRESS OF**

**Abernethy, John** 1680–1740  
Irish Presbyterian minister, theologian, and dissenter

Although knowledge has at times appeared to exhibit something of uniformity in its advances, yet it cannot have escaped the least observant that, as a whole, the Progress of Science has been marked by very variable activity. At once time marvelously rapid; at another, indefinitely slow; now merged in darkness or obscurity, and not blazing forth with meridian splendor.

*Memoirs of John Abernethy*  
Chapter I (p. 1)  
Harper & Brothers. New York, New York, USA. 1853

**Bernard, Claude** 1813–78  
French physiologist

The progress of experimental method consists in this, – that the sum of truths grows larger in proportion as the sum of errors grows less. But each one of these particular truths is added to the rest to establish more general truths. In this fusion, the names of promoters of science disappear little by little, and the further science advances,

the more it takes an impersonal form and detaches itself from the past.

*An Introduction to the Study of Experimental Medicine*  
Part I, Chapter II, Section iv (p. 42)  
Henry Schuman, Inc. New York, New York, USA. 1927

**Bronowski, Jacob** 1908–74  
Polish-born British mathematician and polymath

The progress of science is the discovery at each step of a new order which gives unity to what had long seemed unlike.

*Science and Human Value*  
The Creative Mind (p. 26)  
Harper & Row, Publishers. New York, New York, USA. 1965

**Brown, Samuel** 1817–56  
Chemist

The progress of science is as orderly and determinate as the movements of the planets, the solar systems, and the celestial firmaments. It is regulated by laws as exact and irresistible as those of astronomy, optics, or chemistry...

*Lectures on the Atomic Theory, and Essays Scientific and Literary*  
(Volume 1)  
The Atomic Theory before Christ and Since (p. 81)  
Thomas Constable & Co. Edinburgh, Scotland. 1858

**Cohen, Morris Raphael** 1880–1947  
American philosopher

...the progress of science always depends upon our questioning the plausible, the respectably accepted, and the seemingly self-evident.

*Reason and Nature*  
Book III  
Chapter One, Section II (p. 348)  
Free Press. Glencoe, Georgia, USA. 1953

**Coles, Abraham** 1813–91  
American physician, hymnist, and poet

Believing needless ignorance a crime,  
You strive to reach the summit of your time;  
To old age learning up from early youth  
Your life one long apprenticeship to truth.  
Wisely suspicious sometimes of the new,  
Ye give alert acceptance to the true:  
Even though it make old science obsolete,  
It with a thousand welcomes still you greet...  
Each Year adds something – many things ye know  
Your sires knew not a Hundred Years ago.

*The Microcosm and Other Poems*  
The Microcosm  
Physician's Character and Aims – Science Progressive  
D. Appleton & Company. New York, New York, USA. 1881

**Constitution of the USA**

The Congress shall have the Power...to promote the Progress of Science and useful Arts...

*United States Constitution*  
Article I, Section 8

**Daly, Reginald Aldworth** 1871–1957  
Canadian-American geologist

Inasmuch as cosmogony and geology are both young sciences, consensus of opinions about the earth's origin and history is still reserved for the future. Meantime these sciences are advancing through the erection and testing of competing hypotheses; in other words, through speculation, controlled by all the available facts. Science progresses through systematic guessing in the good sense of the world.

*Our Mobile Earth*

Introduction (p. xx)

Charles Scribner's Sons. New York, New York, USA. 1926

**de La Beche, Henry Thomas** 1796–1855  
English geologist

It surely can be no offence to state, that the progress of science has led to new views, and that the consequences that can be deduced from the knowledge of a hundred facts may be very different from those deducible from five. It is also possible that the facts first known may be the exceptions to a rule, and not the rule itself, and generalizations from these first-known facts, though useful at the time, may be highly mischievous, and impede the progress of the science if retained when it has made some advance.

*Sections & Views, Illustrative of Geological Phenomena*

Preface (p. viii)

Treuttel & Wurtz. London, England. 1830

**Dewar, James** 1842–1923  
English physicist and chemist

In a legitimate sense all genuine scientific workers feel that they are "inheritors of unfulfilled renown." The battlefields of science are the centers of a perpetual warfare, in which there is no hope of final victory, although partial conquest is ever triumphantly encouraging the continuance of the disciplined and strenuous attack on the seemingly impregnable fortress of nature.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1902*

History of Cold and the Absolute Zero (p. 240)

Government Printing Office. Washington, D.C. 1903

**Dryden, John** 1631–1700  
English poet, dramatist, and literary critic

Is it not evident, in these last hundred years (when the Study of Philosophy has been the business of all the Virtuosi in Christendom) that almost a new Nature has been reveal'd to us? that more errors of the School have been detected, more useful Experiments in Philosophy have been made, more Noble Secrets in Opticks, Medicine, Anatomy, Astronomy, discover'd, than in all those credulous and doting Ages from Aristotle to us? so true it is that nothing spreads more fast than Science, when rightly and generally cultivated.

*Of Dramatick Poesie: An Essay* (Volume 1) (p. 12)  
Printed for Henry Herringman. London, England. 1684

**Duclaux, Pierre Émile** 1840–1904  
French biochemist

It is because science is sure of nothing that it is always advancing.

In William Osler

*Evolution of Modern Medicine*

Chapter VI (p. 219)

Yale University Press. New Haven, Connecticut, USA. 1921

A series of judgments, revised without ceasing, goes to make up the incontestable progress of science.

In W. Mansfield Clark

*The Determination of Hydrogen Ions*

Chapter VIII (p. 177)

The Williams & Wilkins Company. Baltimore, Maryland, USA. 1928

## Editorial

The progress of science, but even more the spread and development of the scientific spirit, are constantly forcing upon religion new and difficult questions and constantly raising anew the question whether faith and the scientific mind can live together. If not it will soon come to pass that between the intellectual forces of the world and the religion of the world there will be a great gulf fixed over which none will pass from either side. On the one hand, from the attitude of mind which science has created there will be no retreat but only advance; and on the other, the human heart's need of religion makes it certain that however it may change its form religion will never die. The only question is whether religion and science will live together or dwell apart in separate and hostile camps.

Faith and the Scientific Mind

*The Biblical World*, Volume XXXVIII, Number 1, July, 1911

**Einstein, Albert** 1879–1955  
German-born physicist

**Infeld, Leopold** 1898–1968  
Polish physicist

Science forces us to create new ideas, new theories. Their aim is to break down the wall of contradictions which frequently blocks the way of scientific progress. All the essential ideas in science were born in a dramatic conflict between reality and our attempts at understanding.

*The Evolution of Physics*

Quanta (p. 280)

Simon & Schuster. New York, New York, USA. 1936

**Enriques, Federico** 1871–1946  
Italian mathematician

[T]he progress of science is dependent upon science itself, it is an extension and not a creation.

*Problems of Science*

Chapter 3, Section 37 (p. 165)

The Open Court Publishing Company. Chicago, Illinois, USA. 1914

**Fiske, John** 1842–1901  
American philosopher and historian

When we look at the stupendous edifice of science that has been reared upon this basis, when we consider the almost limitless sweep of inorganic and organic chemistry, the myriad applications to the arts, the depth to which we have been enabled to penetrate into the innermost proclivities of matter, it seems almost incredible that a single century can have witnessed so much achievement.

*A Century of Science and Other Essays*

Chapter I (p. 4)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1900

**Foster, Sir Michael** 1836–1907  
English physiologist

Though much of the progress of science seems to take on the form of a series of great steps, each made by some great man, the distinction in science between the great discoverer and the humble worker is one of degree only, not of kind.

Address by the President of the British Association for the Advancement of Science

*Science*, N.S. Volume X, Number 249, October 6, 1899 (p. 476)

The path [of progress in science] may not always be in a straight line; there may be swerving to this side and to that; ideas may seem to return again and again to the same point of the intellectual compass; but it will always be found that they have reached a higher level.... Moreover, science is not fashioned as is a house, by putting brick to brick, that which is once put remaining as it was put to the end. The growth of science is that of a living being. As is the embryo, phases follows phase, and each member or body puts on in succession different appearances, though all the while the same member, so a scientific conception of one age seems to differ from that of a following age...

*Annual Report of the Smithsonian Institution For 1899*

The Growth of Science in the Nineteenth Century

Government Printing Office. Washington, D.C. 1900

In science there is only progress. The path may not be always a straight line, there may be swerving to this side and to that, ideas may seem to return again and again to the same point of the intellectual compass; but it will always be found that they have reached a higher level – they have moved, not in a circle, but in a spiral.

*Report of the Sixty-ninth Meeting of the British Association for the Advancement of Science*

President's Address (p. 15)

John Murray. London, England. 1900

**France, Anatole (Jean Jacques Brousson)** 1844–1924  
French writer

The progress of science renders useless the very books which have been the greatest aid to that progress. As those works are no longer useful, modern youth is naturally

inclined to believe they never had any value; it despises them, and ridicules them if they happen to contain any superannuated opinion whatever.

Translated by Lafcadio Hern

*The Crime of Sylvester Bonnard*

June 4 (p. 168)

Harper & Brothers. New York, New York, USA. 1890

**Franklin, Benjamin** 1706–90  
American printer, scientist, and diplomat

The rapid progress true Science now makes occasions my regretting sometimes that I was born so soon. It is impossible to imagine the heights to which may be carried, in a thousand years, the power of man over matter. O that moral Science were in as fair a way of improvement, that men would cease to be wolves to one another, and that human beings would at length learn what they now improperly call humanity.

In Linus Pauling

*College Chemistry*

Letter to Joseph Priestley, 8 February, 1780

Chapter 1 (p. 3)

W.H. Freeman & Company. San Francisco, California, USA. 1964

**Free, E. E.**

No biographical data available

Like a man on a bicycle science cannot stop; [science] must progress or collapse.

The Electric Brains in the Telephone

*The World's Work*, Volume LIII, Number 4, February, 1927 (p. 429)

**Garrod, Archibald** 1857–1936  
English physician

In these days of rapid scientific progress there is a tendency to accept the facts of nature, as at present known, without glancing back at the slow and difficult stages by which the knowledge of these facts has been arrived at. Yet such a retrospect is by no means unprofitable, since it warns us that hasty generalizations upon insufficient data retard rather than advance the progress of knowledge, and that the theories of the day must not be accepted as necessarily expressing absolute truths.

In Alexander G. Bearn

*Archibald Garrod and the Individuality of Man*

Chapter 3 (p. 25)

Clarendon Press. Oxford, England. 1993

**Greene, Brian** 1963–  
American physicist

Progress in science proceeds in fits and starts. Some periods are filled with great breakthroughs, in other times researchers experience dry spells. Scientists put forward results, both theoretical and experimental. The results are debated by the community, sometimes they are discarded, sometimes they are modified, and sometimes they provide inspirational jumping-off points for new and more accurate ways of understanding the physical

universe. In other words, science proceeds along a zigzag path toward what we hope will be ultimate truth, a path that began with humanity's earliest attempts to fathom the cosmos and whose end we cannot predict.

*The Elegant Universe*

Chapter 1 (p. 20)

W.W. Norton & Company, Inc. New York, New York, USA. 2003

**Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

Science progresses not only because it helps to explain newly discovered facts, but also because it teaches us over and over again what the word “understanding” may mean.

*Physics and Beyond*

Chapter 10 (p. 124)

Harper & Row, Publishers. New York, New York, USA. 1971

**Kingzett, Charles Thomas** 1852–1935

Chemist

Boast is made of the rapid progress of science. Bah! it is untrue. Science never did, does not, and never can make rapid strides. Relatively, progress may be rapid, but it is only relative to times when progress was much slower.

*Animal Chemistry; Or, The Relations of Chemistry to Physiology and Pathology*

Part I, Chapter I (p. 17)

Longmans, Green & Co. London, England. 1878

**Koestler, Arthur** 1905–83

Hungarian-born English writer

The progress of science is strewn, like an ancient desert trail, with the bleached skeletons of discarded theories which once seemed to possess eternal life.

*The Ghost in the Machine* (p. 178)

The Macmillan Co. New York, New York, USA. 1968

**Kuhn, Thomas S.** 1922–96

American historian of science

...we must explain why science – our surest example of sound knowledge – progresses as it does, and we first must find out how, in fact, it does progress.

In Imre Lakatos and Alan Musgrave (eds.)

*Criticism and the Growth of Knowledge*

Logic of Discovery or Psychology of Research (p. 20)

Cambridge University Press. Cambridge, England. 1970

Does a field make progress because it is a science, or is it a science because it makes progress?

*The Structure of Scientific Revolutions* (2nd edition)

Chapter XIII (p. 162)

The University of Chicago Press. Chicago, Illinois, USA. 1970

**Langley, Samuel Pierpoint** 1834–1906

American astronomer and aviation pioneer

I would almost prefer to ask you to think rather of a moving crowd [for the progress of science], where the

direction of the whole comes somehow from the independent impulses of its individual members, not wholly unlike a pack of hounds, which, in the long run, perhaps catches its game, but where, nevertheless, when at fault, each individual goes his own way by scent, not by sight, some running back and some forward; where the louder-voiced bring many to follow them, nearly as often in a wrong path as in a right one; where the entire pack even has been known to move off bodily on a false scent...

The History of a Doctrine

*The Popular Science Monthly*, Volume 34, Number 2, December, 1888

(p. 213)

**Lee, Tsung Dao** 1926–

Chinese-born American nuclear physicist

The progress of science has always been the result of a close interplay between our concepts of the universe and our observations on nature. The former can only evolve out of the latter and yet the latter is also conditioned greatly by the former. Thus, in our exploration of nature, the interplay between our concepts and our observations may sometimes lead to totally unexpected aspects among already familiar phenomena.

*Nobel Lectures, Physics 1942–1962*

...the progress of science is greatly aided by the judicious use of the imagination, constantly checked by a comparison with facts.

*Notes on the Properties of Matter and Heat*

Introductory (p. 3)

Percival Lewis. Berkeley, California, USA. 1903

**Lichtenberg, Georg Christoph** 1742–99

German physicist and satirical writer

There is no greater impediment to progress in the sciences than the desire to see it take place too quickly.

Translated by R.J. Hollingdale

*Aphorisms*

Notebook K, Aphorism 72

Penguin Classics. New York, New York, USA. 1990

**Lindley, David** 1956–

English astrophysicist and author

Progress in science is a matter of jumping to conclusions. The trick is to jump to useful and interesting conclusions. Generalizing from small scraps of evidence may lead one astray, but sticking strictly to what limited evidence one has, and refusing to countenance anything that is not directly provable, leads nowhere at all. The scientist has to generate new ideas and hypotheses, then act upon them.

*Where Does the Weirdness Go? Why Quantum Mechanics Is Strange, but Not as Strange as You Think*  
An Engineer, a Physicist, and a Philosopher... (p. 157)  
Basic Books, Inc. New York, New York, USA. 1996

### Loey, William Albert

No biographical data available

In the progress of science there is an army of observers and experimenters each contributing his share, but the rank and file supply mainly isolated facts, while the ideas take birth in the minds of a few gifted leaders, either endowed with unusual insight, or so favored by circumstances that they reach general conclusions of importance.

*Biology and Its Makers: With Portraits and Other Illustrations* (3rd edition)

Part I, Chapter I (p. 7)

Henry Holt & Co. New York, New York, USA. 1908

### Lowie, Robert H. 1883–1957

Austrian-born American anthropologist

The clarification of concepts...directly gauges scientific progress.

*The History of Ethnological Theory*

Chapter XIV (p. 281)

Rinehart & Company, Inc. New York, New York, USA. 1937

### Mach, Ernst 1838–1916

Austrian physicist and philosopher

Science has almost made greater progress through that which she has known how to ignore than by that which she has taken into account.

Translated by the Bhikkhau Silacara

In Paul Dahlke

*Buddhism & Science*

Chapter 6 (p. 100)

Macmillan & Co Ltd. London, England. 1913

As a fact, every enlightening progress made in science is accompanied with a certain feeling of disillusionment. We discover that that which appeared wonderful to us is no more wonderful than other things which we know instinctively and regard as self-evident; nay, that the contrary would be much more wonderful; that everywhere the same fact expresses itself. Our puzzle turns out then to be a puzzle no more; it vanishes into nothingness, and takes its place among the shadows of history.

Translated by Thomas McCormack

*The Science of Mechanics: A Critical and Historical Account of Its Development* (4th edition)

Chapter I (p. 31)

The Open Court Publishing Co. Chicago, Illinois, USA. 1902

### Mayr, Ernst 1904–2005

German-born American biologist

Any scientific revolution has to accept all sorts of black boxes, for if one had to wait until all black boxes are opened, one would never have any conceptual advances.

*One Long Argument: Charles Darwin and the Genesis of Modern Evolutionary Thought*

Chapter Ten (p. 146)

Harvard University Press. Cambridge, Massachusetts, USA. 1991

### Medawar, Sir Peter Brian 1915–87

Brazilian-born English zoologist

It can be said that Science progresses only by peeling away, one after another, all the covering of apparent stability in the world; disclosing beneath the immobility of the infinitely small, movement of extra rapidity, and beneath the immobility of the Immense, movement of extra slowness.

*The Future of Man*

Some Reflections on Progress (p. 62)

Methuen & Company Ltd. London, England. 1960

### Planck, Max 1858–1947

German physicist

It is a rather zigzag pattern than the curve of scientific progress follows; indeed I might say that the forward movement is of an explosive type, where the rebound is an attendant characteristic of the advance. Every applied hypothesis which succeeds in throwing the searchlight of a new vision across the field of physical science represents a plunge into the darkness; because we cannot at first reduce the vision to a logical statement. Then follows the birth-struggle of a new theory. Once this has seen the light of day it has to go forward willy-nilly until the stamp of its destiny is put on it when the test of the research measurements is applied.

*Where Is Science Going?*

Nature's Image in Science (pp. 90–91)

W.W. Norton & Company, Inc. New York, New York, USA. 1932

An important scientific innovation rarely makes its way by gradually winning over and converting its opponents: it rarely happens that Saul becomes Paul. What does happen is that its opponents gradually die out and that the growing generation is familiarized with the idea from the beginning...

*The Philosophy of Physics*

Chapter III (p. 97)

W.W. Norton & Company, Inc. New York, New York, USA. 1936

### Popper, Karl R. 1902–94

Austrian/British philosopher of science

In science it would be a tremendous loss if we were to say: "We are not making very much progress. Let us sweep away all science and start afresh." The rational procedure is to correct it and to revolutionize it, but not to sweep it away. You may create a new theory, but the new theory is created in order to solve those problems which the old theory did not solve.

*Conjectures and Refutations*

Chapter 4 (p. 132)

Harper & Row, Publishers. New York, New York, USA. 1963

...in order that a new theory should constitute a discovery or a step forward it should conflict with its predecessor... it should contradict its predecessor; it should overthrow it. In this sense, progress in science – or at least a striking progress – is always revolutionary.

In Rom Harré

*Problems of Scientific Revolution*

The Rationality of Scientific Revolutions (pp. 82–83)

The Clarendon Press. Oxford, England. 1975

**Price, Don Krasher** 1910–95

American political scientist

...most scientists are prepared to work most of the time within the framework of ideas developed by their acknowledged leaders. In that sense...science is ruled by oligarchs who hold influence as long as their concepts and systems are accepted as the most successful strategy.... Once in a great while, a rival system is proposed; then there can usually be no settlement of the issue by majority opinion. The metaphor of “scientific revolution” suggests the way in which the losing party is displaced from authority, discredited and its doctrines eliminated from textbooks.

*The Scientific Estate*

Chapter 6 (p. 172)

Harvard University Press. Cambridge, Massachusetts, USA. 1965

**Priestley, Joseph** 1733–1804

English theologian and scientist

If the progress continues the same in another period, of equal length, what a glorious science shall we see unfold, what a fund of entertainment is there in store for us, and what important benefits must derive mankind.

Quoted by John G. McEvoy

Electricity, Knowledge, and the Nature of Progress in Priestley’s Thought

*The British Journal for the History of Science*, Volume 12, Number 40, 1979 (p. 76)

**Quetelet, Adolphe** 1794–1874

Belgian mathematician, astronomer, and statistician

The more progress physical sciences makes, the more they tend to enter the domain of mathematics, which is a kind of center to which they all converge. We may even judge of the degree of perfection to which a science has arrived by the facility with which it may be submitted to calculation.

In E. Mailly

*Annual Report of the Board of Regents of the Smithsonian Institution, 1874*

Eulogy of Quetelet (p. 173)

Government Printing Office. Washington, D.C. 1875

**Richet, Charles** 1850–1935

French physiologist

One can only progress in the sciences – with the exception of Mathematics – at the price of great pecuniary sacrifice.

Translated by Sir Oliver Lodge

*The Natural History of a Savant*

Chapter II (p. 21)

J.M. Dent & Sons Ltd. London, England. 1927

All progress in science is progress in civilization, and consequently contributes to the welfare of man.

Translated by Sir Oliver Lodge

*The Natural History of a Savant*

Chapter XIII (p. 145)

J.M. Dent & Sons Ltd. London, England. 1927

**Rindos, David** 1947–96

American educator

Progress in science depends not only upon new data but also upon the careful elaboration of new approaches to old data as well as new.

In Michael B. Schiffer (ed.)

*Archaeological Method and Theory* (Volume 1)

Chapter I (p. 1)

University of Arizona Press. Tucson, Arizona, USA. 1989

**Romanoff, Alexis Lawrence** 1892–1980

Russian soldier and scientist

Science is the key to the progress of the world.

*Encyclopedia of Thoughts*

Aphorism 20

Ithaca Heritage Books. Ithaca, New York, USA. 1975

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

Men sometimes speak as though the progress of science must necessarily be a boon to mankind, but that, I fear, is one of the comfortable nineteenth century delusions which our more disillusioned age must discard.

*Icarus; or, The Future of Science* (p. 57)

**Russell, Lord John** 1792–1878

English Whig and Liberal politician

Those who make these [scientific] discoveries sometimes commit great errors. They fall into many absurd mistakes...but these blunders and these errors disappear – the discoveries alone remain; other men afterwards make these discoveries the elements and groundwork of new investigations, and thus the progress of science is continual; but truth remains, the methods of investigations even are shortened, and the progress continually goes on.

*The World’s Best Orations: From the Earliest Period to the Present*

*Time* (Volume 9)

Science and Literature as Modes of Progress (p. 3365)

Ferd. P. Keiser. St. Louis, Missouri, USA. 1899

**Sarton, George** 1884–1956

Belgian-born American scholar and writer

When we say that science is essentially progressive this does not mean that in his quest of truth man follows always the shortest path. Far from it, he beats about

the bush, does not find what he is looking for but finds something else, retraces his steps, loses himself in various detours, and finally after many wanderings touches the goal.

*The History of Science and the New Humanism*

Chapter I (pp. 45–46)

H. Holt & Co. New York, New York, USA. 1931

**Smith, Alexander** 1865–1922

American chemist and author

The progress of science would be almost completely arrested, if, every time we succeeded in formulating a seemingly satisfactory statement of truth in regard to some set of phenomena, the exhibition by nature of any behavior which was in conflict with our statement became forthwith “impossible.”

*Introduction to General Inorganic Chemistry*

Chapter I (p. 8)

The Century Co. New York, New York, USA. 1907

**Stewart, Alfred Walter** 1880–1947

British chemist

Speaking exclusively of observational and experimental sciences, it is obvious that progress can be accomplished only at the cost of destroying or modifying current theories; for if a theory suffices to explain facts discovered after its promulgation, knowledge may be increased; but there is no true progress unless our general outlook is altered.

*Recent Advances in Organic Chemistry*

Chapter I (p. 1)

Longmans, Green & Co. London, England. 1908

**Thomson, Sir George Paget** 1892–1975

English physicist

...the progress of science is a little like making a jig-saw puzzle. One makes collections of pieces which certainly fit together, though at first it is not clear where each group should come in the picture as a whole, and if at first one makes a mistake in placing it, this can be corrected later without dismantling the whole group.

*The Inspiration of Science*

Introduction (pp. 5–6)

Oxford University Press, Inc. London, England. 1961

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

You can hardly convince a man of an error in a life-time, but must content yourself with the reflection that the progress of science is slow.

*A Week on the Concord and Merrimack Rivers*

Sunday (p. 43)

Charles Scribner's Sons. New York, New York, USA. 1921

**Umbgrove, J. H. F.**

No biographical data available

Science progresses with steady strides. New facts come to light and new ideas are born every day, and

our conception of the structure of the universe changes accordingly. Our views have constantly to be revised and readjusted, but occasionally new aspects of far-reaching consequence shed such an unexpectedly different light on existing problems that its effects might be compared to those of a revolution. All that had hitherto been sacrosanct crumbles to the ground; hardly anything is left untouched.

*The Pulse of the Earth*

Chapter I (p. 2)

M. Nijhoff. The Hague, Netherlands. 1947

**von Bertalanffy, Ludwig** 1901–72

Austrian biologist

The evolution of science is not a movement in an intellectual vacuum; rather it is both an expression and a driving force of the historical process.

*Problems of Life: An Evaluation of Modern Biological Thought*

Chapter Six (p. 202)

Watts & Company. London, England. 1952

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

...we might well mention from our perspective, that there are advantages to entering a field of science which is in a state of crisis, and in which we also find an active, extraordinary person. We are young with young methods, our beginnings reach into a new epoch.

In Karl J. Fink

*Goethe's History of Science*

Chapter 6 (p. 88)

Cambridge University Press. Cambridge, England. 1991

**von Liebig, Justus** 1803–73

German organic chemist

...the progress of science is, like the development of Nature's works, gradual and expansive. After the buds and branches spring forth the leaves and blossoms, after the blossoms the fruit.

*Familiar Letters on Chemistry*

Letter IX (p. 128)

Walton & Maberly. London, England. 1859

## SCIENCE, PROMOTION OF

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

If a man devotes himself to the promotion of science, he is firstly opposed, and then he is informed that his ground is already occupied. At first men will allow no value to what we tell them, and then they behave as if they knew it all themselves.

Translated by Thomas Bailey Saunders

*The Maxims and Reflections of Goethe*

#571 (p. 199)

The Macmillan Co. New York, New York, USA. 1906

**von Neumann, John** 1903–57  
Hungarian-American mathematician

**Morgenstern, Oskar** 1902–77  
German-born American economist

The great progress in every science came when, in the study of problems which were modern as compared with ultimate aims, methods were developed which could be extended further and further. The free fall is a very trivial physical phenomenon, but it was the study of this exceedingly simple fact and its comparison with the astronomical material, which brought forth mechanics.

*Theory of Games and Economic Behavior*  
Chapter 1.3.2 (p. 6)  
Princeton University Press. Princeton, New Jersey, USA. 1947

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

The progress of Science consists in observing interconnections and in showing with a patient ingenuity that the events of this ever-shifting world are but examples of a few general relations, called laws. To see what is general in what is particular, and what is permanent in what is transitory, is the aim of scientific thought.

*An Introduction to Mathematics*  
Chapter 1 (p. 4)  
Oxford University Press, Inc. New York, New York, USA. 1958

[S]cience started its modern career by taking over ideas derived from the weakest side of the philosophies of Aristotle's successors. In some respects it was a happy choice. It enabled the knowledge of the seventeenth century to be formulated so far as physics and chemistry were concerned, with a completeness which lasted to the present time. But the progress of biology and psychology has probably been checked by the uncritical assumption of half-truths.

*Science and the Modern World*  
Chapter I (pp. 16–17)  
The Macmillan Company. New York, New York, USA. 1929

In the conditions of modern life the rule is absolute, the race which does not value trained intelligence is doomed. Not all your heroism, not all your social charm, not all your wit, not all your victories on land or at sea, can move back the finger of fate. Today we maintain ourselves. Tomorrow science will have moved forward yet one more step, and there will be no appeal from the judgment which will then be pronounced on the uneducated.

*The Organisation of Thought*  
Chapter I (p. 28)  
Greenwood Press Publishers. Westport, Connecticut, USA. 1974

## SCIENCE, PURE

**Barnett, Lincoln Kinnear** 1909–79  
American science writer

...the aims of pure basic science, unlike those of applied science, are neither fast-flowing nor pragmatic. The quick harvest of applied science is the useable process, the medicine, the machine. The shy fruit of pure science is understanding.

The Meaning of Einstein's New Theory  
*Life*, January 9, 1950 (p. 22)

**Coulter, John Merle** 1851–1928  
American botanist and educator

To neglect pure science and support only applied science would be like wanting children and eliminating parents. The Social, Educational, and Scientific Value of Botanic Gardens  
*Science*, N.S. Volume 45, Number 1174, June 29, 1917 (p. 645)

**Jevons, Frank Byron** 1858–1936  
No biographical data available

The business of pure science is to discover facts; that of the applied science is to use them.

*An Introduction to the Study of Comparative Religion*  
Introduction (p. 2)  
The Macmillan Co. New York, New York, USA. 1908

**Munroe, J.**  
No biographical data available

The study of pure Science tends in a measure not only to lessen our sense of the beauty of external Nature, but to dispel that reverent spirit in which we should regard each other and the wonderful universe in which we dwell.

*Science and the Sense of Beauty*  
*The Journal of Science, and Annals of Astronomy, Biology, Geology*,  
Volume IV, (Third series), April, 1882 (p. 201)

## National Academy of Sciences (USA)

...pure science is the blind instinct of civilization. It delights to lay eggs – the more, the better – but gives no thought nor care to their hatching.

*Biographical Memoirs* (Volume 4)  
Biographical Memoir of George Hammell Cook (p. 138)  
National Academy of Sciences (USA). Washington, D.C. 1902

**Sagan, Carl** 1934–96  
American astronomer and author

Science – pure science, science not for any practical application but for its own sake – is a deeply emotional matter for those who practice it, as well as for those non-scientists who every now and then dip in to see what's been discovered lately.

*The Demon-Haunted World: Science as a Candle in the Dark*  
Chapter 19 (p. 330)  
Random House, Inc. New York, New York, USA. 1995

## SCIENCE, PURSUIT OF

**Chandrasekhar, Subrahmanyan** 1910–95  
Indian-born American astrophysicist

The pursuit of science has often been compared to the scaling of mountains, high and not so high. But who amongst us can hope, even in imagination, to scale the Everest and reach its summit when the sky is blue and the air is still, and in the stillness of the air survey the entire Himalayan range in the dazzling white of the snow stretching to infinity? None of us can hope for a comparable vision of nature and of the universe around us. But there is nothing mean or lowly in standing in the valley below and awaiting the sun to rise over Kinchinjunga.

*Truth and Beauty: Aesthetics and Motivation in Science*  
Chapter 2, Section X (pp. 26–27)  
The University of Chicago Press. Chicago, Illinois, USA. 1987

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

We all know that there are regions of the human spirit untrammelled by the world of physics. In the mystic sense of the creation around us, in the expression of art, in a yearning towards God, the soul grows upward and finds the fulfillment of something implanted in its nature. The sanction for this development is within us, a striving born with our consciousness or an Inner Light proceeding from a greater power than ours. Science can scarcely question this sanction, for the pursuit of science springs from a striving which the mind is impelled to follow, a questioning that will not be suppressed.

*The Nature of the Physical World*  
Chapter XV (pp. 327–328)  
The University Press. New York, New York, USA. 1929

**Priestley, Joseph** 1733–1804  
English theologian and scientist

A successful pursuit of science makes a man the benefactor of all mankind and of every age.

*Experiments and Observations on Different Kinds of Air* (Volume 1)  
The Preface (p. xxvii)  
Thomas Pearson. Birmingham, England. 1790

**Wheeler, John Archibald** 1911–  
American physicist and educator

...the pursuit of science is more than the pursuit of understanding. It is driven by the creative urge, the urge to construct a vision, a map, a picture of the world that gives the world a little more beauty and coherence than it had before.

*Geons, Black Holes, and Quantum Foam: A Life in Physics*  
Chapter 3 (p. 84)  
W.W. Norton & Company, Inc. New York, New York, USA. 1998

## SCIENCE, REALITY OF

**Lubbock, John, First Baron Avebury** 1834–1919  
English banker, politician, biologist, and archaeologist

...the realities of Science have proved far more varied and surprising than the dreams of fiction.

*The Beauties of Nature and the Wonders of the World We Live In*  
Chapter III (p. 96)  
Macmillan & Company Ltd. London, England. 1903

## SCIENCE, REFINEMENT OF

**Churchill, Winston Spencer** 1882–1965  
British prime minister, statesman, soldier, and author

The latest refinements of science are linked with the cruelties of the Stone Age.

Speech  
26 March, 1942

## SCIENCE, REPUBLIC OF

**Clifford, William Kingdon** 1845–79  
English mathematician

...the republic of science, which allows no masters, but proved comrades only...

In Robert Tucker  
*Mathematical Papers*  
Review of *A Budget of Paradoxes* (p. 561)  
Macmillan & Company Ltd. London, England. 1882

## SCIENCE, REWARD OF

**Slosson, Edwin E.** 1865–1929  
American chemist and journalist

The highest reward of science, the secret satisfaction of standing where no mortal man has ever stood before, is rightly reserved to those who contribute most to its advance.

Science from the Side-Lines  
*The Century: A Popular Quarterly*, Volume 103, November 1921 to April 1922 (p. 473)

## SCIENCE, RIGOR OF

**Hertz, Heinrich** 1857–94  
German physicist

The rigor of science requires, that we distinguish well the un-draped figure of nature itself from the gay-coloured

vesture with which we clothe it at our pleasure.

Quoted in Ludwig Boltzmann

Certain Questions of the Theory of Gasses

*Nature*, Volume 51, Number 1322, February 28, 1895 (p. 413)

## SCIENCE, ROLE OF

### Colin, Trudge

No biographical data available

The true role of science is not to change the universe but more fully to appreciate it.

*The Engineer in the Garden: Genes and Genetics* (p. 361)

Hill & Wang. New York, New York, USA. 1993

### Tudge, Colin 1943–

English science writer

The true role of science is not to change the universe but more fully to appreciate it.

*The Engineer in the Garden: Genes and Genetics* (p. 361)

Hill & Wang. New York, New York, USA. 1993

## SCIENCE, RUSH OF

### Darwin, Sir Francis 1848–1925

English botanist

How grand is the onward rush of science; it is enough to console us for the many errors which we have committed, and for our efforts being overlaid and forgotten in the mass of new facts and new views which are daily turning up.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 2)

Darwin to Wallace, August 28, 1872 (p. 348)

D. Appleton & Company. New York, New York, USA. 1896

## SCIENCE, SCAVENGER OF

### Magendie, Francois 1783–1855

French physiologist

I am a mere street scavenger of science. With hook in hand and basket on my back, I go about the streets of science collecting whatever I find.

In Rene Dubos

*Louis Pasteur: Free Lance of Science*

Chapter XIII (p. 363)

Little, Brown & Company. Boston, Massachusetts, USA. 1950

## SCIENCE, SCOPE OF

### Simpson, George Gaylord 1902–84

American paleontologist

As for the scope of science, it includes everything known to exist or to happen in the material universe. Since the arts, philosophy, and theology do exist in the material universe, they too are within the scope of science and can

properly be studied as psychological, anthropological, and biological phenomena.

*Notes on the Nature of Science*

Notes on the Nature of Science by a Biologist (pp. 11–12)

Harcourt, Brace & World, Inc. New York, New York, USA. 1962

## SCIENCE, SCRUTINIZING EYE OF

### Dana, James Dwight 1813–95

American geologist, mineralogist, and naturalist

The scrutinizing eye of science penetrates with far-reaching sight the system of things about us, and in the dim limits of vision reads everywhere the word mystery.

*On Coral Reefs and Islands*

Chapter II (p. 47)

G.P. Putnam & Co. 1853

## SCIENCE, SEARCH-LIGHT OF

### Dampier, Sir William Cecil 1867–1952

English scientific writer

But beyond the bright search-lights of science, Out of sight of the windows of sense, Old riddles still bid us defiance, Old questions of Why and of Whence.

*The Recent Development of Physical Science*

Introduction (p. 10)

P. Blakiston's Son & Co. Philadelphia, Pennsylvania, USA. 1904

## SCIENCE, SECRETS OF

### Quintilian ca. 35–ca. 100

Roman rhetorician

There is nothing more detestable than a man who, because he has learned a little more than the alphabet, thinks that he has been initiated into the deepest secrets of science.

*De Institutione Oratoria*

I, 1, 8

Publisher undetermined. London, England. 1822

The lofty serenity of science becomes possible only on the condition of impartial criticism, which without regard for the beliefs of a certain portion of humanity, handles its imperturbable instrument with the inflexibility of the geometrician, without anger and without pity. The critic never insults.

*The Future of Science*

Chapter XV (p. 257)

Roberts Brothers. Boston, Massachusetts, USA. 1893

## SCIENCE, SERENITY OF

### Renan, Ernest 1823–92

French philosopher and Orientalist

The lofty serenity of science becomes possible only on the condition of impartial criticism, which without regard

for the beliefs of a certain portion of humanity, handles its imperturbable instrument with the inflexibility of the geometriician, without anger and without pity. The critic never insults.

*The Future of Science*

Chapter XV (p. 257)

Roberts Brothers. Boston, Massachusetts, USA. 1893

## SCIENCE, SHIP OF

**Gregory, Sir Richard Arman** 1864–1952

English scientific writer and journalist

Explorers on the ship of science go out to discover new lands; and their spirit is not the same as that which actuates the prospectors who follow them with the intention of making the lands profitable to themselves and others.

*Discovery, Or, The Spirit and Service of Science*

Chapter IX (pp. 234–235)

Macmillan & Co Ltd. London, England. 1916

## SCIENCE, SIGNS OF

**Hobbes, Thomas** 1588–1679

English philosopher and political theorist

The signs of science are, some certain and infallible; some, uncertain. Certain, when he that pretendeth the science of anything, can teach the same; that is to say, demonstrate the truth thereof perspicuously to another; uncertain, when only some particular events answer to his pretence, and upon many occasions prove so as he says they must.

*Leviathan, Or, The Matter, Form, and Power of a Commonwealth,*

*Ecclesiastical and Civil* (2nd edition)

Chapter V (p. 30)

George Routledge & Sons. London, England. 1886

## SCIENCE, SOUL OF

**Darwin, Sir Francis** 1848–1925

English botanist

Forgive me for suggesting one caution; as Demosthenes said, “Action, action, action,” was the soul of eloquence, so is caution almost the soul of science.

In Francis Darwin (ed.)

*More Letters of Charles Darwin* (Volume 2)

To Dohrn, January 4, 1870 (p. 444)

D. Appleton & Company. New York, New York, USA. 1903

**Lowenberg, J.**

No biographical data available

The soul of science is a restless soul. Its temper is a temper aglow with defiance of all that limits and arrests inquiry, analysis, and experiment. Ceaseless incursion into the unknown is its endless task. It lives on questions and it feeds on problems. No scientific answer

which in its turn is not the beginning of new questions. No scientific solution without its peculiar train of fresh problems. It is in this sense that the word finality is utterly incongruous with the critical and mobile spirit of science.

Philosophy and Humanism

*University of California Chronicle*, Volume XXIII, Number 3, July, 1921 (p. 311)

## SCIENCE, STAGE OF

**Whewell, William** 1794–1866

English philosopher and historian

Every stage of science has its train of practical applications and systematic inferences, arising both from the demands of convenience and curiosity, and from the pleasure which, as we have already said, ingenious and active-minded men feel in exercising the process of deduction.

*History of the Inductive Sciences from the Earliest to the Present Time* (3rd edition)

Book III, Chapter I (p. 121)

John W. Parker & Son. London, England. 1857

## SCIENCE, STORY OF

**Anthony, H. D.**

No biographical data available

The story of science and its background reveals another aspect of human progress, measured not so much in terms of time as of achievement.

*Science and Its Background*

Chapter I (p. 6)

Macmillan & Co Ltd. London, England. 1948

## SCIENCE, STRENGTH OF

**Abelson, Philip Hauge** 1913–2004

American physicist

Part of the strength of science is that it has tended to attract individuals who love knowledge and the creation of it. Just as important to the integrity of science have been the unwritten rules of the game. These provide recognition and approbation for work which is imaginative and accurate, and apathy or criticism for the trivial or inaccurate.... Thus, it is the communication process which is at the core of the vitality and integrity of science...

The Roots of Scientific Integrity

*Science*, Volume 139, 1963

**Hauge, Philip** 1913–2004

American scientist, editor, and administrator

Part of the strength of science is that it has tended to attract individuals who love knowledge and the creation of it.

Just as important to the integrity of science have been the unwritten rules of the game. These provide recognition and approbation for work which is imaginative and accurate, and apathy or criticism for the trivial or inaccurate.... Thus, it is the communication process which is at the core of the vitality and integrity of science.... The system of rewards and punishments tends to make honest, vigorous, conscientious, hardworking scholars out of people who have human tendencies of slothfulness and no more rectitude than the law requires.

The Roots of Scientific Integrity  
*Science*, Volume 139, 1963 (p. 3561)

**Lewis, Gilbert Newton** 1875–1946  
American chemist

The strength of science lies in its naïveté. Science is like life itself; if we could foresee all the obstacles that lie in our path we would not attack even the first, but would settle down to self-centered contemplation.

*The Anatomy of Science*  
Chapter I (p. 1)  
Yale University Press. New Haven, Connecticut, USA. 1926

## SCIENCE, STUDENT OF

**Hill, Alexander**  
No biographical data available

The aim Of science is to know Nature. As a merchant takes stock of his goods before he makes plans for placing them on the market, so the student of science must make himself acquainted with the phenomena which Nature exhibits, in the province which he has pledged himself to explore, before he attempts to assign to them their several uses.

*Introduction to Science*  
Chapter I (p. 5)  
The Macmillan Co. New York, New York, USA. 1900

**Kingsley, Charles** 1819–75  
English clergyman and author

Good men, honest men, accurate men, righteous men, patient men, self-restraining men, fair men, modest men. Men who are aware of their own vast ignorance compared with the vast amount that there is to be learned in such a universe as this. Men who are accustomed to look at both sides of a question; who, instead of making up their minds in haste like bigots and fanatics, wait like wise men, for more facts, and more thought about the facts. In one word, men who had acquired just the habit of mind which the study of Natural Science can give, and must give; for without it there is no use studying Natural Science; and the man who has not got that habit of mind, if he meddles with science, will merely become a quack and a charlatan, only fit to get his bread as a spirit-rapper, or an inventor of infallible pills.

*Scientific Lectures and Essays*  
Preface (pp. 19–20)  
Macmillan & Co Ltd. London, England. 1893

**Munroe, J.**  
No biographical data available

The student of modern Science is led by patient observation and experiment into the details of Nature. He is no longer viewing the great masses of the heavens and endeavoring to solve the riddle of their mysterious motions. He is busy investigating the component particles of their large masses.

Science and the Sense of Beauty  
*The Journal of Science, and Annals of Astronomy, Biology, Geology*,  
Volume IV, (Third series), April, 1882 (p. 202)

**Richards, Theodore William** 1868–1928  
American chemist

Every student of Science, even if he cannot start his journey where his predecessors left off, can at least travel their beaten track more quickly than they could while they were clearing the way: and so before his race is run he comes to virgin forest and becomes himself a pioneer.

*Nobel Lectures, Chemistry 1901–1921*  
Nobel lecture for award received in 1914  
Atomic Weights (p. 280)  
Elsevier Publishing Company. Amsterdam, Netherlands. 1966

## SCIENCE, STUDY OF

**Boole, George** 1815–64  
English mathematician

The study of every department of physical science begins with observation, it advances by the collation of facts to a presumptive acquaintance with their connecting law, the validity of such presumption it tests by new experiments so devised as to augment, if the presumption be well founded, its probability indefinitely; and finally, the law of the phenomenon having been with sufficient confidence determined, the investigation of causes, conducted by the due mixture of hypothesis and deduction, crowns the inquiry.

*An Investigation of the Laws of Thought*  
Chapter XXII (p. 402)  
Walton & Maberly. London, England. 1854

**Clarke, Frank Wigglesworth** 1847–1931  
American chemist

The study of science is a continual discouragement of obscurity or vagueness; it is a discipline in the statement and solution of definite problems, and it trains one to see things as they are, apart from all irrelevancies.

The Man of Science in Practical Affairs  
*Appletons' Popular Science Monthly*, Volume XLV, February, 1900  
(p. 488)

**Lavoisier, Antoine Laurent** 1743–94

French chemist

When we begin the study of any science, we are in a situation, respecting that science, similar to that of children; and the course by which we have to advance is precisely the same which Nature follows in the formation of their ideas. In a child, the idea is merely an effect produced by a sensation; and, in the same manner, in commencing the study of a physical science, we ought to form no idea but what is a necessary consequence, and immediate effect, of an experiment or observation. Besides, he that enters upon the career of science, is in a less advantageous situation than a child who is acquiring his first ideas.

*Elements of Chemistry*

Preface (p. xv)

Publisher undetermined

Edinburgh, Scotland. 1799

**Prout, Curtis**

No biographical data available

The study of science suggests the need for humility.

*Demand and Get the Best Health Care for You: An Eminent Doctor's Practical Advice* (p. 148)

Faber &amp; Faber. Boston, Massachusetts, USA. 1997

**SCIENCE, SUBJECTS OF****Cole, K. C.**

Science writer

The subjects of science are not only often unseeable; they are also untouchable, unmeasurable, and sometimes even unimaginable.

*First You Build a Cloud and Other Reflections on Physics as a Way of Life*

Part I, Chapter I (p. 17)

Harcourt Brace &amp; Co. Orlando, Florida, USA. 1999

**SCIENCE, SUCCEED IN****Singer, Charles** 1876–1960

Historian of science and medicine

To succeed in science it is necessary to receive the tradition of those who have gone before us. In science, more perhaps than in any other study, the dead and the living are one.

In Lloyd William Taylor

*Physics: the Pioneer Science* (Volume 1)

Chapter 15 (p. 182)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1941

**SCIENCE, SUPERIORITY OF****Born, Max** 1882–1970

German-born English physicist

I now regard my former belief in the superiority of science over other forms of human thought and behavior

as a self-deception due to youthful enthusiasm over the clarity of scientific thinking as compared with the vagueness of metaphysical systems.

Still, change of fundamental concepts and the failure to improve the moral standards of human society are no demonstration of the uselessness of science in the search for truth and for a better life.

*Physics in My Generation*

Preface (p. v)

Springer-Verlag New York, Inc. New York, New York, USA. 1969

**SCIENCE, TECHNICALITIES OF****Clarke, Frank Wigglesworth** 1847–1931

American chemist

The technicalities of science, so bewildering to the layman, are merely aids to exactness, avoidances of circumlocution – in short, they are practical devices whereby labor is saved.

The Man of Science in Practical Affairs

*Appletons' Popular Science Monthly*, Volume XLV, February, 1900 (p. 488)**SCIENCE, TEMPLE OF****Brewster, David** 1781–1868

Scottish scientist, inventor, and writer

If the God of Love is most appropriately worshiped in the Christian Temple, the God of Nature may be equally honoured in the Temple of science.

*Report of the Twentieth Meeting of the British Association for the Advancement of Science*

Address of the President (p. xli)

John Murray. London, England. 1851

**Einstein, Albert** 1879–1955

German-born physicist

Many kinds of men devote themselves to Science, and not all for the sake of Science herself. There are some who come into her temple because it offers them the opportunity to display their particular talents. To this class of men science is a kind of sport in the practice of which they exult, just as an athlete exults in the exercise of his muscular prowess. There is another class of men who come into the temple to make an offering of their brain pulp in the hope of securing a profitable return. The men are scientists only by the chance of some circumstance which offered itself when making a choice of career...it is clear that if the men who have devoted themselves to science consisted only of the two categories I have mentioned, the edifice could never have grown to its present proud dimensions....

In Max Planck

*Where Is Science Going?*

Prologue (p. 7)

W.W. Norton &amp; Company, Inc. New York, New York, USA. 1932

I am inclined to agree with Schopenhauer in thinking that one of the strongest motives that lead people to give their lives to art and science is the urge to flee from everyday life, with its drab and deadly dullness, and thus to unshackle the chains of one's own transient desires, which supplant one another in interminable succession so long as the mind is fixed on the horizon of daily environment.

In Max Planck

*Where Is Science Going?*

Prologue (p. 7)

W.W. Norton & Company, Inc. New York, New York, USA. 1932

In the temple of science are many mansions, and various indeed are they that dwell therein and the motives that have led them thither. Many take to science out of a joyful sense of superior intellectual power; science is their own special sport to which they look for vivid experience and the satisfaction of ambition; many others are to be found in the temple who have offered the products of their brains on this altar for purely utilitarian purposes. Were an angel of the Lord to come and drive all the people belonging to these two categories out of the temple, the assemblage would be seriously depleted, but there would still be some men, of both present and past times, left inside.

*Ideas and Opinions*

Principles of Research (p. 224)

Crown Publishers, Inc. New York, New York, USA. 1954

**Gregory, Sir Richard Arman** 1864–1952

British science writer and journalist

To qualify for admission into the temple of science it is necessary to offer sacrifices at the altar of knowledge; and only those with sincere regard for truth will find their gifts acceptable.

*Discovery; or, The Spirit and Service of Science*

Chapter III (p. 54)

Macmillan & Company Ltd. London, England. 1918

**Herschel, Sir John Frederick William** 1792–1871

English astronomer and chemist

Admission to its [temple of science] sanctuary, and to the privileges and feelings of a votary, is only to be gained by one means – sound and sufficient knowledge of mathematics, the great instrument of all exact inquiry, without which no man can ever make such advances in this or any other of the higher departments of science as can entitle him to form an independent opinion on any subject of discussion within their range.

*Outlines of Astronomy: By Sir John F. W. Herschel*

Introduction (p. 26)

American Home Library Co. New York, New York, USA. 1902

**Pasteur, Louis** 1822–95

French chemist

Preconceived ideas are like searchlights which illuminate the path of the experimenter and serve him as a guide to interrogate nature. They become a danger only if he transforms them into fixed ideas – this is why I should like to see these profound words inscribed on the threshold of all the temples of science: “The greatest derangement of the mind is to believe in something because one wishes it to be so”...

In René Dubos

*Louis Pasteur: Free Lance of Science*

Speech to the French Academy of Medicine, July 18, 1876, Chapter XIII (p. 376)

Little, Brown & Company. Boston, Massachusetts, USA. 1950

**Peet, C. C.**

No biographical data available

The temple of science is the temple of sense; Its foundation is logic, and right its defense; Knowledge and wisdom, its beams of support; Truth its great tower, and reason its court.

*Whispers and Echoes*

The Temple of Science (p. 48)

Published by the Author. Boston, Massachusetts, USA. 1882

**Pierce, Benjamin** 1809–80

American mathematician

...it is not to be forgotten that the Temple of Science, by whomsoever built, belongs to no country or clime. It is the World's Temple, and all men are free of its communion. Let us not mar its beauty by 'writing our names upon its walls. The stone which we have inserted, is not ours, it is not thine, it is not mine, but it is part of the Temple.

Opening Address

*The Annals of Science*, Volume I, Number 18, August, 1853 (p. 207)

**Planck, Max** 1858–1947

German physicist

Anybody who has been seriously engaged in scientific work of any kind realizes that over the entrance to the gates of the temple of science are written the words: *Ye must have faith*. It is a quality which the scientist cannot dispense with.

*Where Is Science Going?*

Epilogue (p. 214)

W.W. Norton & Company, Inc. New York, New York, USA. 1932

**Polyphilus**

One evening as I slept, methought I beheld a beautiful temple in a beautiful place; I stood and gazed on this wonderful work with admiration and astonishment, many of its high towers appeared to touch the sky, but one in particular met my observation; it seemed to rise above all the others and lose its summit in the deep blue sky, which it would have done but for a stream of vivid gold which displayed its wondrous termination. What does

this mean? I enquired of an old man at the gate of the temple. He answered, son! This is the temple of science!

*The Oriental Rambler, or, The Papers of Polyphilus*

Part I

Number 25 (p. 109)

J.B. Pharoah. 1844

**Richards, William Carey** 1818–92

American magazine editor

And lo! a temple builded to her praise,  
Whose grand proportions mortals may not know!  
Geology its deep foundation lays,  
In massive rocks, that with the ages grow,  
Slow as their solemn lapse, and strong as slow:  
No marble walls on these foundations rise,  
Nor mortal-fashioned columns stand arrow;  
For walls and dome, Astronomy supplies  
The infinite profound, of wonder-veiling skies.

*Electron, or, The Pranks of the Modern Puck*

The Temple of Science (pp. 17–18)

D. Appleton & Co. New York, New York, USA. 1858

## SCIENCE, THEOREM OF

**Harris, James** 1709–80

English grammarian

...every Exercise of the Mind upon Theorems of Science, like generous and manly Exercise of the Body, tends to call forth and strengthen Nature's original Vigour. Be the Subject itself immediately lucrative or not, the Nerves of Reason are braced by the mere Employ, and we become abler Actors in the Drama of Life, whether our Part be of the busier, or of the sedater kind.

*Hermes: Or, A Philosophical Inquiry Concerning Universal Grammar*

(7th edition)

Book II, Chapter V (p. 295)

Printed for J. Collingwood. London, England. 1825

## SCIENCE THEORETICAL

**Kline, Morris** 1908–92

American mathematics professor and writer

Theoretical Science is a game of mathematical make-believe.

*Mathematics: The Loss of Certainty*

Chapter XIV (p. 325)

Oxford University Press, Inc. New York, New York, USA. 1980

**Schrödinger, Erwin** 1887–1961

Austrian theoretical physicist

A theoretical science unaware that those of its constructs considered relevant and momentous are destined eventually to be framed in concepts and words that have a grip on the educated community and become part and parcel of the general world picture – a theoretical science, I say,

where this is forgotten, and where the initiated continue musing to each other in terms that are, at best, understood by a small group of close fellow travelers, will necessarily be cut off from the rest of cultural mankind; in the long run it is bound to atrophy and ossify however virulently esoteric chat may continue within its joyfully isolated groups of experts.

Are There Quantum Jumps?

*The British Journal for the Philosophy of Science*, Volume 3, 1952 (p. 110)

## SCIENCE, THINK OF

**Wilson, Andrew** 1852–1912

No biographical data available

When, therefore, you think of science, do not picture it to yourself as composed of nothing save the dry-as-dust technicalities of popular notions.... Think of true science as a living reality; as a faithful expounder of all that is worth knowing and that can be known; as an existing power, ever anxious in its unwearied march for the good and welfare of mankind; and best of all, perhaps, as an ever-willing instructor of all who will come to be taught.

*Leisure-time Studies: Chiefly Biological. A Series of Essays and Lectures*

Science-Culture for the Masses (pp. 34–35)

Chatto & Windus. London, England. 1879

## SCIENCE, TORCH OF

**Poteat, William Louis** 1856–1938

American educator

It is true that the torch of science grows brighter with each passing year, and shoots its rays deeper into the enveloping darkness, but mystery is ever with it. Science proposes more questions than it solves.

Science and Culture

*The South Atlantic Quarterly*, Volume 2, Number 1, January, 1903 (p. 72)

## SCIENCE, TOUCH OF

**Balfour, Arthur James** 1848–1930

English prime minister

The material world, howsoever it may have gained in sublimity, has, under the touch of science, lost (so to speak) in domestic charm. Except where it affects the immediate needs of organic life, it may seem so remote from the concerns of men that in the majority it will rouse no curiosity, while of those who are fascinated by its marvels, not a few will be chilled by its impersonal and indifferent immensity.

In Wilfrid M. Short

*The Mind of Arthur James Balfour*

Decadence (p. 97)

George H. Doran Co. New York, New York, USA. 1918

**Pritchett, V. S.** 1900–97  
English writer

A touch of science, even bogus science, gives an edge to the superstitious tale.

*The Living Novel and Later Appreciations*  
An Irish Ghost (p. 123)  
Random House, Inc. New York, New York, USA. 1964

## SCIENCE, TOUCHSTONE OF

**Pearson, Karl** 1857–1936  
English mathematician

The touchstone of science is the universal validity of its results for all normally constituted and duly instructed minds.

*The Grammar of Science* (2nd edition)  
Chapter I (p. 24)  
Adam & Charles Black. London, England. 1900

## SCIENCE, TRACES OF

**Venable, Francis Preston** 1856–1934  
American chemist

In attempting to discover traces of a science in earliest historic times, one must first disabuse his mind of the idea that he will find it in anything like the elaborated modern form in which he knows it. These natural sciences are the result of a long process of evolution, and the primal form will probably prove a very much disguised one.

*A Short History of Chemistry*  
Part First (p. 1)  
D.C. Heath & Co. Boston, Massachusetts, USA. 1894

## SCIENCE, TRASH CANS OF

**Mandelbrot, Benoit B.** 1924–  
French mathematician

I started looking in the trash cans of science...because I suspected that what I was observing was...perhaps very widespread. I attended lectures and looked in unfashionable periodicals...once in a while finding some interesting things. In a way it was a naturalist's approach, not a theoretician's approach. But my gamble paid off.

In James Gleick  
*Chaos: Making a New Science*  
A Geometry of Nature (p. 110)  
The Viking Press. New York, New York, USA. 1987

## SCIENCE, TREASURES OF

**Webster, Daniel** 1782–1852  
American statesman

We welcome you to the treasures of science and the delights of learning.

*The Great Speeches and Orations of Daniel Webster*  
First Settlement of New England (p. 52)  
Little, Brown & Co. Boston, Massachusetts, USA. 1914

## SCIENCE, TRUE

**Harvey, Moses** 1820–1901  
Irish clergyman, essayist, and naturalist

True science being thus the interpretation of nature, must of necessity be imperfect, though progressive; and from feeble beginnings, and through many mistakes arising from an imperfect acquaintance with facts, she has to correct her stammering utterances, as she attempts to read the hieroglyphics of the universe.

Science and Religion  
*The Maritime Monthly*, Volume II, November, 1873 (p. 479)

...true Science is always modest and humble; always cherishes a deep reverence for facts, and is always ready to correct her own interpretations as a clearer light is reached. As she conquers one realm after another, she recognizes that these are but fringes of the great realms of the unknown which lie beyond.

Science and Religion  
*The Maritime Monthly*, Volume II, November, 1873 (p. 479)

**Renan, Ernest** 1823–92  
French philosopher and Orientalist

A little true science is better than a great deal of bad science. One is less liable to error by confessing one's ignorance than by fancying that one knows a great many things one does not.

*The Future of Science*  
Preface (p. xix)  
Roberts Brothers. Boston, Massachusetts, USA. 1893

## SCIENCE, TRUTH OF

**Silver, Brian L.**  
Israeli professor of physical chemistry

One point is incontestable: the "truth" of science must always remain open to critical scrutiny and will sometimes have the status of a beauty queen: looks good today, but next year she'll be dethroned. That is because the real test of a scientific theory is not whether it is "true." The real test is whether it works.

*The Ascent of Science*  
Part I, Chapter 2 (p. 24)  
Solomon Press Book. New York, New York, USA. 1998

## SCIENCE, TYPES OF

**Harris, Errol E.**  
No biographical data available

Accordingly there are two main types of science, exact science...and empirical science...seeking laws which are

generalizations from particular experiences and are verifiable (or, more strictly, “probabilities”) only by observation and experiment.

*Hypothesis and Perception: The Roots of Scientific Method*  
Prevalent Views of Science (p. 25)  
George Allen & Unwin Ltd. London, England. 1970

## SCIENCE, UNITY OF

**Pearson, Karl** 1857–1936  
English mathematician

The unity of all science consists alone in its method, not in its material.

*The Grammar of Science* (2nd edition)  
Chapter I (p. 12)  
Adam & Charles Black. London, England. 1900

## SCIENCE, UTILITY OF

**Thomson, Sir John Arthur** 1861–1933  
Scottish naturalist

To see things and happenings clearly, both in themselves and in their relations to other things and happenings, is the aim of science. And no one who enjoys scientific work – whether at the humble level of accurate description, or at the high level of discovering a formula – cares to hear much about the “utility of science.”

*Introduction to Science*  
Chapter VIII (p. 224)  
Henry Holt & Co. New York, New York, USA. 1911

## SCIENCE, VALUE OF

**Bronowski, Jacob** 1908–74  
Polish-born British mathematician and polymath

The values of science derive neither from the virtues of its members, nor from the finger-wagging codes of conduct by which every profession reminds itself to be good. They have grown out of the practice of science, because they are the inescapable conditions for its practice.

*Science and Human Values*  
The Sense of Human Dignity (p. 60)  
Harper & Row, Publishers. New York, New York, USA. 1965

## SCIENCE, VEHICLE OF

**Watson, David Lindsay** 1901–73  
No biographical data available

The main vehicle of science is not the published formulations of laws and experiments in books and periodicals. This vehicle is, first and foremost, men who are worthy of them, who can understand and use the laws. But more than this: the vehicle is also the pattern of the society that can produce such men.

*Scientists Are Human*  
Chapter I (p. 3)  
Watts. London, England. 1938

## SCIENCE, WATCH-TOWERS OF

**Mitchel, Ormsby MacKnight** 1805–62  
American astronomer

The watch-towers of science now cover the whole earth, and the sentinels never sleep.

*The Planetary and Stellar Worlds: A Popular Exposition of the Great Discoveries and Theories of Modern Astronomy*  
Lecture I (p. 39)  
Baker & Scribner. New York, New York, USA. 1848

## SCIENCE, WELLS OF

**Hunt, Robert**

No biographical data available

...the world has too long been accustomed to look upon the results of scientific labor as mere dry details of facts. The day is rapidly approaching when Truth in her own severe simplicity will be found to possess charms to attract the lover of the beautiful far more potent than the half-formed and incongruous creations of untutored Fancy – when the poet and the child of genius will make pilgrimages to the wells of Science and drink inspiration from waters purer than those of Castalia.

*The Poetry of Science*  
*The Mercersburg Review*, Volume 3, Number 1, January, 1851 (p. 96)

## SCIENCE, WILDERNESS OF

**Thomas, Lewis** 1913–93  
American physician and biologist

The essential wildness of science as a manifestation of human behavior is not generally perceived. As we extract new things of value from it, we also keep discovering parts of the activity that seem in need of better control, more efficiency, less unpredictability.

*The Lives of a Cell: Notes of a Biology Watcher*  
Natural Science (p. 100)  
The Viking Press. New York, New York, USA. 1974

## SCIENCE, WINDOWS OF

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

Even if the open windows of science at first make us shiver after the cozy indoor warmth of traditional humanizing myths, in the end the fresh air brings vigor, and the great spaces have a splendor of their own.

*What I Believe*  
Chapter I (p. 14)  
E.P. Dutton & Company. New York, New York, USA. 1925

**SCIENCE, WONDER OF**

**Kennedy, John F.** 1917–63  
35th president of the USA

Let both sides seek to invoke the wonders of science instead of its terrors. Together let us explore the stars, conquer the deserts, eradicate disease, tap the ocean depths and encourage the arts and commerce.

Inaugural Address, January 20, 1961

**SCIENCE, WORK OF**

**Bachelard, Gaston** 1884–1962  
French philosopher

Any work of science, no matter what its point of departure, cannot become fully convincing until it crosses the boundary between the theoretical and the experimental: *Experimentation must give way to argument, and argument must have recourse to experimentation.*

Translated by A. Goldhammer

*The New Scientific Spirit*

Introduction (pp. 3–4)

Beacon Press. Boston, Massachusetts, USA. 1984

**Kroeber, Alfred Louis** 1876–1960  
American anthropologist

...it appears that the total work of science must be done on a series of levels which the experience of science gradually discovers.

*The Nature of Culture* (p. 121)

The University of Chicago Press. Chicago, Illinois, USA. 1952

**Ruskin, John** 1819–1900  
English writer, art critic, and social reformer

The work of science is to substitute facts for appearances, and demonstrations for impressions.

*The Works of John Ruskin* (Volume 2)

*The Stones of Venice*

Chapter II (p. 36)

John Wiley & Sons. New York, New York, USA. 1887

**Wilson, Edward O.** 1929–  
American biologist and author

The work of real science is hard and often for long intervals frustrating. You have to be a bit compulsive to be a productive scientist. Keep in mind that new ideas are commonplace, and almost always wrong. Most flashes of insight lead nowhere; statistically, they have a half-life of hours or maybe days. Most experiments to follow up the surviving insights are tedious and consume large amounts of time, only to yield negative or (worse!) ambiguous results.

