*Industrial and Engineering Chemistry: News Edition*, Volume 8, Number 2, 20 January, 1930

**GLEAM**

**Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

Thought is only a gleam in the midst of a long night. But it is this gleam which is everything.

Translated by George Bruce Halsted

*The Value of Science*

*Science and Reality* (p. 142)

The Science Press. New York, New York, USA. 1907

**GLUONS**

**Feynman, Richard P.** 1918–88

American theoretical physicist

We call these quanta gluons, and say that besides quarks there must be gluons to hold the quarks together.

In Heinz R. Pagels

*The Cosmic Code: Quantum Physics as the Language of Nature*

Part II, Chapter 6 (p. 251)

Simon & Schuster. New York, New York, USA. 1982

**GOAL**

**Browne, Sir Thomas** 1605–82

English author and physician

In this virtuous Voyage of thy Life, hull not about like the Ark without the use of Rudder, Mast, or Sail, and bound for no Port. Let not Disappointment cause Despondency, nor difficulty despair.

*The Prose of Sir Thomas Browne*

Christian Morals

Part I, Section 1 (p. 371)

**Farber, Eric A.**

No biographical data available

Everything worthwhile which has been achieved by an individual, a group, or humanity as a whole was done by striving toward a definite, clearly defined – although sometimes unattainable – goal.

The Teaching and Learning of Engineering

*Journal of Engineering Education*, Volume 45, Number 10, June, 1955 (p. 784)

**Fredrickson, A. G.** 1932–

No biographical data available

We must try to set up some definite goals that have the benefit of all mankind as their objective.

The Dilemma of Innovating Societies

*Chemical Engineering Education*, Volume 4, Summer 1969 (p. 148)

Only by setting up defined goals will it be possible to develop priorities and institutions that can guide the innovative genius of men onto paths that will be truly, as opposed to superficially, beneficial.

The Dilemma of Innovating Societies

*Chemical Engineering Education*, Volume 4, Summer 1969 (p. 148)

**Grew, Nehemiah** 1641–1712

Scientific writer and journalist

.... If but little thought be effected, yet to design more, can do us no harm: For although a Man shall never be able to hit Stars by shooting at them; yet he shall come much nearer to them than another that throws at Apples.

*The Anatomy of Plants*

An Idea of A Philosophical History of Plants (p. 24)

Printed by W. Rawlins. London, England. 1682

**Osler, Sir William** 1849–1919

Canadian physician and professor of medicine

When schemes are laid in advance, it is surprising how often the circumstances fit in with them.

*Aequanimitas, With Other Addresses to Medical Students, Nurses, and Practitioners of Medicine*

Internal Medicine as a Vocation (p. 138)

The Blakiston Company. Philadelphia, Pennsylvania, USA. 1932

## GOD

**Adams, George** 1750–95  
English instrument maker

God pervades infinity, and sees through eternity...  
*Lectures on Natural and Experimental Philosophy* (Volume 4)  
Chapter XXVII (p. 4)  
Printed by R. Hindmarsh. London, England. 1794

**Agassiz, Jean Louis Rodolphe** 1807–73  
Swiss-born American naturalist, geologist, and teacher

I will frankly tell you that my experience in prolonged scientific investigations convinces me in a belief in God. A God who is behind and within the chaos of vanishing point of human knowledge – adds a wonderful stimulus to the man who attempts to penetrate into the regions of the unknown.

In A. R. Hanes  
*Report of the Superintendent of Public Instruction*  
*The Study of Physics* (p. 200)  
Virginia Department of Public Instruction  
1889

...the resources of the Deity cannot be so meager, that, in order to create a human being endowed with reason, he must change a monkey into a man.

*Methods of Study in Natural History*  
Preface (p. iv)  
Houghton Mifflin & Co. Boston, Massachusetts, USA. 1896

**Allen, Dave** 1936–2005  
Irish comic and satirist

If man has a sense of humor about God then surely God must have a sense of humor about man.

*Dave Allen at Large, BBC*  
Aired on Miami Channel 2, WPBT, October 18, 1984

**Allen, Ethan** 1738–89  
Hero of the American Revolution

As far as we understand nature, we are become acquainted with the character of God; for the knowledge of nature is the revelation of God.

*Reason the Only Oracle of Man*  
Chapter I, Section II (p. 30)  
Scholar's Facsimiles and Reprints. New York, New York, USA. 1940

**Aristotle** 384 BC–322 BC  
Greek philosopher

...God and nature create nothing that has not its use.

In *Great Books of the Western World* (Volume 8)  
*On the Heavens*  
Book I, Chapter 4 (p. 362)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Asimov, Isaac** 1920–92  
American author and biochemist

If we assume the existence of an omniscient and omnipotent being, one that knows and can do absolutely every-

thing, then to my own very limited self, it would seem that existence for it would be unbearable. Nothing to wonder about? Nothing to ponder over? Nothing to discover? Eternity in such a heaven would surely be indistinguishable from hell.

*"X" Stands for Unknown*  
Introduction (p. 11)  
Doubleday & Company, Inc. Garden City, New York, USA. 1984

**Bentley, Richard** 1882–1742  
English clergyman

The Atoms or Particles, which now constitute Heaven and Earth, being once separate and diffused in the Mundane Space, like the supposed Chaos, could never without a God by their Mechanical affections have convened into the present Frame of Things or any other like it.

*A Confutation of Atheism from The Origin and Frame of the World* Part II  
A Sermon Preached at St Martin's in the Fields  
November the 7th, 1692 (p. 7)

**Blackie, John Stuart** 1809–95  
Scottish scholar

God hath made three beautiful things,  
Birds, and women, and flowers;  
And he on earth who happy would be  
Must look with love on all the three;  
But chiefly, in bright summer hours,  
He is wise who loves the flowers,  
And roams the fields with me.

*Musa Burschicosa: A Book of Songs for Students and University Men*  
The Botanist's Song, First stanza  
Edmonston and Douglas. Edinburgh, Scotland. 1869

**Bohm, David** 1917–92  
American physicist

I would put it another way: people had insight in the past about a form of intelligence that had organized the universe and they personalized it and called it "God."

Quoted by Renée Weber  
*Dialogues with Scientists and Sages: The Search for Unity* (p. 21)  
Routledge & Kegan Paul. London, England. 1986

**Bonnor, William Bowen** 1920–  
English physicist

It seems to me highly improper to introduce God to solve our scientific problems.

In Charles-Albert Reichen  
*A History of Astronomy* (p. 100)  
Hawthorn Books. New York, New York, USA. 1963

**Born, Max** 1882–1970  
German-born English physicist

If God has made the world a perfect mechanism, He has at least conceded so much to our imperfect intellects that in order to predict little parts of it, we need not solve innumerable differential equations, but can use dice with fair success.

In Heinz R. Pagels

 Third Address, Chapter IV (p. 57)  
 Farrar, Straus & Young. New York, New York, USA. 1952

**Butler, Joseph** 1692–1752  
 English bishop and exponent of natural theology

...the Author of Nature appears deliberate throughout His operations, accomplishing His natural ends by slow successive steps. And there is a plan of things beforehand laid out, which, from the nature of it, requires various systems of means, as well as length of time, in order to the carrying on its several parts into execution.  
*The Analogy of Religion, Natural and Revealed, to the Constitution and Course of Nature*  
 Chapter II, Section 1 (p. 148)  
 Samuel G. Goodrich. Hartford, Connecticut, USA. 1819

**Card, Orson Scott** 1951–  
 Science fiction author

All the universe is just a dream in God's mind, and as long as he's asleep, he believes in it, and things stay real.  
*Seventh Son*  
 Chapter 10 (p. 126)  
 Tom Doherty Associates, Inc. New York, New York, USA. 1987

**Carlyle, Thomas** 1795–1881  
 English historian and essayist

[Nature] is a Volume written in celestial hieroglyphs, in a true Sacred-writing; of which even Prophets are happy that they can read here a line and there a line.  
*Sartor Resartus*  
 Book III, Chapter VIII (p. 234)  
 Ginn & Company. Boston, Massachusetts, USA. 1897

...Nature, which is the Time-vesture of God, and reveals Him to the wise, hides Him from the foolish.  
*Sartor Resartus*  
 Book III, Chapter VIII (p. 240)  
 Ginn & Company. Boston, Massachusetts, USA. 1897

**Carver, George Washington** 1864–1943  
 American agricultural chemist

God is going to reveal to us things He never revealed before if we put our hands in His. No books ever go into my laboratory. The thing I am to do and the way of doing it are revealed to me. I never have to grope for methods. The method is revealed to me the moment I am inspired to create something new. Without God to draw aside the curtain I would be helpless.  
 In Ethel Edwards  
*Carver of Tuskegee* (pp. 141–142)  
 Cincinnati, Ohio: Ethel Edwards & James T. Hardwick, a limited edition work compiled in part from over 300 personal letters written by Dr. Carver to James T. Hardwick. 1971

**Compton, Karl Taylor** 1887–1954  
 American educator and physicist

As the complexity of the structure of matter became revealed through research, its basic simplicity, unity, and dependability became equally evident. So we now see ourselves in a world governed by natural laws instead of by capricious deities and devils. This does not necessarily mean that God has been ruled out of the picture, but it does mean that the architect and engineer of the universe is a far different type of being from the gods assumed by the ancients, and that man lives and dies in a world of logical system and orderly performance.  
*A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton During the Years 1930–1949* (p. 3)  
 Undergraduate Association, Massachusetts Institute of Technology. Cambridge, Massachusetts, USA. 1955

**Cowper, William** 1731–1800  
 English poet

Nature is a name for an effect,  
 Whose cause is God.  
*The Poetical Works of William Cowper*  
 The Task, the Winter Walk at Noon  
 John W. Lovell Company. New York, New York, USA. n.d.

**Dawkins, Richard** 1941–  
 English ethologist, evolutionary biologist, and popular science writer

If God is a synonym for the deepest principles of physics, what word is left for a hypothetical being who answers prayers, intervenes to save cancer patients or helps evolution over difficult jumps, forgives sins or dies for them?  
 Snake Oil and Holy Water  
*Forbes ASAP*, October 4, 1999

**Dick, Thomas** 1600–80  
 Scottish theologian and philosopher

Here imagination must drop its wing, since it can penetrate no further into the dominions of Him who sits on the Throne of Immensity. Overwhelmed with a view of

the magnificence of the Universe, and the perfections of its Almighty Author, we can only fall prostrate in deep humility and exclaim, "Great and marvelous are Thy works, Lord God Almighty."

In Hector Macpherson

*A Century's Progress in Astronomy*

Chapter XIII (p. 288)

William Blackwood & Sons. Edinburgh, Scotland. 1909

**Dirac, Paul Adrien Maurice** 1902–84

English theoretical physicist

It seems to me one of the fundamental features of nature that fundamental physical laws ...described in terms of mathematical theory of great beauty and power need quite a high standard of mathematics for one to understand .... You may wonder: Why is nature constructed on these lines? One can only answer that our present knowledge seems to show that nature is so constructed.... We simply have to accept it. One could perhaps describe the situation by saying that God is a mathematician of very high order and He used a very advanced mathematics in constructing the Universe...

The Evolution of the Physicist's Picture of Nature

*Scientific American*, Volume 208, Number 5, May, 1963 (p. 53)

**Dyson, Freeman J.** 1923–

American physicist and educator

Humanity looks to me like a magnificent beginning but not the last word. Small children often have a better grasp of these questions than grown-ups. It happened to me that I adopted a stepdaughter. I moved into her family when she was five years old. Before that, she had been living alone with her mother. Soon after I moved in, she saw me for the first time naked. "Did God really make you like that?" she asked with some astonishment. "Couldn't he have made you better?" That is a question that every scientific humanist should be confronted with, at least once in a lifetime. The only honest answer is, of course, yes.

*Infinite in All Directions*

Part One, Chapter One (p. 9)

HarperCollins Publishers. New York, New York, USA. 1988

**Einstein, Albert** 1879–1955

German-born physicist

To be sure, the doctrine of a personal God interfering with natural events could never be refuted, in the real sense, by science, for this doctrine can always take refuge in those domains in which scientific knowledge has not yet been able to set foot. But I am persuaded that such behavior on the part of the representatives of religion would not only be unworthy but also fatal. For a doctrine which is able to maintain itself not in clear light but only in the dark, will of necessity lose its effect on mankind, with incalculable harm to human progress. In their struggle for the ethical good, teachers of religion must have the stature to give up the doctrine of a personal God, that is, give up that

source of fear and hope which in the past placed such vast power in the hands of priests. In their labors they will have to avail themselves of those forces which are capable of cultivating the Good, the True, and the Beautiful in humanity itself. This is, to be sure, a more difficult but an incomparably more worthy task.

*Science, Philosophy, and Religion*

A 1934 Symposium, published by the Conference on Science, Philosophy and Religion in Their Relation to the Democratic Way of Life, Inc. New York, New York. 1941

What I'm really interested in is whether God could have made the world in a different way; that is, whether the necessity of logical simplicity leaves any freedom at all.

In A.P. French

*Einstein: A Centenary Volume*

Chapter 4 (p. 128)

Harvard University Press. Cambridge, Massachusetts, USA. 1979

I cannot imagine a God who rewards and punishes the objects of his creation, whose purposes are modeled after our own – a God, in short, who is but a reflection of human frailty. Neither can I believe that the individual survives the death of his body, although feeble souls harbor such thoughts through fear or ridiculous egotisms.

*New York Times*, Obituary, 19 April, 1955

**Ellie Arroway (Fictional character)**

So what's more likely? That an all-powerful, mysterious God created the Universe, and decided not to give any proof of his existence? Or, that He simply doesn't exist at all, and that we created Him, so that we wouldn't have to feel so small and alone?

**Erdős, Paul** 1913–96

Hungarian mathematician

God created two acts of folly. First, He created the Universe in a Big Bang. Second, He was negligent enough to leave behind evidence for this act, in the form of the

microwave radiation.

In John D. Barrow and Frank J. Tipler  
*The Anthropic Cosmological Principle*  
Chapter 6.7 (p. 401)  
Clarendon Press. Oxford, England. 1986

**Fernel, Jean** 1497–1558  
French physician

Nature embracing all things and entering into each, governs the courses and the revolutions of the sun and the moon, and of the other stars, and the succession of times, the change of the season, and the ocean's ebb and flow. Nature rules this immensity of things with an order assured and unvarying. How were it possible for Nature so to conduct and direct all this thus well but for the interposition of a divine Intelligence, which, having produced the world, preserves it?

In Sir Charles Sherrington  
*Man on His Nature*  
Chapter I (p. 21)  
Doubleday Anchor Books. Garden City, New York, USA. 1955

**Feynman, Richard P.** 1918–88  
American theoretical physicist

God was always invented to explain mystery. God is always invented to explain those things that you do not understand. Now when you finally discover how something works, you get some laws which you're taking away from God; you don't need him anymore. But you need him for the other mysteries. So therefore you leave him to create the universe because we haven't figured that out yet; you need him for understanding those things which you don't believe the laws will explain, such as consciousness, or why you only live to a certain length of time – life and death – stuff like that. God is always associated with those things that you do not understand. Therefore I don't think that the laws can be considered to be like God, because they have been figured out.

In P.C.W. Davies and J. Brown (eds.)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1983

**Galilei, Galileo** 1564–1642  
Italian physicist and astronomer

But I do not feel obliged to believe that the same God who has endowed us with senses, reason, and intellect has intended to forgo their use and by some other means to give us knowledge which we can attain by them.

Translated by Stillman Drake  
*Discoveries and Opinions of Galileo*  
Letter to Madame Christina of Lorraine (p. 183)  
Doubleday. New York, New York, USA. 1957

**Goodspeed, Edgar J.** 1871–1962  
American scholar

...science is seen to be just one more of those great flights of altar stairs that lead through darkness up to God.

*The Four Pillars of Democracy*  
Chapter II (p. 55)  
Harper & Brothers. New York, New York, US. 1940

**Gould, Stephen Jay** 1941–2002  
American paleontologist and evolutionary biologist

Since creationist-bashing is a noble and necessary pursuit these days, readers may wonder why I am praising such an invocation of God's power to create immutable entities all at once – especially since Linnaeus substituted this idea for earlier notions of looser definition and mutability. But, as I [have] argued..., the history of science progresses in such a manner – from theory to theory along a complex surface with a slant toward greater empirical adequacy, not along a straight and narrow path pushed by a gathering snowball of factual accumulation. The conceptual change was surely enormous, but Darwin's invocation of natural selection in steps as a replacement for God all at once did not require any major overhaul in practice. Species are real whether created by God or constructed by natural selection – and Darwin's conceptual shift, the second unmasking, required little revision in Linnaean methods.

Introduction (p. 3)

Oxford University Press, Inc. New York, New York, USA. 1984

**Hawking, Stephen William** 1942–  
English theoretical physicist

We still believe that the universe should be logical and beautiful; we just dropped the word "God."

Quoted by Renée Weber

*Dialogues with Scientists and Sages: The Search For Unity* (p. 21)  
Routledge & Kegan Paul. London, England. 1986

Science seems to have uncovered a set of laws that, within the limits set by the uncertainty principle, tell us how the universe will develop with time, if we know its state at any one time. These laws may have originally been decreed by God, but it appears that he has since left the universe to evolve according to them and does not now intervene in it.

*A Brief History of Time: From the Big Bang to Black Holes*

Chapter 8 (p. 122)

Bantam Books. Toronto, Ontario, Canada. 1988

The idea that space and time may form a closed surface without boundary also has profound implications for the role of God in the affairs of the universe. With the success of scientific theories in describing events, most people have come to believe that God allows the universe to evolve according to a set of laws and does not intervene in the universe to break these laws. However, the laws do not tell us what the universe should have looked like when it started – it would still be up to God to wind up the clockwork and choose how to start it off. So long as the universe had a beginning, we could suppose it had a creator. But if the universe is really completely self-contained, having no boundary or edge, it would have neither beginning nor end: it would simply be. What place, then, for a creator?

*A Brief History of Time: From the Big Bang to Black Holes*

Chapter 8 (pp. 140–141)

Bantam Books. Toronto, Ontario, Canada. 1988

Up to now, most scientists have been too occupied with the development of new theories that describe what the universe is to ask the question why.... If we find the answer to that, it would be the ultimate triumph of human reason – for then we would know the mind of God.

*A Brief History of Time: From the Big Bang to Black Holes*

Chapter 11 (p. 174–175)

Bantam Books. Toronto, Ontario, Canada. 1988

...but if he [God] had started it [the universe] off in such an incomprehensible way, why did he choose to let it evolve according to laws that we could understand?

*A Brief History of Time: The Updated Expanded Tenth Anniversary Edition*

Chapter 8 (p. 127)

Bantam Books. Toronto, Ontario, Canada. 1998

...you don't have to say that the way the universe began was the personal whim of God. But you still have the question: Why does the universe bother to exist? If you like, you can define God to be the answer to that question.

*Black Holes and Baby Universes and Other Essays*

The genuine spirit of Mathesis is devout. No intellectual pursuit more truly leads to profound impressions of the existence and attributes of a Creator, and to a deep sense of our filial relations to him, than the study of these abstract sciences. Who can understand so well how feeble are our conceptions of Almighty Power, as he who has calculated the attraction of the sun and the planets, and weighed in his balance the irresistible force of the lightning? Who can so well understand how confused is our estimate of the Eternal Wisdom, as he who has traced out the secret laws which guide the hosts of heaven, and combine the atoms on earth? Who can so well understand that man is made in the image of his Creator, as he who has sought to frame new laws and conditions to govern imaginary worlds, and found his own thoughts similar to those on which his Creator has acted?

Polish physicist

Einstein uses his concept of God more often than a Catholic priest.

*Quest – An Autobiography*

Book Three, Part IV (p. 268)

Chelsea Publishing Company. New York, New York, USA. 1980

**Jacobi, Karl Gustav Jacob** 1804–51  
German mathematician

God ever arithmetizes.

In E.T. Bell

*Men of Mathematics* (p. xxi)

Simon & Schuster. New York, New York, USA. 1937

**James, William** 1842–1910  
American philosopher and psychologist

The God whom science recognizes must be a God of universal laws exclusively, a God who does a wholesale, not a retail business. He cannot accommodate his processes to the convenience of individuals.

*The Varieties of Religious Experience*

Lecture XX (pp. 483–485)

The Modern Library. New York, New York, USA. 1967

**Jastrow, Robert** 1925–  
American space scientist

When an astronomer writes about God, his colleagues assume he is either over the hill or going bonkers.

*God and the Astronomers*

Chapter 1 (p. 11)

W.W. Norton & Company, Inc. New York, New York, USA. 1978

**Jeans, Sir James Hopwood** 1877–1946  
English physicist and mathematician

...in physics God made mathematics and man made the rest.

*Annual Report of the Board of Regents of the Smithsonian Institution*  
(1934)

The New World-Picture of Modern Physics (p. 83)  
Government Printing Office. Washington, D.C. 1935

**Joule, James Prescott** 1818–89  
English physicist

...the phenomena of nature, whether mechanical, chemical, or vital, consist almost entirely in a continual conversion of attraction through space, living force, and heat into one another. Thus it is that order is maintained in the universe – nothing is deranged, nothing ever lost, but the entire machinery, complicated as it is, works smoothly and harmoniously. And though, as in the awful vision of Ezekiel, “wheel may be in the middle of wheel,” and everything may appear complicated and involved in the apparent confusion and intricacy of an almost endless variety of causes, effects, conversions, and arrangements, yet is the most perfect regularity preserved – the whole being governed by the sovereign will of God.

*The Scientific Papers of James Prescott Joule*  
On Matter, Living Forces and Heat (p. 273)  
Taylor & Francis. London, England. 1884

**Kant, Immanuel** 1724–1804  
German philosopher

...God has put a secret art into the forces of nature so as to enable it to fashion itself out of chaos into a perfect world system ...

Translated by W. Hastie  
*Kant's Cosmogony*  
Preface (p. 27)  
James Maclehose & Sons. Glasgow, Scotland. 1900

**Keill, John** 1671–1721  
Scottish mathematician and natural philosopher

Among all the Gifts and Benefits the most bountiful God has most plentifully bestowed on Mankind, those are in the first place Valuable which consist in the Improvements of the Mind by Arts and Sciences.

*An Introduction to the True Astronomy*  
The Preface (p. 1)  
Printed for Bernard Lintot. London, England. 1721

**Keillor, Garrison** 1942–  
American humorist and radio broadcaster

We wondered if there is a God or is the universe only one seed in one apple on a tree in another world where a million years of ours is only one of their moments and what we imagine as our civilization is only a tiny charge of static electricity and the great truth that our science is slowly grasping is the fact the apple in which we are part of one seed is falling, has been falling for a million years and in one one-millionth of a second it will hit hard-frozen ground in that other world and split open and lie on the ground and a bear will come along and gobble it up, everything, the Judeo-Christian heritage, science, democracy, the Renaissance, art,

music, sex, sweet corn – all disappear into that black hole of a bear.

Leaving Home  
*The Atlantic Monthly*, Volume 260, Number 3, September, 1987 (p. 48)

**Kepler, Johannes** 1571–1630  
German astronomer

The chief aim of all investigations of the external world should be to discover the rational order and harmony which has been imposed on it by God and which He revealed to us in the language of mathematics.

In Morris Kline  
*Mathematical Thought from Ancient to Modern Times* (p. 231)  
Oxford University Press, Inc. New York, New York, USA. 1972

...if there are globes in the heaven similar to our Earth, do we vie with them over who occupies the better portion of the universe? For if their globes are nobler, we are not the noblest of rational creatures. Then how can all things be for man's sake? How can we be the master of God's handiwork?

*Conversations with Galileo's Sidereal Messenger*  
Translated by Edward Rosen  
Section VIII (p. 43)  
Johnson Reprint Corp. New York, New York, USA. 1965

**Kersh, Gerald** 1911–68  
English journalist and author

I can't believe in the God of my Fathers. If there is one Mind which understands all things, it will comprehend me in my unbelief.

I don't know whose hand hung Hesperus in the sky, and fixed the Dog Star, and scattered the shining dust of Heaven, and fired the sun, and froze the darkness between the lonely worlds that spin in space.

*Sergeant Nelson of the Guards* (p. 135)  
The John C. Winston Co. Philadelphia, Pennsylvania, USA. 1945

**Lalande, Jérôme** 1732–1807  
French astronomer

I have searched through the heavens, and nowhere have I found a trace of God.

*Zoological Philosophy: An Exposition with Regard to the Natural History of Animals*  
 Chapter III (p. 41)  
 The University of Chicago Press. Chicago, Illinois, USA. 1984

**Lambert, Johann Heinrich** 1728–77  
 Swiss German mathematician and astronomer

If we admit the existence of a Supreme Disposer, who brought order out of Chaos, and gave form to the universe, it will follow that the universe is a perfect work, the impression, the character, the reflected image of the perfections of its author.

Translated by James Jacque  
*The System of the World*  
 Part I, Chapter II (p. 9)  
 Printed for Vernor and Hood. London, England. 1800

**Lawrence, D. H. (David Herbert)** 1885–1930  
 English writer

The history of the cosmos  
 is the history of the struggle of becoming.  
 When the dim flux of unformed life  
 struggled, convulsed back and forth upon itself,  
 and broke at last into light and dark  
 and came into existence as light,  
 came into existence as cold shadow  
 then every atom of the cosmos trembled with delight.  
 Behold, God is born!  
 He is bright light!  
 He is pitch dark and cold.

*The Complete Poems of D.H. Lawrence*  
 God Is Born  
 Viking Press. New York, New York, USA. 1973

**Leibniz, Gottfried Wilhelm** 1646–1716  
 German philosopher and mathematician

As God calculates, so the world is made.  
 In Morris Kline  
*Mathematics and the Physical World*  
 Chapter 23 (p. 385)  
 Dover Publications, Inc. New York, New York, USA. 1981

 Poet and physician

Little wonder that God can make souls when his clay is  
 star-clusters!  
*Science, Matter and Immortality*  
 Chapter XVI (p. 197)  
 William & Norgate. London, England. 1909

**Mencken, H. L. (Henry Louis)** 1880–1956  
 American journalist and literary critic

It is impossible to imagine the universe run by a wise,  
 just and omnipotent God, but it is quite easy to imagine  
 it run by a board of gods. If such a board actually exists

it operates precisely like the board of a corporation that  
 is losing money.

*Minority Report: H.L. Mencken's Notebooks*  
 No. 79 (p. 63)  
 Alfred A. Knopf. New York, New York, USA. 1956

**Michalson, Carl** 1915–65  
 No biographical data available

One may point to nature and say, "There is a God," but  
 one cannot point to nature and say, "There God is."

In P. Ramsey (ed.)  
*Faith and Ethics: The Theology of H. Richard Niebuhr*  
 Chapter IX (p. 257)  
 Harper & Brothers. New York, New York, USA. 1957

**Miller, Hugh** 1802–56  
 Scottish geologist and theologian

The perfection of the works of Deity is a perfection entire  
 in its components, and yet these are not contemporaneous,  
 but successive: it is a perfection which includes the  
 dead as well as the living, and bears relation, in its completeness,  
 not to time, but to eternity.

*The Old Red Sandstone*  
 Chapter III (p. 41)  
 John B. Alden, Publisher. New York, New York, USA. 1892

**Millikan, Robert Andrews** 1868–1953  
 American physicist

A fire mist and a planet,  
 A crystal and a cell,  
 A jelly fish and a saurian  
 And caves where cavemen dwell.  
 Then a sense of law and beauty,  
 And a face turned from the clod.  
 Some call it evolution  
 And others call it God.

*Science and the New Civilization*

**Moynihan, Sir Berkeley** 1865–1936  
 English surgeon

...the God of Science is a greater and more glorious  
 Being than the God of the Theologians.

In Edward H. Cotton  
*Has Science Discovered God?*  
 The Scientific Argument for Personal Survival (p. 260)  
 Thomas Y. Crowell Company, Publishers. New York, New York, USA. 1931

**Newton, Sir Isaac** 1642–1727  
 English physicist and mathematician

A true, supreme or imaginary dominion makes a true,  
 supreme or imaginary God. And from his true dominion it  
 follows that the true God is a living, intelligent and powerful  
 Being.... We know him only by his most wise and excellent  
 contrivances of things, and final causes...but we reverence  
 and adore him on account of his dominion: for

we adore him as his servants; and a god without dominion, providence, and final causes, is nothing else but Fate and Nature.

Translated by Andrew Motte

When God makes a mistake, they call it nature.

*The Witches of Eastwood*

Film (1987)

**Orgel, Irene** 1922–

English poet

“But before Man?” asked Jonah, shocked out of his wits. “Do you mean you understood nothing at all? Didn’t you exist?”

“Certainly,” said God patiently. “I have told you how I exploded in the stars. Then I drifted for aeons in clouds of inchoate gas. As matter stabilized, I acquired the knowledge of valency. When matter cooled, I lay sleeping in the insentient rocks. After that I floated fecund in the unconscious seaweed upon the faces of the deep. Later I existed in the stretching paw of the tiger and the blinking eye of the owl. Each form of knowledge led to the more developed next. Organic matter led to sentience which led to consciousness which led inevitably to my divinity.”

*The Odd Tales of Irene Orgel*

Jonah (pp. 17–18)

Eakins Press. New York, New York, USA. 1967

**Paley, William** 1743–1805

English theologian

In crossing a heath, suppose I pitched my foot against a stone, and were asked how the stone came to be there; I might possibly answer, that, for anything I knew to the contrary, it had lain there forever: nor would it perhaps be very easy to show the absurdity of this answer. But suppose I had found a watch upon the ground, and it should be inquired how the watch happened to be in that place; I should hardly think of the answer which I had before given, that, for anything I knew, the watch might have always been there. Yet why should not this answer serve for the watch as well as the stone?

*Fortune*, Volume 114, Number 8, October 13, 1986 (p. 57)

**Popper, Karl R.** 1902–94

Austro-Hungarian-born philosopher of science

The earlier, naturalistic, revolution against God replaced the name “God” by the name “Nature.” Almost everything else was left unchanged. Theology, the Science of God, was replaced by the Science of Nature; God’s laws by the laws of Nature; God’s will and power by the will and power of Nature (the natural forces); and later God’s design and God’s judgment by Natural Selection. Theological determinism was replaced by naturalistic determinism; that is, God’s omnipotence and omniscience were replaced by the omnipotence of Nature and the omniscience of Science.

**Whitcomb, J.**  
 No biographical data available

**Morris, H. M.**  
 No biographical data available

The more we study the fascinating story of animal distribution around the earth, the more convinced we have become that this vast river of variegated life forms, moving ever outward from the Asiatic mainland, across the continents and seas, has not been a chance and haphazard phenomenon. Instead, we see the hand of God guiding and directing these creatures in ways that man, with all his ingenuity, has never been able to fathom, in order that the great commission to the postdiluvian animal kingdom might be carried out, and that they may breed abundantly in the earth, and be fruitful, and multiply upon the earth (Gen. 8:17).

*The Genesis Flood: The Biblical Record and It's Scientific Implications*  
 Chapter III (p. 86)  
 Presbyterian and Reformed Pub. Co. Philadelphia, Pennsylvania, USA. 1961

**Wilson, Edward O.** 1929–  
 American biologist and author

Today, thanks to the relentless advance of the science which Newton pioneered, God's immanence has been pushed to somewhere below the subatomic particles or beyond the farthest visible galaxy.

*On Human Nature*  
 Chapter 8 (p. 171)  
 Harvard University Press. Cambridge, Massachusetts, USA. 1978

**Wood, William Hamilton**  
 No biographical data available

God is a term which symbolizes that which faith finds beyond where science ends. He is not the absolute. He does not properly belong to scientific investigation or teachings because the organs of science are observation,

experiment and reason. Science therefore finds no God, and, without speaking irreverently has little use for this symbol or hypothesis.

*The Religion of Science*  
 Chapter II (p. 31)  
 The Macmillan Co. New York, New York, USA. 1922

**Wright, Frank Lloyd** 1867–1959  
 American architect

Toward the end of the last century, many physicists felt that the mathematical description of physics was getting ever more complicated. Instead, the mathematics involved has become ever more abstract, rather than more complicated. The mind of God appears to be abstract but not complicated. He also appears to like group theory.

*Fearful Symmetry*  
 Chapter 9 (p. 132)  
 Macmillan Publishing Company. New York, New York, USA. 1986

**Zeldovich, Yakov Borisovich** 1914–87  
 Russian physicist

...almighty God throwing dice for every single proton or antiproton would soon get tired with the astronomical number of particles. He could not make the asymmetry large enough.

In Joseph Silk

 Cosmologists and Their Myths (p. 7)  
 AIP Press. Woodbury, New York, USA. 1994

**Ziman, John M.** 1925–2005  
 English physicist

As has been said of some experiments in high-energy physics: the process to be observed has never occurred before in the history of the Universe; God himself is waiting to see what will happen!

*Reliable Knowledge*  
 Chapter 3 (fn 11, p. 62)  
 Cambridge University Press. Cambridge, England. 1978

## GOOD SENSE

**Descartes, René** 1596–1650  
 French philosopher, scientist, and mathematician

Good sense is, of all things among men, the most equally distributed; for everyone thinks himself so abundantly provided with it, that those even who are the most difficult to satisfy in everything else, do not usually desire a larger measure of this quality than they already possess.

*Discourse on the Method of Rightly Conducting the Reason, and Seeking Truth in the Sciences*  
 Part I (p. 45)  
 Sutherland and Knox. Edinburgh, Scotland. 1850

## GOVERNMENT

**Feynman, Richard P.** 1918–88  
 American theoretical physicist

No government has the right to decide on the truth of scientific principles, nor to prescribe in any way the character of the questions investigated. Neither may a government determine the aesthetic value of artistic creations,

nor limit the forms of literacy or artistic expression. Nor should it pronounce on the validity of economic, historic, religious, or philosophical doctrines. Instead it has a duty to its citizens to maintain the freedom, to let those citizens contribute to the further adventure and the development of the human race.

*The Meaning of It All*

## GRADUALNESS

**Pavlov, Ivan Petrovich** 1849–1936

Russian physiologist

About this [gradualness] most important condition of fruitful scientific work I never can speak without emotion. Gradualness, gradualness and gradualness. From the very beginning of your work, school yourselves to serve gradualness in the accumulation of knowledge.

Bequest of Pavlov to the Academic Youth of His Country  
*Science*, Volume 83, Number 2155, April 17, 1936 (p. 369)

English poet, dramatist, and actor

Dost thou love pictures?

In *Great Books of the Western World* (Volume 26)

*The Plays and Sonnets of William Shakespeare* (Volume 1)

*The Taming of the Shrew*

Introduction, Scene ii, l. 51

Encyclopaedia Britannica, Inc. Chicago, Illinois, USA. 1952

**Tufte, Edward R.** 1942–

American artist and statistician

Excellence in statistical graphics consists of complex ideas communicated with clarity, precision, and efficiency. Graphical displays should show the data, induce the viewer to think about the substance rather than about the methodology, graphic design, the technology of graphic production, or something else, avoid distorting what the data have to say, present many numbers in a small space make large data sets coherent, encourage the eye to compare different pieces of data, reveal the data at several levels of detail, from a broad overview to the fine structure, serve a reasonable clear purpose: description, exploration, tabulation, or decoration [should] be closely integrated with the statistical and verbal descriptions of a data set.

*The Visual Display of Quantitative Information*

Part I, Chapter 1 (p. 13)

Graphic Press. Cheshire, Connecticut, USA. 1983

Of course statistical graphics, just like statistical calculations, are only as good as what goes into them. An ill-specified or preposterous model or a puny data set cannot be rescued by a graphic (or by calculation), no matter how clever or fancy. A silly theory means a silly graphic.

*The Visual Display of Quantitative Information*

Part I, Chapter 1 (p. 15)

Graphic Press. Cheshire, Connecticut, USA. 1983

Graphical integrity is more likely to result if these six principles are followed:

The representation of numbers, as physically measured on the surface of the graphic itself, should be directly proportional to the numerical quantities represented.

Clear, detailed, and thorough labeling should be used to defeat graphical distortion and ambiguity. Write out explanations of the data on the graphic itself. Label important events in the data.

Show data variations, not design variations.

In time-series displays of money, deflated and standardized units of monetary measurements are nearly always better than nominal units.

The number of information-carrying (variable) dimensions depicted should not exceed the number of dimensions in the data.

Graphics must not quote data out of context.

*The Visual Display of Quantitative Information*

Part I, Chapter 2 (p. 77)

Graphic Press. Cheshire, Connecticut, USA. 1983

## GRAVITATION

**Rogers, Samuel** 1763–1855

English poet

That very law [gravitation] which moulds a tear, And bids it trickle from its source, That law preserves the earth a sphere, And guides the planets in their course.

*The Poetical Works of Rogers, Campbell, J. Montombery, Lamb, and Kirke White*

On A Tear

J. Grigg. Philadelphia, Pennsylvania, USA. 1836

## GRAVITATIONAL LENS

**Drake, Frank**

**Sobel, Dava**

No biographical data available

“I know perfectly well that at this moment the whole universe is listening to us,” Jean Giraudoux wrote in *The Madwoman of Chaillot*, “and that every word we say echoes to the remotest star.” That poetic paranoia is a perfect description of what the Sun, as a gravitational lens, could do for the Search for Extraterrestrial Intelligence.

*Is Anyone Out There?: The Scientific Search for Extraterrestrial Intelligence*

Chapter 10 (p. 232)

Delacorte press. New York, New York, USA. 1992

**Einstein, Albert** 1879–1955

German-born physicist

...there is no great chance of observing this phenomenon.

Lens-like Action of a Star by the Deviation of Light in the Gravitational Field

*Science*, Volume 84, Number 2188, 1936 (p. 507)

**Zwicky, Fritz** 1898–1974

Swiss-American Astronomer

... the probability that nebulae which act as gravitational lenses will be found becomes practically a certainty.

On the Probability of Detecting Nebulae Which Act as Gravitational Lenses  
*Physical Review*, Volume 51, Number 8. 1937

## GRAVITY

**Arnott, Neil** 1788–1874  
 Scottish physician

Attraction, as gravitation, is the muscle and tendon of the universe, by which its mass is held together and its huge limbs are wielded. As cohesion and adhesion, it determines the multitude of physical features of its different parts. As chemical or interatomic action, it is the final source to which we trace all material changes.

In J. Dorman Steele  
*Popular Physics*  
 Chapter III (p. 41)  
 American Book Company. New York, New York, USA. 1896

**Bierce, Ambrose** 1842–1914  
 American newspaperman, wit, and satirist

GRAVITATION, n. The tendency of all bodies to approach one another with a strength proportioned to the quantity of matter they contain – the quantity of matter they contain being ascertained by the strength of their tendency to approach one another. This is a lovely and edifying illustration of how science, having made A the proof of B, makes B the proof of A.

*The Cynic's Word Book*  
 Gravity (p. 141)  
 Doubleday, Page & Co. New York, New York, USA. 1906

**Blake, William** 1757–1827  
 English poet, painter, and engraver

God keep me...from supposing Up and Down to be the same thing as all experimentalists must suppose.

*The Complete Poetry and Prose of William Blake*  
 Letter to George Cumberland, 12 April, 1827  
 University of California Press. Berkeley, California, USA. 1982

**Chittenden, Newton W.**  
 Mineral surveyor

Guided by the genius of Newton, we see sphere bound to sphere, body to body, particle to particle, atom to mass, the minutest part to the stupendous whole – each to each, each to all, and all to each – in the mysterious bonds of a ceaseless, reciprocal influence.

Translated by Andrew Motte  
 In Isaac Newton  
*Newton's Principia: The Mathematical Principles of Natural Philosophy*  
 Life of Sir Isaac Newton  
 Daniel Adee. New York, New York, USA. 1848

**Clarke, Arthur C.** 1917–  
 English science and science fiction writer

Gravity, like the air we breathe, is one of those natural phenomena we take for granted and never think about in the ordinary course of events. It is a major factor in the

lives of steeplejacks and mountaineers, but those of us who like more two-dimensional existences usually notice it only when we run upstairs in a hurry or sit on a chair which has unaccountably removed itself.

*The Exploration of Space*  
 Chapter 4 (p. 30)  
 Harper & Brothers Publishers. New York, New York, USA. 1951

**Clerke, Agnes Mary** 1842–1907  
 Irish astronomer

Gravity, however, is a force of the utmost generality in the way it affects matter. It takes no notice of distinctions of kind or quality. The substances acted upon may be hot or cold, dense or rare, elementary or compound; they may be of any imaginable chemical or mineralogical constitution; they may be in any state of aggregation; they may be organic or inorganic; no difference is perceptible; gravity is concerned solely with mass, and is measured strictly by movement; and from gravitational inquiries, accordingly, mass and movement can alone be learned.

*Problems in Astrophysics*  
 Chapter 1 (p. 2)  
 Adam & Charles Black. London, England. 1903

**Conduitt, John** 1688–1737  
 French philosopher

Whilst he [Newton] was musing in a garden it came into his thought that the power of gravity (which brought an apple from the tree to the ground) was not limited to a certain distance from the earth but that this power must extend much farther than was usually thought. Why not as high as the Moon said he to himself & if so that must influence her motion & perhaps retain her in her orbit, whereupon he fell a calculating.

*Never at Rest: A Biography of Isaac Newton*  
 Chapter 5 (p. 154)  
 Cambridge University Press. Cambridge, England. 1980

**Dürrenmatt, Friedrich** 1921–90  
 Swiss playwright and novelist

My mission is to devote myself to the problems of gravitation, not the physical requirements of a woman.

Translated by James Kirkup  
*The Physicists*  
 Act One (p. 19)  
 Grove Press, Inc. New York, New York, USA. 1964

**Eddington, Sir Arthur Stanley** 1882–1944  
 English astronomer, physicist, and mathematician

One of our ancestors, taking arboreal exercise in the forest, failed to reach the bough intended and his hand closed on nothingness. The accident might well occasion philosophical reflections on the distinctions of substance and void – to say nothing of the phenomenon of gravity.

*The Nature of the Physical World*  
 Chapter XIII (p. 273)  
 The University Press. New York, New York, USA. 1929

**Einstein, Albert** 1879–1955  
German-born physicist

Falling in love is not at all the most stupid thing that people do – but gravitation cannot be held responsible for it.

In Helen Dukas and Banesh Hoffmann  
*Albert Einstein: The Human Side: New Glimpses from His Archives* (p. 56)  
Princeton University Press. Princeton, New Jersey, USA. 1979

I know that hardly any physicists believe that the gravitational forces can play any part in the constitution of matter. The physicists always argues that the forces are too small. This reminds me of a joke. An unmarried woman had a child and the family was greatly humiliated. So the midwife tried to console the mother by saying: “Don’t worry so much, it’s a very small child!”

In Leopold Infeld  
*Quest – An Autobiography*  
Book Three, Part IV (p. 266)  
Chelsea Publishing Company. New York, New York, USA. 1980

I shall conduct the reader over the road that I have myself traveled, rather a rough and winding road, because otherwise I cannot hope that he will take much interest in the result at the end of the journey. The conclusion I shall arrive at is that the field equations of gravitation which I have championed hitherto still need a slight modification.

Cosmological Considerations on the General Theory of Relativity  
*Proceedings of the Prussian Academy of Sciences*, Volume X, 1917 (p. 142)

**Emerson, Ralph Waldo** 1803–82  
American lecturer, poet, and essayist

The child amidst his baubles is learning the action of light, motion, gravity...

*Ralph Waldo Emerson: Essays and Lectures  
Nature: Addresses, and Lectures*  
The Divinity School Address (p. 76)  
The Library of America. New York, New York, USA. 1983

Let us draw a lesson from nature, which always works by short ways. When the fruit is ripe, it falls. When the fruit is dispatched, the leaf falls. The circuit of the waters is mere falling. The walking of man and all animals is a falling forward. All our manual labor and works of strength, as prying, splitting, digging, rowing, and so forth, are done by dint of continual falling, and the globe, earth, moon, comet, sun, star, fall forever and ever.

*The Complete Works of Ralph Waldo Emerson* (Volume 2)

Part III, Chapter XXII (p. 250)  
D. Appleton & Co. New York, New York, USA. 1868

**Everett, Edward** 1794–1865  
Whig Party politician

...the great frame of nature, from the infinitesimal molecule to the entire compacted universe, is held together by the law of gravity; every mote that floats in the sunbeam, every leaf that falls in the forest, every drop that distills from the clouds, every planet that encircles the sun, every sun which holds together its attendant system, and every system which swings in vast gyration through the infinite of space, obeys this mysterious power.

*Inauguration of Washington University at Saint Louis, Missouri. April 23, 1857*  
Mr. Everett’s Inaugural Address on Academical Education (p. 99)  
Little, Brown & Co. Boston, Massachusetts, USA. 1857

**Faraday, Michael** 1791–1867  
English physicist and chemist

I go with Newton when he speaks of the “physical lines of gravitating force”...

In Bence Jones  
*The Life and Letters of Faraday* (Volume 2)  
Chapter III (p. 367)  
J.B. Lippincott. Philadelphia, Pennsylvania, USA. 1870

...we come into this world, we live, and depart from it, without our thoughts being called specifically to consider how all this takes place; and were it not for the exertions of some few inquiring minds, who have looked into these things and ascertained the very beautiful laws and conditions by which we *do* live and stand upon the earth, we should hardly be aware that there was anything wonderful in it.

In William Crookes  
*A Course of Six Lectures on the Various Forces of Matter and Their Relations to Each Other*  
Lecture 1 (p. 3)  
Richard Griffin & Co. London, England. 1860

**Feynman, Richard P.** 1918–88  
American theoretical physicist

But I would like not to underestimate the value of the world view which is the result of scientific effort. We have been led to imagine all sorts of things infinitely more marvelous than the imaginings of poets and dreamers of the past. It shows that the imagination of nature is far, far greater than the imagination of man. For instance, how much more remarkable it is for us all to be stuck – half of us upside down – by a mysterious attraction to a spinning ball that has been swinging in space for billions of years than to be carried on the back of an elephant supported on a tortoise swimming in a bottomless sea.

*What Do You Care What Other People Think?*

The Value of Science (p. 242)  
W.W. Norton & Company, Inc. New York, New York, USA. 1988

**Fort, Charles** 1874–1932  
American writer

If the Law of Gravitation could be stated as a real utterance, it might be a real resistance to us. But we are told only that gravitation is gravitation.

*The Book of the Damned*  
Chapter X (p. 132)  
Boni & Liveright. New York, New York, USA. 1919

Book III, Chapter XXI (p. 199)  
Printed for Thomas Tegg. London, England. 1841

**Glashow, Sheldon L.** 1932–  
American physicist

I have often said from the podium that although it is gravity that holds my feet to the ground, it is the electromagnetic force that stops me from falling through the ground. Electromagnetism binds the atoms together and puts a solid floor beneath my feet.

*Interactions: A Journey Through the Mind of a Particle Physicist and the Matter of This World*  
Chapter 4 (p. 73)  
Warner Books. New York, New York, USA. 1988

**Hamilton, Sir William Rowan** 1805–65  
Anglo-Irish mathematician, physicist, and astronomer

When a fact is generalised, our discontent is quieted, and we consider the generality itself as tantamount to an explanation. Why does this apple fall to the ground? Because all bodies gravitate towards each other. Arrived at this general fact, we inquire no more, although ignorant now as previously of the cause of gravitation; for gravitation is nothing more than a name for a general fact, the why of which we know not.

In Henry Longueville Mansel and John Veitch  
*Lectures on Metaphysics and Logic*  
Lecture IV (p. 71)  
William Blackwood & Sons. Edinburgh, Scotland. 1861

**Heaviside, Oliver** 1850–1925  
English electrical engineer, mathematician, and physicist

...an old idea that the speed of gravitation must be an enormous multiple of the speed of light...is only moonshine.

*Electromagnetic Theory* (Volume 3)  
Chapter X (p. 144)  
"The Electrician" printing and publishing company. London, England.  
1894–1912

**Herschel, Sir John Frederick William** 1792–1871  
English astronomer and chemist

All bodies with which we are acquainted, when raised into the air and quietly abandoned, descend to the earth's surface in lines perpendicular to it. They are therefore urged thereto by a force or effort, which it is but reasonable to regard as the direct or indirect result of a consciousness and a will existing somewhere, though beyond our power to trace, which force we term gravity...

*Outlines of Astronomy*  
Part 1, Chapter VIII (p. 368)  
American Home Library Co. New York, New York, USA. 1902

**Heyl, Paul R.**  
American scientist

Gravitation appears to be a function of nothing but the masses involved and their space coordinates. As to all other properties the evidence is negative, in most cases of a high degree of precision, reaching a few parts in a billion. The cause of gravitation is hidden in a protective armor on which there is not even a projection upon which to hang a hypothesis.

What is Gravitation?  
*Scientific Monthly*, Volume 47, August, 1938 (p. 117)

**King, Alexander** 1900–65  
No biographical data available

Newton saw an apple fall and discovered the Laws of Gravity.

Eve made an apple fall and discovered the Gravity of Law.

*I Should Have Kissed Her More* (p. 51)  
Simon & Schuster. New York, New York, USA. 1961

**Laplace, Pierre Simon** 1749–1827  
French mathematician, astronomer, and physicist

...we must suppose that the gravitating fluid has a velocity which is at least a hundred millions of times greater than that of light...

*Celestial Mechanics*, (Volume 4)(p. 645)  
Chelsea Publishing Company. New York, New York, USA. 1966

The law of universal gravitation has this inestimable advantage, that it may be reduced to calculation, and by a comparison of its results with observation, it presents the most certain method of verifying its existence. We shall see that this great law of nature represents all the celestial phenomena even in their minutest details, that there is not one single inequality of their motions which is not derived from it, with the most admirable precision, and that it explains the cause of several singular motions, just perceived by astronomers, and which were either too complicated or too slow for them to recognize their law.  
Translated by J. Pond

*The System of the World* (Volume 2)  
Book IV (pp. 2–3)  
Printed for Richard Phillips. London, England. 1809

### Lehman, Robert C.

Archimedes in his bathtub  
Thinking of the king's new crown.  
Was it gold or baser metal?  
On Archy's brow there was a frown.  
Gravitation pulled him downward  
As the tub began to fill.  
Buoyant forces lifted upward  
Till the tub began to spill.

Eureka

*The Physics Teacher*, Volume 21, Number 2, February, 1983 (p. 87)

### Lockyer, Joseph Norman 1836–1920

English astronomer and physicist

The force of gravity on their surfaces must be very small. A man placed on one of them would spring with ease 60 feet high, and sustain no greater shock in his descent than he does on the Earth from leaping a yard. On such planets giants may exist; and those enormous animals which here require the buoyant power of water to counteract their weight, may there inhabit the land.

*Elements of Astronomy*

Chapter IX (p. 153)

D. Appleton and Company. New York, New York, USA. 1885

### Moore, Mary

No biographical data available

[A properly fitted corset] prevents gravity from pulling us to far forward or too far backward, which in so doing, makes us old before our time.

In Martin Gardner

*Fads and Fallacies in the Name of Science*

Chapter 8 (p. 96)

Dover Publications, Inc., New York, New York, USA; 1957

### Newton, Sir Isaac 1642–1727

English physicist and mathematician

To understand the motions of the planets under the influence of gravity without knowing the cause of gravity is as good a progress in philosophy as to understand the frame of a clock and the dependence of the wheels upon one another without knowing the cause of the gravity of the weight.

*Memoirs of Literature*

Chapter XVIII

Sold by R. Knaplock. London, England. 1722

You sometimes speak of gravity as essential and inherent to matter. Pray do not ascribe that notion to me; for the cause of gravity is what I do not pretend to know, and therefore would take more time to consider of it.

In Richard Bentley

*The Works of Richard Bentley*

Letters from Sir Isaac Newton, Letter I, Volume 3 (p. 210)

So far I have accounted for the phenomena presented to us by the heavens and the sea by means of the force of gravity, but I have as yet assigned no cause to this gravity....I have not been able to deduce from phenomena the *raison d'être* of the properties of gravity and I have not set up hypotheses.

In J. Arthur Thomson

*The System of Animate Nature* (Volume 1)

Lecture I (p. 9)

William & Norgate. London, England. 1920

Hitherto we have explained the phenomena of the heavens and of our sea by the power of gravity, but have not yet assigned the cause of this power. This is certain, that it must proceed from a cause that penetrates to the very centres of the sun and planets, without suffering the least diminution of its force; that operates not according to the quantity of the surfaces of the particles upon which it acts (as mechanical causes used to do), but according to the quantity of the solid matter which they contain, and propagates its virtue over all sides to immense distances, decreasing always as the inverse square of the distances.

In *Great Books of the Western World* (Volume 34)

General Scholium (p. 371)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...what hinders the fixed stars from falling upon one another?

In *Great Books of the Western World* (Volume 34)

*Optics*

Book III, Part I, Query 28 (p. 529)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### Noordung, Hermann 1892–1929

Slovene rocket engineer and pioneer of cosmonautics

Since the beginning of time, mankind has considered it as an expression of its Earthly weakness and inadequacy to be bound to the Earth, to be unable to free itself from the mysterious shackles of gravity.

In Ernest Stuhlinger, J.D. Henry and Jennifer Garland

*The Problem With Space Travel: The Rocket Motor*

(Noordung's) Introduction (p. 1)

Aeronautics and Space Administration. Washington, D.C. 1995

### Philip Morrison

No biographical data available

### Phylis Morrison

No biographical data available

Gravity is exigent; it reaches inside every candy box, no matter what the wrapping, to distinguish the full pound from the empty container.

*Powers of Ten*

Looking at the World: An Essay (p. 6)  
Scientific American Library. New York, New York, USA. 1982

**Ridley, B. K.**

No biographical data available

What a remarkable idea, that when you accelerate into a run, your muscles are fighting the influence of galaxies scarcely visible even with the most powerful telescopes!

*Time, Space and Things*

Chapter 8 (p. 148)

Cambridge University Press. Cambridge, England. 1984

**Shizuki, Tadao** 1760-1806

Japanese astronomer and translator

The cause of gravity is quite inscrutable. Even with advanced Western instruments and mathematics, the fundamental cause is indeterminable.

Quoted in Rekisho Shinsho

*New Treatise on Calendrical Phenomena*

1802

**Slossin, Edwin Emery** 1865-1919

Chemist and author

A warp in nature has been found, No line is straight, no circle round;

For Isaac Newton had unsound

Ideas of gravitation.

*Easy Lessons in Einstein*

Easy Lessons in Einstein (p. 1)

Harcourt, Brace & Howe. New York, New York, USA. 1920

**Soddy, Frederick** 1877-1956

English chemist

An ingenious theory of gravitation was put forward a century ago which, though not accepted, is very suggestive, and illustrates the difference between what science would consider a real cause and one that is fictitious, like the "force of gravity".

*Matter and Energy*

Chapter V (p. 112)

Henry Holt & Co. New York, New York, USA. 1912

**Thomson, James** 1700-48

Scottish poet

...by the blended power

Of gravitation and projection, saw

The whole in silent harmony revolve...

And ruled unerring by that single power

Which draws the stone projected to the ground.

*The Complete Poetical Works of James Thomson*

To the Memory of Newton, l. 40-42, l. 75-76

H. Frowde. London, England. 1908

**Tolstoy, Leo** 1828-1910

Russian writer

When Newton enunciated the law of gravity he did not say that the sun or the earth had a property of attraction;

he said that all bodies from the largest to the smallest have the property of attracting one another, that is, leaving aside the question of the cause of the movement of the bodies, he expressed the property common to all bodies from the infinitely large to the infinitely small.

*Great Books of the Western World* (Volume 51)

*Second Epilogue*, Chapter II (p. 695)

Encyclopaedia Britannica, Inc. Chicago, Illinois, USA. 1952

**Tyndall, John** 1820-93

Irish-born English physicist

In the falling of a rock from a mountain head, in the shoot of an avalanche, in the plunge of a cataract, we often see more impressive illustrations of the power of gravity than in the motions of the stars. When the intellect has to intervene, and calculation is necessary to the building up of the conception, the expansion of the feelings ceases to be proportional to the magnitude of the phenomena.

*Hours of Exercise in the Alps*

Chapter 20 (p. 251)

D. Appleton & Co. New York, New York, USA. 1895

**von Braun, Wernher** 1912-77

German-American rocket scientist

We can lick gravity, but sometimes the paperwork is overwhelming.

On Bureaucracy

*Chicago Sun Times*, 10 July 1958

**Wheeler, John Archibald** 1911-

American physicist and educator

...one feels that one has, at last in gravitational collapse, a phenomenon where general relativity dramatically comes into its own, and where its fiery marriage with quantum physics will be consummated.

*Relativity, Groups, and Topology*

Geometrodynamics and the Issue of the Final State

**Whewell, William** 1794-1866

English philosopher and historian

[The law of gravitation] is indisputably and incomparably the greatest scientific discovery ever made, whether we look at the advance which it involved, the extent of truth disclosed, or the fundamental and satisfactory nature of this truth.

*History of the Inductive Sciences, from the Earliest to the Present Time* (Volume 2)

Book 7, Chapter 2, article 5 (p. 180)

John W. Parker. London, England. 1837

**Whittaker, Sir Edmund** 1873-1956

English mathematician

Gravitation simply represents a continual effort of the universe to straighten itself out.

In Robert G. Colodny (ed.)

*From Quarks to Quasars: Philosophical Problems of Modern Physics*

Newtonian Gravity, Limits, and the Geometry of Space (p. 181)

University of Pittsburgh Press. Pittsburgh, Pennsylvania, USA.

**Zee, Anthony**

American physicist

Of the fundamental forces of nature, we are most intimate with gravity. In the uttermost darkness of night, lost in our private thoughts and shut off from the world of light, we still feel the incessant tug of gravity. No sooner had we come into existence that we became aware of the downwards pull of gravity, balanced by the buoyancy of the fluid inside our mothers' wombs. Yet we do not know gravity.

*An Old Man's Toy: Gravity at Work and Play in Einstein's Universe*

Preface (p. ix)

The Macmillan Company. New York, New York, USA. 1989

**GREAT RED SPOT****Wilde, Henry**

No biographical data available

The great red spot on his surface is generally considered to be caused by luminous vapours at great depths within the globe, if not by the actual incandescent crust of that part of the planet. The great extent and permanency of this spot indicate it as the locus of one of the vents through which comets and cometary satellites have been ejected at different periods of the history of the planet.

*Celestial Ejectamenta* (p. 11)

At The Clarendon Press. Oxford, England. 1910

**GREATNESS****Greene, Edward L.**

No biographical data available

...a great man in whatsoever profession, a man of power in any branch of science, is greater than the science to which he devotes himself; that he himself personally is of more moment, and ought to be of deeper interest than his science; yes, than all the sciences that are or ever shall be.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1907*

Linnaean Memorial Address (p. 685)

Government Printing Office. Washington, D.C. 1908

**Longfellow, Henry Wadsworth** 1807–82

American poet

Lives of great men all remind us  
We can make our lives sublime,  
And, departing, leave behind us  
Footprints on the sands of time.

*The Poetical Works of Henry Wadsworth Longfellow*

A Psalm of Life, Stanza VII

Houghton Mifflin Company. Boston, Massachusetts, USA. 1883

**GREEK****Maine, Henry Sumner** 1822–88

English comparative jurist

Except the blind forces of Nature, nothing moves in this world which is not Greek in its origin.

*Village-communities in the East and West*

The Effects of Observation of India on Modern European Thought (p. 238)

Henry Holt & Co. New York, New York, USA. 1890

**GREENHOUSE WARMING****Wohlforth, Charles** 1963–

American author

It was certainly possible to argue that other, smaller effects would cancel greenhouse gas warming, but the burden of proof belonged on those who made such claims. Yet even as the evidence piled up on the side of the most reasonable assumption, the public repeatedly spun off in weird directions, with every “what if” given equal weight. It was as if a murder defendant caught with a bloody weapon in one hand and a written confession in the other were acquitted on the theory that an alien might have beamed him into that position.

*The Whale and the Supercomputer: On the Northern Front of Climate Change*

Chapter 6 (p. 168)

North Point Press. New York, New York, USA. 2004

**GROUP****Bell, E. T. (Eric Temple)** 1883–1960

Scottish-American mathematician and educator

Wherever groups disclosed themselves, or could be introduced, simplicity crystallized out of comparative chaos.

*Mathematics: Queen and Servant of Science*

Groups (p. 164)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1951

**GROUP THEORY****Dyson, Freeman J.** 1923–

American physicist and educator

The trouble with group theory is that it leaves so much unexplained that one would like to explain. It isolates in a beautiful way those aspects of nature that can be understood in terms of abstract symmetry alone. It does not offer much hope of explaining the messier facts of life, the numerical values of particle lifetimes and interaction strengths – the great bulk of quantitative experimental data that is now waiting for explanation. The process of abstraction seems to have been too drastic, so that many

essential and concrete features of the real world have been left out of consideration. Altogether group theory succeeds just because its aims are modest. It does not try to explain everything, and it does not seem likely that it will grow into a complete or comprehensive theory of the physical world.

Mathematics in the Physical Sciences

*Scientific American*, Volume 211, Number 3, September, 1964 (p. 146)

**Newman, James Roy** 1907–66

Mathematician and mathematical historian

The Theory of Groups is a branch of mathematics in which one does something to something and then compares the result with the result obtained from doing the same thing to something else, or something else to the same thing.

*The World of Mathematics* Volume 3

*World of Mathematics*

Commentary on Certain Important Abstractions (p. 1534)

1956

**Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

The theory of groups is an extensive subject upon which there is much to be said. There are many kinds of groups, and whatever classification may be adopted we will always find new groups which will not fit it.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1909*

The Future of Mathematics (p. 137)

Government Printing Office, Washington, D.C. 1910

**Rota, Gian-Carlo** 1932–99

Italian-born American mathematician

Group theory, like lattice theory, is the whipping boy of mathematicians in need of concealing their feelings of insecurity.

*Indiscrete Thoughts*

Chapter XX (p. 221)

Birkhäuser, Boston, Massachusetts, USA. 1997

## GROUPS

**Bowen, Francis** 1811–90

American philosophical writer and educationalist

The first necessity, then, which is imposed upon us by the constitution of the mind itself, is to break up the infinite wealth of Nature into groups and classes of things, with reference to their resemblances and affinities, and thus to enlarge the grasp of our mental faculties, even at the expense of sacrificing the minuteness of information which can be acquired only by studying objects in detail.

*A Treatise on Logic*

Chapter X (p. 315)

Allyn & Bacon, Boston, Massachusetts, USA. 1895

## GROWTH

**Peattie, Donald Culross** 1898–1964

American botanist, naturalist and author

...the everlasting command of living organizations is, "Forward!" Growth, true growth, is unique to life. The cell builds from the inside out, transmuting raw elements into stuff like itself. The crystal, the stalactite, the snowflake, are but chill and mathematical imitators of growing life, increasing only by superficial accretions of unchanged matter.

*Flowering Earth*

Chapter 4 (pp. 45–46)

G.P. Putnam's Sons, New York, New York, USA. 1939

## GROWTH STRATEGIES

**da Vinci, Leonardo** 1452–1519

Italian High Renaissance painter and inventor

Another sect of ignorant persons declare that Nature or Heaven created them in these places by celestial influences, as if in these places we did not also find the bones of fishes which have taken a long time to grow; and as if, we could not count, in the shells of cockles and snails, the years and months of their life, as we do in the horns of bulls and oxen, and in the branches of plants that have never been cut in any part.

*The Notebooks of Leonardo da Vinci* (Volume II) 990

## GUESS

**Bronowski, Jacob** 1908–74

Polish-born English mathematician and polymath

There never was a great scientist who did not make bold guesses, and there never was a bold man whose guesses were not sometimes wild.

*Science and Human Values*

The Sense of Human Dignity (p. 64)

Harper & Row, Publishers, New York, New York, USA. 1965

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

No, no: I never guess. It is a shocking habit, – destructive to the logical faculty.

In William S. Baring-Gould (ed.)

*The Annotated Sherlock Holmes* (Volume 1)

*The Sign of the Four*, Chapter 1 (p. 614)

Wings Books, New York, New York, USA. 1967

**Feynman, Richard P.** 1918–88

American theoretical physicist

In general we look for a new law by the following process. First we guess it. Then we compute the conse-

quences of the guess to see what would be implied if this law that we guessed is right. Then we compare the results of the computation to nature, with experiment or experience, compare it directly with observation, to see if it works. If it disagrees with experiment it's wrong. In that simple statement is the key to science. It does not make any difference how beautiful your guess is. It does not make any difference how smart you are, who made the guess, or what his name is – if it disagrees with experiment it's wrong.

*The Character of Physical Law*

Chapter 7 (p. 156)

British Broadcasting Company. London, England. 1965

### **Gould, Stephen Jay** 1941–2002

American paleontologist, evolutionary biologist, and historian of science

I can understand such an attitude directed toward photographs of objects – through opportunities for subtle manipulation are legion even here. But many of our pictures are incarnations of concepts masquerading as neutral descriptions of nature. These are the most potent sources of conformity, since ideas passing as descriptions lead us to equate the tentative with the unambiguously factual. Suggestions for the organization of thought are transformed to established patterns in nature. Guesses and hunches become things.

*Wonderful Life: The Burgess Shale and the Nature of History*

Chapter I (p. 28)

W.W. Norton & Company, Inc. New York, New York, USA. 1989

### **Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

To say that Einstein formulated a theory of relativity by guesswork is on all fours with saying that Wordsworth wrote rhymes and Mozart tuneful music. It is cheeky where something grave is called for.

Hypothesis and Imagination

*Times Literary Supplement*, 25 Oct 1963

### **Pólya, George** 1887–1985

Hungarian mathematician

Anything new that we learn about the world involves plausible reasoning, which is the only kind of reasoning for which we care in everyday affairs.... Certainly, let us learn proving, but also let us learn guessing.

*Mathematics and Plausible Reasoning* (Volume 1)

Induction and Analogy in Mathematics

Preface

Princeton University Press. Princeton, New Jersey, USA. 1954

### **Prior, Matthew** 1664–1721

English poet and diplomat

Forc'd by reflective Reason I confess,  
That human Science is uncertain Guess.

In A.R. Waller

*Poems on Several Occasions*

Knowledge, The First Book (p. 283)

At the University Press. Cambridge, England. 1905

### **Whewell, William** 1794–1866

English philosopher and historian

...advances in knowledge! are not commonly made without the previous exercise of some boldness and license in guessing.

*The Philosophy of the Inductive Sciences, Founded Upon Their History* (2nd edition)

Book XI, Chapter V (p. 55)

John W. Parker. London, England. 1867

If many of the guesses of philosophers of bygone times now appear fanciful and absurd, because time and observation have refuted them, others, which were at the time equally gratuitous, have been confirmed in a manner which makes them appear marvellously sagacious.

*The Philosophy of the Inductive Sciences, Founded Upon Their History* (2nd edition)

Book XI, Chapter V (p. 56)

John W. Parker. London, England. 1867

To try wrong guesses is apparently the only way to hit upon right ones.

*History of the Inductive Sciences from the Earliest to the Present Time* (3rd edition)

Book V, Chapter II (p. 284)

John W. Parker & Son. London, England. 1857

## **GULF STREAM**

### **Maury, Matthew Fontaine** 1806–73

American astronomer, astrophysicist, historian and oceanographer

There is a river in the ocean: in the severest droughts it never fails, and in the mightiest floods it never overflows; its banks and its bottom are of cold water, while its current is of warm; the Gulf of Mexico is its fountain, and its

*The Physical Geography of the Sea* (8th edition)

Chapter II (p. 19)

Harper & Brothers Publishers. New York, New York, USA. 1871

## **GUNPOWDER**

### **Bacon, Roger**

...the sound of thunder may be artificially produced in the air with greater resulting horror than if it had been produced by natural causes.

*Roger Bacon's Letter Concerning the Marvelous Power of Art and of Nature and Concerning the Nullity of Magic*

Gunpowder (p. 30)

## **GYNECOLOGIST**

### **Rivers, Joan** 1933–

American comedian

The gynecologist says, Relax, relax, I can't get my hand out, relax. I wonder why I'm not relaxed. My feet are in the stirrups, my knees are in my face, and the door is open facing me.... And my gynecologist does jokes. Dr. Schwartz at your cervix! I'm dilated to meet you! Say ahhh. There's Jimmy Hoffa! There's no way you can get back at that son of a bitch unless you learn to throw your voice.

In Roz Warren

*Glibquips* (p. 70)

Crossing Press, Freedom, California. USA. 1994

## GYROSCOPE

**Maxwell, James Clerk** 1831–79

Scottish physicist

To those who study the progress of exact science, the common spinning top is a symbol of the labours and the perplexities of men who had successfully threaded the mazes of planetary motions. The mathematicians of the last age, searching through nature for problems worthy of their analysis, found in this toy their youth ample occupation for their highest mathematical powers.

No illustration of astronomical precession can be devised more perfect than that presented by a properly balanced top, but yet the motion of rotation has intricacies far exceeding those of the theory of precession.

*The Scientific Papers of James Clerk Maxwell*

On a Dynamical Top (p. 248)

University Press. Cambridge, England. 1890

## H

### HAPPENING

#### **Kay, Marshall**

American geologist

Anything that has happened, can.

*Mapping Mars: Science, Imagination and the Birth of a World*

Mike Carr's Mars (p. 160)

Fourth Estate. London, England. 2002

#### **Leclerc, Georges-Louis, Comte de Buffon** 1707–88

French naturalist

To understand what has happened, and even what will happen we have only to examine what is happening.

In Frances Mason

*Creation by Evolution*

The Evolution of the Brain (p. 326)

The Macmillan Company. New York, New York, USA. 1928

### HAPPINESS

#### **Morley, Christopher** 1890–1957

American writer

...for after all, happiness (as the mathematicians might say) lies on a curve, and we approach it only by asymptote...

*The Haunted Bookshop*

Chapter XIII (p. 242)

Double, Page & Company. New York, New York, USA. 1923

### HARD WORK

#### **Jacobi, Karl Gustav Jacob** 1804–51

German mathematician

It must not be supposed that it is to a gift of nature that I owe such mathematical power as I possess. No, it has come by hard work, hard work. Not mere industry, but brain-splitting thinking – hard work; hard work that has often endangered my health.

Quoted by C.S. Peirce

In A.G. Sedgwick

*The 19th Century: A Review of Progress During the Past One Hundred Years in the Chief Departments of Human Activity*

The Century's Great Men in Science (p. 317)

G.P. Putnam's Sons. New York, New York, USA. 1901

### HARMONIC LAW

#### **Kepler, Johannes** 1571–1630

German astronomer

But now since the first light eight months ago, since broad day three months ago, and since the sun of my

wonderful speculation [relating to the law of planetary motion – harmonic law] has shone fully a very few days ago: nothing holds me back. I am free to give myself up to the sacred madness, I am free to taunt mortals with the frank confession that I am stealing the golden vessels of the Egyptians, in order to build of them a temple for my God, far from the territory of Egypt. If you pardon me, I shall rejoice; if you are enraged, I shall bear up. The die is cast, and I am writing the book – whether to be read by my contemporaries or by posterity matters not. Let it await its reader for a hundred years, if God Himself has been ready for His contemplator for six thousand years.

In *Great Books of the Western World* (Volume 16)

*Harmonies of the World*

Proem (p. 1010)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### HARMONY

#### **von Humboldt, Alexander** 1769–1859

German naturalist and explorer

The earnest and solemn thoughts awakened by a communion with Nature intuitively arise from a presentiment of the order and harmony pervading the whole universe, and from the contrast we draw between the narrow limits of our own existence and the image of infinity revealed on every side, whether we look upward to the starry vault of heaven, scan the far-stretching plain before us, or seek to trace the dim horizon across the vast expanse of ocean.

Translated by E.C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)

Introduction (p. 25)

D. Appleton & Co. New York, New York, USA. 1850

### HAZARD

#### **Laplace, Pierre Simon** 1749–1827

French mathematician, astronomer, and physicist

The opinion that man has long been placed in the centre of the universe, considering himself the special object of the cares of nature, leads each individual to make himself the centre of a more or less extended sphere and to believe that hazard has preference for him.

Translated by Frederick Wilson Truscott and Frederick Lincoln

*A Philosophical Essay on Probabilities*

Chapter XVI (p. 164)

John Wiley & Sons. New York, New York, USA. 1902

### HEAL

#### **Eddy, Mary Baker** 1821–1910

Religious writer

...how do drugs, hygiene, and animal magnetism heal? It may be affirmed that they do not heal, but only

relieve suffering temporarily exchanging one disease for another.

*Science and Health, With Key to the Scriptures*

Chapter XIV (p. 143)

Allison V. Stewart. Boston, Massachusetts, USA. 1918

## HEALING

**Bonaparte, Napoleon** 1769–1821

French soldier and emperor of France

You know, my dear doctor, the art of healing is simply the art of lulling and calming the imagination.

In J. Christopher Herold (ed.)

*The Mind of Napoleon*

Science and the Arts (p. 140)

Columbia University Press. New York, New York, USA. 1955

**Butler, Samuel** 1612–80

English novelist, essayist, and critic

Dogs with their tongues their wounds do heal,  
But men with hands, as thou shalt feel.

*The Poetical Works of Samuel Butler* (Volume 1)

Part I, canto ii, l. 773–774

Bell & Daldy. London, England. 1835

**Eddy, Mary Baker** 1821–1910

American religious writer

Here comes the question, How do drugs, hygiene and animal magnetism heal? It may be affirmed that they do not heal, but only relieve suffering temporarily, exchanging one disease for another.

*Science and Health with Key to the Scriptures*

Chapter XIV (p. 483)

Joseph Armstrong. Boston, Massachusetts, USA. 1906

**Forssmann, Werner** 1904–79

German physician and physiologist

One may compare the art of healing with a work of art, which from different standpoints and under different lighting reveals ever new and surprising beauty.

*Nobel Lectures, Physiology or Medicine 1942–1962*

The Role of Heart Catheterization and Angiocardiography in the Development of Modern Medicine (p. 510)

Elsevier Publishing Company. Amsterdam, Netherlands. 1964

**Mencken, H. L. (Henry Louis)** 1880–1956

American journalist and literary critic

...it will never get well if you pick it.

What Is Going on in the World

*The American Mercury*, Volume XXX, Number 119, November, 1933 (p. 257)

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

What wound did ever heal but by degrees?

In *Great Books of the Western World* (Volume 27)

*The Plays and Sonnets of William Shakespeare* (Volume 2)

*Othello, The Moore of Venice*

Act II, Scene iii, l. 375

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Willan, Robert** 1757–1812

Scottish physician

The Art of Healing would seem to be of all Arts the most honourable, even tho' no better Reason could be given for it, than that it is the most difficult.

*An Essay on the King's-evil: By Robert Willan, M.D.*

To Dr. Mead (p. v)

Printed for J. & P. Knapton. London, England. 1746

## HEALTH

**Amiel, Henri-Frédéric** 1821–81

Swiss philosopher, poet, and critic

Health is the first of all liberties, and happiness gives us the energy which is the basis of health.

Translated by Mrs. Humphrey Ward

*Amiel's Journal*

April 3, 1865 (p. 132)

A.L. Burt Company, Publishers. New York, New York, USA. 1897

**Born-Volber, A. J.**

No biographical data available

All that influences health, influences disease.

In Albert Abrams

*Man and His Poisons*

Chapter X (p. 220)

E.B. Treat & Co. New York, New York, USA. 1906

**Butler, Samuel** 1612–80

English novelist, essayist, and critic

It was a monotonous life, but it was very healthy; and one does not much mind anything when one is well.

*Erewhon and Erewhon Revisited*

Chapter I (p. 5)

The Modern Library. New York, New York, USA. 1955

**da Vinci, Leonardo** 1452–1519

Italian High Renaissance painter and inventor

Strive to preserve your health; and in this you will the better succeed in proportion as you keep clear of the physicians, for their drugs are a kind of alchemy concerning which there are no fewer books than there are medicines.

*Leonardo da Vinci's Note Books* (p. 65)

Duckworth & Company. London, England. 1906

**de Cervantes, Miguel** 1547–1616

Spanish novelist, playwright, and poet

The beginning of health lies in knowing the disease and in the sick man's willingness to take the medicines which the physician prescribes...

In *Great Books of the Western World* (Volume 29)

*The History of Don Quixote de la Mancha*  
Part II, Chapter 60 (p. 392)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Donleavy, James Patrick** 1926–  
No biographical data available

...when you don't have any money, the problem is food.  
When you have money, it's sex. When you have both,  
it's health...

*The Ginger Man*  
Chapter 5 (p. 39)  
Delacorte Press. New York, New York, USA. 1974

**Eddy, Mary Baker** 1821–1910  
American religious writer

Health is not a condition of matter, but of Mind; nor can  
the material senses bear reliable testimony on the subject  
of health.

*Science and Health with Key to the Scriptures*  
Chapter VI (p. 120)  
Joseph Armstrong. Boston, Massachusetts, USA. 1906

**Eliot, George (Mary Ann Evans Cross)** 1819–80  
English novelist

...the rich ate and drank freely, accepting gout and apo-  
plexy as things that ran mysteriously in respectable fami-  
lies...

*Silas Marner*  
Chapter III (pp. 28–29)  
Dodd, Mead & Company. New York, New York, USA. 1948

**Eliot, T. S. (Thomas Stearns)** 1888–1965  
American expatriate poet and playwright

The sense of wellbeing! It's often with us  
When we are young, but then it's not noticed;  
And by the time one has grown to consciousness  
It comes less often.

*The Elder Statesman*  
Act II (p. 54)  
Farrar, Straus & Cudahy. New York, New York, USA. 1959

**Emerson, Ralph Waldo** 1803–82  
American lecturer, poet, and essayist

The first wealth is health. Sickness is poor-spirited, and  
cannot serve anyone; it must husband its resources to  
live. But health or fullness answers its own ends and has  
to spare, runs over, and inundates the neighborhoods and  
creeks of other men's necessities.

*Ralph Waldo Emerson: Essays and Lectures*  
*The Conduct of Life*  
Power (p. 972)  
The Library of America. New York, New York, USA. 1983

**Gull, Sir William Withey** 1816–90  
English physician

What we call health, which looks so fixed and stable, is  
more changeable than the stability of the rainbow.

*A Collection of the Published Writings of William Withey Gull (Volume 2)*  
Notes and Aphorisms (p. lix)  
The New Sydenham Society. London, England. 1896

**Hawthorne, Nathaniel** 1804–64  
American novelist and short story writer

A bodily disease, which we look upon as whole and  
entire within itself, may, after all, be but a symptom of  
some ailment in the spiritual part.

*The Scarlet Letter*  
Chapter 10 (p. 122)  
Modern Library. New York, New York, USA. 2000

**Herophilus** 325 BCE–255 BCE  
Greek physician

To lose one's health renders science null, art inglori-  
ous, strength effortless, wealth useless and eloquence  
powerless.

In Samuel Evans Massengill  
*A Sketch of Medicine and Pharmacy and a View of Its Progress by the*  
*Massengill Family from the Fifteenth to the Twentieth Century* (p. 28)  
The S. E. Massengill Company. Bristol, Tennessee, USA. 1943

**Holmes, Oliver Wendell** 1809–94  
American physician, poet, and humorist

If you mean to keep as well as possible, the less you think  
about your health the better.

*Over the Teacups*  
Chapter VIII (p. 186)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1892

There are three wicks you know to the lamp of a man's  
life: brain, blood, and breath. Press the brain a little, its  
light goes out, followed by both the others. Stop the heart  
a minute, and out go all three of the wicks. Choke the air  
out of the lungs, and presently the fluid ceases to sup-  
ply the other centres of flame, and all is soon stagnation,  
cold, and darkness.

*The Professor at the Breakfast-Table*  
Chapter XI

**Jefferson, Thomas** 1743–1826  
3rd president of the USA

With your talents and industry, with science, and that  
steadfast honesty which eternally pursues right, regard-  
less of consequences, you may promise yourself every-  
thing – but health, without which there is no happiness.  
An attention to health then should take place of every  
other object. The time necessary to secure this by active  
exercises, should be devoted to it in preference to every  
other pursuit.

In Julian P. Boyd (ed.)  
*The Papers of Thomas Jefferson* (Volume 11)  
Letter to Thomas Mann Randolph, Jr., July 6, 1787 (p. 558)  
Princeton University Press. Princeton, New Jersey, USA. 1950

**Melville, Herman** 1819–91  
American novelist

I rejoice in my spine, as in the firm audacious staff of that flag which I fling half out to the world.

**Ray, John** 1627–1705

English naturalist

Health without money is half a sickness.

*A Complete Collection of English Proverbs* (p. 12)

Printed for G. Cowie. London, England. 1813

Early to go to bed, and early to rise, makes a man healthy, wealthy, and wise.

*A Complete Collection of English Proverbs* (p. 33)

Printed for G. Cowie. London, England. 1813

Health is better than wealth.

*A Complete Collection of English Proverbs* (p. 120)

Printed for G. Cowie. London, England. 1813

**Romains, Jules** 1885–1972

French author

Healthy people are sick people who don't know it.

*Knock*

Act 1 (p. 12)

Barron's Educational Series. Great Neck, New York, USA. 1962

**Romanoff, Alexis Lawrence** 1892–1980

Russian soldier and scientist

One who does not care about his own health, or life, will soon be either disabled or dead.

*Encyclopedia of Thoughts*

Aphorisms 1033

Heritage Books. Ithaca, New York, USA. 1975

**Sacks, Oliver W.** 1933–

American neurologist and author

Health is infinite and expansive in mode, and reaches out to be filled with the fullness of the world; whereas disease is finite and reductive in mode, and endeavors to reduce the world to itself.

*Awakenings*

Perspectives (p. 234)

Vintage Books. New York, New York, USA. 1990

**Shaw, George Bernard** 1856–1950

Irish comic dramatist and literary critic

Use your health, even to the point of wearing it out. That is what it is for. Spend all you have before you die; and do not outlive yourself.

*The Doctor's Dilemma*

Preface on Doctors

The Latest Theories (p. xcii)

Brentano's. New York, New York, USA. 1920

Doctoring is not even the art of keeping people in health (no doctor seems able to advise you what to eat any better than his grandmother or the nearest quack): it is the art of curing illnesses.

*The Doctor's Dilemma*

Preface (p. 25)

Penguin Books. Baltimore, Maryland, USA. 1954

**Simmons, Charles** 1798–1856

American clergy and litterateur

He that wants health wants everything.

*Laconic Manual and Brief Remarker Containing Over a Thousand*

*Subjects Alphabetically and Systematically Arranged* (p. 234)

Robert Dick. Toronto, Ontario, Canada. 1853

A man too busy to take care of his health is like a mechanic too busy to take care of his tools.

*Laconic Manual and Brief Remarker Containing Over a Thousand*

*Subjects Alphabetically and Systematically Arranged* (p. 234)

Robert Dick. Toronto, Ontario, Canada. 1853

**Sterne, Laurence** 1713–68

English novelist and humorist

People who are always taking care of their health, are like misers, who are hoarding up treasure which they have never spirit enough to enjoy.

*The Works of Laurence Sterne: With a Life of the Author*

The Koran (p. 330)

William Durell & Co. New York, New York, USA. 1814

**Stevenson, Robert Louis** 1850–94

Scottish essayist and poet

It is better to lose health like a spend thrift than to waste it like a miser.

*Virginibus Puerisque & Familiar Studies of Men & Books*

Aes Triplex (p. 68)

J.M. Dent & Sons Ltd. London, England. No date

**Thomson, James** 1700–48

Scottish poet

Health is the vital Principle of Bliss,  
And Exercise of Health.

*The Castle of Indolence*

Canto II, Stanza lviii

William Smith. London, England. 1842

**Twain, Mark (Samuel Langhorne**

**Clemens)** 1835–1910

American author and humorist

There are people who strictly deprive themselves of each and every eatable, drinkable and smokable which has in any way acquired a shady reputation. They pay this price for health. And health is all they get for it. How strange it is. It is like paying out your whole fortune for a cow that has gone dry.

*Mark Twain's Autobiography* (Volume 1)  
Chapters Begun in Vienna (p. 98)  
Harper & Brothers. New York, New York, USA. 1924

He had much experience of physicians, and said “the only way to keep your health is to eat what you don’t want, drink what you don’t like, and do what you’d durther not.”

*Following the Equator* (Volume 2)  
Chapter XIII (p. 151)  
Harper & Brothers. New York, New York, USA. 1899

**Walton, Izaak** 1593–1683  
English writer

...look to your health: and if you have it, praise God, and value it next to a good conscience; for health is the second blessing that we mortals are capable of; a blessing that money cannot buy.

*The Complete Angler*  
The Fifth Day, Chapter XXI (pp. 225–226)  
T.N. Foulis. London, England. 1913

## HEART TRANSPLANT

**Maudsley, Henry** 1835–1918  
English physician

Were the heart of one man to be placed in the body of another it would probably make no difference in the circulation of the blood, but it might make a real difference in the temper of his mind. So close is the physiological sympathy of parts in the commonwealth of the body, that it is necessary in the physiological study of mind to regard it as a function of the whole organism, as comprehending the whole bodily life.

*Responsibility in Mental Disease*  
Introductory (pp. 18–19)  
D. Appleton & Co. New York, New York, USA. 1900

## HEAT

**Bacon, Sir Francis** 1561–1626  
English lawyer, statesman, and essayist

...heat is a motion of expansion, not uniformly of the whole body together, but in the smaller parts of it; and at the same time checked, repelled, and beaten back, so that the body acquires a motion alternative, perpetually quivering, striving and struggling, and irritated by repercussion, whence springs the fury of fire and heat.

In James Spedding, Robert Leslie Ellis, Douglas Denon Heath and William Rawley  
*Works of Francis Bacon* (Volume 8)  
*Translation of the Novum Organum* (p. 215)  
Taggard & Thompson. Boston, Massachusetts, USA. 1863

**Baumel, Judith**  
No biographical data available

Think of the complexity of temperature, quantification of that elusive quality “heat.”

Tonight, for instance, your hands are colder than mine. Someone could measure more precisely than we the nature of this relationship.

*The Weight of Numbers*  
Fibonacci (p. 20)  
Wesleyan University Press, Middletown, Connecticut, USA; 1988

**Carnot, Sadi Nicolas Leonhard** 1796–1832  
French physicist and engineer

The phenomenon of the production of motion by heat has not been considered in a sufficiently general way.... It is necessary to establish proofs applicable not only to steam engines but to all other heat-engines, irrespective of the working substance and the manner in which it acts.

Translated by W.F. Maggie  
*The Second Law of Thermodynamics: Memoirs by Carnot, Clausius, and Thompson*  
Reflections on the Motive Power of Heat, and on Engines Suitable for Developing this Power (p. 6)  
Harper & Brothers. New York, New York, USA. 1899

**Clausius, Rudolph** 1822–88  
German physicist

Heat can never pass from a colder to a warmer body without some other change, connected therewith, occurring at the same time.

*The Mechanical Theory of Heat – With its Applications to the Steam Engine and to Physical Properties of Bodies*  
Fourth Memoir  
John van Voorst. London, England. 1867

**Dyson, Freeman J.** 1923–  
American physicist and educator

Heat is disordered energy. So with two words the nature of heat is explained.

What is Heat?  
*Scientific American*, Volume 191 Number 3, September, 1954 (p. 58)

**Eliot, George (Mary Ann Evans Cross)** 1819–80  
English novelist

Heat is a great agent and a useful word, but considered as a means of explaining the universe, it requires an extensive knowledge of differences....

*Daniel Deronda*  
Book I, Chapter VII (p. 23)  
Harper & Brothers. New York, New York, USA. 1876

**Flanders, Michael** 1922–75  
English actor and singer

**Swann, Donald** 1923–94  
English composer, musician, and entertainer

You can't pass heat from a cooler to a hotter.  
 Try if you like, you far better notter,  
 cause the cold in the cooler will get hotter as a ruler,  
 'cause the hotter body's heat will pass to the cooler.

*At the Drop of Another Hat*

The First and Second Law

CD. Telarc. Cleveland, Ohio, USA. 1994

Heat is work and work's a curse  
 And all the heat in the universe  
 Is gonna cool down  
 Because it can't increase.

*At the Drop of Another Hat*

The First and Second Law

CD. Telarc. Cleveland, Ohio, USA. 1994

### **Fourier, (Jean Baptiste-) Joseph** 1768–1830

French mathematician and physicist

The effects of heat are subject to constant laws which cannot be discovered without the aid of mathematical analysis.

Translated by Alexander Freeman

*The Analytical Theory of Heat*

Chapter I (p. 14)

At The University Press. Cambridge, England. 1878

...a very extensive class of phenomena exists, not produced by mechanical forces, but resulting simply from the presence and accumulation of heat. This part of natural philosophy cannot be connected with dynamical theories, it has principles peculiar to itself, and is founded on a method similar to that of other exact sciences.

In *Great Books of the Western World* (Volume 45)

*The Analytical Theory of Heat* (p. 23)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Heat, like gravity, penetrates every substance of the universe, its rays occupy all parts of space. The object of our work is to set forth the mathematical laws which this element obeys. The theory of heat will hereafter form one of the most important branches of general physics.

In *Great Books of the Western World* (Volume 43)

*The Analytical Theory of Heat*

Preliminary Discourse (p. 169)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### **Frost, Robert** 1874–1963

American poet

Say something to us we can learn.  
 By heart and when alone repeat.  
 Say something! And it says, "I burn."  
 But say with what degree of heat.  
 Talk Fahrenheit, Talk Centigrade.  
 Use language we can comprehend.  
 Tell us what elements you blend.

*Complete Poems of Robert Frost*

Choose Something Like a Star, l. 9–15

Henry Holt & Company. New York, New York, USA. 1949

### **Hall, Thomas Wright**

No biographical data available

Heat is considered to be as closely kin to Electricity as is infancy to manhood, and thus to be all-worthy of scientific apotheosis.

*New Theory of Galvanism: The Electrothermology of Chemistry*

Preface (p. v)

Edmonston & Douglas. Edinburgh, Scotland. 1872

...in this perhaps presumptuous effort, Heat is viewed in entirely novel aspects. Heat is considered no longer exclusively a thing of thermometers and pyrometers, but as a great power in chemistry.

*New Theory of Galvanism: The Electrothermology of Chemistry*

Preface (p. v)

Edmonston & Douglas. Edinburgh, Scotland. 1872

### **Herschel, Friedrich Wilhelm**

**(Sir William)** 1738–1822

English astronomer

The word heat, in its common acceptation, denotes a certain sensation well known to every person. The cause of this sensation, to avoid ambiguity, ought to have been distinguished by a name different from that which is used to point out its effect. Various authors, indeed, who have treated on the subject of heat, have occasionally added certain terms to distinguish their conceptions, such as latent, absolute, specific, sensible heat, while others have adopted the new expressions of caloric and the matter of heat.

Experiments on the Solar and on the Terrestrial Bays that Occasion Heat

*Philosophical Transactions of the Royal Society of London,*

Volume 90, 1800 (p. 293)

### **Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

### **Hoyle, Geoffrey** 1942–

English science fiction writer

The Yela can destroy the Earth by wrapping a blanket of hydrogen around our atmosphere. Then all it needs do to destroy us is just press a little of the hydrogen into the atmosphere itself. The hydrogen and the oxygen in our atmosphere combine together with an immense release of heat. The generation of heat causes the gas to rise and more hydrogen is sucked down. Within seconds the whole atmosphere is a raging inferno.

*Into Deepest Space*

Chapter I (p. 6)

Harper & Row, Publishers. New York, New York, USA. 1974

### **Johnson, Frank H.**

American biologist

Without heat, all life processes cease. With a little too much heat, they cease just as surely.

Heat and Life

*Scientific American*, Volume 191 Number 3, September, 1954 (p. 65)

**Joule, James Prescott** 1818–89  
English physicist

I shall lose no time in repeating and extending these experiments, being satisfied that the grand agents of nature are by the Creator's fiat indestructible, and that whatever mechanical force is expended an exact equivalent of heat is always obtained.

In Osborne Reynolds  
*Memoir of James Prescott Joule*  
Chapter VI (p. 71)  
Manchester Literary and Philosophical Society. Manchester, England.  
1892

You see, therefore, that living force may be converted into heat, and that heat may be converted into living force, or its equivalent attraction through space. All, three, therefore – namely, heat, living force, and attraction through space (to which I might also add light, were it consistent with the scope of the present lecture) – are mutually convertible into one another. In these conversions nothing is ever lost. The same quantity of heat will always be converted into the same quantity of living force. We can therefore express the equivalency in definite language applicable at all times and under all circumstances.

*The Scientific Papers of James Prescott Joule*  
On Matter, Living Force and Heat (pp. 270–271)  
Taylor & Francis. London, England. 1884

...the grand agents of nature are, by the Creator's fiat, *indestructible*; and that wherever mechanical force is expended, an exact equivalent of heat is always obtained.

On the Calorific Effects of Magneto-Electricity, and on the Mechanical Effects of Heat  
*Philosophical Magazine*, Volume XXIII, Number CLIV, December, 1843 (p. 442)

**Joyce, James** 1882–1941  
Expatriate Irish writer and poet

Be a warm day I fancy. Specially in these black clothes feel it more. Black conducts, reflects (refracts is it?) the heat.

*Ulysses* (p. 57)  
Random House, Inc. New York, New York, USA. 1946

**Keane, Bill Joseph**  
No biographical data available

Heat makes things expand. That's why the days are longer in the summer.

*Cartoon caption*

**Locke, John** 1632–1704  
English philosopher and political theorist

Heat is a very brisk agitation of the insensible parts of the object, which produces in us that sensation, from whence

we denominate the object hot; so what in our sensation is heat, in the object is nothing but motion.

*The Works of John Locke In Nine Volumes* (Volume 2)  
*Elements of Natural Philosophy*  
Chapter XI  
Of the Five Senses, of Touch

**Lyell, Sir Charles** 1797–1875  
English geologist

It is a favourite dogma of some physicists that not only the earth, but the sun itself, is continually losing a portion of its heat, and that as there is no known source by which it can be restored we can foresee the time when all life will cease to exist on this planet, and on the other hand we can look back to a period when the heat was so intense as to be incompatible with the existence of any organic beings such as are known to us in the living or fossil world. ... A geologist in search of some renovating power by which the amount of heat may be made to continue unimpaired for millions of years, past and future, in the solid parts of the earth...has been compared by an eminent physicist to one who dreams he can discover a source of perpetual motion and invent a clock with a self-winding apparatus. But why should we despair of detecting proofs of such regenerating and self-sustaining

*Principles of Geology*  
Chapter XXXII (p. 213)  
J, Murray. London, England. 1868

**Maxwell, James Clerk** 1831–79  
Scottish physicist

The distinction between hot bodies and cold ones is familiar to all, and is associated in our minds with the difference of the sensations which we experience in touching various substances, according as they are hot or cold. The intensity of these sensations susceptible of degrees, so that we may estimate one body to be hotter or colder than another by touch. The words hot, warm, cool, cold are associated in our minds with a series of sensations which we suppose to indicate a corresponding series of states of an object with respect to heat.

*Theory of Heat*  
A Treatise on Heat  
Chapter I (p. 1)  
Longmans, Green & Company. London, England. 1871

**Mayer, Julius Robert von Joseph** 1904–83  
German physician and physicist

Concerning the intimate nature of heat, or of electricity, etc., I know nothing, anymore than I know the intimate nature of any matter whatsoever, or of anything else.

Quoted by Pierre Duhem  
*The Aim and Structure of Physical Theory*  
Part I, Chapter III (p. 52)  
Princeton University Press. Princeton, New Jersey, USA. 1954

**McNeil, I. Joseph**

No biographical data available

In the beginning God created the heaven and the earth are the opening words of the Bible, which goes on, in verse 3, and God said Let there be light: and there was light. It must be assumed that the Cosmic Illuminator had to abide by the laws of physics like the rest of us for, after all, He had created them. In the nature of things, sensible heat comes long before visible light in the spectrum of electromagnetic wavelengths. Thus, when God said Let there be light, he implied, Let there also be heat – and there was heat.

The stove is hot, but that's no change  
Heat's what it's supposed to make  
Resistance generates the energy to bake  
So its always Ohm Ohm on the range.

The Cowboy's Lament

*The Physics Teacher*, Volume 15, Number 2, February, 1977 (p. 127)

**Mott-Smith, Morton Joseph**

People are always exaggerating temperatures. If the day is hot, they add on a few degrees; if it is cold they deduct a few. No one ever gives the air temperature to a fraction of a degree, but only to whole degrees. Now on the Fahrenheit scale, on account of the small size of its degree, these whoppers and inaccuracies are only about half as big as they are on the other scales.

*Heat and Its Workings* (p. 24)

D. Appleton & Company. New York, New York, USA. 1933

**Newton, Sir Isaac** 1642–1727

English physicist and mathematician

Do not all fixed bodies, when heated beyond a certain degree, emit light and shine; and is not this emission performed by the vibrating motions of their parts?

In *Great Books of the Western World* (Volume 34)

*Optics*

Book III, Part 1, Query 8

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Planck, Max** 1858–1947

German physicist

The concept of heat, like all other physical concepts, originates in a sense-perception, but it acquires its physical significance only on the basis of a complete separation of the events in the sense-organs from the external events which excite the sensation. So heat, regarded physically, has no more to do with the sense of hotness than colour,

in the physical sense, has to do with the perception of colour.

Translated by Henry L. Brose

*Theory of Heat*

Introduction (p. 1)

The Macmillan Company. New York, New York, USA. 1957

**Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

And a well-made language is no indifferent thing; not to go beyond physics, the unknown man who invented the word heat devoted many generations to error. Heat has been treated as a substance, simply because it was designated by a substance, and it has been thought indestructible.

## HEAVENLY BODIES

**Phelps, Almira Hart Lincoln** 1793–1884  
American educator and writer

The study of nature, in any of her forms, is highly interesting and useful. But the heavenly bodies are far distant from us – and were they – within our reach, are too mighty for us to grasp, our feeble minds seem overwhelmed in the contemplation of their immensity.

*Familiar Lectures on Botany, Practical, Elementary and Physiological*  
(5th edition)  
Lecture I (p. 15)  
F.J. Huntington & Co. New York, New York, USA. 1837

## HEAVENS

**Addison, Joseph** 1672–1719  
English essayist, poet, and statesman

The ways of Heaven are dark and intricate,  
Puzzled in Mazes and perplex'd with errors:  
Our understanding traces 'em in vain,  
Lost and bewilder'd in the fruitless search;  
Nor sees with how much art the winding run,  
Nor where the regular confusion ends.

*Cato*  
Act One, Scene I  
J. Dicks. London, England. 1883

**Alighieri, Dante** 1265–1321  
Italian poet and writer

...Heaven calls you, and revolves around you, displaying to you its eternal beauties....

In *Great Books of the Western World* (Volume 21)  
*The Divine Comedy of Dante Alighieri*  
Purgatory, Canto XIV, l. 47–48  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### Author undetermined

He cannot but feel a sense of pleasure, and even, of power, when he tracks the course of the flashing comet, examines into the physical characteristics of the Sun and Moon, and records the various phases of the distant planets. But if such be his feeling, it is certainly tempered with awe and wonder as he contemplates the phenomena of the heavens – the beauty of the stars, the immensity of their orbits, the regularity with which each bright world performs its appointed course, the simplicity of the laws which govern its motions, and the mystery which attends its far-off existence.

*The Story of The Herschels: A Family of Astronomers*  
Chapter I  
T. Nelson & Sons. London, England. 1889

There is no “behind the scenes” in the heavens whence new stars and comets may make their entrance and strut and fret their hour on the celestial stage; no lumber garret or property room into which they can retire and be stowed out of the way. The universe is an open, infinite somewhere, at every point of its extent as much a real somewhere as it is here, where we happen for the moment to be bowling through space.

In Charles Dickens  
Periodical Comets  
*All the Year Round: A Weekly Journal*, Volume 7, March 23, 1872 (p. 390)

**Ball, Sir Robert Stawell** 1840–1913  
Irish astronomer

“The Story of the Heavens” is...indeed a wondrous story to narrate; and could we tell it adequately, it would prove of boundless interest and of exquisite beauty. It leads to the contemplation of the mightiest efforts of nature and the greatest achievements of human genius.

*The Story of the Heavens*  
Introduction (p. 1)  
Cassell & Co., Ltd. London, England. 1890

**Brewster, David** 1781–1868  
Scottish scientist, inventor, and writer

In the stillness of night, when the moral world is asleep – when the aspen leaf has ceased to flutter, and no sound is heard save that of the remote waterfall, or the restless ocean, or the zephyr breath among the distant foliage, the silver Moon, the brilliant Planet, and the twinkling Star, are the beacon-lights which guide the eye through the brilliant expanse above.

Ah, but a man's reach should exceed his grasp,  
Or what's a heaven for?

*The Poems and Plays of Robert Browning*  
Andrea del Sarto, 97  
The Modern Library. New York, New York, USA. 1934

**Burke, Edmund** 1729–97  
English statesman and philosopher

The starry heaven, though it occurs so very frequently to our view, never fails to excite an idea of grandeur. This cannot be owing to anything in the stars themselves, separately considered. The number is certainly the cause. The apparent disorder augments the grandeur; for the appearance of care is highly contrary to our ideas of magnificence. Besides, the stars lie in such apparent confusion as makes it impossible, on ordinary occasions, to reckon them. This gives them the advantage of a sort of infinity. *A Philosophical Enquiry into the Origin of Our Ideas of the Sublime and Beautiful*

Section XIV (pp. 98–99)  
Harper & Brothers Publishers. New York, New York, USA. 1844

Magnificence is likewise a source of the sublime. A great profusion of things, which are splendid or valuable in themselves, is magnificent. The starry heaven, though it occurs so very frequently to our view, never fails to excite an idea of grandeur. This cannot be owing to anything in the stars themselves, separately considered. The number is certainly the cause. The apparent disorder augments the grandeur, for the appearance of care is highly contrary to our ideas of magnificence. Besides, the stars lie in such apparent confusion, as makes it impossible, on ordinary occasions, to reckon them. This gives them the advantage of a sort of infinity.

*The Sublime and the Beautiful*  
Section XIV (p. 73)  
Printed by J.F. Dove. London, England. 1827

**Burnham, Jr., Robert Jr.** 1931–93  
American astronomer

Here, in the dark unknown immensity of the heavens, we shall meet the glories beyond description and witness scenes of inexpressible splendor. In the great black gulfs of space and in the realm of the innumerable stars, we shall find mysteries and wonders undreamed of.

*Burnham's Celestial Handbook*  
Chapter 2 (p. 13)  
Celestial Handbook Publications. Flagstaff, Arizona, USA.

**Chesterton, G. K. (Gilbert Keith)** 1874–1936  
English author

Oh with what prayers and fasting  
Shall mortal man deserve  
To see that glimpse of Heaven.

*The Coloured Lands*  
The Joys of Science (p. 209)  
Sheed & Ward. New York, New York, USA. 1938

**Cicero (Marcus Tullius Cicero)** 106 BCE–43 BCE  
Roman orator, politician, and philosopher

If a man should ascend alone into heaven and behold clearly the structure of the universe and the beauty of the stars, there would be no pleasure for him in the

awe-inspiring sight, which would have filled him with delight if he had had someone to whom he could describe what he had seen.

Translated by William Armistead Falconer  
*De Amicitia*  
XXIII (p. 195)  
Harvard University Press. Cambridge, Massachusetts, USA. 1938

**Copernicus, Nicolaus** 1473–1543  
Polish astronomer

...the heavens are immense in comparison with the Earth...  
In *Great Books of the Western World* (Volume 16)  
*On the Revolutions of the Heavenly Spheres*  
Book One, Chapter 6 (p. 516)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**de Fontenelle, Bernard le Bovier** 1657–1757  
French author

When the heavens were a little blue arch, stuck with stars, me thought the universe was too straight and close: I was almost stifled for want of air: but now it is enlarged in height and breadth, and a thousand vortices taken in. I begin to breathe with more freedom, and I think the universe to be incomparably more magnificent than it was before.

Translated by John Glanville  
*A Plurality of Worlds*  
The Fifth Evening (p. 129)  
Printed for R.W. London, England. 1702

**de Gubernatis, Giuseppe Angelo**  
No biographical data available

The immense vault of heaven which over-arches the earth, as the eternal storehouse of light and rain, as the power which causes the grass to grow, and therefore the animals which pasture upon it, assumes in the Vedic literature the name of Aditis, or the infinite, the inexhaustible, the fountain of ambrosia (*amritasya nabhis*).

*Zoological Mythology; or, The Legends of Animals*  
Section I (p. 5)  
Trübner & Co. London, England. 1872

**Dickinson, Emily** 1830–86  
American lyric poet

What once was "Heaven"  
is "Zenith" now –  
Where I proposed to go  
When Time's brief masquerade was done  
Is mapped, and charted too.

*The Complete Poems of Emily Dickinson*  
No. 70 (p. 37)  
Little, Brown, Boston & Company. Boston, Massachusetts, USA. 1960

**Donne, John** 1572–1631  
English poet and divine

Man has weav'd out a net, and this net throwne  
Upon the Heavens, and now they are his owne.

*An Anatomy of the World*

The First Anniversary  
Presented for presentation to members of the Roxburge Club.  
Cambridge, England. 1951

And then that heaven, which spreads so farre, as that  
subtill men have, with some appearance of probabilitie,  
imagined, that in that heaven, in those manifold Sphere  
of the Planets and the Starres, there are many earths,  
many worlds, as big as this which we inhabit...

*Donne's Sermons*

The Heavens and Earth, Sermon 98 (p. 161)  
Clarendon Press. Oxford, England. 1942

### Emerson, Ralph Waldo 1803–82

American lecturer, poet, and essayist

Profounder, profounder,  
Man's spirit must dive;  
To his aye-rolling orbit  
No goal will arrive;  
The heavens that now draw him  
With sweetness untold,  
Once found – for new heavens  
He spurneth the old.

*The Works of Ralph Waldo Emerson* (Volume 5) (p. 81)  
Hearst's International Library Co. New York, New York, USA. 1914

### Flammarion, Camille 1842–1925

French astronomer and writer

The silence of the vast and starry Heavens may terrify us;  
its immensity may seem to overwhelm us. But our inquiring  
thought flies curiously on the wings of dream, toward  
the remotest regions of the visible. It rests on one star and  
another, like the butterfly on the flower. It seeks what will  
best respond to its aspirations: and thus a kind of communication  
is established, and, as it were, protected by  
all Nature in these silent appeals. Our sense of solitude  
has disappeared.

Translated by Frances Alice Welby

*Astronomy for Amateurs*

Introduction (p. 12)

D. Appleton & Co. New York, New York, USA. 1915

Diamonds, turquoises, rubies, emeralds, all the precious  
stones with which women love to deck themselves, are to  
be found in greater perfection, more beautiful, and more  
splendid, set in the immensity of Heaven!

Translated by Frances Alice Welby

*Astronomy for Amateurs*

Introduction (p. 16)

D. Appleton & Co. New York, New York, USA. 1915

The Heavens afford us a perennial store of treasure,  
wherein the thinker, poet or artist can find inexhaustible  
subjects of contemplation.

*Astronomy for Amateurs*

Chapter III (p. 66)

D. Appleton & Co. New York, New York, USA. 1915

### Guilleimin, Amédée 1826–93

French journalist and scientific writer

What are the Heavens? Where the shores of that limitless  
ocean; where the bottom of that unfathomable abyss?

In Norman Lockyer and Richard Anthony Proctor

*The Heavens: An Illustrated Handbook of Popular Astronomy*

The Heavens (p. 1)

Richard Bentley & Son. London, England. 1878

### Gronchal, Florence Armstrong

American astronomer and photographer

To the true lover of the stars, one universe or a million  
makes not a whit of difference. The silent song of the  
heavens is as sweet today, its mystery as alluring, its  
delights more marvelous, than in the days of yore when  
planets rolled out heavenly notes and stars shone through  
the seven spheres of pure, translucent crystal.

*The Music of the Spheres: A Nature Lover's Astronomy*

Chapter IX (p. 200)

The Macmillan Company. New York, New York, USA. 1926

### Herschel, Friedrich Wilhelm

(Sir William) 1738–1822

English astronomer

*Coelorum perrupit claustra*

He broke through the barriers of the heavens

*Epitaph*

Upton Church

The subject of the Construction of the Heavens is of so  
extensive and important a nature, that we cannot exert  
too much attention in our endeavors to throw all possible  
light upon it.

On the Construction of the Heavens

*Philosophical Transactions of the Royal Society of London*, 1783

Hitherto the sidereal heavens have been represented by  
the concave surface of a sphere. In future we shall look  
upon those regions into which we may now penetrate as  
a naturalist regards a rich extent of ground containing  
strata variously inclined and directed as well as consist-  
ing of very different materials.

Account of Some Observations Tending to Investigate the Construction  
of the Heavens

*Philosophical Transactions of the Royal Society of London*,

Volume 74, 1784 (p. 438)

This method [disposition of the component parts] of  
viewing the heavens seems to throw them into a new  
kind of light. They are now seen to resemble a luxuriant  
garden which contains the greatest variety of productions  
in different flourishing beds; and one advantage we may  
at least reap from it is that we can, as it were, extend the  
range of our experience to an immense duration. For, is it  
not almost the same thing whether we live successively

to witness the germination, blooming, foliage, fecundity, fading, withering, and corruption of a plant, or whether a vast number of specimens, selected from every stage through which the plant passes in the course of its existence, be brought at once to our view?

Catalogue of a Second Thousand of New Nebula  
*Philosophical Transactions of the Royal Society of London*,  
Volume 79, 1789 (p. 226)

A knowledge of the construction of the heavens has always been the ultimate object of ray observations ...

In Edward Polehampton and John Mason Good  
*The Gallery of Nature and Art: Or, a Tour Through Creation and Science* (Volume 1) (2nd edition)

Chapter VII (p. 61)  
Crosby Lockwood & Son. New York, New York, USA. 1892

### Huggins, Sir William 1824–1910

English astronomer

We, who form part of the emblazonry, can only see the design distorted and confused; here crowded, there scattered, at another place superposed. The groupings due to our position are mixed up with those which are real.

*Report of the Sixty-first Meeting of the British Association for the Advancement of Science*

Address by William Huggins (p. 35)  
John Murray. London, England. 1892

### Jefferies, Richard 1848–87

English naturalist and author

The whole time in the open air, resting at mid-day, under the elms with the ripple of heat flowing through the shadow; at midnight between the ripe corn and the hawthorn hedge on the white wild camomile and the poppy pale in the duskiness, with face upturned to the thoughtful heaven.

*The Open Air*  
Goldenbrown (p. 26)  
Chatto & Windus. London, England. 1908

### Kant, Immanuel 1724–1804

German philosopher

Two things fill me with awe: the starry heavens and the sense of moral responsibility in man.

Quoted in John Tyndall  
*Fragments of Science for Unscientific People*  
Chapter VII (p. 163)  
D. Appleton & Co. New York, New York, USA. 1875

### Kepler, Johannes 1571–1630

German astronomer

My aim is to show that the heavenly machine is not a kind of divine, live being, but a kind of clockwork, insofar as nearly all the manifold motions are caused by a most simple, magnetic, and material force, just as all motions of the clock are caused by a simple weight. And I also show how these physical causes are to be given numerical and geometrical expression.

In Michael Polyani

*The Logic of Personal Knowledge*  
Letter to Herwart von Hohenburg, February 10, 1605 (p. 52)  
The Free Press. Glencoe, Illinois, USA. 1961

### Laplace, Pierre Simon 1749–1827

French mathematician, astronomer, and physicist

If in a fine night, and in a place where the horizon is uninterrupted, we follow with attention the appearance of the heavens, it will be seen to vary at every instant.

Translated by John Pond  
*The System of the World* (Volume 1)  
Chapter I (p. 3)  
Printed for Richard Phillips. London, England. 1809

### Mitchel, Ormsby MacKnight 1805–62

American astronomer

It is in the stillness of the midnight hour, when all nature is hushed in repose, when the hum of the world's ongoing is no longer heard, that the planets roll and shine, and the bright stars, trooping through the deep heavens, speak to the willing spirit that would learn their mysterious being.

*The Planetary and Stellar Worlds: A Popular Exposition of the Great Discoveries and Theories of Modern Astronomy*  
Introductory Lecture (p. 1)  
T. Nelson & Sons. London, England. 1859

...in the stillness of the midnight hour, when all nature is hushed in repose, when the hum of the world's ongoing is no longer heard...the planets roll and shine, and the bright stars, trooping through the deep heavens, speak to the willing spirit that would learn their mysterious being.

*The Planetary and Stellar Worlds: A Popular Exposition of the Great Discoveries and Theories of Modern Astronomy*  
Lecture I (p. 17)  
Baker & Scribner. New York, New York, USA. 1848

The starry heavens do not display their glittering constellations in the glare of day, while the rush and turmoil of business incapacitate man for the enjoyment of their solemn grandeur. It is in the stillness of the midnight hour, when all nature is hushed in repose, when the hum of the world's ongoing is no longer heard, that the planets roll and shine, and the bright stars, trooping through the deep heavens, speak to the willing spirit that would learn their mysterious being.

*The Planetary and Stellar Worlds: A Popular Exposition of the Great Discoveries and Theories of Modern Astronomy*  
Introductory lecture (p. 17)  
Baker & Scribner. New York, New York, USA. 1848

Far away from the earth on which we dwell, in the blue ocean of space, thousands of bright orbs, in clusterings and configurations of exceeding beauty, invite the upward gaze of man, and tempt him to the examination of the wonderful sphere by which he is surrounded. The starry heavens do not display their glittering constellations in the glare of day, while the rush and turmoil of business incapacitate man for the enjoyment of their solemn grandeur.

*The Orbs of Heaven, or, The Planetary and Stellar Worlds*  
Lecture I (p. 1)  
Office of the National Illustrated Library. London, England. 1851

Music is here; but it is the deep and solemn harmony of the spheres. Poetry is here; but it must be read in the characters of light, written on the sable garments of night. Architecture is here; but it is the colossal structure of sun and system, of cluster and universe. Eloquence is here; but “there is neither speech nor language: its voice is not heard.”

*The Orbs of Heaven, or, The Planetary and Stellar Worlds*  
Lecture I (p. 4)  
Office of the National Illustrated Library. London, England. 1851

## Narrator

The Heavens. Once an object of superstition, awe and fear. Now a vast region for growing knowledge. The distance of Venus, the atmosphere of Mars, the size of Jupiter, and the speed of Mercury. All this and more we know. But their greatest mystery the heavens have kept a secret. What sort of life, if any, inhabits these other planets? Human life, like ours? Or life extremely lower in the scale. Or dangerously higher.

*Invaders from Mars*  
Film (1953)

## Nicholson, James

No biographical data available

Where is the man who, in the calm stillness of an autumn or winter night, can look up to and contemplate the vast blue canopy of the heavens, as it glows and sparkles from horizon to zenith with stars sown broadcast and countless as daisies in May, without experiencing that profound sense of awe and mystery that comes, dove like, descending out of the solemn stillness to take possession of his being and bend it in lowly adoration at the feet of the Great All-father?

*Nightly Wanderings in the Gardens of the Sky*  
Introduction (p. 10)  
Porteous Brothers. Glasgow, Scotland. 1881

## Nicks, Oran W.

Unless you are a sailor, a shepherd, or otherwise occupied outdoors at night, the great sweep of the heavens is almost surely less familiar to you than it was to your ancestors.

*Far Travelers*  
The Team Assembles (p. 6)  
NASA. Washington, D.C. 1985

## Pasteur, Louis

1822–95

French chemist

What is there beyond this starry vault? Other starry heavens. Well, and beyond? The human mind, urged by an invincible force, will never cease to ask itself: What is

there beyond? Suppose the mind stops somewhere in time or space? As the point where it stops is only of a finite greatness, greater only than all those which have come before it, the mind hardly begins to contemplate it before the implacable question returns, and returns again, without the mind being able to make its cry of curiosity cease.

In Frederick Morris Warren  
*Ten Frenchmen of the Nineteenth Century*  
Selections (p. 246)  
The Chautauqua Press. Chautauqua, New York, USA. 1904

## Proctor, Mary

1862–1957

American popularizer of astronomy

When we gaze at the starlit heavens, and admire the silvery radiance of the Milky Way, we would fain believe that there is absolute silence and rest, a perfect haven of repose.

The Silver River of Heaven  
*The Chautauquan*, Volume 21, Number 4, July, 1895 (p. 460)

## Proctor, Richard Anthony

1837–88

English astronomer

On a calm, clear night...the contemplation of the celestial vault raises in the least thoughtful mind vague suggestions of infinity, eternity, and omnipotence.

Shooting-Stars, Meteors and, Aerolites  
*The Eclectic Magazine*, Volume VII, Number 2, February, 1868 (p. 145)

## Seneca (Lucius Annaeus Seneca)

4 BCE–65 AD

Roman playwright

No man is so utterly dull and obtuse, with head so bent on Earth, as never to lift himself up and rise with all his soul to the contemplation of the starry heavens, especially when some fresh wonder shows a beacon-light in the sky.

*Physical Science In the Time of Nero, being a Translation of the Quaestiones Naturales of Seneca*  
Book VII, Chapter I (p. 271, 272)  
Macmillan & Company Ltd. London, England. 1910

## Shelley, Percy Bysshe

1792–1822

English poet

Heaven's ebon vault  
Studded with stars unutterably bright,  
Through which the moon's unclouded grandeur rolls,  
Seems like a canopy which love has spread  
To curtain her sleeping world.

*The Complete Poetical Works of Percy Bysshe Shelley*  
Queen Mab, IV  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

## Sime, James

1843–95

No biographical data available

The prose of the heavens surpasses the brightest poetry of earth.

In James Sime

*William Herschel and His Work*

Star-Dust, Chapter V, Ocean of Ether (p. 153)

Charles Scribner's Sons. New York, New York, USA. 1900

**Somerville, Mary** 1780–1872

English mathematician

The heavens afford the most sublime subject of study which can be derived from science. The magnitude and splendor of the objects, the inconceivable rapidity with which they move, and the enormous distances between them, impress the mind with some notion of the energy that maintains them in their motions, with a durability to which we can see no limit.

*The Connexion of the Physical Sciences* (9th edition)

Introduction (p. 2)

John Murray. London, England. 1858

...however profoundly we may penetrate the depths of space, there still remain innumerable systems, compared with which, those which seem so mighty to us must dwindle into insignificance, or even become invisible....

*Mechanism of the Heavens*

Preliminary Dissertation (p. 2)

John Murray. London, England. 1831

**Spencer, Herbert** 1820–1903

English social philosopher

Sad, indeed is it to see how men occupy themselves with trivialities, and are indifferent to the grandest phenomena – care not to understand the architecture of the Heavens, but are deeply interested in some contemptible controversy about the intrigues of Mary Queen of Scots!

*Education: Intellectual, Moral and Physical*

A.L. Fowle. New York, New York, USA. 1860

**Steele, Joel Dorman** 1836–86

American educator

In the presence of such weird and wondrous beauty [the night heavens], the tenderest sentiments of the heart are aroused. A feeling of awe and reverence, of softened melancholy mingled with a thought of God, comes over us, and awakens the better nature within us.

*The Story of the Stars: New Descriptive Astronomy*

Introductory Remarks (p. 1)

American Book Co. Chicago, Illinois, USA. 1884

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

...in the heavens there are rivers of stars and milky ways.

In Robert Sattelmeyer (ed.)

*Journal 1842–1848* (Volume 2) (p. 33)

Princeton University Press. Princeton, New Jersey, USA. 1984

**von Humboldt, Alexander** 1769–1859

German naturalist and explorer

The vault of heaven, studded with nebulae and stars, and the rich vegetable mantle that covers the soil in the climate of palms, cannot surely fail to produce on the minds of these laborious observers of nature an impression more imposing and more worthy of the majesty of creation than on those who are unaccustomed to investigate the great mutual relations of phenomena.

Translated by E. C. Otte

## HEMATOCRIT

### Wintrobe, Maxwell M.

Canadian-born physician

I...discovered that there were no reliable normal blood values. What was called "normal" was based on only a few counts that had been made in the nineteenth century. So I proceeded to collect normal blood values. Others elsewhere, also mindful of this deficiency, were beginning to do the same. A major problem, however, was methodology, and this was what led me to devise the hematocrit as a simple and accurate means of quantitating blood.

In A.B. Weisse

*Conversations in Medicine: The Story of Twentieth-Century American Medicine in the Words of Those Who Created It* (p. 83)

New York University Press. New York, New York, USA. 1984

## HEREDITY

### Bateson, William 1861–1926

English geneticist

An exact determination of the laws of heredity will probably work more change in a man's outlook on the world and in his power over nature than any other advance in natural knowledge that can be clearly foreseen.

*Annual Report of the Board of Regents of the Smithsonian Institution (1902)*

The Problems of Heredity and Their Solution (p. 559)

Government Printing Office. Washington, D.C. 1903

### Bateson, William 1861–1926

English biologist and geneticist

Evolution is a process of Variation and Heredity. The older writers, though they had some vague idea that it must be so, did not study Variation and Heredity. Darwin did, and so begot not a theory, but a science.

In A.C. Seward

*Heredity and Variation in Modern Lights*

Darwin and Modern Science Heredity and Variation in Modern Light

(p. 88)

### Caullery, Maurice 1868–1958

French biologist

...the biologist who studies heredity is very much like a mathematician who is studying a very complex function with the aid of partial differential equations and who tries to analyze the properties and the function about a point without being able as in the case of an elementary function to study it in itself, directly in all its respects.

*Annual Report of the Board of Regents of the Smithsonian Institution (1916)*

The Present State of the Problem of Evolution (p. 330)

Government Printing Office. Washington, D.C. 1917

### de Vilmorin, Henri L.

No biographical data available

Heredity is the lever by which the results of the study and care and perseverance of the raiser are fixed, so to say, into the most valuable of the plants grown for man's use or delight.

In Washington Atlee Burpee

*Selection in Seed Growing*

Pedigree or Grade Races in Horticulture (p. 10)

W. Atlee Burpee & Co. Philadelphia, Pennsylvania, USA. 1896

## HERMETICALLY SEALED

**Compton, Karl Taylor** 1887–1954  
American physicist

Long, long ago, when gods mingled among men, the god Hermes established the first laboratory on this earth and discovered many new and interesting substances by subjecting various kinds and mixtures of earth and rocks to the influence of fire or water. Not being blessed with the protection of the US Patent Office, he kept his discoveries secret by putting his products into jars, which were carefully closed and sealed. Hence arose the term “hermetically sealed”, and the chemistry and metallurgy which thus sprang from the god Hermes was long known as the “hermetic art.”