Scientists, Scholars, Knaves and Fools

*American Scientist*, Volume 86 January-February, 1998 (p. 6)

**SCIENCE, WORLD OF****National Research Council (USA)**

In a viable democracy it is essential that each participating citizen appreciate the scientific and technological bases of his society. Unless the general public can understand something of the world of science and appreciate the nature and goals of scientific activity, it will not be able to fit science and technology properly into its perspective of life.

*Physics in Perspective* (Volume 1)

Chapter 2 (p. 27)

National Academy of Sciences

Washington, D.C. 1972

**Spencer-Brown, George** 1923–  
English mathematician and polymath

Left to itself, the world of science slowly diminishes as each result classed as scientific has to be reclassified as anecdotal or historical...Science is a continuous living process; it is made up of activities rather than records; and if the activities cease it dies.

*Probability and Scientific Inference*

Chapter XV (p. 107)

Longmans, Green & Company. London, England. 1957

**SCIENCE AND ART**

**Asimov, Isaac** 1920–92  
American author and biochemist

How often people speak of art and science as though they were two entirely different things, with no interconnection. An artist is emotional, they think, and uses only his intuition; he sees all at once and has no need of reason. A scientist is cold, they think, and uses only his reason; he argues carefully step by step, and needs no imagination. That is all wrong. The true artist is quite rational as well as imaginative and knows what he is doing; if he does not, his art suffers. The true scientist is quite imaginative as well as rational, and sometimes leaps to solutions where reason can follow only slowly; if he does not, his science suffers.

*The Roving Mind*

Chapter 25

Prometheus Books. Buffalo, New York, USA. 1983

**Author undetermined**

Science and art mutually assist each other; the arts furnish facts and materials to science, and science illuminates the path of the arts.

Introductory Remarks

*The American Journal of Science*, Volume 1, Number 1, 1819 (p. 8)

Art is personal and science is universal.

In Lecomte du Nouy

*The Road to Reason*

Chapter 1 (p. 31)

Longmans, Green & Company. London, England. 1949

**Blake, William** 1757–1827

English poet, painter, and engraver

He who would do good to another must  
do it in Minute Particulars:

General Good is the plea of the scoundrel,  
hypocrite and flatterer;

For art and science cannot exist but in  
minutely organized Particulars.

*The Complete Poetry and Prose of William Blake*

Jerusalem

The Holiness of Minute Particulars, 3, Section 55 (p. 399)

University of California Press. Berkeley, California, USA. 1982

**Brecht, Bertolt** 1898–1956

German writer

But science and art meet on this ground, that both are  
there to make man's life easier, the one setting out to  
maintain, the other to entertain us. In the age to come  
art will create entertainment from that new productivity  
which can so greatly improve our maintenance, and in  
itself, if only it is left unshackled, may prove to be the  
greatest pleasure of all.

Translated by John Willett

*Brecht on Theatre: The Development of an Aesthetic*

A Short Organon for the Theater, 20 (p. 185)

Hill & Wang. New York, New York, USA. 1964

**Campbell, Norman R.** 1880–1949

English physicist and philosopher

Science is the noblest of the arts and men of science the  
most artistic of all artists.

*Physics: The Elements*

Chapter VIII (pp. 227–228)

At The University Press. Cambridge, England. 1920

Science, like art, should not be something extraneous,  
added as a decoration to other activities of existence; it  
should be part of them, inspiring our most trivial actions  
as well as our noblest thoughts.

*What Is Science?*

Chapter VIII (p. 183)

Dover Publications. New York, New York, USA. 1952

**Cassidy, Harold Gomes**

No biographical data available

A balanced response to science and art can come only  
from people who do not fear science, but understand its  
power and its limitations people who have such faith in  
the ultimate power of truth, wherever it may be found,  
that they are not afraid to look for it; people who believe  
that what is true in art or science remains true always,  
even though it may be continually reinterpreted.

*The Sciences and the Arts: A New Alliance* (p. 3)

Harper & Brothers Publishers. New York, New York, USA. 1962

If humans understood science and would effectively  
make their voices heard, they could, with the aid of scien-  
tists, control the forces of cultural change in the process  
of their actual generation, directing them in the ways that  
lead toward the morally and ethically just ends that arise  
from the union of art and science. This union, when it  
is a union of whole science and whole art, supports and  
illuminates anew a noble image of man.

*The Sciences and the Arts: A New Alliance*

Chapter 11 (p. 165)

Harper & Brothers. New York, New York, USA. 1962

**Cassirer, Ernst** 1874–1945

German philosopher

Since art and science move in entirely different planes,  
they cannot contradict or thwart one another.

*An Essay on Man: An Introduction to a Philosophy of Human Culture*

Chapter IX (p. 170)

Yale University Press. New Haven, Connecticut, USA. 1944

**Cohen, I. Bernard** 1914–2003

American physicist and science historian

Great creations whether of science or art – can never be  
viewed dispassionately.

In the 1952 printing

*Optics*

Preface (p. ix)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Comte, Auguste** 1798–1857

French philosopher

If science springs from art, it can only be matured when  
it has left art behind.

*The Positive Philosophy of Auguste Comte* (Volume 2)

Book V, Chapter I (p. 4)

George Bell & Sons. London, England. 1896

**Connolly, Cyril** 1903–74

English critic and editor

Today the function of the artist is to bring imagination  
to science and science to imagination, where they meet,  
in the myth.

*The Unquiet Grave*

Part III (p. 86)

Hamish Hamilton. London, England. 1945

**Crick, Francis Harry Compton** 1916–2004

English biochemist

People with training in the arts still feel that in spite of  
the alterations made in their life by technology – by the  
internal combustion engine, by penicillin, by the Bomb –  
modern science has little to do with what concerns them  
most deeply. As far as today's science is concerned this  
is partly true, but tomorrow's science is going to knock  
their culture right out from under them.

*Of Molecules and Men*

The Prospect Before Us (p. 95)

University of Washington Press. Seattle, Washington, USA. 1966

**Davy, Sir Humphry** 1778–1829  
English chemist

It is needless for us again to say that in *science* and the *arts* there is a dependence which is the source of their progression and importance. In a well organized country, power is always compound: Archimedes could not have made machines which terrified the Roman soldiers without the assistance of good carpenters and good workers in metal.

In John Davy

*Fragmentary Remains, Literary and Scientific, of Sir Humphry Davy*

Chapter III (p. 116)

John Churchill. London, England. 1858

**de Gourmont, Rémy** 1858–1915  
French critic and novelist

Art includes everything that stimulates the desire to live; science, everything that sharpens the desire to know. Art, even the most disinterested, the most disembodied, is the auxiliary of life. Born of the sensibility, it sows and creates it in its turn. It is the flower of life and, as seed, it gives back life. Science, or to use a broader term, knowledge, has its end in itself, apart from any idea of life and propagation of the species.

Translated by Glenn S. Burne

*Selected Writings*

Art and Science (p. 170)

The University of Michigan Press. Ann Arbor, Michigan, USA. 1966

**de Montaigne, Michel Eyquem** 1533–92  
French Renaissance writer

...Sciences and Arts are not cast in a mold, but rather by little and little formed and shaped by often handling and polishing them over; even as bears fashion their young whelps by often licking them...

*Essays of Montaigne*

Book II, Chapter 12 (p. 278)

David Nutt. London, England. 1895

**Delbrück, Max** 1906–81  
German-born American biologist

The books of the great scientists are gathering dust on the shelves of learned libraries. And rightly so. The scientist addresses an infinitesimal audience of fellow composers. His message is not devoid of universality but its universality is disembodied and anonymous. While the artist's communication is linked forever with its original form, that of the scientist is modified, amplified, fused with the ideas and results of others, and melts into the stream of knowledge and ideas which forms our culture.

A Physicist's Renewed Look at Biology: Twenty Years Later

*Science*, Volume 168, Number 3937, June 12, 1970 (p. 1314)

The scientist has in common with the artist only this: that he can find no better retreat from the world than his work and also no stronger link with the world than his work.

A Physicist's Renewed Look at Biology: Twenty Years Later  
*Science*, Volume 168, Number 3937, June 12, 1970 (p. 1314)

**Dickens, Charles** 1812–70  
English novelist

What art was to the ancient world, science is to the modern...

*Coningsby; or, The New Generation*

Book IV, Chapter I (p. 142)

The Century Co. New York, New York, USA. 1907

**Dubos, René Jules** 1901–82

French-born American microbiologist and environmentalist

Directly or indirectly, the various forms of art reflect the strivings, the struggles, and the sufferings of mankind. The state of health and the ills of a society are recorded not only in the writings of its physicians and scholars but also in the themes and moods of its artists and poets.

*Mirage of Health*

Chapter VII (p. 215)

Harper & Brothers Publishers. New York, New York, USA. 1959

**Durant, William James** 1885–1981

American historian and essayist

Every science begins as philosophy and ends as art; it arises in hypothesis and flows into achievement.

*The Story of Philosophy*

Introduction (p. 2)

Simon & Schuster. New York, New York, USA. 1953

**Einstein, Albert** 1879–1955

German-born physicist

Science exists for Science's sake, like Art for Art's sake, and does not go in for special pleading or for the demonstration of absurdities.

*Cosmic Religion, with Other Opinions and Aphorisms*

On Science (p. 100)

Covici-Fiede. New York, New York, USA. 1931

...one of the strongest motives that lead men to art and science is escape from everyday life with its painful crudity and hopeless dreariness, from the fetters of one's own ever shifting desires. A finely tempered nature longs to escape from personal life into the world of objective perception and thought... Man tries to make for himself in the fashion that suits him best a simplified and intelligible picture of the world; he then tries to some extent to substitute this cosmos of his for the world of experience, and thus to overcome it. This is what the painter, the poet, the speculative philosopher, and the natural scientist do, each in his own way.

*The World as I See It*

Principles of Research (pp. 20–21)

Philosophical Library. New York, New York, USA. 1949

After a certain high level of technical skill is achieved, science and art tend to coalesce in esthetics, plasticity,

and form. The greatest scientists are always artists as well.

In Alice Calaprice (ed.)  
*The Quotable Einstein* (p. 171)  
Princeton University Press. Princeton, New Jersey, USA. 1996

**Escher, M. C.** 1898–1972  
Dutch graphic artist

...science and art sometimes can touch one another, like two pieces of the jigsaw puzzle which is our human life, and that contact may be made across the borderline between the two respective domains.

In Doris Schattschneider  
*Visions of Symmetry: Notebooks, Periodic Drawings, and Related Works of M.C. Escher*  
Chapter 2 (p. 104)  
W.H. Freeman & Company. New York, New York, USA. 1990

**Feynman, Richard P.** 1918–88  
American theoretical physicist

I've always been very one-sided about science and when I was younger I concentrated almost all my effort on it. I didn't have time to learn and I didn't have much patience with what's called the humanities, even though in the university there were humanities that you had to take. I tried my best to avoid somehow learning anything and working at it. It was only afterwards, when I got older, that I got more relaxed, that I've spread out a little bit. I've learned to draw and I read a little bit, but I'm really still a very one-sided person and I don't know a great deal. I have a limited intelligence and I use it in a particular direction.

In Jeffrey Robbins (ed.)  
*The Pleasure of Finding Things Out: The Best Short Works of Richard P. Feynman*  
Chapter 1 (p. 2)  
Perseus Books. Cambridge, Massachusetts, USA. 1999

**Hanotaux, Gabriel** 1853–1944  
French statesman

Art imitates and interprets Nature; Science studies it and applies it to the needs of Humanity. Art and Science are united through technique.

*Contemporary France* (Volume 2)  
Chapter XII, Section III (p. 640)  
Archibald Constable & Co. London, England. 1905

**Harvey, William** 1578–1657  
English physician

On the same terms, therefore, as art is attained to, is all knowledge and science acquired; for as art is a habit with reference to things to be done, so is science a habit in respect to things to be known; as that proceeds from the imitation of types or forms so this proceeds from the knowledge of natural things.

In *Great Books of the Western World* (Volume 28)  
*Anatomical Exercises on the Generation of Animals*

Of the Manner and Order of acquiring Knowledge (p. 333)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Heisenberg, Werner Karl** 1901–76  
German physicist and philosopher

Both science and art form in the course of the centuries a human language by which we can speak about the more remote parts of reality, and the coherent sets of concepts as well as the different styles of art are different words or groups of words in this language.

*Physics and Philosophy: The Revolution in Modern Science*  
Chapter VI (p. 109)  
Harper & Row, Publishers. New York, New York, USA. 1958

**Huxley, Aldous** 1894–1963  
English writer and critic

Unlike art, science is genuinely progressive. Achievement in the fields of research and technology is cumulative; each generation begins at the point where its predecessor left off.

*Science, Liberty and Peace*  
Chapter I (p. 30)  
William Morrow & Company, Inc. New York, New York, USA. 1967

Science and art are only too often a superior kind of dope, possessing this advantage over booze and morphia: that they can be indulged in with a good conscience and with the conviction that, in the process of indulging, one is leading the "higher life."

*Ends and Means*  
Chapter XIV (p. 276)  
Chatto & Windus. London, England. 1938

**Karanikas, Alexander** 1916–2006  
Greek-American professor of English

...science pierces reality like a dagger in search of fact and truth while art caresses reality looking for pleasure, grace and beauty.

*Tillers of a Myth*  
Science, the False Messiah (p. 127)  
The University of Wisconsin Press. Madison, Wisconsin, USA. 1969

**Kepes, Gyorgy** 1906–2001  
Hungarian-born American artist and theorist

The essential vision of reality presents us not with fugitive appearances but with felt patterns of order which have coherence and meaning for the eye and for the mind. Symmetry, balance and rhythmic sequences express characteristics of natural phenomena: the connectedness of nature – the order, the logic, the living process. Here art and science meet on common ground.

*The New Landscape*  
In *Art and Science*  
Chapter I (p. 24)  
Paul Theobald & Company Chicago, Illinois, USA. 1956

Mathematicians who build new spaces and physicists who find them in the universe can profit from the study

of pictorial and architectural spaces conceived and built by men of art.

*The New Landscape*

In *Art and Science*

Chapter I (p. 28)

Paul Theobald & Company Chicago, Illinois, USA. 1956

**Klee, Paul** 1879–1940

Swiss expressionist painter

...the worst state of affairs is when science begins to concern itself with art.

*The Diaries of Paul Klee 1898–1918*

Diary III, Number 747 (p. 194)

University of California Press. Berkeley, California, USA. 1964

**Knuth, Donald E.** 1938–

Creator of TeX

The difference between art and science is that science is what people understand well enough to explain to a computer. All else is art.

In Robert Slater

*Portraits in Silicon*

Chapter 31 (p. 351)

The MIT Press. Cambridge, Massachusetts, USA. 1987

**Koestler, Arthur** 1905–83

Hungarian-born English writer

Einstein's space is no closer to reality than van Gogh's sky. The glory of science is not in a truth more absolute than the truth of Bach or Tolstoy, but in the act of creation itself. The scientist's discoveries impose his own order on chaos, as the composer or painter imposes his; an order that always refers to limited aspects of reality, and is based on the observer's frame of reference, which differs from period to period as a Rembrandt nude differs from a nude by Manet.

*The Act of Creation*

Book One, Part Two, Chapter X (p. 252)

The Macmillan Company. New York, New York, USA. 1964

**Kraus, Karl** 1874–1936

Austrian essayist and poet

Science is spectrum analysis. Art is photosynthesis.

In John D. Barrow

*The Artful Universe* (p. 114)

Clarendon Press. Oxford, England. 1995

**M'Cosh, James** 1811–94

Scottish philosopher

There were bleaching, dyeing, and tanning, and artificers in copper and iron, before there was chemistry to explain the processes used. Men made wine before there was any theory of fermentation; and glass and porcelain were manufactured before the nature of alkalis and earths had been determined. The pyramids of Nubia and Egypt, the palaces and sculptured slabs of Nineveh, the cyclopean walls of Italy and Greece, the obelisks and temples of

India, the cromlechs and druidical circles of countries formerly Celtic, all preceded the sciences of mechanics and architecture. There was music before there was a science of acoustics; and painting, while yet there was no theory of colours or perspective.

*The Method of the Divine Government, Physical and Moral* (p. 140)

Robert Carter & Brothers. New York, New York, USA. 1865

**Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

There is no spiritual copyright in scientific discoveries, unless they should happen to be quite mistaken. Only in making a blunder does a scientist do something which, conceivably, no one else might ever do again. Artists are not troubled by matters of priority, but Wagner would certainly not have spent twenty years on *The Ring* if he had thought it at all possible for someone else to nip in ahead of him with *Götterdämmerung*.

*The Act of Creation*

*New Statesman*, 19 June, 1964

**Melville, Herman** 1819–91

American novelist

One can envisage an end of science no more readily than one can envisage an end of imaginative literature or the fine arts.

*Advice to a Young Scientist*

Chapter 11 (p. 90)

Basic Books, Inc. New York, New York, USA. 1979

**Moulton, Forest Ray** 1872–1952

American astronomer

It is a mistake to regard science in itself as the opposite of art. There are in all branches of science harmonies and beauties which appeal strongly to those who fully understand them.

*Descriptive Astronomy; An Elementary Exposition of the Facts, Principles, and Theories of Astronomical Science*

Part I (p. 2)

American School of Correspondence. Chicago, Illinois, USA. 1912

**Munroe, J.**

No biographical data available

Science eradicates superstition. Art teaches us to enjoy Nature without analysis, and Science to investigate her. The artistic interpretation of Nature is one-sided and passive; it is the impression which Nature makes on our sensibility. But the scientific interpretation is active, and engages our reason.

*Science and the Sense of Beauty*

*The Journal of Science, and Annals of Astronomy, Biology, Geology*, Volume IV, (Third series), April, 1882 (p. 205)

**Musil, Robert** 1880–1942

Austrian author

What is done for science must also be done for art: accepting undesirable side effects for the sake of the main goal,

and moreover diminishing their importance by making this main goal more magnificent. For one should reform forward, not backward: social illnesses, revolutions, are evolutions inhibited by a conserving stupidity.

Translated by Burton Pike and David S. Luft

*Precision and Soul: Essays and Addresses*

Novellas (p. 9)

University of Chicago Press, Chicago, Illinois, USA. 1990

**Nabokov, Vladimir Vladimirovich** 1899–1977

Russian-born American novelist

Attainment and science, retainment and art – the two couples keep to themselves, but when they do meet, nothing else in the world matters.

There can, indeed, be no antagonism between science and art, between theoretical knowledge and its economic applications. The practical expression of a truth can never be divorced from its theoretic conception.

*Economic Geology; Or, Geology in Its Relations to the Arts and Manufactures*

Introduction (p. 1)

William Blackwood & Sons, Edinburgh, Scotland. 1874

**Oppenheimer, James Robert** 1904–67

American theoretical physicist

Both the man of science and the man of art live always at the edge of mystery, surrounded by it; both always, as to the measure of their creation, have had to do with the harmonization of what is new with what is familiar, with the balance between novelty and synthesis, with the struggle to make partial order in total chaos.

Prospects in the Arts and Sciences

Speech, 26 December, 1954, Columbia University Bicentennial

The frontiers of science are separated now by long years of study, by specialized vocabularies, arts, techniques, and knowledge from the common heritage even of a most civilized society; and anyone working at the frontier of such science is in that sense a very long way from home, a long way too from the practical arts that were its matrix and origin, as indeed they were of what we today call art.

Prospects in the Arts and Sciences

Speech, 26 December, 1954, Columbia University Bicentennial

**Pearson, Karl** 1857–1936

English mathematician

Our aesthetic judgment demands harmony between the representation and the represented, and in this sense science is often more artistic than modern art.

*The Grammar of Science*

Chapter I (p. 17)

Adam & Charles Black, London, England. 1900

**Reynolds, Osborne** 1842–1912

English fluid dynamics engineer

I have to deal with facts, and I shall try to deal with nothing but facts. Many of these facts, or the conclusions to be immediately drawn from them, may appear to bear on the possibilities – or, rather, the impossibilities – of art. But in the Society of Arts I need not point out that art knows no limit; where one way is found to be closed, it is the function of art to find another. Science teaches us the results that will follow from a known condition of things; but there is always the unknown condition, the future effect of which no science can predict.

*Papers on Mechanical and Physical Subjects* (Volume 2)

Lecture to the Society of Arts

At The University Press, Cambridge, England. 1900=03

**Rubbia, Carlo** 1934–

Italian physicist

...science for me is very close to art. Many people think that scientific discovery is a very rational process –

mathematics and equations and so on make it look extremely formal and extremely strict – but in my view, scientific discovery is an irrational act. It's an intuition which turns out to be reality at the end of it – and I see no difference between a scientist developing a marvelous discovery and an artist making a painting, or music or something.

In Lewis Wolpert and Alison Richards

*Passionate Minds*

Asking Nature (p. 197)

Oxford University Press, Oxford, England. 1997

**Ruskin, John** 1819–1900

English writer, art critic, and social reformer

Science and art are commonly distinguished by the nature of their actions; the one as knowing, the other as changing, producing, or creating.

*The Works of John Ruskin*

*The Stones of Venice*

Chapter II (p. 36)

John Wiley & Sons, New York, New York, USA. 1887

...science has to do with facts, art with phenomena. To science, phenomena are of use only as they lead to facts; and to art facts are of use only as they lead to phenomena.

*The Stones of Venice*

Chapter II (p. 39)

John R. Alden, Publisher, New York, New York, USA. 1885

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

In art nothing worth doing can be done without genius; in science even a very moderate capacity can contribute to a supreme achievement.

*Mysticism and Logic: And Other Essays*

Chapter II (p. 41)

Longmans, Green & Co, London, England. 1919

**Sagan, Carl** 1934–96  
American astronomer and author

It is sometimes said that scientists are unromantic, that their passion to figure out robs the world of beauty and mystery. But is it not stirring to understand how the world actually works – that white light is made of colors, that color is the way we perceive the wavelengths of light, that transparent air reflects light, that in so doing it discriminates among the waves, and that the sky is blue for the same reason that the sunset is red? It does no harm to the romance of the sunset to know a little bit about it.

*Pale Blue Dot: A Vision of the Human Future in Space*  
Chapter 10 (pp. 159–160)  
Random House, Inc. New York, New York, USA. 1994

**Santayana, George (Jorge Agustín Nicolás Ruiz de Santillana)** 1863–1952  
Spanish-born American philosopher

Science is the response to the demand for information, and in it we ask for the whole truth and nothing but the truth. Art is the response to the demand for entertainment, for the stimulation of our senses and imagination, and truth enters into it only as it subserves these ends.

*The Sense of Beauty: Being the Outlines of Aesthetic Theory*  
The Nature of Beauty (p. 22)  
Charles Scribner's Sons. New York, New York, USA. 1896

**Sarton, George** 1884–1956  
Belgian-born American scholar and writer

When one reads the history of science one has the exhilarating feeling of climbing a big mountain. The history of art gives one an altogether different impression. It is not at all like the ascension of a mountain, always upward whichever the direction of one's path; it is rather like a leisurely journey across a hilly country.

*The History of Science and the New Humanism*  
Chapter I (p. 25)  
H. Holt & Co. New York, New York, USA. 1931

**Shlain, Leonard**  
American surgeon and author

Both art and physics are unique forms of language. Each has a specialized lexicon of symbols that is used in a distinctive syntax. Their very different and specific contexts obscure their connection to everyday language as well as to each other. Nevertheless, it is noteworthy just how often the terms of one can be applied to the concepts of the other. "Volume," "space," "mass," "force," "light," "color," "tension," "relationship," and "density" are descriptive words that are heard repeatedly if you trail along with a museum docent. They also appear on the blackboards of freshman college physics lectures.

Quoted by Gerald Nolton  
*Art and Physics: Parallel Visions in Space, Time and Light*  
Chapter 1  
William Morrow & Company, Inc. New York, New York, USA. 1991

The proponents of these two diverse endeavors [art and physics] wax poetic about elegance, symmetry, beauty, and aesthetics. While physicists demonstrate that  $A$  equals  $B$  or that  $X$  is the same as  $Y$ , artists often choose signs, symbols, and allegories to equate a painterly image with a feature of experience. Both of these techniques reveal previously hidden relationships.

Quoted by Gerald Nolton  
*Art and Physics: Parallel Visions in Space, Time and Light*  
Chapter 1  
William Morrow & Company, Inc. New York, New York, USA. 1991

**Silver, Brian L.**  
Israeli professor of physical chemistry

Whatever the Sun may be, said D. H. Lawrence, it is certainly not a ball of flaming gas. Helios, the sun god, has more sex appeal than a cloud of gas, however hot.

*The Ascent of Science*  
Part IX, Chapter 36 (p. 485)  
Solomon Press Book. New York, New York, USA. 1998

[D. H.] Lawrence [saw] science systematically chipping away at the mysterious, but generally benign, unknown and arrogantly replacing it with the dull, prosaic, down-to-earth known. . . . The scientist's rainbow is the result of the different refractive indices of the various frequencies of light that make up solar radiation. But man evidently prefers mystery to math, and the intrusion of science into the movements of the planets and the stars, into the living cell and into that final sanctuary of the spirit, the mind, has undoubtedly cast a chill over that warm, blurred garden, the theocentric universe. The scientist, ruthlessly buying up desirable property, appears to many people to be building an automated factory in the middle of the garden.

*The Ascent of Science*  
Part IX, Chapter 36 (p. 485)  
Solomon Press Book. New York, New York, USA. 1998

**Smyth, H. D.**  
No biographical data available

We have a paradox in the method of science. The research man may often think and work like an artist, but he has to talk like a bookkeeper in terms of facts, figures and logical sequence of thought.

Quoted by Gerald Nolton  
On the Duality and Growth of Physical Science  
*American Scientist*, Volume 41, 1953 (p. 93)

**Spencer, Herbert** 1820–1903  
English social philosopher

...Science is necessary not only for the most successful production, but also for the full appreciation of the fine arts.

*Education: Intellectual, Moral, and Physical*  
Chapter I (p. 70)  
A.L. Fowle. New York, New York, USA. 1860

**Sterne, Laurence** 1713–68  
English novelist and humorist

Art and science are words frequently made use of, but the precision of which is so rarely understood, that they are often mistaken for one another.

*The Works of Laurence Sterne: With a Life of the Author* (Volume 6)  
The Koran (p. 347)  
William Durell & Co. New York, New York, USA. 1814

I think that science may be styled the knowledge of universals, or abstract wisdom; and art is science reduced to practice – or science is reason, and art the mechanism of it – and may be called practical science. Science, in fine, is the theorem, and art the problem.

*The Works of Laurence Sterne: With a Life of the Author* (Volume 6)  
The Koran (p. 348)  
William Durell & Co. New York, New York, USA. 1814

Science is the theorem...and art is the problem.

*The Works of Laurence Sterne*  
84 (p. 127)

Printed for J. Mozley. London, England. 1745

**Sullivan, John William Navin** 1886–1937  
Irish science writer

...it is certain that the real function of art is to increase our self-consciousness; to make us more aware of what we are, and therefore of what the universe in which we live really is. And since mathematics, in its own way, also performs this function, it is not only aesthetically charming but profoundly significant. It is an art, and a great art.

In James Roy Newman  
*The World of Mathematics* (Volume 3)  
Part XVII (p. 2021)  
Simon & Schuster. New York, New York, USA. 1956

The measure in which science falls short of art is the measure in which it is incomplete as science.

The Justification of the Scientific Method  
*The Athenaeum*, May, 1919 (p. 275)

**Thomson, Sir John Arthur** 1861–1933  
Scottish naturalist

...it is certain, though rarely realized, that Science has precious gifts to place in the hands of Art that she may fashion them magically into beauty.

*Introduction to Science*  
Chapter VI (p. 167)  
Henry Holt & Co. New York, New York, USA. 1911

I [the scientist] also am an artist, he says, or words to that effect, meaning (1) that a scientific investigation is, like a picture, an endeavor to get at the setting and significance of things or events; (2) that there is a delight and an endeavor in scientific workmanship that is its own reward; and (3) that in the higher reaches of science, the discovery of a formula, a general law, a pedigree, a

homology, an interrelation – whatever it may be – is in some measure a personal achievement.

*Introduction to Science*  
Chapter VIII (pp. 224–225)  
Henry Holt & Co. New York, New York, USA. 1911

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

Art can never match the luxury and superfluity of Nature. In the former all is seen; it cannot afford concealed wealth, and is niggardly in comparison; but Nature, even when she is scant and thin outwardly, satisfies us still by the assurance of a certain generosity at the roots.

*A Week on the Concord and Merrimack Rivers*  
Thursday (p. 236)  
Charles Scribner's Sons. New York, New York, USA. 1921

**Tolstoy, Leo** 1828–1910  
Russian writer

True science investigates and brings to human perception such truths and such knowledge as the people of a given time and society consider most important. Art transmits these truths from the region of perception to the region of emotion.

*What Is Art?*  
Chapter Twenty (p. 181)  
Hackett Publishing Co. Indianapolis, Indiana, USA. 1996

Science and art are as closely bound together as the lungs and heart, so that if one organ is vitiated the other cannot act rightly.

*What Is Art?*  
Chapter Twenty (p. 181)  
Hackett Publishing Co. Indianapolis, Indiana, USA. 1996

**Trousseau, Armand** 1801–67  
French internist

Every science touches art at some points – every art has its scientific side; the worst man of science is he who is never an artist, and the worst artist is he who is never a man of science.

*Lectures on Clinical Medicine, Delivered at the Hotel-Dieu* (Volume 2)  
Introduction (p. 40)  
Lindsay & Blakiston. Philadelphia, Pennsylvania, USA. 1869

**Valéry, Paul** 1871–1945  
French poet and critic

There is a science of simple things, an art of complicated ones. Science is feasible when the variables are few and can be enumerated; when their combinations are distinct and clear. We are tending toward the condition of science and aspiring to it. The artist works out his own formulas; the interest of science lies in the art of making science.

In Jackson Mathews (ed.)  
*The Collected Works of Paul Valéry* (Volume 14)  
*Moralités*  
Analects (p. 64)  
Princeton University Press. Princeton, New Jersey, USA. 1971

**Waddington, Conrad Hal** 1905–75

British biologist and paleontologist

The best of modern art is compatible only with true science, and the bogus science requires a fake art to keep it company.

*The Scientific Attitude*

Science Is Not Neutral (p. 27)

Penguin Books, Middlesex, England. 1941

**Watson, William**

When will you learn your place and rank in Mind? Art can create; Science can only find.

*The Muse in Exile*

Science and Nature

John Lane Co. New York, New York, USA. 1913

**Waugh, John Hugh W.**

No biographical data available

Science and Art, truly twin offspring of the intellect, are every way meet companions – impotent when disjoined; in union, irresistible, – the very powers of nature “becoming plastic” and rendering a ready allegiance to their sway.

*Mathematical Essays*

Essay I (p. 14)

Johnstone &amp; Hunter. Edinburgh, Scotland. 1854

**Whewell, William** 1794–1866

English philosopher and historian

Art and Science differ. The object of Science is Knowledge; the objects of Art are Works. In Art, truth is a means to an end; in Science, it is the only end. Hence the Practical Arts are not to be classed among the Sciences.

*The Philosophy of the Inductive Sciences Founded Upon Their History* (Volume 2)

Aphorisms Concerning Science, Aphorism XXV (p. 471)

John W. Parker. London, England. 1847

**Willmott, Robert Eldridge Aris** 1809–63

English writer and poet

Some gifted adventurer is always sailing round the world of art and science, to bring home costly merchandise from every port.

*Pleasures, Objects, and Advantages, of Literature* (4th edition)

Chapter XII (p. 53)

G. Routledge &amp; Co. London, England. 1855

**Wordsworth, William** 1770–1850

English poet

Enough of Science and of Art;  
Close up these barren leaves;  
Come forth, and bring with you a heart  
That watches and receives.

A successful blending of the sciences and the humanities is necessary for the health of our civilization.

*Science Is Human*

Science Is Human (p. 31)

University of Otago Press. Dunedin, New Zealand. 1972

### **Sagan, Carl** 1934–96

American astronomer and science writer

The very method of mathematical reasoning that Isaac Newton introduced to explain the motion of the planets

around the Sun has led to most of the technology of our modern world. The Industrial Revolution, for all its shortcomings, is still the global model of how an agricultural nation can emerge from poverty. These debates have bread-and-butter consequences.

*Pale Blue Dot: A Vision of the Human Future in Space*

Chapter 4 (p. 56)

Random House, Inc. New York, New York, USA. 1994

## SCIENCE AND CRIME

### **Wilson, Andrew** 1852–1912

No biographical data available

The scientific study of criminals, and the philosophic study of crimes, form not merely an interesting, but a highly warrantable exercise of intellect. Only through some such investigation into these subjects can a knowledge of the nature, cause, and cure of crime be attained – if, indeed, such knowledge in its perfect phases be ever reached in human history.

*Leaves from a Naturalist's Note-book*

Science and Crime (p. 1)

Chatto & Windus. London, England. 1882

## SCIENCE AND ETHICS

### **Margenau, Henry** 1901–97

American physicist

To be sure, there is no agreement among philosophers or even among practicing educators as to the disciplines that are truly sciences. Few will argue that the study of literature is a science or that physics is not a science, but disputes arise when this question is raised with regard to sociology or history. Such disputes may rise above the fruitless quarrels over terminology and attain considerable importance, as in the question whether ethics is, ought to be, or cannot be a science.

*The Nature of Physical Reality: A Philosophy of Modern Physics*

Chapter 2 (p. 16)

McGraw-Hill Book Co., Inc. New York, New York, USA. 1950

## SCIENCE AND FAME

### **da Costa, J. Chalmers** 1863–1933

American physician

Men come and men go, but science lives and advances. Individual discoveries are glorious and worthy, but we must give due meed of praise to the hard-working, obscure practitioners who, regardless of fame and wealth, apply them. Too often in this modern world even the scientist has been touched by the love of notoriety or the joy of gain, emotions which will mar his usefulness, will cloud the agar in his test-tube and blur the glass of his microscope.

Then And Now

*Transactions of the Philadelphia County Medical Society*, Volume XX,  
Number 5, May, 1899 (p. 159)

## SCIENCE AND FREEDOM

**Baltimore, David** 1938–  
American biologist

Freedom is the range of opportunities available to an individual – the more he has to choose from, the freer his choices. Science creates freedom by widening our range of understanding and therefore the possibilities from which we can choose.

In Gerald Holton and Robert S. Morison (eds.)

*Limits of Scientific Inquiry*

Limiting Science: A Biologist's Perspective (p. 42)

W.W. Norton & Co. New York, New York, USA. 1979

## SCIENCE AND GOD

**Agassiz, Jean Louis Rodolphe** 1807–73  
Swiss-born American naturalist, geologist, and teacher

...I will frankly tell you that my experience in prolonged scientific investigations convinces me that a belief in God – a God who is behind and within the chaos of ungeneralized facts beyond the present vanishing-points of human knowledge – adds a wonderful stimulus to the man who attempts to penetrate into the region of the unknown.

In Edwin Percy Whipple

*Recollections of Eminent Men: With Other Papers*

Recollections of Agassiz (p. 96)

Ticknor & Co. Boston, Massachusetts, USA. 1886

**Arbuthnot, John** 1667–1735  
Scottish mathematician and physician

All the visible Works of God Almighty are made in *Number, Weight and Measure*: Therefore, to consider them, we ought to understand *Arithmetic, Geometry, and Statics*...  
*An Essay on the Usefulness of Mathematical Learning* (3rd edition) (p. 8)  
Printed for J. Barrett  
London, England. 1745

**Chittenden, Newton W.**  
Mineral surveyor

Thus, the diligent student of science, the earnest seeker of truth, as through the courts of a sacred Temple, wherein, at each step, new wonders meet the eye, till, as a crowning grace, they stand before a Holy of Holies, and learn that all science and all truth are one which hath its beginning and its end in the knowledge of Him whose glory the heavens declare, and whose handiwork the firmament showeth forth.

Translated by Andrew Motte

In Isaac Newton

*Newton's Principia: The Mathematical Principles of Natural Philosophy*

Life of Sir Isaac Newton

Daniel Adee. New York, New York, USA. 1848

**Herrick, Charles Judson** 1868–1960  
American neurologist

We may render to God the things that are God's and to science only the things that are nature's.

*The Evolution of Human Nature*

Epilogue: The Unknown God (p. 465)

University of Texas Press. Austin, Texas, USA. 1956

**von Braun, Wernher** 1912–77  
German-American rocket scientist

I find it as difficult to understand a scientist who does not acknowledge the presence of a superior rationality behind the existence of the universe as it is to comprehend a theologian who would deny the advances of science. And there is certainly no scientific reason why God cannot retain the same relevance in our modern world that He held before we began probing His creation with telescope, cyclotron, and space vehicles.

In Richard H. Utt

*Creation: Nature's Designs and Designer*

Foreword (p. 6)

Pacific Press. Mountain View, California, USA. 1971

## SCIENCE AND GOVERNMENT

**Babbage, Charles** 1792–1871  
English mathematician

...scientific knowledge scarcely exists amongst the higher classes of society. The discussion in the Houses of Lords or of Commons, which arise on the occurrence of any subjects connected with science, sufficiently prove this fact...  
*Reflections on the Decline of Science in England. And on Some of Its Causes*

Introductory Remarks (p. 8)

Printed for B. Fellowes. London, England. 1830

## SCIENCE AND KNOWLEDGE

**Locke, John** 1632–1704  
English philosopher and political theorist

Nobody is under an obligation to know everything. Knowledge and science in general is the business only of those who are at ease and leisure.

*An Essay Concerning Human Understanding and a Treatise on the Conduct of the Understanding*

A Treatise on the Conduct of the Understanding

Section 7 (p. 494)

James Kay, June & Company. Philadelphia, Pennsylvania, USA. ca. 1850

## SCIENCE AND LITERATURE

**Burroughs, John** 1837–1921  
American naturalist and essayist

Until science is mixed with emotion, and appeals to the heart and imagination, it is like dead inorganic matter;

and when it becomes so mixed and so transformed, it is literature.

*Indoor Studies*

Chapter II (p. 53)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1904

Science and literature in their aims and methods have but little in common. Demonstrable fact is the province of the one; sentiment is the province of the other.

*Indoor Studies*

Chapter II (p. 58)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1904

Science is probably unfavorable to the growth of literature because it does not throw man back upon himself and concentrate him as the old belief did; it takes him away from himself, away from human relations and emotions, and leads him on and on.

*Indoor Studies*

Science and Literature (p. 58)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1904

Literature interprets life and nature in terms of our sentiments and emotions; science interprets them in terms of our understanding.

*Under The Apple Tree*

Literature and Science (p. 177)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1916

Science reveals things as they are in and of themselves; literature, as they stand related to our mental and emotional condition and edification. One is not true and the other false; both are true in their own sphere, true as fact, and true as emotion and idea. Science explains the rainbow, but literature sees it as a symbol and a promise. So with the sunset or the sunrise. Science knows all about the diamond, but knows not why it is so prized by us. It explains the pearl, but not the pearl necklace.

*Under the Apple-Trees*

Chapter XI (p. 179)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1916

**Newman, John Henry** 1801–90

Catholic Cardinal

Literature stands related to Man, as Science stands to Nature; it is his history.

*The Scope and Nature of University Education*

Discourse VIII (p. 333)

Longman, Green, Longman & Roberts. London, England. 1859

## SCIENCE AND MORALS

**Bronowski, Jacob** 1908–74

Polish-born British mathematician and polymath

It is not the business of science to inherit the earth, but to inherit the moral imagination; because without that man and beliefs and science will perish together.

*The Ascent of Man*

Chapter 13 (p. 432)

Little, Brown & Company. Boston, Massachusetts, USA. 1973

**Chesterton, G. K. (Gilbert Keith)** 1874–1936

English author

...when any part of the general public is drawn into a debate on physical science, we may be certain that it has already become a debate on moral science.

*All Is Grist: A Book of Essays*

On Gossip about Heredity (p. 96)

Methuen & Company Ltd. London, England. 1931

**Compton, Karl Taylor** 1887–1954

American educator and physicist

I would emphasize the fact that scientific discovery is, per se, neither good nor bad. It simply produces knowledge and with knowledge, opportunity and responsibility. I think it fair to say that the advance of science carries with it powerful demands on morality if the results are to be beneficial rather than harmful.

*A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton*

During the Years 1930–1949 (p. 5)

Undergraduate Association, MIT. Cambridge, Massachusetts, USA. 1955

**Dewey, John** 1859–1952

American philosopher and educator

Science through its physical technological consequences is now determining the relations which human beings, severally and in groups, sustain to one another. If it is incapable of developing moral techniques which will also determine these relations, the split in modern culture goes so deep that not only democracy but all civilized values are doomed.

*Freedom and Culture*

Chapter Six (p. 118)

Prometheus Books. Buffalo, New York, USA. 1989

**Diderot, Denis** 1713–84

French encyclopedist and philosopher of materialism

The moral universe is so closely linked to the physical universe that it is scarcely likely that they are not one and the same machine.

*Eléments de Physiologie* (pp. xiii–xiv)

Librairie M. Didier. Paris, France. 1964

**Ferré, Nels F. S.** 1908–71

Swedish-American theologian

Science can be and is being made into an escapist philosophy – into a dodge of moral disciplines and spiritual responsibilities.

*Faith and Reason*

Chapter II (p. 83)

Harper & Brothers. New York, New York, USA. 1946

**Friedenberg, Edgar Z.** 1921–2001

Educator, education critic, and sociologist

...only science can hope to keep technology in some sort of moral order.

*The Vanishing Adolescent*

The Impact of the School, the Clarification of Experience (p. 50)

Beacon Press. Boston, Massachusetts. 1964

**Gould, Stephen Jay** 1941–2002

American paleontologist, evolutionary biologist, and historian of science

I do not know when the technical and popular prose of science became separated, although I accept the inevitability of such a division as knowledge became increasingly more precise, detailed, and specialized. We have now reached the point where most technical literature not only falls outside the possibility of public comprehension but also (as we would all admit in honest moments) outside our own competence in scientific disciplines far removed from our personal expertise. I trust that we all regard this situation as saddening, even though we accept its necessity.

Take Another Look

*Science*, Volume 286, Number 5441, October 29, 1999 (p. 899)

**Jefferson, Thomas** 1743–1826

3rd president of the USA

...if science produces no better fruits than tyranny, murder, rapine and destitution of national morality, I would rather wish our country to be ignorant, honest and estimable, as our neighboring savages are.

*The Writings of Thomas Jefferson* (Volume 6)

Letter to John Adams, 1812 (p. 37)

Deby & Jackson. New York, New York, USA. 1859

**Kruyt, Hugo Rudolph** 1882–1959

Dutch colloid chemist

Clearer than ever we understand that knowledge is not all, that we need morals and brotherhood to avoid science becoming a curse.

In John P. Dickinson

*International Council of Scientific Unions*

First General Assembly Following the Second World War, Science and Scientific Researchers in Modern Society (p. 165)

**Lerner, Max** 1902–92

American educator and author

Science itself is a humanist in the sense that it doesn't discriminate between human beings, but it is also morally neutral. It is no better or worse than the ethos with and for which it is used.

Manipulating Life

*New York Post*, January 24, 1968

**Masters, William H.** 1915–2001

American gynecologist and researcher

Science by itself has no moral dimension. But it does seek to establish truth. And upon this truth morality can be built.

Two Sex Researchers on the Firing Line

*Life*, 24 June, 1966 (p. 49)

**Oppenheimer, James Robert** 1904–67

American theoretical physicist

Scientists aren't responsible for the facts that are in nature. It's their job to find the facts. There's no sin connected with it – no morals. If anyone should have a sense of sin, it's God. He put the facts there.

In Lincoln Barnett

J. Robert Oppenheimer

*Life*, October 10, 1949 (p. 133)

**Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

There can no more be immoral science than there can be scientific morals.

*The Foundations of Science*

*The Values of Science*, Introduction (p. 206)

The Science Press. New York, New York, USA. 1913

**Snow, Charles Percy** 1905–80

English novelist and scientist

...there is a moral component right in the grain of science itself...

*The Two Cultures: And a Second Look*

Chapter I (p. 13)

At The University Press. Cambridge, England. 1964

**Toynbee, Arnold J.** 1882–83

English historian

Our western science is a child of moral virtues; and it must now become the father of further moral virtues if its extraordinary material triumphs in our time are not to bring human history to an abrupt, unpleasant and discreditable end.

A Turning Point in Man's Destiny

*The New York Times Magazine*, December 26, 1954 (p. 5)

**Wallace, Henry A.** 1888–1935

33rd vice-president of the USA

I can understand the impulse which prompts scientists to defend science against the attacks of the uninformed. Science has achieved so many miracles for society, saved so many lives, made possible so extraordinary an advance in material living standards for so many millions of people, that it is disquieting to think that all the consequences of science can ever be other than good. Yet I don't see what basis we have for assuming that science can and does have only beneficial consequences. Is the product of man's curiosity inevitably good?...It may be disturbing to realize it, but the truth seems to be that science proceeds without moral obligations; it is neither moral nor immoral, but in essence amoral.

Scientists in an Unscientific Society

*Scientific Monthly*, Volume 150, 1934 (p. 285)

## SCIENCE AND PHILOSOPHY

**Bacon, Sir Francis** 1561–1626  
English lawyer, statesman, and essayist

The great and radical difference of capacities, as to philosophy and the sciences, lies here: that some are stronger and fitter to observe the differences of things; others their correspondencies: for a steady and sharp genius can fix it's contemplations, and dwell and fasten upon all the subtlety of differences, while a sublime and ready genius perceives and compares the smallest and most general agreements of things; but both kinds easily fall into excess, by grasping either at the dividing scale, or shadows of things. The former is so taken up with the particles of things, as almost to neglect their structure, whilst the other views their fabrication with such astonishment, as not to enter into the simplicity of nature.

In George Adams  
*Lectures on Natural and Experimental Philosophy* (Volume 1)  
Lecture IV (p. 127)  
Printed by R. Hindmarsh. London, England. 1794

**Burroughs, John** 1837–1921  
American naturalist and writer

Science displeases literature when it dehumanizes nature and shows us irrefragable laws when we had looked for humanistic divinities.

*The Breath of Life*  
Chapter X (p. 243)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1915

**Chesterton, G. K. (Gilbert Keith)** 1874–1936  
English author

To mix science up with philosophy is only to produce a philosophy that has lost all its ideal value and a science that has lost all its practical value.

*All Things Considered*  
Science and Religion (p. 187)  
John Lane Co. New York, New York, USA. 1910

**Compton, Karl Taylor** 1887–1954  
American educator and physicist

Science is not a technique or a body of knowledge, though it uses both. It is rather an attitude of inquiry, or observation and reasoning, with respect to the world. It can be developed, not by memorizing facts or juggling formulas to get an answer, but only by actual practice of scientific observation and reasoning.

*A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton During the Years 1930–1949* (p. 44)  
Undergraduate Association, MIT. Cambridge, Massachusetts, USA. 1955

**de Casseres, Benjamin** 1873–1945  
American journalist and author

My studies in speculative philosophy, metaphysics, and science are all summed up in the image of a mouse called

man, running in and out of every hole in the cosmos hunting for the absolute cheese.  
*Harper's Weekly*, Volume 19, Number 3164, June 28, 1976

**Durant, William James** 1885–1981  
American historian and essayist

Philosophy...is the front trench in the siege of truth. Science is the captured territory.

*The Story of Philosophy*  
Introduction (p. 2)  
Simon & Schuster. New York, New York, USA. 1953

Science is analytical description, philosophy is synthetic interpretation. Science wishes to resolve the whole into the known.

*The Story of Philosophy*  
Introduction (p. 2)  
Simon & Schuster. New York, New York, USA. 1953

Science without philosophy, facts without perspective and valuation, cannot save us from havoc and despair. Science gives us knowledge, but only philosophy can give us wisdom.

*The Story of Philosophy*  
Introduction (p. 3)  
Simon & Schuster. New York, New York, USA. 1953

**Eddy, Mary Baker** 1821–1910  
American religious writer

Jesus of Nazareth was the most scientific man that ever trod the globe. He plunged beneath the material surface of things, and found the spiritual cause.

*Science and Health with Key to the Scriptures*  
Chapter X (p. 313)  
Joseph Armstrong. Boston, Massachusetts, USA. 1906

**Fischer, Martin H.** 1879–1962  
German-American physician

Not fact-finding, but attainment to philosophy, is the aim of science.

*Fischerisms* (p. 7)  
C.C. Thomas. Springfield, Illinois, USA. 1944

**Gornick, Vivian**  
American essayist

Science – like art, religion, political theory, or psychoanalysis – is work that holds out the promise of philosophical understanding, excites in us the belief that we can “make sense of it all.”

*Women in Science: Portraits from a World in Transition*  
Part One (p. 66)  
Simon & Schuster. New York, New York, USA. 1983

**Huxley, Julian** 1887–1975  
English biologist, philosopher, and author

The attempt to understand this universe, including the nature of man, is the task of science; and as she makes progress with this task, so will she become more and

more an indispensable part of philosophy and religion – imagination’s touchstone, thought’s background, action’s base.

Searching for the Elixir of Life  
*The Century Illustrated Monthly Magazine*, Volume 103, Number 4,  
February, 1922

**Jeans, Sir James Hopwood** 1877–1946

English physicist and mathematician

The philosophy of any period is always largely interwoven with the science of the period, so that any fundamental change in science must produce reactions in philosophy.

*Physics and Philosophy*  
Chapter I (p. 2)  
Dover Publications, Inc. New York, New York, USA. 1981

In whatever ways we define science and philosophy their territories are contiguous; wherever science leaves off – and in many places its boundary is ill-defined – there philosophy begins.

*Physics and Philosophy*  
Chapter I (p. 17)  
Dover Publications, Inc. New York, New York, USA. 1981

**Jones, Steve** 1944–

English genetics professor

...philosophy is to science as pornography is to sex.

In Mary Midgley  
Can Science Save Its Soul?  
*New Scientist*, 1 August, 1992 (p. 25)

**Keats, John** 1795–1821

English Romantic lyric poet

Do not all charms fly  
At the mere touch of cold philosophy?  
There was an awful rainbow once in heaven:  
We know her woof, her texture; she is given  
In the dull catalogue of common things.  
Philosophy will clip an Angel’s wings,  
Conquer all mysteries by rule and line,  
Empty the haunted air, and gnom’ed mine –  
Unweave a rainbow...

*The Complete Poetical Works and Letters of John Keats*  
Lamia, Part II, l. 229–237  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1890

**Mercier, André** 1913–99

Swiss physicist

Philosophy does not “solve problems”, whereas science does. Philosophy, in its relations to science, gathers up the problems of science, which are no longer problems since they have found solutions, and seeks to order them in such a way that the structure of knowledge does, in fact, appear.

Fifty Years of the Theory of Relativity  
*Nature*, Volume 175, Number 4465, May 28, 1955 (p. 919)

**Pope Pius XII** 1876–1958

Bishop of Rome

Science descends ever more deeply into the hidden recesses of things, but it must halt at a certain point when questions arise which cannot be settled by means of sense observations. At that point the scientist needs a light which is capable of revealing to him truth which entirely escapes his senses. This light is philosophy.

In Philip G. Fothergill  
*Life and Its Origin*  
Pontifical Academy of Science, Meeting 1955 (p. 12)

**Popper, Karl R.** 1902–94

Austrian/British philosopher of science

All science and all philosophy are enlightened common sense.

*Objective Knowledge: An Evolutionary Approach*  
Chapter 2 (p. 34)  
Clarendon Press. Oxford, England. 1972

**Renan, Ernest** 1823–92

French philosopher and Orientalist

Socrates founded philosophy, and Aristotle science. There was philosophy before Socrates, and science before Aristotle; and since Socrates and since Aristotle, philosophy and science have made immense progress: but all has all been built upon the foundations they laid.

*The Life of Jesus*  
Chapter 28 (p. 383)  
Modern Library. New York, New York, USA. 1955

**Rice, Harvey** 1800–91

American lawyer and newspaper publisher

It is only in modern times that science has taken the advanced step, and led philosophy into the beautiful avenues of Nature; where, amid the infinite, she gazes at the universe, listens to the music of the spheres, and beholds the golden wealth of the infinite displayed on every side.

*Nature and Culture*  
Chapter 1 (p. 10)  
Lee & Shepard. Boston, Massachusetts, USA. 1875

**Ritchie, Arthur David** 1891–1967

Scottish philosopher and science history writer

Philosophers who write about Science and scientists who write about Philosophy are too often preoccupied with the scientific theories and discoveries of the moment to the detriment of both their Science and their Philosophy.

*Scientific Method: An Inquiry into the Character and Validity of Natural Law*  
Preface (p. v)  
Kegan Paul, Trench, Trubner & Co., Ltd. London, England. 1923

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

The man who has no tincture of philosophy goes through life imprisoned in the prejudices.... To such a man the

world tends to become definite, finite, obvious; common objects rouse no questions, and unfamiliar possibilities are contemptuously rejected.

*The Problems of Philosophy*

Chapter XV (pp. 156–157)

Oxford University Press, Inc. London, England. 1959

It seems to me that science has a much greater likelihood of being true in the main than any philosophy hitherto advanced (I do not, of course, except my own). In science there are many matters about which people are agreed; in philosophy there are none. Therefore, although each proposition in a science may be false, and it is practically certain that there are some that are false, yet we shall be wise to build our philosophy upon science, because the risk of error in philosophy is pretty sure to be greater than in science. If we could hope for certainty in philosophy, the matter would be otherwise, but so far as I can see such a hope would be a chimerical.

*The Philosophy of Logical Atomism*

Logical Atomism

University of Minnesota Press. Minneapolis, Minnesota, USA. 1959

**Thomson, Sir John Arthur** 1861–1933

Scottish naturalist

Science brings in great wealth of raw material, but the architectural genius must be sought in Philosophy.

*Introduction to Science*

Chapter V (p. 132)

Henry Holt & Co. New York, New York, USA. 1911

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

In our science and philosophy, even, there is commonly no true and absolute account of things. The spirit of sect and bigotry has planted its hoof amid the stars. You have only to discuss the problem, whether the stars are inhabited or not, in order to discover it.

*The Writings of Henry David Thoreau* (Volume 4)

*Life Without Principle* (p. 469)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

**Weyl, Hermann** 1885–1955

German mathematician

A scientist who writes on philosophy faces conflicts of conscience from which he will seldom extricate himself whole and unscathed; the open horizon and depth of philosophical thoughts are not easily reconciled with that objective clarity and determinacy for which he has been trained in the school of science.

*Philosophy of Mathematics and Natural Science*

Preface (p. v)

Princeton University Press. Princeton, New Jersey, USA. 1949

## SCIENCE AND POETRY

**Amiel, Henri-Frédéric** 1821–81

Swiss philosopher, poet, and critic

True poetry is truer than science, because it is synthetic, and seizes at once what the combination of all the sciences is able at most to attain as a final result.

Translated by Humphry Ward

*Amiel's Journal: The Journal Intime of Henri-Frédéric Amiel*

31st October, 1852 (p. 30)

McGraw-Hill Book Co., Inc. New York, New York, USA. 1893

The soul of nature is divined by the poet; the man of science only serves to accumulate materials for its demonstration.

Translated by Humphry Ward

*Amiel's Journal: The Journal Intime of Henri-Frédéric Amiel*

31st October, 1852

McGraw-Hill Book Co., Inc. New York, New York, USA. 1893

**Arnold, Matther** 1822–88

English poet and social critic

...the highest reach of science is, one may say, an inventive power, a faculty of divination, akin to the highest power exercised in poetry...

*Essays in Criticism*

The Literary Influence of Academies (p. 47)

Macmillan & Company Ltd. London, England. 1869

The interpretations of science do not give us this intimate sense of objects as the interpretations of poetry give it; they appeal to a limited faculty, and not to the whole man.

*Essays in Criticism* (2nd edition)

Maurice de Guerin (p. 76)

Macmillan & Company Ltd. London, England. 1869

## Author undetermined

Science dissects the universe; it is a dead thing to the dissector: poetry apprehends the universe; it is alive to the poet.

Brief Practical Reading in the Book of Revelation

*Evangelical Magazine and Missionary Chronicle*, N.S. Volume IX, 1867 (pp. 258–259)

**Berdoe, Edward** 1836–1919

Physician

The more thoroughly the lover of Nature is skilled in the knowledge of her laws, the greater will be the intellectual pleasure with which he will contemplate them; and the poet who can follow Nature into her secret chambers, and commune with her on her deepest phenomena, will be the poet who has the noblest things to say to the human soul.

In the Browning Society

*The Browning Society's Papers*

Chapter XXX (p. 36)

N. Trübner & C. London, England. 1885–1886

**Beston, Henry** 1888–1968

American writer

Poetry is as necessary to comprehension as science. It is as impossible to live without reverence as it is without joy.

*The Outermost House*  
Chapter X (p. 221)  
Rinehart & Company. New York, New York, USA. 1928

**Burroughs, John** 1837–1921  
American naturalist and essayist

The true poet and the true scientist are not estranged. They go forth into nature like two friends. Behold them strolling through the summer fields and woods. The younger of the two is much the more active and inquiring; he is ever and anon stepping aside to examine some object more minutely, plucking a flower, treasuring a shell, pursuing a bird, watching a butterfly; now he turns over a stone, peers into the marshes, chips off a fragment of a rock, and everywhere seems intent on some special and particular knowledge of the things about him. The elder man has more an air of leisurely contemplation and enjoyment, – is less curious about special objects and features, and more desirous of putting himself in harmony with the spirit of the whole. But when his younger companion has any fresh and characteristic bit of information to impart to him, how attentively he listens, how sure and discriminating is his appreciation! The interests of the two in the universe are widely different, yet in no true sense are they hostile or mutually destructive.

*Indoor Studies* (Volume 8)  
Chapter II (p. 74)  
Houghton Mifflin Co. Boston, Massachusetts, USA. 1904

To clothe science with flesh and blood, to breathe into it the breath of life, is a creative work which only the Poet can do.

*Indoor Studies*  
Chapter III (p. 77)  
Houghton Mifflin Co. Boston, Massachusetts, USA. 1904

**Carus, Paul** 1852–1919  
American philosopher

Why a mathematical or otherwise scientific poetry has not yet developed, is due simply to the fact that there are not enough mathematicians in the world to form an audience sufficiently large to make the man of poetical sentiments a real poet as the word is commonly understood; for the poet is made by the people, and public recognition is the true laurel wreath of any real poet laureate.

*Friedrich Schiller: A Sketch of His Life and an Appreciation of His Poetry*  
Schiller, A Philosophical Poet (p. 33)  
The Open Court Publishing Co. Chicago, Illinois, USA. 1905

**Clifford, William Kingdon** 1845–79  
English philosopher and mathematician

It is an open secret to the few who know it, but a mystery and a stumbling-block to the many, that Science and Poetry are own sisters; insomuch that in those branches of scientific inquiry which are most abstract, most formal, and most remote from the grasp of the ordinary

sensible imagination, a higher power of imagination akin to the creative insight of the poet is most needed and most fruitful of lasting work.

In Leslie Stephen and Frederick Pollock (eds.)  
*Lectures and Essays* (Volume 1)  
Introduction (p. 1)  
Macmillan & Company. London, England. 1886

**Coleridge, Samuel Taylor** 1772–1834  
English lyrical poet, critic, and philosopher

Poetry is not the proper antithesis to prose, but to science. Poetry is opposed to science, and prose to metre.

In Henry Nelson Coleridge  
*The Literary Remains of Samuel Taylor Coleridge* (Volume 2)  
Definition of Poetry (p. 7)  
William Pickering. London, England. 1836

The proper and immediate object of science is the acquirement, or communication, of truth; the proper and immediate object of poetry is the communication of immediate pleasure.

In Henry Nelson Coleridge  
*The Literary Remains of Samuel Taylor Coleridge* (Volume 2)  
Definition of Poetry (p. 7)  
William Pickering. London, England. 1836

**Cooke, George Willis** 1848–1923  
American Unitarian minister, writer, editor, and lecturer

Science can dissect the human body, but it can do little towards an explanation of the subtler meaning of life and mind. Its methods are analytical; it has reached no truly synthetic results in the regions where knowledge is most to be desired. Its effects on literature are destructive. Science destroys poetry, dries up the poetic sense, closes the doors of imagination.

*George Eliot: A Critical Study of Her Life, Writings, and Philosophy*  
Chapter XIX (pp. 410–411)  
Houghton Mifflin & Co. New York, New York, USA. 1883

**Davis, Joel** 1948–  
No biographical data available

Poetry and science are closer than most people realize. Many poets and scientists already know this, of course. Most of the rest of us are still trapped in dismal stereotypes about both fields of human endeavor. The deep link between the two is vision.

*Alternate Realities*  
In a Grain of Sand (p. 3)  
Plenum Trade. New York, New York, USA. 1997

**Day-Lewis, Cecil** 1904–72  
Irish poet

Science is concerned with finding out and stating the facts: poetry's task is to give you the look, the smell, the taste, the "feel" of those facts.

*Poetry for You*  
Chapter I (p. 10)  
Basil Blackwell & Mott Ltd. Oxford, England. 1959

Every good poem, in fact, is a bridge built from the known, familiar side of life over into the unknown. Science, too, is always making expeditions into the unknown. But this does not mean that science can supersede poetry. For poetry enlightens us in a different way from science: it speaks directly to our feelings or imagination. The findings of poetry are no more and no less true than science.

*Poetry for You*

Chapter VIII (p. 92)

Basil Blackwell & Mott Ltd. Oxford, England. 1959

**Gray, David** 1838–61

Scottish poet

It is certain that the clear, dry sky of scientific knowledge is utterly unlike that vague atmosphere of dream and phantasy in which the Muse has been wont to move and have her being.

*Letters, Poems and Selected Prose Writings of David Gray*

Science and Poetry (p. 323)

The Courier Co. Buffalo, New York, USA. 1888

Science and poetry will continue to co-exist, and may even become good friends. The dauntless and tireless scientist will not cease to question nature and push outward the lines of physical knowledge; but, on the other hand, he can scarcely make any serious invasion of Poetry's spiritual domain.

*Letters, Poems and Selected Prose Writings of David Gray*

Science and Poetry (p. 330)

The Courier Co. Buffalo, New York, USA. 1888

**Grierson, Francis** 1848–1927

English-born American musician, composer, and pianist

There is such a thing as poetic science, but no such thing as scientific poetry.

*The Humour of the Underman, and Other Essays* (p. 9)

John Lane Co. London, England. 1913

**Hare, Julius Charles** 1795–1855

English theological writer

**Hare, Augustus William** 1834–1903

Science sees signs; Poetry the thing signified.

*Guesses at Truth* (p. 354)

Macmillan & Co Ltd. London, England. 1876

**Holton, Gerald** 1922–

Research professor of physics and science history

Poets rush in where scientists fear to tread.

*Einstein, History, and Other Passions: The Rebellion Against Science at the End of the Twentieth Century*

Part One, Chapter 6 (p. 132)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

**Irving, David**

No biographical data available

The principal object indeed of poetry is not profit but pleasure: if however a scientific poem be intended for solid

instruction, the endless progression of human knowledge will speedily abridge the importance of almost every precept which it may contain; and when the scientific part is completely obsolete, the poetry will no longer be found attractive.

*Memoirs of the Life and Writings of George Buchanan* (p. 242)

Printed for Bell & Bradfute. Edinburgh, Scotland. 1907

**Jones, Frederick Wood** 1879–1954

Physician

Whoever wins to a great scientific truth will find a poet before him in the quest.

*Medical Journal of Australia*, 29 August, 1931

**Kingsley, Charles** 1819–75

English clergyman and author

Science has made vast strides, and introduced entirely new modes of looking at nature, and poets must live up to the age.

*Alton Locke*

Chapter XV (p. 133)

Macmillan & Co Ltd. London, England. 1862

**Lowell, James Russell** 1819–91

American poet, critic, essayist, editor, and diplomat

In the earliest ages science was poetry, as in the later poetry has become science.

*The Writings of James Russell Lowell* (p. 359)

The Riverside Press. Cambridge, England. 1890

**Lysaght, Sidney Royse** 1860–1941

Irish writer

Science in the first place looks for information, poetry for beauty; and, taking different paths, they meet on the borderland of discovery.

*A Reading of Life*

Chapter II (p. 35)

Macmillan & Company Ltd. London, England. 1936

**Macaulay, Thomas Babington** 1800–50

English historian and writer

...as men know more, and think more, they look less at individuals, and more at classes. They therefore make better theories, and worse poems.

*Critical and Miscellaneous Essays*

Milton (p. 21)

Carey & Heart. Philadelphia, Pennsylvania, USA. 1843

In an enlightened age there will be much intelligence, much science, much philosophy, abundance of just classification and subtle analysis, abundance of wit and eloquence, abundance of verses, and even of good ones – but little poetry.

*Critical and Miscellaneous Essays*

Milton (p. 23)

Carey & Heart. Philadelphia, Pennsylvania, USA. 1843

...poetry effects its purpose most completely in a dark age. As the light of knowledge breaks in upon its exhibitions, as the outlines of certainty become more and more definite, and the shades of probability more and more distinct, the hues and lineaments of the phantoms which it calls up grow fainter and fainter.

*Critical and Miscellaneous Essays*

Milton (pp. 23–24)

Carey & Heart. Philadelphia, Pennsylvania, USA. 1843

### **Maudsley, Henry** 1835–1918

English physician

The mountains are not less imposing in their grandeur because the Oreads have deserted them, nor the groves less attractive, nor the streams more desolate, because science has banished the Dryads and the Naiads. No, science has not destroyed poetry, nor expelled the divine from Nature, but has furnished the materials, and given the presages, of a higher poetry and a mightier philosophy than the world has yet seen.

*Body and Mind*

Lecture III (p. 96)

D. Appleton & Co. New York, New York, USA. 1872

### **Melandri, E.**

No biographical data available

The existence of poetics of science is undeniable.... Barring poetics from science is the same as barring use of the hypothesis.

In Fernand Hallyn

*The Poetic Structure of the World: Copernicus and Kepler*

Introduction (p. 7)

Zone Books. New York, New York, USA. 1990

### **Miller, Hugh** 1802–56

Scottish geologist and theologian

Because science flourishes, must poesy decline? The complaint serves but to betray the weakness of the class who urge it.

*Sketch-book of Popular Geology* (3rd edition)

Lecture Second (p. 80)

William P. Nimmo. Edinburgh, Scotland. 1869

### **Moore, Thomas** 1779–1852

Irish poet

Lady Bab. Yes, my dear, a poem upon *sol ammoniac* – in which, under the name of the *Loves of Ammonia*, I have personified this interesting *alkali*, and described very tenderly all the various *experiments* that have been tried on her.

Miss S. This is what has been called ‘enlisting Poetry under the banners of Science,’

*The Works of Thomas Moore*

The Blue Stocking (p. 295)

Printed for E. Fleischer. Leipzig, Germany 1833

### **Munroe, J.**

No biographical data available

There is a lofty poetry in the wonderful revelations of Science, – poetry felt by Newton, Herschel, Faraday, and perhaps by all great discoverers. It is still sometimes felt by the student as he pursues his studies into fresh fields. If, then, we have lost a reverent sense for the marvels we are familiar with, we should rather attribute it to the triteness of our knowledge than to the character of that knowledge in itself.

Science and the Sense of Beauty

*The Journal of Science, and Annals of Astronomy, Biology, Geology,*

Volume IV, (Third series), April, 1882 (p. 203)

### **Pellissier, Georges**

No biographical data available

The pitfall of scientific poetry lies in a perfection which the prose writer masters without effort, but which the poet can only attain through miracles of patient, laborious art. To tax one’s ingenuity to set in verse a law, an axiom, or a definition more naturally expressed in prose, is a mental exercise quite as sterile as difficult.

*The Literary Movement in France During the Nineteenth Century*

Part III, Chapter II (p. 372)

G. Putnam’s Sons. New York, New York, USA. 1897

### **Pollock, Sir Frederick** 1845–1937

English jurist

It is an open secret to the few who know it, but a mystery and a stumbling-block to the many, that Science and Poetry are own sisters; insomuch that in those branches of scientific inquiry which are most abstract, most formal, and most remote from the grasp of the ordinary sensible imagination, a higher power of imagination akin to the creative insight of the poet is most needed and most fruitful of lasting work.

In Leslie Stephen and Frederick Pollock

*Lectures and Essays, by the Late William Kingdon Clifford* (2nd edition)

Introduction, Part I (p. 1)

Macmillan & Company Ltd. London, England. 1886

### **Proctor, Richard Anthony** 1837–88

English astronomer

Many think that science cannot truly be called science if clothed in poetic garb, and, on the other hand, others seem to fear that a glory must depart from the face of nature if science scrutinise her mysteries too closely.

*The Poetry of Astronomy*

Preface

Smith, Elder & Co. London, England. 1881

### **Robertson, Frederick W.** 1816–53

English divine

Science destroys poetry until the heart bursts into mysticism, and out of science brings poetry again, asserting a

wonder and a vague mystery of life and feeling, beneath and beyond all science, and proclaiming the wonderfulness and mystery of that which we seem most familiarly to understand.

*The World's Best Orations: From the Earliest Period to the Present Time* (Volume 9)

The Highest Form of Expression (pp. 3319–3320)  
Ferd. P. Keiser. St. Louis, Missouri, USA. 1899

**Poetry creates life; Science dissects death.**

*Lectures and Addresses on Literary and Social Topics*  
Lecture I (p. 123)

Ticknor & Fields. Boston, Massachusetts, USA. 1859

**Roux, Joseph** 1725–93

French hydrographer

Science is for those who learn; poetry, for those who know.

Translated by Isabel Hapgood

*Meditations of a Parish Priest: Thoughts*  
LXXI (p. 43)

Thomas Y. Crowell & Co. New York, New York, USA. 1886

**Spencer, Herbert** 1829–1903

English social philosopher

...science opens up realms of poetry where to the unscientific all is a blank. Those engaged in scientific researches constantly show us that they realize not less vividly, but more vividly, than others, the poetry of their subjects. Whoever will dip into Hugh Miller's works on geology, or read Mr. Lewes's "Seaside Studies," will perceive that science excites poetry rather than extinguishes it.

*Education*

Chapter I (p. 68)

Willard Small. Boston, Massachusetts, USA. 1890

...those who have never entered upon scientific pursuits know not a tithe of the poetry by which they are surrounded. Whoever has not in youth collected plants and insects, knows not half the halo of interest which lanes and hedgerows can assume. Whoever has not sought for fossils, has little idea of the poetical associations that surround the places where imbedded treasures were found. Whoever at the seaside has not had a microscope and aquarium, has yet to learn what the highest pleasures of the seaside are.

*Education*

Chapter I (p. 69)

Willard Small. Boston, Massachusetts, USA. 1890

...it is not true that the facts of science are unpoetical; or that the cultivation of science is necessarily unfriendly to the exercise of imagination or the love of the beautiful. On the contrary science opens up realms of poetry where to the unscientific all is a blank.

*Education: Intellectual, Moral, and Physical*

Chapter I (p. 82)

D. Appleton & Co. New York, New York, USA. 1891

**Stedman, Edmund Clarence** 1833–1908

American poet, critic, and essayist

...our school-girls and spinsters wander down the lanes with Darwin, Huxley, and Spencer under their arms; or if they carry Tennyson, Longfellow, and Morris, read them in the light of spectrum analysis, or test them by the economics of Mill and Bain.

*Victorian Poets* (p. 13)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1915

**Thomson, Sir John Arthur** 1861–1933

Scottish naturalist

Science has enormous treasure-caves full of what we cannot but describe as the raw materials of poetry.

*Introduction to Science*

Chapter VI (p. 167)

Henry Holt & Co. New York, New York, USA. 1911

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

The poet uses the results of science and philosophy, and generalizes their wisest deductions.

*The Writings of Henry David Thoreau* (Volume 1)

*A Week on the Concord and Merrimack Rivers*

Friday (p. 478)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

**Tillyard, E. M. W.** 1889–1962

English classical scholar

**Lewis, C. S. (Clive Staples)** 1898–1963

British author, scholar, and popular theologian

Only science can tell you where and when you are likely to meet an elm: only poetry can tell you what meeting an elm is like.

*The Personal Heresy: A Controversy*

Chapter V (p. 110)

Oxford University Press, Inc. London, England. 1939

**Tomlinson, C.**

No biographical data available

The single object of science is the discovery of truth as it is in nature, and I cannot imagine greater mistake than to suppose that science is the enemy of poetry. There are higher flights in science than were ever reached by poetry, and if the poetry of the future is to be something more than repetition of the past, it must borrow wings from science.

Poetry versus Science

*Notes and Queries*, Eighth Series, Volume II, Number 33, August 13, 1892 (p. 133)

**von Schlegel, Friedrich** 1772–1829

German philosopher, critic, and writer

Strictly speaking, the idea of a scientific poem is probably as nonsensical as that of a poetic science.

*Dialogue on Poetry and Literary Aphorisms*

Selected Aphorisms from the Lyceum

Aphorism 61 (p. 127)

The Pennsylvania State University Press, University Park, Pennsylvania, USA. 1968

**Wheelock, John Hall** 1886–1978

American poet

The statements of science are hearsay, reports from a world outside the world we know. What the poet tells us has long been known to us all, and forgotten. His knowledge is of our world, the world we are both doomed and privileged to live in, and it is a knowledge of ourselves, of the human condition, the human predicament.

*What Is Poetry?*

Chapter 6

Charles Scribner's Sons, New York, New York, USA. 1963

**Whitman, Walt** 1819–92

American poet, journalist, and essayist

Exact science and its practical movements are no checks on the greatest poet but always his encouragement and support. ...there the arms that lifted him first and brace him best...there he returns after all his goings and comings. The sailor and traveller...the anatomist chemist astronomer geologist phrenologist spiritualist mathematician historian and lexicographer are not poets, but they are the lawgivers of poets and their construction underlies the structure of every perfect poem.

*Leaves of Grass*

Preface to the 1855 edition of "*Leaves of Grass*" (p. 304)

Doubleday, Doran & Company, Inc. New York, New York, USA. 1940

If there shall be love and content between the father and the son and if the greatness of the son is the exuding of the greatness of the father, there shall be love between the poet and the man of demonstrable science. In the beauty of poems are the tuft and final applause of science.

*Leaves of Grass*

Preface to the 1855 edition of "*Leaves of Grass*" (p. 304)

Doubleday, Doran & Company, Inc. New York, New York, USA. 1940

**Wordsworth, William** 1770–1850

English poet

If the time should ever come when what is now called science, thus familiarised to men, shall be ready to put on, as it were, a form of flesh and blood, the Poet will lend his divine spirit to aid the transfiguration, and will welcome the Being thus produced, as a dear and genuine inmate of the household of man.

*The Prose Works of William Wordsworth* (Volume 2)

Chapter III (p. 92)

Edward Moxon, Son, & Co. London, England. 1876

Poetry is the breath and finer spirit of all knowledge; it is the impassioned expression which is in the countenance of all Science.

*Lyrical Ballads* (Volume 1)

Preface (p. xxxvii)

Printed for T.N Longman & O. Rees. London, England. 1802

The knowledge both of the Poet and the Man of science is pleasure; but the knowledge of the one cleaves to us as a necessary part of our existence, our natural and unalienable inheritance; the other is a personal and individual acquisition, slow to come to us, and by no habitual and direct sympathy connecting us with our fellow-beings.

In Andrew Jackson George

*The Complete Poetical Works of William Wordsworth*

Preface to the Lyrical Ballads (p. 795)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1904

**Zee, Anthony**

American physicist

In science, one tries to say what no one else has ever said before. In poetry, one tries to say what everyone else has already said, but better. This explains, in essence, why good poetry is as rare as good science.

*Fearful Symmetry*

Chapter 7 (p. 103)

Macmillan Publishing Company, New York, New York, USA. 1986

## SCIENCE AND POLITICS

**Bernal, John Desmond** 1901–71

Irish-born physicist and X-ray crystallographer

The greater the man the more he is soaked in the [political] atmosphere of his time; only thus can he get a wide enough grasp of it to be able to change substantially the pattern of knowledge and action.

*Science in History* (p. 22)

C.A. Watts & Co. London, England.

**Born, Max** 1882–1970

German-born English physicist

...the subordination of fundamental research to political and military authorities is detrimental. The scientists themselves have learned by now that the period of unrestricted individualism in research has come to an end. They know that even the most abstract and remote ideas may one day become of great practical importance – like Einstein's law of equivalence of mass and energy. They have begun to organize themselves and to discuss the problem of their responsibility to human society. It should be left to these organizations to find a way to harmonize the security of the nations with the freedom of research and publication without which science must stagnate.

*The Restless Universe*

Postscript (p. 308)

Dover Publications, Inc. New York, New York, USA. 1951

**Budworth, D.**

No biographical data available

Science policy is essentially about the allocation of scarce resources, and is therefore a part of politics.... The scarce resource with which science policy should concern itself in the short term is not money, but that portion of the scientific population which is capable of initiating and leading significant work. Such people are always in short supply, even when the total population itself is greater than the available jobs.

Science Policy Should Be About People

*New Scientist*, Volume 69, Number 993, 25 March, 1976 (pp. 684–685)**Clarke, Arthur C.** 1917–

English science and science fiction writer

The menace of interplanetary imperialism can be overcome only by world-wide technical and political agreements well in advance of the actual event, and these will require continual pressure and guidance from the organizations which have studied the subject.

*The Challenge of the Spaceship*

The Challenge of the Spaceship (p. 8)

Harper &amp; Brothers. New York, New York, USA. 1959

**de Maupertuis, Pierre-Louis Moreau** 1698–1759

French mathematician and astronomer

There are sciences over which the will of kings has no immediate influence; it can procure advancement there only in so far as the advantages which it attaches to their study can multiply the number and the efforts of those who apply themselves to them. But there are other sciences which for their progress urgently need the power of sovereigns; they are all those which require greater expenditure than individuals can make or experiments which would not ordinarily be practicable.

*Lettres su le progrès des sciences, Oeuvres de Maupertuis*

Dresden (pp. 6–7)

Publisher undetermined

**Johnson, Harry G.** 1923–1979

American economist

Basic science, per se, contributes to culture; it contributes to our social well-being, including national defence and public health; to our economic well-being; and it is an essential element of the education not only of scientists but also of the population as a whole. In deciding how much science the society needs, one must decide how the support of science bears on these other, politically defined, goals of the society.

In National Academy of Sciences

*Basic Research and National Goals: A Report to the Committee on Science and Astronautics*

Federal Support of Basic Research: Some Economic Issues, Summary (p. 5)

US Government Printing Office. Washington, D.C. 1965

**Koestler, Arthur** 1905–83

Hungarian-born English writer

No scientist is admired for failing in the attempt to solve problems that lie beyond his competence. The most he can hope for is the kindly contempt earned by the Utopian politician. If politics is the art of the possible, research is surely the art of the soluble. Both are immensely practical-minded affairs.

The Act of Creation

*New Statesman*, Volume 19, June, 1964**Price, Don Krasher** 1910–95

American political scientist

...all sciences are considered by their professors as equally significant; by the politicians, as equally incomprehensible; and by the military as equally expensive.

*The Scientific Estate*

Chapter 1 (p. 12)

Harvard University Press. Cambridge, Massachusetts, USA. 1965

...it has begun to seem evident to a great many administrators and politicians that science had become something very close to an establishment, in the old and proper sense of that word: a set of institutions supported by tax funds but largely on faith and without direct responsibility to political control.

*The Scientific Estate*

Chapter 1 (p. 12)

Harvard University Press. Cambridge, Massachusetts, USA. 1965

**Rabinowitch, Eugene** 1901–73

Russian-born American biophysicist

Science has assumed such an important role in determining the parameters of national and international life, that participation in national decisions by people whose world picture has been affected by the study and practice of science (even if this picture has its own bias), is indispensable for many major political decisions – to correct the bias of the more traditional molders of national decisions, such as men with legal training.

Open Season on Scientists

*The New Republic*, January 1, 1966 (p. 21)**SCIENCE AND PRACTICE****de La Beche, Henry Thomas** 1796–1855

English geologist

Science and practice are not antagonistic, they are mutual aids.

*Records of the School of Mines and of Science Applied to the Arts* (Volume 1), Part I

Inaugural Discourse (p. 21)

Longman, Brown, Green &amp; Longmans. London, England. 1852

## SCIENCE AND RELIGION

**Adams, George** 1750–95  
English instrument maker

The two kingdoms of nature and grace, as two parallel lines, correspond to each other, follow a like course, but can never be made to touch. An adequate understanding of this distinction in all its branches, would be the consummation of human knowledge.

*Lectures on Natural and Experimental Philosophy* (Volume 1)  
Lecture VI (p. 242)  
Printed by R. Hindmarsh. London, England. 1794

**Adams, Henry Brooks** 1838–1918  
American man of letters

The preacher then went on to criticise the attitude of religion towards science. “If there is still a feeling of hostility between them...it is no longer the fault of religion. There have been times when the church seemed afraid, but she is so no longer. Analyze, dissect, use your microscope or your spectrum till the last atom of matter is reached; reflect and refine till the last element of thought is made clear; the church now knows with the certainty of science what she once knew only by the certainty of faith, that you will find enthroned behind all thought and matter only one central idea, – that idea which the church has never ceased to embody, – I AM!

*Democracy, and Esther: Two Novels by Henry Adams*  
Esther (p. 212)  
Peter Smith. Gloucester, Massachusetts, USA. 1965

**Atkinson, Henry George**

**Martineau, Harriet**

There is no theory of a God, of an author of Nature, of an origin of the universe, which is not utterly repugnant to my faculties; which is not (to my feelings) so irreverent as to make me blush; so misleading as to make me mourn.

*Letters on the Laws of Man's Nature and Development*  
Chapter 19 (p. 217)  
John Chapman. London, England. 1851

**Allport, Gordon** 1897–1967  
American psychologist

A narrowly conceived science can never do business with a narrowly conceived religion.

*The Individual and His Religion: A Psychological Interpretation*  
Preface (p. vi)  
The Macmillan Company. New York, New York, USA. 1956

**Alpher, Ralph Asher** 1921–  
American physicist

I...reject the argument put forth by many fundamentalists that science has nothing to do with religion because

God is not among the things making up the universe in which we live. Surely if a necessity for a god-concept in the universe ever turns up, that necessity will become evident to the scientist.

Theology of the Big Bang  
*Religious Humanism*, Volume 17, Number 1, Winter, 1983 (p. 12)

**Appleyard, Bryan** 1951–  
English author and journalist

Science was the lethally dispassionate search for truth in the world whatever its meaning might be; religion was the passionate search for meaning whatever the truth might be. Science can lay a claim to a meaning in the sense of establishing causality, and religion could claim truth in the sense of a transcendent order. But science's meaning does not answer the question Why? And religion's truth had no scientific relevance.

*Understanding the Present: Science and the Soul of Modern Man*  
Chapter 4 (p. 79)  
Doubleday. New York, New York, USA. 1992

**Bakunin, Mikhail Alexandrovich** 1814–76  
Russian revolutionary

In our church – if I may be permitted to use for a moment an expression which I so detest – ...we have a chief, an invisible Christ, science.

*God and the State*  
Chapter I (p. 20)  
McGraw-Hill Book Co., Inc. New York, New York, USA. 1916

**Berger, Peter L.** 1929–  
American sociologist

Protestant theologians have been increasingly engaged in playing a game whose rules have been dictated by their cognitive antagonists.

*A Rumor of Angels: Modern Society and the Rediscovery of the Supernatural*  
Chapter 1 (p. 10)  
Doubleday & Company, Inc. Garden City, New York, USA. 1970

**Berman, Louis**  
No biographical data available

Science also as a religion, as a faith to bind men together, as a substitute for the moribund old mythologies and theologies which kept them sundered, is commencing to be talked of in a more serious tone.

*The Glands Regulating Personality*  
Introduction (pp. 16–17)  
The Macmillan Co. New York, New York, USA. 1921

...the religion of science will play the great part of the Liberator of mankind from the whole system of torments that have made the way of all flesh a path of rocks along which a manacled prisoner crawls to his doom.

*The Glands Regulating Personality*  
Introduction (p. 17)  
The Macmillan Co. New York, New York, USA. 1921

**Bernal, John Desmond** 1901–71  
Irish-born physicist and X-ray crystallographer

Now the history of scientific advance has shown us clearly that any appeal to Divine Purpose or any supernatural agency, to explain any phenomenon, is in fact only a concealed confession of ignorance, and a bar to genuine research.

*Science and Ethics*

A Marxist Critique (p. 116)

George Allen & Unwin Ltd. London, England. 1942

The role of God in the material world has been reduced stage by stage with the advance of science, so much so that He only survives in the vaguest mathematical form in the minds of older physicists and biologists.

In C.H. Waddington (ed.)

*Science and Ethics*

A Marxist Critique (p. 116)

George Allen & Unwin Ltd. London, England. 1942

**Boutroux, Émile** 1845–1921  
French philosopher

In spite of their relations, science and religion remain, and must remain, distinct. If there were no other way of establishing a rational order between things than that of reducing the many to the one, either by assimilation or by elimination, the destiny of religion would appear doubtful.

Translated by Jonathan Nield

*Science and Religion in Contemporary Philosophy*

Conclusion (pp. 399–400)

Duckworth & Company. London, England. 1912

**Brewster, David** 1781–1868  
Scottish scientist, inventor and writer

...identified with astronomy, in proclaiming truths supposed to be hostile to Scripture, Geology has been denounced as the enemy of religion. The twin sisters of terrestrial and celestial physics have thus been joint-heirs of intolerance and persecution – unresisting victims in the crusade which ignorance and fanaticism are ever waging against science.

*More Worlds Than One: The Creed of the Philosopher and the Hope of the Christian*

Chapter III (p. 47)

Chatto & Windus. London, England. 1876

**Buchner, Ludwig** 1824–99  
German physician and philosopher

[How can we conceive] a supreme legislator, who allows himself to be moved by prayers and sobs, to reverse the immutable order which he himself has created, to violate his own laws, and with his own hand to destroy the action of the natural forces!

*Force and Matter*

Chapter VI (p. 38)

Trübner & Co. London, England. 1864

What this or that man may understand by a governing reason, an absolute power, a universal soul, a personal God, etc., is his own affair. The theologians, with their articles of faith, must be left to themselves; so the naturalists with their science: they both proceed by different routes.

*Force and Matter*

Chapter VI (p. 43)

Trübner & Co. London, England. 1864

It is now known that there can be no discussion about those periodic creations of the earth of which so much was said, and which to this day an erroneous conception of nature tries to identify with the so-called days of creation of the Bible; but that the whole past of the earth is nothing but an unfolded *present*.

*Force and Matter*

Chapter IX (p. 57)

Trübner & Co. London, England. 1864

How curious and whimsical is not the conception of a creative power, which conducts the earth and its inhabitants through various transitions and immense periods of time to a more developed form, in order to make it finally a fit dwelling-place for the most organised animal – man.

*Force and Matter*

Chapter IX (p. 60)

Trübner & Co. London, England. 1864

An enlightened intellect no longer requires the aid of that powerful hand which, acting from without, excites the burning spirits of the interior of the earth to a sudden rebellion, which pours the waters as a deluge over the earth, and shapes for its designs the whole structure like soft clay.

*Force and Matter*

Chapter IX (p. 60)

Trübner & Co. London, England. 1864

**Buck, Pearl S.** 1892–1973  
American author

Science and religion, religion and science, put it as I may they are two sides of the same glass, through which we see darkly until these two, focusing together, reveal the truth.

*A Bridge for Passing*

Chapter III (p. 255)

John Day Company. New York, New York, USA. 1962

**Bultmann, R.**

...the New Testament provides a world picture which belongs entirely to Jewish or Gnostic mythology and is incredible or even meaningless in a scientific age.

In H.J. Paton

*The Modern Predicament: A Study in the Philosophy of Religion*

Chapter XV, Section 3 (p. 228)

Collier Books. New York, New York, USA. 1962

**Burroughs, John** 1837–1921  
American naturalist and essayist

The scientific faith of mankind – faith in the universality of natural causation – is greatly on the increase; it is waxing in proportion as theological faith is waning; and if love of truth is to be our form of love of God, and if the conservation of human life and the amelioration of its conditions are to be our form of brotherly love, then the religion of a scientific age certainly has some redeeming features.

*The Writings of John Burroughs* (Volume 19)  
Chapter X (p. 175)

Houghton, Mifflin. Boston, Massachusetts, USA. 1916

The mysteries of religion are of a different order from those of science; they are parts of an arbitrary system of man's own creation; they contradict our reason and our experience, while the mysteries of science are revealed by our reason, and transcend our experience.

Scientific Faith

*The Atlantic Monthly*, July 1915 (p. 33)

The miracles of religion are to be discredited, not because we cannot conceive of them, but because they run counter to all the rest of our knowledge; while the mysteries of science, such as chemical affinity, the conservation of energy, the indivisibility of the atom, the change of the non-living into the living...extend the boundaries of our knowledge, though the modus operandi of the changes remains hidden.

Scientific Faith

*The Atlantic Monthly*, July 1915 (p. 33)

**Bush, Vannevar** 1890–1974  
American electrical engineer and physicist

To pursue science is not to disparage the things of the spirit. In fact, to pursue science rightly is to furnish a framework on which the spirit may rise.

Speech, MIT, October 5, 1953

**Bushnell, Horace** 1802–76  
American Congregational minister

As the science of nature goes toward completion, religion, having all the while been watching for it in close company, will have gotten immense breadth and solidity, from the ideas and facts unfolded in its discoveries, and will be as much enlarged in its confidence and the sentiment of worship, as beholding God's deep system in the world signifies more than looking on its surfaces.

Science and Religion

*Putnam's Magazine*, Volume 1, 1868 (p. 267)

**Butler, Samuel** 1612–80  
English novelist, essayist, and critic

Science and religion are reconciled in amiable and sensible people but nowhere else.

*The Note-Books of Samuel Butler* (Volume 1)  
1874–1883 (p. 118)

University Press of America, Inc. Lanham, Maryland, USA. 1984

**Carpenter, William Benjamin** 1813–85  
English physiologist and naturalist

...when Science, passing beyond its own limits, assumes to take the place of Theology, and sets up its own conception of the Order of Nature as a sufficient account of its Cause, it is invading a province of Thought to which it has no claim, and not unreasonably provokes the hostility of those who ought to be its best friends.

*Report of the Forty-second Meeting of the British Association for the Advancement of Science*

Address (p. lxxxiv)

**Chadwick, Owen** 1916–  
English historian and Christian scholar

Science versus Religion – the antithesis conjures two hypostatized entities of the later nineteenth century: Huxley St. George slaying Samuel smoothest of dragons; a mysterious undefined ghost called Science against a mysterious indefinable ghost called Religion; until by 1900 schoolboys decided not to have faith because Science, whatever that was, disproved Religion, whatever that was.

*The Secularisation of the European Mind in the Nineteenth Century*  
Part II, Chapter 7 (p. 161)

Cambridge University Press. Cambridge, England. 1990

**Chapin, Edwin Hubbell** 1840–80  
Universalist minister, author, lecturer, and social reformer

Revelation and science are continually interpreting one another, while every day the material universe is unfolding a more spiritual significance, and indicating its subservience to a spiritual end.

*Living Words* (p. 45)

Universalist Publishing House. Boston, Massachusetts, USA. 1883

Let us not fear that the issues of natural science shall be scepticism or anarchy. Through all God's works there runs a beautiful harmony. The remotest truth in his universe is linked to that which lies nearest the throne.

*Living Words* (p. 117)

Universalist Publishing House. Boston, Massachusetts, USA. 1883

**Clark, W. C.**  
No biographical data available

**Majone, G.**  
No biographical data available

The social uses of science have always had something in common with the social uses of religion. And in the two decades following the Second World War, modern science took on a most religious-looking numinous legitimacy as an unquestioned source of authority on all manner of policy problems.

*Report of the International Institute of Applied Systems Analysis*  
The Critical Appraisal of Scientific Inquiries with Policy Implications,  
Luxemburg, Austria, 1984 (p. 35)

**Cobbe, Frances Power** 1822–1904  
Irish writer

Science... is but a mere heap of facts, not a golden chain of truths, if we refuse to link it to the throne of God.

*The Peak in Darien: An Octave of Essays*  
Magnanimous Atheism (pp. 50–51)  
George H. Ellis. Boston, Massachusetts, USA. 1882

**Coleridge, Stephen** 1854–1936  
English author, barrister, and opponent of vivisection

The Church by no mental contortions or intellectual gymnastics can ever reconcile the dull negative assertions of Science with the spiritual aspirations of Religion, the noble altruisms of Christianity, or the divine visions of the philosophers.

*The Idolatry of Science*  
Chapter II (p. 9)  
John Lane Co. London, England. 1920

**Compton, Karl Taylor** 1887–1954  
American educator and physicist

Science has contributed to the making of religion into a developing dynamic spiritual force.

During the Years 1930–1949 (p. 19)  
Undergraduate Association, MIT. Cambridge, Massachusetts, USA. 1955

**Conklin, Edwin Grant** 1863–1952  
American zoologist

Science cannot solve the great mysteries of our existence, – why we are, whither we are bound, and what it all means. Faith alone assures us that there is definite purpose in all experience. This knowledge makes life worth living and service a privilege.

In Edward H. Cotton  
*Has Science Discovered God?*  
A Biologist's Religion (p. 89)  
Thomas Y. Crowell Company. New York, New York, USA. 1931

The faith, ideals, and ethics of science constitute a form of natural religion.

*Science*, December 31, 1837

**Coulson, Charles Alfred** 1910–74  
English theoretical chemist

...science is one aspect of God's presence, and scientists therefore part of the company of His heralds.

*Science and Christian Belief*  
Scientific Method (p. 30)  
The University of North Carolina Press. Chapel Hill, North Carolina, USA. 1955

**Davies, Paul Charles William** 1946–  
British-born physicist, writer, and broadcaster

If the Church is largely ignored today it is not because science has finally won its age-old battle with religion, but because it has so radically reoriented our society that the biblical perspective of the world now seems largely irrelevant. As one television cynic recently remarked, few of our neighbors possess an ass for us to covet.

*God and the New Physics*  
Chapter 1 (p. 2)  
Simon & Schuster. New York, New York, USA. 1983

Those who invoke God as an explanation of cosmic organization usually have in mind a supernatural agency, acting on the world in defiance of natural laws. But it is perfectly possible for much, if not all of what we encounter in the universe to be the product of intelligent manipulation of a purely natural kind: within the laws of physics. For example, our galaxy could have been made by a powerful mind who rearranged the primeval gases using carefully placed gravitating bodies, controlled explosions and all the other paraphernalia of a space age astro-engineer.

*God and the New Physics*  
Chapter 15 (p. 208)  
Simon & Schuster. New York, New York, USA. 1983

In spite of the fact that religion looks backward to revealed truth while science looks forward to new vistas and discoveries, both activities produce a sense of awe and a curious mixture of humility and arrogance in their practitioners. All great scientists are inspired by the subtlety and beauty of the natural world that they are seeking to understand. Each new subatomic particle, every unexpected object, produces delight and wonderment. In constructing their theories, physicists are frequently guided by arcane concepts of elegance in the belief that the universe is intrinsically beautiful.

*God and the New Physics*  
Chapter 17 (p. 220)  
Simon & Schuster. New York, New York, USA. 1983

**Davis, Andrew Jackson**  
No biographical data available

The world has many needs; the greatest of all is, a philosophy, which unfolds in a systematic and orderly form the stupendous truths of Nature; which points the soul of man, through Nature, to the Eternal Mind... The soft silvery sunbeams of heaven do not more naturally flow over the fields than did the loving, intuitive soul of Jesus spread its elixir over his solemn utterances. Every Bible student feels its mysterious beauty; realizes its spiritual presence, as he reads those sacred evangels of the Testaments. Every civilized mind feels the goodness of his teachings, and admires the expurgated history of the man, bequeathed to us by the early fathers of the Church; nevertheless, the world needs today a 'philosophy' which Jesus did not furnish, needs a 'revelation' to the faculty of reason, which the Bible does not explain.

*The Present Age and Inner Life* (3rd edition)  
A Survey of Human Needs (pp. 17, 24)  
W. White & Co. Boston, Massachusetts, USA. 1873

**Dembski, William A.** 1960–  
Mathematician and philosopher

Any view of the sciences that leaves Christ out of the picture must be seen as fundamentally deficient.

*Intelligent Design: The Bridge Between Science and Theology*  
Part 3, Chapter 7, Section 7.6 (p. 206)  
InterVarsity Press. Downers Grove, Illinois, USA. 1999

**Disraeli, Benjamin, First Earl of Beaconsfield** 1804–81

English prime minister, founder of Conservative Party, and novelist

It [the revelation of chaos] is treated scientifically; everything is explained by geology and astronomy, and in that way. It shows you exactly how a star is formed; nothing can be so pretty! A cluster of vapour, the cream of the milky way, a sort of celestial cheese, churned into light,

*Novels and Tales by the Earl of Beaconsfield* (Volume 9)  
*Tancred, Or The New Crusade*  
Chapter IX (p. 109)  
Longmans, Green & Co. London, England. 1900

**Dobzhansky, Theodosius** 1900–75  
Russian-American scientist

There are still many people who are happy and comfortable adhering to fundamentalist creeds. This should cause no surprise, since a large majority of these believers are as unfamiliar with scientific findings as were people who lived centuries ago.

*The Biology of Ultimate Concern*  
Chapter 5 (p. 95)  
The New American Library, Inc. New York, New York, USA. 1967

Science and religion deal with different aspects of existence...[T]hese are the aspect of facts and the aspect of meaning. But there is one stupendous fact...the meaning of which they have ceaselessly tried to discover. This fact is Man.

*The Biology of Ultimate Concern*  
Chapter 5 (p. 96)  
The New American Library, Inc. New York, New York, USA. 1967

...nothing gives more pleasure to a rather common type of religious person than to point out that science cannot explain this or cannot account for that!

*The Biology of Ultimate Concern*  
Chapter 5 (p. 97)  
The New American Library, Inc. New York, New York, USA. 1967

**Draper, John William** 1811–82  
English scientist

As to Science, she has never sought to ally herself to civil power. She has never attempted to throw odium or inflict social ruin on any human being. She has never subjected anyone to mental torment, physical torture, least of all

to death, for the purpose of upholding or promoting her ideas. She presents herself unstained by cruelties and crimes. But in the Vatican – we have only to recall the Inquisition – the hands that are now raised in appeals to the Most Merciful are crimsoned.

*History of the Conflict between Religion and Science*  
Preface (p. xi)  
D. Appleton and Company. New York, New York, USA. 1898

The time approaches when men must take their choice between quiescent, immobile faith and ever-advancing Science – faith, with its medieval consolations, Science, which is incessantly scattering its material blessings in the pathway of life, elevating the lot of man in this world, and unifying the human race.

*History of the Conflict between Religion and Science* (pp. 364–365)  
D. Appleton & Co. New York, New York, USA. 1897

**du Noüy, Pierre Lecomte** 1883–1947  
French scientist

Any man who believes in God must realize that no scientific fact, as long as it is true, can contradict God. Otherwise, it would not be true. Therefore, any man who is afraid of science does not possess a strong faith.

*Human Destiny*  
Chapter 16 (p. 243)  
Longmans, Green & Company. London, England. 1947

**Dubos, René Jules** 1901–82  
French-born American microbiologist and environmentalist

Religion and science...constitute deep-rooted and ancient efforts to find richer experience and deeper meaning than are found in the ordinary biological and social satisfactions. As pointed out by Whitehead, religion and science have similar origins and are evolving toward similar goals.

*A God Within*  
Chapter 12. On Being Human (p. 255)  
Charles Scribner's Sons. New York, New York, USA. 1972

Both [religion and science] started from crude observations and fanciful concepts, meaningful only within a narrow range of conditions for the people who formulated them of their limited tribal experience. But progressively, continuously, and almost simultaneously, religious and scientific concepts are ridding themselves of their coarse and local components, reaching higher and higher levels of abstraction and purity.

*A God Within*  
Chapter 12. On Being Human (p. 255)  
Charles Scribner's Sons. New York, New York, USA. 1972

Both the myths of religion and the laws of science, it is now becoming apparent, are not so much descriptions of facts as symbolic expressions of cosmic truths.

*A God Within*  
Chapter 12. On Being Human (p. 255)  
Charles Scribner's Sons. New York, New York, USA. 1972

**Durant, William James** 1885–1981

American historian and essayist

Those of you who specialize in science will find it hard to understand religion, unless you feel, as Voltaire did, that the harmony of the spheres reveals a cosmic mind, and unless you realize, as Rousseau did, that man does not live by intellect alone.

Commencement Address

Webb School of Claremont, California, June 7, 1958

We are such microscopic particles in so immense a universe that none of us is in a position to understand the world, much less to dogmatize about it. Pascal trembled at the thought of man's bewildered minuteness between the immensity of the whole and the complexity of each part; "these infinite spaces," he said, "frighten me!" Let us be careful how we pit our pitiful generalizations against the infinite variety, scope, and subtlety of the world.

Commencement Address

Webb School of Claremont, California, June 7, 1958

**Dyson, Freeman J.** 1923–

American physicist and educator

Professional scientists today live under a taboo against mixing science and religion.

*Disturbing the Universe*

Chapter 23 (p. 245)

Basic Books, Inc. New York, New York, USA. 1979

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

Probably most astronomers, if they were to speak frankly, would confess to some chafing when they are reminded of the psalm "The heavens declare the glory of God." It is so often rubbed into us with implications far beyond the simple poetic thought awakened by the splendour of the star-clad sky. There is another passage from the Old Testament that comes nearer to my own sympathies –

And behold the Lord passed by, and a great and strong wind rent the mountains, and brake in pieces the rocks before the Lord; but the Lord was not in the wind: and after the wind an earthquake; but the Lord was not in the earthquake: and after the earthquake a fire; but the Lord was not in the fire: and after the fire a still small voice.... And behold there came a voice unto him, and said, "What doest thou here, Elijah?"

Wind, earthquake, fire – meteorology, seismology, physics – pass in review, as we have been reviewing the natural forces of evolution; the Lord was not in them. Afterwards, a stirring, an awakening in the organ of the brain, a voice which asks "What doest thou here?"

*Science and the Unseen World*

Lecture II (pp. 25–26)

The Macmillan Co. New York, New York, USA. 1929

It is probably true that the recent changes of scientific thought remove some of the obstacles to a reconciliation of religion with science; but this must be carefully distinguished from any proposal to base religion on scientific discovery. For my own part I am wholly opposed to any such attempt.

*Science and the Unseen World*

Chapter VII (pp. 72–73)

The Macmillan Company. New York, New York, USA. 1929

The starting-point of belief in mystical religion is a conviction of significance or, as I have called it earlier, the sanction of a striving in the consciousness. This must be emphasized because appeal to intuitive conviction of this kind has been the foundation of religion through all ages, and I do not wish to give the impression that we have now found something new and more scientific to substitute. I repudiate the idea of proving the distinctive beliefs of religion either from the data of physical science or by the methods of physical science.

*The Nature of the Physical World*

Chapter XV (p. 333)

The Macmillan Company. New York, New York, USA. 1930

It is curious that the doctrine of the running down of the physical universe is so often looked upon as pessimistic and contrary to the aspirations of religion. Since when has the teaching that "heaven and earth shall pass away" become ecclesiastically unorthodox?

*New Pathways in Science*

Chapter III, Section III (p. 59)

The Macmillan Company. New York, New York, USA. 1935

**Einstein, Albert** 1879–1955

German-born physicist

All religions, arts and sciences are branches of the same tree.

*Out of My Later Years* (p. 7)

Thames &amp; Hudson. London, England. 1950

Scientific research is based on the idea that everything that takes place is determined by laws of nature, and therefore this holds for the actions of people. For this reason, a research scientist will hardly be inclined to believe that events could be influenced by a prayer, i.e., by a wish addressed to a supernatural Being.

However, it must be admitted that our actual knowledge of these laws is only imperfect and fragmentary, so that, actually, the belief in the existence of basic all-embracing laws in Nature also rests on a sort of faith. [Belief in basic laws of Nature] has been largely justified so far by the success of scientific research.

In Helen Dukas and Banesh Hoffman

*Albert Einstein: The Human Side: New Glimpses from His Archives*

Letter dated 24 January, 1936 (pp. 32–33)

Princeton University Press. Princeton, New Jersey, USA. 1979

Everyone who is seriously involved in the pursuit of science becomes convinced that a spirit is manifest in the

laws of the Universe – a spirit vastly superior to that of man, and one in the face of which we with our modest powers must feel humble. In this way the pursuit of science leads to a religious feeling of a special sort, which is indeed quite different of the religiosity of someone more naïve.

In Helen Dukas and Banesh Hoffman  
*Albert Einstein: The Human Side – New Glimpses from His Archives*  
Letter dated 20 December, 1935 (p. 33)  
Princeton University Press, Princeton, New Jersey, USA. 1979

The basis of all scientific work is the conviction that the world is an ordered and comprehensive entity, which is a religious sentiment. My religious feeling is a humble amazement at the order revealed in the small patch of reality to which our feeble intelligence is equal.

*Cosmic Religion, With Other Opinions and Aphorisms*  
On Science (p. 98)  
Covici-Fiede. New York, New York, USA. 1931

[T]he cosmic religious experience is the strongest and the noblest driving force behind scientific research. No one who does not appreciate the terrific assertions, and, above all, the devotion without which pioneer creations in scientific thought cannot come into being, can judge the strength of the feeling out of which alone such work, turned away as it is from immediate practical life, can grow. What a deep faith in the rationality of the structure of the world and what a longing to understand even a small glimpse of the reason revealed in the world there must have been in Kepler and Newton to enable them to unravel the mechanism of the heavens in long years of lonely study.

*The New York Times Magazine*, 9 November, 1930

Certain it is that a conviction, akin to religious feeling, of the rationality or intelligibility of the world lies behind all scientific work of a higher order.... This firm belief, a belief bound up with deep feeling, in a superior mind that reveals itself in the world of experience, represents my conception of God.

*Ideas and Opinions*  
On Scientific Truth (p. 261)  
Crown Publishers, Inc. New York, New York, USA. 1954

I have never found a better expression than “religious” for this trust in the rational nature of reality and of its peculiar accessibility to the human mind. Where this trust is lacking science degenerates into an uninspired procedure. Let the devil care if the priests make capital out of this. There is no remedy for that.

*Lettres a Maurice Solovine* (pp. 102–103)  
Gauthier-Villars. Paris, France. 1956

I am of the opinion that all the finer speculations in the realm of science spring from a deep religious feeling, and that without such feeling they would not be fruitful.

*Science and God: A Dialog*  
*Forum*, Volume 83, June, 1930 (p. 373)

Science without religion is lame, religion without science is blind.

*Out of My Later Years*  
Science and Religion, II (p. 26)  
Thames & Hudson. London, England. 1950

...science not only purifies the religious impulse of the dross of its anthropomorphism but also contributes to a religious spiritualization of our understanding of life.

*Out of My Later Years*  
Science and Religion, II (p. 29)  
Thames & Hudson. London, England. 1950

**Eiseley, Loren C.** 1907–77  
American anthropologist, educator, and author

Century after century, humanity studies itself in the mirror of fashion, and ever the mirror gives back distortions, which for the moment impose themselves upon man’s real image. In one period we believe ourselves governed by immutable laws; in the next, by chance. In one period angels hover over our birth; in the following time we are planetary waifs, the product of a meaningless and ever altering chemistry. We exchange halos in one era for fangs in another. Our religious and philosophical conceptions change so rapidly that the theological and moral exhortations of one decade become the wastepaper of the next epoch. The ideas for which millions yielded up their lives produce only bored yawns in a later generation.

*The Unexpected Universe*  
Chapter Eight, Section 2 (p. 179)  
Harcourt, Brace & World, Inc. New York, New York, USA. 1969

**Emerson, Ralph Waldo** 1803–82  
American lecturer, poet, and essayist

The Religion that is afraid of science dishonors God and commits suicide.

*The Journals and Miscellaneous Notebooks of Ralph Waldo Emerson*  
(Volume 2)  
1826–1832, 4 March, 1831 (p. 239)  
Harvard University Press. Cambridge, Massachusetts, USA. 1970

**Flaubert, Gustave** 1821–90  
French novelist

A little science takes your religion from you; a great deal brings you back to it.

*Dictionary of Accepted Ideas*  
M. Reinhardt. London, England. 1954

**Fosdick, Harry Emerson** 1878–1969  
American clergyman and educator

What modern science is doing for multitudes of people, as anybody who watches American life can see, is not to disprove God’s theoretical existence, but to make him “progressively less essential.”

*Adventurous Religion*  
Will Science Displace God? (p. 136)  
Harper & Brothers. New York, New York, USA. 1926

**Freud, Sigmund** 1856–1939

Austrian neurologist and co-founder of psychoanalysis

The scientific spirit brings about a particular attitude towards worldly matters; before religious matters it pauses for a little, hesitates, and finally there too crosses the threshold. In this process there is no stopping; the greater the number of men to whom the treasures of knowledge become accessible, the more widespread is the falling-away from religious belief...

*The Future of an Illusion*

Chapter VII (p. 38)

W.W. Norton &amp; Company, Inc. New York, New York, USA. 1961

**Frothingham, Octavius Brooks** 1822–95

American clergyman and author

[There are] a host of minds of profoundest thought, who find nothing in the disclosures of science to shake their faith in the eternal verities of reason and religion.

*George Ripley*

Chapter VI (p. 231)

Houghton Mifflin &amp; Co. Boston, Massachusetts, USA. 1883

**Froude, James Anthony** 1818–94

English historian and biographer

The superstitions of science scoff at the superstitions of faith.

*The Lives of the Saints**Eclectic Review*, February, 1852**Garman, Charles E.** 1862–1932

No biographical data available

Science is thinking God's thoughts after Him just as truly as when we read the scriptures.

*Letters, Lectures, Addresses of Charles Edward Garman; A Memorial Volume, Prepared with the Cooperation of the Class of 1884, Amherst Science and Theism* (p. 231)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1909

**Gilkey, Langdon** 1919–2004

Protestant theologian

It is because science is limited to a certain level of explanation that scientific and religious theories can exist side by side without excluding one another, that one person can hold both to the scientific accounts of origins and to a religious account, to the creation of all things by God...

*Creationism on Trial: Evolution and God at Little Rock*

Chapter 5 (p. 117)

Winston Press. Minneapolis, Minnesota, USA. 1985

**Gillispie, Charles Coulston** 1918–

French writer and editor of philosophy and history of science

If one be clear about the nature of science as a description of the world, declarative but never normative, may not the choice between science and religion be refused? Is

it not simply a false problem, arising from a confusion – an ancient confusion going back to the beginning of science – between objects and persona? Science is about nature, after all, not about duties. It is about objects. Christianity is about persons, the relation of the persons of men to the person of God.

*The Edge of Objectivity: An Essay in the History of Scientific Ideas*

Chapter VIII (pp. 350–351)

Princeton University Press. Princeton, New Jersey, USA. 1960

**Gladstone, William Ewart** 1809–98

British Liberal Party statesman

To characterize Science as having gone to war with Providence would be, for a man with my convictions, both altogether irrational and very nearly blasphemous. There is, indeed, a practice which seems to me to be widely spread among many persons in the present day, of first unduly narrowing the definition of Science, and then as unduly extending it to all the opinions which those persons think fit to hold, and all the theories they erect on the subjects they term scientific.

*Correspondence on Church and Religion of William Ewart Gladstone* (Volume 2)

Letter 274 (p. 98)

The Macmillan Co. New York, New York, USA. 1910

**Goodspeed, Edgar J.** 1871–1962

American scholar

Science sees meaning in every part; religion sees meaning in the whole.

*Four Pillars of Democracy*

Chapter V (p. 106)

Harper &amp; Brothers. New York, New York, USA. 1940

...religion needs science, to protect it from religion's greatest danger, superstition.

*Four Pillars of Democracy*

Chapter V (p. 115)

Harper &amp; Brothers. New York, New York, USA. 1940

Science needs religion, to prevent it from becoming a curse to mankind instead of a blessing.

*The Four Pillars of Democracy*

Chapter VI (p. 134)

Harper &amp; Brothers. New York, New York, US. 1940

**Grinnell, Frederick** 1945–

American cell biologist

...modern science constitutes a method for understanding and modifying the world but has no inherent direction, whereas modern religion describes a messianic world view but lacks a useful method to bring about this state of affairs.

*Complementarity: An Approach to Understanding the Relationship Between Science and Religion**Perspectives in Biology and Medicine*, Volume 29, Number 2, Winter 1986 (p. 293)

**Gull, Sir William Withey** 1816–90

English physician

Realize, if you can, what a paralyzing influence on all scientific inquiry the ancient belief must have had which attributed the operations of nature to the caprice not of one divinity only, but of many. There still remains vestiges of this in most of our minds, and the more distinct in proportion to our weakness and ignorance.

*British Medical Journal*, Volume 2, 1874 (p. 425)

**Haldane, John Burdon Sanderson** 1892–1964

English biologist

The wise man regulates his conduct by the theories both of religion and science. But he regards these theories not as statements of ultimate fact but as art-forms.

*Possible Worlds and Other Papers*

Chapter XXXI (p. 252)

Harper & Brothers. New York, New York, USA. 1928

**Hardin, Garrett** 1915–2003

American ecologist and microbiologist

We are terribly clever people, we moderns: we bend Nature to our will in countless ways. We move mountains, we make caves, fly at speeds no other organism can achieve and tap the power of the atom. We are terribly clever. The essentially religious feeling of subserviency to a power greater than ourselves comes hard to us clever people. But by our intelligence we are now beginning to make out the limits of our cleverness, the impotence principles that say what can and cannot be. In an operational sense, we are experiencing a return to a religious orientation toward the world.

*Nature and Man's Fate*

The Search for Truth

The New American Library. New York, New York, USA. 1961

**Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

In the history of science, ever since the famous trial of Galileo, it has repeatedly been claimed that scientific truth cannot be reconciled with the religious interpretation of the world. Although I am now convinced that scientific truth is unassailable in its own field, I have never found it possible to dismiss the content of religious thinking as simply part of an outmoded phase in the consciousness of mankind, a part we shall have to give up from now on. Thus in the course of my life I have repeatedly been compelled to ponder on the relationship of these two regions of thought, for I have never been able to doubt the reality of that to which they point.

*Across the Frontiers*

Chapter XVI (p. 213)

Harper & Row, Publishers. New York, New York, USA. 1974

If we are honest – and scientists have to be – we must admit that religion is a jumble of false assertions, with

no basis in reality. The very idea of God is a product of human imagination.

*Physics and Beyond: Encounters and Conversations*

Chapter 7 (p. 85)

Harper & Row, Publishers. New York, New York, USA. 1972

**Hertz, Rabbi Richard**

No biographical data available

I find no conflict between science and religion. Science teaches what is. Religion teaches what ought to be. Science describes. Religion prescribes. Science analyzes what we can see. Religion deals with what is unseen. Each can help the other.

*The American Jew in Search of Himself*

Chapter 4 (p. 42)

Bloch Publishing Company. New York, New York, USA. 1962

**Hillis, W. Daniel** 1956–

American engineer, inventor, and author

...I remain convinced that neither religion nor science has everything figured out.

*The Pattern on the Stone: The Simple Ideas that Make Computers Work*

(p. 152)

Basic Books, Inc. New York, New York, USA. 1998

**Hitchcock, Edward** 1793–1864

American geologist

Twin sister of natural and revealed religion, and of heavenly birth, she will never belie her celestial origin, nor cease to sympathize with all that emanates from the same pure home. Human ignorance and prejudice may for a time seem to have divorced what God has joined together. But human ignorance and prejudice shall at length pass away, and then science and religion shall be seen blending their particolored rays into one beautiful bow of light, linking heaven to earth and earth to heaven.

*The Religion of Geology and Its Connected Sciences*

Lecture V (p. 178)

Phillips Sampson & Co. Boston, Massachusetts, USA. 1854

**Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

Science, for instance, – in other words, knowledge, – is not the enemy of religion; for, if so, then religion would mean ignorance. But it is often the antagonist of school-divinity.

*The Professor at the Breakfast-table*

Chapter V (p. 162)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1916

**Hooykaas, Reijer**

Dutch historian of science

Metaphorically speaking, whereas the bodily ingredients of science may have been Greek, its vitamins and hormones were biblical.

*Religion and the Rise of Modern Science*

Epilogue (p. 162)

William B. Eerdmans Publishing Company, Grand Rapids, Michigan, USA. 1972

**Howerth, I. W.**

No biographical data available

...the relation of intelligent man to the world of nature, and the social possibilities that grow out of such a relation, are the elements which might be made the basis of "a new religion," the religion of science, and the religion of humanity.

*Science Monthly*, Volume XVII, November, 1923**Huxley, Julian** 1887–1975

English biologist, philosopher, and author

...it is no longer possible to maintain that science and religion must operate in thought-tight compartments or concern separate sectors of life; they are both relevant to the whole of human existence.

In Teilhard de Chardin

*The Phenomenon of Man*

Introduction (p. 26)

Harper &amp; Row, Publishers. New York, New York, USA. 1959

Like the meridians as they approach the poles, science, philosophy and religion are bound to converge as they draw nearer to the whole. I say "converge" advisedly, but without merging, and without ceasing, to the very end, to assail the real from different angles and on different planes.

In Teilhard de Chardin

*The Phenomenon of Man*

Introduction (p. 30)

Harper &amp; Row, Publishers. New York, New York, USA. 1959

**Huxley, Thomas Henry** 1825–95

English biologist

...the materialistic position that there is nothing in the world but matter, force, and necessity, is as utterly devoid of justification as the most baseless of theological dogmas.

*Collected Essays* (Volume 1)

On the Physical Basis of Life (p. 162)

Macmillan &amp; Company Ltd. London, England. 1904

Elijah's great question, "Will you serve God or Baal? Choose ye," is uttered audibly enough in the ears of everyone of us as we come to manhood. Let every man who tries to answer it seriously ask himself whether he can be satisfied with the Baal of authority, and with all the good things his worshippers are promised in this world and the next. If he can, let him, if he be so inclined, amuse himself with such scientific implements as authority tells him are safe and will not cut his fingers; but let him not imagine he is, or can be, both a true son of the Church and a loyal soldier of science.

*Collected Essays* (Volume 2)*Darwiniana*

Mr. Darwin's Critics (p. 149)

Macmillan &amp; Company Ltd. London, England. 1904

Extinguished theologians lie about the cradle of every science as the strangled snakes beside that of Hercules; and history records that whenever science and orthodoxy have been fairly opposed, the latter has been forced to retire from the lists, bleeding and crushed if not annihilated; scotched, if not slain.

*Collected Essays**Darwinia*

Chapter II (p. 52)

D. Appleton &amp; Co. New York, New York, USA. 1897

True science and true religion...are twin-sisters, and the separation of either from the other is sure to prove the death of both. Science prospers exactly in proportion as it is religious; and religion flourishes in exact proportion to the scientific depth and firmness of its basis. The great deeds of philosophers have been less the fruit of their intellect than of the direction of that intellect by an eminently religious tone of mind. Truth has yielded herself rather to their patience, their love, their single-heartedness, and their self-denial, than to their logical acumen.

Quoted in Herbert Spencer

*Education: Intellectual, Moral, and Physical*

Chapter I (p. 81)

D. Appleton &amp; Co. New York, New York, USA. 1860

**Inge, William Ralph** 1860–1954

English religious leader and author

No scientific discovery is without its religious and moral implications.

*Outspoken Essays* (Second Series)

Confessio Fidei (p. 56)

Longmans, Green &amp; Company. London, England. 1922

**Jastrow, Robert** 1925–

American space scientist

For the scientist who has lived by his faith in the power of reason, the story ends like a bad dream. He has scaled the mountains of ignorance; he is about to conquer the highest peak; as he pulls himself over the final rock, he is greeted by a band of theologians who have been sitting there for centuries.

*God and the Astronomers*

Chapter 6 (p. 116)

W.W. Norton &amp; Company, Inc. New York, New York, USA. 1978

**Joint Statement of Religious Leaders**

The purpose of science is to develop, without prejudice or preconception of any kind, a knowledge of the facts, the laws, and the processes of nature. The even more important task of religion, on the other hand, is to develop the consciences, the ideals, and the aspirations of mankind.

In Robert Andrews Millikan

The Pilgrim Press. Boston, Massachusetts, USA. 1924

**Jones, John**

No biographical data available

When a scientist is confronted with the facts of Spiritualism, and is satisfied that they are genuine, he is pretty sure to conclude that he has come upon the discovery of a “new force;” when the same facts are brought home to a clergyman or Congregationalist Minister, he in general is equally confident that it must all be the work of the devil or of evil spirits; and as the one naturally has recourse to levers, spring balances, and other mechanical apparatus to prove his theory, so the other as instinctively resorts to Church doctrines, Scripture texts, and other theological apparatus to establish his.

A Congregationalist Minister on Spiritualism as “The Work of Demons” *The Spiritual Magazine*, February, 1872 (p. 49)

**Kaempffert, Waldemar** 1877–1956

American science editor and museum director

Religion may preach the brotherhood of man; science practices it.

**Kidd, Benjamin** 1858–1916

English social philosopher

A rational religion is a scientific impossibility...

*Social Evolution*

Chapter V (p. 101)

The Macmillan Co. New York, New York, USA. 1894

**King, Jr., Martin Luther** 1929–68

American civil rights leader and clergyman

Science investigates; religion interprets. Science gives man knowledge which is power; religion gives man wisdom which is control.

*Strength to Love*

Chapter I (p. 3)

Harper & Row, Publishers. New York, New York, USA. 1963

**Laing, Samuel** 1810–97

English writer

In the meantime, it behooves those who see more clearly than others the absolute certainty of the conclusions of science, and the inevitably fatal results to religion of staking its existence on literal interpretations which have become flatly incredible, to do their best to assist the transformation of the old dogmatic theology into a new “Christianity without miracles,” which shall retain the essential spirit, the pure morality, the consoling beliefs, and as far as possible the venerable forms and sacred associations of the old faith, while placing them in thorough accordance with freedom of thought, and with the whole body of other truths, discovered and to be discovered,

*Modern Science and Modern Thought*

Part II, Chapter IX (p. 297)

Chapman & Hall, Ltd. London, England. 1891

**Lankester, Edwin Ray** 1847–1929

English zoologist

...no sane man has ever pretended, since science became a definite body of doctrine, that we know or ever can hope to know or conceive of the possibility of knowing, whence this mechanism has come, why it is there, whither it is going, and what there may or may not be beyond and beside it which our senses are incapable of appreciating. These things are not ‘explained’ by science and never can be.

Chapter XXXI (p. 389)

Henry Holt & Co. New York, New York, USA. 1913

**Lewis, C. S. (Clive Staples)** 1898–1963

British author, scholar, and popular theologian

Keep pressing home on him the ordinarieness of things. Above all, do not attempt to use science (I mean, the real sciences) as a defense against Christianity. They will positively encourage him to think about realities he can’t touch and see. There have been sad cases among the modern physicists.

*The Screwtape Letters: Letters from a Senior to a Junior Devil* (p. 4)

Harper & Row, Publishers. New York, New York, USA. 2001

**Lewis, Gilbert Newton** 1875–1946

American chemist

...in the struggle of life with the facts of existence, Science is a bringer of aid; in the struggle of the soul with the mystery of existence, Science is the bringer of light.

On the Dread and Dislike of Science

*Fortnightly Review*, Volume 29, 1878

**Lodge, Sir Oliver** 1851–1940

English physicist

It is widely recognised at the present day that the modern spirit of scientific inquiry has in the main exerted a wholesome influence upon Theology, clearing it of much encumbrance of doubtful doctrine, freeing it from slavery to the literal accuracy of historical records, and reducing the region of the miraculous or the incredible, with which it used to be almost conterminous, to a comparatively small area.

*Man and the Universe* (2nd edition)

Section 1, Chapter I (p. 1)

Methuen & Co. London, England. 1908

Now it must, I think, be admitted that the modern scientific atmosphere, in spite of much that is wholesome and nutritious, exercises some sort of blighting influence upon religious ardour, and that the great saints or seers have as a rule not been eminent for their acquaintance

with exact scientific knowledge, but, on the contrary, have felt a distrust and a dislike of that uncompromising quest for cold hard truth in which the leaders of science are engaged; and on the other hand, that the leaders of science have shown an aloofness from, if not a hostility for, the theoretical aspects of religion.

In James Edward Hand

*Ideals of Science & Faith*

A Physicist's Approach (p. 5)

Longmans, Green & Co. New York, New York, USA. 1904

Science aims at a vigorous adult, intelligent, serpent-like wisdom, and active interference with the course of nature; religion aims at a meek, receptive, child-hearted attitude of dovelike resignation to the Divine will.

In James Edward Hand

*Ideals of Science & Faith*

A Physicist's Approach (p. 12)

Longmans, Green & Co. New York, New York, USA. 1904

### Lonchamp, Jean-Pierre

No biographical data available

A desirable dialogue between science and religion presupposes, primarily, vigour of language and a clarification of terms used. In the scientific area, there needs to be a clear distinction made between theory and application; in the area of religion between belief, faith and theology.

Translated by Dame Mary Groves

*Science and Belief*

Chapter 16 (p. 157)

St. Pauls. Middlegreen, England 1992

### Lynch, Gary

No biographical data available

What you're really seeking are constraints.... You're seeking things that box you in. That's what separates science from most other human endeavors. Religion is not something where people sit down and say, "Well, if there were a god then".... But science is a constant search for that, for those things that hem you in.

In George Johnson

Chapter V. Cosmic Origins (p. 74)

The Bruce Publishing Company. Milwaukee, Minnesota, USA. 1968

### Mencken, H. L. (Henry Louis) 1880–1956

American journalist and literary critic

To me the scientific point of view is completely satisfying, and it has been so as long as I can remember. Not once in this life have I ever been inclined to seek a rock and a refuge elsewhere. It leaves a good many dark spots in the universe, to be sure, but not a hundredth time as many as theology. We may trust it, soon or late, to throw light upon many of them, and those that remain dark will be beyond illumination by any other agency. It also fails on occasion to console, but so does theology...

In Charles A. Fecher

*Mencken: A Study of His Thought* (p. 84)

Alfred A. Knopf. New York, New York, USA. 1978

The notion that science does not concern itself with first causes – that it leaves the field to theology or metaphysics, and confines itself to mere effects – this notion has

no support in the plain facts. If it could, science would explain the origin of life on earth at once – and there is every reason to believe that it will do so on some not too remote tomorrow. To argue that gaps in knowledge which will confront the seeker must be filled, not by patient inquiry, but by intuition or revelation, is simply to give ignorance a gratuitous and preposterous dignity.

*Treatise on the Gods*

Chapter 5 (p. 239)

Vintage Books. New York, New York, USA. 1963

The essence of science is that it is always willing to abandon a given idea, however fundamental it may seem to be, for a better one; the essence of theology is that it holds its truths to be eternal and immutable. To be sure, theology is always yielding a little to the progress of knowledge, and only a Holy Roller in the mountains of Tennessee would dare to preach today what the popes preached in the Thirteenth Century, but this yielding is always done grudgingly, and thus lingers a good while behind the event.

*Minority Report: H.L. Mencken's Notebooks*

No. 232 (p. 166)

Alfred A. Knopf. New York, New York, USA. 1956

The effort to reconcile science and religion is almost always made, not by theologians, but by scientists unable to shake off altogether the piety absorbed with their mother's milk.

*Minority Report: H.L. Mencken's Notebooks*

No. 232 (p. 166)

Alfred A. Knopf. New York, New York, USA. 1956

### **Mernissi, Fatima** 1940–

Moroccan writer, feminist, and sociologist

Awareness of the stars and their light pervades the Koran, which reflects the brightness of the heavenly bodies in many verses. The blossoming of mathematics and astronomy was a natural consequence of this awareness. Understanding the cosmos and the movements of the stars means understanding the marvels created by Allah. There would be no persecuted Galileo in Islam, because Islam, unlike Christianity, did not force people to believe in a “fixed” heaven.

Translated by Mary Jo Lakeland

### **Methodist New Connexion**

Science ceases to scoff at religion. Religion ceases to frown on science. Through a happy conjuncture of events they have met together, and are kissing each other. The hour of mockery by the one, and of reproof by the other are past. Henceforth, they will dwell together in amity and good will. They will mutually illustrate the wisdom, power and grace of God. Science will adorn and enrich

religion and religion will ennoble and sanctify science.

*The Jubilee of the Methodist New Connexion*

Chapter VI (p. 386)

John Bakewell. London, England. 1848

### **Miller, Kenneth R.** 1948–

American biology professor and author

To a believer, God's great gift was to provide us with a means to understand, to master, and to do good using both the strengths and weaknesses of human nature.