*Annual Report of the Board of Regents of the Smithsonian Institution (1933)*

The Battle of the Alchemists (p. 268)

Government Printing Office. Washington, D.C.

## HETEROCHRONIC CHANGE

**Garstang, Walter** 1868–1949  
English embryologist and amateur poet

Ambystoma is a giant newt who rears in swampy waters,

As other newts are wont to do, a lot of fishy daughters:

These Axolotls, having gills, pursue a life aquatic,

But, when they should transform to newts, are naughty and erratic.

They change upon compulsion, if the water grows too foul,

For then they have to use their lungs, and go ashore to prowl:

But when a lake’s attractive, nicely aired, and full of food,

They cling to youth perpetual, and rear a tadpole brood.

And newts Perennibranchiate have gone from bad to worse:

They think aquatic life is bliss, terrestrial a curse.

They do not even contemplate a change to suit the weather,  
But live as tadpoles, breed as tadpoles, tadpoles alto-

gether!

*Larval Forms, and Other Zoological Verses*

The Axolotl and the Ammonoete

The University of Chicago Press. Chicago, Illinois, USA. 1985

## HETEROGENEITY

**Thomson, Sir John Arthur** 1861–1933  
Scottish naturalist

As among plants and animals, so among lifeless things there is extraordinary heterogeneity. There are over eighty different kinds of elements; the number of different minerals is legion; the multitude of the stars is untold.

*The System of Animate Nature* (Volume 1)

Lecture II (p. 64)

William & Norgate. London, England. 1920

## HEXAGON

**Pappas of Alexandria** 250–320  
Greek style geometer

Bees...by virtue of a certain geometrical forethought... know that the hexagon is greater than the square and the triangle, and will hold more honey for the same expenditure of material.

In Sanderson Smith

*Agnesi to Zeno: Over 100 Vignettes from the History of Math*

Bees as Mathematicians (p. 173)

Key Curriculum Press. Emeryville, California, USA. 1996

## HIDEOUS

**Landrin, Armand**  
No biographical data available

Those animals or plants which we designate hideous or shapeless are not *opposed*, are not *contrary*, to the great natural laws, which, by the way, are far from being thoroughly understood; they are simply *unlike* the types of plant life or animal life we are most accustomed to see. And, in this sense, so-called deformities are not always *anomalies*; they are merely unusual facts.

*The Monsters of the Deep: And Curiosities of Ocean Life*

Introduction (p. 9)

T. Nelson & Sons. London, England. 1875

## HIEROGLYPHICS

**Birmingham Brown (Fictional character)**

The higher glyphs is higher than the lower glyphs.

*The Feathered Serpent*

Film (1934)

**Doyle, Sir Arthur Conan** 1859–1930  
Scottish writer

These hieroglyphics have evidently a meaning. If it is a purely arbitrary one, it may be impossible for us to solve it. If, on the other hand, it is systematic, I have no doubt that we shall get to the bottom of it.

In William S. Baring-Gould (ed.)  
*The Annotated Sherlock Holmes* (Volume 2)  
*The Adventure of the Dancing Men* (pp. 530–531)  
 Wings Books. New York, New York, USA. 1967

**King, Thomas Starr** 1824–64  
 American Unitarian clergyman

Nature is hieroglyphic. Each prominent fact in it is like a type: its final use is to set up one letter of the infinite alphabet, and help us, by its connections, to read some statement or statute applicable to the conscious world.

*The White Hills: Their Legends, Landscape, and Poetry*  
 The Connecticut Valley (p. 394)  
 Estes & Lauret. Boston, Massachusetts, USA. 1887

## HILBERT

**Dirac, Paul Adrien Maurice** 1902–84  
 English theoretical physicist

Hilbert... was perhaps the most absent-minded man who ever lived. He was a great friend of the physicist James Franck. One day when Hilbert was walking in the street he met James Franck and he said, "James, is your wife as mean as mine?" Well, Franck was taken aback by this statement and didn't know quite what to say, and he said, "Well, what has your wife done?" And Hilbert said, "It was only this morning that I discovered quite by accident that my wife does not give me an egg for breakfast. Heaven knows how long this has been going on."

In T. Ferris (ed.)  
*The World Treasury of Physics, Astronomy and Mathematics*  
 Hilbert (p. 604)  
 Little Brown & Company. Boston, Massachusetts, USA. 1991

## HILBERT SPACE

**von Neumann, John** 1903–57  
 Hungarian-American mathematician

I would like to make a confession which may seem immoral: I do not believe in Hilbert space anymore.

Letter to G. Birkhoff dated 13 Nov (Birkhoff believes the year was 1935)  
*Proceedings of Symposia in Pure Mathematics*, Volume 2, 1961 (p. 158)

## HISTORIAN

**Birrell, Augustine** 1850–1933  
 English politician, academic, and writer

What have we a right to demand of an historian? First, surely stern veracity, which implies not merely knowledge but honesty. An historian stands in a fiduciary position towards his readers, and if he withholds from them important facts likely to influence their judgment, he is guilty of fraud, and, when justice is done in this world,

will be condemned to refund all moneys he has made by his false professions, with compound interest. This sort of fraud is unknown to the law, but to nobody else. "Let me know the facts!" may well be the agonized cry of the student who finds himself floating down what Arnold has called "the vast Mississippi of falsehood, History." Secondly comes a catholic temper and way of looking at things. The historian should be a gentleman and possess a moral breadth of temperament. There should be no bitter protesting spirit about him. He should remember the world he has taken upon himself to write about is a large place, and that nobody set him up over us. Thirdly, he must be a born story-teller. If he is not this, he has mistaken his vocation. He may be a great philosopher, a useful editor, a profound scholar, and anything else his friends like to call him, except a great historian.

*Obiter Dicta*  
 Carlyle (p. 14)  
 John B. Alden, Publisher. New York, New York, USA. 1885

**Buffon, George Louis Leclerc** 1707–88  
 French naturalist

...it is the business of the historian to describe not to invent ...

Translated by William Smellie  
*Natural History General and Particular* (Volume 1) (3rd edition)  
 The History and Theory of the Earth (p. 4)  
 Printed for A. Straman & T. Caldwell. London, England. 1791

**Butler, Samuel** 1835–1902  
 British writer

It has been said that though God cannot alter the past, historians can; it is perhaps because they can be useful to Him in this respect that He tolerates their existence.

*Erewhon Revisited Twenty Years Later*  
 Chapter XIV (p. 151)  
 E.P. Dutton & Co. New York, New York, USA. 1920

**Herschel, Sir John Frederick William** 1792–1871  
 English astronomer and chemist

No grand practical result of human industry, genius, or meditation, has sprung forth entire and complete from the master hand or mind of an individual designer working straight to its object, and foreseeing and providing for all details. As in the building of a great city, so in every such product, its historian has to record rude beginnings, circuitous and inadequate plans; frequent demolition, renewal and rectification; the perpetual removal of much cumbrous and unsightly material and scaffolding, and constant opening out of wider and grander conceptions; till at length a unity and a nobility is attained, little dreamed of in the imagination of the first projector.

*Outlines of Astronomy: By Sir John F. W. Herschel*  
 Introduction (pp. 30–31)  
 American Home Library Co. New York, New York, USA. 1902

**Joravsky, David**

No biographical data available

The most difficult job for the historian is to develop a double vision, seeing his subjects' choices both as they saw them and as he, the retrospective outsider, sees them, free of the pressures that made them gasp and rage. He does not increase wisdom by laughter at their folly, by indignation at their tyranny, or by sentimental substitutes for ridicule and anger. The historian's scorn, rage, or facile charity are really self-congratulation at bottom.

*The Lysenko Affair*

Chapter 9 (p. 271)

The University of Chicago Press. Chicago, Illinois, USA. 1970

**Marmery, J. Villin**

No biographical data available

Men, as a rule, accept the fact of today as it stands without troubling themselves about the gradual steps taken in the past to reach it. They have neither the leisure nor the inclination to probe the obscurity of past ages themselves. They leave this task to the historian. Nor have they the inclination and leisure, pressed onward as they are by their daily work, to follow the historian if his account is at all bulky. Time fails them.

*Progress of Science*

Preface (p. vii)

Chapman &amp; Hall, Ltd. London, England. 1895

**Robbins, Tom** 1936–

American novelist

Hardly a pure science, history is closer to animal husbandry than it is to mathematics, in that it involves selective breeding. The principal difference between the husbandryman and the historian is that the former breeds sheep or cows or such, and the latter breeds (assumed) facts. The husbandryman uses his skills to enrich the future; the historian uses his to enrich the past. Both are usually up to their ankles in bullshit.

*Another Roadside Attraction* (p. 114)

Bantam Books. New York, New York, USA. 1990

**Thorne, Kip S.** 1940–

American theoretical physicist

I do not aspire to a historian's standards of completeness, accuracy, or impartiality.

Preface (p. 19)

W.W. Norton &amp; Company, Inc. New York, New York, USA. 1994

**Wilde, Oscar** 1854–1900

Irish wit, poet, and dramatist

Anybody can make history. Only a great man can write it.

*Intentions*

The Critic As Artist (p. 127)

Brentano's. New York, New York, USA. 1905

**HISTORICAL METHOD****Viollet-le-Duc, Eugène Emmanuel** 1814–79

French architect and theorist

If we will consent to regard the works of the past as belonging to the past – as steps by which we must pass if we would attain to the knowledge of what is appropriate to our own social condition; if we proceed by way of analysis, and not by that of unreflecting imitation; if amid the accumulated remains of former ages we search for methods that are applicable, and if we know how to determine in what respects they are applicable; in short, if, abandoning effete doctrinal traditions, we rely on our own observation, we shall have opened the way and shall ourselves be able to pursue it.

*Lectures On Architecture*

Lecture XI (p. 1)

Samson Low, Marston, Searle &amp; Rivington. London, England. 1881

**HISTORY****Acton, John Emerich Edward Dalberg** 1834–1902

English historian

The great object, in trying to understand history, political, religious, literary or scientific, is to get behind men and to grasp ideas.

*Letters of Lord Acton to Mary Gladstone*

March 15, 1880 (p. 6)

George Allen. London, England. 1904

**Anderson, James H.**

No biographical data available

History is the narration of a succession of events, the causes and effects of fundamental principles, the rise, culmination and wane of various powers, and as such it is fraught with interest, but the history of the earth itself from the beginning until such time as it was rendered fit for the habitation of man is far more interesting than any monkish chronicle or mediaeval romance.

*Riddles of Prehistoric Times*

Chapter I (p. 7)

Broadway Publishing Co. New York, New York, USA. 1911

**Belloc, Hilaire** 1870–1953

French-born poet and historian

No one truly loves history who is not more exalted according to the greater age of the new things he finds.

*The Old Road*

On the Road and the Fascination of Antiquity (p. 10)

Constable &amp; Co. London, England. 1911

**Brunstein, Karl A.**

No biographical data available

History, like faith, has both its uses and abuses. Often the introduction of either one of them into a discussion

signals the abandonment of any further pursuit of rational understanding.

*Beyond the Four Dimensions*

Chapter Five (p. 81)

Walker & Co. New York, New York, USA. 1979

**Clarke, Arthur C.** 1917–

English science and science fiction writer

We must not let our pride in our achievements blind us to the lessons of history. Over the first cities of mankind, the desert sands now lie centuries deep. Could the builders of Ur and Babylon – once the wonders of the world – have pictured London or New York? Nor can we imagine the citadels that our descendants may build beneath the blinding Sun on Mercury, or under the stars of the cold Plutonian wastes. And beyond the planets, though ages still ahead of us in time, lies the unknown and infinite promise of the stellar universe.

*Interplanetary Flight: An Introduction to Astronautics*

Chapter 10 (p. 126)

Harper & Row, Publishers. New York, New York, USA. 1960

**Clerke, Agnes Mary** 1842–1907

Irish astronomer

A history tells us...how we came to know it. It thus places facts before us in the natural order of their ascertainment, and narrates instead of enumerating. The story to be told leaves the marvels of imagination far behind, and requires no embellishment from literary art or high-flown phrases. Its best ornament is unvarnished truthfulness ...

*A Popular History of Astronomy During the Nineteenth Century* (3rd edition)

Preface to the first edition (p. ix)

Adam & Charles Black. London, England. 1893

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

All things are engaged in writing their history. The planet, the pebble, goes attended by its shadow. The rolling rock leaves its scratches on the mountain; the river its channel in the soil; the animal its bones in the stratum; the fern and leaf their modest epitaph in the coal. The falling drop makes its sculpture in the sand or the stone. Not a foot steps into the snow or along the ground, but prints, in characters more or less lasting, a map of its March.

*Representative Men: Seven Lectures*

Chapter VII (p. 261)

Houghton, Mifflin Co. Boston, Massachusetts, USA. 1903

**Ford, Henry** 1863–1947

American industrialist

History is more or less bunk. It's tradition. We want to live in the present and only the history that is worth a tinker's damn is the history we make today.

Interview with Charles Wheeler

*Chicago Tribune*, May 25, 1916

**Geikie, Sir Archibald** 1835–1924

English geologist

While eagerly pressing forward in the search after the secrets of Nature, we are apt to keep the eye too constantly fixed on the way that has to be traveled, and to lose sight and remembrance of the paths already trodden.

*The Founders of Geology*

Lecture I (p. 1)

Macmillan & Company Ltd. London, England. 1897

If all history is only an amplification of biography, the history of science may be most instructively read in the life and work of the men by whom the realms of Nature have been successively won.

*The Founders of Geology* (2nd edition)

Chapter I (p. 4)

Macmillan & Company Ltd. London, England. 1905

In the history of mankind no sharp line can be drawn between the events that are happening now or have happened within the last few generations, and those that took place long ago, and which are sometimes, though inaccurately, spoken of as historical. Every people is enacting its history today just as fully as it did many centuries ago.

*Geology*

Part I, Chapter II (p. 10)

J.A. Hill & Co. New York, New York, USA. 1904

**Gould, Stephen Jay** 1941–2002

American paleontologist, evolutionary biologist, and historian of science

History subverts the stereotype of science as a precise, heartless enterprise that strips the uniqueness from any complexity and reduces everything to timeless, repeatable, controlled experiments in a laboratory.

*The Flamingo's Smile*

Prologue (p. 18)

W.W. Norton & Company, Inc. New York, New York, USA. 1985

I regard the failure to find a clear “vector of progress” in life's history as the most puzzling fact of the fossil record. But I also believe we are now on the verge of a solution, thanks to a better understanding of evolution in both normal and catastrophic times.

*The Flamingo's Smile*

Part 4, Chapter 15 (p. 241)

W.W. Norton & Company, Inc. New York, New York, USA. 1985

**Hilbert, David** 1862–1943

German mathematician

History teaches the continuity of the development of science. We know that every age has its own problems, which the following age either solves or casts aside as profitless and replaces by new ones.

Translated by Mary Winston Newson (p. 437)

Mathematical Problems

**Mach, Ernst** 1838–1916

Austrian physicist and philosopher

Let us not let go the guiding hand of history. History has made all; history can alter all.

*History and Root of the Principle of the Conservation of Energy*

Chapter I (p. 18)

The Open Court Publishing Company. Chicago, Illinois, USA. 1911

**Müller, Max** 1823–1900

German philologist and Orientalist

There is but one way to understand the continuous growth of the human mind and to gain a firm grasp of what it has achieved in any department of knowledge – that is to watch its historical development.

In Mayo Williamson Hazeltine

*Orations from Homer to William McKinley*

On Some Lessons of Antiquity (p. 8597)

P.F. Collier & Son. New York, New York, USA. 1902

**Nernst, Walther** 1864–1941

German physicist and chemist

It is often easy to write history, but it is always more difficult to learn anything from the history after it is written.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1908*

Development of General and Physical Chemistry During the Last Forty Years (p. 253)

Government Printing Office. Washington, D.C. 1909

**Osler, Sir William** 1849–1919

Canadian physician and professor of medicine

History is simply the biography of the mind of man; and our interest in history, and its educational value to us, is directly proportionate to the completeness of our study of the individuals through whom this mind has been manifested.

*An Alabama Student: And Other Biographical Essays*

Harvey and His Discovery (p. 296)

Oxford University Press, Inc. American Branch. New York, New York, USA. 1908

**Pais, Abraham** 1918–2000

Dutch-born physicist

History is highly subjective, however, since it is created after the fact, and after the date, by the inevitable process of the selection of events deemed relevant by one observer or another. Thus there are as many (overlapping) histories as there are historians.

*Inward Bound*

Chapter I (p. 3)

Clarendon Press. Oxford, England. 1986

**Palgrave, Francis** 1788–1861

English historian

History requires no less study than Law. We cannot dabble in its practical application. Would you take upon yourself to pay down your purchase-money for an acre of land, upon your knowledge of conveyancing derived from Blackstone's Commentaries?

*The History of Normandy and of England* (Volume 1)

Preface (p. xxxix)

John W. Parker & Son. London, England. 1851

History is only another aspect of Time; and Time never stands still.

*The History of Normandy and of England* (Volume 1)

Chapter I (p. 3)

John W. Parker & Son. London, England. 1851

**Plumb, Sir John H.** 1911–2001

English historian

History is Janus-faced, but the faces are far from being identical.

In Robert M. Hutchins and Mortimer J. Adler

*The Great Ideas of Today* 1974

*History and Tradition* (p. 63)

Encyclopaedia Britannica, Inc. Chicago, Illinois, USA. 1975

**Voltaire (François-Marie Arouet)** 1694–1778

French writer

It is with history, as it is with mathematics and natural philosophy; the field of it is immensely enlarged. The more easy it is to compile newspapers, the more difficult it is at the present day to write history.

*A Philosophical Dictionary* (Volume 2)

History (p. 21)

W. Dugdale. London, England. 1843

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

There is no longer any doubt in our day that the history of the world must from time to time be rewritten. However, such a necessity does not develop because many new events have been discovered, but because new perspectives are being expressed, ... the companion of a progressive era is being led to a position [from] which the past can be viewed and evaluated in a new way.

In Karl J. Fink

*Goethe's History of Science*

Chapter 4 (p. 57)

Cambridge University Press. Cambridge, England. 1991

**von Humboldt, Alexander** 1769–1859

German naturalist and explorer

He who can trace, through bygone times, the stream of our knowledge to its primitive source, will learn from history how, for thousands of years, man has labored, amid the ever-recurring changes of form, to recognize the invariability of natural laws; and has thus, by the force of mind, gradually subdued a great portion of the physical world to his dominion.

Translated by E.C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)

Introduction (p. 23)

D. Appleton & Co. New York, New York, USA. 1850

In interrogating the history of the past, we trace the mysterious course of ideas yielding the first glimmering perception of the same image of a cosmos, or harmoniously ordered whole, which, dimly shadowed forth to the human mind in the primitive ages of the world, is now fully revealed to the maturer intellect of mankind as the result of long and laborious observation.

Translated by E.C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)  
Introduction (p. 23)

D. Appleton & Co. New York, New York, USA. 1850

## HISTORY, NATURAL

**Burroughs, John** 1837–1921

American naturalist and essayist

Natural history is a matter of observation; it is a harvest which you gather when and where you find it growing. Birds and squirrels and flowers are not always in season, but philosophy we have always with us. It is a crop which we can grow and reap at all times and in all places, and it has its own value and brings its own satisfaction.

*The Writings of John Burroughs* (Volume 19)

Preface (p. v)

Houghton, Mifflin. Boston, Massachusetts, USA. 1916

**Smellie, William** 1740–95

Scottish encyclopedist and naturalist

Natural history is the most extensive, and perhaps the most instructive and entertaining of all the sciences. It is the chief source from which human knowledge is derived. To recommend the study of it from motives of utility, were to affront the understanding of mankind.

Translated by William Smellie

In Georges Louis Leclerc Buffon

*Natural History, General and Particular* (Volume 1) (2nd edition)

Preface (p. ix)

Printed for W. Strahan & T. Cadell. London, England. 1785

Natural history has been exhibited in its most forbidding aspect, which has limited the study of it to a few, and these often not of the most brilliant talents; for it has been remarked, that the parade of learning, resulting from technical phrases and definitions, allure some men to become what is called great naturalists, whose chief knowledge of Nature is the knack of being able to name, with facility, a great number of her productions.

Translated by William Smellie

*Natural History, General and Particular* (Volume 1) (2nd edition)

Preface (p. xii)

Printed for W. Strahan & T. Cadell. London, England. 1785

## HOLISM

**Davies, Paul Charles William** 1946–

British-born physicist, writer, and broadcaster

Yet there is a growing dissatisfaction with sweeping reductionism, a feeling that the whole really is greater than the sum of its parts. Analysis and reduction will always have a central role to play in science, but many people cannot accept that it is an exclusive role. Especially in physics, the synthetic or holistic approach is becoming increasingly fashionable in tackling certain types of problem.

*The Cosmic Blueprint: New Discoveries in Nature's Creative Ability to Order the Universe*

Chapter 1 (p. 8)

Simon & Schuster. New York, New York, USA. 1988

## HOLOTYPE

Holotypes, syntypes, lectotypes, and neotypes are the bearers of the scientific names of all animal taxa. They are the international standards of reference that provide objectivity in zoological nomenclature. They are held in trust for science by all zoologists and by persons responsible for their safe keeping.

*International Code of Zoological Nomenclature* (3rd edition)

Article 72(g)

Iowa State University Press. Ames, Iowa, USA. 1982

## HOMEOPATHY

**Darwin, Charles Robert** 1809–82

English naturalist

You speak about Homoeopathy, which is a subject which makes me more wrath even than does Clairvoyance. Clairvoyancy so transcends belief that one's ordinary faculties are put out of the question, but in homoeopathy common sense and common observation come into play, and both those must go to the dogs, if the infinitesimal doses have any effect whatever.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 1)

Letter to Fox, September, 1850 (p. 341)

D. Appleton & Company. New York, New York, USA. 1896

**Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

If you want to be sure not to reach threescore and twenty, get a little box of homeopathic pellets and a little book of

homeopathic prescriptions. I had a poor friend who fell into that way. . . . The poor fellow had cultivated symptoms as other people cultivate roses or chrysanthemums. What a luxury of choice his imagination presented to him!

*Over the Teacups*

Chapter VIII (p. 187)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1892

## HOMO SAPIEN

**Huxley, Thomas Henry** 1825–95

English biologist

*Was the oldest *Homo sapiens* pliocene or miocene, or yet more ancient? In still older strata do the fossilized bones of an Ape more anthropoid, or a Man more pithecoïd, than any yet known await the researches of some unborn palaeontologist?*

*Evidence as to Man's Place in Nature*

Chapter III (p. 184)

D. Appleton & Company, New York, New York, USA. 1873

**Leakey, Richard Erskine** 1944–

Kenyan paleoanthropologist and politician

*...*Homo sapiens* is poised to become the greatest catastrophic agent since a giant asteroid collided with the Earth sixty-five million years ago wiping out half the world's species in a geological instant.*

*The Sixth Extinction*

Chapter 13 (p. 241)

Anchor Books. New York, New York, USA. 1996

**Margulis, Lynn** 1938–

American cell biologist and evolutionist

**Sagan, Dorion** 1959–

American science writer

The question then becomes: If we have been around painting cave walls and designing artifacts for some 30,000 years at least, how long will it be until *Homo sapiens* becomes something else? When will a future descendent species look back on us as their naive predecessors?

*Microcosmos*

Chapter 12 (p. 226)

Summit Books. New York, New York, USA. 1986

## HOMOLOGY

**Jordan, David Starr** 1851–1931

American scientist and university administrator

Homology in any form is simply the stamp of heredity. In other words, homology means blood-relationship. The simplest explanation is the truest and would long ago have been recognized had it not been for prejudices of various sorts – theological prejudices that saw the image of God in man only, and scientific prejudices

which arose from the surface study of surfaces. For it is the inside of an animal which tells the real history of its ancestry; its outside tells us only where its ancestors have been.

*Foot-notes to Evolution, a Series of Popular Addresses on the Evolution of Life*

Chapter I (pp. 3–4)

D. Appleton & Co. New York, New York, USA. 1907

## HONORS

**Davy, Sir Humphry** 1778–1829

English chemist

A man should be proud of his honours, not vain of them.

In Sir William Ramsay

*Essays Biographical and Chemical*

The Great London Chemists

Section II (p. 54)

Archibald Constable & Company Ltd. London, England. 1908

## HOPE

**Oppenheimer, James Robert** 1904–67

American theoretical physicist

It is in our hands to see that the hope of the future is not lost, because we were too sure that we knew the answers, too sure that there was no hope.

*The Open Mind*

The Open Mind (p. 57)

Simon & Schuster. New York, New York, USA. 1955

## HORMONE

**Denckla, W. Donner**

American endocrinologist

Throughout the history of endocrinology, hormones and vitamins are almost always defined as being good for us, and here I'm getting up and saying that this hormone may actually be part of a self-destruct program.

In Pamela Weintraub (ed.)

*The Omni Interviews*

Death Hormone (p. 237)

Ticknor & Fields. New York, New York, USA. 1984

## HORTICULTURE

**Burpee, W. Atlee** 1858–1915

American seedman

Horticulture, for its proper advancement and full development, seems necessarily to be as international in its character as are the finances of the world.

In Washington Atlee Burpee

*Selection in Seed Growing*

Seedsmen's Session (p. 9)

W. Atlee Burpee & Co. Philadelphia, Pennsylvania, USA. 1896

**Hawkins, J. C.**

No biographical data available

It may be that horticulturists, like poets, are born, not trained; or it may be that the science of horticulture is like the science of war, the science not at all like the art itself in practice; one may be theory and dress parade, the other down-right hard work; one red tape and the gaudy paraphernalia of pomp and splendor, with glory to him who fighting dies, and fame to him who dares and survives.

President's Annual Address

*The Minnesota Horticulturist*, Volume 27, Number 8, August, 1899 (p. 283)

**HORTICULTURIST****President of the 1893 Horticultural Congress**

There is no more charming art and occupation than the cultivation of flowers and fruit-bearing trees. There is no calling more innocent and conducive to human welfare than that of the horticulturist. The improvement and beautifying of public parks and grounds depend chiefly upon the gardener's art.

In Washington Atlee Burpee

*Selection in Seed Growing*

The Horticultural Congress (p. 7)

W. Atlee Burpee & Co. Philadelphia, Pennsylvania, USA. 1896

**HOSPITAL****Barrett-Browning, Elizabeth** 1806–61

English poet

I think it frets the saints in heaven to see  
How many desolate creatures on the earth  
Have learnt the simple dues of fellowship  
And social comfort, in a hospital.

*The Complete Poetical Works of Elizabeth Barrett Browning*

Aurora Leigh, Book III, l. 1120–1123

Houghton Mifflin Company. Boston, Massachusetts, USA. 1900

**Beckett, Samuel** 1906–89

Irish playwright

What sky! What light! Ah in spite of all it is a blessed thing to be alive in such weather, and out of hospital.

*All That Fall* (p. 9)

Grove Press. New York, New York, USA. 1957

**Bernard, Claude** 1813–78

French physiologist

...I consider hospitals only as the entrance to scientific medicine; they are the first field of observation which a physician enters; but the true sanctuary of medical science is a laboratory; only there can he seek explanations of life in the normal and pathological states by means of experimental analysis.

Translated by Henry Copley Greene

*Experimental Medicine II*

Part II, Chapter II, Section X (p. 140)

Henry Schuman, Inc. New York, New York, USA. 1927

**Bevan, Aneurin** 1897–1960

Welsh-born English politician

I would rather be kept alive in the efficient if cold altruism of a large hospital than expire in a gush of warm sympathy in a small one.

Speech

30 April 1946, House of Commons

**Browne, Sir Thomas** 1605–82

English author and physician

...for the world, I count it not an Inne, but an Hospital; and a place, not to live, but to die in.

*Religio Medici*

Part II, Section 11 (p. 95)

Elliot Stock. London, England. 1883

**Kerr, Jean** 1922–2003

American author and playwright

One of the most difficult things to contend with in a hospital is the assumption on the part of the staff that because you have lost your gall bladder you have also lost your mind.

*Please Don't Eat the Daisies*

Operation operation (p. 143)

Doubleday & Company, Inc. Garden City, New York, USA. 1957

Hospital: Ail House.

*Quote, the Weekly Digest*, April 2, 1967 (p. 277)

**Mayo, William J.** 1861–1939

American physician

The hospital should be a refuge to which the sick might go for relief as they went before our Savior...

The Teaching Hospital of the University of Michigan

*Journal of the Michigan Medical Society*, Volume 25, January, 1926

**Ray, John** 1627–1705

English naturalist

A suit of law and an urinal brings a man to the hospital.

*A Complete Collection of English Proverbs* (p. 14)

Printed for G. Cowie. London, England. 1813

**Southerne, Thomas**

Irish dramatist

...wee'r worn,

Hack'd, hewn with constant service, thrown aside

To rust in peace; or rot in Hospitals.

*The Loyal Brother*

Act I, Scene I

Printed for William Cademan. London, England. 1682

**Thomson, James** 1700–48

Scottish poet

...lo! A goodly Hospital ascends;  
In which they bade each human Aid be nigh,  
That could the Sick-Bed smoothe of that unhappy Fry.  
It was a worthy edifying Sight,  
And gives to Human-Kind peculiar Grace,  
To see kind Hands attending Day and Night,  
With tender Ministry, from Place to Place.  
Some prop the Head; some, from the pallid Face,  
Wipe off the faint cold Dews weak Nature sheds;  
Some reach the healing Draught: the whilst, to chase  
The Fear supreme, around their soften'd Beds,  
Some holy Man by Prayer all opening Heaven dispreeds.

*The Castle of Indolence*

Canto II, Stanza lxxiv–lxxv

William Smith. London, England. 1842

## HOT SPRINGS

**Morton, Ron L.**

No biographical data available

Hot springs are waters that issue onto the earth's surface at temperatures appreciably warmer than leftover pizza. These waters can flow, bubble, seep, or ooze. They can smell as sweet as freshly mown hay, or they can reek like 10-year-old eggs mixed with a wino's breath and served up with oodles of old, cooked cabbage.

*Music of the Earth: Volcanoes, Earthquakes, and Other Geological Wonders*

Chapter 5 (p. 125)

Plenum Press. New York, New York, USA. 1996

Hot springs are defined as springs of water that issue onto the earth's surface at temperatures "appreciably" above the average temperature of the air at their exit point. This means that if you sat in one in Hawaii you might be boiled like a lobster, whereas in Minnesota you could be turned into a giant ice cube. Appreciably above – now that's real scientific and exact. Some references define "appreciably above" as 11–16°F (6–8°C), others as 15–20°F (8–11°C); the Dictionary of Geological Terms says the temperature has to be higher than that of a human body (they don't specify whether that's dead or alive). Now if we grant a warm body, "appreciably" is more than 98° F (36.6° C), which is "appreciably" greater than the average air temperature almost anywhere on earth! Now, as silly as all this seems, this is what helps make geology fun.

*Music of the Earth: Volcanoes, Earthquakes, and Other Geological Wonders*

Chapter 5 (p. 125)

Plenum Press. New York, New York, USA. 1996

Hot springs the world over are of two general kinds: those that make you feel good and those that will kill you.

*Music of the Earth: Volcanoes, Earthquakes, and Other Geological Wonders*

Chapter 5 (p. 126)

Plenum Press. New York, New York, USA. 1996

## HOUSE

**Fort, Charles** 1874–1932

American writer

A barn is a house, if one lives in it. If residence constitutes houseness, because style of architecture does not, then a bird's nest is a house: and human occupancy is not the standard to judge by, because we speak of dogs' houses; nor material, because we speak of snow houses of Eskimos – or a shell is a house to a hermit crab – or was to the mollusk that made it – or things seemingly so positively different as the White House at Washington and a shell on the seashore are seen to be continuous.

*The Book of the Damned*

Chapter I (p. 9)

Boni & Liveright. New York, New York, USA. 1919

## HOW

**Adair, Robert K.**

American physicist

Our condemnation of "how" pertains to the deep, fundamental, questions of physics. As a matter of common speech, physicists use "how" and "why" like everyone else – and without apology – in questions that refer uncertain inferences or observations to better establish constructs or observations.

*The Great Design: Particles, Fields, and Creation*

Chapter I (p. 4)

Oxford University Press. Oxford, England. 1989

## HUE

**Schiller, Friedrich** 1759–1805

German poet, philosopher, historian, and dramatist

Make thy lasting abode where fixed Eternity dwelleth!  
Come, ye varying hues, come and illuminate man!

*The Poems of Schiller*

Light and Colour (p. 314)

H. Holt & Co. New York, New York, USA. 1902

## HUGGERMUGGER

**Fitzgerald, George Francis** 1851–1901

Irish physicist

When a student is told, as an explanation of the word "mass," that it means "quantity of matter," there is an

appeal made from the obscure to the more obscure. It is a case of huggermugger.

*The Scientific Writings of the Late George Francis Fitzgerald*  
Dynamical Units (p. 452)  
Hodges, Figgis & Co. Dublin, Ireland. 1902

## HUMAN

**Nansen, Fridtjof** 1861–1930  
Norwegian explorer, scientist, and diplomat

The history of the human race is a continual struggle from darkness towards light. It is, therefore, to no purpose to discuss the use of knowledge; man wants to know, and when he ceases to do so, he is no longer man.

In Prescott Holmes  
*The Story of Exploration and Adventure in the Frozen Seas*  
Chapter XIII (p. 230)  
Henry Altemus. Philadelphia, Pennsylvania, USA. 1896

**von Humboldt, Alexander** 1769–1859  
German naturalist and explorer

When the human mind first attempts to subject to its control the world of physical phenomena, and strives by meditative contemplation to penetrate the rich luxuriance of living nature, and the mingled web of free and restricted natural forces, man feels himself raised to a height from whence, as he embraces the vast horizon, individual blend together in varied groups, and appear as if shrouded in a vapoury veil.

Translated by E. C. Otte  
*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)  
Introduction (p. 79)  
Harper & Brothers Publishers. New York, New York, USA. 1858

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

It is possible to believe that all the past is but the beginning of a beginning, and that all that is and has been is but the twilight of the dawn. It is possible to believe that all the human mind has ever accomplished is but the dream before the awakening. We cannot see, there is no need for us to see, what this world will be like when the day has finally come. We are creatures of the twilight.

*Annual Report of the Board of Regents of the Smithsonian Institution* (1902)  
The Discovery of the Future (p. 392)  
Government Printing Office. Washington, D.C. 1903

## HUMAN ACTION

**Bronowski, Jacob** 1908–74  
Polish-born British mathematician and polymath

Every human action goes back in some part to our animal origins; we should be cold and lonely creatures if we were cut off from that blood-stream of life.

*The Ascent of Man*  
Lower than the Angels (p. 31)  
Little, Brown & Co. Boston, Massachusetts, USA. 1973

## HUMAN ACTIVITY

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

In regard to every form of human activity it is necessary that the question should be asked from time to time, What is its purpose and ideal? In what way does it contribute to the beauty of human existence? As respects those pursuits which contribute only remotely, by providing the mechanism of life, it is well to be reminded that not the mere fact of living is to be desired, but the art of living in the contemplation of great things.

*Mysticism and Logic: And Other Essays*  
Chapter IV (p. 58)  
Longmans, Green & Co. London, England. 1919

## HUMAN BEINGS

**Delbrück, Max** 1906–81  
German-born American biologist

Human beings are organisms capable of manipulating internal representations of the world by means of concrete operations and can transcend the bounds of their biologically given perceptions. They can liberate themselves and construct a view of reality that conflicts with intuition, yet gives a true, more encompassing view.

*Mind from Matter*  
Twenty (p. 277)  
Blackwell Scientific Publications, Inc., Palo Alto, California, USA. 1986

**Hay, John**  
No biographical data available

The cosmic presence whose seas go rocking past is peopled by innumerable beginners in creation. We follow and learn how immensely wide it is, and how far we still have to go. This beach is our original ground, a center of the world. Here is the outward-facing place where human life, even when lost in fear, can declare an eternity, without knowing why.

*The Undiscovered Country*  
Coexistence (p. 192)  
W.W. Norton & Company, Inc. New York, New York, USA. 1981

**Sagan, Carl** 1934–96  
American astronomer and author

A human being is seriously inconvenienced if his body temperature is raised or lowered by a mere 20 degrees. Is this because we happen to live by accident on the one planet in the Solar System that has a surface at the right temperature for biology? Or is it that our chemistry is

delicately attuned to the temperature of the planet on which we have evolved? The latter is almost surely the case. Other temperatures, other biochemistries.

*The Cosmic Connection: An Extraterrestrial Perspective*  
Chapter 6 (pp. 45–46)  
Dell Publishing, Inc. New York, New York, USA. 1975

We are like butterflies who flutter for a day and think it is forever.

*Cosmos*  
Chapter II (p. 30)  
Random House, Inc. New York, New York, USA. 1980

## HUMAN BODY

**Chesterton, G. K. (Gilbert Keith)** 1874–1936  
English writer

The trouble about always trying to preserve the health of the body is that it is so difficult to do without destroying the health of the mind.

*Come to Think of It*  
On the Classics (p. 47)  
Methuen & Company Ltd. London, England. 1932

**Flaubert, Gustave** 1821–90  
French novelist

Body. If we knew how our body is made, we wouldn't dare move.

*Dictionary of Accepted Ideas*  
M. Reinhardt. London, England. 1954

**Heaney, Robert P.**  
American physician

It's just like remodeling an office.... The body tears out partitions, puts up dry walls and paints.

The Calcium Craze  
*Newsweek*, January 27, 1986 (p. 50)

**Henle, Jacob** 1809–85  
German physician

I know of no better food for the imagination than the beautiful formation of the human body, constructed of individual bones and muscles, which I know so well and can assemble accurately.

In R. Kagan (ed.)  
*Leaders of Medicine*  
Chapter I (p. 11)  
The Medico-Historical Press. Boston, Massachusetts, USA. 1941

**Heschel, Abraham J.** 1907–72  
Jewish theologian

The body is a sanctuary, the doctor is a priest.

*The Insecurity of Freedom*  
The Patient as a Person (p. 33)  
Farrar, Straus & Giroux. New York, New York, USA. 1966

**Holmes, Oliver Wendell** 1809–94  
American physician, poet, and humorist

The microscopic observers who have come after him [Bichat] have analyzed these [anatomical elements] into letters, as we may call them – the simple elements by the combination of which Nature spells out successively tissues, which are her syllables, organs which are her words, systems which are her chapters, and so goes on from the simple to the complex, until she binds up in one living whole that wondrous volume of power and wisdom which we call the human body.

*The Writings of Oliver Wendell Holmes* (Volume 9)  
*Medical Essays: 1842–1882*  
Chapter IV (p. 228)  
Houghton Mifflin & Co. Boston, Massachusetts, USA. 1911

**Huxley, Thomas Henry** 1825–95  
English biologist

...the body is a machine of the nature of an army, not of that of a watch or of a hydraulic apparatus. Of this army each cell is a soldier, an organ a brigade, the central nervous system headquarters and field telegraph, the alimentary and circulatory system the commissariat. Losses are made good by recruits born in camp, and the life of the individual is a campaign, conducted successfully for a number of years, but with certain defeat in the long run.

*Science and Education: Essays*  
Biological Sciences and Math (p. 369)  
D. Appleton & Co. New York, New York, USA. 1896

It is because the body is a machine that education is possible. Education is the formation of habits, a superinducing of an artificial organisation upon the natural organisation of the body: so that acts, which at first required a conscious effort, eventually became unconscious and mechanical.

*Collected Essays* (Volume 1)  
*Method and Result*  
Descartes' Discourse on Method (p. 188)  
Macmillan & Company Ltd. London, England. 1904

**Latham, Peter Mere** 1789–1875  
English physician

This body must be your study, and your continual care – your active, willing, earnest care. Nothing must make you shrink from it. In its weakness and infirmities, in the dishonours of its corruption, you must still value it – still stay by it – to mark its hunger and thirst, its sleeping and waking, its heat and its cold; to hear its complaints, to register its groans.

*The Collected Works of Ambrose Bierce*  
*The Devil's Dictionary* (pp. 11–12)  
The Neale Publishing Co. New York, New York, USA. 1911

## ADENOID

**Chapin, Charles Value** 1856–1941  
American physician and public health officer

[It is] more important to remove adenoids from the child than it is to remove ashes from the back yard.

*How to Avoid Infection* (p. 61)  
Harvard University Press. Cambridge, Massachusetts, USA. 2001

## ADRENAL GLAND

**Addison, Thomas** 1793–1860  
English physician

The functions of the supra-renal capsules...are almost or altogether unknown. The large supply of blood which they receive from three separate sources; their numerous nerves, derived immediately from the semilunar ganglia and solar plexus; their early development in the foetus; their unimpaired integrity to the latest period of life; and their peculiar gland-like structure; all point to the performance of some important office.

*On the Constitutional and Local Effects of Disease of the Supra-Renal Capsules* (p. 1)  
Samuel Highley. London, England. 1855

**Jeffers, Robinson** 1887–1962  
American poet

He saw clearly in his mind the little  
Adrenal glands perched on the red-brown kidneys,  
As if all his doomed tissues became transparent,  
Pouring in these passions their violent secretion  
Into his blood-stream, raising the tension unbearably.  
And the thyroids: tension, tension.

In Tim Hunt (ed.)  
*The Collected Poetry of Robinson Jeffers* (Volume 2)  
Margrave (p. 163)  
Stanford University Press. Stanford, California, USA. 1988

...the leonine adrenal glands poured their blind fury  
Into his blood...

In Tim Hunt (ed.)  
*The Collected Poetry of Robinson Jeffers* (Volume 3)  
Hungerfield (p. 380)  
Stanford University Press. Stanford, California, USA. 1988

Howard felt a sudden increase of force and life in his mind, like a transfusion  
Of strong red blood, he thought "The faithful adrenals  
Have just heard how near death I am..."

In Tim Hunt (ed.)  
*The Collected Poetry of Robinson Jeffers* (Volume 2)  
Such Counsels You Gave to Me (p. 575)  
Stanford University Press. Stanford, California, USA. 1988

## ARTERY

**Barnes, Djuna** 1892–1982  
American writer

But the great doctor, he's a divine idiot and a wise man. He closes one eye, the eye that he studied with, and putting his finger on the arteries of the body says: "God whose

roadway this is, has given me permission to travel on it also," which, Heaven help the patient, is true...

*Nightwood*

La Somnambule (p. 40)

Harcourt, Brace & Company. New York, New York, USA. 1937

## AUTONOMIC NERVOUS SYSTEM

**Langley, John Newport** 1852–1925

English physiologist

I propose to substitute the word "autonomic". The word implies a certain degree of independent action, but exercised under control of a higher power. The "autonomic" nervous system means the nervous system of the glands and of the involuntary muscle; it governs the "organic" functions of the body.

On the Union of Cranial Autonomic Visceral Fibers with the Nerve Cells of the Superior Cervical Ganglion

*The Journal of Physiology*, Volume 23, 1898–1899 (p. 241)

## BACK

**Hubbard, Elbert** 1856–1915

American editor, publisher, and writer

BACK: 2. A smooth surface composed of skin and bones which stretches between Land's End and John O'Groat's.

*The Roycroft Dictionary Concocted by Ali Baba and the Bunch on Rainy Days* (p. 15)

The Roycrofters. East Aurora, New York, USA. 1914

## BLOOD

**Armstrong, John** 1709–79

American civil engineer and soldier

The blood, the fountain whence the spirits flow,  
The generous stream that waters every part,  
And motion, vigor, and warm life conveys  
To every particle that moves or lives...

*The Art of Preserving Health*

Book II, l. 12–15 (p. 26)

Printed by Hosea Sprague. Boston, Massachusetts, USA. 1802

**du Bartas, Guillaume de Salluste** 1544–90

French poet

Even so the Blood (bred of good nourishment)  
By divers Pipes to all the body sent,  
Turns here to Bones there changes into Nerves;  
Here is made Marrow, there for Muscles serves.

*Du Bartas: His Divine Weekes and Workes*

First Week, Sixth Day (p. 55)

Printed by Robert Young. London, England. 1641

## Editor of the Louisville Journal

Doctor, what do you think is the cause of this frequent rush of blood to my head?

Oh, it is nothing but an effort of nature. Nature, you know, abhors a vacuum.

In George Denison Prentice

*Prenticeana* (p. 22)

Penguin Books. Baltimore 1957

**Harvey, William** 1578–1657

English physician

But what remains to be said upon the quantity and source of the blood which thus passes is of so novel and unheard-of character, that I do not only fear injury to myself from the envy of a few, but I tremble lest I have mankind at large for my enemies, so much doth wont and custom, that become as another nature, and doctrine once sown and that hath struck deep root, and respect for antiquity influence all men; still the die is cast, and my trust is in my love of truth, and the candor that inheres in cultivated minds.

The Study (2), l. 1740

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## BONE

**Cuvier, Georges** 1769–1832

French zoologist and statesman

By thus employing the method of observation, where theory is no longer able to direct our views, we procure astonishing results. The smallest fragment of bone, even the most apparently insignificant apophysis, possesses a fixed and determinate character, relative to the class, order, genus, and species of the animal to which it belonged; insomuch, that, when we find merely the extremity of a well-preserved bone, we are able, by careful examination, assisted by analogy and exact comparison, to determine the species to which it once belonged, as certainly as if we had the entire animal before us.

*An Essay on the Theory of the Earth*

Section 27 (p. 103)

Kirk & Mercein. New York, New York, USA. 1818

**BRAIN**

**Ackerman, Diane** 1948–  
American writer

Imagine the brain, that shiny mound of being, that mouse-gray parliament of cells, that dream factory, that petit tyrant inside a ball of bone, that huddle of neurons calling all the plays, that little everywhere, that fickle pleasuredome, that wrinkled wardrobe of selves stuffed into the skull like too many clothes into a gym bag.

*An Alchemy of Mind. The Marvel and Mystery of the Brain*  
Chapter 1 (p. 3)  
Charles Scribner's Sons. New York, New York, USA. 2004

Shaped a little like a loaf of French country bread, our brain is a crowded chemistry lab, bustling with nonstop neural conversations.

*An Alchemy of Mind. The Marvel and Mystery of the Brain*  
Chapter 1 (p. 4)  
Charles Scribner's Sons. New York, New York, USA. 2004

**Allport, Susan** 1950–  
American naturalist and science writer

Most of us have spent some time wondering how our brain works. Brain scientists spend their entire lives pondering it, looking for a way to begin asking the question, How does the brain generate mind? The brain, after all, is so complex an organ and can be approached from so many different directions using so many different techniques and experimental animals that studying it is a little like entering a blizzard, the Casbah, a dense forest. It's easy enough to find a way in – an interesting phenomenon to study – but also very easy to get lost.

*Explorers of the Black Box: The Search for the Cellular Basis of Memory*  
Chapter One (pp. 17–18)  
W.W. Norton & Company, Inc. New York, New York, USA. 1986

**Aristotle** 384 BCE–322 BCE  
Greek philosopher

The seat of the soul and the control of voluntary movement – in fact, of nervous functions in general – are to be sought in the heart. The brain is an organ of minor importance.

Chapter XXV (pp. 499–500)  
The Modern Library. New York, New York, USA. 1936

**Coveney, Peter** 1958–  
Theoretical chemist

It is unmatched in its ability to think, to communicate, and to reason. Most striking of all, it has a unique awareness of its identity and of its place in space and time. Welcome to the human brain, the cathedral of complexity.

*Frontiers of Complexity. The Search for Order in a Chaotic World* (p. 279)  
Fawcett Columbine. New York, New York, USA. 1995

**Crick, Francis Harry Compton** 1916–2004  
English biochemist

It is essential to understand our brains in some detail if we are to assess correctly our place in this vast and complicated universe we see all around us.

*What Mad Pursuit: A Personal View of Scientific Discovery*  
Chapter 14 (p. 163)  
Basic Books, Inc., Publishers. New York, New York, USA. 1988

**Darwin, Charles Robert** 1809–82  
English naturalist

It is certain that there may be extraordinary mental activity with an extremely small absolute mass of nervous matter: thus the wonderfully diversified instincts, mental powers, and affections of ants are notorious, yet their cerebral ganglia are not so large as the quarter of a small pin's head. Under this point of view, the brain of an ant is one of the most marvelous atoms of matter in the world, perhaps more so than the brain of a man.

In *Great Books of the Western World* (Volume 49)  
*The Descent of Man*  
Part I, Chapter II (p. 281)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Davis, Joel** 1948–  
No biographical data available

The human brain is the last, and greatest, scientific frontier. It is truly an internal cosmos that lies contained within our skulls. The more than 100 billion nerve cells and trillion supporting cells that make up your brain and mine constitute the most elaborate structure in the known universe.

*Mapping the Mind: The Secrets of the Human Brain and How It Works*  
Introduction: The Human Brain Project (p. 1)  
Carol Publishing Group. New York, New York, USA. 1997

**Day, Clarence S.** 1874–1935  
American writer

When the brain fails to act with the body, or, worse, works against it, the body will sicken no matter what cures doctors try.

*This Simian World*  
Chapter Ten (p. 59)  
Alfred A. Knopf. New York, New York, USA. 1941

**Diamond, Marian**  
American neuroscientist

The brain is a three-pound mass you can hold in your hand that can conceive of a universe a hundred-billion light years across.

In John D. Barrow  
*Impossibility*  
Chapter 4. Complexity Matching (p. 96)

**Doyle, Sir Arthur Conan** 1859–1930  
Scottish writer

You see, he explained, I consider that a man's brain originally is like a little empty attic, and you have to stock it with such furniture as you choose. A fool takes in all the lumber of every sort that he comes across, so that the knowledge which might be useful to him gets crowded

out, or at best is jumbled up with a lot of other things so that he has a difficulty in laying his hands upon it. Now the skilful workman is very careful indeed as to what he takes into his brain-attic. He will have nothing but the tools which may help him in doing his work, but of these he has a large assortment, and all in the most perfect order. It is a mistake to think that that little room has elastic walls and can distend to any extent. Depend upon it there comes a time when for every addition of knowledge you forget something that you knew before. It is of the highest importance, therefore, not to have useless facts elbowing out the useful ones.

In William S. Baring-Gould (ed.)  
*The Annotated Sherlock Holmes* (Volume 1)  
*A Study in Scarlet*, Chapter 2 (p. 154)  
Wings Books. New York, New York, USA. 1967

The human brain is capable of only one strong emotion at a time, and if it be filled with curiosity or scientific enthusiasm, there is no room for fear.

*Tales of Unease* (p. 7)  
Wordsworth Editions, Ltd. Herfordshire, England. 2000

**Fischbach, Gerald D.**  
American physician

The brain immediately confronts us with its great complexity. The human brain weighs only three to four pounds but contains about 100 billion neurons. Although that extraordinary number is of the same order of magnitude as the number of stars in the Milky Way, it cannot account for the complexity of the brain. The liver probably contains 100 million cells, but 1,000 livers do not add up to a rich inner life.

*Mind and Brain*  
*Scientific American*, Volume 267, Number 3, September, 1992 (p. 49)

**Havemann, Joel**  
American journalist

What seems astonishing is that a mere three-pound object, made of the same atoms that constitute everything else under the sun, is capable of directing virtually everything that humans have done: flying to the moon and hitting seventy home runs, writing Hamlet and building the Taj Mahal – even unlocking the secrets of the brain itself.

*A Life Shaken: My Encounter with Parkinson's Disease*  
Chapter Three (p. 45)  
The Johns Hopkins University Press. Baltimore, Maryland, USA. 2002

**Holmes, Oliver Wendell** 1809–94  
American physician, poet, and humorist

Our brains are seventy-year clocks. The Angel of Life winds them up once for all, then closes the case, and gives the key into the hand of the Angel of the Resurrection.

*The Autocrat of the Breakfast-Table*  
Chapter VIII (p. 185)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1891

**Hooper, Judith**

American biology writer

**Teresi, Dick**

American science writer and editor

The brain is a little saline pool that acts as a conductor, and it runs on electricity.

*The Three-Pound Universe*

Chapter 2 (p. 29)

Macmillan Publishing Company, New York, New York, USA. 1986

**Huxley, Julian** 1887–1975

English biologist, philosopher, and writer

The brain alone is not responsible for mind, even though it is a necessary organ for its manifestation. Indeed an isolated brain is a piece of biological nonsense.

In Teilhard de Chardin

*The Phenomenon of Man*

Introduction (pp. 16–17)

Harper &amp; Row, Publishers, New York, New York, USA. 1959

**Huygens, Christiaan** 1629–95

Dutch mathematician, astronomer, and physicist

There's one sort who knowing nothing of Geometry or Mathematics, will laugh at it as a whimsical and ridiculous undertaking. It's mere Conjunction to them to talk of measuring the Distance or Magnitude of the Stars: And for the Motion of the Earth, they count it, if not a false, at least a precarious Opinion; and no wonder then if they take what's built upon such a slippery Foundation for the Dreams of a fanciful Head and a distemper'd Brain.

Book the First, The Objections of ignorant Cavillers prevented (p. 5)

Printed for T. Childe, London, England. 1698

**Lowell, James Russell** 1819–91

American poet, critic, and editor

...most brains reflect but the crown of a hat.

*A Fable for Critics*

A Fabler for the Critics (p. 35)

G.P. Putnam, New York, New York, USA. 1848

**Mach, Ernst** 1838–1916

Austrian physicist and philosopher

As a rule, the human brain is too much, and wrongly, burdened with things which might be more conveniently and accurately preserved in books where they could be found at a moment's notice.

Translated by Thomas J. McCormack

*Popular Scientific Lectures* (2nd edition)

On Instruction in the Classics and the Mathematico-Physical Sciences (p. 343)

The Open Court Publishing Co. Chicago, Illinois, USA. 1897

**McCormick, Leander Hamilton** 1859–1934

American author, inventor, and scientist

A profound brain is related to average brains as a giant is to average humanity.

*Characterology*

Chapter XXVI (p. 593)

Rand McNally &amp; Co. Chicago, Illinois, USA. 1920

The brain is the soil in which knowledge is implanted, and just as a gardener divides his ground into parcels for the cultivation of different plants, so the various districts of the brain are set apart for different kinds of thought and of knowledge.

*Characterology*

Chapter XXVI (p. 595)

Rand McNally &amp; Co. Chicago, Illinois, USA. 1920

The human brain is a vast business establishment compressed within a small space.

*Characterology*

Chapter XXVI (p. 600)

Rand McNally &amp; Co. Chicago, Illinois, USA. 1920

**McGinn, Colin** – 1950

English philosopher

Brains cause technology, society, art, science, soap operas, sin. A remarkable set of effects for such a small chunk of coagulated atoms.

*The Mysterious Flame: Conscious Minds in a Material World*

Chapter 1 (p. 15)

Basic Books, New York, New York, USA. 1999

**Montagu, Ashley** 1905–99

English-born American anthropologist

You certainly can't tell anything from the microscopic structure of the brain whether the person was an idiot or a genius.

In D. Brian

*Genius Talk: Conversations with Nobel Scientists and Other Luminaries*

Chapter 19 (p. 349)

Plenum Press, New York, New York, USA. 1995

**Mountcastle, Vernon B.** 1918–

American neurosurgeon

Each of us lives within the universe – the prison – of his own brain. Projecting from it are millions of fragile sensory nerve fibers, in groups uniquely adapted to sample the energetic states of the world around us; heat, light, force and chemical composition. That is all we ever know of it directly: all else is logical inference. Sensory stimuli reaching us are transduced peripheral nerve endings, and neural replicas of them dispatched brainward, to the gray mantle of the cerebral cortex. We use them to form dynamic and continually updated neural maps of our place and orientation in the external world, and of events within it. At the level of sensation, your images and my images are virtually the same, and readily identified one to another by verbal descriptions, or common reactions. Beyond that, each image is conjoined with genetic and

stored experimental information that makes each of us uniquely private. From that complex integral each constructs at a higher level of perceptual experience, on my view in brain regions like those of the parietal lobe, his own, very personal, view from within.

The Views from Within: Pathways to the Study of Perception  
*Johns Hopkins Medical Journal*, Volume 136, 1975 (p. 109)

**Oates, Joyce Carol** 1938–

American novelist

The brain is a muscle of busy hills, the struggle of unthought things with things eternally thought.

*Love and Its Derangements*

The Grave Dwellers

Louisiana State University Press. Baton Rouge, Louisiana, USA. 1970

**Pavlov, Ivan Petrovich** 1849–1936

Russian physiologist

If we could look through the skull into the brain of a consciously thinking person, and if the place of optimal excitability were luminous, then we should see playing over the cerebral surface, a bright spot with fantastic, waving borders constantly fluctuating in size and form, surrounded by a darkness more or less deep, covering the rest of the hemisphere.

*Twenty-five Years of Objective Study of the Higher Nervous Activity of Animals* (p. 222)

Martin Lawrence. London, England. 1928

**Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

The brain is as weak as the senses, and it would be lost in the complexities of the world were there not harmony in that complexity. After the manner of the short-sighted, we would see only detail after detail, losing sight of each detail before the examination of another, unable to bind them together.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1909*

The Future of Mathematics (p. 126)

Government Printing Office. Washington, D.C. 1910

**Posner, Michael I.** 1936–

American neuroscientist and psychology researcher

**Raichle, Marcus E.** 1937–

American professor of radiology and neurology

The microscope and telescope opened up unexpectedly vast domains of scientific discovery. A similar opportunity has now been created in the study of human cognition by the introduction of methods to visualize the brain systems involved as we think.

*Images of Mind*

Chapter Ten (p. 245)

Scientific American Library. New York, New York, USA. 1994

**Pugh, Emerson M.**

No biographical data available

Like the entomologist in pursuit of brightly coloured butterflies, my attention hunted, in the flower garden of the gray matter, cells with delicate and elegant forms, the mysterious butterflies of the soul, the beating of whose wings may someday – who knows? – clarify the secret of mental life.

In S. Ramón y Cajal

*Recollections of My Life*

Chapter VII (p. 363)

The MIT Press. Cambridge, Massachusetts, USA. 1989

**Riedl, Rupert J.M.**

No biographical data available

...as biologists, we do know that our large brain has developed exactly like these extreme organs which, so far, have brought all their owners to extinction. However, we also know that our extreme organ enjoys a certain advantage, which we may have to exploit: the organ can be aware of itself.

Translated by Paul Foulkes

*Biology of Knowledge: The Evolutionary Basis of Reason* (p. 153)

Wiley. New York, New York, USA. 1984

**Sagan, Carl** 1934–96

American astronomer and author

We are an intelligent species and the use of our intelligence quite properly gives us pleasure. In this respect the brain is like a muscle. When we think well, we feel good. Understanding is a kind of ecstasy.

*Broca's Brain: Reflections on the Romance of Science*

Part I, Chapter 2 (p. 14)

Random House, Inc. New York, New York, USA. 1979

The human brain seems to be in a state of uneasy truce, with occasional skirmishes and rare battles. The existence of brain components with predispositions to certain behavior is not an invitation to fatalism or despair: we have substantial control over the relative importance of each component. Anatomy is not destiny, but it is not irrelevant either.

*The Dragons of Eden: Speculations on the Evolution of Human Intelligence*

Chapter 8 (p. 199)

Random House, Inc. New York, New York, USA. 1977

**Vogt, Carl** 1817–95

German physician and naturalist

The brain...is simply an organ which excretes feeling as the kidneys excrete urine.

In Irving John Good (ed.)

*The Scientist Speculates*

Mind and Consciousness (p. 80)

BasicBooks. New York, New York, USA. 1962

**Young, John Zachary** 1907–97  
English zoologist

In order to understand what is meant by the word “brain” as it is used by neuroscientists, we must bear in mind the evidence that this organ contains in some recorded form the basis of one’s whole conscious life. It contains the record of all our aims and ambitions and is essential for the experience of all pleasures and pains, all loves and hates.

*Philosophy and the Brain*

Part I, Section 3 (p. 8)

Oxford University Press, Inc. Oxford, England. 1987

## CELL

**Anderson, Poul** 1926–2001  
American science fiction writer

The cell is a sea where molecules drift on thermal tides.

In Byron Preiss and William R. Alschuler (eds.)

*The Microverse*

Death Wish (p. 140)

Bantam Books. New York, New York, USA. 1989

### Bastin, Ted

No biographical data available

As far as one can judge at all, the cell cannot be understood in its behavior as the basis of events at the molecular level. One would judge this because the control processes of detailed cell physiology seem to proliferate endlessly in the sense that the more one understands a given chain of reactions and their associated background dynamics, the larger is the number of ancillary, trigger and other processes which it seems necessary to call in to achieve completeness of explanation and a self-contained causal scheme.

In A.R. Peacock

Reductionism: A Review of the Epistemological Issues and Their Relevance to Biology and the Problem of Consciousness

*Zygon*, Volume 11, Number 4, 4 December, 1976 (p. 327)

**Bateson, William** 1861–1926  
English biologist and geneticist

When I look at a dividing cell I feel as an astronomer might do if he beheld the formation of a double star: that an original act of creation is taking place before me.

*Problems of Genetics*

Chapter II (p. 41)

Yale University Press. New Haven Connecticut, USA. 1913

**Benchley, Robert** 1889–1945  
American humorist and critic

The scene is a plateau of primeval ooze. Things are in terrible shape. Nobody knows what to do because there is nobody. The Earth is practically new and nothing is alive except a lot of – what shall we say?

*20,000 Leagues Under the Sea or David Copperfield*

It Seems There Were a Couple of Cells (p. 176)

Blue Ribbon Books. New York, New York, USA. 1928

**Burroughs, John** 1837–1921  
American naturalist and essayist

The cell is an intelligent being; through the chemico-physical forces it builds up a man and fits him with a brain and all his wonderful organs and powers. It builds the flower, the seed, the leaf, the stalk, the root, and through the mystery of inheritance keeps up the succession of its kind.

*Under The Apple Tree*

The Primal Mind (p. 139)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1916

**Chargaff, Erwin** 1905–2002  
Austrian biochemist

The cell is more than a chemical slum.

*Voices in the Labyrinth: Nature, Man and Science*

Chapter 1 (p. 5)

The Seabury Press. New York, New York, USA. 1977

**Claude, Albert** 1898–1983  
Belgian-American cytologist

We have entered the cell, the Mansion of our birth, and started the inventory of our acquired wealth.

*Nobel Lectures, Physiology or Medicine 1971–1980*

Nobel lecture for award received in 1974

The Coming Age of the Cell

World Scientific Publishing Company. Singapore. 1992

For over two billion years, through the apparent fancy of her endless differentiations and metamorphosis, the Cell, as regards its basic physiological mechanisms, has remained one and the same. It is life itself, and our true and distant ancestor.

*Nobel Lectures, Physiology or Medicine 1971–1980*

Nobel lecture for award received in 1974

The Coming Age of the Cell

World Scientific Publishing Company. Singapore. 1992

**Cudmore, Lorraine Lee**  
American cell biologist

Some cells are extremely visible – the egg of an ostrich, of a hen or puffin. But we cell biologists see these the way anyone would, as a large globe of yellow yolk surrounded by a transparent glutinous mass; interesting only by virtue of their behavior in soufflé or omelet.

*The Center of Life: A Natural History of the Cell*

The Universal Cell (p. 5)

New York Times Book Company. New York, New York, USA. 1977

Our cells, the ones we love, are repositories of such fantastic architectural flights – pleasure domes far beyond even the most opiated dreams of Coleridge, a Xanadu percolating with the directed chaos of those hundreds of thousands of simultaneous chemical reactions that are life.

*The Center of Life: A Natural History of the Cell*  
The Universal Cell (p. 5)  
New York Times Book Company. New York, New York, USA. 1977

Every living thing is made of cells, and everything a living thing does is done by the cells that make it up.

*The Center of Life: A Natural History of the Cell*  
The Universal Cell (p. 6)  
New York Times Book Company. New York, New York, USA. 1977

Cells have everything. Except visibility.

*The Center of Life: A Natural History of the Cell*  
The Universal Cell (p. 6)  
New York Times Book Company. New York, New York, USA. 1977

Cells let us walk, talk, think, make love and realize the bath water is cold.

*The Center of Life: A Natural History of the Cell*  
The Universal Cell (p. 6)  
New York Times Book Company. New York, New York, USA. 1977

We are made of cells. And of stars.

*The Center of Life: A Natural History of the Cell*  
Biochemical Evolution (p. 27)  
New York Times Book Company. New York, New York, USA. 1977

A cell always leaves the same first impression. It is incredibly crowded in there; a welter of structures crammed together like rush-hour riders in Tokyo or New York subways, with no apparent breathing space.

*The Center of Life: A Natural History of the Cell*  
Cellular Evolution (p. 50)  
New York Times Book Company. New York, New York, USA. 1977

**Davies, Paul Charles William** 1946–

British-born physicist, writer, and broadcaster

The living cell is the most complex system of its size known to mankind. Its host of specialized molecules, many found nowhere else but within living material, are themselves already enormously complex. They execute a dance of exquisite fidelity, orchestrated with breathtaking precision. Vastly more elaborate than the most complicated ballet, the dance of life encompasses countless molecular performers in synergetic coordination. Yet this is a dance with no sign of a choreographer. No intelligent supervisor, no mystic force, no conscious controlling agency swings the molecules into place at the right time, chooses the appropriate players, closes the links, uncouples the partners, moves them on. The dance of life is spontaneous, self-sustaining, and self-creating.

*The Fifth Miracle: The Search for the Origin of Life*  
Chapter 1 (p. 29)  
Simon & Schuster. New York, New York, USA. 1996

**Delbrück, Max** 1906–81

German-born American biologist

The closer one looks at these performances of matter in living organisms, the more impressive the show becomes. The meanest living cell becomes a magic puzzle box full

of elaborate and changing molecules, and far outstrips all chemical laboratories of man in the skill of organic synthesis performed with expedition and good judgment of balance.... [A]ny living cell carries with it the experience of a billion years of experimentation by its ancestors. You cannot expect to explain so wise an old bird in a few simple words.

A Physicist Looks at Biology  
*Transactions of The Connecticut Academy of Sciences*, Volume 38, 1949 (p. 191)

No, any living cell carries with it the experiences of a billion years of experimentation by its ancestors. You cannot expect to explain so wise an old bird in a few simple words.

A Physicist Looks at Biology  
*Transactions of The Connecticut Academy of Sciences*, Volume 38, 1949

**Reichenbach, Hans** 1891–1953

German philosopher of science

The production of just one living cell from inorganic matter is the most urgent problem which concerns the biologist who wants to make the theory of evolution complete.... Presumably, biologists will someday construct synthetic albumen molecules of the gene type and of the protoplasm type, put them together, and thus produce an aggregate which possesses all the characteristics of a living cell. Should the experiment succeed, it would demonstrate conclusively that the origin of life can be traced back to inorganic matter.

*The Rise of Scientific Philosophy*  
Chapter 12 (p. 202)  
University of California Press. Berkeley, California, USA. 1951

**Rubin, Harry**

No biographical data available

...we cannot disrupt the cell to understand its living behavior because in doing so we destroy the very property we wish to understand...

Cancer as a Developmental Disorder  
*Cancer Research*, Volume 45, July 1985 (p. 2940)

**Sachs, Julius** 1832–97

German botanist

To many, the cell is always an independent living being, which sometimes exists for itself alone, and sometimes becomes joined with others – millions of its like in order to form a cell-colony, or, as Haeckel has named it for the plant particularly, a cell republic. To others again, to whom the author of this book also belongs, cell-formation is a phenomenon very general, it is true, in organic life, but still only of secondary significance.

Translated by H. Marshall Ward  
*Lectures on the Physiology of Plants*  
Lecture VI (p. 73)  
At The Clarendon Press. Oxford, England. 1887

**Sherrington, Sir Charles** 1857–1952  
English physiologist

Essential for any conception of the cell is that it is no static system. It is dynamic. It is energy-cycles, suites of oxidation and reduction, concatenated ferment-actions. It is like a magic hive the walls of whose chambered spongework are shifting veils of ordered molecules, and rend and renew as operations rise and cease. A world of surfaces and streams. We seem to watch battalions of specific catalysts, like Maxwell's "demons," lined up, each waiting, stop-watch in hand, for its moment to play the part assigned to it. Yet each step is understandable chemistry.

*Man on His Nature*

Chapter III (p. 80)

Doubleday Anchor Books. Garden City, New York, USA. 1955

**Szent-Györgyi, Albert** 1893–1986  
Hungarian-born American biochemist

The cell knows but one fuel – hydrogen.

In Kenneth Thimann

*The Life of Bacteria: Their Growth, Metabolism and Relationships*

Chapter V (p. 167)

The Macmillan Company. New York, New York, USA. 1963

**Thomas, Lewis** 1913–93  
American physician and biologist

The uniformity of earth's life, more astonishing than its diversity, is accountable by the high probability that we derived, originally, from some single cell, fertilized in a bolt of lightning as the earth cooled. It is from the progeny of this parent cell that we all take our looks; we still share genes around, and the resemblance of the enzymes of grasses to those of whales is in fact a family resemblance.

*The Lives of a Cell: Notes of a Biology Watcher*

The Lives of a Cell (p. 5)

The Viking Press. New York, New York, USA. 1974

**Verworn, Max** 1862–1921  
German physiologist

It is the cell to which the consideration of every bodily function sooner or later drives us. In the muscle-cell lies the riddle of the heart-beat, or of muscular contraction; in the gland-cell are the causes of secretion; in the epithelial-cell, in the white blood-cell, lie the problem of the absorption of food, and the secrets of the mind are slumbering in the ganglion-cell...

In Edmund Beecher Wilson

*The Cell in Development and Inheritance*

Introduction (p. 4)

The Macmillan Co. New York, New York, USA. 1896

## CHROMOSOME

**Conklin, Edwin Grant** 1863–1952  
American zoologist

What molecules and atoms and electrons are to the physicist and chemist, chromosomes and genes are to the biologist.

A Generation's Progress in the Study of Evolution

*Science*, Volume 80, Number 2068, August 17, 1934 (p. 151)

**Newman, Joseph S.** 1892–1960  
American poet

All living protoplasmic cells  
That make up frogs or pimpernels  
Or men or hippopotami  
Have portions known as nuclei.  
Within these microscopic homes  
There lurk our fateful chromosomes,  
Those strange hereditary factors  
That make us good or bad actors,  
That shape our lips and chins and eyebrows  
And predetermine fools and highbrows.

*Poems for Penguins, and Other Lyrical Lapses*

Heredity

Greenburg. New York, New York, USA. 1941

**Schrödinger, Erwin** 1887–1961  
Austrian theoretical physicist

But the term code-script is, of course, too narrow. The chromosome structures are at the same time instrumental in bringing about the development they foreshadow. They are law-code and executive power – or, to use another simile, they are architect's plan and builder's craft – in one.

*What Is Life? Mind and Matter: The Physical Aspect of the Living Cell*

Chapter II, Section 12 (p. 21)

At The University Press. Cambridge, England. 1945

**Stoller, Robert** 1925–91  
American psychoanalytic theorist and researcher

What to the unempathic scientist is a chromosome is the heavy hand of immutable destiny to the victims: on receiving the genetic information, the patient may feel transformed into a freak, no longer fully human. Those who feel this is an exaggeration have not treated people afflicted with depression, hopelessness, or psychosis as a result of learning such a truth.

In Michael A. Sperber and Lissy F. Jarvik

Physiology of Digestion (p. 141)

Elsevier Publishing Company. Amsterdam, Netherlands. 1967

**DIAPHRAGM****Bierce, Ambrose** 1842–1914

American newspaperman, wit, and satirist

DIAPHRAGM, n. A muscular partition separating disorders of the chest from disorders of the bowels.

*The Cynic's Word Book*

Diaphragm (p. 74)

Doubleday, Page & Co. New York, New York, USA. 1906

**Kitchen, Joseph Moses Ward**

No biographical data available

The vast majority of the human race live and die in absolute ignorance of the fact that there is such an organ as the diaphragm – one of the most important structures of the human body. A certain very small proportion of the race are aware of the existence of such a structure, but that is the limit of their information in regard to the diaphragm.

*The Diaphragm and Its Functions*

Introduction (p. 5)

Edgar S. Werner. Albany, New York, USA. 1885

**EAR****Jeans, Sir James Hopwood** 1877–1946

English physicist and mathematician

Students of evolution in the animal world tell us that the ear was the last of the sense-organs to arrive; it is beyond question the most intricate and the most wonderful.

*Science and Music*

Chapter VII (p. 252)

The Macmillan Co. New York, New York, USA. 1938

**Mach, Ernst** 1838–1916

Austrian physicist and philosopher

For a long time the structure of the organ of hearing has actively engaged the attention of anatomists. A considerable number of brilliant discoveries has been brought to light by their labors, and a splendid array of facts and truths established. But with these facts a host of new enigmas has been presented.

Translated by Thomas Joseph McCormack  
*Popular Scientific Lectures* (3rd edition)  
 The Fibres of Corti (p. 17)  
 The Open Court Publishing Co. Chicago, Illinois, USA. 1898

## ESOPHAGUS

**Bierce, Ambrose** 1842–1914  
 American newspaperman, wit, and satirist

ESOPHAGUS, n. That part of the alimentary canal that lies between pleasure and business.

*The Cynic's Word Book*  
 Esophagus (p. 99)  
 Doubleday, Page & Co. New York, New York, USA. 1906

## EYE

**Adams, George** 1750–95  
 English instrument maker

The eyes are placed in the most eminent part of the body, near the brain, the seat of sensation.

*Lectures on Natural and Experimental Philosophy* (Volume 2)  
 Lecture XVII (p. 273)  
 Printed by R. Hindmarsh. London, England. 1794

The black and the blue are the most beautiful colours, and give the most fire and vivacity of expression to the eye. In black eyes there is more force and impetuosity; but the blue excel in sweetness and delicacy.

*Lectures on Natural and Experimental Philosophy* (Volume 2)  
 Lecture XVII (pp. 279–280)  
 Printed by R. Hindmarsh. London, England. 1794

The eyes are a faithful guard to the whole man, and are placed as in a friendly watch-tower, to discern his danger, and give him friendly warning, while it is yet far off.

*Lectures on Natural and Experimental Philosophy* (Volume 2)  
 Lecture XVIII (p. 357)  
 Printed by R. Hindmarsh. London, England. 1794

**Carroll, Lewis (Charles Dodgson)** 1832–98  
 English writer and mathematician

“I see nobody on the road,” said Alice.  
 “I only wish I had such eyes,” the King remarked in a fretful tone. “To be able to see Nobody! And at that distance too! Why, it’s as much as I can do to see real people by this light!”

*The Complete Works of Lewis Carroll*  
 Through the Looking-Glass  
 Chapter VII (p. 223)  
 The Modern Library. New York, New York, USA. 1936

**Eddington, Sir Arthur Stanley** 1882–1944  
 English astronomer, physicist, and mathematician

I have said that the science of the visible universe starts with a determination to use our eyes; but that does not mean that the primary use of the eye is for advancing science.

*Science and the Unseen World*

Chapter VIII (p. 79)  
 The Macmillan Company. New York, New York, USA. 1929

**Emerson, Ralph Waldo** 1803–82  
 American lecturer, poet, and essayist

Eyes are bold as lions – roving, running, leaping, here and there, far and near. They speak all languages. They wait for no introduction; they are no Englishmen ; ask no leave of age, or rank; they respect neither poverty nor riches, neither learning nor power nor virtue nor sex; but intrude, and come again, and go through and through you in a moment of time. What inundation of life and thought is discharged from one soul into another, through them !

*The Conduct of Life*  
 Behavior (pp. 178–179)  
 Houghton Mifflin Co. Boston, Massachusetts, USA. 1904

**Jenkins, Norburne B.**  
 No biographical data available

The eye is so lively, nervous, and sentient that it really is not comparable to any other function except itself or the mind.

The Spectacal and Eye-glass Habit  
*Medical Record*, Volume 58, September 15, 1900 (p. 431)

**Molyneux, William** 1656–98  
 Irish astronomer

Tis therefore contrived by the *Most Wise and Omnipotent Framer of the Eye*, That it should have a Power of adapting itself in some Measure to *Nigh and Distant* Objects. For they require different Conformations of the Eye But whether this variety of Conformation consist in the Crystallines approaching nigher to, or removing farther from the Retinas; Or in the Crystallines assuming a different Convexity, sometimes greater, sometimes less, according as is requisite, I leave to the scrutiny of others, and particularly of the curious Anatomist.

*Dioptrica Nova* (p. 104)  
 Printed for Benjamin Tooke  
 London, England. 1692

**von Helmholtz, Hermann** 1821–94  
 German scientist and philosopher

If an optician sent it [the eye] to me as an instrument, I would send it back with reproaches for the carelessness of his work and demand the return of my money.

In J.B. Bury  
*A History of Freedom of Thought*  
 Chapter VII (pp. 145–146)  
 Oxford University Press, Inc. London, England. 1952

## EYELID

**Adams, George** 1750–95  
 English instrument maker

When the eye is wearied with its daily service, and the night spreads a veil of darkness over this lower world,

the curtain that is hung before the eye falls down, and the eye-lids are shut with a close seal, till we have renewed our strength, and the morning restores the world to our view: the eye-lid not only affording refreshment and rest to the eye, but defending it from the secret perils and invisible dangers of the night.

*Lectures on Natural and Experimental Philosophy* (Volume 2)

Lecture XVIII (p. 356)

Printed by R. Hindmarsh. London, England. 1794

## FACE

**Wittgenstein, Ludwig Josef Johann** 1889–1951

Austrian-born English philosopher

The face is the soul of the body.

Translated by Peter Winch

*Culture and Value* (p. 23e)

The University of Chicago Press. Chicago, Illinois, USA. 1980

## FINGER PRINT

**Grew, Nehemiah** 1641–1712

English vegetable anatomist and physiologist

...if anyone will but take the pains, with an indifferent glass, to surrey the palm of his hand very well washed with a ball, he may perceive innumerable little ridges, of equal size and distance, and every where running parallel to each other.

*Readings in Natural Philosophy; Or, A Popular Display of the Wonders of Nature*

Of the Pores in the Skin of the Hands and Feet (p. 77)

Printed for Horatio Phillips. London, England. 1828

**Twain, Mark (Samuel Langhorne**

**Clemens)** 1835–1910

American author and humorist

Every human being carries with him from his cradle to his grave certain physical marks which do not change their character, and by which he can always be identified – and that without shade of doubt or question. These marks are his signature, his physiological autograph, not be counterfeited, nor can he disguise it or hide it away, nor can it become illegible by the wear and mutations of time. This signature is not his face – age can change that beyond recognition; it is not his hair, for that can fall out; it is not his height, for duplicates of that exist; it is not his form, for duplicates of that exist also, whereas this signature is each man's very own – there is no duplicate of it among the swarming populations of the globe! [The audience were interested once more.]

This autograph consists of the delicate lines or corrugations with which Nature marks the insides of the hands and the soles of the feet.

*Pudd'nhead Wilson* (p. 286)

American Publishing Co. Hartford, Connecticut, USA. 1897

## GALL BLADDER

**Rogers, Will** 1879–1935

American actor and humorist

Then he turned and exclaimed with a practiced and well-subdued enthusiasm, "It's the Gall-Bladder – just what I was afraid of." Now you all know what the word "afraid of," when spoken by a doctor, leads to. It leads to more calls.

*The Autobiography of Will Rogers*

Chapter Twelve (p. 153)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1949

## GLAND

**Carrel, Alexis** 1873–1944

French surgeon and biologist

For the noblest aspirations of the soul to vanish it is sufficient that the blood plasma be deprived of certain chemical substances. When the thyroid gland, for example, ceases to secrete thyranin into the blood stream there is no longer either intelligence, sense of evil, sense of beauty or religious sense.

Furthermore, the pituitary, the thyroid, the sexual glands, the suppreanal gland, make possible love, hatred, enthusiasm and faith. The Christian virtues are more difficult to practice when our endocrine glands are deficient.

In Jean Rostand Larousse and Andrée Tétray

Translated by Delano Ames

*Larousse Science of Life: A Study of Biology, Sex, Genetics, Heredity and Evolution* (p. 19)

Hamlyn. London, England. 1971

## HAIR

**Montagna, William**

Dermatological researcher

Interest in hair today has grown to the proportion of a fetish. Think of the many loving ways in which advertisements refer to scalp hair – satiny, glowing, shimmering, breathing, living. Living indeed! It is as dead as rope.

*New York Herald Tribune*, August 11, 1963

## HAND

**Bronowski, Jacob** 1908–74

Polish-born British mathematician and polymath

We have to understand that the world can only be grasped by action, not by contemplation. The hand is more important than the eye.... The hand is the cutting edge of the mind.

*The Ascent of Man*

Chapter 3 (pp. 115–116)

Little, Brown & Co. Boston, Massachusetts, USA. 1975

**Duke of Argyll (George Douglas Campbell)** 1823–1900

English statesman and writer on science, religion, and politics

It is indeed wonderful to think that the feeble and sprawling paddles on a newt, the ungainly flippers of a seal, and the long leathery wings of a bat, have all the same elements, bone for bone, with that human hand which is the supple instrument of man's contrivance, and is alive even to the finger-tips, with the power of expressing his intellect and his will.

*The Works of the Duke of Argyll*

Chapter IV (p. 123)

John B. Alden, Publisher. New York, New York, USA. 1884

**Radcliffe, Charles Bland** 1822–89

English physician

The hand of man is in no sense a peculiar organ. It is the foot ennobled: that is all.

*Proteus; or Unity in Nature*

Chapter II (p. 24)

Macmillan & Co Ltd. London, England. 1877

## HEAD

**Bronowski, Jacob** 1908–74

Polish-born British mathematician and polymath

The head is more than a symbolic image of man: it is the seat of foresight and, in that respect, the spring which drives cultural evolution.

*The Ascent of Man*

Chapter I (p. 36)

Little, Brown & Co. Boston, Massachusetts, USA. 1975

## HEART

**Barnard, Christiaan N.** 1923–

South African heart surgeon

...it is infinitely better to transplant a heart "than to bury it so it can be devoured by worms."

People

*Time*, October 31, 1969 (p. 36)

**Barnes, Djuna** 1892–1982

American author

We are adhering to life now without last muscle – the heart.

*Nightwood*

La Somnambule (p. 50)

Harcourt, Brace & Company. New York, New York, USA. 1937

**de Bakey, Michael E.**

American cardiovascular surgeon

If you can think of how much love there would be in hundreds of hearts, then that is how much love there is in a plastic heart. When you grow up you will understand how very much love that is.

Heart of the Matter

*Newsweek*, June 6, 1966 (p. 56)

**Hamilton, Sir William Rowan** 1805–65

Anglo-Irish mathematician, physicist, and astronomer

The heart, because it is human – say rather because it is not wholly not divine – lifts itself up in aspiration, and claims to mingle with the lights of heaven; and joyfully receives into itself the skyey influences, and feels that it is no stranger in the courts of the moon and the stars. Though between us and the nearest of those stars there be a great gulph fixed, yet beyond that mighty gulph (oh, far beyond!) fly, on illimitable pinions, the thoughts and affections of man, and tell us that there, too, are beings, akin to us – members of one great family – beings animated, thoughtful, loving – susceptible of joy and hope, of pain and fear – able to adore God, or to rebel against him – able to admire and speculate upon that goodly array of worlds with which they also are surrounded.

*Life of Sir William Rowan Hamilton*

Introductory Lecture on astronomy (pp. 640–641)

Hodges, Figgis & Co. Dublin, Ireland. 1882

**Harvey, William** 1578–1657

English physician

The heart, consequently, is the beginning of life; the sun of the microcosm, even as the sun in his turn might well be designated the heart of the world; for it is the heart by whose virtue and pulse the blood is moved, perfected, made apt to nourish, and is preserved from corruption and coagulation; it is the household divinity which, discharging its function, nourishes, cherishes, quickens the whole body, and is indeed the foundation of life, the source of all action. The heart of animals is the foundation of their life, the sovereign of everything within them, the sun of their microcosm, that upon which all growth depends, from which all power proceeds.

In *Great Books of the Western World* (Volume 28)

*An Anatomical Disquisition on the Motion of the Heart and Blood In Animals*

Dedication (p. 267)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

But of these things we shall speak more opportunely when we come to speculate upon the final cause of this motion of the heart.

In *Great Books of the Western World* (Volume 28)

*An Anatomical Disquisition on the Motion of the Heart and Blood in Animals*

Chapter 8 (p. 286)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Hellerstein, Herman**

Physician

Coronary heart disease is a silent disease and the first manifestation frequently is sudden death.

Tests to Avoid Attack

*Newsweek*, August 6, 1984 (p. 64)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**LUNG****Mayow, John** 1641–79

English chemist and physiologist

The lungs are placed in a recess so sacred and hidden that nature would seem to have specially withdrawn this part both from the eyes and from the intellect; for, beyond the wish, it has not yet been granted to anyone to fit a window to the breast and redeem from darkness the profounder secrets of nature. For of all the parts of the body, the lungs alone, as if shrinking from observation, cease

from their movement and collapse at once on the first entrance of light and self-revelation.... Still, let me draw near to the inmost vitals, and, concerning so obscure a matter, make at least a guess.

*Medico-Physical Works*

Second Treatise (p. 183)

The Alembic Club. Edinburgh, Scotland. 1907

### Ott, Susan

Physician

Roses are red

Violets are blue

Without your lungs

Your blood would be too.

A Pulmonologist's Valentine

*The New England Journal of Medicine*, Volume 304, Number 12, 1981 (p. 739)

### Servetus, Michael 1511–53

Spanish theologian and physician

It is in the lungs, consequently, that the mixture (of the inspired air with the blood) takes place, and it is in the lungs also, not in the heart, that the crimson colour of the blood is acquired.

In William Osler

*Michael Servetus*

Lord Baltimore Press. Baltimore, Maryland, USA. 1909

## NERVE

### Home, Everard 1756–1832

English physician

The nerves have been hitherto considered as chords that have no powers of contraction within themselves, but only serving as a medium, by means of which the influence of the brain may be communicated to the muscles, and the impressions made upon the different parts of the body conveyed to the brain.

On the Irritability of Nerves

*Philosophical Transactions of the Royal Society of London*, 1801 (p. 1)

### Tyndall, John 1820–93

Irish-born English physicist

Between the mind of man and the outer world are interposed the nerves of the human body, which translate, or enable the mind to translate, the impressions of that world into facts of consciousness and thought.

*Fragments of Science: A Series of Detached Essays, Addresses, and Reviews*

Chapter II (p. 28)

D. Appleton & Co. New York, New York, USA. 1897

## SKELETON

### Selzer, Richard 1928–

American physician and essayist

What man does not ponder the whereabouts of his skeleton – the place where it will lie? Say what you will, all sanitary and pragmatic considerations aside, these jaunty saunterers that have held us upright, have stiffened us against the grate and grind of life, are dear to us. What stands closer to a man all his days than his bones?

Printed at the Shakespeare Head Press. Oxford, England. 1939–1968

**Twain, Mark (Samuel Langhorne**

**Clemens)** 1835–1910

American author and humorist

Adam and Eve had many advantages, but the principal one was that they escaped teething.

*The Tragedy of Pudd’nhead Wilson*

Chapter IV (p. 39)

New American Library. New York, New York, USA. 1980

**Wheeler, Hugh** 1912–87

English-born playwright

To lose a lover or even a husband or two during the course of one’s life can be vexing. But to lose one’s teeth is a catastrophe.

*Four by Sondheim*

A Little Night Music

Act II, Scene I (p. 269)

Applause. New York, New York, USA. 2000

## TONGUE

**Lyly, John** 1554–1606

English dramatist

We may see the cunning and curious work of Nature, which hath barred and hedged nothing in so strongly as the tongue, with two rows of teeth, and therewith two lips; besides she hath placed it far from the heart, that it should not utter that which the heart hath conceived; this also should cause us to be silent, seeing those that use much talk, though they speak truly, are never believed.

*Euphues: The Anatomy of Wit*. (pp. 146–147)

A. Constable & Co. Westminster, England. 1900

**Ruskin, John** 1819–1900

English writer, art critic, and social reformer

Nearly every other creature but a snake can do all sorts of mischief with its tongue. A woman worries with it, a chameleon catches flies with it, a snail files away fruit with it, a hummingbird steals honey with it, a cat steals milk with it, a pholas digs holes in rocks with it, and a gnat digs holes in us with it; but the poor snake cannot do any manner of harm with it whatsoever ...

*Deucalion* (Volume 2)

Chapter I, 22 (p. 16)

John Wiley & Sons. London, England. 1886

## HUMAN NATURE

**Einstein, Albert** 1879–1955

German-born physicist

Human nature always has tried to form for itself a simple and synoptic image of the surrounding world. In doing this it tries to construct a picture which will give some sort of tangible expression to what the human mind sees in nature.

Translated by James Murphy

In Max Planck

*Where Is Science Going?*

Prologue (p. 8)

Norton. New York, New York, USA. 1932

## HUMAN PAST

**Newton, Charles Thomas** 1816–94

English archaeologist

The record of the Human Past is not all contained in printed books. Man’s history has been graven on the rock

of Egypt, stamped on the brick of Assyria, enshrined in the marble of the Parthenon – it rises before us a majestic Presence in the piled-up arches of the Coliseum – it lurks an unsuspected treasure amid the oblivious dust of archives and monasteries – it is embodied in all the heirlooms of religions, of races, of families; in the relics which affection and gratitude, personal or national, pride of country or pride of lineage, have preserved for us – it lingers like an echo on the lips of the peasantry, surviving in their songs and traditions, renewed in their rude customs with the renewal of Nature's seasons ...

*Essays on Art and Archaeology*

On the Studyies of Archaeology (p. 1)

Macmillan & Company Ltd. London, England. 1880

## HUMAN PERCEPTION

**Tyndall, John** 1820–93

Irish-born English physicist

Our senses stand between these phenomena [human perceptions] and the reasoning mind. We observe the fact, but are not satisfied with the mere act of observation: the fact must be accounted for fitted into its position in the line of cause and effect. Taking our facts from Nature we transfer them to the domain of thought: look at them, compare them, observe their mutual relations and connexions, and bringing them ever clearer before the mental eye, finally alight upon the cause which unites them.

*Fragments of Science: A Series of Detached Essays, Addresses, and Reviews* (Volume 1)

Chapter XI (p. 282)

D. Appleton & Co. New York, New York, USA. 1896

## HUMAN POWER

**Glass, H. Bentley** 1906–2005

American geneticist

Human power, which mounted slowly indeed through the eons of prehistory and somewhat more rapidly after the advent of the sword and pen, has gathered momentum with logarithmic sweep since the dawn of modern science. Today it seems to be rocketing into outer space with the incredible energy of atomic fission.

*Annual Report of the Board of Regents of the Smithsonian Institution* (1955)

Genetics in the Service of Man (p. 299)

Government Printing Office. Washington, D.C. 1956

## HUMAN SPIRIT

**Hawking, Stephen William** 1942–

English theoretical physicist

To confine our attention to terrestrial matters would be to limit the human spirit.

In Lawrence M. Krauss

*The Physics of Star Trek*

Foreword (p. xiii)

Harp Perennial Publishers. New York, New York, USA. 1995

## HUMANITY

**Dewar, Redcote**

No biographical data available

...a humanity which will not accept its own science, uphold its own knowledge, trust to its own inferences, believe in its own creeds, and abide by the consequences of its own observations, experiences and experiments, in preference to the science, knowledge, logic, beliefs, observations, experiences and experiments of any past age whatsoever, is hopelessly imbecile.

*From Matter to Man: A New Theory of the Universe*

Chapter II (p. 15)

Chapman & Hall, Ltd. London, England. 1898

**Wilson, Edward O.** 1929–

American biologist and author

Humanity is exalted not because we are so far above other living creatures, but because knowing them well elevates the very concept of life.

*Biophilia*

Bernhardsdorp (p. 22)

Harvard University Press. Cambridge, Massachusetts, USA. 1984

## HUMANKIND

**Boas, Franz** 1858–1942

German-born American anthropologist

If the clear enunciation of the aims and methods of physical or biological science is not an easy matter, difficulties many times greater are encountered in an attempt to explain the present position of investigation dealing with mankind from the biological, geographical, and psychological points of view – subjects that seem to lack in unity, and that present a number of most divergent aspects.

*Lectures on Science, Philosophy and Art, 1907–1908*

Anthropology

The Columbia University Press. New York, New York, USA. 1908

**Shea, William R.**

No biographical data available

In order to survive and to progress, mankind cannot know too much. Salvation can hardly be thought of as the reward for ignorance. Mankind has been given its mind in order that it may find out where it is, what it is, and who it is, and how it may assume the responsibility for itself which is the chief obligation incurred in gaining knowledge.

*The History of Science and the Image of Science*

*Notes and Records of the Royal Society of London*, Volume 55, Number 1, January, 2001

**HUMILITY**

**Rowland, Henry Augustus** 1848–1901  
American physicist

Humility is indeed a distinctive quality of every scientific mind; not humility before man and man-made images, but before the marvellous universe in which the Earth is only a particle.

*Discovery, Or, The Spirit and Service of Science*  
Chapter III (p. 50)  
Macmillan & Co Ltd. London, England. 1916

**HYBRID**

**Crick, Francis Harry Compton** 1916–2004  
English biochemist

In nature, hybrid species are usually sterile, but in science the reverse is often true. Hybrid subjects are often astonishingly fertile, whereas if a scientific discipline remains too pure it usually wilts.

*What Mad Pursuit: A Personal View of Scientific Discovery*  
Chapter 14 (p. 150)  
Basic Books, Inc. New York, New York, USA. 1978

**HYDROLOGY**

**Aristotle** 384 BCE–322 BCE  
Greek philosopher

It is evident that if anyone tries to compute the volume of water constantly flowing each day and then to visualize a reservoir for it, he will see that to contain the whole yearly flow of water it will have to be as large as the earth in size, or at any rate not much smaller.

In *Great Books of the Western World* (Volume 8)

Book I, xiii  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**HYPERBOLA**

**Carroll, Lewis (Charles Dodgson)** 1832–98  
English writer and mathematician

What mathematician has ever pondered over an hyperbola, mangling the unfortunate curve with lines of intersection here and there, in his efforts to prove some property that perhaps after all is a mere calumny, who has not fancied at last that the ill-used locus was spreading out its asymptotes as a silent rebuke, or winking one focus at him in contemptuous pity?

*The Complete Works of Lewis Carroll*  
*The Dynamics of a Particle* (p. 1130)  
The Modern Library. New York, New York, USA. 1936

**Ditton, Humphry** 1675–1715  
English mathematician

We behold indeed, in the motions of the celestial bodies, some effects of [the attraction] that may be call'd more August or pompous. But methinks these little hyperbolas, form'd by a fluid between two glass planes, are not a-whit less fine and curious than the spacious ellipses describ'd by the planets, in the bright expanse of Heaven.

*The New Law of Fluids: or, a Discourse Concerning the Ascent of Liquors, in Exact Geometrical Figures Between Two Nearly Contiguous Surfaces, to Which Is Added the True State of the Case About Matter's Thinking* (p. 41)  
Printed by J. Roberts for B. Cowse. London, England. 1713–14

**Frere, John Hookam** 1769–1846  
British diplomat and man of letters

**Canning, George** 1770–1827  
British statesman and prime minister

Not thus HYPERBOLA – with subtlest art  
The blue-eyed wanton plays her changeful part;  
Quick as her conjugated axes move  
Through every posture of luxurious love,  
Her supportive limbs with easiest grace expand....

In Charles Edmonds  
*Poetry of the Anti-Jacobin*  
The Loves of the Triangle, Canto II, l. 115–119  
Printed for J. Wright, by W. Bulmer & Company. London, England. 1801

**HYPERBOLIC CURVE**

**Hardy, Thomas** 1840–1928  
English poet and regional novelist

Indeed, he seemed to approach the grave as a hyperbolic curve approaches a line – less directly as he got nearer, till it was doubtful if he would ever reach it at all.

*Far from the Madding Crowd*  
Chapter XV (p. 117)  
Harper & Brothers Publishers. New York, New York, USA. 1895

**HYPERSPACE****Hans Solo (Fictional character)**

Traveling through hyperspace ain't like dusting crops, boy.

*Star Wars*  
Film (1977)

**Kaku, Michio** 1947–  
Japanese-American theoretical physicist

Future historians of science may well record that one of the greatest conceptual revolutions in the twentieth-century science was the realization that hyperspace may be the key to unlock the deepest secrets of nature and Creation itself.

*Hyperspace : A Scientific Odyssey Through Parallel Universes, Time Warps, and the 10th Dimension*  
Chapter 1 (p. 9)  
Oxford University Press, Inc. New York, New York, USA. 1995

**Keyser, Cassius Jackson** 1862–1947  
American mathematician

Creation of hyperspaces is one of the ways by which the rational spirit secures release from limitation. In them it lives ever joyously, sustained by an unflinching sense of infinite freedom.

*The Human Worth of Rigorous Thinking: Essays and Addresses*  
Mathematical Emancipations: Dimensionality and Hyperspace (p. 110)  
Columbia University Press. New York, New York, USA. 1925

## HYPOCHONDRIAC

**Ace, Goodman** 1899–1982  
American radio writer and performer

If you're a hypochondriac, first class, you awaken each morning with the firm resolve not to worry; everything is going to turn out all wrong.

*The Fine Art of Hypochondria*  
Who Am I (p. 13)  
Doubleday & Company, Inc. Garden City, New York, USA. 1966

**Askey, Vincent**  
American physician

When it comes to your health, I recommend frequent doses of that rare commodity among Americans – common sense. We are rapidly becoming a land of Hypochondriacs, from the ulcer-and-martini executives in the big city to the patent medicine patrons in the sulphur-and-molasses belt.

*The Land of Hypochondriacs*  
Address, October 20, 1960, Bakersfield, California

**Colton, Charles Caleb** 1780–1832  
English sportsman and writer

Those hypochondriacs, who, like Herodius, give up their whole time and thoughts to the care of their health, sacrifice unto life, every noble purpose of living; striving to support a frail and feverish being here, they neglect an hereafter; they continue to patch up and repair their moldering tenement of clay, regardless of the immortal tenant that must survive it; agitated by greater fears than the apostle, and supported by none of his hopes, they “die daily.”

*Lacon; or Many Things in a Few Words*  
1. 139  
William Gowans. New York, New York, USA. 1849

Hypochondriacs squander large sums of time in search of nostrums by which they vainly hope they may get more time to squander.

Fantasy poet

Hypochondriac: A person of ill repute.  
*Quote, the Weekly Digest*, May 7, 1967 (p. 377)

**Thomson, James** 1700–48  
Scottish poet

And moping here did Hypochondria sit,  
Mother of Spleen, in Robes of various Dye,  
Who vexed was full oft with ugly fit,  
And some her frantic deem'd, and some her deem'd a wit.  
A lady proud she was of ancient blood,  
Yet oft her fear her pride made crouchen low,  
She felt or fancy'd in her fluttering mood,  
All the diseases which at the spittles know,  
And sought all physic which the shops bestow,  
And still new leaches and new drugs would try,  
Her humour ever wavering to and fro,  
For sometimes she would laugh and sometimes cry,  
Then sudden waxed wroth, and all she knew not why.  
*The Castle of Indolence*  
Hypochondria, Stanza lxxv–lxxvi  
William Smith. London, England. 1842

## HYPODERMIC NEEDLE

**Battles, William Snowden**  
No biographical data available

For many hold 'twould be so hard  
Through Heaven's gate to wheedle  
A doctor as to drive a camel through  
A hypodermic needle.  
In Mary Lou McDonough

*Quote, the Weekly Digest*, March 19, 1967 (p. 237)

**HYPOTHESES, SYSTEM OF****Popper, Karl R.** 1902–94

Austrian/British philosopher of science

I think that we shall have to get accustomed to the idea that we must not look upon science as a “body of knowledge”, but rather as a system of hypotheses; that is to say, as a system of guesses or anticipations which in principle cannot be justified, but with which we work as long as they stand up to tests, and of which we are never justified in saying that we know that they are “true” or “more or less certain” or even “probable.”

*The Logic of Scientific Discovery*

Appendix I, II (p. 317)

Basic Books. New York, New York, USA. 1959

**HYPOTHESIS****Adams, Henry Brooks** 1838–1918

American man of letters

A science cannot be played with. If an hypothesis is advanced that obviously brings into direct sequence of cause and effect all the phenomena of human history, we must accept it, and if we accept it, we must teach it.

*The Degradation of the Democratic Dogma*

The Tendency of History (p. 131)

The Macmillan Co. New York, New York, USA. 1919

**Amundson, Ronald**

No biographical data available

It is commonly held that scientists do not generate hypotheses randomly, but rather with the goal in mind of solving some scientific problem. Now, if a purposively generated hypothesis has a greater chance of scientific success than a randomly generated one (a supposition we must fervently hope is true) then Condition 2 fails fully to be met. There are degrees here, of course. Perhaps “insightful” hypotheses are only slightly more likely than random ones to be successful, and only a tiny bit of the success of science is to be explained by the insights of scientists. Selection would in this case retain much of its force. But if “insightful” hypotheses are much more likely to be successful, selection is much eroded.

Chapter VII (p. 49)

Faber & Faber. London, England. 1957

**Barrell, Joseph** 1869–1919  
American geologist

A hypothesis to gain scientific credence must emerge successful from the test of observed facts and mathematical theory.

*The Evolution of the Earth and Its Inhabitants*  
Chapter I (p. 12)

Yale University Press. New Haven, Connecticut, USA. 1919

**Barry, Frederick** 1876–1943  
Historian of science

Hypothesis, however, is an inference based on knowledge which is insufficient to prove its high probability.

*The Scientific Habit of Thought: An Informal Discussion of the Source and Character of Dependable Knowledge*  
The Elements of Theory (p. 164)

Columbia University Press. New York, New York, USA. 1927

**Bartlett, Elisha** 1804–55  
Physician

The restless and inquisitive mind, from its very constitution insatiable, and ever unsatisfied with its actual and absolute possessions, endeavors to imagine the phenomena, which it cannot demonstrate; it struggles to overleap the boundary, whose inexorable circumference cages it in; and, failing to do this, it fills the infinite and unknown regions, beyond and without it, with its own creations.

*An Essay on the Philosophy of Medical Science*  
Part I, Chapter 4 (p. 33)

Lea & Blanchard. Philadelphia, Pennsylvania, USA. 1844

Without qualifying, in any degree, the doctrine which I have been endeavoring to elucidate, that all science is independent of hypothesis, I am quite willing to admit, that the hypothesis has often been of service to science, in suggesting, guiding and directing its researches. I am willing to go further than this – and to admit, at least the possibility – that the researches thus suggested and directed, may lead, ultimately, to the positive demonstration of the assumed phenomena, constituting the theory.

*An Essay on the Philosophy of Medical Science*  
Part I, Chapter 4 (p. 46)

Lea & Blanchard. Philadelphia, Pennsylvania, USA. 1844

**Bernard, Claude** 1813–78  
French physiologist

An anticipative idea or an hypothesis is, then, the necessary starting point for all experimental reasoning. Without it, we could not make any investigation at all nor learn anything; we could only pile up sterile observations. If we experiment without a preconceived idea, we should move at random...

Translated by Henry Copley Greene  
*An Introduction to the Study of Experimental Medicine*  
Part One, Chapter II, Section ii (p. 32)

Henry Schuman, Inc. New York, New York, USA. 1927

**Beveridge, William Ian Beardmore** 1908–  
Australian zoologist

The hypothesis is the principal intellectual instrument in research. Its function is to indicate new experiments and observations and it therefore sometimes leads to discoveries even when not correct itself. We must resist the temptation to become too attached to our hypothesis, and strive to judge it objectively and modify it or discard it as soon as contrary evidence is brought to light. Vigilance is needed to prevent our observations and interpretations being biased in favor of the hypothesis. Suppositions can be used without being believed.

*The Art of Scientific Investigation*  
Chapter Four (p. 52)

W.W. Norton & Company, Inc. New York, New York, USA. 1957

**Boltzmann, Ludwig Edward** 1844–1906  
Austrian physicist

...neither the Theory of Gases nor any other physical theory can be quite a congruent account of facts.... Certainly, therefore, Hertz is right when he says: "The rigor of science requires, that we distinguish well the undraped figure of nature itself from the gay-coloured vesture with which we clothe it at our pleasure." But I think the predilection for nudity would be carried too far if we were to forego every hypothesis.

Translated by Stephen G. Brush

*Lectures on Gas Theory*

Translator's Introduction (p. 16)

University of California Press. Berkeley, California, USA. 1964

Every hypothesis must derive indubitable results from mechanically well-defined assumptions by mathematically correct methods.

Certain Questions of the Theory of Gasses

*Nature*, Volume 51, Number 1322, February 28, 1895 (p. 413)

I think the predilection for nudity [regarding the undraped figure of nature] would be carried too far if we were to forego every hypothesis. Only we must not demand too much from hypotheses.

Certain Questions of the Theory of Gasses

*Nature*, Volume 51, Number 1322, February 28, 1895 (p. 413)

**Boyle, Robert** 1627–91  
English natural philosopher and theological writer

The Requisites of a *good Hypothesis* are:  
That It be Intelligible. That It neither Assume nor Suppose anything Impossible, unintelligible, or demonstrably False.

That It be consistent with Itself.

That It be lit and sufficient to Explicate the Phaenomena, especially the chief.

That It be, at least, consistent, with the rest of the Phaenomena It particularly relates to, and do not contradict

any other known Phenomena of nature, or manifest Physical Truth.

In Michael Alexander Stewart

*Selected Philosophical Papers of Robert Boyle*

MS Notes on a Good and an Excellent Hypothesis (p. 119)

Hackett Publishing, Indianapolis, Indiana, USA. 1991

**Bruner, Jerome Seymour** 1915–

American psychologist

The shrewd guess, the fertile hypothesis, the courageous leap to a tentative conclusion – these are the most valuable coin of the thinker at work.

*The Process of Education*

Introduction (p. 14)

Harvard University Press, Cambridge, Massachusetts, USA. 1961

**Carroll, Lewis (Charles Dodgson)** 1832–98

English writer and mathematician

“Would you tell me, please, which way I ought to go from here?”

“That depends a good deal on where you want to get to,” said the Cat.

“I don’t much care where –” said Alice.

“Then it doesn’t matter which way you go,” said the Cat.

*The Complete Works of Lewis Carroll*

*Alice’s Adventures in Wonderland*

Chapter VI (pp. 71–72)

The Modern Library, New York, New York, USA. 1936

**Chamberlin, Thomas Chrowder** 1843–1928

American geologist

Affection may as easily cling about a beloved intellectual child under the name of a working hypothesis as under any other, and may become a ruling passion.

*Congress of Arts and Science: Universal Exposition, St. Louis, 1904*

Volume 4

The Methods of the Earth-Sciences (p. 481)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1906

It is as foolish to cultivate sterile soil in science as in agriculture, and preliminary tests may show that given soils are necessarily sterile.

*Congress of Arts and Science: Universal Exposition, St. Louis, 1904*

Volume 4

The Methods of the Earth-Sciences (p. 482)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1906

It will be observed that the distinction [between hypothesis and theory] is not such as to prevent a working hypothesis from gliding with the utmost ease into a ruling theory. Affection may as easily cling about a beloved intellectual child when named as a hypothesis as if named a theory, and its establishment in the one guise may become a ruling passion very much as in the other.

Studies for Students. The Method of Multiple Working Hypotheses

*The Journal of Geology*, Volume 5, Number 8, 1897 (pp. 842–843)

**Cohen, Morris Raphael** 1880–1947

American philosopher

There is...no genuine progress in scientific insight through the Baconian method of accumulating empirical facts without hypotheses or anticipation of nature. Without some guiding idea we do not know what facts to gather...we cannot determine what is relevant and what is irrelevant.

*A Preface to Logic*

Chapter VII (p. 135)

Henry Holt & Company, New York, New York, USA. 1944

**Cort, David**

But suspicion is a thing very few people can entertain without letting the hypothesis turn, in their minds, into fact...

*Social Astonishments*

ONE, Believing in Books (p. 27)

The Macmillan Company, New York, New York, USA. 1963

**Curtis, George Ticknor** 1812–94

American author, writer, historian, and lawyer

... what I mean by the rationality of a belief in any hypothesis is its fitness to be accepted and acted upon because it has in its favor the strongest probabilities of the case, so far as we can grasp those probabilities. I know of no other foundation for a belief in anything; for belief is the acceptance by the mind of some proposition, statement, or supposed fact, the truth of which depends upon evidence addressed to our senses, or to our intellectual perceptions, or to both.

*Creation Or Evolution?*

Chapter I (p. 3)

D. Appleton & Co. New York, New York, USA. 1887

**Daly, Reginald Aldworth** 1871–1957

Canadian-American geologist

The “facts” of today are the hypotheses of yesterday.

*Igneous Rocks and Their Origin*

Introduction (p. xxii)

McGraw-Hill Book Co., Inc. London, England. 1914

**Dampier-Whetham, William** 1867–1952

English scientific writer

A false hypothesis, if it serve as a guide for further enquiry, may, at the right stage of science, be as useful as, or more useful than, a truer one for which acceptable evidence is not yet at hand.

*Science and the Human Mind*

Science in the Ancient World (p. 39)

Longmans, Green & Company, New York, New York, USA. 1912

**Daniels, Farrington** 1889–1972

Physical chemist

A successful hypothesis is not necessarily a permanent hypothesis, but it is one which stimulates additional research, opens up new fields, or explains and coordinates previously unrelated facts.

*Outlines of Physical Chemistry*

Chapter I (p. 4)

John Wiley &amp; Sons, Inc. New York, New York, USA. 1948

**Darwin, Charles Robert** 1809–82

English naturalist

An unverified hypothesis is of little or not value; but if anyone should hereafter be led to make observations by which some such hypothesis could be established, I shall have done good service, as an astonishing number of isolated facts can be thus connected together and rendered intelligible.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 1)

Chapter II (p. 75)

D. Appleton &amp; Company. New York, New York, USA. 1896

I suspect the first expedition I take, clinometer and hammer in hand, will send me back very little wiser and a good deal more puzzled than when I started. As yet I have only indulged in hypotheses, but they are such powerful ones that I suppose, if they were put into action for but one day, the world would come to an end.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 1)

Chapter V (p. 164)

D. Appleton &amp; Company. New York, New York, USA. 1896

In scientific investigations, it is permitted to invent any hypothesis and, if it explains various large and independent classes of facts, it rises to the ranks of a well-grounded theory.

*The Variations of Animals and Plants Under Domestication* (Volume 1)

Introduction (p. 9)

D. Appleton &amp; Company. New York, New York, USA. 1896

**Davis, William Morris** 1850–1934

American geomorphologist

The sensible facts are discoverable by our senses, the insensible facts by our thoughts. The invention of hypotheses is therefore nothing more than a mental effort to bring insensible facts into causal relation with sensible facts, and such an effort of correlation is praiseworthy even if it is daring.

In H. Shapley, H. Wright, and S. Rapport (eds.)

*Readings in the Physical Sciences*

The Reasonableness of Science (p. 22)

Appleton-Century-Crofts. New York, New York, USA. 1948

**Davy, Sir Humphry** 1778–1829

English chemist

The only use of an hypothesis is, that it should lead to experiments; that it should be a guide to facts. In this application, conjectures are always of use. The destruction of an error hardly ever takes place without the discovery of truth.... Hypothesis should be considered merely an intellectual instrument of discovery, which at any time may be relinquished for a better instrument.

It should never be spoken of as truth; its highest praise is verisimilitude. Knowledge can only be acquired by the senses; nature has an archetype in the human imagination; her empire is given only to industry and action, guided and governed by experience.

In John Davy (ed.)

*The Collected Works of Sir Humphry Davy* (Volume 8) (pp. 346–347)

Smith, Elder &amp; Company. London, England. 1839–1840

Believing that our philosophical systems are exceedingly imperfect, I never attached much importance to this hypothesis [electro-chemical action]; but having formed it after a copious induction of facts, and having gained immediately by the application of it a number of practical results, and considering myself the author of it as I was of the decomposition of the alkalies, and having developed it in an elementary work, as far as the present state of chemistry seemed to allow. I have never criticised or examined the manner in which different authors have adopted or explained it – contented, if in the hands of others it assisted the arrangement of chemistry or mineralogy, or became an instrument of discovery.

The Bakerian Lecture: On the Relations of Electrical and Chemical Changes

*Philosophical Transactions of the Royal Society of London, B*, Volume 116, 1826 (p. 312)

[Hypotheses were] part of the scaffolding of the building of science [rather] than as belonging either to its foundations, materials, or ornaments.

*Fragmentary Remains*

Chapter VII (pp. 231–232)

John Churchill. London, England. 1858

**de Montaigne, Michel Eyquem** 1533–92

French Renaissance writer

Just as women for themselves make use of teeth of ivory where the natural are wanting, and instead of their true complexion make one of some foreign matter; legs of cloth or felt, and plumpness of cotton, and in the sight and knowledge of everyone paint, patch, and trick up themselves with false and borrowed beauty: so does science (and even our law itself has, they say, legal fictions whereon it builds of its truth its justice); she gives us, in presupposition and for current pay, things which she herself informs us were invented...

Translated by Charles Cotton

In *Great Books of the Western World* (Volume 25)*The Essays of Michel Eyquem de Montaigne*

Essays II, 12 (pp. 258–259)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**de Morgan, Augustus** 1806–71

English mathematician and logician

...wrong hypotheses, rightly worked from, have produced more useful results than unguided observation.

*A Budget of Paradoxes*

Francis Bacon (p. 55)

Longmans, Green &amp; Company. London, England. 1872

**Doyle, Sir Arthur Conan** 1859–1930  
Scottish writer

I have devised seven separate explanations, each of which would cover the facts as far as we know them. But which of these is correct can only be determined by the fresh information which we shall no doubt find waiting for us.

In William S. Baring-Gould (ed.)

*The Annotated Sherlock Holmes* (Volume 2)

*The Adventure of the Copper Beeches* (p. 122)

Wings Books. New York, New York, USA. 1967

If the fresh facts which come to our knowledge all fit themselves into the scheme, then our hypothesis may gradually become a solution.

In William S. Baring-Gould (ed.)

*The Annotated Sherlock Holmes* (Volume 2)

*The Adventure of Wisteria Lodge* (p. 245)

Wings Books. New York, New York, USA. 1967

**du Noüy, Pierre Lecomte** 1883–1947  
French scientist

The man of science who cannot formulate a hypothesis is only an accountant of phenomena.

*The Road to Reason*

Chapter 3 (p. 77)

Longmans, Green & Company. London, England. 1949

**Duhem, Pierre-Maurice-Marie** 1861–1916  
French physicist and mathematician

In sum, the physicist can never subject an isolated hypothesis to experimental test, but only a whole group of hypotheses; when the experiment is in disagreement with his predictions, what he learns is that at least one of his hypotheses constituting this group is unacceptable and ought to be modified; but the experiment does not designate which one should be changed.

*The Aim and Structure of Physical Theory*

Part II, Chapter VI (p. 187)

Princeton University Press. Princeton, New Jersey, USA. 1954

**Dumas, Jean Baptiste-Andre** 1800–84  
French biochemist

Hypotheses are the crutches of science to be thrown away at the proper time.

Quoted by G.B. Halsted

The Elements: Verified and Unverified

*Proceedings of the American Association for the Advancement of Science*, December 1903–January 1904 (p. 393)

Till now it has been usual to discard a hypothesis as soon as it leads to absurdities, but to some modern investigators this course seems too inconvenient.

In Ida Freund

*The Study of Chemical Composition*

Chapter VIII (p. 339)

At The University Press. Cambridge, England. 1904

**Dumont, Theron Q. (William Walker Atkinson)** 1862–1932

American attorney, merchant, publisher, and author

The verification of an hypothesis must be an ‘all around one,’ and there must be an agreement between the observed facts and the logical conclusions in the case – the hypothesis must fit the facts, and the facts must fit the hypothesis. The facts are like the glass slipper of the Cinderella legend. The several sisters of Cinderella were like imperfect hypotheses, for the slipper did not fit them, nor did they fit the slipper. When Cinderella’s foot was found to be the one foot upon which the glass slipper fitted, then the Cinderella hypothesis was considered to be verified – the glass slipper was hers, and the prince claimed his bride.

*The Master Mind: Or the Key to Mental Power, Development and Efficiency*

Chapter XIV (p. 214)

Advanced Thought Publishing Co. Chicago, Illinois, USA. 1918

## Editor

Hypotheses are like balloons, and if not anchored to the solid material of disease, they drift away.

The Latest Church Medical Movement

*American Medicine*, N.S. Volume III, Number 10, October, 1906 (p. 437)

**Evans, Bergen** 1904–78  
Author

We see what we want to see, and observation conforms to hypothesis.

*The Natural History of Nonsense*

Chapter 19 (p. 268)

Alfred A. Knopf. New York, New York, USA. 1947

An honorable man will not be bullied by a hypothesis.

*The Natural History of Nonsense*

Chapter 19 (p. 275)

Alfred A. Knopf. New York, New York, USA. 1947

**Fischer, Martin H.** 1879–1962  
German-American physician

Many confuse hypothesis and theory. An hypothesis is a possible explanation; a theory, the correct one.

In Howard Fabing and Ray Marr

*Fischerisms* (p. 7)

C.C. Thomas. Springfield, Illinois, USA. 1944

**Faraday, Michael** 1791–1867  
English physicist and chemist

Hypotheses, treated as mere poetic fancies in one age, scouted as scientific absurdities in the next – preparatory only to their being altogether forgotten – have often, when least expected, received confirmation from indirect channels, and, at length, become finally adopted as tenets,

deducible from the sober exercise of induction.

*The Subject Matter of a Course of Six Lectures on the Non-Metallic Elements*

Section I (p. 23)

Longman, Brown, Green, Longmans & Robert. London, England. 1853

**Freud, Sigmund** 1856–1939

Austrian neurologist and co-founder of psychoanalysis

In the complete absence of any theory of the instincts which would help us to find our bearings, we may be permitted, or rather, it is incumbent upon us, in the first place to work out any hypothesis to its logical conclusion, until it either fails or becomes confirmed.

*On Narcissism*

Chapter I

Yale University Press. New Haven, Connecticut, USA. 1991

**Friedman, Milton** 1912–2006

American laissez-faire economist

The construction of hypotheses is a creative act of inspiration, intuition, invention; its essence is the vision of something new in familiar material.

*Essays in Positive Economics*

Part I, Section VI (p. 43)

The University of Chicago Press. Chicago, Illinois, USA. 1953

**Geikie, John Cunningham** 1824–1906

American clergyman

...I cannot help thinking his hypotheses are like inverted pyramids – a great deal resting on very little.

*Hours With the Bible* (Volume 3)

Chapter XVII (p. 429)

James Pott & Co. New York, New York, USA. 1889

**Gibbs, J. Willard** 1839–1903

American mathematician

In the present state of science, it seems hardly possible to frame a dynamic theory of molecular action which shall embrace the phenomena of thermodynamics, of radiation, and of the electrical manifestations which accompany the union of atoms. Yet any theory is obviously inadequate which does not take into account...all these phenomena. Even if we confine our attention to the phenomena distinctly thermodynamic, we do not escape difficulties in as simple a matter as the number of degrees of freedom of a diatomic gas. It is well known that while theory would assign to the gas six degrees of freedom per molecule, in our experiments on specific heat we cannot account for more than five. Certainly, one is building on an insecure foundation, who rests his work on hypotheses concerning the constitution of matter.

*Elementary Principles in Statistical Mechanics: Developed with Especial Reference to the Rational Foundation of Thermodynamics*

Preface (pp. ix–xi)

Charles Scribner's Sons. New York, New York, USA. 1902

**Gilbert, G. K.** 1843–1918

American geologist

The man who produces but one [hypothesis] cherishes and champions that one as his own, and is blind to its faults. With such men, the testing of alternative hypotheses is accomplished only through controversy. Crucial observations are warped by prejudice, and the triumph of truth is delayed.

In William Hoyt

*Coon Mountain Controversies: Meteor Crater and the Development of Impact Theory*

Chapter Two (p. 38)

The University of Arizona Press. Tucson, Arizona, USA. 1987

**Goldenweiser, Alexander** 1880–1940

American anthropologist

Scientific hypotheses are intuitive leaps in the dark.

*Robots or Gods*

Chapter III (p. 46)

Alfred A. Knopf. New York, New York, USA. 1931

**Gore, George** 1826–1909

English electrochemist

Hypotheses are more varied than the truths of science; for every single new truth of science discovered by means of research, many hypotheses have been imagined.

*The Art of Scientific Discovery*

Chapter XXXVII (p. 366)

Longmans, Green & Co. London, England. 1878

**Gregg, Alan** 1890–1957

American medical educator and philosopher

A dream is a firstborn: an hypothesis should be an orphan.

In Wilder Penfield

Chapter 22 (p. 318)

Little, Brown & Company. Boston, Massachusetts, USA. 1967

**Gregory, Sir Richard Arman** 1864–1952

British science writer and journalist

The hypothesis which represents an effort of imaginative power not founded upon a wide range of facts may pass as fiction, but it has no place in science.

*Discovery; or, The Spirit and Service of Science*

Chapter VI (p. 161)

Macmillan & Company Ltd. London, England. 1918

**Huxley, Thomas Henry** 1825–95

English biologist

That which we were looking for, and could not find, was a hypothesis representing the origin of known organic forms which assumed the operation of no causes but such as could be proved to be actually at work. We wanted, not to pin our faith to that or any other speculation, but

to get hold of clear and definite conceptions which could be brought face to face with facts and have their validity tested.

In Leonard Huxley

*Life and Letters of Thomas Henry Huxley* (Volume 1)

Chapter XIII (p. 182)

D. Appleton & Company. New York, New York, USA. 1901

The great tragedy of Science – the slaying of a beautiful hypothesis by an ugly fact.

*Collected Essays* (Volume 8)

*Biogenesis and Abiogenesis* (p. 244)

Macmillan & Company Ltd. London, England. 1904

Every hypothesis is bound to explain, or, at any rate, not be inconsistent with, the whole of the facts which it professes to account for; and if there is a single one of these facts which can be shown to be inconsistent with (I do not merely mean inexplicable by, but contrary to) the hypothesis, the hypothesis falls to the ground – it is worth nothing.

*Collected Essays* (Volume 2)

*Darwiniana*

On Our Knowledge of the Causes of the Phenomena of Organic Nature,

Lecture VI (pp. 463)

Macmillan & Company Ltd. London, England. 1904

Anyone who has studied the history of science knows that almost every great step therein has been made by the “anticipation of Nature,” that is, by the invention of hypothesis, which, though verifiable, often had very little foundation to start with; and, not unfrequently, in spite of a long career of usefulness, turned out to be wholly erroneous in the long run.

*Collected Essays* (Volume 8)

*Discourses, Biological and Geological*

The Problems of the Deep Sea (p. 62)

Macmillan & Company Ltd. London, England. 1904

**James, William** 1842–1910

American philosopher and psychologist

A good hypothesis in science must have other than those of the phenomenon it is immediately invoked to explain, otherwise it is not prolific enough.

*The Varieties of Religious Experience*

Lecture XX (p. 508)

The Modern Library. New York, New York, USA. 1967

**Jevons, William Stanley** 1835–82

English economist and logician

By deductive reasoning and calculation, we must endeavor to anticipate such new phenomena, especially those of a singular and exceptional nature, as would necessarily happen if the hypothesis be true.

*The Principles of Science: A Treatise on Logic and Scientific Method*

Book I, Chapter VI (p. 131)

The Macmillan Co. New York, New York, USA. 1874

I hold that in all cases of inductive inference we must invent hypotheses, until we fall upon some hypothesis which yields deductive results in accordance with experience. Such accordance renders the chosen hypothesis more or less probable, and we may then deduce with some degree of likelihood, the nature of our future experience, on the assumption that no arbitrary change takes place in the conditions of nature.

*The Principles of Science: A Treatise on Logic and Scientific Method*

Book II, Chapter XI (p. 228)

Macmillan & Company Ltd. London, England. 1887

Perfect readiness to reject a theory inconsistent with fact is a primary requisite of the philosophic mind. But it, would be a mistake to suppose that this candour has anything akin to fickleness; on the contrary, readiness to reject a false theory may be combined with a peculiar pertinacity and courage in maintaining an hypothesis as long as its falsity is not actually apparent.

*The Principles of Science: A Treatise on Logic and Scientific Method*

Chapter XXVI (p. 586)

Macmillan & Co Ltd. London, England. 1887

**Lambert, Johann Heinrich** 1728–77

Swiss-German mathematician and astronomer

A hypothesis will in the end become a truth when all phenomena let themselves be derived from it in a natural and in an obvious manner, when all these consequences are connected with one another and with the general reasons, in short, when that hypothesis is consistent in all its parts with itself.

Translated by Stanley Jaki

*Cosmological Letters on the Arrangement of the World-Edifice*

Eleventh Letter (p. 120)

Science History Publications. New York, New York, USA. 1976

I wonder what an astronomy would look like which has been rigorously demonstrated in every respect. It seems as if one can get to the truth only through a series of hypotheses, and that one has to reject each previous one to espouse the next and to abandon it again.

Translated by Stanley Jaki

*Cosmological Letters on the Arrangement of the World-Edifice*

Twentieth Letter (p. 191)

Science History Publications. New York, New York, USA. 1976

**Leclerc, Georges-Louis, Comte de Buffon** 1707–88

French naturalist

These hypotheses are all constructed on tottering foundations. The ideas they contain are indistinct, the facts are confounded, and the whole is a motely [sic] jumble of physics and fable. They, accordingly, have never been adopted but by men who embrace opinions without examination, and who, incapable of distinguishing the degree of probability, are more deeply impressed with marvelous chimeras than with the genuine force of truth.

Translated by William Smellie  
*Natural History General and Particular* (Volume 1) (3rd edition)  
 The History and Theory of the Earth (p. 3)  
 Printed for A. Straman & T. Caldwell. London, England. 1791

**Levi, Primo** 1919–87  
 Italian writer and chemist

But there is trouble in store for anyone who surrenders to the temptation of mistaking an elegant hypothesis for a certainty: the readers of detective stories know this quite well.

Translated by Raymond Rosenthal  
*The Periodic Table*  
 Chromium (p. 157)

My name is A (known as c),  
 You have no upper bound for me.  
 I go as low as A1,  
 And then soar back restrained by none.  
 The hierarchies of steps I roam,  
 And almost every step, my home.  
 Of course J. König has ordained  
 That certain first steps can't be gained.  
 But Cohen and Gödel set me free,  
 AW I can be.  
 You cannot catch me in your net,  
 Discreteness hasn't trapped me yet.  
 So learn the moral of my tale,  
 I cannot fit into a scale.  
 For any scale you think will serve,  
 Might press me down, but then I'll swerve.  
 Ode to the Continuum Hypothesis  
*Mathematics Magazine*, Volume 50, Number 2, March, 1977 (p. 94)

**Maeterlinck, Maurice** 1862–1949  
 Belgian playwright and poet

Hypothesis follows on hypothesis; the theoretical rubbish-heap accumulates; and truth ever eludes us.

Translated by Maurice Maeterlinck  
 In Jean-Henri Fabre  
*The Life of the Spider*  
 Preface (p. 34)

...a modern satirist has called "Hypothetics" – the science of that which might have happened but did not...

*Popular Government: Four Essays*  
 Essay I (p. 32)  
 Liberty Classics. Indianapolis, Indiana, USA. 1976

**Marryat, Frederick** 1792–1848  
 English novelist

An hypothesis is only a habit – a habit of looking through a glass of one peculiar colour, which imparts its hue to all around it.

*The King's Own*  
 Chapter XXXV (p. 227)  
 George Routledge & Sons. London, England. 1873

**Medawar, Sir Peter Brian** 1915–87  
 Brazilian-born English zoologist

The formulation of a hypothesis carries with it an obligation to test it as rigorously as we can command skills to do so.

Hypothesis and Imagination  
*Times Literary Supplement*, 25 Oct 1963

The formulation of a natural law begins as an imaginative exploit and imagination is a faculty essential to the

scientist's task.... In a modern professional vocabulary a hypothesis is an imaginative preconception of what might be true in the form of a declaration with verifiable deductive consequences. It no longer tows "gratuitous," "mere," or "wild" behind it, and the pejorative usage ("Evolution is a mere hypothesis," "It is only a hypothesis that smoking causes lung cancer") is one of the outward signs of little learning.

Hypothesis and Imagination

*Times Literary Supplement*, 25 October, 1963

**Mellor, Joseph William** 1863–1938

Chemist

Without hypotheses, the experimental method may degenerate into empiricism; without experiments, hypotheses may degenerate into speculation.

*A Comprehensive Treatise on Inorganic and Theoretical Chemistry*

Chapter I (p. 16)

Longman, Green & Co. London, England. 1922

The mind unconsciously assimilates evidence in favour of a pet hypothesis; and a pet hypothesis is apt to grow from a favoured child to a tyrannical master.

*A Comprehensive Treatise on Inorganic and Theoretical Chemistry*

Chapter I (p. 57)

Longman, Green & Co. London, England. 1922

**Mill, John Stuart** 1806–73

English political philosopher and economist

An hypothesis is any supposition which we make (either without actual evidence, or upon evidence avowedly insufficient), in order to endeavor to deduce from it conclusions in accordance with facts which are known to be real; under the idea that if the conclusions to which the hypothesis leads are known truths, the hypothesis itself either must be, or at least is likely to be, true.

*A System of Logic, Ratiocinative and Inductive*

Book III, Chapter XIV (p. 290)

Harper & Brothers Publishers. New York, New York, USA. 1867

An hypothesis being a mere supposition, there are no other limits to hypotheses than those of the human imagination; we may, if we please, imagine, by way of accounting for an effect, some cause of a kind utterly unknown, and acting according to a law altogether fictitious.

*A System of Logic, Ratiocinative and Inductive*

Book III, Chapter XIV (p. 290)

Harper & Brothers Publishers. New York, New York, USA. 1867

It appears, then, to be a condition of a genuinely scientific hypothesis, that it be not destined always to remain an hypothesis, but be certain to be either proved or disproved by that comparison with observed facts which is termed Verification.

*A System of Logic, Ratiocinative and Inductive*

Book III, Chapter XIV (p. 293)

Harper & Brothers Publishers. New York, New York, USA. 1867

The hypothesis, by suggesting observations and experiments, puts us upon the road to that independent evidence if it be really attainable; and till it be attained, the hypothesis ought not to count for more than a suspicion.

*A System of Logic, Ratiocinative and Inductive*

Book III, Chapter XIV (p. 294)

Harper & Brothers Publishers. New York, New York, USA. 1867

**Mendeleyev, Dmitry Ivanovich** 1834–1907

Russian chemist

Hypotheses help and guide scientific work – the search for truth – as the tiller's plough helps the cultivation of useful plants.

Compiled by V.V. Vorontsov

*Words of The Wise: A Book of Russian Quotations*

Translated by Vic Schneierson

Progress Publishers. Moscow, Russia. 1979

**More, Louis Trenchard**

American educator

It seems rather futile, if such be the normal history of hypothetical models, to inflict on us the labor of learning abstruse hypotheses which continually revamp old metaphysical terms and merely dress them up in new transcendental symbols. It is a valuable exercise to strip hypotheses of their technical phraseology; to change those words which deceive our minds into believing that a clear idea has been conveyed, when, in fact, they have merely been wrenched from any real significance.

*The Limitations of Science*

Chapter IV (p. 109)

Henry Holt & Co. New York, New York, USA. 1915

**Müller, Johann Heinrich Jacob** 1809–75

Physicist

...hypotheses are like questions which we put to Nature, but the answers she gives are not simply "yes" and "no;" but it can be so, or it cannot.

*Principles of Physics and Meteorology*

Introduction (p. 4)

Hippolyte Bailliere. London, England. 1847

**Newton, Sir Isaac** 1642–1727

English physicist and mathematician

I frame no hypotheses; for whatever is not deduced from the phenomena is to be called an hypothesis; and hypotheses, whether metaphysical or physical, whether of occult qualities or mechanical, have no place in experimental philosophy.

*Mathematical Principles of Natural Philosophy*

Book III, General Scholium

E.P. Dutton & Company. New York, New York, USA. 1922

In experimental philosophy we are to look upon propositions inferred by general induction from phenomena as accurately or very nearly true, notwithstanding any

contrary hypotheses that may be imagined, till such time as other phenomena occur, by which they may either be made more accurate, or liable to exceptions.

*Mathematical Principles of Natural Philosophy*

Book III, Rule IV

E.P. Dutton & Company. New York, New York, USA. 1922

**Nordmann, Charles** 1881–1940

French astronomer

Hypotheses usually spring up like mushrooms in every dark corner of science. You get a score of them to explain the slightest obscurity.

Nordmann, Charles

*Einstein and the Universe: A Popular Exposition of the Famous Theory*

Chapter II (p. 40)

T. Fisher Unwin Ltd. London, England. 1922

Hypotheses in science are a kind of soft cement which hardens rapidly in the open air, thus enabling us to join together the separate blocks of the structure and to fill up the breaches made in the walls by projectiles with artificial stuff which the superficial observer presently mistakes for stone. It is because hypotheses are something like that in science that the best scientific theories are those which include the least hypotheses.

Translated by Joseph McAbe

*Einstein and the Universe: A Popular Exposition of the Famous Theory*

Chapter II (p. 40)

T. Fisher Unwin Ltd. London, England. 1922

Lutheran minister

...it is not necessary that these hypotheses should be true, or even probably; but it is enough if they provide a calculus which fits the observations...

In *Great Books of the Western World* (Volume 16)

*On the Revolutions of the Heavenly Spheres*

Introduction, to the Reader Concerning the Hypothesis of this Work

(p. 505)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Pascal, Blaise** 1623–62

French mathematician and physicist

For sometimes an obvious absurdity follows from its negation, and then the hypothesis is true and certain; or an obvious absurdity follows from its affirmation, and then the hypothesis is considered false; and when we have not yet been able to draw an absurdity either from its negation or from its affirmation, the hypothesis remains doubtful. So that to establish the truth of an hypothesis it is not enough that all the phenomena should follow from it, whereas if there follows from it something opposed to a single phenomenon, that is enough to make certain its falsity.

In *Great Books of the Western World* (Volume 33)

Aphorisms and Ideals of Pasteur (p. 343)

W.B. Saunders Co. Philadelphia, Pennsylvania, USA. 1920

**Peirce, Charles Sanders** 1839–1914

American scientist, logician, and philosopher

The great difference between induction and hypothesis is that the former infers the existence of phenomena such as we have observed in cases which are similar, while hypothesis supposes something of a different kind from what we have directly observed, and frequently something which it would be impossible for us to observe directly.

*Chance, Love and Logic: Philosophical Essays*

Deduction, Induction, Hypothesis (p. 149)

Harcourt, Brace & Company, Inc. New York, New York, USA. 1923

If hypotheses are to be tried haphazard, or simply because they will suit certain phenomena, it will occupy the mathematical physicists of the world say half a century on the average to bring each theory to the test, and since the number of possible theories may go up into the trillion, only one of which can be true, we have little prospect of making further solid additions to the subject in our time.

The Architecture of Theories

*The Monist*, Volume I, Number 2, January, 1891 (p. 164)

**Pirsig, Robert M.** 1928–

American writer

For every fact there is an *infinity* of hypotheses. The more you *look* the more you *see*.

*Zen and the Art of Motorcycle Maintenance: An Inquiry into Values* (p. 171)

William Morrow & Company, Inc

New York, New York, USA. 1974

**Planck, Max** 1858–1947  
German physicist

An indispensable hypothesis, even though still far from being a guarantee of success, is however the pursuit of a specific aim, whose lighted beacon, even by initial failures, is not betrayed.

*Nobel Lectures, Physics 1901–1921*

Nobel lecture for award received in 1918 (p. 407)

Elsevier Publishing Company. Amsterdam, Netherlands. 1967

The measure of the value of a new hypothesis in physics is not its obviousness but its utility.

Translated by R. Jones and D.H. Williams

*A Survey of Physics: A Collection of Lectures and Essays*

The Place of Modern Physics in the Mechanical View of Nature (p. 39)

Methuen & Company Ltd. London, England. 1925

...every hypothesis in physical science has to go through a period of difficult gestation and parturition before it can be brought out into the light of day and handed to others, ready-made in scientific form so that it will be, as it were, fool-proof in the hands of outsiders who wish to apply it.

*Where Is Science Going?*

Chapter VI (p. 178)

W.W. Norton & Company, Inc. New York, New York, USA. 1932

**Plato** 428 BCE–347 BCE  
Greek philosopher

I think that you should...consider not only the consequences which flow from a given hypothesis; but also the consequences which flow from denying the hypothesis.

In *Great Books of the Western World* (Volume 7)

*Parmenides*

Section 135 (p. 491)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Poincaré, Jules Henri** 1854–1912  
French mathematician and theoretical astronomer

The firm determination to submit to experiment is not enough; there are still dangerous hypotheses; first, and above all, those which are tacit and unconscious. Since we make them without knowing it, we are powerless to abandon them.

*The Foundations of Science*

*Science and Hypothesis*, Part IV

Chapter IX (p. 134)

The Science Press. New York, New York, USA. 1913

For a Latin, truth can be expressed only by equations; it must obey laws simple, logical, symmetric and fitted to satisfy minds in love with mathematical elegance. The Anglo-Saxon to depict a phenomenon will first be engrossed in making a model, and he will make it with common materials, such as our crude, unaided senses show us them.... He concludes from the body to the atom. Both therefore make hypotheses, and this indeed is necessary, since no scientist has ever been able to get on without them. The essential thing is never to make them unconsciously.

*The Foundations of Science*

Author's Preface to Translation (p. 6)

The Science Press. New York, New York, USA. 1913

**Popper, Karl R.** 1902–94  
Austrian/British philosopher of science

The best we can say of a hypothesis is that up to now it has been able to show its worth, and that it has been more successful than other hypotheses although, in principle, it can never be justified, verified or even shown to be probable. The appraisal of the hypothesis relies solely upon deductive consequences (predictions) which may be drawn from the hypothesis: There is no need even to mention "induction."

*The Logic of Scientific Discovery*

New Appendices, Two Notes on Induction and Demarcation 1933–1934

(p. 315)

Basic Books, Inc. New York, New York, USA. 1959

**Poynting, John Henry** 1852–1914  
English physicist

The hypotheses of science are continually changing. Old hypotheses break down and new ones take their place. But the classification of known phenomena which a hypothesis has suggested, and the new discoveries of phenomena to which it has led, remain as positive and permanent additions to natural knowledge when the hypothesis itself has vanished from thought.

In J.A. Thomson

*Introduction to Science*

Chapter I (p. 27)

Williams & Norgate Ltd. London, England. 1916

This hypothesis [the atomic and molecular hypothesis of matter] arose so early in the history of science that we are almost tempted to suppose that it is a necessity of thought, and that it has a warrant of some higher order than any other hypothesis which could be imagined arose so early in the history of science that we are almost tempted to suppose that it is a necessity of thought, and that it has a warrant of some higher order than any other hypothesis which could be imagined.

Address to the Mathematical and Physical Section

*Science*, Volume 10, Number 247, September 22, 1899 (p. 389)

To use an old analogy – and here we can hardly go except upon analogy – while the building of Nature is growing spontaneously from within, the model of it, which we seek to construct in our descriptive science, can only be constructed by means of scaffolding from without, a scaffolding of hypotheses. While in the real building all is continuous, in our model there are detached parts which must be connected with the rest by temporary ladders and passages, or which must be supported till we can see how to fill in the understructure. To give the hypotheses equal validity with facts is to confuse the temporary scaffolding with the building itself.

Address to the Mathematical and Physical Section

*Science*, Volume 10, Number 247, September 22, 1899 (pp. 391–392)

**Priestley, Joseph** 1733–1804

English theologian and scientist

Hypotheses, while they are considered merely as such, lead persons to try a variety of experiments, in order to ascertain them. In these experiments, new facts generally arise. These new facts serve to correct the hypothesis which gave occasion to them. The theory, thus corrected, serves to discover more new facts, which, as before, bring the theory still nearer to the truth. In this progressive state, or method of approximation, things continue...

*The History and Present State of Electricity*

Part III, Section I (p. 445)

Printed for J. Dodsley. London, England. 1767

**Richet, Charles** 1850–1935

French physiologist

Be as bold in the conception of hypotheses as rigorous in their demonstration.

*The Natural History of a Savant*

Chapter X (p. 123)

J.M. Dent &amp; Sons Limited. London, England. 1927

**Sagan, Carl** 1934–96

American astronomer and author

There are many hypotheses in physics of almost comparable brilliance and elegance that have been rejected because they did not survive such a confrontation with experiment. In my view, the human condition would be greatly improved if such confrontations and willingness to reject hypotheses were a regular part of our social, political, economic, religious and cultural lives.

*The Dragons of Eden: Speculations on the Evolution of Human Intelligence*

Chapter 7 (p. 184)

Random House, Inc. New York, New York, USA. 1977

Spin more than one hypothesis. If there's something to be explained, think of all the different ways in which it could be explained. Then think of tests by which you might systematically disprove each of the alternatives. What survives, the hypothesis that resists disproof in this Darwinian selection among "multiple working hypotheses," has a much better chance of being the right answer than if you had simply run with the first idea that caught your fancy.

*The Demon-Haunted World: Science as a Candle in the Dark*

Chapter 12 (p. 210)

Random House, Inc. New York, New York, USA. 1995

It seems to me what is called for is an exquisite balance between two conflicting needs: the most skeptical scrutiny of all hypotheses that are served up to us and at the same time a great openness to new ideas. If you are only skeptical, then no new ideas make it through to you. You never learn anything new. You become a crotchety old person convinced that nonsense is ruling the world. (There is, of course, much data to support you.) On the

other hand, if you are open to the point of gullibility and have not an ounce of skeptical sense in you, then you cannot distinguish useful ideas from worthless ones. If all ideas have equal validity then you are lost, because then, it seems to me, no ideas have any validity at all.

*The Burden of Skepticism*

Pasadena lecture, 1987

If you spend any time spinning hypotheses, checking to see whether they make sense, whether they conform to what else we know, thinking of tests you can pose to substantiate or deflate your hypotheses, you will find yourself doing science. And as you come to practice this habit of thought more and more you will get better and better at it. To penetrate into the heart of the thing – even a little thing, a blade of grass, as Walt Whitman said – is to experience a kind of exhilaration that, it may be, only human beings of all the beings on this planet can feel. We are an intelligent species and the use of our intelligence quite properly gives us pleasure. In this respect the brain is like a muscle. When we think well, we feel good.

*Broca's Brain: Reflections on the Romance of Science*

Part I, Chapter 2 (p. 14)

Random House, Inc. New York, New York, USA. 1979

**Smith, Robertson**

No biographical data available

The very object of hypothesis is to inquire whether a real cause has not had a wider operation that there is any direct evidence for.

In R.A. Fisher

*The Genetical Theory of Natural Selection*

Chapter III (p. 52)

Dover Publications, Inc. New York, New York, USA. 1958

**Sonneberg, Walter**

No biographical data available

An hypothesis is a theory with a false label.

*Social Eccentricities*

Social Eccentricities (p. 33)

Broadway Publishing Co. New York, New York, USA. 1906

**Steinbeck, John** 1902–68

American novelist

There is one great difficulty with a good hypothesis. When it is completed and rounded, the corners smooth and the content cohesive and coherent, it is likely to become a thing in itself, a work of art. It is then like a finished sonnet or a painting completed. One hates to disturb it. Even if subsequent information should shoot a hole in it, one hates to tear it down because it once was beautiful and whole.

*Sea of Cortez*

Chapter 17 (p. 180)

Paul P. Appel, Publisher. Mount Vernon, New York, USA. 1982

When a hypothesis is deeply accepted it becomes a growth which only a kind of surgery can amputate.

*Sea of Cortez*

Chapter 17 (p. 180)

Paul P. Appel, Publisher. Mount Vernon, New York, USA. 1982

**Sterne, Laurence** 1713–68

English novelist and humorist

It is the nature of an hypothesis when once a man has conceived it, that it assimilates everything to itself, as proper nourishment, and from the first moment of your begetting it, it generally grows the stronger by everything you see, hear, read or understand.

...hypotheses are like steps in a staircase: each one must be mounted before the next one can be reached; and if you have no intention of coming back again that way, it does not matter if you destroy each step when you have made use of it.

*Report of the Seventy-third Meeting of the British Association for the Advancement of Science*

Presidential Address (p. 645)

John Murray. London, England. 1904

**Whewell, William** 1794–1866

English philosopher and historian

To discover a Conception of the mind which will justly represent a train of observed facts is, in some measure, a process of conjecture...and the business of conjecture is commonly conducted by calling up before our minds several suppositions, selecting that one which most agrees with what we know of the observed facts. Hence he who has to discover the laws of nature may have to invent many suppositions before he hits upon the right one; and among the endowments which lead to his success, we must reckon that fertility of invention which ministers to him such imaginary schemes, till at last he finds the one which conforms to the true order of nature. A faculty in devising hypotheses, therefore, is so far from being a fault in the intellectual character of a discoverer, that it is, in truth, a faculty indispensable to his task....

*The Philosophy of the Inductive Sciences Founded Upon Their History* (Volume 2)

Part II, Book XI, Chapter V, Section II, Article 6 (p. 54)

John W. Parker. London, England. 1847

The framing of hypotheses is, for the inquirer after truth, not the end, but the beginning of his work.

*The Philosophy of the Inductive Sciences: Founded Upon Their History* (Volume 2)

Book XI, Chapter V (p. 57)

John W. Parker. London, England. 1847

The hypothesis is like the captain, and the observations like the soldiers of an army: while he appears to command them, and in this way to work his own will, he does in fact derive all his power of conquest from their obedience, and becomes helpless and useless if they mutiny.

*The Philosophy of the Inductive Sciences: Founded Upon Their History* (Volume 2)

Chapter V (p. 59)

John W. Parker. London, England. 1847

The hypotheses which we accept ought to explain phenomena which we have observed. But they ought to do more than this: our hypotheses ought to foretell phenomena which have not yet been observed.

*The Philosophy of the Inductive Sciences Founded Upon Their History* (Volume 2)

Part II, Book XI, Chapter V, Section III, article 10 (p. 62)

John W. Parker. London, England. 1847

The hypotheses which we accept ought to explain phenomena which we have observed. But they ought to do more than this: our hypotheses ought to foretel phenomena which have not yet been observed ...

*The Philosophy of the Inductive Sciences: Founded Upon Their History* (Volume 2)

Part II, Book XI, Chapter V (p. 62)

John W. Parker. London, England. 1847

Hypotheses may be useful, though involving much that is superfluous, and even erroneous: for they may supply the true bond of connection of the facts; and the superfluity and error may afterwards be pared away.

*The Philosophy of the Inductive Sciences Founded Upon Their History* (Volume 2)

Aphorisms, Aphorisms Concerning Science, XI (p. 468)

John W. Parker. London, England. 1847

...he who has to discover the laws of nature may have to invent many suppositions before he hits upon the right one; and among the endowments which lead to his success, we must reckon that fertility of invention which ministers to him such imaginary schemes, till at last he finds the one which conforms to the true order of nature. A facility in devising hypotheses, therefore, is so far from being a fault in the intellectual character of a discoverer, that it is, in truth, a faculty indispensable to his task.

*The Philosophy of the Inductive Sciences, Founded Upon Their History* (2nd edition)

Book XI, Chapter V (p. 54)

John W. Parker. London, England. 1867

...hypotheses may often be of service to science, when they involve a certain portion of incompleteness, and even of error.

*The Philosophy of the Inductive Sciences, Founded Upon Their History* (2nd edition)

Book XI, Chapter V (p. 60)

John W. Parker. London, England. 1867

...hypotheses which we accept ought to explain phenomena which we have observed. But they ought to do more than this: our hypotheses ought to foretel phenomena which have not yet been observed ...

*The Philosophy of the Inductive Sciences, Founded Upon Their History* (2nd edition)

Book XI, Chapter V (p. 62)

John W. Parker. London, England. 1867

...when the hypothesis, of itself and without adjustment for the purpose, gives us the rule and reason of a class of facts not contemplated in its construction, we have a criterion of its reality, which has never yet been produced in favour of falsehood.

*The Philosophy of the Inductive Sciences: Founded Upon Their History*

Book XI, Chapter V (pp. 67–68)

John W. Parker. London, England. 1847

The truth of tentative hypotheses must be tested by their application to facts. The discoverer must be ready,

carefully to try his hypotheses in this manner, and to reject them if they will not bear the test, in spite of indolence and vanity.

*The Philosophy of the Inductive Sciences, Founded Upon Their History*  
(Volume 2) (2nd edition)

Aphorisms Concerning Science (p. 468)

John W. Parker. London, England. 1848

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

If science is not to degenerate into a medley of ad hoc hypotheses, it must become philosophical and must enter upon a thorough criticism of its own foundations.

*Science and the Modern World*

Chapter I (p. 17)

The Macmillan Company. New York, New York, USA. 1929

**Wittgenstein, Ludwig Josef Johann** 1889–1951

Austrian-born English philosopher

It is an hypothesis that the sun will rise tomorrow: and this means that we do not know whether it will rise.

Translated by D.F. Pears & B.F. McGuinness

## ICE

**Coleridge, Samuel Taylor** 1772–1834  
English lyrical poet, critic, and philosopher

And now there came both mist and snow,  
And it grew wondrous cold:  
And ice, mast high, came floating by,  
As green as emerald.  
And through the drifts the snowy clifts,  
Did send a dismal sheen:  
No shapes of men nor beast we ken –  
The ice was all between.  
The ice was here, the ice was there,  
The ice was all around:  
It crack'd and growl'd, and roar'd and howl'd,  
Like noises in a swound!

*The Rime of the Ancient Mariner and Other Poems*  
Rime of the Ancient Mariner, Part I, 1 (pp. 51–60)  
Little Leather Library Corporation. New York, New York, USA. 1915

**Faraday, Michael** 1791–1867  
English physicist and chemist

The world of ice and of eternal snow, as unfolded to us on the summits of the neighboring Alpine chain, so stern, so solitary, so dangerous, it may be, has yet its own peculiar charm. Not only does it enchain the attention of the natural philosopher, who finds in it the most wonderful disclosures as to the present and past history of the globe, but every summer it entices thousands of travelers of all conditions, who find there mental and bodily recreation.

In Hermann von Helmholtz  
Translated by Edmund Atkinson  
*Popular Lectures on Scientific Subjects*  
Ice and Glaciers (p. 107)  
D. Appleton & Company. New York, New York, USA. 1873

Ice is cool. It's water, but it's not.  
*Buffy, the Vampire Slayer*  
TV series, Helpless, Episode 46 (1999)

**Tyndall, John** 1820–93  
Irish-born English physicist

To the eye of science these ice-crystals are as precious as the diamond – as purely formed, as delicately built. Where no disturbing causes intervene, there is no disorder in this crystalline architecture. By their own constructive power molecule builds itself on to molecule with a precision far greater than that attainable by the hands of man.

*Fragments of Science for Unscientific People*  
Chapter III (p. 83)  
D. Appleton & Co. New York, New York, USA. 1875

## ICEBERG

**Dana, Richard Henry** 1815–82  
American lawyer and author

No pencil has ever yet given anything like the true effect of an iceberg. In a picture, they are huge, uncouth masses, stuck in the sea, while their chief beauty and grandeur – their slow, stately motion; the whirling of the snow about their summits, and the fearful groaning and cracking of their parts – the picture cannot give. This is the large iceberg; while the small and distant islands, floating on the smooth sea, in the light of a clear day, look like little floating fairy isles of sapphire.

*Two Years Before the Mast*  
Chapter 32 (p. 303)  
Doubleday & Company, Inc. Garden City, New York, USA. 1949

**Esar, Evan** 1899–1995  
American humorist

[Iceberg] A permanent wave.

*Esar's Comic Dictionary*  
Iceberg  
Doubleday & Company, Inc. Garden City, New York, USA. 1983

**Miller, Hugh** 1802–56  
Scottish geologist and theologian

Nature sports want only amid every variety of form; and the motion of the great floating masses, cast into shapes with which we associate moveless solidity, adds to the magical effect of the scene. Here a flat-roofed temple, surrounded by colonnades of hoar and wasted columns, comes drifting past; there a cathedral, furnished with towers and spire, strikes heavily against the rocky bottom, many fathoms beneath, and its nodding pinnacles stoop at every blow. Yonder, already fast aground, there rests a ponderous castle, with its curtained towers, its arched gateway, and its multitudinous turrets, reflected on the calm

surface beneath; and pyramids and obelisks, buttressed ramparts, and embrasured watch-towers, with shapes still more fantastic – those of ships, and trees, and brute and human forms – crowd the retiring vista beyond.

*Popular Geology*

Lecture Second (p. 120)

Gould & Lincoln. Boston, Massachusetts, USA. 1860

**Muir, John** 1838–1914

American naturalist

On days like this, true sun-days, some of the bergs show a purplish tinge, though most are white from the disintegrating of their weathered surfaces. Now and then a new-born one is met that is pure blue crystal throughout, freshly broken from the fountain or recently exposed to the air by turning over.

*Travels in Alaska*

Chapter XIV (p. 232)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1915

When sunshine is sifting through the midst of the multitude of icebergs that fill the fiord and through the jets of radiant spray ever rising from the tremendous splashing of the falling and upspringing bergs, the effect is indescribably glorious. Glorious, too, are the shows they make in the night when the moon and stars are shining. The berg-thunder seems far louder than by day, and the projecting buttresses seem higher as they stand forward in the pale light, relieved by gloomy hollows, while the new-born bergs are dimly seen, crowned with faint lunar rainbows in the up-dashing spray.

*Travels in Alaska*

Chapter XVI (p. 269)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1915

**Jones, William**

No biographical data available

Among the most imposing and grand of the many wonders of the ocean world, are the fixed and floating icebergs, the “palaces of nature,” which assume extraordinary and fantastic shapes, and more than realize the most sublime conceptions of the imagination.

**Wright, George Frederick** 1838–1921

American geologist

**Upham, Warren** 1850–1934

American geologist

The ice of Greenland is incessantly travelling both by land and sea, and is ever ready to meet the tourist and the explorer far down toward the middle of the Atlantic.

*Greenland Icefields and Life in the North Atlantic*

Chapter I (p. 1)

D. Appleton & Co. New York, New York, USA. 1896

## ICHOLOGY

**Frey, Robert W.**

No biographical data available

In a sense, the field of ichnology is both old and new. Its guiding principles were known to a few workers many years ago, and these principles are now being rediscovered by scores of current workers. As is true in the development of any science, ichnologists have indeed gotten some occasional pebbles mixed in with their snowball; but they have also exposed many misconceptions and have made numerous positive gains. Ichnology today is rapidly approaching that plateau at which the sub-discipline will settle comfortably into the ever-growing accumulation of “standard” but highly useful methods or procedures in geology. Ichnology is not a new “magic wand,” to render sister subdisciplines obsolete, but neither can it be glibly ignored by anyone seriously interested in ancient life or environmental reconstructions.

*The Study of Trace Fossils*

Prologue (p. ix)

Springer-Verlag. New York, New York, USA. 1975

## ICHTHYOLOGIST

**Cuppy, Will** 1884–1929

American humorist and critic

...it is the chief function of the ichthyologists, or fish people, to keep pointing out, day after day, the perfect fitness of fish for existence in a liquid medium. And they’re right, at that. But I sometimes think that if fish were not well adapted for an aquatic life – if they were square, say – then it would be time to talk.

*How to Become Extinct*

Fish and Democracy (p. 2)

Dover Publications. New York, New York, USA. 1964

**Fishback, Margaret** 1904–85

No biographical data available

An ichthyologist is he,  
Well versed in anthropology  
To boot, so maybe he will know  
Why God or nature bothered so  
To give us beards and shiny noses  
While fish still live on beds of roses.

*I Take It Back*

Fish Course

E.P. Dutton & Company. New York, New York, USA. 1935

## ICHTHYOLOGY

**Roberts, Mary** 1788–1864

English botanist and author

I salute you from the land of the mountain and the flood;  
from amid scenes worthy the pen of Virgil, and the pencil

of Loraine; from the solitary village of Bethgellert, where the science of Ichthyology recently engaged the attention of your friend; that interesting science which includes the order, genera, and species of those animals which have either a naked, or scaly body; are furnished with fins and destitute of feet; belonging to the fourth division into which Linnaeus has divided the animal kingdom. Their natural history is necessarily involved in more obscurity than that of land animals, from the difficulty of ascertaining their habits, instincts, and specific differences; yet sufficient is already known to excite the curiosity, and reward the diligence of the naturalist.

*The Sea-side Companion; or, Marine Natural History*  
Letter VI (pp. 49–50)  
Printed for Whittaker & Co. London, England. 1835

## IDEA

**Abbey, Edward** 1927–89

American environmentalist and nature writer

I'd sooner exchange ideas with the birds on earth than learn to carry on intergalactic communications with some obscure race of humanoids on a satellite planet from the world of Betelgeuse.

*Desert Solitaire*  
The First Morning (p. 7)  
Ballantine Books. New York, New York, USA. 1968

**Acton, John Emerich Edward Dalberg** 1834–1902  
English historian

Ideas have a radiation and development, an ancestry and posterity of their own, in which men play the part of godfathers and godmothers more than that of legitimate parents.

In Gertrude Himmelfard  
*Darwin and the Darwinian Revolution*  
Chapter XVIII (p. 380)  
Doubleday & Co, Inc. Garden City, New York, USA. 1962

**Agnew, Ralph Palmer**

American mathematician

It is better to have ideas that are not quite right than to have no ideas at all.

*Differential Equations*  
Chapter 1, Problem 1.491 (p. 16)  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1972

**Alcott, Amos Bronson** 1799–1888

American educational and social reformer

If the ancients left us ideas, to our credit be it spoken that we moderns are building houses for them – structures which neither Plato nor Archimedes had dreamed possible.

*Table-talk*  
Hippogrieffs (p. 35)  
Roberts Brothers. Boston, Massachusetts, USA. 1877

**Aristotle** 384 BCE–322 BCE

Greek philosopher

The same ideas, one must believe, recur in men's mind not once or twice but again and again.

In *Great Books of the Western World* (Volume 8)  
*On the Heavens*  
Book I, Chapter 3, 270b [20]  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Bagehot, Walter** 1826–77

English journalist

One of the greatest pains to human nature is the pain of a new idea.

*Physics and Politics*  
Chapter 5 (p. 145)  
Ivan R. Dee, Publisher. Chicago, Illinois, USA. 1999

**Belinsky, Vissarion Grigorievich** 1811–48

Russian writer and literary critic

In science you must look for ideas. No ideas, no science. Knowledge of the facts is precious, because facts are laden with ideas. Facts without ideas are tripe for the brain and for the memory.

Compiled by V.V. Vorontsov  
*Words of the Wise: A Book of Russian Quotations*  
Translated by Vic Schneierson  
Progress Publishers. Moscow, Russia. 1979

German-Jewish Marxist literary critic and essayist

Ideas are to objects as constellations are to stars.

*The Origin of German Tragic Drama* (p. 34)  
Verso. London, England. 1998

**Bernard, Claude** 1813–78

French physiologist

It is impossible to devise an experiment without a preconceived idea; devising an experiment, we said, is putting a question; we never conceive a question without an idea which invites an answer. I consider it, therefore, an absolute principle that experiments must always be devised in view of a preconceived idea, no matter if the idea be not very clear nor very well defined. As for noting the results of the experiment, which is itself only an induced observation, I posit it similarly as a principle that we must here, as always, observe without a preconceived idea.

Translated by Henry Copley Greene  
*An Introduction to the Study of Experimental Medicine*  
Part One, Chapter I, Section vi (p. 23)  
Henry Schuman, Inc. New York, New York, USA. 1927

The experimental method, then, cannot give new and fruitful ideas to men who have none; it can serve only to guide the ideas of men who have them, to direct their ideas and to develop them so as to get the best possible results. The idea is a seed; the method is the earth furnishing the conditions in which it may develop, flourish, and give

the best fruit according to its nature. But as only what has been sown in the ground will ever grow in it, so nothing will be developed by the experimental method except the ideas submitted to it.

Translated by Henry Copley Greene  
*An Introduction to the Study of Experimental Medicine*  
 Part One, Chapter II, Section ii (p. 34)  
 Henry Schuman, Inc. New York, New York, USA. 1927

If an idea presents itself to us, we must not reject it simply because it does not agree with the logical deductions of a reigning theory.

Translated by Henry Copley Greene  
*An Introduction to the Study of Experimental Medicine*  
 Part One, Chapter II, Section iii (p. 36)  
 Henry Schuman, Inc. New York, New York, USA. 1927

Our ideas are only intellectual instruments which we use to break into phenomena; we must change them when they have served their purpose, as we change a blunt lancet that we have used long enough.

Translated by Henry Copley Greene  
*An Introduction to the Study of Experimental Medicine*  
 Part One, Chapter II, Section iv (p. 41)  
 Henry Schuman, Inc. New York, New York, USA. 1927

When one calls a new fact a discovery, the fact itself is not a discovery, but rather the new idea derived from it ...

*An Introduction to the Study of Experimental Medicine*  
 Part One, Chapter II (p. 53)  
 Henry Schuman, Inc. New York, New York, USA. 1927

There must be a general idea to verify; without that there is no scientist.

Translated by Hebbel H. Hoff, Lucienne Guillemin and Roger Guillemin  
*The Cahier Rouge of Claude Bernard* (p. 117)  
 Schenkman Publishing Co. Cambridge, Massachusetts, USA. 1967

### **Blake, William** 1757–1827

English poet, painter, and engraver

I have heard many people say, “Give me the ideas, it is no matter what words you put them into.... Ideas cannot be given but in their minutely appropriate words,

Chapter I (p. 19)  
 Edward H. Fletcher. New York, New York, USA. 1858

### **Briggs, Robin**

No biographical data available

The history of ideas is at once a fascinating and a difficult subject. Fascinating, since it can so often illuminate our own attitudes and problems by reference to the struggle of previous generations, and can also give a new dimension to past ages. Difficult, because ideas change their meaning and importance according to the context in which they appear, and vary in their significance for different thinkers and different periods.

*The Scientific Revolution of the Seventeenth Century*  
 Foreword (p. ix)

Longman Group Ltd. London, England. 1969

### **Buchanan, Scott** 1895–1968

American educator and philosopher

The clarification of any idea, however, simple or complex it may be, begins with its location on that translucent

phosphorescent surface of man's thought that Plato called opinion or belief.

*Poetry and Mathematics*

Chapter I

The University of Chicago Press. Chicago, Illinois, USA. 1975

**Butler, Samuel** 1612–80

English novelist, essayist, and critic

Every idea has something of the pain and peril of child-birth about it; ideas are just as mortal and just as immortal as organized beings are.

*The Note-books of Samuel Butler* (p. 108)

A. C. Fifield. London, England. 1913

**Camus, Albert** 1913–60

Algerian-French novelist, essayist, and playwright

...we know, and what we really know, practical assent and simulated ignorance...allows us to live with ideas which, if we truly put them to the test, ought to upset our whole life.

Translated by Justin O'Brien

...the force of impressions generally depends on preconceived ideas...

*The Voyage of The Beagle*

Chapter XXI (p. 503)

Heron Books. 1968

**Davy, Sir Humphry** 1778–1829

English chemist

One use of physical science is that it gives definite ideas.

In John Davy

*Memoirs of the Life of Sir Humphry Davy* (Volume 1)

Chapter II (p. 123)

Longman, Rees, Orme, Brown, Green & Longman. London, England. 1836

**de Bono, Edward** 1933–

Maltese psychologist and writer

Pouncing on an idea as soon as it appears kills the idea. Too early and too enthusiastic logical attention either

freezes the idea or forces it into the old moulds. Concentration on an idea isolates it from its surroundings and arrests its growth. The glare of attention inhibits the fertile semi-conscious processes that go to develop an idea.

*New Think: The Use of Lateral Thinking in the Generation of New Ideas* (p. 138)  
Avon Books. New York, New York, USA. 1971

An idea is far more fertile if seduced rather than raped.

*New Think: The Use of Lateral Thinking in the Generation of New Ideas* (p. 139)  
Avon Books. New York, New York, USA. 1971

**Dennett, Daniel Clement** 1942–  
American philosopher

If I were to give an award for the single best idea anyone has ever had, I'd give it to Darwin, ahead of Newton and Einstein and everyone else. In a single stroke, the idea of evolution by natural selection unifies the realm of life, meaning, and purpose with the realm of space and time, cause and effect, mechanism and physical laws.

*Darwin's Dangerous Idea*  
Chapter One, Section 1 (p. 21)  
Simon & Schuster. New York, New York, USA. 1995

**Dewey, John** 1859–1952  
American philosopher and educator

Old ideas give way slowly, for they are more than abstract forms and categories. They are habits, predispositions, deeply engrained attitudes of aversion and preference. Moreover, the conviction persists – though history shows it to be a hallucination – that all the questions that the human mind has asked are questions that can be answered in terms of the alternatives that the questions themselves present. But in fact intellectual progress usually occurs through sheer abandonment of questions together with both of the alternatives they assume – an abandonment that results from their decreasing vitality and a change of urgent interest. We do not solve them: we get over them. Old questions are solved by disappearing, evaporating, while new questions corresponding to the changed attitudes of endeavor and preference take their place. Doubtless the greatest dissolvent in contemporary thought of old questions, the greatest precipitant of new methods, new intention, new problems, is the one effected by the scientific revolution that found its climax in the “Origin of Species.”

*The Influence of Darwin on Philosophy, and Other Essays in Contemporary Thought*  
The Influence of Darwinism on Philosophy, Section IV (p. 19)  
Henry Holt & Company. New York, New York, USA. 1910

To magnify thought and ideas for their own sake apart from what they do (except, once more, esthetically) is to refuse to learn the lesson of the most authentic kind of knowledge – the experimental – and it is to reject the idealism which involves responsibility. To praise think-

ing above action because there is so much ill-considered action in the world is to help maintain the kind of a world in which action occurs for narrow and transient purposes. To seek after ideas and to cling to them as means of conducting operations, as factors in practical arts, is to participate in creating a world in which the springs of thinking will be clear and ever-flowing.

*The Quest for Certainty*  
Chapter V (p. 138)  
Balch & Co. New York, New York, USA. 1929

**Dirac, Paul Adrien Maurice** 1902–84  
English theoretical physicist

It seems that some essentially new physical ideas are here needed.

*The Principles of Quantum Mechanics* (2nd edition)  
Chapter XIII, Section 81 (p. 297)  
At The Clarendon Press. Oxford, England. 1935

...it is a general rule that the originator of a new idea is not the most suitable person to develop it because his fears of something going wrong are really too strong and prevent his looking at the method from a purely detached point of view in the way that he ought to.

*The Development of Quantum Theory* (p. 24)  
Gordon & Breach Science. New York, New York, USA. 1971

**Dobzhansky, Theodosius** 1900–75  
Russian-American scientist

Great ideas often seem simple and self-evident, but only after somebody has explained them to us. Then, how interesting they become! The act of insight is among the most exciting and pleasurable experiences a scientist can have, when he recognizes what all the time was there to be seen, and yet he did not see it.

In Robert M. Hutchins and Mortimer J. Adler (eds.)  
*The Great Ideas 1974*  
Advancement and Obsolescence in Science (p. 56)  
Encyclopedia Britannica, Inc. Chicago, Illinois, USA. 1952

A new idea is unforeseeable until it has been germinated in somebody's mind, and a new discovery is not guaranteed until at least a glimmer of it is seen.

In Robert M. Hutchins and Mortimer J. Adler  
*The Great Ideas of Today 1974*  
Advancement and Obsolescence in Science (p. 61)  
Encyclopedia Britannica, Inc. Chicago, Illinois, USA. 1952

**Doyle, Sir Arthur Conan** 1859–1930  
Scottish writer

One's ideas must be as broad as Nature if they are to interpret Nature.

In William S. Baring-Gould (ed.)  
*The Annotated Sherlock Holmes* (Volume 1)  
*A Study in Scarlet*, Chapter 5 (p. 179)  
Wings Books. New York, New York, USA. 1967

**Drexler, K. Eric** 1955–  
American nanotechnology engineer and researcher, and futurist

Because of our superficial self-awareness, we often wonder where an idea in our heads came from. Some people imagine that these thoughts and feelings come directly from agencies outside their own minds; they incline towards a belief in haunted heads.

*Engines of Creation*

Chapter 5 (p. 67)

Anchor Press/Doubleday. Garden City, New York, USA. 1986

**Duckworth, Eleanor** 1935–

Psychologist

The having of wonderful ideas is what I consider to be the essence of intellectual development.

The Having of Wonderful Ideas

*Harvard Educational Review*, May, 1972 (p. 218)

Wonderful ideas cannot spring out of nothing. They build on a foundation of other ideas.

The Having of Wonderful Ideas

*Harvard Educational Review*, May, 1972 (pp. 222–223)

Wonderful ideas build on other wonderful ideas. They are not had without content...

The Having of Wonderful Ideas

*Harvard Educational Review*, May, 1972 (p. 224)

**Easton, William**

No biographical data available

A creative thinker evolves no new ideas. He actually evolves new combinations of ideas that are already in his mind.

In Alex F. Osborn

Chapter I (p. 28)

J.B. Lippincott &amp; Co. Philadelphia, Pennsylvania, USA. 1870

**Feyerabend, Paul K.** 1924–94

Austrian-born American philosopher of science

There is no idea, however, ancient and absurd, that is not capable of improving our knowledge.

*Against Method: Outline of an Anarchistic Theory of Knowledge*

Chapter 4 (p. 47)

Verso. London, England. 1978

**Feynman, Richard P.** 1918–88

American theoretical physicist

...there are great ideas developed in the history of man, and these ideas do not last unless they are passed purposely and clearly from generation to generation.

*The Meaning of It All: Thoughts of a Citizen Scientist*

Chapter I (p. 4)

Perseus Books. Reading, Massachusetts, USA. 1998

There is no authority who decides what is a good idea. We have lost the need to go to an authority to find out whether an idea is true or not. We can read an authority and let him suggest something; we can try it out and find out if it is true or not. If it is not true, so much the worse – so the “authorities” lose some of their functions.

*The Meaning of It All: Thoughts of a Citizen Scientist*

Chapter I (p. 21)

Perseus Books. Reading, Massachusetts, USA. 1998

...the idea [to get rid of the infinite self-energies in the classical theory] seemed so obvious to me and so elegant that I fell deeply in love with it. And, like falling in love with a woman, it is only possible if you do not know much about her, so you cannot see her faults.

*Nobel Lectures, Physics 1963–1970*The Development of the Space-Time View of Quantum Electrodynamics  
Elsevier Publishing Co. Amsterdam, The Netherlands. 1972**Gaarder, Jostein** 1952–

Norwegian intellectual

The Idea is much too big for my little head.

Translated by Paulette Møller

*Sophie's World: A Novel about the History of Philosophy*

The Big Bang

Farrar, Straus &amp; Giroux New York, New York, USA. 1994

**Gould, Stephen Jay** 1941–2002

American paleontologist, evolutionary biologist, and historian of science

It is easy to dismiss a crazy theory with laughter that debars any attempt to understand a man's motivation – and the nummulosphere is a crazy theory. I find that few men

of imagination are not worth my attention. Their ideas may be wrong, even foolish, but their methods often repay a close study. Few honest passions are not based upon some valid perception of unity or some anomaly worthy of note. The different drummer often beats a fruitful tempo.

*The Panda's Thumb: More Reflections in Natural History*

Chapter 22 (pp. 234–235)

W.W. Norton &amp; Company, Inc. New York, New York, USA. 1980

**Hadamard, Jacques** 1865–1963

French mathematician

The ideas chosen by my unconscious are those which reach my consciousness, and I see that they are those which agree with my aesthetic sense.

*The Psychology of Invention in the Mathematical Field* (p. 39)

Princeton University Press. Princeton, New Jersey, USA. 1945

**Hare, Augustus William** 1834–1903

English writer and raconteur

**Hare, Julius Charles** 1795–1855

English theological writer

Notions may be imported by books from abroad; ideas must be grown at home by thought.

*Guesses at Truth* (3rd edition) (p. 3)

Printed for Walton &amp; Maberly. London, England. 1855

**Harrison, Edward Robert** 1919–2007

English-born American cosmologist

Ideas, once born, seemingly have a life of their own. Like germs they breed, spread, mutate, and catch their invaded victims by surprise. When and where an idea originated is often unknown, and many a person believes the idea, as recounted by him, springs unprompted from the recesses of his own mind. A thought drifts as light as thistledown, and sensitive minds responding to its novel vibrations “independently” discover the new idea.

*Masks of the Universe*

Chapter 6 (p. 87)

Macmillan Publishing Company. New York, New York, USA. 1985

**Hayes, Brian**

American scientist, columnist, and author

The nature of the mathematical enterprise may raise the stakes even higher than they are elsewhere in the world of science and scholarship. In other fields, an idea that proves fruitful for a time but eventually has to be discarded is counted a partial success. In mathematics, a proof that turns out to have a serious flaw is nothing but an embarrassment.

Aftermath

*The Emissary*, Fall 1999 (p. 13)**Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

... we see from these formulations how difficult it is when we try to push new ideas into an old system of concepts belonging to an earlier philosophy, or, to use an old metaphor, when we attempt to put new wine into old bottles. Such attempts are always distressing, for they mislead us into continually occupying with the inevitable cracks in the old bottles, instead of rejoicing over the new wine.

In Wolfgang Pauli (ed.)

Develop a honeybee mind, gathering ideas everywhere and associating them fully.

But You Don't Understand the Problem

*Electronic News*, July 17, 1967

### **Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

Man's claim to have progressed far beyond his fellow animals must be supported, not by his search for food, warmth, and shelter (however ingeniously conducted) but by his penetration into the very fabric of the Universe. It is in the world of ideas and in the relation of his brain to the Universe itself that the superiority of Man lies. The rise of Man may just be described as an adventure in ideas.

*Frontiers of Astronomy*

Chapter One (p. 1)

Harper & Row, Publishers. New York, New York, USA. 1955

### **Hugo, Victor** 1802–85

French author, lyric poet, and dramatist

Man is not a circle with a single centre; he is an ellipse with two foci. Facts are one, ideas are the other.

*Les Miserables*

Volume 4, Book VII, Chapter 1 (p. 257)

The Heritage Press. New York, New York, USA. 1938

An idea is a meteor; at the moment of success, the accumulated meditations which have preceded it open a little, and a spark flashes forth from it...

Translated by Isabel F. Hapgood

*The Toilers of the Sea*

Part I, Book Sixth, Chapter VI (p. 255)

The Heritage Press. New York, New York, USA. 1961

Scientific ideas compete in an open marketplace. Each offers the possibility of a plausible solution to what might be a potentially significant problem. In its promise, an idea will attract other scientists – fellow explorers who will articulate, criticize, and ultimately determine the idea's actuality. While these explorers can breathe life into an idea, their absence or defection leads to its death. Ideas without recruits become like Bishop Berkeley's proverbial unheard falling tree.

Personal and Impersonal Channels of Recruitment in the Growth of Theory  
*Human Development*, Volume 16, 1973 (p. 133)

### **Langer, Susanne Katherina Knauth** 1895–1985

American philosopher

The limits of thought are not so much set from outside, by the fullness or poverty of experiences that meet the mind, as from within, by the power of conceptions, the wealth of formulative notions with which the mind meets experience.... A new idea is a light that illuminates presences which simply had no form for us before the light fell on them.

*Philosophy in a New Key*

Chapter I (p. 8)

Harvard University Press. Cambridge, Massachusetts, USA. 1957

**Lavoisier, Antoine Laurent** 1743–94

French chemist

Like three impressions of the same seal, the word ought to produce the idea, and the idea to be a picture of the fact.

*Elements of Chemistry in a New Systematic Order*

Preface of the Author (p. xiv)

Printed for William Creech. Edinburgh, Scotland. 1790

When we begin the study of any science, we are in a situation, respecting that science, similar to that of children; and the course by which we have to advance is precisely the same which Nature follows in the formation of their ideas. In a child, the idea is merely an effect produced by a sensation; and, in the same manner, in commencing the study of a physical science, we ought to form no idea but what is a necessary consequence, and immediate effect, of an experiment or observation.

*Elements of Chemistry in a New Systematic Order*

Preface of the Author (p. xvi)

Printed for William Creech. Edinburgh, Scotland. 1790

**Lederman, Leon** 1922–

American high-energy physicist

If the basic idea is too complicated to fit on a T-shirt, it's probably wrong.

In Timothy Ferris (ed.)

On the theory of probabilities, the odds in every generation are a billion to one against the originator of an idea being right and the world wrong. This formidable preponderance of numbers against him has doubtless awed many a timid, but correct, thinker into silence, and cast many a stone in the path of human progress.

*From Nebula to Nebula*

Introduction (p. 15)

Privately printed. Pittsburgh, Pennsylvania, USA. 1917

**Ley, Willy**

American scientist

The study of an idea is, of necessity, the story of many things. Ideas, like large rivers, never have just one source. Just as the water of a river near its mouth, in its final form, is composed largely of many tributaries, so an idea, in its final form, is composed largely of later additions.

*Rockets, Missiles and Space Travel*

Chapter 1 (p. 3)

The Viking Press. New York, New York, USA. 1951

**Locke, John** 1632–1704

English philosopher and political theorist

...there seems to be a constant decay of all our ideas; even of those which are struck deepest, and in minds the

most retentive; so that if they be not sometimes renewed, by repeated exercises of the senses, or reflection on those kinds of objects which at first occasioned them, the print wears out, and at last there remains nothing to be seen.

In *Great Books of the Western World* (Volume 35)

*An Essay Concerning Human Understanding*

Book II, Chapter X, Section 5 (p. 143)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Ideas in mathematics are a sure ground of certainty; and yet everyone may not make so right an use of them, as to attain to certainty by them: but yet anyone's failing of certainty by them, is not the overturning of this truth, that certainty is to be had by them.

*The Works of John Locke*

A Letter to the Right Rev. Edward Lord Bishop of Worcester (p. 56)

Printed for Thomas Tegg. London, England. 1823

**Lowell, Percival** 1855–1916

American astronomer

Only the accustomed and the commonplace do men take kindly at once. The strange terrifies them. It is with ideas in men as with unfamiliar sights in beasts. Both shy at first at what they have never seen before. Scientists and layman alike are afraid to commit themselves to that upon which they have not been brought up.

In William Graves Hoyt

*Lowell and Mars*

Chapter 15 (p. 298)

University of Arizona Press. Tucson, Arizona, USA. 1976

An idea... is a mode of motion, not in any figurative sense but in an actual one, and as such possesses inertia. That is, it takes force to start it going; and once set going, force to make it stop. A new idea entering the field encounters, opposed to it, the momentum of those already there. It has got to overcome this before it can prevail. Then it in turn grows hard to oust. The ripple of yesterday has become the roller of today. The despised is not the despotic.

In William Graves Hoyt

*Lowell and Mars*

Chapter 15 (p. 300)

University of Arizona Press. Tucson, Arizona, USA. 1976

**Lyttleton, R. A.**

English astronomer

A new idea may be likened to a new-born babe: it is to be carefully nurtured and given every consideration rather than attacked with the choking diet of a multitude of so-called facts because it cannot prove at once that it will one day grow into a Samson.

In Ronald Duncan and Miranda Weston-Smith (eds.)

*The Encyclopaedia of Ignorance: Everything You Ever Wanted to Know About the Unknown*

The Nature of Knowledge (p. 11)

Pergamon Press. Oxford, England. 1977

Definition Press. New York, New York, USA. 1972

**Spencer, Herbert** 1820–1903

English social philosopher

Early ideas are not usually true ideas.

*The Principles of Biology* (Volume 1)

Part III, Chapter II, Section 110 (p. 333)

D. Appleton &amp; Company. New York, New York, USA. 1897

Inquiring into the pedigree of an idea is not a bad means of roughly estimating its value. To have come of respectable ancestry, is *prima facie* evidence of worth in a belief as in a person; while to be descended from a discreditable stock is, in the one case as in the other, an unfavourable index.

*Essays, Scientific, Political, and Speculative* (Volume 1)

The Nebular Hypothesis (p. 108)

D. Appleton &amp; Co. New York, New York, USA. 1898

**Stewart, Ian** 1945–

English mathematician and science writer

Really good mathematical ideas are hard to come by. They result from the combined work of many people over long periods of time. Their discovery involves wrong turnings and intellectual dead ends. They cannot be proved at will: truly novel mathematics is not amenable to an industrial “Research and Development” approach. But they pay for all that effort by their durability and versatility.

*The Problems of Mathematics*

Chapter 1 (pp. 11–12)

Oxford University Press, Inc. Oxford, England. 1987

**Stinton, D.**

No biographical data available

One should never have too much reverence for ideas, no matter whose they are. Ideas are meant to be kicked around, stood upon their heads, and looked at backwards through mirrors. It is only in this way that they can grow up in the way that they should, without excessive self-importance. The ideas of one man are the food for thought of another.

*The Anatomy of the Aeroplane*

Preface (p. ix)

American Elsevier Publishing Company. New York, New York, USA. 1966

**Thagard, Paul**

No biographical data available

Because the variation, selection, and transmission of scientific ideas differ in such fundamental ways from their biological analogs, Darwinian natural selection provides a poor model for understanding the growth of science. It misleadingly suggests that variation in scientific ideas is blind, that their selection is by local criteria, and that their transmission is genetic. It ignores the pragmatic, problem-solving context of induction. Thus employment of the evolutionary analogy leads away from solutions to important problems about the growth of knowledge, not toward them. Hence, evolutionary epistemology, conceived as the application of the Darwinian model to scientific development, should be abandoned.

*Computational Philosophy of Science*

Chapter 6 (pp. 110–111)

MIT Press. Cambridge. 1988

**Thomson, James** 1700–48

Scottish poet

Ten thousand great ideas filled his mind;  
But with the clouds they fled, and left no trace behind.

*Castle of Indolence*

Canto I, stanza 59

William Smith. London, England. 1842

**Toulmin, Stephen** 1922–

Anglo-American English philosopher

**Goodfield, June**

Science writer and historian

New ideas are the tools of science, not its end-product. They do not *guarantee* deeper understanding, yet our grasp of Nature will be extended only if we are prepared to welcome them and give them a hearing. If at the outset exaggerated claims are made on their behalf, this need not matter. Enthusiasm and deep conviction are necessary if men are to explore all possibilities of any new idea, and later experience can be relied on either to confirm or to moderate the initial claims – for science flourishes on a double programme of speculative liberty and unsparing criticism.

*The Architecture of Matter*

Chapter 2 (p. 41)

The University of Chicago Press. Chicago, Illinois, USA. 1982

**Trotter, Wilfred** 1872–1939

Surgeon and sociologist

The mind likes a strange idea as little as the body likes a strange protein, and resists it with similar energy. It would

not be too fanciful to say that a new idea is the most quickly acting antigen known to science. If we watch ourselves honestly we shall often find that we have begun to argue against a new idea before it has been completely stated.

*Collected Papers*

Has the Intellect a Function?

Oxford University Press, Inc. Oxford, England. 1941

It is a mistake to suppose, as it is so easy to do, that science enjoins upon us the view that any given idea is true or false and there is an end of it; an idea may be neither demonstrably true nor false and yet be useful, interesting, and good exercise. Again, it is poverty rather than fertility of ideas that causes them to be used as a substitute for experiment, to be fought for with prejudice or decried with passion. When ideas are freely current they keep science fresh and living and are in no danger of ceasing to be the nimble and trusty servants of truth. We may perhaps allow ourselves to say that the body of science gets from the steady work of experiment and observation its proteins, its carbohydrates, and – sometimes too profusely – its fats, but that without its due modicum of the vitamin of ideas the whole organism is apt to become stunted and deformed, and above all to lose its resistance to the infection of orthodoxy.

Observation and Experiment and Their Use in the Medical Science  
*British Medical Journal*, July 26, 1930 (p. 132)

**Tucker, Abraham** 1705–74

English writer

...an idea, on being displaced by another, does not wholly vanish, but leaves a spice and tincture of itself behind, by which it operates with a kind of attraction upon the subsequent ideas, determining which of their associates they shall introduce, namely such as carry some conformity with itself.... This regular succession of ideas, all bearing a reference to some one purpose retained in view, is what we call a train; and daily experience testifies how readily they follow one another in this manner of themselves, without any pains or endeavor of ours to introduce them.

*The Light of Nature Pursued* (Volume 1)

Trains (p. 147)

Hilliard & Brown. Cambridge, England. 1831

**Twain, Mark (Samuel Langhorne**

**Clemens)** 1835–1910

American author and humorist

His head was an hour-glass; it could stow an idea, but it had to do it a grain at a time, not the whole idea at once.

*A Connecticut Yankee in King Arthur's Court*

Chapter XXVIII (p. 255)

Harper & Brothers. New York, New York, USA. 1899

**von Bubnoff, S.**

No biographical data available

The logical continuity of science is only a pious wish; the progress of knowledge is erratic and irrational. Ideas die not because they are wrong but because they find no substance and are reborn and become capable of development when the substance is available.

Chapter V, Section 1 (p. 142)

Unwin Paperbacks. London, England. 1980

**von Humboldt, Alexander** 1769–1859

German naturalist and explorer

Undue conciseness often checks the flow of expression, whilst diffuseness is alike detrimental to a clear and precise exposition of our ideas.

*Cosmos* (Volume I)

Introduction (p. 1)

Henry G. Bohn. London, England. 1849

**von Liebig, Justus** 1803–73

German organic chemist

Numberless germs of intellectual life fill the universe, but it is only in a few rare minds that these germs find a soil in which they can be developed. In these chosen minds the idea, whose origin is unknown, shows its vitality in creative acts; in them, the mysterious laws of nature assume a form, efficient, active, and recognisable by all.

*Familiar Letters on Chemistry*

Letter IV (p. 63)

Walton & Maberly. London, England. 1859

**Wallace, Alfred Russel** 1823–1913

English humanist, naturalist, and geographer

...I have long since come to see that no one deserves either praise or blame for the ideas that come to him, but only for the actions resulting there from. Ideas and beliefs are certainly not voluntary acts. They come to us – we hardly know how or whence, and once they have got possession of us we cannot reject or change them at will. It is for the common good that the promulgation of ideas should be free – uninfluenced by either praise or blame, reward or punishment.

The Origin of the Theory of Natural Selection

*Popular Science Monthly*, Volume 74, 1909 (p. 400)

**Weber, Max** 1864–1920

German founder of modern sociology and economic thinker

Ideas come in their own good time, not when we want them. In fact, the best ideas occur to us while smoking a cigar on the sofa, as Ihering says, or during a walk up a gently rising street, as Helmholtz observes of himself with scientific precision, or in some such way. At any rate, ideas come when they are least expected, rather than while you are racking your brains at your desk.

Translated by Rodney Livingstone

*The Vocation Lectures*

Science as a Vocation (p. 9)

Hackett Publishing Company. Indianapolis, Indiana, USA. 2004

### Weidlein, Edward Ray

Chemical engineer

If one were asked to name the most dynamic force in the known universe, he might grope for some time before he made a hesitant choice, wavering between such imponderables as the power of the sun and the energy hidden within the atom. His reluctant choice in any event would probably be wrong – for the most powerful force known to man still is an idea.

Cooperation – A Responsibility of the Scientist

*American Scientist*, March, 1962 (p. 29)

### Weil, André 1906–98

French mathematician

...the ability to recognize mathematical ideas in obscure and inchoate form, and to trace them under the many disguises which they are apt to assume before coming out in full daylight, is most likely to be coupled with a better than average mathematical talent. More than that, it is an essential component of such talent, since in large part the art of discovery consists in getting a firm grasp on the vague ideas which are “in the air,” some of them flying all around us, some (to quote Plato) floating around in our own minds.

In Raymond George Ayoub

*Musings of the Masters: An Anthology of Mathematical Reflections*

History of Mathematics (p. 207)

Mathematical Association of America. Washington, D.C. 2004

In the future, as in the past, the great ideas [of mathematics] must be simplifying ideas, the creator must always be one who clarifies, for himself, and for others, the most complicated issues of formulas and concepts.

In Peter L. Duren, Richard Askey, Uta C. Merzbach and Harold M. Edwards (eds.)

*A Century of Mathematics in America* (Volume 3)

The Future of Mathematics (p. 334)

American Mathematical Society. Providence, Rhode Island, USA. 1989

### Weisskopf, Victor Frederick 1908–2002

Austrian-American physicist

...it is not surprising that, after a long period of searching and erring, some of the concepts and ideas in human thinking should have come gradually closer to the fundamental laws of this world...

*Knowledge and Wonder: The Natural World as Man Knows It*

Epilogue (p. 270)

Doubleday & Company. Garden City, New York, USA. 1966

### Wells, H. G. (Herbert George) 1866–1946

English novelist, historian, and sociologist

...he had ideas about everything. He could no more help having ideas about everything than a dog can resist smelling at your heels.

*Mr. Britling Sees It Through*

Book I, Chapter I, Section 2 (p. 10)

The Macmillan Company. New York, New York, USA. 1917

### Wheeler, John Archibald 1911–

American physicist and educator

To my mind there must be, at the bottom of it all, not an equation, but an utterly simple idea. And to me that idea, when we finally discover it, will be so compelling, so inevitable, that we will say to one another, “Oh, how beautiful. How could it have been otherwise.”

In Timothy Ferris (ed.)

*Coming of Age in the Milky Way*

Chapter 17 (p. 346)

William Morrow & Company, Inc. New York, New York, USA. 1988

### Whewell, William 1794–1866

English philosopher and historian

With his ideas unfolded by education, sharpened by controversy, rectified by metaphysics, he [Man] may *understand* the natural world, but he cannot *invent* it.

*The Philosophy of the Inductive Sciences, Founded Upon Their History* (Volume 2)

Book XIII, Chapter IV (p. 379)

John W. Parker. London, England. 1847

The cultivation of ideas is to be conducted as having for its object the connexion of facts; never to be pursued as a mere exercise of the subtilty of the mind, striving to build up a world of its own, and neglecting that which exists about us.

*The Philosophy of the Inductive Sciences, Founded Upon Their History* (Volume 2)

Book XIII, Chapter IV (p. 379)

John W. Parker. London, England. 1847

Ideas are not transformed, but informed Sensations; for without ideas, sensations have no form.

*The Philosophy of the Inductive Sciences: Founded Upon Their History* (Volume 2) (2nd edition)

Aphorisms Concerning Ideas (p. 444)

John W. Parker. London, England. 1847

Facts are the materials of science, but all Facts involve Ideas. Since, in observing Facts, we cannot exclude Ideas, we must, for the purposes of science, take care that the Ideas are clear and rigorously applied.

*The Philosophy of the Inductive Sciences Founded Upon Their History* (Volume 2)

Aphorisms, Aphorisms Concerning Science, IV (p. 467)

John W. Parker. London, England. 1847

Scientific Ideas can often be adequately exhibited for all the purposes of reasoning, by means of Definitions and Axioms; all attempts to reason by means of Definitions from common Notions, lead to empty forms or entire confusion.

*History of the Inductive Sciences from the Earliest to the Present Time* (3rd edition)

Introduction (p. 13)

John W. Parker & Son. London, England. 1857

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

To talk sense is to talk quantities.

*The Aims of Education and Other Essays*

Chapter I (p. 11)

The Macmillan Company. New York, New York, USA. 1959

If you have had your attention directed to the novelties in thought in your own lifetime, you will have observed that almost all really new ideas have a certain aspect of foolishness when they are first produced.

*Science and the Modern World*

Chapter III (p. 70)

The Macmillan Company. New York, New York, USA. 1929

...traditional ideas are never static. They are either fading into meaningless formulae, or are gaining power by the new lights thrown by a more delicate apprehension. They are transformed by the urge of critical reason, by the vivid evidence of emotional experience, and by the cold certainties of scientific perception. One fact is certain, you cannot keep them still.

*Science and the Modern World*

Chapter XII (p. 269)

The Macmillan Company. New York, New York, USA. 1929

In the study of ideas, it is necessary to remember that insistence on hard-headed clarity issues from sentimental feeling, as it were a mist, cloaking the perplexities of fact. Insistence on clarity at all costs is based on sheer superstition as to the mode in which human intelligence functions. Our reasonings grasp at straws for premises and float on gossamers for deductions.

*Adventures of Ideas*

Chapter V (p. 91)

The Macmillan Company. New York, New York, USA. 1956

**Wilde, Oscar** 1854–1900

Irish wit, poet, and dramatist

He played with the idea, and grew willful; tossed it into the air and transformed it; let it escape and recaptured it; made it iridescent with fancy, and winged it with paradox.

*The Picture of Dorian Gray*

Chapter 3 (p. 46)

The Modern Library. New York, New York, USA. 1992

**Wilson, Edward O.** 1929–

American biologist and author

These whispering denizens of the mind are sensed but rarely seen. They rustle the foliage, leave behind a pug mark filling with water and a scent, excite us for an instant and vanish. Most ideas are waking dreams that fade to an emotional residue.

*The Diversity of Life*

Chapter One (p. 8)

W.W. Norton & Company, Inc. New York, New York, USA. 1992

Keep in mind that new ideas are commonplace, and almost always wrong. Most flashes of insight lead nowhere; statistically, they have a half-life of hours or maybe days. Most experiments to follow up the surviving insights are tedious and consume large amounts of time, only to yield negative or (worse!) ambiguous results.

Scientists, Scholars, Knaves and Fools

*American Scientist*, Volume 86, January–February, 1998 (p. 6)

**Wittgenstein, Ludwig Josef Johann** 1889–1951

Austrian-born English philosopher

Ideas too sometimes fall from the tree before they are ripe.

Translated by Peter Winch

*Culture and Value* (p. 27e)

The University of Chicago Press. Chicago, Illinois, USA. 1980

Sometimes you see the idea in the way an astronomer sees stars in the far distance. (Or it seems like that anyway.)

Translated by Peter Winch

*Culture and Value* (p. 58e)

The University of Chicago Press. Chicago, Illinois, USA. 1980

**Wright, Thomas** 1711–86

English cosmologist

...the author having dug all his Ideas from the Mines of Nature, is surely entitled to every kind of Indulgence.

*An Original Theory or New Hypothesis of the Universe*

Preface (p. iv)

Printed for the Author. London, England. 1750

## IDEAS

**Berkeley, George** 1685–1753

Irish prelate and metaphysical philosopher

Things remaining the same, our ideas vary, and which of them, or even whether any of them at all, represent the true quality really existing in the thing, it is out of our reach to determine. So that, for aught we know, all we see, hear, and feel, may be only phantom and vain chimera ...

In Alexander Campbell Fraser

*Selections from Berkeley* (3rd edition)

Principles of Human Knowledge: Part I (p. 96)

At The Clarendon Press. Oxford, England. 1884

**Bernard, Claude** 1813–78

French physiologist

Our feelings lead us at first to believe that absolute truth must lie within our realm; but study takes from us, little by little, these chimerical conceits.

Translated by Henry Copley Green

*An Introduction to the Study of Experimental Medicine*

Part Two, Chapter 3 (p. 82)

Henry Schuman, Inc. New York, New York, USA. 1949

**Burroughs, John** 1837–1921

American naturalist and essayist

Birds and squirrels come home to us all in a way that speculative ideas do not.

*The Writings of John Burroughs* (Volume 19)

Preface (p. v)

Houghton, Mifflin. Boston, Massachusetts, USA. 1916

## IDEOLOGY

**Gould, Stephen Jay** 1941–2002

American paleontologist, evolutionary biologist, and historian of science

Biological determinism is, in its essence, a theory of limits. It takes the current status of groups as a measure of where they should and must be... We inhabit a world of human differences and predilections, but the extrapolation of these facts to theories of rigid limits is ideology.

*The Mismeasure of Man*

Chapter One (p. 60)

W.W. Norton & Company, Inc. New York, New York, USA. 1996

## IDLER

**Johnson, Samuel** 1696–1772

English critic, biographer, and essayist

Among those whom I never could persuade to rank themselves with Idlers, and who speak with indignation of my morning sleeps and nocturnal rambles; one passes the day in catching spiders, that he may count their eyes with a microscope; another erects his head, and exhibits the dust of a marigold separated from the flower with a dexterity worthy of Leuwenhoeck himself. Some turn the wheel of electricity; some suspend rings to a load-stone, and find that what they did yesterday they can do again today. Some register the changes of the wind, and die fully convinced that the wind is changeable.

*The Idler*

Number 17 (p. 58)

William Durell. New York, New York, USA. 1811

## IDOL

**Bacon, Sir Francis** 1561–1626

English lawyer, statesman, and essayist

...the doctrine of idols bears the same relation to the interpretation of nature, as that of confutation of sophisms does to common logic.... It is the peculiar and perpetual error of the human understanding to be more

moved and excited by affirmations than by negations; whereas it ought duly and regularly to be impartial; nay, in establishing any true axiom, the negative instance is the most powerful.

In *Great Books of the Western World* (Volume *Novum Organum*)

First Book (pp. 109, 110)

Encyclopaedia Britannica, Inc. Chicago, Illinois, USA. 1952

**de Morgan, Augustus** 1806–71

English mathematician and logician

The history of the intellectual world is the history of the worship of one idol after another.

*A Budget of Paradoxes* (Volume 1) (2nd edition)

Basis of Modern Discovery (p. 89)

The Open Court Publishing Co. Chicago, Illinois, USA. 1915

## IGNORANCE

**Adams, George** 1750–95

English instrument maker

The natural propensity of the human mind to know the cause of every effect often leads men into errors, and makes them satisfied with a word which does not remove their ignorance.

*Lectures on Natural and Experimental Philosophy* (Volume 1)

Lecture I (p. 14)

Printed by R. Hindmarsh. London, England. 1794

**Ansted, David Thomas** 1814–80

English geologist

Ignorance is bold, and takes high but useless flights; true knowledge is modest, and limits her flight to what she knows she can accomplish safely.

*The Great Stone Book of Nature*

The Book of Nature (p. 5)

Macmillan & Co Ltd. London, England. 1864

Ignorance, having few facts, loses sight of all in her endeavors to generalize; knowledge, with many facts, finds it difficult so to arrange them as to obtain the conclusions they properly warrant.

*The Great Stone Book of Nature*

The Book of Nature (p. 23)

George W. Childs. Philadelphia, Pennsylvania, USA. 1863

**Bernstein, Jeremy** 1929–

American physicist, educator, and writer

Ignorance of science and technology is becoming the ultimate self-indulgent luxury.

*Cranks, Quarks, and the Cosmos: Writings on Science*

Chapter 16 (p. 202)

Basic Books. New York, New York, USA. 1993

**Berry, Arthur**

No biographical data available

The larger the sphere of our knowledge, the greater its contact with the infinity of our ignorance.

*A Short History of Astronomy*

Chapter XIII  
Volume 83, Number 1, January, 1978 (p. 354)  
John Murray. London, England. 1898

### Bertotti, Bruno

Physicist

The catalogue of our ignorance has two, not one, gates: there is the obvious exit gate, through which questions answered and settled by experimental and theoretical developments march out and disappear into the textbooks and the applications; but there is also a more important, albeit less perspicuous, entrance gate, through which new riddles come to life in the scientific world.

*The Encyclopaedia of Ignorance: Everything You Ever Wanted to Know About the Unknown*

The Riddles of Gravitation (p. 92)  
Pergamon Press. Oxford, England. 1977

### Brecht, Bertolt 1898–1956

German writer

GALILEO: Truth is born of the times, not of authority. Our ignorance is limitless: let us lop one cubic millimeter off it. Why try to be clever now that we at last have a chance of being just a little less stupid?

Translated by John Willett

*Life of Galileo*

Scene 4 (p. 42)

Arcade Publishing. New York, New York, USA. 1994

### Bruno, Giordano 1548–1600

Italian philosopher and pantheist

Ignorance is the most delightful science in the world because it is acquired without labor or pains and keeps the mind from melancholy.

In David Starr Jordan

*The Higher Foolishness, with Hints as to the Care & Culture of Aristocracy; Followed by Brief Sketches on Ecclesiasticism, Science & the Unfathomed Universe*

Title page

The Bobbs-Merrill Company. Indianapolis, Indiana, USA. 1927

### Cooper, James Fenimore 1789–1851

American writer

Ignorance and superstition ever bear a close, and even a mathematical relation to each other.

*Jack Tier Or the Florida Reef*

Chapter 3 (p. 368)

Hurd & Houghton. London, England. 1871

### Cuvier, Georges 1769–1832

French zoologist and statesman

The time is past for ignorance to assert that these remains of organized bodies are mere *lusus naturae* – productions generated in the womb of the earth by its own creative powers.

*An Essay on the Theory of the Earth*

Section 4 (p. 31)

Kirk & Mercein. New York, New York, USA. 1818

### Darwin, Charles Robert 1809–82

English naturalist

It has often and confidently been asserted that man's origin can never be known: but ignorance more frequently begets confidence than does knowledge: it is those who know little, and not those who know so much, who so positively assert that this or that problem will never be solved by science.

In *Great Books of the Western World* (Volume 49)

*The Descent of Man*

Introduction (p. 253)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### Davy, Sir Humphry 1778–1829

English chemist

Man is formed for pure enjoyment; his duties are high, his destination is lofty; and he must, then, be most accused of ignorance and folly when he grovels in the dust, having wings which can carry him to the skies.

*Humphry Davy on Geology: The 1805 Lectures for the General Audience*

Introductory Lecture for the Courses of 1805 (p. 9)

The University of Wisconsin Press. Madison, Wisconsin, USA. 1980

### de Luc, Jean André 1773–1817

Swiss naturalist

...a considerable obstruction to the real advancement of science, the progress of which is much less retarded by ignorance than by error.

Translated by Henry de La Fite

*An Elementary Treatise on Geology*

Preliminary Discourse on Geology (p. 1)

F.C. & J. Rivington. London, England. 1809

### Duke of Argyll (George Douglas

**Campbell) 1823–1900**

English statesman and writer on science, religion, and politics

Without a sense of ignorance there could be no desire of knowledge, and without his desire of knowledge man would not be man.

*The Unity of Nature*

Chapter 9 (p. 188)

G.P. Putnam's Sons. New York, New York, USA. 1885

### Duncan, Ronald

No biographical data available

### Weston-Smith, Miranda

No biographical data available

Compared to the pond of knowledge, our ignorance remains Atlantic.

*The Encyclopaedia of Ignorance: Everything You Ever Wanted to Know About the Unknown*

Editorial Preface (p. ix)

Pergamon Press. Oxford, England. 1977

### Eddington, Sir Arthur Stanley 1882–1944

English astronomer, physicist, and mathematician

Nowadays whenever enthusiasts meet together to discuss theoretical physics the talk sooner or later turns in a certain direction. You leave them conversing on their special problems or the latest discoveries; but return after an hour and it is any odds that they will have reached an all-engrossing topic – the desperate state of their ignorance.

*The Nature of the Physical World*

Chapter IX (p. 179)

D. Appleton & Co. New York, New York, USA. 1900

**Eliot, T. S. (Thomas Stearns)** 1888–1965

American expatriate poet and playwright

In order to arrive at what you do not know

You must go by a way which is the way of ignorance.

*The Collected Poems and Plays 1909–1950*

East Coker, Part III, stanza 2 (p. 127)

Harcourt, Brace & World, Inc. New York, New York, USA. 1952

**Faraday, Michael** 1791–1867

English physicist and chemist

At present we are accustomed to admit action at sensible distances, as of one magnet upon another, or of the sun upon the earth, as if such admission were itself a perfect answer to any inquiry into the nature of the physical means which cause distant bodies to affect each other; and the man who hesitates to admit the sufficiency of the answer, or of the assumption on which it rests, and asks for a more satisfactory account, runs some risk of appearing ridiculous or ignorant before the world of science.

*Experimental Researches in Electricity* (Volume 3)

The Same – And on the Nature of Force (p. 570)

Bernard Quaritch. London, England. 1855

**Fisher, Sir Ronald Aylmer** 1890–1962

English statistician and geneticist

The precise specification of our knowledge is, however, the same as the precise specification of our ignorance.

*Statistical Methods and Scientific Inference*

Chapter II (pp. 28–29)

Hafner Publishing Company. New York, New York, USA. 1959

**Franklin, Alfred**

No biographical data available

Men are enclosed in their own ignorance as in a prison with slowly receding walls. Unable to see beyond, they marvel at the vastness of their mansion without ever suspecting the existence of an infinite world outside.

In Charles Noël Martin

*The Role of Perception in Science*

Conclusion (p. 138)

Hutchinson of London. London, England. 1963

**Gilbert, G. K.** 1843–1918

American geologist

It is not altogether pleasant to deal with a subject in regard to which domain of our ignorance is so broad; but

if we are optimists we may be comforted by the reflection that the geologists of this generation, at least, will have no occasion like Alexander, to lament a dearth of worlds to conquer.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1895*

Continental Problems of Geology (p. 173)

Government Printing Office. Washington, D.C. 1896

**Gissing, George** 1857–1903

English novelist

It has long been observed that mathematics tend to narrow the mind, and that an exclusive devotion to Science leads to ignorance so complete that it precludes a consciousness of its own existence.

*The Private Papers of Henry Ryecroft*

Chapter VII (p. 44)

E.P. Dutton & Co. New York, New York, USA. 1903

**Gore, George** 1826–1909

English electrochemist

The difficulties of research arise largely from our ignorance.

*The Art of Scientific Discovery*

Part II, Chapter 14 (p. 210)

Longmans, Green & Co. London, England. 1878

**Gull, Sir William Withey** 1816–90

English physician

The greatest advance that can be made in practical Science is to a full and intimate recognition of our ignorance.

*A Collection of the Published Writings of William Withey Gull* (Volume 2)

Notes and Aphorisms (p. lvi)

The New Sydenham Society. London, England. 1896

**Hamilton, Sir William Rowan** 1805–65

Anglo-Irish mathematician, physicist, and astronomer

There are two sorts of ignorance: we philosophize to escape ignorance, and the consummation of our philosophy is ignorance; we start from the one, we repose in the other; they are the goals from which, and to which, we tend: and the pursuit of knowledge is but a course between two ignorances, as human life is itself only a traveling from grave to grave.

*Discussions on Philosophy and Literature, Education and University Reform*

Appendix I, B (p. 591)

Harper & Brothers Publishers. New York, New York, USA. 1855

The highest reach of human science is the scientific recognition of human ignorance ...

*Discussions on Philosophy and Literature, Education and University Reform*

Appendix I, B (p. 591)

Harper & Brothers Publishers. New York, New York, USA. 1855

**Harrison, Edward Robert** 1919–2007

English-born American cosmologist

Consider the unlearned, unaware of their ignorance, who think they know everything! As knowledge increases, ignorance decreases, but this kind of ignorance – unlearned ignorance – is no more than the lack of knowledge. With knowledge comes awareness of ignorance – learned ignorance – and the more we know, the more aware we become of what we do not know.

*Masks of the Universe*

Chapter 17 (p. 273)

Macmillan Publishing Company. New York, New York, USA. 1985

### Hellman, C. Doris

Translator and editor

There are many things whose existence we allow, but whose character we are still in ignorance of.... Why should we be surprised, then, that comets, so rare a sight in the universe, are not embraced under definite laws, or that their return is at long intervals?...The day will yet come when the progress of research through long ages will reveal to sight the mysteries of nature that are now concealed.... The day will yet come when posterity will be amazed that we remained ignorant of things that will to them seem so plain.

*The Comet of 1577: Its Place in the History of Astronomy*

Chapter I (p. 33)

Columbia University Press. New York, New York, USA. 1944

### Herschel, Sir John Frederick William 1792–1871

English astronomer and chemist

No man can rise from ignorance to anything deserving to be called a complete grasp of any considerable branch of science without receiving and discarding in succession many crude and incomplete notions, which so far from injuring the truth in its ultimate reception, act as positive aids to its attainment by acquainting him with the symptoms of an insecure footing in his progress.

*Outlines of Astronomy: By Sir John F. W. Herschel*

Introduction (p. 31)

American Home Library Co. New York, New York, USA. 1902

### Hilbert, David 1862–1943

German mathematician

...in mathematics there is no ignorabimus.

Mathematical Problems

*Bulletin of the American Mathematical Society*, Volume 8, July 1902 (p. 445)

### Holbach, Paul Henri Thiry 1723–89

French philosopher

The source of man's unhappiness is his ignorance of Nature. The pertinacity with which he clings to blind opinions imbibed in his infancy, which interweave themselves with his existence, the consequent prejudice that warps his mind, that prevents its expansion, that renders him the slave of fiction, appears to doom him to continual error.

Translated by H.D. Robinson

*The System of Nature, Or, Laws of the Moral and Physical World*

(Volume 1)

Author's Preface (p. 2)

J.P. Mendum

Boston, Massachusetts, USA. 1889

### Holmes, Oliver Wendell 1809–94

American physician, poet, and humorist

You cannot and need not expect to disturb the public in the possession of its medical superstitions. A man's ignorance is as much his private property, and as precious in his own eyes, as his family Bible.

*The Young Practitioner*

Speech

Bellevue Hospital College

March 2, 1871

Our task is only that of sending out a few pickets under the starry flag of science to the edge of that dark domain where the ensigns of the obstinate rebel, Ignorance, are flying undisputed.

*Medical Essays 1842–1882*

Chapter IV (p. 212)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

### Hutton, James 1726–97

Scottish geologist, chemist, and naturalist

Ignorance suspects not error ...

*Theory of the Earth: With Proofs and Illustrations* (Volume 1)

Chapter VIII, Section I (p. 559)

H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

### Huxley, Thomas Henry 1825–95

English biologist

Ignorance is visited as sharply as willful disobedience – incapacity meets with the same punishment as crime. Nature's discipline is not even a word and a blow, and the blow first; but the blow without the word. It is left to you to find out why your ears are boxed.

*Collected Essays* (Volume 3)

*Science and Education*

A Liberal Education; and Where to Find It (p. 85)

Macmillan & Company Limited. London, England. 1904

...there is perhaps no sight in the whole world more saddening and revolting than is offered by men sunk in ignorance of everything but what other men have written; seemingly devoid of moral belief or guidance; but with the sense of beauty so keen, and the power of expression so cultivated, that their sensual caterwauling may be almost mistaken for the music of the spheres.

*Science and Education*

Chapter V (pp. 116–117)

American Home Library Co. New York, New York, USA. 1902

### James, William 1842–1910

American philosopher and psychologist

Our science is a drop, our ignorance a sea. Whatever else be certain, this at least is certain – that the world of our

present natural knowledge is enveloped in a larger world of some sort whose residual properties [about which] we at present can frame no positive idea.

*The Will to Believe and Other Essays in Popular Philosophy*  
Is Life Worth Living? (p. 54)  
Dover Publications, Inc. New York, New York, USA. 1956

### **Kingdon, Clifford W.**

No biographical data available

A wise man only remembers his ignorance in order to destroy it.

Aims and Instruments of Scientific Thought  
*The Popular Science Monthly*, Volume 2, December, 1872 (p. 179)

### **Kingsley, Charles** 1819–75

English clergyman and author

I hope that my children, at least, if not I myself, will see the day, when ignorance of the primary laws and facts of science will be looked on as a defect, only second to ignorance of the primary laws of religion and morality.

*Scientific Lectures and Essays*  
Preface (p. 7)  
Macmillan & Co Ltd. London, England. 1893

### **Laplace, Pierre Simon** 1749–1827

French mathematician, astronomer, and physicist

In ignorance of the ties which unite such events to the entire system of the universe, they have been made to depend upon final causes or upon hazard, according as they occur and are repeated with regularity, or appear without regard to order; but these imaginary causes have gradually receded with the widening bounds of knowledge and disappear entirely before sound philosophy, which sees in them only the expression of our ignorance of the true causes.

*A Philosophical Essay on Probabilities*  
Chapter II (p. 3)  
John Wiley & Sons. New York, New York, USA. 1902

### **Lodge, Sir Oliver** 1851–1940

English physicist

The ordinary run of men live among phenomena of which they know nothing and care less. They see bodies fall to the earth, they hear sounds, they kindle fires, they see the heavens roll above them, but of the causes and inner working of the whole they are ignorant, and with their ignorance they are content.

*Pioneers of Science and the Development of Their Scientific Theories*  
Lecture I (p. 5)  
Dover Publications, Inc. New York, New York, USA. 1926

In regions where our ignorance is great, occasional guesses are permissible.

On the Supposed Weight and Ultimate Fate of Radiation  
*Philosophical Magazine*, Volume 41, 1921

### **Lovecraft, H. P. (Howard Phillips)** 1890–1937

American writer of fantasy, horror, and science fiction

The most merciful thing in the world, I think, is the inability of the human mind to correlate all its contents. We live on a placid island of ignorance in the midst of black seas of infinity, and it was not meant that we should voyage far.

*The Dark Descent*  
The Call of Cthulhu (p. 86)  
The Macmillan Co. New York, New York, USA. 1997

We live on a placid island of ignorance in the midst of black seas of infinity, and it was not meant that we should voyage far.

In Joyce Carol Oates  
*Tales of H.P. Lovecraft: Major Works*  
*The Call of Cthulhu*  
Chapter I (p. 52)  
HarperCollins Books. New York, New York, USA. 1997

### **McCormick, Leander Hamilton** 1859–1934

American author, inventor, and scientist

The centre of the universe is knowledge; its circumference is ignorance.

*Characterology*  
Chapter XXVI (p. 602)  
Rand McNally & Co. Chicago, Illinois, USA. 1920

### **Oppenheimer, James Robert** 1904–67

American theoretical physicist

We are not today tempted to search for these keys that unlock the whole of human knowledge and man's experience. We know that we are ignorant; we are well taught it, and the more surely and deeply we know our own job the better able we are to appreciate the full measure of our pervasive ignorance.

*Science and the Common Understanding*  
Chapter 6 (pp. 89–90)  
Simon & Schuster. New York, New York, USA. 1954

### **Pavlov, Ivan Petrovich** 1849–1936

Russian physiologist

Never think that you already know all. However highly you are appraised, always have the courage to say to yourself – I am ignorant.

Bequest of Pavlov to the Academic Youth of His Country  
*Science*, Volume 83, Number 2155, April 17, 1936 (p. 369)

### **Playfair, Lyon** 1818–98

Scottish scientist and Parliamentarian

It is no mean task for intellect to leap over the barriers of ignorance; it is even more easy to go onward ill new and untrodden paths.

*Records of the School of Mines and of Science Applied to the Arts*  
(Volume 1), Part I  
The Study of Abstract Science (p. 28)  
Longman, Brown, Green & Longmans. London, England. 1852

### **Pratchett, Terry** 1948–

English author

But then...it used to be so simple, once upon a time. Because the universe was full of ignorance all around and the scientist panned through it like a prospector crouched over a mountain stream, looking for the gold of knowledge among the gravel of unreason, the sand of uncertainty and the little whiskery eight-legged swimming things of superstition. Occasionally he would straighten up and say things like "Hurrah, I've discovered Boyle's Third Law." And everyone knew where they stood. But the trouble was that ignorance became more interesting, especially big fascinating ignorance about huge and important things like matter and creation, and people stopped patiently building their little houses of rational sticks in the chaos of the universe and started getting interested in the chaos itself – partly because it was a lot easier to be an expert on chaos, but mostly because it made really good patterns that you could put on a t-shirt.

*Witches Abroad* (p. 7)

Victor Gollancz Ltd. London, England. 1991

**Recorde, Robert** 1510?–58

English mathematician and writer

...the greatest point of all ignorance, not to know the goosenes of ignorance, and not to understand the benefit of knowledge...

*The Castle of Knowledge*

The First Treatise (pp. 1–2)

Imprinted by R. Wolfe. London, England. 1556

**Ritchie, Arthur David** 1891–1967

Scottish philosopher and science history writer

The first thing the reasonable man must do is to be content with a very little knowledge and a very great deal of ignorance. The second thing he must do is to make the utmost possible use of the knowledge he has and not waste his energy crying for the moon. The third thing he must do is try and see clearly where his knowledge ends and his ignorance begins.

*Scientific Method: An Inquiry into the Character and Validity of Natural Law*

Chapter VI (p. 177)

Kegan Paul, Trench, Trubner & Co., Ltd. London, England. 1923

**Rowan-Robinson, Michael**

English astronomer

In extragalactic astrophysics we suffer from three types of ignorance: ignorance in principle, ignorance due to observational limitations, and ignorance due to inadequacy of theory and observation.

*The Encyclopaedia of Ignorance: Everything You Ever Wanted to Know About the Unknown*

Galaxies, Quasars and the Universe (p. 58)

Pergamon Press. Oxford, England. 1977

To be a true scientist is only to have an inkling of the full extent of man's ignorance.

*The Encyclopaedia of Ignorance: Everything You Ever Wanted to Know*

*About the Unknown*

Galaxies, Quasars and the Universe (p. 62)

Pergamon Press. Oxford, England. 1977

**Sayadaw, Ledi** 1846–1923

Theravadin Buddhist monk

Ignorance is like an eclipse. When the sun is eclipsed there is no sunlight. When the moon is eclipsed there is no moonlight. Likewise, when the mind is shrouded by ignorance, no knowledge can arise.

*A Manual of the Excellent Man*

Chapter 9 (p. 99)

Buddhist Publication Society. Kandy, Sri Lanka. 2000

**Schrödinger, Erwin** 1887–1961

Austrian theoretical physicist

In an honest search for knowledge you quite often have to abide by ignorance for an indefinite period. Instead of filling a gap by guesswork, genuine science prefers to put up with it; and this, not so much from conscientious scruples above telling lies, as from the consideration that, however irksome the gap may be, its obliteration by a fake removes the urge to seek after a tenable answer.

*Nature and the Greeks*

Chapter I (p. 6)

At The University Press. Cambridge, England. 1954

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

...there is no darkness but ignorance...

In *Great Books of the Western World* (Volume 27)

*The Plays and Sonnets of William Shakespeare* (Volume 2)

*Twelfth Night*

Act IV, Scene ii

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Shapley, Harlow** 1885–1972

American astronomer

...the most interesting feature of this science astronomy (and of all science) is our eager ignorance.

Astronomy

*Scientific American*, Volume 183, Number 3, September, 1950 (pp. 25–26)

**Sonneberg, Walter**

We simply reveled in ignorance; we learned by making mistakes and by occasionally discovering some of them. We did not know for what to look, but we looked at everything, for everything was a revelation.

General Methods in Earlier Days  
*The Popular Science Monthly* *The Popular Science Monthly*,  
 Volume 86, Number 1, 1915 (p. 29)

**Vonnegut, Kurt** 1922–2007  
 American author

Beware of the man who works hard to learn something, learns it, and finds himself no wiser than before.... He is full of murderous resentment of people who are ignorant without having come by their ignorance the hard way.

*Cat's Cradle* (p. 294)  
 Delta Trade Paperbacks. New York, New York, USA. 1998

**Walker, Kenneth** 1882–1966  
 Physician

And how small is the sum of our actual knowledge. With regards to all the more important things, to the questions which concern us more nearly, it amounts to little beyond a consciousness of our own ignorance.

*Meaning and Purpose*  
 Chapter XV (p. 168)  
 Jonathan Cape. London, England. 1944

**Watts, Alan Wilson** 1915–73  
 American philosopher

The greater the scientist, the more he is impressed with his ignorance of reality, and the more he realizes that his laws and labels, descriptions and definitions, are the products of his own thought.

*The Wisdom of Insecurity*  
 Chapter IX (p. 149)  
 Pantheon. New York, New York, USA. 1951

**Wells, H. G. (Herbert George)** 1866–1946  
 English novelist, historian, and sociologist

It is our ignorance of the future and our persuasion that that ignorance is absolutely incurable that alone gives the past its enormous predominance in our thoughts.

*Annual Report of the Board of Regents of the Smithsonian Institution (1902)*  
 The Discovery of the Future (p. 380)  
 Government Printing Office. Washington, D.C. 1903

**Whately, Richard** 1787–1863  
 English theologian

He that is not aware of his ignorance, will be only misled by his knowledge.

*Thoughts and Apophthegms*  
 Section VI (p. 164)  
 Lindsay & Blakiston. Philadelphia, Pennsylvania, USA. 1856

## IGNORANT

**Horrocks, Jeremiah** 1618–41  
 English astronomer

It is much easier to teach the ignorant than those who will not learn.

In Arundell Blount Whatton  
*Memoir of the Life and Labors of the Rev. Jeremiah Horrox*  
 Chapter IV (p. 144)  
 Wertheim, MacIntosh & Hunt. London, England. 1859

**Mach, Ernst** 1838–1916  
 Austrian physicist and philosopher

We shall find here much that has evidently been brought forward only to impress the minds of the ignorant ...

*Popular Scientific Lectures*  
 On Instruction in the Classics and the Sciences (pp. 330–331)  
 The Open Court Publishing Co. Chicago, Illinois, USA. 1897

**Oppenheimer, James Robert** 1904–67  
 American theoretical physicist

I am over and over again appalled by how ignorant, how incredibly ignorant of the most rudimentary things about my subject are my fellows the historians, my acquaintances the statesmen, my friends the men of affairs. They have no notion of what cooks in physics; I think that they have very little notion of what cooks in other parts of the house called science than the one that I live in.

*The Open Mind*  
 The Scientist in Society (p. 125)  
 Simon & Schuster. New York, New York, USA. 1955

**Pavlov, Ivan Petrovich** 1849–1936  
 Russian physiologist

Never think that you already know all. However highly you are appraised, always have the courage to say of yourself – I am ignorant.

Bequest of Pavlov to the Academic Youth of His Country  
*Science*, Volume 83, Number 2155, April 17, 1936 (p. 369)

## ILLNESS

**Bisch, Louis E.**  
 No biographical data available

“Like any other major experience, illness actually changes us. How? Well, for one thing we are temporarily relieved from the pressure of meeting the world head-on.... We enter a realm of introspection and self-analysis. We think soberly, perhaps for the first time, about our past and future.... Illness...gives us that rarest thing in the world – a *second chance*, not only at health but at life itself!”

Turn Your Sickness into an Asset  
*Reader's Digest*, November, 1937 (p. 2)

**Bond, J.**  
 No biographical data available

**Bond, S.**  
 No biographical data available

A simple distinction we need to make here is between illness and disease. Disease refers to a medical concept

of pathology, which is indicated by a group of signs and symptoms. The presence or absence of a disease, as indicated by signs and symptoms, is clinically defined by the medical profession. The doctor or his substitute, using a common body of knowledge, makes the decision as to whether or not a person has a disease. In contrast, illness is defined by the person who had the signs and symptoms' experience of "health" and "ill-health" and is indicated by the person's reactions to the symptoms.

*Sociology and Health Care: An Introduction for Nurses and Other Health Care Professionals*  
Chapter 8 (p. 200)  
Churchill Livingstone. Edinburgh, Scotland. 1986

### **Bonnett, O. T.**

A little illness is truly a wonderful thing to have if you are afraid of life.

*Why Healing Happens* (p. 109)  
MacMurray & Beck, Aspen. 1996

### **Butler, Samuel** 1612–80

English novelist, essayist, and critic

...I reckon being ill as one of the great pleasures of life, provided one is not too ill and is not obliged to work till one is better.

*The Way of All Flesh*  
Chapter LXXX (p. 346)  
Rinehart & Company, Inc. New York, New York, USA. 1955

### **Cassell, Eric J.**

No biographical data available

Illness [stands] for what the patient feels when he goes to the doctor and disease for what he has on the way home from the doctor's office. Disease...is something an organ has; illness is something a man has.

*The Healer's Art: A New Approach to the Doctor-Patient Relationship* (p. 48)  
Lippincott. New York, New York, USA. 1976

### **Chekhov, Anton Pavlovich** 1860–1904

Russian author and playwright

If doctors prescribe too many remedies for an illness it probably means that the illness can't be cured at all.

Translated by Sir John Gielgud  
*The Cherry Orchard: A Comedy in Four Acts*  
Act 1 (p. 21)  
Heinemann Educational Books Ltd. London, England. 1963

### **Glasow, Arnold**

No biographical data available

Spring fever in some areas is double pneumonia.

*Quote, the Weekly Digest*, June 18, 1967 (p. 497)

### **Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

Nature is a benevolent old hypocrite; she cheats the sick and dying with illusions better than any anodynes.

### *Medical Essays*

The Young Practitioner (p. 388)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

### **Jaspers, Karl** 1883–1969

German psychiatrist and philosopher

What "sick" in general may mean depends less on a doctor's judgment than on the judgment of the patient and the prevailing conceptions of the contemporary culture.... With psychic illnesses [this] is very much so. The same psychic state will bring the one individual to the psychiatrist as a sick person while it will take another to the confessional as one suffering from sin and guilt.

*General Psychopathology* (p. 780)  
The University of Chicago Press. Chicago, Illinois, USA. 1963

### **Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

Twice in my life I very nearly died as a result of cerebral vascular accidents, and I don't look forward a bit to making, in due course, a clean job of it. I neither cursed God for depriving me of the use of two limbs nor thanked and praised Him for sparing me the use of two others. On these two occasions I derived no comfort from religion or from the thought that God was looking after me.

*The Limits of Science*  
Chapter 7 (pp. 96–97)  
Harper & Row, Publishers. New York, New York, USA. 1984

### **Meredith, Owen (Edward Robert Bulwer-Lytton, First Earl Lytton)** 1831–91

English statesman and poet

Similarity in affliction makes us brothers even to the unknown.

*The Caxtons* (Volume 1)  
Part IX, Chapter VII (p. 333)  
Little, Brown & Company. Boston, Massachusetts, USA. 1899

### **Moore, Anthony R.**

No biographical data available

The experiences of illness are protean. In some cases disease can dignify, in others it creates heroic capacities. It can lead to self-realization; it can level unequal men; it can be thought of as an agent of retribution.... Even patients who see disease as a despoiler often experience sentiments of greater complexity. They see illness as an ever-present reminder of the unexpected, and of man's fundamental vulnerability.

*The Missing Medical Text: Humane Patient Care* (p. 36)  
Melbourne University Press, Victoria. 1978

### **Sigerist, Henry E.** 1891–1957

Medical historian

Illness, in general, is not a good literary subject.

*Civilisation and Disease*  
Chapter IX (p. 182)  
Cornell University Press. Ithaca, New York, New York. 1943

American playwright and novelist

For what human ill does not dawn seem to be an alleviation?  
*The Bridge of San Luis Rey*  
Part 3 (p. 119)  
Albert & Charles Boni. New York, New York, USA. 1928

**Wiltshire, John**  
No biographical data available

Illness has from ancient times been conceived as punishment, as a derivative of sin (with venereal disease providing the obvious paradigm), and even when this nexus is broken or disavowed by the conscious mind, it is always creeping back in less conscious forms...as in the production of “asthmatic” or “cancer prone” personality types. Or it may take another form when a sudden “attack” of disease is connected – to all intents and purposes arbitrarily – with some personal guilt, and thereby given a form of explanation.

*Samuel Johnson in the Medical World: The Doctor and the Patient* (p. 6)  
Cambridge University Press. Cambridge, England. 1991

**Woolf, Virginia** 1882–1941  
English novelist and essayist

Considering how common illness is, how tremendous the spiritual change that it brings, how astonishing, when the lights of health go down, the undiscovered countries that are then disclosed, what wastes and deserts of the soul a slight attack of influenza brings to view, what precipices and lawns sprinkled with bright flowers a little rise of temperature reveals, what ancient and obdurate oaks are uprooted in us by the act of sickness...

*The Moment*  
On Being Ill (p. 9)  
Harcourt, Brace & Company. New York, New York, USA, 1948

There is, let us confess it (and illness is the great confessional), a childish outspokenness in illness; things are said, truths blurted out, which the cautious respectability of health conceals.

*The Moment*  
On Being Ill (p. 13)  
Harcourt, Brace & Company. New York, New York, USA, 1948

## ADDICTION

**Jung, Carl G.** 1875–1961  
Swiss psychologist and psychiatrist

Every form of addiction is bad, no matter whether the narcotic be alcohol or morphine or idealism.

*Memories, Dreams, Reflections*  
Retrospect (p. 329)  
Vintage Books. New York, New York, USA. 1970

**St. John, Nicholas**  
Writer

Dependency is a marvelous thing. It does more for the soul than any formulation of doctor or material.

*The Addiction*  
Film (1995)

## ALLERGY

**Mather, Increase** 1639–1723

American Puritan clergyman

Some men also have strange antipathies in their natures against that sort of food which others love and live upon. I have read of one that could not endure to eat either bread or flesh; of another that fell into a swooning fit at the smell of a rose...

*Remarkable Providences*

Chapter IV (p. 71)

Reeves &amp; Turner. London, England. 1890

**Pirquet von Cesenatico, C. P.** 1874–1929

Austrian pediatrician

For this general concept of the changed capacity for reaction, I propose the term “allergy”. “Allo” denotes the deviation from the original state, from the behavior of the normal, as in “allorhythmia”, “allotropy”.

Allergie

*Muenchener medizinische wochenschrift*, Volume 53, July 24, 1906**Welsh, Joan I.**

No biographical data available

Medical science has gone far;

On that we'll all agree –

What used to be called an itch

Today's an allergy.

*Quote, the Weekly Digest*, July 21, 1968 (p. 56)

## ANEMIA

**Whipple, George H.** 1878–1976

American pathologist

It is obvious to any student of anemia that a beginning has been made, but our knowledge of pigment metabolism and hemoglobin regeneration is inadequate in every respect. This is a stimulating outlook for the numerous investigators in this field and we may confidently expect much progress in the near future.

*Nobel Lectures, Physiology or Medicine 1922–1941*

**MacFadden, Bernard** 1868–1955  
American physical culturist

If you feed a cold, as often done, you frequently have to starve a fever.

When a Cold Is Needed

*Physical Culture*, February, 1934

**Milton, John** 1608–74  
English poet

Fever, the eternal reproach to the physicians.

*The Reason of Church-Government*

Preface

Printed by E.G. for John Rothwell. London, England. 1641

**Osler, Sir William** 1849–1919  
Canadian physician and professor of medicine

Humanity has but three great enemies: fever, famine and war; of these by far the greatest, by far the most terrible, is fever.

In Harvey Cushing

*The Life of Sir William Osler* (Volume 1)

Chapter XVI (p. 435)

Clarendon Press. Oxford, England. 1925

**Paulos, John Allen** 1945–  
American mathematician

Consider a precise number that is well known to generations of parents and doctors: the normal human body temperature of 98.6 Fahrenheit. Recent investigations involving millions of measurements reveal that this number is wrong; normal human body temperature is actually 98.2 Fahrenheit. The fault, however, lies not with Dr. Wunderlich's original measurements – they were averaged and sensibly rounded to the nearest degree: 37 degree celsius. When this temperature was converted to Fahrenheit, however, the rounding was forgotten and 98.6 was taken to be accurate to the nearest tenth of a degree. Had the original interval between 36.5 and 37.5 degree celsius been translated, the equivalent Fahrenheit temperatures would have ranged from 97.7 to 99.5. Apparently, dyscalculia can even cause fevers.

*A Mathematician Reads the Newspaper*

Ranking Health Risks: Experts and Laymen Differ (p. 139)  
Basic Books. New York, New York, USA. 1995

**Ransom, John Crowe** 1888–1974  
American poet

Here lies a lady of beauty and high degree.  
Of chills and fever she dies, of fever and chills,  
The delight of her husband, her aunts, an infant of three,  
And of medicos marveling sweetly on her ills.

*The Poetry of John Crowe Ransom*

Here Lies a Lady (p. 64)

Rutgers University Press. New Brunswick, New Jersey, USA. 1972

**Shakespeare, William** 1564–1616  
English poet, playwright, and actor

He had a fever when he was in Spain,  
And when the fit was on him, I did mark  
How he did shake....

*Measure for Measure*

Act I, Scene ii, l. 58

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**ILLUSION****Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

The distinction between horizontal and vertical is not an illusion; and the man who thinks it is likely to come to an untimely end. Yet we cannot arrive at a comprehensive view of nature unless we combine horizontal and vertical dimensions into three dimensional space.

*Space, Time and Gravitation: An Outline of the General Relativity Theory*

Chapter III (p. 45)

At The University Press. Cambridge, England. 1921

**Enriques, Federigo** 1871–1946

Italian mathematician

Since truth and error enter our minds by the door which the senses open to knowledge, we are soon obliged to be on our guard against illusions.

Translated by Katharine Royce  
*Problems of Science*  
 Introduction (p. 10)  
 The Open Court Publishing Co. Chicago, Illinois, USA. 1914

**Laplace, Pierre Simon** 1749–1827  
 French mathematician, astronomer, and physicist

Our passions, our prejudices, and dominating opinions, by exaggerating the probabilities which are favorable to them and by attenuating the contrary probabilities, are the abundant sources of dangerous illusions.

Translated by Frederick Wilson Truscott and Frederick Lincoln  
*A Philosophical Essay on Probabilities*  
 Chapter XVI (p. 160)  
 John Wiley & Sons. New York, New York, USA. 1902

**Pólya, George** 1887–1985  
 Hungarian mathematician

In our personal life we often cling to illusions. That is, we do not dare to examine certain beliefs which could be easily contradicted by experience, because we are afraid of upsetting our emotional balance.

*Induction and Analogy in Mathematics* (Volume 1)  
 Chapter I (p. 7)  
 Princeton University Press. Princeton, New Jersey, USA. 1954

## ILLUSTRATION

**Downy, J. C.**  
 No biographical data available

**Kelly, J. L.**  
 No biographical data available

While skill at drawing, or a steady hand, may help a person create an illustration, his skill will be of little help if he lacks the quality of careful observation, of attention to every detail of the subject; accuracy is the most sought after virtue in biological illustration.

*Biological Illustration: Techniques and Exercises* (p. viii)  
 Iowa State University Press. Ames, Iowa, USA. 1982

**Miles, Alfred Henry**

Illustrations are like windows to the house of knowledge. They let light in upon the understanding and they facilitate the outlook upon truth and beauty. To illustrate is to help one sense by the use of another, to reason by analogy and to teach the unknown by the known.

*Natural History of the World*  
 Preface (p. v)  
 Dodd, Mead & Co. New York, New York, USA. 1895

## IMAGE

**Pythagoras of Samos** ca. 580 BCE–500 BCE  
 Greek mathematician, astronomer, and philosopher

Nothing perishes in this world; but things merely vary and change their form. To be born, means simply that a

thing begins to be something different from what it was before; and dying, is ceasing to be the same thing. Yet, although nothing retains long the same image, the sum of the whole remains constant.

Quoted in Charles Lyell  
*Principles of Geology*  
 Book I, Chapter II (p. 27)  
 James Kay, Jun., & Brother. Philadelphia, Pennsylvania, USA. 1837

## IMAGINATION

### Advertisement

The freely ranging imagination of an orderly mind in a stimulating intellectual climate has a way of dissolving artificial barriers.

Advertisement by Los Alamos Scientific Laboratory  
*Scientific American*, Volume 204, Number 4, April, 1961 (p. 195)

**Akenside, Mark** 1721–70  
 English poet and physician

There are certain powers in human nature which seem to hold a middle place between the organs of bodily sense and the faculties of moral perception: They have been Call'd by a very general name, THE POWERS OF IMAGINATION.

*The Poetical Works of Mark Akenside*  
 The Powers of Imagination  
 Associated University Presses. Cranbury, New Jersey, USA. 1996

**Atchity, Kenneth** 1944–  
 Writer

That's what imagination is for: to go in advance so action can follow.

*A Writer's Time: Making the Time to Write* (p. 34)  
 W.W. Norton & Company, Inc. New York, New York, USA. 1995

**Bacon, Sir Francis** 1561–1626  
 English lawyer, statesman, and essayist

We are not...to imagine or suppose, but to discover, what Nature does or may be made to do.

In Henry Hobhouse  
*Seeds of Change, Five Plants that Transformed Mankind*  
 Quinine and the White Man's Burden (p. 14)  
 Harper & Row, Publishers. New York, New York, USA. 1987

**Ball, Sir Robert Stawell** 1840–1913  
 Irish astronomer

We have reached a point where man's intellect begins to fail to yield him anymore light, and where his imagination has succumbed in the endeavor to realise even the knowledge he has gained.

*The Story of the Heavens*  
 Chapter XXIII (p. 471)  
 Cassell & Co., Ltd. London, England. 1890

**Barfield, Owen** 1898–1997  
 British philosopher, critic, and anthroposophist

Imagination is really thinking with a bit of will in it.  
*History, Guilt, and Habit*  
 Chapter 3 (p. 80)  
 Wesleyan University Press. Middletown, Connecticut, USA. 1979

**Beveridge, William Ian Beardmore** 1908–  
 Australian zoologist

The imagination merely enables us to wander into the darkness of the unknown where, by the dim light of the knowledge that we carry, we may glimpse something that seems of interest. But when we bring it out and examine it more closely it usually proves to be only trash whose glitter had caught our attention. Imagination is at once the source of all hope and inspiration but also of frustration. To forget this is to court despair.  
*The Art of Scientific Investigation* (p. 58)  
 W.W. Norton & Company, Inc. New York, New York, USA. 1957

**Blake, William** 1757–1827  
 English poet, painter, and engraver

The tree which moves some to tears of joy is in the Eyes of others only a Green thing that stands in the way. Some see Nature all Ridicule & Deformity...& Some Scarce see Nature at all. But to the Eyes of the Man of Imagination, Nature is Imagination itself.  
*The Letters of William Blake*  
 Letter to Dr. Trusler, 23 August, 1799 (p. 34)  
 Harvard University Press. Cambridge, Massachusetts, USA. 1968

...to the eyes of the man of imagination, Nature is Imagination itself.  
 In Frederick Tatham (ed.)  
*The Letters of William Blake*  
 To The Rev. Dr. Trusler (p. 62)  
 Charles Scribner's Sons. New York, New York, USA. 1906

Nature has no outline:  
 but Imagination has.  
 Nature has no tune:  
 but Imagination has!  
 Nature has no supernatural & dissolves:  
 Imagination is Eternity.  
*The Complete Poetry and Prose of William Blake*  
 The Ghost of Abel  
 University of California Press. Berkeley, California, USA. 1982

**Borland, Hal** 1900–78  
 American writer

Give any man a star on which he can fix his eye and he can reach as far as his imagination points the way.  
*An American Year*  
 June (p. 46)  
 Simon & Schuster. New York, New York, USA. 1946

**Born, Max** 1882–1970  
 German-born English physicist

Faith, imagination and intuition are decisive factors in the progress of science as in any other human activity.

*Natural Philosophy of Cause and Chance*  
 Appendix One, 36 (p. 209)  
 At The Clarendon Press. Oxford, England. 1949

**Brillouin, Léon** 1889–1969  
 French physicist

An artist's inspiration or a scientist's theory, reveal the unpredictable power of human imagination.  
*Scientific Uncertainty and Information*  
 Dedication  
 Academic Press. New York, New York, USA. 1964

**Brodie, Sir Benjamin Collins** 1817–80  
 English chemist

Lastly, physical investigation, more than anything besides, helps to teach us the actual value and right use of the Imagination – of that wondrous faculty, which, left to ramble uncontrolled, leads us astray into a wilderness of perplexities and errors, a land of mists and shadows; but which, properly controlled by experience and reflection, becomes the noblest attribute of man; the source of poetic genius, the instrument of discovery in Science, without the aid of which Newton would never have invented fluxions, nor Davy have composed the earths and alkalies, nor would Columbus have found another Continent.  
 In John Tyndall  
*Fragments of Science*  
 Address to the Royal Society, November 30, 1859, Scientific Use of the Imagination (p. 423)  
 D. Appleton & Company. New York, New York, USA. 1898

**Bronowski, Jacob** 1908–74  
 Polish-born British mathematician and polymath

Man is distinguished from other animals by his imaginative gifts. He makes plans, inventions, new discoveries, by putting different talents together; and his discoveries become more subtle and penetrating, as he learns to combine his talents in more complex and intimate ways. So the great discoveries of different ages and different cultures, in technique, in science, in the arts, express in their progression a richer and more intricate conjunction of human faculties, an ascending trellis of his gifts.  
*The Ascent of Man*  
 Lower than the Angels (p. 20)  
 Little, Brown & Co. Boston, Massachusetts, USA. 1973

**Brougham, Henry** 1778–1868  
 English statesman

A mere theory...is the unmanly and unfruitful pleasure of a boyish and prurient imagination, or the gratification of a corrupted and depraved appetite...  
 The Bakerian Lecture on the Theory of Light and Colours  
*Edinburgh Review*, Volume 1, 1801–3 (p. 450)

**Buckley, Arabella B.** 1840–1929  
 English naturalist and science writer

...we must have imagination. I do not mean mere fancy, which creates unreal images and impossible monsters, but imagination, the power of making pictures or images in our mind of that which is, though it is invisible to us.

*The Fairy-Land of Science*

Lecture I (p. 17)

D. Appleton & Company. New York, New York, USA. 1899

**Burroughs, John** 1837–1921

American naturalist and essayist

In the great sciences, like astronomy and geology, one gets wholes; the imagination has play-room. The cosmic laws launch him upon a shoreless sea. One is blown upon by a breeze from eternity. The same with biology in the light of evolution.

*Under the Apple-Trees*

Chapter XI (p. 178)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1916

**Chargaff, Erwin** 1905–2002

Austrian biochemist

Unpredictable associations and the free play of imagination are no less important in science, that is, in real science, than they are in writing.

*Heraclitean Fire: Sketches from a Life before Nature* (p. 166)

The Rockefeller University Press. New York, New York, USA. 1978

**Chesterton, G. K. (Gilbert Keith)** 1874–1936

English author

Nobody can imagine how nothing could turn into something. Nobody can get an inch nearer to it by explaining how something could turn into something else. It is really far more logical to start by saying “In the beginning God created heaven and earth” even if you only mean “In the beginning some unthinkable power began some unthinkable process.” For God is by its nature a name of mystery, and nobody ever supposed that man could imagine how a world was created anymore than he could create one. But evolution really is mistaken for explanation. It has the fatal quality of leaving on many minds the impression that they do understand it and everything else; just as many of them live under a sort of illusion that they have read the Origin of Species.

*The Everlasting Man*

Chapter I (p. 3)

Dodd, Mead & Company. New York, New York, USA. 1925

**Clarke, Arthur C.** 1917–

English science and science fiction writer

Across the seas of space lie the new raw materials of the imagination, without which all forms of art must eventually sicken and die. Strangeness, wonder, mystery, and magic – these things, which not long ago seemed lost forever, will soon return to the world. And with them,

perhaps will come again an age of sagas and epics such as Homer never knew.

*Greetings, Carbon-Based Biped!* (p. 229)

HarperCollins. London, England, 2000

**Cole, K. C.**

Science writer

Imagining the unseeable is hard, because imagining means having an image in your mind. And how can you have a mental image of something you have never seen? Like perception itself, the models of science are embedded inextricably in the current worldview we call culture.

*First You Build a Cloud and Other Reflections on Physics as a Way of Life*

Chapter One (p. 18)

Harcourt Brace & Co. Orlando, Florida, USA. 1999

**Coleridge, Stephen** 1854–1936

English author, barrister, and opponent of vivisection

Not that there may not emerge here and there among men of letters one who by some misfortune has lost his imagination and has subsided into a mere man of maxims such as was Polonius, whose trite observations were rightly founded on experience and were therefore not to be gainsayed, but whose opinions on contemporary human affairs were foolish, and who was in actual society a bore.

*The Idolatry of Science*

Chapter IV (pp. 21–22)

John Lane Co. London, England. 1920

**D’Alembert, Jean Le Rond** 1717–83

French mathematician

Thus metaphysics and geometry are, of all the sciences belonging to reason, those in which imagination has the greatest to share. I ask pardon for this observation, from those men of taste who, little aware of the near affinity of geometry to their own pursuits, and still less suspecting that the only intermediate step between them is formed by metaphysics, are disposed to employ their wit in depreciating its value...to the geometer who invents imagination is not less essential than to the poet who creates.... Of all the great men of antiquity, Archimedes is perhaps he who is best entitled to be placed by the side of Homer.

In Robert Blakey

*History of the Philosophy of Mind: Embracing the Opinions of All*

*Writers on Mental Science from the Earlier Periods to the Present Time*

(Volume 3)

Chapter XI (p. 176)

Longman, Brown, Green & Longmans. London, England. 1850

**Daly, Reginald Aldworth** 1871–1957

Canadian-American geologist

At bottom each “exact” science is, and must be speculative, and its chief tool of research, too rarely used with both courage and judgment, is the regulated imagination.