Where does science sit with all of this? I would argue that any scientist who believes in God possesses the faith that we are given our unique imaginative powers not only to find God, but also to discover as much of His universe as we could. In other words, to a religious person, science can be a pathway towards God, not away from Him, an additional and sometimes even an amazing grace!

*Finding Darwin's God*

Chapter 9 (pp. 280–281)

HarperCollins Publishers, Inc. New York, New York, USA. 1999

### **Millikan, Robert Andrews** 1868–1953

American physicist

If the beauty, the meaning and the purposes of this life as revealed by both science and religion are all a dream, then let me dream on forever!

*Science and Life*

Science and Religion (p. 64)

The Pilgrim Press. Boston, Massachusetts, USA. 1924

Modern science, of the real sort, is slowly learning to walk humbly with its God, and in learning that lesson it is contributing something to religion.

*Evolution in Science and Religion*

Chapter III (pp. 94–95)

Yale University Press. New Haven, Connecticut, USA. 1927

The purpose of science is to develop, without prejudice or preconception of any kind, a knowledge of the facts, the laws and the processes of nature. The even more important task of religion, on the other hand, is to develop the consciences, the ideals and the aspirations of mankind. Each of these two activities represents a deep and vital function of the soul of man, and both are necessary for the life, the progress and the happiness of the human race.

Science Serves God

*Time*, June 4, 1923

It is a sublime conception of God which is furnished by science, and one wholly consonant with the highest ideals of religion, when it represents Him as revealing Himself through countless ages in the development of the earth as an abode for man and in the age long inbreathing of life into its constituent matter, culminating in man with his spiritual nature and all his Godlike powers.

Science Serves God

*Time*, June 4, 1923

**Moore, Benjamin** 1745–1816  
Episcopal writer and professor of rhetoric

...the eternal truths of science and religion were the same one hundred years ago as they are today and as they will be one hundred years hence, both realms of knowledge, as well as our inborn desires to penetrate their mysteries, are a part of the great plan of creation, and in their intrinsic laws remain the same “yesterday, today and forever.”

*The Origin and Nature of Life*

Chapter I

Henry Holt & Co. New York, New York, USA.

Science can readily strip away from any earlier system of religion, mythological accounts of creation which represent the state of natural knowledge when the system was growing, and can disprove or reject accounts of natural phenomena which are now known clearly to be errors, but when this has all been done the real kernel still remains in any religious system worthy of the name.

*The Origin and Nature of Life*

Chapter I

Henry Holt & Co. New York, New York, USA.

When new scientific facts are suddenly thrown in amongst old pre-conceived ideas of divinity, there may at first appear discords, and zealous champions of natural science and of religious knowledge fly to arms and indulge in acrimonious polemics; but as time advances and things that are crude and adventitious are thrown away one each side, it is discovered that science has added a new beauty to religion, or rather revealed a beauty that was there all the while, but concealed by misconceptions, or by lack of knowledge.

*The Origin and Nature of Life*

Chapter I (p. 8)

Henry Holt & Company. New York, New York, USA. No date

### **Moore, John A.**

American writer and professor of genetics and biology

A fundamental difference between religious and scientific thought is that the received beliefs in religion are ultimately based on revelations or pronouncements, usually by some long dead prophet or priest.... Dogma is interpreted by a caste of priests and is accepted by the multitude on faith or under duress. In contrast, the statements of science are derived from the data of observations and experiment, and from the manipulation of these data according to logical and often mathematical procedures.

The Ethic of Freethought (p. 13)  
Adam & Charles Black. London, England. 1901

**Peirce, Benjamin** 1809–80  
American mathematician

Of the many difficult questions with which science is disturbed, none are so serious as those which are connected with religion. There are men, and pious men too, who seem honestly to think that science and religion are naturally opposed to each other; than which I cannot conceive a more monstrous absurdity. How can there be a more faithless species of infidelity, than to believe that the Deity has written his word upon the material universe and a contradiction of it in the Gospel?

*Address of Professor Benjamin Peirce, President of the American Association for the Year 1853, on Retiring from the Duties of President* (p. 11)  
Unknown publisher. 1853

Science and religion are born of the same house, and that house is not divided against itself. There will at all times be an apparent conflict between them, arising from defects of human nature; but all this conflict is of human origin, and it originates in the deficiency of our knowledge, not in the greatness of it.

The Conflict between Religion and Science  
*Dickinson's Theological Quarterly*, Volume 3, Number 4, October, 1877 (p. 101)

**Planck, Max** 1858–1947  
German physicist

There can never be any real opposition between religion and science; for the one is the compliment of the other.

*Where Is Science Going?*  
Chapter V (p. 168)  
W.W. Norton & Company, Inc. New York, New York, USA. 1932

Religion belongs to that realm that is inviolable before the law of causation and therefore closed to science.

*Where Is Science Going?*  
Chapter V (p. 168)  
W.W. Norton & Company, Inc. New York, New York, USA. 1932

Religion and natural science...are in agreement, first of all, on the point that there exists a rational world order independent from man, and secondly, on the view that the character of this world order can never be directly known but can only be indirectly recognized or suspected. Religion employs in this connection its own

characteristic symbols, while natural science uses measurements founded on sense experiences.

*Scientific Autobiography and Other Papers*

Religion and Natural Science, Part IV (pp. 182–183)

Philosophical Library. New York, New York, USA. 1949

Religion and natural science are fighting a joint battle in an incessant, never relaxing crusade against skepticism and against dogmatism, against disbelief and against superstition, and the rallying cry in this crusade has always been, and always will be, “On to God.”

*Scientific Autobiography and Other Papers*

Religion and Natural Science, Part IV (p. 187)

Philosophical Library. New York, New York, USA. 1949

### Poeco, Carolyn

No biographical data available

Let’s teach our children from a very young age about the story of the universe and its incredible richness and beauty. It is already so much more glorious and awesome – and even comforting–than anything offered by any scripture or God concept I know.

Quoted in Dinesh D’Souza

*What’s So Great About Christianity* (p. 35)

### Polanyi, Michael 1891–1976

Hungarian-born English scientist, philosopher, and social scientist

Admittedly, religious conversion commits our whole person and changes our whole being in a way that an expansion of natural knowledge does not do. But once the dynamics of knowing are recognized as the dominant principle of knowledge, the difference appears only as one of degree...it establishe[s] a continuous ascent from our less personal knowing of inanimate matter to our convivial knowing of living beings and beyond this to knowing our responsible fellow men. Such I believe is the true transition from the sciences to the humanities and also from our knowing the laws of nature to our knowing the person of God.

Faith and Reason

*Journal of Religion*, Volume 41, Number 4, October, 1961 (pp. 244, 245)

### Polkinghorne, John 1930–

British physicist, Episcopal priest, and writer

Only in the media, and in the popular and polemical scientific writing, does there persist the myth of the light of pure scientific truth confronting the darkness of obscurantist religious error. Indeed, when one reads writers like Richard Dawkins or Daniel Dennett, one sees that nowadays the danger of a facile triumphalism is very much a problem for the secular academy rather than the Christian Church.

*Quarks, Chaos, and Christianity* (p. 5)

Abingdon Press. Nashville, Tennessee, USA. 2005

### Pope John Paul II 1920–2005

Bishop of Rome

Science can purify religion from error and superstition. Religion can purify science from idolatry and false absolutes.

In James Reston

*Galileo, a Life* (p. 461)

HarperCollins Publishers, Inc. New York, New York, USA. 1994

Science goes astray if it ceases to pursue its ultimate end, which is the service of culture and hence of man; it experiences crisis when it is reduced to a purely utilitarian model; it is corrupted when it becomes a technical instrument of domination or manipulation for economic or political goals. There is then what one can call a crisis of the legitimation of science, and it is therefore urgent to defend authentic science that is open to the question of the meaning of man and to the search for the whole truth, *a free science that is dependent only on the truth*. From the point of view of the Church, it would be impossible to separate science and culture.

Speech

Fiftieth Anniversary of the Pontifical Academy of Sciences

Rome, 28 October, 1968

### Pope Pius XII 1876–1958

Bishop of Rome

The more true science advances, the more it discovers God, almost, as though he were standing, vigilant behind every door which science opens.

Address, November 22, 1951

### Popper, Karl R. 1902–94

Austrian/British philosopher of science

Science is most significant as one of the greatest spiritual adventures that man has yet known.

In John Oulton Wisdom

*Foundations of Inference in Natural Science* (p. v)

Methuen & Company Ltd. London, England. 1952

### Raven, Charles E. 1885–1964

English writer of theology and science

To mention Science and Religion in the same sentence is...to affirm an antithesis and suggest a conflict.

*Science, Religion and the Future*

Chapter I (p. 1)

At The University Press. Cambridge, England. 1943

### Raymo, Chet 1936–

American physicist and science writer

Everything we have learned in science since the time of Galileo suggests that the nebulas and galaxies are oblivious to our fates. Everything we have learned suggests that our souls and bodies are inseparable. Everything we have learned suggests that the grave is our destiny. Therefore, if the promise of eternal life is to have maximum drawing power, it is essential for Church and guru to undermine the legitimacy of science.

**Roelofs, Howard Dykema** 1893–1974  
Professor of philosophy

Religion can produce on occasion what science never does, namely, saints. Today we have science and scientists aplenty. We lack saints.

In Herbert J. Muller  
*Science and Criticism: The Humanistic Tradition in Contemporary Thought*  
Chapter III (p. 59)  
G. Braziller. New York, New York, USA. 1943

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

The most essential characteristic of scientific technique is that it proceeds from experiment, not from tradition. The experimental habit of mind is a difficult one for most people to maintain; indeed the science of one generation has already become the tradition of the next, and there are still wide fields, notably that of religion, into which the experimental spirit has hardly penetrated at all.

*The Scientific Outlook*  
Chapter VI (p. 149)  
George Allen & Unwin. London, England. 1931

**Sagan, Carl** 1934–96  
American astronomer and author

How is it that hardly any major religion has looked at science and concluded, “This is better than we thought! The Universe is much bigger than our prophets said, grander, more subtle, more elegant?”

*Pale Blue Dot: A Vision of the Human Future in Space*  
Chapter 4 (p. 52)  
Random House, Inc. New York, New York, USA. 1994

If you lived two or three millennia ago, there was no shame in holding that the Universe was made for us. It was an appealing thesis consistent with everything we knew; it was what the most learned among us taught without qualification. But we have found out much since then. Defending such a position today amounts to willful disregard of the evidence, and a flight from self-knowledge.

*Pale Blue Dot: A Vision of the Human Future in Space*  
Chapter 4 (p. 52)  
Random House, Inc. New York, New York, USA. 1994

If you want to know when the next eclipse of the Sun will be, you might try magicians or mystics, but you’ll do much better with scientists.

*The Demon-Haunted World: Science as a Candle in the Dark* (p. 30)  
Random House, Inc. New York, New York, USA. 1995

Think of how many religions attempt to validate themselves with prophecy. Think of how many people rely on these prophecies, however vague, however unfulfilled, to support or prop up their beliefs. Yet has there ever been a religion with the prophetic accuracy and reliability of science?

*Demon-Haunted World: Science As a Candle in the Dark*  
Chapter 2 (p. 30)  
Random House, Inc. New York, New York, USA. 1995

Heroes who try to explain the world in terms of matter and energy may have arisen many times in many cultures, only to be obliterated by the priests and philosophers in charge of the conventional wisdom....

*The Demon-Haunted World: Science as a Candle in the Dark* (p. 310)  
Random House, Inc. New York, New York, USA. 1995

**Seeley, John Robert** 1834–95  
English essayist and historian

Religion says, “Let man be silent, and listen when God speaks.” Science says, “Let us interrogate Nature, and let us be sure that the answer we get is really Nature’s, and not a mere echo of our own voice.”

*Natural Religion, by the Author of ‘Ecce homo’*  
Chapter I (p. 11)  
Macmillan & Co Ltd. London, England. 1882

**Shaw, George Bernard** 1856–1950  
Irish comic dramatist and literary critic

Let the Churches ask themselves why there is no revolt against the dogmas of mathematics though there is one against the dogmas of religions. It is not that the mathematical dogmas are more comprehensible.... It is not that science is free from legends, witchcraft, miracles, biographic boostings of quacks as heroes and saints, and of barren scoundrels as explorers and discoverers.... But no student of science has yet been taught that specific gravity consists in the belief that Archimedes jumped out of the bath and ran naked through the streets of Syracuse shouting Eureka, Eureka, or that the law of inverse squares must be discarded if anyone can prove that Newton was never in an orchard in his life.

*Back to Methuselah*  
Preface (pp. lxxvii–lxxviii)  
Constable & Company Ltd. London, England. 1921

**Spencer, Herbert** 1829–1903  
English social philosopher

As, to the religious, it will seem absurd to set forth any justification for Religion; so, to the scientific, will it seem absurd to defend Science.

*First Principles of a New System of Philosophy*  
Part I, Chapter I, section 5 (p. 17)  
D. Appleton & Co. New York, New York, USA. 1892

Of all antagonisms of belief, the oldest, the widest, the most profound and the most important, is that between Religion and Science. It commenced when the recognition of the simplest uniformities in surrounding things, set a limit to the once universal superstition.

*First Principles of a New System of Philosophy*  
Part I, Chapter I, section 3 (p. 11)  
D. Appleton & Co. New York, New York, USA. 1892

...Religion, everywhere present as a weft running through the warp of human history, expresses some eternal fact; while it is almost a truism to say of Science that it is an organised mass of facts, ever growing, and ever being more completely purified from errors. And if both have bases in the reality of things, then between them there must be a fundamental harmony.

*First Principles of a New System of Philosophy*  
Part I, Chapter I, section 6 (p. 20)  
D. Appleton & Co. New York, New York, USA. 1892

He who contemplates the Universe from the religious point of view, must learn to see that this which we call Science is one constituent of the great whole; and as such ought to be regarded with a sentiment like that which the remainder excites.

*First Principles of a New System of Philosophy*  
Part I, Chapter I, section 6 (p. 21)  
D. Appleton & Co. New York, New York, USA. 1892

...in much of the science that is current, there is a pervading spirit of irreligion; but not in that true science which has passed beyond the superficial into the profound.... So far from science being irreligious, as many think, it is the neglect of science that is irreligious – it is the refusal to study the surrounding creation that is irreligious.

*Education: Intellectual, Moral, and Physical*  
Chapter I (pp. 89–90)  
D. Appleton & Co. New York, New York, USA. 1891

**Sperry, Roger Wolcott** 1913–94  
Neuropsychologist

Probably the widest, deepest rift in contemporary culture and the source of its most profound conflict is that separating the two major opposing views of existence upheld by science and by orthodox religions, respectively. Together they represent two totally different kinds of “truth”, the former asking us to accept impersonal mass-energy accounts of the cosmos, the latter requiring faith in varied spiritual explanations.

The New Mentalist Paradigm and Ultimate Concern  
*Perspectives in Biology and Medicine*, Volume 29, Number 3, Part I, Spring 1986 (p. 415)

**Stace, Walter Terence** 1886–1967  
English philosopher and educator

...no scientific argument – by which I mean an argument drawn from the phenomena of nature – can ever have the slightest tendency either to prove or disprove the existence of God...science is irrelevant to religion.

*Religion and the Modern Mind*  
Chapter 5 (p. 76)  
J.B. Lippincott Company. Philadelphia, Pennsylvania, USA. 1952

**Stanley, Arthur Penrhyn** 1815–81  
English clergyman and author

There were, there are perhaps still, two modes of reconciliation of Scripture and science, which have been each in their day attempted, and have each totally and deservedly failed. One is the endeavor to wrest the words of the Bible from their natural meaning, and force them to speak the language of science.... [T]here is another reconciliation an acknowledgment of the affinity, the identity which exists between the *spirit* of Science and the *spirit* of the Bible.

*Sermons on Special Occasions Preached in Westminster Abbey*  
The Religious Aspects of Geology (pp. 201, 202–203)  
John Murray. London, England. 1882

**Stapledon, Olaf** 1886–1950

English author

Within the chapel, the great Bible was decorously removed and the windows thrown open, to dispel somewhat the odour of sanctity. For though the early and spiritistic interpretations of relativity and quantum theory had by now accustomed men of science to pay their respects to the religions, many of them were still liable to a certain asphyxia when they were actually within the precincts of sanctity.

*Last and First Men*

Chapter II (p. 29)

Jeremy P. Tarcher, Inc. Los Angeles, California, USA. 1988

When the scientists had settled themselves upon the archaic and unyielding benches, the President explained that the chapel authorities had kindly permitted this meeting because they realized that, since men of science had gradually discovered the spiritual foundation of physics, science and religion must henceforth be close allies. Moreover the purpose of this meeting was to discuss one of those supreme mysteries which it was the glory of science to discover and religion to transfigure.

*Last and First Men*

Chapter II (p. 29)

Jeremy P. Tarcher, Inc. Los Angeles, California, USA. 1988

**Streeter, B. H. (Burnett Hillman)** 1874–1937

English theologian and New Testament scholar

Science is the great cleanser of the human thinking; it makes impossible any religion but the highest.

*Reality*

Chapter IX (p. 272)

Publisher undetermined

**Teilhard de Chardin, Pierre** 1881–1955

French Jesuit, paleontologist, and biologist

Religion and science are the two conjugated faces of phases of one and the same act of complete knowledge – the only one which can embrace the past and future of evolution so as to contemplate, measure and fulfill them.

*The Phenomenon of Man*

Chapter Three, Chapter III, Section 2 (pp. 284–285)

Harper &amp; Brothers. New York, New York, USA. 1959

**Temple, Frederick** 1821–1902

Anglican prelate and archbishop of Canterbury

Science and Religion seem very often to be the most determined foes to each other that can be found. The scientific man often asserts that he cannot find God in Science; and the religious man often asserts that he cannot find Science in God.

*The Relations Between Religion and Science* (p. 4)

Macmillan &amp; Company. New York, New York, USA. 1884

Science postulates uniformity; Religion postulates liberty.

*The Relations Between Religion and Science* (p. 70)

Macmillan &amp; Company. New York, New York, USA. 1884

**Thompson, Joseph Parrish**

No biographical data available

The strife over science and religion would be greatly restricted by a rigorous and binding definition of the terms in dispute. Scientific theory and theological dogma would go on contending; but that which is true in science and that which is true in religion can never come in collision, and the demarcation of each would make their harmony apparent almost without discussion.

*American Comments on European Questions, International and Religious*

Chapter IX (p. 186)

Houghton Mifflin &amp; Co. New York, New York, USA. 1884

**Thomson, Sir John Arthur** 1861–1933

Scottish naturalist

Although there has never been much love lost between Biology and Theology, we cannot say that there is any unanimity in the attitude which biologists have assumed, or assume, in regard to theological doctrines. Some are or have been aggressively hostile, such as Haeckel and Huxley; others assume or really feel a nonchalant indifference, having no use for theology; others affect a superficial acquiescence, either by keeping idea-tight compartments in their cerebral machinery, or by condescending to verbal devices. And there are others, who feel the opposition to be real and deep, but who try to effect friendly contact and mutual appreciation, of an emotional sort at least.

In James Edward Hand

*Ideals of Science & Faith*

A Biological Approach (p. 50)

Longmans, Green &amp; Co. New York, New York, USA. 1904

When we are thrilled with the wonder of the world, the heights and depths of things, the beauty of it all, we approach the door of natural religion. And when the Nature-feeling is not superficial but informed with knowledge, with no gain of the hard-won analysis unused, we may reach the threshold. And when we feel that our scientific cosmology leaves Isis still veiled, and when our attempts at philosophical interpretation give us a reasoned conviction of a meaning behind the process, we may perhaps enter in.

*The System of Animate Nature* (Volume 1)

Lecture I (p. 42)

William &amp; Norgate. London, England. 1920

Religious interpretation and scientific description must not be inconsistent, but they are incommensurable.

*The Outline of Science* (Volume 4)

Chapter XXXVIII (p. 1177)

G.P. Putnam's Sons. New York, New York, USA. 1937

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

There is more religion in men's science than there is science in their religion.

*A Week on the Concord and Merrimack Rivers*  
 Sunday (p. 54)  
 Charles Scribner's Sons. New York, New York, USA. 1921

**Tillich, Paul** 1886–1965  
 German-born American theologian

The distinction between the truth of faith and the truth of science leads to a warning, directed to theologians, not to use recent scientific discoveries to confirm the truth of faith. Microphysics have undercut some scientific hypotheses concerning the calculability of the universe. The theory of quantum and the principle of indeterminacy have had this effect. Immediately religious writers use these insights for the confirmation of their own ideas of human freedom, divine creativity, and miracles. But there is no justification for such a procedure at all, neither from the point of view of physics nor from the point of view of religion. The physical theories referred to have no direct relation to the infinitely complex phenomenon of human freedom, and the emission of power in quantum has no direct relation to the meaning of miracles.... The truth of faith cannot be confirmed by latest physical or biological or psychological discoveries – as it cannot be denied by them.

*Dynamics of Faith*  
 Chapter V, Section 2 (p. 85)  
 Harper & Brothers. New York, New York, USA. 1957

...theology cannot rest on scientific theory. But it must relate its understanding of man to an understanding of universal nature, for man is a part of nature and statements about nature underlie every statement about him. In Theodosius Dobzhansky  
*The Biology of Ultimate Concern*  
 Chapter 6 (pp. 109–110)  
 The New American Library, Inc. New York, New York, USA. 1967

**Tipler, Frank J.** 1947–  
 American physicist

When I began my career as a cosmologist some twenty years ago, I was a convinced atheist. I never in my wildest dreams imagined that one day I would be writing a book purporting to show that the central claims of Judeo-Christian theology are in fact true, that these claims are straightforward deductions of the laws of physics as we now understand them. I have been forced into these conclusions by the inexorable logic of my own special branch of physics.

*The Physics of Immortality*

**Toynbee, Arnold J.** 1852–83  
 English historian

Theology, not religion, is the antithesis to science.  
*Toynbee's Industrial Revolution*  
 Notes and Jottings (p. 243)  
 A.M. Kelley. New York, New York, USA. 1969

Before the close of the seventeenth century our forefathers consciously took their treasure out of religion and reinvested it in natural science...

A Turning Point in Man's Destiny  
*The New York Times Magazine*, December 26, 1954 (p. 5)

**Tyndall, John** 1820–93  
 Irish-born English physicist

We claim, and we shall wrest from theology, the entire domain of cosmological theory.

The Belfast Address  
 The Position of Science

**Valéry, Paul** 1871–1945  
 French poet and critic

Without religions the sciences would never have existed. For the human brain would not have trained itself to range beyond the immediate, ever – present “facts” of appearance which, for it, constitute reality.

In Jackson Mathews (ed.)  
*The Collected Works of Paul Valéry* (Volume 14)  
*Analects*, XLVIII (p. 285)  
 Princeton University Press. Princeton, New Jersey, USA. 1971

**Virchow, Rudolf Ludwig Karl** 1821–1902  
 German pathologist and archaeologist

There can be no scientific dispute with respect to faith, for science and faith exclude one another.

Translated by Lelland J. Rather  
*Disease, Life, and Man, Selected Essays*  
 On Man (p. 68)  
 Stanford University Press. Stanford, California, USA. 1958

The task of science...is not to attack the objects of faith, but to establish the limits beyond which knowledge cannot go and to found a unified self-consciousness within these limits.

Translated by Lelland J. Rather  
*Disease, Life, and Man, Selected Essays*  
 On Man (p. 69)  
 Stanford University Press. Stanford, California, USA. 1958

...belief has no place as far as science reaches, and may be first permitted to take root where science stops.

Translated by Lelland J. Rather  
*Disease, Life, and Man, Selected Essays*  
 On Man (p. 69)  
 Stanford University Press. Stanford, California, USA. 1958

**Whaling, Thornton** 1858–1938  
 American Presbyterian writer

There can be no real conflict between natural science and true religion because their spheres are entirely distinct and separate. ...Conflicts between these two are always the result of misinterpretation and misrepresentation of one or the other or both, and history abounds with illustrations of all these forms of confusing contradictions. Science and religion, while thus separate,

have various relationships which make each the servant of the other.

*Science and Religion Today* (pp. 51–52)  
The University of North Carolina Press. Chapel Hill, North Carolina. 1929

Dean Inge [English religious leader] remarks, “We may hope for a time when the science of a religious man will be scientific and religion of a scientific man religious.”

*Science and Religion Today* (pp. 51–52)  
The University of North Carolina Press. Chapel Hill, North Carolina. 1929

**Whewell, William** 1794–1866  
English philosopher and historian

All speculations on subjects in which Science and Religion bear upon each other are liable to one of the two opposite charges[:] that the speculator sets Philosophy and Religion at variance; or that he warps Philosophy into a conformity with Religion.

*Of the Plurality of Worlds*  
Preface (p. iv)  
John W. Parker & Son. London, England. 1853

**White, Andrew Dickson** 1832–1918  
American diplomat, historian, and educator

In all modern history, interference with science in the supposed interest of religion, no matter how conscientious such interference may have been, has resulted in the direst evils both to religion and to science, and invariably; and, on the other hand, all untrammelled scientific investigation, no matter how dangerous to religion some of its stages may have seemed . . . , has invariably resulted in the highest good both of religion and of science.

*A History of the Warfare of Science With Theology in Christendom*  
(Volume 1)  
Introduction (p. viii)  
D. Appleton & Co. New York, New York, USA. 1922

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

When we consider what religion is for mankind, and what science is, it is no exaggeration to say that the future course of history depends upon the decision of this generation as to the relations between them.

*Science and the Modern World*  
Chapter XII (p. 181)  
The Macmillan Company. New York, New York, USA. 1929

Religion will not gain its old power until it can face change in the same spirit as does science. Its principles may be eternal, but the expression of these principles requires continual development.

*Science and the Modern World*  
Chapter XII (p. 189)  
The Macmillan Company. New York, New York, USA. 1929

Science suggests a cosmology; and whatever suggests a cosmology suggests a religion.

*Religion in the Making*  
Truth and Criticism (p. 136)  
New American Library. New York, New York, USA. 1960

**Wilde, Oscar** 1854–1900  
Irish wit, poet, and dramatist

Science is the record of dead religions.  
*Phrases and Philosophies for the Use of the Young*  
L. Smithers. London, England. 1903  
Press. Minneapolis, Minnesota, USA. 1996

**Winchell, Alexander** 1824–91  
American geologist

The din of a great controversy sounds in our ears. Men of thought have been summoned to choose their banner, and range themselves upon one side or the other of the line of battle. It is the “conflict” between Religion and Science which has thrown the world into commotion.

*Reconciliation of Science and Religion*  
Chapter I (p. 17)  
Harper & Brothers Publishers. New York, New York, USA. 1877

**Wood, William Hamilton**  
No biographical data available

...he who has science and art has religion also.  
*The Religion of Science*  
Chapter I (p. 8)  
The Macmillan Co. New York, New York, USA. 1922

Science is general, universal, unbiased, rational, while theology is local, limited, narrow and practical.  
*The Religion of Science*  
Chapter I (p. 9)  
The Macmillan Co. New York, New York, USA. 1922

Science is reason, religion is emotion, therefore they do not move in the same plane or speak the same language.  
*The Religion of Science*  
Chapter II (p. 19)  
The Macmillan Co. New York, New York, USA. 1922

All religions of advanced standing have a Sacred Book or Literature. This Book, unlike all others is a special revelation and it is authority. The religion of science declares that nature itself is the source of authority and revelation, but the revelation will be given only to him who seeks with open and properly prepared mind.

*The Religion of Science*  
Chapter IV (p. 69)  
The Macmillan Co. New York, New York, USA. 1922

**Wright, George Frederick** 1838–1921  
American geologist

If the men of science could distinguish between their legitimate scientific conclusions and their metaphysical speculations, and if Christian apologists were less ready than some of them are to set limits to the realm of secondary causes, Science and Religion would have

no difficulty in lying down together without either being incorporated in the other.

In Levi Franklin Gruber

*Creation Ex Nihilo*

Foreword (p. 1)

The Gorham Press. Boston, Massachusetts, USA. 1918

## SCIENCE AND SOCIETY

**Asimov, Isaac** 1920–92

American author and biochemist

Science with all its faults has brought education and the arts to more people – a larger percentage – than has ever existed before science. In that respect it is science that is the great humanizer. And, if we are going to solve the problems that science has brought us, it will be done by science and in no other way.

Essay 400 – A Way of Thinking

*The Magazine of Fantasy and Science Fiction*, December, 1994

...science must not be viewed as a mysterious black box out of which came toys and goodies, for that way laymen would view scientists as a kind of lab-coated priesthood – and, eventually, fear and hate them.

Essay 400 – A Way of Thinking

*The Magazine of Fantasy and Science Fiction*, December, 1994

**Balfour, Arthur James** 1848–1930

English prime minister

...science is the great instrument of social change, all the greater because its object is not change but knowledge;

*Decadence: Henry Sidgwick Memorial Lecture* (pp. 55–56)

At The University Press. Cambridge, England. 1908

**Barry, Dave** 1947–

American humor columnist

...a recent survey, conducted by the National Science Foundation...showed that the average American does not understand basic scientific principles. Naturally, the news media reported this finding as though it was shocking, which is silly. This is, after all, a nation that has produced tournament bass fishing and the Home Shopping Channel; we should be shocked that the average American still knows how to walk erect.

In a World of Scientists, No One Really Knows Much of Anything

*Dave's World*, July 8, 1996

**Bauer, Henry H.** 1931–

American chemist

The point is that no amount of knowledge of or about science in itself causes individuals or groups to make good decisions about the many quandaries of life: humans readily subjugate their knowledge to their wishes, believing and doing what they want, all scientific facts and knowledge notwithstanding.

*Scientific Literacy and the Myth of the Scientific Method*

Chapter 1 (p. 13)

University of Illinois Press. Urbana, Illinois, USA. 1992

What is the social value of science? Why should we support it with taxes? Answer: It can keep people honest. Emperors and popes used to insist that people subscribe to lies about the Earth, about the relationships among different sorts of people, and about a lot of other things. They cannot lie to that extent anymore. Science can put and keep politicians and prophets in their proper place, at least over some things.

*Scientific Literacy and the Myth of the Scientific Method*

Chapter 7 (p. 146)

University of Illinois Press. Urbana, Illinois, USA. 1992

Scientific research is an investment in the future; trying to make it pay off quickly is as counterproductive as is, in the economic sphere, skimming wealth from corporations through leveraged buy-outs instead of investing for the long haul. Science is part of humanity's cultural heritage. Being educated in science is as important as being educated in philosophy, or psychology, or foreign languages because without it one is ignorant, a primitive savage rather than a civilized human being. And to be scientifically literate is to understand that.

*Scientific Literacy and the Myth of the Scientific Method*

Chapter 7 (p. 147)

University of Illinois Press. Urbana, Illinois, USA. 1992

Studying science is excellent training for the mind, much better than the classically prescribed study of Latin. When you study science in the right way, you learn about reality therapy; and that is worth applying to other things than science.

*Scientific Literacy and the Myth of the Scientific Method*

Chapter 7 (p. 147)

University of Illinois Press. Urbana, Illinois, USA. 1992

**Bernstein, Jeremy** 1929–

American physicist, educator, and writer

...the first reason for teaching science to non scientists is that many of these nonscientists have a genuine desire to learn about science, and this, after all, is the best reason for teaching anything to anyone.

*Cranks, Quarks, and the Cosmos: Writings on Science*

Chapter 16 (p. 196)

Basic Books, Inc. New York, New York, USA. 1993

We live in a complex, dangerous, and fascinating world. Science has played a role in creating the dangers, and one hopes that it will aid in creating ways of dealing with these dangers. But most of these problems cannot, and will not, be dealt with by scientists alone. We need all the help we can get, and this help has got to come from a scientifically literate general public. Ignorance of science and technology is becoming the ultimate self-indulgent luxury.

*Cranks, Quarks, and the Cosmos: Writings on Science*  
Chapter 16 (p. 202)  
Basic Books, Inc. New York, New York, USA. 1993

**Brin, David** 1950–  
American scientist and author

We Americans have refined self-righteousness to a high art, cherishing the romantic image of smart outsiders against the establishment. New Age types see themselves as brave truth-seekers, opposed by a rigid technological priesthood. No matter that this priesthood is dedicated to self-criticism, and to sharing whatever they learn. Science represents this era's "establishment," and is therefore automatically suspect.

*Otherness*

What to Say to a UFO  
Bantam Dell Doubleday Publishing Group. New York, New York, USA. 1994

**Burke, Edmund** 1729–97  
English statesman and philosopher

[Society] is a partnership in all science, a partnership in all art, a partnership in every virtue and in all perfection. As the ends of such a partnership cannot be obtained in many generations, it becomes a partnership not only between those who are living, but between those who are living, those who are dead, and those who are to be born.

*The Works of the Right Hon. Edmund Burke: With a Biographical and Critical Introduction* (Volume 1)  
Part V (p. 417)  
Holdsworth & Ball. London, England. 1834

**Calvin, William H.** 1939–  
Theoretical neurophysiologist

Science doesn't merely empower us, as in seeding better technologies; it also helps prevent trouble in the first place. Knowledge can be like a vaccine, immunizing you against false fears and bad moves.

*How Brains Think: Evolving Intelligence, Then and Now*  
Chapter 3 (p. 41)  
Basic Books, Inc. New York, New York, USA. 1996

**Clarke, Arthur C.** 1917–  
English science and science fiction writer

One of the factors, ironically enough, which has contributed to popular willingness to accept the incredible is the success of modern science. Because so many technical marvels have been achieved, the public believes that the scientist is a magician who can make anything happen. It does not know where to draw the line between the possible, the plausible, the improbable and the frankly absurd. Admittedly this is often extremely difficult, and even the experts sometimes fall flat on their faces. But usually, all that is needed is a little common sense.

*Voices from the Sky: A Preview of the Coming Space Age*  
The Lunatic Fringe  
Harper & Row, Publishers. New York, New York, USA. 1965

**Compton, Karl Taylor** 1887–1954  
American educator and physicist

There is "something new under the sun" in that modern science has given mankind, for the first time in the history of the human race, a way of securing a more abundant life which does not simply consist in taking it away from someone else. Science really creates wealth and opportunity where they did not exist before.

*A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton During the Years 1930–1949* (p. 2)  
Undergraduate Association, MIT. Cambridge, Massachusetts, USA. 1955

**Cori, Carl** 1896–1984  
American biochemist

Art and science can best grow and develop in a society which cherishes freedom and which shows respect for the needs, the happiness and the dignity of human beings.

*Les Prix Nobel. The Nobel Prizes in 1947*  
Nobel banquet speech for award received in 1947  
Nobel Foundation. Stockholm, Sweden. 1948

**Crick, Francis Harry Compton** 1916–2004  
English biochemist

The average adult can usually enjoy something only if it relates to what he knows already, and what he knows about science is in many cases pitifully inadequate.

*What Mad Pursuit: A Personal View of Scientific Discovery*  
Chapter 7 (p. 80)  
Basic Books, Inc. New York, New York, USA. 1988

**Dawkins, Richard** 1941–  
British ethologist, evolutionary biologist, and popular science writer

People certainly blame science for nuclear weapons and similar horrors. It's been said before but needs to be said again: if you want to do evil, science provides the most powerful weapons to do evil; but equally, if you want to do good, science puts into your hands the most powerful tools to do so. The trick is to want the right things, then science will provide you with the most effective methods of achieving them.

*Science, Delusion and the Appetite for Wonder*  
Richard Dimpleby Lecture, BBC1 Television, November 12th, 1996

It has become almost a cliché to remark that nobody boasts of ignorance of literature, but it is socially acceptable to boast ignorance of science and proudly claim incompetence in mathematics.

*Science, Delusion and the Appetite for Wonder*  
Richard Dimpleby Lecture, BBC1 Television, November 12th, 1996

Science provokes more hostility than ever, sometimes with good reason, often from people who know nothing about it and use their hostility as an excuse not to learn. Depressingly many people still fall for the discredited cliché that scientific explanation corrodes poetic sensibility.

*Science and Sensibility*  
Queen Elizabeth Hall Lecture, London, 24th March, 1998

## Editorial

The scientific illiteracy of politicians, their simple lack of “feel” for what science is and what it can do, prevents them from exploring the deeper questions, among the most important facing humankind: how can science be conducted so that, on the one hand, the thinkers have the freedom to think, for that is the *sine qua non*; and how, on the other hand, can the products of unfettered thought be harnessed for the needs of society?

Who Cares About Science?

*New Scientist*, 17 October, 1985 (p. 18)

## Eisenhower, Dwight David 1890–1969

34th president of the USA

Science, great as it is, remains always the servant and the handmaiden of freedom. And a free science will ever be one of the most effective tools through which man will eventually bring to realization his age-old aspiration for an abundant life, with peace and justice for all.

In Dael Wolfe (ed.)

*Symposium on Basic Research*

Casper Auditorium of the Rockefeller Institute, May, 1959

Science: Handmaiden of Freedom (p. 142)

American Association of the Advancement of Science. Washington, D.C. 1959

## Feyerabend, Paul K. 1924–94

Austrian-born American philosopher of science

[Because] there is trouble in the third world... [it is argued that] the attempt to judge cosmologies by their content may have to be given up. Such a development, far from being undesirable, changes science from a stern and demanding mistress into an attractive and yielding courtesan who tries to anticipate every wish of her lover. Of course, it is up to us to choose either a dragon or a pussy cat for our company. I do not think I need to explain my own preferences.

*Realism, Rationalism and Scientific Method*

Consolations for the Specialist (p. 161)

Cambridge University Press. Cambridge, England. 1985

## Feynman, Richard P. 1918–88

American theoretical physicist

...the things that appear in the newspaper and that seem to excite the adult imagination are always those things which they cannot possibly understand, because they haven't learned anything at all of the much more interesting well-known [to scientists] things that people have found out before. It's not the case with children, thank goodness, for a while – at least until they become adults.

In Jeffrey Robbins, ed.

*The Pleasure of Finding Things Out: The Best Short Works of Richard P. Feynman*

Chapter 4 (p. 102)

Perseus Books. Cambridge, Massachusetts, USA. 1999

Another value of science is the fun called intellectual enjoyment which some people get from reading and learning and thinking about it, and which others get from working in it. This is an important point, one which is not considered enough by those who tell us it is our social responsibility to reflect on the impact of science on society. Is this mere personal enjoyment of value to society as a whole? No! But it is also a responsibility to consider the aim of society itself. Is it to arrange matters so that people can enjoy things? If so, then the enjoyment of science is as important as anything else.

In Jeffrey Robbins (ed.)

*The Pleasure of Finding Things Out: The Best Short Works of Richard P. Feynman*

Chapter 6 (p. 143)

Perseus Books. Cambridge, Massachusetts, USA. 1999

I don't believe in the idea that there are a few peculiar people capable of understanding math, and the rest of the world is normal. Math is a human discovery, and it's no more complicated than humans can understand. I had a calculus book once that said, “What one fool can do, another can.” What we've been able to work out about nature may look abstract and threatening to someone who hasn't studied it, but it was fools who did it, and in the next generation, all the fools will understand it.

In Jeffrey Robbins (ed.)

*The Pleasure of Finding Things Out: The Best Short Works of Richard P. Feynman*

Chapter 9 (p. 144)

Perseus Books. Cambridge, Massachusetts, USA. 1999

When we read about this in the newspaper, it says “Scientists say this discovery may have importance in the search for a cure for cancer.” The paper is only interested in the use of the idea, not the idea itself. Hardly anyone can understand the importance of an idea, it is so remarkable. Except that, possibly, some children catch on. And when a child catches on to an idea like that, we have a scientist.

In Jeffrey Robbins (ed.)

*The Pleasure of Finding Things Out: The Best Short Works of Richard P. Feynman*

Chapter 6 (p. 145)

Perseus Books. Cambridge, Massachusetts, USA. 1999

[I]f a thing is not scientific, if it cannot be subjected to the test of observation, this does not mean that it is dead, or wrong, or stupid. We are not trying to argue that science is somehow good and other things are somehow not good. Scientists take all those things that can be analyzed by observation, and thus the things called science are found out. But there are some things left out, for which the method does not work. This does not mean that those things are unimportant. They are, in fact, in many ways the most important.

*The Meaning of It All: Thoughts of a Citizen Scientist*

Chapter 1 (p. 16)

Perseus Books. Reading, Massachusetts, USA. 1998

It is odd, but on the infrequent occasions when I have been called upon in a formal place to play the bongo drums, the introducer never seems to find it necessary to mention that I also do theoretical physics.

*The Character of Physical Law*

Chapter 1 (p. 13)

British Broadcasting Company. London, England. 1965

### **Freud, Sigmund** 1856–1939

Austrian neurologist and co-founder of psychoanalysis

There are the elements, which seem to mock at all human control: the earth, which quakes and is torn apart and buries all human life and its works; water, which deluges and drowns everything in a turmoil; storms, which blow everything before them; there are diseases, which we have only recently recognized as attacks by other organisms; and finally there is the painful riddle of death, against which no medicine has yet been found, nor probably will be. With these forces nature rises up against us, majestic, cruel and inexorable; she brings...to our mind once more our weakness and helplessness, which we thought to escape through the work of civilization.

*The Future of an Illusion*

Chapter III (pp. 15–16)

W.W. Norton & Company, Inc. New York, New York, USA. 1961

### **Gleick, James** 1954–

American author, journalist, and essayist

Einstein's relativity did not speak to human values. Those were, or were not, relative for reasons unrelated to the physics of objects moving at near-light speed. Borrowing metaphors from the technical sciences could be a dangerous practice.

*Genius: The Life and Science of Richard Feynman*

Epilogue (p. 430)

Pantheon Books. New York, New York, USA. 1992

### **Gould, Stephen Jay** 1941–2002

American paleontologist and evolutionary biologist

...I believe that science must be understood as a social phenomenon, a gutsy, human enterprise, not the work of robots programmed to collect pure information.... Science, since people must do it, is a socially embedded activity. It progresses by hunch, vision, and intuition. Much of its change through time does not record a closer approach to absolute truth, but the alteration of cultural contexts that influence it so strongly. Facts are not pure and unsullied bits of information; culture also influences what we see and how we see it. Theories, moreover, are not inexorable inductions from facts. The most creative theories are often imaginative visions imposed upon facts; the source of imagination is also strongly cultural.

*The Mismeasure of Man*

Chapter One (p. 53)

W.W. Norton & Company, Inc. New York, New York, USA. 1996

Science, since people must do it, is a socially embedded activity. It progresses by hunch, vision, and intuition. Much of its change through time does not record a closer approach to absolute truth, but the alteration of cultural contexts that influence it so strongly. Facts are not pure and unsullied bits of information; culture also influences what we see and how we see it. Theories, moreover, are not inexorable inductions from facts. The most creative theories are often imaginative visions imposed upon facts; the source of imagination is also strongly cultural.

*The Mismeasure of Man*

Chapter One (pp. 53–54)

W.W. Norton & Company, Inc. New York, New York, USA. 1996

Science is accessible to all thinking people because it applies universal tools of intellect to its distinctive material. The understanding of science – one need hardly repeat the litany – becomes ever more crucial in a world of biotechnology, computers, and bombs.

*Time's Arrow, Time's Cycle: Myth and Metaphor in the Discovery of Geological Time*

Chapter 1 (p. 7)

Harvard University Press. Cambridge, Massachusetts, USA. 1987

### **Haskins, C. P.**

No biographical data available

Science provides a challenge to effort for the individual youth that is far greater than the challenge of militarism. It provides a unity of thought which is far wider, for it transcends all national boundaries. It provides a wider battleground, for the goal of militarism is the conquering of man, but that of science is the understanding and the subjugation of all the rest of our natural environment. And finally, it is an infinitely broader training than totalitarian training can possibly be, for it requires, in addition to great courage, stamina, and drive, the qualities of intellectualism and gentleness.

*Science Philosophy and Religion*

Scientific Thought and a Democratic Ideology (p. 235)

The Conference on Science, Philosophy and Religion in Their Relation to a Democratic Way of Life, Inc. New York, New York, USA. 1941

### **Hoffmann, Roald** 1937–

Polish-born American chemist

...the overall effect of science is inexorably democratizing, in the deepest sense of the word – by making available to a wider range of people the necessities and comforts that in a previous age were reserved for a privileged elite.

*The Same and Not the Same*

Part Eight, Chapter 40 (p. 212)

Columbia University Press. New York, New York, USA. 1995

### **Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

I am a little afraid that science is breeding us down too fast into coral-insects. A man like Newton or Leibnitz

or Haller used to paint a picture of outward or inward nature with a free hand, and stand back and look at it as a whole and feel like an archangel; but nowadays you have a Society, and they come together and make a great mosaic, each man bringing his little bit and sticking it in its place, but so taken up with his petty fragment that he never thinks of looking at the picture the little bits make when they are put together.

*The Poet at the Breakfast-Table*

Chapter III (p. 79)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1895

### **Holton, Gerald** 1922–

Research professor of physics and science history

Was not the universe of Dante and Milton so powerful and “gloriously romantic” precisely because it incorporated, and thereby rendered meaningful, the contemporary scientific cosmology alongside the moral and aesthetic conceptions? Leaving aside the question of whether Dante’s and Milton’s contemporaries by and large were living in a rich and fragrant world of gladness, love, and beauty, it is fair to speculate that if our new cosmos is felt to be cold, inglorious, and unromantic, it is not the new cosmology which may be at fault, but the absence of new Dantes and Miltons.

*Einstein, History, and Other Passions: The Rebellion Against Science at the End of the Twentieth Century*

Part One, Chapter 2 (p. 53)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

But making science again a part of every intelligent person’s educational resource is the minimum requirement – not because science is more important than other field, but because it is an integral part of a sound contemporary worldview.

*Einstein, History, and Other Passions: The Rebellion Against Science at the End of the Twentieth Century*

Part One, Chapter 2 (p. 53)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

### **King, Jr., Martin Luther** 1929–68

American civil rights leader and clergyman

The means by which we live have outdistanced the ends for which we live. Our scientific power has outrun our spiritual power. We have guided missiles and misguided men.

*Strength to Love*

Chapter VII (p. 57)

Harper & Row, Publishers. New York, New York, USA. 1963

### **Lederman, Leon** 1922–

American high-energy physicist

In his “Defense of Poetry,” the English romantic poet Percy Bysshe Shelley contended that one of the sacred tasks of the artist is to “absorb the new knowledge of the sciences and assimilate it to human needs, color it with

human passions, transform it into the blood and bone of human nature.” Not many romantic poets rushed to accept Shelley’s challenge, which may explain the present sorry state of our nation and planet. If we had Byron and Keats and Shelley and their French, Italian, and Urdu equivalents explaining science, the science literacy of the general public would be far higher than it is now.

*The God Particle: If the Universe Is the Answer, What Is the Question*

Chapter 9 (p. 382)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1993

### **Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

Money can’t buy ideas, that’s for sure, but lack of it can prevent one having them.

*The Cost-Benefit Analysis of Pure Research*

*Hospital Practice*, Sept 1973

I am afraid we shall have to regard the funding of “pure” research as a tax levied upon society that is not dissimilar in kind from that which maintains art galleries and opera houses – a “civilization tax”, perhaps.

*The Cost-Benefit Analysis of Pure Research*

*Hospital Practice*, Sept 1973

It is the great glory and also the great threat of science that anything which is possible in principle – which does not flout a bedrock law of physics – can be done if the intention to do it is sufficiently resolute and long sustained.

*Four Score Years and Ten – And Still Counting*

*Guardian*, December 13, 1984

### **More, Louis Trenchard**

American educator

...science has other functions in addition to the attack and solution of problems by the creative power of the individual: phenomena and laws must be taught in detail to the specialist; general conclusions must be given to the world in order that they may become a part of the general intellectual life; and finally discoveries are to be applied to social and industrial needs.

*The Limitations of Science*

Chapter VI (p. 190)

Henry Holt & Co. New York, New York, USA. 1915

### **Oppenheimer, James Robert** 1904–67

American theoretical physicist

We live today in a world in which poets and historians and men of affairs are proud that they wouldn’t even begin to consider about learning anything of science, regarding it as the far end of a tunnel too long for any wise man to put his head into.

*The Open Mind*

*The Scientist in Society* (p. 128)

Simon & Schuster. New York, New York, USA. 1955

**Paulos, John Allen** 1945–  
American mathematician

In general, almost any mathematically expressed scientific fact can be transformed into a consumer caveat (or lure) that will terrify (or attract) people.

*A Mathematician Reads the Newspaper*  
Asbestos Removal Closes NYC Schools (p. 142)  
Basic Books, Inc. New York, New York, USA. 1995

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

Some men are so impressed by what science knows that they forget what it does not know; others are so much more interested in what it does not know than in what it does that they belittle its achievements.

*Unpopular Essays*  
Philosophy for Laymen (p. 40)  
George Allen & Unwin Ltd. London, England. 1950

Can a society in which thought and technique are scientific persist for a long period, as, for example, ancient Egypt persisted, or does it necessarily contain within itself forces which must bring either decay or explosion?

Lloyd Roberts lecture  
Can a Scientific Community be Stable, Royal Society of Medicine, London, November 29, 1949

**Sagan, Carl** 1934–96  
American astronomer and author

Many of the dangers we face indeed arise from science and technology – but, more fundamentally, because we have become powerful without becoming commensurately wise. The world-altering powers that technology has delivered into our hands now require a degree of consideration and foresight that has never before been asked of us.

*Pale Blue Dot: A Vision of the Human Future in Space*  
Chapter 22 (p. 384)  
Random House, Inc. New York, New York, USA. 1994

Surely...any powerful tool, those in power will try to use...or even monopolize.... Surely scientists, being people, grow up in a society and reflect the prejudices of that society. How could it be otherwise? Some scientists have been nationalists; some have been racists; some have been sexists. But that doesn't undermine the validity of science. It's just a consequence of being human.

Wonder and Skepticism  
*Skeptical Inquirer*, January/February, 1995 (p. 24)

There is a reward structure in science that is very interesting: Our highest honors go to those who disprove the findings of the most revered among us.... [I]t's exactly the opposite [in economics, politics, or religion]: There we reward those who reassure us that what we've been told is right, that we need not concern ourselves about it.

This difference, I believe, is at least a basic reason why we've made so much progress in science, and so little in some other areas.

Wonder and Skepticism  
*Skeptical Inquirer*, January/February, 1995 (p. 24)

The scientific world view works so well, explains so much and resonates so harmoniously with the most advanced parts of our brains that in time, I think, virtually every culture on the Earth, left to its own devices, would have discovered science.

*Cosmos*  
Chapter VII (p. 176)  
Random House, Inc. New York, New York, USA. 1980

**Schrödinger, Erwin** 1887–1961  
Austrian theoretical physicist

... – who are we? ... I consider this not only one of the tasks, but the task of science, the only one that really counts.

*Science and Humanism: Physics in Our Time*  
The Alleged Break-Down of the Barrier Between Subject and Object (p. 51)  
At The University Press. Cambridge, England. 1952

**Silver, Brian L.**  
Israeli professor of physical chemistry

Scientific ideas have affected the relationship of man to society, his ideas of God, and his image of himself. Science has influenced the way people write poetry and the way they paint pictures. In the hands of bigots, it has provided a theoretical justification for the sterilization of some human beings and the enslavement of others. Science, as a source of ideas, is a major character in the human drama.

*The Ascent of Science*  
Preface (p. xvi)  
Solomon Press Book. New York, New York, USA. 1998

**Snow, Charles Percy** 1905–80  
English novelist and scientist

Literary intellectuals at one pole – at the other scientists. – .... Between the two a gulf of mutual incomprehension.

*The Two Cultures and the Scientific Revolution*  
Chapter I (p. 4)  
Cambridge University Press. New York, New York, USA. 1961

**Stenger, Victor J.** 1935–  
American physicist

Most humans on this planet use the fruits of science in every phase of their lives. I become very irritated at those who decry science while accepting its every benefit. It is especially ironic how the antiscientists use modern communications to get their messages to the public.

*Physics and Psychics: The Search for a World Beyond the Senses*  
Chapter 14 (p. 297)

On Cloning Human Beings (pp. 51–52)  
The Viking Press. New York, New York, USA. 1979

**Timiriazeff, C. A.**  
Russian botanist

To develop and prosper, every science requires the moral and material support of society; but, on the other hand, society takes practical interest only in things which it considers useful.

Translated by Anna Sheremeteva  
*Die Sinne der Pflanzen*  
Chapter 1 (p. 7)  
Longmans, Green & Co. London, England. 1912

**Weinberg, Steven** 1933–  
American nuclear physicist

It is simply a logical fallacy to go from the observation that science is a social process to the conclusion that the final product, our scientific theories, is what it is because of the social and historical forces acting in this process. A party of mountain climbers may argue over the best path to the peak, and these arguments may be conditioned by the history and social structure of the expedition, but in the end either they find a good path to the peak or they do not, and when they get there they know it. (No one would give a book about mountain climbing the title Constructing Everest.)

*Dreams of a Final Theory: The Scientist's Search for the Ultimate Laws of Nature*  
Chapter VI (p. 165)  
Pantheon Books. New York, New York, USA. 1992

It certainly feels to me that we are discovering something real in physics, something that is what it is without any regard to the social and historical conditions that allowed us to discover it.

*Dreams of a Final Theory: The Scientist's Search for the Ultimate Laws of Nature*  
Chapter VI (p. 165)  
Pantheon Books. New York, New York, USA. 1992

We may need to rely again on the influence of science to preserve a sane world. It is not the certainty of scientific knowledge that fits it for this role, but its uncertainty.

Seeing scientists change their minds again and again about matters that can be studied directly in laboratory experiments, how can one take seriously the claims of religious tradition or sacred writings to certain knowledge about matters beyond human experience?

*Dreams of a Final Theory: The Scientist's Search for the Ultimate Laws of Nature*  
Chapter VII (p. 188)  
Pantheon Books. New York, New York, USA. 1992

**Weisskopf, Victor Frederick** 1908–2002  
Austrian-American physicist

Science cannot develop unless it is pursued for the sake of pure knowledge and insight. It will not survive unless it is used intensely and wisely for the betterment of humanity and not as an instrument of domination. Human existence depends upon compassion and curiosity. Curiosity without compassion is inhuman; compassion without curiosity is ineffectual.

*Science Yesterday, Today, and Tomorrow*  
Speech, 1993

**Wilson, Edward O.** 1929–  
American biologist and author

The love of complexity without reductionism makes art; the love of complexity with reductionism makes science.

*Consilience: The Unity of Knowledge*  
Chapter 4 (p. 54)  
Alfred A. Knopf. New York, New York, USA. 1998

**Wolpert, Lewis** 1929–  
British embryologist

Mary Shelley's *Dr. Frankenstein*, H. G. Wells's *Dr. Moreau* and Aldous Huxley's *Brave New World...* are evidence of a powerfully emotive anti-science movement. Science is dangerous, so the message goes – it dehumanizes; it takes away free will; it is materialistic and arrogant. It removes magic from the world and makes it prosaic. But note where these ideas come from – not from the evidence of history, but from creative artists who have molded science by their own imagination.

*The Unnatural Nature of Science*  
Introduction (p. x)  
Harvard University Press. Cambridge, Massachusetts, USA. 1992

**Zelinsky, Wilbur** 1921–  
American cultural geographer

Perhaps the greatest discovery of twentieth century science has to do with its own essential nature: That it is, first and always, a social activity, an organized band of human beings who obey the same fundamental rules of organized behavior as do any other complex group of people, not a disembodied flock of angels soaring unswervingly upward toward the elysian fields of truth. The Demigod's Dilemma

*Annals of the Association of American Geographers*, Volume 65, 1975 (p. 133)

## SCIENCE AND SORCERY

**Foster, Alan Dean** 1946–  
American author of fantasy and science fiction

Where lies the line between sorcery and science? It is only a matter of terminology, my friend.

*Cyber Way* (p. 320)  
Ace Books. New York, New York, USA. 1990

## SCIENCE AND SPIRITUALITY

**Sagan, Carl** 1934–96  
American astronomer and author

The notion that science and spirituality are mutually exclusive does a disservice to both.

*Demon-Haunted World: Science As a Candle in the Dark*  
Chapter 2 (pp. 29–30)  
Random House, Inc. New York, New York, USA. 1995

## SCIENCE AND STATE

**Duprée, Hunter** 1921–  
American historian of science and technology

The mighty edifice of government science dominated the scene in the middle and twentieth century as a Gothic cathedral dominated a thirteenth century landscape. The work of many hands over the years, it universally inspired admiration, wonder and fear.

*Science in the Federal Government*  
Chapter XIX (p. 375)  
Harvard University Press. Cambridge, Massachusetts. 1957

**Feyerabend, Paul K.** 1924–94  
Austrian-born American philosopher of science

...the separation of state and church must be complemented by the separation of state and science, that most recent, most aggressive, and most dogmatic religious institution.

*Against Method: Outline of an Anarchistic Theory of Knowledge*  
Chapter 18 (p. 295)  
Verso. London, England. 1978

**Mellanby, Kenneth** 1908–93  
English ecologist and entomologist

...the corridors of power have a strong attraction for even the most devoted investigator, and these corridors seldom lead back to the laboratory.

*Disorganisation of Scientific Research*  
*New Scientist*, Volume 59, Number 86023, August, 1973 (p. 436)

**Ramón y Cajal, Santiago** 1852–1934  
Spanish neuropathologist

Today's statesmen undoubtedly have limitations, one of which is not realizing that the greatness and might

of nations are the products of science, and that justice, order, and good laws are important but secondary factors in prosperity.

*Advice for a Young Investigator*  
Chapter 6 (p. 91)  
The MIT Press. Cambridge, Massachusetts, USA. 1999

**Rutherford, Ernest** 1871–1937  
English physicist

It is essential for men of science to take an interest in the administration of their own affairs or else the professional civil servant will step in – and then the Lord help you.

*Bulletin of the Institute of Physics*, 1950, 1, Number 1, cover

**Wiener, Norbert** 1894–1964  
American mathematician

Neither the public nor the big administrator [of science] has too good an understanding of the inner continuity of science, but they have both seen its world-shaking consequences, and they are afraid of it. Both of them wish to decerebrate the scientist, as the Byzantine State emasculated its civil servants. Moreover the great administrator who is not sure of his own intellectual level can aggrandize himself only by cutting his scientific employees down to size.

*I Am a Mathematician*  
Epilogue (p. 363)  
Doubleday. Garden City, NY 1956

## SCIENCE AND SUPERSTITION

**Einstein, Albert** 1879–1955  
German-born physicist

By furthering logical thought and a logical attitude, science can diminish the amount of superstition in the world. There is no doubt that all but the crudest scientific work is based on a firm belief – akin to religious feeling – in the rationality and comprehensibility of the world.

*Cosmic Religion, With Other Opinions and Aphorisms*  
On Science (p. 98)  
Covici-Fiede. New York, New York, USA. 1931

**Lovecraft, H. P. (Howard Phillips)** 1890–1937  
American writer of fantasy, horror, and science fiction

We were not...in any sense childishly superstitious, but scientific study and reflection had taught us that the known universe of three dimensions embraces the merest fraction of the whole cosmos of substance and energy.

*The Shunned House*  
Section IV  
The Recluse Press. Athol, Massachusetts, USA. 1928

To say that we actually believed in vampires or werewolves would be a carelessly inclusive statement. Rather must it be said that we were not prepared to deny the

possibility of certain unfamiliar and unclassified modifications of vital force and attenuated matter; existing very infrequently in three-dimensional space because of its more intimate connection with other spatial units, yet close enough to the boundary of our own to furnish us occasional manifestations which we, for lack of a proper vantage-point, may never hope to understand.

*The Shunned House*

Section IV

The Recluse Press. Athol, Massachusetts, USA. 1928

**Machen, Arthur** 1863–1947

Welsh author

I have told you that I was of skeptical habit; but though I understood little or nothing, I began to dread, vainly proposing to myself the iterated dogmas of science that all life is material, and that in the system of things there is no undiscovered land, even beyond the remotest stars, where the supernatural can find a footing. Yet there struck in on this the thought that matter is as really awful and unknown as spirit, that science itself but dallies on the threshold, scarcely gaining more than a glimpse of the wonders of the inner place.

*The Novel of the Black Seal* (p. 18)

Kessinger Publishing. Whitefish, Montana, USA.

**Pagels, Heinz R.** 1939–88

American physicist and science writer

I like to browse in occult bookshops if for no other reason than to refresh my commitment to science.

*The Dreams of Reason: The Computer and the Rise of the Sciences of Complexity*

Chapter 11 (p. 242)

Simon & Schuster. New York, New York, USA. 1988

## SCIENCE AND TECHNOLOGY

**Adler, Alfred** 1870–1937

Austrian psychiatrist

The confusion of science with technology is understandable. Certainly the two often appear to be aspects of a single larger process, as when science proposes new laws of physics, which inspire the development of a technology for their exploration, which in turn exposes inaccuracies in the laws and forces science to seek a more profound level of theory. But in fact their divergence is great. It is in the divergence of engagement from fulfillment, of means from ends.... If truth is a path, then science explores it, and the brief stops along the way are where technologies begin (they build towns and pave a highway). Technology is results, science is process; though the two fuse and separate and then fuse once more, as ends and means must, their opposition is profound.

*The Atlantic Monthly*, February, 1972

## SCIENCE AND TRUTH

**Lorenz, Konrad** 1903–89

Austrian zoologist

Truth, in science, can be defined as the working hypothesis best fitted to open the way to the next better one.

Translated by Marjorie Kerr Wilson

*On Aggression*

Chapter Fourteen (p. 288)

Harcourt, Brace & World, Inc. New York, New York, USA. 1963

## SCIENCE AND WOMEN

### Agrippa (Fictional character)

Well versed in the natural sciences and mathematics. She speaks seven languages proficiently. Were she not a woman one would consider her to be an intellectual.

*Cleopatra*

Film (1963)

**Bolton, Henrietta**

No biographical data available

As a general rule the scientific woman must be strong enough to stand alone, able to bear the often unjust sarcasm and dislike of men who are jealous of seeing what they consider their own field invaded.

Women in Science

*Popular Science Monthly*, Volume 53, 1898 (p. 511)

**Buckley, Arabella B.** 1840–1929

English author

I have promised to introduce you today to the fairy-land of science, – a somewhat bold promise, seeing that most of you probably look upon science as a bundle of dry facts, while fairy-land is all that is beautiful, and full of poetry and imagination. But I thoroughly believe myself, and hope to prove to you, that science is full of beautiful pictures, of real poetry, and of wonder-working fairies...

*The Fairy-Land of Science*

Lecture I (p. 7)

D. Appleton & Company. New York, New York, USA. 1892

**Cannon, Annie Jump** 1863–1941

American astronomer

...a life spent in the routine of science need not destroy the attractive human element of a woman's nature.

Obituary of Williamina Paton Fleming

*Science*, Volume 33, June 30, 1911 (p. 988)

**de Lamennais, Félicité Robert** 1782–1854

French nobleman and ecclesiastic scholar

I have never met a woman who was competent to follow a course of reasoning the half of a quarter of an hour – *un demi quart d'heure*. She has qualities which are wanting in us, qualities of a particular, inexpressible charm; but,

in the matter of reason, logic, the power to connect ideas, to enchain principles of knowledge and perceive their relationships, woman, even the most highly gifted, rarely attains to the height of a man of mediocre capacity.

In H.J. Mozans

*Women in Science*

Chapter III (p. 136)

The MIT Press. Cambridge, Massachusetts, USA. 1974

**de Pizan, Christine** 1364–ca. 1430

Venetian Medieval writer and analyst

I'll give you some conclusive examples. I repeat – and don't doubt my word – that if it were the custom to send little girls to school and to teach them all sorts of different subjects there, as one does with little boys, they would grasp and learn the difficulties of all the arts and sciences just as easily as the boys do.

Translated by Rosalind Brown-Grant

*The Book of the City of Ladies*

Part I, 26 (p. 57)

Penguin Books. London, England. 1999

**Galbraith, John Kenneth** 1908–2006

Canadian-American economist

The real accomplishment of modern science and technology consists in taking ordinary men, informing them narrowly and deeply, and then, through appropriate organization, arranging to have their knowledge combined with that of other specialized but equally ordinary men. This dispenses with the need for genius. The resulting performance, though less inspiring, is far more predictable.