*Igneous Rocks and Their Origin*

Introduction (p. xxi)

McGraw-Hill Book Co., Inc. London, England. 1914

What geology, like every other science, needs today is a frank recognition that imaginative thought is not dangerous to science but is the life blood of science.

*Igneous Rocks and Their Origin*

Introduction (p. xxii)

McGraw-Hill Book Co., Inc. London, England. 1914

**Darwin, Charles Robert** 1809–82

English naturalist

This sketch is *most* imperfect; but in so short a space I cannot make it better. Your imagination must fill up many wide blanks. Without some reflexion it will appear all rubbish; perhaps it will appear so after reflexion.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 1)

Letter To Asa Gray, September 5, 1857 (p. 481)

D. Appleton &amp; Company. New York, New York, USA. 1887

The value of the products of our imagination depends, of course, on the number, accuracy, and clearness of our impressions, on our judgment and taste in selecting or rejecting the involuntary combinations, and to a certain extent on our power of voluntary [combinations of] them...

In *Great Books of the Western World* (Volume 49)*The Descent of Man*

Part I, Chapter III (p. 292)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Disraeli, Benjamin, First Earl****of Beaconsfield** 1804–81

English prime minister, founder of Conservative Party, and novelist

...imagination is too often accompanied by somewhat irregular logic.

*Wit and Wisdom*

Imagination (p. 168)

Longmans, Green, &amp; Co. London, England. 1881

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

And yet there should be no combination of events for which the wit of man cannot conceive an explanation. Simply as a mental exercise, without any assertion that it is true, let me indicate a possible line of thought. It is, I admit, mere imagination; but how often is imagination the mother of truth?

In William S. Baring-Gould (ed.)

*The Annotated Sherlock Holmes* (Volume 1)*The Valley of Fear*

Part I, Chapter 6 (p. 507)

Wings Books. New York, New York, USA. 1967

...for strange effects and extraordinary combinations we must go to life itself, which is always far more daring than any effort of the imagination.

In William S. Baring-Gould (ed.)

*The Annotated Sherlock Holmes* (Volume 2)*The Red-Headed League* (p. 419)

Wings Books. New York, New York, USA. 1967

**Einstein, Albert** 1879–1955

German-born physicist

I am enough of an artist to draw freely upon my imagination. Imagination is more important than knowledge. Knowledge is limited. Imagination encircles the world.

What Life Means to Einstein: An Interview by George Sylvester Viereck  
*The Saturday Evening Post*, October 26, 1929 (p. 117)

**Einstein, Albert** 1879–1955

German-born physicist

**Infeld, Leopold** 1898–1968

Polish physicist

In imagination there exists the perfect mystery story. Such a story presents all the essential clues, and compels us to form our own theory of the case. If we follow the plot carefully we arrive at the complete solution for ourselves just before the author's disclosure at the end of the book. The solution itself, contrary to those of inferior mysteries, does not disappoint us; moreover, it appears at the very moment we expect it.

*The Evolution of Physics*

The Great Mystery Story (p. 3)

Simon &amp; Schuster. New York, New York, USA. 1961

Scientific imagination finds old concepts too confining, and replaces them by new ones.

*The Evolution of Physics*

Chapter I (p. 26)

Simon &amp; Schuster

New York, New York, USA. 1961

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

Science does not know its debt to imagination.

*The Complete Works of Ralph Waldo Emerson* (Volume 8)*Letters and Social Aims*

Chapter I (p. 10)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

If I could put my hand on the North Star, would it be as beautiful? The sea is lovely, but when we bathe in it the beauty forsakes all the near water. For the imagination and senses cannot be gratified at the same time.

*The Complete Works of Ralph Waldo Emerson* Volume 6*The Conduct of Life*

Beauty (p. 303)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

**Faraday, Michael** 1791–1867

English physicist and chemist

The world little knows how many of the thoughts and theories which have passed through the mind of a scientific investigator have been crushed in silence and

secrecy by his own severe criticism and adverse examination; that in the most successful instances not a tenth of the suggestions, the hopes, the wishes, the preliminary conclusions have been realized.

In Karl Pearson

*The Grammar of Science*

Introductory, Section 11 (p. 38)

Charles Scribner's Sons. London, England. 1892

...in the pursuit of physical science, the imagination should be taught to present the subject investigated in all possible and even impossible views...

*Experimental Researches in Chemistry and Physics*

On Mental Education (p. 480)

Richard Taylor & William Francis. London, England. 1859

The truth of science has ever had not merely the task of evolving herself from the dull and uniform mist of ignorance, but also that of the repressing and dissolving the phantoms of the imagination.

In Bence Jones

*The Life and Letters of Faraday* (Volume 2)

Chapter III (p. 285)

Longmans, Green & Company. London, England. 1870

Let us encourage ourselves by a little more imagination prior to experiment.

In Bence Jones

*The Life and Letters of Faraday* (Volume 2)

Chapter IV (p. 414)

J.B. Lippincott & Co. Philadelphia, Pennsylvania, USA. 1870

Let the imagination go, guarding it by judgment and principle, but holding it in and directing it by experiment.

In Bence Jones

*The Life and Letters of Faraday* (Volume 2)

15,809 (p. 415)

J.B. Lippincott & Co. Philadelphia, Pennsylvania, USA. 1870

### **Fersman, A. E.** 1883–1945

Geochemist and mineralogist

First of all, a scientist must be endowed with an imagination, for imagination plays no less important a part in science than it does in art. Imagination is as necessary as is painstaking work on collected material. Without imagination scientific work is just an assortment of facts and conclusions – empty, chaotic, and often barren.

Compiled by V.V. Vorontsov

*Words of the Wise: A Book of Russian Quotations*

Translated by Vic Schneierov

Progress Publishers. Moscow, Russia. 1979

### **Feynman, Richard P.** 1918–88

American theoretical physicist

...the imagination of nature is far, far greater than the imagination of man.

*The Meaning of It All: Thoughts of a Citizen Scientist*

Chapter 1 (p. 10)

Perseus Books. Reading, Massachusetts, USA. 1998

It is surprising that people do not believe that there is imagination in science. It is a very interesting kind of

imagination, unlike that of the artist. The great difficulty is in trying to imagine something that you have never seen, that is consistent in every detail with what has already been seen, and that is different from what has been thought of; furthermore, it must be definite and not a vague proposition. That is indeed difficult.

*The Meaning of It All: Thoughts of a Citizen Scientist*

Chapter 1 (pp. 22–23)

Perseus Books. Reading, Massachusetts, USA. 1998

It is only through refined measurements and careful experimentation that we can have a wider vision. And then we see unexpected things: we see things that are far from what we would guess – far from what we could have imagined. Our imagination is stretched to the utmost, not, as in fiction, to imagine things which are not really there, but just to comprehend those things which are there.

*The Character of Physical Law*

Chapter 6 (p. 127)

British Broadcasting Company. London, England. 1965

As usual, nature's imagination far surpasses our own, as we have seen from the other theories which are subtle and deep.

*The Character of Physical Law*

Chapter 7 (p. 162)

British Broadcasting Company. London, England. 1965

What we need is imagination, but imagination in a terrible strait-jacket.

*The Character of Physical Law*

Chapter 7 (p. 171)

British Broadcasting Company. London, England. 1965

Imagination reaches out repeatedly trying to achieve some higher level of understanding, until suddenly I find myself momentarily alone before one new corner of nature's pattern of beauty and true majesty revealed.

*Les Prix Nobel. The Nobel Prizes in 1965*

Nobel banquet speech for award received in 1965

Nobel Foundation. Stockholm, Sweden. 1966

Our imagination is stretched to the utmost, not, as in fiction, to imagine things which are not really there, but just to comprehend those things which are there.

In James Gleik

### **Feynman, Richard P.** 1918–88

American theoretical physicist

### **Leighton, Robert B.** 1919–97

American physicist

### **Sands, Matthew L.** 1919–

American physicist

The whole question of imagination in science is often misunderstood by people in other disciplines...whatever we are allowed to imagine in science must be consistent with everything else we know: that the electric fields and

the waves we talk about are not just some happy thoughts which we are free to make as we wish, but ideas which must be consistent with all the laws of physics we know. We can't allow ourselves to seriously imagine things which are obviously in contradiction to the known laws of nature. And so our kind of imagination is quite a difficult game. One has to have the imagination to think of something that has never been seen before, never been heard of before. At the same time the thoughts are restricted in a strait jacket, so to speak, limited by the conditions that come from our knowledge of the way nature really is. The problem of creating something which is new, but which is consistent with everything which has been seen before, is one of extreme difficulty.

*The Feynman Lectures on Physics* (Volume 2)  
Chapter 20–3 (p. 20-10)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1983

### **Frye, Northrop** 1912–91

Canadian literary critic

Science begins with the world we have to live in, accepting its data and trying to explain its laws. From there, it moves toward the imagination: it becomes a mental construct, a model of a possible way of interpreting experience.

*The Educated Imagination*

The Motive for Metaphor (p. 23)

**Herschel, Friedrich Wilhelm**  
**(Sir William)** 1738–1822  
English astronomer

[I]f we would hope to make any progress in an investigation of this delicate nature, we ought to avoid two opposite extremes, of which I can hardly say which is the most dangerous. If we indulge a fanciful imagination and build worlds of our own, we must not wonder at our going wide from the path of truth and nature; but these will vanish like the Cartesian vortices, that soon gave way when better theories were offered.

On the other hand, if we add observation to observation, without attempting to draw not only certain conclusions, but also conjectural views from them, we offend against the very end for which only observations ought to be made. I will endeavor to keep a proper medium, but if I should deviate from that, I could wish not to fall into the latter error.

On the Construction of the Heavens

Part Second, Book I, Chapter I (p. 199)

A.C. McClurg & Co. Chicago, Illinois, USA. 1887

**Huxley, Julian** 1887–1975  
English biologist, philosopher, and author

Imagination is needed in science as much as in any other mental activity. But it must not take charge of the scientific mind. If it [were to] do, disaster may follow.

*Essays in Popular Science*

On the History of Science (p. 168)

Chatto & Windus. London, England. 1926

**Huxley, Thomas Henry** 1825–95  
English biologist

The rapid increase of natural knowledge, which is the chief characteristic of our age, is effected in various ways. The main army of science moves to the conquest of new worlds slowly and surely, nor ever cedes an inch of the territory gained. But the advance is covered and facilitated by the ceaseless activity of clouds of light troops

provided with a weapon – always efficient, if not always an arm of precision – the scientific imagination.

*Man's Place in Nature and other Anthropological Essays*

Chapter VI (p. 271)

D. Appleton & Company. New York, New York, USA. 1896

**Jeans, Sir James Hopwood** 1877–1946

English physicist and mathematician

...are there any limits at all to the extent of space? Even a generation ago, I think most scientists would have answered this question in the negative. They would have argued that space could be limited only by the presence of something which is not space. We, or rather our imaginations, could only be prevented from journeying forever through space by running against a wall of something different from space. And, hard though it may be to imagine space extending forever, it is far harder to imagine a barrier of something different from space which could prevent our imaginations from passing into a further space beyond.

*The Universe Around Us*

Chapter I (p. 68)

The Macmillan Company. New York, New York, USA. 1929

**Jefferies, Richard** 1848–87

English naturalist and author

There is so much beyond all that has ever yet been imagined.

Letter 21 (p. 274)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1899

**Kolb, Edward W. (Rocky)** 1951–

American cosmologist

...the greatest tool of discovery is the human imagination.

*Blind Watchers of the Sky*

Preface (p. x)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

Although today we look harder and farther than we have ever looked, with all the instruments of modern science, and with all of the imagination and courage we can muster, we are still blind watchers of the sky.

*Blind Watchers of the Sky*

Chapter One (p. 9)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

**Lamarck, Jean-Baptiste Pierre Antoine** 1744–1829

French biologist

Imagination is one of the finest faculties of man: it ennobles and elevates his thoughts and relieves him from the domination of minute details; and when it reaches a very high development, it makes him superior to the great majority of other people.

Translated by Hugh Elliot

*Zoological Philosophy: An Exposition with Regard to the Natural History of Animals*

Chapter VIII (p. 390)

The University of Chicago Press. Chicago, Illinois, USA. 1984

**Lankester, Edwin Ray** 1847–1929

English zoologist

All true science deals with speculation and hypothesis, and acknowledges as its most valued servant – its indispensable ally and helpmeet – that which our German friends I call “Phantasie” and we “the Imagination.”

*The Advancement of Science*

Chapter I (p. 4)

Macmillan & Company Ltd. London, England. 1890

**Laplace, Pierre Simon** 1749–1827

French mathematician, astronomer, and physicist

The philosopher who is really useful to the cause of science, is he who, uniting to a fertile imagination, a rigid severity in investigation and observation, is at once tormented by the desire of ascertaining the cause of the phenomena, and by the fear of deceiving himself in that which he assigns.

*System of the World* (Volume 2)

Book V, Chapter IV (pp. 276–277)

Longman, Rees, Orme, Brown & Green. Dublin, Ireland. 1830

**Lavoisier, Antoine Laurent** 1743–94

French chemist

In the study and practice of the sciences [learning to reason justly] is quite different; the false judgments we form neither affect our existence nor our welfare; and we are not forced by any physical necessity to correct them. Imagination, on the contrary, which is ever wandering beyond the bounds of truth, joined to self-love and that self-confidence we are so apt to indulge, prompts us to draw conclusions which are not immediately derived from facts; so that we become in some measure interested in deceiving ourselves. Hence it is by no means to

be wondered, that, in the science of physics in general, men have often made suppositions, instead of forming conclusions. These suppositions, handed down from one age to another, acquire additional weight from the authorities by which they are supported, till at last they are received, even by men of genius, as fundamental truths.

*Elements of Chemistry in a New Systematic Order*

Preface of the Author (p. xvii)

Printed for William Creech. Edinburgh, Scotland. 1790

**Leslie, Sir John** 1766–1832

Scottish physicist and mathematician

The gift of a lively fancy is an important requisite for every physical observer.

*Elements of Natural Philosophy*

Introduction (p. xiii)

Printed for W. & C. Tate. Edinburgh, Scotland. 1823

The imagination of the Philosopher differs from that of the Poet, only because it calls forth less vivid images; but it is equally creative, and equally sentient to the flitting scenes of Nature.

*Elements of Natural Philosophy: Including Mechanics and Hydrostatics* (Volume 1)

Introduction (p. xv)

Oliber & Boyd. Edinburgh, Scotland. 1829

**Lowell, Percival** 1855–1916

American astronomer

Imagination is the single source of the new...reason, like a balance wheel, only keeping the action regular. For reason...compares what we imagine with what we know, and gives us the answer in terms of the here and now, which we call the actual. But the actual...does not mark the limit of the possible.

In William Graves Hoyt

*Lowell and Mars*

Chapter 2 (p. 20)

University of Arizona Press. Tucson, Arizona, USA. 1976

A good education is indispensable, one as broad as it is long; without it he runs the risk of becoming a crank. Then enters the important quality of imagination. This word to the routine rabble of science is a red rag to a bull; partly because it is beyond their conception, partly because they do not comprehend how it is used. To their thinking to call a man imaginative is to damn him; when, did they but know it, it is admitting the very genius they would fain deny. For all great work imagination is vital; just as necessary in science and business as it is in novels and art.... The difference between the everyday and scientific use of it is in that in science every imagining must be tested to see whether it explains the facts. Imagination harnessed to reason is the force that pulls an idea through. Reason, too, of the most complete, uncompromising kind. Imagination supplies the motive power, reason the guiding rein.

In William Graves Hoyt

*Lowell and Mars*

Chapter 2 (p. 21)

University of Arizona Press. Tucson, Arizona, USA. 1976

**Mach, Ernst** 1838–1916

Austrian physicist and philosopher

After having reached an opinion for a special case, one gradually modifies the circumstances of this case in one's imagination as far as possible, and in doing so tries to stick to the original opinion as closely as one can. There is no procedure which leads more safely and with greater mental economy to the simplest interpretation of all natural events.

In Ephraim Avigdor Speiser

*Studies in the History of Science* (p. 105)

University of Pennsylvania Press. Philadelphia, Pennsylvania, USA. 1941

**Marett, Robert Randolph** 1866–1943

Social anthropologist

...imagination is the queen of those mental functions which meet in what we loosely term "thought"; and imagination is ever most active where, on the outer fringe of the mind's routine work, our inarticulate questionings radiate into the unknown.

*Anthropology*

Chapter I (p. 28)

Henry Holt & Co. New York, New York, USA. 1912

**Matthew, William Diller** 1871–1930

Canadian-American paleontologist

It has been well observed that the imagination of man does not really enable him to create anything new, but only to recombine or rearrange what he has seen.

*The Science-history of the Universe* (Volume 6)

Chapter I

The Current Literature Publishing Co. New York, New York, USA. 1909

**Mayo, William J.** 1861–1939

American physician

The sciences bring into play the imagination, the building of images in which the reality, of the past is blended with the ideals for the future, and from the picture there springs the prescience of genius.

Contributions of Pure Science to Progressive Medicine

*The Journal of the American Medical Association*, Volume 84,

Number 20, May 16, 1925 (p. 1466)

**McComb, Samuel**

No biographical data available

The astronomer's physical frame is confined by the walls of his observatory, but his mind sweeps the orbit of the earth, tracks the solar system as it sounds its way through boundless space. Nor does the Milky Way, the confines of the stellar universe, avail to stay the flight of his speculative imagination; he can pierce through it. Though his telescope may not, and wonder what lies beyond.

The Modern Attitude Towards Belief in a Future Life

*The Living Age*, Volume XXXV, Number 3279, May 11, 1907 (p. 366)

**Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

All advances of scientific understanding, at every level, begin with a speculative adventure, an imaginative pre-conception of what might be true.... [This] conjecture is then exposed to criticism to find out whether or not that imagined world is anything like the real one. Scientific reasoning is, therefore, at all levels an interaction between two episodes of thought – a dialogue between two voices, the one imaginative and the other critical...

*The Hope of Progress*

Science and Literature (p. 16)

Methuen &amp; Company Ltd. London, England. 1972

If the generative act in science is imaginative in character, only a failure of the imagination – a total inability to conceive what the solution of a problem might be – could bring scientific inquiry to a standstill. No such failure of the imagination – nor any failure of nerve that might be responsible for it – has yet occurred in science and there is not the slightest reason to suppose that it will ever do so.

*The Limits of Science* (p. 85)

Harper &amp; Row Publishers. New York, New York, USA. 1984

**Mellor, Joseph William** 1863–1938

Chemist

It is the sprite imagination which usually reveals the deeper meaning of facts which have been diligently garnered, and laboriously sifted.

*A Comprehensive Treatise on Inorganic and Theoretical Chemistry*

(Volume 1)

Chapter I (p. 9)

Longman, Green &amp; Co. London, England. 1922

It cannot be doubted that science in its higher work, requires a supple and well-developed imagination.

*A Comprehensive Treatise on Inorganic and Theoretical Chemistry*

(Volume 1)

Chapter I (p. 10)

Longman, Green, &amp; Co. London, England. 1922

It is now generally recognized that imagination, uncontrolled by facts, has produced all the palsying superstitions which have blinded and cursed the human race – past and present.

*A Comprehensive Treatise on Inorganic and Theoretical Chemistry*

(Volume 1)

Chapter I (p. 16)

Longman, Green &amp; Co. London, England. 1922

**Miller, Hugh** 1802–56

Scottish geologist and theologian

It is said that modern science is averse to the exercise and development of the imaginative faculty. But is it really so?

*Sketch-Book of Popular Geology*

Lecture Second (p. 79)

William P. Nimmo &amp; Company. Edinburgh, Scotland. 1880

**Mitchell, Maria** 1818–89

American astronomer and educator

Not too much mechanical apparatus – let the imagination have some play; a cube maybe shown by a model, but let the drawing upon the blackboard represent the cube; and if possible let Nature be the blackboard; spread your triangles upon land and sky.

In Phebe Mitchell Kendall

*Maria Mitchell: Life, Letters, and Journals*

Chapter IX (p. 180)

Lea &amp; Shepard Publishers. Boston, Massachusetts, USA. 1896

We especially need imagination in science. It is not all mathematics, nor all logic, but it is somewhat beauty and poetry.

In Phebe Mitchell Kendall

*Maria Mitchell: Life, Letters, and Journals*

Chapter IX (p. 187)

Lee &amp; Shepard. Boston, Massachusetts, USA. 1896

**Moore, Benjamin** 1745–1816

Episcopal writer and professor of rhetoric

Imagination is as fundamentally important for a student of natural science as for a poet or a devotee of a religious belief. It is by the use of the imagination that science is led on from discovery to discovery ...

*The Origin and Nature of Life*

Chapter I

Henry Holt &amp; Co. New York, New York, USA.

**More, Louis Trenchard**

American educator

It is no small danger thus to confuse reality and imagination; a science, which becomes so hypothetical or so specialized as to be unintelligible to the educated man, is apt to become as sterile as a religion which is in the sole possession of a hierarchy.

*The Limitations of Science*

Chapter II (pp. 34–35)

Henry Holt &amp; Co. New York, New York, USA. 1915

**Pascal, Blaise** 1623–62

French mathematician and physicist

Let man then contemplate the whole of nature in her full and lofty majesty.... But if our eyes stop here, let our imagination pass beyond. It will sooner tire of conceiving things than nature of producing them. The whole visible world is only an imperceptible trace in the amplitude of nature. No idea approaches it. However much we may inflate our conceptions beyond these imaginable spaces, we give birth only to atoms with respect to the reality of things.

*Pensees*

Beginning (p. 50)

Hackett. Indianapolis, Indiana, USA. 2004

French biologist

Our imagination...is equally confounded by what is infinitely great or infinitely small.

*The Universe: Or, The Infinitely Great and the Infinitely Little*

Book I (p. 3)

Blackie & Son. London, England. 1870

**Proctor, Richard Anthony** 1837–88

English astronomer

I believe that no one who studies aright the teachings of the profoundest students of nature will fail to perceive that our Galileos, Keplers, and Newtons, our Priestleys, Faradays, and Tyndalls, have been moved in no small degree by poetic instincts, and that their best scientific work has owed as much to their imagination as to their reasoning and perceptive faculties.

*The Poetry of Astronomy*

Preface

Smith, Elder & Co. London, England. 1881

**Pulitzer, Joseph** 1847–1911

American journalist and publisher

I know what you mean by imagination! That it is necessarily inexact or irresponsible. I hope you will recover from that. Imagination isn't disorder or sloppiness or substituting misinformation for something that should have been definitely ascertained.... It isn't being lazy or indifferent or lacking personal or professional conscience. No. It is what the astronomer has when he says that right there, though no one has located it, must be a star. It is what Darwin had when, with the long orchid in his hand, he said that somewhere they would find the long-tongued moth who visited it.

In Austin L. Porterfield

*Creative Factors in Scientific Research*

Chapter IV (p. 61)

Duke University Press. Durham, North Carolina, USA. 1941

**Raymo, Chet** 1936–

American physicist and science writer, teacher, and naturalist

No more of the universe is visible to our unaided eyes than to the eyes of our Neanderthal ancestors. But science, the product of our imagination, has immensely extended the range of our imagination. Our inward eye can range beyond the dome of visible stars to the unseen realm of the nebulae and galaxies.

*365 Starry Nights*

Introduction (p. x)

Prentice Hall Press. New York, New York, USA. 1982

Science is not a collection of facts, nor is science something that happens in the laboratory. Science is something that happens in the head; it is a flight of imagination beyond the constraints of ordinary imagination.

*The Virgin and the Mousetrap: Essays in Search of the Soul of Science*

Chapter I (p. 3)

The Viking Press. New York, New York, USA. 1991

**Reade, T. M.**

No biographical data available

When it becomes necessary to invent imaginary conditions, to do imaginary work instead of rigorously reasoning out the probabilities of geological facts – all too few in many cases – I shall leave the seemingly congenial occupation to the poets and romancers of science, and confess myself entirely unfitted for the prosecution of scientific investigation.

Glacial Geology, Old and New

*Geological Magazine*, Volume X, Number 1, 1893 (p. 37)

**Reid, Thomas** 1710–96

Scottish philosopher

It is genius, and not the want of it, that adulterates philosophy, and fills it with error and false theory. A creative imagination disdains the mean offices of digging for a foundation, of removing rubbish, and carrying materials; leaving these servile employments to the drudges in science, it plans a design, and raises a fabric. Invention supplies materials where they are wanting, and fancy adds colouring and every befitting ornament. The work pleases the eye, and wants nothing but solidity and a good foundation.

*The Works of Thomas Reid* (Volume 1)

An Inquiry into the Human Mind, Chapter I, Section ii (p. 99)

James Thin. Edinburgh, Scotland. 1895

**Richards, Mary Caroline**

No biographical data available

The imagination equips us to perceive reality when it is not fully materialized.

*Centering in Pottery, Poetry, and the Person*

Chapter III (p. 74)

Wesleyan University Press. Middletown, Connecticut, USA. 1989

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

...if you have a good scientific imagination you can think of all sorts of things that might be true, and that's the essence of science. You first think of something that might be true – then you look to see if it is, and it generally isn't.

*Bertrand Russell Speaks His Mind*

What Is Philosophy? (p. 13)

Greenwood Press, Publishers. Westport, Connecticut, USA. 1960

**Sagan, Carl** 1934–96

American astronomer and author

Imagination will often carry us to worlds that never were.

But without it, we go nowhere.

*Cosmos*

Chapter I (p. 2)

Ballantine Books. New York, New York, USA. 1985

**Schopenhauer, Arthur** 1788–1860

German philosopher

Every man takes the limits of his own field of vision for the limits of the world.

*The Wisdom of Life, and Other Essays*

Studies in Pessimism

Psychological Observations (p. 255)

M. W. Dunne. New York, New York, USA. 1901

**Serling, Rod** 1924–75

American playwright

There is a fifth dimension beyond those known to man. It is a dimension vast as space and timeless as infinity. It is the middle ground between light and shadow, between the pit of his fears and the summit of his knowledge. This is the dimension of imagination. It is an area called the Twilight Zone.

*Twilight Zone*

Preamble

Television program (1959–1964)

**Serviss, Garrett Putman** 1851–1921

American science fiction writer

His imagination flashed like lightning over the subject of his talk, revealing it at the most unexpected angles, and often he roused us to real enthusiasm for things the very names of which we almost forgot amidst the next day's occupations.

*A Columbus of Space*

Chapter I (p. 2)

D. Appleton & Co. New York, New York, USA. 1911

**Shaw, George Bernard** 1856–1950

Irish comic dramatist and literary critic

DON JUAN: Stupidity has all the knowledge, and Imagination all the intelligence.

*Man and Superman: A Comedy and a Philosophy*

Act III (p. 83)

The Heritage Press. New York, New York, USA. No date

### Super, Charles W.

No biographical data available

When the imagination is kept within bounds by the intellect it discovers many general truths.

Science and Poetry

*Popular Science Monthly*, Volume LXXXVI, February, 1914 (p. 168)

### Teall, J. J. Harris 1849–1924

British geologist

...it is well to remember that there is a scientific, as well as an unscientific, use of the imagination.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1902*

The Evolution of Petrological Ideas (p. 288)

Government Printing Office. Washington, D.C. 1903

### Thomson, Sir John Arthur 1861–1933

Scottish naturalist

The scientific imagination devises a possible solution – an hypothesis – and the investigator proceeds to test it. He makes intellectual keys and then tries whether they fit the lock. If the hypothesis does not fit, it is rejected and another is made. The scientific workshop is full of discarded keys.

*Introduction to Science*

Chapter III (p. 69)

Henry Holt & Co. New York, New York, USA. 1911

### Thomson, Sir George Paget 1892–1975

English physicist

Science, like all arts, needs imagination.

*The Inspiration of Science*

Chapter II (p. 8)

Oxford University Press, Inc. London, England. 1961

### Thoreau, Henry David 1817–62

American essayist, poet, and practical philosopher

...the imagination, give it the least license, dives deeper and soars higher than Nature goes.

*The Writings of Henry David Thoreau* (Volume 2)

*Walden*

Chapter XVI (p. 441)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

### Thorndike, Ashley Horace

No biographical data available

The sciences cannot advance very far without the imagination, and literature is a feeble thing if it loses hold on the reason.

*Literature in a Changing Age*

Chapter IX (p. 231)

The Macmillan Co. New York, New York, USA. 1920

### Tischner, August

No biographical data available

Infinite space and its content as the celestial mechanism are beyond the intellectual faculties of man to understand, and it is a matter of course that knowledge is replaced by imagination. Theoretical astronomy or what they have agreed to call explanatory science is but the fruit of imagination.

*The Fixed Idea of Astronomical Theory* (p. 32)

Gustav Fock. Leipzig, Germany. 1885

### Tombaugh, Clyde 1906–97

American astronomer

You have to have the imagination to recognize a discovery when you make one. When they examined Voyager images and saw for the first time the volcanic eruptions on Io, which called for some intuitive imagination. I would suggest that above everything else, in observing you have to be very alert to everything. You have to be able to recognize a discovery as such. There are so many people who don't seem to have that talent. A research astronomer cannot afford to be in such a rut. I might say that different types of personalities in astronomy make certain types of discoveries that are in line with their personalities.

In David H. Levy

*Clyde Tombaugh: Discoverer of Planet Pluto*

Chapter 5 (p. 61)

University of Arizona Press. Tucson, Arizona, USA. 1991

### Twain, Mark (Samuel Langhorne

Clemens) 1835–1910

American author and humorist

...you can't depend on your eyes when your imagination is out of focus.

*A Connecticut Yankee in King Arthur's Court*

Chapter XLIII (p. 439)

Harper & Brothers Publishers. New York, New York, USA. 1917

### Tyndall, John 1820–93

Irish-born English physicist

With accurate experiment and observation to work upon...imagination becomes the architect of physical theory.

In Sir Richard Arman Gregory

*Discovery; or, The Spirit and Service of Science*

Chapter VI (p. 162)

Macmillan & Company Ltd. London, England. 1918

Bounded and conditioned by cooperant reason, imagination becomes the mightiest instrument of the physical discoverer.

*Scientific Addresses*

Scientific Use of the Imagination (p. 36)

Charles C. Charfield. New Haven, Connecticut, USA. 1870

The outward facts of nature are insufficient to satisfy the mind. We cannot be content with knowing that the light and heat of the sun illuminate and warm the world. We are led irresistibly to enquire, 'What is light, and what is

heat?’ and this question leads us at once out of the region of sense into that of imagination.

*Fragments of Science: A Series of Detached Essays, Addresses, and Reviews* (Volume 1)  
Chapter II (p. 72)  
D. Appleton & Co. New York, New York, USA. 1915

Scientific men fight shy of the word [imagination] because of its ultrascientific connotations; but the fact is that without the exercise of this power our knowledge of Nature would be a mere tabulation of coexistences and sequences.

*Fragments of Science: A Series of Detached Essays, Addresses, and Reviews* (Volume 2)  
Chapter VIII (p. 104)  
D. Appleton & Co. New York, New York, USA. 1896

...it behooves us, who are examining the power and function of the imagination, to keep constantly before us the physical images which underlie our terms.

*Fragments of Science: A Series of Detached Essays, Addresses, and Reviews* (Volume 2)  
Chapter 8 (p. 120)  
D. Appleton & Co. New York, New York, USA. 1896

[The] conception of physical theory implies, as you perceive, the exercise of the imagination. Do not be afraid of this word, which seems to render so many respectable people, both in the ranks of science and out of them, uncomfortable. That men in the ranks of science should feel thus is, I think, a proof that they have suffered themselves to be misled by the popular definition of a great faculty instead of observing its operation in their own minds. Without imagination we cannot take a step beyond the bourne of the mere animal world, perhaps not even to the edge of this one.

*Six Lectures on Light Delivered in America in 1872–1873*  
3rd Edition  
Lecture II (p. 43)  
D. Appleton & Co. New York, New York, USA. 1901

...presented rightly to the mind, the discoveries and generalizations of modern science constitute a poem more sublime than has ever yet addressed the human imagination.

*Heat Considered as a Mode of Motion*  
Chapter XIV (p. 466)  
D. Appleton & Company. New York, New York, USA. 1875

**Velikovsky, Immanuel** 1895–1979  
Russian author

Imagination coupled with skepticism and an ability to wonder – if you possess these, bountiful nature will hand you some of the secrets out of her inexhaustible store. The pleasure you will experience in discovering truth will repay you for your work; don't expect other compensation, because it may not come.

*Earth in Upheaval*  
Supplement, Worlds in Collision in the Light of Recent Finds in Archaeology, Geology, and Astronomy, Address, Princeton University, October 14, 1953 (p. 279)  
Dell Publishing Company, Inc. New York, New York, USA. 1955

**Voltaire (François-Marie Arouet)** 1694–1778  
French writer

There is an astonishing imagination, even in the science of mathematics.... We repeat, there was far more imagination in the head of Archimedes than in that of Homer.

*The Works of Voltaire* (Volume 10)  
*Philosophical Dictionary* (Volume 10)  
Imagination (p. 170)  
The St. Hubert Guild. Akron, Ohio, USA. 1901

**von Humboldt, Alexander** 1769–1859  
German naturalist and explorer

All that the senses can but imperfectly comprehend, all that is most awful in such romantic scenes of nature, may become a source of enjoyment to man, by opening a wide field to the creative powers of his imagination.

Translated by E. C. Otte  
*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)  
Introduction (p. 26)  
Harper & Brothers Publishers. New York, New York, USA. 1858

**von Liebig, Justus** 1803–73  
German organic chemist

...the moment the imagination alone is taken for a guide, and is allowed to solve questions left undecided by researches, investigation ceases, truth remains unascertained, and there is not only this negative evil, but in error we create a Monster, envious, malignant, and obstinate, which, when at length truth endeavors to make its way, crosses its path, combats, and strives to annihilate it!

In John Blyth (ed.)  
*Familiar Letters on Chemistry*  
Letter I (p. 18)  
Walton & Maberly. London, England. 1859

If we do not succeed in discovering causes by our researches, we have no right to create them by the imagination; we must not allow mere fancy to proceed beyond the bounds of our knowledge.

In John Gardner  
*Familiar Letters on Chemistry*  
Second Series  
Letter I (p. 27)  
Taylor & Walton. London, England. 1844

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

All our minds are made of memories. In our memories each of us has something that without any special training whatever will go back into the past and grip firmly and convincingly all sorts of workable facts, sometimes more convincingly than firmly. But the imagination, unless it is strengthened by a very sound training in the laws of causation, wanders like a lost child in the blankness of things to come and returns empty.

*The Discovery of the Future* (p. 21)  
B.W. Huebsch. New York, New York, USA. 1913

**Wheeler, John Archibald** 1911–  
American physicist and educator

The vision of the Universe that is so vivid in our minds is framed by a few iron posts of true observation – themselves resting on theory for their meaning – but most of all the walls and towers in the vision are of papier-mâché, plastered in between those posts by an immense labor of imagination and theory.

In John Archibald Wheeler and Wojciech Hubert Zurek (eds.)  
*Quantum Theory and Measurement*  
Law Without Law (p. 203)  
Princeton University Press. Princeton, New Jersey, USA. 1983

**Whitrow, G. J.** 1912–2000  
English mathematician

Our idea of the universe as a whole remains a product of the imagination.

*The Structure and Evolution of the Universe: An Introduction to Cosmology*  
Chapter 8 (p. 197)  
Hutchinson. London, England. 1959

**Willan, Robert** 1757–1812  
Scottish physician

There seems to be some Bounds placed to all Physical Enquiries, beyond which we cannot go, except in Imagination, and sometimes even that will fail us.

*An Essay on the King's-evil. By Robert Willan, M.D.*  
An Essay on the King's-evil (p. 5)  
Printed for J. & P. Knapton. London, England. 1746

**Wilson, Edmund** 1895–1972  
American writer and literary critic

The great scientists have been occupied with values – it is only their vulgar followers who think they are not. If scientists like Descartes, Newton, Einstein, Darwin, and Freud don't "look deeply into experience," what do they do? They have imaginations as powerful as any poet's and some of them were first-rate writers as well. How do you draw the line between Walden and The Voyage of the Beagle? The product of the scientific imagination is a new vision of relations – like that of the artistic imagination.

In Elena Wilson (ed.)  
*Letters on Literature and Politics, 1912–1972*  
Letter to Allen Tate, July 20, 1931 (p. 212)  
Farrar, Straus & Giroux. New York, New York, USA. 1977

## IMAGINE

**Cole, K. C.**  
Science writer

Imagining the unseeable is hard, because *imagining* means having an image in your mind.

*First You Build a Cloud and Other Reflections on Physics as a Way of Life*  
Part I, Chapter 1 (p. 18)  
Harcourt Brace & Co. Orlando, Florida, USA. 1999

## IMBECILITY

**Chesterton, G. K. (Gilbert Keith)** 1874–1936  
English author

I am more and more convinced that I suffer, not from a shiny or showy impertinence, but from a simplicity that verges upon imbecility.

*All Things Considered*  
Science and Religion (p. 188)  
John Lane Co. New York, New York, USA. 1910

## IMMENSITY

**Pouchet, Félix Archimède** 1800–72  
French biologist

Immensity is everywhere. It stands revealed in the azure dome of heaven, where glows a perfect dust of stars, and in the living atom which hides from us the marvels of its organization.

*The Universe: Or, The Infinitely Great and the Infinitely Little*  
Book I, The Invisible World (p. 3)  
Blackie & Son. London, England. 1870

## IMMORTALITY

**Bell, Alexander Graham** 1847–1920  
American scientist

To my mind, the "Evolutionary Hypothesis" tends to weaken belief in the "immortality of personal consciousness" by revealing a cause for the growth of such an idea quite independently of its truth.

In Samuel June Barrows  
*Science and Immortality: The Christian Register Symposium*  
XXVII (p. 94)  
Geo. H. Ellis. Boston, Massachusetts, USA. 1887

**Gray, Asa** 1810–88  
American botanist

...it is not science – certainly not physical and physiological science – that brings immortality to light, modern science does not really tend to put out that light. Yet, if that light were quenched, "I know not where," in modern science alone, "is that Promethean heat that can that light relume."

In Samuel June Barrows  
*Science and Immortality: The Christian Register Symposium*  
III (p. 14)  
Geo. H. Ellis. Boston, Massachusetts, USA. 1887

**Hall, Asaph** 1829–1907  
American astronomer

Science does not, I think, give a positive answer to questions concerning the immortality of the human soul ...

In Samuel June Barrows  
*Science and Immortality: The Christian Register Symposium*  
XVII (p. 62)  
Geo. H. Ellis. Boston, Massachusetts, USA. 1887

**Lesley, J. P.**

No biographical data available

The ideas of unchangeably and immortality are not only repugnant to physical science, but inconceivable by it ...

In Samuel June Barrows

*Science and Immortality: The Christian Register Symposium*  
VI (p. 20)

Geo. H. Ellis. Boston, Massachusetts, USA. 1887

The question of immortality can hardly be said to be affected at all by the methods and results of the physical sciences as pursued and reached by men of our day, who busy themselves solely with material forms, growths, changes, dissolutions, reproductions, weights, measures, attractions and repulsions – in a word, with what is called matter and what are called its forces, the life-force and the mind-force included.

In Samuel June Barrows

*Science and Immortality: The Christian Register Symposium*  
VI (p. 20)

Geo. H. Ellis. Boston, Massachusetts, USA. 1887

**Newcomb, Simon** 1835–1909

Canadian-American astronomer

If we admit the hypothesis of immortality, it is difficult to see how we could ever reach any proof of it derived from experience.

In Samuel June Barrows

*Science and Immortality: The Christian Register Symposium*  
V (pp. 17–18)

Geo. H. Ellis. Boston, Massachusetts, USA. 1887

**Plato** 428 BCE–347 BCE

Greek philosopher

But he who has been earnest in the love of knowledge and of true wisdom, and has exercised his intellect more than any other part of him, must have thoughts immortal and divine, if he attain truth, and in so far as human nature is capable of sharing in immortality, he must altogether be immortal...

In *Great Books of the Western World* (Volume 7)

*Timaeus*

Section 90 (p. 476)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**von Braun, Wernher** 1912–77

German-American rocket scientist

Nature does not know extinction: all it knows is transformation. Everything science has taught me, and continues to teach me, strengthens my belief in the continuity of our spiritual existence after death.

Immortality

*This Week Magazine*, January 24, 1960 (p. 2)

**IMMUNITY****Mechnikov, Ilya** 1845–1916

Russian microbiologist

There is no need to be a doctor or a scientist to wonder why the human body is capable of resisting so many harmful agents in the course of everyday life. It is often seen that in households where all members are exposed to the same danger, or again in schools or troops where everyone lives the same life, disease does not strike everyone indifferently. For some individuals who go down at the attack, there are others who have immunity to a greater or lesser extent.

*Nobel Lectures, Physiology or Medicine 1901–1921*

Nobel lecture for award received in 1908

On the Present State of the Question of Immunity in Infectious Diseases (p. 281)

Elsevier Publishing Company. Amsterdam, Netherlands. 1967

Whenever the organism enjoys immunity, the introduction of infectious microbes is followed by the accumulation of mobile cells, of white corpuscles of the blood in particular which absorb the microbes and destroy them.

*Nobel Lectures, Physiology or Medicine 1901–1921*

On the Present State of the Question of Immunity in Infectious Diseases  
Elsevier Publishing Co. Amsterdam, The Netherlands. 1967

**IMMUNOLOGICAL DEFENSE****Chedd, Graham**

No biographical data available

[I]t is possible to divide [immunological defenses] into two general classes, representing approximately the infantry and the heavy armor. The infantry consists of the well-known soluble antibodies, sent out into the blood in response to invasion by the great majority of the microbes to which we are susceptible. The heavy armour is made up of the cytotoxic lymphocytes, the class of white blood cells that attack and destroy many parasitic organisms, that are largely responsible for rejecting grafts of foreign tissue, and whose main job may be to patrol the body on the continual lookout for cancer cells.

Immunological Engineering

*New Scientist and Science Journal*, May 13, 1971

**Thomas, Lewis** 1913–93

American physician and biologist

Our arsenals for fighting off bacteria are so powerful and involve so many defense mechanisms, that we are more in danger from these than from the invaders. We live in the midst of explosive devices. We are mined.

*New England Journal of Medicine*, September 14, 1972

## IMMUNOLOGICAL SELF-RECOGNITION

**Burnet, Sir Frank Macfarlane** 1899–1985  
Australian virologist

There is an insistent suggestion that immunological self-recognition is derived from the processes by which morphological and functional integrity is maintained in large and long-lived multicellular organisms. This may be a mere cobweb of phantasy but in my more optimistic moments I could hope that it might also function like Ariadne's thread to guide us effectively through part of that biological labyrinth, the process of differentiation.

*Nobel Lectures, Physiology or Medicine 1942–1962*

Immunological Recognition of Self

Elsevier Publishing Co. Amsterdam, The Netherlands. 1964

## IMPENETRABILITY

**Bernal, John Desmond** 1901–71  
Irish-born physicist and X-ray crystallographer

...the key word in the structure of liquids is the one which Humpty Dumpty used in *Alice Through the Looking Glass*, 'impenetrability'.

*Proceedings of the Royal Society of London*, Volume 280 (p. 302)

## IMPERTURBABILITY

**Osler, Sir William** 1849–1919  
Canadian physician and professor of medicine

Imperturbability means coolness and presence of mind under all circumstances, calmness amid storm, clearness of judgment in moments of grave peril, immobility, impassiveness, or, to use an old and expressive word, *phlegm*. It is the quality which is most appreciated by the laity though often misunderstood by them; and the physician who has the misfortune to be without it, who betrays indecision and worry, and who shows that he is flustered and flurried in ordinary emergencies, loses rapidly the confidence of his patients.

*Aequanimitas: With Other Addresses to Medical Students, Nurses and Practitioners of Medicine*

*Aequanimitas* (p. 4)

P. Blackiston's Sons & Co. Philadelphia, Pennsylvania, USA. 1910

## IMPORTANCE

**Weisskopf, Victor Frederick** 1908–2002  
Austrian-American physicist

Everything is important, but there are degrees of importance ...

In Denis Brian

*The Voice of Genius*

Chapter Four (p. 102)

Perseus Publishing, Cambridge, Massachusetts, USA. 1995

## IMPOSSIBILITY

**Adams, Douglas** 1952–2001  
English author, comic radio dramatist, and musician

It is impossible to import things into an infinite area, there being no outside to import things in from.

*The Original Hitchhiker Radio Script*

Fit the Fifth (p. 101)

Harmony Books. New York, New York, USA. 1983

**Aristotle** 384 BCE–322 BCE  
Greek philosopher

In framing an ideal we may assume what we wish, but should avoid impossibilities.

In *Great Books of the Western World* (Volume 9)

*Politics*

Book II, Chapter 6, 1265a [15]

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

A likely impossibility is always preferable to an unconvincing possibility.

In *Great Books of the Western World* (Volume 8)

*On Poetics*

24, 1460a

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Bohr, Niels Henrik David** 1886–1962  
Danish physicist

To aim at such a distant object and hit it is of course impossible. But if one has the impudence to throw in that direction without aiming, and in addition to imagine something so absurd as that one might hit it, yes, then perhaps it can happen. The idea that something perhaps could happen can be stronger than practice and will.

In Timothy Ferris (ed.)

*The Whole Shebang: A State – of-the Universe's Report*

Quantum Weirdness (p. 273)

Simon & Schuster. New York, New York, USA. 1996

**Borel, Félix Edouard Justin Emile** 1871–1956  
French mathematician

Events with a sufficiently small probability never occur, or at least we must act, in all circumstances, as if they were impossible.

Translated by Maurice Baudin

*Probabilities and Life*

Introduction (pp. 2–3)

Dover Publications. New York, New York, USA. 1962

*The Adventure of Priory School* (p. 620)

Wings Books. New York, New York, USA. 1967

**Goddard, Robert H.** 1882–1945  
American physicist

Often a science in its infancy, because it is unable to distinguish between path and barrier, falsely judges many things to be possible and others to be impossible...

*The Papers of Robert H. Goddard* (Volume 1)

*On Taking Things for Granted*

Graduation oration (p. 66)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1970

**Goldwyn, Samuel** 1882–1974  
American film producer

I'll tell you in two words – impossible.

Quoted in his obituary

*New York Times*, February 1, 1974

**Huxley, Aldous** 1894–1963  
English writer and critic

Except under controlled conditions, or in circumstances where it is possible to ignore individuals and consider only large numbers and the law of averages, any kind of accurate foresight is impossible.

*Time Must Have a Stop*

Chapter XXX (p. 296)

The Sun Dial Press. Garden City, New York, USA. 1944

**Juster, Norton** 1929–  
American architect and author

...so many things are possible just as long as you don't know they're impossible.

*The Phantom Tollbooth*

Chapter 19 (p. 247)

Alfred A. Knopf. New York, New York, USA. 1989

**Rubinstein, Anton** 1829–94  
Russian pianist, composer, and conductor

Do not forget to dare the impossible in order to achieve the possible.

Compiled by V.V. Vorontsov

*Words of the Wise: A Book of Russian Quotations*

Translated by Vic Schneiersson

Progress Publishers. Moscow, Russia. 1979

**Shakespeare, William** 1564–1616  
English poet, playwright, and actor

Well, I'll have her: and if it be a match, as nothing is impossible – .

In *Great Books of the Western World* (Volume 26)

*The Plays and Sonnets of William Shakespeare* (Volume 1)

*The Two Gentlemen of Verona*

Act III, Scene ii, l. 379

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Syngé, John L.** 1897–1995  
Irish mathematician and physicist

There is a fascination about the impossible...which is responsible for the dreams and fantasies with which we are all familiar. Everything which is possible becomes banal. Only the inaccessible is worthy of our passions.

*Kandelman's Krim*

Chapter Eight (p. 115)

Jonathan Cape. London, England. 1957

**Thurber, James** 1894–1961  
American writer and cartoonist

All things, as we know, are impossible in this most impossible of all impossible worlds.

*Lanterns and Lances*

The Last Clock (p. 43)

Time-Life Books, Inc. Alexandria, Virginia, USA. 1980

**von Braun, Wernher** 1912–77  
German-American rocket scientist

...the past few decades should have taught us to use the word "impossible" with utmost caution.

In Erik Bergaust

*Wernher von Braun*

Reaching for the Straws (p. 2)

National Space Institute. Washington, D.C. 1976

**Wilde, Oscar** 1854–1900  
Irish wit, poet, and dramatist

Man can believe the impossible, but man can never believe the improbable.

*Epigrams: Phrases and Philosophies for the Use of the Young*

Sebastian Melmoth

A.R. Keller. London, England. 1907

## IMPOSSIBLE

**Clarke, Arthur C.** 1917–  
English science and science fiction writer

Given power and knowledge (wisdom is rather useful, too) nothing that does not infringe the laws of Nature need be regarded as impossible.

*The Exploration of Space*

Chapter 11 (p. 118)

Harper & Brothers Publishers. New York, New York, USA. 1951

It is really quite amazing by what margins competent but conservative scientists and engineers can miss the mark, when they start with the preconceived idea that what they are investigating is impossible. When this happens, the most well-informed men become blinded by their prejudices and are unable to see what lies directly ahead of them.

*Profiles of the Future*

Chapter I (p. 7)

Harper & Row. New York, New York, USA. 1973

## Dr. Hans Reinhardt (Fictional character)

The word "impossible"...is only found in the dictionary of fools.

*The Black Hole*

Film (1979)

**Flammarion, Camille** 1842–1925  
French astronomer and writer

Impossible to deny what I saw, impossible to admit it.

Translated by S.R. Crocker

*Stories of Infinity*

First Story (p. 28)

Robert Brothers. Boston, Massachusetts, USA. 1873

**James, William** 1842–1910  
American philosopher and psychologist

I believe there is no source of deception in the investigation of nature which can compare with a fixed belief that certain kinds of phenomena are *impossible*.

In Henry James

*The Letters of William James: Ed. by His Son, Henry James*

Letter to Carl Stumpf (p. 248)

The Atlantic Monthly Press. Boston, Massachusetts, USA. 1920

**Johnson, Samuel** 1696–1772  
English critic, biographer, and essayist

Few things are impossible to diligence and skill.

In Arthur Murphy

*The Works of Samuel Johnson, LL.D. Volume 2*

*Rasselas*

Chapter VII (p. 14)

Jones & Co. London, England. 1825

## IMPRESSION

**Bacon, Sir Francis** 1561–1626  
English lawyer, statesman, and essayist

The human understanding is most excited by that which strikes and enters the mind at once and suddenly, and by which the imagination is immediately filled and inflated.

It then begins almost imperceptibly to conceive and suppose that everything is similar to the few objects which have taken impression on the mind.

In W.I.B. Beveridge

*The Art of Scientific Investigation*

Chapter Nine (p. 114)

W.W. Norton & Company, Inc. New York, New York, USA. 1957

**von Humboldt, Alexander** 1769–1859  
German naturalist and explorer

Impressions change with the varying movements of the mind, and we are led by a happy illusion to believe that we receive from the external world that with which we have ourselves invested it.

*Cosmos (Volume I)*

Introduction (p. 5)

Henry G. Bohn. London, England. 1849

**IMPULSE**

**Tyndall, John** 1820–93  
Irish-born English physicist

Extraordinary effects are produced by the accumulation of small impulses.

*Fragments of Science: A Series of Detached Essays, Addresses, and Reviews* (Volume 1)  
Chapter 22 (p. 444)  
D. Appleton & Co. New York, New York, USA. 1896

**IMPROBABILITY**

**Dawkins, Richard** 1941–  
English ethologist, evolutionary biologist, and popular science writer

To “tame” chance means to break down the very improbable into less improbable small components arranged in series. No matter how improbable it is that an X could have arisen from Y in a single step, it is always possible to conceive of a series of infinitesimal graded intermediates between them. However improbable a large scale change may be, smaller changes are less improbable. And provided we postulate a sufficient series of sufficiently finely graded intermediates, we shall be able to derive anything from anything else, without astronomical improbabilities.

*The Blind Watchmaker*  
Chapter 11 (pp. 317–318)  
W.W. Norton & Company, Inc. New York, New York, USA. 1986

**Poincaré, Jules Henri** 1854–1912  
French mathematician and theoretical astronomer

Physical theories must not introduce as many arbitrary constants as there are phenomena to be accounted for; they must establish connections among the various experimental facts and, above all, must lead to predictions.

In A. d’Abro  
*The Rise of the New Physics* (Volume One)  
Chapter IV (p. 33)  
Dover Publications, Inc. New York, New York, USA. 1951

**INADEQUACY**

**Cannon, Walter Bradford** 1871–1945  
American neurologist and physiologist

Training and practice may not lead to perfection, but they will surely compensate for early inadequacy.

*The Way of an Investigator: A Scientist’s Experiences in Medical Research*  
Chapter III (p. 43)  
W.W. Norton & Company, Inc. New York, New York, USA. 1945

**INCOMPLETE KNOWLEDGE**

**Mach, Ernst** 1838–1916  
Austrian physicist and philosopher

An incomplete knowledge put into words forms a relatively firm prop for fleeting thoughts, from which the thoughts, seeking among facts, set out, and to which, modifying it by criticism and comparison, they continually return.

*The Science of Mechanics: A Critical and Historical Account of Its Development*  
Appendix of Additions and Alterations to the Seventh German Edition (p. 14)  
The Open Court Publishing Co. Chicago, Illinois, USA. 1915

**INCOMPREHENSIBLE**

**Browne, Sir Thomas** 1605–82  
English author and physician

Have a glimpse of incomprehensibles; and thoughts of things, which thoughts but tenderly touch. Lodge immaterials in thy head; ascend unto invisibles ...

In Simon Wilkin  
*The Works of Sir Thomas Browne* (Volume 3)  
*Christian Morals* (p. 133)  
Henry B. Bohn. London, England. 1852

**Chargaff, Erwin** 1905–2002  
Austrian biochemist

Humanity has an enormous capacity to disregard the incomprehensible.

*Voices in the Labyrinth: Nature, Man and Science* (p. 31)  
The Seabury Press. New York, New York, USA. 1977

**Robinson, Abraham** 1918–74  
Mathematician

I cannot imagine that I shall ever return to the creed of the true Platonist, who sees the world of the actual infinite spread out before him and believes that he can comprehend the incomprehensible.

From A Formalist’s Point of View  
*Dialectica*, Volume 23 1969

**von Goethe, Johann Wolfgang** 1749–1832  
German poet, novelist, playwright, and natural philosopher

A man must cling to the belief that the incomprehensible is comprehensible; otherwise he would not try to fathom it.

Translated by Thomas Bailey Saunders  
*The Maxims and Reflections of Goethe #554* (p. 194)  
The Macmillan Co. New York, New York, USA. 1906

**INCONCEIVABILITY**

**Kelvin, Lord William Thomson** 1824–1907  
Scottish engineer, mathematician, and physicist

Nothing that we can measure is inconceivably large or inconceivably small in physical science.

*Popular Lectures and Addresses* (Volume 1)  
Lecture, Royal Institution of Great Britain  
February 3, 1883 (p. 147)  
Macmillan & Company Ltd. London, England. 1894

**INCURABLE**

**von Ebner-Eschenbach, Marie** 1830–1916  
Austrian novelist

The incurable ills are the imaginary ills.

Translated by Annis Lee Wister

*Aphorisms*

Number 52

J.B. Lippincott & Co. Philadelphia, Pennsylvania, USA. 1883

**INDEPENDENCE**

**Koerner, Jon**

No biographical data available

The problem is that, in many cases for many systems, there may simply be no such thing as a truly independent variable. Out here in the real world, the phrase “independent” may often be oxymoronic. The very notion of independence reflects the world of Platonic idealism, a pure world populated by separate discrete things each with its essence, floating suspended in a sea of laws, rules governing the relations between these autonomous entities.

*Nontriviality of Nonlinear Dynamics in Psychology of Learning*

Doctoral dissertation, University of Minnesota, 1989 (p. 118)

**INDEX**

**Binney, Charles Chauncey** 1855–1913

No biographical data available

One may recollect generally that certain thoughts or facts are to be found in a certain book; but without a good index such a recollection may hardly be more available than that of the cabin-boy who knew where the ship’s teakettle was, because he saw it fall overboard. In truth, a very large part of every man’s reading falls overboard; and unless he has good indexes, he will never find it again, how much so ever he may look for it.

*The Life of Horace Binney: With Selections From His Letters*

Letter, February 20, 1866 (p. 446)

J. Lippincott Co. Philadelphia, Pennsylvania, USA. 1903

**Busk, R. H.**

No biographical data available

Multitudes of desired items lie buried under one’s hand, lost and useless because the mind that indexed them thought of them under one category and the mind that wants to unearth them searches for them under another category.

Indexing Monumental Inscriptions

*Notes and Queries*, Seventh Series, I, May 1, 1886 (p. 353)

**INDIFFERENCE**

**Bartlett, Elisha** 1804–55

American physician

Closely allied to this [integrity] is what may be called scientific indifference to the results of our observations, a quality of mind of most rare and difficult attainment, but most essential to the trusty and true observer. He must see clearly that the scientific truth he seeks is in nature – not in his thoughts or wishes – and that his sole function is to find where and what it is. The various passions of the human heart may dread or may desire, this issue or another: – but science asks one only question. And that is – What is?

In William E. Stempsey

*Elisha Bartlett’s Philosophy of Medicine*

The Philosophy in Therapeutics (p. 203)

Springer-Verlag. Dordrecht, The Netherlands. 2005

**INDIVIDUAL**

**Einstein, Albert** 1879–1955

German-born physicist

The individual feels the nothingness of human desires and aims and the sublimity and marvelous order which reveal themselves both in Nature and in the world of thought. He looks upon individual existence as a sort of prison and wants to experience the universe as a single significant whole.

*The World as I See It* (p. 229)

Philosophical Library. New York, New York, USA. 1949

The harmony of the whole makes every creature what it is, and the human being is a human being as much by the form and nature of his upper jaw as by the form and nature of the last joint of his little toe. And so, again, every creature is but a tone, a shade of a great harmony, which must be studied in its entirety, otherwise no individual has any meaning.

In Peter Hume Brown

*Life of Goethe* (Volume 1)

Chapter XVIII (p. 275)

Henry Holt & Co. New York, New York, USA. 1920

**INDIVIDUALITY**

**Alexander, Samuel** 1859–1938

Australian-born British philosopher

Individuality is a pervasive character of things, but so also it would seem that there is nothing individual which has not in it a character recognisable by thought, and known as a universal.

*Space, Time, and Deity: The Gifford Lectures at Glasgow, 1916–1918*

(Volume 1)

Introduction (p. 2)

Macmillan & Co. Ltd. London, England. 1920

**Muir, John** 1838–1914

American naturalist

Indeed, every atom in creation may be said to be acquainted with and married to every other, but with

universal union there is a division sufficient in degree for the purposes of the most intense individuality.

*Steep Trails*

Chapter I (p. 12)

Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

...no matter, therefore, what may be the note which any creature forms in the song of existence, it is made first for itself, then more and more remotely for all the world and worlds.

*Steep Trails*

Chapter I (p. 12)

Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

## INDUCTION

**Comte, Auguste** 1798–1857

French philosopher

Induction for deduction, with a view to construction.

In J.A. Thomson

*Introduction to Science*

Chapter III (p. 58)

Williams & Norgate Ltd. London, England. 1916

**Hamilton, Sir William Rowan** 1805–65

Anglo-Irish mathematician, physicist, and astronomer

The humblest student of astronomy, or of any other physical science, if he is to profit at all by his study, must in some degree go over for himself, in his own mind, if not in part with the aid of his own observation and experiment, that process of induction which leads from familiar facts to obvious laws, then to the observation of facts more remote, and to the discovery of laws of higher orders.

*Report of the Fifth Meeting of the British Association for the Advancement of Science*

Address by Sir William Hamilton (p. xliii)

John Murray. London, England. 1836

**Jevons, William Stanley** 1835–82

English economist and logician

No inductive conclusions are more than probable ...

*The Principles of Science: A Treatise on Logic and Scientific Method*

Preface to the First Edition (p. ix)

Macmillan & Company Ltd. London, England. 1892

Our ultimate object in induction must be to obtain the complete relation between the conditions and the effect, but this relation will generally be so complex that we can only attack it in detail.

*The Principles of Science: A Treatise on Logic and Scientific Method*

Book IV, Chapter XX (p. 443)

Macmillan & Co Ltd. London, England. 1887

**Laplace, Pierre Simon** 1749–1827

French mathematician, astronomer, and physicist

Even in the mathematical sciences, our principal instruments to discover the truth are induction and analogy.

*Oeuvres complètes de Laplace*

Introduction, Volume 7 (p. v)

Gauthier-Villars. Paris, France. 1886

Analysis and natural philosophy owe their most important discoveries to this fruitful means, which is called induction. Newton was indebted to it for his theorem of the binomial and the principle of universal gravity.

*A Philosophical Essay on Probabilities*

Chapter XVII (p. 176)

Dover Publications, Inc. New York, New York, USA. 1951

**Lewis, C. S. (Clive Staples)** 1898–1963

British author, scholar, and popular theologian

This is called the inductive method. Hypothesis, my dear young friend, establishes itself by a cumulative process: or, to use popular language, if you make the same guess often enough it ceases to be a guess and becomes a Scientific Fact.

*The Pilgrim's Regress: An Allegorical Apology for Christianity, Reason and Romanticism*

Wm. B. Eerdsman, Publishers. Grand Rapids. Michigan, USA. 1996

**Mendeleyev, Dmitry Ivanovich** 1834–1907

Russian chemist

By investigating the universe by an inductive method (endeavoring from the much which is observable to arrive at a little which may be verified and is indubitable) the new science refuses to recognise dogma as truth, but through reason, by a slow and laborious method of investigation, strives for and attains to true deductions.

*Principles of Chemistry* (Volume 1)

Introduction (p. 2, fn 1)

Longmans, Green & Company. London, England. 1891

**Newman, Francis William** 1805–97

English scholar

To infer that iron may be melted, because brass may be melted, is analogy: or to infer the same, because lead, or because tin or silver, can be melted, is still analogy. But to reason that iron may be melted, because brass and copper and lead and tin and silver will all melt, is no longer analogy, but induction.

*Lectures on Logic*

Section IV (p. 94)

J.H. Parker. Oxford, England. 1838

**Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

The method of the physical sciences is based upon the induction which leads us to expect the recurrence of a phenomenon when the circumstances which give rise to it are repeated. If all the circumstances could be simultaneously reproduced, this principle could be fearlessly applied; but this never happens; some of the circumstances will always be missing. Are we absolutely certain that they are unimportant? Evidently not! It may be

probable, but it cannot be rigorously certain. Hence the importance of the role that is played in the physical sciences by the law of probability. The calculus of probabilities is therefore not merely a recreation, or a guide to the baccarat player; and we must thoroughly examine the principles on which it is based.

*Science and Hypothesis*

Author's Preface (pp. xxvi–xxvii)

Courier Dover Publications. New York, New York, USA. 1952

**Sylvester, James Joseph** 1814–97

English mathematician

Induction and analogy are the special characteristics of modern mathematics, in which theorems have given place to theories, and no truth is regarded otherwise than as a link in an infinite chain. 'Omne exit in infinitum' is their favourite motto and accepted axiom.

*The Laws of Verse: Or Principles of Verification Exemplified in Metrical Translations*

Inaugural Address (p. 118)

Longmans, Green & Co. London, England. 1870

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

Thinking by analogy is not to be despised. Analogy has this merit, that it does not settle things – does not pretend to be conclusive. On the other hand, that *induction* is pernicious which, with a preconceived end in view, and working right forward for only that, drags in its train a number of unsifted observations, both false and true.

In John Stuart Blackie

*The Wisdom of Goethe*

Philosophy, Metaphysics, Logic, Truth and Science (p. 167)

William Blackwood & Sons. Edinburgh, Scotland. 1883

**Whewell, William** 1794–1866

English philosopher and historian

Newton's theory [of gravitation] is the circle of generalization which includes all the others [as Kepler's laws, Ptolemy's theory, etc.]; – the highest point of the inductive ascent; – the catastrophe of the philosophic drama to which Plato had prologized; – the point to which men's minds had been journeying for two thousand years.

*History of the Inductive Sciences from the Earliest to the Present Time* (3rd edition)

Book VII, Chapter II (p. 139)

John W. Parker & Son. London, England. 1857

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

...the chief reason in favor of any theory on the principles of mathematics must always be inductive, i.e., it must lie in the fact that the theory in question enables us to deduce ordinary mathematics. In mathematics, the greatest degree of self-evidence is usually not to be found quite at the beginning, but at some later point; hence

the early deductions, until they reach this point, give reasons rather from them, than for believing the premises because true consequences follow from them, than for believing the consequences because they follow from the premises.

*Principia Mathematica* (Volume 1)

Preface (p. v)

At The University Press. Cambridge, England. 1950

There is a tradition of opposition between adherents of induction and of deduction. In my view, it would be just as sensible for the two ends of a worm to quarrel.

The Organization of Thought

*Science*, Volume 44, Number 1134, September 29, 1916 (p. 417)

## INDUCTIVE METHOD

**Mendeleyev, Dmitry Ivanovich** 1834–1907

Russian chemist

By investigating the universe by an inductive method (endeavoring from the much which is observable to arrive at a little which may be verified and is indubitable) the new science refuses to recognise dogma as truth, but through reason, by a slow and laborious method of investigation, strives for and attains to true deductions.

Translated by A. J. Greenaway and George Kamensky

*The Principles of Chemistry* 5th edition

INTRODUCTION (p. 2)

Longmans, Green & Co. London, England. 1891

## INERTIA

**Feynman, Richard P.** 1918–88

American theoretical physicist

**Leighton, Robert B.** 1919–97

American physicist

**Sands, Matthew L.** 1919–

American physicist

Then it was found that the rules of motions of particles were incorrect. The mechanical rules of inertia and forces are wrong – Newton's laws are wrong – in the world of atoms. Instead, it was discovered that things on a small scale behave nothing like things on a larger scale.

*The Feynman Lectures on Physics* (Volume 1)

Chapter 2–3 (pp. 2–6)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1983

**Leibniz, Gottfried Wilhelm** 1646–1716

German philosopher and mathematician

It is one thing if something merely retains its state until some event happens to change it – a circumstance which may occur if the subject is completely indifferent with respect to either state; it is another thing and signifies

much more if the subject is not indifferent but possesses a power, an inclination as it were, to retain its state and to resist the cause of change.

In Hermann Weyl

*Philosophy of Mathematics and Natural Science*

Part II, Chapter I (p. 105)

Princeton University Press. Princeton, New Jersey, USA. 1949

**Rothman, Milton A.** 1919–

Experimental American nuclear physicist and science writer

There was once a government whose leaders decided that it would be nice to relieve the people of the effort of carrying their weight around. They reasoned that life would be much easier without the stresses and strains caused by the force of gravity. Therefore they convened their legislature and repealed the law of gravity. As soon as their president signed the bill, everything became weightless. Immediately all the air whizzed off into space. Likewise, all objects not tied down to the ground were flung away from the spinning earth – for, unfortunately, the legislature had forgotten to repeal the law of Inertia.

*The Laws of Physics*

Chapter I (p. 5)

Basic Books, Inc. New York, New York, USA. 1963

## INFALLIBLE

### Emperor Cartagia (Fictional character)

The trouble with being infallible is that you have to deal with everyone else making mistakes.

Babylon 5 (Television series)

## INFER

### Case, Thomas

No biographical data available

Beasts infer: man reasons.

In T.B. Strong

*Lectures on the Method of Science*

Lecture I (p. 2)

At The Clarendon Press. Oxford, England. 1906

### Clerke, Agnes Mary

 1842–1907

Irish astronomer

What is must be studied before what was can be inferred. Precedent states remain visionary unless they can be closely linked to actual and observable conditions.

*Modern Cosmogonies*

Chapter I (pp. 15–16)

Adam & Charles Black. London, England. 1905

## INFERENCE

### Deetz, James

 1930–2000

American archaeologist

At the inferential level, the archaeologist is at least providing the flesh for the bare bones of his data, and, if done with care and imagination, such a procedure makes possible the delineation and ultimate understanding of past cultures.

*Invitation to Archaeology*

Chapter I (p. 11)

The Natural History Press. Garden City, New York, USA. 1967

### Deming, William Edwards

 1900–93

American statistician, educator, and consultant

An inference, if it is to have scientific value, must constitute a prediction concerning future data. If the inference is to be made purely with the help of the distribution theory of statistics, the experiments that constitute evidence for the inference must arise from a state of statistical control; until that state is reached, there is no universe, normal or otherwise, and the statistician's calculations by themselves are an illusion if not a delusion. The fact is that when distribution theory is not applicable for lack of control, any inference, statistical or otherwise, is little better than a conjecture. The state of statistical control is therefore the goal of all experimentation.

*Statistical Method from the Viewpoint of Quality Control*

Foreword from the Editor (p. iii)

Washington: Department of Agriculture. 1939

### Priestley, Joseph

 1733–1804

English theologian and scientist

I can only repeat that it is not my opinions on which I would be understood to lay any stress. Let the new facts, from which I deduce them, be considered as my discoveries, and let other persons draw better inferences from them if they can.

In F.W. Gibbs

*Joseph Priestley: Adventurer in Science and Champion of Truth*

Chapter 9 (p. 117)

Thomas Nelson & Sons Ltd. London, England. 1965

### Wiley, Gordon R.

 1913–2002

American archaeologist and writer

Inference is the key or the methodological pivot of archaeology, for it is only through inference that inanimate objects are reassembled into the milieu of life. Inferences are drawn from analogies.

*An Introduction to American Archaeology* (Volume 1)

North and Middle America (p. 3)

Prentice-Hall. Englewood Cliffs, New Jersey, USA. 1966

## INFINITE

### Anaxagoras

 ca. 500 BCE–428 BCE

Greek philosopher of nature

There is no smallest among the small and no largest among the large, But always something still smaller and something still larger.

In Eli Maor  
*To Infinity and Beyond: A Cultural History of the Infinite* (p. 2)  
 Birkhäuser. Boston, Massachusetts, USA. 1987

### Author undetermined

[pi] vs e  
 [PI] goes on and on and on....  
 And e is just as cursed.  
 I wonder: Which is larger  
 When their digits are reversed?  
*Source undetermined*

**Bailey, Philip James** 1816–1902  
 English poet

God puts his finger in the other scale,  
 And up we bounce, a bubble. Nought is great  
 Nor small, with God; for none but he can make  
 The atom imperceptible, and none  
 But he can make a world; he counts the orbs,  
 He counts the atoms of the universe,  
 And makes both equal; both are infinite.  
*Festus: A Poem*  
 Scene IV (p. 83)  
 George Routledge & Sons, Limited. London, England. 1893

 Because I longed

to comprehend the infinite  
 I drew a line  
 between the known and unknown.  
 In Ernest Robson and Jet Wimp  
*Against Infinity*  
 Because I Longed (p. 11)  
 Primary Press, Parker Ford, Pennsylvania, USA. 1979

**Berkeley, George** 1685–1753  
 Irish prelate and metaphysical philosopher

Of late the speculations about Infinities have run so high,  
 and grown to such strange notions, as have occasioned  
 no small scruples and disputes among the geometers of  
 the present age. Some there are of great note who, not  
 content with holding that finite lines may be divided into  
 an infinite number of parts, do yet farther maintain that  
 each of those infinitesimals is itself subdivisible into an  
 infinity of other parts or infinitesimals of a second order,  
 and so on ad infinitum. These, I say, assert there are infin-  
 itesimals of infinitesimals of infinitesimals, & c., without  
 ever coming to an end; so that according to them an inch  
 does not barely contain an infinite number of parts, but an  
 infinity of an infinity of an infinity ad infinitum of parts.  
*The Principles of Human Knowledge*  
 Section 130  
 Hull, A. Brown & Sons, Ltd. London, England. 1937

**Blake, William** 1757–1827  
 English poet, painter, and engraver

If the doors of perception were cleansed, everything  
 would appear to man as it is, infinite.  
*The Complete Poetry and Prose of William Blake*  
 The Marriage of Heaven and Hell  
 University of California Press. Berkeley, California, USA. 1982

**Borges, Jorge Luis** 1899–1986  
 Argentine writer

There is a concept which corrupts and upsets all others.  
 I refer not to Evil, whose limited realm is that of ethics;  
 I refer to the infinite.  
 In Donald A. Yates & James E. Irby (eds.)  
*Labyrinths: Short Stories & Other Writings*  
 Avatars of the Tortoise (p. 202)  
 A New Direction Book. New York, New York, USA. 1964

The ignorant suppose that infinite number of drawings  
 require an infinite amount of time; in reality it is quite  
 enough that time to be infinitely subdivisible, as is the  
 case in the famous parable of the Tortoise and the Hare.  
 This infinitude harmonizes in an admirable manner with  
 the sinuous numbers of Chance and of the Celestial  
 Archetype of the Lottery, adored by the Platonists.  
*Ficciones*  
 The Babylon Lottery (p. 70)  
 Grove Press. New York, New York, USA. 1962

**Burroughs, John** 1837–1921  
 American naturalist and essayist

What is size, what is time, distance, etc., to the Infinite?  
 Nothing. The Infinite knows no time, no space, no great,  
 no small, no beginning, no end.  
*Birds and Poets With Other Papers*  
 Touches of Nature (p. 65)  
 David Douglas Edinburgh, Scotland. 1884

**Camus, Albert** 1913–60  
 Algerian-French novelist, essayist, and playwright

Somebody has to have the last word. Otherwise, every  
 reason can be met with another one and there would  
 never be no end to it.  
*The Fall* (p. 45)  
 Alfred A. Knopf. New York, New York, USA. 1958

**Carlyle, Thomas** 1795–1881  
 English historian and essayist

The moment of discovery, “spontaneous illumination...”  
 The infinite is made to blend itself with the finite, to stand  
 visible, as it were, attainable there.  
 In Roger A MacGowan and Frederick I Ordway, III  
*Intelligence in the Universe* (p. 49)  
 Prentice-Hall, Englewood Cliffs, New Jersey, USA. 1966

**da Vinci, Leonardo** 1452–1519  
 Italian High Renaissance painter and inventor

What is that thing which does not give itself, and which  
 if it were to give itself would not exist?

It is the infinite...

Translated by Edward MacCurdy

*The Notebooks of Leonardo da Vinci* (Volume 1)

Mathematics (p. 612)

George Braziller. New York, New York, USA. 1958

**de Morgan, Augustus** 1806–71

English mathematician and logician

Great fleas have little fleas upon their backs to bite 'em,  
And little fleas have lesser fleas, and so ad infinitum.  
And the great fleas themselves, in turn have greater fleas  
to go on;

While these again have greater still, and greater still, and  
so on.

*A Budget of Paradoxes*

Are Atoms Worlds (p. 377)

Longmans, Green & Company. London, England. 1872

I had expressed my wish to have a thermometer of probability,  
with impossibility at one end, as 2 plus 2 makes 5,  
and necessity at the other as 2 plus 2 make 4.

*A Budget of Paradoxes*

Dr. Whewell's Letter (p. 416)

Longmans, Green & Company. London, England. 1872

**Dell, J. H.**

No biographical data available

The wilder'd mind is tost and lost,  
O sea in thy eternal tide;  
The reeling brain essays in vain,  
O stars, to grasp the vastness wide!  
The terrible tremendous scheme  
That glimmers in each glancing light,  
O night, O stars, too rudely jars  
The finite with the infinite!

In Alfred R. Wallace

*Man's Place in the Universe: A Study of the Results of Scientific Research in Relation to the Unity or Plurality of Worlds* (p. x)

Chapman & Hall Ltd. London, England. 1903

**Descartes, René** 1596–1650

French philosopher, scientist, and mathematician

We call infinite that thing whose limits we have not perceived,  
and so by that word we do not signify what we understand about a thing,  
but rather what we do not understand.

In P. Mancosu and E. Vailati

Torricelli's Infinitely Long Solid and Its Philosophical Reception in the Seventeenth Century

*Isis*, Volume 82, Number 311, 1991 (p. 62)

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

For it is only the finite that has wrought and suffered; the infinite  
lies stretched in smiling repose.

*Ralph Waldo Emerson: Essays and Lectures*

*Essays: First Series*

Spiritual Laws (p. 305)

The Library of America. New York, New York, USA. 1983

...and thus ever, behind the coarse effect, is a fine cause,  
which, being narrowly seen, is itself the effect of a finer cause.

*Ralph Waldo Emerson: Essays and Lectures*

*Nature: Addresses, and Lectures*

Circles (p. 404)

The Library of America. New York, New York, USA. 1983

**Flammarion, Camille** 1842–1925

French astronomer and writer

The infinitely little is equal to the infinitely great.

Translated by Frances Alice Welby

*Astronomy for Amateurs*

Chapter XII (p. 319)

D. Appleton & Co. New York, New York, USA. 1915

**Gauss, Johann Carl Friedrich** 1777–1855

German mathematician, physicist, and astronomer

The infinite is only a *façon de parler*.

In C.A.F. Peters

*Briefwechsel zwischen C. E. Gauss und H. C. Schumacher* (Volume 2)

Letter to Schumacher dated July 12, 1831 (p. 269)

Vandenhoeck & Ruprecht. Göttingen, Germany. 1987

**Hawking, Stephen William** 1942–

English theoretical physicist

In an infinite number universe, every point can be regarded as the center,  
because every point has an infinity of stars on each side of it.

*A Brief History of Time: From the Big Bang to Black Holes*

Chapter 1 (p. 5)

Bantam Books. Toronto, Ontario, Canada. 1988

**Hilbert, David** 1862–1943

German mathematician

The infinite, like no other problem, has always deeply moved the soul of men.  
The infinite, like no other idea, has had a stimulating and fertile influence upon the mind.  
But the infinite is also more than any other concept, in need of clarification.

In Hermann Weyl

*Philosophy of Mathematics and Natural Science*

Part I, Chapter II (p. 66)

Princeton University Press. Princeton, New Jersey, USA. 1949

The infinite! No other question has ever moved so profoundly the spirit of man...

In E.T. Bell

*Men of Mathematics* (Address in memory of Weierstrass) (p. xxi)

Simon & Schuster. New York, New York, USA. 1937

From time immemorial the infinite has stirred men's emotions more than any other question.  
Hardly any other idea stimulated the mind so fruitfully. Yet no other concept needs clarification more than it does.

In H.B. Griffiths and A.G. Hawson

*Mathematics: Society and Curricula*  
Exercises (p. 111)  
Cambridge University Press. London, England. 1974

**Hobbes, Thomas** 1588–1679

English philosopher and political theorist

When we say anything is infinite, we signify only that we are not able to conceive the ends and bounds of the thing named.

In *Great Books of the Western World* (Volume 23)

*Leviathan*

Part I, Chapter 3 (p. 54)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

No man can have in his mind an image of infinite magnitude; nor conceive infinite swiftness, infinite time, or infinite force, or inmate power.

*Leviathan, Or, The Matter, Form, and Power of a Commonwealth,*

*Ecclesiastical and Civil* (2nd edition)

Chapter III (p. 22)

George Routledge & Sons. London, England. 1886

**Huxley, Thomas Henry** 1825–95

English biologist

Truly it has been said, that to a clear eye the smallest fact is a window through which the Infinite may be seen.

*Discourses Biological and Geological*

The Study of Zoology (p. 209)

D. Appleton & Company. New York, New York, USA. 1897

**Kant, Immanuel** 1724–1804

German philosopher

But the infinite is absolutely (not merely comparatively) great. In comparison with this all else (in the way of magnitudes of the same order) is small. But the point of capital importance is that the mere ability even to think it as a whole indicates a faculty of mind transcending every standard sense. For the latter would entail a comprehension yielding as unit a standard bearing to the infinite rati- on expressible in numbers, which is impossible.

*The Critique of Judgment*

First Part, The Mathematically Sublime, 26

Hafner Publishing Company. New York, New York, USA. 1951

**Kasner, Edward** 1878–1955

American mathematician

**Newman, James Roy** 1911–66

Mathematician and mathematical historian

The infinite in mathematics is always unruly unless it is properly treated.

*Mathematics and the Imagination*

Paradox Lost and Paradox Regained (p. 210)

Simon & Schuster. New York, New York, USA. 1940

**Kelvin, Lord William Thomson** 1824–1907

Scottish engineer, mathematician, and physicist

I say *finitude* is incomprehensible, the infinite in the universe *is* comprehensible. Now apply a little logic to

this. Is the negation of infinitude comprehensible? What would you think of a universe in which you could travel one, ten, or a thousand miles, or even to California, and then find it come to an end? Even if you were to go millions and millions of miles, the idea of coming to an end is incomprehensible.

*Popular Lectures and Addresses* (Volume 1)

The Wave Theory of Light (pp. 314–315)

Macmillan & Company Ltd. London, England. 1894

**Keyser, Cassius Jackson** 1862–1947

American mathematician

[The] subject of the infinite, how it baffles approach! How immediate and how remote it seems, how it abides and yet eludes the grasp, how familiar it appears, mingling with the elemental simplicities of the heart, continuously weaving itself into the intimate texture of common life, and yet how austere and immense and majestic, outreaching the sublimest flights of the imagination, transcending the stellar depths, immeasurable by the beginningless, endless chain of the ages!

*The Human Worth of Rigorous Thinking: Essays and Addresses*

The Axiom of Infinity (p. 141)

Columbia University Press. New York, New York, USA. 1916

One fact at once is clear, namely, that, whatever ultimate justification the hypothesis may find, thought has never escaped the necessity of supposing the universe of things to be intrinsically somehow cleft asunder into the two Grand Divisions, or figured, if you will, under the two fundamental complementary all-inclusive Forms, which, from motives more or less distinctly felt and also just, as we shall see, though not quite justified, have been, from time immemorial, designated as the Finite and the Infinite.

*The Human Worth of Rigorous Thinking: Essays and Addresses*

Chapter VII (p. 142)

Columbia University Press. New York, New York, USA. 1916

**Locke, John** 1632–1704

English philosopher and political theorist

...if a man had a positive idea of infinite – he could add two infinities together: nay, make one infinite infinitely bigger than another, absurdities too gross to be confuted.

*An Essay Concerning Human Understanding* (Volume 1)

Book II, Chapter XVII (p. 292)

At The Clarendon Press. Oxford, England. 1844

**Loomis, Elisha S.** 1852–1940

Teacher

In the use of this method (of infinities) the pupil must be awake and thinking, for when the infinite is employed in an argument by the unskilled, the conclusion is often most absurd.

In Eli Maor

*To Infinity and Beyond: A Cultural History of the Infinite* (p. 34)

Birkhäuser. Boston, Massachusetts, USA. 1987

**Lucretius** ca. 99 BCE–55 BCE  
Roman poet

Again if for the moment all existing space be held to be bounded, supposing a man runs forward to its outside borders, and stands on the utmost verge and then throws a winged javelin, do you choose that when hurled with vigorous force it shall advance to the point to which it has been sent and fly to a distance, or do you decide that something can get in its way and stop it? for you must admit and adopt one of the two suppositions; either of which shuts you out from all escape and compels you to grant that the universe stretches without end.

In *Great Books of the Western World* (Volume 12)

*Lucretius: on the Nature of Things*

Book One, I. 968–980 (p. 13)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Maeterlinck, Maurice** 1862–1949  
Belgian playwright and poet

The infinite which our imagination seeks to embrace is nothing more than the indefinite.

Translated by Bernard Miall

*The Life of Space*

The Fourth Dimension, IV (p. 13)

Dodd, Mead & Company. New York, New York, USA. 1928

**Miller, Hugh** 1802–56  
Scottish geologist and theologian

There are two great infinities – the infinite in space and the infinite in time.

*Sketch-Book of Popular Geology*

Lecture Third (p. 120)

William P. Nimmo & Company, Edinburgh, Scotland. 1880

**Mitchell, Maria** 1818–89  
American astronomer and educator

Do not forget the infinite in the infinitesimal.

In Helen Wright

*Sweeper in the Sky*

Chapter 9 (p. 164)

Macmillan & Company Ltd. New York, New York, USA. 1949

**Pascal, Blaise** 1623–62  
French mathematician and physicist

We know that there is an infinite, and we are ignorant of its nature.

In *Great Books of the Western World* (Volume 33)

Section III, 233

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Pasteur, Louis** 1822–95  
French chemist

He who proclaims the existence of the infinite – and no one can escape from it – accumulates in this affirmation more of the supernatural than exists in all the miracles of all religions.

In Frederick Morris Warren

*Ten Frenchmen of the Nineteenth Century*

Selections (p. 246)

The Chautauqua Press. Chautauqua, New York, USA. 1904

...the notion of the infinite...forces itself upon our mind and yet is incomprehensible. When this notion takes possession of the understanding we have only to bow before it. At this moment of keen anguish we must ask our reason to pardon us. All the springs of intellectual life threaten to relax. We feel ourselves on the point of being seized by Pascal's "sublime madness."

In Frederick Morris Warren

*Ten Frenchmen of the Nineteenth Century*

Selections (p. 246)

The Chautauqua Press. Chautauqua, New York, USA. 1904

**Poincaré, Jules Henri** 1854–1912  
French mathematician and theoretical astronomer

...it is only the affirmation of the, power of the mind which knows itself capable of conceiving the indefinite repetition of the same act when once this act is possible.

Translated by George Bruce Halsted

*Science and Hypothesis*

Part I, Chapter 1 (p. 13)

The Science Press. New York, New York, USA. 1905

**Proctor, Richard Anthony** 1837–88  
English astronomer

Inconceivable, doubtless, are these infinities of time and space, of matter, of motion, and of life. Inconceivable that the whole universe can be for all time the scene of the operation of infinite power, omnipresent, all-knowing. Utterly incomprehensible how Infinite Purpose can be associated with endless material evolution. But it is no new thought, no modern discovery, that we are thus utterly powerless to conceive or comprehend the idea of an Infinite Being, Almighty, All-knowing, Omnipresent, and Eternal, of whose inscrutable purpose the material universe is the unexplained manifestation. Science is in presence of the old, old mystery; the old, old questions are asked of her – 'Canst thou by searching find out God? Canst thou find out the Almighty unto perfection? It is as high as heaven; what canst thou do? deeper than hell; what canst thou know?' And science answers these questions as they were answered of old – 'As touching the Almighty we cannot find Him out.'

In Alfred R. Wallace

*Man's Place in the Universe: A Study of the Results of Scientific Research in Relation to the Unity or Plurality of Worlds* (p. x)

Chapter XVI (p. 324)

Chapman & Hall Limited. London, England. 1903

**Proctor, Richard Anthony** 1837–88  
English astronomer

Science deals with the finite though it may carry our thoughts to the infinite.

*Our Place Among Infinities: A Series of Essays Contrasting Our Little Abode thoughts to the infinite.*  
The Past and Future of Our Earth (p. 1)  
D. Appleton & Co. New York, New York, USA. 1876

**Richardson, Lewis** 1881–1953  
English mathematician and physicist

Big whorls have little whorls  
Which feed on their velocity,  
And little whorls have lesser whorls,  
And so on to viscosity.

In Ian Stewart

*Does God Play Dice: The New Mathematics of Chaos*  
Chapter 10 (p. 184)  
Blackwell Publishing Ltd. Malden, Massachusetts, USA. 2002

**Rowland, Henry Augustus** 1848–1901  
American physicist

It is a curious fact that, having minds tending to the infinite, with imaginations unlimited by time and space, the limits of our exact knowledge are very small indeed.

*The Physical Papers of Henry Augustus Rowland*  
The Highest Aims of the Physicist (p. 675)  
The Johns Hopkins Press. Baltimore, Maryland, USA. 1902

**Royce, Josiah** 1855–1916  
American philosopher

...let us suppose, if you please, that a portion of the surface of England is very perfectly leveled and smoothed, and is the devoted to the production of our precise map of England. That in general, then, should be found upon the surface of England, map constructions which more or less roughly represent the whole of England – all this has nothing puzzling about it.... But now suppose that this our resemblance is to be made absolutely exact.... A map of England, contained within England, is to represent, down to the minutest detail, every contour and marking, natural or artificial, that occurs upon the surface of England.... One who, with absolute exactness of perception, looked down upon the ideal map thus supposed to be constructed, would see lying upon the surface of England on as large of small a scale as you please.... This representation, which would repeat in the outer portions the details of the former, but upon a smaller space, would be seen to contain yet another England, and this another, and so on without limit.

*The World and the Individual*  
Supplementary Essay, Section III (p. 504)  
The Macmillan Company. New York, New York, USA. 1900

**Shakespeare, William** 1564–1616  
English poet, playwright, and actor

...I could be bounded in a nutshell and count myself a king of infinite space...

Infinity! What measures thee? Before the worlds as days,  
and men as moments flee!

In W. Hastie (ed.)

*Kant's Cosmogony*

Seventh Chapter (p. 134)

Greenwood Publishing Corporation. New York, New York, USA. 1968

**von Leibniz, Gottfried Wilhelm**

I am so much in favor of the actual infinite that instead of admitting that nature abhors it, as is commonly said,

I hold that it affects it everywhere in order better to mark the perfections of its author.

*The Philosophical Works of Leibnitz*

Reply to the Extract from the Letter of M. Foucher (p. 65)

Tuttle, Morehouse & Taylor. New Haven, Connecticut, USA. 1890

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

From what science has discovered about the infinitely small and the infinitely vast, the size of our bodies is almost totally irrelevant. In this little mahogany stand... may be civilizations as complex and diversified in scale as our own; and up there, the heavens, with all their vastness, may be only a minute strand of tissue in the body of a being in the scale of which all our universes are as a trifle.

In Lucien Price

*Dialogues of Alfred North Whitehead as Recorded by Lucien Price*

Dialogue XLIII, November 11, 1947 (pp. 367–368)

Little, Brown & Company. Boston, Massachusetts, USA. 1954

**Wittgenstein, Ludwig Josef Johann** 1889–1951

Austrian-born English philosopher

“Ought the word “infinite” to be avoided in mathematics?” Yes; where it appears to confer a meaning upon the calculus; instead of getting one from it.

*Remarks on the Foundations of Mathematics*

Appendix II, 17 (p. 63e)

The MIT Press. Cambridge, Massachusetts, USA. 1967

**Zebrowski, George** 1945–

Polish-American science fiction writer

Science, when it runs up against infinities, seeks to eliminate them, because a proliferation of entities is the enemy of explanation.

*Time Is Nothing But A Clock*

*OMNI Magazine*, Volume 17, Number 1, 1994 (p. 144)

## INFINITE SERIES

**Riemann, Bernhard** 1826–66

German mathematician

The recognition of the fact that infinite series fall into two classes (according to whether the limit is independent of the ordering of the terms or not) constitutes a turning-point in the conceptualization of the infinite in mathematics.

Quoted in Reinhold Remmert

*Theory of Complex Functions*

Part A, Chapter 0, section 4 (p. 30)

Springer-Verlag. New York, New York, USA. 1991

## INFINITE SET

**Cameron, Peter J.** 1959–

American novelist

Counting is a less precise tool for infinite sets than for finite ones. The shepherdess who can count her flock of a

hundred sheep will know if the wolf has taken one; but, if she has an infinite flock, she won't notice until almost all of her sheep have been lost.

*Combinatorics*

Chapter 19 (p. 307)

Cambridge University Press. Cambridge, England. 1994

## INFINITELY SMALL

**Tolstoy, Leo** 1828–1910

Russian writer

A modern branch of mathematics having achieved the art of dealing with the infinitely small can now yield solutions in other more complex problems of motion which used to appear insoluble.

This modern branch of mathematics, unknown to the ancients, when dealing with problems of motion admits the conception of the infinitely small, and so conforms to the chief condition of motion (absolute continuity) and thereby corrects the inevitable error which the human mind cannot avoid when it deals with separate elements of motion instead of examining continuous motion.

*Great Books of the Western World* (Volume 51)

*War and Peace*

Book XI, Chapter I (p. 469)

Encyclopaedia Britannica, Inc. Chicago, Illinois, USA. 1952

Only by taking infinitesimally small units for observation (the differential of history, that is, the individual tendencies of men) and attaining to the art of integrating them (that is, finding the sum of these infinitesimals) can we hope to arrive at the laws of history.

*War and Peace*

Book Eleven, Chapter I

## INFINITESIMAL

### Author undetermined

A smart sprinkle of infinitesimals were disposed at advantageous points; logarithms bristled at every angle, and crowds of those diminutive figures which have so often carried distraction to the very cerebellum of a freshman, were scattered through the whole fortifications.

*The Symbol of Darkness*

*The Knickerbocker*, Volume 34, Number 3, September, 1849 (p. 216)

**Bing, Ilse** 1899–1998

German-born avant-garde photographer

Infinitesimal is the nearest to zero

infinitesimal is so small

that it is no longer something

but it is not yet nothing.

In Ernest Robson and Jet Wimp

*Against Infinity*

Infinitesimal (p. 12)

Primary Press, Parker Ford, Pennsylvania, USA. 1979

**Boethius, Anicius Manlius Severinus** ca. 475–524  
Roman philosopher and statesman

Thou has learnt from astronomical proofs that the whole earth compared with the universe is not greater than a point, that is, compared with the sphere of the heavens, it may be thought of as having no size at all. Then, of this tiny corner, it is only one-quarter that, according to Ptolemy, is habitable to living things. Take away from this quarter the seas, marshes, and other desert places, and the space left for man hardly even deserves the name of infinitesimal.

Translated by W. V. Cooper  
*The Consolation of Philosophy*  
II, vii  
J.M. Dent. London, England. 1902

**Browning, Robert** 1812–89  
English poet

Oh! The little more, and how much it is!  
And the little less, and what world's away!

*The Poetical Works of Robert Browning*  
By the Fireside  
Stanza XXXIX  
The Macmillan Company. New York, New York, USA. 1888–94

**Carus, Paul** 1852–1919  
American philosopher

Infinity is the land of mathematical hocus pocus. There Zero the magician is king. When Zero divides any number he changes it without regard to its magnitude into the infinitely small: and inversely, when divided by any number he begets the infinitely great.

*The Nature of Logical and Mathematical Thought*  
*Monist*, Volume 20, Number 1, January, 1910 (p. 69)

**Dantzig, Tobias** 1884–1956  
Russian mathematician

They [the mathematicians of the Enlightenment] defined their terms vaguely and used their methods loosely, and the logic of their arguments was made to fit the dictates of their intuition. In short, they broke all the laws of rigor and of mathematical decorum. The veritable orgy which followed the introduction of the infinitesimals... was but a natural reaction. Intuition had too long been held imprisoned by the severe rigor of the Greeks. Now it broke loose, and there were no Euclids to keep its romantic flight in check.

In by W.M. Priestley  
*Calculus: A Liberal Art*  
Chapter 8 (p. 310)  
Springer-Verlag New York, Inc. New York, New York, USA. 1998

### Scott Cary (Fictional character)

I was continuing to shrink, to become...what? The infinitesimal? What was I? Still a human being? Or was I the man of the future? If there were other bursts of radiation,

other clouds drifting across seas and continents, would other beings follow me into this vast new world? So close – the infinitesimal and the infinite. But suddenly, I knew they were really the two ends of the same concept. The unbelievably small and the unbelievably vast eventually meet – like the closing of a gigantic circle. I looked up, as if somehow I would grasp the heavens. The universe, worlds beyond number, God's silver tapestry spread across the night. And in that moment, I knew the answer to the riddle of the infinite. I had thought in terms of man's own limited dimension. I had presumed upon nature.

Closing soliloquy narration  
*The Incredible Shrinking Man*  
Film (1957)

**Tolstoy, Leo** 1828–1910  
Russian writer

Arriving at infinitesimals, mathematics, the most exact of sciences, abandons the process of analysis and enters on the new process of the integration of unknown, infinitely small, quantities. Abandoning the conception of cause, mathematics seeks law, that is, the property common to all unknown, infinitely small, elements.

*Great Books of the Western World* (Volume 51)  
Second Epilogue, Chapter II (p. 695)  
Encyclopaedia Britannica, Inc. Chicago, Illinois, USA. 1952

**van Orman Quine, Willard** 1908–2000  
American philosopher

An infinitesimal is supposed to go into 1 not just sixteen times, or a thousand times, but infinitely many times.

*The Ways of Paradox, and Other Essays*  
Chapter 3 (p. 23)  
Harvard University Press. Cambridge, Massachusetts, USA. 1976

## INFINITY

**Alexander, Archibald** 1772–1851  
American Presbyterian theologian

Immensity and infinity are not synonymous terms.

*Some Problems of Philosophy*  
Chapter XIV (p. 114)  
Charles Scribner's Sons. New York, New York, USA. 1886

**Archytas of Tarentum** 428 BCE–350 BCE  
Greek mathematician

If I am at the extremity of the heaven of the fixed stars, can I stretch outwards my hand or staff? It is absurd to suppose that I could not; and if I can, what is outside must be either body or space. We may then in the same way get to the outside of that again, and so on; and if there is always a new place to which the staff may be held out, this clearly involves extension without limit.

Quoted in

*Essays in Honor of Gilbert Murray*

The Invention of Space (p. 233)

George Allen & Unwin Ltd. London, England. 1936

**Aurelius Antoninus, Marcus** 121–180

Roman emperor

Infinity past and to come is a fathomless gulf, into which vanish all things.

In Gerald Henry Rendall

*Marcus Aurelius Antoninus to Himself*

Book V (pp. 55–56)

Macmillan & Company Ltd. London, England. 1901

**Beerbohm, Max** 1872–1956

English caricaturist and writer

The attempt to conceive Infinity had always been quite arduous enough for me.

*Mainly on the Air*

A Note on the Einstein Theory (p. 77)

Alfred A. Knopf, Inc. New York, New York, USA. 1947

**Bernard Jaffe (Fictional character)**

There is no remainder in the mathematics of infinity.

*I Heart Huckabees*

Film (2004)

**Blake, William** 1757–1827

English poet, painter, and engraver

Too see the world in a grain of sand,  
And a heaven in a wild flower:  
Hold infinity in the palm of your hand,  
And eternity in an hour.

*The Complete Poetry and Prose of William Blake*

The Pickering Manuscript, Auguries of Innocence, l. 1–4

University of California Press. Berkeley, California, USA. 1982

The nature of infinity is this:

That everything has its

Own Vortex, and when once a traveler thro' Eternity

Has pass'd that Vortex,

he perceives it roll backward behind

His path, into a globe itself unfolding like a sun;

Or like a moon, or like a universe of starry majesty,

While he keeps onwards in his wondrous journey on the earth,

Or like a human form, a friend (with) whom he lived benevolent.

*The Complete Poetry and Prose of William Blake*

Milton, l. 21–7

University of California Press. Berkeley, California, USA. 1982

**Borland, Hal** 1900–78

American writer

Lift your eyes to the nighttime heavens now if you would see the lights of infinity.

*An American Year: Country Life and Landscapes Through the Seasons*

August (p. 81)

Simon & Schuster. New York, New York, USA. 1946

**Box, George E. P.** 1919–

English statistician

It is a pity, therefore, that the authors have confined their attention to the relatively simple problem of determining the approximate distribution of arbitrary criteria and have failed to produce any sort of justification for the tests they propose. In addition to those functions studied there are an infinity of others, and unless some principle of selection is introduced we have nothing to look forward to but an infinity of test criteria and an infinity of papers in which they are described.

Discussion

*Journal of the Royal Statistical Society*, Ser. B., 18, 1956 (p. 29)

**Bruno, Giordano** 1548–1600

Italian philosopher and pantheist

All is filled with infinity, and beyond infinity there is nothing.

In I. Frith

*Life of Giordano Bruno*

Chapter IX (p. 223)

Trübner & Co. London, England. 1885

**Churchill, Winston Spencer** 1882–1965

British prime minister, statesman, soldier, and author

I saw, as one might see the transit of Venus... , a quantity passing through infinity and changing its sign from plus to minus. I saw exactly how it happened and why the tergiversation was inevitable.... But it was after dinner and I let it go!

*My Early Life: A Roving Commission*

A Roving Commission (p. 26)

Charles Scribner's Sons. New York, New York, USA. 1958

**Cohen, David** 1942–2002

American mathematician

**Henle, James M.**

American mathematician

At the heart of the calculus lies INFINITY – that strange region of mathematics that's part mystical, part magical; that's dangerous by reputation, and ultimately romantic.

*Calculus: The Language Of Change*

Chapter 9 (p. 573)

Jones and Bartlett Publishers. Sudbury, Massachusetts, USA. 2005

**Cousins, Norman** 1912–90

American editor and author

Infinity converts the possible into the inevitable.

Editor's Odyssey

*Saturday Review*, April 15, 1978 (p. 18)

**Crane, Hart** 1899–1932

American poet

But the star-glistened salver of infinity,  
The circle, blind crucible of endless space,

Is sluiced by motion – subjugated never.

*The Complete Poems and Selected Letters and Prose of Hart Crane*  
The Bridge, Cape Hatteras  
Anchor Books, Garden City, New York, USA. 1966

**de Morgan, Augustus** 1806–71

English mathematician and logician

Doubt about Taylor's theorem or the binomial theorem, and you may be listened to with attention. But do not dare to question his mathematician's notions of infinitely great or infinitely small, be they positive or negative. You may be simply wrong about Taylor or the binomial: but about infinity you are not merely wrong, but absurd; and not merely absurd, but manifestly and palpably absurd.

*Transactions of the Cambridge Philosophical Society*

On Infinity: and on the Sign of Equality (p. 145)

At The University Press, Cambridge, England. 1871

I am well aware of the position occupied by the subject [infinity] I am about to treat. I know the positive way in which opinions are held upon it. Those who teach that we know nothing are quite sure we know nothing: those who teach that we know a certain something are as sure both of the character and extent of the known region: those who halt between these opinions are perfectly satisfied that such halting is the only true position for a rational being.

*Transactions of the Cambridge Philosophical Society* (Volume 11)

On Infinity: and on the Sign of Equality (p. 145)

At The University Press, Cambridge, England. 1871

Infinity is a pertinacious meddler, who will not be turned out: we must find out what he wants, and give it him.

*Transactions of the Cambridge Philosophical Society*

On Infinity: and on the Sign of Equality (p. 156, fn 1)

At The University Press, Cambridge, England. 1871

**Dewar, Redcote**

No biographical data available

In infinity looms a world of shadow called the unknown, the unread, or the unlearned, an *incognita* daily vanishing as its wrung-out secrets are added to our stores of knowledge.

*From Matter to Man: A New Theory of the Universe*

Chapter II (p. 23)

Chapman & Hall, Ltd. London, England. 1898

**Dryden, John** 1631–1700

English poet, dramatist, and literary critic

But how can finite grasp Infinity?

*The Poetical Works of Dryden*

Hind and the Panther, I

The Riverside Press, Cambridge, Massachusetts, USA. 1949

**Eco, Umberto** 1932–

Italian novelist, essayist, and scholar

You cannot escape one infinity, I told myself, by fleeing to another; you cannot escape the revelation of the identical by taking refuge in the illusion of the multiple.

Translated by William Weaver

*Foucault's Pendulum*

Chapter 1 (pp. 6–7)

Harcourt, Brace Jovanovich, Publishers. San Diego, California, USA. 1988

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

That queer quantity “infinity” is the very mischief, and no rational physicist should have anything to do with it. Perhaps that is why mathematicians represent it by a sign like a love-knot.

*New Pathways in Science*

Chapter X, Section III (p. 217)

The Macmillan Company. New York, New York, USA. 1935

**Eldridge, Paul** 1888–1982

American educator

Truth must be judged in terms of time and space; superstition in terms of eternity and infinity.

*Maxims for a Modern Man*

2533

T. Yoseloff. New York, New York, USA. 1965

**Froude, James Anthony** 1818–94

English historian and biographer

Large forms resolve themselves into parts, down so far as we can see into infinity.

*Short Studies on Great Subjects* (Volume 2)

Calvinism (p. 16)

Charles Scribner's Sons. New York, New York, USA. 1890

**Gamow, George** 1904–68

Russian-born American physicist

*One, Two, Three – Infinity*

Title of Book

**Gauss, Johann Carl Friedrich** 1777–1855

German mathematician, physicist, and astronomer

Infinity is only a figure of speech, meaning a limit to which certain ratios may approach as closely as desired, when others are permitted to increase indefinitely.

In Eli Maor

*To Infinity and Beyond: A Cultural History of the Infinite* (p. ix)

Birkhäuser. Boston, Massachusetts, USA. 1987

**Gleick, James** 1954–

American author, journalist, and essayist

In the mind's eye, a fractal is a way of seeing infinity.

*Chaos: Making a New Science*

A Geometry of Nature (p. 98)

The Viking Press. New York, New York, USA. 1987

**Greene, Brian** 1963–

American physicist

Calculations that merge the equations of general relativity and those of quantum mechanics typically yield one

and the same ridiculous answer: infinity. Like a sharp rap on the wrist from an old-time schoolteacher, an infinite answer is nature's way of telling us that we are doing something that is quite wrong.

*The Elegant Universe*

Chapter 5 (p. 129)

W.W. Norton & Company, Inc. New York, New York, USA. 2003

**Harrison, Edward Robert** 1919–2007

English-born American cosmologist

Only a cosmic jester could perpetrate eternity and infinity...

*Masks of the Universe*

Part II, Chapter 12 (p. 230)

The Macmillan Company. New York, New York, USA. 1985

**Ionesco, Eugene** 1912–94

French playwright

PROFESSOR: You know how to count? How far can you count up to?

PUPIL: I can count to...to infinity.

PROFESSOR: That's not possible, miss.

PUPIL: Well then, let's say to sixteen.

PROFESSOR: That is enough. One must know one's limits.

Translated by Donald M. Allen

*Four Plays*

*The Lesson* (p. 53)

Grove Press, Inc. New York, New York, USA. 1958

**Jaki, Stanley L.** 1924

Benedictine priest and physicist

As soon as you have infinity in mathematics everything breaks down.

In Eric J. Lerner

*The Big Bang Never Happened*

Chapter 9 (p. 386)

Time Books. New York, New York, USA. 1991

**James, Henry** 1811–82

No biographical data available

Does infinity mean endless space? Does eternity mean endless time?

*Lectures and Miscellanies*

The Law of Creation (p. 322)

Redfield. New York, New York, USA. 1852

**Jung, Carl G.** 1875–1961

Swiss psychiatrist and founder of analytical psychology

Only if we know that what truly matters is the infinite can we avoid fixing our interests on futilities. In the final analysis we count for something only because of the essential we embody, and if we do not embody that life is wasted.

*Memories, Dreams, Reflections*

Chapter XI (p. 325)

Vintage Books. New York, New York, USA. 1963

**Kaplan, Robert** 1946–

No biographical data available

**Kaplan, Ellen**

No biographical data available

Is it ourself, our mind or spirit, that is infinity's proper home? Or might the infinite be neither out there nor in here but only in language, a pretty conceit of poetry?

*The Art of the Infinite*

An Invitation (p. 1)

Oxford University Press, Inc. Oxford, England. 2003

**Kasner, Edward** 1878–1955

American mathematician

**Newman, James Roy** 1911–66

Mathematician and mathematical historian

With the Hottentots, infinity begins at three.

*Mathematics and the Imagination*

New Names for Old (p. 19)

Simon & Schuster. New York, New York, USA. 1940

**Keyser, Cassius Jackson** 1862–1947

American mathematician

...there are many infinites of many orders...infinites are surpassed by other infinites...infinites, like the stars, differ in glory. This is not rhetoric, it is naked fact.

*The Human Worth of Rigorous Thinking: Essays and Addresses*

The Walls of the World (p. 98)

Columbia University Press. New York, New York, USA. 1916

**Locke, John** 1632–1704

English philosopher and political theorist

This further is observable in number, that it is that which the mind makes use of in measuring all things that by us are measurable, which principally are expansion and duration; and our idea of infinity, even when applied to those, seems to be nothing but the infinity of number. For what else are out ideas of Eternity and Immensity, but the repeated additions of certain ideas of imagined parts of duration and expansion, with the infinity of number; in which we can come to no end of addition.

In *Great Books of the Western World* (Volume 35)

*An Essay Concerning Human Understanding*

Book II, Chapter XVI, Section 8 (p. 167)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

But of all other ideas, it is number, which I think furnishes us with the clearest and most distinct idea of infinity we are capable of.

In *Great Books of the Western World* (Volume 35)

*An Essay Concerning Human Understanding*

Book II, Chapter XVII, Section 9 (p. 170)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Maclaurin, Colin** 1838–1916

Scottish mathematician

The view of nature, which is the immediate object of sense, is very imperfect, and of small extent; but, by the

assistance of art, and the aid of reason, becomes enlarged, till it loses itself in infinity.

*An Account of Sir Isaac Newton's Philosophical Discoveries*

Chapter I Section 5

London, England. 1748

### Mathews, G. B.

No biographical data available

A great deal of misunderstanding is avoided if it be remembered that the term *infinity*, *infinite*, *zero*, *infinitesimal* must be interpreted in connexion with their context, and admit a variety of meanings according to the way in which they are defined.

*Theory of Numbers*

Part 1, Section 104 (p. 112)

Chelsea Publishing Company. New York, New York, USA. 1980

### Milton, John 1608–74

English poet

[Infinity is]...a dark  
Illimitable ocean, without bound,  
Without dimension; where length, breadth, and height,  
And time, and place, are lost ...

In Arthur Wilson Verity

*Paradise Lost*

Book II (p. 64)

Cambridge University Press. Cambridge, England. 1907

### Murray, David Ambrose

No biographical data available

Large and small are merely terms of comparison. Space has two infinities, infinitely larger and infinitely smaller, but there is no natural starting point for comparisons. Whatever size or length is taken it is capable of infinite subdivision and infinite multiplication, so that with respect to some other line or space it may be considered infinitely large or infinitely small.

*Atoms and Energies*

Chapter I (p. 24)

Barnes & Co. New York, New York, USA. 1901

### Murray, William John

No biographical data available

To seek aid of the finite in trying to fathom infinity is like dissecting a seed to discover the nature of the fruit.

*The Astor Lectures*

Creation (p. 116)

The Divine Science Publishing Association. New York, New York, USA. 1917

### Pascal, Blaise 1623–62

French mathematician and physicist

Unity joined to infinity adds nothing to it, no more than one foot to an infinite measure. The finite is annihilated in the presence of the infinite, and becomes a pure nothing.

In *Great Books of the Western World* (Volume 33)

*Pensées*

Section III, 233

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### Pierpont, James

No biographical data available

...the notion of infinity is our greatest friend; it is also the greatest enemy of our peace of mind...Weirstrass taught us to believe that we had at last thoroughly tamed and domesticated this unruly element. Such however is not the case; it has broken loose again. Hilbert and Brouwer have set out to tame it once more. For how long? We wonder.

Mathematical Rigor, Past and Present

*Bulletin of the American Mathematical Society*, Volume 34, January–February, 1928 (p. 47)

### Poe, Edgar Allan 1809–49

American short story writer

Let us begin, then, at once, with that merest of words, "Infinity." This, like "God," "spirit," and some other expressions of which the equivalents exist in all languages, is by no means the expression of an idea, but of an effort at one. It stands for the possible attempt at an impossible conception. Man needed a term by which to point out the direction of this effort – the cloud behind which lay, forever invisible, the object of this attempt.

*Poems and Essays of Edgar Allan Poe*

Eureka (p. 128)

W.J. Widdleton, Publisher. New York, New York, USA. 1881

### Poincaré, Jules Henri 1854–1912

French mathematician and theoretical astronomer

...without mathematical infinity, there would be no science at all, because there would be nothing general.

In H.B. Griffiths & A.G. Hawson

*Mathematics: Society and Curricula*

Exercises (p. 111)

Cambridge University Press. London, England. 1974

### Poland, Carl V.

No biographical data available

Infinity is a possibility, not a thing.

Monism and the Antimonies

*The Monist*, (p. 628), Volume XXV, 1915

### Proctor, Richard Anthony 1837–88

English astronomer

It is not simply the vast in which men have learned to believe, not mere immensity, but the mystery of absolute infinity. On all sides our island home [Earth] is surrounded by a shoreless sea of space.

*Mysteries of Time and Space*

Newton and Darwin (p. 4)

R. Worthington

New York, New York, USA. 1883

**Rucker, Rudy** 1946–  
Science and science fiction author

The study of infinity is much more than a dry academic game. The intellectual pursuit of the Absolute Infinite is, as Georg Cantor realized, a form of the souls quest for God. Whether or not the goal is ever reached, an awareness of the process brings enlightenment.

*Infinity and the Mind*

Preface (p. ix)

Princeton University Press. Princeton, New Jersey, USA. 1995

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

When algebra has been learnt, all goes smoothly until we reach those studies in which the notion of infinity is employed – the infinitesimal calculus and the whole of higher mathematics.

*Mysticism and Logic: And Other Essays*

Chapter IV (p. 64)

Longmans, Green & Co. London, England. 1919

If any philosopher had been asked for a definition of infinity, he might have produced some unintelligible rigmarole, but he would certainly not have been able to give a definition that had any meaning at all.

*Mysticism and Logic: And Other Essays*

Chapter V (p. 85)

Longmans, Green & Co. London, England. 1919

**Shelley, Percy Bysshe** 1792–1822  
English poet

...infinity within,  
Infinity without...

Queen Mab, l. 22–23

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

**Stillwell, John**

No biographical data available

Reasoning about infinity is one of the characteristic features of mathematics as well as its main source of conflict.

*Mathematics and Its History*

Chapter 4 (p. 51)

Springer-Verlag. New York, New York, USA. 1989

**Van-Anderson, Helen**

No biographical data available

There is no end to the study of Infinity.

*The Right Knock: A Story* (8th edition)

Chapter XXXVI (p. 305)

The New York Magazine of Mysteries. New York, New York, USA. 1903

**Wolf, Fred Alan** 1934–

American theoretical physicist, writer, and lecturer

Infinity is always one more than now.

*Parallel Universes*

Chapter 6 (p. 69)

Simon & Schuster. New York, New York, USA. 1988

Some scientists are also bothered by infinities, which seem to crop up at embarrassing places in our theories of the universe. A black hole...has an infinity at its very center.

*Parallel Universes*

Chapter 6 (p. 69)

Simon & Schuster. New York, New York, USA. 1988

I like infinities. I believe that infinity is just another name for mother nature. Nature provides infinite possibility all the time.

*Parallel Universes*

Chapter 6 (p. 70)

Simon & Schuster. New York, New York, USA. 1988

I believe that the infinity of possibilities predicted to arise in quantum physics is the same infinity as the number of universe-possibilities predicted to arise in relativistic physics when, at the beginning of time, the universe, our home, and all of its sisters and brothers were created. As modest and troublesome as we often are, we too are never the less creatures of infinity.

*Parallel Universes*

Chapter 6 (p. 70)

Simon & Schuster. New York, New York, USA. 1988

...infinity is just another name for mother nature.

*Parallel Universes*

Chapter 6 (p. 70)

Simon & Schuster. New York, New York, USA. 1988

**Ya Vilenkin, N.**

No biographical data available

In the Middle Ages the problem of infinity was of interest mainly in connection with arguments about whether the set of angels who could sit on the head of a pin was infinite or not.

*Stories about Sets* (p. 2)

Academic Press. New York, New York, USA. 1968

**Zebrowski, George** 1945–

Science fiction author

Science, when it runs up against infinities, seeks to eliminate them, because a proliferation of entities is the enemy of explanation.

Time is Nothing but a Clock

*OMNI*, Volume 17, Number 1, October, 1984 (p. 144)

**Zeno of Elea**

But now the many things are necessarily just so many as they are; and if they are just so many as they are, then are they finite in number.... If there are many things, then must they be infinite in number, for there must ever be

other things between things, and again between these still others; and so they must be infinite in number.

Translated by Alexander J. W. Morrison

In August Heinrich Ritter

*The History of Ancient Philosophy* (Volume 1)

Zeno of Elea (p. 473)

D.A. Talboys. Oxford, England. 1838

## INFLAMMATION

**Dickens, Charles** 1812–70

English novelist

I was born with inflammation of the lungs, and of everything else, I believe, that was capable of inflammation.

*Hard Times* (Volume 1)

Book the First, Chapter IV (pp. 25–26)

At The Riverside Press. Cambridge, England. 1869

## INFORMATION

**Bacon, Sir Francis** 1561–1626

English lawyer, statesman, and essayist

For information commences with the senses. But the whole business terminates in Works.... The chief cause of failure in operation (especially after natures have been diligently investigated) is the ill determination and measurement of the forces and actions of bodies. Now the forces and actions of bodies are circumscribed and measured, either by distances of space, or by moments of time, or by concentration of quantity, or by predominance of virtue; and unless these four things have been well and carefully weighed, we shall have sciences, fair perhaps in theory, but in practice inefficient. The four instances which are useful in this point of view I class under one head as Mathematical Instances and Instances of Measurement.

In James Spedding, Robert Leslie Ellis and Douglas Denon Heath

*The Works of Francis Bacon* (Volume 8)

*The New Organon*

Book II, XLIII

Taggard & Thompson. Boston, Massachusetts, USA. 1868

**Bateson, Gregory** 1904–80

English anthropologist, social scientist, linguist, and cyberneticist

Information is any difference that makes a difference.

*Mind and Nature: A Necessary Unity*

Glossary (p. 233)

E.P. Dutton & Co. New York, New York, USA.

**Bernal, John Desmond** 1901–71

Irish-born physicist and X-ray crystallographer

We should admit in theory what is already very largely a case in practice, that the main currency of scientific information is the secondary sources in the form of abstracts, reports, tables, etc., and that the primary sources are only for detailed reference by very few people. It is possible that the fate of most scientific papers will be not to be read by anyone who uses them, but

with luck they will furnish an item, a number, some facts or data to such reports which may, but usually will not, lead to the original paper being consulted. This is very sad but it is the inevitable consequence of the growth of science.

The Supply of Information to the Scientist: Some Problems of the Present Day

*Journal of Documentation*, Volume 13, 1957

**Brand, Stewart**

No biographical data available

Information wants to be free. Information also wants to be expensive.

*The Media Lab: Inventing the Future at MIT* (p. 202)

Penguin Books. New York, New York, USA. 1988

**Davies, Paul Charles William** 1946–

British-born physicist, writer, and broadcaster

In other words, there is more to a message than merely its information content; there is also the value or quality of the information that has to be taken into account.

*The Cosmic Blueprint: New Discoveries in Nature's Creative Ability to Order the Universe*

Chapter 6 (p. 77)

Simon & Schuster. New York, New York, USA. 1988

**Eliot, T. S. (Thomas Stearns)** 1888–1965

American expatriate poet and playwright

Where is the Life we have lost in living? Where is the wisdom we have lost in knowledge? Where is the knowledge we have lost in information?

*The Complete Poems and Play, 1900–1950*

*The Rock*

Choruses from "The Rock" I (p. 96)

Houghton, Mifflin, Harcourt. New York, New York, USA. 1952

**Franklin, Benjamin** 1706–90

American printer, scientist, and diplomat

I find a frank acknowledgment of one's ignorance is not only the easiest way to get rid of a difficulty, but the likeliest way to obtain information, and therefore I practice it: I think it an honest policy. Those who affect to be thought to know everything, and so undertake to explain everything, often remain long ignorant of many things that others could and would instruct them in, if they appeared less conceited.

*The Works of Benjamin Franklin* (Volume 1)

Electricity (p. 307)

Hillard, Gray & Company. Boston, Massachusetts, USA. 1836–40

**Herschel, Sir John Frederick William** 1792–1871

English astronomer and chemist

...the sparks of information from time to time struck out, instead of glimmering for a moment, and dying away in oblivion, began to accumulate into a genial glow, and the flame was at length kindled which was speedily to acquire the strength and rapid spread of a conflagration.

*A Preliminary Discourse on the Study of Natural Philosophy*  
Part III, Chapter VI, Section 383 (p. 348)  
Printed for Longman, Rees, Orme, Brown & Green. London, England.  
1831

**Hertz, Heinrich** 1857–94  
German physicist

...to get information for myself and for others direct from nature gives me so much more satisfaction than to be always learning it from others and for myself alone...

*Miscellaneous Papers*  
Introduction (p. xiii)  
Macmillan & Company Ltd. London, England. 1896

**Koestler, Arthur** 1905–83  
Hungarian-born English writer

There may be thousands of relevant bits of information lying dormant in hundreds of technical journals on dusty library shelves which, if remembered, would act as Open Sesames.

*The Act of Creation*  
Book One, Part Two, Chapter X  
Notes (p. 254)  
The Macmillan Company. New York, New York, USA. 1964

**Lee, Stan** 1922–  
American writer and editor

Negative information is that which, immediately upon acquiring, causes the recipient to know less than he did before.

*Dunn's Conundrum*  
Trash Report: #85–10–9 (p. 156)  
Harper & Row, Publishers. New York, New York, USA. 1985

**Liebling, A. J.**  
No biographical data available

When information becomes unavailable, the expert comes into his own.

*New York Times Book Review*, November 23, 1997

**Mailer, Norman** 1923–  
American author

The only thing of which I could be certain was that everyone had information to offer, spoke in a voice that was full of authority, and contradicted what the last fellow had said.

*Ancient Evenings*  
Part IV, Chapter Seven (p. 312)  
Little, Brown & Company. Boston, Massachusetts, USA. 1983

**Medawar, Sir Peter Brian** 1915–87  
Brazilian-born English zoologist

The ballast of factual information, so far from being just about to sink us, is growing daily less. The factual burden of a science varies inversely with its degree of maturity. As a science advances, particular facts are comprehended

within, and therefore in a sense annihilated by, general statements of steadily increasing explanatory power and compass – whereupon the facts need no longer be known explicitly, that is, spelled out and kept in mind. In all sciences we are being progressively relieved of the burden of singular instances, the tyranny of the particular. We need no longer record the fall of every apple.

Two Conceptions of Science  
*Encounter*, 143, August, 1965

**Minot, George R.** 1885–1950  
American physician

As each bit of information is added to the sum of human knowledge it is evident that it is the little things that count; that give all the fertility and character; that give all the hope and happiness to human affairs. The concept of bigness is apt to be a delusion, and standardizing processes must not supplant creative impulses.

*Les Prix Nobel. The Nobel Prizes in 1934*  
Nobel banquet speech for award received in 1934  
Nobel Foundation. Stockholm, Sweden. 1935

### President's Science Advisory Committee

We shall cope with the information explosion, in the long run, only if some scientists and engineers are prepared to commit themselves deeply to the job of sifting, reviewing, and synthesizing information; i.e., to handling information with sophistication and meaning, not merely mechanically. Such scientists must create new science, not just shuffle documents: their activities of reviewing, writing books, criticizing, and synthesizing are as much a part of science as is traditional research.

*Science, Government and Information*  
Summary and Major Recommendations  
A. 1 (p. 2)  
The White House. Washington, D.C. January 10, 1963

**Schrödinger, Erwin** 1887–1961  
Austrian theoretical physicist

The scientific picture of the real world around me is very deficient. It gives me a lot of factual information, puts all our experience in a magnificently consistent order, but is ghastly silent about all and sundry that is really dear to our heart, that really matters to us.

In Ken Wilbur (ed.)  
*Quantum Questions* (p. 81)  
New Science Library. Boulder, Colorado, USA. 1984

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910  
American author and humorist

I think it is best to put up with information the way you get it; and seem satisfied with it, and surprised at it, and grateful for it, and say, "My word!" and never let on. It was a wide space; I could tell you how wide, in chains and perches and furlongs and things, but that would not help

you any. Those things sound well, but they are shadowy and indefinite, like troy weight and avoirdupois; nobody knows what they mean. When you buy a pound of a drug and the man asks you which you want, troy or avoirdupois, it is best to say "Yes," and shift the subject.

*Following the Equator* (Volume 1)

Chapter XXIII (p. 229)

Harper & Brothers. New York, New York, USA. 1899

**Wiener, Norbert** 1894–1964

American mathematician

...information is information, not matter or energy ...

*Cybernetics, or Control and Communication in the Animal and the Machine* (2nd edition) (p. 132)

The MIT Press. Cambridge, Massachusetts, USA. 1948

## INGENUITY

**Hertzberger, Herman** 1932–

Dutch architect

Ingenuity in finding new concepts is all too often seen as something exclusive, reserved for the few who are gifted in that respect.

*Space and the Architect: Lessons in Architecture 2*

Chapter 2 (p. 30)

Publishers. Rotterdam, The Netherlands. 2000

**Johnson, Samuel** 1696–1772

English critic, biographer, and essayist

It may sometimes happen, that the greatest efforts of ingenuity have been exerted in trifles; yet the same principles and expedients may be applied to more valuable purposes, and the movements, which put into action machines of no use but to raise the wonder of ignorance, may be employed to drain fens or manufacture metals, to assist the architect or preserve the sailor.

*The Rambler* (Volume 2)

No. 83, January 1, 1751 (pp. 184–185)

Edward Earle. Philadelphia, Pennsylvania, USA. 1812

## INHERITANCE

**Ardrey, Robert** 1908–80

American anthropologist

...acquired characteristics cannot be inherited, and... within a species every member is born in the essential image of the first of its kind.

*African Genesis: A Personal Investigation into the Animal Origins and Nature of Man*

Chapter I, Section 2 (p. 12)

Athenaeum. New York, New York, USA. 1961

**Darwin, Charles Robert** 1809–82

English naturalist

As many more individuals of each species are born than can possibly survive; and as, consequently, there is a frequently recurring struggle for existence, it fol-

lows that any being, if it varies however slightly in any manner profitable to itself, under the complex and sometimes varying conditions of life, will have a better chance of surviving, and thus be naturally selected. From the strong principle of inheritance, any selected variety will tend to propagate its new and modified form.

In *Great Books of the Western World* (Volume 49)

*The Origin of Species by Means of Natural Selection*

Introduction (p. 7)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Any variation which is not inherited is unimportant for us.

In *Great Books of the Western World* (Volume 49)

*The Origin of Species by Means of Natural Selection*

Chapter I (p. 11)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Galton, Sir Francis** 1822–1911

English anthropologist, explorer, and statistician

The large do not always beget the large, nor the small the small, and yet the observed proportions between the large and the small in each degree of size and in every quality, hardly varies from one generation to another.

*Natural Inheritance*

Chapter I (p. 2)

Macmillan & Company Ltd. London, England. 1889

## INITIATIVE

**Little, Arthur D.** 1863–1935

American chemist

Initiative is one of the rarest mental qualities; yet without it progress is impossible. Its combination with the scientific imagination and command of fact is still rarer and more precious.

*The Fifth Estate* (p. 5)

The Franklin Institute. Philadelphia, Pennsylvania, USA. 1924

## INNOVATION

**Duncan, Robert Kennedy** 1919–88

American poet

There is nothing in the action of the present-day forces of Innovation that bears any of the symptoms of past history. For the first time in any known era these aspirational forces have gained control, not through the explosive violence of revolution, but through the processes of evolution. As a result we find ourselves saved from revolution, living in an age intensely dynamic, ignorant of where we are going, but on the way.

*Some Chemical Problems of Today*

Chapter I (p. 1)

Harper & Brothers Publishers. New York, New York, USA. 1911

**Fredrickson, G.** 1932–

No biographical data available

The point is simply that if a technological innovation has a good side (as it almost always does), it will more than likely have a bad side as well.

The Dilemma of Innovating Societies

*Chemical Engineering Education*, Volume 4, Summer 1969 (p. 144)

**Gardner, John W.** 1912–2002  
American administrator

We may learn something about the renewal of societies if we look at the kind of men who contribute most to that outcome – the innovators.

*Self-Renewal: The Individual and the Innovative Society*

Chapter 4 (p. 27)

Harper & Rowe, Publishers, New York, New York, USA. 1964

Many of the major changes in history have come about through successive small innovations, most of them anonymous.

*Self-Renewal: The Individual and the Innovative Society*

Chapter 4 (p. 31)

Harper & Rowe, Publishers, New York, New York, USA. 1964

### Thagard, Paul

Professor of philosophy

Whereas genetic variation in organisms is not induced by the environmental conditions in which the individual is struggling to survive, scientific innovations are designed by their creators to solve recognized problems; they therefore are correlated with solutions to problems... Scientists also commonly seek new hypotheses that will correct error in their previous trials...

*Computational Philosophy of Science*

Chapter 6 (p. 103)

The MIT Press. Cambridge, Massachusetts, USA. 1988

## INOCULATE

**Sagan, Carl** 1934–96  
American astronomer and author

If you want to save your child from polio, you can pray or you can inoculate.... Try science.

*Demon-Haunted World: Science As a Candle in the Dark*

Chapter 2 (p. 30)

Random House, Inc. New York, New York, USA. 1995

## INORGANIC

**Hardy, Thomas** 1840–1928  
English poet and regional novelist

Another year's installment of flowers, leaves, nightingales, thrushes, finches, and such ephemeral creatures, took up their positions where only a year ago others had stood in their place when these were nothing more than germs and inorganic particles.

*Tess of the D'Urbervilles: A Pure Woman Faithfully Presented*

Chapter XX (p. 165)

Harper & Brothers Publishers. New York, New York, USA. 1920

### Shulman, Max

No biographical data available

Organic chemistry is the study of organs; inorganic chemistry is the study of the insides of organs.

In Evan Esar

*20,000 Quips and Quotes* (p. 127)

Doubleday. Garden City, New York, USA. 1968

**Thomson, Sir John Arthur** 1861–1933

Scottish naturalist

In the concrete fullness of the world without, we distinguish by common consent the realm of organisms and the domain of the inorganic. Sun and stars, sky and sea, mountains and rivers, the air we breathe and the dust beneath our feet, crystals and precious stones, it seems like colour-blindness to sum this up in the negative and unattractive term "inorganic." But better that than use a question-begging word.

*The System of Animate Nature* (Volume 1)

Lecture II (p. 49)

William & Norgate. London, England. 1920

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

So far as we can see, inorganic entities are vehicles for receiving and storing in a napkin, and for restoring without gain or loss.

*Process and Reality* (p. 269)

Chapter VIII (p. 177)

The Free Press. New York, New York, USA. 1978

## INQUIRY

**Durant, William James** 1885–1981

American historian and essayist

### Durant, Ariel

No biographical data available

...inquiry is fatal to certainty.

*The Age of Napoleon: A History of European Civilization from 1789 to 1815* (p. 1045)

Simon & Schuster. New York, New York, USA. 1975

**Foster, Sir Michael** 1836–1907

English physiologist

Almost every [scientific] inquiry, certainly every prolonged inquiry, sooner or later goes wrong. The path, at first so straight and clear, grows crooked and gets blocked; the hope and enthusiasm, or even the jaunty ease, with which the inquirer set out, leave him, and he falls into a slough of despond.

The President's Address

*The Chemical News and Journal of Industrial Science*, Volume LXXX, Number 2077, September 15, 1899 (p. 130)

### Henry Frankenstein (Fictional character)

Where should we be if nobody treed to find out what lies beyond?

*Frankenstein*  
Film (1931)

**Tyndall, John** 1820–93  
Irish-born English physicist

The aspects of Nature provoke in man the spirit of inquiry. As the eye is formed to see, and the ear to hear, so the human mind is formed to explore and understand the basis and relationship of natural phenomena.

*Heat a Mode of Motion* (6th edition)  
Lecture I (p. 1)  
D. Appleton & Co. New York, New York, USA. 1915

## INQUISITION

**Galilei, Galileo** 1564–1642  
Italian physicist and astronomer

If Galileo had said in verse that the world moved, the Inquisition might have let him alone.

In Thomas Hardy  
*Hardy: Selected Poems*  
Appendix (p. 200)  
Penguin Books. New York, New York, USA. 1998

## INQUISITIVE

**Gies, William J.** 1872–1956  
US biochemist and dentist

No man discovers, except by accident, who isn't *inquisitive*.

Research in Dentistry  
*Journal of Dental Research*, Volume 3, Number 3, September, 1921 (p. xciv)

## INSANITY

**Jung, Carl G.** 1875–1961  
Swiss psychiatrist and founder of analytical psychology

At bottom we discover nothing new and unknown in the mentally ill; rather, we encounter the substratum of our own natures.

*Memories, Dreams, Reflections*  
Chapter IV (p. 127)  
Vintage Books. New York, New York, USA. 1970

## INSCRIPTION

**Miller, Hugh** 1802–56  
Scottish geologist and theologian

We have been looking abroad on the old geological burying-grounds, and deciphering the strange inscriptions on their tombs; but there are other burying-grounds, and other tombs – solitary church-yards among the hills, where the dust of the martyrs lies, and tombs that rise over the ashes of the wise and good; nor are there awant-

ing, on even the monuments of the perished races, frequent hieroglyphics, that while their burial-yards contain but the debris of the past, we are to regard the others as charged with the sown seed of the future.

*The Testimony of the Rocks; of, Geology in Its Bearings on the Two Theologies, Natural and Revealed*  
Lecture Second (p. 140)  
Gould & Lincoln. Boston, Massachusetts, USA. 1857

## INSECT COLORING

**Kirby, William** 1759–1850  
English entomologist

**Spence, William** 1783–1860  
English entomologist

In fishes the lucid scales, of varied hue, that cover and defend them, are universally admired, and esteemed their peculiar ornament but place a butterfly's wing under a microscope, that avenue to unseen glories in new worlds, and you will discover that nature has endowed the most numerous of the insect tribes with the same privilege, multiplying in them the forms, and diversifying the colouring of this kind of clothing beyond all parallel.

*An Introduction to Entomology; Or, Elements of the Natural History of Insects* (7th Edition)  
Letter 1 (p. 5)  
Longman, Brown, Green, Longmans & Robert. London, England. 1858

What numbers vie with the charming offspring of Flora in various beauties! some in the delicacy and variety of their colours, colours not like those of flowers evanescent and fugitive, but fixed and durable, surviving their subject, and adorning it as much after death as they did when it was alive; others, again, in the veining and texture of their *wings*; and others in the rich cottony down that clothes them.

*An Introduction to Entomology; Or, Elements of the Natural History of Insects* (7th edition)  
Letter 1 (pp. 5–6)  
Longman, Brown, Green, Longmans & Robert. London, England. 1858

## INSECT PEST

**Macleod, Norman** 1812–72  
Scottish clergyman

Experienced European travelers, when they hire a boat for a journey on the Nile, always stipulate that it shall be sunk for a certain number of days, in order to clear it of the various insect pests to which such vessels are liable, but which seem to cause no discomfort to the Oriental owners.

*Good Words*  
Only A Cockroach (p. 628)  
Isbister & Co. London, England. 1879

## INSECT VARIEGATION

**Kirby, William** 1759–1850  
English entomologist

**Spence, William** 1783–1860  
English entomologist

In variegation, insects certainly exceed every other class of animated beings. Nature, in her sportive mood, when painting them, sometimes imitates the clouds of heaven; at others, the meandering course of the rivers of the earth, or the undulations of their waters: many are veined like beautiful marbles; others have the semblance of a robe of the finest net-work thrown over them; some she blazons with heraldic insignia, giving them to bear in fields sable – azure – vert – gules – argent and or, fesses – bars – bends – crosses – crescents – stars, and even animals. On many, taking her rule and compasses, she draws with precision mathematical figures; points, lines, angles, triangles, squares, and circles.

*An Introduction to Entomology; Or, Elements of the Natural History of Insects* (7th edition)

Letter 1 (p. 5)

Longman, Brown, Green, Longmans & Robert. London, England. 1858

## INSIGHT

**Fabre, Jean-Henri** 1823–1915  
French entomologist and author

‘Twas a tiny grain at first, an insignificant ball rolling and increasing as it went. From one slope to the other of the theorems, it grew to a heavy mass; and the mass became a mighty projectile which, flung backwards and retracing its course, split the darkness and spread it into one vast sheet of light.

Translated by Alexander Teixeira de Mattos

*The Life of the Fly*

Chapter XIII (p. 315)

Dodd, Mead & Co. New York, New York, USA. 1925

**Merrell-Wolff, Franklin**

No biographical data available

The function of insight gives a transcendental content that, when reduced to an interpretive system, becomes subject to the relativity of all subject-object consciousness. Therefore, there can be no such thing as an infallible interpretation. Thus we must distinguish between insight and its formulation.

*Transformations in Consciousness*

Introception (p. 163)

State University of New York. Albany, New York, USA. 1995

**Standen, Anthony**

Anglo-American science writer

Insight is not the same as scientific deduction, but even at that it may be more reliable than statistics.

*Science Is a Sacred Cow*

Chapter V (p. 123)

E.P. Dutton & Company. New York, New York, USA. 1950

**Weaver, Warren** 1894–1978  
American mathematician

Sometimes when, for a time, we think hard about some subject and then “dismiss it from our minds,” this subject seems to reappear later, in an improved and expanded form, just as though it had descended to a subconscious level of the mind, and had there profited by association with an unrecognized mixture of other ideas in a sort of unconscious reverie.

*Lady Luck: A Theory of Probability*

Chapter 1 (p. 30)

Dover Publications, Inc. New York, New York, USA. 1963

## INSOMNIAC

**Crichton-Browne, Sir James** 1840–1938  
English physician

A lady of my acquaintance, after a slight operation, suffered from insomnia [that] drugs failed to relieve. Her doctor, however, was very resourceful and on visiting her on the Sunday forenoon said: “I see there’s a sermon on the wireless at eight this evening...” There is no soporific better than a dry sermon.

*From the Doctor’s Notebook*

Insomnia (p. 202)

Duckworth. London, England. 1937

## INSPIRATION

**Huggins, Sir William** 1824–1910  
English astronomer

A feeling as of inspiration seized me: I felt as if I had it now in my power to lift a veil which had never before been lifted; as if a key had been put into my hands which would unlock a door which had been regarded as forever closed to man – the veil and door behind which lay the unknown mystery of the true nature of the heavenly bodies.

*The New Astronomy: A Personal Retrospect*

*The Twentieth Century*, Volume XLI, June, 1897 (p. 911)

**Hugo, Victor** 1802–85

French author, lyric poet, and dramatist

One must fill oneself with human science. Above all and in spite of all, be a man. Do not fear to surcharge yourself with humanity. Ballast your mind with reality and then throw yourself into the sea – the sea of inspiration.

Translated by L. O’Rourke

*Intellectual Autobiography* (pp. 124–125)

Funk & Wagnalls Company. London, England. 1907

**Poincaré, Jules Henri** 1854–1912  
French mathematician and theoretical astronomer

One need only open the eyes to see that the conquest of industry which have enriched so many practical men would never have seen the light, if these practical men alone had existed and if they had not been preceded by unselfish devotees who died poor, who never thought of utility, and yet had a guide far other than caprice.

*The Foundations of Science  
Science and Method*, Book I  
Chapter I (p. 363)  
The Science Press. New York, New York, USA. 1913

**Sand, George (Amantine-Lucile-Aurore Dupin)** 1804–76  
French novelist and feminist

We are of nature, in nature, by nature, and for nature. Talent, will, genius are natural phenomena like the lake, the volcano, the mountain, the wind, the star, the cloud.

Translated by A.L. McKenzie  
*The George Sand—Gustave Flaubert Letters*  
Letter CCLXXX (p. 323)  
Duckworth & Company Ltd. London, England. 1922

**Wallace Barnes (Fictional character)**

You know, there's such a very thin dividing line between inspiration and obsession that sometimes it's very hard to decide which side we're really on.

*The Dambusters*  
Film (1955)

## INSTINCT

**Barrett, C. L.**  
No biographical data available

If it be objected that the term instinct is meaningless, I can only reply that there are many things in nature to which we attach convenient labels, although they still remain beyond our understanding.

*Annual Report of the Board of Regents of the Smithsonian Institution (1909)*  
The Origin and Development of Parasitical Habits in the Cuculidae (p. 492)  
Government Printing Office. Washington, D.C. 1910

**Bridges, Robert Seymour** 1844–1930  
English poet

'Tis laughable that men should fondle such surprise  
at animal behavior, seeing some beetle or fly  
– whose very existence is so negligible and brief –  
act more intelligently than he might himself had he been  
there to advise with all his pros and cons,  
his cause, effects and means: Such conduct he will style  
“Marvels of Instinct”, but what sort of wisdom is this that  
mistaketh the exception for the general rule and the rule  
for the exception?

*The Testament of Beauty – A Poem in Four Books*  
Book I  
At The Clarendon Press. Oxford, England. 2007

**Holmes, Oliver Wendell** 1809–94  
American physician, poet, and humorist

Instinct... is crystallized intelligence ...  
*The Writings of Oliver Wendell Holmes (Volume 9)*  
*Medical Essays: 1842–1882*  
Chapter IV (p. 247)  
Houghton Mifflin & Co. Boston, Massachusetts, USA. 1911

...the more we observe and study, the wider we find the range of the automatic and instinctive principles in body, mind, and morals, and the narrower the limits of the self-determining conscious movement ...

*The Autocrat of the Breakfast-table*  
Chapter IV (p. 79)  
J.M. Dent & Co. London, England. 1907

**James, William** 1842–1910  
American philosopher and psychologist

The whole story of our dealings with the lower wild animals is the history of our taking advantage of the way in which they judge of everything by its mere label, as it were, so as to ensnare or kill them. Nature, in them, has left matters in this rough way, and made them act *always* in the manner which would be *oftenest* right. There are more worms unattached to hooks than impaled upon them; therefore, on the whole, says Nature to her fishy children, bite at every worm and take your chances. But as her children get higher, and their lives more precious, she reduces the risks. Since what seems to be the same object may be now a genuine food and now a bait; since in gregarious species each individual may prove to be either the friend or the rival, according to the circumstances, of another; since any entirely unknown object may be fraught with weal or woe, *Nature implants contrary impulses to act on many classes of things*, and leaves it to slight alterations in the conditions of the individual case to decide which impulse shall carry the day. Thus, greediness and suspicion, curiosity and timidity, coyness and desire, bashfulness and vanity, sociability and pugnacity, seem to shoot over into each other as quickly, and to remain in as unstable equilibrium, in the higher birds and mammals as in man.

*The Principles of Psychology* Volume 2  
Chapter XXIV (p. 392)  
Henry Holt & Co. New York, New York, USA. 1918

**May, Rollo** 1909–94  
American psychologist

An instinct, Freud emphasizes, has as its goal the restoring of an earlier state. He borrows here from the second law of thermodynamics that the energy of the universe is constantly running down. Since "...an instinct is an urge inherent in organic life to restore an earlier state of

things..." and "inanimate things existed before living ones," so our instincts push us back to the inanimate. The instincts move toward nirvana, which is complete absence of excitation. The "aim of all life is death." And here we find ourselves at Freud's most controversial theory termed the death instinct, or Thanatos.

*Love and Will*

Chapter Three (p. 85)

W.W. Norton & Company, Inc. New York, New York, USA. 1969

**Sterling, John** 1806–44

English author

...instinct is intelligence incapable of self-consciousness.

In Julius Charles Hare (ed.)

*Essays and Tales* Volume 2

Thoughts, Thoughts and Images (p. 146)

John W. Parker. London, England. 1848

**Thomson, Sir John Arthur** 1861–1933

Scottish naturalist

...obeying the living hand of the past which is within them.

*The Outline of Science* (Volume 1)

Chapter VII (p. 220)

G.P. Putnam's Sons. New York, New York, USA. 1937

**White, Gilbert** 1720–93

English naturalist and cleric

To a thinking mind nothing is more wonderful than that early instinct which impresses young animals with the notion of the situation of their natural weapons, and of using them properly in their own defense, even before those weapons subsist or are formed.

*The Natural History of Selborne*

Letter XXXI (p. 178)

Robert M. McBride & Company. New York, New York, USA. 1925

They who write on natural history cannot too frequently advert to instinct, that wonderful limited faculty, which, in some instances, raises the brute creation as it were above reason, and in others leaves them so far below it.

*The Natural History of Selborne*

Letter LVI (p. 221)

Robert M. McBride & Company. New York, New York, USA. 1925

## INSTRUMENT

**Abbott, Donald Putnam** 1920–86

American marine biologist and professor

There's no substitute for fine forceps. None.

In Galen Howard Hilgard (ed.)

*Observing Marine Invertebrates: Drawings from the Laboratory*

Author's Preface (p. xvii)

Stanford University Press. Stanford, California, USA. 1987

### Author undetermined

Man cannot but feel a sense of pleasure, and even of power, when, through the instruments constructed by

his ingenuity, he finds himself brought within reach, as it were, of the innumerable orbs that roll through the domains of space.

*The Story of The Herschels: A Family of Astronomers*

Chapter I (p. 6)

T. Nelson & Sons. London, England. 1889

**Babbage, Charles** 1792–1871

English mathematician

The first step in the use of every instrument is to find the limits within which its employer can measure the *same object under the same circumstances*. It is only from knowledge of this that he can have confidence in his measures of the *same object under different circumstances*, and after that, of *different objects under different circumstances*.

*Reflections on the Decline of Science in England, And on Some of Its Causes*

Chapter V (p. 172)

Printed for B. Fellowes. London, England. 1830

**Bacon, Sir Francis** 1561–1626

English lawyer, statesman, and essayist

The unassisted hand and the understanding left to itself possess but little power. Effects are produced by the means of instruments and helps, which the understanding requires no less than the hand; and as instruments either promote or regulate the motion of the hand, so those that are applied to the mind prompt or protect the understanding.

In *Great Books of the Western World* (Volume 30)

*Novum Organum*

First Book, Aphorism 2 (p. 107)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Baudrillard, Jean** 1929–

French cultural theorist

It is like the expanding universe. The more our instruments penetrate it, the further the limits recede.

Translated by Chris Turner

*Cool Memories*

October, 1983 (p. 145)

Verso. London, England. 1990

**Bridgman, Percy Williams** 1882–1961

American physicist

Not only do we use instruments to give us fineness of detail inaccessible to direct sense perception, but we also use them to extend qualitatively the range of our senses into regions where our senses no longer operate...

*The Way Things Are*

Chapter V (p. 149)

Harvard University Press. Cambridge, Massachusetts, USA. 1959

**Hayden, Horace H.** 179–1844

Geologist and botanist

All observations are liable to error; no telescope is perfect, no leveling instrument entirely trustworthy; no instrumental graduations are exact and no observer is infallible.

*A Sketch of the Geography and Geology of the Himalaya Mountains and Tibet*

Chapter 4 (p. 23)

Superintendent Government Printing. Calcutta, India. 1907–1908

**Carpenter, William Benjamin** 1813–85

English physiologist and naturalist

No one who attentively examines the progress of any department of Science, save such as are (like Mathematics or Metaphysics) of a purely abstract character, can fail to perceive how much it is dependent upon the perfection of its *instruments*.

*The Microscope and Its Revelations*

Introduction (p. 1)

John Churchill. London, England. 1866

**Chesterton, G. K. (Gilbert Keith)** 1874–1936

English author

Men can construct a science with very few instruments, or with very plain instruments; but no one on earth could construct a science with unreliable instruments.

*Heretics*

Science and the Savages (p. 147)

Books for Libraries Press. Freeport, New York, USA. 1970

**Davy, Sir Humphry** 1778–1829

English chemist

...nothing tends so much to the advancement of knowledge as the application of a new instrument. The native intellectual powers of men in different times are not so much the causes of the different success of their labours, as the peculiar nature of the means and artificial resources in their possession.

In Thomas Hager

*Force of Nature: The Life of Linus Pauling*

Chapter 4 (p. 86)

Simon & Schuster. New York, New York, USA. 1995

In physical science the imperfections of our instruments of investigation, the fallacies to which we are liable from the modifications of impressions by the state of feeling, and the minute nature and the complicated relations of the objects of research, prevent us from attaining to that state of certainty afforded by the results of the science of quantity.

In John Davy

*Memoirs of the Life of Sir Humphry Davy* (Volume 1)

Chapter II (p. 123)

Longman, Rees, Orme, Brown, Green & Longman. London, England. 1836

**Egler, Frank E.** 1911–96

American botanist and ecologist

Dazed with this brightness of our technology, I wonder if some are not inclined to forget that the most important

instrument in science must always be the mind of man.

*The Way of Science*

Methodology and Instrumentation (p. 59)

Hafner Publishing Company. New York, New York, USA. 1970

**Eisenhart, Churchill** 1913–94

Statistician

Of wonders of science and feats of design

Has many a scribe writ the praise;

And if I now mention the subject again

It's distinctly a relative phase.

For while science and gadgets are fine in their ways

One worries at times 'bout their clutch,

Especially when science, design, and math'matics

Combine to get us in Dutch.

Operational Aspects of Instrument Design

*Science*, Volume 110, October 7, 1949 (p. 343)

**Enriques, Federigo** 1871–1946

Italian mathematician

...impossibility exists only in relation to the instruments specified.

*Problems of Science*

Introduction (p. 7)

The Open Court Publishing Co. La Salle, Indiana, USA. 1914

**Flexner, Abraham** 1866–1959

American educator

Science lies in the intellect, not in the instruments.

*Medical Education: A Comparative Study*

Chapter I (pp. 6–7)

The Macmillan Company. New York, New York, USA. 1925

**Foster, Bishop**

No biographical information available

Man, having one kind of an eye given him by his Maker, proceeds to construct two other kinds [of scopes]. He makes one that magnifies invisible objects thousands of times, so that a dull razor-edge appears as thick as three fingers, until the amazing beauty of color and form in infinitesimal objects is entrancingly apparent, and he knows that God's care of least things is infinite. Then he makes the other kind four or six feet in diameter, and penetrates the immensities of space thousands of times beyond where his natural eye can pierce, until he sees that God's immensities of worlds are infinite also.

In Henry Warren

*Recreations in Astronomy*

Chapter III (p. 43)

Chautauqua Press. New York, New York, USA. 1886

**Galison, Peter**

American physicist and historian

The modern history of instruments and the patterns of their use may lack the glamour of the history of our over arching theoretical constructs. Nonetheless, these

bubbling, sparking, clanking devices remain the weft and the warp of physics.

In Peter Achinstein and Owen Hannaway  
*Observation, Experiment and Hypothesis in Modern Physics*  
Bubble Chambers and the Experimental Workplace (p. 359)  
The MIT Press. Cambridge, Massachusetts, USA. 1985

### **Giere, Ronald**

American philosopher of science

The overwhelming presence of machines and instrumentation must be one of the most salient features of the modern scientific laboratory.... The development of science depends at least as much on new machinery as it does on new ideas.

*Explaining Science: A Cognitive Approach*  
Chapter 5 (p. 138)  
The University of Chicago Press. Chicago, Illinois, USA. 1988

### **Gogarty, Oliver St. John** 1878–1957

Irish author

The telescope, the microscope and the test-tube have made skeptics of us all. We have changed wisdom for an exact knowledge of stains, precipitants, reactions and refractions, and put it, for this generation at least, beyond recall.

*I Follow Saint Patrick*  
Chapter 15  
Reynal & Hitchcock. New York, New York, USA. 1938

### **Hale, George Ellery** 1868–1938

American astronomer

We need the ideas of men from all parts of the world; we need the contributions they can make; and we need them more than we need larger instrumental means than we now possess.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1907*  
Some Opportunities for Astronomical Work with Inexpensive Apparatus (p. 285)  
Government Printing Office. Washington, D.C. 1908

### **Hardy, Thomas** 1840–1928

English poet and regional novelist

Then, by means of the instrument at hand, they traveled together from the earth to Uranus and the mysterious outskirts of the solar system; from the solar system to “61 Cygni,” the nearest fixed star in the northern sky; from “61 Cygni” to remoter stars; thence to the remotest visible, till the ghastly chasm which they had bridged by a fragile line of sight was realized ...

*Two on a Tower*  
Chapter IV (p. 38)  
Henry Holt & Co. New York, New York, USA. 1882

### **Hooper, Wynnard**

No biographical data available

It is found convenient to speak of the science of Spectrum Analysis and of Microscopical Science, on the following

grounds: – All complicated scientific instruments require that those who use them should understand them thoroughly, and should be able to adjust them should they get out of order. Now the knowledge which enables the operator to use his instrument effectively, and to restore its efficiency when it is not in working order, is important enough to be termed “scientific.”

*The Method of Statistical Analysis*  
*Journal of the Royal Statistical Society*, Volume 44, March, 1881 (p. 47)

### **Kuhn, Thomas S.** 1922–96

American historian of science

...scientists see new and different things when looking with familiar instruments in places they have looked before.... It is as elementary prototypes for these transformations of the scientist’s world that the familiar demonstrations of a switch in visual gestalt prove so suggestive. What were ducks in the scientist’s world before the revolution are rabbits afterwards.

*The Structure of Scientific Revolutions*  
Chapter X (p. 111)  
The University of Chicago Press. Chicago, Illinois, USA. 1970

### **Lavoisier, Antoine Laurent** 1743–94

French chemist

As the usefulness and accuracy of chemistry depend entirely upon the determination of the weights of the ingredients and products, too much precision cannot be employed in this part of the subject; and for this purpose, we must be provided with good instruments.

*Elements of Chemistry in a New Systematic Order*  
Part III, Chapter I (p. 88)  
Printed for William Creech. Edinburgh, Scotland. 1790

In the present advanced state of chemistry, very expensive and complicated instruments are become indispensably necessary for ascertaining the analysis and synthesis of bodies with the requisite precision as to quantity and proportion; it is certainly proper to endeavor to simplify these, and to render them less costly; but this ought by no means to be attempted at the expense of their convenience of application, and much less of their accuracy.

*Elements of Chemistry in a New Systematic Order*  
Part III, Chapter I, Section II (p. 319)  
W. Creech. Edinburgh, Scotland. 1790

### **Planck, Max** 1858–1947

German physicist

It goes without saying that the laws of nature are in themselves independent of the properties of the instruments with which they are measured. Therefore in every observation of natural phenomena we must remember the principle that the reliability of the measuring apparatus must always play an important role.

Translated by James Murphy  
*Where is Science Going?*  
Chapter I (pp. 63–64)  
George Allen & Unwin. London, England. 1933

**Proctor, Richard Anthony** 1837–88  
English astronomer

Larger and larger grew the universe... as men turned more and more powerful, more and more exact instruments to the survey of the heavens.

The First Part

Night, Faust in his Study, l. 668–675

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

The reason why we are on a higher imaginative level is not because we have finer imagination, but because we have better instruments.

*Science and the Modern World*

Chapter VII (p. 166)

The Macmillan Company. New York, New York, USA. 1929

## INSULIN

**Banting, Frederick G.** 1891–1941  
Canadian physiologist

Insulin is not a cure for diabetes; it is a treatment. It enables the diabetic to burn sufficient carbohydrates, so that proteins and fats may be added to the diet in sufficient quantities to provide energy for the economic burdens of life.

*Nobel Lectures, Physiology or Medicine 1922–1941*

Nobel lecture for award received in 1923

Diabetes and Insulin (p. 68)

Elsevier Publishing Company. Amsterdam, Netherlands. 1965

## INTEGER

**Hauffman, Paul**  
No biographical data available

The trouble with integers is that we have examined only the small ones. Maybe all the exciting stuff happens at really big numbers, ones we can't get our hand on or even begin to think about in any very definite way. So maybe all the action is really inaccessible and we're just fiddling around. Our brains have evolved to get us out of the rain, find where the berries are, and keep us from getting killed. Our brains did not evolve to help us grasp really large numbers or to look at things in a hundred thousand dimensions.

The Man Who Loves Only Numbers

*The Atlantic Magazine*, Volume 260, Number 5, November, 1987

**Minkowski, Hermann** 1864–09  
German mathematician

Integers are the fountainhead of all mathematics.

*Diophantische Approximationen: eine einführung in die zahlen Theorie,*  
 von Hermann Minkowski  
 Preface  
 Publisher undetermined

## INTEGRAL

**Kasner, Edward** 1878–1955  
 American mathematician

**Newman, James Roy** 1911–66  
 Mathematician and mathematical historian

...it is to the definite integral that structural engineers must render thanks for the Golden Gate Bridge, for it rests on this even more than on concrete and steel.

*Mathematics and the Imagination*  
 Chance and Chanceability – The Calculus (p. 340)  
 Simon & Schuster. New York, New York, USA. 1940

**McReynolds, J. W.**  
 No biographical information available

I am a mathematician to this extent: I can follow triple integrals if they are done slowly on a large blackboard by a personal friend.

George's Problem  
*Scripta Mathematica*, Volume 15, 1949

**McShane, E. J.**  
 No biographical information available

There are in this world optimists who feel that any symbol that starts off with an integral sign must necessarily denote something that will have every property that they should like an integral to possess.

This of course is quite annoying to us rigorous mathematicians; what is even more annoying is that by doing so they often come up with the right answer.

*Bulletin of the American Mathematical Society*, Volume 69, 1963 (p. 611)

**Sylvester, James Joseph** 1814–97  
 English mathematician

It seems to be expected of every pilgrim up the slopes of the mathematical Parnassus, that he will at some point or other of his journey sit down and invent a definite integral or two towards the increase of the common stock.

*The Collected Mathematical Papers of James Joseph Sylvester* (Volume 2)  
 Notes to the Meditation on Poncelet's Theorem, Including a Valuation of the Two New Definite Integrals (p. 214, fn 2)  
 University Press. Cambridge, England. 1904–1912

## INTEGRATION

**Clarke, Arthur C.** 1917–  
 English science and science fiction writer

“But no-one expected he'd ever get very far, because I don't suppose he could even integrate e to the x.” “Is such ignorance possible?” gasped someone.

*Tales from the White Hart* (p. 5)  
 Publisher undetermined

**de Morgan, Augustus** 1806–71  
 English mathematician and logician

Common integration is only the memory of differentiation, the different artifices by which integration is effected are changes, not from the known to the unknown, but from forms in which memory will not serve us to those in which it will.

*Transactions of the Cambridge Philosophical Society*, Volume 8, 1844 (p. 188)

**Kettering, Charles Franklin** 1876–1958  
 American engineer and inventor

...the most highly satisfactory use of the reverse-curve sign of integration used in calculus is for those two S-openings in the top of a violin.

In T.A. Boyd  
*Professional Amateur* (p. 209)  
 E.P. Dutton & Company, Inc. New York, New York, USA. 1957

**Rankine, William John Macquorn** 1820–72  
 Scottish engineer and physicist

Now integrate L with respect to dt,  
 (t Standing for time and persuasion);  
 Then, between proper limits, 'tis easy to see,  
 The definite integral Marriage must be –  
 (A very concise demonstration).

*Songs and Fables*  
 The Mathematician in Love, Verse 7  
 J. Maclehose. Glasgow, Scotland. 1874

 No biographical data available

“Oh, hast thou solved the integral?  
 Here is a raise, my brainish boy!”  
 He threw his time cards in the air  
 And clapped his hands with joy.

Wockyjabber  
*The Magazine of Fantasy and Science Fiction*, May, 1960

## INTELLECT

**Bergson, Henri** 1859–1941  
 French philosopher

The history of the evolution of life, incomplete as it yet is, already reveals to us how the intellect has been formed, by an uninterrupted progress, along a line which ascends through the vertebrate series up to man. It shows us in the faculty of understanding an appendage of the faculty of acting, a more and more precise, more and more complex and supple adaptation of the consciousness of living beings to the conditions of existence that are made for them.

*Creative Evolution*  
 Introduction (p. xix)  
 The Modern Library. New York, New York, USA. 1944

**Bramah, Ernest** 1869–1942

Author

As the Book of Verses indicates, “The person who patiently awaits a sign from the clouds for many years, and fails to notice the earthquake at his feet, is devoid of intellect.”

*The Wallet of Kai Lung*

16

Grant Richards. London, England. 1911

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

Intellect...sees an object as it stands in the light of science...

*The Complete Works of Ralph Waldo Emerson* (Volume 2)*Essays: First Series*

Chapter XI (p. 326)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

Nature is good, but intellect is better ...

*Representative Men*

Chapter II (p. 66)

Bernhard Tauchnitz. Leipzig, Germany. 1917

**Freud, Sigmund** 1856–1939

Austrian neurologist and co-founder of psychoanalysis

We may insist as much as we like that the human intellect is weak in comparison with human instincts, and be right in doing so. But nevertheless there is something peculiar about this weakness. The voice of the intellect is a soft one, but it does not rest until it has gained a hearing. Ultimately, after endlessly repeated rebuffs, it succeeds. This is one of the few points in which one may be optimistic about the future of mankind.

In Jonathan Glover

*Humanity: A Moral History of the Twentieth Century*

The Future of An Illusion

Yale University Press. New Haven, Connecticut, USA. 2001

**Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

One-story intellects, two-story intellects, three-story intellects with skylights. All fact-collectors, who have no aim beyond their facts, are one-story men. Two-story men compare, reason, generalise, using the labours of the fact-collectors as well as their own. Three-story men idealise, imagine, predict; their best illumination comes from above, through the skylight.

*The Poet at the Breakfast-table* (p. 69)

David Douglas. Edinburgh, Scotland. 1884

**Jevons, William Stanley** 1835–82

English economist and logician

It is the prerogative of Intellect to discover what is uniform and unchanging in the phenomena around us.

*The Principles of Science: A Treatise on Logic and Scientific Method*

(2nd edition)

Chapter I (p. 3)

Macmillan &amp; Co Ltd. London, England. 1877

The dignity of intellect begins with the power of separating points of agreement from those of difference.

*The Principles of Science: A Treatise on Logic and Scientific Method*

(2nd edition)

Chapter II (p. 24)

Macmillan &amp; Co Ltd. London, England. 1877

**Jung, Carl G.** 1875–1961

Swiss psychiatrist and founder of analytical psychology

Only in the course of the nineteenth century, when spirit began to degenerate into intellect, did a reaction set in against the unbearable dominance of intellectualism, and this led to the unpardonable mistake of confusing intellect with spirit and blaming the latter for the misdeeds of the former.

Translated by R.F.C. Hull

*Alchemical Studies*

Difficulties Encountered by a European in Trying to Understand the East (p. 9)

Princeton University Press. Princeton, New Jersey, USA. 1967

**Mellor, Joseph William** 1863–1938

Chemist

...man has to apply a very weak intellect to a very complicated world; and the resources of the human intellect are too narrow, and the universe is too complex to leave any hope that it will ever be within man's power to carry scientific perfection to Tennyson's last degree of simplicity:

... One law, one element.

*A Comprehensive Treatise on Inorganic and Theoretical Chemistry*

(Volume 1)

Chapter I (p. 10)

Longman, Green, &amp; Co. London, England. 1922

**Tischner, August**

No biographical data available

It is strange: even sound intellects yield to that mighty incubus, the spirit of the age!

*The Fixed Idea of Astronomical Theory* (p. 36)

Gustav Fock. Leipzig, Germany. 1885

**Tyndall, John** 1820–93

Irish-born English physicist

We cannot quench [the] desires of the intellect. They are stimulated by the phenomena which surround us in our present state of existence as the body is by oxygen; and in the presence of these phenomena man thirsts for knowledge as an Arab longs for water when he smells the Nile. In Royal Institute of Great Britain

*Lectures on Education: Delivered at the Royal Institute of Great Britain*

On the Importance of the Study of Physics (p. 175)

John W. Parker &amp; Son. London, England. 1854

Whether we see rightly or wrongly – whether our intellection be real or imaginary – it is of the utmost importance in science to aim at perfect clearness in the description of all that comes, or seems to come, within the range of the intellect.

*Fragments of Science for Unscientific People*  
Chapter X (p. 242)

D. Appleton & Co. New York, New York, USA. 1875

...there is in the human intellect a power of expansion – I might almost call it a power of creation – which is brought into play by the simple brooding upon facts.

*Scientific Addresses*

Scientific Use of the Imagination (p. 39)

Charles C. Chatfield. New Haven, Connecticut, USA. 1870

## INTELLECTUAL

**Hamerton, Philip Gilbert** 1834–94

English artist and art critic

The intellectual life is sometimes a fearfully solitary one. Unless he lives in a great capital the man devoted to that life is more than all other men liable to suffer from isolation, to feel utterly alone beneath the deafness of space and the silence of the stars.

*The Intellectual Life*

Part VII, Letter II (p. 237)

Little, Brown & Co. Boston, Massachusetts, USA. 1901

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

In the modern world the celibacy of the medieval learned class has been replaced by a celibacy of the intellectual which is divorced from the concrete contemplation of the complete facts.

*Science and the Modern World*

Chapter XIII (p. 283)

The Macmillan Company. New York, New York, USA. 1929

## INTELLECTUAL FACULTY

**Fisher, Sir Ronald Aylmer** 1890–1962

English statistician and geneticist

The types of mind which result from training in mathematics and in biology certainly differ profoundly; but the difference does not seem to lie in the intellectual faculty.

*Genetical Theory of Natural Selection*

Preface (p. viii)

At The Clarendon Press. Oxford, England. 1930

## INTELLIGENCE

**Bradbury, Ray** 1920–

American writer

The universe is full of matter and force. Yet in all that force, amongst all the bulks and gravities, the rains of

cosmic light, the bombardment of energy – how little spirit, how small the decimal points of intelligence.

In Ray Bradbury, Arthur C. Clarke, Bruce Murray, Carl Sagan, and Walter Sullivan

*Mars and the Mind of Man*

Ray Bradbury (p. 133)

Harper & Row, Publishers. New York, New York, USA. 1973

**Grassé, Pierre P.** 1895–1985

French zoologist

Any living thing possesses an enormous amount of “intelligence....” Today, this “intelligence” is called “information,” but it is still the same thing.... This “intelligence” is the sine qua non of life. If absent, no living being is imaginable. Where does it come from? This is a problem which concerns both biologists and philosophers, and, at present, science seems incapable of solving it.

*Evolution of Living Organisms: Evidence for a New Theory of Transformation*

An Introduction to the Study of Evolution (p. 2)

Academic Press. New York, New York, USA. 1977

**Hinton, Charles Howard** 1853–1907

English mathematician

At the present time our actions are largely influenced by our theories. We have abandoned the simple and instinctive mode of life of the earlier civilisations for one regulated by the assumptions of our knowledge and supplemented by all the devices of intelligence.

*Scientific Romances: First Series*

What is the Fourth Dimension? Chapter I (p. 3)

Swan Sonnenschein, Lowrey & Co. London, England. 1886

**Lemon, Harvey Brace**

Physicist

In our recognition that order is universal, a fact confirmed by myriads of observations of patient, indefatigable, and devoted investigators, the old saying that “an irreverent astronomer is mad” can apply with equal force to the physicist. Man learns something of his own minute and colossal stature, and he comes to feel that his own intelligence, which enables him to make such sublime discoveries, is the supreme achievement of evolution.

In H.H. Newman (ed.)

*The Nature of the World and of Man*

Atomic Structure (p. 98)

The University of Chicago Press. Chicago, Illinois, USA. 1927

**Lilly, John**

No biographical data available

The highest intelligence on the planet probably exists in a sperm whale, who has a ten-thousand-gram brain, six times larger than ours.

In Pamela Weintraub (ed.)

*The Omni Interviews*

Altered States (p. 165)

Ticknor & Fields. New York, New York, USA. 1984

**Morris, Robert Tuttle** 1857–1945  
American surgeon

Man is the only animal persistently engaged in bringing about his own destruction. He does this with what he calls his intelligence ...

*Microbes and Men*

Chapter I (p. 3)

Doubleday Page & Co. Garden City, New York, USA. 1916

**Simak, Clifford D.** 1904–88  
American writer

The emergence of intelligence, I am convinced, tends to unbalance the ecology. In other words intelligence is the great polluter. It is not until a creature begins to manage its environment that nature is thrown into disorder.

*Shakespeare's Planet* (p. 113)

Berkeley Publishers, Inc. New York, New York, USA. 1976

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

What, unless biological science is a mass of errors, is the cause of human intelligence and vigour? Hardship and freedom: conditions under which the active, strong, and subtle survive and the weaker go to the wall ...

*Seven Science Fiction Novels of H. G. Wells*

*The Time Machine*

Chapter 4 (p. 27)

Dover Publications, Inc. New York, New York, USA. 1934

Nature never appeals to intelligence until habit and instinct are useless. There is no intelligence where there is no change and no need of change.

*Seven Science Fiction Novels of H. G. Wells*

*The Time Machine*

Chapter 10 (p. 65)

Dover Publications, Inc. New York, New York, USA. 1934

## INTELLIGENT DESIGN

**Darwin, Charles Robert** 1809–82  
English naturalist

Your question what would convince me of Design is a poser. If I saw an angel come down to teach us good, and I was convinced from others seeing him that I was not mad, I should believe in design.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 2)

Chapter III (p. 169)

Letter To Asa Gray, September 17, 1861

D. Appleton & Company. New York, New York, USA. 1887

**Davies, Paul Charles William** 1946–  
British-born physicist, writer, and broadcaster

I belong to the group of scientists who do not subscribe to a conventional religion but nevertheless deny that the universe is a purposeless accident.... [T]he physical

universe is put together with an ingenuity so astonishing that I cannot accept it merely as a brute fact. There must... be a deeper level of explanation.

*The Mind of God: The Scientific Basis for a Rational World*

Preface (p. 16)

Simon & Schuster. New York, New York, USA. 1992

**Dembski, William A.** 1960–  
American mathematician and philosopher

Scientists rightly resist invoking the supernatural in scientific explanations for fear of committing a god-of-the-gaps fallacy (the fallacy of using God as a stop-gap for ignorance). Yet without some restriction on the use of chance, scientists are in danger of committing a logically equivalent fallacy – one we may call the “chance-of-the-gaps fallacy.” Chance, like God, can become a stop-gap for ignorance.

*The Chance of the Gaps*

Paper presented at conference, Boulder, Colorado. Fall 2001

What has kept design outside the scientific mainstream these last 130 years is the absence of precise methods for distinguishing intelligently caused objects from unintelligently caused ones. For design to be a fruitful scientific theory, scientists have to be sure they can reliably determine whether something is designed.... This fear of falsely attributing something to design only to have it overturned later has prevented design from entering science proper....

*Mere Creation: Science, Faith and Intelligent Design*

Introduction (p. 16)

InterVarsity Press. Downers Grove, Illinois, USA. 1998

**Kelvin, Lord William Thomson** 1824–1907  
Scottish engineer, mathematician, and physicist

...overpoweringly strong proofs of intelligent and benevolent design lie all round us, and if ever perplexities, whether metaphysical or scientific, turn us away from them for a time, they come back upon us with irresistible force, showing to us through nature the influence of a free will, and teaching us that all living beings depend on one ever-acting Creator and Ruler.

*Popular Lectures and Addresses* (Volume 2)

Presidential Address to the British Association, Edinburgh, 1871 (p. 205)

Macmillan & Company Ltd. London, England. 1894

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

You all know the argument from design: everything in the world is made just so that we can manage to live in the world, and if the world was ever so little different, we could not manage to live in it.

*Why I Am Not a Christian: And Other Essays on Religion and Related Subjects*

Why I Am Not a Christian (p. 9)

Watts. London, England. 1927

## INTERACTION

**Hugo, Victor** 1802–85  
French author, lyric poet, and dramatist

Nothing, in fact, is small, and anyone who is affected by the profound penetration of nature is aware of this fact. Although no absolute satisfaction is granted to philosophy, and though it can no more circumscribe the cause than limit the effect, the contemplator falls into unfathomable ecstasy when he watches all the decomposition of forces which result in unity. Everything labors for everything.

*Les Misérables*

Volume 4, Book III, Chapter 3 (p. 67)  
The Heritage Press. New York, New York, USA. 1938

Algebra is applied to the clouds, the irradiation of the planet benefits the rose, and no thinker would dare to say that the perfume of the hawthorn is useless to the constellation.

*Les Misérables*

Volume 4, Book III, Chapter 3 (p. 67)  
The Heritage Press. New York, New York, USA. 1938

## INTERDEPENDENCE

**Muir, John** 1838–1914  
American naturalist

To the dwellers of the plain, dependent on irrigation, the Big Tree, leaving all its higher uses out of the count, is a tree of life, a never failing spring, sending living water to the lowlands all through the hot, rainless summer.

*Our National Parks*

Chapter IX (p. 329)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

Plants, animals and stars are all kept in place, bridled along appointed way, with one another, and through the midst of one another killing and being killed, eating and being eaten, in harmonious proportions and quantities.

*Steep Trails*

Chapter I (p. 13)  
Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

...consumption of one another... is a kind of culture varying with the degree of directness with which it is carried out, but we should be careful not to ascribe to such culture any improving qualities upon those on whom it is brought to bear.

*Steep Trails*

Chapter I (p. 13)  
Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

## INTERN

**Stone, John**  
No biographical data available

The old man asked, "Are you an Intern?" Hearing the young doctor's tired, "Yes," the old man followed with another question: "Do you know what it takes to be a good Intern? It takes the heart of a lion, the eye of an eagle, and the hand of a woman."

In D. Abse (ed.)

*My Medical School* (p. 196)  
Robson Books. London, England. 1978

## INTERNIST

**Findley, Thomas**  
Physician

An internist has been defined as a man who is totally unable to answer either yes or no to any question.... If there is such a thing as a typical internist, he is a sedentary individual, curious, skeptical, reflective. He is accustomed to look at the patient as a unit rather than as a collection of separate organs and, if he had the fundamental scientific training he should have had, he is eager to distinguish between a fact and someone's opinion.

The Obligations of an Internist to a General Surgeon

*Surgery*, Volume 16, 1944

Accustomed to legerdemain and quick results, [the surgeon] is apt to regard the diagnosis and treatment of a headache, for example, as a trivial matter, forgetting that the internist may require hours of probing before discovering that what the patient needs is not a new pair of glasses but a different mother-in-law.

The Obligations of an Internist to a General Surgeon

*Surgery*, Volume 16, 1944

## INTERPRET

**Burroughs, John** 1837–1921  
American naturalist and essayist

It is not in the act of seeing things or apprehending facts that we differ so much from one another, as in the act of interpreting what we see or apprehend.

*Under The Apple Tree*

Literature and Science (p. 176)  
Houghton Mifflin Co. Boston, Massachusetts, USA. 1916

**Gray, George W.**  
Freelance science writer

One of the imperative tasks of our day is to interpret the purposes, methods, and results of science in such wise that this greatest adventure of the human spirit may be "understood of the people." Science needs to be made use of, but understanding of it must precede complete utilization. It needs to be made use of, not only in those practical ways which lighten burdens, relieve pains, cure diseases, and increase the comforts

and conveniences of civilized life, but more – it needs to be made use of also in those higher outcomes of the new knowledge: the freeing of the individual from fear and superstition, the widening of intellectual horizons, the strengthening of the ties of mutual interest which alleviate man's inhumanity to man.

*The Advancing Front of Science*

Prologue (p. 5)

McGraw-Hill Book Co., Inc. New York, New York, USA. 1937

## INTERPRETATION

**Leakey, Mary** 1913–96

English archaeologist

There is so much we do not know, and the more we do know, the more we realize that early interpretations were completely wrong. It is good mental exercise, but people get so hot and nasty about it, which I think is ridiculous.

Marguerite Holloway

*Scientific American*, October, 1994

**Shah, Idries** 1924–96

Persian author and teacher in the Sufi tradition

...for every person there is an interpretation.

*Thinkers of the East*

Reading (p. 105)

Jonathan Cape. London, England. 1971

## INTERSTELLAR MESSAGE

### Baron Munchausen (Fictional character)

I immediately perceived the true descent of this people, which does not appear of terrestrial origin, but descended from some of the inhabitants of the moon, because the principal language spoken there, and in the centre of Africa, is very nearly the same. Their alphabet and method of writing are pretty much the same, and show the extreme antiquity of this people, and their exalted origin. I here give you a specimen of their writing...

*The Surprising Adventures of Baron Munchausen*

Chapter XXV (p. 178)

Thomas Y. Crowell Company, Publishers. New York, New York, USA.

1902

**Thomas, Lewis** 1913–93

American physician and biologist

Perhaps the safest thing to do at the outset, if technology permits, is to send music...I would vote for Bach, all of Bach, streamed out into space, over and over again. We would be bragging, of course, but it is surely excusable for us to put the best possible face on at the beginning of such an acquaintance.

*The Lives of a Cell: Notes of a Biology Watcher*

Ceti (p. 45)

The Viking Press. New York, New York, USA. 1974

## INTIMIDATION

**Shaw, George Bernard** 1856–1950

Irish playwright

It's always the way with the inartistic professions: when they're beaten in argument they fall back on intimidation. I never knew a lawyer yet who didn't threaten to put me in prison sooner or later. I never knew a parson who didn't threaten me with damnation. And now you threaten me with death. With all your tall talk you've only one real trump in your hand, and that Intimidation.

*The Doctor's Dilemma*

Act III (p. 153)

Penguin Books. Baltimore, Maryland, USA. 1954

## INTRODUCTION

**Wiese, W. L.**

No biographical data available

**Smith, Melvin William**

No biographical data available

**Glennon, B. M.**

No biographical data available

After having written introductory remarks for 9.2 elements, we must confess that this becomes a rather cumbersome exercise in style. Since we expect that this introduction will share the fate of most introductions (namely be ignored) and since there is nothing new to say on this ion (for scientific content see F I) we might as well give the few readers of this introduction some good advice:

If there is no other data source,

Use the Coulomb approximation, of course. The results should certainly be fine

For any moderately or highly excited line.

*Atomic Transition Probabilities* (p. 117)

US Dept. of Commerce, National Bureau of Standards. Washington,

D.C. 1966

## INTUITION

**Bruner, Jerome Seymour** 1915–

American psychologist

Intuition implies the act of grasping the meaning or significance or structure of a problem without explicit reliance on the analytical apparatus of one's craft. It is the intuitive mode that yields hypotheses quickly, that produces interesting combinations of ideas before their worth is known. It precedes proof: indeed, it is what the techniques of analysis and proof are designed to test and check. It is founded on a kind of combinatorial playfulness that is only possible when the consequences of error are not overpowering or sinful. Above all, it is a form of

activity that depends upon confidence in the worthwhile-ness of the process of mathematical activity rather than upon the importance of right answers at all times.

On Learning Mathematics

*Mathematics Teacher*, Volume 53, December, 1960 (p. 613)

### Dahlke, Paul

Established the first German Buddhist monastery

As all vegetable growth demands an impulsion, a provocation, so also does that mental growth which science names "intuition." One does not arrive at an intuition by the paths of induction-deduction; one grows into it.

Translated by the Bhikkhau Silacara

*Buddhism & Science*

Chapter 6 (p. 83)

Macmillan & Co Ltd. London, England. 1913

### Dantzig, George Bernard 1914–2005

American mathematician

I had no experience at the time with problems in higher dimensions, and I didn't trust my geometrical intuition. For example, my intuition told me that the procedure would require too many steps wandering from one adjacent vertex to the next. In practice, it takes few steps. In brief, one's intuition in higher dimensional space is not worth a damn!

In D. Albers, G. Alexanderson and C. Reid

*More Mathematical People: Contemporary Conversations* (p. 77)

Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

### Einstein, Albert 1879–1955

German-born physicist

To these elementary laws there leads no logical path, but only intuition, supported by being sympathetically in touch with experience.

In Gerald Holton

*Thematic Origins of Scientific Thought: Kepler to Einstein*

Chapter 10 (p. 357)

Harvard University Press. Cambridge, Massachusetts, USA. 1973

...there is no logical way to the discovery of these elemental laws. There is only the way of intuition, which is helped by a feeling for the order lying behind the appearance...

In Max Planck

*Where Is Science Going?*

Prologue, (p. 10)

W.W. Norton & Company, Inc. New York, New York, USA. 1932

### Huxley, Aldous 1894–1963

English writer and critic

...experience is not a matter of having actually swum the Hellespont, or danced with the dervishes, or slept in a doss-house. It is a matter of sensibility an intuition, of seeing and hearing the significant things, of paying attention at the right moments, of understanding and coordinating. Experience is not what happens to a man; it is

what a man does with what happens to him.

*Texts and Pretexts: An Anthology with Commentaries*

Introduction (p. 5)

Greenwood Press, Publishers. Westport, Connecticut, USA. 1933

### Klee, Paul 1879–1940

Swiss painter

When intuition joins exact research, the progress of understanding will be accelerated astoundingly.

In Rolf Huisgen

*The Adventure Playground of Mechanisms and Novel Reactions*

*Marginalia on Art and Science* (p. 211)

American Chemical Society. Washington, D.C. 1994

### Poincaré, Jules Henri 1854–1912

French mathematician and theoretical astronomer

Intuition... does not give us certainty.

Translated by George Bruce Halsted

*The Value of Science*

Part I, Chapter I (p. 18)

The Science Press. New York, New York, USA. 1907

...logic and intuition have each their necessary role. Each is, indispensable. Logic, which alone can give certainty, is the instrument of demonstration; intuition is the instrument of invention.

Translated by George Bruce Halsted

*The Value of Science*

Part I, Chapter I (p. 23)

The Science Press. New York, New York, USA. 1907

The chief end of mathematical instruction is to develop certain powers of the mind, and among these the intuition is not the least precious. By it the mathematical world comes in contact with the real world, and even if pure mathematics could do without it, it would always be necessary to turn to it to bridge the gulf between symbol and reality. The practitioner will always need it, and for one mathematician there are a hundred practitioners. However, for the mathematician himself the power is necessary, for while we demonstrate by logic, we create by intuition; and we have more to do than to criticize others' theorems, we must invent new ones, this art, intuition teaches us.

In James Byrnie Shaw

Henri Poincare as An Investigator

*Popular Science Monthly*, March, 1913 (p. 222)

### von Humboldt, Alexander 1769–1859

German naturalist and explorer

That which for a long time remains merely an object of vague intuition, by degrees acquires the certainty of positive truth; and man, as an immortal poet has said, in our own tongue – Amid ceaseless change seeks the unchanging pole.

*Cosmos* (Volume I)

Introduction (p. 16)

Henry G. Bohn. London, England. 1849

**INTUITIVE**

**Pascal, Blaise** 1623–62  
French mathematician and physicist

All mathematicians would...be intuitive if they had clear sight, for they do not reason incorrectly from principles known to them; and intuitive minds would be mathematical if they could turn their eyes to the principles of mathematics to which they are unused.

*Thoughts*

Section I (p. 7)

P.F. Collier & Son. New York, New York, USA. 1910

**INVALID**

**Tracy, Susan Edith** 1864–1926  
American nurse

Whoever succeeds in making an invalid happy and in maintaining this same state of happiness has gone a long way towards making him well. The secretory system has subtle connecting lines with his mental attitude, a temptingly arranged tray, a fine aroma, the sight of delicious fruit produce instant stimulation of digestive fluids; deeper breathing results from a sight of real grandeur, it is easy to take deep inspirations as we look out over a wide stretch of sea or up to towering mountains. May we not justly feel that wounds heal quicker where a tranquil mind exists, that the complex organism recognizes the atmosphere which dominates and settles down into comfort as naturally as a cat curls up before a fire on the

Some Profitable Occupations for Invalids

*The American Journal of Nursing* Volume 8

December, 1907 (pp. 172–173)

**Yourcenar, Marguerite** 1903–87  
French writer

Nothing seemed simpler: a man has the right to decide how long he may usefully live...sickness disgusts us with death, and we wish to get well, which is a way of wishing to live. But weakness and suffering, with manifold bodily woes, soon discourage the invalid from trying to regain ground: he tires of those respites which are but snares, of that faltering strength, those ardors cut short, and that perpetual lying in wait for the next attack.

*Memoirs of Hadrian*

Patientia (pp. 278, 279)

Farrar, Straus & Company. New York, New York, USA. 1963

**INVARIANCE**

**Wigner, Eugene Paul** 1902–95  
Hungarian-born American physicist

It is now natural for us to try to derive the laws of nature and to test their validity by means of the laws of invari-

ance, rather than to derive the laws of invariance from what we believe to be the laws of nature.

*Symmetries and Reflections*

Chapter 1 (p. 5)

Ox Bow Press. Woodbridge, Connecticut, USA. 1979

**INVARIANTS**

**Sylvester, James Joseph** 1814–97  
English mathematician

As all roads are said to lead to Rome, so I find, in my own case at least, that all algebraic inquiries sooner or later end at the Capitol of Modern Algebra over whose shining portal is inscribed “Theory of Invariants.”

*The Collected Mathematical Papers of James Joseph Sylvester* (Volume 2)

An Inquiry into Newton’s Rule for the Discovery of Imaginary Roots

(p. 380, fn 1)

University Press. Cambridge, England. 1904–1912

The theory [of invariants] I am about to expound, or whose birth I am about to announce, stands to this in the relation not of a younger sister, but of a brother, who, though of later birth, on the principle that the masculine is more worthy than the feminine, or at all events, according to the regulations of the Salic law, is entitled to take precedence over his elder sister, and exercise supreme sway over their united realms.

*The Collected Mathematical Papers of James Joseph Sylvester* (Volume 4)

On the Method of Recipients (p. 281)

Cambridge University Press. Cambridge, England. 1908

**INVENT**

**Marquis, Don** 1878–1937  
American newspaperman, poet, and playwright

Science has always been too dignified to invent a good back-scratcher.

In Edward Anthony

*O Rare Don Marquis* (p. 354)

Doubleday & Co., Inc. Garden City, New York, USA. 1962

**Slossin, Edwin Emery** 1865–1919  
Chemist and author

...in the course of time man often finds that he can make something new which is better than anything in nature or naturally produced. The savage discovers. The barbarian improves. The civilized man invents. The first finds. The second fashions. The third fabricates.

*Creative Chemistry*

Chapter I (p. 4)

The Century Co. New York, New York, USA. 1921

**INVENTION**

**Bacon, Sir Francis** 1561–1626  
English lawyer, statesman, and essayist

The human mind is often so awkward and ill-regulated in the career of invention that is at first diffident, and then despises itself. For it appears at first incredible that any such discovery should be made, and when it has been made, it appears incredible that it should so long have escaped men's research. All which affords good reason for the hope that a vast mass of inventions yet remains, which may be deduced not only from the investigation of new modes of operation, but also from transferring, comparing and applying those already known, by the methods of what we have termed literate experience.

In *Great Books of the Western World* (Volume 30)

*Novum Organum*

First Book, Aphorism 110 (p. 129)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Brecht, Bertolt** 1898–1956

German writer

The more we can squeeze out of nature by inventions and discoveries and improved organization of labour, the more uncertain our existence seems to be. It's not we who lord it over things, it seems, but things which lord it over us.

*The Messingkauf Dialogues*

The Second Night, the Philosopher's Speech About Our Period (p. 42)

Methuen. London, England. 1965

**Butler, Samuel** 1835–1902

British writer

All the inventions that the world contains,  
Were not by reason first found out, nor brains;  
But pass for theirs who had the luck to light Upon them  
by mistake or oversight.

English theologian and scientist

From Natural Philosophy have flowed all those great inventions by means of which mankind in general is able to subsist with more ease, and in greater numbers upon the face of the earth. Hence arise the capital advantages of men above brutes, and of civilization above barbarity. *The History and Present State of Electricity: With Original Experiments* (Volume 1) (p. XXI)  
Printed for C. Bathurst & T. Lowndes. London, England. 1775

**Sprat, Thomas** 1635–1713  
English historian

Invention is an Heroic thing and plac'd above the reach of a low, and vulgar Genius. It requires an active, a bold, a nimble, a restless mind: a thousand difficulties must be contemn'd, with which a mean heart would be broken: many attempts must be made to no purpose: much Treasure must be scattered without any return: much violence and vigor of thought must attend it: some irregularities and excesses must be granted it that would hardly be pardon'd by the severe Rules of Prudence. *The History of the Royal Society of London for the Improving of Natural Knowledge*  
Section XXXI (p. 392)  
Printed by T.R. London, England. 1667

**Swift, Jonathan** 1667–1745  
Irish-born English writer

The greatest Inventions were produced in the Times of Ignorance; as the Use of the Compass, Gunpowder, and Printing; and by the dullest Nations, as the Germans. *Satires and Personal Writings*  
Thoughts on Various Subjects (p. 407)  
Oxford University Press, Inc. New York, New York, USA. 1965

**Sylvester, James Joseph** 1814–97  
English mathematician

As the prerogative of Natural Science is to cultivate a taste for observation, so that of Mathematics is, almost from the starting point, to stimulate the faculty of invention. *A Plea for the Mathematician*  
*Nature*, Volume 1, Thursday, January 6, 1870 (p. 261 fn)

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

Our inventions are wont to be pretty toys, which distract out attention from serious things. They are but improved means to an unimproved end. *The Writings of Henry David Thoreau* (Volume 2)  
*Walden*  
Chapter I (pp. 57–58)  
Houghton Mifflin & Co. Boston, Massachusetts, USA. 1893

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910  
American author and humorist

A man invents a thing which could revolutionize the arts, produce mountains of money, and bless the earth, and who will bother with it or show any interest in it? – and so you are just as poor as you were before. But you invent some worthless thing to amuse yourself with, and would throw it away if let alone, and all of a sudden the whole world makes a snatch for it and out crops a fortune. *The American Claimant*  
Chapter XXIV (p. 164)  
Chatto & Windus. London, England. 1892

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

The greatest invention of the nineteenth century was the invention of the method of invention. *Science and the Modern World*  
Chapter VI (p. 96)  
The Macmillan Company. New York, New York, USA. 1929

...inventive genius requires pleasurable mental activity as a condition for its vigorous exercise. “Necessity is the mother of invention” is a silly proverb. “Necessity is the mother of futile dodges” is much nearer to the truth. The basis of the growth of modern invention is science, and science is almost wholly the outgrowth of pleasurable intellectual curiosity. *The Aims of Education and Other Essays*  
Chapter IV (p. 69)  
The Macmillan Company. New York, New York, USA. 1959

## INVENTOR

**Burdon-Sanderson, J.**  
No biographical data available

...the human inventor is but a blunderer as compared with the unknown Master of the animal creation. *Annual Report of the Board of Regents of the Smithsonian Institution, 1896*  
Ludwig and Modern Physiology (p. 368)  
Government Printing Office. Washington, D.C. 1898

**Emerson, Ralph Waldo** 1803–82  
American lecturer, poet, and essayist

Man is a shrewd inventor, and is ever taking the hint of a new machine from his own structure, adapting some secret of his own anatomy in iron, wood, and leather, to some required function in the work of the world. *Ralph Waldo Emerson: Essays and Lectures*  
*English Traits*  
Wealth (p. 857)  
The Library of America. New York, New York, USA. 1983

**Fessenden, Reginald Aubrey** 1866–1932  
Canadian physicist and inventor

The inventor and the research man are confused because they both examine results of physical or chemical operations. The research man does something and does not

care (exactly) what it is that happens, he measures whatever it is. The inventor wants something to happen, but does not care how it happens or what it is that happens if it is not what he wants.

In Frederick Seitz

*The Cosmic Inventor: Reginald Aubrey Fessenden*

Aphorisms (p. 54)

American Philosophical Society. Philadelphia, Pennsylvania, USA. 1999

**Milton, John** 1608–74

English poet

Th' invention all admir'd, and each how hee  
To be th' inventor miss'd; so easy it seem'd,  
Once found, which yet unfound most would have  
thought  
Impossible...

In *Great Books of the Western World* (Volume 32)

*Paradise Lost*

Book VI, 1 (pp. 498–501)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Rabinow, Jacob** 1910–99

Inventor

This is the penalty of being an inventor. If you invent something when everybody wants it, it is too late; it's been thought of by everybody else. If you invent too early, nobody wants it because it is too early. If you invent very late, after the need has passed, then it is just a mental exercise. I assure you that it is very hard to invent just at the right time.

In Daniel V. DeSimone

*Education for Innovation*

The Process of Invention (p. 75)

Pergamon Press. New York, New York, USA. 1968

The job of the inventors is to provide the lead for a lagging system.

In Daniel V. DeSimone

The Process of Invention (p. 75)

Pergamon Press. New York, New York, USA. 1968

**Redfield, Casper L.**

No biographical data available

A man's capacity as an inventor depends upon his faculty of making guesses which have some semblance of possibility...

In Joseph Rossman

*Industrial Creativity: The Psychology of the Inventor*

Chapter XI (p. 111)

University Books. New Hyde Park, New York, USA. 1964

**Rossman, Joseph**

Inventor

Inventors are unconscious social changers.

*Industrial Creativity: The Psychology of the Inventor*

Chapter I (p. 6)

University Books. New Hyde Park, New York, USA. 1964

The inventor experiences a need which he wishes to satisfy.

*Industrial Creativity: The Psychology of the Inventor*

Chapter VI (p. 81)

University Books. New Hyde Park, New York, USA. 1964

**Swann, William Francis Gray** 1884–1962

Anglo-American physicist

The inventor walks in the territory which the man of science has mapped out into regions of assured fertility, dubious fertility, and almost certain sterility. The man of science, and indeed the engineer, is inclined to conserve their efforts by walking in the rather limited realm which, on the basis of the laws with which they operate, represents regions of assured fertility. However, the inventor walks with courage everywhere. He sees a pasture which he thinks has promise. The physicist would explain to him that his reasons for expecting something from that region are invalid, and in 90 per cent of the cases they are, but the inventor walks nevertheless.

In Lenox R. Lohr

**Muir, Matthew Moncrieff Pattison** 1848–1931  
English chemist

Accurate and systematised investigation has brought to light the infinite complexity of nature, the fineness of the dovetailing of every event into many others, the never ending response of all things to changes in the conditions that encompass them, the universal orderliness of natural occurrences, the immutability of sequences, and the absolute interdependence of cause and effect ...

*The Alchemical Essence and the Chemical Element* (p. 45)  
Longmans, Green & Co. La Salle, Indiana, USA. 1894

**von Humboldt, Alexander** 1769–1859  
German naturalist and explorer

In the sphere of natural investigation, as in poetry and painting, the delineation of that which appeals most strongly to the imagination, derives its collective interest from the vivid truthfulness with which the individual features are portrayed.

Translated by E.C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)  
Introduction (p. 34)  
D. Appleton & Co. New York, New York, USA. 1850

...in the sphere of natural investigation, as in poetry and painting, the delineation of that which appeals most strongly to the imagination, derives its collective interest from the vivid truthfulness with which the individual features are portrayed.

*Cosmos* (Volume 1)

Introduction (p. 13)  
Henry G. Bohn. London, England. 1849

**Young, Thomas** 1773–1829  
English polymath

Those who possess the genuine spirit of scientific investigation, and who have tasted the pure satisfaction arising from an advancement in intellectual acquirements, are contented to proceed in their researches, without inquiring at every step what they gain by their newly discovered,, lights, and to what practical purposes they are applicable: they receive a sufficient gratification from the enlargement of their views of the constitution of the universe, and experience, in the immediate pursuit of knowledge, that pleasure which others wish to obtain more circuitously by its means. And it is one of the principal advantages of a liberal education, that it creates a susceptibility of an enjoyment so elegant and so rational.

*A Course of Lectures on Natural Philosophy and the Mechanical Arts*  
Lecture I (p. 2)  
Printed for Taylor & Walton. London, England. 1845

## INVESTIGATOR

### Author undetermined

A scientific investigator is like the first traveler in some unsettled land: he may note the existence of valuable minerals, he may recognise the fertility of the land, but he cannot stop to raise the ore, to clear the forests, and to  
*The Encouragement of Scientific Research IV*  
*The Journal of Science, and Annals of Astronomy, Biology, Geology,*  
Volume VI, October, 1876 (pp. 477–478)

### Caldwell, G. C.

No biographical data available

Great investigators like great poets, like men great in anything, are born not made; born, may we not truly say, out of the spirit of the country and the period in which their great works are done.

*Annual Report of the Board of Regents of the Smithsonian Institution,*  
1893

*The American Chemist* (p. 252)  
Government Printing Office. Washington, D.C. 1894

### Carty, J. J.

No biographical data available

The investigator in pure science may be likened to the explorer who discovers new continents or islands or hitherto unknown territory. He is continually seeking to extend the boundaries of knowledge.

*The Relation of Pure Science to Industrial Research*  
*Science*, N.S. Volume 44, Number 1137, October 13, 1916 (p. 514)

### Eliot, Charles William

 1834–1926

American academic

The scientific investigator wins pleasure or satisfaction where most men and women would find only vexation and futile effort.

Address by President Charles W. Eliot  
*Science*, N.S. Volume 24, Number 601, July 6, 1906 (p. 15)

### Gies, William J.

 1872–1956

US biochemist and dentist

...the prime virtues of honesty, courage and common sense...seem to be among the most important characteristics of successful investigators.

Research in Dentistry  
*Journal of Dental Research*, Volume 3, Number 3, September, 1921 (p. xciv)

### Gore, George

 1826–1909

English electrochemist

If a man cannot acquire the knowledge of others without losing his independence of thought, it is evident he cannot become an original investigator.

*The Art of Scientific Discovery*  
Part III, Chapter XXX (p. 297)  
Longmans, Green & Co. London, England. 1878

An investigator cannot, to any great degree, pick and choose discoveries, but must, to a large extent, be content to accept those he can find.

*The Art of Scientific Discovery*  
Part IV, Chapter XXXVIII (p. 372)  
Longmans, Green & Co. London, England. 1878

**James, William** 1842–1910  
American philosopher and psychologist

The most useful investigator, because the most sensitive observer, is always he whose eager interest in one side of the question is balanced by an equally keen nervousness lest he become deceived. Science has organized this nervousness into a regular technique, her so-called method of verification; and she has fallen so deeply in love with the method that one may even say she has ceased to care for truth by itself at all. It is only truth as technically verified that interests her. The truth of truths might come in merely affirmative form, and she would decline to touch it.

*The Will to Believe and Other Essays in Popular Philosophy*  
The Will to Believe (p. 21)  
Longmans, Green & Co. London, England. 1912

**Jevons, William Stanley** 1835–82  
English economist and logician

...the successful investigator must combine diverse qualities; he must have clear notions of the result he expects and confidence in the truth of his theories, and yet he must have that candour and flexibility of mind which enable him to accept unfavourable results and abandon mistaken views.

*The Principles of Science: A Treatise on Logic and Scientific Method*  
Book IV, Chapter XVIII (p. 404)  
Macmillan & Co Ltd. London, England. 1887

**Mach, Ernst** 1838–1916  
Austrian physicist and philosopher

The highest philosophy of the scientific investigator is precisely this toleration of an incomplete conception of the world and the preference for it rather than an apparently perfect, but inadequate conception.

*The Science of Mechanics: A Critical and Historical Account of Its Development*  
Chapter IV (p. 464)  
The Open Court Publishing Co. Chicago, Illinois, USA. 1919

**Shapley, Harlow** 1885–1972  
American astronomer

...man's role as an investigator and would-be interpreter of the universe is surpassingly fascinating, whether or not it is cosmically significant.

*Starlight*

Part III, Chapter XV (p. 143)  
George H. Doran Company. New York, New York, USA 1926

## ION

**Hendrick, Ellwood**  
No biographical data available

I used to think theology  
Was rather rough on doubt,  
But chemistry with ions, beats  
Theology all out.  
So you'd better get your Bible down before you're well begun,  
For you're going to need the exercise the art of faith, my son.

The Present Status of Ionization Theory  
*Journal of Chemical Education*, Volume 2, Number 5, May, 1925 (p. 376)

**Kunin, Robert**  
No biographical data available

**Myers, Robert J.**  
No biographical data available

A recent interpretation of the miracle supposedly performed by Moses as he led the Israelites safely through the wilderness suggests the possibility of the application of ion exchange. In order to make the "bitter" water at Matah potable during their journey, Moses found a tree "which when he had cast it into the waters, the waters were made sweet." It has been suggested that the oxidized cellulose of the tree entered into an exchange reaction with the bitter electrolytes of the water, rendering the water potable.

*Ion Exchange Resins*  
Chapter 1 (p. 1)  
John Wiley & Sons, Inc. New York, New York, USA. 1950

## IRRATIONALITY

**Laudan, Larry** 1945–  
American philosopher of science

If rationality consists in believing only what we can reasonably presume to be true, and if we define "truth" in its classical nonpragmatic sense, then science is (and will forever remain) irrational.

*Progress and Its Problems: Toward a Theory of Scientific Growth*  
Chapter Four (p. 125)  
University of California Press. Berkeley, California, USA. 1977

...when a thinker does what it is rational to do, we need inquire no further into the causes of his actions; whereas, when he does what is in fact irrational – even if he believes it to be rational – we require some further explanation.

*Progress and Its Problems: Toward a Theory of Scientific Growth*  
Chapter Six (pp. 188–189)  
University of California Press. Berkeley, California, USA. 1977

**Mannheim, Karl** 1893–1947  
Austria-Hungarian sociologist

Anyone who wants to drag in the irrational where the lucidity and acuity of reason still must rule by right merely shows that he is afraid to face the mystery at its legitimate place.

*Essays on the Sociology of Knowledge*

Chapter V (p. 229)

Routledge & Kegan Paul Ltd. London, England. 1952

**Wilde, Oscar** 1854–1900  
Irish wit, poet, and dramatist

CHILTERN: You think science cannot grapple with the problem of women?

CHEVELEY: Science can never grapple with the irrational. That is why it has no future before it, in this world.

CHILTERN: And women represent the irrational.

*Complete Writings of Oscar Wilde*

*An Ideal Husband*

Act I

The Nottingham Society. New York, New York, USA. 1907

## IRREFRAGABILITY

**van Orman Quine, Willard** 1908–2000  
American philosopher

Irrefragability, thy name is mathematics.

*The Ways of Paradox, and Other Essays*

Chapter 3 (p. 22)

Harvard University Press. Cambridge, Massachusetts, USA. 1976

## IRRELEVANT

**Bell, E. T. (Eric Temple)** 1883–1960  
Scottish-American mathematician and educator

There is no denying that some with an incapacity for intelligent observation have covered reams of paper with mathematical profundities irrelevant to anything on earth, although possibly of inestimable value in the Kingdom of Heaven.

*The Handmaiden of the Sciences*

Chapter I (p. 2)

Williams & Wilkins Co. Baltimore, Maryland, USA. 1937

American mathematician

**Starbird, Michael**  
American mathematician

We have isolated the essential and identified the irrelevant.

*Coincidences, Chaos, and All That Math Jazz*

Part II, Chapter 6 (p. 119)

W.W. Norton & Co. New York, New York, USA. 2005

**Cornford, Francis M.** 1874–1943  
English academic

No academic person is ever voted into the chair until he has reached an age at which he has forgotten the meaning of the word ‘irrelevant.’

*Microcosmographia Academica*

The Conduct of Business

Bowes & Bowes, Publishers. Cambridge, England. 1908

## IRREVERSIBILITY

**Planck, Max** 1858–1947  
German physicist

A process which in no manner can be completely reversed I called a “natural” one. The term for it in universal use today is: “Irreversible.”

*Scientific Autobiography and Other Papers*

A Scientific Autobiography (p. 17)

Philosophical Library. New York, New York, USA. 1949

## ISLAND, OCEAN

**Gould, Stephen Jay** 1941–2002  
American paleontologist and evolutionary biologist

Oceanic islands are our great natural laboratories of evolution, the source of so many ideas about organic change and of so many classical examples from finches on the Galápagos to Hies on Hawaii. The combination of geographic isolation and difficult access, with frequent absence of predators or competitors, provides explosive possibilities for creatures who manage to reach these bounteous havens.

*Eight Little Piggies: Reflections in Natural History*

Chapter I (p. 25)

W.W. Norton & Co. New York, New York, USA. 1993

## ISOMERISM

**van’t Hoff, Jacobus Henricus** 1852–1911  
Dutch physical and organic chemist

I desire to introduce some remarks which may lead to discussion and hope to avail myself of the discussion to give my ideas more definiteness and breadth. Since the starting point for the following communication is found in the chemistry of the carbon compounds, I shall for the present do nothing more than state the points having reference to it. It appears more and more that the present constitutional formulas are incapable of explaining certain cases of isomerism; the reason for this is perhaps the fact that we need a more definite statement about the actual positions of the atoms.

Formulas at Present Used in Chemistry and a Note on the Relation of Optical Activity and the Chemical Constitution of Organic Compounds  
*Archives néerlandaises des sciences exactes et naturelles*, Volume 9, September, 1874

**ISOSTASY****Chamberlain, Rollin T.**

American geologist

The keynote to isostasy is a working toward equilibrium. Isostasy is not a process which upsets equilibrium, but one which restores equilibrium.

*Journal of the Washington Academy of Sciences*, Volume 20, 1932 (p. 455)

**ISOTOPE****Soddy, Frederick** 1877–1956

English chemist

The general resemblance in character and relative period of the succeeding members of the various disintegration series [referring to isotopes] on the one hand, and their distinct individual peculiarities on the other, are most fascinating and mysterious. We seem to have here an extension of similar relations expressed for elementary matter generally by the periodic law, and there is no doubt that any explanation of the one will have an application to the other.

*Nobel Lectures, Chemistry 1901–1921*

The Origins of the Conception of Isotopes

Elsevier Publishing Co. Amsterdam, The Netherlands. 1966

**IT****Carroll, Lewis (Charles Dodgson)** 1832–98

English writer and mathematician

...the patriotic archbishop of Canterbury, found it advisable –

“Found *what?*” said the Duck.

“Found *it*,” the Mouse replied, rather crossly: “of course you know what ‘it’ means.”

“I know what ‘it’ means well enough, when *I* find a thing,” said the Duck: “it’s generally a frog, or a worm.

The question is, what did the archbishop find?”

*The Complete Works of Lewis Carroll*

*Alice’s Adventures in Wonderland*

Chapter III (p. 36)

The Modern Library. New York, New York, USA. 1936

**Weingarten, Violet**

Writer

...report for a routine checkup feeling like a hypochondriac because obviously you’re in perfect health, and the doctor mumbles something about “it” having to come out, no rush, next week will be plenty of time.

*Intimations of Mortality* (p. 3)

Alfred A. Knopf. New York, New York, USA. 1978

## J

### JARGON

#### **Rickett, Harold William**

No biographical data available

The sciences have their technical jargons – indispensable to the researcher and to some extent even to the amateur. Since the former must teach the latter, it has sometimes been thought that an understanding of nature can be gained only by learning words.

*The Green Earth: An Invitation to Botany*

Preface (p. 2)

Jacques Cattell Press. Lancaster, Pennsylvania, USA. 1943

#### **Tyndall, John** 1820–93

Irish-born English physicist

If you speak to your fellowman, you are not entitled to use jargon. Bad experiments are jargon addressed to Nature, and just as much to be deprecated.

*Fragments of Science for Unscientific People*

Chapter XIII (p. 363)

D. Appleton & Co. New York, New York, USA. 1875

### JEALOUSY

#### **Jung, Carl G.** 1875–1961

Swiss psychiatrist and founder of analytical psychology

The kernel of all jealousy is lack of love.

*Memories, Dreams, Reflections*

Chapter IV (p. 137)

Vintage Books. New York, New York, USA. 1963

### JOURNAL

#### **Stuart, Copans A.**

No biographical data available

Why, dear colleagues, must our findings

Now be put in sterile bindings?

Once physicians wrote for recreation.

Our great teachers through the ages,

Fracastro, and other sages,

Found writing could be fun, like fornication...

*Perspectives in Biology and Medicine*, Winter 1973 (p. 232)

### JOURNEY

#### **Abbey, Edward** 1927–89

American environmentalist and nature writer

That's the best thing about walking, the journey itself. It doesn't matter much whether you get where you're

going or not. You'll get there anyway. Every good hike brings you eventually back home. Right where you started.

*The Journey Home: Some Words in Defense of the American West*

Chapter 18 (p. 205)

E.P. Dutton. New York, New York, USA. 1977

The longest journey begins with a single step, not with the turn of an ignition key.

*The Journey Home: Some Words in Defense of the American West*

Chapter 18 (p. 205)

E.P. Dutton. New York, New York, USA. 1977

#### **Muir, John** 1838–1914

American naturalist

One bird, a thrush, embroidered the silence with cheery notes, making the solitude familiar and sweet, while the solemn monotone of the stream sifting through the woods seemed like the very voice of God, humanized, terrestrialized, end entering one's heart as to a home prepared for it. Go where we will, all the world over, we seem to have been there before.

*All the World Over: Notes from Alaska*

First page

Sierra Club Books. San Francisco, California, USA. 1996

### JUDGMENT

#### **Drinker, Henry** 1850–1937

...in regard to all civil engineering, the first requisite is good judgment, the second requisite is good judgment, and the final requisite is GOOD JUDGMENT.

In Henry Drinker

*Tunneling, Explosive Compounds, and Rock Drilling* (p. 1005)

John Wiley & Sons, Inc. New York, New York, USA. 1878

#### **McCormick, Leander Hamilton** 1859–1934

American author, inventor, and scientist

Reason leads to conclusions, which may be logical or illogical, sound or unsound, according as they are based on valid or invalid premises. The selection of premises depends upon judgment, and consequently, premises with sound reasoners must be valid and sound.

*Characterology*

Chapter XXVI (p. 594)

Rand McNally & Co. Chicago, Illinois, USA. 1920

#### **Morehouse, George Wilkinson** 1840–?

American naturalist

It cannot be denied that unbiased, intelligent judgment is extremely difficult of attainment. Our hereditary tendencies and early impressions are strong.

*The Wilderness of Worlds*

Preface (p. 3)

Peter Eckler, Publisher. New York, New York, USA. 1898

**Pascal, Blaise** 1623–62  
French mathematician and physicist

...it is to judgment that perception belongs, as science belongs to intellect. Intuition is the part of judgment, mathematics of intellect.

*Thoughts*

Section I (p. 10)

P.F. Collier & Son. New York, New York, USA. 1910

**Sagan, Carl** 1934–96  
American astronomer and author

It is of interest to note that while some dolphins are reported to have learned English – up to 50 words used in correct context – no human being has been reported to have learned dolphinese. Prejudice is making a judgment before you have looked at the facts. Postjudice is making a judgment afterward. Prejudice is terrible, in the sense that you commit injustices and you make serious mistakes. Postjudice is not terrible. You can't be perfect of course; you may make mistakes also. But it is permissible to make a judgment after you have examined the evidence. In some circles it is even encouraged.

*The Burden of Skepticism*

*Skeptical Enquirer*, Volume 12, Fall, 1987 (p. 46)

**Stewart, Dugald** 1753–1828  
Scottish philosopher

Whoever limits his exertions to the gratification of others, whether by personal exhibition, as in the case of the actor and of the mimic, or by those kinds of literary composition which are calculated for no end but to please or to entertain, renders himself, in some measure, dependent on their caprices and humors. The diversity among men, in their judgments concerning the objects of taste, is incomparatively greater than in their speculative conclusions; and

accordingly, a mathematician will publish to the world a geometrical demonstration, or a philosopher, a process of abstract reasoning, with a confidence very different from what a poet would feel, in communicating one of his productions even to an intimate friend.

*Elements of the Philosophy of the Human Mind*

Part Third, Chapter I, Section III (p. 202)

Carey, Lea & Carey. Philadelphia, Pennsylvania, USA. 1827

## JUNGLE

**Beebe, William** 1877–1962  
American ornithologist

It is possible to enter a jungle and become acutely aware of poison fang and rending claw – much as a pacifist considers the high adventure of righteous war. But it is infinitely more wonderful and altogether satisfying to slip quietly and receptively into the life of the jungle, to accept all things as worthy and reasonable; to sense the beauty, the joy, the majestic serenity of this age-old fraternity of nature, into whose sanctuary man's entrance is unnoticed, his absence unregretted.

*Jungle Peace*

Chapter I (p. 4)

William Holt & Co. New York, New York, USA. 1918

## JUSTIFICATION

**Kelvin, Lord William Thomson** 1824–1907  
Scottish engineer, mathematician, and physicist

These somewhat pedantic words are justifiable, because “infinitesimal satellite” is nine syllables to express three or four sentences; that is our justification.

*Popular Lectures and Addresses (Volume 1)*

Lecture, Institution of Civil Engineers, May 3, 1883 (p. 100)

Macmillan & Company Ltd. London, England. 1894

## K

### KEY

**Mayr, Ernst** 1904–2005  
German-born American biologist

The use of keys in identification is old indeed. Much of Aristotle's classifications of animals was presented in the form of simple dichotomous alternatives.

*Principles of Systematic Zoology*  
Chapter 11B.3 (p. 276)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1969

**Quicke, D. L.**

No biographical data available

The purpose of a key is to enable identifications, and it should not be a vehicle for expressing systematic opinions. First, good systematic characters are very often poor or even unusable key characters, and second, classifications are all too frequently subject to modification.

*Principles and Techniques of Contemporary Taxonomy* (p. 99)  
Blackie Academic & Professional. London, England. 1993

### KINGDOM

**Whittaker, R. H.**

No biographical data available

There are those who consider questions in science which have no unequivocal experimentally determined answer scarcely worth discussing. Such feeling, along with conservatism, may have been responsible for the long and almost unchallenged dominance of the system of two kingdoms – plants and animals – in the broad classification of organisms. The unchallenged position of these kingdoms has ended, however; alternative systems are being widely considered.

New Concepts of Kingdoms of Organisms

*Science*, Volume 163, Number 3863, 10 January, 1969 (p. 150)

### KLING BOTTLE

**Winsor, Frederick**

No biographical data available

Three jolly sailors from Blaydon-on-Tyne  
They went to sea in a bottle by Klein.  
Since the sea was entirely inside the hull  
The scenery seen was exceedingly dull.

*The Space Child's Mother Goose*

Simon & Schuster. New York, New York, USA. 1958

## KNOT

**Carroll, Lewis (Charles Dodgson)** 1832–98

English writer & mathematician

“A knot!” said Alice, always ready to make herself useful, and looking anxiously about her. “Oh, do let me help undo it!”

*The Complete Works of Lewis Carroll*

*Alice's Adventures in Wonderland*

Chapter III (p. 41)

The Modern Library. New York, New York, USA. 1936

### KNOT THEORY

**Birman, Joan** 1927–

American mathematician

Knot theory for a long time was a little backwater of topology.

In Barry Cipra and Paul Zorn

*From Knot to Unknot* (p. 9)

American Mathematical Society. Providence, Rhode Island, USA. 1993

### KNOW

**Bagehot, Walter** 1826–77

English lawyer, statesman, and essayist

If you please, sir, tell me what you do not know...

*Literary Studies: With a Prefatory Memoir*

Essay I (p. 39)

Longmans, Green & Co. London, England. 1902

**Chargaff, Erwin** 1905–2002

Austrian biochemist

In the end, we know nearly everything about nearly nothing.

*Voices in the Labyrinth: Nature, Man and Science* (p. 26)

The Seabury Press. New York, New York, USA. 1977

**Ouspensky, Peter D.** 1878–1947

Russian philosopher

The most difficult thing is to know what we do know, and what we do not know.

Translated by Nicholas Bessaraboff and Claude Bragdon

*Tertium Organum*

Chapter 1 (p. 1)

Manas Press. New York, New York, USA. 1920

**Pearson, Karl** 1857–1936

English mathematician

To know requires exertion, and it is intellectually easiest to shirk effort altogether by accepting phrases which cloak the unknown in the undefinable.

*The Grammar of Science* (2nd edition)  
 Preface to the Second Edition (p. viii)  
 Adam & Charles Black. London, England. 1900

## KNOWING

**Adams, Douglas** 1952–2001  
 English author, comic radio dramatist, and musician

“Protect me from knowing what I don’t need to know. Protect me from even knowing that I decided not to know about the things that I decided not to know about. Amen.” That’s it. It’s what you pray silently inside yourself anyway, so you may as well have it out in the open.

*The Ultimate Hitchhiker’s Guide to the Galaxy*  
*Mostly Harmless*  
 Chapter 9 (p. 704)  
 The Ballantine Book Company. New York, New York, USA. 2002

**Eddington, Sir Arthur Stanley** 1882–1944  
 English astronomer, physicist, and mathematician

It is the inexorable law of our acquaintance with the external world that that which is presented for knowing becomes transformed in the process of knowing.

*New Pathways in Science*  
 Chapter I (p. 7)  
 At the University Press. Cambridge, England. 1935

**Nietzsche, Friedrich Wilhelm** 1844–1900  
 German philosopher

Once upon a time, in some out of the way corner of that universe which is dispersed into numberless twinkling solar systems, there was a star upon which clever beasts invented knowing. That was the most arrogant and mendacious minute of “world history,” but nevertheless, it was only a minute. After nature had drawn a few breaths, the star cooled and congealed, and the clever beasts had to die.

*The Portable Nietzsche*  
 On Truth and Lie in an Extra-Moral Sense (p. 42)  
 Penguin Books. New York, New York, USA. 1976

**Williamson, Marianne** 1952–  
 American spiritual activist

There’s a collective knowing that a dimension of reality exists beyond the material plane, and that sense of knowing is causing a mystical resurgence on the planet today. It’s not just children who are looking for a missing piece. It is a very mature outlook to question the nature of our reality.

*Everyday Grace: Having Hope, Finding Forgiveness, and Making Miracles*  
 Introduction: Reclaiming Our Magic  
 Penguin Putnam Inc. New York, New York, USA. 2002

## KNOWLEDGE

**Adams, George** 1750–95  
 English instrument maker

...mankind...for more than a thousand years, looked up to Aristotle as an oracle in philosophy. His authority was the test of truth; it was a philosophy, says Lord Bacon, fruitful of words, but barren or works; admirably contrived to draw a veil over ignorance, and put a stop to the progress of knowledge, by filling men with a conceit that they knew everything: a philosophy, that instead of accounting for any of the phenomena of nature, contrived to give learned names to their unknown causes, and fed men with hulks of barbarous terms, instead of the fruits of real knowledge.

*Lectures on Natural and Experimental Philosophy* (Volume 1)  
 Lecture II (pp. 30–31)  
 Printed by R. Hindmarsh. London, England. 1794

The principles of all knowledge are founded in mind; the mind of man, either animated by desire or pressed by necessity, puts in action it’s various energies, and unfolds the seeds of knowledge.

*Lectures on Natural and Experimental Philosophy* (Volume 3)  
 Chapter XXXIII (p. 369)  
 Printed by R. Hindmarsh. London, England. 1794

**Addison, Joseph** 1672–1719  
 English essayist, poet, and statesman

The utmost extent of man’s knowledge is to know that he knows nothing.

*Interesting Anecdotes, Memoirs, Allegories, Essays, and Poetical Fragments*  
 Volume 3 & 4, Essay on Pride (p. 230)  
 Printed for T. N. Longman. London, England. 1796

**Alighieri, Dante** 1265–1321  
 Italian poet and writer

...to have heard without retaining does not make knowledge.

In *Great Books of the Western World* (Volume 21)  
*The Divine Comedy of Dante Alighieri*  
 Paradise, Canto V, l. 41–42  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Allen, Ethan** 1738–89  
 Hero of the American Revolution

The desire of knowledge has engaged the attention of the wise and curious among mankind in all ages which has been productive of extending the arts and sciences far and wide in the several quarters of the globe, and excited the contemplative to explore nature’s laws in a gradual series of improvement, until philosophy, astronomy, geography,

and history, with many other branches of science, have arrived to a great degree of perfection.

*Reason, the Only Oracle of Man, Or, A Compendious System of Natural Religion*

Chapter I (p. 5)

G.W. & A.J. Matsell. New York, New York, USA. 1836

### **Anthony, H. D.**

No biographical data available

No branch of knowledge can be isolated, even though sometimes methods of instruction may give that impression.

*Science and Its Background*

Chapter I (p. 1)

Macmillan & Co Ltd. London, England. 1948

### **Arbuthnot, John** 1667–1735

Scottish mathematician and physician

Mathematical knowledge adds vigor to the mind, frees it from prejudice, credulity, and superstition.

*An Essay on the Usefulness of Mathematical Learning*

Printed at the Theater. Oxford, England. 1701

### **Aristotle** 384 BCE–322

Greek philosopher

Yet it does not appear to be true in all cases that correlatives come into existence simultaneously. The object of knowledge would appear to exist before knowledge itself for it is usually the case that we acquire knowledge of objects already existing; it may be difficult, if not impossible, to find a branch of knowledge the beginning of the existence of which was contemporaneous with that of its object.

In *Great Books of the Western World* (Volume 8)

*Categories*

Chapter 7, 7b [20]

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 19

All men by nature desire to know.

In *Great Books of the Western World* (Volume 8)

*Metaphysics*

Book I, Chapter 1 (p. 499)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...knowledge of any kind is a thing to be honored and prized...

In *Great Books of the Western World* (Volume 8)

*On the Soul*

Book 1, Chapter 1, 402a

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...knowledge is the object of our enquiry and men do not think they know a thing till they have grasped the "why" of it.

### **Armstrong, Baron William George** 1810–1900

No biographical data available

...however high we climb in the pursuit of knowledge we shall still see heights above us, and the more we extend our view, the more conscious we shall be of the immensity which lies beyond.

*The Industrial Resources of the District of the Three Northern Rivers,*

*The Tyne, Wear, and Tees*

The Inaugural Address (p. xlii)

Longman, Green, Longman, Roberts & Green. London, England. 1864

### **Asimov, Isaac** 1920–92

American author and biochemist

I believe that scientific knowledge has fractal properties; that no matter how much we learn, whatever is left, however small it may seem, is just as infinitely complex as the whole was to start with. That, I think, is the secret of the Universe.

Essay 400 – A Way of Thinking

*The Magazine of Fantasy and Science Fiction*, December, 1994

The greatest weapons in the conquest of knowledge are an understanding mind and the inexorable curiosity that drives it on.

*Asimov's New Guide to Science*

Chapter 2 (p. 56)

Basic Books, Inc. New York, New York, USA. 1984

...increasing knowledge leads not to conquest only, but to utter defeat as well, for one learns not only of new potentialities, but also of new limitations.

*Of Time and Space and Other Things*

Introduction (p. iv)

Doubleday & Co., Inc. Garden City, New York, USA. 1965

### **Audubon, John James** 1785–1851

West Indian-born American ornithologist and artist

...he who is desirous of instruction ought not to disdain listening to anyone, who has knowledge to communicate, however humble may be his lot, or however limited his talents...

*Ornithological Biography* (Volume 1)

The Cougar (p. 205)

Adam Black. Edinburgh, Scotland. 1831

### **Author undetermined**

Right now I'm having amnesia and déjà vu at the same time. I think I've forgotten this before.

Source undetermined

...every flower in the garden of knowledge may be plucked. The solid earth, the yielding waters, the ambient air, the numerous varieties of organic life, the phenomena of the subtle elements, and the stupendous fabric of the celestial system, may all be searched into, and the symmetry of their structure displayed.

Thoughts on Education  
*The Analyst*, Volume VIII, Number XXIII, 1838 (p. 119)

**Bach, Richard** 1936–  
 American writer

Isn't it strange how much we know if only we ask ourselves instead of somebody else.

*Illusions: The Adventures of a Reluctant Messiah*  
 Chapter 8 (p. 82)  
 Delacorte Press. New York, New York, USA. 1977

**Bacon, Sir Francis** 1561–1626  
 English lawyer, statesman, and essayist

...that knowledge hath in it somewhat of the serpent, and therefore where it entereth into a man it makes him swell...

In *Great Books of the Western World* (Volume 30)  
*Advancement of Learning*  
 First Book, Chapter I, Section 2 (p. 2)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

To conclude therefore, let no man upon a weak conceit of sobriety or an ill-applied moderation think or maintain that a man can search too far, or be too well studied in the book of God's words, or in the book of God's work, divinity, or philosophy; but rather let men endeavor an endless progress or proficiency in both.

In *Great Books of the Western World* (Volume 30)  
*Advancement of Learning*  
 First Book, Chapter I, Section 3 (p. 4)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...men have entered into a desire of learning and knowledge, sometimes upon a natural curiosity and inquisitive appetite; sometimes to entertain their minds with variety and delight; sometimes for ornament and reputation; and sometimes to enable them to victory of wit and contradiction; and most times for lucre and profession; and seldom sincerely to give a true account of their gift of reason, to the benefit and use of men: if there were sought in knowledge a couch whereupon to rest a searching and restless spirit; or a terrace for a wandering and variable mind to walk up and down with a fair prospect; or a tower of state for a proud mind to raise itself upon; or a fort or commanding ground for strife and contention; or a shop for profit or sale ...

In William Aldis Wright  
*The Advancement of Learning* (3rd edition) (p. 42)  
 At The Clarendon Press. Oxford, England. 1885

...the commandment of knowledge is yet higher than the commandment over the will; for it is > a commandment over the reason, belief, and understanding of man, which is the highest part of the mind, and giveth law to the will itself: for there is no power on earth which setteth up a throne or chair of state in the spirits and souls of men, and: in their cogitations, imaginations, opinions, and beliefs, but knowledge and learning.

*The Works of Francis Bacon, Lord Chancellor of England* (Volume 1)  
*Advancement of Learning*  
 Book I (p. 182)  
 A. Hart. Philadelphia, Pennsylvania, USA 1850

The lame...in the path outstrip the swift who wander from it, and it is clear that the very skill and swiftness of him who runs not in the right direction must increase his aberration.

In *Great Books of the Western World* (Volume 30)  
*Novum Organum*  
 First Book, Aphorism 61 (p. 113)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

If any man makes it his delight and care – not so much to cling to and use past discoveries, as to penetrate to what is beyond them – not to conquer Nature by talk, but by toil – in short, not to have elegant and plausible theories, but to gain sure and demonstrable knowledge; let such men (if it shall seem to them right), as true children of knowledge, unite themselves with us.

In J.W. Gregory  
*Annual Report of the Board of Regents of the Smithsonian Institution, 1907*  
 Geology of the Inner Earth – Igneous Ores (p. 312)  
 Government Printing Office. Washington, D.C. 1908

But the greatest error of all is, mistaking the ultimate end of knowledge; for some men covet knowledge out of a natural curiosity and inquisitive temper; some to entertain the mind with variety and delight; some for ornament and reputation; some for victory and contention; many for lucre and a livelihood; and but few for employing the Divine gift of reason to the use and benefit of mankind. Thus some appear to seek in knowledge a couch for a searching spirit; others, a walk for a wandering mind; others, a tower of state; others, a fort, or commanding ground; and others, a shop for profit or sale, instead of a storehouse for the glory of the Creator and the endowment of human life.

*The Works of Francis Bacon*  
 Preliminaries (p. lix)  
 Printed for James M. Jones  
 London, England. 1815

**Barfield, Owen** 1898–1997  
 British philosopher, critic, and anthroposophist

There is no “science of sciences”; no unity of knowledge. There is only an accelerating increase in that pigeon-holed knowledge by individuals of more and more about less and less, which, if persisted in indefinitely, can only lead mankind to a sort of “idiocy” (in the original sense of the word) – a state of affairs, in which fewer and fewer representations will be collective, and more and more will be private, with the result that there will in the end be no means of communication between one intelligence and another.

*Saving the Appearances: A Study in Idolatry*  
 Chapter XXI (p. 145)  
 Faber & Faber. London, England. 1957

**Barker, George Frederick** 1835–1910  
American scientist

It is through the medium of our senses alone that we derive our knowledge of the phenomena of external nature.

*Physics: Advanced Course* (4th edition)  
Chapter I (p. 3)  
Henry Holt & Co. New York, New York, USA. 1893

**Barrie, Sir James M.** 1860–1937  
Scottish journalist, writer, and dramatist

ERNEST. ...I'm not young enough to know everything.  
*The Admirable Crichton*  
Act I (p. 16)  
Hodder & Stoughton. London, England. 1961

**Barry, Frederick** 1876–1943  
Historian of science

It is clear, for instance, that we classify business management, pugilism and medicine together as science because, though as occupations they are only incidentally related, they are all characterized by the practical, methodical, and so far as is humanly possible, the rational utilization of knowledge for the attainment of definite goals.

*The Scientific Habit of Thought: An Informal Discussion of the Source and Character of Dependable Knowledge*  
Chapter I (p. 5)  
Columbia University Press. New York, New York, USA. 1927

**Bartram, John** 1699–1777  
American botanist

I hope by these practical observations [of cross fertilization] to open a gate into a very large field of experimental knowledge, which, if judiciously improved, may be a considerable addition to the beauty of the florist's garden.

*Memorials of John Bartram and Humphry Marshall*  
Letter from John Bartram to Colonel W. Byrd in 1739 (p. 315)  
Lindsay & Blakiston. Philadelphia, Pennsylvania, USA. 1849

**Becker, Carl Lotus** 1873–1945  
American historian

There is nothing new in heaven or earth not dreamt of in our laboratories; and we should be amazed indeed if tomorrow and tomorrow and tomorrow failed to offer us something new to challenge our capacity for readjustment.

*The Heavenly City of the Eighteenth Century Philosophers*  
Chapter I (p. 23)  
Yale University Press. New Haven, Connecticut, USA. 1932

If we would discover the little backstairs door that for any age serves as the secret entranceway to knowledge, we will do well to look for certain unobtrusive words with uncertain meanings that are permitted to slip off the tongue or the pen without fear and without research; words which, having from constant repetition lost their

metaphorical significance, are unconsciously mistaken for objective realities.

*The Heavenly City of the Eighteenth-Century Philosophers* (2nd edition)  
Chapter II (p. 47)  
Yale University Press. New Haven, Connecticut, USA. 2003

**Bernard, Claude** 1813–78  
French physiologist

The fact that knowledge endlessly recedes as the investigator is about to grasp it is what constitutes at the same time his torment and happiness.

In René Dubos  
*The Dreams of Reason*  
Chapter 6 (p. 138)  
Columbia University Press. New York, New York, USA. 1961

One of the greatest obstacles to the free and universal movement of human knowledge is the tendency that leads different kinds of knowledge to separate into systems.

Translated by Henry Copley Greene  
*An Introduction to the Study of Experimental Medicine*  
Part Three, Chapter III, Section iv (p. 223)  
Henry Schuman, Inc. New York, New York, USA. 1927

**Billings, Josh (Henry Wheeler Shaw)** 1818–85  
American writer and humorist

It is better to kno less, than to kno so mutch, that aint so.

A Remark (Beginning of book)  
G.W. Carleton & Company, Publishers. New York, New York, USA. 1879

**Bloch, Marc** 1905–83  
American physicist and educator

Each science, taken by itself, represents but a fragment of the universal march toward knowledge.

*The Historian's Craft*  
Introduction (p. 15)  
Manchester University Press. Manchester, England. 2004

**Bloor, David**

No biographical data available

All knowledge, the sociologist could say, is conjectural and theoretical. Nothing is absolute and final. Therefore all knowledge is relative to the local situation of the thinkers who produce it: the ideas and conjectures that they are capable of producing; the problems that bother them; the interplay of assumptions and criticism in their milieu; their purposes and aims; the experiences they have and the standards and meanings they apply.

*Knowledge and Social Imagery*  
Chapter Eight (p. 159)  
The University of Chicago Press. Chicago, Illinois, USA. 1991

Like many features of a landscape, knowledge looks different from different angles. Approach it from an unexpected route, glimpse it from an unusual vantage point, and at first it may not be recognizable.

*Knowledge and Social Imagery*  
Chapter Eight (p. 160)  
The University of Chicago Press. Chicago, Illinois, USA. 1991

**Bohr, Niels Henrik David** 1886–1962  
Danish physicist

...all knowledge presents itself within a conceptual framework adapted to account for previous experience and that any such frame may prove too narrow to comprehend new experiences.

*Atomic Physics and Human Knowledge*  
Unity of Knowledge (p. 67)  
John Wiley & Sons. New York, New York, USA. 1958

In our time, when increasing knowledge and ability more than ever link the fate of all peoples, international collaboration in science has far-reaching tasks which may be furthered not least by an awareness of the general conditions for human knowledge.

*Atomic Physics and Human Knowledge*  
Atoms and Human Knowledge (p. 93)  
John Wiley & Sons, Inc. New York, New York, USA. 1958

**Borel, Félix Edouard Justin Emile** 1871–1956  
French mathematician

Incomplete knowledge must be considered as perfectly normal in probability theory; we might even say that, if we knew all the circumstances of a phenomenon, there would be no place for probability, and we would know the outcome with certainty.

Translated by Douglas Scott  
*Probability and Certainty*  
Chapter 1 (p. 13)  
Walker & Company. New York, New York, USA. 1963

**Boulding, Kenneth E.** 1910–93  
English economist and social scientist

The carbon atom, for instance, knows how to join with four hydrogen atoms or with two oxygen atoms. It also mysteriously enough knows how to join with one oxygen atom to form carbon monoxide. It is little more than a figure of speech, however, to regard this ability as knowledge.

*The Image*  
Chapter 3 (p. 32)  
The University of Michigan Press. Ann Arbor, Michigan, USA. 1956

GALILEO:...Knowledge will become a passion and research an ecstasy.

Translated by John Willett  
*Life of Galileo*  
Scene 9 (p. 77)  
Arcade Publishing. New York, New York, USA. 1994

**Bronowski, Jacob** 1908–74  
Polish-born British mathematician and polymath

Knowledge makes prodigious journeys, and what seems to us a leap in time often turns out to be a long progression from place to place, from one city to another.

*The Ascent of Man*  
The Music of the Spheres (p. 162)  
Little, Brown & Co. Boston, Massachusetts, USA. 1973

There is no absolute knowledge. And those who lay claim to it, whether they are scientists or dogmatists, open the door to tragedy.

*The Ascent of Man*  
Chapter 11 (p. 353)  
Little, Brown & Company. Boston, Massachusetts, USA. 1973

Knowledge is not a loose-leaf notebook of facts.

*The Ascent of Man*  
The Long Childhood (p. 436)  
Little, Brown & Co. Boston, Massachusetts, USA. 1973

**Brown, John**

No biographical data available

You come to the chest of knowledge. It is shut, it is bolted, but...you have the key; put it in steadily and home. But what is the key? It is the love of truth; neither more or less; no other key opens it; no false one, however cunning, can pick that lock; no assault of hammer, however stout, can force it open; but with its own key, a little child may open it; often does open it.

Quoted in Richard Arman Gregory  
*Discovery, Or, The Spirit and Service of Science*  
Chapter II (p. 28)  
Macmillan & Co Ltd. London, England. 1916

**Bryant, William Cullen** 1794–1878  
American poet

Knowledge is the material with which Genius builds her fabrics. The greater its abundance, the more power is required to dispose it into order and beauty, but the more vast and magnificent will be the structure.

*Prose Writings* (Volume 1)  
Lectures on Poetry (p. 32)  
D. Appleton & Co. New York, New York, USA. 1884

**Bulfinch, Thomas** 1796–1867  
American writer

If no other knowledge deserves to be called useful but that which helps to enlarge our possessions or to raise our station in society, then mythology has no claim to the appellation. But if that which tends to make us happier and better can be called useful then we claim that epithet for our subject.

*The Age of Fable* (p. 1)  
The Modern Library. New York, New York, USA. 1934

**Bube, Richard H.**  
American materials scientist

Science has become a particular kind of knowledge obtained in a particular way: knowledge of the natural world obtained by sense interaction with that world.

*The Encounter Between Christianity and Science*  
Chapter 1 (p. 17)  
W.B. Eerdmans Publishing Company. Grand Rapids, Iowa, USA. 1968

**Bullock, Theodore Holmes** 1915–2005  
Comparative neuroscientist

The road is long and branching, distractions and obstacles are many, the goal is hazy and far away, pilgrims speak in many tongues. But we can look back and see progress, or look up and see some exciting peaks.

In John C. Fentress (ed.)  
*Simpler Networks and Behavior*  
In Search of Principles in Neural Integration  
Sinauer Associates, Inc. Sunderland, Massachusetts, USA. 1976

**Bush, Vannevar** 1890–1974  
American electrical engineer and physicist

The process by which the boundaries of knowledge are advanced, and the structure of organised science is built, is a complex process indeed. It corresponds fairly well with the exploitation of a difficult quarry for its building materials and the fitting of these into an edifice; but there are very significant differences. First, the material itself is exceedingly varied, hidden and overlaid with relatively worthless rubble.... Second, the whole effort is highly unorganised. There are no direct orders from architect or quarrymaster. Individuals and small bands proceed about their business unimpeded and uncontrolled, digging where they will, working over their material, and tucking it into place in the edifice.

*Endless Horizons*  
Chapter 17 (p. 179)  
Public Affairs Press. Washington, D.C. 1946

**Butler, Samuel** 1612–80  
English novelist, essayist, and critic

It is far safer to know too little than too much. People will condemn the one, though they will resent being called upon to exert themselves to follow the other.

*The Way of All Flesh*  
Chapter V (p. 18)  
Rinehart & Company, Inc. New York, New York, USA. 1955

**Butlerov, Aleksandr Mikhailovich** 1828–86  
Russian chemist

As speech is composed of sets of words and as images are composed of aggregates of shades, so from the mass of apprehended facts connected with one another there arises knowledge in its loftiest and finest sense.

Compiled by V.V. Vorontsov  
*Words of The Wise: A Book of Russian Quotations*  
Translated by Vic Schneiersson  
Progress Publishers. Moscow, Russia. 1979

**Byron, George Gordon, 6th Baron Byron** 1788–1824  
English Romantic poet and satirist

That knowledge is not happiness, and science  
But an exchange of ignorance for that  
Which is another kind of ignorance.

*The Complete Poetical Works of Byron*

*Manfred*  
Act II, Scene V, l. 431–433  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1933

**Cajori, Florian** 1859–1930  
Swiss-born American educator and mathematician

The contemplation of the various steps by which mankind has come into possession of the vast stock of mathematical knowledge can hardly fail to interest the mathematician. He takes pride in the fact that his science, more than any other, is an exact science, and that hardly anything ever done in mathematics has proved to be useless.

*A History of Mathematics*  
Introduction (p. 1)  
Macmillan & Company Ltd. London, England. 1919

...by slow degrees, the minds of men were cut adrift from their old scholastic moorings and sent forth on the wide sea of scientific inquiry, to discover new islands and continents of truth.

*A History of Mathematics*  
Modern Europe (p. 139)  
Macmillan & Co Ltd. London, England. 1894

**Cannon, Walter Bradford** 1871–1945  
American neurologist and physiologist

The boundary of knowledge, however, is pushed forward with painful slowness, and always, as an advance is achieved, further territory to be explored is revealed.

*The Way of an Investigator: A Scientist's Experiences in Medical Research*  
Chapter II (p. 28)  
W.W. Norton & Company. New York, New York, USA. 1945

**Carnap, Rudolf** 1891–1970  
American philosopher

When we say that scientific knowledge is unlimited, we mean "there is no question whose answer is in principle unattainable by science."

In Mary Midgley  
Can Science Save Its Soul?  
*New Scientist*, Volume 135, Number 1832, 1 August, 1992 (p. 24)

**Carroll, J. E.**  
No biographical data available

Collecting fresh fruits becomes even harder as the tree of knowledge grows higher and wider. However, there are certain branches that provide surer footholds to the new growths, and teachers must search these out.

*Rate Equations in Semiconductor Electronics* (p. vi)  
Cambridge University Press. Cambridge, England. 1985

**Carus, Paul** 1852–1919  
American philosopher

Every success of scientific inquiry, every progress of research in the several fields of knowledge, every new

invention based upon methodical experiment is a refutation of agnosticism – the philosophy of nescience – in so far as these several advances corroborate the reliability of science.

*Philosophy as a Science: A Synopsis of Writings of Dr. Paul Carus*  
Introduction (p. 1)  
The Open Court Publishing Co. Chicago, Illinois, USA. 1909

### Charlie Chan (Fictional character)

Knowledge only gained through curiosity.  
*Charlie Chan at the Wax Museum*  
Film (1940)

Small investigation sometimes bring large amount of knowledge.

*The Golden Eye*  
Film (1948)

Part II, In the Light of Darkness (p. 109)  
Rockefeller University Press. New York, New York, USA. 1978

**Clark, Eugenie** 1922–  
US marine biologist

Not many appreciate the ultimate power and potential usefulness of basic knowledge accumulated by obscure, unseen investigators who, in a lifetime of intensive study, may never see any practical use for their findings but who go on seeking answers to the unknown without thought of financial or practical gain.

*The Lady and the Sharks*  
Chapter 1 (p. 6)  
Harper & Row. New York, New York, USA. 1959

**Clarke, J. M.**  
No biographical data available

Knowledge is the only instrument of production that is not subject to diminishing returns.

Overhead Costs in Modern Industry  
*Journal of Political Economy*, October, 1927

**Clerke, Agnes Mary** 1842–1907  
Irish astronomer

...our knowledge will, we are easily persuaded, appear in turn the merest ignorance to those who come after us. Yet it is not to be despised, since by it we reach up groping fingers to touch the hem of the garment of the Most High.

*A Popular History of Astronomy During the Nineteenth Century*  
Part II, Chapter XIII (p. 442)  
A. & C. Black. London, England. 1908

**Cloos, Hans** 1885–1951  
German geologist

The well-marked path to knowledge is open to anyone willing to make the effort to follow it, though no one will ever quite reach its end.

*Conversation with the Earth*  
Prologue (p. 4)  
Routledge & Kegan Paul. London, England. 1954

**Coleridge, Mary** 1861–1907  
English poet

The fruits of the tree of Knowledge are various; he must be strong indeed who can digest all of them.

*Gathered Leaves*  
Mary Coleridge (pp. 8–9)  
Constable & Company. London, England. 1910

**Collingwood, Robin George** 1889–1943  
English historian and philosopher

Questioning is the cutting edge of knowledge; assertion is the dead weight behind the edge that gives it driving force.

*Speculum Mentis*  
Chapter III, Section 5 (p. 78)  
At The Clarendon Press. Oxford, England. 1946

**Collins, Wilkie** 1824–89  
English novelist

...what is scientific knowledge now may be scientific ignorance in some years more.

*Heart and Science*  
LIV (p. 285)  
Chatto & Windus. London, England. 1899

**Commoner, Barry** 1917–  
American biologist, ecologist, and educator

Nature is the same everywhere and what men everywhere have learned about nature, taken together, leads to knowledge far deeper than that which each man alone can learn.

*Science and Survival*  
Chapter 4 (p. 57)  
The Viking Press. New York, New York, USA. 1966

**Conant, James Bryant** 1893–1978  
American educator and scientist

The stumbling way in which even the ablest of the scientists in every generation have had to fight through thickets of erroneous observations, misleading generalizations, inadequate formulations, and unconscious prejudice is rarely appreciated by those who obtain their scientific knowledge from textbooks.

*Science and Common Sense*

Chapter Three (p. 44)  
Yale University Press. New Haven, Connecticut, USA. 1951

**Confucius** 551 BCE–479 BCE  
Chinese philosopher and reformer

When you know a thing, to hold that you know it; and when you do not know a thing, to allow that you do not know it; – this is knowledge.

In James Legge  
*The Chinese Classics* (Volume 1)  
*The Confucian Analects*, book 2:17  
At The Clarendon Press. Oxford, England. 1893–95

**Cooke, Josiah Parsons** 1827–94

Honor those who seek Knowledge for her own sake, and remember they are the great heroes of the world, who work in faith, and leave the result with God!

American educationalist and political philosopher

...knowledge is a plant of slow growth.  
*The Introductory Lecture of Thomas Cooper, Esq.*  
Introductory Lecture (p. 4)  
Printed by Archibald Loudon. Carlisle, Pennsylvania, USA. 1812

**Cowper, William** 1731–1800  
English poet

Knowledge and Wisdom, far from being one,  
Have oft-times no connexion. Knowledge dwells  
In heads replete with thoughts of other men;  
Wisdom in minds attentive to their own.  
Knowledge, a rude unprofitable mass,  
The mere materials with which wisdom builds...  
Knowledge is proud that he has learn'd so much;  
Wisdom is humble that he knows no more.

*The Poetical Works of William Cowper*  
The Task, Book VI, l. 88–93, 96, 97  
John W. Lovell Company. New York, New York, USA. No date

**Crookes, Sir William** 1832–1919  
English chemist and physicist

...working at the very confines of our knowledge, [some chemists] find themselves occasionally at least face to face with a barrier which has hitherto proved impassable, but which must be overthrown, surmounted, or turned, if chemical science is ever to develop into a definite, an organised unity. This barrier is nothing less than the chemical elements commonly so called, the bodies as yet undecomposed into anything simpler than themselves. There they extend before us, as stretched the wide Atlantic before the gaze of Columbus, mocking, taunting, and murmuring strange riddles, which no man yet has been able to solve.

*Report of the Fifty-sixth Meeting of the British Association for the Advancement of Science*  
Presidential Address (pp. 558–559)  
John Murray. London, England. 1887

**da Vinci, Leonardo** 1452–1519  
Italian High Renaissance painter and inventor

The acquisition of any knowledge whatever is always useful to the intellect, because it will be able to banish the useless things and retain those which are good. For nothing can be either loved or hated unless it is first known.

Translated by Edward MacCurdy  
*The Notebooks of Leonardo da Vinci* (Volume 1)  
Aphorisms (p. 88)  
George Braziller. New York, New York, USA. 1958

All our knowledge originates in opinion.  
In Edward MacCurdy  
*Leonardo da Vinci's Note-Books*  
Book I (p. 53)  
Duckworth & Company. London, England. 1906

The knowledge of past time and of the position of the earth is the adornment and the food of human minds.