*The New Industrial State*

Chapter VI, Section 2 (p. 62)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1967

**Gildersleeve, Virginia Crocheron** 1877–1965

American educator

If we could produce one or two more Madame Curies, that would accomplish far more for the advancement of women than any amount of agitation, argument and legislation.

*Many a Good Crusade: Memoirs of Virginia Crocheron Gildersleeve*

Part I. The Advancement of Women, (p. 104)

The Macmillan Company. New York, New York, USA. 1954

**Johnston, William** 1861–1917

American typographer

Into what profound mystery of science shall man be permitted to enter where woman may not follow?

*Address on Female Education* (p. 16)

Printed by Chas. Scott & Co. Columbus, Ohio, USA. 1845

**Kant, Immanuel** 1724–1804

German philosopher

All abstract speculations, all knowledge which is dry, however useful it may be, must be abandoned to the laborious and solid mind of man.... For this reason women

will never learn geometry.

In H.J. Mozans

*Women in Science*

Chapter III (p. 136)

The MIT Press. Cambridge, Massachusetts, USA. 1974

**Kass-Simon, G.**

American neurobiologist

**Farnes, Patricia** 1931–85

American health care writer

For women in science to be remembered, not only must their work be thought right, but usually it must have such impact upon scientific thought that exclusion is impossible. If women scientists are wrong, or if they narrowly miss the mark, or if they propound ideas that are ultimately superseded, not only are their ideas quickly forgotten, but as often as not, the women are ostracized by their contemporaries or treated with derision.

*Women of Science: Righting the Record*

Introduction (p. xiii)

Indiana University Press. Bloomington, Indiana, USA. 1990

**Lamy, Étienne** 1845–1919

French essayist, politician, and lawyer

Women...group themselves at the center of human knowledge, whereas men disperse themselves toward its outer boundaries. While men are always pushing analysis to its utmost limits, women are seeking a synthesis. While men are becoming more technical, women are becoming more intellectual. They are better placed to observe the correlations of the different sciences, and to subordinate them to the common and unique source of truth from which they all descend. We seem, indeed, to be approaching a time when women will become the conservers of general ideas.

In H.J. Mozans

*Women in Science.*

Chapter XII (pp. 409–410)

The MIT Press. Cambridge, Massachusetts, USA. 1974

**Marcet, Mrs. (Jane Haldimand)** 1769–1858

English expository author in chemistry, botany, religion, and economics

In writing these pages, the author was more than once checked in her progress by the apprehension that such an attempt might be considered by some, either as unsuited to the ordinary pursuits of her sex, or ill justified by her own recent and imperfect knowledge of the subject. But, on the one hand, she felt encouraged by the establishment of those public institutions, open to both sexes, for the dissemination of philosophical knowledge, which clearly prove that the general opinion no longer excludes women from an acquaintance with the elements of science...

*Conversations on Chemistry, in Which the Elements of that Science Are*

*Familiarly Explained and Illustrated by Experiments*

Preface (p. iv)

Sidney's Press for Cooke. New Haven, Connecticut, USA. 1809

**Merchant, Carolyn** 1936? –  
American ecofeminist philosopher

While learned ladies had always been present among the educated of nobility, and women had contributed to science and mathematics from earliest times, the “scientific lady” was a product of the Scientific Revolution.

*The Death of Nature: Women, Ecology, and the Scientific Revolution*  
Chapter 11 (p. 269)  
Harper & Row, Publishers. San Francisco, California, USA. 1980

**Mitchell, Maria** 1818–89  
American astronomer and educator

Women, more than men, are bound by tradition and authority. What the father, the brother, the doctor, and the minister have said has been received undoubtingly. Until women throw off this reverence for authority, they will not develop. When they do this, when they come to truth through their investigations, when doubt leads them to discovery, the truth which they get will be theirs, and their minds will work on and on unfettered.

In Eve Merriam

*Growing Up Female in America*  
Maria Mitchell (p. 96)

Doubleday & Company, Inc. Garden City, New York, USA. 1971

**Mozans, H. J. (John Augustine Zahm)** 1851–1921  
American priest, professor of physics, and science writer

Whilst men of science will be forced to continue as specialists as long as the love of fame, to consider no other motives of research, continue to be a potent influence in their investigations, it is probable that women will have less love for the long and tedious processes involved in the more difficult kinds of specialization. They will, it seems likely, be more inclined to acquire a general knowledge of the whole circle of the sciences – a knowledge that will enable them to take a comprehensive survey of nature. And it will be fortunate for themselves, as well as for the men who must perforce remain specialists, if they elect to do so. For nothing gives falsier views of nature as a whole, nothing more unfits the mind for a proper apprehension of higher and more important truths, nothing more incapacitates one for the enjoyment of the masterpieces of literature or the sweeter amenities of life, than the narrow occupation of a specialist who sees nothing in the universe but electrons, microbes and protozoa.

*Women in Science*

Chapter XII (pp. 408–409)

The MIT Press. Cambridge, Massachusetts, USA. 1974

**Myrdal, Sigrid**  
American scientist and inventor

There’s the question of how you react when your data do not turn out the way you want them to. One possibility is to think “Oh no, something went wrong, my experiment failed.” or “Did I ask the question wrong?” and put

the data in the drawer. I think the feminine approach is to ask “What’s this trying to tell me?” and consider that nature may be more interesting and complicated than... expected, but therefore probably a bit more elegant. By actually having to deal with the data, I’ve gone to totally different interpretations. If something turns out quite screwy, I give it a chance. It’s possible that it’s more feminine to give something a chance.

In Linda Jean Shepherd

*Lifting the Veil: The Feminine Face of Science*  
Receptivity (p. 86)

Shambhala. Boston, Massachusetts, USA. 1993

**Pepwell, Henry**  
English printer

I mervayle gretely of the opnyon of some men that say they wolde in no wyse that theyr daughters or wyves or kynneswomen sholde lerne scyences, and that it sholde apayre theyr codycyons. This thing is not to say ne to sustayne. That the woman apayreth by conyng it is not well to beleve. As the proverb saythe, ‘that nature gyveth may not be taken away.’

Quoted in H. J. Mozans

*Woman in Science*

Chapter II (p. 106)

D. Appleton & Company. New York, New York, USA. 1913

**Pidgeon, Walter** 1897–1984  
Canadian actor

Women and science are incompatible. No true scientist can have anything to do with a woman.

*Madame Curie*

Film (1943)

**Plato** 428 BCE–347 BCE  
Greek philosopher

Nothing can be more absurd than the practice, which prevails in our country, of men and women not following the same pursuits with all their strength and with one mind, for thus the state, instead of being a whole, is reduced to a half.

In H.J. Mozans

*Women and Science* (p. 2)

The MIT Press. Cambridge, Massachusetts, USA. 1974

**Poullain de la Barre, François** 1647–1723  
French feminist theorist and philosopher

*L’esprot n’a point de sexe.*

The mind has no sex.

*De l’éducation des dames pour la conduite de l’esprit dans les sciences et dans les moeurs*

Paris, France. 1674.

**Rich, Adrienne** 1929–  
American poet

The belief that established science and scholarship – which have so relentlessly excluded women from their

making – are “objective” and “value-free” and that feminist studies are “unscholarly,” “biased,” and “ideological” dies hard. Yet the fact is that all science, and all scholarship, and all art are ideological; there is no neutrality in culture!

*Blood, Bread and Poetry*

Chapter 1 (p. 3)

W.W. Norton & Company. New York, New York, USA. 1986

**Sharp, Katharine Dooris** 1846–1935

Irish botanist

...while the road to scientific attainment is for the man broad and well-paved through centuries of use, there is generally for woman, when she dares to walk therein, a look askance and a cold reception.

*Summer in a Bog*

The Woman Botanist (p. 93)

Chapter 2 (p. 27)

Plenum Press. New York, New York, USA. 1992

## SCIENCE EDUCATION

**Bethe, Hans** 1906–2005

American physicist

We need science education to produce scientists, but we need it equally to create literacy in the public. Man has a fundamental urge to comprehend the world about him, and science gives today the only world picture which we can consider as valid. It gives an understanding of the inside of the atom and of the whole universe, or the peculiar properties of the chemical substances and of the manner in which genes duplicate in biology. An educated layman can, of course, not contribute to science, but can enjoy and participate in many scientific discoveries which as constantly made. Such participation was quite common in the 19th century, but has unhappily declined. Literacy in science will enrich a person's life.

Quote

*Popular Mechanics*, Volume 116, Number 3, September, 1961 (p. 256)

**von Liebig, Justus** 1803–73

German organic chemist

Without an acquaintance with the history of physics it is impossible to form any correct opinion of the effect which the study of nature has exercised upon the cultivation of the mind. In our schools mere children are now taught truths, the attainment of which has cost immense labour and indescribable efforts.

In John Gardner

*Familiar Letters on Chemistry*

Second Series

Letter I (p. 8)

Taylor & Walton. London, England. 1844

The great desideratum of the present age is practically manifested in the establishment of schools in which the natural sciences occupy the most prominent place in the course of instruction. From these schools a generation will spring up, vigorous in understanding, qualified to accomplish all that is truly great, and to bring forth fruits of universal usefulness. Through them the resources, strength, and wealth of empires will be incalculably increased...

In John Gardner

*Familiar Letters on Chemistry*

Second Series

Letter I (p. 33)

Taylor & Walton. London, England. 1844

## SCIENCE FICTION

**Asimov, Isaac** 1920–92

American author and biochemist

Individual science fiction stories may seem as trivial as ever to the blinder critics and philosophers of today – but the core of science fiction, its essence...has become crucial to our salvation if we are to be saved at all.

In Robert Holdstock (ed.)

*The Encyclopedia of Science Fiction*

Foreword (p. 7)

Octopus Books Ltd. London, England. 1978

**Ballard, James Graham** 1930–

English writer

Everything is becoming science fiction. From the margins of an almost invisible literature has sprung the intact reality of the 20th century.

Fictions of Every Kind

*Books and Bookmen*, February, 1971

**Hawking, Stephen William** 1942–

English theoretical physicist

We may not yet be able to boldly go where no man (or woman) has gone before, but at least we can do it in the mind.

In Lawrence M. Krauss

*The Physics of Star Trek*

Foreword (pp. xi–xii)

Harp Perennial Publishers. New York, New York, USA. 1995

There is a two-way trade between science fiction and science. Science fiction suggests ideas that scientists incorporate into their theories, but sometimes science turns up notions that are stranger than any science fiction.

In Lawrence M. Krauss  
*The Physics of Star Trek*

Forward (p. xii)

Harp Perennial Publishers. New York, New York, USA. 1995

Nevertheless, today's science fiction is often tomorrow's science fact. The physics that underlies Star Trek is surely worth investigating. To confine our attention to the terrestrial matters would be to limit the human spirit.

In Lawrence M. Krauss  
*The Physics of Star Trek*

Forward (p. xiii)

Harp Perennial Publishers. New York, New York, USA. 1995

## SCIENCE GEEK

**Willis, Connie** 1945–

American science fiction writer

The effect, especially with the Coke-bottle glasses, should have been science geek, but it wasn't... Science geeks wear black shoes and white socks. he wasn't even wearing a pocket protector, though he should have been.

*Bellwether* (p. 12)

Bantam Spectra. New York, New York, USA. 1997

## SCIENCE IS

**Abbey, Edward** 1927–89

American environmentalist and nature writer

Science is the whore of industry and the handmaiden of war.

*A Voice Crying in the Wilderness: Notes from a Secret Journal*

Chapter 10 (p. 93)

St. Martin's Press. New York, New York, USA. 1989

**Adams, Henry Brooks** 1838–1918

American man of letters

My belief is that science is to wreck us, and that we are like monkeys monkeying with a loaded shell; we don't in the least know or care where our practically infinite energies come from or will bring us to.

*Letters of Henry Adams* (Volume 2)

Letter, August 10, 1902, to Brooks Adams (p. 392)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1938

**Alves, Reuben**

No biographical data available

Science is what it is, not what scientists think they do.

*New York Times*, July 13, 1979, A8 (p. 128)

*Conversations With Isaac Asimov*

*Isaac Asimov Speaks* (p. 143)

University Press of Mississippi. Jackson, Mississippi, USA. 2005

**Astbury, William Thomas** 1898–1961

English crystallographer and molecular biologist

...science is truly one of the highest expressions of human culture – dignified and intellectually honest, and withal a never-ending adventure. Personally, I feel much the same with regard to the more ecstatic moments in science as I do with regard to music. I see little difference between the thrill of scientific discovery and what one experiences when listening to the opening bars of the Ninth Symphony.

Science in Relation to the Community

*School Science Review*, Number 109, 1948 (p. 279)

## Author undetermined

Science is like an organism, it cannot be made great by the command of "hurry up." It must have its time to grow and develop.

*Ninth Annual Report of the Pathological Institute*

Relation of the Pathological Institute to the Official Organ of the Publication of State Hospitals (p. 226)

Wynkoop Hallenbeck Crawford Co. Albany, New York, USA. 1898

**Bain, Alexander** 1818–1903

Scottish philosopher and psychologist

[Science] is the most perfect embodiment of Truth, and of the ways of getting at Truth. More than anything else does it impress the mind with the nature of Evidence, with the labour and precautions necessary to prove a thing. It is the grand corrective of the laxness of the natural man in receiving unaccredited facts and conclusions. It exemplifies the devices for establishing a fact, or a law, under every variety of circumstances; it saps the credit of everything that is affirmed without being properly attested.

*Education as a Science*

Chapter V (pp. 146–147)

D. Appleton & Co. New York, New York, USA. 1898

**Bauer, Henry H.** 1931–

American chemist

That science is inescapably a human activity does not mean that it is only or just a human activity, essentially similar to all other human activities.

*Scientific Literacy and the Myth of the Scientific Method*  
Chapter 7 (p. 141)  
University of Illinois Press. Urbana, Illinois, USA. 1992

**Bernal, John Desmond** 1901–71  
Irish-born physicist and X-ray crystallographer

Science is one of the most absorbing and satisfying pastimes, and as such it appeals in different ways to different types of personality. To some it is a game against the unknown where one wins and no one loses; to others, more humanly minded, it is a race between different investigators as to who should first wrest the prize from nature. It has all the qualities which make millions of people addicts of the crossword puzzle or the detective story, the only difference being that the problem has been set by nature or chance and not by man, that the answer cannot be got with certainty, and when they are found often raise far more questions than the original problem.  
*The Social Function of Science* (p. 97)  
The Macmillan Company. New York, New York, USA. 1939

**Bernard, Claude** 1813–78  
French physiologist

Science is like a rope that we hold by one end, which we see. The other end is in the water and is attached to the unknown.  
Translated by Hebbel H. Hoff, Lucienne Guillemin and Roger Guillemin  
*The Cahier Rouge of Claude Bernard* (p. 89)  
Schenkman Publishing Co. Cambridge, Massachusetts, USA. 1967

**Berthelot, Marcellin (or Marcelin) Pierre**

**Eugène** 1827–1907  
French chemist and politician

Science is essentially a collective work, pursued during the course of time by the efforts of a multitude of workers of every age and of every nation, succeeding themselves and associating by virtue of a tacit understanding for the search for pure truth and for the applications of that truth to the continuous betterment of the condition of all mankind.  
In Camille Matignon  
*Annual Report of the Board of Regents of the Smithsonian Institution, 1907*  
Marcellin Berthelot (p. 684)  
Government Printing Office. Washington, D.C. 1908

**Boas, George** 1891–1980  
American philosophy professor

Science is the art of understanding nature.  
In Laurence M. Gould  
*Science and the Culture of Our Times*  
*UNESCO Courier*, February, 1968 (p. 6)

**Bohm, David** 1917–92  
American physicist

**Peat, F. David** 1938–  
English holistic physicist and author

Science is an attempt to understand the universe and humanity's relationship to nature.  
*Science, Order, and Creativity*  
Chapter One (p. 16)  
Bantam Books. New York, New York, USA. 1987

Science is essentially a public and social activity.  
*Science, Order, and Creativity*  
Chapter Two (p. 67)  
Bantam Books. New York, New York, USA. 1987

Science is, however, at least in principle, dedicated to seeing any fact as it is, and to being open to free communication with regard not only to the fact itself, but also to the point of view from which it is interpreted.  
*Science, Order, and Creativity*  
Chapter Six (pp. 241–242)  
Bantam Books. New York, New York, USA. 1987

**Born, Max** 1882–1970  
German-born English physicist

The satisfaction of the noble curiosity of the scholar is only one aspect of research. Science is also – and many say predominantly – a collective effort to obtain power over the forces of nature in the interest of human life.  
*The Restless Universe*  
Postscript (p. 297)  
Dover Publications, Inc. New York, New York, USA. 1951

**Bouty, Edmond** 1846–1922  
French physicist

Science is a product of the human mind, a product that conforms to both the laws of thought and the outside world. Hence it has two aspects, one subjective, the other objective; and both are equally necessary, for it is impossible to alter the laws of the mind as it is to change the laws of the universe.  
In Gaston Bachelard  
*The New Scientific Spirit*  
Introduction (p. 2)  
Beacon Press. Boston, Massachusetts, USA. 1984

**Broad, William** 1951–  
Science writer

**Wade, Nicholas**  
British-born scientific writer

Science is not an abstract body of knowledge, but man's understanding of nature. It is not an idealized interrogation of nature by dedicated servants of truth, but a human process governed by the ordinary human passions of ambition, pride, and greed, as well as by all the well-hymned virtues attributed to men of science.  
*Betrayers of the Truth* (p. 223)  
Simon & Schuster. New York, New York, USA. 1982

**Bronowski, Jacob** 1908–74  
Polish-born British mathematician and polymath

Science is a very human form of knowledge. We are always at the brink of the known, we always feel forward for what is to be hoped.

*The Ascent of Man*

Knowledge or Certainty (p. 374)

Little, Brown & Co. Boston, Massachusetts, USA. 1973

**Brown, Samuel** 1817–56  
Chemist

Science is an ideal of the method of nature, and the production of that ideal is a true creation.

*Lectures on the Atomic Theory and Essays Scientific and Literary*

(Volume 1)

The History of Science (p. 299)

Thomas Constable & Co. Edinburgh, Scotland. 1858

**Burroughs, John** 1837–1921  
American naturalist and writer

Science is the critic and doctor of life, but never its inspirer. It enlarges the field of literature, but its aims are unlitrary. The scientific explanation of the great problems – life, mind, consciousness -seems strangely inadequate; they are like the scientific definition of light as vibrations or electric oscillations in the ether of space, which would not give a blind man much idea of light.

*Under the Apple-Trees*

Chapter XI (p. 196)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1916

Science is a capital or fund perpetually reinvested; it accumulates, rolls up, is carried forward by every new man. Every man of science has all the science before him to go upon, to set himself up in business with. What an enormous sum Darwin availed himself of and reinvested! Not so in literature; to every poet, to every artist, it is still the first day of creation, so far as the essentials of his task are concerned. Literature is not so much a fund to be reinvested as it is a crop to be ever new-grown.

*The Writings of John Burroughs* (Volume 17)

The Summit of the Years

In the Noon of Science (p. 64)

Houghton Mifflin Company. New York, New York, USA. 1913

**Butler, Samuel** 1612–80  
English novelist, essayist, and critic

Science is being daily more and more personified and anthropomorphized into a god. By and by they will say that science took our nature upon him, and sent down his only begotten son, Charles Darwin, or Huxley, into the world so that those who believe in him, etc.; and they will burn people for saying that science, after all, is only an expression for our ignorance of our own ignorance.

In Geoffrey Keynes and Brian Hill (eds.)

*Samuel Butler's Notebooks*

Science (p. 233)

Jonathan Cape. London, England. 1951

**Buzzati-Traverso, Adriano** 1913–83  
Italian genetic scientist

Science is a game: it can be exhilarating, it can be useful, it can be frightfully dangerous. It is a play prompted by man's irrepressible curiosity to discover the universe and himself, and to increase his awareness of the world in which he lives and operates.

*The Scientific Enterprise, Today and Tomorrow*

Part I, Chapter 1 (p. 3)

UNES Company. Paris, France. 1977

**Calder, Ritchie** 1906–82  
Scottish journalist

Science is a river which the explorer may encounter at any point along its course. He can follow it either to its source or to its delta or both.

*Profile of Science*

Introduction (p. 13)

George Allen & Unwin Ltd. London, England. 1951

Science is the everlasting interrogation of Nature by Man.

*Man and the Cosmos: The Nature of Science Today*

Chapter I (p. 3)

Frederick A. Praeger, Publishers. New York, New York, USA. 1968

**Carnap, Rudolf** 1891–1970  
American philosopher

Science is a system of statements based on direct experience, and controlled by experimental verification. Verification in science is not, however, of single statements but of the entire system or sub-system of such statements.

Translated by M. Black

*The Unity of Science* (p. 42)

Kegan Paul, Trench, Trubner & Co. London, England. 1934

**Chekhov, Anton Pavlovich** 1860–1904  
Russian author and playwright

Science is the most important, the most magnificent, and the most necessary element of life.

Translated by Vic Schneierson

Progress Publishers. Moscow, Russia. 1979

**Chernyshevsky, Nikolai Gavrilovich** 1828–89  
Russian socialist reformer

Science is the repository of the experience and thinking of the human race. It is mainly through science that the ideas, and then the morals and life of people, are improved.

Compiled by V.V. Vorontsov

*Words of the Wise: A Book of Russian Quotations*

Translated by Vic Schneierson

Progress Publishers. Moscow, Russia. 1979

**Conant, James Bryant** 1893–1978  
American educator and scientist

[Science is] the activity of people who work in laboratories and whose discoveries have made possible modern industry and medicine.

*Science and Common Sense*

Chapter Two (p. 23)

Yale University Press. New Haven, Connecticut, USA. 1951

Science is an interconnected series of concepts and schemes that have developed as a result of experimentation and observation and are fruitful of further experimentation and observation.

*Science and Common Sense*

Chapter Two (p. 25)

Yale University Press. New Haven, Connecticut, USA. 1951

Science is a dynamic undertaking directed to lowering the degree of the empiricism involved in solving problems.

*Modern Science and Modern Man*

Science and Human Conduct (p. 62)

Columbia University Press. New York, New York, USA. 1952

**Cromer, Alan** 1935–

American physicist and educator

Science is overwhelmingly cumulative, not revolutionary, in its structure. This means that most of its established results – even those established recently – will be around forever. A particular result may be found to be an instance of a more general result, but its factualness, as far as it goes, will never change.

*Uncommon Sense: The Heretical Nature of Science*

Chapter 1 (p. 6)

Oxford University Press, Inc. New York, New York, USA. 1993

Science is the heretical belief that the truth about the real nature of things is to be found by studying the things themselves.

*Uncommon Sense: The Heretical Nature of Science*

Chapter 1 (p. 18)

Oxford University Press, Inc. New York, New York, USA. 1993

Science is the search for a consensus of rational opinion among all competent researchers.

*Uncommon Sense: The Heretical Nature of Science*

Chapter 8 (pp. 143–144)

Oxford University Press, Inc. New York, New York, USA. 1993

**Cromie, William J.** 1930–

American journalist and writer

Science is not a mere “lump” of knowledge. It is disciplined thought, it is curiosity, it is creativity, it is the scientists themselves and the methods they use. It is the hope – the religion – that there is order in the universe; that man shall find that order; that someday he will be able to control the environment to which he is now little more than a slave. All this and more make up the dynamic, ever-changing whole called “science.”

*Exploring the Secrets of the Sea*

Conclusion (p. 280)

Prentice-Hall, Inc. Englewood Cliffs, New Jersey, USA. 1962

**da Vinci, Leonardo** 1452–1519

Italian High Renaissance painter and inventor

Science is the captain, practice the soldiers.

*Leonardo da Vinci's Note Books* (p. 54)

Duckworth & Company. London, England. 1906

**Davis, Watson** 1896–1967

No biographical data available

Science is a grand procession through the ages. Blaring trumpets, waving flags, and pomp are not its accompaniment. It travels the quieter roads of the intellect.

*The Advance of Science*

Chapter 32 (p. 375)

Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1934

**de Unamuno, Miguel** 1864–1936

Spanish philosopher and writer

Science is a cemetery of dead ideas, even though life may issue from them.

Translated by J.E. Crawford Flitch

*The Tragic Sense of Life in Men and in Peoples*

Chapter V (p. 90)

Macmillan & Company Ltd. London, England. 1921

**Dobzhansky, Theodosius** 1900–75

Russian-American scientist

Science is cumulative knowledge. Each generation of scientists works to add to the treasury assembled by its predecessors. A discovery made today may not be significant or even comprehensible by itself, but it will make sense in conjunction with what was known before. Indeed this will usually have been necessary to its achievement.

In Robert M. Hutchins and Mortimer J. Adler (eds.)

*The Great Ideas Today* 1974

Advancement and Obsolescence in Science (p. 52)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1974

**Durant, William James** 1885–1981

American historian and essayist

Science is the captured territory; and behind it are those secure regions in which knowledge and art build our imperfect and marvelous world.

*The Story of Philosophy*

Introduction (p. 2)

Simon & Schuster Paperback. New York, New York, USA. 2005

**Edelman, Gerald M.** 1929–

American biochemist and neuroscientist

Science is imagination in the service of the verifiable truth and that service is indeed communal. It cannot be rigidly planned. Rather, it requires freedom and courage and the plural contributions of many different kinds of people who must maintain their individuality while giving to the group.

*Les Prix Nobel. The Nobel Prizes in 1972*

Nobel banquet speech for award received in 1972

Nobel Foundation. Stockholm, Sweden. 1973

**Elliot, Hugh Samuel Roger** 1881–1930

No biographical data available

Our science is like a small candle set in the midst of infinite and pitchy darkness. It helps not at all in seeing things that are a million miles away; and even if we succeed in multiplying its light a million-fold, we shall still be no wiser as to space a trillion miles away, and we shall have approached no nearer the solution of infinite distance or the boundaries of space.

*Modern Science and Materialism*

Chapter I (p. 19)

Longmans, Green & Co. London, England. 1919

**Egler, Frank E.** 1911–96

American botanist and ecologist

Science is a product of man, of his mind; and science creates the real world in its own image.

*The Way of Science*

Science Concepts (p. 22)

Hafner Publishing Company. New York, New York, USA. 1970

**Einstein, Albert** 1879–1955

German-born physicist

Science is a wonderful thing if one does not have to earn one's living at it.

In Helen Dukas and Banesh Hoffman

*Albert Einstein: The Human Side: New Glimpses from His Archives*

Letter to a California student March 24, 1951 (p. 57)

Princeton University Press. Princeton, New Jersey, USA. 1979

**Elmer-Dewitt, Philip** 1949–

American writer and editor

Science is like a flashlight; what it illuminates depends on where it is pointed.

Don't Tread on My Lab

*Time*, January 24, 1994

**Farrar, Frederic William** 1831–1903

English clergyman and author

Science is the best teacher of accurate, acute, and exhaustive observation of what is; it encourages the habit of mind which will rest on nothing but what is true; truth is the ultimate and only object, and there is the ever-recurring appeal to facts as the test of truth.

*Essays on a Liberal Education* (2nd edition)

Essay Six (p. 251)

Macmillan & Co Ltd. London, England. 1868

**Feynman, Richard P.** 1918–88

American theoretical physicist

Science is a way to teach how something gets to be known, what is not known, to what extent things are known (for nothing is known absolutely), how to handle doubt and uncertainty, what the rules of evidence are, how to think about things so that judgments can be made, how to distinguish truth from fraud, and from show.

*The Problem of Teaching Physics in Latin America*

*Engineering and Science*, November, 1963

**Gill, Eric** 1882–1940

English sculptor

Science is analytical, descriptive, informative. Man does not live by bread alone, but by science he attempts to do so. Hence the deadliness of all that is purely scientific.

*It All Goes Together: Selected Essays* (p. 117)

The Devin-Adair Company. New York, New York, USA. 1944

**Glass, H. Bentley** 1906–2005

American geneticist

Science is not only to know, it is to do, and in the doing it has found its soul.

*Science and Ethical Values*

Chapter 3 (p. 101)

University of North Carolina Press. Chapel Hill, North Carolina, USA. 1965

**Gluckman, Max** 1911–75

English anthropologist

Science is cumulative. The apprentice in this generation can outdo his master of the last.

*Politics, Law & Ritual*

Chapter VII (p. 303)

Aldine Publishing Company. Chicago, Illinois, USA. 1965

**Gore, George** 1826–1909

English electrochemist

Science is the interpretation of nature, and man is the interpreter.

*The Art of Scientific Discovery*

Part I, Chapter I (p. 2)

Longmans, Green & Co. London, England. 1878

**Gorky, Maxim** 1868–1938

Russian writer

Science is becoming the nervous system of our time.

Compiled by V.V. Vorontsov

*Words of the Wise: A Book of Russian Quotations*

Translated by Vic Schneierson

Progress Publishers. Moscow, Russia. 1979

Science is humanity's superior reason, the sun which man has created of his own flesh and blood and has lit to illuminate the darkness of his hard life and to show the way to freedom, justice, and beauty.

Compiled by V.V. Vorontsov

*Words of the Wise: A Book of Russian Quotations*

Translated by Vic Schneierson

Progress Publishers. Moscow, Russia. 1979

**Gould, Stephen Jay** 1941–2002

American paleontologist and evolutionary biologist

All science is intelligent inference; excessive literalism is a delusion, not a humble bowing to evidence.

*Dinosaur in a Haystack: Reflections in Natural History*

Part Three, Chapter 12 (p. 156)

Random House, Inc. New York, New York, USA. 1995

Science is an integral part of culture. It's not this foreign thing, done by an arcane priesthood. It's one of the glories of the human intellectual tradition.

*Independent (London)*, January 24, 1990

**Gray, George W.**

Freelance science writer

Science is not only for illumination, for the mastery of nature's resources and the improvement of man's estate, it is also for the satisfaction of the soul.

*New World Picture*

Preface (p. x)

Little, Brown & Co. Boston, Massachusetts, USA. 1935

...science supremely is the art of entertaining doubts of beliefs experimentally accepted. No truth is sacrosanct. No belief is too generally approved, too well established by experiment, to escape the challenge of doubt. And no doubt is too radical to receive a hearing if it is seriously proposed.

*The Advancing Front of Science*

Chapter IV (p. 70)

McGraw-Hill Book Co., Inc. New York, New York, USA. 1937

**Goth, Alan** 1947–

American physicist

...science is not merely a collection of facts, but is instead an ongoing detective story, in which scientists passionately search for clues in the hope of unraveling the mysteries of the universe.

*The Inflationary Universe; the Quest for a New Theory of Cosmic Origins*

Chapter 3 (p. 34)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1997

**Harare, José V.**

No biographical data available

**Bell, David F.**

No biographical data available

Science is the totality of the world's legends. The world is the space of their inscription. To read and to journey are one and the same act.

In Michel Sires

*Hermes: Literature, Science, Philosophy*

Introduction (p. xxi)

The Johns Hopkins University Press. Baltimore, Maryland, USA. 1982

**Harman, Willis**

No biographical data available

Science is all about cause. That's why you have science; you're trying to find the explanation, the causes, for the phenomena. Now, if really everything is connected to everything, if there really is only a oneness, everything then affects everything, and everything is the cause of everything in a certain sense, so that the whole idea of causality has to be revised.

*Thinking Allowed: Conversations on the Leading Edge of Knowledge and Discovery*

Metaphysics and Modern Science, Part I: Consciousness and Science

Thinking Allowed Productions. Berkeley, California, USA.

**Harrington, John W.**

American geologist

Science is the progressive discovery of the nature of nature.

*Dance of the Continents*

The Lure of the Hunt (p. 30)

J.P. Archer. Los Angeles, California, USA. 1983

**Harvey, Moses** 1820–1901

Irish clergyman, essayist, and naturalist

In its largest sense, Science is the interpretation of the great volume of nature, whose author is God. To the finite mind of man that volume presents difficulties, perplexities, mysteries, partly because of the vastness of the plan on which it is projected, and partly because of the feebleness of that human intelligence which attempts to penetrate its secrets. It is a sealed volume: and only by patient study, and humble labour can the mystic seals be unloosed.

Science and Religion

*The Maritime Monthly*, Volume II, Number 5, November, 1873 (p. 478)

**Henry, Joseph** 1797–1878

Scottish-born American scientist

...science is the pursuit above all which impresses us with the capacity of man for intellectual and moral progress and awakens the human intellect to aspiration for a higher condition of humanity.

Inscription on the National Museum of American History, Washington, D.C.

**Herschel, Sir John Frederick William** 1792–1871

English astronomer and chemist

Science is the knowledge of many, orderly and methodically digested and arranged, so as to become attainable to one.

*The Cabinet of Natural Philosophy*

Part I, Chapter II, Section 13 (p. 18)

Longman, Rees, Orme, Brown & Green. London, England. 1831

Science is of no party. Under the government, whether of Whig or Tory, she has often had to complain of the difficulty of making herself heard in recommendation of her objects; but those objects once recognized by a British government, are taken up in a spirit and with a liberality which ensures success, if success be possible.

*Essays from the Edinburgh and Quarterly Reviews with Addresses and Other Pieces*  
 Terrestrial Magnetism (pp. 112–113)  
 Longman, Brown, Green, Longmans & Roberts. London, England. 1857

Science is the knowledge of many, orderly and methodically digested and arranged, so as to become attainable by one.

*A Preliminary Discourse on the Study of Natural Philosophy*  
 Chapter II (p. 18)  
 Longman, Rees, Orme, Brown & Green. London, England. 1831

**Herzen, Aleksandr** 1812–70

Russian political author

Science is a table abundantly laid for every man whose hunger is great enough, whose craving for spiritual nourishment has grown sufficiently insistent.

*Selected Philosophical Works*  
 Dilettantism in Science (p. 58)  
 Foreign Languages Publishing House. Moscow, Russia. 1956

Science is strength; it shows the relations of things, their laws and interactions.

Compiled by V.V. Vorontsov  
*Words of the Wise: A Book of Russian Quotations*  
 Translated by Vic Schneiersson  
 Progress Publishers. Moscow, Russia. 1979

**Hill, Alexander**

No biographical data available

Science is a synonym of knowledge ...

*Introduction to Science*  
 Chapter I (p. 2)  
 The Macmillan Co. New York, New York, USA. 1900

Science is knowledge in perspective. It is knowledge viewed down the vista of time: not an aggregation of facts presented simultaneously to the intellect, but a sequence of facts successively ascertained and placed in proper relation with all that was previously known.

*Introduction to Science*  
 Chapter I (p. 2)  
 The Macmillan Co. New York, New York, USA. 1900

Science is learning with understanding.

*Introduction to Science*  
 Chapter I (pp. 2–3)  
 The Macmillan Co. New York, New York, USA. 1900

**Hitler, Adolf** 1889–1945

Chancellor of Germany

Science is a social phenomenon, and like every other social phenomenon is limited by the injury or benefit it confers on the community.... The idea of free and unfettered science... is absurd.

In Hermann Rauschning  
*Hitler Speaks: A Series of Political Conversations with Adolf Hitler on His Real Aims* (pp. 220–221)  
 Butterworth. London, England. 1939

**Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

Science is the topography of ignorance. From a few elevated points we triangulate vast spaces, inclosing infinite unknown details.

*The Writings of Oliver Wendell Holmes* (Volume 9)  
*Border Lines in Medical Science* (p. 211)  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1891–1906

**Holton, Gerald** 1922–

Research professor of physics and science history

**Roller, Duane H. D.** ?–1994

Science historian

Science is an ever-unfinished quest to discover facts and establish relationships between them.

*Foundations of Modern Physical Science*  
 Chapter 13 (p. 214)  
 Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1950

**Hugo, Victor** 1802–85

French author, lyric poet, and dramatist

Science is ignorant, and has no right to laugh: a *savant* who laughs at the possible, is very near being an idiot.

Translated by Melville Best Anderson  
*William Shakespeare*  
 Part I, Book I, Chapter V (p. 38)  
 A.C. McClurg & Co. Chicago, Illinois, USA. 1887

**Huizinga, Johan** 1872–1945

Dutch historian

...that all science is merely a game can be easily discarded as a piece of wisdom too easily come by. But it is legitimate to enquire whether science is not liable to indulge in play within the closed precincts of its own method. Thus, for instance, the scientist's continuous penchant for systems tends in the direction of play.

*Homo Ludens*  
 Chapter XI (p. 203)  
 Roy Publishers. New York, New York, USA. 1950

**Huxley, Aldous** 1894–1963

English writer and critic

Science is angling in the mud – angling for immortality and for anything else that may happen to turn up.

*After Many a Summer Dies the Swan*  
 Part II, Chapter 6 (p. 179)  
 Harper & Row Publishers. New York, New York, USA. 1965

**Jacks, L. P.** 1860–1955

English educator, philosopher, and Unitarian minister

Science is never static, never stagnant, never content with the boundary it has reached. It is always dynamic, always breaking bounds.... Science...abhors a limitation....

Is There a Foolproof Science?  
*The Atlantic Monthly*, February, 1924 (p. 231)

Science is the pursuer, life is the pursued....

Is There a Foolproof Science?

*The Atlantic Monthly*, February, 1924 (p. 238)

**Jeffers, Robinson** 1887–1962

American poet

Science is not to serve but to know. Science is for itself its own value, it is not for man...

In Tim Hunt (ed.)

*The Collected Poetry of Robinson Jeffers* (Volume 3)

The Double Axe: The Inhumanist (p. 291)

Stanford University Press. Stanford, California. USA. 1988

Science is an adoration; a kind of worship.

In Tim Hunt (ed.)

*The Collected Poetry of Robinson Jeffers* (Volume 3)

The Double Axe: The Inhumanist (p. 292)

Stanford University Press. Stanford, California. USA. 1988

**Kafka, Franz** 1883–1924

German-language novelist

All science is methodology with regard to the Absolute. Therefore, there need be no fear of the unequivocally methodological. It is a husk, but not more than everything except the One.

*Dearest Father: Stories and Other Writings*

The Blue Octavo Notebooks

The Third Notebook

October 18, 1917

**Kelvin, Lord William Thomson** 1824–1907

Scottish engineer, mathematician, and physicist

Science is bound by the everlasting law of honour, to face fearlessly every problem which can fairly be presented to it. If a probable solution, consistent with the ordinary course of nature, can be found, we must not involve the abnorm act of Creative Power.

*Popular Lectures and Addresses* (Volume 2)

Presidential Address to the British Association, Edinburgh, 1871

(pp. 199–200)

Macmillan & Company Ltd. London, England. 1894

**Keyser, Cassius Jackson** 1862–1947

American mathematician

Science is destined to appear as the child and the parent of freedom blessing the earth without design. Not in the ground of need, not in bent and painful toil, but in the deep-centered play-instinct of the world, in the joyous mood of the eternal Being, her spirit, which is always young, Science has her origin and root; and her spirit, which is the spirit of genius in moments of elevation, is but a sublimated form of play, the austere and lofty analogue of the kitten playing with the entangled skein...

*Mathematics* (p. 44)

Columbia University Press. New York, New York, USA. 1907

**Kliuchevsky, V. O.** 1841–1911

Russian historian

Science is often identified with knowledge. This is a gross misunderstanding. Science is not merely knowledge, but also consciousness, that is, the skill of properly using knowledge.

Compiled by V.V. Vorontsov

*Words of the Wise: A Book of Russian Quotations*

Translated by Vic Schneierston

Progress Publishers. Moscow, Russia. 1979

**Knight, David**

No biographical data available

Most science is a very ordinary human activity not so very far removed from painting by numbers.

*Ideas in Chemistry: A History of the Science*

Introduction (p. 6)

Athlone. London, England. 1992

**Knuth, Donald E.** 1938–

Creator of TeX

Science is what we understand well enough to explain to a computer, Art is all the rest.

In Marko Petkovsek, Herbert S. Wilf and Doron Zeilberger

*A=B*

Foreword

A.K. Peters. Wellesley, Massachusetts, USA. 1996

**Kofahl, R. E.**

No biographical data available

Science is human experience systematically extended (by intent, methodology and instrumentation) for the purpose of learning more about the natural world and for the critical empirical testing and possible falsification of all ideas about the natural world. Scientific hypotheses may incorporate only elements of the natural empirical world, and thus may contain no element of the supernatural.

Correctly Redefining Distorted Science; A Most Essential Task

*Creation Research Society Quarterly*, Volume 23, 1986 (p. 112)

**Kosso, Peter**

No biographical data available

Science is like a microscope, and nature is the specimen.

*Appearance and Reality: An Introduction to the Philosophy of Physics*

Chapter 8 (p. 178)

Oxford University Press. Oxford, England. 1998

**Krauss, Lawrence M.** 1954–

American theoretical physicist

Science is based on limits: It proceeds by progressively finding out what is not possible, through experiment and theory, in order to determine how the universe might really function. It is worth recalling Sherlock Holmes's adage that when you have eliminated all other possibilities, whatever remains, no matter how improbable, is the truth. Because of this, the universe is a pretty remarkable place even without all the extras. The greatest gift science has bestowed upon humanity, in my opinion, is the

knowledge that whether we like it or not, the universe is the way it is.

*Beyond Star Trek: Physics from Alien Invasions to the End of Time*

Epilogue (p. 173)

Basic Books, Inc. New York, New York, USA. 1997

### **Larrabee, Eric** 1922–90

Historian

Science is a – what? a method, a faith, a body of facts, a structure of theories, an institution, a way of life, a finite number of duly qualified individuals, an infinity of relevance and possibility. For a large number of scientists, science is indescribable, but indisputably a thing: it is knowable, palpable, reliable, usable. They live with it and by it; it is simply and unequivocally there.

Commentary

*Science and the Common Reader*, June, 1966 (p. 43)

### **Leary, Timothy** 1920–96

American psychologist and educator

Science is all metaphor.

*Contemporary Authors*, Volume 107

### **Lewes, George Henry** 1817–78

English philosopher

Science is the systematic classification of Experience.

*The Physical Basis of Mind*

Problem I, Chapter I (p. 4)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1891

### **Lysaght, Sidney Royse** 1860–1941

Irish writer

Science is the lamp which man has himself kindled; it has built him light-houses on the dark shores of the unknown: but his dreams, his quests of truth lead him beyond the waters which his little lamp of knowledge illumines ...

*A Reading of Life*

Chapter II (p. 54)

Macmillan & Company Ltd. London, England. 1936

### **March, Robert H.** 1937–

American professor of physics

Science is more than a mere attempt to describe nature as accurately as possible. Frequently the real message is well hidden, and a law that gives a poor approximation to nature has more significance than one which works fairly well but is poisoned at the root.

*Physics for Poets*

Chapter I (p. 17)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1996

### **Muller, Herbert Joseph** 1905–80

American historian and educator

Although science is no doubt the Jehovah of the modern world, there is considerable doubt about the glory of its handiwork.

*Science and Criticism: The Humanistic Tradition in Contemporary Thought*

Chapter III (p. 59)

G. Braziller. New York, New York, USA. 1943

### **Newton, Roger G.**

Physics professor and author

Science is, in fact, an intricate edifice erected from complex, imaginative designs in which esthetics is a more powerful incentive than utility. Beauty, finally, comprises its greatest intellectual appeal.

*What Makes Nature Tick?*

Epilogue (p. 236)

Harvard University Press. Cambridge, Massachusetts, USA. 1993

### **O'Malley, Austin** 1858–1932

American physician and humorist

Science is truth with her wings clipped.

*Thoughts of a Recluse*

God and Religion (p. 109)

D.H. McBride & Co. Chicago, Illinois, USA. 1898

### **O'Neill, John J.**

No biographical data available

Science is like the expanding universe in which, according to a tentative theory of the astronomers, all the stars and all of the galaxies, in all directions, are moving away from the earth. As each science becomes more complex, it moves further from the common understanding.... Like the stars, each science as it makes further progress into the unknown becomes further separated from its neighbors, and faces the danger of being isolated in a limited universe of its own.

*You and the Universe*

Foreword (p. 3)

Ives Washburn, Inc. New York, New York, USA. 1946

### **Pearson, Karl** 1857–1936

English mathematician

'That all science is description and not explanation, that the mystery of change in the inorganic world is just as great and just as omnipresent as in the organic world, are statements which will appear platitudes to the next generation.

*The Grammar of Science*

Preface to the Second Edition (p. vii)

Adam & Charles Black. London, England. 1900

### **Poincaré, Lucien** 1862–1920

French physicist

Science is in some sort a living organism, which gives birth to an indefinite series of new beings taking the places of the old, and which evolves according to the nature of its environment, adapting itself to external conditions, and healing at every step the wounds which contact with reality may have occasioned.

*The New Physics and Its Evolution*

Chapter I (p. 6)

D. Appleton & Co. New York, New York, USA. 1908

**Porterfield, Austin L.**

No biographical data available

Science, in the broadest sense, is the entire body of the most accurately tested, critically established, systematized knowledge available about that part of the universe which has come under human observation. For the most part this knowledge concerns the forces impinging upon human beings in the serious business of living and thus affecting man's adjustment to and of the physical and the social world.... Pure science is more interested in understanding, and applied science is more interested in control...

*Creative Factors in Scientific Research*

Chapter II (p. 11)

Duke University Press. Durham, North Carolina, USA. 1941

**Pratt, C. C.**

No biographical data available

Science is a vast and impressive tautology.

*The Logic of Modern Psychology*

Chapter VI (p. 154)

The Macmillan Company. New York, New York, USA. 1939

**Prigogine, Ilya** 1917–2003

Russian-born Belgian physical chemist

**Stengers, Isabelle** 1949–

Belgian philosopher

Science is part of the Darwinian struggle for life. It helps us to organize our experience. It leads us to economy of thought. Mathematical laws are nothing more than conventions useful for summarizing the results of possible experiments.

*Order Out of Chaos*

Chapter III Ignoramus, Ignoramibus (p. 97)

Bantam Books. New York, New York, USA. 1984

**Quine, Willard van Orman** 1908–2000

American logician and philosopher

Science is like a boat, which we rebuild plank by plank while staying afloat in it. The philosopher and the scientist are in the same boat.

In George Johnson

*In the Palaces of Memory: How We Build the World Inside Our Heads*

The End of Philosophy (p. 222)

Alfred A. Knopf. New York, New York, USA. 1991

**Rabi, Isidor Isaac** 1898–1988

Austrian-born American physicist

Science is a great game. It is inspiring and refreshing. The playing field is the universe itself.

*New York Times*, October 28, 1964 (p. 38)

**Randi, James** 1928–

Canadian magician and scientific skeptic

I believe that science is best defined as a careful, disciplined, logical search for knowledge about any and

all aspects of the universe, obtained by examination of the best available evidence and always subject to correction and improvement upon the discovery of better evidence.

What's left is magic, and it doesn't work.

*The Mask of Nostradamus*

Chapter Five (p. 66)

Prometheus Books. Buffalo, New York, USA. 1993

**Raymo, Chet** 1936–

American physicist and science writer

...science is a spider's web. Confidence in any one strand of the web is maintained by the tension and resiliency of the entire web.

*The Virgin and the Mousetrap: Essays in Search of the Soul of Science*

Chapter 16 (p. 144)

The Viking Press. New York, New York, USA. 1991

**Renan, Ernest** 1823–92

French philosopher and Orientalist

...science is a religion, science alone will henceforth make the creeds, science alone can solve for men the eternal problems, the solutions of which his nature imperatively demands.

*The Future of Science*

Chapter V (p. 97)

Roberts Brothers. Boston, Massachusetts, USA. 1893

**Russell, Bertrand Arthur William** 1872–1970

English philosopher

Science is in its essence nothing but the systematic pursuit of knowledge, and knowledge, whatever ill-uses bad men may make of it, is in its essence good. To lose faith in knowledge is to lose faith in the best of man's capacities; and there if repeat unhesitatingly that the unyielding rationalist has a better faith and a more unbending optimism than any other of the timid seekers after the childish comforts of a less adult age.

*The Scientific Outlook*

Chapter V (p. 138)

George Allen & Unwin. London, England. 1931

**Sagan, Carl** 1934–96

American astronomer and author

Science is an attempt, largely successful, to understand the world, to get a grip on things, to get hold of ourselves, to steer a safe course. Microbiology and meteorology now explain what only a few centuries ago was considered sufficient cause to burn women to death.

*The Demon-Haunted World: Science as a Candle in the Dark*

Chapter 2 (p. 26)

Random House, Inc. New York, New York, USA. 1995

Science is far from a perfect instrument of knowledge. It's just the best we have.

*The Demon-Haunted World: Science as a Candle in the Dark*

Chapter 2 (p. 27)

Random House, Inc. New York, New York, USA. 1995

Science is much more than a body of knowledge. It is a way of thinking. This is central to its success. Science invites us to let the facts in, even when they don't conform to our preconceptions. It counsels us to carry alternative hypotheses in our heads and see which best match the facts. It urges on us a fine balance between no-holds-barred openness to new ideas, however heretical, and the most rigorous skeptical scrutiny of everything – new ideas and established wisdom.

Why We Need to Understand Science  
*Parade Magazine*, September 10, 1989

**Sandage, Allan** 1926–  
American astronomer

Science is the only self-correcting human institution, but it also is a process that progresses only by showing itself to be wrong.

In Alan Lightman and Roberta Brawer  
*Origins: The Lives and Worlds of Modern Cosmologists*  
Allan Sandage (p. 82)  
Harvard University Press. Cambridge, Massachusetts, USA. 1990

**Santayana, George (Jorge Agustín Nicolás Ruiz de Santillana)** 1863–1952  
Spanish-born American philosopher

Science is nothing but developed perception, interpreted intent, common sense rounded out and minutely articulated.

*The Life of Reason: Or, The Phases of Human Progress*  
Chapter XI (p. 307)  
Charles Scribner's Sons. New York, New York, USA. 1906

Science is a half-way house between private sensation and universal vision.

*The Life of Reason; or The Phases of Human Progress*  
Part V, Chapter I (p. 385)  
Charles Scribner's Sons. New York, New York, USA. 1953

**Sarton, George** 1884–1956  
Belgian-born American scholar and writer

Science is neither philosophy, nor religion, nor art; it is the totality of positive knowledge, as closely knit as possible; it is as different from its practical applications on the one hand, as it is from idle theorizing and blind faith on the other. It behooves us to make no extravagant claims for it, and to be as humble as we can.

*The History of Science and the New Humanism*  
Chapter III (p. 133)  
H. Holt & Co. New York, New York, USA. 1931

**Schwartz, John** 1941–  
American theoretical physicist

Science is a long movie, and the news media generally take mere snapshots.

If You Seek the Truth, Don't Trash the Science  
*Washington Post*, 21 February, 1999 (p. B-1)

**Sharma, Jaipuria**  
No biographical data available

**Sharma, Pt. Gopal**  
No biographical data available

**Rao, Poornachandra**  
No biographical data available

Science is an ocean and research is the exploration of that ocean to find out the hidden treasures of facts.

*Vaastu* (p. 28)  
Lotus Press. New Delhi, India. 2007

**Shaw, George Bernard** 1856–1950  
Irish comic dramatist and literary critic

Science is always simple and always profound. It is only the half-truths that are dangerous.

*The Doctor's Dilemma*  
Act I (p. 24)  
Brentano's. New York, New York, USA. 1920

**Smith, Adam** 1723–1790  
Scottish moral philosopher and founder of modern economic theory

Science is the great antidote to the poison of enthusiasm and superstition.

*An Inquiry into the Nature and Causes of the Wealth of Nations*  
Book V, Chapter I, part III, Section III (p. 748)  
The Modern Library. New York, New York, USA. 1937

**Smolin, Lee** 1955–  
American theoretical physicist

Science is, above everything else, a search for an understanding of our relationship with the rest of the universe.

*The Life of the Cosmos*  
Part One, Chapter One (p. 23)  
Oxford University Press, Inc. New York, New York, USA. 1997

**Soddy, Frederick** 1877–1956  
English chemist

Amid all the sneers at the impracticability and visionary character of communist schemes, let it not be forgotten that science is a communism, neither theoretical nor on paper, but actual and in practice. The results of those who labour in the fields of knowledge for its own sake are published freely and pooled in the general stock for the benefit of all. Common ownership of all its acquisitions is the breath of its life. Secrecy or individualism of any kind would destroy its fertility.

*Science and Life: Aberdeen Addresses*  
Science and Life (pp. 2–3)  
E.P. Dutton & Co. New York, New York, USA. 1920

**Spencer, Herbert** 1820–1903  
English social philosopher

Paraphrasing an Eastern fable, we may say that in the family of knowledges, Science is the household drudge, who, in obscurity, hides unrecognized perfections. To her

has been committed all the work; by her skill, intelligence and devotion, have all the conveniences and gratifications been obtained; and while ceaselessly occupied ministering to the rest, she has been kept in the background, that her haughty sisters might flaunt their fripperies in the eyes of the world. The parallel holds yet further. For we are fast coining to the *denouement*, when the positions will be changed; and while these haughty sisters sink into merited neglect, Science, proclaimed as highest alike in worth and beauty, will reign supreme.

*Education: Intellectual, Moral, and Physical*

Chapter I (p. 82)

Willard Small. Boston, Massachusetts, USA. 1890

Science is organized knowledge; and before knowledge can be organized, some of it must first be possessed. Every study, therefore, should have a purely experimental introduction; and only after an ample fund of observations has been accumulated, should reasoning begin.

*Education: Intellectual, Moral, and Physical*

Chapter II (p. 124)

D. Appleton & Co. New York, New York, USA. 1891

All Science is prevision; and all prevision ultimately aids us in greater or less degree to achieve the good and avoid the bad. As certainly as the perception of an object lying in our path warns us against stumbling over it; so certainly do those more complicated and subtle perceptions which constitute Science, warn us against stumbling over intervening obstacles in the pursuit of our distant ends.

*First Principles of a New System of Philosophy*

Chapter I (p. 19)

D. Appleton & Co. New York, New York, USA. 1865

### **Sterne, Laurence** 1713–68

English novelist and humorist

Science is intelligent curiosity, an organized thinking replacing a primitive wonder.

*Man and the Stars*

Chapter I (p. 4)

McGraw-Hill Book Co., Inc. New York, New York, USA. 1930

### **Stewart, Ian** 1945–

English mathematician and science writer

Science is a collective activity, and the actions of each individual resonate and interact with those of the others in a pattern so gigantic that we can no more comprehend the whole than a blood cell can comprehend how its host feels when it mashes a finger in a car door.

*The Problems of Mathematics*

Chapter 20 (p. 234)

Oxford University Press, Inc. Oxford, England. 1987

### **Thomson, Sir John Arthur** 1861–1933

Scottish naturalist

Science is one of the pathways toward the truth, but there are other pathways.

The New World of Science

*The Atlantic Monthly*, June, 1930

Science is a particular way of looking at the world, but it is not the only way.

The New World of Science

*The Atlantic Monthly*, June, 1930

Science is a kind of knowledge which gives descriptions and laws reached by observation and experiment. It is not the only kind of knowledge, it is not the only pathway towards truth – but it is indispensable.

In Francis Mason (ed.)

*The Great Design*

Introduction (p. 13)

The Macmillan Co. New York, New York, USA. 1934

Science is always setting forth on Columbus voyages, discovering new worlds and conquering them by understanding. For Knowledge means Foresight and Foresight means Power.

*The Outline of Science: A Plain Story Simply Told*

Introduction (p. 3)

G.P. Putnam's Sons. New York, New York, USA. 1922

Science is frankly empirical in method and aim; it seeks to discover the laws of concrete being and becoming, and to formulate these in the simplest terms, which are either immediate data of experience or verifiably derived therefrom.

*The System of Animate Nature* (Volume 1)

Lecture I (p. 39)

William & Norgate. London, England. 1920

### **Thorne, Kip S.** 1940–

American theoretical physicist

Science is a community enterprise. The insights that shape our view of the Universe come not from a single person or a small handful, but from the combined efforts of many.

*Black Holes and Time Warps: Einstein's Outrageous Legacy*

Preface (p. 18)

W.W. Norton & Company, Inc. New York, New York, USA. 1994

### **Titchener, Edward Bradford** 1867–1927

English-born American psychologist

If science is curiosity, therefore, it is the curiosity which pierces the overlay of interpretation to arrive at sheer existence; if it is love of truth, then truth is the face its objects wear to themselves and their kind and the man who identifies himself with them, and science seeks to know that face; if it is a passion for facts, then facts are the materials of a world scoured clean of belief and inference and all such evaluative accretion, and science aims to explore this world.

*Systematic Psychology: Prolegomena*

Chapter I (p. 32)

The Macmillan Co. New York, New York, USA. 1929

**Toynbee, Arnold J.** 1852–83  
English historian

There have been many definitions of the word “science.” Perhaps the most generally accepted one is that science is a form of study in which there can be an exact knowledge of the present and the past and, through this, an infallible prediction of the future. If this is what science means, then no study made by a human mind can be completely scientific.

*Occasional Paper, The Institute for the Study of Science in Human Affairs*

Science in Human Affairs: An Historian’s View

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910

American author and humorist

Science is as sorry as you are that this year’s science is no more like last year’s science than last year’s was like the science of twenty years gone by. But science cannot help it. Science is full of change. Science is progressive and eternal. The scientists of twenty years ago laughed at the ignorant men who had groped in the intellectual darkness of twenty years before. We derive pleasure from laughing at them.

*Collected Tales, Sketches, Speeches, and Essays 1852–1890* (Volume 1)  
A Brace of Brief Lectures on Science (p. 538)

The Library of America. New York, New York, USA. 1992

**Urey, Harold Clayton** 1893–1981

American chemist

To those of us who spend our lives working on scientific problems, science is a great intellectual adventure of such interest that nothing else we ever do can compare with it. We are attempting to understand the order of a physical universe, vast in extent in space and time, and most complicated and beautiful in its details.

In Shirley Thomas

*Men of Space. Profiles of the Scientists Who Probe for Life in Space* (Volume 6)

Harold C. Urey (p. 212)

Chilton Books. Philadelphia, Pennsylvania, USA. 1963

**Vernadskii, Vladimir Ivanovich** 1863–1945

Russian mineralogist

Science is alone and the routes to its achievement are alone. They are independent from the ideas of man, from his aspirations and wishes, from the social tenor of his life, from his philosophical, social, and religious theories. They are independent from his will and from his world outlook – they are primordial.

In Loren R. Graham

*The Soviet Academy of Sciences and the Communist Party, 1927–1932*  
Chapter III (p. 80)

Princeton University Press. Princeton, New Jersey, USA. 1967

**von Baer, Carl Ernst** 1792–1876

Prussian-Estonian biologist

Science...is, in its source, eternal; in its operation, not limited by time and space; in its scope, immeasurable; in its problem, endless; in its goal, unattainable.

In Sir Richard Arman Gregory

*Discovery; or, The Spirit and Service of Science*

Chapter III (p. 53)

Macmillan & Company Ltd. London, England. 1918

**von Frisch, Karl** 1886–1982

Austrian ethnologist

Science is eternal in its out-gushing stream, bounded by neither time nor space, immeasurable in its activity, endless in its scope, its final goal ever unreachd.

Quoted in Martin Gumpert

*Trail Blazers of Science* (p. 1)

Funk & Wagnalls. New York, New York, USA. 1936

**von Humboldt, Alexander** 1769–1859

German naturalist and explorer

Science is the labor of mind applied to nature...

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)  
Introduction (p. 76)

Harper & Brothers. New York, New York, USA. 1869

**von Liebig, Justus** 1803–73

German organic chemist

Science is conservative in her nature, not destructive. She does not reject the truths discovered by practice, but receives them; they are never disputed by her, but are examined and receive from her their proper import and further application. Science, therefore, can produce no revolution in practice; but she leads the way to a series of progressive developments, which are evolved in natural sequence from each other.

In John Blyth

*Letters on Modern Agriculture*

Letter XII (p. 233)

Walton & Maberly. London, England. 1859

Science is the organized attempt of mankind to discover how things work as causal systems.

*The Scientific Attitude*

Forward (p. 9)

Penguin Books. Middlesex, England. 1941

**Weil, Simone** 1909–43

French philosopher and mystic

Science is voiceless; it is the scientist who talks.

*On Science, Necessity, and the Love of God*

Reflections on Quantum Theory (p. 57)

Oxford University Press, Inc. London, England. 1968

Science is today regarded by some as a mere catalogue of technical recipes, and others as a body of pure intellectual speculations which are sufficient unto themselves; the former set too little value on the intellect, the latter on the world.

Translated by Arthur Wills and John Petrie

*Oppression and Liberty*

Theoretical Picture of a Free Society (pp. 104–105)

Routledge & Kegan Paul Ltd. London, England. 1958

**Weisskopf, Victor Frederick** 1908–2002  
Austrian-American physicist

Science is curiosity, discovering things and asking why.

*The Privilege of Being a Physicist*  
Chapter 4 (p. 31)

W.H. Freeman & Company, New York, New York, USA. 1989

Science is like a tree in which the basic sciences make up the trunk, the older ones at the base, the newer, more esoteric ones at the top where growth into new areas takes place. The branches represent the applied activities. The lower, larger ones correspond to the applied sciences that emerged from older basic sciences; the higher, smaller ones are the outgrowth of more recent basic research. The top of the trunk, the frontier of basic research, has not yet developed any branches.

The Significance of Science

*Science*, Volume 176 March, 1972 (p. 146)

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

Science is a match that man has just got alight. He thought he was in a room – in moments of devotion, a temple – and that his light would be reflected from and display walls inscribed with wonderful secrets and pillars carved with philosophical systems wrought into harmony. It is a curious sensation, now that the preliminary splutter is over and the flame burns up clear, to see his hands and just a glimpse of himself and the patch he stands on visible, and around him, in place of all that human comfort and beauty he anticipated – darkness still.

The Rediscovery of the Unique

*The Fortnightly Review*, New Series 50, July 1891

**White, Leslie Alvin** 1900–75  
American anthropologist

Science is sciencing.

Science Is Sciencing

*Philosophy of Science*, Volume 5, 1938

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

Science is simply setting out on a fishing expedition to see whether it cannot find some procedure which it can call the measurement of space and some procedure which it can call the measurement of time, and something which it can call a system of forces, and something which it can call masses, so that these formulae may be satisfied. The only reason – on this theory – why anyone should want to satisfy these formulae is a sentimental regard for Galileo, Newton, Euler and Lagrange. The theory, so far from founding science on a sound observational basis, forces everything to conform to a mere mathematical preference for certain simple formulae.

*The Concept of Nature*

Chapter VI (pp. 139–140)

Cambridge University Press, Cambridge, England. 1926

Science is in the minds of men, but men sleep and forget, and at their best in any one moment of insight entertain but scanty thoughts. Science therefore is nothing but a confident expectation that relevant thoughts will occasionally occur.

*An Enquiry Concerning the Principles of Natural Knowledge*

Part I, Chapter I (p. 10)

At The University Press, Cambridge, England. 1919

Science is either an important statement of systematic theory correlating observations of a common world or is the daydream of a solitary intelligence with a taste for the daydream of publication.

*Process and Reality: An Essay in Cosmology*

Part IV, Chapter V, Section IV (p. 502)

The Macmillan Company, New York, New York, USA. 1929

Science is even more changeable than theology.

*Science and the Modern World*

Chapter XII (p. 183)

The Macmillan Company, New York, New York, USA. 1929

Science is concerned with the facts of bygone transition. History relates the aim at ideals. And between Science and History, lies the operation of the Deistic impulse of energy. It is the religious impulse in the world which transforms the dead facts of Science into the living drama of History. For this reason Science can never foretell the perpetual novelty of History.

*Modes of Thought*

Chapter II, Lecture Five (p. 142)

The Macmillan Company, New York, New York, USA. 1938

Science is the organisation of thought.

*The Organisation of Thought*

Chapter VI (p. 106)

Greenwood Press Publishers, Westport, Connecticut, USA. 1974

Science is a river with two sources, the practical source and the theoretical source. The practical source is the desire to direct our actions to achieve predetermined ends.... The theoretical source is the desire to understand.

*The Organisation of Thought*

Chapter VI (p. 106)

Greenwood Press Publishers, Westport, Connecticut, USA. 1974

**Wilde, Oscar** 1854–1900  
Irish wit, poet, and dramatist

Science is out of the reach of morals, for her eyes are fixed upon eternal truths.

*The Works of Oscar Wilde* (Volume 10)

*Intentions*

The Critic as Artist, Part 2 (p. 394)

AMS Press, New York, New York, USA. 1909

**Willmott, Robert Eldridge Aris** 1809–63

English writer and poet

Science is not embraced in the pleasures of literature.