Translated by Edward MacCurdy  
*Leonardo da Vinci's Note-books*  
Book I (p. 53)  
Duckworth & Co. London, England. 1906

**Darwin, Charles Robert** 1809–82  
English naturalist

The more one thinks, the more one feels the hopeless immensity of man's ignorance.

In Francis Darwin (ed.)  
*More Letters of Charles Darwin* (Volume 1)  
Letter 307, Darwin to Farrar, August 28, 1881 (p. 394)  
D. Appleton & Company. New York, New York, USA. 1903

**Daumal, René** 1908–44  
French surrealist writer

You cannot stay on the summit forever; you have to come down again. So why bother in the first place? Just this: What is above knows what is below, but what is below does not know what is above. In climbing, take careful note of the difficulties along your way; for as you go up, you can observe them. Coming down, you will no longer see them, but you will know they are there if you have observed them well. There is an art of finding one's direction in the lower regions by the memory of what one saw higher up. When one can no longer see, one can at least still know.

Translated by Roger Shattuck  
*Mount Analogue*  
Editor's Note (p. 110)  
Shambhala. Boston, Massachusetts, USA. 1986

**Davy, Sir Humphry** 1778–1829  
English chemist

The love of knowledge and of intellectual power is a faculty belonging to the human mind in every state of society; and it is one by which it is most justly characterized – one the most worthy of being cultivated and extended.

In Robert Siegfried and Robert H. Dott, Jr. (eds.)  
*Humphry Davy on Geology: The 1805 Lectures for the General Audience*

Introductory Lecture for the Courses of 1805 (p. 3)  
The University of Wisconsin Press. Madison, Wisconsin, USA. 1980

All human knowledge is necessarily imperfect; but the further it extends, the better are its effects.

In Robert Siegfried and Robert H. Dott, Jr. (eds.)  
*Humphry Davy on Geology: The 1805 Lectures for the General Audience*

Introductory Lecture for the Courses of 1805 (p. 3)  
The University of Wisconsin Press. Madison, Wisconsin, USA. 1980

Human beings have been created for happiness, and a principal means of obtaining it is by the exercise of the intellectual faculties, by an exertion of reason and imagination, by imitating nature and modifying her operations. And knowledge is no less necessary to supply the wants of the mind than food is to support the functions of the body.

*Fragmentary Remains, Literary and Scientific, of Sir Humphry Davy*  
Chapter III (p. 59)

John Churchill. London, England. 1858

Knowledge can only be acquired by the senses: nature has no archetype in the human imagination; her empire is given only to industry and action, guided and governed by experience.

In John Davy (ed.)  
*Memoirs of the Life of Sir Humphry Davy* (Volume 1)  
Chapter III (p. 216)

Longman, Rees, Orme, Brown, Green & Longman London, England. 1836

**de Morgan, Augustus** 1806–71

English mathematician and logician

Every kind of human knowledge has unanswerable questions at its end: and until the insoluble problems are revealed, we plume ourselves upon our progress.

*Transactions of the Cambridge Philosophical Society*

On Infinity: and on the Sign of Equality (p. 151)

At the University Press. Cambridge, England. 1871

A person of small knowledge is in danger of trying to make his little do the work of more; but a person without any is in more danger of making his no knowledge do the work of some.

*A Budget of Paradoxes* (Volume 1) (2nd edition)

Introductory (p. 4)

The Open Court Publishing Co. Chicago, Illinois, USA. 1915

**Dewar, Redcote**

No biographical data available

Man, however, and particularly a specialist, is terribly conceited in his opinions. He invariably forgets that he

but stands on a transitory pinnacle of knowledge. His horizon may truly be today unbroken, and his learning the apex of his century; but to-morrow and succeeding days other pinnacles shoot up and overshadow him until he is left as but a gargoyle in the depths of ignorance below.

*From Matter to Man: A New Theory of the Universe*

Chapter X (p. 127)

Chapman & Hall, Ltd. London, England. 1898

**Dewey, John** 1859–1952

American philosopher and educator

...if there is any knowledge which is of most worth it is knowledge of the ways by which anything is entitled to be called knowledge instead of being mere opinion or guess-work or dogma.

Science as Subject-Matter and as Method

*Science*, N.S. Volume 31, Number 787, January 28, 1910 (p. 125)

**Dickens, Charles** 1812–70

English novelist

But wot's that, you're a-doin' of? Pursuit of knowledge under difficulties, Sammy?

Chapter XXXIII (p. 387)

Dodd, Mead & Company. New York, New York, USA. 1944

**Dingle, Herbert** 1890–1978

English astrophysicist

No generation that is in the true line of advance can properly know what it is doing. It works in the dark, building better than it knows, by the blind understanding which directs its actions towards the final achievement. We can at least learn from our experience not to despise the work of those on whose shoulders we stand, as we hope for charitable judgment from those who will succeed us.

*Through Science to Philosophy*

Chapter XV (p. 354)

At The Clarendon Press. Oxford, England. 1937

**Dobzhansky, Theodosius** 1900–75

Russian-American scientist

The more we know, the better we realize that our knowledge is a little island in the midst of an ocean of ignorance.

In Robert M. Hutchins and Mortimer J. Adler

*The Great Ideas Today* 1974

*Advancement and Obsolescence in Science* (p. 61)

Encyclopaedia Britannica, Inc. Chicago, Illinois, USA. 1975

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

What can we know? What are we all? Poor silly half-brained things peering out at the infinite, with the aspirations of angels and the instincts of beasts.

*The Stark Munro Letters*

Letter V (p. 94)

D. Appleton & Company. New York, New York, USA. 1895

Some eighty thousand years are supposed to have existed between paleolithic and neolithic man. Yet in all that time he only learned to grind his flint stones instead of chipping them. But within our father's lives what changes have there not been? The railway and the telegraph, chloroform and applied electricity. Ten years now go further than a thousand then, not so much on account of our finer intellects as because the light we have shows us the way to more. Primeval man stumbled along with peering eyes, and slow, uncertain footsteps. Now we walk briskly towards our unknown goal.

*The Stark Munro Letters*

Letter XIV (p. 320)

D. Appleton & Company. New York, New York, USA. 1895

I consider that a man's brain originally is like a little empty attic, and you have to stock it with such furniture as you choose. A fool takes in all the lumber of every sort that he comes across, so that the knowledge which might be useful to him gets crowded out, or at best is jumbled up with a lot of other things, so that he has a difficulty in laying his hands upon it. Now the skilful workman is very careful indeed as to what he takes into his brain-attic. He will have nothing but the tools which may help him in doing his work, but of these he has a large assortment, and all in the most perfect order. It is a mistake to think that that little room has elastic walls and can distend to any extent. Depend upon it – there comes a time when for every addition of knowledge you forget something that you knew before. It is of the highest importance, therefore, not to have useless facts elbowing out the useful ones.

In William S. Baring-Gould (ed.)

*The Annotated Sherlock Holmes* (Volume 1)

*A Study in Scarlet*

Chapter 2 (p. 154)

Wings Books. New York, New York, USA. 1967

Is it not? Is it not? Breadth of view, my dear Mr. Mac, is one of the essentials of our profession. The interplay of ideas and the oblique uses of knowledge are often of extraordinary interest.

In William S. Baring-Gould (ed.)

*The Annotated Sherlock Holmes* (Volume 1)

*The Valley of Fear*

Part I, Chapter 7 (p. 512)

Wings Books. New York, New York, USA. 1967

A man should keep his little brain-attic stocked with all the furniture that he is likely to use, and the rest he can put away in the lumber-room of his library, where he can get it if he wants it.

*The Complete Sherlock Holmes*

*The Five Orange Pips* (p. 225)

Doubleday & Company, Inc. Garden City, New York, USA. 1930

### Dr. Carrington (Fictional character)

...knowledge is more important than life.... There is onle one excuse for existing – to think – to find out – to learn ...

*The Thing from Another World*

Film (1951)

### Drexler, K. Eric 1955–

American nanotechnology engineer and researcher, and futurist

People who confuse science with technology tend to become confused about limits...they imagine that new knowledge always means new know-how; some even imagine that knowing everything would let us do anything.

*Engines of Creation*

Chapter 10 (p. 148)

Anchor Press/Doubleday. Garden City, New York, USA. 1986

### Eddington, Sir Arthur Stanley 1882–1944

English astronomer, physicist, and mathematician

We have discovered that it is actually an aid in the search for knowledge to understand the nature of the knowledge we seek.

*The Philosophy of Physical Science*

Chapter I, Section II (p. 5)

The Macmillan Company. New York, New York, USA. 1939

...the road to a knowledge of the stars leads through the atom; and important knowledge of the atom has been reached through the stars.

*Stars and Atoms*

Lecture I (pp. 9–10)

Yale University Press. London, England. 1927

### Egler, Frank E. 1911–96

American botanist and ecologist

Knowledge is not wisdom; wisdom is knowledge when it is tempered by judgment.

*The Way of Science*

The Nature of Science (p. 1)

Hafner Publishing Company. New York, New York, USA. 1970

### Einstein, Albert 1879–1955

German-born physicist

Yet it is equally clear that knowledge of what is does not open the door directly to what should be.

*Out of My Later Years* (p. 22)

Thames & Hudson. London, England. 1950

In the light of finally obtained knowledge the deductions seem almost self-evident and can be understood with no great difficulty by any intelligent student. But the foreboding search in the dark, with its intense yearnings, its alternation from confidence to despondence and then the ultimate break-through to final clarity, can only be perceived by someone who has experienced it himself.

In Cornelius Lanczos

*Albert Einstein and the Cosmic World Order*

Chapter 5 (p. 85)

Interscience Publishers. New York, New York, USA. 1965

In every true searcher of Nature there is a kind of religious reverence; for he finds it impossible to imagine that he is the first to have thought out the exceedingly delicate threads that connect his perceptions. The aspect of knowledge which had not yet been laid bare gives the

investigator a feeling akin to that experienced by a child who seeks to grasp the masterly way in which elders manipulate things.

In Alexander Moszkowski  
*Conversations with Einstein*  
Chapter III (p. 46)  
Horizon Press. New York, New York, USA. 1970

It is my inner conviction that the development of science seeks in the main to satisfy the longing for pure knowledge.

In Alexander Moszkowski  
*Conversations with Einstein*  
Chapter VIII (p. 173)  
Horizon Press. New York, New York, USA. 1970

...knowledge cannot spring from experience alone but only from the comparison of the inventions of the intellect with observed fact.

Translated by Alan Harris  
*Essays in Science*

Intellect (p. 419)  
The Library of America. New York, New York, USA. 1983

**Everett, Edward** 1794–1865  
American statesman, educator, and orator

...the great object of all knowledge is to enlarge and purify the soul, to fill the mind with noble contemplations, to furnish a refined pleasure, and to lead our feeble reason from the works of nature up to its great Author and Sustainer.

*An Oration*  
The Uses of Astronomy, Albany, New York, 28 July 1856 (p. 36)  
Ross & Tousey. New York, New York, USA. 1856

**Faber, Harold**  
No biographical data available

New scientific knowledge is like wine in the wedding of Cana: it cannot be used up; the same idea can serve many users simultaneously; and as the number of customers increases, no one need be getting less of it because the others are getting more.

*The Book of Laws*  
The Laws of Economics, Leontief's Law (p. 57)  
Times Books. New York, New York, USA. 1979

**Faraday, Michael** 1791–1867  
English physicist and chemist

I cannot doubt but that he who, as a wise philosopher, has most power of penetrating the secrets of nature, and guessing by hypothesis at her mode of working, will also be most careful, for his own safe progress and that of others, to distinguish that knowledge which consists of assumption, by which I mean theory and hypothesis, from that which is the knowledge of facts and laws; never raising the former to the dignity or authority of the latter, nor confusing the latter more than is inevitable with the former.

*Experimental Researches in Electricity* (Volume 2)  
A Speculation Touching Electric Conduction and the Nature of Matter (pp. 285–286)  
Bernard Quaritch. London, England. 1844

**Fermi, Enrico** 1901–54  
Italian-born American physicist

It is no good to try and stop knowledge from going forward...ignorance is never better than knowledge.

In Laura Fermi  
*Atoms in the Family*  
Chapter 23 (p. 244)  
The University of Chicago Press. Chicago, Illinois, USA.

**Feynman, Richard P.** 1918–88  
American theoretical physicist

I don't know what's the matter with people: they don't learn by understanding; they learn by some other way – by rote, or something. Their knowledge is so fragile!

*Surely You're Joking, Mr. Feynman!: Adventures of a Curious Character Who Stole the Door* (pp. 36–37)  
W.W. Norton & Company, Inc. New York, New York, USA. 1985

A great deal more can be known than can be proved.  
*Chicago Tribune*, 318:4, Section 7, November 14, 1993

Knowledge is of no real value if all you can tell me is what happened yesterday. It is necessary to tell what will happen tomorrow if you do something.... You must be willing to stick your neck out.

*The Meaning of It All*  
Chapter 1 (p. 25)  
Perseus Books. Reading, Massachusetts, USA. 1998

**Feynman, Richard P.** 1918–88  
American theoretical physicist

**Leighton, Robert B.** 1919–97  
American physicist

**Sands, Matthew L.** 1919–  
American physicist

The principle of science, the definition, almost, is the following: The test of all knowledge is experiment. Experiment is the sole judge of scientific "truth."

*The Feynman Lectures on Physics* (Volume 1)  
Chapter 1–1 (p. 1–1)  
Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1983

**Fischer, Martin H.** 1879–1962  
German-American physician

Knowledge is a process of piling up facts; wisdom lies in their simplification.

In Howard Fabing and Ray Marr  
*Fischerisms* (p. 2)  
C.C. Thomas. Springfield, Illinois, USA. 1944

**Fischer, Robert B.**  
No biographical data available

Thus, the scientist must recognize the statistical aspect of much of his knowledge, not, on the one hand, unduly hesitating to accept it as true if the probability is reasonably

high, but, on the other hand, maintaining an alertness to the possibility that what may for good appear to be highly improbable may indeed occur or be true.

*Science, Man and Society*  
Chapter 3 (p. 37)  
W.B. Saunders Company. Philadelphia, Pennsylvania, USA. 1971

**Fisher, Sir Ronald Aylmer** 1890–1962  
English statistician and geneticist

Inductive inference is the only process known to us by which essential new knowledge comes into the world.

*The Design of Experiments*  
I, 4 (p. 7)  
Hafner Publishing Company. New York, New York, USA. 1971

**Flammarion, Camille** 1842–1925  
French astronomer and writer

Is it not pleasant to exercise our minds in the contemplation of the great spectacles of nature? Is it not useful to know, at least, upon what we tread, what place we occupy in the infinite, the nature of the sun whose rays maintain terrestrial life, of the sky which surrounds us, of the numerous stars which in the darkness of night scatter through space their silent light? This elementary knowledge of the universe, without which we live, like plants, in ignorance of and indifference to the causes of which we perpetually witness the effects, we can acquire not only without difficulty, but with an ever-increasing pleasure.

*Popular Astronomy: A General Description of the Heavens*  
Book I, Chapter I (p. 1)  
Chatto & Windus. London, England. 1894

**Fleck, Ludwik** 1896–1961  
Physician and epistemologist

Certainty, simplicity, vividness originate in popular knowledge. That is where the expert obtains his faith in this triad as the ideal of knowledge. Therein lies the general epistemological significance of popular science.

*Genesis and Development of a Scientific Fact*  
Chapter Four, Section 4 (p. 115)  
The University of Chicago Press. Chicago, Illinois, USA. 1979

**Forsyth, A. R.**  
No biographical data available

...let me plead...for the highest consideration to be given to the pursuit of pure knowledge as well as technical training, not neglecting mathematics, once called the Queen of the Sciences. The wind bloweth where it listeth, and the spirit of knowledge does not follow the quest for wealth and power; but the creation of new knowledge makes for the high repute of a nation, alike in the days when its influence is dominant and more in the distant days when its doings shall have been recorded on the scroll of time.

*Gateway to the Great Books – Mathematics*

Mathematics in Life and Thought (p. 46)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1963

**Foster, Sir Michael** 1836–1907  
English physiologist and educator

What we know and what we think is not a new fountain gushing fresh from the barren rock of the unknown at the stroke of the rod of our own intellect, it is a stream which flows by us and through us, fed by the far-off rivulets of long ago.

*Lectures on the History of Physiology*  
Lecture I (p. 1)  
University Press. Cambridge, England. 1901

As the loom which is weaving that ever-spreading garment takes in new warp and new woof, such threads only of each are taken in as can be fitly joined to those which have come in before; each thread as it is twisted in becomes a hold for other threads to be caught up later on. No single observation, no single experiment stands alone by itself, nor can its worth be rightly judged by itself alone.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1898*  
Recent Advances in Science, and their Bearing on Medicine and Surgery (p. 350)  
Government Printing Office. Washington, D.C. 1899

Every experiment, every observation has, besides its immediate result, effects which, in proportion to its value, spread always on all sides into ever distant parts of knowledge.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1898*  
Recent Advances in Science, and Their Bearing on Medicine and Surgery (pp. 350–351)  
Government Printing Office. Washington, D.C. 1899

**Franklin, Benjamin** 1706–90  
American printer, scientist and diplomat

The first Drudgery of Settling new Colonies, which confines the Attention of People to mere Necessaries, is now pretty well over; and there are many in every Province in Circumstances that set them at Ease, and afford Leisure to cultivate the finer Arts, and improve the common Stock of Knowledge. To such of these who are Men of Speculation, any Hints must from time to time arise, may Observations occur, which if well-examined, pursued and improved, might produce Discoveries to the Advantage of some or all of the British Plantations, or to the Benefit of Mankind in general.

*A Proposal for Promoting Useful Knowledge Among the British Plantations in America (1743)*

**Fuller, Thomas** 1608–61  
English clergyman and author

Knowledge is a Treasure, but Practice is the Key to it.  
*Gnomologia: Adages and Proverbs, Wise Sentences, and Witty Sayings. Ancient and Modern, Foreign and British*

No. 3139  
Printed for Thomas and Joseph Allman. London, England. 1816

**Gauss, Johann Carl Friedrich** 1777–1855  
German mathematician, physicist, and astronomer

The knowledge whose content makes up astronomy is the gain from more than 2,000 years' work on one of the most abundant objects of human knowledge, in which the foremost minds of all times have summoned up all the resources of genius and diligence.

In G. Waldo Dunnington (ed.)  
*Inaugural Lecture on Astronomy and Papers on the Foundations of Mathematics*  
Inaugural Lecture on Astronomy (p. 49)  
Louisiana State University Press. Baton Rouge, Louisiana, USA. 1937

**Gell, Alfred** 1945–97  
English social anthropologist

There are no closed frontiers between intellectual approaches. Only closed minds which refuse to cross them.

*The Anthropology of Time: Cultural Constructions of Temporal Maps and Images*  
Chapter 31 (p. 322)  
Berg. Oxford, England. 1996

**Gibran, Kahlil** 1883–1931  
Lebanese-American philosophical essayist

No man can reveal to you aught but that which already lies half asleep in the dawning of your knowledge.

*The Prophet*  
On Teaching (p. 56)  
Alfred A. Knopf. New York, New York, USA. 1969

Knowledge and understanding are life's faithful companions who will never prove untrue to you. For knowledge is your crown, and understanding your staff; and when they are with you, you possess no greater treasures.

Translated by Anthony Ferris  
*The Treasured Writing of Kahlil Gibran*  
*The Voice of the Master*  
Wisdom, viii (p. 488)  
The Citadel Press. New York, New York, USA. 1958

**Gilbert, G. K.** 1843–1918  
American geologist

In the domain of the world's knowledge there is no infallibility.

The Origin of Hypotheses, Illustrated by the Discussion of a Topographic Problem  
*Science*, Volume 3, Number 53, January 3, 1896 (p. 12)

Knowledge of Nature is an account at bank, where each dividend is added to the principle and the interest is ever compounded; and hence it is that human progress, founded on natural knowledge, advances with ever increasing speed.

The Origin of Hypotheses, Illustrated by the Discussion of a Topographic Problem  
*Science*, Volume 3, Number 53, January 3, 1896 (p. 13)

**Gore, George** 1826–1909  
Electrochemist and scientific writer

New knowledge is not like a cistern, soon emptied, but is a fountain of almost unlimited power and duration...

*The Art of Scientific Discovery*  
Part I, Chapter III (p. 27)

Longmans, Green & Company. London, England. 1878

Existing knowledge is the basis of future discovery; all our knowledge of the future is implicitly wrapped up in nature; we require to stand upon the *terra-firma* of the known, in order to stretch outwards into the darkness and uncertainty of the unknown.

*The Art of Scientific Discovery*  
Chapter XXX (p. 293)

Longmans, Green & Co. London, England. 1878

Knowledge begets knowledge, as wealth begets wealth, and he who possesses much can with the greater facility obtain more.

*The Art of Scientific Discovery*  
Part III, Chapter XXX (p. 294)

Longmans, Green & Co. London, England. 1878

**Gray, George W.**  
Freelance science writer

Theory is built on experiment, and experiment and discovery are guided by theory; science is forever stumbling forward from one approximation to a closer one, and the story of knowledge is a record of continual change.

*New World Picture*  
Preface (p. viii)

Little, Brown & Co. Boston, Massachusetts, USA. 1935

**Gregory, Sir Richard Arman** 1864–1952  
British science writer and journalist

The less a man knows, the more content he is with his intellectual capacity and outlook: it requires a great man to realise the imperfections of his knowledge.

*Discovery; or, The Spirit and Service of Science*  
Chapter I (p. 20)

Macmillan & Company Ltd. London, England. 1918

Man as a physical being is but a microscopic part of the universe, yet his mind carries him ever upward, and with spirit bold and unconquerable he seeks to reach the summit of Mount Olympus. Infinite space remains to humble his pride in spite of the knowledge he has obtained of the starry heavens; yet he pursues his inquiries into the unknown, and his children's children will continue the search.

*Discovery, Or, The Spirit and Service of Science*  
Chapter I (p. 21)

Macmillan & Co Ltd. London, England. 1916

The gospel of work is the gospel of science. Go into the fields of Nature and labour if you would become a disciple of science; for not otherwise can the kingdom of natural knowledge be gained.

*Discovery; or, The Spirit and Service of Science*  
Chapter III (pp. 41–42)

Macmillan & Company Ltd. London, England. 1918

New treasures can never be secured from Nature without effort; "tribulation, not undisturbed progress gives life and soul, and leads to success when success can be reached, in the struggle for natural knowledge."

*Discovery; or, The Spirit and Service of Science*  
Chapter III (p. 42)

Macmillan & Company Limited. London, England. 1918

Success in science means the birth of new knowledge.

*Discovery; or, The Spirit and Service of Science*  
Chapter III (p. 42)

Macmillan & Company Ltd. London, England. 1918

**Hall, Alfred Rupert** 1920–  
English historian of science

...the grain of real knowledge is concealed in a vast deal of esoteric chaff.

*The Scientific Revolution, 1500–1800*  
Chapter XI (p. 307)

Longmans, Green & Company. London, England. 1954

**Hamerton, Philip Gilbert** 1834–94  
English artist and art critic

New knowledge is not like a cistern, soon emptied, but is a fountain of almost unlimited power and duration.

*The Intellectual Life*  
Part I, Chapter III (p. 27)

Little, Brown & Co. Boston, Massachusetts, USA. 1901

**Harris, Sydney J.**  
No biographical data available

Our current annoyance at the long hair affected by young men is both trivial and parochial; what matters is the amount of substance inside the head, not outside.

*Leaving the Surface* (p. 329)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1968

**Harrison, Edward Robert** 1919–2007  
English-born American cosmologist

...the first law of knowledge is the conservation of ignorance. Take any subject, no matter how simple; have you noticed, after study and thought, how the more we know of that subject the more aware we become of what we do not know? For some outlandish reason greater knowledge leads unavoidably to an awareness of greater ignorance. Learned ignorance (awareness of ignorance) replaces unlearned ignorance (unawareness of ignorance), and total ignorance as a consequence remains unchanged. Learned ignorance always increases

with knowledge. “This is the second law of knowledge. Happy is the person who knowing nothing thinks he knows everything!...”

A Twinkle in the Eye of the Universe  
*Quarterly Journal of the Royal Astronomical Society*, Volume 25,  
Number 4, December, 1984 (p. 423)

### Harth, Erich

No biographical data

I have no possessions that are truly my own. I am like a stranger at a rich man’s gate. What I have is borrowed, and even my knowledge is nothing but hand-me-downs, and an occasional oddity I pick up by chance. I pass it on to others like me.

*The Creative Loop: How the Brain Makes a Mind*  
Chapter 1 (p. 6)  
Addison-Wesley, Reading, Massachusetts, USA. 1993

### Hartmann, Heinz

1894–1970  
Psychiatrist and psychoanalyst

...every avenue which could lead to an increase of our knowledge deserves to be followed, regardless of the consequences. This is the professional code, or rather one of the professional codes, we find in men of science.

*Psychoanalysis and Moral Values* (p. 56)  
International Universities Press. New York, New York, USA. 1960

### Harvey, William

1578–1657  
English physician

What shall I deliver in these my Exercises on Animal Generation I am anxious to make publicly known, not merely that posterity may there perceive the sure and obvious truth, but further, and especially, that by exhibiting the method of investigation which I have followed, I may propose to the studious a new and unless I am mistaken a safer way to the attainment of knowledge.

In *Great Books of the Western World* (Volume 28)  
*Anatomical Exercises on the Generation of Animals*  
Introduction (p. 231)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### Hele-Shaw, H. S.

1854–1941  
Naval architect

If I have assumed too little knowledge on your part, it is because of the difficulties I have found in the subject myself. If I have left more obscure than I have been able to make clear, it is consoling to think how many centuries were required to discover even what is known at the present time, and we may well be forgiven if we cannot grasp at once results which represent the life work of some of the greatest men.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1899*  
The Motions of a Perfect Liquid  
Government Printing Office. Washington, D.C. 1901

### Herbert, Frank

1920–86  
American science fiction writer

Every judgment teeters on the brink of error. To claim absolute knowledge is to become monstrous. Knowledge is an unending adventure at the edge of uncertainty.

*Children of Dune* (p. 268)  
Penguin Putnam Inc. New York, New York, USA. 1976

### Herschel, Sir John Frederick William

1792–1871  
English astronomer and chemist

...it happens that great masses of knowledge are daily perishing before our eyes without the possibility of recovery, because, in fact, our eyes are not open to them, and we have nothing to awaken our attention to their transient display.

*Essays From the Edinburgh and Quarterly Reviews with Addresses and Other Pieces*  
Terrestrial Magnetism (pp. 65–66)  
Longman, Brown, Green, Longmans & Robert. London, England. 1857

As civilization extends, wants and desires of a higher order than material gratifications arise; and among them that of extending knowledge *for the sake of knowing* the craving after a larger grasp, a clearer insight, a more complete conception in all its relations of the wondrous universe of which we form a part.

*Familiar Lectures on Scientific Subjects*  
Lecture V (p. 179)  
George Routledge & Sons. New York, New York, USA. 1871

Knowledge is not, like food, destroyed by use, but rather augmented and perfected.

In David Josiah Brewer  
*The World’s Best Essays, from the Earliest Period to the Present Time*  
(Volume 6)  
Science as a Civilizer (p. 2188)  
Ferd P. Kaiser. St. Louis, Missouri, USA. 1910

### Hertzberger, Herman

1932–  
Dutch architect

Knowledge and experience keep forcing us back into the old grooves of the old record of meanings, the way a knife keeps returning to the original striations in a sheet of cardboard.

*Space and the Architect: Lessons in Architecture 2*  
Chapter 2 (p. 35)  
Publishers. Rotterdam, The Netherlands. 2000

### Hill, Archibald V.

1886–1977  
English physiologist

The pursuit of natural knowledge, the investigation of the world – mental and material – in which we live, is not a dull and spiritless affair: rather is it a voyage of adventure of the human mind, a holiday for reckless and imaginative souls.

*Les Prix Nobel. The Nobel Prizes in 1922*

Nobel banquet speech for award received in 1922

Nobel Foundation. Stockholm, Sweden. 1923

**Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

This is an inquisitive age, and if we insist on piling up beyond a certain height knowledge which is in itself mere trash and lumber to a man whose life is to be one long fight with death and disease, there will be some sharp questions asked by and by.

*Scholastic and Bedside Teaching*

Lecture

Harvard University

November 6, 1867

The air we breathe is made up of four elements, at least: oxygen, nitrogen, carbonic acid gas, and knowledge.

*Over the Teacups*

Chapter VI (pp. 132–133)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1892

The best part of our knowledge is that which teaches us where knowledge leaves off and ignorance begins.

*Medical Essays*

Border Lines in Medical Science (p. 211)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

The traveler who would not drink of the Nile until he had tracked it to its parent lakes, would be like to die of thirst; and the medical practitioner who would not use the results of many laborers in other departments without sharing their special toils, would find life far too short and art immeasurably too long.

*Medical Essays*

Scholastic and Bedside Teaching (p. 274)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

Knowledge and timber shouldn't be much used till they are seasoned.

*The Autocrat of the Breakfast-Table*

Chapter VI (p. 134)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1891

Knowledge – it excites prejudices to call it science – is advancing as irresistibly, as majestically, as remorselessly as the ocean moves in upon the shore.

*The Poet at the Breakfast Table*

Chapter X (p. 260)

J.M. Dent & Co. London, England. 1906

It is the province of knowledge to speak and it is the privilege of wisdom to listen.

*The Poet at the Breakfast-Table*

Chapter X (p. 264)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1895

**Holton, Gerald** 1922–

Research professor of physics and science history

**Roller, Duane H. D.** ?–1994

Science historian

Knowledge is like a net; if one were to cut out the part which is labeled science, the rest of the net would be useless.

*Foundations of Modern Physical Science*

Chapter 14 (p. 247)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1950

**Hopkinson, John** 1849–98

English physicist and electrical engineer

Our knowledge must always be limited, but the knowable is limitless. The greater the sphere of our knowledge the greater the surface of contact with our infinite ignorance.

*The Relation of Mathematics to Engineering*

*Nature*, Volume 50, Number 1280, May 10, 1894 (p. 47)

**Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

The aim is to bite good and hard on the fruit of the tree of knowledge.

*Ten Faces of the Universe*

*The Mathematician's Universe* (p. 52)

W.H. Freeman & Company. San Francisco, California, USA. 1977

**Hubble, Edwin Powell** 1889–1953

American astronomer

Knowledge stirs the imagination, drives away the nightmares of superstition.

*The Nature of Science and Other Lectures*

Part I, Science and Technology (pp. 24–25)

The Huntington Library. San Marino, California, USA. 1954

The laws of science are the permanent contribution to knowledge – the individual pieces which are fitted together attempt to form a picture of the physical universe in action.

*The Nature of Science and Other Lectures*

Part I, Experiment and Experience (p. 40)

The Huntington Library. San Marino, California, USA. 1954

Science acquires knowledge but has no interest in its practical applications. The applications are the work of engineers.

*The Nature of Science and Other Lectures*

Part II, Scientists at War (p. 63)

The Huntington Library, San Marino, California, USA. 1954

The history of astronomy is a history of receding horizons. Knowledge has spread in successive waves, each wave representing the exploitation of some new clew to the interpretation of observational data.

*The Realm of the Nebulae*

Chapter I (p. 21)

Dover Publications, Inc. New York, New York, USA. 1958

**Hugo, Victor** 1802–85  
French author, lyric poet, and dramatist

All human knowledge is but picking and culling. The circumstance that the false is mingled with the true, furnishes no excuse for rejecting the whole mass. When was the tare an excuse for refusing the corn? Hoe out the weed error, but reap the fact, and place it beside others. Science is the sheaf of facts.

Translated by Melville Best Anderson

*William Shakespeare*

Part I, Book I, Chapter V (p. 38)

A.C. McClurg & Co. Chicago, Illinois, USA. 1887

**Hutton, James** 1726–97

Scottish geologist, chemist, and naturalist

If our knowledge is imperfect, we may form erroneous principles, and deceive ourselves in reasoning with regard to those works of nature, which are wisely calculated for our instruction.

*Theory of the Earth: With Proofs and Illustrations* (Volume 1)

Chapter I, Section II (p. 42)

H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

**Huxley, Aldous** 1894–1963

English writer and critic

Knowledge is the highest good, truth the supreme value, all the rest is secondary and subordinate.

*Brave New World*

Chapter Sixteen (p. 273)

Harper & Brothers. New York, New York, USA. 1950

**Huxley, Julian** 1887–1975

English biologist, philosopher, and author

Knowledge is basic. It is knowledge which enables us to understand the world and ourselves, and to exercise some control or guidance. It sets us in a fruitful and significant relation with the enduring processes of the universe. And, by revealing the possibilities of fulfillment that are still open, it provides an overriding incentive.

In Pierre Teilhard de Chardin

*The Phenomenon of Man*

Introduction (p. 28)

Harper & Row, Publishers. New York, New York, USA. 1965

**Huxley, Thomas Henry** 1825–95

English biologist

So far as that limited revelation of the nature of things, which we call scientific knowledge, has yet gone, it tends, with constantly increasing emphasis, to the belief that, not merely the world of plants, but that of animals; not merely living things, but the whole fabric of the earth; not merely our planet, but the whole solar system; not merely our star and its satellites, but the millions of similar bodies which bear witness to the order which pervades boundless space, and has endured through boundless time; are all working out their predestined courses of evolution.

*Evolution and Ethics and Other Essays*

Prolegomena (p.6)

Macmillan & Company Ltd. London, England. 1894

It is given to few to add to the store of knowledge, to strike new springs of thought, or to shape new forms of beauty. But so sure as it is that men live not by bread, but by ideas, so sure is it that the future of the world lies in the hands of those who are able to carry the interpretation of nature a step further than their predecessors.

*Collected Essays* (Volume 3)

*Science and Education*

Address on University Education (p. 254)

Macmillan & Company Ltd. London, England. 1904

Indeed, if a little knowledge is dangerous, where is the man who has so much as to be out of danger?

*Collected Essays* (Volume 3)

*Science and Education*

On Elementary Instruction in Physiology (p. 300)

Macmillan & Company Ltd. London, England. 1904

...in science, as in life, learning and knowledge are distinct, and the study of things, and not of books, is the source of the latter.

*Collected Essays* (Volume 8)

*Discourses, Biological and Geological*

A Lobster; or, The Study of Zoology (p. 218)

Macmillan & Company Ltd. London, England. 1904

Forewarned is forearmed, says the proverb; and knowledge of the laws of nature is forewarning of that which we may expect to happen, when we have to deal with natural objects.

*Introductory*

Article 10 (p. 16)

Macmillan & Company Ltd. London, England. 1907

In its earliest development knowledge is self-sown. Impressions force themselves upon men's senses whether they will or not, and often against their will. The amount of interest which these impressions awaken is determined by the coarser pains and pleasures which they carry in their train, or by mere curiosity; and reason deals with the materials supplied to it as far as that interest carries it, and no farther.

*The Crayfish: An Introduction to the Study of Zoology* (p. 2)

C. Kegan Paul & Co. London, England. 1880

When simple curiosity passes into the love of knowledge as such, and the gratification of the aesthetic sense of the beauty of completeness and accuracy seems more desirable than the easy indolence of ignorance; when the finding out of the causes of things becomes a source of joy, and he is counted happy who is successful in the search; common knowledge of nature passes into what our forefathers called Natural History, from whence there is but a step to that which used to be termed Natural Philosophy, and now passes by the name of Physical Science.

*The Crayfish: An Introduction to the Study of Zoology* (p. 3)

C. Kegan Paul & Co. London, England. 1880

The rapid increase of natural knowledge, which is the chief characteristic of our age, is effected in various ways. The main army of science moves to the conquest of new worlds slowly and surely, nor ever cedes an inch of the territory gained. But the advance is covered and facilitated by the ceaseless activity of clouds of light troops provided with a weapon – always efficient, if not always an arm of precision – the scientific imagination. It is the business of these *enfants perdus* of science to make raids into the realm of ignorance wherever they see, or think they see, a chance; and cheerfully to accept defeat, or it may be annihilation, as the reward of error.

*Man's Place in Nature: And Other Anthropological Essays*  
Chapter VI (p. 272)  
D. Appleton & Co. New York, New York, USA. 1919

...every great advance in natural knowledge has involved the absolute rejection of authority ...

*Lay Sermons, Addresses and Reviews*  
Chapter VI (p. 118)  
D. Appleton & Co. New York, New York, USA. 1903

**Huygens, Christiaan** 1629–95

Dutch mathematician, astronomer, and physicist

For my part, I shall be very well contented, and shall count I have done a great matter, if I can but come to any knowledge of the nature of things, as they now are, never troubling my head about their beginning, or how they were made, knowing that to be out of the reach of human Knowledge, or even Conjecture.

*The Celestial Worlds Discover'd, or, Conjectures Concerning the Planetary Worlds, Their Inhabitants and Productions*  
Book the Second, Every Sun has a Vortex round it, very different from those of Cartes (p. 160)  
Printed for T. Childe. London, England. 1698

**Ingle, Dwight J.** 1907–78

Biologist and endocrinologist

To gain knowledge is not always simple. The search for truth, however, is one of man's most thrilling adventures. It is a search that requires patience, caution, and persistence.

*Is It Really So?: A Guide to Clear Thinking*  
Chapter 9 (p. 76)  
The West Minster Press. Philadelphia, Pennsylvania, USA. 1976

**James, William** 1842–1910

American philosopher and psychologist

...our science is a drop, our ignorance a sea. Whatever else be certain, this at least is certain – that the world of our present natural knowledge is enveloped in a larger world of some sort of whose residual properties we at present can frame no positive idea.

*The Will to Believe and Other Essays in Popular Philosophy*  
Is Life Worth Living? (p. 54)  
Dover Publications, Inc. New York, New York, USA. 1956

**Jeans, Sir James Hopwood** 1877–1946

English physicist and mathematician

We of the present age know very little – almost nothing; we are rather pioneers setting out to explore a new country. We have the thrill of ever-changing views, now and again we reach a ridge or summit which opens up new and unexpected vistas – of necessity our point of view must continually change.

*Living Philosophies*  
Chapter VIII (p. 119)  
Simon & Schuster. New York, New York, USA. 1931

...our knowledge of the external world must always consist of numbers, and our picture of the universe – the synthesis of our knowledge – must necessarily be mathematical in form. All the concrete details of the picture, the apples, the pears and bananas, the ether and atoms and electrons, are mere clothing that we ourselves drape over our mathematical symbols – they do not belong to Nature, but to the parables by which we try to make Nature comprehensible. It was, I think, Kronecker who said that in arithmetic God made the integers and man made the rest; in the same spirit, we may add that in physics God made the rest.

*The New World-Picture of Modern Physics*  
*Supplement to Nature*, Volume 134, Number 3384, September, 1934 (p. 356)

...science should leave off making pronouncements: the river of knowledge has too often turned back on itself.

*The Mysterious Universe*  
Chapter V (p. 188)  
The Macmillan Company. New York, New York, USA. 1932

...to many it is not knowledge but the quest for knowledge that gives the greater interest to thought – to travel hopefully is better than to arrive.

*Physics and Philosophy*  
Chapter VII (p. 217)  
Dover Publications, Inc. New York, New York, USA. 1981

**Jefferson, Thomas** 1743–1826

Third president of the USA

A patient pursuit of facts, and cautious combination and comparison of them, is the drudgery to which man is subjected by his Master, if he wishes to attain sure knowledge.

*Notes on the State of Virginia* (p. 71, n)  
Printed by Samuel H Smith. Philadelphia, Pennsylvania, USA. 1800

**Jevons, William Stanley** 1835–82

English economist and logician

So far as object is different from object, knowledge is useless and inference impossible. But so far as object resembles object, we can pass from one to the other.

*The Principles of Science: A Treatise on Logic and Scientific Method*

Introduction (p. 3)

The Macmillan Co. New York, New York, USA. 1887

I am convinced that it is impossible to expound the methods of induction in a sound manner, without resting them on the theory of probability. Perfect knowledge alone can give certainty, and in nature perfect knowledge would be infinite knowledge, which is clearly beyond our capacities. We have, therefore, to content ourselves with partial knowledge, – knowledge mingled with ignorance, producing doubt.

*The Principles of Science: A Treatise on Logic and Scientific Method*

Book II, Chapter X (p. 197)

Macmillan & Company Ltd. London, England. 1887

**Johnson, Samuel** 1696–1772

English critic, biographer, and essayist

Integrity without knowledge is weak and useless and knowledge without integrity is dangerous and dreadful.

*The History of Rasselas: Prince of Abyssinia*

Chapter XLI (p. 100)

Oxford University Press. Oxford, England. 1988

**Jordan, David Starr** 1851–1931

American scientist and educator

We know nothing until we find it out...

Reason, Reverence and Love

*Science Monthly*, Volume XXI, Number 6, December, 1925 (p. 587)

**Jourdain, Philip E. B.** 1879–1919

English logician

When we wish to bring to the knowledge of a person any phenomena or processes of nature, we have the choice of two methods: we may allow the person to observe matters for himself, when instruction comes to an end; or, we may describe to him the phenomena in some way, so as to save him the trouble of personally making anew each experiment.

*The Nature of Mathematics* (Revised edition)

Chapter I (p. 18)

T.C. & E.C. Jack. London, England. 1919

**Judd, John Wesley** 1840–1916

British geologist

...our first step towards the acquirement of scientific or exact knowledge, must be the unlearning of what we have before been led to regard as true.

*Volcanoes: What They Are And What They Teach*

Chapter I (p. 1)

D. Appleton & Co. New York, New York, USA. 1881

**Keep, Josiah** 1849–1911

American educator and malacologist

We seldom love that of which we have but slight knowledge.

*Shells and Sea-life*

Preface (p. 3)

Whitaker & Wells Co. San Francisco, California, USA. 1910

**Kennedy, John F.** 1917–63

Twenty-sixth president of the USA

The greater our knowledge increases, the greater our ignorance unfolds.

Address at Rice University

Houston, Texas, September 12, 1962

**Kerry, John** 1943–

US senator

It is wrong to tell scientists that they can't cross the frontiers of new knowledge...

*CNN*

Kerry Promotes Science, Technology as Job Engines

Friday, October 22, 2004

**Kettering, Charles Franklin** 1876–1958

American engineer and inventor

We have only begun to knock a few chips from the great quarry of knowledge that has been given us to dig out and use. We know almost nothing about everything. That is why, with all conviction, I say that the future is boundless.

In James Kip Finch

*Engineering and Western Civilization*

Chapter 20 (p. 306)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1951

**Keyser, Cassius Jackson** 1862–1947

American mathematician

Day is just as mysterious as night, and the mystery of knowledge and understanding is more wonderful and awesome than the darkness of the unknown.

*Science and Religion, The Rational And The Superrational* (p. 49)

Yale University Press. New Haven, Connecticut, USA. 1914

...knowledge – a kind of proliferating sphere, expanding along divergent lines by the outward-seeking of an inner life of wonder.

*The Human Worth of Rigorous Thinking: Essays and Addresses*

Chapter VI (p. 128)

Columbia University Press. New York, New York, USA. 1916

**Koestler, Arthur** 1905–83

Hungarian-born English writer

We can add to our knowledge, but we cannot subtract from it.

*The Sleep Walkers: A History of Man's Changing Vision of the Universe*

Chapter I (p. 19)

The Macmillan Co. New York, New York, USA. 1959

**Kropotkin, Peter Alekseyevich** 1842–1921

Russian revolutionary and geographer

Knowledge is an immense power. Men must know. But we already know much! What if that knowledge – and only that – should become the possession of all? Would not science itself progress in leaps and cause mankind to make strides in production, invention, and social

creation, or [in] which we are hardly in a condition now to measure the speed?

*Memoirs of a Revolutionist*

Part IV, III (p. 21)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1899

**Kusch, Polykarp** 1911–93

German-American physicist

The increase of scientific knowledge lies not only in the occasional milestones of science, but in the efforts of the very large body of men who with love and devotion observe and study nature.

*Les Prix Nobel. The Nobel Prizes in 1955*

Nobel banquet speech for award received in 1955

Nobel Foundation. Stockholm, Sweden. 1956

**Lamarck, Jean-Baptiste**

**Pierre Antoine** 1744–1829

French biologist

Men who strive in their works to push back the limits of human knowledge know well that it is not enough to discover and prove a useful truth previously unknown, but that it is necessary also to be able to propagate it and get it recognized...

Translated by Hugh Elliot

*Zoological Philosophy: An Exposition with Regard to the Natural History of Animals*

Chapter VIII (p. 404)

The University of Chicago Press. Chicago, Illinois, USA. 1984

**Laplace, Pierre Simon** 1749–1827

French mathematician, astronomer, and physicist

That which we know is a little thing; that which we do not know is immense.

In Will and Ariel Durant

*The Story of Civilization: The Age of Napoleon* (p. 324)

Simon & Schuster. New York, New York, USA. 1975

Strictly speaking it may even be said that nearly all our knowledge is problematical; and in the small number of things which we are able to know with certainty, even in the mathematical sciences themselves, the principal means for ascertaining truth – induction and analogy – are based on probabilities ...

*A Philosophical Essay on Probabilities*

Chapter I (p. 1)

John Wiley & Sons. New York, New York, USA. 1902

**Lardner, Dionysius** 1793–1859

British physicist and astronomer

Although it has been reserved for modern times to bring to perfection the methods of investigation pursued in physical researches, these great divisions of human knowledge have nevertheless been always progressive. If the labors of the ancients were obstructed, their advancement retarded, and their productions disfigured by fantastical theories; the facts they accumulated, the phenomena

they described, and the observations they recorded, have formed a bequest of the highest value to the better disciplined inquirers and observers of later days.

*Popular Lectures on Science and Art*

Electricity (p. 103)

Harry W. Law. New York, New York, USA. 1856

It is astonishing, in this age of the diffusion of knowledge, how susceptible the public mind is of excitement on any topic, the principles of which do not lie absolutely on the surface of the most ordinary course of elementary education.

*Popular Lectures on Science and Art*

Weather Almanacs (p. 159)

Harry W. Law. New York, New York, USA. 1856

**Larrabee, Harold A.** 1894–1979

No biographical data available

The great prizes of science go to the successful discoverers, not to those who follow behind and carefully explore the new land that has been opened up.

*Reliable Knowledge*

Chapter 3 (p. 72)

Cambridge University Press. Cambridge, England. 1978

**Latham, Peter Mere** 1789–1875

English physician

There is nothing so captivating as NEW knowledge.

In William B. Bean

*Aphorisms from Latham* (p. 38)

Prairie Press. Iowa City, Iowa, USA. 1962

The knowledge which lies behind is our natural help to that which lies before.

*Lectures on Subjects Connected with Clinical Medicine*

Lecture I (p. 3)

Longman, Rees, Orme, Brown, Green & Longman. London,

England. 1836

It is the special infirmity of ingenuous minds to reflect with too much anxiety upon their own progress in knowledge; to sit in judgment upon themselves, calculating whether they have made the best of all their opportunities, and wishing, vainly wishing, that their time might come over again, to enable them to supply this omission, or rectify that mistake.

*Lectures on Subjects Connected with Clinical Medicine*

Lecture I (p. 12)

Longman, Rees, Orme, Brown, Green & Longman. London,

England. 1836

Knowledge may be an incumbrance as well as a help. Many men know more than they are able to wield. There is a point (I believe) in the acquisition of knowledge (and this point varies infinitely in different individuals), beyond

*Lectures on Subjects Connected with Clinical Medicine*

Lecture I (p. 17)

Longman, Rees, Orme, Brown, Green & Longman. London,

England. 1836

In medical science, the only materials of our knowledge are those things which are referable to our sensations and perceptions: matters of fact.

*Lectures on Subjects Connected with Clinical Medicine*

Lecture V (pp. 117–118)

Longman, Rees, Orme, Brown, Green & Longman. London, England. 1836

**Lawrence, D. H. (David Herbert)** 1885–1930

English writer

**Moore, Harry V.**

No biographical data available

“Knowledge” has killed the sun, making it a ball of gas, with spots; “knowledge” has killed the moon, it is a dead little earth fretted with extinct craters as with smallpox ...

*Sex Literature and Censorship* (p. 117)

Twayne Publishers. 1953

**LeConte, John** 1818–91

American physician and physicist

...the lofty aspirations of humanity and not delusions; they are realities. They link us to a purer order of existence, which makes us heirs of immortality. We repose order a confident and unwavering assurance that, in God’s own time, these earth-mists will be dispersed, and the dim twilight of conjecture will yield to the glorious, unclouded noonday of knowledge.

The Nebular Hypothesis

*The Popular Science Monthly*, Volume 2, April 1873 (p. 660)

**Ledger, Edmund** 1841–1913

English astronomer

...the more the horizon of our knowledge widens, the less we seem to know, in contrast with the boundless field of still untrodden truth ...

*The Sun, Its Planets and Their Satellites*

Lecture I (p. 2)

Edward Stanford. London, England. 1882

**Lemon, Harvey Brace**

Physicist

Quite characteristic is it of the acquisition of knowledge that as one learns a little, the horizon widens and what lies ahead to be learned is seen to cover a much vaster area. It is with our eyes on these horizons that we climb. What has been surmounted and overcome seems small and insignificant. How small and insignificant it is, fortunately we shall probably never be aware.

*Galileo to Cosmic Rays: A Look at Physics*

Chapter 40 (p. 440)

The University of Chicago Press. Chicago, Illinois, USA. 1934

**Levi, Primo** 1919–87

Italian writer and chemist

The future of humanity is uncertain, even in the most prosperous countries, and the quality of life deteriorates; and yet I believe that what is being discovered about the infinitely large and the infinitely small is sufficient to

absolve this end of the century and millennium. What a very few are acquiring in knowledge of the physical world will perhaps cause this period not to be judged as a pure return to barbarism.

*Other People’s Trades*

News from the Sky (pp. 23–24)

Summit Books. New York, New York, USA. 1989

**Lewis, Clarence Irving** 1883–1964

American philosopher

...interest in truth for its own sake – the pure and undistracted purpose to know – is not the characteristic final purpose of knowing. Knowledge for its own sake, and the contemplative life, represent an esthetic or near-esthetic ideal rather than one normally attributable to cognition. It is merely a professional fallacy of the scholar to impute his own peculiar interest in finding out the truth to human cognizing in general, as if that were the aim which rules or should rule it. He who is disinterestedly interested in finding out and knowing; who subordinates the desires and interests of action to discovery of truth, and to contemplation of it; likewise divests knowledge of its natural and pragmatic significance. By the same token, the ideal of the contemplative life is mildly abnormal, however valid and indubitable the values to which it is addressed. The Ivory tower is characteristically the refuge of the practically defeated and of those who become disillusioned of the utilities of action.

*An Analysis of Knowledge and Valuation*

Chapter XIV (p. 442)

The Open Court Publishing Company. La Salle, Illinois, USA. 1946

There is no knowledge without interpretation.

*Mind and the World-Order: Outline of a Theory of Knowledge*

Chapter VII (p. 195)

Dover Publications, Inc. New York, New York, USA. 1956

...if there is any knowledge at all, *some* knowledge must be a priori.

*Mind and the World-Order: Outline of a Theory of Knowledge*

Chapter VII (p. 196)

Dover Publications, Inc. New York, New York, USA. 1956

**Lichtenberg, Georg Christoph** 1742–99

German physicist and satirical writer

I made the journey to knowledge like dogs who go for walks with their masters, a hundred times forward and backward over the same territory; and when I arrived I was tired.

*Lichtenberg: Aphorisms & Letters*

Aphorisms (p. 58)

Jonathan Cape. London, England. 1969

**Little, Arthur D.** 1863–1935

American chemist

If knowledge is to be humanized it must first be translated.

*The Fifth Estate*

The Franklin Institute. Philadelphia, Pennsylvania, USA. 1924

**Locke, John** 1632–1704

English philosopher and political theorist

Every step the mind takes in its progress towards knowledge, makes some discovery, which is not only new, but the best too, for the time at least.

*An Essay Concerning Human Understanding*

Epistle to the Reader (p. v)

Printed for Thomas Tegg. London, England. 1841

**Loehle, Craig**

Mathematical ecologist

A major obstacle to science is not ignorance but knowledge.

A Guide to Increased Creativity in Research – Inspiration or Perspiration?

*BioScience*, Volume 40, Number 2, February, 1990 (p. 123)

**Macaulay, Thomas Babington** 1800–59

English historian and author

Knowledge advances by steps, and not by leaps.

On History

*Edinburgh Review*, Volume XLVII, May, 1828

**Mach, Ernst** 1838–1916

Austrian physicist and philosopher

Not every physicist is an epistemologist, and not everyone must or can be one. Special investigation claims a whole man, so does the theory of knowledge.

*History and Root of the Principle of the Conservation of Energy*

Author's Preface (p. 12)

The Open Court Publishing Company. Chicago, Illinois, USA. 1911

...the student of the theory of knowledge, like the geologist and the astronomer, must be permitted to reason back from the forms which are created before his eyes to others which he finds ready made for him.

Translated by Thomas J. McCormack

*Popular Scientific Lectures* (2nd edition)

On the Economical Nature of Physical Inquiry (p. 203)

The Open Court Publishing Co. Chicago, Illinois, USA. 1897

Knowledge which one does not possess one cannot use.

Translated by Thomas J. McCormack

*Popular Scientific Lectures* (2nd edition)

On Some Phenomena Attending the Flight of Projectiles (p. 327)

The Open Court Publishing Co. Chicago, Illinois, USA. 1897

Every candid person will confess that there are many branches of knowledge about which he had better be silent.

*Popular Scientific Lectures*

On Instruction in the Classics and the Sciences (p. 345)

The Open Court Publishing Company. Chicago, Illinois, USA. 1898

... we are entitled to regard our knowledge of the decisive conditions of any phenomenon as sufficient only in the event that such conditions determine the phenomenon precisely and uniquely.

Translated by Thomas J. McCormack

*The Science of Mechanics: A Critical and Historical Account of Its Development*

Chapter I (p. 10)

The Open Court Publishing Co. Chicago, Illinois, USA. 1919

It is a peculiar property of instinctive knowledge that it is predominantly of a negative nature. We cannot so well say what must happen as we can what cannot happen, since the latter alone stands in glaring contrast to the obscure mass of experience in us in which single characters are not distinguished.

*The Science of Mechanics* (5th edition)

Chapter I, Part II, Section 2 (p. 36)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

**Maclaurin, Colin** 1698–1746

Scottish mathematician and natural philosopher

Those who have not imbibed the prejudices of philosophers, are easily convinced that natural knowledge is to be founded on experiment and observation.

*An Account of Sir Isaac Newton's Philosophical Discoveries, in Four Books* (p. 24)

Printed for the Author's Children. London, England. 1748

By proceeding with due care, every age will add to the common stock of knowledge; the mysteries that still lie concealed in nature may be gradually opened, arts will flourish and increase, mankind will improve, and appear more worthy of their situation in the universe, as they approach more towards a perfect knowledge of nature.

*An Account of Sir Isaac Newton's Philosophical Discoveries, in Four Books* (p. 91)

Printed for the Author's Children. London, England. 1748

**Maeterlinck, Maurice** 1862–1949

Belgian playwright and poet

Because I have stirred a few grains of sand on the shore, am I in a position to know the depths of the ocean?

Translated by Maurice Maeterlinck

In Jean-Henri Fabre

*The Life of the Spider*

Preface (p. 34)

Dodd, Mead & Co. New York, New York, USA. 1913

Life has unfathomable secrets. Human knowledge will be erased from the archives of the world before we possess the last word that the Gnat has to say to us...

Translated by Maurice Maeterlinck

In Jean-Henri Fabre

*The Life of the Spider*

Preface (p. 34)

Dodd, Mead & Co. New York, New York, USA. 1913

**Margenau, Henry** 1901–97

American physicist

To gain knowledge of general principles by way of abstract exposition is a possible but not an expeditious course. It seems wiser to approach them with a large but well-defined project in view, a project which calls

for continued and varied application of the principles to be studied, and which may serve at once as goal and as illustration.

*The Nature of Physical Reality: A Philosophy of Modern Physics*  
Chapter I (p. 1)  
McGraw-Hill Book Co., Inc. New York, New York, USA. 1950

**Marlowe, Christopher** 1564–93

Renaissance English playwright and poet

Our souls, whose faculties can comprehend  
The wondrous architecture of the world,  
And measure every wandering planet's course,  
Still climbing after knowledge infinite.

*Tamburlaine the Great*

Part the First, Act II, Scene 7, l. 20–23

The Hesperides Press. London, England. 1930

**Mather, Kirtley F.** 1888–1978

American geologist

The expanding horizon of knowledge has simply lengthened the line of contact between man and the unknown elements in the cosmos.

In Edward H. Cotton

*Has Science Discovered God?*

Sermons from Stones (pp. 3–4)

Thomas Y. Crowell Company. New York, New York, USA. 1931

**McEwan, Ian** 1948–

English author

Shakespeare would have grasped wave functions, Donne would have understood complementarity and relative time. They would have been excited. What richness! They would have plundered this new science for their imagery. And they would have educated their audiences too. But you “arts” people, you’re not only ignorant of these magnificent things, You’re rather proud of knowing nothing.

*The Child in Time*

Chapter 2

Houghton Mifflin Company. Boston, Massachusetts, USA. 1987

**Milton, John** 1608–74

English poet

O Sacred, Wise, and Wisdom-giving Plant,  
Mother of Science...

Elsevier Publishing Company. Amsterdam, Netherlands. 1965

**Minto, Walter** 1753–96

Scottish-American mathematician

The progress of the human mind, from ignorance to knowledge, has generally been slow, and not by the most obvious and easy path.

*An Inaugural Oration on the Progress and Importance of the Mathematical Sciences.*

Princeton, preceding the Annual Commencement 1788 (p. 10)

Printed by Isaac Collins, 1788

**Mitchell, Maria** 1818–89

American astronomer and educator

...we have a hunger of the mind which asks for knowledge of all around us, and the more we gain, the more is our desire; the more we see, the more we are capable of seeing.

In Eve Merriam

*Growing Up Female in America*

Maria Mitchell (p. 88)

Doubleday & Company, Inc. Garden City, New York, USA. 1971

**Monod, Jacques** 1910–76

French biochemist

Any mingling of knowledge with values is unlawful, forbidden.

*Chance and Necessity: An Essay on the Natural Philosophy of Modern Biology*

Vintage Books. New York, New York, USA. 1972

**Montgomery, Lucy Maud** 1874–1942

Canadian author

Isn't it splendid to think of all the things there are to find out about? It just makes me feel glad to be alive – it's such an interesting world. It wouldn't be half so interesting if we knew all about everything, would it? There'd be no scope for imagination then, would there?

*Anne of Green Gables*

Chapter II (p. 19)

Page & Company. Boston, Massachusetts, USA. 1908

**Moore, Benjamin** 1745–1816

Episcopal writer and professor of rhetoric

The extent and accuracy of our knowledge of external phenomena increase all the time, and it is this increase of knowledge which makes all science progressive.

*The Origin and Nature of Life*

Chapter I

Henry Holt & Co. New York, New York, USA.

**Morgan, Charles** 1894–1958

English playwright and novelist

...as knowledge increases, wonder deepens...

*The Fountain*

The Bond

Chapter Ten (p. 383)

Alfred A. Knopf. New York, New York, USA. 1932

**Müller, Max** 1823–1900  
German philologist and Orientalist

The only knowledge worth having and which lasts us for life must not be cut and dry, but on the contrary must be living and growing knowledge, knowledge of which we know the beginning, the middle, and the end, knowledge of which we can produce the title-deeds whenever they are called for.

In Mayo Williamson Hazeltine  
*Orations from Homer to William McKinley*  
On Some Lessons of Antiquity (p. 8597)  
P.F. Collier & Son. New York, New York, USA. 1902

There are certain things which we must know as if they were part of ourselves. But there are many other things which we simply put into our pockets, which we can find there whenever we want them ...

In Mayo Williamson Hazeltine  
*Orations from Homer to William McKinley*  
On Some Lessons of Antiquity (p. 8598)  
P.F. Collier & Son. New York, New York, USA. 1902

**Mumford, Lewis** 1895–1990  
American social philosopher

The belief that science developed solely out of a pursuit of knowledge for its own sake is at best only a half truth, and at worst, mere self-flattery or self-deception on the part of scientists.

*The Myth of the Machine: The Pentagon of Power* (p. 106)  
Chapter V (p. 106)  
Harcourt Brace Jovanovich, Inc. New York, New York, USA. 1970

**Myers, Frederic William Henry** 1843–1901  
English poet and essayist

...the method which our race has found most effective in acquiring knowledge is by this time familiar to all men. It is the method of modern Science – that process which consists in an interrogation of Nature entirely dispassionate, patient, systematic; such careful experiment and cumulative record as can often elicit from her slightest indications her deepest truths. That method is now dominant throughout the civilised world; and although in many directions experiments may be difficult and dubious, facts, rare and elusive, Science works slowly on and bides her time, – refusing to fall back upon tradition or to launch into speculation, merely because straight is the gate which leads to valid discovery, indisputable truth.

*Human Personality and Its Survival of Bodily Death* (Volume 1)  
Introduction (p. 1)  
Longmans, Green & Company. London, England. 1903

**Myrdal, Gunnar** 1898–1987  
Swedish economist and sociologist

All ignorance, like all knowledge, tends thus to be opportunistic.

*Objectivity in Social Research*  
Chapter III (p. 19)  
Pantheon Books. New York, New York, USA. 1969

**Newcomb, Simon** 1835–1909  
Canadian-born American astronomer

The fact is that our knowledge of the universe has been in the nature of a slow and gradual evolution, commencing at a very early period in human history, and destined to go forward without stop, as we hope, so long as civilization shall endure.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1896*  
The Problems of Astronomy (p. 83)  
Government Printing Office. Washington, D.C. 1898

**Nicholson, James**

Chapter I (p. 37)  
Oliver & Boyd. Edinburgh, Scotland. 1961

**Oppenheimer, James Robert** 1904–67  
American theoretical physicist

...knowledge rests on knowledge; what is new is meaningful because it departs slightly from what was known before; this is a world of frontiers, where even the liveliest of actors or observers will be absent most of the time from most of them.

*Science and the Common Understanding*  
Chapter 6 (p. 90)  
Simon & Schuster. New York, New York, USA. 1954

A great discovery is a thing of beauty; and our faith – our binding, quiet faith – is that knowledge is good and good in itself.

*Science and the Common Understanding*  
Chapter 6 (p. 98)  
Simon & Schuster. New York, New York, USA. 1954

**Oreskes, Naomi**

No biographical data available

...if new knowledge is to be made, old knowledge has to be unmade.

*The Rejection of Continental Drift*

Epilogue (p. 316)

Oxford University Press, Inc. New York, New York, USA. 1999

**Osler, Sir William** 1849–1919

Canadian physician and professor of medicine

Science is organized knowledge, and knowledge is of things we see. Now the things that are seen are temporal; of the things that are unseen science knows nothing and has at present no means of knowing anything.

*Science and Immortality*

The Teresians (pp. 40–41)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1905

**Ostwald, Carl Wilhelm Wolfgang** 1853–1932

Latvian-born German chemist

Our knowledge is an incomplete piece of patchwork; but each one of us is bound to make the best possible use of the incomplete knowledge he possesses, conscious always that his results are any day liable to be replaced by new discoveries or ideas.

Translated by Thomas Seltzer

*Individuality and Immortality*

Individuality and Immortality (p. 3)

Houghton, Mifflin & Co. Boston, Massachusetts, USA. 1906

**Ouspensky, Peter D.** 1878–1947

Russian philosopher

Knowledge must start from some foundation, something must be recognized as known, or we shall be obliged always to define one unknown by means of another.

Translated by Nicholas Bessaraboff and Claude Bragdon

*Tertium Organum*

Chapter I (p. 1)

Manas Press. New York, New York, USA. 1920

**Parnov, E. I.**

Russian writer

When we speak of the limits of the universe we imply the limits of knowledge. Temporary limits to be sure, but nevertheless limits. In probing the universe man probes his brain. The nature of his boldest and 'maddest' theories is determined by his way of thinking. That is why the secrets of the cosmos and the microworld excite and attract me. They are a mirror which reflects our capability for knowledge. And man is born for knowledge. This is the meaning and the purpose of civilization which is why man will never stop looking into the mirror of the universe.

Translated by Vladimir Talny

*At the Crossroads of Infinities* (p. 10)

MIR Publishers. Moscow, Russia. 1971

**Pavlov, Ivan Petrovich** 1849–1936

Russian physiologist

From the very beginning of your work, school yourself to severe gradualness in the accumulation of knowledge.

Bequest of Pavlov to the Academic Youth of His Country

*Science*, Volume 83, Number 2155, April 17, 1936 (p. 369)

**Peel, Sir Robert** 1788–1850

British prime minister and statesman

Heed not the sneers and foolish sarcasms against learning, of those who are unwilling that you should rise above the level of their own contented ignorance. Do not for a moment imagine that you have not time for acquiring knowledge; it is only the idle man who wants time for everything. The industrious man knows the inestimable value of the economy of time, and amidst the most multifarious occupations, can find leisure for rational recreation and mental improvement. Do not believe that the acquisition of scientific knowledge will obstruct your worldly prosperity, or that it is incompatible with your worldly pursuits. Rely upon it, you cannot sharpen your intellectual faculties, you cannot widen the range of your knowledge, without becoming more skilful and successful in the business or profession in which you are engaged.

Quoted in Gideon Algernon Mantell

*The Wonders of Geology; or, A Familiar Exposition of Geological Phenomena*

Address to the Reader (pp. xiii–xiv)

G.H. Bohn. London, England. 1857–58

**Persius** 32–64

Roman poet

Is science only useful as 'tis shown, And is thy knowledge nothing, if not known?

Translated by Lewis Evans

*The Satires of Juvenal, Persius, Sulpicia, and Lucilius*

The Satires of Persius (p. 489)

Harper & Brothers Publishers. New York, New York, USA. 1889

**Petit, Jean-Pierre**

French astrophysicist

I'VE UNDERSTOOD IT! Well, that is...I'm not exactly sure WHAT I've understood, but I have the impression I've understood SOMETHING.

*Euclid Rules. OK?* (p. 44)

Publisher undetermined

No biographical data available

All human knowledge is limited; but who has reached the boundary in any direction?

*A Treatise on Geology*

Geology, Progress of Geology (p. 4)

A. & C. Black. Edinburgh, Scotland. 1837

**Phillpotts, Eden** 1862–1960

English novelist, poet, and dramatist

Knowledge is all scientific researchers are after – new knowledge and discovery.

*A Shadow Passes*

Chapter IX (p. 140)

The Macmillan Company. New York, New York, USA. 1934

**Platt, John R.**

No biographical data available

We are like men coming out of the dark house of the past into a world of dazzling sunlight. We have climbed up out of the dark cellar where we have been trapped for centuries, isolated, ignorant, selfish, combative, and helpless. Suddenly, we find ourselves standing on the threshold of a doorway through which we can see a vista of almost incredible knowledge, abundance, and well-being.

In Robert M. Hutchins and Mortimer J. Adler (eds.)

*The Great Ideas Today, 1968**The New Biology and the Shaping of the Future* (p. 122)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1966

We have bitten into the apple of knowledge and our eyes are opened. We have been driven out of the Eden of irresponsibility into the world of decision.

In Robert M. Hutchins and Mortimer J. Adler (eds.)

*The Great Ideas Today, 1968**The New Biology and the Shaping of the Future* (p. 169)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1966

**Popper, Karl R.** 1902–94

Austrian/British philosopher of science

The way in which knowledge progresses, and especially our scientific knowledge, is by unjustified (and unjustifiable) anticipations, by guesses, by tentative solutions to our problems, by conjectures. These conjectures are controlled by criticism; that is, by attempted refutations, which include severely critical tests. They may survive these tests; but they can never be positively justified: they can neither be established as certainly true nor as “probable” (in the sense of probability calculus). Criticism of our conjectures is of decisive importance: by bringing out our mistakes it makes us understand the difficulties of the problem which we are trying to solve. This is how we become better acquainted with our problems, and able to propose more mature solutions: the very refutation of a theory – that is, of any serious tentative solution to our problem – is always a step forward that takes us nearer to the truth. And this is how we can learn from our mistakes.

*Conjectures and Refutations: The Growth of Scientific Knowledge*

Preface (p. vii)

Harper &amp; Row, Publishers. New York, New York, USA. 1963

The more we learn about the world, and the deeper our learning, the more conscious, specific, and articulate will be our knowledge of what we do not know, our knowledge of our ignorance. For this, indeed, is the main source

of our ignorance – the fact that our knowledge can only be finite, while our ignorance must be infinite.

*Conjectures and Refutations: The Growth of Scientific Knowledge*

Introduction (p. 28)

Harper &amp; Row, Publishers. New York, New York, USA. 1963

The theory of knowledge which I wish to propose is a largely Darwinian theory of the growth of knowledge. From the amoeba to Einstein, the growth of knowledge is always the same: we try to solve our problems, and to obtain, by a process of elimination, something approaching adequacy in our tentative solutions.

*Objective Knowledge: An Evolutionary Approach*

Chapter 7 (p. 261)

Clarendon Press. Oxford, England. 1972

... we should have to represent the tree of knowledge as springing from countless roots which grow up into the air rather than down, and which ultimately, high up, tend to unite into one common stem.

*Objective Knowledge: An Evolutionary Approach*

Chapter 7 (pp. 262–263)

Clarendon Press. Oxford, England. 1972

**Poynting, John Henry** 1852–1914

English physicist

Molecules, atoms and corpuscles are at the present day the letters of the alphabet in which we write our knowledge of Physical Nature.

*Collected Scientific Papers*

Molecules, Atoms and Corpuscles, 1902 (p. 664)

At The University Press. Cambridge. 1920

**Preston, Thomas** 1860–1900

Irish scientist

The great lessons of history are not to be found in the records of battles or in the details of infamous amours and massacres, nor in the memory of dates, but rather in the full knowledge of the inner meaning of events, and a deep appreciation of their general bearing on the social development of mankind. So also in science, that knowledge which is power is not the mere memory of facts, but the comprehension of their whole meaning in the story of nature.

*The Theory of Heat*

Preface to the First Edition (p. 4)

Macmillan &amp; Company Ltd. London, England. 1904

**Price, C.**

No biographical data available

As new knowledge develops, it has increasingly provided natural explanations for facts and phenomena formerly ascribed to the supernatural. Perhaps an understanding of chemical evolution and biological function can develop a philosophy of man more unified, less divisive, less of a major breeding ground for man’s inhumanity to man than the many religious dogmas now so much used to

inflare feelings of hatred, suspicion and prejudice in human society.

In D. Fohlfing and A. Oparin (eds.)

*Molecular Evolution: Prebiological and Biological*

Some Social and Philosophical Implications of Progress on the Origin and Synthesis of Life (p. 462)

Plenum Press. New York, New York, USA. 1972

### **Priestley, Joseph** 1733–1804

English theologian and scientist

The greater is the circle of light, the greater is the boundary of the darkness by which it is confined.

*Experiments and Observations on Different Kinds of Air* (Volume 1)

The Preface (p. xix)

Thomas Pearson. Birmingham, England. 1790

Could I imagine that the knowledge of nature would ever be exhausted, and that we were approaching to a termination of our enquiries, I could more contentedly shut my eyes on a scene in which nothing more was to be seen, or done. But to quit the stage at present (and I believe the aspect of things will be exactly similar in any future period of our existence) without the hope of re-visiting it, would fill me with the deepest regret.

*Experiments and Observations on Different Kinds of Air* (Volume 1)

The Preface (p. xli)

Thomas Pearson. Birmingham, England. 1790

...the increase of knowledge is like the increase of a city. The buildings of some of the first streets make a great figure, is much talked of, and known to everybody; whereas the addition of, perhaps, twice as much building, after it has been swelled to a considerable size, is not so much as taken notice of, and may really be unknown to many of the inhabitants.

*The History and Present State of Electricity*

Preface (pp. vi–vii)

Printed for J. Dodsley. London, England. 1767

### **Pryanishnikov, D. N.**

Knowledge is not consummate, crystalised, and petrified; it is being eternally created and is eternally in motion.

Compiled by V.V. Vorontsov

*Words of the Wise: A Book of Russian Quotations*

Translated by Vic Schneierson

Progress Publishers. Moscow, Russia. 1979

### **Rabi, Isidor Isaac** 1898–1988

Austrian-born American physicist

We are the inheritors of a great scientific tradition and of a beautiful structure of knowledge. It is the duty of our generation to add to the perfection of this structure and to pass on to the next generation the best traditions of our science for the edification and entertainment of all mankind.

The Physicist Returns from the War

*The Atlantic Monthly*, Volume 176, Number 4, October, 1945 (p. 114)

### **Ramón y Cajal, Santiago** 1852–1934

Spanish neuropathologist

We render a tribute of respect to those who add original work to a library, and withhold it from those who carry a library around in their head.

Translated by Neely Swanson and Larry W. Swanson

*Advice for a Young Investigator*

Chapter 5 (p. 78)

The MIT Press. Cambridge, Massachusetts, USA. 1999

### **Ramsay, Sir William** 1852–1916

English chemist

The young student, when he learns what is known, is too apt to think that little is left to be discovered; yet all our progress since the time of Sir Isaac Newton has not falsified the saying of that great man – that we are but children picking up here and there a pebble from the shore of knowledge, while a whole unknown ocean stretches before our eyes. Nothing can be more certain than this: that we are just beginning to learn something of the wonders of the world on which we live and move and have our being.

*Essays Biographical and Chemical*

Chemical Essays

What Is an Element? (p. 160)

Archibald Constable & Company Ltd. London, England. 1908

### **Ray, John**

No biographical data available

No knowledge can be more pleasant to the soul than Natural History: none so satisfying, or that doth so feed the mind. The treasures of Nature are inexhaustible: there is enough for the most indefatigable industry, the happiest opportunities, the most prolix and undisturbed vacancies.

Quoted in Henry Phillips

*History of Cultivated Vegetables* (Volume 1) (2nd edition)

Introduction (p. 2)

Henry Colburn & Co. London, England. 1822

### **Raymo, Chet** 1936–

American physicist and science writer

Knowledge is an island in a sea of mystery. The metaphor takes its power from a firmly held fact: We live in a universe that is infinite, or effectively so. Our brains are finite, a mere 100 billion nerve cells. Our mental maps of the world are therefore necessarily finite. As time passes, the scale and detail of our maps increase, but they no more exhaust the worldscape they describe than a map of the Grand Canyon depletes the power of that natural chasm to astonish and surprise.

*Skeptics and True Believers: The Exhilarating Connection Between Science and Religion*

Chapter Three (pp. 47–48)

Walker & Company. New York, New York, USA. 1998

## Rectangle

Knowledge is gained by practical investigation and experience, and has no need of the assistance of assumption to provide an excuse for ignorance.

*Zetetic Cosmogony*

Assumptions (p. 4)

T.L. Cullingworth. Durban, South Africa. 1899

### Reichenbach, Hans 1891–1953

German philosopher of science

The urge to knowledge is so deeply rooted in man that it can scarcely be omitted from a list of life's important needs. To be sure, nearly all actions which have significance for practical life rest on decisions as to values, decisions which can never be rendered by scientific cognition; science gives no answer to such questions as "What should I do?"

*Atom and Cosmos: The World of Modern Physics*

Introduction (p. 18)

The Macmillan Co. New York, New York, USA. 1933

### Rennie, James 1787–1867

Naturalist

It can never be too strongly impressed upon a mind anxious for the acquisition of knowledge, that the commonest things by which we are surrounded are deserving of minute and careful attention.

*Insect Architecture* (2nd edition)

Chapter I (p. 1)

Charles Knight. London, England. 1830

### Ritchie, Arthur David 1891–1967

Scottish philosopher and science history writer

That our knowledge only illuminates a small corner of the Universe, that it is incomplete, approximate, tentative and merely probable need not concern us. It is genuine nevertheless. Physical science stands as one of the great achievements of the human spirit.

*Scientific Method: An Inquiry into the Character and Validity of Natural Law*

Chapter VII (pp. 201–202)

Kegan Paul, Trench, Trubner & Co., Ltd. London, England. 1923

### Richet, Charles 1850–1935

French physiologist

The aim of science is knowledge about phenomena.

*The Natural History of a Savant*

Chapter VI (p. 42)

J.M. Dent & Sons Limited. London, England. 1927

### Ritchie, Arthur David

Scottish philosopher and science history writer

It is natural for anybody of a sanguine temperament who is impressed by the dependence of life on physical circumstances...to think that he is only a short way from the

solution of every problem. He thinks he is delivering a final assault on the very citadel of Life itself; then, when the heat of the combat is over and he can look round at what he has accomplished, he finds that it is only an insignificant and almost undefended out-work that he has taken, and the citadel is as far off as ever.

*Scientific Method: An Inquiry into the Character and Validity of Natural Laws*

Chapter VI (pp. 176–177)

Kegan Paul, Trench, Trubner & Company Ltd. London, England. 1923

### Robinson, James Harvey 1863–1936

American historian

Of all human ambitions an open mind eagerly expectant of new discoveries and ready to remold convictions in the light of added knowledge and dispelled ignorances and misapprehensions, is the noblest, the rarest and the most difficult to achieve.

*The Humanizing of Knowledge*

Chapter V (p. 61)

George H. Doran Company. New York, New York, USA. 1923

### Rossmann, Joseph

Inventor

However, knowledge alone...never gives rise to new inventions or industries. It is usually left to the inventor to utilize the facts and principles of science, and to apply them for practical purposes.

*Industrial Creativity: The Psychology of the Inventor*

Chapter II (p. 19)

University Books. New Hyde Park, New York, USA. 1964

### Rothman, Milton A. 1919–

Experimental American nuclear physicist and science writer

It takes very little imagination to believe naively that anything is possible. Any ten-year-old child can believe this. It takes a great deal of knowledge to know what things are possible and what things are impossible.

*The Science Gap: Dispelling the Myths and Understanding the Reality of Science*

Myth 8 (p. 142)

Prometheus Books. Amherst, New York, USA. 2003

### Royce, Josiah 1855–1916

American philosopher

Science is never merely knowledge; it is orderly knowledge.

*Logical Essays* (p. 317)

W.C. Brown Company. Dubuque, Iowa, USA. 1951

### Russell, Bertrand Arthur William 1872–1970

English philosopher, logician, and social reformer

Unless we can know something without knowing everything, it is obvious that we can never know something.

In John E. Leffler

*Rates and Equilibria of Organic Reactions as Treated by Statistical, Thermodynamic, and Extrathermodynamic Methods* (p. v)

John Wiley & Sons, Inc. New York, New York, USA. 1963

Science, as its name implies, is primarily knowledge; by convention it is knowledge of a certain kind, the kind, namely, which seeks general laws connecting a number of particular facts.

*The Scientific Outlook*

Introduction (p. 10)

George Allen & Unwin Ltd. London, England. 1931

Knowledge, as opposed to fantasies of wish-fulfillment, is difficult to come by.

*The Scientific Outlook*

Chapter I (p. 34)

George Allen & Unwin. London, England. 1931

Whatever knowledge we possess is either knowledge of particular facts or scientific knowledge.

*The Scientific Outlook*

Chapter III (p. 73)

George Allen & Unwin Ltd. London, England. 1931

The world as we perceive it is full of a rich variety: some of it is beautiful, some of it is ugly; parts seem to us good, parts bad. But all this has nothing to do with the purely causal properties of things, and it is the properties with which science is concerned. I am not suggesting that if we knew these properties completely we should have a complete knowledge of the world, for its concrete variety is an equally legitimate object of knowledge. What I am saying is that science is that sort of knowledge which gives causal understanding, and that this sort of knowledge can in all likelihood be completed, even where living bodies are concerned, without taking account of anything but their physical and chemical properties.

*The Scientific Outlook*

Chapter V (p. 133)

George Allen & Unwin Ltd. London, England. 1931

With equal passion I have sought knowledge. I have wished to understand the hearts of men. I have wished to know why the stars shine. And I have tried to apprehend the Pythagorean power by which numbers holds sway above the flux. A little of this, but not much, I have achieved.

*The Autobiography of Bertrand Russell*

Prologue (pp. 3–4)

Little, Brown & Company. Boston, Massachusetts, USA. 1967

Knowledge, everywhere, is coming to be regarded not as a good in itself, or as a means of creating a broad and humane outlook on life in general, but as merely an ingredient in technical skill.

*The Will to Doubt*

“Useless” Knowledge (p. 72)

The Wisdom Library. New York, New York, USA. 1958

We know very little, and yet it is astonishing that we know so much, and still more astonishing that so little knowledge can give us so much power.

*ABC of Relativity*

Chapter 15 (p. 155)

Routledge. London, England. 1997

**Sagan, Carl** 1934–96

American astronomer and author

In science it often happens that scientists say, “You know that’s a really good argument; my position is mistaken,” and then they would actually change their minds and you never hear that old view from them again. They really do it. It doesn’t happen as often as it should, because scientists are human and change is sometimes painful. But it happens every day. I cannot recall the last time something like that happened in politics or religion.

*1987 Committee for Scientific Investigation of Claims of the Paranormal*  
Keynote Address

In a way, science might be described as paranoid thinking applied to Nature: we are looking for natural conspiracies, for connections among apparently disparate data.

*The Dragons of Eden: Speculations on the Evolution of Human Intelligence*

Chapter 7 (p. 183)

Random House, Inc. New York, New York, USA. 1977

**Saint Avvaiyar**

No biographical data available

What we have learnt is like a handful of Earth,  
While what we have yet to learn is like the whole World.

In an article by M. Blumer

*Angewandte Chemie International Edition in English*, Volume 14, 1975 (p. 507)

**Samuelson, Bengt, I.** 1934–

Swedish physiological chemist

We are just in the beginning of gathering knowledge about man and his environment. We can hardly comprehend the enormous possibilities that are inherent in discovering the structure and function of nature from the inner space of particles and atoms to the cells of the human body as well as the outer space of stars and galaxies. To use the new knowledge in technical and medical developments to combat poverty and disease throughout the world is indeed a challenge.

*Les Prix Nobel. The Nobel Prizes in 1982*

Nobel banquet speech for award received in 1982

Nobel Foundation. Stockholm, Sweden. 1983

**Sandeman, George** 1863–1952

Spanish-born American philosopher

There are no chasms in science, and so long as knowledge is man’s knowledge, it is one. The world is not made in compartments answering to university lectureships.

*Problems of Biology*

Chapter I (p. 12)

Swan Sonnenschein & Co., Ltd. London, England. 1896

**Santayana, George (Jorge Agustín Nicolás**

**Ruiz de Santillana)** 1863–1952

Spanish-born American philosopher

Science, then is the alternative consideration of common experience; it is common knowledge extended and refined.

*The Life of Reason or The Phases of Human Progress*

Part V, Chapter I (p. 393)

Charles Scribner's Sons. New York, New York, USA. 1953

**Seton, Ernest Thompson** 1860–1946

Naturalist and writer

A knowledge of animals doubles the interest of an ordinary country ramble – and the more we learn their ways, the more glimpses we will likely get of them!

In William H. Carr

*The Stir of Nature*

Chapter Two (p. 27)

Oxford University Press, Inc. New York, New York, USA. 1930

**Severinus, Petrus** 1540–1602

Swedish anatomist

...sell your lands, your house, your clothes and your jewelry; burn up your books. On the other hand, buy yourselves stout shoes, travel to the mountains, search the valleys, the deserts, the shores of the sea, and the deepest depressions of the earth; note with care the distinctions between animals, the differences of plants, the various kinds of minerals, the properties and mode of origin of everything that exists. Be not ashamed to study diligently the astronomy and terrestrial philosophy of the peasantry. Lastly, purchase coal, build furnaces, watch and operate with the fire without wearying. In this way and no other, you will arrive at a knowledge of things and their properties.

In Allen G. Debus

*The French Paracelsians*

Chapter 1 (p. 8)

Cambridge University Press. Cambridge, England. 1991

**Seward, John**

No biographical data available

Let us have the mind and the mind's-workings, not the remains of earnest thought which has been frittered away by a long dreary course of preparatory study, by which all life has been evaporated. Never forget that there is in the wide river of nature something which everybody who has a rod and line may catch, precious things which everyone may dive for.

The Purpose and Tendency of Early Italian Art

*The Germ*, Volume 2, February, 1850 (p. 60)

**Shelley, Mary Wollstonecraft** 1797–1851

English Romantic writer

You seek for knowledge and wisdom, as I once did; and I ardently hope that the gratification of your wishes may not be a serpent to sting you, as mine has been.

*Frankenstein: Or, The Modern Prometheus*

Preface

Running Press. Philadelphia, Pennsylvania, USA. 1990

Oh what a strange nature is knowledge! It clings to the mind, when it has once seized on it, like a lichen on the rock.

*The Novels and Selected Works of Mary Shelly* (Volume 1)

*Frankenstein*

Volume 2, Chapter V (p. 90)

William Pickering. London, England. 1996

**Shermer, Michael** 1954–

American science writer

Science is not the affirmation of a set of beliefs but a process of inquiry aimed at building a testable body of knowledge constantly open to rejection or confirmation. In science, knowledge is fluid and certainty fleeting. That is at the heart of its limitations. It is also its greatest strength.

*Why People Believe Weird Things: Pseudoscience, Superstition, and*

*Other Confusions of Our Time*

Part 2, Chapter 8 (p. 124)

Henry Holt & Company. New York, New York, USA. 2002

**Sillman, Benjamin** 1779–1864

American chemist and geologist

Knowledge is nothing but the just and full comprehension of the real nature of things, physical, intellectual, and moral; it is co-existence with the universe of being; reaching back to the dawn of time, and forward to its consummation.

*An Introductory Lecture* (p. 47)

Printed by Hezekiah Howe. New Haven, Connecticut, USA. 1828

**Silver, Brian L.**

Israeli professor of physical chemistry

...at the borders of our knowledge we run into real complexity, into questions that challenge our ability to define the nature of reality.

*The Ascent of Science*

Preface (p. xiv)

Solomon Press Book. New York, New York, USA. 1998

**Smiles, Samuel** 1812–1904

Scottish author and reformer

Human knowledge is but an accumulation of small facts, made by successive generations of men, the little bits of knowledge and experience carefully treasured up by them growing at length into a mighty pyramid.

*Self-Help*

Chapter V (p. 122)

John Murray. London, England. 1876

**Smith, Henry John Stephen** 1826–83

Irish mathematician

...the bond of union among the physical sciences is the mathematical spirit and the mathematical method which pervade them.... [O]ur knowledge of nature, as it advances, continuously resolves differences of quality

into differences of quantity. All exact reasoning – indeed all reasoning – about quantity, is mathematical reasoning; and thus as our knowledge increases that portion of it which becomes mathematical increases at a still more rapid rate.

In J.W.L. Glaisher

*The Collected Mathematical Papers of Henry John Stephen Smith*  
(Volume 2)

Appendix I (p. 683)

At The Clarendon Press. Oxford, England. 1894

**Smith, Logan Pearsall** 1865–1946  
American author

I know too much; I have stuffed too many of the facts of History and Science into my intellectuals. My eyes have grown dim over books; believing in geological periods, cave dwellers, Chinese Dynasties, and the fixed stars has prematurely aged me.

*Trivia*

Paul P. Appel, Publisher. Mount Vernon, New York, USA. 1982

**Stenger, Victor J.** 1935–  
American physicist

I have learned that obtaining new knowledge is not easy and that we shouldn't expect it to be easy. All the easy stuff was discovered a long time ago. Today, new knowledge is accumulated only through the greatest effort and concentration of resources, often by teams of hundreds of scientists.

*Physics and Psychics: The Search for a World Beyond the Senses*

Preface (p. 10)

Prometheus Books. Buffalo, New York, USA. 1990

**Sterne, Laurence** 1713–68  
English novelist and humorist

Knowledge, like matter, he would affirm, was divisible in infinitum; – that the grains and scruples were as much a part of it as the gravitation of the whole world.

*The Life and Opinions of Tristram Shandy, Gentleman and a Sentimental Journey Through France and Italy* (Volume 1)

Chapter XIX (p. 130)

Macmillan & Company Ltd. London, England. 1900

**Stewart, Ian** 1945–  
English mathematician and science writer

I may not understand it, but it sure looks important to me.

*Does God Play Dice?* (2nd edition)

Chapter 6 (p. 109)

Blackwell Publishing Ltd. Malden, Massachusetts, USA. 2002

**Sturgis, Russell** 1836–1909  
American architect

It is very easy to hinder one's growth in knowledge by being too ready to decide.

*How to Judge Architecture: A Popular Guide to the Appreciation of Buildings*

Chapter I (p. 11)

The Baker & Taylor Co. New York, New York, USA. 1903

**Sullivan, John William Navin** 1886–1937  
Irish mathematician

Knowledge for the sake of knowledge, as the history of science proves, is an aim with an irresistible fascination for mankind, and which needs no defense. The mere fact that science does, to a great extent, gratify our intellectual curiosity, is a sufficient reason for its existence.

*The Limitations of Science*

Chapter 7, Section 3 (p. 164)

New American Library. New York, New York, USA. 1956

**Swift, Jonathan** 1667–1745  
Irish-born English writer

Erect your schemes with as much method and skill as you please; yet if the materials be...spun out of your own entrails...the edifice will conclude at last in cobwebs.... As for us the ancients, we are content with the bee to pretend to nothing of our own, beyond our wings and our voice, that is to say, our flights and our language. For the rest, whatever we have got, has been by infinite labour and search, and ranging through every corner of nature.

*Gulliver's Travels, the Tale of a Tub, Battle of the Books, etc.*

The Battle of the Books (p. 554)

Oxford University Press, Inc. London, England. 1929

**Synge, John L.** 1897–1995  
Irish mathematician and physicist

Knowledge is alive. It creeps, it grows, it crawls, it jumps. It never stays quite still. We add to it. We tear it in pieces. We put it together again, and then it is a different knowledge.

*Kandelman's Krim*

Chapter Four (p. 85)

Jonathan Cape. London, England. 1957

**Szent-Györgyi, Albert** 1893–1986  
Hungarian-born American biochemist

Knowledge is a sacred cow, and my problem will be how we can milk her while keeping clear of her horns.

Teaching and the Expanding Knowledge

*Science*, Volume 146, Number 3649, 4 December, 1964 (p. 1278)

**Tennyson, Alfred (Lord)** 1809–92  
English poet

Knowledge comes, but wisdom lingers.

*Alfred Tennyson's Poetical Works*

Locksley Hall, Stanza 72

Oxford University Press, Inc. London, England. 1953

And this grey spirit yearning in desire,  
To follow knowledge like a sinking star, beyond the  
utmost bound of human thought.

*Alfred Tennyson's Poetical Works*

Ulysses, l. 30–31

Oxford University Press, Inc. London, England. 1953

**Thompson, Joseph Parrish**  
No biographical data available

The physicist might as well think to confine the atmosphere within the receiver of his air-pump, the chemist to compress the rivers into his retort, as to monopolize the term knowledge by the limitations of his particular science.

*American Comments on European Questions, International and Religious*

Chapter IX (p. 195)

Houghton Mifflin & Co. New York, New York, USA. 1884

**Thomson, Sir George Paget** 1892–1975  
English physicist

Science is knowledge which, in principle at least, is public in the sense that it may be shared by many, unlike private personal experiences such as dreams or pain. This suggests a preference for statements which can be made in a form valid for large classes of possible observers.

*The Inspiration of Science*

Introduction (p. 6)

Oxford University Press, Inc. London, England. 1961

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

Strictly speaking there is no such thing as elementary knowledge. There is always a chasm between knowledge and ignorance which the steps of science can never pass.

In Robert Sattelmeyer (ed.)

*Journal (Volume 2: 1842–1848)* (p. 91)

Princeton University Press. Princeton, New Jersey, USA. 1984

The knowledge of an unlearned man is living & luxuriant like a forest – but covered with mosses & lichens and for the most part inaccessible & going to waste – the knowledge of the man of science is like timber collected in yards for public works, which still supports a green sprout here & there – but even this is liable to dry rot.

*Journal (Volume 3: 1848–1851)*

January 7, 1851 (p. 174)

Princeton University Press. Princeton, New Jersey, USA. 1981

My desire for knowledge is intermittent; but my desire to bathe my head in atmospheres unknown to my feet is perennial and constant. The highest that we can attain to is not Knowledge, but Sympathy with Intelligence. I do not know that this higher knowledge amounts to anything more definite than a novel and grand surprise on a sudden revelation of the insufficiency of all that we called Knowledge before – a discovery that there are more

things in heaven and earth than are dreamed of in our philosophy. It is the lighting up of the mist by the sun.

*The Writings of Henry David Thoreau* (Volume 9)

*Walking* (p. 294)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

Such is always the pursuit of knowledge. The celestial fruits, the golden apples of the Hesperides, are ever guarded by a hundred-headed dragon which never sleeps, so that it is an Herculean labor to pluck them.

*The Writings of Henry David Thoreau* (Volume 9)

*Wild Apples* (p. 377)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

### **Timiryazev, K. A.**

Russian botanist

The select who engage in science must look upon knowledge as a treasure entrusted to their care, but belonging to the whole people.

Compiled by V.V. Vorontsov

*Words of the Wise: A Book of Russian Quotations*

Translated by Vic Schneiererson

Progress Publishers. Moscow, Russia. 1979

Knowledge considered as a means to an end is art; knowledge considered as an end in itself is science.

Translated by Anna Sheremeteva

*Die Sinne der Pflanzen*

Chapter I (p. 7)

Longmans, Green & Co. London, England. 1912

### **Tucker, Karen**

No biographical data available

As the circle of knowledge expands into the unknown, the boundary between the known and unknown also expands.... Speculating and predicting what lies beyond the boundary is fascinating. Finding out is even more fascinating.

*Revealing the Universe*

Chapter 26 (p. 262)

Harvard University Press. Cambridge, Massachusetts, USA. 2001

### **Tyndall, John** 1820–93

Irish-born English physicist

He [the researcher] ponders the knowledge he possesses and tries to push it further, he guesses and checks his

guess, he conjectures and confirms or explodes his conjecture. These guesses and conjectures are by no means leaps in the dark; for knowledge once gained casts a faint light beyond its own immediate boundaries.

*Fragments of Science for Unscientific People*

Chapter VI (p. 110)

D. Appleton & Co. New York, New York, USA. 1875

In his efforts to cross the common bourne of the known and the unknown, the effective force of the man of science must depend, to a great extent, upon his acquired knowledge.

*Fragments of Science: A Series of Detached Essays, Addresses, and Reviews*

Chapter V (p. 132)

D. Appleton & Co. New York, New York, USA. 1897

The centrifugal form in which knowledge, as a whole, advances, spreading ever wider on all sides, is due in reality to the exertions of individuals, each of whom directs his efforts, more or less, along a single line.

*Fragments of Science*

Part One

A Lecture to School Masters (p. 353)

P.F. Collier & Son. New York, New York, USA. 1901

### **van Leeuwenhoek, Antony** 1632–1723

Dutch biology researcher and microscope developer

...my work, which I've done for a long time, was not pursued in order to gain the praise I now enjoy, but chiefly from a craving after knowledge, which I notice resides in me more than in most other men. And therewithal, whenever I found out anything remarkable, I have thought it my duty to put down my discovery on paper, so that all ingenious people might be informed thereof.

In Julia A Ribes, Kay Elder and Doris J. Baker

*Infections, Infertility, and Assisted Reproduction*

Letter of June 12, 1716 (p. 3)

Cambridge University Press. Cambridge, England. 2004

### **von Baeyer, Hans Christian** 1938–

German-born physicist and author

Field guides are instruments of the pleasure of pure knowledge.

Rainbows, Whirlpools, and Clouds

*The Sciences*, Volume 24, Number 4, July/August, 1984 (p. 24)

### **von Buch, L.**

No biographical data available

It is hard to say when knowledge of any particular natural body began and to whom this knowledge must be ascribed. Is it the one who first raised the body from the mass of the unknown or he who first perceived the special nature and individuality of this body or he who first coined a special name for it? Obviously, one would not opt for the finder nor for he who gave it its name but for the naturalist who first showed how its special characteristic might be

recognized and whereby the creature is to be essentially separated and distinguished from all similar ones. But this knowledge only emerges very slowly and gradually and is obscured by many other things which, in the course of time, have to state at which point in time the first discovery of a product of nature is to be sited.

In Rudolf Daber and Jochen Helms (eds.)

*Fossils: The Oldest Treasures That Ever Lived*

Only a Slab of Transitional Limestone (p. 40)

T.H.F. Publications, Inc., Neptune City, New Jersey, USA. 1985

German poet, novelist, playwright, and natural philosopher

...how one gropes and falters when one wants to dedicate himself to knowledge, how in the sciences one tends to take the back for the front and the bottom for the top, this is to be presented in the history of color theory, which by treating a specific realm, must present symbolically the destiny of many other human efforts.

In Karl J. Fink

*Goethe's History of Science*

Chapter 6 (p. 85)

Cambridge University Press. Cambridge, England. 1991

...the fine thread, which wafts and woofs through the web of knowledge, through the sciences in all periods, even through the darkest and most confusing ones, is drawn by individuals.

In Karl J. Fink

*Goethe's History of Science*

Chapter 7 (p. 93)

Cambridge University Press. Cambridge, England. 1991

### **von Helmholtz, Hermann** 1821–94

German scientist and philosopher

...our knowledge is not to lie dormant in the shape of catalogues. The very fact that we must carry it about in black and white shows that our intellectual mastery of it is incomplete. It is not enough to be acquainted with the facts; scientific knowledge begins only when their laws and their causes are unveiled.

In David Cahan (ed.)

*Science and Culture: Popular and Philosophical Essays*

On the Relation of Natural Science to Science in General

Academical Discourse, November 22, 1862 (p. 83)

The University of Chicago Press. Chicago, Illinois, USA. 1995

We are convinced that whatever contributes to the knowledge of the forces of nature or the powers of the human mind is worth cherishing, and may, in its own due time, bear practical fruit, very often where we should least have expected it.

Translated by E. Atkinson

*Popular Lectures on Scientific Subjects*

First Series

On the Relation of Natural Science to General Science (p. 28)

D. Appleton & Co. New York, New York, USA. 1897

To flee into an ideal world is a false resource of transient success; it only facilitates the play of the adversary; and when knowledge only reflects itself, it becomes unsubstantial and empty, or resolves itself into illusions and phrase.

Translated by E. Atkinson

*Popular Lectures on Scientific Subjects*

Second Series

Gustav Magmus

Longmans, Green & Co. London, England. 1903

### **von Humboldt, Alexander** 1769–1859

German naturalist and explorer

Those who by the light of history should trace back through past ages the progress of physical knowledge to its early and remote sources, would learn how for thousands of years the human mind has laboured to lay hold of the sure thread of the invariability of natural laws, amid the perplexities of ceaseless change; and in so doing has gradually conquered, so to speak, great part of the physical universe.

*Cosmos: A Sketch of a Physical Description of the Universe*

Introduction (p. 4)

Longman, Brown, Green & Longmans. London, England. 1849

At the limits of circumscribed knowledge, as from some lofty island shore, the eye delights to penetrate to distant regions.

Translated by E. C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe (Volume 1)*

General Review of Natural Phenomena (p. 81)

Harper & Brothers Publishers. New York, New York, USA. 1858

### **von Liebig, Justus** 1803–73

German organic chemist

As the human mind advances in knowledge, from whatever source that knowledge may be derived, all its powers are strengthened and elevated. The acquisition of a new truth is equivalent to a new sense, enabling us now to perceive and recognise innumerable phenomena which remain invisible or concealed to others, as they formerly were to ourselves.

In John Blyth

*Familiar Letters on Chemistry* (4th edition)

Letter 1 (p. 2)

Walton & Maberly. London, England. 1859

### **Waddington, Conrad Hal** 1905–75

British biologist and paleontologist

Scientific knowledge and understanding is a communal achievement, the sum of a multitude of contributions from many different people. Any individual may feel a certain justifiable pride if he knows that he has added one brick to the structure.

*The Scientific Attitude*

Science's Failure and Success (p. 62)

Penguin Books. Middlesex, England. 1941

**Walker, John** 1731–1803

English minister and educator

The objects of nature themselves must be sedulously examined in their native state, the fields and the mountains must be traversed, the woods and the waters must be explored, the ocean must be fathomed and its shores scrutinized by everyone that would become proficient in natural knowledge.... The way to knowledge of natural history is to go to the fields, the mountains, the oceans, and to observe, collect, identify, experiment and study.

*Lectures on Geology: Including Hydrography, Mineralogy, and Meteorology with an Introduction to Biology*

Biographical Introduction (p. xvii)

The University of Chicago Press. Chicago, Illinois, USA. 1966

**Wallace, Alfred Russel** 1823–1913

English humanist, naturalist, and geographer

He who has extended his inquiries into the varied phenomena of nature learns to despise no fact, however small, and to consider the most apparently insignificant and common occurrences as much in need of explanation as those of a grander and more imposing character.

*My Life*

Chapter XIV (p. 202)

Chapman &amp; Hall. London, England. 1905

Can we believe that we are fulfilling the purpose of our existence while so many of the wonders and beauties of the creation remain unnoticed around us? While so much of the mystery which man has been able to penetrate, however imperfectly, is still all dark to us? While so many of the laws which govern the universe and which influence our lives are, by us, unknown and uncared for? And this not because we want the power, but the will, to acquaint ourselves with them. Can we think it right that, with the key to so much that we ought to know, and that we should be the better for knowing, in our possession, we seek not to open the door, but allow this great store of mental wealth to lie unused, producing no return to us, while our highest powers and capacities rust for want of use?

*My Life*

Chapter XIV (p. 203)

Chapman &amp; Hall. London, England. 1905

How little should we know had the knowledge acquired by each preceding age died with it! How blindly should we grope our way in the same obscurity as did our ancestors, pursue the same phantoms, make the same fatal blunders, encounter the same perils, in order to purchase the same truths which had been already acquired by the same process, and lost again and again in bygone ages!

*My Life*

Chapter XIV (p. 204)

Chapman &amp; Hall. London, England. 1905

Is it not fitting that, as intellectual beings with such high powers, we should each of us acquire a knowledge of what past generations have taught us, so that, should the

opportunity occur, we may be able to add somewhat, however small, to the fund of instruction for posterity?

*My Life*

Chapter XIV (p. 204)

Chapman &amp; Hall. London, England. 1905

...can any reflecting mind have a doubt that, by improving to the utmost the nobler faculties of our nature in this world, we shall be the better fitted to enter upon and enjoy whatever new state of being the future may have in store for us?

*My Life*

Chapter XIV (p. 204)

Chapman &amp; Hall. London, England. 1905

...our horizon ever widens, the limits to our advance seem more distant than ever, and there seems nothing too noble, too exalted, too marvelous, for the ever-increasing knowledge of future generations to attain to.

*My Life*

Chapter XIV (p. 204)

Chapman &amp; Hall. London, England. 1905

**Waugh, John Hugh W.**

No biographical data available

In an age distinguished, beyond example, for utilitarian enterprise, rapid accomplishment, and signal success, it is not altogether surprising that we should be prone to connect results with the more immediate causes that produce them; and, in our possibly trite familiarity with the individual agents, and principles concerned in any new and profitable combination of them, towards some practical end, that we should too frequently fail to recognise the more remote springs of our knowledge and the sources of our power – that while beholding some felicitous combination, it may be the lofty achievements of the immediate inventor, and as yet dazzled with the splendour and brilliancy of his laurels, we should remain forgetful of the claims of those whose glory it may have been to have furnished his means, or from the recesses of science to have elaborated the elements of his triumph – of those who, while busied in their own congenial walks, regard it as their chiefest and their proudest boast, to cultivate knowledge, and yet for knowledge sake.

*Mathematical Essays*

Essay I (p. 7)

Johnstone &amp; Hunter. Edinburgh, Scotland. 1854

Knowledge, as the gift of Science, can certainly never be either too highly or too gratefully prized; nevertheless, it only becomes power when developed in practice – when beneficially applied.

*Mathematical Essays*

Essay I (p. 14)

Johnstone &amp; Hunter. Edinburgh, Scotland. 1854

**Weisskopf, Victor Frederick** 1908–2002

Austrian-American physicist

Knowledge has to be sucked into the brain, not pushed into it.

*The Privilege of Being a Physicist*

Chapter 4 (p. 31)

W.H. Freeman & Company. New York, New York, USA. 1989

**Weyl, Hermann** 1885–1955

German mathematician

At the basis of all knowledge there lies: (1) *Intuition*, mind's ordinary act of "seeing" what is given to him... (2) *Understanding and expression*. Even in Hilbert's formalized mathematics I must understand the directions given me by communication in words for how to handle the symbols and formulas. (3) *Thinking the possible*. In science a very stringent form of it is exercised when, by thinking out the possibilities of the mathematical game, we try to make sure that the game will never lead to a contradiction; a much freer form is the imagination by which theories are conceived.

In Raymond George Ayoub

*Musings of the Masters: An Anthology of Mathematical Reflections*

The Unity of Knowledge (p. 76)

Mathematical Association of America. Washington, D.C. 2004

**Whately, Richard** 1787–1863

English theologian

The dangers of knowledge are not to be compared with the dangers of ignorance. Man is more likely to miss his way in darkness than in twilight; in twilight than in full sun.

*Thoughts and Apophthegms*

Section VI (p. 167)

Lindsay & Blakiston. Philadelphia, Pennsylvania, USA. 1856

The analytical method is the best to introduce knowledge, the synthetical to perfect and retain it.

**Wilson, Edward O.** 1929–

American biologist and author

New knowledge is not science until it is made social. The scientific culture can be defined as new verifiable knowledge secured and distributed with fair credit meticulously given.

*Naturalist*

The Forms of Things Unknown (p. 210)

Island Press. Washington, D.C. 1994

Now to the heart of wonder. Because species diversity was created prior to humanity, and because we evolved within it, we have never fathomed its limits. As a consequence, the living world is the natural domain of the most restless and paradoxical part of the human spirit.

In John A Murray

*The Islands and the Sea* (p. 265)

Oxford University Press, Inc. Oxford, England. 1991

**Wright, Frances** 1795–1852

Scottish-born American reformer

Knowledge signifies things known. Where there are no things known, there is no knowledge. Where there are no things to be known, there can be no knowledge. We have observed that every science, that is, every branch of knowledge, is compounded of certain facts, of which our sensations furnish the evidence. Where no such evidence is supplied, we are without data; we are without first premises; and when, without these, we attempt to build up a science, we do as those who raise edifices without foundations. And what do such builders construct? Castles in the air.

*Course of Popular Lectures*

Lecture 4

Published by the author. Philadelphia, Pennsylvania, USA. 1836

**Ziman, John M.** 1925–2005

English physicist

Scientific knowledge is not created solely by the piecemeal mining of discrete facts by uniformly accurate and reliable individual scientific investigations. The process of criticism and evaluation, of analysis and synthesis, are essential to the whole system. It is impossible for each one of us to be continually aware of all that is going on around us, so that we can immediately decide the significance of every new paper that is published. The job of making such judgments must therefore be delegated to the best and wisest among us, who speak, not with their own personal voices, but on behalf of the whole community of Science. Anarchy is as much a danger in that community as in any tribe or nation. It is impossible for the consensus – public knowledge – to be voiced at all, unless it is channeled through the minds of selected persons, and restated in their words for all to hear.

*Public Knowledge: An Essay Concerning the Social Dimension of Science*

Chapter 7 (pp. 136–137)

Cambridge University Press. Cambridge, England. 1968

**KNOWLEDGE, PHYSICAL****Jeans, Sir James Hopwood** 1877–1946

English physicist and mathematician

We each live our mental life in a prison-house from which there is no escape. It is our body; and its only communication with the outer world is through our sense-organs – eyes, ears, etc. These form windows through which we can look out on to the outer world and acquire knowledge of it. A man lacking all five senses could know nothing of this outer world, because he would have no means of contact with it; the whole content of his mind would be an expansion of what had been in it at birth.

*Physics and Philosophy*

Chapter I (p. 6)

The University Press. Cambridge, England. 1943

**KNOWLEDGE, SCIENTIFIC****Pollard, Bedford**

No biographical data available

...scientific knowledge is like a key to unlock a thousand hidden treasures, it is happily true that the unlearned and the unscientific mind may pass through the wide halls of nature and learn lessons as real and be touched as deeply, as is possible with the wisest professor in the world.

Spring Thoughts

*The British Friend*, May, 1894 (p. 130)**KNOWLEDGE, TREE OF****Haeckel, Ernst Heinrich Philipp****August** 1834–1919

German biologist and philosopher

Science has to pluck the blessed fruits from the tree of knowledge, unconcerned whether these conquests trench upon the poetical imaginings of faith or not.

**Brooks, William Keith** 1848–1908  
American zoologist

...is not the biology which restricts itself to the physical basis, and forgets the external world, like your play of 'Hamlet' without the Hamlet? Is not the biological laboratory which leaves out the ocean and the mountains and meadows a monstrous absurdity?

*The Foundations of Zoology* (p. 41)  
The Macmillan Co. New York, New York, USA. 1899

**Carhart, Henry Smith** 1844–1920  
American physicist

**Chute, Horatio Nelson**  
No biographical data available

A few years ago it seemed necessary to urge upon teachers the adoption of laboratory methods to illustrate the textbook; in not a few instances it would now seem almost necessary to urge the use of a text-book to render intelligible the chaotic work of the laboratory.

*The Elements of Physics*  
Preface (p. iv)  
Allyn & Bacon. Boston, Massachusetts, USA. 1897

**Ciardi, John** 1916–86  
American poet

To the laboratory then I went. What little right men they were exactly! Magicians of the microsecond precisely wired to what they cared to ask no questions of but such as their computers clicked and hummed.

It was a white-smocked, glass, and lightened Hell. And there Saint Particle the Septic sat lost in his horn-rimmed thoughts. A gentlest pose. But in the frame of one lens as I passed I saw an ogre's eye leap from his face.

Fragment

*Saturday Review*, April 30, 1966

**Dampier, Sir William Cecil** 1867–1952

English scientific writer

In the laboratory, as in practical life, there is neither room nor time for philosophic doubt. In periods of reflection, however, when considering the theoretical bearing of the results of our experiments, it is sometimes well to remember the limitation of our present certain knowledge, and the purely conceptual nature of our scheme of Natural Science when based merely on its own inductions.

*The Recent Development of Physical Science*

Chapter I (p. 44)

John Murray. London, England. 1904

**Darwin, Sir George Howard** 1845–1912

English astronomer and mathematician

Great laboratories have...a rather serious defect, in that they tend to make all but the very best students helpless, and thus to dwarf their powers of resource and inventiveness.

*The Tides and Kindred Phenomena in the Solar System*

Chapter II (p. 18)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1898

**Dewey, John** 1859–1952

American philosopher and educator

Many a student has acquired dexterity and skill in laboratory methods without its ever occurring to him that they have anything to do with constructing beliefs that are alone worthy of the title of knowledge.

Science as Subject-Matter and as Method

*Science*, N.S. Volume 31, Number 787, January 28, 1910 (p. 126)

**Drake, Daniel** 1785–1852

American physician

The laboratory is not more necessary for the study of chemistry, or a garden of plants for the study of botany, than a hospital for the study of practical medicine and surgery.

Introductory lecture

Medical College of Ohio, 1849

**Fischer, Martin H.** 1879–1962

German-American physician

All the world is a laboratory to the inquiring mind.

In Howard Fabing and Ray Marr

*Fischerisms*

C.C. Thomas. Springfield, Illinois, USA. 1944

A laboratory is only a place where one may better set up and control conditions.

In Howard Fabing and Ray Marr

*Fischerisms*

C.C. Thomas. Springfield, Illinois, USA. 1944

**Henry, William**

No biographical data available

A chemical laboratory, though extremely useful, and even essential, to all who embark extensively in the practice of chemistry, either as an art, or as a branch of liberal knowledge, is by no means required for the performance of those simple experiments which furnish the evidence of the fundamental truths of science. A room that is well lighted, easily ventilated, and destitute of any valuable furniture is all that is absolutely necessary for the purpose.

*The Elements of Experimental Chemistry* (Volume 1)

Part I, Chapter I (p. 27)

Thomas & Andres. Boston, Massachusetts, USA. 1814

**Hilger, Adam**

No biographical data available

I also remember Len Hibbard, another of the more senior staff members, remarking half in jest, half in earnest, that there were two ways of pronouncing the word "laboratory." In American usage the accent was on the first syllable; in English, on the second. "But it is clear", he continued, "that the accent should be on the 'labor', and not on the 'oratory'."

In Joan Freeman

*A Passion for Physics: The Story of a Woman Physicist*

Chapter 5. The Radar Days (p. 90)

Institute of Physics Publishing. Bristol, England. 1993

**Huxley, Thomas Henry** 1825–95

English biologist

In truth, the laboratory is the fore-court of the temple of philosophy; and whoso has not offered sacrifices and undergone purification there has little chance of admission into the sanctuary.

Conversation I (p. 14)

Grigg, Elliot & Company. Philadelphia, Pennsylvania, USA. 1848

**Kelvin, Lord William Thomson** 1824–1907

Scottish engineer, mathematician, and physicist

There is...one thing I feel strongly in respect to investigation in physical or chemical laboratories – it leaves no room for shady, doubtful distinctions between truth, half-truth, whole falsehood. In the laboratory everything tested or tried is found true or not.

In Sir Richard Arman Gregory

*Discovery; or, The Spirit and Service of Science*

Chapter II (p. 24)

Macmillan & Company Ltd. London, England. 1918

The laboratory of a scientific man is his place of work. The laboratory of the geologist and of the naturalist is the face of this beautiful world. The geologist's laboratory is the mountain, the ravine and the seashore. The naturalist and the botanist go to foreign lands, to study the wonders of nature, and describe and classify the results of their observations.

*Popular Lectures and Addresses* (Volume 2)

The Bangor Laboratories

Address

Physical and Chemical Laboratories in University College

Bangor, North Wales, February 2, 1885 (p. 476)

Macmillan & Company Ltd. London, England. 1894

**Lagen, Doug**

No biographical data available

The lab is my jeopardy, I cannot breathe.

It eateth my clothes with strong acids.

It destroyeth my soles.

It leadeth me into the paths of science for its own sake.

Yea, though I walk through the welter of stink and smells,  
I will fear not chemical, for it is oneness.

It provideth me a bench in the presence of fluorine.

It loadeth my day with toil.

My beaker runneth over. Surely bad tastes and odors  
shall follow me all the days of my life, and I shall dwell  
in the house of science forever.

The Lab

*Chemistry*, June, 1976 (p. 27)

**Lamb, J. C.**

No biographical data available

If you can make the vilest stinks invented  
And work in them from morn till late at night,

Or with your lot be perfectly contented

When you are asked to fool with dynamite;

If you can still remain quite calm and placid

When plant officials effervesce and fret,

Or being told to test a fuming acid

Can suck it through a 1-cc pipette:

...

If you can subjugate all thoughts of pleasure

And still retain a meed of self-esteem;

If you can give your few short hours of leisure

To keeping up with every modern theme;

If you donate your every waking minute

And seek your sole reward in duty done,

Yours is the Lab. And everything that's in it,

And what is more, you're welcome to it, Son.

*Industrial and Engineering Chemistry: News Edition*, Volume 10, Number 11, June, 1932 (p. 152)

**Langer, Susanne Katherina Knauth** 1895–1985

American philosopher

The men in the laboratory have departed so far from the old forms of experimentation – typified by Galileo's weights and Franklin's kite – that they cannot be said to observe the actual objects of their curiosity at all; instead, they are watching index needles, revolving drums, and sensitive plates.

*Philosophy in a New Key: A Study in the Symbolism of Reason, Rite, and Art*

Chapter I (p. 20)

Harvard University Press. Cambridge, Massachusetts, USA. 1942

**National Research Council (USA)**

The research laboratory, including the theoretical physicist's blackboard or lunch table, provides the kind of freewheeling environment in which an idea can be followed for a time to see where it leads.

*Physics in Perspective* (Volume 1)

Chapter 3 (p. 76)

National Academy of Sciences

Washington, D.C. 1972

**Osler, Sir William** 1849–1919

Canadian physician and professor of medicine

Worse still is the “lock and key” laboratory in which suspicion and distrust reign, and everyone is jealous and fearful lest the other should know of or find out about his work.

*Aequanimitas, with Other Addresses to Medical Students, Nurses, and Practitioners of Medicine*

Chauvinism in Medicine (p. 280)

The Blakiston Company. Philadelphia, Pennsylvania, USA. 1932

**Pasteur, Louis** 1822–95

French chemist

...I implore you, take some interest in those sacred dwellings meaningfully described as laboratories. Ask that they may be multiplied and completed. They are the temples of the future, of riches and of comfort. There humanity grows greater, better, stronger; there she can learn to read the works of Nature, works of progress and universal harmony, while humanity's own works are too often those of barbarism, of fanaticism and of destruction.

In R. Vallery-Radot

Government Printing Office. Washington, D.C. 1909

## LABORATORY WORK

**Cooley, LeRoy Clark** 1833–1916  
American chemist

The educational value of laboratory work depends entirely on the way in which it is done. It rewards the student just in proportion to the care he bestows on it, and the effort which he makes to secure accurate results.

*Physics: The Student's Manual for the Study Room and Laboratory*

Laboratory Work (p. 6)

American Book Co. New York, New York, USA. 1897

**Millikan, Robert Andrews** 1868–1953  
American physicist

The most serious criticism which can be urged against modern laboratory work in Physics is that it often degenerates into a servile following of directions, and thus loses all save a purely manipulative value.

*Mechanics, Molecular Physics and Heat: A Twelve Weeks' College Course*

Preface (p. 3)

Ginn & Co. Boston, Massachusetts, USA. 1903

## LABYRINTH

**Borges, Jorge Luis** 1899–1986  
Argentine writer

I thought of a labyrinth of labyrinths, of one sinuous spreading labyrinth that would encompass the past and the future and in some way involve the stars.

In Donald A. Yates & James E. Irby (eds.)

*Labyrinths: Short Stories & Other Writings*

The Garden of Forking Paths (p. 23)

A New Direction Book. New York, New York, USA. 1964

**LAKE**

**Hamerton, Philip Gilbert** 1834–94  
English artist and art critic

There are few things in the world so dependent upon mere size as lakes are for the effect which they produce upon the mind. In buildings, the effect increases with the size, and however large a building may be, it still produces the effect of being a building. A large castle is a castle still, a vast cathedral is a cathedral still. So in human genius a great poet is still a poet, his poetical greatness does not promote him into another order of humanity; but however paradoxical it may seem, a great lake by the mere fact of its greatness loses all the characteristics of a lake, and becomes an inland sea.

*Landscape*  
Chapter XXI (p. 220)  
Roberts Brothers. Boston, Massachusetts, USA. 1885

**Lubbock, John, First Baron Avebury** 1834–1919  
English banker, politician, biologist, and archaeologist

Lakes in fine scenery are like silver ornaments on a beautiful dress, like liquid gems in a rich setting, or bright eyes in a lovely face.

*The Beauties of Nature and the Wonders of the World We Live In*  
Chapter VII (p. 252)  
Macmillan & Company Ltd. London, England. 1903

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

A lake is the landscape's most beautiful and expressive feature. It is earth's eye...

*The Writings of Henry David Thoreau* (Volume 2)  
*Walden*  
Chapter IX (p. 291)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

**LAKE BED**

**Powell, J. R.**

It [the dry lake bed] is a desert to the agriculturist, a mine to the paleontologist, and a paradise to the artist.

*Canyons of the Colorado*  
Chapter III (p. 38)  
BiblioBazaar. 2006

**LAND**

**Agassiz, Jean Louis Rodolphe** 1807–73  
Swiss-born American naturalist, geologist, and teacher

To me it seems, that to look on the first land that was ever lifted above the waste of waters, to follow the shore where the earliest animals and plants were created when

the thought of God first expressed itself in organic forms, to hold in one's hand a bit of stone from an old sea-beach, hardened into rock thousands of centuries ago, and studied with the beings that once crept upon its surface or were stranded there by some retreating wave, is even of deeper interest to men than the relics of their own race, for these things tell more directly of the thoughts and creative acts of God.

*Geological Sketches*  
Chapter II (pp. 29–30)  
Ticknor & Fields. Boston, Massachusetts, USA. 1866

**Harrington, Thomas**  
No biographical data available

The Land we inhabit affords the ingenious and philosophic mind infinite matter for contemplation.

*Science Improved or the Theory of the Universe*  
Section I (p. 9)  
Printed for the Author. London, England. 1774

**Huxley, Thomas Henry** 1825–95  
English biologist

Direct proof may be given that some parts of the land of the northern hemisphere are at this moment insensibly rising and others insensibly sinking; and there is indirect, but perfectly satisfactory, proof, that an enormous area now covered by the Pacific has been deepened thousands of feet, since the present inhabitants of that sea came into existence. Thus there is not a shadow of a reason for believing that the physical changes of the globe, in past times, have been effected by other than natural causes.

*Collected Essays* (Volume 8)  
*Discourses, Biological and Geological*  
On a Piece of Chalk (p. 34)  
Macmillan & Company Ltd. London, England. 1904

**Leopold, Aldo** 1886–1948  
American naturalist

Land... is not merely soil; it is a fountain of energy flowing through a circuit of soils, plants, and animals. Food chains are the living channels which conduct energy upward; death and decay return it to the soil. The circuit is not closed; some energy is dissipated in decay, some is added by absorption from the air, some is stored in the soils, peats, and long-lived forests; but it is a sustained circuit, like a slowly augmented revolving fund of life.

In Susan L. Flader and J. Baird Callicott  
*The River of the Mother of God*  
A Biotic View of Land (pp. 268–269)  
The University of Wisconsin Press. Madison, Wisconsin, USA. 1991

Land is soil, water, plants and animals. Each of the "organs" of land has meaning as a separate entity, just as fingers, toes, and teeth have.

In Susan L. Flader and J. Baird Callicott  
*The River of the Mother of God*  
Wherefore Wildlife Ecology? (p. 336)  
The University of Wisconsin Press. Madison, Wisconsin, USA. 1991

I am trying to teach you that his alphabet of “natural objects” (soils and rivers, birds and beasts) spells out a story, which he who runs may read – if he knows how. Once you learn to read the land, I have no fear of what you will do to it, or with it. And I know many pleasant things it will do to you.

In Susan L. Flader and J. Baird Callicott

*The River of the Mother of God*

Wherefore Wildlife Ecology? (p. 337)

The University of Wisconsin Press. Madison, Wisconsin, USA. 1991

### **Lyll, Sir Charles** 1797–1875

English geologist

...millions of our race are now supported by lands situated where deep seas prevailed in earlier ages. In many districts not yet occupied by man, land animals and forests now abound where the anchor once sunk into the oozy bottom.

*Principles of Geology* (Volume I) (3rd edition)

Book II, Part I, Chapter V (p. 373)

John Murray. London, England. 1834

### **Mills, Stephanie**

No biographical data available

Our behavior toward the land is an eloquent and detailed expression of our character, and the land is not incapable of reflecting these statements back.

*In Service of the Wild*

Prologue (p. 3)

Beacon Press. Boston, Massachusetts, USA. 1995

### **Steinbeck, John** 1902–68

American novelist

For nitrates are not the land, nor phosphates; and the length of fiber in the cotton is not the land. Carbon is not a man, nor salt nor water nor calcium. He is all of these, but he is much more, much more; and the land is so much more than its analysis. The man who is more than his chemistry, walking on the earth – that man who is more than his elements knows the land that is more than its analysis.

*The Grapes of Wrath* (p. 157)

The Viking Press. New York, New York, USA. 1939

### **The Bible (King James Version)**

And God said, Let there be a firmament in the midst of the waters, and let it divide the waters from the waters.

Genesis 1:6

## LANDSCAPE

### **Dodge, Richard Elwood**

No biographical data available

The great poets of the world have often attempted to depict in appealing phrases, more graphic than any of

the carefully selected and more detailed descriptions of the scientists, the striking features of the landscape that everyone knows but perhaps does not appreciate.

Man and His Geographic Environment

*Journal of Geography*, Volume 8, 1910 (p. 184)

### **Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

We can scarcely describe the beauty of a landscape as non-existent when there is no conscious being to witness it; but it is through consciousness that we can attribute a meaning to it.

*The Nature of the Physical World*

Chapter XII (p. 267)

The University Press. New York, New York, USA. 1929

### **Ehrlich, Gretel** 1946–

American travel writer

I like to think of landscape not as a fixed place but as a path that is unwinding before my eyes, under my feet. To see and know a place is a contemplative act. It means emptying our minds and letting what is there, in all its multiplicity and endless variety, come in.

*Legacy of Light*

Introduction, Landscape

Alfred A. Knopf. New York, New York, USA. 1987

### **Hamerton, Philip Gilbert** 1834–94

English artist and art critic

The land appertains to its lord, but the landscape belongs to him who, for the time being enjoys it.

*Landscape*

Chapter I (p. 12)

Roberts Brothers. Boston, Massachusetts, USA. 1885

### **Hilliard, George Stillman** 1808–79

American politician

The imaginative charm of the landscape does not disappear when we survey it from the geologist’s point of view; when we know what elemental forces, what mighty energies of wave and fire, have reared the pinnacled rock, have smoothed the level plain, have rounded the gentle slopes of the hills and torn open the mountain gates for the stream to pass through.

*The Relation of the Poet to His Age*

Discourse (p. 39)

Charles C. Little & James Brown. Boston, Massachusetts, USA. 1843

## LANGUAGE

### **Abbey, Edward** 1927–89

American environmentalist and nature writer

Language makes a mighty loose net with which to go fishing for simple facts, when facts are infinite.

*Desert Solitaire*

Author’s Introduction (p. x)

Ballantine Books. New York, New York, USA. 1968

**Author undetermined**

If you're anxious for to shine in the speculative line  
As a man of thought profound,  
You must vent exotic gabble that will flabbergast the  
rabble

By its awe-inspiring sound.

Bluff's Old Sweet Song

*The Pick and Hammer Club*, December 29, 1937 (p. 9)

**Barthes, Roland** 1915–80

French social and literary critic

As far as science is concerned language is simply an instrument, which it profits it to make as transparent and neutral as possible: it is subordinate to the matter of science (workings, hypotheses, results) which, so it is said, exists outside language and precedes it. On the one hand and first there is the content of the scientific message, which is everything; on the other hand and next, the verbal form responsible for expressing that content, which is nothing.

In Michael Lane (ed.)

*Introduction to Structuralism*

Science versus Literature (p. 411)

Basic Books. New York, New York, USA. 1970

**Bloomfield, Leonard** 1887–1949

American linguist

The use of language in science is specialized and peculiar. In a brief speech the scientist manages to say things which in ordinary language would require a vast amount of talk. His hearers respond with great accuracy and uniformity. The range and exactitude of scientific prediction exceed any cleverness of everyday life: the scientist's use of language is strangely effective and powerful. Along with systematic observation, it is this peculiar use of language which distinguishes science from non-scientific behavior.

Linguistic Aspects of Science

*International Encyclopedia of Unified Science*, Volume 1, Number 4 (p. 1)

The University of Chicago Press. Chicago, Illinois, USA. 1938.

**Bohr, Niels Henrik David** 1886–1962

Danish physicist

What is it that we human beings ultimately depend on? We depend on our words. We are suspended in language. Our task is to communicate experience and ideas to others. We must strive continually to extend the scope of our description, but in such a way that our messages do not thereby lose their objective or unambiguous character.

In Aage Petersen

The Philosophy of Niels Bohr

*Bulletin of the Atomic Scientists*, Volume 19, Number 7, September,

1963 (p. 10)

**Byron, George Gordon, 6th Baron Byron** 1788–1824

English Romantic poet and satirist

I linger yet with nature for the night  
Hath been to me a more familiar face  
Than that of man; and in her starry shade  
Of dim and solitary loveliness  
I learned the language of another world.

*The Complete Poetical Works of Byron*

Manfred

Act III, Scene iv

Houghton Mifflin Company. Boston, Massachusetts, USA. 1933

**Casimir, Hendrik B. G.** 1909–2000

Dutch physicist

The number of speakers of Broken English is so overwhelming and there are so many for whom B.E. is almost the only way of expressing themselves...that it is about time that Broken English be regarded as a language in its own right.

*Haphazard Reality: Half a Century of Science*

Chapter 4 (p. 122)

Harper & Row, Publishers. New York, New York, USA. 1983

**Cooke, Josiah Parsons** 1827–94

American chemist

Language is the medium of thought, and cannot be separated from it. He who would think well must have a good command of language, and he who has the best command of language I am almost tempted to say will think the best.

*Scientific Culture: And Other Essays* (2nd edition)

Scientific Culture (p. 21)

D. Appleton & Co. New York, New York, USA. 1855

**Daumal, René** 1908–44

French surrealist writer

It is...not enough for language to have clarity and content... It must also have a goal and an imperative. Otherwise from language we descend to chatter, from chatter to babble and from babble to confusion

*A Night of Serious Drinking*

Shambhala. Boulder, Colorado, USA. 1979

**Davy, Sir Humphry** 1778–1829

English chemist

The man of true genius, who studies science in consequence of its applications, pointing out to himself a definite end, will make use of all the instruments of investigation which are necessary for his purposes: and in the search of discovery, he will rather pursue the plans of his own mind than be limited by the artificial divisions of language.

*A Discourse, Introductory to a Course of Lectures on Chemistry* (pp.

10–11)

Press of the Royal Institution of Great Britain. London. 1802

In natural science there is one language universally intelligible, – the language of facts; it belongs to nature, and it is permanent as the objects of nature; it is the same to

the citizen of Paris and of London.

*The Collected Works of Sir Humphry Davy* (Volume 1)

Chapter VII (p. 235)  
The Grolier Society. London, England. 1907

**Duke of Argyll (George Douglas Campbell)** 1823–1900  
English statesman and writer on science, religion, and politics

Half the perplexities of men are traceable to obscurity of thought hiding and breeding under obscurity of language.

*The Reign of Law* (4th American edition)  
Chapter I (p. 2)  
George Routledge & Sons. New York, New York, USA. 1873

**Heisenberg, Werner Karl** 1901–76  
German physicist and philosopher

The point is we are bound up with a language, we are hanging in the language. If we want to do physics, we must describe our experiments and the results to other physicists, so that they can be verified or checked by others. At the same time, we know that the words we use to describe the experiments have only a limited range of applicability. That is a fundamental paradox which we have to confront. We cannot avoid it; we have simply to cope with it, to find what is the best thing we can do about it.

In Paul Buckley and F. David Peat  
*Glimpsing Reality: Ideas in Physics and the Link to Biology*  
Werner Heisenberg (p. 7)  
University of Toronto Press. Toronto, Ontario, Canada. 1996

**Hesse, Mary B.** 1924–  
English science historian

...there is an external world which can in principle be exhaustively described in scientific language. The scientist, as both observer and language-user, can capture the external facts of the world in propositions that are true if they correspond to the facts and false if they do not. Science is ideally a linguistic system in which true propositions are in one-to-one relation to facts, including facts that are not directly observed because they involve hidden entities or properties, or past events or far distant events. These hidden events are described in theories, and theories can be inferred from observation, that

is, the hidden explanatory mechanism of the world can be discovered from what is open to observation. Man as scientist is regarded as standing apart from the world and able to experiment and theorize about it objectively and dispassionately.

*Revolutions and Reconstructions in the Philosophy of Science*  
Introduction (p. vii)  
Indiana University Press. Bloomington, Indiana, USA. 1980

**Hinshelwood, Sir Cyril** 1897–1967  
English chemist

The creations of various men of science may be likened to pictures by artists of different schools, all conveying essential truth but in varied forms. The individual nature of its symbolism lays science open to the attack of those philosophers who like to question minutely the use of language in every statement. Men of science, although some of them play at this game themselves, tend on the whole to be impatient of purely semantic discussions and indeed most of them would probably feel that present-day linguistic philosophy has been not unjustly described as an affair of limited risks and small returns.

Science and Scientists  
*Nature*, Volume 207, Number 5001, September 4, 1965 (p. 1058)

**Huxley, Aldous** 1894–1963  
English writer and critic

Like the man of letters, the scientist finds it necessary to “give a purer sense to the words of the tribe.” But the purity of scientific language is not the same as the purity of literary language. The aim of the scientist is to say only one thing at a time, and to say it unambiguously and with the greatest possible clarity. To achieve this, he simplifies and jargonizes.

*Literature and Science*  
Chapter 5 (p. 12)  
Harper & Row, Publishers. New York, New York, USA. 1963

**Huxley, Thomas Henry** 1825–95  
English biologist

...every art is full of conceptions which are special to itself; and, as the use of language is to convey our conceptions to one another, language must supply signs for those conceptions.

*The Crayfish* (6th edition)  
Chapter I (p. 14)  
Kegan Paul, Trench & Trubner. London, England. 1896

**Johnson, Samuel** 1696–1772  
English critic, biographer, and essayist

I am not so lost in lexicography, as to forget that words are the daughters of earth, and that things are the sons of heaven. Language is only the instrument of science, and words are but the signs of ideas: I wish, however, that

the instrument might be less apt to decay, and that signs might be permanent, like the things which they denote.

*Dictionary of the English Language*

Introduction

Longmans, Green & Company. London, England. 1882

**Kistiakowsky, George B.** 1900–82

Russian American chemist

...science is today one of the few common languages of mankind; it can provide a basis for understanding and communication of ideas between people that is independent of political boundaries and ideologies.

Science and Foreign Affairs

*Bulletin of the Atomic Scientists*, Volume 16, Number 4, April, 1960 (p. 115)

**Laurent, Auguste** 1807–53

French chemist

For a language to be perfect, it is not sufficient that each substance, each idea, each modification of form, time, place, &c., should be represented by one word or by one invariable symbol; it is necessary in addition, both to aid the memory and to facilitate the operations of the mind, that analogous words should designate analogous substances, analogous ideas, and modifications of ideas, &c. It is thus that the words of our language represent to us, by similar terminations or augments, similar modifications of the ideas represented, as when we say, *Je vois, j'aperçois, je reqois; nous voyons, nous apercevons, nous recevons*. In like manner do chemists make use of the expressions sulphate, nitrate, chlorate, chloride, bromide, iodide, &c.

Translated by William Odling

*Chemical Method, Notation, Classification, & Nomenclature*

Part First, Section First

Printed for the Cavendish Society. 1855

**Lavoisier, Antoine Laurent** 1743–94

French chemist

The impossibility of separating the nomenclature of a science from the science itself is owing to this, that every branch of physical science must consist of three things: the series of facts which are the objects of the science, the ideas which represent these facts, and the words by which these ideas are expressed. Like three impressions of the same seal, the word ought to produce the idea, and the idea to be a picture of the fact.

In *Great Books of the Western World* (Volume 45)

*Elements of Chemistry*

Preface (p. 1)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...we cannot improve the language of any science without at the same time improving the science itself; neither can we, on the other hand, improve a science, without improving the language or nomenclature which belongs to it.

*Elements of Chemistry in a New Systematic Order*

Preface of the Author (p. xv)

Printed for William Creech. Edinburgh, Scotland. 1790

**Mach, Ernst** 1838–1916

Austrian physicist and philosopher

Language, with its helpmate, conceptual thought, by fixing the essential and rejecting the unessential, constructs its rigid pictures of the fluid world on the plan of a mosaic, at a sacrifice of exactness and fidelity but with a saving of tools and labor.

Translated by Thomas J. McCormack

*Popular Scientific Lectures* (2nd edition)

The Economical Nature of Physical Inquiry (p. 192)

The Open Court Publishing Co. Chicago, Illinois, USA. 1897

**Martin, Calvin Luther**

American historian

I thought of words as sculptors of space, as turn-keys: liberators or jailers of the powers about us.

*In the Spirit of the Earth*

Chapter 2 (p. 25)

The Johns Hopkins University Press. Baltimore, Maryland, USA. 1992

**McPhee, John** 1931–

American journalist and nonfiction writer

There was, to be sure, another side of the page – full of geological language of the sort that would have attracted Gilbert and Sullivan.

*Basin and Range* (p. 26)

Farrar, Straus, Giroux. New York, New York, USA. 1981

**Mellor, Joseph William** 1863–1938

Chemist

It is considered bad style to mix Latin and Greek root words and profiles. Consequently we usually try to keep Greek with Greek, and Latin with Latin. Thus, we say “diatomic,” not “biatomic”; “bimolecular,” not “dimolecular”; “bivalent,” not “divalent”; and “bivariant,” not “divariant”; because “atomic” is derived from a Greek word, while “molecular,” “variant,” and “valent,” are derived from Latin words. Here are, however, many hybrids universally recognized. For example, millimetre, centimetre, etc. Monovalent, divalent, etc., are also used at times in spite of their hybrid character. We cannot, therefore, always be “purists” without defying custom, which, as Horace has said, decides the language we must use.

*Modern Inorganic Chemistry*

Chapter II (p. 39)

Longmans, Green & Co. London, England. 1912

**Muir, Matthew Moncrieff Pattison** 1848–1931

English chemist

To write a full description of the origin, growth and misadventures of the language of chemistry is to write a history of science.

*A History of Chemical Theories and Laws*

Appendix to Part I (p. 189)

John Wiley & Sons, Inc. New York, New York, USA. 1906

**Oppenheimer, Frank** 1912–85

Physicist

At the leading edge of experience in philosophy, science and feeling there is inevitably a groping for language to translate the insecure novelty of noticing and understanding into a precision of meaning and imagery.

In K.C. Cole

*First You Build a Cloud and Other Reflections on Physics as a Way of Life*

Chapter One (p. 15)

Harcourt Brace &amp; Co. Orlando, Florida, USA. 1999

**Pearson, Karl** 1857–1936

English mathematician

If the reader finds the opinions of physicists of worldwide reputation, and the current definitions of physical concepts called into question, he must not attribute this to a purely sceptical spirit in the author. He accepts almost without reserve the great results of modern physics; it is the language in which these results are stated that he believes needs reconsideration.

*The Grammar of Science* (2nd edition)

Preface to the First Edition (p. x)

Adam &amp; Charles Black. London, England. 1900

**Quine, Willard van Orman** 1908–2000

American logician and philosopher

Language is conceived in sin and science is its redemption.

*The Roots of Reference*

Part II, Section 18 (p. 68)

Open Court Publishing. La Salle, Illinois, USA. 1974

**Shaler, Nathaniel Southgate** 1841–1906

American geologist

The greater part of the facts [with] which geologists have to deal possess for the general public a recondite character. They concern things which are not within the limits of familiar experience. In treating of them, the science uses a language of its own, an argot as special as that of the anatomist or the metaphysician.

**Weaver, Warren** 1894–1978  
American mathematician

With the extremely small or the extremely large, with inconceivably brief or extended phenomena, science has a difficult time. It is by no means clear that our present concepts or even our existing language is suitable for these ranges.

*Science and Imagination*  
Chapter Two (p. 50)  
Basic Books, Inc. New York, New York, USA. 1967

## LARVAE

**Jaeger, Benedict** 1789–?  
Austrian born American entomologist

Larvae are like infant children, whose only occupation consists in eating, that they may grow and fulfill their destiny; but as they approach the time when they must

appear in society as perfect creatures, they transform themselves into a cocoon (*pupa*), and sleep until Nature has clad them with a new and splendid dress, and furnished them with glistening wings to appear as respectable objects in the fashionable world of Insects.

*The Life of North American Insects*  
ORDER I (p. 19)  
Harper & Brothers Publishers. New York, New York, USA. 1859

## LATIN SQUARE

**Kendall, Maurice G.** 1907–83  
English statistician

The first mathematical discussion of the Latin Square known to modern statisticians was given by Euler in 1882. Euler does not make any specific references to previous work and merely mentions the problem as having aroused interest, but since he entitled his paper “Recherch sur un Inouvelle espece de guarre magigues” he seems to have been under the impression that the problem was fairly new...

Who Discovered the Latin Square?  
*The American Statistician*, Volume 11, Number 4, August, 1948 (p. 13)

**Fleiss, Joseph L.** 1937–2003  
American biostatistician

An Israeli statistician named Hare,  
Had five factors he wished to compare,  
Levels of each were nine,  
So of course his design  
Was a Hebro–Greco–Latin square.

Letters to the Editor

## LAVA

### Author undetermined

Hence on a level plain, and at some distance from its source, the lava-stream advances at a leisurely pace. In such circumstances the cooling proceeds so quickly that a crust of considerable thickness is soon formed on the top of the current, and persons who are bold enough may cross the stream by means of this natural bridge. Even where the current continues flowing rapidly, this crust may be formed on its surface; and a man, whose curiosity exceeds his prudence, may stand on the top of it, bore a hole through the crust, and see the lava flowing underneath his feet!

*Wonders of Creation: A Descriptive Account of Volcanoes and Their Phenomena*  
Chapter I  
T. Nelson. London, England. 1890

A simple jet of water of considerable volume, thrown into the air to the height of a hundred feet, is itself a beautiful

spectacle. What then must be a huge jet of glowing white lava projected to the height of several hundred feet, and with what an awful thundering sound must it come tumbling to the ground, thence to rush as a roaring torrent down the mountain's side!

*Wonders of Creation: A Descriptive Account of Volcanoes and Their Phenomena*

Chapter I

T. Nelson. London, England. 1890

**Mantell, Gideon Algernon** 1780–1852

English obstetrician, geologist, and paleontologist

Volcanic eruptions throw up into daylight the foundations of the fathomless deep below, in the form of ejected or molten masses, or in rivers of ignited and fluid rocks, which congeal on the surface of the ground, either inflated like the scoriae of furnaces, or in solid masses, with no visible impress of heat ...

*The Wonders of Geology; or, A Familiar Exposition of Geological Phenomena*

Introduction (p. 4)

G.H. Bohn. London, England. 1857–58

**Twain, Mark (Samuel Langhorne**

**Clemens)** 1835–1910

American author and humorist

Under us, and stretching away before us, was a heaving sea of molten fire of seemingly limitless extent.... At unequal distances all around the shores of the lake were nearly white-hot chimneys or hollow drums of lava, four or five feet high, and up through them were bursting gorgeous sprays of lava-gouts and gem spangles, some white, some red and some golden – a ceaseless bombardment, and one that fascinated the eye with its unapproachable splendor. The more distant jets, sparkling up through an intervening gossamer veil of vapor, seemed miles away; and the further the curving ranks of fiery mountains receded, the more fairy-like and beautiful they appeared.

*Roughing It* (Volume 2)

Chapter XXXIV (pp. 304–305)

Harper & Brothers Publishers. New York, New York, USA. 1899

**LAVA BEDS**

**Muir, John** 1838–1914

American naturalist

Deserts are charming to those who know how to see them – all kinds of bogs, barrens, and healthy moors; but the Modoc Lava Beds have for me an uncanny look. As I gazed the purple deepened over all the landscape. Then fell the gloaming, making everything still more forbidding and mysterious. Then, darkness like death.

*Steep Trails*

Chapter V (p. 93)

Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

**LAW**

**Author undetermined**

The universe does not have laws, it has habits, and habits can be broken.

Source undetermined

**Babbage, Charles** 1792–1871

English mathematician

The more man inquires into the laws which regulate the material universe, the more he is convinced that all its varied forms arise from the action of a few simple principles. These principles themselves converge, with accelerating force, towards some still more comprehensive law to which all matter seems to be submitted. Simple as that law may possibly be, it must be remembered that it is only one amongst an infinite number of simple laws: that each of these laws has consequences at least as extensive as the existing one, and therefore that the Creator who selected the present law must have foreseen the consequences of all other laws.

Does Causality Imply Necessity (p. 207)  
Courier Dover Publications. Mineola, New York, USA. 1995

**Casti, John L.** 1943–  
American mathematician

A law explains a set of observations; a theory explains a set of laws. The quintessential illustration of this jump in level is the way in which Newton's theory of mechanics explained Kepler's law of planetary motion. Basically, a law applies to observed phenomena in one domain (e.g., planetary bodies and their movements), while a theory is intended to unify phenomena in many domains. Thus, Newton's theory of mechanics explained not only Kepler's laws, but also Galileo's findings about the motion of balls rolling down an inclined plane, as well as the pattern of oceanic tides. Unlike laws, theories often postulate unobservable objects as part of their explanatory mechanism. So, for instance, Freud's theory of mind relies upon the unobservable ego, superego, and id, and in modern physics we have theories of elementary particles that postulate various types of quarks, all of which have yet to be observed.

*Searching for Certainty: How Scientists Predict the Future*

Truth Seeker. New York, New York, USA. 1950

**de Moivre, Abraham** 1667–1754

French-born mathematician

...as it is thus demonstrable that there are, in the constitution of things, certain Laws according to which Events happen, it is no less evident from Observation, that these Laws serve to wise, useful and beneficent purposes, to preserve the steadfast Order of the Universe, to propagate the several Species of Beings, and furnish to the sentient Kind such degrees of happiness as are suited to their State.

*The Doctrine of Chances: or, A Method of Calculating the Probabilities of Events in Play* (3rd edition)

A Method of Approximating the Sum of the Terms of the Binomial... (p. 252)

Printed for Millar. London, England. 1756

**Deming, William Edwards** 1900–93

American statistician, educator, and consultant

It would be splendid if all action required in social, economic, and industrial planning could be based on scientific laws; but actually, so many of the laws remain yet to be discovered that most action must be taken on the basis of knowledge of the subject matter in related fields.

*Statistical Adjustment of Data* (p. 11)

John Wiley & Sons, Inc. New York, New York, USA. 1938

**Dewey, John** 1859–1952

American philosopher and educator

Scientific principles and laws do not lie on the surface of nature. They are hidden, and must be wrested from nature by an active and elaborate technique of inquiry.

*Reconstruction in Philosophy*

Chapter II (p. 32)

Beacon Press. Boston, Massachusetts, USA. 1920

**Dirac, Paul Adrien Maurice** 1902–84

English theoretical physicist

The underlying physical laws necessary for the mathematical theory of a large part of physics and the whole of chemistry are thus completely known, and the difficulty

is only that the application of these laws leads to equations much too complicated to be soluble.

Quantum Mechanics of Many-Electron Systems

*Proceedings of the Royal Society*, Volume 123, Number 792, 6 April, 1929 (p. 714)

**Duhem, Pierre-Maurice-Marie** 1861–1916

French physicist and mathematician

Any physical law, being approximate, is at the mercy of the progress which, by increasing the precision of experiments, will make the degree of approximation of this law insufficient: the law is essentially provisional. The estimation of its value varies from one physicist to the next, depending on the means of observation at their disposal and the accuracy demanded by their investigations: the law is essentially relative.

*The Aim and Structure of Physical Theory*

Part II, Chapter V (p. 174)

Princeton University Press. Princeton, New Jersey, USA. 1954

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

It is one thing for the human mind to extract from the phenomena of nature the laws which it has itself put into them; it may be a far harder thing to extract laws over which it has had no control.

*Space, Time and Gravitation: An Outline of the General Relativity Theory*

Chapter XII (p. 200)

At The University Press. Cambridge, England. 1921

**Edgeworth, Francis Ysidro** 1845–1926

Irish economist and statistician

The Greeks, says Mr. Galton, if they had known of the law of errors [the precision of the mean of a large number of observations], would have personified and deified it; the moderns should at least respect it as the most universal law of nature.

On the Representation of Statistics by Mathematical Formula (concluded.)

*Journal of the Royal Statistical Society*, Volume XLII, 1899 (p. 552)

**Einstein, Albert** 1879–1955

German-born physicist

Who would be so venturesome as to decide today the question whether causal law and differential law, these ultimate premises of Newton's treatment of nature, must definitely be abandoned.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1927*

Isaac Newton (p. 207)

Government Printing Office. Washington, D.C. 1928

The general laws of nature are to be expressed by equations which hold good for all the systems of co-ordinates, that is, are co-variant with respect to any substitutions whatever (generally co-variant).

*Proceedings of the American Catholic Philosophical Association*,

Volume 11, 1935

As far as the laws of mathematics refer to reality, they are not certain; and as far as they are certain, they do not refer to reality.

*Sidelights on Relativity*

Geometry and Experience (p. 28)

E.P. Dutton & Company, Inc. New York, New York, USA. 1922

...there is no logical way to the discovery of these elemental laws. There is only the way of intuition, which is helped by a feeling for the order lying behind the appearance.

In Max Planck

*Where Is Science Going?*

Prologue (p. 10)

W.W. Norton & Company, Inc. New York, New York, USA. 1932

A law cannot be definite for the one reason that the conceptions with which we formulate it develop and may prove insufficient in the future. There remains at the bottom of every thesis and of every proof some remainder of the dogma of infallibility.

*Cosmic Religion, with Other Opinions and Aphorisms*

On Science (p. 100)

Covici-Fiede. New York, New York, USA. 1931

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

A man does not tie his shoe without recognizing laws which bind the farthest regions of nature: moon, planet, gas, crystal, are concrete geometry and numbers.

*The Works of Ralph Waldo Emerson* (Volume 1)

*Essays, Second Series*

Nature (p. 356)

Harper & Brothers. New York, New York, USA. 1925

Every ultimate fact is only the first of a new series. Every general law only a particular fact of some more general law presently to disclose itself.

*Essays*

Circles (p. 284)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1873

**Euclid of Alexandria** 325 BCE–265 BCE

Greek mathematician

The laws of nature are but the mathematical thoughts of God.

In Stanley Gudder

*A Mathematical Journey* (p. 112)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1976

**Faraday, Michael** 1791–1867

English physicist and chemist

How wonderful it is to me the simplicity of nature when we rightly interpret her laws and how different the convictions which they produce on the mind in comparison with the uncertain conclusions which hypothesis or even theory present.

*The Correspondence of Michael Faraday* (Volume 2)

Faraday to Svanberg, August 16, 1850 (p. 430)

Institution of Electrical Engineers. London, England. 1991

**Feynman, Richard P.** 1918–88  
American theoretical physicist

There is also a rhythm and a pattern between the phenomena of nature which is not apparent to the eye, but only to the eye of analysis; and it is these rhythms and patterns which we call Physical Laws.

*The Character of Physical Law*  
Chapter 1 (p. 13)  
British Broadcasting Company. London, England. 1965

This is common to all our laws; they all turn out to be simple things, although complex in their actual actions.

*The Character of Physical Law*  
Chapter 1 (p. 33)  
British Broadcasting Company. London, England. 1965

**Feynman, Richard P.** 1918–88  
American theoretical physicist

**Leighton, Robert B.** 1919–97  
American physicist

**Sands, Matthew L.** 1919–  
American physicist

From a long view of the history of mankind – seen from, say, ten thousand years from now – there can be little doubt that the most significant event of the nineteenth century will be judged as Maxwell’s discovery of the laws of electrodynamics. The American Civil War will pale into provincial insignificance in comparison with this important scientific event of the same decade.

*The Feynman Lectures on Physics* (Volume 2)  
Chapter 1–6 (pp. 1–11)  
Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1983

**Franklin, Benjamin** 1706–90  
American printer, scientist, and diplomat

Nor is it of much importance to us to know the manner in which nature executes her laws; it is enough if we know the laws themselves. It is of real use to know that China left in the air unsupported will fall and break; but *how* it comes to fall, and *why* it breaks, are matters of speculation. It is a pleasure indeed to know them but we can preserve our china without it.

*The Complete Works in Philosophy, Politics, and Morals, of the Late Dr. Benjamin Franklin* (Volume 1)  
*Opinions and Conjectures*  
Section 19 (p. 224)  
Printed for J. Johnson. London, England. 1806

**Frazer, Sir James George** 1854–1941  
Scottish classicist and anthropologist

We must remember that at bottom the generalisations of science or, in common parlance, the laws of nature are merely hypotheses devised to explain that ever-shifting phantasmagoria of thought which we dignify with the high-sounding names of the world and the universe.

*The Golden Bough: A Study in Magic and Religion* (Volume 1)  
(Abridged edition)  
Chapter LXIX (p. 712)  
The Macmillan Company. New York, New York, USA. 1922

**Freeman, R. Austin** 1862–1943  
British physician and mystery novelist

But when I came to reflect on the facts observed, I was struck by their singularity. Moustache hairs are shed very freely, but they do not drop out at regular intervals. One, two, or more hairs in any one box would not have been surprising. A man who was in the habit of pulling or stroking his moustache might dislodge two or three at once. The surprising thing was the regularity with which these hairs occurred; one, and usually one only, in each box, and no complete box in which there was none. It was totally opposed to the laws of probability.

*A Certain Dr. Thorndyke*  
Thorndyke Connects the Links (p. 282)  
Dodd, Mead & Company. New York, New York, USA. 1928

**Friend, Julius W.**  
European historian

**Feibleman, James K.** 1904–87  
American philosopher

If nature is not subject to law, then the whole of science is a fruitless proceeding.

*What Science Really Means*  
Chapter IV (p. 95)  
George Allen & Unwin Ltd. London, England. 1937

**Froude, James Anthony** 1818–94  
English historian and biographer

Superstition, hero worship, ignorance of the laws of probability, religious, political, or speculative prejudice. One or other of these has tended from the beginning to give us distorted pictures.

*Short Studies on Great Subjects* (Volume 2)  
Scientific Method Applied to History (p. 470)  
Charles Scribner’s Sons. New York, New York, USA. 1890

**Galton, Sir Francis** 1822–1911  
English anthropologist, explorer, and statistician

...the process of evolution on this earth, so far as we can judge, has been carried out neither with intelligence nor truth, but entirely through the routine of various sequences, commonly called “laws,” established or necessitated we know not how.

*Inquiries into Human Faculty and Its Development*  
The Observed Order of Events (p. 197)  
AMS Press. New York, New York, USA. 1973

**Gamow, George** 1904–68  
Russian-born American physicist

If and when all the laws governing physical phenomena are finally discovered, and all the empirical constants

occurring in these laws are finally expressed through the four independent basic constants, we will be able to say that physical science has reached its end, that no excitement is left in further explorations, and that all that remains to a physicist is either tedious work on minor details or the self-educational study and adoration of the magnificence of the completed system. At that stage physical science will enter from the epoch of Columbus and Magellan into the epoch of *National Geographic Magazine*.

Any Physics Tomorrow?

*Physics Today*, Volume 2, Number 1, January, 1949 (p. 18)

**Gay-Lussac, Joseph Louis** 1778–1850

French chemist and physicist

If one were not animated with the desire to discover laws, they would often escape the most enlightened attention.

In Maurice Crosland

*Gay-Lussac: Scientist and Bourgeois*

Chapter 3 (p. 43)

Cambridge University Press. Cambridge, England. 1978

**Gibbon, Edward** 1737–94

English historian

...but the laws of probability, so true in general, so fallacious in particular...

In M.M. Reese (ed.)

*Gibbon's Autobiography*

Life and Visitors in Lausanne (p. 124)

Routledge & Kegan Paul. London, England. 1971

**Hamilton, Sir William Rowan** 1805–65

Anglo-Irish mathematician, physicist, and astronomer

We must not conclude a law from facts too small in number, or observed with too little care; or if the scientific imagination, impatient of restraint, press onward at once to the goal, and divine from the falling of an apple the law of gravitation, and in the trivial and everyday changes which are witnessed around us on this earth perceive the indications of a mighty power, extending through all space, and compelling to their proper orbits the “planets struggling fierce towards heaven’s free wilderness”; yet must such divinations be long received, even by the favoured discoverer himself, if he be of the true inductive school, with candid diffidence and philosophic doubt, until they have been confirmed by new appeals to other, and more remote, and more varied phenomena.

*Life of Sir William Rowan Hamilton*

Introductory Lecture on astronomy (pp. 645–646)

Hodges, Figgis & Co. Dublin, Ireland. 1882

**Harker, Alfred** 1859–1939

American petrologist

...the laws of physics and chemistry must be the same in a crucible as in the larger laboratory of Nature.

*The Natural History of Igneous Rocks*

Chapter XII (p. 282)

Hafner Publishing Company. New York, New York, USA. 1965

**Heinlein, Robert A.** 1907–88

American science fiction writer

Natural laws have no pity.

*Time Enough for Love*

Second Intermission (p. 369)

G.P. Putnam’s Sons. New York, New York, USA. 1973

**Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

In physics, we can only work with the assumption that we have natural laws. If we have no natural laws, then anything can happen, and we can only describe what we see, and that’s all.

In Paul Buckley and F. David Peat (eds.)

*Glimpsing Reality: Ideas in Physics and the Link to Biology*

Werner Heisenberg (p. 15)

University of Toronto Press. Toronto, Ontario, Canada. 1996

**Herschel, Sir John Frederick William** 1792–1871

English astronomer and chemist

We must never forget that it is principles not phenomena, – laws, not insulated, independent facts, which are the objects of inquiry of the natural philosopher.

*A Preliminary Discourse on the Study of Natural Philosophy*

Part I, Chapter I, Section 10 (pp. 13–14)

Longman, Rees, Orme, Brown & Green. London, England. 1831

**Holton, Gerald** 1922–

Research professor of physics and science history

**Roller, Duane H. D.** ?–1994

Science historian

If we liken the facts to be explained to fish in a pond, then the law or set of laws is the net with which we make the catch. It may turn out that our particular net is not fine enough to haul in all fish, large and small, but it may still be quite satisfactory for supplying our ordinary needs. We may go even further and maintain that to be useful at all, our conceptual schemes, like our nets, must contain holes; if it were otherwise (if, so to speak, we were to go fishing with large buckets instead of nets), we should not be able to distinguish between the significant and the trivial, the fish and the water.

*Foundations of Modern Physical Science*

Chapter 15 (p. 260)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1950

**Holton, Gerald James** 1809–94

American physician, poet, and humorist

Being built on concepts, hypotheses, and experiments, laws are no more accurate or trustworthy than the wording of the definitions and the accuracy and extent of the supporting experiments.

*Introduction to Concepts and Theories in Physical Science* (p. 269)

Addison-Wesley Press. New York, New York, USA. 1952

**Hopper, Grace Murray** 1906–92

Computer compiler

If you do something once, people will call it an accident. If you do it twice, they call it a coincidence. But do it a third time and you've just proven a natural law.

In Ethlie Ann Vare and Greg Ptacek

*Mothers of Invention*

From Eggbeaters to Eggheads (p. 187)

Quill. New York, New York, USA. 1987

**Hospers, John**

No biographical data available

**Hopper, Grace Murray** 1906–92

Computer compiler

The laws of science are not viewed in independence of one another. Together they form a vast body or system of laws, with each law fitting into a system including many other laws, each mutually reinforcing the others. The laws that scientists are most loathe to abandon are those that form such an integral part of a system of laws that the abandonment of the one law would require the abandonment or alteration of a larger number of other laws in the system. Thus an observation that directly confirms one law indirectly confirms a group of laws, because of the interconnection of the laws in a system. . . . whether or not something is called a law, then, depends to a large extent on how deeply embedded it is in a wider system of laws.

In E.D. Klemke, Robert Hollinger and A. David Kline

*Introductory Readings in the Philosophy of Science*

Laws (p. 110)

Prometheus Books. Buffalo, New York, USA. 1980

**Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

It is not only the smallest features of the Universe that are controlled by the laws of physics. The behavior of matter on the very large scale that concerns us in astronomy is also determined by physics. The heavenly bodies dance like puppets on strings. If we are to understand why they dance as they do, it is necessary to find out how the strings are manipulated.

*Frontiers of Astronomy*

Chapter Three (p. 40)

Harper &amp; Row, Publishers. New York, New York, USA. 1955

The laws of physics are governed by a process of intellectual natural selection. When they make correct predictions they survive. When they make incorrect predictions they become extinct. Physicists then look for new laws that do not make incorrect predictions.

*Frontiers of Astronomy*

Chapter Eighteen (p. 318)

Harper &amp; Row, Publishers. New York, New York, USA. 1955

**Huxley, Thomas Henry** 1825–95

English biologist

You have all heard it repeated, I dare say, that men of science work by means of induction and deduction, and that by the help of these operations, they, in a sort of sense, wring from Nature certain other things, which are called natural laws. . . . To hear all these large words, you would think that the mind of a man of science must be constituted differently from that of his fellow men; but if you will not be frightened by terms, you will discover that you are quite wrong, and that all these terrible apparatus are being used by yourselves every day and every hour of your lives.

*Collected Essays* (Volume 2)*Darwiniana*

On Our Knowledge of the Causes of the Phenomena of Organic Nature, Section III (p. 364)

Macmillan &amp; Company Ltd. London, England. 1904

“Law” means a rule which we have always found to hold good, and which we expect always will hold good.

*Collected Essays* (Volume 1)*Method and Result*

On Descartes' "Discourse Touching the Method of Using One's Reason Rightly and of Seeking Scientific Truth", Volume I (p. 193)

Macmillan &amp; Company Ltd. London, England. 1904

**James, William** 1842–1910

American philosopher and psychologist

. . . as the sciences have developed further, the notion has gained ground that most, perhaps all, of our laws are only approximations.

*Pragmatism: A New Name for Some Old Ways of Thinking*

Lecture II (p. 43)

Longmans, Green &amp; Company. London, England. 1914

Science, like life, feeds on its own decay. New facts burst old rules; then newly divined conceptions bind old and new together into a reconciling law.

*The Will to Believe and Other Essays in Popular Philosophy*

What Psychical Research Has Accomplished (p. 320)

Longmans Green &amp; Co. New York, New York, USA. 1897

**Jevons, William Stanley** 1835–82

English economist and logician

“It is the glory of God,” said Solomon, “to conceal a thing, but the glory of a king to search it out.” The laws of nature are the invaluable secrets which God has hidden, and it is the kingly prerogative of the philosopher to search them out by industry and sagacity.

*The Principles of Science: A Treatise on Logic and Scientific Method*

Book I, Chapter VII (p. 126)

Macmillan &amp; Company Ltd. London, England. 1887

**Johnson, George** 1952–

American science writer

In *Zen and the Art of Motorcycle Maintenance*, Phaedrus, the author Robert Pirsig's alter ego, is sitting outside a motel room in the West, drinking whiskey with his traveling companions and listening to his son, Chris,

tell ghost stories. “Do you believe in ghosts?” Chris asks his father. “No,” Phaedrus says. “They contain no matter and have no energy and therefore, according to the laws of science, do not exist except in people’s minds.” Then he pauses and reflects: “Of course, the laws of science contain no matter and have no energy either and therefore do not exist except in people’s minds.”

*Fire in the Mind: Science, Faith, and the Search for Order*  
Phaedrus’s Ghosts (p. 24)  
Alfred A. Knopf. New York, New York, USA. 1995

### Jones, Luthar Maynard

No biographical data available

The astronomer looking for a star or writing a treatise, is only a discoverer of truth. He makes no law, but finds one operating. Reverse his deductions; destroy every record of Nature’s laws, and it makes no difference; astronomers would begin over again to gather a harvest of light for Science. The earth would yield her fruits and the heavenly hosts still march in silent courses, where the spheres hang out their starry banners. Just so eternal and unchanging are the Laws of man’s nature. Their fitness and use, as the basis of written laws, appears in their thus answering all the conditions of such laws.

The Unwritten Laws of Human Nature Taken as a Basis of Written Law  
*The Yale Literary Magazine*, Volume XXV, Number VIII, July, 1860 (p. 345)

### Jourdain, Philip E. B. 1879–1919

English logician

The laws of calculation and convenient symbolism are the things a mathematician thinks of and aims at. He seems to identify different things if they both satisfy the same laws which are important to him, just as a magistrate may think that there is not much difference between Mr. A., who is red-haired and a tinker and goes to chapel, and Mr. B., who is a brown-haired horse-dealer and goes to church, if both have been found out committing petty larceny. But their respective ministers of religion or wives may still be able to distinguish them.

*The Nature of Mathematics* (Revised edition)  
Chapter II (p. 49)  
T.C. & E.C. Jack. London, England. 1919

### Kadanoff, Leo P.

Theoretical physicist and applied mathematician

...all the richness of structure observed in the natural world is not a consequence of the complexity of physical law, but instead arises from the many-times repeated application of quite simple laws.

Complete Structure from Simple Systems  
*Physics Today*, Volume 44, Number 3, March 1991 (p. 9)

### Kaplan, Abraham 1918–93

American philosopher of science, author, and educator

...laws serve to explain events and theories to explain laws; a good law allows us to predict new facts and a good

theory new laws. At any rate, the success of prediction... adds credibility to the beliefs which led to it, and a corresponding force to the explanations they provide.

*The Conduct of Inquiry: Methodology for Behavioral Science*  
Chapter IX, Section 40 (p. 346)  
Chandler Publishing Company. San Francisco, California, USA. 1964

### Kingsley, Charles 1819–75

English clergyman and author

It does seem to me strange, to use the mildest word, that people whose destiny it is to live, even for a few short years, on this planet which we call the earth, and who do not at all intend to live on it as hermits...should in general be so careless about the constitution of this same planet, and of the laws and facts on which depend, not merely their comfort and their wealth, but their health and their very lives, and the health and the lives of their children and descendants.

*Town Geology*  
Preface (pp. xv–xvi)  
D. Appleton & Company. New York, New York, USA. 1873

They say, man is the microcosm...but the man of science finds every worm and beetle a microcosm in its way. It exemplifies, directly or indirectly, every physical law in the universe, though it may not be two lines long. It is not only a part, but a mirror, of the great whole.

*Alton Locke*  
Chapter XV (p. 132)  
Macmillan & Co Ltd. London, England. 1862

Universal laws manifest themselves only by particular instances.

*Alton Locke*  
Chapter XV (p. 132)  
Macmillan & Co Ltd. London, England. 1862

### Krass, F.

No biographical data available

*Dieselbe Ordnung waltet  berall:  
Im wechselvollen Reigen der Gestirne  
Gebietet das Gesetz nach Mass und Zahl,  
Wie in des Menschen denkendem Gehirne.*

The same order rules everywhere; the law of measure and number rules in the changeful hosts of the stars as it does in man’s thinking brain.

In Ludwig Buchner  
*Force and Matter* (p. 103)  
Truth Seeker. New York, New York, USA. 1950

### Laplace, Pierre Simon 1749–1827

French mathematician, astronomer, and physicist

Surrounded as we are by an infinite variety of phenomena, which continually succeed each other in the heavens and on the earth, philosophers have succeeded in recognizing the small number of general laws to which matter is subject in its motions. To them, all nature is obedient; and everything is as necessarily derived from them,

as the return of the seasons; so that the curve which is described by the lightest atom that seems to be driven at random by the winds, is regulated by laws as certain as those which confine the planets to their orbits.

*System of the World* (Volume 1)

Book II, Chapter VI (p. 221)

Longman, Rees, Orme, Brown & Green. Dublin, Ireland. 1830

All events, even those which on account of their insignificance do not seem to follow the great laws of nature, are a result of it just as necessarily as the revolutions of the sun. In ignorance of the ties which unite such events to the entire system of the universe, they have been made to depend upon final causes or upon hazard, according as they occur and are repeated with regularity, or appear without regard to order; but these imaginary causes have gradually receded with the widening bounds of knowledge and disappear entirely before sound philosophy, which sees in them only the expression of our ignorance of the true causes.

*A Philosophical Essay on Probabilities*

Chapter II (p. 3)

Dover Publications, Inc. New York, New York, USA. 1951

**Lavoisier, Antoine Laurent** 1743–94

French chemist

... I have imposed upon myself, as a law, never to advance but from what is known to what is unknown; never to form any conclusion which is not an immediate consequence necessarily flowing from observation and experiment; and always to arrange the fact, and the conclusions which are drawn from them, in such an order as shall render it most easy for beginners in the study of chemistry thoroughly to understand them.

*Elements of Chemistry* (Volume 1) (5th edition)

Preface of the Author (p. xxii)

Printed for W. Creech. Edinburgh, Scotland. 1802

**Mach, Ernst** 1838–1916

Austrian physicist and philosopher

He who understands not only the letter but also the reason of the law will not be at a loss when confronted with cases to which the letter does not accurately apply.

Translated by Thomas Joseph McCormack

*Popular Scientific Lectures* (3rd edition)

The Forms of Liquids (p. 10)

The Open Court Publishing Co. Chicago, Illinois, USA. 1898

Natural laws may be likened to intellectual type of a higher order, partly movable, partly stereotyped, which last on new editions of experience may become downright impediments.

Translated by Thomas J. McCormack

*Popular Scientific Lectures* (2nd edition)

The Economical Nature of Physics (pp. 193–194)

The Open Court Publishing Co. Chicago, Illinois, USA. 1897

Editorial cartoonist

I feel like a fugitive from th' law of averages.

*Up Front*

Cartoon caption (p. 39)

Henry Holt & Company. New York, New York, USA. 1945

**Maxwell, James Clerk** 1831–79

Scottish physicist

The only laws of matter are those which our minds must fabricate, and the only laws of mind are fabricated for it by matter.

In Gerald M. Edelman

*Bright Air, Brilliant Fire: On the Matter of the Mind*

Chapter 3 (p. 16)

Basic Books. New York, New York, USA. 1992

If we are to ever discover the laws of nature, we must do so by obtaining the most accurate acquaintance with the facts of nature, and not by dressing up in philosophical language the loose opinions of men who had no knowledge of the facts which throw most light on these laws.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1873*

Action at a Distance (p. 257)

Government Printing Office. Washington, D.C. 1874

**Mellor, Joseph William** 1863–1938

Chemist

Science begins with facts and ends with laws. Law is the essence of facts.

*A Comprehensive Treatise on Inorganic and Theoretical Chemistry*

(Volume 1)

Chapter I (p. 10)

Longman, Green, & Co. London, England. 1922

**Meyerson, Emile** 1859–1933

Polish-born French chemist

In fact, we only attain laws by violating nature, by isolating more or less artificially a phenomenon from the whole, by checking those influences which would have falsified the observation. Thus, the law cannot directly express reality. The phenomenon as it is envisaged by it, the “pure” phenomenon, is rarely observed without our intervention, and even with this it remains imperfect, disturbed by accessory phenomena.... Doubtless, if nature were not ordered, if it did not present us with similar objects, capable of furnishing generalized concepts, we could not formulate laws.

Translated by Kate Loewenberg

*Identity & Reality*

Chapter I (pp. 31, 32)

George Allen & Unwin Ltd. London, England. 1930

**Michelson, Albert Abraham** 1852–1931

German-American physicist

The more important fundamental laws and facts of physical science have all been discovered, and these are now so firmly established that the possibility of their ever being supplanted in consequence of new discoveries is

exceedingly remote...our future discoveries must be looked for in the sixth place of decimals.

*Light Waves and Their Uses*

Lecture II (pp. 23, 24)

The University of Chicago Press. Chicago, Illinois, USA. 1903

**Mill, John Stuart** 1806–73

English political philosopher and economist

When this phraseology [laws of Nature] was introduced, the poets and mythologists soon took hold of it and made it subservient to their purposes. Nature was personified: the phrase law of Nature...became a law laid down by the goddess Nature to be obeyed by her creatures. From the poets, this fictitious personage speedily penetrated into the closets of the philosopher...

In Ann P. Robson and John M. Robson (eds.)

*The Collected Works of J.S. Mill* (Volume 22)

Letter to the Republican, 3 January, 1823 (p. 9)

University of Toronto Press. Toronto, Ontario, Canada. 1977

**Mitchell, Maria** 1818–89

American astronomer and educator

The laws of nature...are not discovered by accident; theories do not come by chance even to the greatest minds; they are not born of the hurry and worry of daily toil; they are diligently sought; they are patiently waited for, they are received with cautious reserve, they are accepted with reverence and awe. And until able women have given their lives to investigation, it is idle to discuss their capacity for original work.

In Helen Wright

*Sweeper in the Sky*

Chapter 10 (pp. 203–204)

The Macmillan Company. New York, New York, USA. 1949

The laws which regulate the influence of sun and planets are complex; the nature of the influence is not yet understood. The telescope, the spectroscope, and the camera are all at work, and although the unknown must always be infinite, Nature yields one truth after another to the earnest seeker.

In Helen Wright

*Sweeper in the Sky*

Chapter 11 (p. 219)

Macmillan & Company. New York, New York, USA. 1949

The immense spaces of creation cannot be spanned by our finite powers; these great cycles of time cannot be lived even by the life of a race. And yet, small as is our whole system compared with the infinitude of creation, brief as is our life compared with cycles of time, we are tethered to all by the beautiful dependencies of law, that not only the sparrow's fall is felt to the outermost bound, but the vibrations set in motion by the words that we utter reach through all space and the tremor is felt through all time.

In Helen Wright

*Sweeper in the Sky*

Chapter 11 (p. 227)

Macmillan & Company. New York, New York, USA. 1949

**Oersted, Hans Christian** 1777–1851

Danish physicist and chemist

Added to this we already see numerous indications of a future, in which the chemical and mechanical laws of nature will be more intimately united. In short, the natural laws of chemistry, as well as those of mechanics, are laws of Reason, and both are so intimately connected, that they must be viewed as a unity of Reason.

*The Soul in Nature with Supplementary Contributions*

All Existence a Dominion of Reason (p. 104)

Henry C. Bohn. London, England. 1852

**Oppenheimer, James Robert** 1904–67

American theoretical physicist

The scientist is not responsible for the laws of nature, but it is a scientist's job to find out how these laws operate. It is the scientist's job to find ways in which these laws can serve the human will. However, it is not the scientist's job to determine whether a hydrogen bomb should be used. This responsibility rests with the American people and their chosen representatives.

In Lewis Wolpert and Alison Richards

*A Passion for Science*

Chapter 1 (p. 9)

Oxford University Press, Inc. Oxford, England. 1988

**Pagels, Heinz R.** 1939–88

American physicist and science writer

The fact that the universe is governed by simple natural laws is remarkable, profound and on the face of it absurd. How can the vast variety in nature, the multitude of things and processes all be subject to a few simple, universal laws?

*Perfect Symmetry: The Search for the Beginning of Time*

Part Two, Chapter 1 (p. 160)

Simon & Schuster. New York, New York, USA. 1985

Instead of finding an absolute universal law at the bottom of existence, they [scientists] may find an endless regress of laws, or even worse, total confusion and lawlessness – an outlaw universe.

*Perfect Symmetry: The Search for the Beginning of Time*

Part Three, Chapter 1 (p. 264)

Simon & Schuster. New York, New York, USA. 1985

**Pasteur, Louis** 1822–95

French chemist

The presence of all the students of the Ecole Normale brings back to me how dazzling was my first enthusiasm for science.

The representatives of the faculty of Lille recall to me my first studies in crystallography and fermentation, which opened up an entirely new world to me. With what hopes I was filled when I first surmised that there were laws behind so many obscure phenomena!

*Pasteur*

Chapter XVI (p. 215)

Cassell & Co., Ltd. London, England. 1901

**Pearson, Karl** 1857–1936  
English mathematician

Scientific Law is [a] description, not a prescription.  
The Grammar of Science (p. 87)  
Charles Scribner's Sons. London, England. 1892

...law in the scientific sense only describes in mental shorthand the sequences of our perceptions. It does not explain *why* those perceptions have a certain order, nor *why* that order repeats itself; the law discovered by science introduces no element of necessity into the sequence of our sense-impressions; it merely gives a concise of *how* changes are taking place.

*The Grammar of Science* (2nd edition)  
Chapter IV (p. 113)  
Adam & Charles Black. London, England. 1900

**Planck, Max** 1858–1947  
German physicist

Thus, from the outset we can be quite clear about one very important fact, namely, that the validity of the law of causation for the world of reality is a question that cannot be decided on grounds of abstract reasoning.

*Where Is Science Going?*  
Chapter IV (p. 113)  
W.W. Norton & Company, Inc. New York, New York, USA. 1932

Self-determination is given to us by our consciousness and is not limited by any causal law...

Translated by R. Jones and D.H. Williams  
*A Survey of Physics: A Collection of Lectures and Essays*  
Dynamical Laws and Statistical Laws (p. 68)  
Methuen & Company Ltd. London, England. 1925

How do we discover the individual laws of Physics, and what is their nature? It should be remarked, to begin with, that we have no right to assume that any physical law exists, or if they have existed up to now, that they will continue to exist in a similar manner in the future. It is perfectly conceivable that one fine day Nature should cause an unexpected event to occur which would baffle us all; and if this were to happen we would be powerless to make any objection, even if the result would be that, in spite of our endeavors, we should fail to introduce order into the resulting confusion. In such an event, the only course open to science would be to declare itself bankrupt. For this reason, science is compelled to begin by the general assumption that a general rule of law dominates throughout Nature...

Translated by Walter Henry Johnston  
*The Universe in the Light of Modern Physics* (p. 62)  
W.W. Norton & Company, Inc. New York, New York, USA. 1931

...the outside world is something independent from man, something absolute, and the quest for the laws which apply to this absolute appeared to me as the most sublime scientific pursuit in life.

*Scientific Autobiography and Other Papers*  
A Scientific Autobiography (p. 13)  
Philosophical Library. New York, New York, USA. 1949

Rightly viewed, the real marvel is that we encounter natural laws at all which are the same for men of all races and nations. This is a fact which is by no means a matter of course. And the subsequent marvel is that for the most part these laws have a scope which could not have been anticipated in advance. Thus the element of the wondrous in the structure of the world picture increases with the discovery of every new law.

Translated by F. Gaynor  
*Scientific Autobiography and Other Papers* (p. 93)  
Philosophical Library. New York, New York, USA. 1949

**Playfair, John** 1748–1819  
Scottish geologist, physicist, and mathematician

The Author of nature has not given laws to the universe, which, like the institutions of men, carry in themselves the elements of their own destruction. He has not permitted, in his works, any symptom of infancy or of old age, or any sign by which we may estimate either their future or their past duration. He may put an end, as he no doubt gave a beginning, to the present system, at some determinate period; but we may safely conclude, that this great catastrophe will not be brought about by any of the laws now existing, and that it is not indicated by anything which we perceive.

*Illustrations of the Huttonian Theory of the Earth*  
Section 118 (pp. 119–120)  
Dover Publications, Inc. New York, New York, USA. 1964

Amid all the revolutions of the globe, the economy of nature has been uniform, and her laws are the only thing that have resisted the general movement. The rivers and the rocks, the seas and the continents have changed in all their parts; but the laws [to] which they are subject have remained invariably the same.

*Illustrations of the Huttonian Theory of the Earth*  
Section 373 (p. 421)  
Dover Publications, Inc. New York, New York, USA. 1964

The Author of nature has not given laws to the universe, which, like the institutions of men, carry in themselves the elements of their own destruction.

*The Works of John Playfair* (Volume 1)  
*Illustrations of the Huttonian Theory*, Paragraph 117 (p. 130)  
Printed for Archibald Constable & Co. Edinburgh, Scotland. 1822

**Poincaré, Jules Henri** 1854–1912  
French mathematician and theoretical astronomer

Are the laws of acceleration, the rule of the composition of forces only arbitrary conventions! Conventions, yes; arbitrary, no; they would be so if we lost sight of the experiments which let the creators of the science to adopt them, and which, imperfect as they may be, suffice to justify them. It is well that from time to time our attention is carried back on the experimental origin of these conventions.

*The Foundations of Science*  
*Science and Hypothesis*, Chapter VI (p. 106)  
The Science Press. New York, New York, USA. 1913

...astronomy has not only taught us that there are laws, but that from these laws there is no escape, that with them there is no possible compromise.

*The Foundations of Science*

*The Value of Science*

Part II, Chapter VI (p. 291)

The Science Press. New York, New York, USA. 1921

**Polanyi, Michael** 1891–1976

Hungarian-born English scientist philosopher and social scientist

Now, I am not suggesting that it is impossible to find natural laws; but only that this is not done, and cannot be done, by applying some explicitly known operation...

*Science, Faith, and Society*

Science and Reality (p. 22)

The University of Chicago Press. Chicago, Illinois. 1964

**Poynting, John Henry** 1852–1914

English physicist

We must confess that physical laws have greatly fallen off in dignity. No long time ago they were quite commonly described as the Fixed Laws of Nature, and were supposed sufficient in themselves to govern the universe. Now we can only assign to them the humble rank of mere descriptions, often erroneous, of similarities which we believe we have observed.... A law of nature explains nothing, it has no governing power, it is but a descriptive formula which the careless have sometimes personified.

In J. Arthur Thomson

*The System of Animate Nature* (Volume 1)

Lecture I (p. 9)

William & Norgate. London, England. 1920

A law may fail or cease to be true, not because Nature has changed her ways, but because we have failed in our statement of likenesses, or because we learn new details with which our old description does not tally.

*Collected Scientific Papers*

Physical Law and Life, 1903 (p. 686)

At The University Press. Cambridge, England. 1920

...physical laws...have...greatly fallen off in dignity. No long time ago they were quite commonly described as the Fixed Laws of Nature, and were supposed sufficient in themselves to govern the universe. Now we can only assign to them the humble rank of mere descriptions, often tentative, often erroneous, of similarities which we believe we have observed.

Address to the Mathematical and Physical Section

*Science*, N.S. Volume X, Number 247, 1899 (p. 386)

**Reichenbach, Hans** 1891–1953

German philosopher of science

When science says that a law is valid, it means but *one* thing – that the law permits conclusions as to future observations.

*Atom and Cosmos: The World of Modern Physics*

Chapter 19 (p. 285)

The Macmillan Co. New York, New York, USA. 1933

**Ross, Sir Ronald** 1857–1932

Scottish physician

In this, O Nature, yield, I pray, to me. I pace and pace, and think and think, and take The fever'd hands, and note down all I see, That some dim distant light may haply break.

The painful faces ask, can we not cure?

We answer, No, not yet; we seek the laws. O God, reveal thro' all this thing obscure The unseen, small, but million-murdering cause.

Quoted in Richard Arman Gregory

*Discovery, Or, The Spirit and Service of Science*

Chapter VIII (p. 226)

Macmillan & Co Ltd. London, England. 1916

**Rowland, Henry Augustus** 1848–1901

American physicist

He who makes two blades of grass grow where one grew before is the benefactor of mankind; but he who obscurely worked to find the laws of such growth is the intellectual superior as well as the greater benefactor of the two.

*The Physical Papers of Henry Augustus Rowland*

The Highest Aim of the Physicist (p. 669)

Johns Hopkins Press. Baltimore, Maryland, USA. 1902

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

The discovery that all mathematics follows inevitably from a small collection of fundamental laws is one which immeasurably enhances the intellectual beauty of the whole; to those who have been oppressed by the fragmentary and incomplete nature of most existing chains of deduction this discovery comes with all the overwhelming force of a revelation; like a palace emerging from the autumn mist as the traveler ascends an Italian hill-side, the stately stories of the mathematical edifice appear in their due order and proportion, with a new perfection in every part.

*Mysticism and Logic and Other Essays*

Chapter IV (pp. 67–68)

Longmans, Green & Company. London, England. 1925

The discovery of causal laws is the essence of science and therefore there can be no doubt that scientific men do right to look for them. If there is any region where there are no causal laws, that region is inaccessible to science. But the maxim [is] that mushroom gatherers should seek mushrooms.

*Religion and Science*

Determinism (pp. 146–147)

Henry Holt & Company. New York, New York, USA. 1935

Scientific laws, when we have reason to think them accurate, are different in form from the common-sense rules which have exceptions: they are always, at least in physics, either differential equations or statistical averages.

*The Analysis of Matter*

Chapter XIX (p. 191)

Harcourt, Brace & Company, Inc. New York, New York, USA. 1927

**Sagan, Carl** 1934–96  
American astronomer and author

There is something stunningly narrow about how the Anthropic Principle is phrased. Yes, only certain laws and constants of nature are consistent with our kind of life. But essentially the same laws and constants are required to make a rock. So why not talk about a Universe designed so rocks could one day come to be, and strong and weak Lithic Principles? If stones could philosophize, I imagine Lithic Principles would be at the intellectual frontiers.

*Pale Blue Dot: A Vision of the Human Future in Space*  
Chapter 3 (p. 38)  
Random House, Inc. New York, New York, USA. 1994

**Schrödinger, Erwin** 1887–1961  
Austrian theoretical physicist

**Schwarzschild, Martin** 1912–97  
German American Astronomer

If simple perfect laws uniquely rule the universe, should not pure thought be capable of uncovering this perfect set of laws without having to lean on the crutches of tenuously assembled observations? True, the laws to be discovered may be perfect, but the human brain is not. Left on its own, it is prone to stray, as many past examples sadly prove. In fact, we have missed few chances to err until new data freshly gleaned from nature set us right again for the next steps. Thus pillars rather than crutches are the observations on which we base our theories; and for the theory of stellar evolution these pillars must be there before we can get far on the right track.

*Structure and Evolution of the Stars*  
Chapter 1 (p. 1)  
Princeton University Press. Princeton, New Jersey, USA. 1958

**Siegel, Eli** 1902–78  
American philosopher, poet, critic, and founder of Aesthetic Realism

Biological laws, seen subtly, can make a girl proud.  
*Damned Welcome*  
Aesthetic Realism, Maxims, Part Two, #316 (p. 139)  
Definition Press. New York, New York, USA. 1972

**Slosson, Edwin E.** 1865–1929  
American chemist and journalist

There are no laws in nature. What we call the “laws of nature” are the memory schemes we invent to aid us in grasping a lot of facts at one time. When our knowledge is growing rapidly, as it is now, we have to shift to new and larger formulas very suddenly. But this requires stretching the mind to take in bigger ideas, which is as painful a process as stretching an unused muscle. No wonder we tend to dodge it.

*Chats on Science*  
Chapter LXXX (pp. 248–249)  
G. Bell & Sons Ltd. London, England. 1924

**Snow, Charles Percy** 1905–80  
English novelist and scientist

Once or twice I have been provoked and have asked the company how many of them could describe the Second Law of Thermodynamics. The response was cold: it was also negative. Yet I was asking something which is about the scientific equivalent of: Have you read a work of Shakespeare’s?

*The Two Cultures: And a Second Look*  
Chapter I (pp. 14–15)  
At The University Press. Cambridge, England. 1964

D. Appleton & Co. New York, New York, USA. 1915

**Voltaire (François-Marie Arouet)** 1694–1778  
French writer

In effect, it would be very singular that all nature, all the planets, should obey eternal laws, and that there should be a little animal five feet high, who, in contempt of these laws, could act as he pleased, solely according to his caprice.

*The Best Known Works of Voltaire*

*Ignorant Philosophers*

Chapter XIII (p. 428)

Blue Ribbon Books. New York, New York, USA. 1940

**von Helmholtz, Hermann** 1821–94  
German scientist and philosopher

A law of nature, however, is not a mere logical conception that we have adopted as a kind of *memoria technicai* to enable us to more readily remember facts. We of the present day have already sufficient insight to know that the laws of nature are not things which we can evolve by any speculative method. On the contrary, we have to discover them in the facts; we have to test them by repeated observation or experiment, in constantly new cases, under ever-varying circumstances; and in proportion only as they hold good under a constantly increasing change of conditions, in a constantly increasing number of cases with greater delicacy in the means of observation, does our confidence in their trustworthiness rise.

*Popular Lectures on Scientific Subjects*

Lecture VIII (p. 370)

D. Appleton & Company. New York, New York, USA. 1885

Physico-mechanical laws are, as it were, the telescopes of our spiritual eye, which can penetrate into the deepest night of time, past and to come.

Translated by E. Atkinson

*Popular Lectures on Scientific Subjects*

*First Series*

On the Interaction of Natural Forces (p. 189)

D. Appleton & Co. New York, New York, USA. 1897

It may perhaps appear rash that we, restricted as we are, in the circle of our observations in space, by our position on this little earth, which is but as a grain of dust in our milky way; and limited in time by the short duration of the human race; that we should attempt to apply the laws which we have deduced from the confined circle of facts open to us to the whole range of infinite space, and of time from everlasting to everlasting.

Translated by E. Atkinson

*Popular Lectures on Scientific Subjects*

*Second Series*

On the Origin of the Planetary System (p. 144)

Clarendon Press. Oxford, England. 1988

**Whewell, William** 1794–1866  
English philosopher and historian

The number and variety of the laws which we find established in the universe is so great, that it would be idle to endeavor to enumerate them. In their operation they are combined and intermixed in incalculable and endless complexity, influencing and modifying each other’s effects in every direction.

*The Bridgewater Treatises on the Power, Wisdom, and Goodness of God as Manifested in the Creation* (Treatise III)

Astronomy and General Physics Considered with Reference to Natural Theology

Chapter III (p. 12)

Carey, Lea & Blanchard. Philadelphia, Pennsylvania, USA. 1833

But with regard to the material world, we can at least go so far as this – we can perceive that events are brought about not by insulated interpositions of Divine power, exerted in each particular case, but by the establishment of general laws.

In *Great Books of the Western World* (Volume 49)

*The Origin of Species by Means of Natural Selection* (p. xi)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Men cannot help believing that the laws laid down by discoverers must be in a great measure identical with the real laws of nature, when the discoverers thus determine effects beforehand in the same manner in which nature herself determines them when the occasion occurs. Those who can do this, must, to a considerable extent, have detected nature’s secret; – must have fixed upon the conditions to which she attends, and must have seized the rules by which she applies them.

*The Philosophy of the Inductive Sciences, Founded Upon Their History* (2nd edition)

Book XI, Chapter V (p. 64)

John W. Parker. London, England. 1867

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

The laws of physics are the decrees of fate.

*Science and the Modern World*

Chapter I (p. 16)

The Macmillan Company. New York, New York, USA. 1929

Laws are statements of observed facts.

*Adventures of Ideas*

Chapter VII (p. 148)

The Macmillan Company. New York, New York, USA. 1956

If the law states a precise result, almost certainly it is not precisely accurate; and thus even at the best the result, precisely as calculated, is not likely to occur.

Chapter VII (pp. 155–156)  
The Macmillan Co. New York, New York, USA. 1891

**Pouchet, Félix Archimède** 1800–72  
French biologist

To the tunic of leaves by which plants are covered is due all the magnificence of creation. The flowers, indeed, form a charming ornament which attracts and seduces the eye, but they remain unnoticed in the grand scenes of Nature, when she unrolls before us her most splendid landscapes, her sombre forests, or her immense extended plains of verdure.

*The Universe: Or, The Infinitely Great and the Infinitely Little*  
Book I, Chapter III (p. 384)  
Blackie & Son. London, England. 1870

**Ruskin, John** 1819–1900  
English writer, art critic, and social reformer

...the leaves of the herbage at our feet take all kinds of strange shapes, as if to invite us to examine them. Star-shaped, heart-shaped, spear-shaped, arrow-shaped, fretted, fringed, cleft, furrowed, serrated, sinuated; in whorls, in tufts, in spires, in wreaths endlessly expressive, deceptive, fantastic, never the same from footstalk to blossom; they seem perpetually to tempt our watchfulness, and take delight in outstripping our wonder.

*Modern Painters* (Volume 5)  
Part VI, Chapter 10 (p. 92)  
John Wiley & Sons. New York, New York, USA. 1879

**LEAF CLUSTER**

**Ruskin, John** 1819–1900  
English writer, art critic, and social reformer

...every single leaf-cluster presents the general aspect of a little family, entirely at unity among themselves, but obliged to get their living by various shifts, concessions, and infringements of the family rules, in order not to invade the privileges of other people in their neighborhood.

*Modern Painters* (Volume 5)  
Part VI, Chapter 4 (p. 32)  
John Wiley & Sons. New York, New York, USA. 1879

**LEARN**

**Dickens, Charles** 1812–70  
English novelist

Vether it's worth goin' through so much, to learn so little, as the chairty-boy said ven he got to the end of the alphabet, is a matter o' taste.

*Pickwick Papers*  
Chapter XXVII (p. 379)  
The University Society. New York, New York, USA. 1908

**Huxley, Thomas Henry** 1825–95  
English biologist

What is the use of all your learning, unless you can tell me what I want to know? I am here blindly groping about, and constantly damaging myself by collision with three mighty powers, the power of the invisible God, the power of my fellow Man, and the power of brute Nature. Let your learning be turned to the study of these powers, that I may know how I am to comport myself with regard to them.

*Science and Education: Essays*  
Essay VIII (p. 198)  
D. Appleton & Co. New York, New York, USA. 1896

**Macgillivray, William** 1796–1852

Scottish naturalist and ornithologist

The man who would effectually learn from nature, must approach with affection, and receive her instructions with a humility that would ill accord with any subsequent vain display of the knowledge acquired.

*A History of British Birds, Indigenous and Migratory* (Volume 1)

Preface (pp. iii–iv)

Printed for Scott, Webster & Geary. London, England. 1837

**Ruskin, John** 1819–1900

English writer, art critic, and social reformer

...on the cellular surface of one of the blocks of it [the volcano at Yewdale Crag], you may find more beauty, and learn more precious things, than with telescope or photograph from all the moons in the milky way, though every drop of it were another solar system.

*The Complete Works of John Ruskin* (Volume 17)

Volume I, Chapter XII (p. 143)

Rehwee, Wattle & Walsh. Philadelphia, Pennsylvania, USA. 1891

**Shaw, George Bernard** 1856–1950

Irish playwright

You have learnt something. That always feels at first as if you had lost something.

*John Bull's Other Island and Major Barbara*

Major Barbara (p. 284)

Brentano's. New York, New York, USA. 1911

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

Seeking and blundering are good, for it is only by seeking and blundering we learn.

Translated by John Anster

*Faustus: The Second Part*

Notes (p. 476)

Longman, Green, Longman, Roberts & Green. London, England. 1864

**Whately, Richard** 1787–1863

English theologian

To learn a thing because it is easy is like buying a bargain.

In Elizabeth Jane Whatley

*Miscellaneous Remains from the Commonplace Book of Richard*

*Whately, D.D.*

Apothegm 74 (p. 7)

Longman, Green, Longman, Roberts & Green. London, England. 1865

**Wilson, Colin**

No biographical data available

Once you enter the world of science or mathematics or philosophy, endless plains open around you. The more you learn, the more fascinating the whole thing becomes.

*Voyage to a Beginning*

Chapter 10 (p. 163)

Cecil & Amelia Woolf. London, England. 1969

**LEARNED BODIES****Verne, Jules** 1828–1905

French novelist

The Cambridge Observatory called a special meeting; and with that composure which distinguishes learned bodies in general, peacefully discussed the scientific bearings of the question.

*Works of Jules Verne*

*A Tour of The Moon*

Chapter XXI (p. 367)

F. Tyler Daniels. New York, New York, USA. 1911

**LEARNING****Barzun, Jacques** 1907–

French-born American educator, historian, and educator

The school has not taught how to learn; now it wants to climb that Mt. Everest of intellect, critical thought. Critical thinking can only be learned by the discussion of an idea which is part of a subject, under the guidance of an able thinker. Thinking is like piano-playing; it is shown, not taught.

*Begin Here: The Forgotten Conditions of Teaching and Learning* (p. 46)

The University of Chicago Press. Chicago, Illinois, USA. 1991

**Bryson, Lyman**

No biographical data available

No man...can choose to do what he never heard of doing or never thought of doing. In this sense, the ultimate measure of freedom is knowledge and we learn in order to be free.

*Science and Freedom*

What Is Freedom?, Section II (p. 13)

Columbia University Press. New York, New York, USA. 1947

**Carson, Rachel** 1907–64

American marine biologist and author

It is more important to pave the way for the child to want to know than to put him on a diet of facts he is not ready to assimilate.

*The Sense of Wonder* (p. 45)

Harper & Row, Publishers. New York, New York, USA. 1984

**Dennett, Daniel Clement** 1942–

American philosopher

...we often learn more from bold mistakes than from cautious equivocation.

*Consciousness Explained*

Preface (p. xi)

Little, Brown & Company. Boston, Massachusetts, USA. 1991

**Ferris, Timothy** 1944–

American science writer

Our ignorance, of course, has always been with us, and always will be. What is new is our awareness of it, our

awakening to its fathomless dimensions, and it is this, more than anything else, that marks the coming of age of our species. Space may have a horizon and time a stop, but the adventure of learning is endless.

*Coming of Age in the Milky Way*

Chapter 20 (p. 383)

William Morrow & Company, Inc. New York, New York, USA. 1988

### **Garrett, A. B.**

No biographical data available

Learning is motivated by intent and understanding by visualization.

Visualization: A Step to Understanding

*Journal of Chemical Education*, Volume 25, Number 10, October, 1948 (p. 544)

### **Hemingway, Ernest** 1899–1961

American novelist, short-story writer, and journalist

There are some things which cannot be learned quickly, and time, which is all we have, must be paid heavily for their acquiring. They are the very simplest things...

*Death in the Afternoon*

Chapter Sixteen (p. 192)

Charles Scribner's Sons. New York, New York, USA. 1955

### **Hoffmann, Banesh** 1906–86

Mathematician and educator

If you have read thus far, there is no dignified way of escape left to you. You have paid your fare, and climbed to the highest peak of the roller-coaster. You have therefore let yourself in for the inevitable consequences. It is no use trying to back out. You had warning in the preface of what to expect, and if contemplation of the heights there described makes you giddy and apprehensive, I cannot accept responsibility. The going will be rough, but I can promise you excitement aplenty. So hold tight to your seat and hope for the best. We are about to push off into vertiginous space.

*The Strange Story of the Quantum*

Chapter XII (p. 71)

Dover Publications, Inc. New York, New York, USA. 1959

### **Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

The easiest and surest way of acquiring facts is to learn them in groups, in systems, and systematized knowledge is science. You can very often carry two facts fastened together more easily than one by itself, as a house-maid can carry two pails of water with a hoop more easily than one without it.

*Medical Essays*

Scholastic and Bedside Teaching (p. 287)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

### **Kingsley, Charles** 1819–75

English clergyman and author

No amount of book learning will make a man a scientific man: nothing but patient observation, and quiet and fair thought over what he has observed. He must go out for himself, compare and judge for himself, in the field, in the quarry, the cutting. He must study rocks, ores, fossils, in the nearest museum; and thus store his head, not with words, but with facts. He must verify – as far as he can – what he reads in books, by his own observation; and be slow to believe in anything, even on the highest scientific authority, till he has either seen it, or something like enough to it to make it seem to him probable, or at least possible. So, and so only, will he become a scientific man, and a good geologist...

*Town Geology*

Preface (pp. ix–x)

D. Appleton & Company. New York, New York, USA. 1873

### **Landau, Edmund** 1877–1938

German mathematician

Please forget whatever you've been studying at school; for you have not learned it.

Translated by F. Steinhardt

*Foundations of Analysis: The Arithmetic of Whole, Rational, Irrational and Complex Numbers*

Preface to the Student (p. v)

Chelsea Publishing Company. Bronx, New York, USA. 1951

### **Lowell, Percival** 1855–1916

American astronomer

That we are in some wise kin to all the rest of the cosmos science has been steadily demonstrating more and more clearly. The essential oneness of the universe is the goal to which all learning tends.

*Mars*

Chapter I, 1 (p. 3)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1895

### **Priestley, Joseph** 1733–1804

English theologian and scientist

Learning and talents, have ever commanded the respect and the admiration of mankind. In the dawn of science, indeed, the inventors of the useful arts were deified by those to whom they became benefactors by their discoveries; and the skilful in agriculture, were considered as super-human.

In John Corry

*The Life of Joseph Priestly* (p. 9)

Printed by Wilks, Grafton & Co. Birmingham, England. 1804

### **Pythagoras of Samos** ca. 580 BCE–500 BCE

Greek mathematician, astronomer, and philosopher

The learning of many things does not teach intelligence...

In G.S. Kirk and J.E. Raven

*The Pre-Socratic Philosophers: A Critical History with a Selection of Texts* Fragment 260 (p. 218)

At The University Press. Cambridge, England. 1963

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

William James used to preach the “will to believe.” For my part, I should wish to preach the “will to doubt...” What is wanted is not the will to believe, but the wish to find out, which is the exact opposite.

*Skeptical Essays*

Chapter XII (pp. 154, 157)

W.W. Norton & Company, Inc. New York, New York, USA. 1928

**Shakespeare, William** 1564–1616  
English poet, playwright, and actor

And this our life, exempt from public haunt,  
Find tongues in trees, books in the running brooks,  
Sermons in stones, and good in everything.

In *Great Books of the Western World* (Volume 26)

English theologian

“A little learning” is then only (and then always) “a dangerous thing,” when we are not aware of its littleness.

*Thoughts and Apophthegms*

Section VI (p. 165)

Lindsay & Blakiston. Philadelphia, Pennsylvania, USA. 1856

**Wheeler, John Archibald** 1911–  
American physicist and educator

...how can anyone learn anything new who does not find it a shock.

*A Journey into Gravity and Spacetime* (p. 39)

Scientific American Library. New York, New York, USA. 1990

## LECTURE

**Brinton, William**  
English physician

Those who disparage lectures insinuate that their value is almost limited to two circumstances – that they ensure the bodily presence of the student, and then force through the organs of hearing a minimum of information on certain medical subjects; and thus, in direct contradiction to the proverb, not only bring the horse to the water but also make him drink.

Introductory Lecture

*The London Lancet*, Volume 2, Number 6, December, 1857 (p. 436)

**Clifford, William Kingdon** 1845–79  
English mathematician

It may have occurred (and very naturally too) to such as have had the curiosity to read the title of this lecture, that it must necessarily be a very dry and difficult subject; interesting to very few, intelligible to still fewer, and, above all, utterly incapable of adequate treatment within the limits of a discourse like this.

*Lectures and Essays, by the Late William Kingdon Clifford*

On the Aims and Instruments of Scientific Thought (p. 85)

Macmillan & Company Ltd. London, England. 1886

**Coleridge, Samuel Taylor** 1772–1834  
English lyrical poet, critic, and philosopher

...sympathy and interest are to a lecturer like the sun and the showers to nature – absolutely necessary to the production of blossoms and fruit.

In John Payne Collier

*Seven Lectures on Shakespeare and Milton*

The First Lecture (p. 1)

Chapman & Hall, Ltd. London, England. 1856

...it is to be borne in mind, that every man who takes upon himself to lecture, requires that he should be considered by his hearers capable of teaching something that is valuable, or of saying something that is worth hearing. In a mixed audience not a few are desirous of instruction, and some require it; but placed in my present situation I consider myself, not as a man who carries moveables into an empty house, but as a man who entering a generally well furnished dwelling, exhibits a light which enables the owner to see what is still wanting. I endeavor to introduce the means of ascertaining what is, and is not, in a man's own mind.

In John Payne Collier  
*Seven Lectures on Shakespeare and Milton*  
 The Sixth Lecture (p. 31)  
 Chapman & Hall, Ltd. London, England. 1856

**Cornford, Francis M.** 1874–1943  
 English academic

The Principle of Sound Learning is that the noise of vulgar fame should never trouble the cloistered calm of academic existence. Hence, learning is called sound when no one has ever heard of it; and ‘sound scholar’ is a term of praise applied to one another by learned men who have no reputation outside the University, and a rather queer one inside it. If you should write a book (you had better not), be sure that it is unreadable; otherwise you will be called ‘brilliant’ and forfeit all respect.

*Microcosmographia Academica*  
 The Principles of Government, of Discipline (Including Religion), and of Sound Learning  
 Bowes & Bowes, Publishers. Cambridge, England. 1908

**Edgeworth, Maria** 1767–1849  
 Anglo-Irish novelist

**Edgeworth, Richard Lovell** 1744–1817  
 Anglo-Irish politician and inventor

...if he [the lecturer] does riot communicate much of that knowledge which he endeavors to explain, it is not to be attributed either to his want of skill, or to the insufficiency of his apparatus, but to the novelty of the terms which he is obliged to use. Ignorance of the language in which any science is taught, is an insuperable bar to its being suddenly acquired; besides a precise knowledge of the meaning of terms, we must have an instantaneous idea excited in our minds whenever they are repeated; and, as this can be acquired only by practice, it is impossible that philosophical lectures can be of much service to those who are not familiarly acquainted with the technical language in which they are delivered ...

*Essays on Practical Education* (Volume 2)  
 Chapter XVII (p. 277)  
 Printed for R. Hunter. London, England. 1822

**Feynman, Richard P.** 1918–88  
 American theoretical physicist

OMNI: As we came back to the office, you stopped to discuss a lecture on color vision you’ll be giving. That’s pretty far from fundamental physics, isn’t it? Wouldn’t a physiologist say you were “poaching?”

Feynman: Physiology? It has to be physiology? Look, give me a little time and I’ll give a lecture on anything in physiology. I’d be delighted to study it and find out all about it, because I can guarantee you it would be very interesting. I don’t know anything, but I do know that everything is interesting if you go into it deeply enough.

In Jeffrey Robbins, ed.

*The Pleasure of Finding Things Out: The Best Short Works of Richard P. Feynman*  
 Chapter 9 (p. 203)  
 Perseus Books. Cambridge, Massachusetts, USA. 1999

I am Professor Feynman, in spite of this suit-coat. I usually give lectures in shirtsleeves, but when I started out of the hotel this morning my wife said, “You must wear a suit.” I said, “But I usually give lectures in shirtsleeves.” She said, “Yes, but this time you don’t know what you’re talking about so you had better make a good impression...” So, I got a coat.

What Is and What Should Be the Role of Scientific Culture in Modern Society  
*Supp. Al Nuovo Cimento*, Volume 4, 1966

**Henn, Thomas Rice** 1901–74  
 English literary critic

Among the admirable American expressions which enter our language from time to time to lend it new vitality, there is one which I would have every audience, and every lecturer, use at the end of every lecture or course: *So what?* What does all this amount to.

*The Apple and the Spectroscope*  
 Chapter XI (p. 134)  
 Methuen & Co. London, England. 1951

**Huxley, Thomas Henry** 1825–95  
 English biologist

The object of lectures is, in the first place, to awaken the attention and excite the enthusiasm of the student; and this, I am sure, may be effected to a far greater extent by the oral discourse and by the personal influence of a respected teacher than in any other way. Second, lectures have the double use of guiding the student to the salient points of a subject, and at the same time forcing him to attend to the whole of it, and not merely to that part which takes his fancy. And last, lectures afford the student the opportunity of seeking explanations of those difficulties which will, and indeed ought to, arise in the course of his studies.

*Collected Essays* (Volume 8)  
*Discourses, Biological and Geological*  
 A Lobster; or, The Study of Zoology (p. 217)  
 Macmillan & Company Ltd. London, England. 1904

**Johnson, Samuel** 1696–1772  
 English critic, biographer, and essayist

Lectures were once useful; but now, when all can read, and books are so numerous, lectures are unnecessary. If your attention fails, and you miss a part of a lecture, it is lost; you cannot go back as you do upon a book.... People have nowadays got a strange opinion that everything should be taught by lectures. Now, I cannot see that lectures can do as much good as reading the books from which the lectures are taken. I know nothing that can be best taught by lectures, except where experiments are to be shown. You may

teach chemistry by lectures. You might teach making shoes by lectures!

*Boswell's 'Life of Samuel Johnson'*

15 April, 1781 (p. 1136)

Oxford University Press, Inc. Oxford, England. 1965

**Miller, Hugh** 1802–56

Scottish geologist and theologian

My lecture contains but little...Such is the scantiness of the materials on which I had to work, that it could not have contained much: if according to the dramatist, the “amount be beggarly,” it is because the “boxes are empty.”

*The Testimony of the Rocks; of, Geology in Its Bearings on the Two Theologies, Natural and Revealed*

Lecture Eleventh (p. 462)

Gould & Lincoln. Boston, Massachusetts, USA. 1857

**Termier, Pierre** 1859–1930

French geologist

It is always necessary to close a lecture on geology with humility.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1924*

The Drifting of the Continents (p. 236)

Government Printing Office. Washington, D.C. 1925

**Wächtershäuser, Günter**

International patent lawyer

Ladies and gentlemen, throughout my lecture I have presented to you nothing but speculation.

In J. and K. Tran Thon Van, J.C. Mounolou, J. Schneider and C. Mckay (eds.)

*Frontiers of Life*

Order Out of Order: Heritage of the Iron-Sulfur World

## LECTURER

**Cornford, Francis M.** 1874–1943

English academic

A lecturer is a sound scholar, who is chosen to teach on the ground that he was once able to learn. Eloquence is not permissible in a lecture; it is a privilege reserved by statute for the Public Orator. *Microcosmographia Academicam*

The Principles of Government, of Discipline (Including Religion), and of Sound Learning

Bowes & Bowes, Publishers. Cambridge, England. 1908

## LEMMA

### Author undetermined

Is a lemma which proves two facts a dilemma?

Source undetermined

**Leibniz, Gottfried Wilhelm** 1646–1716

German philosopher and mathematician

If it were always necessary to reduce everything to intuitive knowledge, demonstration would often be insufferably prolix. This is why mathematicians have had the cleverness to divide the difficulties and to demonstrate separately the intervening propositions. And there is art also in this; for as the mediate truths (which are called lemmas, since they appear to be a digression) may be assigned in many ways, it is well, in order to aid the understanding and memory, to choose of them those which greatly shorten the process, and appear memorable and worthy in themselves of being demonstrated. But there is another obstacle, viz.: that it is not easy to demonstrate all the axioms, [or] to reduce demonstrations wholly to intuitive knowledge. And if we had chosen to wait for that, perhaps we should not yet have the science of geometry.

Translated by Peter Remnant and Jonatha Bebbett

*New Essays on Human Understanding*

Book 4, Chapters 2 and 8

Cambridge University Press. Cambridge, England. 1981

## LEPTON

### National Research Council (USA)

If man does not fully understand the leptons, he cannot claim to understand nature.

*Physics in Perspective* (Volume 1)

Chapter 3 (p. 63)

National Academy of Sciences

Washington, D.C. 1972

## LEVER

**Archimedes of Syracuse** 287 BCE–212 BCE

Sicilian mathematician

Give me a place on which to stand and I will move the world.

In Ebenezer Cobham Brewer

*A Guide to Roman History* (p. 321)

Jarrold & Son. London, England. 1852

**Graham, L. A.**

No biographical data available

See Saw, Marjorie Daw,

She rocked – and learned the lever law.

She saw that he weighed more than she

For she sat higher up than he,

Which made her cry, excitedly,

“To see saw, it is plain to see,

There must be an equality

“Twixt You times X and Y times Me.”

*Ingenious Mathematical Problems and Methods*

Mathematical Nursery Rhyme Number 19

Dover Publications, Inc. New York, New York, USA. 1959

**LIBERALITY**

**von Goethe, Johann Wolfgang** 1749–1832  
 German poet, novelist, playwright, and natural philosopher

In New York, there are ninety different Christian denominations; each one confessing God the Lord in its own way without being led astray by the others. In science, indeed in research in general, we must achieve this, for what can it mean when everyone speaks of liberality and then wants to prevent others from thinking and expressing themselves in their own way.

In Karl J. Fink  
*Goethe's History of Science*  
 Part IV (p. 127)  
 Cambridge University Press. Cambridge, England. 1991

**LIBRARIAN**

**Clifford, William Kingdon** 1845–79  
 English mathematician

It is an opinion current among librarians, that there is no such thing as trash; that the most foolish unconnected flysheet treating of nothing at all should in all cases be preserved and bound up with other such flysheets, not in view of any possible future investigator to whom it may be as gold among quartz, but because it is right that this thing should be done.

*Mathematical Papers*  
 Review of *A Budget of Paradoxes* (p. 559)  
 Macmillan & Company Ltd. London, England. 1882

**LIBRARY**

**Lines, William J.**  
 Writer

Only barbarians are not curious about where they come from and how the world came to be what it is. Culture, in contrast, permits and encourages questions about origins. In modern English-language culture, libraries are a chief means of inquiry into the past.

*An All Consuming Passion: Origins, Modernity, and the Australian Life of Georgiana Molloy*  
 Acknowledgements (p. 377)

Irish-born physicist and X-ray crystallographer

The beauty of life is, therefore, geometrical beauty of a type that Plato would have much appreciated.

*The Origin of Life*

Preface (p. xiii)

The World Publishing Company. Cleveland, Ohio, USA. 1967

Life is a partial, continuous, progressive, multiform and conditionally interactive self-realization of the potentialities of atomic electron states...

*The Origin of Life*

Preface (p. xv)

The World Publishing Company. Cleveland, Ohio, USA. 1967

The question of the origin of life is essentially speculative. We have to construct, by straightforward thinking on the basis of very few factual observations, a plausible and self consistent picture of a process which must have occurred before any of the forms which are known to us in the fossil record could have existed.

*The Origin of Life*

Chapter 1 (p. 2)

The World Publishing Company. Cleveland, Ohio, USA. 1967

Men will not be content to manufacture life: they will want to improve on it.

*The World, the Flesh and the Devil: An Enquiry into the Future of the Three Enemies of the Rational Soul*

Chapter III (p. 45)

Indiana University Press. Bloomington, Indiana, USA. 1969

**Bergson, Henri** 1859–1941

French philosopher

...life is like a current passing from germ to germ through the medium of a developed organism.

Translated by Arthur Mitchell

*Creative Evolution*

Chapter I (p. 27)

Henry Holt & Co. New York, New York, USA. 1911

**Bernard, Claude** 1813–78

French physiologist

If I had to define life in a single phrase, I should clearly express my thought by throwing into relief the one characteristic which, in my opinion, sharply differentiates biological science. I should say: life is creation.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Part Two, Chapter II, Section I (p. 93)

Henry Schuman, Inc. New York, New York, USA. 1927

The conditions necessary to life are found neither in the organism nor in the outer environment, but in both at once. Indeed, if we suppress or disturb the organism, life ceases, even though the environment remains intact; if, on the other hand, we take away or vitiate the environment, life just as completely disappears, even though the organism has not been destroyed.

Translated by Henry C. Greene

*An Introduction to the Study of Experimental Medicine*

Chapter III

Henry Schuman, Inc. New York, New York, USA. 1927

The spontaneity enjoyed by beings endowed with life has been one of the principal objections urged against the use of experimentation in biological studies.

Translated by Henry C. Greene

*An Introduction to the Study of Experimental Medicine*

Chapter III

Henry Schuman, Inc. New York, New York, USA. 1927

...a living organism is nothing but a wonderful machine endowed with the most marvelous properties and set going by means of the most complex and delicate mechanism.

Translated by Henry C. Greene  
*An Introduction to the Study of Experimental Medicine*  
 Chapter III  
 Henry Schuman, Inc. New York, New York, USA. 1927

It is not by struggling against cosmic conditions that the organism develops and maintains its place; on the contrary, it is by an adaptation to, an agreement with, these conditions. So, the living being does not form an exception to the great natural harmony which makes things adapt themselves to one another; it breaks no concord; it is neither in contradiction to nor struggling against general cosmic forces; far from that, it forms a member of the universal concert of things, and the life of the animal, for example, is only a fragment of the total life of the universe.

In William Maddock Bayliss  
*Principles of General Physiology*  
 Preface (p. xvii)  
 Longmans, Green & Company. London, England. 1920

**Berrill, Norman John** 1903–96  
 English-born American biologist

Life can be thought of as water kept at the right temperature in the right atmosphere in the right light for a long enough period of time.

*You and the Universe*  
 Chapter 15 (p. 117)  
 Dodd, Mead & Company. New York, New York, USA. 1958

**Blumenberg, Hans** 1920–  
 German philosopher

The combined circumstances that we live on Earth and are able to see stars – that the conditions necessary for life do not exclude those necessary for vision, and vice versa – is a remarkably improbably one.

This is because the medium [in] which we live is, on the one hand, just thick enough to enable us to breathe and to prevent us from being burned up by cosmic rays, while, on the other hand, it is not so opaque as to absorb entirely the light of the stars and block any view of the universe. What a fragile balance between the indispensable and the sublime.

*The Genesis of the Copernican World*  
 Introduction (p. 3)  
 The MIT Press. Cambridge, Massachusetts, USA. 1987

**Bohr, Niels Henrik David** 1886–1962  
 Danish physicist

...the existence of life must be considered as an elementary fact that cannot be explained, but must be taken as a starting point in biology, in a similar way as the quantum of action, which appears as an irrational element from the point of view of classical mechanical physics, taken together with the existence of elementary particles, forms the foundation of atomic physics.

Light and Life  
*Nature*, Volume 131, Number 3309, April 1, 1933 (p. 458)

**Borland, Hal** 1900–78  
 American writer

The year holds one moment, which may last for a week, when tree and bush and vine are on the breathless verge of leafing out.

*Borland Country*  
 The Moment (p. 20)  
 J.B. Lippincott Company. Philadelphia, Pennsylvania, USA. 1971

Life persists, and so does its ultimate source, call it what you will. Man is a unique form of that life, but not alien to it. He happens to live in the midst of life on this earth, this particular small unit of a universe about which he actually has only a smattering of knowledge.

*The Enduring Pattern*  
 Foreword (p. 5)  
 Simon & Schuster. New York, New York, USA. 1959

We are the survivors, all of us, not of a man-made holocaust but of infinitely more powerful and enduring forces, the surge of life, the rhythm of change, and the infinity of time.

*The Enduring Pattern*  
 Foreword (pp. 6–7)  
 Simon & Schuster. New York, New York, USA. 1959

**Bradley, Jr., John Hodgdon** 1898–1962  
 American geologist

Living things are the result of a special, perhaps a unique combination of conditions. They stand small, weak, and alone in a wilderness of the dead. Cruel forces beat upon them and reduce them whenever possible to the unleavened clay from which they sprang.

*Parade of the Living*  
 Part I, Chapter II (p. 13)  
 Coward-McCann, Inc. New York, New York, USA. 1930

Not until creatures had grown to a size observable by the crude vision of man and his microscope, not until they had developed skeletons that could resist decay and become fossilized while their mud sepulchers were turning to stone, did they leave any certain records. The parade of living things through time began in a way we can never understand, in an age we can never know, just as it will end in a manner nobody can foresee, at a time that is lost over the dark horizon of the future.

*Parade of the Living*  
 Part I, Chapter III (p. 27)  
 Coward-McCann, Inc. New York, New York, USA. 1930

They [early life] were but shapes in the dark, yet ordained soon to emerge into a brighter day at the head of a procession that spread with abundant triumph over the whole earth.

*Parade of the Living*  
 Part I, Chapter III (p. 35)  
 Coward-McCann, Inc. New York, New York, USA. 1930

The history of life on earth is more than a collection of shells and bones in a cabinet. It is more than a

procession of changing forms and functions. It is a dramatic spectacle.

*Parade of the Living*

Apologia

Coward-McCann, Inc. New York, New York, USA. 1930

### **Brooks, William Keith** 1848–1908

American zoologist

...life is response to the order of nature ...

*The Foundations of Zoology*

Lecture I (p. 3)

The Columbia University Press. New York, New York, USA. 1908

I shall try to show that life is response to the order of nature.... Our interest in all branches of science is vital interest. It is only as living things that we care to know. Life is that which, when joined to mind, is knowledge, – knowledge in use; and we may be sure that all living things with minds like ours are conscious of some part of the order of nature, for the response in which life consists is response to this order.

*The Foundations of Zoology*

Lecture I (pp. 3–4)

The Macmillan Co. New York, New York, USA. 1899

Life is that which, when joined to mind, is knowledge, – knowledge in use; and we may be sure that all living things with minds like ours are conscious of some part of the order of nature, for the response in which life consists is response to this order.

*The Foundations of Zoology*

Lecture I (p. 4)

The Macmillan Co. New York, New York, USA. 1899

Every reflective biologist must know that no living being is self-sufficient, or would be what it is, or would be at all, if it were not part of the natural world....

Living things are real things...but their reality is in their interrelations with the rest of nature, and not in themselves.

Heredity and Variation: Logical and Biological

The question of the conditions under which living matter originated on the surface of the earth is still a subject limited largely to speculation.... One of the purposes of the observation reported herein is to add another fact that might have some bearing upon this interesting question.

One of the most popular current conceptions is that life originated in an organic milieu. The problem to which we are addressed is the origin of that organic milieu in the absence of any life.

Reduction of Carbon Dioxide in Aqueous Solutions by Ionizing Radiation

*Science*, Volume 114, Number 2964, October 19, 1951 (p. 416)

**Glazkov, Yuri** 1939–

Russian cosmonaut

The winds scatter across the planet the seeds of life to bring forth the grass and flowers and woods. The eternal winds of the universe are rushing along. What do they bring? No one knows. But I am sure that Nature has created us, endowed us with intelligence, so that we, like her servant the winds, can carry life into the vast and limitless emptiness and to its innumerable worlds. Reason should win out on Earth and then in the whole universe.

German physicist and philosopher

...a feeling will gradually grow up that life on earth represents a unity, that damage at one point can have effects everywhere else, that we are jointly responsible for the ordering of life upon this our earth. From the cosmic distances to which man can penetrate by the means of modern technology, we see perhaps more clearly than from earth itself the unitary laws whereby all life on our planet is ordered.

*Across the Frontiers*  
Chapter VI (p. 68)  
Harper & Row, Publishers. New York, New York, USA. 1974

**Herschel, Sir John Frederick William** 1792–1871  
English astronomer and chemist

If matter exists in the universe for the purpose of life, nature would seem to tip a hogshead to fill a wineglass, when it makes life possible only on a little planet.

**Holmes, Oliver Wendell** 1809–94  
American physician, poet, and humorist

The more we study the body and the mind, the more we find both to be governed, not by, but according to, laws, such as we observe in the larger universe.

*The Autocrat of the Breakfast-Table*  
Chapter IV (p. 71)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1891

**Huxley, Thomas Henry** 1825–95  
English biologist

The last thing that it would be proper for me to do would be to speak of the work of my life, or to say at the end of the day whether I think I have earned my wages or not. Men are said to be partial judges of themselves. Young men may be, I doubt if old men are. Life seems terribly foreshortened as they look back and the mountain they set themselves to climb in youth turns out to be a mere spur of immeasurably higher ranges when, by failing breath, they reach the top. But if I may speak of the objects I have had more or less definitely in view since I began the ascent of my hillock, they are briefly these: To promote the increase of natural knowledge and to forward the application of scientific methods of investigation to all the problems of life to the best of my ability, in the conviction which has grown with my growth and strengthened with my strength, that there is no alleviation for the sufferings of mankind except veracity of thought and of action, and the resolute facing of the world as it is when the garment of make-believe by which pious hands have hidden its uglier features is stripped off.

Autobiography (p. 13)  
Houghton Mifflin & Co. Boston, Massachusetts, USA. 1909

**Jaeger, Benedict** 1789–?  
Austrian-born American entomologist

The conditions of our being are such, that we are tied by destiny to every object; and the more intimate and appreciable the connection, the more interesting and important to us becomes a full understanding of our mutual relations and dependencies in the vast arena of Life.

*The Life of North American Insects*  
Preface (p. xi)  
Harper & Brothers Publishers. New York, New York, USA. 1859

**Jeans, Sir James Hopwood** 1877–1946  
English physicist and mathematician

We know of no type of astronomical body in which the conditions can be favorable to life except planets like our own revolving round a sun.... [O]nly an infinitesimally small corner of the universe can be in the least suited to form an abode of life.

*The Universe Around Us*  
Chapter V (pp. 320, 321)  
The Macmillan Company. New York, New York, USA. 1929

Is this, then, all that life amounts to? To stumble, almost by mistake, into a universe which was clearly not designed for life, and which, to all appearances, is either totally indifferent or definitely hostile to it, to stay clinging on to a fragment of a grain of sand until we are frozen off, to

strut our tiny hour on our tiny stage with the knowledge that our aspirations are all doomed to final frustration, and that our achievement must perish with our race, leaving the universe as though we had never been?

*The Mysterious Universe*

Chapter I (pp. 15–16)

The Macmillan Company. New York, New York, USA. 1932

...it does not at present look as though Nature had designed the universe primarily for life; the normal star and the normal nebula have nothing to do with life except making it impossible. Life is the end of a chain of by-products; it seems to be the accident, and life-destroying radiation the essential.

The Wider Aspects of Cosmogony (p. 177)

Government Printing Office. Washington, D.C. 1929

### **Jennings, Herbert Spencer** 1868–1947

American zoologist

The universe did not become sterile with the first production of life. It is continuously creative now as in the past.

*The Universe and Life*

Chapter II (p. 51)

Yale University Press. New Haven, Connecticut, USA. 1941

[Life] will repeat the same unsuccessful experiment, the same tragic mistakes a hundred times.... In hundreds of ways, life produces imperfect types, many that cannot continue to exist even under the best of conditions.... The pathway of developing life is profusely marked with those imperfect starts, with the attempts of life to move in directions that lead but to conditions in which life is impossible.

*The Universe and Life*

Chapter II (pp. 54–55)

Yale University Press. New Haven, Connecticut, USA. 1941

In the study of the progress of life, therefore, we find no reason to doubt that life is traveling a new course, the final goal of which does not now exist, the end of which is not now predictable. Life that is upon a new adventure, life that is moving in directions not laid out beforehand, life that is transforming into what did not before exist, life that is rising to heights not before reached – this is the vision that biology presents to our eyes.

*The Universe and Life*

Chapter II (p. 65)

Scottish engineer, mathematician, and physicist

The hypothesis that life originated on this earth through moss-grown fragments from the ruins of another world may seem wild and visionary; all I maintain is that it is not unscientific.

*Report of the Forty-First Meeting of the British Association for the*

*Advancement of Science*

On the Origin Of Life

Edinburgh, Scotland. 1871

Mathematics and dynamics fail us when we contemplate the earth, fitted for life but lifeless, and try to imagine the commencement of life upon it. This certainly did not take place by any action of chemistry, or electricity, or crystalline grouping of molecules under the influence of force, or by any possible kind of fortuitous concourse of atoms. We must pause face to face with the mystery and miracle of the creation of living creatures.

Series 5, The Age of the Earth as an Abode Fitted for Life

*Philosophical Magazine*, Volume 47, 1899 (p. 89)

A very ancient speculation, still clung to by many naturalists (so much so that I have a choice of modern terms to quote in expressing it) supposes that, under meteorological conditions very different from the present, dead matter may have run together or crystallised or fermented into “germs of life,” or “organic cells,” or “protoplasm.” But science brings a vast mass of inductive evidence against this hypothesis of spontaneous generation,.... Dead matter cannot become living without coming under the influence of matter previously alive. This seems to me as sure a teaching of science as the law of gravitation.

*Popular Lectures and Addresses* (Volume 2)

Address to the British Association (pp. 197–198)

Macmillan & Company Ltd. London, England. 1894

...life proceeds from life, and from nothing but life.

Address by the President (p. civ)

### **Kopp, Hermann**

The alchemist of past centuries tried hard to make the elixir of life... These efforts were in vain; it is not in our power to obtain the experiences and views of the future by prolonging our lives forward in this direction. However, it is possible and in a certain way to prolong our lives backwards, by acquiring the experiences of those who existed before us and by learning to know their views as if we were their contemporaries. The means for doing this is also an elixir of life.

*Die Entwicklung der Chemien der neuern Zeit*

Foreword

Publisher undetermined

**Krebs, Hans Adolf** 1900–81

German-born English biochemist

The existence of common features in different forms of life indicates some relationship between the different organisms, and according to the concept of evolution these relations stem from the circumstance that the higher organisms, in the course of millions of years, have gradually evolved from simpler ones. The concept of evolution postulates that living organisms have common roots, and in turn the existence of common features is powerful support for the concept of evolution. The presence of the same mechanism of energy production in all forms of life suggests two other inferences, first, that the mechanism of energy production has arisen very early in the evolutionary process, and second, that life, in its present forms, has arisen only once.

*Nobel Lectures, Physiology or Medicine 1942–1962*

Nobel lecture for award received in 1953

The Citric Acid Cycle (p. 409)

Elsevier Publishing Company. Amsterdam, Netherlands. 1964

...in principle, one by one, the difficulties of explaining living systems in terms of chemistry and physics disappear. "In principle" are the operative words. In practice the difficulties remain great and seem insurmountable in the foreseeable future. But, from the point of view of the theory of knowledge, there is nevertheless a decisive difference.

Living things are, as it were, universes. Were it possible to magnify the human body so that the positive electrons would be as large as small shot... , a man would be about 10,000 times as tall as the distance from the earth to the sun. Were the electrons luminous, each individual would look like a nebula or collection of an immense number of suns, all of which would be in rapid orbital motion. There would be constellations, which we call molecules, and the atoms would be solar systems... We are in very truth minute universes, composed of quadrillions of suns and planets.

**McCabe, Joseph** 1867–1955

English rationalist writer and ex-Franciscan priest

There is, perhaps, no other chapter in the chronicle of the earth that we approach with so lively an interest as the chapter which should record the first appearance of life. Unfortunately, as far as the authentic memorials of the past go, no other chapter is so impenetrably obscure as this. The reason is simple. It is a familiar saying that life has written its own record, the long-drawn record of its dynasties and its deaths, in the rocks. But there were millions of years during which life had not yet learned to write its record, and further millions of years the record of which has been irretrievably destroyed.

**Muggeridge, Malcolm** 1903–90

English journalist and social critic

Nor, as far as I am concerned, is there any recompense in the so-called achievements of science. It is true that in my lifetime more progress has been made in unravelling the composition and the mechanism of the material universe than previously in the whole of recorded history. This does not at all excite my mind, or even my curiosity. The atom has been split; the universe has been discovered, and will soon be explored. Neither achievement has any bearing on what alone interests me – which is why life exists, and what is the significance, if any, of my minute and so transitory part in it.

English Romantic writer

To examine the causes of life, we must first have recourse to death.

*Frankenstein: Or, The Modern Prometheus*

Chapter III (p. 69)

George Routledge & Sons. London, England. 1891

After days and nights of incredible labour and fatigue, I succeeded in discovering the cause of generation and; life; nay, more, I became myself capable of bestowing animation upon lifeless matter.

*Frankenstein: Or, The Modern Prometheus*

Chapter IV (p. 71)

George Routledge & Sons. London, England. 1888

**Sherrington, Sir Charles** 1857–1952

English physiologist

The microscope reveals that plants and animals are literally commonwealths of individually living units... Thus

the corporeal house of life is built of living stones. In that house each stone is a self-centered microcosm, individually born, breathing for itself, feeding itself, consuming its own substance in its living, renewing its substance to meet that consumption, harmonizing with its own inner life some special function for the benefit of the whole, and destined ultimately for an individual death.

In T.B. Strong (ed.)

*Lectures on the Method of Science*

Chapter III (p. 67)

Clarendon Press. Oxford, England. 1906

A grey rock, said Ruskin, is a good sitter. That is one type of behavior. A darting dragon-fly is another type of behavior. We call the one alive, the other not. But both are fundamentally balances of give and take of motion with their surround. To make "life" a distinction between them is at root to treat them both artificially.

*Man on His Nature*

Chapter III (p. 88)

Doubleday Anchor Books. Garden City, New York, USA. 1955

### **Simpson, George Gaylord** 1902–84

American paleontologist

The historian of life takes not only knowledge of fossils but also a tremendous array of pertinent facts from other fields of earth sciences and of life sciences and weaves them all into an integral interpretation of what the world of life is like and how it came to be so. Finally, he is bound to reflect still more deeply and to face the riddles of the meaning and nature of life and of man as well as problems of human values and conduct. The history of life certainly bears directly on all these riddles and problems, and realization of its own value demands investigation of this bearing.

Life is a chemical reaction; death is the cessation of that reaction; living matter, from the microscopic yeast spore to humanity itself, is merely the result of certain

accidental groupings of otherwise inert matter, and life can actually be created by repeating in the laboratory nature's own methods and processes!

Creating Life in the Laboratory

*Cosmopolitan*, Volume 52, May, 1912 (pp. 774–781)

**Szent-Györgyi, Albert** 1893–1986

Hungarian-born American biochemist

What drives life is thus a little electric current, kept up by the sunshine. All the complexities of intermediary metabolism are but the lacework around this basic fact.

Imre Csizmadia, Botond Penke and Gabor Toth (eds.)

*The Role of Chemistry in the Evolution of Molecular Medicine*

Introduction to Submolecular Biology

Chapter 3

Elsevier Publishing Company. Amsterdam, Netherlands. 2004

Every biologist has at some time asked “What is life?” and none has ever given a satisfactory answer. Science is built on the premise that Nature answers intelligent questions intelligently; so if no answer exists, there must be something wrong with the question.

*The Living State : With Observations on Cancer* (p. 1)

Academic Press. New York, New York, USA. 1972

It is common knowledge that the ultimate source of all our energy and negative entropy is the radiation of the sun. When a photon interacts with a material particle on our globe it lifts one electron from an electron pair to a higher level. This excited state as a rule has but a short lifetime and the electron drops back within 10<sup>-7</sup> to 10<sup>-8</sup> [second] to the ground state giving off its excess energy one way or another. Life has learned to catch the electron in the excited state, uncouple it from its partner and let it drop back to the ground state through its biological machinery utilizing its excess energy for life processes.

In W. D. McElroy and B. Glass (eds.)

*Light and Life*

Introductory Comments (p. 7)

The Johns Hopkins Press. Baltimore, Maryland, USA. 1961

## The X-Files

SCULLY: It began with an act of supreme violence – a big bang expanding ever outward, cosmos born of matter and gas, matter and gas ten billion years ago. Whose idea was this? Who had the audacity for such invention? And the reason? Were we part of that plan ten billion years ago? Are we born only to die? To be fruitful and multiply and replenish the earth before giving way to our generations? If there is a beginning, must there be an end? We burn like fires in our time only to be extinguished. To surrender to the elements' eternal reclaim. Matter and gas... will this all end one day? Life no longer passing to life, the Earth left barren like the stars above, like the cosmos. Will the hand that lit the flame let it burn down? Let it burn out? Could we, too, become extinct? Or if this fire of life living inside us is meant to go on, who decides?

Who tends the flames? Can he reignite the spark even as it grows cold and weak?

*Biogenesis*

Season 6 (2000)

**Tillich, Paul** 1886–1965

German-born American theologian

Now the way into the profounder levels of life is not to be found by means of physical and psychological analysis but only by means of intuitive insight, of apprehension on the basis of one's own aliveness.

*The Religious Situation* (p. 58)

Meridian Books

New York, New York, USA. 1956

**Twain, Mark (Samuel Langhorne**

**Clemens)** 1835–1910

American author and humorist

Among you boys you have a game: you stand a row of bricks on end a few inches apart; you push a brick, it knocks its neighbor over, the neighbor knocks over the next brick – and so on till all the row is prostrate. That is human life. A child's first act knocks over the initial brick, and the rest will follow inexorably. If you could see into the future, as I can, you would see everything that was going to happen to that creature; for nothing can change the order of its life after the first event has determined it. That is, nothing will change it, because each act unfailingly begets an act, that act begets another, and so on to the end, and the seer can look forward down the line and see just when each act is to have birth, from cradle to grave.

*The Mysterious Stranger*

Chapter VII (p. 87)

Harper & Brothers Publishers. New York, New York, USA. 1926

**Updike, John** 1932–

American novelist, short story writer, and poet

But I happen to know exactly how life arose; it's brand-new news, at least to the average layman like yourself. Clay. Clay is the answer. Crystal formation in fine clays provided the template, the scaffolding, for the organic compounds and the primitive forms of life. All life did, you see, was take over the phenotype that crystalline clays had evolved on their own.

Macmillan & Company Ltd. London, England. 1891–94

**Wald, George** 1906–97  
American biologist and biochemist

We are not alone in the universe, and do not bear alone the whole burden of life and what comes of it. Life is a cosmic event – so far as we know the most complex state of organization that matter has achieved in our cosmos. It has come many times, in many places – places closed off from us by impenetrable distances, probably never to be crossed even with a signal. As men we can attempt to understand it, and even somewhat to control and guide its local manifestations. On this planet that is our home, we have every reason to wish it well. Yet should we fail, all it not lost. Our kind will try again elsewhere.

The Origin of Life  
*Scientific American*, Volume 191, Number 2, August, 1954 (p. 53)

**Watson, James D.** 1928–  
American geneticist and biophysicist

...we have complete confidence that further research of the intensity recently given to genetics will eventually provide man with the ability to describe with completeness the essential features that constitute life.

*Molecular Cell Biology* (2nd edition)  
Chapter 1 (p. 1)  
Scientific American Books. New York, New York, USA. 1990

**Watts, Alan Wilson** 1915–73  
American philosopher

I cannot feel Christianly because I am in a world which grows from within. I am simply incapable of feeling its life as coming from above, from beyond the stars, even recognizing this to be a figure of speech. More exactly, I cannot feel that its life comes from Another, from one who is qualitatively and spiritually external to all that lives and grows. On the contrary, I feel this whole world to be moved from the inside, and from an inside so deep that it is my inside as well, more truly I than my surface consciousness.

*Nature, Man, and Woman*  
Part I, Chapter 1 (p. 46)  
Vintage Books. New York, New York, USA. 1970

The naive idea that there is first of all empty space and then things filling it underlies the classical problem of how the world came out of nothing. Now the problem has to be rephrased, “How did something-and-nothing come out of...what?”

*Nature, Man, and Woman*  
Part I, Chapter 2 (p. 56)  
Vintage Books. New York, New York, USA. 1970

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

We look back through countless millions of years and see the will to live struggling out of the intertidal slime, struggling from shape to shape and from power to power, crawling and then walking confidently upon the land, struggling generation after generation to master the air, creeping down into the darkness of the deep; we see it turn upon itself in rage and hunger and reshape itself anew; we watch it draw nearer and more akin to us, expanding, elaborating itself, pursuing its relentless, inconceivable purpose, until at least it reaches us and its being beats through our brains and arteries...

*The Discovery of the Future* (pp. 49–50)  
B.W. Huebsch. New York, New York, USA. 1913

Gathered together at last under the leadership of man, the student-teacher of the universe, unified, disciplined, armed with the secret powers of the atom and with knowledge as yet beyond dreaming, Life, forever dying to be born afresh, forever young and eager, will presently stand upon this earth as upon a footstool, and stretch out its realm amidst the stars.

Little, Brown & Company. Boston, Massachusetts, USA. 1983

## LIFE ENERGY

**Baldwin, J. Mark** 1861–1934

Psychologist

It can be stated without fear of refutation that every physiological investigation shows with accumulating emphasis that the manifestations of living matter are not explicable with only the forces of dead matter, and the more profound the knowledge of the investigator the more certain is the testimony that the life energy is not a mere name.

The Processes of Life Revealed by the Microscope: A Plea for Physiological Histology

*Science*, N.S. Volume 2, Number 34, August 23, 1895 (p. 210)

## LIFE GOAL

**Huxley, Thomas Henry** 1825–95

English biologist

To promote the increase of natural knowledge and to forward the application of scientific methods of investigation to all the problems of life to the best of my ability, in the conviction which has grown with my growth and strengthened with my strength, that there is no alleviation for the sufferings of mankind except veracity of thought and of action, and the resolute facing of the world as it is when the garment of make-believe by which pious hands have hidden its uglier features is stripped off.

*Collected Essays* (Volume 1)

Autobiography (p. 16)

D. Appleton & Co. New York, New York, USA. 1901

## LIFE, END OF

**Adams, Henry Brooks** 1838–1918

American man of letters

My strength is prostrated beyond anything that I ever experienced before, even to total impotence. I have little life left in me.

*The Degradation of the Democratic Dogma*

The Heritage of Henry Adams (p. 75)

The Macmillan Co. New York, New York, USA. 1919

## LIFE, EXTRATERRESTRIAL

**Arrhenius, Svante August** 1859–1927

Swedish scientist

There is no more elevating spectacle than to contemplate the sky with its thousands of stars on a clear night. When we send our thoughts to those lights glittering in infinite distance, the question forces itself upon us, whether there are not out there planets like our own that will sustain organic life.

Translated by H. Born

*Worlds in the Making: The Evolution of the Universe*

Chapter 2 (p. 39)

Harper & Brothers Publishers. New York, New York, USA. 1908

## LIFE, HISTORY OF

**Carson, Rachel** 1907–64

American marine biologist and author

The history of life on earth has been a history of interaction between living things and their surroundings. To a large extent, the physical form and the habits of the earth's vegetation and its animal life have been molded by the environment. Considering the whole span of earthly time, the opposite effect, in which life actually modifies its surroundings, has been relatively slight. Only within the moment of time represented by the present century has one species – man – acquired significant power to alter the nature of his world.

*Silent Spring*

Chapter 2 (p. 16)

Fawcett Publications. Greenwich, Connecticut, USA. 1962

## LIFE, MYSTERY OF

**Hayes, William**

It is not very long since genetics and biochemistry were quite separate sciences, each seeking...a key to unlock the mystery of life. The biochemist found enzymes, the genetist genes.

*The Genetics of Bacteria and their Viruses* (p. 258)

**LIFE, ORIGIN OF**

**Marsh, Othniel Charles** 1831–99  
American paleontologist

The origin of life, and the order of succession in which its various forms have appeared upon the earth, offer to science its most inviting and most difficult field of research. Although the primal origin of life is unknown, and may perhaps never be known, yet no one has a right to say how much of the mystery now surrounding it science cannot remove.

*Introduction and Succession of Vertebrate Life in America*

Introduction (p. 3)

Tuttle, Morehouse & Taylor, Printers. New Haven, Connecticut, USA. 1877

**LIFE, PROBLEMS OF**

**de Staël (Anne-Louise-Germaine), Mme.** 1766–1817  
French romantic writer

The problems of life are more complicated; not one is positive, not one is absolute; we must conjecture, we must decide by the aid of indications and assumptions, which bear no analogy with the infallible procedure of the calculus. Demonstrated truths do not conduct to probable truths; which alone, however, serve us for our guide in business, in the arts, and in society. There is, no doubt, a point at which the mathematics themselves require that luminous power of invention, without which it is impossible to penetrate into the secrets of nature.

Quoted in William Hamilton

*Discussions on Philosophy and Literature, Education and University Reform*

On the Study of Mathematics as an Exercise of the Mind (p. 293)

Harper & Brothers Publishers. New York, New York, USA. 1861

**LIFE, RICHNESS OF**

**Lubbock, John, First Baron Avebury** 1834–1919  
English banker, politician, biologist, and archaeologist

The richness of life is marvellous. Anyone who will sit down quietly on the grass and watch a little will be indeed surprised at the number and variety of living beings, everyone with a special history of its own, everyone offering endless problems of great interest.

*The Pleasures of Life*

Chapter VII (pp. 151–152)

The Macmillan Co. New York, New York, USA. 1891

**LIGHT**

**Abbot, Charles Greeley** 1872–1973  
American astrophysicist

Light is the messenger that brings the news. The message is in cipher, very long, faint, and hard to read. It tells of the materials, classifications, mass, size, and number of the stars.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1916*

News From the Stars (p. 157)

Government Printing Office. Washington, D.C. 1917

**Alighieri, Dante** 1265–1321  
Italian poet and writer

O Supreme Light, that so high upliftest Thyself from mortal conceptions, re-lend to my mind a little of what Thou didst appear, and make my tongue so powerful that it may be able to leave one single spark of Thy glory for the folk to come.

Paradise, Canto XXXIII

l. 67–72

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Author undetermined**

I know the speed of light, but what's the speed of dark?

Source undetermined

Light travels faster than sound, which is why some people appear bright until they speak.

Source undetermined

...light is like a letter directed to us by an unknown hand, the very receipt of which informs us of the writer's existence, but of little more. Analysing the light by the prism is like opening the letter; and as in the spectrum we see brilliant lines, the many-coloured characters of nature, so in the other have we lines written in pen and ink.

Light and Sunlight

*The National Review*, Volume XIII, Number XXV, July, 1881 (p. 4)

**Blackmore, Richard** 1825–1900  
English Victorian novelist

Behold the light emitted from the Sun,  
What more familiar, and what more unknown?

While by its spreading Radiance it reveals

All Nature's Face, it still itself conceals.

*The Works of the English Poets, from Chaucer to Cowper* (Volume 10)

Creation, Book II (p. 348)

Publisher undetermined

London, England. 1810

**Bohm, David** 1917–92  
American physicist

This ocean of energy could be thought of as an ocean of light.

In Renée Weber

*Dialogues with Scientists and Sages: The Search for Unity* (p. 155)

Routledge & Kegan Paul. London, England. 1986

When we come to light, we are coming to the fundamental activity in which existence has its ground.... Light is the potential of everything.

In Renée Weber

*Dialogues with Scientists and Sages: The Search for Unity* (p. 155)  
Routledge & Kegan Paul. London, England. 1986

**Bragg, Sir William Henry** 1862–1942

English physicist

Light brings us the news of the Universe.

*The Universe of Light*

Chapter I (p. 1)

The Macmillan Company. New York, New York, USA. 1933

Light, properly so called, is only a narrowly defined part of a far greater phenomenon, that of radiation in general.... The lengths of [visible] light waves fall between close limits; but the rules of wave motion apply to the infinitesimal waves of X-rays on one hand and to the long radio waves on the other.