*Pleasures, Objects, and Advantages, of Literature* (4th edition)

Chapter I (p. 2)

G. Routledge & Co. London, England. 1855

**Winchell, Alexander** 1824–91

American geologist

Science is an indefatigable reaper; but how many tares do we find bound up with the wheat! How many exploded theories have left their wrecks along the highway of time! How many abandoned explanations and beliefs lie scattered by the way-side!

*Reconciliation of Science and Religion*

Chapter I (pp. 29–30)

Harper & Brothers Publishers. New York, New York, USA. 1877

**Wittgenstein, Ludwig Josef Johann** 1889–1951

Austrian-born English philosopher

Man has to awaken to wonder – and so perhaps do peoples. Science is a way of sending him to sleep again.

Translated by Peter Winch

*Culture and Value* (p. 5e)

The University of Chicago Press. Chicago, Illinois, USA. 1980

**Wood, Theodore**

No biographical data available

Science is no longer a mere accumulation of dry facts, complicated by pedantic and often meaningless phraseology, but has been proved capable of affording instruction and interest not only to the few, but to the many.

*Our Insect Allies*

Chapter II (p. 25)

Society for Promoting Christian Knowledge. London, England. 1884

**Zinsser, Hans** 1878–1940

American bacteriologist

Science is but a method. Whatever its material, an observation accurately made and free of compromise to bias and desire, and undeterred by consequence, is science.

Untheological Reflections

*The Atlantic Monthly*, July 1929 (p. 91)

**SCIENTIFIC****Author undetermined**

This semi-scientific balderdash is wonderfully like what one reads in the old recipes against witchcraft, or as an introduction to the remedies of quack doctors.

Spitiy Circles and How to Move in Them

*Chamber's Edinburgh Journal*, Number 487, April 26, 1873 (p. 259)

**Balfour, Arthur James** 1848–1930

English prime minister

Now whether the main outlines of the world-picture which I have just imperfectly presented to you be des-

tinued to survive, or whether in their turn they are to be obliterated by some new drawing on the scientific palimpsest, all will, I think, admit that so bold an attempt to unify physical nature excites feelings of the most acute intellectual gratification. The satisfaction it gives is almost esthetic in its intensity and quality. We feel the same sort of pleasurable shock as when from the crest of some melancholy pass we first see far below us the sudden glories of plain, river and mountain.

Reflections Suggested by the New Theory of Matter

*Popular Science Monthly*, Volume 65, Number 6, October, 1904 (p. 501)

**Buchner, Eduard** 1860–1917

German chemist

The work on which I have to report lies on the boundary between animate and inanimate nature. I therefore have reason to hope that I can interest not only the chemists but also the wide circles of all those who follow the advance of biological science with close attention. It is difficult, however, for a person to be comprehensible and at the same time remain scientific, so I must ask you to bear with me.

*Nobel Lectures, Chemistry 1901–1921*

Cell-Free Fermentation

Elsevier Publishing Co. Amsterdam, The Netherlands. 1966

**Calder, Ritchie** 1906–82

Scottish author, journalist, and academic

“Science” and “Scientific” have become overcharged terms because they have been given an arrogance (often by the scientists themselves) or a huckster quality (by mendacious modern advertising) or a magical quality (because the language has become an abracadabra to the layman).

*Man and the Cosmos: The Nature of Science Today*

Chapter I (p. 4)

Frederick A. Praeger, Publishers. New York, New York, USA. 1968

**Newell, Lyman C.**

Chemist

The word *scientific* is often applied to a doctrine, principle, or opinion as a compliment. The word has a good reputation, judging from its generous use. It must be admitted, however, that it is often used with a vague conception of its significance.

The Spirit of Science

*Mind*, Volume 7, Number 1, October, 1900 (p. 5)

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

The kernel of the scientific outlook is a thing so simple, so obvious, so seemingly trivial, that the mention of it may almost excite derision. The kernel of the scientific outlook is the refusal to regard our own desires, tastes, and interests as affording a key to the understanding of the world.

*Mysticism and Logic: And Other Essays*

Chapter II (p. 42)

Longmans, Green & Co. London, England. 1919

**Shaw, George Bernard** 1856–1950  
Irish playwright

The notion that therapeutics or hygiene or surgery is any more or less scientific than making or cleaning boots is entertained only by people to whom a man of science is still a magician who can cure diseases, transmute metals, and enable us to live forever.

*The Doctor's Dilemma*

Preface (p. 78)

Penguin Books. Baltimore, Maryland, USA. 1954

**Shelley, Mary Wollstonecraft** 1797–1851  
English Romantic writer

In other studies you go as far as others have gone before you, and there is nothing more to know; but in a scientific pursuit there is continual food for discovery and wonder. A mind of moderate capacity, which closely pursues one study, must infallibly arrive at great proficiency in that study...

*Frankenstein: Or, The Modern Prometheus*

Chapter III (p. 68)

George Routledge & Sons. London, England. 1891

**Spencer, Herbert** 1829–1903  
English social philosopher

...those who have never entered upon scientific pursuits know not a tithe of the poetry by which they are surrounded. "Whoever has not in youth collected plants and insects, knows not half the halo of interest which lanes and hedge-rows can assume. Whoever has not sought for fossils, has little idea of the poetical associations that surround the places where imbedded treasures were found. Whoever at the seaside has not had a microscope and aquarium, has yet to learn what the highest pleasures of the seaside are.

*Education: Intellectual, Moral, and Physical*

Chapter I (p. 83)

D. Appleton & Co. New York, New York, USA. 1891

## SCIENTIFIC ADVANCE

**Mach, Ernst** 1838–1916  
Austrian physicist and philosopher

...as a general thing every scientific advance, every new problem elucidated, every extension or enrichment of our knowledge of facts, affords a better foundation for practical pursuits.

Translated by Thomas J. McCormack

*Popular Scientific Lectures* (2nd edition)

On Some Phenomena Attending the Flight of Projectiles (p. 327)

The Open Court Publishing Co. Chicago, Illinois, USA. 1897

## SCIENTIFIC AGE

**Sedgwick, William T.** 1855–1921  
American bacteriologist

One of the most fruitful sequels of the scientific age has been the new and higher valuation which it places upon ordinary human life.

*The Call to Public Health*

*Science*, New Series, Volume 28, Number 711, August 14, 1908 (p. 193)

## SCIENTIFIC ANALYSIS

**Amiel, Henri-Frédéric** 1821–81  
Swiss philosopher, poet, and critic

...the habit of scientific analysis...exhausts the material offered to it...

Translated by Humphry Ward

*Amiel's Journal: The Journal Intime of Henri-Frédéric Amiel*

(Volume 2)

1 September, 1875 (p. 193)

McGraw-Hill Book Co., Inc. New York, New York, USA. 1894

## SCIENTIFIC APPROACH

**Farber, Eduard** 1892–1969  
Galician chemist

The scientific approach to reality consists of separating our experiences into simple parts so as to see them more clearly, and of connecting these parts so as to knowingly reconstruct what impressed us. This seems to be a complicated kind of approach. We use two steps, analysis and synthesis, and we have to create intricate relationships between them because separately they are contradictory and sterile. Is it not better to use the direct method of understanding reality as one whole? The inspirational feeling which refuses both analysis and synthesis is strong but it is mute. The German poet Friedrich Schiller expressed our inability to communicate our deepest feelings with these words: "When the soul speaks, alas, it is no longer the soul that speaks!" Science is the effort to find the language of the soul.

*The Evolution of Chemistry: A History of Its Ideas, Methods, and Materials*

Introduction (p. 3)

Ronald Press. New York, New York, USA. 1952

## SCIENTIFIC ATTITUDE

**Bohm, David** 1917–92  
American physicist

**Peat, F. David** 1938–  
English holistic physicist and author

Although science literally means "knowledge," the scientific attitude is concerned much more with rational perception through the mind and with testing such perceptions against actual fact, in the form of experiments and observations.

*Science, Order, and Creativity*

Chapter Six (p. 260)

Bantam Books. New York, New York, USA. 1987

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

The scientific attitude of mind involves a sweeping away of all other desires in the interests of the desire to know – it involves suppression of hopes and fears, loves and hates, and the whole subjective emotional life, until we become subdued to the material, able to see it frankly, without preconceptions, without bias, without any wish except to see it as it is, and without any belief that what it is must be determined by some relation, positive or negative, to what we should like it to be, or to what we can easily imagine it to be.

*Mysticism and Logic: And Other Essays*

Chapter II (p. 44)

Longmans, Green & Co. London, England. 1919

## SCIENTIFIC BELIEF

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

The mind of the most rational among us may be compared to a stormy ocean of passionate convictions based upon desire, upon which float perilously a few tiny boats carrying a cargo of scientifically treated beliefs.

*The Scientific Outlook*

Chapter I (p. 11)

George Allen & Unwin. London, England. 1931

## SCIENTIFIC CHILD

**Chamberlin, Thomas Chrowder** 1843–1928  
American geologist

The scientific child in training should foreshadow the scientific man in creative work.

The Ethical Functions of Scientific Study

*The Journal of Geology*, Volume 2, Number 6, December, 1888 (p. 387)

## SCIENTIFIC COGNITION

**Naan, G. I.**  
Estonian academician

The path of scientific cognition is a race-track without a finish.

Translated by N. Kittell

In Victor N. Komarov

*This Fascinating Astronomy* (p. 299)

MIR Publishers. Moscow, Russia. 1985

## SCIENTIFIC COMMUNITY

**Latour, Bruno** 1947–  
French sociologist of science

**Woolgar, S.**

No biographical data available

...a body of practices widely regarded by outsiders as well organized, logical, and coherent, in fact consists of a disordered array of observations with which scientists struggle to produce order.... Despite participants' well-ordered reconstructions and rationalizations, actual scientific practice entails the confrontation and negotiation of utter confusion.

*Laboratory Life: The Social Construction of Scientific Facts*

Chapter 1 (p. 36)

Sage Publications. Beverly Hills, California, USA. 1979

**Oppenheimer, James Robert** 1904–67  
American theoretical physicist

In any science there is harmony between practitioners. A man may work as an individual, learning of what his colleagues do through reading or conversation; he may be working as a member of a group on problems whose technical equipment is too massive for individual effort. But whether he is part of a team or solitary in his own study, he, as a professional, is a member of a community. His colleagues in his own branch of science will be grateful to him for the inventive or creative thoughts he has, will welcome his criticism....

*The Open Mind*

Chapter VIII (pp. 137–138)

Simon & Schuster. New York, New York, USA. 1955

**Rabi, Isidor Isaac** 1898–1988  
Austrian-born American physicist

There isn't a scientific community. It is a culture. It is a very undisciplined organization.

In Daniel S. Greenberg

*The Politics of Pure Science*

Book One, Chapter I (p. 3)

New American Library. New York, New York, USA. 1967

## SCIENTIFIC CONCEPT

**Chargaff, Erwin** 1905–2002  
Austrian biochemist

Great scientific concepts often have an entirely noninductive, dream-like quality.

*Heraclitean Fire: Sketches from a Life before Nature* (p. 164)

The Rockefeller University Press. New York, New York, USA. 1978

## SCIENTIFIC CONCEPTION

**Huxley, Thomas Henry** 1825–95  
English biologist

...the attempt to convey scientific conceptions, without the appeal to observation, which can alone give such conceptions firmness and reality, appears to me to be in direct antagonism to the fundamental principles of scientific education.

*Physiography: An Introduction to the Study of Nature*

Preface (p. vii)

Macmillan & Co Ltd. London, England. 1897

## SCIENTIFIC CONSCIENCE

**Eliot, George (Mary Ann Evans Cross)** 1819–80  
English novelist

Alas! The scientific conscience has got into the debasing company of money obligation and selfish respects.

*Middlemarch* (Volume 2)

Book VIII, LXXIII (p. 473)

William Blackwood & Sons. Edinburgh, Scotland. 1907

## SCIENTIFIC CRITICISM

**Pearson, Karl** 1857–1936  
English mathematician

In an age like our own, which is essentially an age of scientific inquiry, the prevalence of doubt and criticism ought not to be regarded with despair or as a sign of decadence. It is one of the safeguards of progress; – *la critique est la vie de la science*, I must again repeat. One of the most fatal (and not so impossible) futures for science would be the institution of a scientific hierarchy which would brand as heretical all doubt as to its conclusions, all criticism of its results.

*The Grammar of Science*

Chapter II, Section 7 (p. 66)

Charles Scribner's Sons. London, England. 1892

**Tagore, Rabindranath** 1861–1941  
Indian poet and philosopher

Our scientific world is our world of reasoning. It has its greatness and uses and attractions. We are ready to pay homage due to it. But when it claims to have discovered the real world for us and laughs at the worlds of all simple-minded men, then we must say it is like a general grown intoxicated with his power, usurping the throne of his king.

*Personality*

The World of Personality (p. 70)

The Macmillan Company. New York, New York, USA. 1917

**Schrödinger, Erwin** 1887–1961  
Austrian theoretical physicist

Our age is possessed by a strong surge towards the criticism of traditional customs and opinions. A new spirit is arising which is unwilling to accept anything on authority, which does not so much permit as demand independent, rational thought on every subject, and which refrains from hampering any attack based upon such thought, even though it be directed against things which formerly were considered to be as sacrosanct as you please. ...Its results can only be advantageous: no scientific structure falls entirely into ruin: what is worth preserving preserves itself and requires no protection.

*Science and the Human Temperament*

Chapter I (p. 38)

W.W. Norton & Company, Inc. New York, New York, USA. 1935

**von Goethe, Johann Wolfgang** 1749–1832  
German poet, novelist, playwright, and natural philosopher

A scientific researcher must always think of himself as a member of a jury. His only concern should be the adequacy of the evidence and the clarity of the proofs which support it. Guided by this, he will form his opinion and cast his vote without regard for whether he shares the author's views.

*Scientific Studies* (Volume 12)

Chapter VIII (pp. 306–307)

Suhrkamp. New York, New York, USA. 1988

**von Mises, Ludwig** 1881–1973  
Austrian economist

...scientific criticism has no nobler task than to shatter false beliefs.

*Socialism: An Economic and Sociological Analysis*

Preface to the Second German Edition (p. 19)

Yale University Press. New Haven, Connecticut, USA. 1951

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

If science is not to degenerate into a medley of ad hoc hypotheses, it must become philosophical and must enter upon a thorough criticism of its own foundations.

*Science and the Modern World*

Chapter I (pp. 16–17)

The Macmillan Company. New York, New York, USA. 1929

**Ziman, John M.** 1925–2005  
British physicist

The community of those who are competent to contribute to, or criticize, scientific knowledge must not be closed; it must be larger, and more open, than the group of those who entirely accept a current consensus or orthodoxy. It is an essential element in the health of Science, or of a science, or of the sciences, that self-confirming, mutually validating circles be unable to close. Yet it is also essential that technical scientific discussion be not smothered in a cloud of ignorant prejudices and cranky speculations.

*Public Knowledge: An Essay Concerning the Social Dimension of Science*

Chapter 4 (p. 64)

Cambridge University Press. Cambridge, England. 1968

## SCIENTIFIC DISCIPLINE

**Osler, Sir William** 1849–1919  
Canadian physician and professor of medicine

To the physician particularly, a scientific discipline is an incalculable gift, which leavens his whole life, giving exactness to habits of thought and tempering the mind with that judicious faculty of distrust which can alone, amid the uncertainties of practice, make him wise unto salvation. For perdition inevitably awaits the mind of the

practitioner who has never had the full inoculation with the leaven, who has never grasped clearly the relations of science to his art, and who knows nothing and perhaps cares less, for the limitations of either.

*Aequanimitas: With Other Addresses to Medical Students, Nurses and Practitioners of Medicine*

The Leaven of Science (p. 97)

P. Blackiston's Sons & Co. Philadelphia, Pennsylvania, USA. 1910

## SCIENTIFIC DISCOVERY

**Chargaff, Erwin** 1905–2002

Austrian biochemist

It is true of every scientific discovery that the road means more than the goal.

*Voices in the Labyrinth: Nature, Man and Science* (p. 17)

The Seabury Press. New York, New York, USA. 1977

**Mellor, Joseph William** 1863–1938

Chemist

The secret charm of scientific discovery is not in the facts *per se*, but rather in the extrication of natural relations among the facts one with another.

*A Comprehensive Treatise on Inorganic and Theoretical Chemistry* (Volume 1)

Chapter I (p. 10)

Longman, Green, & Co. London, England. 1922

**Pasteur, Louis** 1822–95

French chemist

In our century, science is the soul of the prosperity of nations and the living source of progress. Undoubtedly, the tiring daily discussions of politics seem to be our guide. Empty appearances! – What really leads us forward are a few scientific discoveries and their applications.

In Leo Hendrik Baekeland

*Some Aspects of Industrial Chemistry* (p. 43)

Columbia University Press. New York, New York, USA. 1914

**Rubbia, Carlo** 1934–

Italian physicist

...scientific discovery is an irrational act. It's an intuition which turns out to be reality at the end of it – and I see no difference between a scientist developing a marvellous discovery and an artist making a painting, or music or something.

In Lewis Wolpert and Alison Richards

*Passionate Minds*

Asking Nature (p. 197)

Oxford University Press. Oxford, England. 1977

**Whewell, William** 1794–1866

English philosopher and historian

The process of scientific discovery is cautious and rigorous, not by abstaining from hypotheses, but by rigorously

comparing hypotheses with facts, and resolutely rejecting all which the comparison does not confirm.

*The Philosophy of the Inductive Sciences, Founded Upon Their History* (Volume 2) (2nd edition)

Aphorisms Concerning Science (p. 468)

John W. Parker. London, England. 1848

## SCIENTIFIC DOCTRINE

**Keyser, Cassius Jackson** 1862–1947

American mathematician

In the early part of the last century a philosophic French mathematician, addressing himself to the question of the perfectibility of scientific doctrines, expressed the opinion that one may not imagine the last word has been said of a given theory so long as it cannot by a brief explanation be made clear to the man of the street. Doubtless that conception of doctrinal perfectibility, taken literally, can never be realized. For doubtless, just as there exist now, so in the future there will abound, even in greater and greater variety and on a vaster and vaster scale, deep-laid and high-towering scientific doctrines that, in respect to their infinitude of detail and in their remote parts and more recondite structure, shall not be intelligible to any but such as concentrate their life upon them.

*Mathematics* (p. 5)

The Columbia University Press. New York, New York, USA. 1907

## SCIENTIFIC DOUBT

**Richet, Charles** 1850–1935

French physiologist

Scientific doubt is a first-class quality, but rather eliminates piquancy from controversy.

*The Natural History of a Savant*

Chapter III (p. 25)

J.M. Dent & Sons Ltd. London, England. 1927

## SCIENTIFIC EDUCATION

**Enriques, Federigo** 1871–1946

Italian mathematician

Our need is to perfect the organization of that work which ought to be accomplished, under free conditions, through a fitting scientific education. To this end it is necessary that all enlightened men, in whatever special branch of study they are respectively working, should be conscious of the unity of the aims of science.

Translated by Katharine Royce

*Problems of Science*

Introduction (p. 2)

The Open Court Publishing Co. Chicago, Illinois, USA. 1914

The end for which we ought to strive today is a scientific education, which shall enable the workers in any field

whatsoever to understand better how the object of their own research is subordinated to more general problems.

Translated by Katharine Royce

*Problems of Science*

Introduction (p. 2)

The Open Court Publishing Co. Chicago, Illinois, USA. 1914

## SCIENTIFIC ENDEAVOR

### Baskerville, Charles

No biographical data available

I like to fancy scientific endeavor as the sea – calm and serene, supporting and mirroring that which is below it, bearing that which is upon it, reaching to and reflecting that which is above it, moving all the while; yet, torn and rent at times by conflict from without and contest within, it runs; it beats against the shores of the unknown, making rapid progress here, meeting stubborn resistance there, compassing it, to destroy but to rebuild elsewhere; and the existence of those within it!

The Elements: Verified and Unverified

*Science*, New Series, Volume 19, Number 472, 15 January, 1904 (p. 100)

### Hawkins, Michael

English astronomer

Scientific endeavor is no more a journey toward absolute truth than biology in all its diversity is a set of constantly improving stages toward some state of ultimate perfection.

*Hunting Down the Universe: The Missing Mass, Primordial Black Holes, and Other Dark Matters*

Chapter 1 (p. 5)

Perseus Books. Reading, Massachusetts, USA. 1998

## SCIENTIFIC ENQUIRY

### Roscoe, Henry E. 1833–1915

English chemist

On the ennobling nature of original scientific enquiry it is needless to enlarge, for although I should be the last to contend that men of science are free from the foibles and weaknesses common to all mankind, I think it stands to reason that the habits of mind which an investigator must cherish are such as must raise him above the petty struggles of ordinary existence, and must, for a time at least, lift him into an atmosphere free from the cloud and smoke which too often darken the usual current of men's lives.

*Essays and Addresses*

Lecture II (pp. 52–53)

Macmillan & Co Ltd. London, England. 1874

## SCIENTIFIC ETHICS

### Westermarck, Edward 1862–1939

Finnish sociologist, anthropologist, and philosopher

If there are no general moral truths, the object of I scientific ethics cannot be to fix rules for human conduct, the aim of all science being the discovery of some truth.

*The Origin and Development of the Moral Ideas* (Volume 1)

Chapter I (p. 18)

Macmillan & Co Ltd. London, England. 1905

## SCIENTIFIC EXPERIMENTER

### Gregory, Sir Richard Arman 1864–1952

English scientific writer and journalist

He [the scientific experimenter] looks at Nature's countenance, and as a sworn witness before the tribunal of reality, testifies to what is revealed to him. Upon him is the responsibility of recording exactly what he sees, and by his gaze alone can that knowledge be obtained which will subdue Nature to the rule of the human intellect. Much that he sees may not be understood, but unless he has the love of truth his vision will be distorted.

*Discovery, Or, The Spirit and Service of Science*

Chapter II (p. 26)

Macmillan & Co Ltd. London, England. 1916

## SCIENTIFIC EXPLORER

### Kingsley, Charles 1819–75

English clergyman and author

The scientific explorer is always like Saul of old, who set out simply to find his father's asses, and found them – and a kingdom besides.

Every Pebble in the Street

*Every Saturday*, Volume I, March 9, 1872 (p. 273)

## SCIENTIFIC FACT

### Tydings, Joseph Davies 1928–

American Senator

Apparently that is one of those scientific facts we are supposed to accept and not ask why.

*Atomic Energy: Hearings before the Special Committee on Atomic Energy United States Senate, seventy-ninth congress, first session pursuant to S. Res. 179* (p. 337)

US Government Printing Office. Washington, D.C. 1945

## SCIENTIFIC FAITH

### Burroughs, John 1837–1921

American naturalist and essayist

Scientific faith is no more smooth sailing than is theological faith. One involves about as many mysteries, as many unthinkable truths, as the other.

*Under The Apple Tree*

Scientific Faith Once More (p. 159)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1916

## SCIENTIFIC FASHION

**Chargaff, Erwin** 1905–2002  
Austrian biochemist

Scientific fashions last longer than women's fashions but not as long as men's.

*Voices in the Labyrinth: Nature, Man and Science* (p. 85)  
The Seabury Press. New York, New York, USA. 1977

## SCIENTIFIC IDEA

**Chrystal, George** 1851–1911  
Scottish mathematician

...few scientific ideas spring up suddenly without previous trace or history.... a close examination always shows that the sprite was in the air before the Prospero came to catch him. [There are] long periods in which great improvements were effected in the science, which cannot be traced to any individual, but seem to have been due merely to the working of the minds of scientific men generally upon the matter, one giving it this little turn, another that, in the main always for the better.

Opening Address

*Nature*, Volume XXXII, September 10, 1885 (p. 447)

**Ritchie, Arthur David** 1891–1967  
Scottish philosopher and science history writer

It is a grave difficulty in the analytical treatment of scientific ideas that the simple laws are so vaguely conceived that analysis is difficult and the theories that are precisely formulated are often put forward as dogma and the evidence in favor of them has sunk into oblivion or into the realm of myth.

*Scientific Method: An Inquiry into the Character and Validity of Natural Law*

Chapter VI (p. 157)

Kegan Paul, Trench, Trubner & Co., Ltd. London, England. 1923

## SCIENTIFIC IGNORANCE

**Pearson, Karl** 1857–1936  
English mathematician

Scientific ignorance may...either arise from an insufficient classification of facts, or be due to the unreality of the facts with which science has been called upon to deal.

*The Grammar of Science* (2nd edition)

Chapter I (p. 22)

Adam & Charles Black. London, England. 1900

## SCIENTIFIC INQUIRY

**Dewey, John** 1859–1952  
American philosopher and educator

The routine of custom tends to deaden even scientific inquiry; it stands in the way of discovery and of the active scientific worker. For discovery and inquiry are synonymous as an occupation. Science is a pursuit, not a coming into possession of the immutable; new theories as points of view are more prized than discoveries that quantitatively increase the store on hand.

*Reconstruction in Philosophy*

Introduction (p. xvii)

Beacon Press. Boston, Massachusetts, USA. 1920

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

It is true that the whole scientific inquiry starts from the familiar world and in the end it must return to the familiar world; but the part of the journey over which the physicist has charge is in foreign territory.

*The Nature of the Physical World*

Introduction (p. xiii)

1928

...the whole scientific inquiry starts from the familiar world and in the end it must return to the familiar world; but the part of the journey over which the physicist has charge is in foreign territory.

*The Nature of the Physical World*

Introduction (p. xv)

The University Press. New York, New York, USA. 1929

**Foster, Sir Michael** 1836–1907  
English physiologist

What is gained by scientific inquiry is gained forever; it may be added to, it may seem to be covered up, but it can never be taken away.

*A Century's Progress in Science*

*Educational Review*, Volume XVIII, November, 1899 (p. 325)

...scientific inquiry, though it be pre-eminently an intellectual effort, has need of the moral quality of courage – not so much the courage which helps a man to face a sudden difficulty as the courage of steadfast endurance.

Presidential Address

*The Chemical News and Journal of Industrial Science*, Volume LXXX,

Number 2077, September 15, 1899 (p. 130)

**Heinlein, Robert A.** 1907–88  
American science fiction writer

There ought not to be anything in the whole universe that man can't poke his nose into – that's the way we're built and I assume there's some reason for it.

*Methuseelah's Children*

Chapter 8 (p. 160)

Aeonian Press. Mattituck, New York, USA. 1976

**Herschel, Sir John Frederick William** 1792–1871  
English astronomer and chemist

A mind which has once imbibed a taste for scientific inquiry, and has learnt the habit of applying its principles

readily to the cases which occur, has within itself an inexhaustible source of pure and exciting contemplations...

*A Preliminary Discourse on the Study of Natural Philosophy*

Part I, Chapter I, Section 11 (pp. 14–15)

Printed for Longman, Rees, Orme, Brown & Green. London, England. 1831

### Herwitz, Daniel

No biographical data available

Cosmological inquiry takes place in the space between mathematics, theory, experiment, simulation, observation, and philosophic speculation. It is where science lives.

In Heather Wax and Gerald Shaw

Master of His Universe

*Science & Spirit*, November–December, 2004

### Lasalle, Ferdinand 1825–64

German jurist and socialist political activist

Whoever obstructs scientific inquiry clamps down the safety valve of public opinion, and puts the State in train for an explosion.

Translated by Thorstein B. Veblan

In Kuno Francke and Isidore Singer

*The German Classics: Masterpieces of German Literature Translated Into English*

Science and the Workingmen (p. 436)

The German Publication Society. New York, New York, USA. 1914

### Maxwell, James Clerk 1831–79

Scottish physicist

Others, again, are not content unless they can project their whole physical energies into the scene, which they conjure up. They learn at what a rate the planets rush through space, and they experience a delightful feeling of exhilaration. They calculate the forces with which the heavenly bodies pull at one another, and they feel their own muscles straining with the effort. To such men momentum, energy, mass are not mere abstract expressions of the results of scientific inquiry. They are words of power, which stir their souls like the memories of childhood.

Address

*Nature.*, Volume II, September 22, 1870

### Medawar, Sir Peter Brian 1915–87

Brazilian-born English zoologist

If the purpose of scientific methodology is to prescribe or expound a system of enquiry or even a code of practice for scientific behavior, then scientists seem able to get on very well without it.

*Pluto's Republic*

Induction and Intuition in Scientific Thought (p. 78)

Oxford University Press, Inc. Oxford, England. 1982

The purpose of scientific enquiry is not to compile an inventory of factual information, nor to build up a totalitarian world picture of Natural Laws in which every event

that is not compulsory is forbidden. We should think of it rather as a logically articulated structure of justifiable beliefs about nature. It begins as a story about a Possible World – a story which we invent and criticize and modify as we go along, so that it winds by being, as nearly as we can make it, a story about real life.

*Pluto's Republic*

Mainly About Intuition, Section 4 (pp. 110–111)

Oxford University Press, Inc. Oxford, England. 1982

...it is high time that laymen abandoned the misleading belief that scientific enquiry is a cold dispassionate enterprise, bleached of imaginative qualities, and that a scientist is a man who turns the handle of discovery; for at every level of endeavor scientific research is a passionate undertaking and the Promotion of Natural Knowledge depends above all on a *sortée* into what can be imagined but is not yet known.

Imagination and Hypothesis

*The Times Literary Supplement* (London), October 25, 1963 (p. 850)

### Rothschild, Lord Nathaniel Mayer 1910–90

English banker

It is sometimes said in justification of basic research, that chance observations made during such work, and their subsequent study may be just as important as those made during applied R & D. While there is some truth in this contention, the country's needs are not so trivial as to be left to the mercies of a form of scientific roulette, with many more than the conventional 37 numbers on which the ball may land.

*A Framework for Government Research and Development* (p. 3)

Her Majesty's Stationery Office. London, England. 1971

### Thomson, Sir John Arthur 1861–1933

Scottish naturalist

Scientific inquiry may be likened to fishing in the sea of reality with a particular kind of tackle. The tackle has well-known excellences, but it has also recognized limitations; and there may be much in the sea that the net used will not catch, being of too wide a mesh.

The New World of Science

*The Atlantic Monthly*, June, 1930

## SCIENTIFIC INSIGHT

### Gore, George 1826–1909

English electrochemist

Our power of scientific insight is but feeble when compared with the profundity of nature, because deep truths require deep thought to enable us to understand and value them.

*The Art of Scientific Discovery*

Part III, Chapter XXXV (p. 328)

Longmans, Green & Co. London, England. 1878

## SCIENTIFIC INTERPRETATION

**Burroughs, John** 1837–1921

American naturalist and essayist

The scientific interpretation of the universe repels a great many minds because it lays the emphasis upon matter itself instead of upon something supermaterial. It hesitates to name a creative energy, but makes matter itself creative, and does not try to help it out with teleological conception.

*Under The Apple Tree*

Literature and Science (p. 180)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1916

## SCIENTIFIC INVESTIGATION

**Agassiz, Jean Louis Rodolphe** 1807–73

Swiss-born American naturalist, geologist, and teacher

Scientific investigation in our day should be inspired by a purpose as animating to the general sympathy, as was the religious zeal which built the Cathedral of Cologne or the Basilica of St. Peter's. The time is passed when men expressed their deepest convictions by these wonderful and beautiful religious edifices; but it is my hope to see, with the progress of intellectual culture, a structure arises among us which may be a temple of the revelations written in the material universe.

*Louis Agassiz: His Life and Correspondence* (Volume 2)

Dredging Expedition (pp. 670–671)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1885

**Bayliss, Sir William Maddock** 1860–1925

English physiologist

It is not going too far to say that the greatness of a scientific investigator does not rest on the fact of his having never made a mistake, but rather on his readiness to admit that he has done so, whenever the contrary evidence is cogent enough.

*Principles of General Physiology*

Preface (pp. xvi–xvii)

Longmans, Green & Company. London, England. 1920

**Born, Max** 1882–1970

German-born English physicist

The Scientist's urge to investigate, like the faith of the devout or the inspiration of the artist, is an expression of mankind's longing for something fixed, something at rest in the universal whirl: God, Beauty, Truth.

*The Restless Universe*

Chapter V (p. 278)

Dover Publications, Inc. New York, New York, USA. 1951

**Boycott, A. E.**

No biographical data available

The difficulty in most scientific work lies in framing the questions rather than in finding the answers.

The Transition from Live to Dead

*Nature*, Volume 123, January 19, 1929 (p. 93)

**Carryl, Charles Edward** 1841–1920

American writer

Then we gather as we travel,  
Bits of moss and dirty gravel,  
And we chip off little specimens of stone;  
And we carry home as prizes  
Funny bugs, of handy sizes,  
Just to give the day a scientific tone.

In Franklin P. Adams

*Innocent Merriment: An Anthology of Light Verse*

Robinson Crusoe's Story

McGraw-Hill Book Company, Inc. New York, New York, USA. 1942

**Chargaff, Erwin** 1905–2002

Austrian biochemist

The scientific professions began to develop a momentum of their own, thereby creating a vested interest in always having more science, bigger science, better-endowed science. This is, incidentally, quite in contrast, for instance, to orchestra musicians whose influence on the number of orchestra pieces being written is minimal.

Voices in the Labyrinth

*Perspectives in Biology and Medicine*, Volume 18, Number 3, Spring, 1975 (p. 324)

**Crookes, Sir William** 1832–1919

English chemist and physicist

To stop short in any research that bids fair to widen the gates of knowledge, to recoil from fear of difficulty or adverse criticism, is to bring reproach on science. There is nothing for the investigator to do but to go straight on; to explore up and down, inch by inch, with the taper of his reason; to follow the light wherever it may lead, even should it at times resemble a will-o'-the-wisp.

Address

British Association for the Advancement of Science, Bristol, England (1898)

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

Holmes is a little too scientific for my tastes – it approaches to cold-bloodedness. I could imagine his giving a friend a little pinch of the latest vegetable alkaloid, not out of malevolence, you understand, but simply out of a spirit of inquiry in order to have an accurate idea of the effects. To do him justice, I think that he would take it himself with the same readiness. He appears to have a passion for definite and exact knowledge.

In William S. Baring-Gould (ed.)

*The Annotated Sherlock Holmes* (Volume 1)

*A Study in Scarlet*, Chapter 1 (p. 149)

Wings Books. New York, New York, USA. 1967

**Farrington, Benjamin** 1891–1974  
Irish scholar

Just as all scientific investigation is fruitless which is not pursued in a spirit of truth, so the results of all scientific endeavor are wasted if the continuity of tradition cannot be assured. It is of the very essence of science to be a co-operation and that not only of the men of the same generation, but of the generations successively.

In Lloyd William Taylor

*Physics: The Pioneer Science* (Volume 2)

Chapter 35 (p. 503)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1941

**Hall, Alfred Rupert** 1920–  
English historian of science

The cumulative growth of science, arising from the employment of methods of investigation and reasoning which have been justified by their fruits and their resistance to the corrosion of criticism, cannot be reduced to any single themes. We cannot say...why some men can perceive the truth, or a technical trick, which has eluded others. From the bewildering variety of experience in its social, economic and psychological aspects it is possible to extract only a few factors, here and there, which have had a bearing on the development of science. At present at least, we can only describe, and begin to analyse, where we should like to understand.

*The Scientific Revolution, 1500–1800*

Introduction (p. xiv)

Longmans, Green & Company. London, England. 1954

**Hertz, Heinrich** 1857–94  
German physicist

I have never forgotten what I often used to say to myself, that I would rather be a great scientific investigator than a great engineer, but would rather be a second-rate engineer than a second-rate investigator.

*Miscellaneous Papers*

Introduction (p. x)

Macmillan & Company Ltd. London, England. 1896

**Huxley, Thomas Henry** 1825–95  
English biologist

The method of scientific investigation is nothing but the expression of the necessary mode of working of the human mind. It is simply the mode in which all phenomena are reasoned about, rendered precise and exact.

*Collected Essays* (Volume 2)

*Darwiniana*

Six Lectures to Working Men (p. 363)

Macmillan & Company London, England. 1904

**Peirce, Charles Sanders** 1839–1914  
American scientist, logician, and philosopher

The man of action has to believe, the inquirer has to doubt; the scientific investigator is both.

In J.B. Conant

*Modern Science and Modern Man*

Science and Spiritual Values (p. 103)

Columbia University Press. New York, New York, USA. 1952

**von Lommel, Eugen** 1837–99  
German physicist

The deeds of a man of science are his scientific investigations. Truth once discovered does not remain shut up in the study or the laboratory. When the moment comes, it bursts its narrow bonds and joins the quick pulse of life. That which has been discovered in solitude, in the unselfish struggle for knowledge, in pure love of science, is often fated to be the mighty lever to advance the culture of our race.

In Sir Richard Arman Gregory

*Discovery; or, The Spirit and Service of Science*

Chapter VII (p. 184)

Macmillan & Company Ltd. London, England. 1918

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

The popular idea of scientific investigation is a vehement, aimless collection of little facts, collected as a bower bird collects shells and pebbles, in methodical little rows, and out of this process, in some manner unknown to the popular mind, certain conjuring tricks – the celebrated “wonders of science” – in a sort of accidental way emerge.

*The Discovery of the Future*

The Discovery of the Future (p. 34)

B.W. Huebsch. New York, New York, USA. 1914

**Wittgenstein, Ludwig Josef Johann** 1889–1951  
Austrian-born English philosopher

In the course of a scientific investigation we say all kinds of things; we make many utterances whose role in the investigation we do not understand. For it isn't as though everything we say has a conscious purpose; our tongues just keep going. Our thoughts run in established routines, we pass automatically from one thought to another according to the techniques we have learned. And now comes the time for us to survey what we have said. We have made a whole lot of movements that do not further our purpose, or that even impede it, and now we have to clarify our thought processes philosophically.

Translated by Peter Winch

*Culture and Value* (p. 64e)

The University of Chicago Press. Chicago, Illinois, USA. 1980

## SCIENTIFIC KNOWLEDGE

**Collins, Wilkie** 1824–89  
English novelist

What is scientific knowledge now may be scientific ignorance in some years more.

*Heart and Science*

Chapter LIV (p. 171)

Chatto &amp; Windus. London, England. 1883

What we call scientific knowledge today is a body of statements of varying degrees of certainty.

*The Meaning of It All*

Chapter 1 (p. 27)

Addison-Wesley. Reading, Massachusetts, USA. 1998

**Glass, H. Bentley** 1906–2005

American geneticist

...the fruits [of scientific knowledge] are of undeniable importance, and before we eat, it might be well for us to see upon which side of the tree of good and evil they are borne.

*Annual Report of the Board of Regents of the Smithsonian Institution (1955)*

Genetics in the Service of Man (p. 299)

Government Printing Office. Washington, D.C. 1956

**Gore, George**

No biographical data available

New scientific knowledge is like a powerful light, it cannot be hidden.

*The Scientific Basis of National Progress*

Chapter IV (p. 181)

Williams &amp; Norgate. London, England. 1882

**Hogben, Lancelot** 1895–1975

English zoologist

...scientific knowledge is not a mere collection of facts. It is an organized repository of useful and fruitful facts.

*Science for the Citizen: A Self-Educator Based on the Social Background of Scientific Discovery*

Part I, Chapter VI (p. 337)

Alfred A. Knopf. New York, New York, USA. 1938

**Lincoln, Almira H.** 1793–1884

Botanist

The beginner in any branch of scientific knowledge, is not like one travelling a straight road, where every step is so much ground actually gained; but the views which he takes are like the faint sketches of a painter, which gradually brighten, and grow more definite as he advances.

*Familiar Lectures on Botany, Practical, Elementary and Physiological*

Part I, Lecture IV (p. 23)

F.J. Huntington &amp; Co. New York, New York, USA. 1837

**Munroe, J.**

No biographical data available

The chief reason why scientific knowledge conflicts with sentiment, and curtails imagination, is that it induces a scientific habit of thought instead of a passive yielding to the enjoyment of beauty and the pleasant reveries it would inspire.

*Science and the Sense of Beauty**The Journal of Science, and Annals of Astronomy, Biology, Geology*, Volume IV, (Third series), April, 1882 (p. 204)**Norton, Charles Eliot** 1827–1908

American scholar

The first stepping-stones towards scientific knowledge are wonder and curiosity ...

*The Work of the Archaeological Institute of America**American Journal of Archaeology*, Volume 4, 1900 (p. 5)

## SCIENTIFIC LANGUAGE

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

I can hardly hope, by the use of scientific language, to convey any sense of my meaning to those ineffectual people who gather their ideas from the columns of a daily newspaper.

*The Poison Belt*

Chapter I (p. 8)

Hodder &amp; Stroughton. London, England. 1913

**von Humboldt, Alexander** 1769–1859

German naturalist and explorer

Exploded errors may survive partially among the uneducated, aided in some instances by an obscure and mystic phraseology: they have also left behind them many expressions by which our nomenclature is more or less disfigured; while a few of happier, though figurative origin, have gradually received more accurate definition, and have been found worthy of preservation in our scientific language.

*Cosmos: A Sketch of a Physical Description of the Universe*

Introduction (p. 5)

Longman, Brown, Green &amp; Longmans. London, England. 1849

## SCIENTIFIC LAW

**Moulton, Richard Green** 1849–1924

English-born American author and lawyer

In science...law has to do not with what ought to be, but with what is; scientific laws are facts reduced to formulae, statements of the habits of things, so to speak.

*Shakespeare as a Dramatic Artist* (3rd edition)

Introduction (p. 33)

At The Clarendon Press. Oxford, England. 1901

## National Research Council (USA)

Knowledge of fundamental scientific laws makes for economy of human thought. It is the great simplifier in a universe of otherwise bewildering complexity.

*Physics in Perspective* (Volume 1)

Chapter 3 (p. 64)

National Academy of Sciences

Washington, D.C. 1972

It is not necessary to analyze every cogwheel in an alleged perpetual motion machine to know that it will not

work or to keep tracking all the planets to be sure that they are not about to collide.

*Physics in Perspective* (Volume 1)  
Chapter 3 (p. 64)  
National Academy of Sciences  
Washington, D.C. 1972

**Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

...scientific laws are not artificial creations; we have no reason to regard them as accidental, though it be impossible to prove they are not.

Translated by George Bruce Halsted

*The Value of Science*

Introduction (p. 14)

The Science Press. New York, New York, USA. 1907

## SCIENTIFIC LITERACY

**Deason, Hilary J.** d. 1971

No biographical data available

Scientific literacy has become a real and urgent matter for the informed citizen. Many have allowed themselves to lapse into a coma of scientific illiteracy because of the misconception that science and mathematics are beyond their understanding, have no personal appeal, and can be rejected or ignored. For them a tocsin [alarm bell] has been sounded by hundreds of intelligent men and women whose personal crusade is the awakening of people everywhere to scientific awareness. They admonish, “read, mark, learn, and inwardly digest.”

*A Guide to Science Reading*

Foreword to the First Edition (p. ix)

The New American Library. New York, New York, USA. 1966

**Walberg, Herbert J.**

Educator

The scientific literacy of American youth, their mastery of the basic knowledge and skills of communication in science, is a problem of grave national concern.

Scientific Literacy and Economic Productivity in International Perspective  
*Daedalus*, Volume 112, Number 2, Spring, 1983 (p. 1)

## SCIENTIFIC LITERATURE

**Foster, Sir Michael** 1836–1907

English physiologist

We have only to read the scientific literature of the time to recognize that a truth which is now not only woven as a master-thread into all our scientific conceptions, but even enters largely into the every-day talk and thoughts of educated people, was a hundred years ago struggling into existence among the philosophers themselves.

*A Century's Progress in Science*

*Educational Review*, Volume XVIII, November, 1899 (p. 315)

## SCIENTIFIC MAN

**Agassiz, Jean Louis Rodolphe** 1807–73

Swiss-born American naturalist, geologist, and teacher

...it must be for truth's sake, and not even for the sake of its usefulness to humanity, that the scientific man studies Nature.

*Methods of Study in Natural History*

Chapter II (p. 24)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1896

**Darwin, Charles Galton** 1809–82

English naturalist

...a scientific man ought to have no wishes, no affections – a mere heart of stone.

In Francis Darwin

*More Letters of Charles Darwin* (Volume I)

Letter 52 (p. 98)

John Murray. London, England. 1903

**Foster, Sir Michael** 1836–1907

English physiologist

[The scientific man] must be alert of mind. Nature is ever making signs to us, she is ever whispering to us the beginnings of her secrets; the scientific man must be ever on the watch, ready at once to lay hold of Nature's hint, however small, to listen to her whisper, however low.

*Report of the Sixty-ninth Meeting of the British Association for the Advancement of Science*

President's Address (p. 16)

John Murray. London, England. 1900

**Kingsley, Charles** 1819–75

English clergyman and author

...a scientific man must expect his little disappointments and injustices. If you were behind the scenes in the scientific world, I can assure you, you would find as much party-spirit, and unfairness, and jealousy, and emulation there, as anywhere else. Human nature, human nature, everywhere!

*Alton Locke*

Chapter XV (p. 132)

Macmillan & Co Ltd. London, England. 1862

**Schuster, Sir Arthur** 1851–1934

English physicist

A scientific man, in so far as he influences the progress of science cannot be far ahead of his time, and though his writings may be read and admired centuries after his death, he will have written in vain if he has not been appreciated by his contemporaries or by those who immediately followed.

*The Influence of Mathematics on the Progress of Physics*

*van Nostrand's Engineering Magazine*, Volume XXVI, Number CLX, April, 1882 (p. 317)

**von Liebig, Justus** 1803–73  
German organic chemist

The discovery of the conditions of a phenomenon is the first and most important requisite for its explanation. They must be ascertained and established by observation. The mode of inquiry and observation depends on the art of the scientific man; the skilful putting of the questions displays the powers of his mind.

*Familiar Letters on Chemistry*

Letter II (p. 27)

Walton & Maberly. London, England. 1859

**Whewell, William** 1794–1866  
English philosopher and historian

...scientific Ideas and common Notions differ in this, that the former are precise and stable, the latter vague and variable; the former are possessed with clear insight, and employed in a sense rigorously limited, and always identically the same; the latter have grown up in the mind from a thousand dim and diverse suggestions, and the obscurity and incongruity which belong to their origin hang about all their applications.

*History of the Inductive Sciences from the Earliest to the Present Time* (3rd edition)

Introduction (p. 13)

John W. Parker & Son. London, England. 1857

## SCIENTIFIC MEN

**Bagehot, Walter** 1826–77  
English lawyer, statesman, and essayist

We think of Euclid as of fine ice; we admire Newton as we admire the Peak of Teneriffe. Even the intensest labours, the most remote triumphs of the abstract intellect, seem to carry us into a region different from our own – to be in a *terra incognita* of pure reasoning, to cast a chill on human glory.

In Richard Holt Hutton

*Literary Studies* (Volume 2)

Thomas Babington Macaulay (p. 222)

Longmans, Green & Co. London, England. 1879

## SCIENTIFIC METHOD

**Agre, Peter** 1949–  
American biologist

The field was essentially stuck, but following the well known scientific approach known as “sheer blind luck,” we stumbled upon the protein that is the answer to the question: do water channels exist?

*Les Prix Nobel. The Nobel Prizes in 2003*

Nobel lecture for award received in 2003

Nobel Foundation. Stockholm, Sweden. 2004

**Bauer, Henry H.** 1931–  
American chemist

There is no good reason to discard the scientific method as an ideal; rather, there is good reason to keep it so. Myths, after all, even if not literally true, are stories that embody moral truths.

*Scientific Literacy and the Myth of the Scientific Method*

Chapter 2 (p. 39)

University of Illinois Press. Urbana, Illinois, USA. 1992

One of the things wrong with the popular, classical definition of the scientific method is the implication that solitary people can successfully do good science, for example frame hypotheses and test them. In practice, however, the people who put forward the hypotheses are not usually the same people who apply the best test to them.

*Scientific Literacy and the Myth of the Scientific Method*

Chapter 3 (p. 52)

University of Illinois Press. Urbana, Illinois, USA. 1992

**Becker, Carl Lotus** 1873–1945  
American historian

It is one of the engaging ironies of modern thought that the scientific method, which it was once fondly hoped would banish mystery from the world, leaves it every day more inexplicable.

*The Heavenly City of the Eighteenth Century Philosophers*

Chapter I (p. 24)

Yale University Press. New Haven, Connecticut, USA. 1932

**Bernard, Claude** 1813–78  
French physiologist

I believe, in a word, that the true scientific method confines the mind without suffocating it, leaves it as far as possible face to face with itself, and guides it, while respecting the creative originality and the spontaneity which are its most precious qualities.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Part Three, Chapter III, Section iv (p. 226)

Henry Schuman, Inc. New York, New York, USA. 1927

**Born, Max** 1882–1970  
German-born English physicist

There are two objectionable types of believers: those who believe the incredible and those who believe that “belief” must be discarded and replaced by “the scientific method.”

*Natural Philosophy of Cause and Chance*

Appendix One (p. 209)

At The Clarendon Press. Oxford, England. 1949

**Bridgman, Percy Williams** 1882–1961  
American physicist

It seems to me that there is a good deal of ballyhoo about scientific method. I venture to think that the people who talk most about it are the people who do least about it. Scientific method is what working scientists do, not what other people or even they themselves may say about it. . . . Scientific method is something talked about by people

standing on the outside and wondering how the scientist manages to do it...

*Reflections of a Physicist*

Chapter 5 (p. 81)

Philosophical Library. New York, New York, USA. 1955

[S]cience is what scientists do, and there are as many scientific methods as there are individual scientists.

*Reflections of a Physicist*

Chapter 5 (p. 81)

Philosophical Library. New York, New York, USA. 1955

The scientific method, as far as it is a method, is nothing more than doing one's damndest with one's mind, no holds barred.

*Reflections of a Physicist*

Chapter 21 (p. 351)

Philosophical Library. New York, New York, USA. 1950

**Butler, Nicholas Murray** 1862–1947

American educator and university administrator

The making of a few score of admirable specialists, and the annual production of a small army of youths with narrow, if minute, information useful in some particular vocation, is a sorry substitute for reaching the great mass of the population with the influence and ideals of scientific inquiry and the scientific method.

In Bernard Jaffe

*New World of Chemistry*

Preface (p. vii)

Silver, Burdett & Company. New York, New York, USA. 1935

**Campbell, Norman R.** 1880–1949

English physicist and philosopher

If the discovery of laws could be reduced to a set of formal rules, anyone who learnt the rules could discover laws. But there is no broad road to progress. Herein lies the most serious objection to much that has been written on the methods of science. There is no method, and it is because there is no method which can be expounded to all the world that science is a delight to those who possess the instincts which make methods unnecessary.

*Physics: The Elements*

Chapter IV (p. 112)

At The University Press. Cambridge, England. 1920

**Case, Thomas**

No biographical data available

Scientific method is simply the way in which inferences are arranged in any science.

In Thomas Banks Strong

*Lectures on the Method of Science*

Chapter I (p. 1)

At The Clarendon Press. Oxford, England. 1906

**Conant, James Bryant** 1893–1978

American educator and scientist

There is no such thing as the scientific method. If there were, surely an examination of the history of physics,

chemistry, and biology would reveal it. For as I have already pointed out, few would deny that it is the progress in physics, chemistry and experimental biology which gives everyone confidence in the procedures of the scientist. Yet, a careful examination of these subjects fails to reveal any one method by means of which the masters in these fields broke new ground.

*Science and Common Sense*

Chapter Three (p. 45)

Yale University Press. New Haven, Connecticut, USA. 1951

**Crick, Francis Harry Compton** 1916–2004

English biochemist

What, then, do Jim Watson and I deserve credit for? If we deserve any credit at all, it is for persistence and the willingness to discard ideas when they became untenable. One reviewer thought that we couldn't have been very clever because we went on so many false trails, but that is the way discoveries are usually made. Most attempts fail not because of lack of brains but because the investigator gets stuck in a cul-de-sac or gives up too soon.

*What Mad Pursuit: A Personal View of Scientific Discovery*

Chapter 6 (p. 74)

Basic Books, Inc. New York, New York, USA. 1988

**Davies, Paul Charles William** 1946–

British-born physicist, writer, and broadcaster

The success of the scientific method at unlocking the secrets of nature is so dazzling it can blind us to the greatest scientific miracle of all: science works.

*The Mind of God: The Scientific Basis for a Rational World*

Chapter 1 (p. 20)

Simon & Schuster. New York, New York, USA. 1992

...the heart of the scientific method is the problem-hypothesis-test process. And, necessarily, the scientific method involves predictions. And predictions, to be useful in scientific methodology, must be subject to test empirically.

*The Cosmic Blueprint: New Discoveries in Nature's Creative Ability to Order the Universe*

Chapter 2 (p. 12)

Simon & Schuster. New York, New York, USA. 1988

**Dubos, René Jules** 1901–82

French-born American microbiologist and environmentalist

...like its literary and artistic counterparts, the process of scientific creation is a completely personal experience for which no technique of observation has yet been devised. Moreover, out of false modesty, pride, lack of inclination or psychological insight, very few of the great discoverers have revealed their own mental processes; at the most they have described methods of work – but rarely their dreams, urges, struggles and visions.

*Louis Pasteur: Free Lance of Science*

Chapter XIII (p. 369)

Little, Brown & Company. Boston, Massachusetts, USA. 1950

**Feyerabend, Paul K.** 1924–94  
Austrian-born American philosopher of science

The idea that science can, and should, be run according to fixed and universal rules, is both unrealistic and pernicious.

*Against Method: Outline of an Anarchistic Theory of Knowledge*  
Chapter 18 (p. 295)  
Verso. London, England. 1978

**Feynman, Richard P.** 1918–88  
American theoretical physicist

After we look for the evidence we have to judge the evidence. There are the usual rules about the judging the evidence; it's not right to pick only what you like, but to take all of the evidence, to try to maintain some objectivity about the thing – enough to keep the thing going – not to ultimately depend upon authority. Authority may be a hint as to what the truth is, but is not the source of information. As long as it's possible, we should disregard authority whenever the observations disagree with it.

In Jeffrey Robbins (ed.)  
*The Pleasure of Finding Things Out: The Best Short Works of Richard P. Feynman*  
Chapter 4 (p. 104)  
Perseus Books. Cambridge, Massachusetts, USA. 1999

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1983

**Flexner, Abraham** 1866–1959  
American educator

So long as men strive to transcend their native powers, to rid themselves of prejudice and preconception, to observe phenomena in a dry light, the effort is scientific, whether at the moment it attains mathematical accuracy or not.

*Medical Education: A Comparative Study*  
Chapter I (p. 3)  
The Macmillan Company. New York, New York, USA. 1925

**France, Anatole (Jean Jacques Brosson)** 1844–1924  
French writer

...the scientific reasons for preferring one piece of evidence to another are sometimes very strong, but they are never strong enough to outweigh our passions, our prejudices,

our interests, or to overcome that levity of mind common to all grave men. It follows that we continually present the facts in a prejudiced or frivolous manner.

*Penguin Island*  
Preface (p. vi)  
Dodd, Mead & Company. New York, New York, USA. 1923

**Garrod, Archibald** 1857–1936  
English physician

[Scientific method] acts as a check, as well as a stimulus, sifting the value of the evidence, and rejecting that which is worthless, and restraining too eager flights of the imagination and too hasty conclusions.

In Alexander G. Bearn  
*Archibald Garrod and the Individuality of Man*  
Chapter 7 (p. 82)  
Clarendon Press. Oxford, England. 1993

**Gotch, Francis** 1853–1913  
English physiologist

The scientific method comprises all those modes of mental activity which are best adapted to attain this end. It is not a hard-and-fast system of thought; it is not a particular method of observation or of experiment; it is not any special technique. In itself, the method is meaningless; it acquires merit through its aim, and is significant because of its purpose. Its form may, and indeed must, be plastic, varying with the condition of man and of nature, but its end remains throughout the same – he revelation of the truth about things.

In Thomas Banks Strong  
*Lectures on the Method of Science*  
Chapter II (p. 27)  
At The Clarendon Press. Oxford, England. 1906

**Gould, Stephen Jay** 1941–2002  
American paleontologist, evolutionary biologist, and historian of science

It is important that we, as working scientists, combat these myths of our profession as something superior and apart. The myths may serve us well in the short and narrow as rationale for a lobbying strategy – give us the funding and leave us alone, for we know what we're doing and you don't understand anyway. But science can only be harmed in the long run by its self-proclaimed separation as a priesthood guarding a sacred rite called the scientific method.

*Time's Arrow, Time's Cycle: Myth and Metaphor in the Discovery of Geological Time*  
Chapter 1 (p. 7)  
Harvard University Press. Cambridge, Massachusetts, USA. 1987

The Nobel prizes focus on quantitative nonhistorical, deductively oriented fields with their methodology of perturbation by experiment and establishment of repeatable chains of relatively simple cause and effect. An entire set of disciplines, different though equal in scope and status, but often subjected to ridicule because they

do not follow this pathway of “hard” science, is thereby ignored: the historical sciences, treating immensely complex and nonrepeatable events (and therefore eschewing prediction while seeking explanation for what has happened) and using the methods of observation and comparison.

Balzan Prize to Ernst Mayr

*Science*, Volume 223, Number 4633, January 20, 1984 (p. 255)

If justification required eyewitness testimony, we would have no sciences of deep time – no geology, no ancient human history either. (Should I believe Julius Caesar ever existed? The hard bony evidence for human evolution...surely exceeds our reliable documentation of Caesar’s life.)

Dorothy, It’s Really Oz

*Time Magazine*, August 23, 1999 (p. 59)

[O]ur ways of learning about the world are strongly influenced by the social preconceptions and biased modes of thinking that each scientist must apply to any problem. The stereotype of a fully rational and objective “scientific method,” with individual scientists as logical (and interchangeable) robots, is self-serving mythology.

This View of Life. In the Mind of the Beholder

*Natural History*, Volume 103, Number 2, February, 1994 (p. 14)

### **Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

The scientific method of analyzing, explaining and classifying has become conscious of its human limitations, which arise out of the fact that by its intervention science alters and refashions the object of its investigation. In other words, method and object can no longer be separated. The scientific world view has ceased to be a scientific view in the true sense of the word.

*The Physicist’s Conception of Nature*

American writer

...sometimes serious scientific problems are solved by a scientific method that can be described only as playful.

Playing for Keeps

*Discover*, October, 1990 (p. 4)

### **Huxley, Thomas Henry** 1825–95

English biologist

I am not afraid of the priests in the long-run. Scientific method is the white ant which will slowly but surely destroy their fortifications. And the importance of scientific methods in modern practical life – always growing and increasing – is the guarantee for the gradual emancipation of the ignorant upper and lower classes, the former of whom especially are the strength of the priests.

*Collected Essays* (Volume 3)

*Science and Education*

Life and Letters (p. 330)

Macmillan & Company Ltd. London, England. 1904

### **Jevons, William Stanley** 1835–82

English economist and logician

Nothing is more certain in scientific method than that approximate coincidence alone can be expected. In the measurement of continuous quantity perfect correspondence must be accidental, and should give rise to suspicion rather than to satisfaction.

*The Principles of Science: A Treatise on Logic and Scientific Method* (2nd edition)

Book IV, Chapter XXI (p. 457)

Macmillan & Co Ltd. London, England. 1877

### **Kropotkin, Peter Alekseyevich** 1842–1921

Russian revolutionary and geographer

He who has once in his life experienced this joy of scientific creation will never forget it; he will be longing to renew it; and he cannot but feel with pain that this sort of happiness is the lot of so few of us, while so many could also live through it, – on a small or on a grand scale, – if scientific methods and leisure were not limited to a handful of men.

*Memoirs of a Revolutionist*

Part IV, I (p. 6)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1899

### **Krutch, Joseph Wood** 1893–1970

American naturalist, conservationist, and writer

We are committed to the scientific method, and measurement is the foundation of that method; hence we are prone to assume that whatever is measurable must be significant and that whatever cannot be measured may as well be disregarded.

*Human Nature and the Human Condition*

Chapter V (p. 78)

Random House, Inc. New York, New York, USA. 1959

### **Maxwell, James Clerk** 1831–79

Scottish physicist

Nature is a journal of science, and one of the several tests of a scientific mind is to discern the limits of the legitimate application of scientific methods.

In W.D. Niven (ed.)

*The Scientific Papers of James Clerk Maxwell* (Volume 2)

Paradoxical Philosophy (p. 759)

Dover Publications, Inc. New York, New York, USA. 1965

### **Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

The scientific method, as it is sometimes called, is a potentiation of common sense.

*Advice to a Young Scientist*

Chapter 11 (p. 93)

Basic Books, Inc., Publishers. New York, New York, USA. 1979

The accusation is sometimes directed against scientists that there is in reality no such thing as the scientific method, i.e., that there is no logically accountable and intellectually rigorous process by which we may proceed

directly to the solution of a given problem. Scientific method works only in retrospect. This accusation is perfectly just but it doesn't in practice amount to anything more than saying that there is no set of cut-and-dried rules for writing a poem or passage of music or conducting any other imaginative exercise.

The Cost-Benefit Analysis of Pure Research  
*Hospital Practice*, Sept 1973

Ask a scientist what he conceives the scientific method to be, and he will adopt an expression that is at once solemn and shifty-eyed; solemn because he feels he ought to declare an opinion; shifty-eyed, because he is wondering how to conceal the fact that he has no opinion to declare.

*Induction and Intuition in Scientific Thought*  
Chapter I, Section 2 (p. 11)

American Philosophical Society. Philadelphia, Pennsylvania, USA. 1969

One of the severest tests of the scientific mind is to know the limits of the legitimate application of the scientific method.

In W.D. Niven

*The Scientific Papers of James Clerk Maxwell* (Volume 2) (p. 759)  
Cambridge University Press. Cambridge, England. 1890

**Pearson, Karl** 1857–1936

English mathematician

Minds trained to scientific methods are less likely to be led by mere appeal to the passions or by blind emotional excitement to sanction acts which in the end may lead to social disaster.

*The Grammar of Science* (2nd edition)  
Chapter I (p. 9)

Adam & Charles Black. London, England. 1900

The man who has accustomed himself to marshal facts, to examine their complex mutual relations, and predict upon the result of this examination their inevitable sequences – sequences which we term natural laws and which are as valid for every normal mind as for that of the individual investigator – such a man, we may hope, will carry his scientific method into the field of social problems.

*The Grammar of Science* (2nd edition)  
Chapter I (p. 9)

Adam & Charles Black. London, England. 1900

I assert that the encouragement of scientific investigation and the spread of scientific knowledge by largely inculcating scientific habits of mind will lead to more efficient citizenship and so to increased social stability. Minds trained to scientific methods are less likely to be led by mere appeal to the passions or by blind emotional excitement to sanction acts which in the end may lead to social disaster.

*The Grammar of Science*

Introductory, Section 3 (pp. 10–11)

Charles Scribner's Sons. London, England. 1892

There is no short cut to truth, no way to gain a knowledge of the universe except through the gateway of scientific method.

*The Grammar of Science* (2nd edition)

Chapter I (p. 17)

Adam & Charles Black. London, England. 1900

**Pirsig, Robert M.** 1928–

American writer

When I think of formal scientific method an image sometimes comes to mind of an enormous juggernaut, a huge bulldozer – slow, tedious, lumbering, laborious, but invincible. It takes twice as long, five times as long, maybe a dozen times as long as informal mechanic's techniques, but you know in the end you're going to get it. There's no fault isolation problem in motorcycle maintenance that can stand up to it. When you've hit a really tough one, tried everything, racked your brain and nothing works, and you know that this time Nature has really decided to be difficult, you say, "Okay, Nature, that's the end of the nice guy," and you crank up the formal scientific method.

*Zen and the Art of Motorcycle Maintenance: An Inquiry into Values*  
Part II, Chapter 9 (p. 107)

William Morrow & Company, Inc. New York, New York, USA. 1974

The real purpose of scientific method is to make sure Nature hasn't misled you into thinking you know something you don't actually know. There's not a mechanic or scientist or technician alive who hasn't suffered from that one so much that he's not instinctively on guard.... If you get careless or go romanticizing scientific information, giving it a flourish here and there, Nature will soon make a complete fool out of you.

*Zen and the Art of Motorcycle Maintenance: An Inquiry into Values*  
Part II, Chapter 9 (p. 108)

William Morrow & Company, Inc. New York, New York, USA. 1974

Traditional scientific method has always been at the very best, 20–20 hindsight. It's good for seeing where you've been.

*Zen and the Art of Motorcycle Maintenance: An Inquiry Into Values*  
Part III, Chapter xxiv (p. 280)

William Morrow & Company, Inc. New York, New York, USA. 1974

**Polanyi, Michael** 1891–1976

Hungarian-born English scientist, philosopher, and social scientist

Scientists who believe that the old, tried, and true is sufficient or who underestimate and fail to understand the need for change may soon be lost in a challenging and exciting period of history. But those who have the vision to see beyond the obvious, the wisdom to search for and recognize the truth, and the ability to apply basic knowledge for the good of mankind will find this period one of great reward and satisfaction.

Challenges to Editors of Scientific Journals

*Science*, Volume 141, Number 3585, September 13, 1963 (p. 1017)

**Raymo, Chet** 1936–

American physicist and science writer

How is it that astronomers can tell such stories, stories more fabulous than any myth of gods and nymphs, when the ink of night offers to the eye only pinpricks of light? The answer is both simple and complex. We look, we invent, we look again. We test our inventions against what we see, and we insist that our inventions be consistent with one another, that our stories of the stars be consistent with our stories of the earth, of life, and of matter and energy.... The story of the falling apple and the story of the stars must resonate together. Only then, when our stories of the world vibrate with a symphonic harmony, are we confident that our inventions partake of reality.

*The Virgin and the Mousetrap: Essays in Search of the Soul of Science*  
Chapter 19 (p. 175)

The Viking Press. New York, New York, USA. 1991

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

Whatever knowledge is attainable, must be attained by scientific methods; and what science cannot discover, mankind cannot know.

*Religion and Science*

Science and Ethics (p. 243)

Henry Holt & Company. New York, New York, USA. 1935

Scientific method...consists mainly in eliminating those beliefs which there is reason to think a source of shocks, while retaining those against which no definite argument can be brought.

*Human Knowledge: Its Scope and Limits*

Part III, Chapter III (p. 185)

Simon & Schuster. New York, New York, USA. 1948

Scientific method...consists in observing such facts as will enable the observer to discover general laws governing facts of the kind in question.

*The Scientific Outlook*

Chapter I (p. 15)

George Allen & Unwin Ltd. London, England. 1931

In arriving at a scientific law there are three main stages: The first consists in observing the significant facts; the second in arriving at a hypothesis, which, if it is true, would account for these facts; the third is deducing from this hypothesis consequences which can be tested by observation. If the consequences are verified, the hypothesis is provisionally accepted as true, although it will usually require modification later on as a result of the discovery of further facts.

*The Scientific Outlook*

Chapter II (p. 58)

George Allen & Unwin Ltd. London, England. 1931

**Smith, Alexander** 1865–1922

American chemist and author

The chief object of useful thought, no matter whether the problem is one of language, history, business, or life, is to organize isolated facts into knowledge, and the means of successfully accomplishing this is the use of the scientific method.

*Introduction to General Inorganic Chemistry*

Chapter I (p. 4)

The Century Co. New York, New York, USA. 1907

**Stansfield, William D.** 1930–

American biologist

Most scientific theories, however, are ephemeral. Exceptions will likely be found that invalidate a theory in one or more of its tenets. These can then stimulate a new round of research leading either to a more comprehensive theory or perhaps to a more restrictive (i.e., more precisely defined) theory. Nothing is ever completely finished in science; the search for better theories is endless.

*The Science of Evolution*

Introduction (p. 8)

Macmillan Company. New York, New York, USA. 1977

The interpretation of a scientific experiment should not be extended beyond the limits of the available data. In the building of theories, however, scientists propose general principles by extrapolation beyond available data. When former theories have been shown to be inadequate, scientists should be prepared to relinquish the old and embrace the new in their never-ending search for better solutions. It is unscientific, therefore, to claim to have “proof of the truth” when all that scientific methodology can provide is evidence in support of a theory.

*The Science of Evolution*

Introduction (p. 8)

Macmillan Publishing Company. New York, New York, USA. 1977

**Skinner, Burrhus Frederic** 1904–90

American psychologist

Here was a first principle not formally recognized by scientific methodologists: When you run into something interesting, drop everything else and study it.

A Case History in Scientific Method

*The American Psychologist*, Volume 11, 1956 (p. 223)

**Skolimowski, Henryk** 1930–

Polish philosopher

We are the proud inheritors and perpetuators of the scientific tradition. But perhaps also the slaves of certain modes of thinking; subjects to a conceptual tyranny which we glorify, thus being perfect slaves – slaves who enjoy their imprisonment.

In A.J. Ayala (ed.)

*Studies in the Philosophy of Biology: Reduction and Related Problems*

Problems of Rationality in Biology (p. 213)

Macmillan & Company Ltd. London, England. 1974

**Sullivan, John William Navin** 1886–1937  
Irish mathematician

To judge from the history of science, the scientific method is excellent as a means of obtaining plausible conclusions which are always wrong, but hardly as a means of reaching the truth.

The Justification of the Scientific Method  
*The Athenaeum*, Number 4644, 2 May, 1919 (p. 275)

**Tate, Allen** 1899–1979  
American poet, teacher, and novelist

Scientific approaches, because each has its own partial conventions momentarily arrogating to themselves the authority of total explanation, must invariably fail to see all the experience latent in the work.

Critical Responsibility  
*The New Republic*, Volume 51, Number 663, August 17, 1927 (p. 340)

**Tennant, F. R.**  
No biographical data available

Half a century ago, it was taught that the scientific method is the sole means of approach to the whole realm of possible knowledge: that there were no reasonably propounded questions worth discussing to which its method was inapplicable. Such belief is less widely held today. Since many men of science became their own epistemologists, science has been more modest.

*Philosophical Theology* (Volume 1)  
Chapter XIII (p. 333)  
At The University Press. Cambridge, England. 1956

**Thomson, Sir John Arthur** 1861–1933  
Scottish naturalist

When our aim is to get a grip of scientific method, we are more likely to succeed by settling down to the thorough study of some one order of facts, than by indulging in an intellectual ramble through the universe.

*Introduction to Science*  
Chapter IV (p. 82)  
Henry Holt & Co. New York, New York, USA. 1911

**Thomson, Sir George Paget** 1892–1975  
English physicist

The scientific method is not a royal road leading to discoveries in research, as Bacon thought, but rather a collection of pieces of advice, some general, some rather special, which may help to guide the explorer in his passage through the jungle of apparently arbitrary facts.

*The Inspiration of Science*  
Chapter II (p. 7)  
Oxford University Press, Inc. London, England. 1961

**Weisz, Paul B.** 1919–  
German-born American chemical engineer and biomedical researcher

All science begins with observation, the first step of the scientific method. At once this delimits the scientific domain; something that cannot be observed cannot be investigated by science.

*Elements of Biology* (p. 40)  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1965

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

For the true scientific method is this:  
To trust no statements without verification,  
to test all things as rigorously as possible,  
to keep no secrets, to attempt no monopolies,  
to give out one's best modestly and plainly,  
serving no other end but knowledge.

In William Beebe  
*Edge of the Jungle*  
Cover page (p. 1)  
Garden City Publishing Company, Inc. Garden City, New York, USA. 1925

**Wolpert, Lewis** 1929–  
British embryologist

Even distinguished philosophers of science... recognize the failure of philosophy to help understand the nature of science. They have not discovered a scientific method that provides a formula or prescriptions for how to make discoveries. But many famous scientists have given advice: try many things; do what makes your heart leap; think big; dare to explore where there is no light; challenge expectation; cherchez le paradox; be sloppy so that something unexpected happens, but not so sloppy that you can't tell what happened; turn it on its head; never try to solve a problem until you can guess the answer; precision encourages the imagination; seek simplicity; seek beauty.... One could do no better than to try them all.

*The Unnatural Nature of Science*  
Chapter 6 (p. 108)  
Harvard University Press. Cambridge, Massachusetts, USA. 1992

No one method, no paradigm, will capture the process of science. There is no such thing as the scientific method.

*The Unnatural Nature of Science*  
Chapter 6 (p. 108)  
Harvard University Press. Cambridge, Massachusetts, USA. 1992

**Zimmerman, Michael** 1946–  
American biologist

Having a scientific outlook means being willing to divest yourself of a pet hypothesis, whether it relates to easy self-help improvements, homeopathy, graphology, spontaneous generation, or any other concept, when the data produced by a carefully designed experiment contradict

that hypothesis. Retaining a belief in a hypothesis that cannot be supported by data is the hallmark of both the pseudoscientist and the fanatic. Often the more deeply held the hypothesis, the more reactionary is the response to nonsupportive data.

*Science, Nonscience, and Nonsense: Approaching Environmental Literacy*

Chapter Two (p. 37)

The Johns Hopkins University Press. Baltimore, Maryland, USA. 1995

## SCIENTIFIC MIND

**Abbey, Edward** 1927–89

American environmentalist and nature writer

Any good poet, in our age at least, must begin with the scientific view of the world; and any scientist worth listening to must be something of a poet, must possess the ability to communicate to the rest of us his sense of love and wonder at what his work discovers.

*The Journey Home: Some Words in Defense of the American West*

Chapter 8 (p. 87)

E.P. Dutton & Company. New York, New York, USA. 1977

**Ackerman, Edward A.** 1911–73

American geographer

The mind of the scientist, no less than that of the poet or musician, must be structured by thought and experience before it reaches the creative stage.

Where Is a Research Frontier?

*Annals of the Association of American Geographers*, Volume 30, 1931 (p. 433)

**Bauer, Henry H.** 1931–

American chemist

Science progresses not because scientists as a whole are passionately open-minded but because different scientists are passionately closed-minded about different things.

*Scientific Literacy and the Myth of the Scientific Method*

Chapter 4 (p. 76)

University of Illinois Press. Urbana, Illinois, USA. 1992

**Beveridge, William Ian Beardmore** 1908–

Australian zoologist

It is true that much time and effort is devoted to training and equipping the scientist's mind, but little attention is paid to the techniques of making the best use of it.

*The Art of Scientific Investigation*

Preface (p. viii)

W.W. Norton & Company, Inc. New York, New York, USA. 1957

**Compton, Karl Taylor** 1887–1954

American educator and physicist

Science requires straight and independent thinking. Every hypothesis or idea is capable of definite proof or disproof. The habit of mind that subjects every idea to rigid test is of utmost value. Much of the loose think-

ing in social, educational, political, and economic affairs would be avoided if the workers in these fields could be given a real training in accurate scientific thinking.

*A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton During the Years 1930–1949* (p. 39)

Undergraduate Association, MIT. Cambridge, Massachusetts, USA. 1955

**Dewey, John** 1859–1952

American philosopher and educator

The future of our civilization depends on the widening spread and deepening hold of the scientific habit of mind.

In Lloyd William Taylor

*Physics: The Pioneer Science* (Volume 1)

Chapter 11 (p. 137)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1941

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

The true scientific mind is not to be tied down by its own conditions of time and space. It builds itself an observatory erected upon the border line of present, which separates the infinite past from the infinite future. From this sure post it makes its sallies even to the beginning and to the end of all things.

*The Poison Belt*

Chapter III (p. 108)

Hodder & Stroughton. London, England. 1913

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

The scientific mind must have a faith which is science.

*The Complete Works of Ralph Waldo Emerson* (Volume 6)

*The Conduct of Life*

Chapter VI (p. 240)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

**Fisher, Sir Ronald Aylmer** 1890–1962

English statistician and geneticist

In scientific subjects, the natural remedy for dogmatism has been found in research. By temperament and training, the research worker is the antithesis of the pundit. What he is actively and constantly aware of is his ignorance, not his knowledge; the insufficiency of his concepts, of the terms and phrases in which he tries to excogitate his problems: not their final and exhaustive sufficiency. He is, therefore, usually only a good teacher for the few who wish to use their mind as a workshop, rather than to store it as a warehouse.

Eugenics, Academic and Practical

*Eugenics Review*, Volume 27, 1935

**Foster, Sir Michael** 1836–1907

English physiologist and educator

...the mind which has been already sharpened by the methods of one science takes a keener edge, and the more quickly, when it is put on the whetstone of another

science, than does a mind which knows nothing of no science.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1898*

Recent Advances in Science, and Their Bearing on Medicine and Surgery (p. 340)

Government Printing Office. Washington, D.C. 1899

### **Kingsley, Charles** 1819–75

English clergyman and author

In one word, [scientific] men [have] acquired just the habit of mind which the study of Natural Science can give, and must give; for without it there is no use studying Natural Science; and the man who has not got that habit of mind, if he meddles with science, will merely become a quack and a charlatan, only fit to get his bread as a spirit-rapper, or an inventor of infallible pills.

*Town Geology*

Preface

D. Appleton & Company. New York, New York, USA. 1873

### **Knickerbocker, William Skinkle** 1892–1972

American professor of English and author

...the scientific...mind produces many of the virtues which in old-fashioned courses of ethics were taught as objectively as a problem in geometry. Patience, endurance, humility, teachableness, honesty, accuracy – without these it is impossible for a scientist to work.

*Classics of Modern Science*

Preface

Alfred A Knopf. New York, New York, USA. 1927

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

### **Kruger, Otto** 1885–1974

American actor

My mind is just as open as it ever was, professor. But it's a scientific mind, and there's no place in it for superstitions.

*Dracula's Daughter*

Film (1936)

### **Large, E. C.**

No biographical data available

There were two age-old tendencies toward stagnation in scientific thought which those of youthful spirit had always to resist. One was the human weakness of accepting the uncorroborated say-so of eminent authorities, and the other was the human stupidity of regarding natural science as something divisible into watertight compartments.

*The Advance of the Fungi*

Chapter XXIII (p. 317)

Henry Holt & Company. New York, New York, USA. 1940

French social anthropologist and structuralist

The scientific mind does not so much provide the right answers as ask the right questions.

Translated by John and Doreen Weightman

*The Raw and the Cooked*

Overture (p. 7)

Harper & Row, Publishers. New York, New York, USA. 1975

### **Maxwell, James Clerk** 1831–79

Scottish physicist

...one of the severest tests of a scientific mind is to discern the limits of the legitimate application of the scientific method.

In W.D. Niven (ed.)

*The Scientific Papers of James Clerk Maxwell* (Volume 2)

Paradoxical Philosophy (p. 759)

At The University Press. Cambridge, England. 1890

### **Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

There is no such thing as a Scientific Mind. Scientists are people of very dissimilar temperaments doing different things in very different ways. Among scientists are collectors, classifiers and compulsive tidiers-up; many are detectives by temperament and many are explorers; some are artists and others artisans. There are poet-scientists and philosopher-scientists and even a few mystics. What sort of mind or temperament can all these people be supposed to have in common? Obligative scientists must be very rare, and most people who are in fact scientists could easily have been something else instead.

*The Art of the Soluble*

Hypothesis and Imagination (p. 132)

Methuen & Company Ltd. London, England. 1967

### **Menzel, Donald Howard** 1901–76

American astronomer

### **Boyd, Lyle B.**

No biographical data available

The creative scientist, eternally curious, keeps an open mind toward strange phenomena and novel ideas, knowing that we have only begun to understand the universe we live in. He remembers, too, that Biot's discovery that meteorites were "stones from the sky" was at first greeted with disbelief, and he hopes never to be guilty or similar obtuseness. But an open mind does not mean credulity or a suspension of the logical faculties that are man's most valuable asset.

*The World of Flying Saucers: A Scientific Examination of a Major Myth of the Space Age*

Chapter VIII (p. 289)

Doubleday & Company, Inc. Garden City, New York, USA. 1963

### **Pagels, Heinz R.** 1939–88

American physicist and science writer

I like to browse in occult bookshops if for no other reason than to refresh my commitment to science.

*The Dreams of Reason: The Computer and the Rise of the Sciences of Complexity*

Chapter 11 (p. 242)

Simon & Schuster. New York, New York, USA. 1988

**Rota, Gian-Carlo** 1932–99  
Italian-born American mathematician

The Talmud and the Tao are trainers of scientific minds. A variety of talents is required if the scientific community is to thrive. ...

*Indiscrete Thoughts*  
Chapter XX (p. 210)  
Birkhäuser. Boston, Massachusetts, USA. 1997

**Rowland, Henry Augustus** 1848–1901  
American physicist

...for myself, I value in a scientific mind most of all that love of truth, that care in its pursuit and that humility of mind which makes the possibility of error always present more than any other quality. This is the mind which has built up modern science to its present perfection which has laid one stone upon the other with such care that it offers to the world the most complete monument to human reason. is the mind which is destined to govern the world in the future and to solve problems pertaining to politics and humanity as well as to inanimate nature.

*The Physical Papers of Henry Augustus Rowland*  
The Physical Laboratory in Modern Education (p. 618)  
The Johns Hopkins Press. Baltimore, Maryland, USA. 1902

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

...the scientific attitude is in some degree unnatural to man; the majority of our opinions are wish-fulfillments, like dreams in the Freudian theory.

*The Scientific Outlook*  
Chapter I (p. 16)  
George Allen & Unwin Ltd. London, England. 1931

**Thomson, Sir John Arthur** 1861–1933  
Scottish naturalist

The scientific mood is especially marked by a passion for facts, by cautiousness of statement, by clearness of vision, and by a sense of the inter-relatedness of things.

*Introduction to Science*  
Chapter I (p. 34)  
Williams & Norgate Ltd. London, England. 1916

**Trotter, Wilfred** 1872–1939  
British surgeon and sociologist

The truly scientific mind is altogether unafraid of the new, and while having no mercy for ideas which have served their turn or shown their uselessness, it will not grudge to any unfamiliar conception its moment of full and friendly attention, hoping to expand rather than to minimize what small core of usefulness it may happen to contain.

Observation and Experiment and Their Use in the Medical Sciences  
*British Medical Journal*, Volume 2, 1930

**Tyndall, John** 1820–93  
Irish-born English physicist

The scientific mind can find no repose in the mere registration of sequence in nature. The further question intrudes itself with resistless might, Whence comes the sequence?

*Fragments of Science* (Volume 2)  
Chapter II (p. 29)  
D. Appleton & Co. New York, New York, USA. 1915

**Valéry, Paul** 1871–1945  
French poet and critic

Each mind can regard itself as a laboratory in which processes peculiar to the individual are used for transforming a substance common to all.

The results obtained by certain individuals are a source of wonderment to others. Starting out with ordinary carbon, one man produces a diamond, by means of temperatures and pressures that others never dreamt of. "Why, it's only carbon!" they say, after analyzing it. But they don't know how to do what he did.

In Jackson Mathews (ed.)  
*The Collected Works of Paul Valéry* (Volume 14)  
*Analects* (p. 482)  
Princeton University Press. Princeton, New Jersey, USA. 1971

**Weidlein, Edward Ray**  
Chemical engineer

A true scientist never grows old in his way of thinking. His mind is constantly working to improve his surroundings and to better understand the laws of nature. He expects to live in a changing world.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1938*  
A World of Change (p. 199)  
Government Printing Office. Washington, D.C. 1939

**Weil, Simone** 1909–43  
French philosopher and mystic

A scientific conception of the world doesn't prevent one from observing what is socially fitting.

Translated by Arthur Wills  
*The Need for Roots: Prelude to a Declaration of Duties Toward Mankind*  
Part III (p. 248)  
The Beacon Press. Boston, Massachusetts, USA. 1952

**Weisskopf, Victor Frederick** 1908–2002  
Austrian-American physicist

Some people maintain that scientific insight has eliminated the need for meaning. I do not agree. The scientific worldview established the notion that there is a sense and purpose in the development of the universe when it recognized the evolution from the primal explosion to

matter, life, and humanity. In humans, nature begins to recognize itself.

*The Joy of Insight: Passions of a Physicist*

Chapter Fourteen (pp. 317–318)

Basic Books, Inc. New York, New York, USA. 1991

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

The aim of scientific thought are to see the general in the particular and the eternal in the transitory.

*OMNI Magazine*, Volume 2, Number 41, November, 1979

A man who only knows his own science, as a routine peculiar to that science, does not even know that. He has no fertility of thought, no power of quick seizing the bearing of alien ideas. He will discover nothing, and be stupid in practical applications.

*The Organisation of Thought*

Chapter II (p. 46)

Greenwood Press Publishers. Westport, Connecticut, USA. 1974

## SCIENTIFIC MOVEMENT

**Sadler, Michael**

No biographical data available

What the classical renaissance was to men of the fifteenth and sixteenth centuries, the scientific movement is to us. It has given a new trend to education. It has changed the outlook of the mind. It has given a new intellectual background to life.

In Fred Hodson

*Broad Lines in Science Teaching*

Introduction (p. xvi)

The Macmillan Co. New York, New York, USA. 1910

## SCIENTIFIC OBSESSION

**Gerould, Katherine Fullerton** 1879–1944

American writer

The great danger of the scientific obsession is not the destruction of all things that are not science, but the slow infection of those things.

*Modes and Morals*

The Extirpation of Culture (p. 87)

Charles Scribner's Sons. New York, New York, USA. 1920

## SCIENTIFIC OPINION

**Brooks, William Keith** 1848–1908

American zoologist

In this course of lectures I shall give, on many questions, the Scotch verdict of “not proven,” and experience

warns us that this will be interpreted as an assertion that they are proved or disproved, although no one can, in justice, interpret an admission that a thesis may sometime be proved or disproved as belief that either of these things will come about, or as an admission of anything else except a suspension of judgment, for all must hold it the height of folly to found a scientific opinion on lack of evidence.

*The Foundations of Zoology*

Lecture I (p. 14)

Macmillan & Co Ltd. London, England. 1899

## SCIENTIFIC PAPER

**Crick, Francis Harry Compton** 1916–2004

English biochemist

There is no form of prose more difficult to understand and more tedious to read than the average scientific paper.

*The Astonishing Hypothesis: The Scientific Search For the Soul*

Preface (p. xiii)

Touchstone. New York, New York, USA. 1995

## SCIENTIFIC PHILOSOPHY

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

The scientific philosophy, therefore, which aims only at understanding the world and not directly at any other improvement of human life, cannot take account of ethical notions without being turned aside from that submission to fact which is the essence of the scientific temper.

*Mysticism and Logic: And Other Essays*

Chapter VI (p. 109)

Longmans, Green & Co. London, England. 1919

## SCIENTIFIC PICTURE

**Schrödinger, Erwin** 1887–1961

Austrian theoretical physicist

...the scientific picture of the real world around me is very deficient. It gives a lot of factual information, puts all our experience in a magnificently consistent order, but it is ghastly silent about all and sundry that is really near to our heart, that really matters to us. It cannot tell us a word about red and blue, bitter and sweet, physical pain and physical delight; it knows nothing of beautiful and ugly, good or bad, God and eternity. Science sometimes pretends to answer questions in these domains, but the answers are very often so silly that we are not inclined to take them seriously.

*Nature and the Greeks*

Chapter VII (p. 93)

At The University Press. Cambridge, England. 1954

## SCIENTIFIC POLICY

### Branford, Victor

No biographical data available

If we assume that at present there is no science, but sciences – unclassified and therefore ungeneralised, it would seem to follow that there is no scientific ideal, but only scientific ideals – unharmonised; and no scientific policy, but only scientific policies – un-co-ordinated.

*Science and Citizenship*

Section IV (p. 11)

George Allen. London, England. 1906

## SCIENTIFIC PRACTICE

### Haraway, Donna 1944–

American educator

Scientific practice may be considered a kind of story-telling practice ...

*Primate Visions*

Introduction (p. 4)

Routledge, Chapman & Hall. New York, New York, USA. 1989

## SCIENTIFIC PRINCIPLES

### Dewey, John 1859–1952

American philosopher and educator

Scientific principles and laws do not lie on the surface of nature. They are hidden, and must be wrested from nature by an active and elaborate technique of inquiry.

*Reconstruction in Philosophy*

Chapter II (p. 32)

Henry Holt & Co. New York, New York, USA. 1920

## SCIENTIFIC PROBLEMS

### Mayr, Ernst 1904–2005

German-born American biologist

Actually most scientific problems are far better understood by studying their history than their logic.

*The Growth of Biological Thought: Diversity, Evolution, and Inheritance*

Chapter I (p. 6)

Harvard University Press. Cambridge, Massachusetts, USA. 1982

## SCIENTIFIC PROCESS

### Brown, Samuel 1817–56

Chemist

By the scientific process there is effected the elaboration of a beautiful orderliness from the midst of a chaos of sensations.

*Lectures on the Atomic Theory and Essays Scientific and Literary*

(Volume 1)

The History of Science (p. 299)

Thomas Constable & Co. Edinburgh, Scotland. 1858

## SCIENTIFIC PROGRESS

### Anthony, H. D.

No biographical data available

As a prelude to any scientific progress there must be a means of recording, a framework of time within which to record, and a system of measurement: an alphabet, a calendar and a system of counting.

*Science and Its Background*

Chapter III (p. 25)

Macmillan & Co Ltd. London, England. 1948

### Brooks, William Keith 1848–1908

American zoologist

The path of scientific progress is strewn with beliefs which have been abandoned for lack of evidence, as burst shells strew a battlefield, and it is our boast that they are abandoned, and not lugged along the line of march. As a shell which has failed to burst is, now and then, picked up on some old battlefield, by someone on whom experience is thrown away, and is exploded by him in the bosom of his approving family, with disastrous results, so one of these abandoned beliefs may be dug up by the head of some intellectual family, to the confusion of those who follow him as their leader.

*The Foundations of Zoology*

Lecture VI (p. 126)

The Macmillan Co. New York, New York, USA. 1899

### Bush, Vannevar 1890–1974

American electrical engineer and physicist

Scientific progress on a broad front results from free play of free intellects, working on subjects of their own choice, in the manner dictated by their curiosity for the exploration of the unknown.

*Science: The Endless Frontier*

Chapter 1 (p. 2)

US Government Printing Office. Washington, D.C. 1945

### Compton, Karl Taylor 1887–1954

American educator and physicist

The geographical pioneer is now supplanted by the scientific pioneer.... Without the scientific pioneer our civilization would stand still and our spirit would stagnate; with him mankind will continue to work toward his higher density. This being so, our problem is to make science as effective an element as possible in our American program for social progress.

*A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton*

During the Years 1930–1949 (p. 2)

Undergraduate Association, MIT. Cambridge, Massachusetts, USA. 1955

The whole history of scientific progress illustrates the importance of free communication of ideas, of co-operative work at all levels, of adequate support and facilities, and above all, of high grade research workers and top-notch leadership.

*A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton During the Years 1930–1949* (p. 11)  
Undergraduate Association, MIT, Cambridge, Massachusetts, USA. 1955

**Crick, Francis Harry Compton** 1916–2004

English biochemist

It can be confidently stated that our present knowledge of the brain is so primitive – approximately at the stage of the four humours in medicine or of bleeding in therapy (what is psychoanalysis but mental bleeding?) – that when we do have fuller knowledge our whole picture of ourselves is bound to change radically. Much that is now culturally acceptable will then seem to be nonsense. People with training in the arts still feel that in spite of the alterations made in their life by technology – by the internal combustion engine, by penicillin, by the Bomb – modern science has little to do with what concerns them most deeply. As far as today's science is concerned this is partly true, but tomorrow's science is going to knock their culture right out from under them.

*Of Molecules and Men*

The Prospect Before Us (p. 94)

University of Washington Press, Seattle, Washington, USA. 1966

**Gould, Stephen Jay** 1941–2002

American paleontologist and evolutionary biologist

The most important scientific revolutions all include, as their only common feature, the dethronement of human arrogance from one pedestal after another of previous convictions about our centrality in the cosmos.

*Dinosaur in a Haystack: Reflections in Natural History*

Part Three, Chapter 13 (p. 164)

Random House, Inc. New York, New York, USA. 1995

**Gregory, Sir Richard Arman** 1864–1952

British science writer and journalist

The discovery of a law of Nature is always of great advantage to scientific progress. By the warp and woof of experiment, the man of science weaves a pattern from the threads of evidence, and presents the result to the world for anyone to improve.

*Discovery: Or the Spirit and Service of Science*

Chapter VII (p. 183)

Macmillan & Company Ltd. London, England. 1918

**Jacob, François** 1920–

French biologist

Contrary to what I once thought, scientific progress did not consist simply in observing, in accurately formulating experimental facts and drawing up a theory from them. It began with the invention of a possible world, or a fragment thereof, which was then compared by experimenta-

tion with the real world. And it was this constant dialogue between imagination and experiment that allowed one to form an increasingly fine-grained conception of what is called reality.

In William Calvin

*The Cerebral Symphony: Seashore Reflections on the Structure of Consciousness*

Chapter 10 (p. 206)

Bantam Books, New York, New York, USA. 1989

**Mather, Kirtley F.** 1888–1978

American geologist

The more we know about the world, the more mysterious and marvelous it becomes. The arrogance which characterized so many scientists of preceding generations has given place to a true humility, admirably displayed by most of the leaders in contemporary scientific progress.

In Edward H. Cotton

*Has Science Discovered God?*

Sermons from Stones (p. 3)

Thomas Y. Crowell Company, Publishers, New York, New York, USA. 1931

**Trimble, George S.** d. 1863

No biographical data available

Actually the biggest deterrent to scientific progress is a refusal of some people, including scientists, to believe that things that seem amazing can really happen.

In Charles Berlitz and William Moore

*The Philadelphia Experiment: Project Invisibility* (p. 8)

Souvenir Press Ltd. London, England. 1979

**Tyndall, John** 1820–93

Irish-born English physicist

One of the problems of science, on which scientific progress mainly depends, is to help the senses of man, by carrying them into regions which could never be attained without such help. Thus we arm the eye with the telescope when we want to sound the depths of space, and with the microscope when we want to explore motion and structure in their infinitesimal dimensions.

*Six Lectures on Light Delivered in America in 1872–1873* (3rd edition)

Lecture I (p. 12)

D. Appleton & Co. New York, New York, USA. 1901

**Virchow, Rudolf Ludwig Karl** 1821–1902

German pathologist and archaeologist

...if we would serve science, we must extend her limits, not only as far as our own knowledge is concerned, but in the estimation of others.

Translated by Frank Chase

*Cellular Pathology: As Based Upon Physiological and Pathological History*

Authors Preface (p. 7)

Dover Publications, Inc. New York, New York, USA. 1971

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

When science appears to be slowing down and, despite the efforts of many energetic individuals, comes to a

dead stop, the fault is often to be found in a certain basic concept that treats the subject too conventionally. Or the fault may lie in a terminology which, once introduced, is unconditionally approved and adopted by the great majority, and which is discarded with reluctance even by independent thinkers, and only as individuals in isolated cases.

*Goethe's Botanical Writings*

An Attempt to Evolve a General Comparative Theory (p. 81)  
University of Hawaii Press. Honolulu, Hawaii, USA. 1952

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

...Who put up that big City and Guilds place at South Kensington? Enterprising business men! They fancy they'll have a bit of science going on, they want a handy Expert ever and again, and there you are! And what do you get for research when you've done it? Just a bare living and no outlook. They just keep you to make discoveries, and if they fancy they'll use 'em they do.

*Tono-Bungay*

Book the Second, Chapter the Second, II (p. 156)

Duffield & Company. New York, New York, USA. 1921

**Weinberg, Steven** 1933–  
American nuclear physicist

I do not believe that scientific progress is always best advanced by keeping an altogether open mind. It is often necessary to forget one's doubts and to follow the consequences of one's assumptions wherever they may lead – the great thing is not to be free of theoretical prejudices, but to have the right theoretical prejudices. And always, the test of any theoretical preconception is in where it leads.

*The First Three Minutes: A Modern View of the Origin of the Universe*  
Chapter V (p. 119)

Basic Books, Inc. New York, New York, USA. 1993

## SCIENTIFIC PUBLISHING

**Agnew, Neil McK.**

No biographical data available

**Pyke, Sandra W.**

No biographical data available

...perhaps the most deceptive myth of all is that the Ph.D. represents the last hurdle in some kind of knowledge race. A student who has just cleared the jump should enjoy this illusion while it lasts. The science game now shifts to a new ground with new rules. Your rating first depends on getting some articles out; then, once you've demonstrated that you can publish, your rating depends on whether you are publishing in respectable journals; then your rating depends on whether you have a good book out; and then...

*The Science Game*

Chapter 12 (p. 146)

Prentice-Hall, Inc. Englewood Cliffs, New Jersey, USA. 1969

**Arber, Agnes Robertson** 1879–1960  
English botanist

A record of research should not resemble a casual pile of quarried stone; it should seem “not built, but born”, as Vasari said in praise of a building.

*The Mind and the Eye: A Study of the Biologist's Standpoint*  
Chapter V (p. 50)

At The University Press. Cambridge, England, USA. 1954

## Author undetermined

As this paper contains nothing which deserves the name either of experiment or discovery, and as it is, in fact, destitute of every species of merit, we should have allowed it to pass among the multitude of those articles which must always find their way into the collections of a society which is pledged to publish two or three volumes every year.... We wish to raise our feeble voice against innovations, that can have no other effect than to check the progress of science, and renew all those wild phantoms of the imagination which Bacon and Newton put to flight from her temple.

Review of Dr. Young's Bakerian Lecture

*Edinburgh Review*, January, 1803 (p. 450)

**Batchelor, G. K.** 1920–2000  
English applied mathematics professor and fluid mechanics engineer

Reading a paper is a voluntary and demanding task, and a reader needs to be enticed and helped and stimulated by the author.

Preoccupations of a Journal Editor

*Journal of Fluid Mechanics*, Volume 106, 1981 (p. 8)

**Buckle, Henry Thomas** 1821–62  
English historian

The publications of our scientific authors overflow with minute and countless details, which perplex the judgment, and which no memory can retain. In vain do we demand that they should be generalized, and reduced into order. Instead of that, the heap continues to swell. We want ideas, and get more facts. We hear constantly what nature is doing, but we rarely hear what man is thinking.

*History of Civilization in England* (Volume 2)

Chapter VI (p. 396)

D. Appleton & Company. New York, New York, USA. 1891

**Casimir, Hendrik B. G.** 1909–2000  
Dutch physicist

I should like to find a way of discouraging unnecessary publications, but I have not found a solution, save the radical one...that all scientific papers be published anonymously.

In Praise of Smallness – How Can We Return to Small Science

*Perspectives in Biology and Medicine*, Volume 23, Number 3, Spring 1980 (p. 383)

**Chargaff, Erwin** 1905–2002  
Austrian biochemist

Scientific journals must remain the preserve of articles capable of affecting the consensus of the scientific public. Books are the place for opinions, speculations, and fanciful accounts of ricocheting planets. The publisher has only to convince enough buyers to cover their cost of publication. In a free society with a vigorous press, there is little danger that an important idea will not get a fair hearing.

*Uncommon Sense: The Heretical Nature of Science*

Chapter 8 (pp. 149–150)

Oxford University Press, Inc. New York, New York, USA. 1993

**Comroe, Jr., Julius H.** 1911–84  
American physician

Almost every scientist working today can get his work published, somewhere, once he decides to “write it up”; maybe it will be in the Bulletin of the Podunk Medical Society rather than in a journal with international prestige or readership, or maybe it will be published only as an abstract. The main determinant of what is or is not published therefore seems to be the scientist, for it is he who decides to become or not to become an author.

Publish and/or Perish

*American Review of Respiratory Disease*, Volume 113, 1976

**Dubos, René Jules** 1901–82  
French-born American microbiologist and environmentalist

...a scientific paper should never try to make more than one point.

In B.D. Davis

Two Perspectives

*Perspectives in Biology and Medicine*, Volume 35, Number 1, Autumn

1991 (p. 38)

**Dyson, Freeman J.** 1923–  
American physicist and educator

Most of the papers which are submitted to the Physical Review are rejected, not because it is impossible to understand them, but because it is possible. Those which are impossible to understand are usually published.

Innovation in Physics

*Scientific American*, Volume 199, Number 3, September, 1958

**Elder, Joseph**  
No biographical data available

Publication is the end-product of research. Research without publication is sterile.

Jargon – Good and Bad

*Science*, Volume 119, Number 3095, 23 April, 1954 (p. 536)

**Gastel, Barbara**  
American medical science writing educator

Every master’s thesis or doctoral dissertation should be accompanied by a lay summary or press release written by the graduate student (with the guidance, if possible, of

a science writing instructor or public information officer at the student’s institution).

*Earth and Life Science Editing*, Volume 24, 1985 (p. 3)

**Gelernter, David** 1955–  
Computer scientist

Scientists nowadays rarely know how to read seriously. They are accustomed to strip-mining a paper to get the facts out and then moving on, not to mollycoddling the thing in search of nuances; there probably aren’t any.

In John Brokman and Katinka Matson (eds.)

*How Things Are: A Tool Kit For the Mind*

Study Talmud (p. 213)

William Morrow & Company, Inc. New York, New York, USA. 1995

**Glaisher, James Whitbread Lee** 1848–1928  
English mathematician

In other branches of science, where quick publication seems to be so much desired, there may possibly be some excuse for giving to the world slovenly or ill-digested work, but there is no excuse in mathematics. The form ought to be as perfect as the substance, and the demonstrations as rigorous as those of Euclid. The mathematician has to deal with the most exact facts of Nature, and he should spare no effort to render his interpretation worthy of his subject, and to give to his work its highest degree of perfection.

Presidential Address, British Association for the Advancement of Science

*Nature*, Section A (1890), Volume 42 (p. 467)

**Gould, Stephen Jay** 1941–2002  
American paleontologist, evolutionary biologist, and historian of science

I do not know when the technical and popular prose of science became separated, although I accept the inevitability of such a division as knowledge became increasingly more precise, detailed, and specialized. We have now reached the point where most technical literature not only falls outside the possibility of public comprehension but also (as we would all admit in honest moments) outside our own competence in scientific disciplines far removed from our personal expertise. I trust that we all regard this situation as saddening, even though we accept its necessity.

Take Another Look

*Science*, Volume 286, Number 5441, October 29, 1999 (p. 899)

**Hagstrom, Warren O.**  
No biographical data available

Manuscripts submitted to scientific periodicals are often called “contributions,” and they are, in fact, gifts. Authors do not usually receive royalties or other payments, and their institutions may even be required to aid in the financial support of the periodical. On the other hand, manuscripts for which the scientific authors do receive financial payments, such as textbooks and popularizations, are, if not despised, certainly held in much lower esteem than articles containing original research results.

*The Scientific Community*

Basic Books, Inc. New York, New York, USA. 1965

**Haldane, John Burdon Sanderson** 1892–1964  
English biologist

Four stages of acceptance: (a) this is worthless nonsense; (b) this is an interesting, but perverse, point of view; (c) this is true, but quite unimportant; (d) I always said so.  
*Journal of Genetics*, Volume 58 (p. 464)

**Hudson, Jeffrey**  
No biographical data available

There's this desert prison...with an old prisoner, resigned to his life, and a young one just arrived. The younger one talks constantly of escape, and, after a few months, he makes a break. He's gone a week, and then he's brought back by the guard. He's half dead, crazy with hunger and thirst. He describes how awful it was to the old prisoner. The endless stretches of sand, no oasis, no sign of life anywhere. The old prisoner listens for awhile, then says. "Yep. I know. I tried to escape myself, twenty years ago." The younger prisoner says "You did? Why didn't you tell me, all these months I was planning my escape? Why didn't you let me know it was impossible?" And the old prisoner shrugs, and says, "So who publishes negative results?"  
*A Case of Need*  
Tuesday, 11 October  
Nine (p. 121)  
The World Publishing Company. New York, New York, USA. 1968

**Huth, Edward Janavel** 1923–  
American physician

Why should the investigators confine themselves to one paper when they can slice up data and interpretations into two, three, five, or more papers that will better serve their needs when they face promotion or tenure committees? "Salami science" does not always equal baloney, but such divided publication is often an abuse of scientific publication.  
Irresponsible Authorship and Wasteful Publication  
*Annals of Internal Medicine*, Volume 104, 1986

**Ingle, Dwight J.** 1907–78  
Biologist and endocrinologist

Science cannot be equated to measurement, although many contemporary scientists behave as though it can. For example, the editorial policies of many scientific journals support the publication of data and exclude the communication of ideas.  
*Principles of Research in Biology and Medicine*  
Chapter 1 (p. 3)  
Lippincott. Philadelphia, Pennsylvania, USA. 1958

**Kennedy, Donald**  
No biographical data available

All the thinking, all the textual analysis, all the experiments and the data-gathering aren't anything until we

write them up. In the world of scholarship we are what we write.

*Academic Duty* (p. 186)  
Harvard University Press. Cambridge, Massachusetts, USA. 1997

**Maslow, A. H.** 1908–70  
American psychologist

I do not recall seeing in the literature with which I am familiar any paper that criticized another paper for being unimportant, trivial or inconsequential.

*Motivation and Personality*  
Chapter 2 (p. 14)  
Harper & Row, Publishers. New York, New York. 1970

**Mayo, William J.** 1861–1939  
American physician

Reading papers is not for the purpose of showing how much we know and what we are doing, but is an opportunity to learn.  
The Value of the Weekly General Staff Meeting  
*Proceedings of Staff Meetings, Mayo Clinic*, Volume 10, January 30, 1935

**Medawar, Sir Peter Brian** 1915–87  
Brazilian-born English zoologist

...it is no use looking to scientific "papers," for they not merely conceal but actively misrepresent the reasoning that goes into the work they describe.... Nor is it any use listening to accounts of what scientists say they do, for their opinions vary widely enough to accommodate almost any methodological hypothesis we may care to devise. Only unstudied evidence will do – and that means listening at a keyhole.

*The Art of the Soluble*  
Hypothesis and Imagination (p. 151)  
Methuen & Company Ltd. London, England. 1967

**Nelkin, Dorothy** 1933–2003  
American sociologist

...too often science in the press is more a subject for consumption than for public scrutiny, more a source of entertainment than of information. Too often science is presented as an arcane activity outside and above the sphere of normal human understanding, and therefore beyond our control. Too often the coverage is promotional and uncritical, encouraging apathy, a sense of impotence, and the ubiquitous tendency to defer to expertise.

*Selling Science: How the Press Covers Science and Technology*  
Chapter 10 (p. 173)  
W.H. Freeman & Company. New York, New York, USA. 1995

**Price, Derek John de Solla** 1922–83  
English science historian and information scientist

...scientists have a strong urge to write papers but only a relatively mild one to read them.

*Little Science, Big Science*  
Chapter 3 (pp. 69–70)  
Columbia University Press. New York, New York, USA. 1963

**Rowland, Henry Augustus** 1848–1901  
American physicist

A hermit philosopher we can imagine might make many useful discoveries. Yet, if he keeps them to himself, he can never claim to have benefited the world in any degree. His unpublished results are his private gain, but the world is not better off until he has made them known in language strong enough to call attention to them and to convince the world of their truth.

*The Physical Papers of Henry Augustus Rowland*  
The Highest Aim of the Physicist (p. 669)  
Johns Hopkins Press, Baltimore, Maryland, USA. 1902

**Schrödinger, Erwin** 1887–1961  
Australian theoretical physicist

...a typical scientific paper has never pretended to be more than another little piece in a larger jigsaw – not significant in itself but as an element in a grander scheme. This technique, of soliciting many modest contributions to the vast store of human knowledge, has been the secret of Western science since the seventeenth century, for it achieves a corporate, collective power that is far greater than any one individual can exert.

Information, Communication, Knowledge  
*Nature*, Volume 224, Number 5217, October 25, 1969 (p. 324)

Primary scientific papers are not meant to be final statement of indisputable truths; each is merely a tiny tentative step forward, through the jungle of ignorance.

Information, Communication, Knowledge  
*Nature*, Volume 224, Number 5217, October 25, 1969 (p. 324)

**Shrady, George**  
No biographical data available

The time is already past when any man can hope to rise to be an authority in any department of medical science through any royal road of social influence, political manipulations, or even personal charms. Those who are to be the leaders and guides of medical science for the coming generation must earn their position by persistent, original investigation, and by faithfully recording their experience in the permanent literature of the day.

Medical Authorship  
*Medical Record*, Volume 2, 1867

**Simpson, Michael A.**  
No biographical data available

We still consistently overvalue poor research and semi-literate publication; again, partly, because quantity, in number of publications, is easier to measure than quality.

A Mythology of Medical Education  
*Lancet*, Volume 3, 1974

**Wilson, Logan**  
No biographical data available

Results unpublished are little better than those never achieved.... One must write something and get it into

print. Situational imperatives dictate a “publish or perish” credo within the ranks.

*The Academic Man: A Study in the Sociology of a Profession* (p. 197)  
Oxford University Press, Inc. London, England. 1942

**Woolley, Sir Charles Leonard** 1880–1960  
English archaeologist

The prime duty of the field archaeologist is to collect and set in order material with not all of which he can himself deal at first hand. In no case will the last word be with him; and just because that is so his publication of the material must be minutely detailed, so that from it others may draw not only corroboration of his views but fresh conclusions and more light.

*Digging Up the Past*  
Chapter V (pp. 133–134)  
Charles Scribner's Sons, New York, New York, USA. 1931

**Ziman, John M.** 1925–2005  
British physicist

The moment of truth for many young scientists comes when they first act as a referee for a scientific paper; having striven for years to get their own work published against the criticism of anonymous referees, they find themselves, by psychological role-reversal, on the other side of the fence. Thus do we eventually internalize the “scientific attitude.”

*Reliable Knowledge*  
Chapter 6 (fn 13, p. 132)  
Cambridge University Press, Cambridge, England. 1978

## SCIENTIFIC PURSUIT

**Dumas, Jean Baptiste-Andre** 1800–84  
French biochemist

My life has been divided between the service of science and that of my country. I would rather have remained the servant of science alone; but, sprung from the obscure ranks of democracy, I have always thought that my country had done so much for me that no devotion on my part could be refused to it. If I have deceived myself, science itself will not hold me guilty. In limiting myself to scientific pursuits, I should have been happier, my life would have been a less anxious one, and perhaps I should have attained a larger view of truth.

Quoted in Thomas Edward Thorpe  
*Essays in Historical Chemistry*  
Chapter XI (p. 361)  
Macmillan & Co Ltd. London, England. 1902

**Shelley, Mary Wollstonecraft** 1797–1851  
English Romantic writer

None but those who have experienced them can conceive of the enticements of science. In other studies you go as far as others have gone before you, and there is nothing

more to know; but in a scientific pursuit there is continual food for discovery and wonder.

*Frankenstein: Or, The Modern Prometheus*

Chapter IV (p. 68)

George Routledge & Sons, London, England. 1888

## SCIENTIFIC RESEARCH

**Davy, Sir Humphry** 1778–1829

English chemist

When, by the unrivalled power of one great genius, and the industry and talent of his illustrious disciples, the laws of the motions of the great masses of matter composing the universe were discovered, and most of the physical phenomena connected with them solved, it appeared as if the field of scientific research were exhausted, as if the rich crops taken from the soil had rendered it sterile, and that little was left for the ingenuity and labour of future inquirers; time, however, has proved how unfounded was this opinion, and how nearly approaching to infinite, are the objects of natural philosophy.

In John Davy (ed.)

*The Collected Works of Sir Humphry Davy* Volume 7

Address of the President (pp. 7–8)

Smith, Elder & Co. London, England. 1840

**Gore, George** 1826–1909

English electrochemist

Scientific research deals fearlessly, not only with things that lie beyond our senses and observation, but also with those which altogether surpass even our conception or imagination; such as extremely minute and immensely great magnitudes, distances and velocities.

*The Art of Scientific Discovery*

Part I, Chapter I (p. 6)

Longmans, Green & Co. London, England. 1878

## SCIENTIFIC RESULTS

**Witt, Otto N.** 1875–1923

German chemist

...scientific results are like the grains of sand, the importance of which lies in their aggregation.

Evolution in Applied Chemistry

*Nature*, Volume 81, Number 2071, July 8, 1909

## SCIENTIFIC REVOLUTION

**Gould, Stephen Jay** 1941–2002

American paleontologist and evolutionary biologist

The most important scientific revolutions all include, as their only common feature, the dethronement of human arrogance from one pedestal after another of previous convictions about our centrality in the cosmos.

*Dinosaur in a Haystack: Reflections in Natural History*

Jove's Thunderbolts (p. 164)

Three Rivers Press. New York, New York, USA. 1995

**Casimir, Hendrik B. G.** 1909–2000

Dutch physicist

Scientific revolutions are not made by scientists. They are declared post factum, often by philosophers and historians of science rather than by the scientists themselves.

*Haphazard Reality*

Chapter 2 (p. 33)

Harper & Row. New York, New York, USA. 1983

## SCIENTIFIC SOCIETY

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

To say that we live in an age of science is a commonplace, but like most commonplaces it is only partially true. From the point of view of our predecessors, if they could view our society, we should, no doubt, appear to be very scientific, but from the point of view of our successors it is probable that the exact opposite would seem to be the case.

*The Scientific Outlook*

Introduction (p. 9)

George Allen & Unwin. London, England. 1931

## SCIENTIFIC SPIRIT

**Bernard, Claude** 1813–78

French physiologist

In my opinion the true scientific spirit is that whose high aspiration fertilize the sciences and draw them on in search of truths which are still beyond them but which must not be suppressed, because they have been attacked by stronger and more delicate philosophic minds.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Part Three, Chapter III, Section iv (p. 223)

Henry Schuman, Inc. New York, New York, USA. 1927

**Burroughs, John** 1837–1921

American naturalist and essayist

The scientific spirit, when applied to historical research, is – like chemistry applied to agriculture – valuable, but good crops have been and can be grown without it.

Arnold on Emerson and Carlyle

*The Century*, Volume XXVII (p. 926)

**Clifford, William Kingdon** 1845–79

English philosopher and mathematician

There is no scientific discoverer, no poet, no painter, no musician, who will not tell you that he found ready made his discovery or poem or picture – that it came to him from outside, and that he did not consciously create it from within.

In Leslie Stephen and Frederick Pollock (eds.)  
*Lectures and Essays* (Volume 1)  
 Some of the Conditions of Mental Development (p. 99)  
 Macmillan & Company Ltd. London, England. 1879

The subject of science is the human universe; that is to say, everything that is, or has been, or may be related to man.

In Leslie Stephen and Frederick Pollock (eds.)  
*Lectures and Essays* (Volume 1)  
 On the Aims and Instruments of Scientific Thought (p. 126)  
 Macmillan & Company Ltd. London, England. 1879

**Compton, Arthur H.** 1892–1962  
 American physicist

The spirit of science knows no national or religious boundaries, and it is thus a powerful force for the peace of the world.

*Les Prix Nobel. The Nobel Prizes in 1927*  
 Nobel banquet speech for award received in 1927  
 Nobel Foundation. Stockholm, Sweden. 1928

**Darwin, Sir George Howard** 1845–1912  
 English astronomer and mathematician

The problems involved in the origin and history of the solar and of other celestial systems have little bearing upon our life on the earth, yet these questions can hardly fail to be of interest to all those whose minds are in any degree permeated by the scientific spirit.

*The Tides and Kindred Phenomena in the Solar System*  
 Preface (p. vi)  
 Houghton Mifflin & Co. Boston, Massachusetts, USA. 1898

**Franklin, Benjamin** 1706–90  
 American printer, scientist, and diplomat

Furnished as all Europe now is with Academies of Science, with nice instruments and the spirit of experiment, the progress of human knowledge will be rapid and discoveries made of which we have at present no conception. I begin to be almost sorry I was born so soon, since I cannot have the happiness of knowing what will be known a hundred years hence.

*The Writings of Benjamin Franklin*  
 Letter, July 27, 1783, to naturalist Sir Joseph Banks (p. 74)  
 Macmillan & Company Ltd. London, England. 1906

**Garrod, Archibald** 1857–1936  
 English physician

...scientific method is not the same as the scientific spirit. The scientific spirit does not rest content with applying that which is already known, but is a restless spirit, ever pressing forward towards the regions of the unknown....

*Archibald Garrod and the Individuality of Man*  
 Chapter 7 (p. 82)  
 Clarendon Press. Oxford, England. 1993

**Hocking, W. E.** 1873–1966  
 American philosopher

We are scientific people and we want our students to feel the enthusiasm and promise of the scientific method. We

want them to feel the moral quality of exact technique, as exact as the subject matter permits. We want them to feel that science is a spiritual experience.

In Lloyd William Taylor  
*Physics: The Pioneer Science* (Volume 1)  
 Chapter 6 (p. 63)  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1941

**Huxley, Thomas Henry** 1825–95  
 English biologist

...the scientific spirit is of more value than its products, and irrationally held truths may be more harmful than reasoned errors. Now the essence of the scientific spirit is criticism. It tells us that whenever a doctrine claims our assent we should reply, "Take it if you can compel it." The struggle for existence holds as much in the intellectual as in the physical world. A theory is a species of thinking, and its right to exist is coextensive with its power of resisting extinction by its rivals.

*Collected Essays* (Volume 2)  
*Darwiniana*  
 The Coming of Age of "The Origin of Species" (p. 229)  
 Macmillan & Company Ltd. London, England. 1904

**Millikan, Robert Andrews** 1868–1953  
 American physicist

The God of science is the Spirit of rational order, and of orderly development. Atheism as I understand it is the denial of the existence of the spirit. Nothing could therefore be more antagonistic to the whole spirit of science.

*Evolution in Science and Religion*  
 Chapter III (p. 88)  
 Yale University Press. New Haven, Connecticut, USA. 1927

**Mivart, St. George Jackson** 1827–1900  
 English biologist

The scientific spirit is, above all, an inquiring spirit. It can never rest satisfied with what has become known, but must ever press on in all directions into fields of truth yet unexplored, and even seek to ascend into regions commonly deemed inaccessible to human research.

*The Groundwork of Science; A Study of Epistemology*  
 Chapter I (p. 1)  
 G.P. Putnam's Sons. New York, New York, USA. 1898

**Peirce, Charles Sanders** 1839–1914  
 American scientist, logician, and philosopher

...the scientific spirit requires a man to be at all times ready to dump his whole cartload of beliefs, the moment experience is against them.

In Justus Buchler (ed.)  
*Philosophical Writings of Peirce*  
 Chapter 4 (pp. 46–47)  
 Dover Publications, Inc. New York, New York, USA. 1955

**Rabi, Isidor Isaac** 1898–1988  
 Austrian-born American physicist

The essence of the scientific spirit is to use the past only as a springboard to the future.

In A.A. Warner, Dean Morse, and T.E. Cooney (eds.)  
*The Environment of Change*  
 The Revolution in Science (p. 47)  
 Columbia University Press. New York, New York, USA. 1969

**Russell, Bertrand Arthur William** 1872–1970  
 English philosopher, logician, and social reformer

The scientific spirit is not an affair of quotation, of externally acquired information, anymore than manners are an affair of the etiquette-book.

*Mysticism and Logic: And Other Essays*  
 Chapter II (pp. 43–44)  
 Longmans, Green & Co. London, England. 1939

To say that we live in an age of science is a commonplace, but like most commonplaces it is only partially true. From the point of view of our predecessors, if they could view our society, we should, no doubt, appear to be very scientific, but from the point of view of our successors it is probable that the exact opposite would seem to be the case.

*The Scientific Outlook*  
 Introduction (p. 9)  
 George Allen & Unwin. London, England. 1931

**Swain, Joseph**  
 No biographical data available

A greater gain to the world perhaps than all the gain of scientific knowledge is the growth of the scientific spirit, with its courage and serenity, its discipline of conscience, its intellectual morality and its habitual response to any disclosure of the truth.

Moral Training Thru the Agency of the Public School  
*Addresses and Proceedings – National Education Association of the United States*  
 Discussion by Joseph Swain (p. 383)  
 National Education Association  
 1907

**Weisskopf, Victor Frederick** 1908–2002  
 Austrian-American physicist

Science, of course, is not the only way of giving sense to our lives. Art does it; so does religion. But when this sense is missing, that's when spiritual pollution is present, when people don't know why they are here. We can have leisure time diversions, of course. But until we learn to fill the vacuum in our minds with content – with meaning, with sense – we will never find solutions to our problems.

*The Privilege of Being a Physicist*  
 Chapter 13 (p. 107)  
 W.H. Freeman & Company. New York, New York, USA. 1989

**Whitman, Walt** 1819–92  
 American poet, journalist, and essayist

I like the scientific spirit – the holding off, the being sure but not too sure, the willingness to surrender ideas when the evidence is against them: this is ultimately fine – it always keeps the way beyond open – always gives life, thought, affection, the whole man, a chance to try over again after a mistake – after a wrong guess.

In Horace Traubel  
*Walt Whitman's Camden Conversations* (pp. 168–169)  
 Rutgers University Press. New Brunswick, New Jersey, USA. 1973

## SCIENTIFIC STUDY

**Chamberlin, Thomas Chrowder** 1843–1928  
 American geologist

The distinction between scientific study and the study of science is much the same as that between creative scholarship and acquisitive scholarship; between modern research and ancient erudition.

The Ethical Functions of Scientific Study  
*The Journal of Geology*, Volume 2, Number 6, December, 1888 (p. 382)

## SCIENTIFIC TEACHING

**Lasalle, Ferdinand** 1825–64  
 German jurist and socialist political activist

Unrestrained freedom of scientific teaching is...not only an inalienable right of the individual, but, what is more to the point, it is, primarily and most particularly, a necessity of life to the community; it involves the life of the State itself.

Translated by Thorstein B. Veblen  
 In Kuno Francke and Isidore Singer  
*The German Classics: Masterpieces of German Literature Translated Into English*  
 Science and the Workingmen (p. 436)  
 The German Publication Society. New York, New York, USA. 1914

## SCIENTIFIC TECHNIQUE

**Russell, Bertrand Arthur William** 1872–1970  
 English philosopher, logician, and social reformer

The essential characteristic of scientific technique is the utilization of natural forces in ways not evident to the totally uninstructed.

*The Scientific Outlook*  
 Chapter VI (p. 141)  
 George Allen & Unwin. London, England. 1931

The tendency of scientific technique is to cause everything to be regarded as not just a brute datum, but raw material for the carrying out of some human purpose.

*The Scientific Outlook*  
 Chapter IX (p. 177)  
 George Allen & Unwin. London, England. 1931

## SCIENTIFIC THEORY

**Frazer, Sir James** 1854–1941  
Scottish social anthropologist

...the history of thought should warn us against concluding that because the scientific theory of the world is the best that has yet been formulated, it is necessarily complete and final. We must remember that at bottom the generalizations of science or, in common parlance, the laws of nature are merely hypotheses devised to explain that ever-shifting phantasmagoria of thought which we dignify with the high-sounding names of the world and the universe. In the last analysis magic, religion, and science are nothing but theories of thought; and as science has supplanted its predecessors, so it may hereafter be itself superseded by some more perfect hypothesis

*The Golden Bough* Volume 2

Chapter XIII (p. 306)

Macmillan & Co Ltd. London, England. 1913

### Reich, Wilhelm

...scientific theory is a contrived foothold in the chaos of living phenomena.

*The Function of the Orgasm* (Volume 1)

Chapter II (pp. 39–40)

The Macmillan Company. New York, New York, USA. 1973

## SCIENTIFIC THINKERS

**Clifford, William Kingdon** 1845–79  
English mathematician

...the world in general, contains three classes of persons. In the first place, it contains scientific thinkers; that is to say, persons whose thoughts have very frequently the characters which I shall presently describe. Secondly, it contains persons who are engaged in work upon what are called scientific subjects, but who in general do not, and are not expected to, think about these subjects in a scientific manner. Lastly, it contains persons who suppose that their work and their thoughts are unscientific, but who would like to know something about the business of the other two classes aforesaid.

*Lectures and Essays, by the Late William Kingdon Clifford*

On the Aims and Instruments of Scientific Thought (p. 85)

Macmillan & Co Ltd. London, England. 1886

## SCIENTIFIC THOUGHT

### Advertisement

Scientific thought deeply influences over everyday life; it is important to our spiritual life, rational and aesthetic, and affords a more intimate insight into the source of all human thought and artistic creation.

Advertisement by The New School for Social Research

*Scientific American*, Volume 2, Number 2, February, 1961 (p. 85)

**Boone, Richard Gause** 1849–1923  
American educator

Scientific thought is no more the province of the physicist than of the philanthropist; it no more belongs to botany than to ethics; to diatoms, than to the Decalogue.

*Science of Education*

Part II, Chapter XIV (p. 186)

Charles Scribner's Sons. New York, New York, USA. 1904

**Clifford, William Kingdon** 1845–79  
English mathematician

...scientific thought does not mean thought about scientific subjects with long names. There are no scientific subjects. The subject of science is the human universe; that is to say, everything that is, or has been, or may be related to man.

In Leslie Stephen and Frederick Pollock

*Lectures and Essays, by the Late William Kingdon Clifford* (2nd edition)

On the Aims and Instruments of Scientific Thought (p. 86)

Macmillan & Co Ltd. London, England. 1886

...scientific thought is not an accompaniment or condition of human progress, but human progress itself.

*Lectures and Essays, by the Late William Kingdon Clifford* (2nd edition)

On the Aims and Instruments of Scientific Thought (p. 109)

Macmillan & Co Ltd. London, England. 1886

**Einstein, Albert** 1879–1955  
German-born physicist

Scientific thought is a development of pre-scientific thought.

*Essays in Science*

The Problem of Space, Ether, and the Field in Physics (p. 61)

Philosophical Library. New York, New York, USA. 1934

### Hill, Alexander

No biographical data available

There is a limit beyond which scientific thought cannot penetrate; not because the outer realm does not appertain to science, but because experience which bears up thought with varying degrees of firmness – just as matter in its several conditions of aggregation, solid, liquid, gaseous, supports animals which stand, swim, fly – becomes too rarified a medium for human intelligence to mount in.

*Introduction to Science*

Chapter I (p. 12)

The Macmillan Co. New York, New York, USA. 1900

**Tyndall, John** 1820–93  
Irish-born English physicist

I have thus led you to the outer rim of speculative science, for beyond the nebulae scientific thought has never ventured hitherto, and have tried to state that which I considered ought, in fairness, to be outspoken.

*The World's Best Orations: From the Earliest Period to the Present Time* (Volume 9)

The Origin of Life (p. 3667)

Ferd. P. Keiser. St. Louis, Missouri, USA. 1899

**Timiriacheff, C. A.**

Russian botanist

Scientific thought, like every other form of mental activity, can work only under conditions of absolute liberty. Oppressed by the weight of utilitarian demands, science can produce but pitiable artificial work, after the same kind as any meagre and mechanical work of art fashioned under similar circumstances.

Translated by Anna Sheremeteva

*Die Sinne der Pflanzen*

Chapter I (p. 9)

Longmans, Green &amp; Co. London, England. 1912

**SCIENTIFIC THOUGHT: HISTORY OF****Jammer, Max** 1915–

Israeli physicist and philosopher

...the study of the history of scientific thought is most essential to a full understanding of the various aspects and achievements of modern culture. Such understanding is not to be reached by dealing with the problems of priority in the history of discoveries, the details of the chronology of inventions, or even the juxtaposition of all the histories of the particular sciences. It is the history of scientific thought in its broadest perspective against the cultural background of the period which has decisive importance for the modern mind.

*Concepts of Space* (2nd edition)

Preface to the First Edition (p. vii)

Harvard University Press. Cambridge, Massachusetts, USA. 1969

**SCIENTIFIC TRAINING****Huxley, Thomas Henry** 1825–95

English biologist

The introduction of scientific training into the general education of the country is a topic upon which I could not have spoken without some more or less apologetic introduction a few years ago. But upon this, as upon other matters, public opinion has of late undergone a rapid modification. Committees of both houses of the Legislature have agreed that something must be done in this direction, and have even thrown out timid and faltering suggestions as to what should be done; while at the opposite pole of society, committees of working-men have expressed their conviction that scientific training is the one thing needful for their advancement, whether as men or as workmen.

Scientific Education: Notes of an After-Dinner Speech

*The Eclectic Magazine*, New Series, Volume X, July-December, 1869

(p. 150)

...if scientific training is to yield its most eminent results,

it must, I repeat, be made practical. That is to say, in explaining to a child the general phenomena of nature, you must, as far as possible, give reality to your teaching by object-lessons ...

Scientific Education: Notes of an After-Dinner Speech

*The Eclectic Magazine*, New Series, Volume X, July-December, 1869

(p. 155)

**SCIENTIFIC TRENDS****Cooper, Leon** 1930–

American physicist

I like to say sometimes that scientific fashion is like fashion in men's and women's clothes.... One year the ties are wide; the next year they're narrow. One year the skirts are high; the next year they're low. And if everyone is wearing a short skirt, you're just hopelessly out of fashion if you're wearing a long skirt. That's the way it sometimes seems with science. You want to be in the middle of what everyone is talking about; you want to be in the mainstream. And the next year it might be something completely different.

In George Johnson

*In the Palaces of Memory: How We Build the Worlds Inside Our Heads*

A Model of Memory (p. 149)

Alfred A. Knopf. New York, New York, USA. 1991

**SCIENTIFIC TRUTH****Agassiz, Jean Louis Rodolphe** 1807–73

Swiss-born American naturalist, geologist, and teacher

...the time has come when scientific truth must cease to be the property of the few, when it must be woven into the common life of the world; for we have reached the point where the results of science touch the very problem of existence, and all men listen for the solving of that mystery.

*Methods of Study in Natural History*

Chapter IV (p. 42)

Ticknor &amp; Fields. Boston, Massachusetts, USA. 1863

**Black, Max** 1909–88

Anglo-American philosopher

Scientists can never hope to be in a position to know the truth, nor would they have any means of recognizing it if it came into their possession.

*Critical Thinking: An Introduction to Logic and Scientific Method*

Chapter 19 (p. 396)

Prentice-Hall. New York, New York, USA. 1952

**Broad, William** 1951–

Science writer

**Wade, Nicholas**

British-born scientific writer

Like any other profession, science is ridden with clannishness and clubbiness. This would be in no way surprising, except that scientists deny it to be the case. The pursuit of scientific truth is held to be a universal quest that recognizes neither national boundaries nor the barriers of race, creed or class. In fact, researchers tend to organize themselves into clusters of overlapping clubs.

*Betrayers of the Truth*

Chapter 9 (p. 180)

Simon &amp; Schuster. New York, New York, USA. 1982

**Chargaff, Erwin** 1905–2002

Austrian biochemist

The initial incommunicability of truth, scientific or otherwise, shows that we think in groves, and that it is painful for us to be torn away from the womblike security of accepted concepts.

*Heraclitean Fire: Sketches from a Life Before Nature*

Part II

The Exquisiteness of Minute Differences (p. 86)

**Crichton, Michael** 1942–

American novelist

Scientists have an elaborate line of bullshit about how they are seeking to know the truth about nature.

*Jurassic Park*

Aviary (p. 284)

Alfred A. Knopf. New York, New York, USA. 1990

**de Gubernatis, Giuseppe Angelo**

No biographical data available

A scientific truth requires years and sometimes centuries of demonstration before it can obtain for itself general acceptance, and, rather than suffer martyrdom, its defender will generally prefer to succumb to the infamous papal motto of “Laudabiliter se subiecit;” but an error that is founded upon a sense of the supernatural does not need the electric wires to flash it from heart to heart and awaken a response in the credulous world; while the ponderous dialectics of an entire army of rationalists will not thereafter suffice to dislodge it.

*Zoological Mythology; or, The Legends of Animals*

Preface (pp. xi–xii)

Trübner &amp; Co. London, England. 1872

**Disraeli, Benjamin, First Earl****of Beaconsfield** 1804–81

English prime minister, founder of Conservative Party, and novelist

Scientific like spiritual truth has ever from the beginning been descending from Heaven to man.

*Lothair*

Introduction (pp. xvii–xviii)

Longmans, Green &amp; Co. London, England. 1879

**Dunne, Finley Peter** 1867–1936

American journalist and humorist

There’s always wan encouragin’ thing about th’ sad scientific facts that come out ivry week in th’ pa-apers. They’re usually not throe.

*Mr. Dooley on Making a Will and Other Necessary Evils*

On the Descent of Man (p. 90)

Charles Scribner’s Sons. New York, New York, USA. 1919

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

Amid all our faulty attempts at expression the kernel of scientific truth steadily grows; and of this truth it may be said – The more it changes, the more it remains the same.

*The Nature of the Physical World*

Conclusion (p. 353)

The Macmillan Company. New York, New York, USA. 1930

**Editor**

The practical development of a scientific truth is somewhat like the growth from a new seed. We recognize the existence of the plant, we ascertain some of its virtues, but we cannot tell its full uses, how soon it will mature, nor how large the tree will be.

In James Means

*The Aeronautical Annual*

Samuel Pierpoint Langley (p. 9)

W.B. Clarke &amp; Co. Boston, Massachusetts, USA. 1896

**Einstein, Albert** 1879–1955

German-born physicist

It is difficult even to attach a precise meaning to the term “scientific truth.” Thus the meaning of the word “truth” varies according to whether we deal with a fact of experience, a mathematical proposition, or a scientific theory. “Religious truth” conveys nothing clear to me at all.

*Ideas and Opinions*

On Scientific Truth (p. 261)

Crown Publishers, Inc. New York, New York, USA. 1954

**Feynman, Richard P.** 1918–88

American theoretical physicist

No government has the right to decide on the truth of scientific principles, nor to prescribe in any way the character of the questions investigated.

*The Meaning of It All: Thoughts of a Citizen Scientist*

Chapter II (p. 57)

Perseus Books. Reading, Massachusetts, USA. 1998

**Foster, Sir Michael** 1836–1907

English physiologist

...no scientific truth is born anew, coming by itself and of itself. Each new truth is always the offspring of something which has gone before, becoming in turn the parent of something coming after.

In Robert Emmons Rogers  
*The Voice of Science in Nineteenth-century Literature*  
 The Growth of Science in the Nineteenth Century (p. 38)  
 The Atlantic Monthly Press. Boston, Massachusetts, USA. 1921

**Geikie, Sir Archibald** 1835–1924  
 English geologist

In scientific as in other mundane questions there may often be two sides, and the truth may ultimately be found not to lie wholly with either.

### Inscription

The works of those who have stood the test of ages have a claim to that respect and veneration to which no modern can pretend.

On the dome of the National Gallery

**Jeffers, Robinson** 1887–1962  
 American poet

...they work alongside the truth  
 Never touching it; their equations are false

But the things work.

In Tim Hunt (ed.)  
*The Collected Poetry of Robinson Jeffers* (Volume 3)  
 The Mathematicians and Physics Men (p. 459)  
 Stanford University Press. Stanford, California, USA. 1988

**Lee, Oliver Justin** 1881–1964  
 American astronomer

The truth to a scientist is not the vague metaphysical concept about which philosophers talk and write so much and know so little. To him truth is that body of statements and conclusions about any set of features and phenomena in nature which represent most accurately all the best observations he can make and which conform most closely to all findings in adjacent or related phases and fields of investigations. He may and does often wonder what the so-called ultimate truth may be, but he does not worry about it. He knows that a priori pure thinking will never reveal it so far as knowledge of the physical universe is concerned, and that observation and deduction alone in the manner of science will ever do it.

*Measuring Our Universe: From the Inner Atom to Outer Space*  
 Chapter 14 (pp. 149–150)  
 The Ronald Press Company. New York, New York, USA. 1950

**Lerner, Eric J.** 1947–  
American popular science book

The only test of scientific truth is how well a theory corresponds to the world we observe. Does it predict things that we can then see? Or do our observations of nature show things that a theory says are impossible? No matter how well liked a theory may be, if observation contradicts it, then it must be rejected. For science to be useful, it must provide an increasingly true and deep description of nature, not a prescription of what nature must be.

*The Big Bang Never Happened*

Part One, Chapter 1 (p. 12)

Time Books. New York, New York, USA. 1991

**Maxwell, James Clerk** 1831–79  
Scottish physicist

For the sake of these different types, scientific truth should be presented in different forms, and should be regarded as equally scientific, whether it appears in the robust form of vivid colouring of a physical illustration, or in the tenuity and paleness of a symbolical expression.

(Volume 1), Part I

The Study of Abstract Science (p. 27)

Longman, Brown, Green & Longmans. London, England. 1852

**Poincaré, Jules Henri** 1854–1912  
French mathematician and theoretical astronomer

For a superficial observer, scientific truth is beyond the possibility of doubt; the logic of science is infallible, and if the scientists are sometimes mistaken, this is only from their mistaking its rules.

*The Foundations of Science*

*Science and Hypothesis*, Introduction (p. 27)

The Science Press. New York, New York, USA. 1913

...scientific truth, which is demonstrated, can in no way be likened to moral truth, which is felt.

The Value of Science  
*The Popular Science Monthly*, Volume LXIX, Number 3, September, 1906 (p. 194)

**Raymo, Chet** 1936–  
American physicist and science writer

Science is not a smorgasbord of truths from which we can pick and choose.

*The Virgin and the Mousetrap: Essays in Search of the Soul of Science*

Chapter 16 (p. 144)

The Viking Press. New York, New York, USA. 1991

Scientific truths are tentative and partial, and subject to continual revision and refinement, but as we tinker with truth in science – amending here, augmenting there – we always keep our ear attuned to the timbre of the web.

*The Virgin and the Mousetrap: Essays in Search of the Soul of Science*

Chapter 16 (p. 145)

The Viking Press. New York, New York, USA. 1991

**Renan, Ernest** 1823–92  
French philosopher and Orientalist

Orthodox people have as a rule very little scientific honesty. They do not investigate, they try to prove, and this must necessarily be so. The result has been given to them beforehand; this result is true, undoubtedly true. Science has no business with it, science which starts from doubt without knowing whether it is going, and gives itself up bound hand and foot to criticism which leads it where-soever it lists.

*The Future of Science*

Chapter III (p. 33)

Roberts Brothers. Boston, Massachusetts, USA. 1893

**Serge, Corrado**  
No biographical data available

Many times a scientific truth is placed as it were on a lofty peak, and to reach it we have at our disposal at first only dark paths along perilous slopes whence it is easy to fall into the abysses where dwells error; only after we have reached the peak by these paths is it possible to lay out safe roads which lead there without peril. Thus it has frequently happened that the first way of obtaining a result has not been quite satisfactory, and that only afterwards did the science succeed in completing the demonstration.

On Some Tendencies in Geometric Investigations

*Bulletin of the American Mathematical Society*, 2nd Series, Volume 10,

June, 1904 (pp. 453–454)

**Shaw, George Bernard** 1856–1950  
Irish comic dramatist and literary critic

In the Middle Ages people believed that the earth was flat, for which they at least had the evidence of their senses: we believe it to be round, not because as many as one percent of us could give the physical reasons

for so quaint a belief, but because modern science has convinced us that nothing that is obvious is true, and that everything that is magical, improbable, extraordinary, gigantic, microscopic, heartless, or outrageous is scientific.

*Man and the Gods: Three Tragedies*

Saint Joan, Preface, *The Real Joan Is Not Marvellous for Us* (p. 132)  
Harcourt, Brace & World, Inc. New York, New York, USA. 1964

### **Spencer, Herbert** 1820–1903

English social philosopher

Scientific truths, of whatever order, are reached by eliminating perturbing or conflicting factors, and recognizing only fundamental factors.

*The Data of Ethics*

Chapter XV, Section 104 (p. 311)

William & Norgate. London, England. 1907

### **Thomas, Lewis** 1913–93

American physician and biologist

The only solid piece of scientific truth about which I feel totally confident is that we are profoundly ignorant about nature.

*The Medusa and the Snail: More Notes of a Biology Watcher*

The Hazard of Science (p. 73)

The Viking Press. New York, New York, USA. 1979

### **Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

The eye which can appreciate the naked and absolute beauty of a scientific truth is far more rare than that which is attracted by a moral one. Few detect the morality in the former, or the science in the latter.

*The Writings of Henry David Thoreau* (Volume 1)

*A Week on the Concord and Merrimack Rivers*

Friday (p. 476)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

### **Weaver, Warren** 1894–1978

American mathematician

...[one] finds unresolved and apparently unresolvable disagreement among scientists concerning the relationship of scientific thought to reality – and concerning the nature of reality itself...that the explanations of science have utility, but that they do in sober fact not explain. He finds that the old external appearance of inevitability completely vanished, for he discovers a charming capriciousness in all the individual events. He finds that logic, so generally supposed to be infallible and unassailable, is in fact shaky and incomplete. He finds that the whole concept of objective truth is a will-o-the-wisp.

The Imperfections of Science

*American Scientist*, Volume 49, 1961 (pp. 99–113)

### **Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

Scientific truth is the remotest of mistresses; She hides in strange places, she is attained by tortuous and laborious roads, but she is always there! Win to her and she will not fail you; she is yours and mankind's forever. She is reality, the one reality I have found in this strange disorder of existence...

*Tono-Bungay*

Book the Third, Chapter the Third, I (p. 324)

Duffield & Company. New York, New York, USA. 1921

## SCIENTIFIC VIEWS

### **Feynman, Richard P.** 1918–88

American theoretical physicist

Scientific views end in awe and mystery, lost at the edge in uncertainty, but they appear to be so deep and so impressive that the theory that it is all arranged as a stage for God to watch man's struggle for good and evil seems inadequate.

*The Meaning of It All*

Chapter II (p. 39)

Perseus Books. Reading, Massachusetts. USA. 1998

## SCIENTIFIC VISION

### **Brown, Robert Hanbury** 1916–2002

English astronomer and physicist

We must make it clear that the scientific vision of the world is neither a rival nor an alternative to any other point of view, but is an essential part of learning to be at home in this mysterious universe.

*Man and the Stars*

Chapter 5 (p. 176)

Oxford University Press. Oxford, England. 1978

## SCIENTIFIC WORK

### **Einstein, Albert** 1879–1955

German-born physicist

To be sure, it is not the fruits of scientific research that elevate a man and enrich his nature, but the urge to understand, the intellectual work, creative or receptive.

*Ideas and Opinions*

Good and Evil (p. 12)

Crown Publishers, Inc. New York, New York, USA. 1954

### **Fisher, Sir Ronald Aylmer** 1890–1962

English statistician and geneticist

The concept that the scientific worker can regard himself as an inert item in a vast co-operative concern working according to accepted rules is encouraged by directing attention away from his duty to form correct scientific conclusions, to summarize them and to communicate them to his scientific colleagues, and by stressing his

supposed duty mechanically to make a succession of automatic “decisions”...

*Statistical Methods and Scientific Inference*

Chapter IV (p. 101)

Hafner Publishing Company, New York, New York, USA. 1959

**Gregory, Sir Richard Arman** 1864–1952

English scientific writer and journalist

Scientific work must...be carried on with an open mind, uninfluenced by preconceived ideas, critical of its own observations, cautious in arriving at conclusions from them, and ready to revise any statement which has not stood the test of further experiment or reasoning.

*Discovery, Or, The Spirit and Service of Science*

Chapter I (p. 12)

Macmillan & Co Ltd. London, England. 1918

**Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

Take from your scientific work a serious and incorruptible method of thought, help to spread it, because no understanding is possible without it. Revere those things beyond science which really matter and about which it is so difficult to speak.

*Philosophic Problems of Nuclear Science*

Chapter 8 (p. 128)

Faber & Faber Ltd. London, England. 1952

**Huxley, Thomas Henry** 1825–95

English biologist

The only people, scientific or other, who never make mistakes are those who do nothing.

*Collected Essays* (Volume 5)

*Science and Christian Traditions*

An Episcopal Trilogy (p. 156)

Macmillan & Company Ltd. London, England. 1904

**Lorand, Arnold**

American physician and prolongevity advocate

...we have often observed in persons whose lives have been devoted to serious scientific work, which has entirely absorbed them, a total absence of sexual desire for a long time, and even impotence.

*Old Age Deferred*

Chapter XLIX (p. 399)

F.A. Davis Company, Publishers, Philadelphia, Pennsylvania, USA. 1911

**Payne-Gaposchkin, Cecelia** 1900–79

British-American astronomer

Do not undertake a scientific career in quest of fame or money. There are easier and better ways to reach them. Undertake it only if nothing else will satisfy you; for nothing else is probably what you will receive. Your reward will be the widening of the horizon as you climb. And if you achieve that reward you will ask no other.

*Cecilia Payne-Gaposchkin: An Autobiography and Other Recollections*

Chapter 22 (p. 227)

Cambridge University Press. New York, New York, USA. 1984

**Rosenthal-Schneider, Ilse** 1891–1990

German physicist and author of history and philosophy of science

The deep satisfaction found in scientific work, akin to the delight derived from genuine art, is one of the fundamental human emotions which is highly intensified by personal contact with the creative mind.

In Paul Arthur Schlipp (ed.)

*Albert Einstein: Philosopher-Scientist*

Presuppositions and Anticipations in Einstein's Physics (p. 145)

The Library of Living Philosophers, Inc. Evanston, Illinois, USA. 1949

**Snow, Charles Percy** 1905–80

English novelist and scientist

Scientific work...has a value of its own, whether you're liking it or not. It's – there. It's permanent. It's work which is always going to last. It's a real creation.

*The Search*

Part IV, Chapter II, Section II (p. 326)

The Bobbs-Merrill Company. Indianapolis, Indiana, USA. 1935

**Weber, Max** 1864–1920

German founder of modern sociology and economic thinker

In science, each of us knows that what he has accomplished will be antiquated in ten, twenty, fifty years. That is the fate to which science is subjected; it is the very meaning of scientific work, to which it is devoted in a quite specific sense, as compared with other spheres of culture.... Every scientific “fulfillment” raises new “questions”; it asks to be surpassed and outdated. Whoever wishes to serve science has to resign himself to this fact.... We cannot work without hoping that others will advance further than we have.

In H.H. Gerth and C. Wright Mills (eds.)

*From Max Weber: Essays in Sociology*

Science as a Vocation (p. 138)

Oxford University Press, Inc. New York, New York, USA. 1970

## SCIENTIFIC WORKER

**Foster, Sir Michael** 1836–1907

English physiologist

[The scientific worker] must be alert of mind. Nature is ever making signs to us, she is ever whispering to us the beginnings of her secrets; the scientific man must be ever on the watch, ready at once to lay hold of Nature's hint, however small, to listen to her whisper, however low.

Presidential Address

*The Chemical News and Journal of Industrial Science*, Volume LXXX, Number 2077, September 15, 1899 (p. 130)

[The scientific worker's] nature must be one which vibrates in unison with that of which he is in search; the seeker after truth must himself be truthful, truthful with the truthfulness of nature; which is far more imperious, far more exacting than that which man sometimes calls truthfulness.

Presidential Address

*The Chemical News and Journal of Industrial Science*, Volume LXXX, Number 2077, September 15, 1899 (p. 130)

**Thomson, Sir John Arthur** 1861–1933

Scottish naturalist

The scientific worker has elected primarily to know, not do. He does not *directly* seek, like the practical man, to realize the ideal of exploiting nature and controlling life – though he makes this more possible; he seeks rather to idealize – to conceptualize – the real, or at least those aspects of reality that are available in his experience. He thinks more of lucidity and formulae than of loaves and fishes. He is more concerned with knowing Nature than with enjoying her. His main intention is to describe the sequences in Nature in the simplest possible formulae, to make a working thought-model of the known world. He would make the world translucent, not that emotion may catch the glimmer of the indefinable light that shines through, but for other reasons – because of his inborn inquisitiveness, because of his dislike of obscurities, because of his craving for a system – an intellectual system in which phenomena are at least provisionally unified.

*Introduction to Science*

Chapter I (pp. 13–14)

Henry Holt & Co. New York, New York, USA. 1911

## SCIENTIFIC WORKSHOP

**Thomson, Sir John Arthur** 1861–1933

Scottish naturalist

The scientific workshop is full of discarded keys.

*Introduction to Science*

Chapter III (p. 69)

Henry Holt & Co. New York, New York, USA. 1911

## SCIENTIFIC WORLD

### Author undetermined

The scientific world is like a colony of insects, in that the individual strives to produce that which he himself cannot hope to enjoy. One generation collects premises in order that a distant generation may discover what they mean. When a problem comes before the scientific world, a hundred men immediately set all their energies to work upon it. One contributes this, another that. Another company, standing upon the shoulders of the first, strike a little higher, until at last the parapet is attained.

In James Mark Baldwin

*Dictionary of Philosophy and Psychology* (Volume 2)

Scientific Method (p. 502)

The Macmillan Co. New York, New York, USA. 1902

**Baldwin, J. Mark** 1861–1934

Psychologist

...the method of modern science is social in respect to the solidarity of its efforts. The scientific world is like a

colony of insects, in that the individual strives to produce that which he himself cannot hope to enjoy. One generation collects premises in order that a distant generation may discover what they mean.

In James Mark Baldwin

*Dictionary of Philosophy and Psychology* (Volume 2) (p. 502)

The Macmillan Co. New York, New York, USA. 1902

## SCIENTIFIC WRITER

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

A scientific writer is placed in a difficulty by his earlier books; either his new book will appear as a rather disjointed addendum to them, or he must perfunctorily go over again a great deal of matter which he has no wish to rewrite.

*New Pathways in Science*

Preface (p. vii)

The Macmillan Co. New York, New York, USA. 1935

## SCIENTIST

**Adam, George**

No biographical data available

Scientists have been yearning for a key to a grand generalization. They have expected it to be revealed by a group of facts uncovered by experimentation, whereas its formula must necessarily spring into being as a simple creation of intuitional thought or imaginative effort, for it must deal with entities beyond observational research.

*The Solar System: An Astronomical Unit Addenda*

Introduction (p. 9)

John W. Newbegin, Publisher. San Francisco, California, USA. 1911

**Adams, Douglas** 1952–2001

English author, comic radio dramatist, and musician

You can't possibly be a scientist if you mind people thinking that you're a fool.

*The Ultimate Hitchhiker's Guide to the Galaxy*

*So Long And Thanks For All The Fish*

Chapter 31 (p. 587)

The Ballantine Book Company. New York, New York, USA. 2002

I'm a scientist and I know what constitutes proof. But the reason I call myself by my childhood name is to remind myself that a scientist must also be absolutely like a child. If he sees a thing, he must say that he sees it, whether it was what he thought he was going to see or not.

*So Long, and Thanks for All the Fish*

Chapter 31 (p. 161)

Harmony Books. New York, New York, USA. 1984

**Agnew, Ralph Palmer**

American mathematician

Scientists, like professional golfers and piano players, should sometimes concentrate upon a task until they can perform it with professional skill.

*Differential Equations*

Chapter 1, Problem 1.49 (p. 16)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1972

**Appleton, Sir Edward** 1892–1965

English physicist

It seems to me that we must recognize that the proper use of science is one of the most important challenges of the present day. And here I think the scientist has a twofold mission, not only of extending the frontiers of knowledge but also of interpreting his results to his fellow-men.

*Les Prix Nobel. The Nobel Prizes in 1947*

Nobel banquet speech for award received in 1947

**Appleyard, Bryan** 1951–

Author and journalist

Scientists inevitably take on the mantle of the wizards, sorcerers and witch doctors. Their miracle cures are our spells, their experiments our rituals.

*Understanding the Present: Science and the Soul of Modern Man*

Chapter 1 (p. 9)

Doubleday. New York, New York, USA. 1992

**Artuad, Antonin** 1896–1948

French poet, actor, and director

But how is one to make a scientist understand that there is something unalterably deranged about differential calculus, quantum theory, or the obscene and so inanely liturgical ordeals of the precession of the equinoxes – ....

In Susan Sontag

*Selected Writings*

Part 33, van Gogh, the Man Suicided by Society (p. 497)

**Auden, W. H.** 1907–72

English-born poet

The true men of action in our time, those who transform the world, are not the politicians and statesmen, but the scientists.

*The Dyer's Hand*

Part II, The Poet and The City (p. 81)

Random House. New York, New York, USA. 1962

When I find myself in the company of scientists, I feel like a shabby curate who has strayed by mistake into a drawing room full of dukes.

*The Dyer's Hand*

Part II, The Poet and The City (p. 81)

Random House. New York, New York, USA. 1962

**Bacon, Sir Francis** 1561–1626

English lawyer, statesman, and essayist

Those who have treated of the sciences have been either empirics or dogmatical. The former like ants only heap up and use their store, the latter like spiders spin out their own webs. The bee, a mean between both, extracts matter from the flowers of the garden and the field, but

works and fashions it by its own efforts. The true labor of philosophy resembles hers, for it neither relies entirely nor principally on the powers of the mind, nor yet lays up in the memory of matter afforded by the experiments of natural history and mechanics in its raw state, but changes and works it in the understanding.

*In Great Books of the Western World* (Volume 30)*Novum Organum*

First Book, Aphorism 95 (p. 126)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Baker, Russell** 1925–

American writer and journalist

Two leading Congressional scientists, Senator Helms and Representative Hyde, have been doing pioneering research on the nature of life. This has produced the Helms–Hyde theory which states that scientific fact can be established by a majority vote of the US Congress.

*The Rescue of Miss Yaskel and Other Pipe Dreams*

Arno Press. New York, New York, USA. 1980

**Barrow, Hohn D.** 1952–

English theoretical physicist

A scientist who uses only logical reasoning from ‘self-evident’ principles will soon find himself in a cul-de-sac – like a blind landscape artist.

*The World Within the World*

Chapter 2 (pp. 40–41)

Clarendon Press. Oxford, England. 1988

**Barzun, Jacques** 1907–

French-born American educator, historian, and educator

...the scientific profession does not constitute an elite, intellectual, or other. The chances are that the ‘scientist’, from the high-school teacher of science to the head of a research institute, is a person of average capacity.

*Science: The Glorious Entertainment* (p. 75)

Harper &amp; Row Publishers. New York, New York, USA. 1964

**Beveridge, William Ian Beardmore** 1908–

Australian zoologist

The scientist who has an independent mind and is able to judge the evidence on its merits rather than in light of prevailing conceptions is the one most likely to be able to realize the potentialities in something really new.

*The Art of Scientific Investigation*

Chapter Three (p. 35)

W.W. Norton &amp; Company, Inc. New York, New York, USA. 1957

**Bohr, Niels Henrik David** 1886–1962  
Danish physicist

Every sentence I utter must be understood not as an affirmation, but as a question.

*New York Times Book Review*, October 20, 1957

**Born, Max** 1882–1970  
German-born English physicist

It seems to me that the scientists who led the way to the atomic bomb were extremely skillful and ingenious, but not wise men. They delivered the fruits of their discoveries unconditionally into the hands of politicians and soldiers; thus they lost their moral innocence and their intellectual freedom...

*The Restless Universe*

Postscript (p. 280)

Dover Publications, Inc. New York, New York, USA. 1951

**Brain, Lord Walter Russell** 1895–1966  
British neurologist

Scientists...meet one another to exchange ideas, to promote their own particular branch of science, or science in general, or because they are aware of its social implications. Nevertheless, such collective activities... play a small part in their lives. Scientists, though they must always be aware of the work of their fellows in their own fields, are essentially individualists; and the body of knowledge to which they are contributing is an impersonal one. Apart from contributing to it, they have no collective consciousness, interest, or aim.

*Science and Antiscience*

*Science*, Volume 148, Number 3667, April, 1965 (p. 193)

**Brewster, Edwin Tenney** 1866–1960  
Educator

For scientific people are after all precisely like the rest of us, and can no more resist – most of them – the urge to speculate where they cannot prove than other men can.

*This Puzzling Planet*

Chapter XIX (p. 301)

The Bobbs-Merrill Company, Indianapolis, Indiana. 1928

**Bronowski, Jacob** 1908–74  
Polish-born British mathematician and polymath

Dissent is the native activity of the scientist, and it has got him into a good deal of trouble in the last years. But if that is cut off, what is left will not be a scientist. And I doubt whether it will be a man.

*Science and Human Values*

The Sense of Human Dignity (p. 61)

Harper & Row, Publishers. New York, New York, USA. 1965

The society of scientists must be a democracy. It can keep alive and grow only by a constant tension between dissent and respect; between independence from the view of others, and tolerance from them.

*Science and Human Values*

The Sense of Human Dignity (pp. 62–63)

Harper & Row, Publishers. New York, New York, USA. 1965

The most remarkable discovery made by scientists is science itself.

*A Sense of the Future: Essays in Natural Philosophy*

Chapter 2 (p. 6)

The MIT Press. Cambridge, Massachusetts, USA. 1977

It is important that students bring a certain ragamuffin, barefoot irreverence to their studies; they are not here to worship what is known, but to question it.

*The Ascent of Man*

Chapter 11 (p. 360)

Chapter 1 (p. 36)

D. Appleton & Co. New York, New York, USA. 1921

**Cartmill, Matt**

American zoologist

As an adolescent I aspired to lasting fame, I craved factual certainty, and I thirsted for a meaningful vision of human life: so I became a scientist. This is like becoming an archbishop so you can meet girls.

Seventy-five Reasons to become a Scientist

*American Scientist*, Volume 76 1988 (p. 452)

**Chargaff, Erwin** 1905–2002

Austrian biochemist

Great scientists are particularly worth listening to when they speak about something of which they know little; in their own specialty they are usually great and dull.

*Heracleian Fire: Sketches from a Life before Nature*

Part II

The Hereditary Code-Script (p. 85)

Rockefeller University Press, New York, New York, USA. 1978

...outside his own ever-narrowing field of specialization, a scientist is a layman. What members of an academy of science have in common is a certain form of semiparasitic living.

Bitter Fruits from the Tree of Knowledge

*Perspectives in Biology and Medicine*, Section III, Volume 16, Number 4, Summer, 1973 (p. 492)

A scientific autobiography belongs to a most awkward literary genre. If the difficulties facing a man trying to record his life are great – and few have overcome them successfully – they are compounded in the case of scientists, of whom many lead monotonous and uneventful lives and who, besides, often do not know how to write...

Book Review of *The Double Helix*

*Science*, Volume 59, Number 3822, 29 March, 1968 (p. 1448)

No scientist's lifework is really continued when he is dead.

*Voices in the Labyrinth: Nature, Man and Science* (p. 74)

The Seabury Press, New York, New York, USA. 1977

**Chesterton, G. K. (Gilbert Keith)** 1874–1936

English author

Apparently a scientist is a man who surveys all the sciences, without any particular study of them, and then gives expression to his own moral principles or prejudices.

*All Is Grist: A Book of Essays*

On Mr. Mencken and Fundamentalism (p. 50)

Methuen & Company Ltd, London, England. 1931

**Clarke, Arthur C.** 1917–

English science and science fiction writer

When a distinguished but elderly scientist states that something is possible, he is almost certainly right. When he states that something is impossible, he is very probably wrong.

*Profiles of the Future: An Inquiry into the Limits of the Possible*

Chapter 2 (p. 14)

Harper & Row, Publishers, New York, New York, USA. 1973

...scientists of over fifty are good for nothing except board meetings and should at all costs be kept out of the laboratory!

*Profiles of the Future: An Inquiry into the Limits of the Possible*

Chapter 2 (pp. 14–15)

Harper & Row, Publishers, New York, New York, USA. 1973

**Conant, James Bryant** 1893–1978

American educator and scientist

...scientists today represent the progeny of one line of descent who migrated, so to speak, some centuries ago into certain fields which were ripe for cultivation. Once science had become self-propagating, those who till these fields have had a relatively easy time keeping up the tradition of their forebears.

*Science and Common Sense*

Chapter One (p. 13)

Yale University Press, New Haven, Connecticut, USA. 1951

**Cope, Henry Frederick**

No biographical data available

A scientist is not one who worships a theory; he is one who walks obediently in the path of knowledge.

*The School in the Modern Church*

Chapter V (p. 58)

George H. Doran Co. New York, New York, USA. 1919

**Cornforth, John W.** 1917–2004

English organic chemist

Scientists do not believe; they check.

Scientists as Citizens

*Australian Journal of Chemistry*, Volume 46, 1993 (p. 266)

**Cousteau, Jacques-Yves** 1910–77

French naval officer and ocean explorer

What is a scientist after all? It is a curious man looking through a keyhole, the keyhole of nature, trying to know what's going on.

*Christian Science Monitor*, 21 July 1971

**Cramer, F.**

No biographical data available

In the long run it pays the scientist to be honest, not only by not making false statements, but by giving full expression to facts that are opposed to his views. Moral slovenliness is visited with far severe penalties in the scientific than in the business world.

In W.I.B. Beveridge

*The Art of Scientific Investigation*

Chapter Eleven (p. 142)

W.W. Norton & Company, Inc. New York, New York, USA. 1957

**Crichton, Michael** 1942–

American novelist

I sometimes think scientists really don't notice that their colleagues have flaws. But in my experience scientists are very human people: which means that some are troubled, deceitful, petty or vain.

*Science Views Media*, January 25, 1999

**Cronenberg, David** 1943–

Canadian film director

...everybody's a mad scientist, and life is their lab. We're all trying to experiment to find a way to live, to solve problems, to fend off madness and chaos.

In Chris Rodley

*Cronenberg on Cronenberg*

Chapter 1 (p. 7)

Faber & Faber Ltd. London, England. 1992

**de Jouvenel, Bertrand** 1903–87

French man of letters

No one can become a scientist who is not driven by a primary urge for discovery, who is not the ardent suitor of a hidden beauty. Somewhat romantically, scientists can be likened to a company of knights dispersed in search of Sleeping Princesses, all of whom are more or less distantly related. The spirit of the quest is essential to the making of a scientist, and forms a fundamental bond between scientists.

*The Logic of Personal Knowledge*

The Republic of Science

The Free Press. Glencoe, Illinois, USA. 1961

**de Madariaga, Salvador** 1886–1978

Spanish writer and statesman

There are two kinds of scientists: they were once described...as the "why" and the "how." The how-scientist

is mainly interested in the way things happen; the why-scientist seeks to find out the cause of things. The first is more of a technician; the second, more of a philosopher. The first is more of a man of talent; the second, more of a man of genius.

*Essays with a Purpose*

Science and Freedom (p. 43)

Hollis & Carter. London, England. 1954

**Derbyshire, Henry James**

No biographical data available

The first principle of a scientist is to neither deny nor affirm anything. Belief has no place in the language of a scientist. It is the one profane word of language. Doubt, which is merely its negative equivalent, is equally profane. When we eliminate these words we are beginning to be positive scientists. All we know is what we determine.

*Origin of Mental Species*

Chapter XII (p. 142)

H.J. Derbyshire. Flint, Michigan, USA. 1919

**Devine, Betsy**

No biographical data available

**Cohen, Joel E.**

No biographical data available

Scientists are funny people. Not just the great ones who think they've discovered the secret of life or of the brain or of the common cold. Even ordinary day-to-day scientists are funny, because they all think that the world makes sense! Most people know better.

*Absolute Zero Gravity: Science Jokes, Quotes, and Anecdotes*

Fireside/Simon & Shuster. New York, New York, USA.

**Dr. Kemp (Fictional character)**

Straightforward scientists have no need for barred doors and drawn blinds.

*The Invisible Man*

Film (1933)

**du Noüy, Pierre Lecomte** 1883–1947

French scientist

The scientist with imagination is the pioneer of progress.

*The Road to Reason*

Chapter 3 (p. 81)

Longmans, Green & Company. London, England. 1949

**Dubos, René Jules** 1901–82

French-born American microbiologist and environmentalist

Scientists, like artists, unavoidably reflect the characteristics of the civilization and the time in which they live. In this sense, they are "enchained"...by the inexorable logic of their time and their work.

*Louis Pasteur: Free Lance of Science*

Introduction (p. xxxviii)

Little, Brown & Company. Boston, Massachusetts, USA. 1950

...like other men, scientists become deaf and blind to any argument or evidence that does not fit into the thought pattern which circumstances have led them to follow.

*Louis Pasteur: Free Lance of Science*

Chapter VII (p. 197)

Little, Brown & Company, Boston, Massachusetts, USA. 1950

**Dyson, Freeman J.** 1923–

American physicist and educator

When something ceases to be mysterious it ceases to be of absorbing concern to scientists. Almost all the things scientists think and dream about are mysterious.

*Infinite in All Directions*

Part One, Chapter Two (p. 14)

HarperCollins Publisher, Inc. New York, New York, USA. 1988

**Egler, Frank E.** 1911–96

American botanist and ecologist

Scientists are only men, and are subject to all the foibles of their kind. They have the same drives for freedom, security, certainty, image and status as have other men.

...the same attraction for the known the familiar and the comfortable, and will cling to old and sterile ideas like a broody hen sitting on boiled eggs. Like those others, there is a lunatic fringe, and a reasonable quota of social misfits, small-pool big-frogs, megalomaniacs, prima donnas, nymphomaniacs, gold diggers, entrepreneurs, prophets and devout disciples.

*The Way of Science*

The Nature of Science (p. 1)

Hafner Publishing Company, New York, New York, USA. 1970

**Einstein, Albert** 1879–1955

German-born physicist

In an attempt to achieve a conceptual formulation of the confusingly immense body of observational data, the scientist makes use of a whole arsenal of concepts which he imbibed practically with his mother's milk; and seldom if ever is he aware of the eternally problematic character of his concepts.

In Max Jammer

*Concepts of Space: The History of Theories of Space in Physics*

Foreword p. (xi)

Harvard University Press, Cambridge, Massachusetts, USA. 1969

The eyes of the scientist are directed upon those phenomena which are accessible to observation, upon their apprehension and conceptual formulation.

In Max Jammer

*Concepts of Space: The History of Theories of Space in Physics*

Preface (p. xi)

Harvard University Press, Cambridge, Massachusetts, USA. 1969

For the scientist, there is only "being," but no wishing, no valuing, no good, no evil – in short, no goal. As long as we remain within the realm of science proper, we can never encounter a sentence of the type: "Thou shalt not lie."

In Philipp Frank

*Relativity – A Richer Truth*

The Laws of Science and the Laws of Ethics (p. 9)

Jonathan Cape, London, England. 1951

...the scientist finds his reward in what Henri Poincaré calls the joy of comprehension, and not in the possibilities of application to which any discovery may lead.

In Max Planck

*Where Is Science Going?*

Epilogue (p. 211)

W.W. Norton & Company, Inc. New York, New York, USA. 1932

To the scientist, the celestial bodies, the objects on Earth, and their chemical peculiarities, simply existed as real objects in space and time, and his task consisted solely in abstracting these laws from experience by way of hypothetical generalizations.

Physics, Philosophy, and Scientific Progress

*Physics Today* Issue 6 June, 2005 (p. 46)

**Emelyanov, A. S.**

No biographical data available

A scientist cannot be a "pure" mathematician, biophysicist or sociologist for he cannot remain indifferent to the fruits of his work, to whether they will be useful or harmful to mankind. An indifferent attitude as to whether people will be better or worse off as a result of scientific achievement is cynicism, if not a crime.

In E.H.S. Burhop In Maurice Goldsmith and Alan Mackay (eds.)

*Society and Science*

Scientist and Public Affairs (p. 31)

Simon & Schuster, New York, New York, USA. 1965

**England, Terry**

No biographical data available

...if three scientists ever agree completely on anything, it's a cult.

*Rewind* (p. 71)

Avon Books, New York, New York, USA. 1997

**Eysenck, Hans Jurgen** 1916–97

Founder of theory of personality

Scientists, especially when they leave the particular field in which they have specialized, are just as ordinary, pig-headed and unreasonable as anybody else.

Continuum

*OMNI Magazine*, Volume 2, December, 1979 (p. 49)

**Faulkner, William** 1897–1962

American novelist and short story writer

Our privacy...has been slowly and steadily and increasingly invaded until now our very dream of civilization is in danger. Who will save us but the scientist and the humanitarian? Yes, the humanitarian in science, and the scientist in the humanity of man.

Quoted in Warren Weaver

Science and People

*Science*, Volume 122, Number 3183, December 30, 1955 (p. 1259)

**Feibleman, James K.** 1904–1987  
American philosopher

It is not the business of scientists to investigate just what the business of science is.

Pure Science, Applied Science, Technology, Engineering: An Attempt at Definitions

*Technology and Culture*, Volume II, Number 4, Fall 1961 (p. 305)

**Feyerabend, Paul K.** 1924–94  
Austrian-born American philosopher of science

Scientists are sculptors of reality – but sculptors in a special sense. They do not merely act causally upon the world (though they do that, too, and they have to if they want to “discover” new entities); they also create semantic conditions engendering strong inferences from known effects to novel projections and, conversely, from the projections to testable effects.

Realism and the Historicity of Knowledge

*The Journal of Philosophy*, Volume LXXXVI, Number 8, 1989 (pp. 404–405)

**Feynman, Richard P.** 1918–88  
American theoretical physicist

It is our responsibility as scientists, knowing the great progress which comes from a satisfactory philosophy of ignorance, the great progress which is the fruit of freedom of thought, to proclaim the value of this freedom; to teach how doubt is not to be feared but welcomed and discussed; and to demand this freedom as our duty to all coming generations.

*What Do You Care What Other People Think?*

The Value of Science (p. 248)

W.W. Norton & Company, Inc. New York, New York, USA. 1988

I would like to point out that people are not honest. Scientists are not honest at all, either. It's useless. Nobody's honest. Scientists are not honest. And people usually believe that they are. That makes it worse. By honest I don't mean that you only tell what's true. But you make clear the entire situation. You make clear all the information that is required for somebody else who is intelligent to make up their mind.

*The Meaning of It All: Thoughts of a Citizen Scientist*

Chapter III (p. 106)

Perseus Books. Reading, Massachusetts, USA. 1998

**Finniston, Sir Monty** 1912–91  
British industrialist

You mustn't think scientists are stupid.

Saying of the Week

*Observer*, 16 January, 1983

**Fitzgerald, Penelope** 1916–2000  
English novelist and biographer

If they don't depend on true evidence, scientists are no better than gossips.

*The Gate of Angels*

Chapter 3 (p. 24)

Doubleday & Company. New York, New York, USA. 1992

**Foster, Alan Dean** 1946–  
American science fiction writer

A man of science is helpless by himself, but two of them constitute an entity capable of ignoring starvation, freezing, and prospects of imminent death just by chatting about some item of mutual interest.

*Icerigger* (p. 116)

Ballantine Books. New York, New York, USA. 1974

**Fox, Robin** 1934–  
English anthropologist, poet, and essayist

Scientists, being children of Adam, can be fools and charlatans or even just blind and biased. Indeed, my own despair at the “academic/scientific enterprise” which raised the initial question is a despair over the inevitability of human frailty, not over the ideals of scientific discovery.

In Paul R. Gross, Norman Levitt, and Martin W. Lewis (eds.)

*The Flight from Science and Reason*

State of the Art/Science in Anthropology (p. 329)

New York Academy of Sciences. New York, New York, USA. 1996

The real poet, like any artist, tries all the time to see the general in the particular. In this he is no different from the scientist. They are siblings under the skin.

In Paul R. Gross, Norman Levitt, and Martin W. Lewis (eds.)

*The Flight from Science and Reason*

State of the Art/Science in Anthropology (p. 343)

New York Academy of Sciences. New York, New York, USA. 1996

**Freud, Sigmund** 1856–1939  
Austrian neurologist and co-founder of psychoanalysis

I am not really a man of science, not an observer, not an experimenter, and not a thinker. I am nothing but by temperament a conquistador – an adventurer if you want to translate the word.

Mighty Minds (1900, letter to Fleiss)

*New Scientist*, 4 April, 1998 (p. 11)

**Frisch, Otto Robert** 1904–79  
Austrian-born English physicist

...a really good scientist is one who knows how to draw correct conclusions from incorrect assumptions.

*What Little I remember*

Hamburg 1930–1933 (p. 54)

University of Cambridge. Cambridge, England. 1980

**Fuller, R. Buckminster** 1895–1983  
American engineer and architect

...public journals, assumedly bespeaking public opinion, [say] scientists “wrest order out of chaos.” But the scientists who have made the great discoveries have been trying their best to tell the public that...they have never

found chaos to be anything other than the superficial confusion of innately a priori human ignorance at birth – an ignorance that is often burdened by the biases of others to remain gropingly unenlightened throughout its life.

In L.L. Larison Cudmore

*The Center of Life: A Natural History of the Cell* (p. xi)

New York Times Book Company. New York, New York, USA. 1977

What the scientists have always found by physical experiment was an a priori orderliness of nature, or Universe always operating at an elegance level that made the discovering scientist's working hypotheses seem crude by comparison. The discovered reality made the scientists' exploratory work seem relatively disorderly.

In L.L. Larison Cudmore

*The Center of Life: A Natural History of the Cell* (p. xi)

New York Times Book Company. New York, New York, USA. 1977

### **Galston, Arthur William** 1920–

American plant biologist

In my view, the only recourse for a scientist concerned about the social consequences of his work is to remain involved with it to the end.

Science and Social Responsibility

*Annals of the New York Academy of Science*, Volume 196, 1972 (p. 223)

### **Galton, Sir Francis** 1822–1911

English anthropologist, explorer, and statistician

A special taste for science seems frequently to be so ingrained in the constitution of scientific men, that it asserts itself throughout their whole existence.

In Karl Pearson

*The Life, Letters and Labours of Francis Galton* (Volume 2) (p. 152)

At The University Press. Cambridge, England. 1914–30

### **Gardner, Martin** 1914–

American writer and mathematics games editor

When reputable scientists correct flaws in an experiment that produced fantastic results, then fail to get those results when they repeat the test with flaws corrected, they withdraw their original claims. They do not defend them by arguing irrelevantly that the failed replication was successful in some other way, or by making intemperate attacks on whomever dares to criticize their competence.

Reply to Claims for ESP

*The New York Review of Books*, February 19, 1981

### **Gauss, Johann Carl Friedrich** 1777–1855

German mathematician, physicist, and astronomer

A taste for the abstract sciences in general and, above all, for the mysteries of numbers, is very rare: this is not surprising, since the charms of this sublime science in all their beauty reveal themselves only to those who have the courage to fathom them. But when a woman, because

of her sex, our customs, and prejudices, encounters infinitely more obstacles than men in familiarizing herself with their knotty problems, yet overcomes these fetters and penetrates that which is most hidden, she doubtless has the most noble courage, extraordinary talent, and superior genius.

Letter, Carl Friedrich Gauss to Sophie Germain, 30 April, 1807

### **Gay, Frederick P.**

No biographical data available

We scientists are like rag-pickers, some fumble through masses of rubbish looking for a certain coin, while the true investigator takes up each object that is turned over and asks himself what use he can make of it.

The Contribution of Medical Science to Medical Art as shown in the Study of Typhoid Fever

*Science*, Volume XLIV, Number 1126, July 28, 1916 (pp. 112–113)

### **Gell-Mann, Murray** 1929–

American physicist

But the practitioners of science are, after all, human beings. They are not immune to the normal influences of egotism, economic self-interest, fashion, wishful thinking and laziness. A scientist may try to steal credit, knowingly initiate a worthless project for gain, or take a conventional idea for granted instead of looking for a better explanation. From time to time scientists even fudge their results, breaking one of the most serious taboos of their profession.

*The Quark and the Jaguar: Adventures in the Simple and the Complex* (p. 80)

W.H. Freeman & Company. New York, New York, USA. 1994

### **Gibran, Kahlil** 1883–1931

Lebanese-American philosophical essayist

A scientist without imagination is a butcher with dull knives and out-worn scales.

*Sand and Foam: A Book of Aphorisms* (p. 46)

Alfred A. Knopf. New York, New York, USA. 1959

### **Glashow, Sheldon L.** 1932–

American physicist

Many scientists are deeply religious in one way or another, but all of them have a certain rather peculiar faith – they have a faith in the underlying simplicity of nature; a belief that nature is, after all, comprehensible and that one should strive to understand it as much as we can. Now this faith in simplicity, that there are simple rules – a few elementary particles, a few quantum rules to explain the structure of the world – is completely irrational and completely unjustifiable. It is therefore a religion.

*The Quantum Universe*

Coproduced by WETA-TV and The Smithsonian Institution (1990).

**Gleck, James** 1954–

American author, journalist, and essayist

Children and scientists share an outlook on life. If I do this, what will happen? is both the motto of the child at play and the defining refrain of the physical scientist.... The unfamiliar and the strange – these are the domain of all children and scientists.

*Genius: The Life and Science of Richard Feynman*

The Rockaway (p. 19)

Pantheon Books. New York, New York, USA. 1992

Scientists still ask the what if questions. What if Edison had not invented the electric light – how much longer would it have taken? What if Heisenberg had not invented the S matrix? What if Fleming had not discovered penicillin? Or (the king of such questions) what if Einstein had not invented general relativity? “I always find questions like that...odd,” Feynman wrote to a correspondent who posed one. Science tends to be created as it is needed. “We are not that much smarter than each other,” he said.

*Genius: The Life and Science of Richard Feynman*

Caltec (p. 329)

Pantheon Books. New York, New York, USA. 1992

**Goldenweiser, Alexander** 1880–1940

American anthropologist

The scientist, when in his laboratory, is craftsman and inventor in one. He also faces nature as a learner. Like the craftsman, he is prepared to commit errors and, having learned from them, to revise his procedure. Like the inventor, he is after something new, he plans his experiments deliberately, watches carefully, ever on the alert for a promising lead – a discovery.

*Robots or Gods*

Chapter IV (p. 44)

Alfred A. Knopf. New York, New York, USA. 1931

A scientist who is no longer capable of framing a hypothesis – or never was – is not a scientist but a methodological fossil.

*Robots or Gods*

Chapter IV (p. 48)

Alfred A. Knopf. New York, New York, USA. 1931

**Goldstein, A.**

No biographical data available

Science is always a race...and scientists are competitive people. Because the monetary rewards are minimal, they go for ego rewards....

In J. Goldberg

*Anatomy of a Scientific Discovery*

Locks and Keys (p. 25)

Bantam Books. Toronto, Ontario, Canada. 1988

**Gornick, Vivian**

American critic, essayist, and memoirist

To do science today is to experience a dimension unique in contemporary working lives; the work promises something incomparable: the sense of living both personally and historically. That is why science now draws to itself all kinds of people – charlatans, mediocrities, geniuses – everyone who wants to touch the flame, feel alive in the time.

*Women in Science: Portraits from a World in Transition*

Part One (p. 26)

Simon & Schuster. New York, New York, USA. 1983

Scientists do what writers do. They also live with an active interiority, only the ongoing speculation in their heads is about relations in the physical world rather than the psychological one.

*Women in Science*

Part I (p. 39)

Simon & Schuster. New York, New York, USA. 1983

Whatever a scientist is doing – reading, cooking, talking, playing – science thoughts are always there at the edge of the mind. They are the way the world is taken in; all that is seen is filtered through an everpresent scientific musing.

*Women in Science: Portraits from a World in Transition*

Part One (p. 39)

Simon & Schuster. New York, New York, USA. 1983

...a scientist or a writer is one who ruminates continuously on the nature of physical or imaginative life, experiences repeated relief and excitement when the insight comes, and is endlessly attracted to working out the idea.

*Women in Science*

Part I (p. 40)

Simon & Schuster. New York, New York, USA. 1983

**Gray, Elisha** 1835–1901

American electrical engineer

When the uncultured man sees a stone in the road it tells him no story other than the fact that he sees a stone and that it would better be removed; and all the satisfaction he gets out of it is in the thought that he has saved some unlucky wagon wheel from being wrenched or broken. The scientist looking at the same stone perhaps will stop, and with a hammer break it open, when the newly exposed faces of the rock will have written upon them a history that is as real to him as the printed page.

*Nature's Miracles; Familiar Talks on Science*

Chapter I (p. 2)

Fords, Howard & Hulbert. New York, New York, USA. 1899

**Gray, George W.**

Freelance science writer

The modern scientist is like a detective who finds clues, but never gets a glimpse of the fugitive he seeks.

New Eyes of the Universe

*The Atlantic Monthly*, Volume 155, Number 5, May, 1935 (p. 607)

**Harding, Rosamund E. M.**

No biographical data available

If the scientist has, during the whole of his life, observed carefully, trained himself to be on the look-out for analogy and possessed himself of relevant knowledge, then the “instrument of feeling”...will become a powerful divining rod leading the scientist to discover order in the midst of chaos by providing him with a clue, a hint, or an hypothesis upon which to base his experiments.

*An Anatomy of Inspiration*

Chapter V (p. 86)

W. Heffer & Sons Ltd. Cambridge, England. 1940

**Harnwell, G. P.** 1903–1982

No biographical data available

The motivations of the pure scientist would appear to many at first thoughts as whimsical and abstract as the immediate results he achieves. The briefest explanation of why he works is curiosity rather than the necessity of earning a livelihood.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1939*

Our Knowledge of Atomic Nuclei (p. 189)

Government Printing Office. Washington, D.C. 1940

**Heinlein, Robert A.** 1907–88

American science fiction writer

Most “scientists” are bottle washers and button sorters.

*Time Enough for Love*

Intermission (p. 257)

G.P. Putnam’s Sons. New York, New York, USA. 1973

**Hight, Gilbert** 1906–78

American classicist

There are naive people all over the world – some of them scientists – who believe that all problems, sooner or later, will be solved by Science. The word Science itself has become a vague reassuring noise, with a very ill-defined meaning and a powerful emotional charge: It is now applied to all sorts of unsuitable subjects and used as a cover for careless and incomplete thinking in dozens of fields. But even taking Science at the most sensible of its definitions, we must acknowledge that it is unperfect as are all activities of the human mind.

*Man’s Unconquerable Mind*

Part Two, Chapter 4 (p. 106)

Cambridge University Press. New York, New York, USA. 1954

**Hogan, James P.** 1946–

English writer of hard science fiction

Scientists are the easiest to fool...They think in straight, predictable, directable, and therefore misdirectable, lines. The only world they know is the one where everything has a logical explanation and things are what they appear to be. Children and conjurers – they terrify me. Scientists are no problem; against them I feel quite confident.

*Code of the Lifemaker*

Chapter I (p. 14)

Ballantine Books. New York, New York, USA. 1983

**Hubbard, Elbert** 1856–1915

American editor, publisher, and author

The scientist who now takes off his shoes knows that the place whereon he stands is holy ground. Science is reverent and speaks with lowered voice, for she has caught glimpses of mysteries undefinable, and to her have come thoughts that are beyond speech. Science cultivates the receptive heart and hospitable mind, and her prayer is for more light, and to that prayer the answer is even now coming.

In *Albert Lane*

*Elbert Hubbard and His Work* (p. 100)

The Blanchard Press. Worcester, Massachusetts, USA. 1901

A metaphysician is one who proves ten times as much as he believes; a scientist is one who believes ten times as much as he can prove.

*Little Journeys*

Herbert Spencer (p. 356)

Wm. H. Wise & Co. New York, New York, USA. 1916

**Hubble, Edwin Powell** 1889–1953

American astronomer

Scientists in general are not very articulate; they work in comparative seclusion and they do not cultivate the art of persuasion.

*The Nature of Science and Other Lectures*

Part I, The Nature of Science (p. 3)

The Huntington Library. San Marino, California, USA. 1954

The scientist, in his purely scientific moods, seeks to understand the world – not to reform it, not to control it, but merely to understand it.

*The Nature of Science and Other Lectures*

Part I, Science and Technology (p. 20)

The Huntington Library. San Marino, California, USA. 1954

**Huggins, Charles** 1901–1997

Canadian born-American surgeon

...there are two kinds of scientists – The “gee whiz” kind and the “so what” kind. Flies around the urine cause the first type to exclaim: “Gee whiz, what could that mean?” whereas the other says: “so what, let’s clean up this mess and get on with a proper experiment.”

In *Elwood V. Jensen*

*The Science of Science*

*Perspectives in Biology and Medicine*, Volume 12, Number 2, Winter, 1969 (p. 283)

**Hull, David L.** 1935–

American philosopher of biology

From the beginning of their careers, scientists are presented with a dilemma. They can make their work look as conventional as possible – just one more brick in the

edifice of science – or as novel and controversial as possible – declaring a whole new theory or possibly even a whole new science.... From my own reading of the recent history of science, I see no strong correlation between my own estimates of the novelty of an idea and the strategy that an author adopts.

*Science as a Process: An Evolutionary Account of the Social and Conceptual Development of Science*

Chapter Six (p. 202)

The University of Chicago Press. Chicago, Illinois, USA. 1988

### **Husserl, Edmund** 1859–1938

German philosopher

When it is actually natural science that speaks, we listen gladly and as disciples. But it is not always natural science that speaks when natural scientists are speaking...

Translated by W.R. Boyce Gibson

*Ideas: General Introduction to Pure Phenomenology*

Second Chapter, Section 20 (p. 86)

George Allen & Unwin Ltd. London, England. 1931

### **Ian (Fictional character)**

Your scientists were so preoccupied with whether or not they could, they didn't stop to think if they should.

*Jurassic Park*

Film (1993)

### **Imhof, Peter**

German computer scientist and social science modeler

...scientists are not a select few intelligent enough to think in terms of "broad sweeping theoretical laws and principles." Instead, scientists are people specifically trained to build models that incorporate theoretical assumptions and empirical evidence. Working with models is essential to the performance of their daily work; it allows them to construct arguments and to collect data.

Tools for Thinking (book review)

*Science*, Volume 287, 1935–1936

### **Ingram, Jay** 1945–

Canadian author and television host

The caricature of the nerdy scientist in his/her lab coat, complete with pocket protector, uttering incomprehensible jargon is bad enough. But the implied character of the person behind the wardrobe is worse: strait-jacketed by conservatism, too quick to demand hard data, hell-bent on reducing life's mysteries to uninteresting sets of numbers and graphs. ...The truth is that scientists love a mystery as much as anyone (it's their business to chase mysteries after all) even when...there is almost no chance it will be solved. Why? Because it's intriguing, challenging, and fun.

*The Barmaid's Brain and other Strange Tales from Science*

The Burning Mirrors of Syracuse

### **Jensen, Elwood V.**

No biographical data available

Research among the less imaginative scientists has been likened to a fox-hunt. A creative investigator shouts "Tally-ho", and the entire troop rides off in the same direction.

The Science of Science

*Perspectives in Biology and Medicine*, Volume 12, Number 2, Winter, 1969 (p. 278)

### **Joad, Cyril Edwin Mitchinson** 1891–1953

English philosopher and broadcasting personality

When the scientist leaves his laboratory and speculates about the universe as a whole, the resultant conclusions are apt to tell us more about the scientist than about the universe.

*Philosophical Aspects of Modern Science*

Chapter XI (p. 339)

G. Allen & Unwin Ltd. London, England. 1932

### **Katscher, F.**

No biographical data available

That great scientists were believing Christians does not prove anything. In this century many free-thinkers have also made great contributions to science, scientific thinking and ethical questions regarding the application of science.

Correspondence

*Nature*, Volume 363, Number 6428, 3 June, 1993 (p. 390)

### **Kemble, Edwin Crawford** 1889–1984

American physicist

...most scientists have little enthusiasm for history. The job of the scientist is to make discoveries and develop new ideas. When new ideas prove effective they tend to make old ones obsolete: thus it is not altogether unfair to say that the typical scientist is in the business of creating the future and destroying the past.

*Physical Science, Its Structure and Development* (Volume 1) (p. 2)

M.I.T. Press. Cambridge, Massachusetts, USA. 1966

### **Killian, Jr., James R.** 1904–88

American manager

The scientist, it is repeatedly said, should be on tap but not on top. He thus is considered to be merely one of the hired men who has no business doing anything but what he is told to do in the field of his specialty. ...I do not imply that the scientist has any right or unique qualifications to be on top. I am disturbed by the attitude that because a man is a scientist, he is disqualified for public and private administrative responsibility even though he may have the qualifications.

The Shortage Re-Examined

*American Scientist*, Spring, April, 1956 (p. 126)

**Kingsley, Charles** 1819–75  
English clergyman and author

[Scientists] Good men, honest men, accurate men, righteous men, patient men, self-restraining men, fair men, modest men. Men who are aware of their own vast ignorance compared with the vast amount that there is to be learned in such a universe as this. Men who are accustomed to look at both sides of a question; who, instead of making up their minds in haste like bigots and fanatics, wait like wise men, for more facts, and more thought about the facts. *Town Geography*

Preface

D. Appleton & Company. New York, New York, USA. 1873

**Koestler, Arthur** 1905–83  
Hungarian-born English writer

[Scientists are] Peeping Toms at the keyhole of eternity.

*The Roots of Coincidence*

Chapter 5, Section 9 (p. 140)

Random House. New York, New York, USA. 1972

**Kolb, Edward W. (Rocky)** 1951–  
American cosmologist

No one devotes a lifetime to science in the hope of making small advances. Every scientist secretly or overtly hopes to make great discoveries.

*Blind Watchers of the Sky*

Chapter Two (p. 42)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

Most scientists spend their lives groping around trying to find their way, as if lost in a fog.

*Blind Watchers of the Sky*

Chapter Eight (p. 203)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

**Kornberg, Arthur** 1918–  
American biochemist

A scientist...shouldn't be asked to judge the economic and moral value of his work. All we should ask the scientist to do is to find the truth – and then not keep it from anyone.

*San Francisco Examiner*, December 19, 1971

**Kuhn, Thomas S.** 1922–96  
American historian of science

Scientists, it should already be clear, never learn concepts, laws, and theories in the abstract and by themselves. Instead, these intellectual tools are from the start encountered in a historically and pedagogically prior unit that displays them with and through their applications.

*The Structure of Scientific Revolutions*

Chapter V (p. 46)

The University of Chicago Press. Chicago, Illinois, USA. 1970

Though many scientists talk easily and well about the particular individual hypotheses that underlie a concrete piece of current research, they are little better than laypersons at characterizing the established basis of their field, its legitimate problems and methods. If they have learned such abstractions at all they show it mainly through their ability to do successful research.

*The Structure of Scientific Revolutions*

Chapter V (p. 47)

The University of Chicago Press. Chicago, Illinois, USA. 1970

**La Farge, Oliver Hazard Perry** 1901–63  
American writer and anthropologist

The inner nature of science within the scientist is both emotional and intellectual. The emotional element must not be overlooked, for without it there is no sound research on however odd and dull-seeming a subject. As is true of all of us, an emotion shapes and forms the scientist's life; at the same time an intellectual discipline molds his thinking, stamping him with a character as marked as a seaman's although much less widely understood.

In Harlow Shapley, Helen Wright and Samuel Rapport

*Readings in the Physical Sciences*

Scientists Are Lonely Men (p. 48)

Appleton-Century-Crofts. New York, New York, USA. 1948

**Langer, Susanne Katherina Knauth** 1895–1985  
American philosopher

The faith of scientists in the power and truth of mathematics is so implicit that their work has gradually become less and less observation, and more and more calculation.

*Philosophy in a New Key: A Study in the Symbolism of Reason, Rite, and Art*

Chapter I (p. 19)

Harvard University Press. Cambridge, Massachusetts, USA. 1942

**Larrabee, Eric** 1922–90  
Historian

Perhaps the time has come for [scientists] to wonder about why they sometimes jar the nerves and try the patience of non-scientists.

...Scientists seem able to go about their business in a state of indifference to, if not ignorance of, anything but the going, currently acceptable doctrine of their several disciplines....

Science and the Common Reader

*Commentary*, June, 1966 (p. 48)

The only thing wrong with scientists is that they don't understand science. They don't know where their own institutions come from, what forces shaped and are still shaping them, and they are wedded to an anti-historical way of thinking which threatens to deter them from ever finding out.

Science and the Common Reader

*Commentary*, June, 1966 (p. 48)

**Lebowitz, Fran** 1951–  
American comedian

Scientists are rarely to be counted among the fun people. Awkward at parties, shy with strangers, deficient in irony – they have had no choice but to turn their attention to the close study of everyday objects.

*Metropolitan Life*

Science (p. 106)

Fawcett Crest. New York, New York, USA. 1978

**Lederman, Leon** 1922–  
American high-energy physicist

Physicists today feel the same emotions that scientists have felt for centuries. The life of a physicist is filled with anxiety, pain, hardship, tension, attacks of hopelessness, depression, and discouragement. But these are punctuated by flashes of exhilaration, laughter, joy, and exultation. These epiphanies come at unpredictable times. Often they are generated simply by the sudden understanding of something new and important, something beautiful, that someone else has revealed.

*The God Particle: If the Universe Is the Answer, What Is the Question?*

Chapter 1 (p. 7)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1993

[If] you are mortal, like most of the scientists I know, the far sweeter moments come when you yourself discover some new fact about the universe. It's astonishing how often this happens at 3 A.M., when you are alone in the lab and you have learned something profound, and you realize that not one of the other five billion people on earth knows what you now know. Or so you hope. You will, of course, hasten to tell them as soon as possible. This is known as "publishing."

*The God Particle: If the Universe Is the Answer, What Is the Question?*

Chapter 1 (p. 7)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1993

When I talk about the pain and hardship of a scientist's life, I'm speaking of more than existential angst. Galileo's work was condemned by the Church; Madame Curie paid with her life, a victim of leukemia wrought by radiation poisoning. Too many of us develop cataracts. None of us gets enough sleep. Most of what we know about the universe we know thanks to a lot of guys (and ladies) who stayed up late at night.

*The God Particle: If the Universe Is the Answer, What Is the Question?*

Chapter 1 (p. 16)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1993

**Lee, Gerald Stanley** 1862–1944  
Writer