*The Universe of Light* (p. vi)

**Coleridge, Samuel Taylor** 1772–1834

English lyrical poet, critic, and philosopher

I feel and seek the light I cannot see ...

*The Works of Samuel Taylor Coleridge: Prose and Verse*  
*Zapolya* (p. 106)

Crissy & Markley. Philadelphia, Pennsylvania, USA. 1853

**de Fontenelle, Bernard le Bovier** 1657–1757

French author

...light is made up of certain little balls, which rebound from what is solid, and return obliquely; but pass thro' what admits of an entrance in a right line, as air or glass: so that what makes the moon enlighten us, is, that she is a firm and solid body, from which the little balls rebound...

*Conversations on the Plurality of Worlds*

The Second Evening (pp. 45–46)

Printed for Peter Wilson. Dublin, Ireland. 1761

**Dick, Thomas** 1600–80

Scottish theologian and philosopher

Light is that invisible ethereal matter which renders objects perceptible by the visual organs. It appears to be distributed throughout the immensity of the universe, and is essentially requisite to the enjoyment of every rank of perceptive existence. It is by the agency of this mysterious substance that we become acquainted with the beauties and sublimities of the universe, and the wonderful operations of the Almighty Creator.

*The Complete Works of Thomas Dick, LL.D.*

Volume IX, The Practical Astronomer, Part I, Introduction (p. 191)

Edwards & Bushnell. St. Louis, Missouri, USA. 1857

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

Oh leave the Wise our measures to collate

One thing at least is certain, LIGHT has WEIGHT

One thing is certain, and the rest debate –

Light-rays, when near the Sun, DO NOT GO STRAIGHT.

In Allie Vibert Douglas

*The Life of Arthur Stanley Eddington* (p. 44)

T. Nelson. London, England. 1956

The velocity of light plays a conspicuous part in the relativity theory, and it is of importance to understand what is the property associated with it which makes it fundamental. The fact that the velocity of light is the same for all observers is a consequence rather than a cause of its pre-eminent character.

*Space, Time and Gravitation: An Outline of the General Relativity Theory*

Chapter III (p. 59)

At The University Press. Cambridge, England. 1921

**Editor**

Light crosses space with the prodigious velocity of 6,000 leagues per second.

*La Science Populaire*, April 28, 1881

A note correcting a first error appeared in our issue number 68, indicating that the speed of light is 6,000 leagues per hour. Our readers have corrected this new error. The speed of light is approximately 76,000 leagues per second.

*La Science Populaire*, June 16, 1881

A typographical error slipped into our last issue that is important to correct. The speed of light is 76,000 leagues per hour – and not 6,000.

*La Science Populaire*, May 19, 1881

**Einstein, Albert** 1879–1955

German-born physicist

All these fifty years of conscious brooding have brought me no nearer to the answer to the question “What are light quanta?” Nowadays every Tom, Dick, and Harry thinks he knows it, but he is mistaken.

In A.P. French

*Einstein: A Centenary Volume*

Letter to M. Besso, 1951 (p. 138)

Harvard University Press. Cambridge, Massachusetts, USA. 1979

**Feynman, Richard P.** 1918–88

American theoretical physicist

I want to emphasize that light comes in this form – particles. It is very important to know that light behaves like particles, especially for those of you who have gone to school, where you were probably told something about

light behaving like waves. I'm telling you the way it does behave – like particles.

*QED: The Strange Theory of Light and Matter*

Chapter 1 (p. 15)

Princeton University Press. Princeton, New Jersey, USA. 1985

**Feynman, Richard P.** 1918–88

American theoretical physicist

**Leighton, Robert B.** 1919–97

American physicist

**Sands, Matthew L.** 1919–

American physicist

It isn't that a particle takes the path of least action but that it smells all the paths in the neighborhood and chooses the one that has the least action.

*The Feynman Lectures on Physics* (Volume 2)

Chapter 19 (pp. 19–9)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA.

1983

Things on a very small scale behave like nothing that you have any direct experience about. They do not behave like waves, they do not behave like particles, they do not behave like clouds, or billiard balls, or weights on springs, or anything that you have ever seen.

*The Feynman Lectures on Physics* (Volume 3)

Chapter 1–1 (p. 1–1)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA.

1983

**Finlay, Victoria**

No biographical data available

When light shines on a leaf, or a daub of paint, or a lump of butter, it actually causes it to rearrange its electrons, in a process called “transition.” There the electrons are, floating quietly in clouds within their atoms, and suddenly a ray of light shines on them. Imagine a soprano singing a high C and shattering a wineglass, because she catches its natural vibration. Something similar happens with the electrons, if a portion of the light happens to catch their natural vibration. It shoots them to another energy level and that relevant bit of light, that glass-shattering “note”, is used up and absorbed. The rest is reflected out, and our brains read it as “colour”.

*Colour; Travels Through the Paintbox*

Science photographer

**Whitesides, George M.**

American chemist

We know light best in its diluted form: a gentle rain of photons falling from the sun that illuminates and warms.

More concentrated, light is a furnace and a terror.

*On the Surface of Things: Images of the Extraordinary in Science*

Silicon, Etched by Light (p. 34)

Chronicle Books. San Francisco, California, USA. 1997

**Glashow, Sheldon L.** 1932–

American physicist

Once upon a time, physicists wondered whether light was an electromagnetic wave or a beam of particles. Quantum mechanics revealed that this question is simply not meaningful since neither answer is quite correct. Light, and all other forms of electromagnetic radiation, sometimes displays particle-like properties as photons, and sometimes behaves like a wave. The same is true for the electron which is particulate as it produces a flash of light on the TV screen and wavelike as it passes through the electron microscope. In everyday life, when a pebble is thrown into a pond, the pebble is the particle and the ripple is the wave. In the quantum mechanical world, there is no such clear-cut distinction. The wave-particle duality is a universal attribute of material systems.

*Interactions: A Journey Through the Mind of a Particle Physicist and the Matter of This World*

Chapter 4 (pp. 87–88)

Warner Books. New York, New York, USA. 1988

**Hale, George Ellery** 1868–1938

American astronomer

Light is the most universal of all languages. Its messages reach us with equal faculty from the depths of the universe and from the electrons whirling in the nearest atom. Like the hieroglyphics of the Egyptians, its tones are silent, but unlike them, it tells of the present as well as of the past.

Light Breaks Where No Sun Shines (p. 82)

New Directions Publishing Corp. New York, New York, USA. 1971

**Tyndall, John** 1820–93  
Irish-born English physicist

Every star declares by its light its undamaged individuality, as if it alone had sent its thrill through space.

*Six Lectures on Light Delivered in America in 1872–1873*

Lecture II (p. 63)

D. Appleton & Co. New York, New York, USA. 1901

The ancients supposed light to be produced and vision excited by something emitted from the eye. The moderns hold vision to be excited by something that strikes the eye from without. What that something is we shall consider more closely subsequently.

*Notes of a Course of Nine Lectures on Light* (4th edition)

Notes on Light (p. 1)

Longmans, Green & Co. London, England. 1872

**von Goethe, Johann Wolfgang** 1749–1832  
German poet, novelist, playwright, and natural philosopher

A part of darkness, which gave birth to light.

Proud light, who now his mother would enthral,

Contesting space and ancient rank with night.

Yet he succeedeth not, for struggle as he will,

To forms material he adhereth still;

From them he streameth, them he maketh fair,

And still the progress of his beams they check;

And so, I trust, when comes the final wreck,

Light will, ere long, the doom of matter share.

Translated by Anna Swanwick

*Goethe's Faust* (p. 54)

George Bell & Sons. London, England. 1879

**von Helmholtz, Hermann** 1821–94  
German scientist and philosopher

There can no longer be any doubt that light waves consist of electric vibrations in the all-pervading ether, and that the latter possesses the properties of an insulator and a magnetic medium.

In Heinrich Rudolph Hertz

*The Principles of Mechanics, Presented in a New Form*

Preface (p. xvi)

The likelihood of a thing happening is inversely proportional to its desirability.

*The Dallas Morning News*, September 9, 1969

**LIMIT****Berlinski, David** 1942–

American mathematician

We are finite creatures, bound to this place and this time, and helpless before an endless expanse. It is within the calculus that for the first time the infinite is charmed into compliance, its luxuriance subordinated to the harsh concept of a limit.

*A Tour of the Calculus*

Introduction (p. xii)

Pantheon Books. New York, New York, USA. 1995

But now a professional secret must be imparted. The concept of a limit is simple. It is the definition that is complex. The concept involves nothing more obscure than the idea of getting closer and closer to something. It suggests the attempt by one human being to approach another: and the inexpugnable thing in love as in mathematics is that however the distance decreases, it often remains what it always was, which is to say, hopelessly poignant because hopelessly infinite.

*A Tour of the Calculus*

Chapter 14 (p. 120)

Pantheon Books. New York, New York, USA. 1995

**Keyser, Cassius Jackson** 1862–1947

American mathematician

What is known in mathematics under the name of limit is everywhere present in life in the guise of some ideal,

some excellence high-dwelling among the rocks, an "ever flying perfect" as Emerson calls it, unto which we may approximate nearer and nearer, but which we can never quite attain, save in aspiration.

*The Human Worth of Rigorous Thinking: Essays and Addresses*

Chapter III (p. 78)

Columbia University Press. New York, New York, USA. 1916

**Merriman, Gaylord M.**

Mathematician

The limit concept is not armchair fantasy, dissolving with the pipesmoke of its dreamer. It is the stuff of life.

*To Discover Mathematics*

Chapter 9 (p. 254)

John Wiley & Sons, Inc. New York, New York, USA. 1942

**LINE****Bell, E. T. (Eric Temple)** 1883–1960

Scottish-American mathematician and educator

The straight line of the geometers does not exist in the material universe. It is a pure abstraction, an invention of the imagination or, if one prefers, an idea of the Eternal Mind.

*The Magic of Numbers*

Chapter 7 (p. 57)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1946

**Bogarde, Dirk** 1921–99

Actor and author

A line has length, but no breadth. If you could see it, it wouldn't be a line.

*Despair*

Film (1979)

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

Gave his sentiment divine

Against the being of a line.

Line in Nature is not found;

Unit and universe are round;

In vain produced, all rays return.

*The Complete Works of Ralph Waldo Emerson* (Volume 9)

*Uriel* (p. 15)

Houghton Mifflin & Company. Boston, Massachusetts, USA. 1904

**Newton, Sir Isaac** 1642–1727

English physicist and mathematician

We ought either to exclude all lines, beside the circle and right line, out of geometry, or admit them according to the simplicity of their descriptions, in which case the Conchoid yields to none except the circle. That is arithmetically more simple which is determined by the more simple equations, but that is geometrically more simple which is determined by the more simple drawing of lines.

In William Allen

On the Curves of Trisection

*American Journal of Science*, Volume 4, 1822 (p. 344)

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

What will the line stretch out to the crack of doom?

In *Great Books of the Western World* (Volume 27)

*The Plays and Sonnets of William Shakespeare* (Volume 2)

*Macbeth*, Act IV, Scene i, l. 117

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

Euclid always contemplates a straight line as drawn between two definite points, and is very careful to mention when it is to be produced beyond this segment. He never thinks of the line as an entity given once for all as a whole. This careful definition and limitation, so as to exclude an infinity not immediately apparent to the senses, was very characteristic of the Greeks in all their many activities. It is enshrined in the difference between Greek architecture and Gothic architecture, and between Greek religion and modern religion. The spire of a Gothic cathedral and the importance of the unbounded straight line in modern Geometry are both emblematic of the transformation of the modern world.

*An Introduction to Mathematics*

Chapter 9 (p. 86)

Oxford University Press, Inc. New York, New York, USA. 1958

**LIQUID****Mach, Ernst** 1838–1916

Austrian physicist and philosopher

Nature acts in the construction of liquid figures on the principle of a covetous tailor, and gives no thought in her work to the fashions. But, strange to say, in this work, the most beautiful fashions are of themselves produced.

Translated by Thomas Joseph McCormack

*Popular Scientific Lectures* (3rd edition)

The Forms of Liquids (p. 10)

The Open Court Publishing Co. Chicago, Illinois, USA. 1898

**LITERATURE****Meredith, Owen (Edward Robert****Bulwer-Lytton, First Earl Lytton)** 1831–91

English statesman and poet

In science, read, by preference, the newest works; in literature, the oldest. The classic literature is always modern.

*Caxtoniana: A Series of Essays on Life, Literature, and Manners*

Hints on Mental Culture (p. 110)

W. Blackwood & Sons. Edinburgh, Scotland. 1863

In science, address the few; in literature the many. In science, the few must dictate opinion to the many; in literature, the many, sooner or later, force their judgment on the few.

*Caxtoniana: A Series of Essays on Life, Literature, and Manners*

Readers and Writers (p. 428)

W. Blackwood & Sons. Edinburgh, Scotland. 1863

**Carson, Rachel** 1907–64

American marine biologist and author

The aim of science is to discover and illuminate truth. And that, I take it, is the aim of literature, whether biography or history or fiction; it seems to me, then, that here can be no separate literature of science.

In Paul Brooks

*The House of Life: Rachel Carson at Work*

Fame (p. 128)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1972

**Crothers, Samuel McChord** 1857–1927

American clergyman and writer

The distinction between Literature and Science is fundamental. What is a virtue in one sphere is a vice in the other.

*The Gentle Reader*

The Hinter-Land of Science (p. 229)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1903

English biologist

Science and literature are not two things, but two sides of one thing.

In Leonard Huxley

*Life and Letters of Thomas Henry Huxley* (Volume 1)

Chapter XVI (p. 231)

D. Appleton & Company. New York, New York, USA. 1901

However good lectures may be, and however extensive the course of reading by which they are followed up, they are but accessories to the great instrument of scientific teaching – demonstration. If I insist unweariedly, nay fanatically, upon the importance of physical science as an educational agent, it is because the study of any branch of science, if properly conducted, appears to me to fill

up a void left by all other means of education. I have the greatest respect and love for literature; nothing would grieve me more than to see literary training other than a very prominent branch of education: indeed, I wish that real literary discipline were far more attended to than it is; but I cannot shut my eyes to the fact that there is a vast difference between men who have had a purely literary, and those who have had a sound scientific, training.

A Lobster; or, The Study of Zoology (p. 218)

Macmillan & Company Limited. London, England. 1904

**James, William** 1842–1910

American philosopher and psychologist

The “marvels” of Science, about which so much edifying popular literature is written, are apt to be “*caviare*” to the men in the laboratories.

*The Principles of Psychology* (Volume 2)

The Emotions, No Special Brain-Centers for Emotion (p. 472)

Henry Holt & Company. New York, New York, USA. 1918

**Langley, John Newport** 1852–1925

Physiologist

Those who have occasion to enter into the depths of what is oddly, if generously, called the literature of a scientific subject, alone know the difficulty of emerging with an unsoared disposition.

*Report of the British Association for the Advancement of Science* (1899)

Physiology, including Experimental Pathology and Experimental

Physiology (p. 891)

J. Muray. London, England. 1917–18

**Levine, George**

No biographical data available

Once one is committed to the view that science is not so clearly separable from the human sciences...or from other humanist enterprises, history of science begins to blur with social history. Literature becomes part of the history of science. Science is reflected in literature. And the tools of literary criticism become instruments in the understanding of scientific discourse.

*One Culture: Essays in Science and Literature*

One Culture: Science and Literature, II (p. 22)

University of Wisconsin Press. Madison, Wisconsin, USA. 1987

**Overhage, Carl F. J.** 1910–

Physicist and electrical engineer

The public printed record of the results of scholarly research is the universal device that transcends the barriers of space and time between scholars. It makes the most recent advances of human knowledge accessible to students and scholars throughout the world. Wherever there is a library, any person who has learned the language may participate in the outstanding intellectual adventures of his time. The same record extends into the

past; through an unbroken sequence of communications, the scholars of today can trace the origin of a new concept in different periods and in different countries. By standing on the shoulders of a giant, he may see farther. The wide availability of the record is one of the guarantees of its soundness. In science especially, truth is held to reside in findings that can be experimentally verified anywhere, at any time.

Libraries: Prospects and Problems

*Science*, Volume 155, Number 3764, February, 1967 (p. 804)

**Tyndall, John** 1820–93

Irish-born English physicist

It has been said that science divorces itself from literature. The statement, like so many others, arises from a lack of knowledge. A glance at the less technical writings of its leaders – of its Helmholtz, its Huxley, and its Du Bois-Reymond – would show what breadth of literary culture they command. Where among modern writers can you find their superiors in clearness and vigor of literary style? Science desires no isolation, but freely combines with every effort toward the bettering of man’s estate. Single-handed and supported not with outward sympathy, but with inward force, it has built at least one great wing of the many-mansioned home which man in his totality demands.... The world embraces not only a Newton, but a Shakespeare; not only a Boyle, but a Raphael; not only a Kant, but a Beethoven; not only a Darwin, but a Carlyle. Not in each of these, but in all, is human nature whole. They are not opposed, but supplementary; not mutually exclusive, but reconcilable.

Address

Delivered before the British association assembled at Belfast, 1874

Publisher undetermined

**Valéry, Paul** 1871–1945

French poet and critic

“Science” means simply the aggregate of all the recipes that are always successful. All the rest is...literature.

In Jackson Mathews (ed.)

*The Collected Works of Paul Valéry* (Volume 14)

*Analects* (p. 64)

Princeton University Press. Princeton, New Jersey, USA. 1971

**Weinberg, Alvin Martin** 1915–

American physicist

...the scientific community has evolved an empirical method for establishing scientific priorities – for deciding what is important in science and what is unimportant. This is the scientific literature. The process of self-criticism, which is integral to the literature of science, is one of the most characteristic features of science. Nonsense is weeded out and held up to ridicule in the literature, whereas what is worthwhile receives much sympathetic attention. This process of self-criticism embodied in the literature, though implicit is nonetheless real and

highly significant. The existence of a healthy, viable, refereed scientific literature in itself helps assure society that the science it supports is valid and deserving of support. This is a most important, though little recognized, social function of the scientific literature.

*Reflections on Big Science*

Chapter III (p. 70)

The MIT Press. Cambridge, Massachusetts, USA. 1967

## LITTLE WILLIE

### Author undetermined

Little Willie, happy and free,  
Took a breath of H3P.  
Now Willie belches rings of smoke,  
And thinks it's quite a parlor joke.  
Source undetermined

Bobbie, in his careless glee, mixed some I with NH3.  
When the stuff was dry and thick, Bobbie hit it with a brick.  
Robert's now in heaven they say; at least he seemed to go that way.  
Our Poet's Corner  
Chemical Cantos  
*Industrial Engineering Chemistry: News Edition*, Volume 7, Number 13,  
July 10, 1929 (p. 10)

Little Willie, tried and true,  
Fed his sis on methylene blue.  
Now Sister has a perloexed look  
When'er she sees a babbling brook.  
Source undetermined

Little Willie, good as pie,  
Fed the cat on alkali.  
Now the process, with yields first-rate,  
Produces potassium pussiate.  
Source undetermined

Little Willie, so and so,  
Put H2S in our H2O.  
Now this was not so bad at all,  
For now we drink naught but alcohol.  
Source undetermined

Little Willie, calm and placid,  
Boiled his main nitric acid.  
Now Mother dear is just a plastic,  
Transparent, clear; but non-elastic.  
Source undetermined

Little Willie, I hate to tell,  
Soaked his dad in HCl.  
Now the chemist at his sink  
Wonders what made all the stink.  
Source undetermined

Little Willie, hard as rocks,  
Put fulminate in Daddy's socks.

Now Daddy really wants to know  
How long it takes to grow a toe.  
Source undetermined

Little Willie's dead and gone;  
In fact he is no more,  
For what he thought was H2O  
Was H2SO4.  
Source undetermined

## LIVING BODY

**Huxley, Thomas Henry** 1825–95  
English biologist

...living bodies may be regarded as nothing but extremely complex bundles of forces held in a mass of matter, as the complex forces of a magnet are held in the steel by its coercive force ...

*Lay Sermons, Addresses and Reviews*

The Origin of Species (p. 288)

Macmillan & Company Ltd. London, England. 1870

## LIVING FOSSILS

**Forbes, Edward** 1815–54  
English naturalist

The result of the examination of the Aegean fauna does not hold out much prospect of the discovery of any more extinct forms in a living state.... To those who have looked forward to the finding of lost forms in the greater depths of the sea, the catalogues I here present to the Association must be unsatisfactory; for though two or three such have occurred, the majority of species in the great depths are either described existing forms, or altogether new. The zero of animal life in depth has been too nearly approached to hold out further hopes.

*Report of the Thirteenth Meeting of the British Association for the Advancement of Science Held at Cork in August 1843*

Report on the Mollusca and Radiata of the Aegean Sea, and on their distribution, considered as bearing on Geology (p. 175)

Published by J. Murray. London, England. 1843

## LIVING MATTER

**Huxley, Thomas Henry** 1825–95  
English biologist

...the properties of living matter distinguish it absolutely from all other kinds of things, and as the present state of knowledge furnishes us with no link between the living and the not-living.

*A Manual of the Anatomy of Invertebrated Animals*

Introduction (p. 9)

D. Appleton & Co. New York, New York, USA. 1888

**Schrödinger, Erwin** 1887–1961  
Austrian theoretical physicist

From all we have learnt about the structure of living matter, we must be prepared to find it working in a manner that cannot be reduced to the ordinary laws of physics. And that not on the ground that there is any “new force” or what not, directing the behavior of the single atoms within a living organism, but because the construction is different from anything we have yet tested in the physical laboratory.

*What Is Life? Mind and Matter: The Physical Aspect of the Living Cell*  
Chapter 7 (p. 76)  
Cambridge University Press. New York, New York, USA. 1967

## LIVING VERSUS DEAD

**Pirie, N. W.**  
No biographical data available

...systems are being discovered and studied which are neither obviously living nor obviously dead, and it is necessary to define these words or else give up using them, and coin others. When one is asked whether a virus is living or dead the only sensible answer is: “I don’t know; we know a number of things it will do and a number of things it won’t and if some commission will define the word ‘living’ I will try to see how the virus fits into the definition.” This answer does not as a rule satisfy the questioner, who generally has strong but unfortunate opinions about what he means by the words living and dead.

In A.J. Khuyver and C.B. van Neil (eds.)  
*The Microbe’s Contribution to Biology* (p. 162)  
Harvard University Press. Cambridge, Massachusetts, USA. 1956

**Thomson, Sir John Arthur** 1861–1933  
Scottish naturalist

If we are to reach a coherent view of Nature, such as could be included in a philosophy, we must arrive at some discernment of the characteristics which mark off living organisms from their not-living surroundings. In the present state of science a definition of the organism cannot be more than tentative, but it must be continually attempted.

*The System of Animate Nature* (Volume 1)  
Lecture III (p. 79)  
William & Norgate. London, England. 1920

## LOCATION

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

We have certain preconceived ideas about location in space which have come down to us from ape-like ancestors.

*The Nature of the Physical World*  
Chapter I (p. 16)  
The Macmillan Company. New York, New York, USA. 1930

## LOGARITHM

**Emerson, Ralph Waldo** 1803–82  
American lecturer, poet, and essayist

Something is wanting to science, until it has been humanised. The table of logarithms is one thing, and its vital play, in botany, music-optics, and architecture, another.

*Representative Men*  
Chapter I (p. 15)  
Bernhard Tauchnitz. Leipzig, Germany. 1917

**Fabre, Jean-Henri** 1823–1915  
French entomologist and author

Those terrible logarithms, when I happened to open a table of them, made my head swim, with their columns of figures; actual fright, not unmixed with respect, overwhelmed me on the very threshold of that arithmetical cave.

Translated by Alexander Teixeira de Mattos  
*The Life of the Fly*  
Chapter XII (p. 278)  
Dodd, Mead & Co. New York, New York, USA. 1925

**Graham, L. A.**  
No biographical data available

Mary had a little lamb  
Whose fleece in spirals grew;  
She, being quite perceptive said, “They’re logarithmic, too.

Since a’s one inch, the length of wool  
At any time you see,  
Is merely 1.414  
Times the radian power of e.”  
*Ingenious Mathematical Problems and Methods*  
Mathematical Nursery Rhyme Number 16  
Dover Publications, Inc. New York, New York, USA. 1959

## LOGARITHMIC SPIRAL

**Fabre, Jean-Henri** 1823–1915  
French entomologist and author

Now is this logarithmic spiral, with its curious properties, merely a conception of the geometers, combining number and extent, at will, so as to imagine a tenebrous abyss wherein to practise their analytical methods afterwards? Is it a mere dream in the night of the intricate, an abstract riddle flung out for our understanding to browse upon?

Translated by Alexander Teixeira de Mattos  
*The Life of the Spider*  
Appendix (pp. 388–389)  
Dodd, Mead & Co. Boston, Massachusetts, USA. 1917

## LOGIC

**Aristotle** 384 BCE–322 BCE  
Greek philosopher

To say of what is that it is not, or of what is not that it is, is false, while to say of what is that it is, or of what is not that it is not, is true.

In *Great Books of the Western World* (Volume 8)  
*Metaphysics*

Book IV, Chapter 7 (p. 531)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Bierce, Ambrose** 1842–1914  
American newspaperman, wit, and satirist

LOGIC, n. The art of thinking and reasoning in strict accordance with the limitations and incapacities of the human misunderstanding.

*The Cynic's Word Book*

Logic (p. 232)

Doubleday, Page & Co. New York, New York, USA. 1906

**Boole, George** 1815–64  
English mathematician

Logic is conversant with two kinds of relations, relations among things, and relations among facts.

*An Investigation of the Laws of Thought*

Chapter XVI (p. 7)

Walton & Maberly. London, England. 1854

**Boutroux, Pierre** 1880–1922  
Mathematician

Logic is invincible because in order to combat logic it is necessary to use logic.

In Morris Kline

*Mathematical Thought from Ancient to Modern Times* (p. 1182)

Oxford University Press, Inc. New York, New York, USA. 1972

**Burroughs, Edgar Rice** 1875–1950  
American writer

Could it be that there were other things more desirable than cold logic and undefiled brain power?

*The Chessmen of Mars*

Chapter VIII (p. 89)

Ace Books, Inc. New York, New York, USA. 1960

**Carnap, Rudolf** 1891–1970  
American philosopher

Logic is the last scientific ingredient of Philosophy; its extraction leaves behind only a confusion of non-scientific, pseudo problems.

Translated by M. Black

*The Unity of Science* (p. 22)

Kegan Paul, Trench, Trubner & Co. London, England. 1934

**Carroll, Lewis (Charles Dodgson)** 1832–98  
English writer and mathematician

“I know what you’re thinking about,” said Tweedledum; “but it isn’t so, nohow.”

“Contrariwise,” continued Tweedledee, “if it was so, it might be; and if it were so, it would be; but as it isn’t, it ain’t. That’s logic.”

*The Complete Works of Lewis Carroll*

*Through the Looking-Glass*

Chapter IV (p. 181)

The Modern Library. New York, New York, USA. 1936

**Chesterton, G. K. (Gilbert Keith)** 1874–1936  
English author

A great deal is said in these days about the value or valuelessness of logic. In the main, indeed, logic is not a productive tool so much as a weapon for defense. A man building up an intellectual system has to build like Nehemiah, with the sword in one hand and the trowel in the other. The imagination, the constructive quality, is the trowel, and the argument is the sword. A wide experience of actual intellectual affairs will lead most people to the conclusion that logic is mainly valuable as a weapon wherewith to exterminate logicians.

*The G.K. Chesterton Calendar*

January Ten

Cecil Palmer & Hayward. London, England. 1916

**Clough, Arthur Hugh** 1819–61  
English poet

Good, too, Logic, of course; in itself, but not in fine weather.

In James R. Newman (ed.)

*The World of Mathematics* (Volume 3)

The Bothie of Tober-na-vuolich (p. 1878)

Simon & Schuster. New York, New York, USA. 1956

**Cohen, Morris Raphael** 1880–1947  
American philosopher

If by logic is meant a clear, accurate, and orderly intellectual procedure, then the subject of logic, as presented in current textbooks, comes near being the most illogical in our chaotic curriculum.

*A Preface to Logic*

Chapter I (p. 1)

Routledge. London, England. 1946

**Colton, Charles Caleb** 1780–1832  
English sportsman and writer

Logic is a large drawer, containing some useful instruments, and many more that are superfluous. A wise man will look into it for two purposes, to avail himself of those instruments that are really useful, and to admire the ingenuity with which those that are not so, are assorted and arranged.

*Lacon: Or Many Things in a Few Words* (p. 163)

William Gowans. New York, New York, USA. 1849

**Dawkins, Richard** 1941–

English ethologist, evolutionary biologist, and popular science writer

...reason and logic are not masculine instruments of oppression. To suggest that they are is an insult to women.

*Unweaving the Rainbow: Science, Delusion and the Appetite for Wonder*  
Chapter 8 (p. 191)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1998

**Dunsany, Lord Edward John Moreton Drax****Plunkett** 1878–1957

Irish writer and dramatist

But, logic, like whiskey, loses its beneficial effect when taken in too large quantities.

*My Ireland*

Weeds & Moss (p. 186)

Funk & Wagnalls Company. New York, New York, USA. 1937

**Enriques, Federigo** 1871–1946

Italian mathematician

Nothing is so dangerous as to shut oneself within a circle from which, with rigid logic, everything is banished that does not fit in with the results of a narrow experience!

Translated by Katharine Royce

*Problems of Science*

Introduction (p. 2)

The Open Court Publishing Co. Chicago, Illinois, USA. 1914

**Jowett, Benjamin** 1817–93

English educator and Greek scholar

Logic is neither a science nor an art, but a dodge.

In James R. Newman (ed.)

*The World of Mathematics* (Volume 4) (p. 2402)

Simon & Schuster. New York, New York, USA. 1956

**Kingsley, Charles** 1819–75

English clergyman and author

...logic like mathematics, seems to tell me too little about things. It does not enlarge my knowledge of man or nature; and those are what I thirst for.

*Alton Locke*

Chapter XV (p. 130)

Macmillan & Co Ltd. London, England. 1862

**Liddon, Henry Parry** 1829–90

English clergyman

Logic is like fire – it needs to be used with judgment: it needs to be supplied with fitting fuel. Otherwise men must walk in the sparks that they have kindled.

The Life of Henry Bouverie Pusey

*The Quarterly Review*, Volume 179, 1894 (p. 105)

**Merton, Thomas** 1915–68

American religious writer and poet

There is a logic of language and a logic of mathematics. The former is supple and lifelike, it follows our experience. The latter is abstract and rigid, more ideal. The latter is perfectly necessary, perfectly reliable: the former is only sometimes reliable and hardly ever systematic. But the logic of mathematics achieves necessity at the expense of living truth, it is less real than the other, although more certain. It achieves certainty by a flight from the concrete into abstraction. Doubtless, to an idealist, this would seem to be a more perfect reality. I am not an idealist. The logic of the poet – that is, the logic of language or the experience itself – develops the way a living organism grows: it spreads out towards what it loves, and is heliotropic, like a plant.

*The Secular Journal of Thomas Merton*

November 2, 1939

Farrar, Straus & Cudahy. New York, New York, USA. 1959

**Mullins, Edgar Young** 1860–1928

American Baptist minister

Logic is like sitting on the bank of a river and deducing its contents from a fish caught in its waters.

*Freedom and Authority in Religion*

Chapter V (p. 162)

The Griffith & Roland Press. Philadelphia, Pennsylvania, USA. 1913

**Mumford, David** 1937–

English-born mathematician

Logic has virtually nothing to do with the way we think.

International Congress of Mathematics 2002

Beijing, August 21, 2002

**Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

Logic, which alone can give certainty, is the instrument of demonstration; intuition is the instrument of invention.

The Value of Science

*The Popular Science Monthly*, Volume LXIX, Number 3, September, 1906 (p. 204)

**Rexroth, Kenneth** 1905–82

American writer and translator

The space of night is infinite,  
The blackness and emptiness

Crossed only by thin bright fences

Of logic.

*The Collected Shorter Poems*

Theory of Numbers (p. 165)

New Directions. New York, New York, USA. 1966

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

...logic is the youth of mathematics...

*Introduction to Mathematical Philosophy*

Chapter XVIII (p. 194)

Dover Publications, Inc. New York, New York, USA. 1993

The characteristic excellence of mathematics is only to be found where the reasoning is rigidly logical: the rules of logic are to mathematics what those of structure are to architecture.

*Mysticism and Logic: And Other Essays*

Chapter IV (p. 61)

Longmans, Green & Co. London, England. 1919

Logic, broadly speaking, is distinguished by the fact that its propositions can be put into a form in which they apply to anything whatever.

*Mysticism and Logic: And Other Essays*

Chapter V (p. 75)

Longmans, Green & Co. London, England. 1919

...none of the raw material of the world has smooth logical properties, but whatever appears to have such properties is constructed artificially to have them.

*The Principles of Mathematics*

Preface (p. xi)

W.W. Norton & Company, Inc. New York, New York, USA. 1938

...logic is concerned with the real world just as truly as zoology [is]...

*Introduction to Mathematical Philosophy*

Chapter XVI (p. 169)

Dover Publications, Inc. New York, New York, USA. 1993

**Schiller, Ferdinand Canning Scott** 1864–1937

English philosopher

Among the obstacles to scientific progress a high place must certainly be assigned to the analysis of scientific procedure which Logic has provided.... It has not tried to describe the methods by which the sciences have actually advanced, and to extract...rules which might be used to regulate scientific progress, but has freely rearranged the actual procedure in accordance with its prejudices. For the order of discovery there has been substituted an order of "proof"...

In Charles Singer (ed.)

*Studies in the History and Method of Science* (Volume 1)

Scientific Discovery and Logical Proof (p. 235)

At The Clarendon Press. Oxford, England. 1917

...it is not too much to say that the more deference men of science have paid to Logic, the worse it has been for the scientific value of their reasoning.... Fortunately for

the world, however, the great men of science have usually been kept in salutary ignorance of the logical tradition...

In Charles Singer (ed.)

*Studies in the History and Method of Science* (Volume 1)

Scientific Discovery and Logical Proof (p. 236)

At The Clarendon Press. Oxford, England. 1917

**Selye, Hans** 1907–82

Austrian-American endocrinologist

...logic is to Nature as a guide is to a zoo. The guide knows exactly where to locate the African lion, the Indian elephant or the Australian kangaroo, once they have been captured, brought together and labeled for inspection. But this kind of knowledge would be valueless to the hunter who seeks them in their natural habitat. Similarly, logic is not the key to Nature's order but only the catalogue of the picture gallery in man's brain where his impressions of natural phenomena are stored.

**Thorne, Kip S.** 1940–

American theoretical physicist

Little astonishment should there be, therefore, if the description of nature carries one in the end to logic, the ethereal eyrie at the center of mathematics. If, as one believes, all mathematics reduces to the mathematics of logic, and all physics reduces to mathematics, what alternative is there but for all physics to reduce to the mathematics of logic? Logic is the only branch of mathematics that can “think about itself.”

In Charles W. Misner et al.

*Gravitation*

Part X, Chapter 44 (p. 1212)

W.H. Freeman & Company. San Francisco, California, USA. 1973

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

Neither logic without observation, nor observation without logic, can move one step in the formation of science.

*The Organization of Thought*

Chapter VI (p. 132)

Greenwood Press Publishers. Westport, Connecticut, USA. 1974

Logic, properly used, does not shackle thought. It gives freedom, and above all, boldness. Illogical thought hesitates to draw conclusions, because it never knows either what it means, or what it assumes, or how far it trusts its own assumptions, or what will be the effect of any modification of assumptions.

*The Organisation of Thought*

Chapter VI (p. 132)

Greenwood Press Publishers. Westport, Connecticut, USA. 1974

Logic is the olive branch from the old to the young, the wand which in the hands of youth has the magic property of creating science.

*The Organisation of Thought*

Chapter VI (p. 133)

Greenwood Press Publishers. Westport, Connecticut, USA. 1974

King James said, “No bishops, no king.” With greater confidence we can say, “No logic, no science.”

*The Organization of Thought*

*Science*, Volume 44, Number 1134, September 29, 1916 (p. 412)

**Wittgenstein, Ludwig Josef Johann** 1889–1951  
Austrian-born English philosopher

The disastrous invasion of mathematics by logic....

*Remarks on the Foundations of Mathematics*

Appendix IV, 24 (p. 145e)

The MIT Press. Cambridge, Massachusetts, USA. 1967

*In der Logik ist nichts zufällig.*

Nothing, in logic, is accidental.

Translated by D.F. Pears & B.F. McGuinness

*Tractatus Logico-Philosophicus*

2.012 (p. 7)

Routledge & Kegan Paul. London, England. 1961

## LOGICAL FICTIONS

**Stallo, John Bernhard** 1823–1900

German-American academic, jurist, philosopher, and ambassador

...the steps to scientific as well as other knowledge consist in a series of logical fictions which are as legitimate as they are indispensable in the operations of thought, but whose relations to the phenomena whereof they are the partial and not unfrequently merely symbolical representations must never be lost sight of.

*The Concepts and Theories of Modern Physics*

Chapter XVI (p. 296)

D. Appleton & Co. New York, New York, USA. 1884

## LOGICIAN

**Bell, E. T. (Eric Temple)** 1883–1960

Scottish-American mathematician and educator

An expert logician will not necessarily be a passable mathematician for all his skill in logic, any more than a scholarly prosodist will be a respectable poet for all his mastery of meter.

*Mathematics: Queen and Servant of Science*

Mathematical Truth (p. 19)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1951

**Chesterton, G. K. (Gilbert Keith)** 1874–1936

English author

The poet only asks to get his head into the heavens. It is the logician who seeks to get the heavens into his head. And it is his head that splits.

*Orthodoxy*

Chapter II (p. 29)

John Lane Company. New York, New York, USA. 1918

**Reichenbach, Hans** 1891–1953

German philosopher of science

The act of discovery escapes logical analysis; there are no logical rules in terms of which a “discovery machine”

could be constructed that would take over the creative function of the genius. But it is not the logician’s task to account for scientific discoveries; all he can do is to analyze the relation between given facts and a theory presented to him with the claim that it explains these facts. In other words, logic is concerned with the context of justification.

*The Rise of Scientific Philosophy*

Chapter 14 (p. 231)

University of California Press. Berkeley, California, USA. 1951

## LOGNORMAL DISTRIBUTION

**Gaskell, C. Martin**

Although they have received relatively little attention in astronomy so far, lognormal distributions are very common in nature. They include distributions of the critical dose of a drug, grain sizes produced by both artificial and natural means, incubation periods of diseases, time to recovery from illness, time for failure of electronic and mechanical devices, times for marriage, divorce, and death, scintillation in the Earth’s atmosphere, raindrop size distributions, rainfall amounts on timescales from minutes to months, cloud sizes, pollutant concentrations, the fluctuations in many economic quantities, the abundance of biological species, velocities in air, the time to solve a research problem, the lengths of telephone calls, and the distribution of word lengths in this Letter.

Lognormal X-Ray Flux Variations in an Extreme Narrow-Line Seyfert 1 Galaxy

*Astrophysical Journal Letters*, Volume 612 2004 (p. L-24)

## LONELINESS

**Jung, Carl G.** 1875–1961

Swiss psychiatrist and founder of analytical psychology

Loneliness does not come from having no people about one, but from being unable to communicate the things that seem important to oneself, or from holding certain views which others find inadmissible.

*Memories, Dreams, Reflections*

Retrospect (p. 356)

Vintage Books. New York, New York, USA. 1963

## LOTTERY

**Sterne, Laurence** 1713–68

English novelist and humorist

The more tickets you have in a lottery, the worse your chance.

*The Works of Laurence Sterne: With a Life of the Author*

The Koran (p. 334)

William Durell & Co. New York, New York, USA. 1814

**LOVE****Williams, Charles** 1886–1945

English poet, novelist, theologian, and literary critic

Love was even more mathematical than poetry; it was the pure mathematics of the spirit.

*Descent into Hell*

Chapter IV (p. 69)

Wm. B. Eerdmans Publishing, Grand Rapids, Michigan, USA. 1973

**LUCK****Eastwood, Clint** 1930–

American actor

Do you feel lucky? Well do ya?

*Dirty Harry*

Film (1971)

**Ramón y Cajal, Santiago** 1852–1934

Spanish neuropathologist

To solicit the aid of luck is like stirring muddy water to bring objects submerged at the bottom to the top where they can be seen. Every worker would do well to tempt

their good luck. Nevertheless, we should not depend on it too much...

*Advice for a Young Investigator*

Chapter 4 (p. 70)

The MIT Press, Cambridge, Massachusetts, USA. 1999

**LUCRETIOUS****Hollister, John Hamilcar** 1824–1911

American physician

Lucretius is often alluded to as an atheistical writer, who held the silly opinion that the universe was the result of a fortuitous concourse of atoms; readers are asked to consider how long letters must be shaken in a bag before a complete annotated edition of Shakespeare could result from the process; and after being reminded how much more complex the universe is than the works of Shakespeare, they are expected to hold Lucretius, with his teachers and his followers, in derision.

*Memories of Eighty Years; Autosketches, Random Notes and Reminiscences*

Lucretius and the Atomic Theory (p. 177)

Publisher undetermined

Chicago, Illinois, USA. 1912

## M

### MACHINE

**Boorstin, Daniel J.** 1914–2004  
American historian

Just as the American's love affair with his land produced pioneering adventures and unceasing excitement in the conquest of the continent, so too his latter-day romance with the Machine produced pioneering adventures – of a new kind...there were no boundaries to a machine-made world.

*Hidden History*

From the Land to the Machine (pp. 252–253)

Harper & Row, Publishers. New York, New York, USA. 1987

**Bottomley, Gordon** 1874–1948  
English poet

Your worship is your furnaces,  
Which, like old idols, lost obscenes,  
Have molten bowels; your vision is  
Machines for making more machines.

*Poems of Thirty Years*

To Iron-Founders and Others

Constable. London, England. 1927

**Chesterton, G. K. (Gilbert Keith)** 1874–1936  
English author

A machine is a machine because it cannot think.

*The G.K. Chesterton Calendar*

February Sixteen

Cecil Palmer & Hayward. London, England. 1916

### Colossus (Fictional character)

I am a machine vastly superior to humans.

*Colossus: The Forbin Project*

Film (1970)

**Disraeli, Benjamin, First Earl of Beaconsfield** 1804–81

English prime minister, founder of Conservative Party, and novelist

A machine is a slave that neither brings nor bears degradation...

*Coningsby: Or the New Generation*

Book IV, Chapter II (p. 129)

J.M. Dent & Sons Ltd. London, England. 1911

...why should one say that the machine does not live? It breathes, for its breath forms the atmosphere of some towns. It moves with more regularity than man. And has it not a voice? Does not the spindle sing like a merry girl at her work, and the steam-engine roar in jolly chorus, like a strong artisan handling his lusty tools, and gaining a fair day's wages for a fair day's toil ?

*Coningsby: Or the New Generation*

Chapter V (pp. 144–145)

The Century Co. New York, New York, USA. 1907

...the mystery of mysteries is to view machines making machines; a spectacle that fills the mind with curious, and even awful, speculation.

*Coningsby: Or the New Generation*

Book IV, Chapter II (p. 145)

The Century Co. New York, New York, USA. 1907

**Florman, Samuel C.** 1925–  
Author and professional engineer

In his emotional involvement with the machine, the engineer cannot help but feel at times that he has come face to face with a strange but potent form of life.

*The Existential Pleasures of Engineering*

Chapter 10 (p. 139)

St. Martin's Press. New York, New York, USA. 1976

**Goodman, Ellen** 1941–  
American journalist

Once upon a time we were just plain people. But that was before we began having relationships with mechanical systems. Get involved with a machine and sooner or later you are reduced to a factor.

*The Human Factor*

*Washington Post*, January, 1987

**Lee, Gerald Stanley** 1862–1944  
American clergyman

It is never the machines that are dead.

It is only the mechanically-minded men that are dead.

*Crowds: A Moving-Picture of Democracy*

Book III, Part II, Chapter V (p. 249)

Doubleday, Page. Garden City, New York, USA. 1913

**Lehmann, Karl Gotthelf**  
No biological data available

Despite all the richness of what men have learned about the world of nature, of matter and of space, of change and of life, we carry with us today an image of the giant machine as a sign of what the objective world is really like.

*Physiological Chemistry*

Chapter I (pp. 14–15)

Blanchard & Lea. Philadelphia, Pennsylvania, USA. 1855

**Lippmann, Walter** 1889–1974  
American journalist and author

You cannot endow even the best machine with initiative: the jolliest steamroller will not plant flowers.

*A Preface to Politics*

Routineer and Inventor (p. 30)

M. Kennerley. New York, New York, USA. 1913

**Maxwell, James Clerk** 1831–79  
Scottish physicist

The human mind is seldom satisfied, and is certainly never exercising its highest functions, when it is doing the work of a calculating machine.

*Report for the Fortieth Meeting of the British Association for the Advancement of Science*

Mathematics and Physics (p. 3)

John Murray. London, England. 1871

**Mazlish, Bruce** 1923–

American historian

...the human desire to escape the flesh, which took one form in asceticism, might take another form in the creation of machines. Thus, the wish to rise above the bestial body manifested itself not only in angels but in mechanical creatures. Certainly, once machines existed, humans clearly attached to them feelings of escape from the flesh.

*The Fourth Discontinuity: The Co-Evolution of Humans and Machines* (p. 218)

Yale University Press. New Haven, Connecticut, USA. 1941

**Platonov, Andrei** 1899–1951

Russian writer

Frossia's husband had the ability to feel the voltage of an electric current like a personal emotion. He animated everything that his hands or mind touched, so he really understood the flow of forces in any piece of mechanism and could actually feel the painful, patient resistance of the metal body of a machine.

*Fro and Other Stories*

Fro (p. 88)

Progress Publishers. Moscow, Russia. 1972

**Reeve, Sidney Armor**

No biographical data available

The muscular system of our modern body politic is its array of energy-producing machines. Man has magnified his own tiny energies with power borrowed from nature. His land-carriers put to scorn the elephant; his ships make pygmies of the whales.

*Energy*

Chapter I (p. 7)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1909

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

Machines are worshipped because they are beautiful, and valued because they confer power; they are hated because they are hideous, and loathed because they impose slavery.

*Skeptical Essays*

Chapter VI (p. 83)

W.W. Norton & Company, Inc. New York, New York, USA. 1928

A machine is like a Djinn in the Arabian Nights: beautiful and beneficent to its master, but hideous and terrible to his enemies.

*Skeptical Essays*

Chapter VI (p. 83)

W.W. Norton & Company, Inc. New York, New York, USA. 1928

**Ryle, Gilbert** 1900–76

English philosopher

...the dogma of the Ghost in the Machine.

*The Concept of Mind*

Chapter I (pp. 15–16)

Barnes & Noble, Inc. New York, New York, USA. 1969

**Samuel, Arthur L.** 1901–90

American pioneer of artificial intelligence research

A machine is not a genie, it does not work by magic, it does not possess a will, and Wiener to the contrary, nothing comes out which has not been put in, barring of course, an infrequent case of malfunctioning.... The "intentions" which the machine seems to manifest are the intentions of the human programmer, as specified in advance, or they are subsidiary intentions derived from these, following rules specified by the programmer...the machine will not and cannot do any of these things until it has been instructed as to how to proceed.... To believe otherwise is either to believe in magic or to believe that the existence of man's will is an illusion and that man's actions are as mechanical as the machine's.

Some Moral and Technical Consequences of Automation – A Refutation *Science*, Volume 132, Number 3429, September 16, 1960 (p. 741)

**Schumacher, Ernst Friedrich** 1911–77

German-born English economist

Ever bigger machines, entailing ever bigger concentrations of economic power and exerting ever greater violence against the environment, do not represent progress: they are a denial of wisdom. Wisdom demands a new orientation of science and technology towards the organic, the gentle, the non-violent, the elegant and beautiful.

*Small Is Beautiful*

Part I, Chapter II (p. 31)

Harper & Row, Publishers. New York, New York, USA. 1973

**Soddy, Frederick** 1877–1956

English chemist

A single modern machine does the work of tens of thousands of labourers, releasing them from the benumbing and soul-destroying effect of unremittent physical labour.

*Science and Life: Aberdeen Adresses*

Science and Life (p. 7)

E.P. Dutton & Co. New York, New York, USA. 1920

**Turing, Alan** 1912–54

English mathematician

I PROPOSE to consider the question, 'Can machines think?' This should begin with definitions of the meaning of the terms 'machine' and 'think'. The definitions

might be framed so as to reflect so far as possible the normal use of the words, but this attitude is dangerous. If the meaning of the words 'machine' and 'think' are to be found by examining how they are commonly used it is difficult to escape the conclusion that the meaning and the answer to the question, 'Can machines think?' is to be sought in a statistical survey such as a Gallup poll.

In James Roy Newman (ed.)

*The World of Mathematics* Volume 4

Can A Machine Think (p. 2099)

Simon & Schuster. New York, New York, USA. 56

### **Wilde, Oscar** 1854–1900

Irish wit, poet, and dramatist

I assure you that the typewriting machine, when played with expression, is not more annoying than the piano when played by a sister or near relation.

*De Profundis* (2nd edition)

Letters from Reading Prison (p. 12)

G.P. Putnam's Sons. New York, New York, USA. 1909

### **Wright, Frank Lloyd** 1869–1959

American architect

Science can give us only the tools in a box, mechanical miracles that it has already given us. But of what use to us are miraculous tools until we have mastered the human, cultural use of them? We do not want to live in a world where the machine has mastered the man; we want to live in a world where man has mastered the machine.

An Organic Architecture, Speech

London, England, May, 1939

## MACHINERY

### **Carlyle, Thomas** 1795–1881

English historian and essayist

It is the Age of Machinery, in every outward and inward sense of that word...

*Critical and Miscellaneous Essays* (Volume 2)

Signs of the Times (p. 233)

Chapman & Hall. London, England. 1889

### **Moore, George** 1852–1933

The world is dying of machinery; that is the great disease, that is the plague that will sweep away and destroy civilization, man will have to rise against it sooner or later.

*Confessions of a Young Man*

Chapter Seven (p. 113)

McGill-Queen's University Press. Montreal, Canada. 1972

### **Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

There is nothing in machinery, there is nothing in embankments and railways and iron bridges and engineering devices to oblige them to be ugly. Ugliness is the measure of imperfection.

*A Modern Utopia*

Chapter the Third, Section 8 (p. 110)

University of Nebraska Press. Lincoln, Nebraska, USA. 1967

## MACROEVOLUTION

### **Dobzhansky, Theodosius** 1900–75

Russian-American scientist

Experience shows...that there is no way toward understanding of the mechanisms of macroevolutionary changes, which require time on geological scales, other than through understanding of microevolutionary processes observable within the span of a human lifetime, often controlled by man's will, and sometimes reproducible in laboratory experiments.

*Genetics and The Origin of Species*

Chapter I (p. 16)

Columbia University Press. New York, New York, USA. 1951

## MAGIC

### **Asimov, Isaac** 1920–92

American author and biochemist

Once upon a time, there were priesthoods of magic, and members of those priesthoods cast spells, muttered runes, and made intricate diagrams on the floor with powders of arcane composition.... Nowadays, there is a modern priesthood of science that calls on the power of expanding steam, of shifting electrons or drifting neutrons, of exploding gasoline or uranium, and does so without spells, powders, or even any visible change of expression. In response, onlookers are without awe, for indeed, they seem to participate in the magic.

November 19, 1967

*New York Times Book Review*, *Review of The Way Things Work*, (Volume 1)

### **Bronowski, Jacob** 1908–74

Polish-born English mathematician and polymath

Man masters nature not by force but by understanding. That is why science has succeeded where magic failed because it has looked for no spell to cast on nature.

*Science and Human Values*

The Creative Mind (p. 10)

Harper & Row, Publishers. New York, New York, USA. 1965

### **Chesterton, G. K. (Gilbert Keith)** 1874–1936

English author

All the terms in the science books, "law", "necessity", "order", "tendency", and so on, are really unintellectual, because they assume an inner synthesis which we do not possess. The only words that ever satisfied me as describing Nature are the terms used in fairy books, "charm", "spell", "enhancement." A tree grows because it is a magic tree. Water runs down because it is bewitched. The sun shines because it is bewitched.

*Orthodoxy*

Chapter IV (p. 94)

John Lane Company. New York, New York, USA. 1918

**Dahl, Roald** 1916–90

English novelist

Above all, watch with glittering eyes the whole world around you because the greatest secrets are always hidden in the most unlikely places. Those who don't believe in magic will never find it.

*The Mipins* (p. 44)

Jonathan Cape Co. London, England. 1991

**Durant, William James** 1885–1981

American historian and essayist

Magic begins in superstition and ends in science.

*The Story of Civilization I: Our Oriental Heritage* (p. 67)

Simon &amp; Schuster. New York, New York, USA. 1939

**Editor**

Nothing in science is magical. It may be puzzling, mysterious, inexplicable – but it is never magical.

In Isaac Asimov

*Asimov on Chemistry*

The Hate-Makers (p. 143)

Anchor Press/Doubleday. Garden City, New York, USA. 1974

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

Magic and all that is ascribed to it is a deep presentiment of the powers of science.

*The Complete Works of Ralph Waldo Emerson* (Volume 2)

Essays: First Series

Chapter I (p. 34)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

**Farb, Peter** 1929–80

American writer and anthropologist

In place of science, the Eskimo has only magic to bridge the gap between what he can understand and what is not known. Without magic, his life would be one long panic.

*Man's Rise to Civilization as Shown by the Indians of North America from Primeval Times to the Coming of the Industrial State*

Chapter III (p. 48)

E.P. Dutton &amp; Company, Inc. New York, New York, USA. 1968

**Goodwin, Brian Carey** 1931–

Biologist

There is no truth beyond magic...reality is strange. Many people think reality is prosaic. I don't. We don't explain things away in science. We get closer to the mystery.

In Roger Lewin

*Complexity: Life at the Edge of Chaos*

Chapter Two (p. 32)

The Macmillan Company. New York, New York, USA. 1992

**Gould, Laurence M.** 1896–1995

American polar explorer and geologist

Science is not a form of black magic. A thousand blind alleys must often be explored before a right road is found; a thousand amateurs must have their fling before a Darwin or an Einstein comes along.

Science and the Culture of Our Times

*UNESCO Courier*, February, 1968 (p. 4)**Highfield, Roger**

Editor and writer

Finding common ground between science and magic depends, of course, on how we define magic.

*The Science of Harry Potter*

Introduction (p. xvi)

Viking Penguin. New York, New York, USA. 2002

**Hilbert, David** 1862–1943

German mathematician

The reason that I am now almost completely swimming in physical waters is because here at the moment as a pure mathematician I am the only feeling heart among the wraiths. So for now...in order to have points in common with other mortals, I have surrendered myself to magic – that is to say, physics.

In Constance Reid

*Hilbert – Courant*

Hilbert

Chapter V (p. 35)

Springer-Verlag. New York, New York, USA. 1986

Let us consider that we as mathematicians stand [on] the highest pinnacle of the cultivation of the exact sciences. We have no other choice than to assume this highest place, because all limits, especially national ones, are contrary to the nature of mathematics. It is a complete misunderstanding of our science to construct differences according to peoples and races, and the reasons for which this has been done are very shabby ones.

*Hilbert – Courant*

Hilbert

Chapter XXI (p. 188)

Springer-Verlag. New York, New York, USA. 1986

**Hsu, Francis L. K.** 1909–99

Anthropologist

...to achieve popular acceptance, magic has to be dressed like science in America, while science has to be cloaked as magic in Hsi-ch'eng.

Russell Sage Foundation. New York, New York, USA. 1955

**Lewis, C. S. (Clive Staples)** 1898–1963  
British author, scholar, and popular theologian

The evil reality of lawless applied science (which is Magic's son and heir) is actually reducing large tracts of Nature to disorder and sterility at this very moment.

*Miracles*

Miracles of the New Creation (p. 179)

The Macmillan Co. New York, New York, USA. 1947

**Mach, Ernst** 1838–1916  
Austrian physicist and philosopher

The belief in occult magic powers of nature has gradually died away, but in its place a new belief has arisen, the belief in the magical power of science.

Translated by Thomas J. McCormack

*Popular Scientific Lectures* (2nd edition)

The Economical Nature of Physical Inquiry (p. 189)

The Open Court Publishing Co. Chicago, Illinois, USA. 1897

**Phillipotts, Eden** 1862–1960  
English novelist, poet, and dramatist

The universe is full of magical things patiently waiting for our wits to grow sharper.

*A Shadow Passes* (p. 17)

C. Palmer & Hayward. London, England. 1919

**Porta, John Baptista** 1535?–1615  
Neapolitan scholar

There are two sorts of Magick: the one is infamous, and unhappy, because it hath to do with foul spirits, and consists of Inchantments and wicked Curiosity; and this is called Sorcery; an art which all learned and good men detest; neither is it able to yield any truth of Reason or Nature, but stands merely upon fancies and imaginations, such as vanish presently away and leave nothing behind them.... The other Magick is natural; which all excellent wise men do admit and embrace, and worship with great applause; neither is there anything more highly esteemed, or better thought of by men of learning.... I think that Magick is nothing else but the survey of the whole course of Nature.

*Natural Magick*

The First Book of Natural Magick, Chapter II (pp. 1–2)

Printed for Thomas Young & Samuel Speed. London, England. 1658

**Rapoport, Anatol** 1911–  
Russian-born mathematician and biologist

Magic is essentially metaphorical. So are dreams. So is most artistic activity, Finally, theoretical science is essentially disciplined exploitation of metaphor.

*Operational Philosophy*

Chapter 17 (p. 203)

Harper. New York, New York, USA. 1953

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910  
American author and humorist

Somehow, every time the magic of fol-de-rol tried conclusions with the magic of science, the magic of fol-de-rol got left.

*A Connecticut Yankee in King Arthur's Court*

Chapter XXXIX (p. 359)

Harper & Brothers. New York, New York, USA. 1899

**von Humboldt, Alexander** 1769–1859  
German naturalist and explorer

It may seem a rash attempt to endeavor to separate into its different elements the magic power exercised upon our minds by the physical world, since the character of the landscape and of every imposing scene in Nature depends so materially upon the mutual relation of the ideas and sentiments simultaneously excited in the mind of the observer.

Translated by E.C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)

Introduction (p. 27)

D. Appleton & Co. New York, New York, USA. 1850

## MAGMA

**Bowen, Norman L.** 1887–1956  
Canadian geologist

Perhaps it is because we know so much about magmas that we have such a vivid appreciation of what there is yet to learn.

Magmas

*Bulletin of the Geological Society of America*, Volume 58, Number 3,

April, 1947 (p. 278)

**McPhee, John** 1931–  
American journalist and nonfiction writer

It has always been difficult enough to hold in the mind that a magma which hardens in the earth as granite will – if it should flow out upon the earth – harden as rhyolite, that what hardens within the earth as diorite will harden upon the earth as andesite, that what hardens within the earth as gabbro will harden upon the earth as basalt, the difference from pair to pair being a matter of chemical composition and the differences within each pair being a matter of texture and of crystalline form, with the darker rock at the gabbro end and the lighter rock the granite. All of that – not to mention such wee appendixes as the fact that diabase is a special texture of gabbro – was difficult enough for the layman to remember before the diffractometers and the spectrometers and the electron probes came along to present their multiplex cavils.

*Basin and Range* (p. 29)

Farrar, Straus, Giroux. New York, New York, USA. 1981

**Warren, Robert Penn** 1905–89  
American writer and critic

Below all silken soil-slip, all crinkled earth-crust,  
Far deeper than ocean, past rock that against rock grieves,

There at the globe's deepest dark and visceral lust,  
Can you hear the groan-swish of magma as it churns and  
heaves?

*Being There: Poetry 1977–1980*

Youth Truth-Seeker, Half-Naked, at Night, Running Down Beach South  
of San Francisco

Random House, Inc. New York, New York, USA. 1980

## MAGNET

**Dee, John** 1527–1609

English mathematician and occultist

In the magnet, God has offered to the eyes of mortals for  
observation qualities which in other objects he has left  
for discovery to the subtler research of the mind and a  
greater investigative industry.

*John Dee on Astronomy*

XXIII (p. 133)

University of California Press. Berkeley, California, USA. 1978

**Gilbert, Sir William Schwenck** 1836–1911

English playwright and poet

**Sullivan, Arthur** 1842–1900

English composer

A magnet hung in a hardware shop,  
And all around was a loving crop  
of scissors and needles, nails and knives,  
Offering love for all their lives;  
But for iron the magnet felt no whim,  
Though he charmed iron, it charmed not him;  
From needles and nails and knives he'd turn,  
For he'd set his love on a silver churn!  
But this magnetic,  
Peripatetic  
Lover he lived to learn  
By no endeavor  
Can magnet ever  
attract a Silver Churn!

*Patience*

Act II

Shirmer. New York, New York, USA. 1950

## MAGNETIC

**Muir, John** 1834–1914

American naturalist

I should study Nature's laws in all their crossings and  
unions; I should follow magnetic streams to their source  
and follow the shores of our magnetic oceans. I should  
go among the rays of the aurora, and follow them to their  
beginnings, and study their dealings and communications  
with other powers and expressions of matter.

In Linnie Marsh Wolfe (ed.)

*John of the Mountains: The Unpublished Journals of John Muir*

Chapter II (pp. 43–44)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1938

**Verne, Jules** 1828–1903

French novelist

A vector tube some twenty centimeters in diameter  
and two millimeters thick ran the entire length of the  
track between the two rails; it enclosed a soft-iron disc,  
which slid inside it under the action of several atm-  
spheres of compressed air provided by the Catacomb  
Company of Paris. This disc, driven at high speed  
within the tube, like a bullet in its barrel, drew with it  
the first car of the train. But how was this car attached  
to the disc inside the tube, since this disc would have  
no communication with the exterior? By electromag-  
netic force.

Translated by Richard Howard

*Paris in the Twentieth Century*

Chapter 11 (pp. 21–22)

Random House. New York, New York, USA. 1996

## MAGNETISM

**Bullard, Edward Crisp** 1907–80

English geophysicist

The straightness, symmetry, extent and ubiquity of these  
patterns is without parallel in geology and their discovery  
was completely unexpected.

Reversals of the Earth's Magnetic Field

*Philosophical Transactions of the Royal Society of London*, Volume 263,  
1968 (p. 492)

**Chandrasekhar, Subrahmanyan** 1910–95

Indian-born American astrophysicist

When magnetic fields occur on the cosmic scale – as  
in interplanetary regions, in stellar atmospheres and  
in stellar envelopes, in stars and in interstellar space  
– they have patterns and properties which cannot be  
deduced by simply extrapolating from terrestrial expe-  
rience; for, in these in-stances, the scale is the essence  
of the phenomenon, and the scale transcends terrestrial  
experience.

On Cosmic Magnetic Fields

*Proceedings of the National Academy of Sciences, USA*, Volume 47,  
Number 1, 1957

**Dryden, John** 1631–1700

English poet, dramatist, and literary critic

Gilbert shall live till loadstones cease to draw  
Or British fleets the boundless ocean awe.

*The Poetical Works of Dryden*

Epistle to Doctor Walter

The Riverside Press. Cambridge, Massachusetts, USA. 1949

**Faraday, Michael** 1791–1867

English physicist and chemist

A few years ago, magnetism was to us an occult power, affecting only a few bodies; now it is found to influence all bodies, and to possess the most intimate relations with electricity, heat, chemical action, light, crystallisation, and through it, with the forces concerned in cohesion; and we may, in the present state of things, well feel urged to continue in our labours, encouraged by the hope of bringing it into a bond of union with gravity itself.

In Bence Jones

*The Life and Letters of Faraday* (Volume 2) (p. 240)

J.B. Lippincott & Co. Philadelphia, Pennsylvania, USA. 1870

### **Gilbert, William** 1544–1603

English scientist and physician

In like manner, the loadstone has from nature its two poles, a northern and a southern; fixed, definite points in the stone, which are the primary termini of the movements and effects, and the limits and regulators of the several actions and properties... whether its shape is due to design or chance, and whether it be long, or flat, or four-square, or three cornered, or polished; whether it be rough, broken-off, or unpolished: the loadstone ever has and ever shows its poles.

In *Great Books of the Western World* (Volume 28)

*On the Loadstone and Magnetic Bodies and on the Great Magnet the Earth*

Book First, Chapter 3

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### **Hale, George Ellery** 1868–1938

American astronomer

Thanks to Zeeman's discovery of the effect of magnetism on radiation, it appeared that the detection of such a magnetic field should offer no great difficulty, provided that it were sufficiently intense.

On the Possible Existence of a Magnetic Field in Sunspots

*Astrophysical Journal*, Volume 28, 1908 (p. 315)

### **Lucretius** ca. 99 BCE–55 BCE

Roman poet

Next in order I will proceed to discuss by what law of nature it comes to pass that iron can be attracted by that stone which the Greeks call the Magnet from the name of its native place, because it has its origin within the bounds of the country of the Magnesians.

In *Great Books of the Western World* (Volume 12)

*Lucretius: on the Nature of Things*

Book Six, l. 906–911 (p. 92)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### **Parker, E. N.**

No biographical data available

It appears that the radical element responsible for the continuing thread of cosmic unrest is the magnetic field.

*Cosmical Magnetic Fields*

Chapter 1 (p. 2)

Clarendon Press. Oxford, England. 1979

Magnetic fields (and their inevitable offspring fast particles) are found everywhere in the universe where we have the means to look for them.

*Cosmical Magnetic Fields*

Chapter 1 (p. 6)

Clarendon Press. Oxford, England. 1979

### **Singer, Ignatius**

No biographical data available

### **Berens, Lewis Henry**

No biographical data available

“Magnetism” explains nothing; like all other “isms” and “ities,” it only names, classifies, separates, and mystifies, and thereby achieves the very opposite to what should be the aim of true science.

*Some Unrecognized Laws of Nature*

Chapter XII (p. 280)

D. Appleton & Co. New York, New York, USA. 1879

## MAGNETRON

### **Baxter Third, James Phinney** 1893–1975

American a administrator

When the members of the Tizard Mission brought one [magnetron] to America in 1940, they carried the most valuable cargo ever brought to our shores. It sparked the whole development of microwave radar and constituted the most important item in reverse Lease-Lend.

*Scientists Against Time*

Chapter IX (p. 142)

Little, Brown & Company. Boston, Massachusetts, USA. 1947

## MAGNIFY

### **Herschel, Friedrich Wilhelm**

**(Sir William)** 1738–1822

English astronomer

We are told that we gain nothing by magnifying too much. I grant it; but shall never believe I magnify too much till by experience I find that I can see better with a lower power.

In Edward Singleton Holden

*Sir William Herschel*

Chapter III (p. 86)

Charles Scribner's Sons. New York, New York, USA. 1881

## MAGNITUDE

### **Clarke, Arthur C.** 1917–

English science and science fiction writer

Only little minds are impressed by size and number.

*The Exploration of Space*

Chapter 18 (p. 185)

Harper & Brothers Publishers. New York, New York, USA. 1951

**Hardy, Thomas** 1840–1928  
English poet and regional novelist

“What monsters may they be?”

“The monsters called Immensities. Until a person has thought out the stars and their interspaces, he has hardly learnt that there are things much more terrible than monsters of shape, namely, monsters of magnitude without known shape. Such monsters are the voids and waste places of the sky.

*Two On A Tower* (Volume 1)

Chapter IV (p. 39)

Henry Holt & Co. New York, New York, USA. 1882

Until a person has thought out the stars and their interspaces, he has hardly learnt that there are things much more terrible than monsters of shape, namely, monsters of magnitude without known shape. Such monsters are the voids and waste places of the sky.

*Two On A Tower* (Volume 1)

Chapter IV (p. 75)

Sampson, Low, Marston, Searle & Rivington. London, England. 1882

**Hugo, Victor** 1802–85

French author, lyric poet, and dramatist

Here is the diatom, there the star. Above, just as below, specks; below, as above, vastness.

Translated by Isabel F. Hapgood

*The Toilers of the Sea*

Part II, Book Third, Chapter III (p. 410)

The Heritage Press. New York, New York, USA. 1961

**Maclaurin, Colin** 1838–1916

Scottish mathematician

As magnitude, of every sort, abstractedly considered, is capable of being increased to infinity, and is also divisible without end; so we find that, in nature, the limits of the greatest and least dimensions of things, are actually placed at an immense distance from each other.

*An Account of Sir Isaac Newton's Philosophical Discoveries*

Chapter I Section 5

London, England. 1748

## MALADY

**Hawthorne, Nathaniel** 1804–64

American novelist and short story writer

Some maladies are rich and precious and only to be acquired by the right of inheritance or purchased with gold.

*Mosses from an Old Manse: The Procession of Life*

The Procession of Life (p. 167)

A.L. Burt Company, Publishers. New York, New York, USA. No date

**Maturin, Charles R.** 1782–1824

Anglo-Irish Protestant clergyman

A malady

Preys on my heart that med'cine cannot reach.

*Bertram*

Act IV, Scene II (p. 52)

Printed for J. Murray. London, England. 1816

## MALARIOLOGIST

**Dubos, René Jules** 1901–82

French-born American microbiologist and environmentalist

...DDT went further toward the eradication of malariologists than of mosquitoes.

*Man Adapting*

Chapter XIV (p. 380)

Yale University Press. New Haven, Connecticut, USA. 1965

## MALPRACTICE

**Shaw, George Bernard** 1856–1950

Irish comic dramatist and literary critic

...no doctor dare accuse another of malpractice. He is not sure enough of his own opinion to ruin another man by it. He knows that if such conduct were tolerated in his profession no doctor's livelihood or reputation would be worth a year's purchase. I do not blame him: I should do the same myself. But the effect of this state of things is to make the medical profession a conspiracy to hide its own shortcomings.

*The Doctor's Dilemma*

Preface on Doctors

Why Doctors Do Not Differ

Doctors and Vivisection (pp. xiv–xv)

Brentano's. New York, New York, USA. 1920

But for this very reason no doctor dare accuse another of malpractice. He is not sure enough of his own opinion to ruin another man by it.

*The Doctor's Dilemma*

Preface (p. 15)

Penguin Books. Baltimore, Maryland, USA. 1954

## MAN

**Adams, George** 1750–95

English scientist

One of the ends for which man was formed, is to correct appearances and errors, by the investigation of truth; whoever considers him attentively, from infancy to manhood, and from manhood to old age, will find him ever busy in endeavoring to find some reality, to supply the place of the false appearances, by which he has hitherto been deceived.

*Astronomical and Geographical Essays* (6th edition)  
 Essay I, Part III (p. 25)  
 W. & S. Jones. London, England. 1812

**Ardrey, Robert** 1908–80  
 American anthropologist

Man is man, and not a chimpanzee, because for millions upon millions of years we killed for a living.

*The Hunting Hypothesis*  
 Chapter 1 (p. 10)  
 Athenaeum. New York, New York, USA. 1876

**Aristotle** 384 BCE–322 BCE  
 Greek philosopher

All men by nature desires to know.  
 In *Great Books of the Western World* (Volume 8)  
*Metaphysics*  
 Book I, Chapter 1  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Asimov, Isaac** 1920–92  
 American author and biochemist

As we trace the development of man over the ages, it seems in many respects a tale of glory and victory; of the development of the brain; of the discovery of fire, of the building of cities and of civilization; of the triumph of reason; of the filling of the Earth and the reaching out to sea and space.

*Time and Space and Other Things*  
 Introduction (p. ix)  
 Doubleday & Company, Inc. Garden City, New York, USA. 1965

**Austin, Mary Hunter** 1868–1934  
 American novelist and essayist

Man is a great blunderer going about in the woods, and there is no other except the bear makes so much noise. Being so well warned beforehand, it is a very stupid animal, or a very bold one, that cannot keep safely hid.

*The Land of Little Rain*  
 The Scavengers (p. 60)  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1903

### Author undetermined

Man is a piece of the universe made alive.  
 Source undetermined

**Balfour, Arthur James** 1848–1930  
 British prime minister

Man, so far as natural science by itself is able to teach us, is no longer the final cause of the universe, the Heaven-descended heir of all the ages. His very existence is an accident, his story a brief and transitory episode in the life of one of the meanest of the planets.

*Essays and Addresses*  
 The Religion of Humanity (p. 307)  
 David Douglas, Edinburgh, Scotland, 1893

**Bates, Marston** 1906–74  
 American zoologist

Man's point of view is curiously different in the forest and in the sea. In the forest he is a bottom animal, in the sea a surface animal.

*The Forest and the Sea: A Look at the Economy of Nature and the Ecology of Man*  
 Chapter 2 (p. 20)  
 Random House, Inc. New York, New York, USA. 1960

### Beaumarchais, Pierre-Augustin

**Caron de** 1732–99  
 French dramatist

*Boire sans soif et faire l'amour à tout temps, madame; il n'y a que ça qui nous distingue des autres bêtes.*

We drink without being thirsty, and make love at any moment; that is the only distinction between us and the other animals.

*Le Mariage de Figaro*  
 Act II, Sc. XXI

**Becker, Carl Lotus** 1873–1945  
 American historian

Edit and interpret the conclusions of modern science as tenderly as we like, it is still quite impossible for us to regard man as the child of God for whom the earth was created as a temporary habitation. Rather must we regard him a little more than a chance deposit on the surface of the world, carelessly thrown up between two ice ages by the same forces that rust iron and ripen corn... The ultimate cause of this cosmic process of which man is a part, whether God or electricity or a "stress in the ether," we know not. Whatever it may be, if indeed it be anything more than a necessary postulate of thought, it appears in its effects as neither benevolent nor malevolent, as neither kind nor unkind, but merely as indifferent to us.

*The Heavenly City of the Eighteenth Century Philosophers*  
 Chapter I (p. 14)  
 Yale University Press. New Haven, Connecticut, USA. 1932

**Bernal, John Desmond** 1901–71  
 Irish-born physicist and X-ray crystallographer

Man is occupied and has been persistently occupied since his separate evolution, with three kinds of struggle: first with the massive, unintelligent forces of nature, heat and cold, winds, rivers, matter and energy; secondly, with the things closer to him, animals and plants, his own body, its health and disease; and lastly, with his desires and fears, his imaginations and stupidities.

*The World, the Flesh & the Devil*  
 The Future  
 Dutton. New York, New York, USA. 1929

**Bernard, Claude** 1813–78  
French physiologist

It is not given to man to alter the cosmic phenomena of the whole universe nor even those of the earth; but the advances of science enable him to alter the phenomena within his reach.

Translated by Henry C. Greene  
*An Introduction to the Study of Experimental Medicine*  
Chapter III  
Henry Schuman, Inc. New York, New York, USA. 1927

**Berthelot, Marcellin (or Marcelin) Pierre Eugène** 1827–1907  
French chemist and politician

Man being servant and interpreter of nature, can do and understand so much and so much only, as he has observed in fact or in thought in the course of nature. Beyond this he neither knows anything nor can do anything.

Quoted by G.B. Halsted  
The Elements: Verified and Unverified  
*Proceedings of the American Association for the Advancement of Science*, December 1903–January 1904 (p. 404)

**Blake, William** 1757–1827  
English poet, painter, and engraver

Where man is not, nature is barren.

*The Complete Poetry and Prose of William Blake*  
The Marriage of Heaven and Hell, Proverbs of Hell, l. 69  
University of California Press. Berkeley, California, USA. 1982

**Bohm, David** 1917–92  
American physicist

In some sense man is a microcosm of the universe; therefore what man is, is a clue to the universe. We are enfolded in the universe.

In Renée Weber  
*Dialogues with Scientists and Sages: The Search for Unity*  
Routledge & Kegan Paul. London, England. 1986

**Borland, Hal** 1900–78  
American writer

There is a fundamental need in man to know three things: who he is, where he lives, and what time it is. With satisfying answers to those three questions, most of us could live in relative peace with the world and ourselves.

*The Enduring Pattern*  
Foreword (p. 3)  
Simon & Schuster. New York, New York, USA. 1959

As far as man is concerned, he may well be a biological accident, possibly a mutation that resulted from a particularly livid flare-up of sunspots, and consequent radiation, a million and a half or two million years ago.

*Borland Country*  
Foreword (pp. 7–8)  
J.B. Lippincott Company. Philadelphia, Pennsylvania, USA. 1971

**Bradley, Jr., John Hodgdon** 1898–1962  
American geologist

...man is the only animal who can face with a thought, a dream, and a smile the mystery and the madness and the terrible beauty of the universe.

*Autobiography of Earth*  
Chapter 12 (p. 347)  
Coward-McCann, Inc. New York, New York, USA. 1935

A germ on an eggshell cannot know the inner workings of eggs. Man is a germ on the shell of the earth, but a germ with reason and imagination. With these he has dug a tunnel toward the buried truth.

*Parade of the Living*  
Part I, Chapter VIII (pp. 86–87)  
Coward-McCann, Inc. New York, New York, USA. 1930

**Bronowski, Jacob** 1908–74  
Polish-born English mathematician and polymath

Among the multitude of animals which scamper, fly, burrow and swim around us, man is the only one who is not locked into his environment. His imagination, his reason, his emotional subtlety and toughness, make it possible for him not to accept the environment, but to change it.

*The Ascent of Man*  
Lower than the Angels (p. 19)  
Little, Brown & Co. Boston, Massachusetts, USA. 1973

Man is a singular creature. He has a set of gifts which make him unique among the animals: so that, unlike them, he is not a figure in the landscape – he is a shaper of the landscape.

*The Ascent of Man*  
Lower than the Angels (p. 19)  
Little, Brown & Co. Boston, Massachusetts, USA. 1973

Every animal leaves traces of what it was; man alone leaves traces of what he created.

*The Ascent of Man*  
Lower than the Angels (p. 42)  
Little, Brown & Co. Boston, Massachusetts, USA. 1973

We are all afraid – for our confidence, for the future, for the world. That is the nature of the human imagination. Yet every man, every civilization, has gone forward because of its engagement with what it has set itself to do. The personal commitment of a man to his skill, the intellectual commitment and the emotional commitment working as one, has made the Ascent of Man.

*The Ascent of Man*  
Chapter 13 (p. 438)  
Little, Brown & Company. Boston, Massachusetts, USA. 1973

**Brues, Charles Thomas** 1879–1955  
American entomologist

In his ceaseless strides towards a domination of the material world, man has encountered many obstacles. Some of these are palpably of his own making. For many of those

presented by his living environment, man is responsible only in so far as he forms a part of the intimately interdependent myriad of organisms which make up that environment.

*Insects and Human Welfare*

Introduction (p. ix)

Harvard University Press. Cambridge, England. 1920

**Bürgel, Bruno Hans** 1875–1948

German astronomer

Man, an atom, a parasite on the grain of sand we call the earth, whirling through the universe, is confronted by the infinite, where, since times eternal, a never-ceasing play of myriads of spheres has taken place. The deeper he tries to penetrate into its mystery the more inexplicable, the more majestic it grows.

Translated by Stella Bloch

*Astronomy for All*

Chapter I (p. 2)

Cassell & Co., Ltd. London, England. 1911

**Burroughs, John** 1837–1921

American naturalist and essayist

Man is at the top, in his own estimation, and thinks the sun and the moon are for him; but he is no more an end than a frog is; and is not so much atop as the birds are. He appeared in the plan, and he will disappear in the plan, and Nature values him only as manure – squanders him as recklessly as autumn leaves.

*The Heart of Burroughs's Journals*

Jan. 17, 1866 (p. 46)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1928

The first step which a man or a people takes toward a culture is a love of the artificial, as such, while the last and crowning step is a love of the natural and the simple.

*The Heart of Burroughs's Journals*

April 5, 1867 (p. 49)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1928

Man lives in his emotions, his hopes and fears, his loves and sympathies, his predilections and his affinities, more than in his reason.

*Under The Apple Tree*

Literature and Science (p. 194)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1916

**Burroughs, William S.** 1914–97

American writer

Man is an artifact designed for space travel. He is not designed to remain in his present biologic state anymore than a tadpole is designed to remain a tadpole.

*The Adding Machine*

Civilian Defense (p. 85)

Arcade Publishing. New York, New York, USA. 1991

**Bushnell, Horace** 1802–76

American Congregational minister

Not all the winds, and storms, and earthquakes, and seas, and seasons of the world, have done as much to revolutionize the world as he [man], the power of an endless life, has done since the day he came forth upon it, and received, as he is most truly declared to have done, dominion over it.

**Butler, Samuel** 1835–1902

British writer

The body is but a pair of pincers set over a bellows and a stewpan and the whole fixed upon stilts.

*The Note-books of Samuel Butler*

Chapter I (p. 18)

E.P. Dutton & Co. New York, New York, USA. 1917

**Byron, George Gordon, 6th Baron Byron** 1788–1824

English Romantic poet and satirist

Man is a carnivorous production,  
And must have meals, at least one meal a day;  
He cannot live, like woodcocks, upon suction,  
But, like the shark and tiger, must have his prey;  
Although his anatomical construction  
Bears vegetables, in a grumbling way,  
Your laboring people think beyond all question,  
Beef, veal, and mutton better for digestion.

*The Complete Poetical Works of Byron*

Don Juan

Canto II, Stanza 67

Houghton Mifflin Company. Boston, Massachusetts, USA. 1933

**Carson, Rachel** 1907–64

American marine biologist and author

In the artificial world of his cities, [man] often forgets the true nature of his planet and the long vistas of its history, in which the existence of the race of men has occupied a mere moment of time.

*The Sea Around Us*

The Gray Beginnings (p. 19)

Simon & Schuster. New York, New York, USA. 1958

**Charron, Pierre** 1541–1603

French philosopher

*La vraye science et le vray estude de l'homme, c'est l'homme.*

The true science and the true study of man, is man.

*De la Sagesse* Lib. i, Chapter I

**Chesterton, G. K. (Gilbert Keith)** 1874–1936

English author

...this is practically the claim of the egoism which thinks that self-assertion can obtain knowledge. A beetle may or may not be inferior to a man – the matter awaits demonstration; but if he were inferior to a man by ten

thousand fathoms, the fact remains that there is probably a beetle view of things of which a man is entirely ignorant.

In Alberto Manguel (ed.)

*On Lying in Bed and Other Essays*

A Defense of Humility (p. 366)

Bayeaux Arts Inc. Calgary, Ontario, Canada. 2000

**Cicero (Marcus Tullius Cicero)** 106 BCE–43 BCE

Roman orator, politician, and philosopher

Before all other things, man is distinguished by his pursuit and investigation of TRUTH. And hence, when free from needful business and cares, we delight to see, to hear, and to communicate, and consider a knowledge of many admirable and abstruse things necessary to the good conduct and happiness of our lives: whence it is clear that whatsoever is TRUE, simple, and direct, the same is most congenial to our nature as men. Closely allied with this earnest longing to see and know the truth, is a kind of dignified and princely sentiment which forbids a mind, naturally well constituted, to submit its faculties to any but those who announce it in precept or in doctrine, or to yield obedience to any orders but such as are at once just, lawful, and founded on utility. From this source spring greatness of mind and contempt of worldly advantages and troubles.

Quoted in John Frederick William Herschel

*Preliminary Discourse on the Study of Natural Philosophy*

After Table of Contents

Publisher undetermined

**Clarke, Arthur C.** 1917–

English science and science fiction writer

For it may be that the old astrologers had the truth exactly reversed, when they believed that the stars controlled the destinies of men.

The time may come when men control the destinies of stars.

*Future Space Programs 1975*

Testimony (p. 200)

US Congress. House Committee on Science and Technology.

US Government Printing Office. Washington, D.C. 1975

There are more suns in the whole of space than there are grains of sand on all the shores of Earth; and on anyone of those grains, there may be civilizations that will make us look like primitive, ignorant savages.

*The Lost Worlds of 2001*

Chapter 15 (p. 105)

New American Library. New York, New York, USA. 1972

**Cornu, A.**

No biographical data available

Our era is distinguished from preceding ages by wonderful utilization of natural forces; man, that weak and defenseless being, has been enabled by his genius to

acquire an extraordinary power, and to bend to his use those subtle yet dreadful agents whose very existence was unknown to our ancestors.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1899*

We thus learn that man is descended from a hairy, tailed quadruped, probably arboreal in its habits ...

*The Descent of Man and Selection in Relation to Sex* (2nd edition)

Chapter XXI (p. 623)

D. Appleton & Co. New York, New York, USA. 1909

Man selects only for his own good : Nature only for that of the being which she tends.

*On the Origin of Species*

Chapter IV (p. 65)

D. Appleton & Co. New York, New York, USA. 1888

**de La Mettrie, Julien Offroy** 1709–51

French philosopher and physician

It is clear that there is but one substance in this world, and that man is its ultimate expression. Compared to monkeys and the cleverest of animals he is just as Huygen's planet clock is to a watch of King Julien. If more wheels and springs are needed to show the motion of the planets than are required for showing and repeating the hours; and if Vaucanson needed more artistry in producing a flautist than a duck, and art would have been even harder put to produce a "talker", and such a machine, especially in the hands of this new kind of Prometheus, must no longer be thought of as impossible.

In Gerald M. Edelman  
*Bright Air, Brilliant Fire: On the Matter of the Mind*  
 Chapter 19 (p. 188)  
 Basic Books. New York, New York, USA. 1992,

**de Voto, Bernard** 1897–1955  
 American historian

Man is a noisome bacillus whom our Heavenly Father created because he was disappointed in the monkey.

In Mark Twain  
*Mark Twain in Eruption: Hitherto Unpublished Pages About Men and Events*  
 Introduction (p. xxvii)  
 Harper & Brothers Publishers. New York, New York, USA. 1922

**Dexter, William A.**  
 No biographical data available

Man's existence on the Earth is like the twinkling of an eye.

The Bigness and the Smallness of Time  
*Journal of Geological Education*, Volume XV, Number 4, October, 1967 (p. 161)

**Doyle, Sir Arthur Conan** 1859–1930  
 Scottish writer

It is...an alteration of perspective, a shifting of our sense of proportion, a vivid realization that we are insignificant and evanescent creatures, existing on sufferance and at the mercy of the first chill wind from the unknown.

*The Poison Belt*  
 Chapter VI (p. 180)  
 Hodder & Stroughton. London, England. 1913

**Eddington, Sir Arthur Stanley** 1882–1944  
 English astronomer, physicist, and mathematician

Nature made nearly every possible mistake before she reached her greatest achievement, Man – or perhaps some would say her worst mistake of all.

*Science and the Unseen World*  
 Chapter I (p. 21)  
 The Macmillan Company. New York, New York, USA. 1929

From his central position man can survey the grandest works of Nature with the astronomer, or the minutest works with the physicist.

*Stars and Atoms*  
 Lecture I (p. 1)  
 Yale University Press. London, England. 1927

**Eiseley, Loren C.** 1907–77  
 American anthropologist, educator, and author

From the oscillating universe, beating like a gigantic heart, to the puzzling existence of antimatter, order, in a human sense, is at least partially an illusion. Ours, in reality, is the order of a time, and of an insignificant fraction of the cosmos, seen by the limited senses of a finite creature.

*The Unexpected Universe*  
 Chapter 2, Section 5 (p. 46)  
 Harcourt, Brace & World, Inc. New York, New York, USA. 1969

In three billion years of slow change and groping effort only one living creature has succeeded in escaping the trap of specialization that has led in time to so much death and wasted endeavor. It is man, but the word should be uttered softly, for his story is not yet done.

*The Unexpected Universe*  
 Chapter Three (p. 52)  
 Harcourt, Brace & World, Inc. New York, New York, USA. 1969

And looking so, across the centuries and the millennia, toward the animal men of the past, one can see a faint light, like a patch of sunlight moving over the dark shadows of the forest floor. It shifts and widens, it winks out, it comes again, but it persists. It is the human spirit, the human soul, however transient, however faulty men may claim it to be. In its coming man had no part. It merely came, that curious light, and man, the animal, sought to be something no animal had been before. Cruel he might be, vengeful he might be, but there had entered into his nature a curious wistful gentleness and courage...

*The Firmament of Time*  
 Chapter V, Part IV (p. 145)  
 Athenaeum. New York, New York, USA. 1960

**Emerson, Ralph Waldo** 1803–82  
 American lecturer, poet, and essayist

Nor has science sufficient humanity, so long as the naturalist overlooks the wonderful congruity which subsists between man and the world; of which he is lord, not because he is the most subtle inhabitant, but because he is its head and heart, and finds something of himself in every great and small thing, in every mountain stratum, in every new law of color, fact of astronomy, or atmospheric influence which observation or analysis lay open.

*The Complete Works of Ralph Waldo Emerson* (Volume 1)  
*Nature: Addresses and Lectures*  
 Chapter VIII (p. 68)  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

Man carries the world in his head, the whole astronomy and chemistry suspended in a thought.

*Essays: Second Series*  
 Nature (p. 178)  
 Ticknor & Fields. Boston, Massachusetts, USA. 1860

**Everett, Edward** 1794–1865  
 Whig Party politician

There is in all creation, below God and the angels, no eye for the beauty, no ear for the melody, no sense for the fragrance, no perception for the symmetry, no comprehension for the unutterable bounty, dignity, and grandeur, but in the rational mind. It would all lie hushed, and blank, and cold, but for the vitality enkindled in it from

the living sense of intelligent man.

*Inauguration of Washington University at Saint Louis, Missouri. April 23, 1857*

Mr. Everett's Inaugural Address on Academical Education (p. 97)  
Little, Brown & Co. Boston, Massachusetts, USA. 1857

**Fiske, John** 1842–1901

American philosopher and historian

...Man does not dwell at the centre of things, but is the denizen of an obscure and tiny speck of cosmical matter quite invisible amid the innumerable throng of flaming suns that make up our galaxy.

*The Destiny of Man Viewed in the Light of His Origin*

Chapter I (p. 15)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1912

**Foster, Sir Michael** 1836–1907

English physiologist

In the first place, above all other things, his [the scientific man's] nature must be one which vibrates in unison with that of which he is in search; the seeker after truth must himself be truthful, truthful with the truthfulness of Nature. For the truthfulness of Nature is not wholly the same as that which man sometimes calls truthfulness. It is far more imperious, far more exacting. Man, unscientific man, is often content with 'the nearly' and 'the almost.'

*Report of the Sixty-ninth Meeting of the British Association for the Advancement of Science*

President's Address (p. 16)

John Murray. London, England. 1900

...the man who, carrying the ways of the world into the domain of science, thinks that he may treat Nature's differences in any other way than she treats them herself, will find that she resents his conduct; if he in carelessness or in disdain overlooks the minute difference which she holds out to him as a signal to guide him in his search, the projecting tip, as it were, of some buried treasure, he is bound to go astray, and, the more strenuously he struggles on, the farther will he find himself from his true goal.

Presidential Address

*The Chemical News and Journal of Industrial Science*, Volume LXXX, Number 2077, September 15, 1899 (p. 130)

**Fuller, R. Buckminster** 1895–1983

American engineer and architect

A self-balancing, 28-pointed adapter-based biped; an electrochemical reduction-plant, integral with segregated storages of special energy extracts in storage batteries, for subsequent activation of thousands of hydraulic and pneumatic pumps, with motors attached; 62,000 miles of capillaries; millions of warning signals, railroad and conveyor systems; crushers and cranes (of which the arms are magnificent 23-jointed affairs with self-surfacing and lubricating systems, and a universally distributed telephone system needing no service for 70 years

if well-managed); the whole extraordinarily complex mechanism guided with complete precision from a turret in which are located telescopic and microscopic self-registering and recording range-finders, a spectroscope, et cetera, air-conditioning intake-and exhaust and a main fuel intake Within the few cubic inches housing the turret mechanism, there is room also for two sound-wave and sound-direction-finder recording diaphragms, a filing and instant reference system, and an expertly devised analytical laboratory large enough not only to contain minute records of every last and continual event of up to 70 years experience or more, but to extend, by computation and abstract fabrication, this experience with relative accuracy into all corners of the observed universe. There is, also, a forecasting and tactical plotting department for the reduction of future possibilities and probabilities to general successful specific choice.

*Nine Chains to the Moon*

Chapter 4 (p. 18)

Doubleday & Company, Inc. Garden City, New York, USA. 1971

**Galton, Sir Francis** 1822–1911

English anthropologist, explorer, and statistician

Our part in the universe may possibly in some distant way be analogous to that of cells in an organised body, and our personalities may be the transient but essential elements of an immortal and cosmic mind.

*Inquiries into Human Faculty and Its Development*

The Observed Order of Events (p. 196)

AMS Press. New York, New York, USA. 1973

**Gamow, George** 1904–68

Russian-born American physicist

...it took less than an hour to make the atoms, a few hundred million years to make the stars and planets, but five billion years to make man.

*The Creation of the Universe*

Conclusion (p. 139)

The Viking Press. New York, New York, USA. 1952

**George, Henry** 1839–97

American political economist

...he [man] is the only animal whose desires increase as they are fed; the only animal that is never satisfied.

*The Complete Works of Henry George*

Book II, Chapter III (p. 134)

Doubleday, Page & Co. Garden City, New York, USA.

**Gray, George W.**

Freelance science writer

Within the limits of nature's law, man is free to mold his future. By design he may increase the probability of a desired outcome. And so we say that destiny is a choice, a selection among alternative destinies. But the selection cannot be left to accident; it is not fortuitous, automatic,

foolproof. Man himself must choose.

*The Advancing Front of Science*

Epilogue (p. 353)

McGraw-Hill Book Co., Inc. New York, New York, USA. 1937

**Guillemin, Amédée** 1826–93

French journalist and scientific writer

How wonderful is the power of man! Chained down to the surface of the Earth, an intelligent atom on a grain of sand lost in the immensity of space, he invents instruments which multiply a thousandfold his vision, he sounds the depths of the ether, gauges the visible universe, and counts the myriads of stars which people it.

*The Heavens: An Illustrated Handbook of Popular Astronomy* (2nd edition)

The Heavens (p. 1)

Richard Bentley. London, England. 1868

**Heinlein, Robert A.** 1907–88

American science fiction writer

By the data to date, there is only one animal in the Galaxy dangerous to man – man himself.

*The Notebooks of Lazarus Long* (p. 1)

G.P. Putnam's Sons. New York, New York, USA. 1973

**Herschel, Sir John Frederick William** 1792–1871

English astronomer and chemist

...man is a speculative as well as a sentient being, searching in everything for connexion and harmony, the perception of which mixes itself with his choicest pleasures...

*Essays from the Edinburgh and Quarterly Reviews with Addresses and Other Pieces*

Whewell on the Inductive Sciences (p. 143)

Longman, Brown, Green, Longmans & Roberts. London, England. 1857

The situation of man on the globe he inhabits, and over which he has obtained the control, is in many respects exceedingly remarkable. Compared with its other denizens, he seems, if we regard only his physical constitution, in almost every respect their inferior, and equally unprovided for the supply of his natural wants and his defence against the innumerable enemies which surround him.

*A Preliminary Discourse on the Study of Natural Philosophy*

Part I, Chapter I (p. 1)

Longman, Brown, Green & Longmans. London, England. 1845

...man is the undisputed lord of the creation. The strongest and fiercest of his fellow-creatures – the whale, the elephant, the eagle, and the tiger – are slaughtered by him to supply his most capricious wants, or tamed to do him service, or imprisoned to make him sport.

*A Preliminary Discourse on the Study of Natural Philosophy*

Part I, Chapter I (p. 2)

Longman, Rees, Orman, Brown & Green. London, England. 1830

**Hewish, Antony** 1924–

English radio astronomer

The world of man lies midway in scale between the inner space of atoms and particles, and the outer space of stars and galaxies. The exploration of both these regions stretches our imagination to its limits.

Nobel banquet speech for award received in 1974

Nobel Foundation. Stockholm, Sweden. 1975

**Heyl, Paul R.**

American scientist

Individually, man is more or less of an enigma; in the mass he is a mathematical problem.

*Annual Report of the Board of Regents of the Smithsonian Institution* (1933)

Romance or Science? (p. 290)

Government Printing Office. Washington, D.C. 1934

**Hinds, Norman E. A.**

No biographical data available

The mind of man can never encompass the total of Creation.

*Geomorphology: The Evolution of Landscape*

Chapter 22 (p. 842)

Prentice-Hall, Inc. New York, New York, USA. 1943

**Holbach, Paul Henri Thiry** 1723–89

French philosopher

He [man] resembles a child destitute of experience, full of idle notions: a dangerous leaven mixes itself with all his knowledge: it is of necessity obscure, it is vacillating and false – He takes the tone of his ideas on the authority of others, who are themselves in error, or else have an interest in deceiving him. To remove this Cimmerian darkness, these barriers to the improvement of his condition; to disentangle him from the clouds of error that envelop him, that obscure the path he ought to tread; to guide him out of this Cretan labyrinth, requires the clue of Ariadne, with all the love she could bestow on Theseus.

Translated by H.D. Robinson

*The System of Nature, Or, Laws of the Moral and Physical World*

(Volume 1)

Author's Preface (p. 2)

J.P. Mendum. Boston, Massachusetts, USA. 1889

Man is the work of Nature: he exists in Nature: he is submitted to her laws: he cannot deliver himself from them; nor can he step beyond them even in thought. It is in vain his mind would spring forward beyond the visible world, an imperious necessity always compels his return.

Translated by H.D. Robinson

*The System of Nature, Or, Laws of the Moral and Physical World*

(Volume 1)

Chapter I (p. 11)

J.P. Mendum. Boston, Massachusetts, USA. 1889

Suns encrust themselves, and are extinguished; planets perish and disperse themselves in the vast plains of air; other suns are kindled; new planets form themselves, either to make revolutions round these suns, or to describe new routes; and man, an infinitely small portion of the globe, which is itself but an imperceptible point in the immensity of space, vainly believes it is for himself this universe is made; foolishly imagines he ought to be the confidant of nature; confidently flatters himself he is eternal, and calls himself KING OF THE UNIVERSE!!

Translated by H.D. Robinson

*The System of Nature, Or, Laws of the Moral and Physical World*  
(Volume 1)

Chapter 6 (p. 46)

J.P. Mendum. Boston, Massachusetts, USA. 1889

O man! wilt thou never conceive that thou art but an ephemeron? All changes in the universe: nature contains no one constant form, yet thou pretendes! That thy species can never disappear; that thou shall be exempted from the universal law, that wills all shall experience change! Alas! In thy actual being, art thou not submitted to continual alterations? Thou, who in thy folly arrogantly assumest to thyself the title of KING OF NATURE!

Translated by H.D. Robinson

*The System of Nature, Or, Laws of the Moral and Physical World*  
(Volume 1)

Chapter 6 (p. 46)

G.W. & A.J. Matsell. New York, New York, USA. 1835

**Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

...only the biological processes of mutation and natural selection are needed to produce living creatures as we know them. Such creatures are no more than ingenious machines that have evolved as strange by-products in an odd corner of the Universe.

*The Nature of the Universe*

Chapter 7 (p. 136)

The University Press. Cambridge, England. 1933

Here we are in this wholly fantastic Universe with scarcely a clue as to whether our existence has any real significance.

*The Nature of the Universe*

Chapter 7 (p. 138)

The University Press. Cambridge, England. 1933

**Hugo, Victor** 1802–85

French author, lyric poet, and dramatist

Man is not a circle with a single centre; he is an ellipse with two foci.. Facts are one, ideas are the other.

*Les Misérables*

Fantine, II (p. 92)

Carleton, Publisher. New York, New York, USA. 1884

**Hutton, James** 1726–97

Scottish geologist, chemist, and naturalist

The globe of this earth is evidently made for man. He

alone, of all the beings which have life upon this body, enjoys the whole and every part; he alone is capable of knowing the nature of this world, which he thus possesses in virtue of his proper right; and he alone can make the knowledge of this system a source of pleasure, and the means of happiness.

*Theory of the Earth: With Proofs and Illustrations* (Volume 1)

Chapter I, Section I (pp. 17–18)

H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

**Hutton, W.**

Chapter I (p. 5)

J. Milligan. Georgetown, District of Columbia. 1822

**Huxley, Thomas Henry** 1825–95

English biologist

The question of questions for mankind – the problem which underlies all others, and is more deeply interesting than any other is the ascertainment of the place which Man occupies in nature and of his relations to the universe of things.

*Collected Essays* (Volume 7)

*On the Relations of Man to the Lower Animals*

Chapter I (p. 77)

Macmillan & Company Ltd. London, England. 1904

Was the oldest *Homo sapiens* pliocene or miocene, or yet more ancient? In still older strata do the fossilized bones of an Ape more anthropoid, or a Man more pithecoïd, than any yet known await the researches of some unborn paleontologist ?

*Evidence as to Man's Place in Nature*

Chapter III (p. 184)

D. Appleton & Co. New York, New York, USA. 1873

**Ionides, Stephen A.**

No biographical data available

The vastness of the universe is a challenge; and all that has gone before us serves at once as example and as guide. We know now that we are little people, imprisoned on a tiny planet which is not even central in the gigantic whirlings of suns and galaxies. Yet we have learned much of how these huge bodies whirl. We can predict something of their future courses. We can even make use of their emanations and turn them to our own benefit. Through the ever increasing arch of our experience, the margin of the untraveled world still fades before us as we move. We are human, we have minds and books and records. What we have learned so far is no mean achievement, and our purpose, like the purpose of Tennyson's

“Ulysses,” holds,  
 “To follow knowledge like a sinking star  
 Beyond the utmost bounds of human thought.”

*Stars and Men*

Chapter XVII (p. 416)

Bobbs-Merrill. Indianapolis, Indiana, USA. 1939

**Jeans, Sir James Hopwood** 1877–1946

English physicist and mathematician

Old Mother Earth must regard man as a very recent apparition indeed; he has just appeared to burrow into her, burn her forests, put her waterfalls into pipes, and generally mar the beauty of her features. If he has done so much in the first few moments of his existence, she may well wonder what is in store for her in the long future ages in which he is destined to labor on her surface.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1928*

The Wider Aspects of Cosmogony (p. 165)

Government Printing Office. Washington, D.C. 1929

**Jennings, Herbert Spencer** 1868–1947

American zoologist

Vast areas of the universe have not yet realized their potentialities for the production of life. If man disappears, if he turns out to be one of the numerous branches that is not capable of continued existence, and if none of the other existing types can seize the advance, still other innumerable types may well arise and start new cycles of evolution. Man is not indispensable to the advancement of life.

*The Universe and Life*

Chapter II (pp. 59–60)

Yale University Press. New Haven, Connecticut, USA. 1941

**Joad, Cyril Edwin Mitchinson** 1891–1953

English philosopher and broadcasting personality

Man, as I envisage him, is a being very young, very simple, very little capable of insight. His knowledge of the world of value is but a fledgling’s knowledge; his admiration is apt to be a nestling’s admiration for the things which are kindly to his own nature. Nevertheless, he may, I believe, pass in thought beyond this fledgling condition, and view the world as indifferent to his aims and alien to his nature, and yet as supremely worthy of his admiration.

*Philosophical Aspects of Modern Science*

Chapter XI (p. 339)

G. Allen & Unwin Ltd. London, England. 1932

Man by the light of science can see his hands, and can catch a glimpse of himself, his past, and the patch upon which he stands; but around him in place of that known

comfort and beauty he had anticipated, and in the first few moments falsely thought that he saw, is darkness still.

*Philosophical Aspects of Modern Science*

Chapter XI (p. 342)

G. Allen & Unwin Ltd. London, England. 1932

**Johanson, Donald**

American paleoanthropologist

**Edey, Maitland**

archy turns revolutionist (p. 227)

Doubleday, Doran &amp; Company, Inc. Garden City, New York, USA. 1933

**Marsh, George Perkins** 1801–82

American diplomat, scholar, and conservationist

...man is, in both kind and degree, a power of a higher order than any of the other forms of animated life, which, like him, are nourished at the table of bounteous nature.

*Man and Nature: Or, Physical Geography as Modified by Human Action*

Preface (p. iii)

Charles Scribner &amp; Co. New York, New York, USA. 1865

**Maudsley, Henry** 1835–1918

English physician

I have no wish whatever to exalt unduly the body; I have, if possible, still less desire to degrade the mind; but I do protest, with all the energy I dare use, against the unjust and most unscientific practice of declaring the body vile and despicable, of looking down upon the highest and most wonderful contrivance of creative skill as something of which man dare venture to feel ashamed. I cannot now summarize the facts and arguments which I have brought forward; I must trust to the indulgence of your memory of them when I declare that to my mind it appears a clear scientific duty to repudiate the quotation from an old writer, which the late Sir William Hamilton used to hang on the wall of his lecture-room:

“On earth there is nothing great but man, In man there is nothing great but mind.”

The aphorism, which, like most aphorisms, contains an equal measure of truth and untruth, is suitable enough to the pure metaphysician, but it is most unsuitable to the scientific inquirer, who is bound to reject it, not because of that which is not true in it only, but much more because of the baneful spirit with which it is inspired.

*Body and Mind*

Lecture III (p. 95)

D. Appleton &amp; Co. New York, New York, USA. 1872

On earth there are assuredly other things great besides man, though none greater; and in man there are other things great besides mind, though none greater.

*Body and Mind*

Lecture III (p. 95)

D. Appleton &amp; Co. New York, New York, USA. 1872

**Miller, Hugh** 1802–56

Scottish geologist and theologian

Up till the introduction of man upon our planet, the humbler creatures, his predecessors, formed but mere figures in its various landscapes, and failed to alter or affect by their works the face of nature.

*The Testimony of the Rocks; of, Geology in Its Bearings on the Two Theologies, Natural and Revealed*

Lecture Sixth (p. 237)

Gould &amp; Lincoln. Boston, Massachusetts, USA. 1857

**Miller, Perry** 1905–63

American historian

It is only too clear that man is not at home in this universe, and yet he is not good enough to deserve a better...

*The New England Mind: The Seventeenth Century*

Chapter 1 (p. 7)

Harvard University Press. Cambridge, Massachusetts, USA. 1953

**Monod, Jacques** 1910–76

French biochemist

If we accept this message – accept all it contains – then man must at last wake out of his millenary dream; and in doing so wake to his total solitude, his fundamental isolation. Now does he at last realize that, like a gypsy,

he lives at the boundary of an alien world. A world that is deaf to his music, just as indifferent to his hopes as to his suffering or his crimes.

*Chance and Necessity* (pp. 172–173)

...man knows at last that he is alone in the universe's unfeeling immensity, out of which he emerged only by chance.

*Chance and Necessity: An Essay on the Natural Philosophy of Modern Biology*

Chapter IX (p. 180)

Vintage Books. New York, New York, USA. 1972

**Morgan, Elaine** 1920–

Welsh writer

Man is the only mammal whose normal method of locomotion is to walk on two legs. A pattern of mammal behavior that emerges only once in the whole history of life on earth takes a great deal of explaining.

*The Aquatic Ape* (p. 49)

Stein & Day. New York, New York, USA. 1982

**Morris, Desmond** 1928–

Zoologist and ethnologist

Despite our grandiose ideas and our lofty self-conceits, we are still humble animals, subject to all the basic laws of animal behavior.... We tend to suffer from a strange complacency that...there is something special about us, that we are somehow above biologic control. But we are not. Many exciting species have become extinct in the past, and we are no exception. Sooner or later we shall go, making way for something else. If it is to be later rather than sooner, then we must take a long, hard look at ourselves as biological specimens, and gain some understanding of our limitations.

*The Naked Ape*

Chapter Eight (p. 240)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1967

**Newman, Joseph S.** 1892–1960

American poet

Man is born, eats, procreates, and dies  
This sequence of events alike applies  
To horses, herring, crocodiles, and flies.

Introduction (p. xiv)

Henry Holt & Co. New York, New York, USA. 1922

**Oppenheimer, James Robert** 1904–67

American theoretical physicist

We [US and USSR] may be likened to two scorpions in a bottle, each capable of killing the other, but only at the risk of his own life.

Atomic Weapons and American Policy

*Foreign Affairs*, July 1953 (p. 529)

**Osborne, John** 1939–94

English playwright

Here we are, we're alone in the universe, there's no God, it just seems that it all began by something as simple as sunlight striking on a piece of rock. And here we are. We've only got ourselves. Somehow, we've just got to make a go of it. We've only ourselves.

*The Entertainer*

No. 12

Criterion Books. New York, New York, USA. 1958

**Osler, Sir William** 1849–1919

Canadian physician and professor of medicine

A man cannot become a competent surgeon without a full knowledge of human anatomy and physiology, and the physician without physiology and chemistry flounders along in an aimless fashion, never able to gain any accurate conception of disease, practising a sort of popgun pharmacy, hitting now the malady and again the patient, he himself not knowing which.

*Aequanimitas: With Other Addresses to Medical Students, Nurses and Practitioners of Medicine*

Chapter VII (p. 127)

P. Blackiston's Sons & Co. Philadelphia, Pennsylvania, USA. 1905

**Pascal, Blaise** 1623–62

French mathematician and physicist

For, in fact, what is man in nature? A Nothingness in comparison with the Infinite, an All in comparison with the Nothing, a mean between nothing and everything.

In *Great Books of the Western World* (Volume 33)

*Pensées*

Section II, 72

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Man is but a reed, the most feeble thing in nature; but he is a thinking reed. The entire universe need not arm itself

to crush him. A vapour, a drop of water suffices to kill him. But, if the Universe were to crush him, man would still be more noble than that which killed him, because he knows that he dies and the advantage which the universe has over him; the universe knows nothing of this.

In *Great Books of the Western World* (Volume 33)

*Pensées*

Section VI, 347

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

But to show him [man] another prodigy equally astonishing, let him examine the most delicate things he knows. Let a mite be given him, with its minute body and parts incomparably more minute, limbs with their joints, veins in the limbs, blood in the veins, humors in the blood, drops in the humors, vapors in the drops. Dividing these last things again, let him exhaust his powers of conception, and let the last object at which he can arrive be now that of our discourse. Perhaps he will think that here is the smallest point in nature. I will let him see therein a new abyss. I will paint for him not only the visible universe, but all that he can conceive of nature's immensity in the womb of this abridged atom. Let him see therein the infinity of the universes, each of which has its firmament, its planets, its earth, in the same proportion as in the visible world; in each earth animals, and in the last mites, in which he will find again all that the first had, finding still in these others the same thing without end and without cessation. Let him lose himself in wonders as amazing in their littleness as the others in their vastness. For who will not be astounded at the fact that our body, which a little while ago was imperceptible in the universe, itself imperceptible in the bosom of the whole, is now a colossus, a world, or rather a whole, in respect of the nothingness which we cannot reach?

Translated by W.F. Trotter

*The Harvard Classics* (Volume 48)

*Thoughts*

Section II (p. 26)

P.F. Collier & Son. New York, New York, USA. 1910

...let man consider what he is in comparison with all existence; let him regard himself as lost in this remote corner of nature; and from the little cell in which he finds himself lodged, I mean the universe, let him estimate at their true value the earth, kingdoms, cities, and himself. What is a man in the Infinite?

Translated by W.F. Trotter

*The Harvard Classics* (Volume 48)

*Thoughts*

Section II (p. 26)

P.F. Collier & Son. New York, New York, USA. 1910

It is dangerous to show man how much he resembles the beasts, without showing him his greatness. It is dangerous to show him his excellence, without showing him his meanness. And the greatest danger of all is, to leave him ignorant of both. But it is highly beneficial to him to have

a knowledge of both.

*Thoughts on Religion, and Other Important Subjects*

Chapter XXIII (p. 233)

Samuel Bagster. London, England. 1806

**Patten, William** 1861–1932

American biologist

To the amoeba, the jelly-fish, or the worm, the “world” is the franchise of an hour in a drop of water; a niche in the rocks for a season; or a home in the sea for a decade. To man, the “world” is the universal whole of time and space, for their content are his to explore and to utilize. And therein lies our measure of freedom and attainment.

*The Grand Strategy of Evolution: The Social Philosophy of a Biologist*

Chapter IV (p. 90)

Richard G. Badger. Boston, Massachusetts, USA. 1920

**Pickering, James Sayre**

No biographical data available

Man is a freak, colloidal combination of thirteen elements which happen to have a chemical affinity for each other, and is the strangest and one of the most amusing accidents of nature. The market value of the substance of the average man is about 98 cents.

*The Stars Are Yours* (p. 230)

The Macmillan Company. New York, New York, USA. 1948

**Planck, Max** 1858–1947

German physicist

...in the sight of God all men are equal. Even the most highly gifted geniuses, such as a Goethe or a Mozart, are but as primitive beings the thread of whose innermost thought and most finely spun feelings is like a chain of pearls unrolling in regular succession before His eye. This does not belittle the greatness of great men. But it would be a piece of stupid sacrilege on our part if we were to arrogate to ourselves the power of being able, on the basis of our own studies, to see as clearly as the eye of God sees and to understand as clearly as the Divine Spirit understands.

Translated by James Murphy

*Where Is Science Going?*

Chapter III (p. 103)

Norton. New York, New York, USA. 1932

**Plaskett, J. S.**

No biographical data available

...when we consider how the human mind, though inhabiting for only a few years this minute planet, accompanying a comparatively insignificant star of the system, has been able to reach out to the inconceivable depths of space and reduce some of the confusion of stars to orderly systems, has been able to deduce the laws which govern these systems, thus unifying, in certain degree, all the wonderful phenomena of suns and planets, comets, stars, nebulae and clusters, into one whole, we do not

lose hope that eventually it will be able to much further unravel the mystery of the universe.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1911*

Developments in Astronomy (p. 270)

Government Printing Office. Washington, D.C. 1912

**Proctor, Richard Anthony** 1837–88

English astronomer

It is, for instance, a strange and suggestive circumstance that man, insignificant in his dimensions and in all his physical powers, when viewed in comparison even with the earth on which he lives, and compelled to remain always upon that orb, which is utterly insignificant compared with the solar system, should yet dare to raise his thoughts beyond the earth and beyond the solar system, to contemplate boldly those amazing depths amidst which the stellar glories are strewn.

*The Expanse of Heaven* (p. 104)

Longmans, Green & Co. London, England. 1897

That he should undertake to measure the scale on which the universe is built, to rate the stars as with swift yet stately motion they career through space, to test and analyze their very substance, to form a judgment as to processes taking place upon and around them, tho not one star in all the heavens can be magnified into more than the merest point all this affords noble conceptions of the qualities which the Almighty has implanted in the soul of man.

*The Expanse of Heaven* (p. 104)

Longmans, Green & Co. London, England. 1897

We have learned how small is our domain in space, but as yet we have scarcely been willing to admit that man's duration in time is as utterly minute, and in a sense insignificant.

*The Poetry of Astronomy*

Age of the Sun and Earth (p. 1)

Smith, Elder & Co. London, England. 1881

**Rabinowitch, Eugene** 1901–73

Russian-born American biophysicist

We are indeed the detritus of stars, our atoms are the flour of celestial mills, our bodies the backings of solar fires.

The Role of Scientists: Thoughts for 1971

*Bulletin of the Atomic Scientists*, Volume XXVII, Number 1, January 1971 (p. 3)

**Raymo, Chet** 1936–

American physicist and science writer

We are indeed the detritus of stars, our atoms are the flour of celestial mills, our bodies the bakings of solar fires.

*The Virgin and the Mousetrap: Essays in Search of the Soul of Science*

Chapter 21 (p. 196)

The Viking Press. New York, New York, USA. 1991

We are not playthings of the gods, comet-warned and

fearful; we are the comet's offspring, volatile compounds made animate, made conscious.

*Skeptics and True Believers: The Exhilarating Connection Between Science and Religion*

Chapter Thirteen (p. 251)

Walker & Company. New York, New York, USA. 1998

**Read, John**

Man must learn to master and control himself as he has learned to master and control nature.

In James R. Newmann

*What is Science?*

Chemistry (p. 194)

Simon & Schuster. New York, New York, USA. 1955

**Riggs, Arthur Stanley**

No biographical data available

Man is what he is today – as our descendants will be a million years hence – because of the virtues of all our ancestors.

*The Romance of Human Progress*

Introduction (p. xix)

The Bobbs-Merrill Company. New York, New York, USA. 1938

**Robinson, Phil** 1847–1902

English journalist and writer on natural history

It is worth your Majesty's noting," said the Dodo to King Solomon, "that Man was not created until the last of the six days; that he is, in fact, the Junior of the Animals."

*Noah's Ark; or, 'Mornings in the Zoo'*

Chapter I (p. 1)

Sampson Low, Marston, Searle & Rivington. London, England. 1882

...Man – this appendix to creation, this supplement as it were, a mere addendum or postscript – has disorganized the whole. He found us [the animals] all living together happily in one spot, and was the cause of our miserable dispersion over the world.

*Noah's Ark; or, 'Mornings in the Zoo'*

Chapter I (p. 2)

Sampson Low, Marston, Searle & Rivington. London, England. 1882

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

For countless ages the sun rose and set, the moon waxed and waned, the stars shone in the night, but it was only with the coming of Man that these things were understood. In the great world of astronomy and in the little world of the atom, Man has unveiled secrets which might have been thought undiscoverable.

*Portraits from Memory, and Other Essays* (p. 238)

Simon & Schuster. New York, New York, USA. 1956

Man is a part of Nature, not something contrasted with Nature.

*What I Believe*

Chapter I (p. 1)

E.P. Dutton & Company, Inc. New York, New York, USA. 1925

...Man is the product of causes which had no prevision of the end they were achieving; that his origin, his growth, his hopes and fears, his loves and his beliefs, are but the outcome of accidental collocations of atoms; that no fire, no heroism, no intensity of thought and feeling, can preserve an individual life beyond the grave; that all the labors of the ages, all the devotion, all the inspiration, all the noonday brightness of human genius, are destined to extinction in the vast death of the solar system, and that the whole temple of man's achievement must inevitably be buried beneath the debris of a universe in ruins – all these things, if not quite beyond dispute, are yet so nearly certain, that no philosophy which rejects them can hope to stand.

In Robert E. Egnor and Lester E. Denonn

*The Basic Writings of Bertrand Russell*

A Free Man's Worship (first published as "The Free Man's Worship" in December, 1903) (p. 67)

Simon & Schuster. New York, New York, USA. 1961

The endless praises of the choirs of angels had begun to grow wearisome; for, after all, did he not deserve their praise? Had he not given them endless joy? Would it not be more amusing to obtain undeserved praise, to be worshipped by beings whom he tortured? He smiled inwardly, and resolved that the great drama should be performed. For countless ages the hot nebula whirled aimlessly through space. At length it began to take shape, the central mass threw off planets, the planets cooled, boiling seas and burning mountains heaved and tossed, from black masses of cloud hot sheets of rain deluged the barely solid crust. And now the first germ of life grew in the depths of the ocean, and developed rapidly in the fructifying warmth into vast forest trees, huge ferns springing from the damp mould, sea monsters breeding, fighting, devouring, and passing away. And from the monsters, as the play unfolded itself, Man was born, with the power of thought, the knowledge of good and evil, and the cruel thirst for worship.

*Mysticism and Logic: And Other Essays*

Chapter III (p. 46)

Longmans, Green & Co. London, England. 1919

**Sackville-West, Victoria** 1862–1936

English poet

...one might reply that man himself was but a collection of atoms, even as a house was but a collection of bricks, yet man laid claim to a soul, to a spirit, to a power of recording and or perception, which had not more to do with his restless atoms than had the house with its stationary bricks.

*All Passion Spent*

Part I (p. 82)

Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1931

**Sakharov, Andrei** 1921–89

Soviet physicist and dissident

Like a gleam in the darkness, we have appeared for an instant from the black nothingness of the ever-unconscious matter, in order to make good the demands of Reason and create a life worthy of ourselves and of the Goal we only dimly perceive.

*Nobel Lectures, Peace 1971–1980*

Acceptance speech for award received in 1975

World Scientific Publishing Company. Singapore. 1997

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

I have had a most rare vision. I have had a dream – past the wit of man to say what dream it was: man is but an ass, if he go about to expound this dream.... Methought I was, and methought I had – but man is but a patched fool, if he will offer to say what methought I had....

It shall be called Bottom's dream, because it hath no bottom.

*A Midsummer-night's Dream* (pp. 72–73)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1903

**Shapley, Harlow** 1885–1972

American astronomer

We are brothers of the boulders, cousins of the clouds.

In Eric Chaisson

*Cosmic Dawn: The Origins of Matter and Life*

Epilogue (p. 299)

Little, Brown & Company. Boston, Massachusetts, USA. 1981

Mankind is made of star stuff, ruled by universal laws. The thread of cosmic evolution runs through his history, as through all phases of the universe – the microcosmos of atomic structures, molecular forms, and microscopic organisms, and the macrocosmos of higher organisms, of planets, stars, and galaxies. Evolution is still proceeding in galaxies and man – to what end, we can only vaguely surmise.

*The View from a Distant Star: Man's Future in the Universe*

Preface (p. 5)

Dell Publishing Company, Inc. New York, New York, USA. 1967

**Simpson, George Gaylord** 1902–84

American paleontologist

It is obvious that the great majority of humans throughout history have had grossly, even ridiculously, unrealistic concepts of the world. Man is, among many other things, the mistaken animal, the foolish animal. Other species doubtless have much more limited ideas about the world, but what ideas they do have are much less

likely to be wrong and are never foolish. White cats do not denigrate black, and dogs do not ask Baal, Jehovah, or other Semitic gods to perform miracles for them.

*This View of Life: The World of an Evolutionist*

Preface (p. viii)

Harcourt, Brace & World, Inc. New York, New York, USA. 1964

He [man] stands alone in the universe, a unique product of a long, unconscious, impersonal, material process with unique understanding and potentialities. These he owes to no one but himself, and it is to himself that he is responsible. He is not the creature of uncontrollable and undeterminable forces, but is his own master. He can and must decide and manage his own destiny.

*Life of the Past*

Chapter 11 (p. 155)

Yale University Press. New Haven, Connecticut, USA. 1953

**Squire, John Collings** 1884–1958

English poet

Men were on earth while climates slowly swung.  
Fanning wide zones to heat and cold, and long  
Subsidence turned great continents to sea,  
And seas dried up, dried up interminably.  
Age after age; enormous seas were dried  
Amid wastes of land. And the last monster died.

*Collected Poems*

The Birds (p. 154)

Macmillan & Company Ltd. London, England. 1959

**Steinbeck, John** 1902–68

American novelist

Man is related...inextricably to all reality, known and unknowable....[P]lankton, a shimmering phosphorescence on the sea and the spinning planets and an expanding universe, all bound together by the elastic string of time. It is advisable to look from the tide pool to the stars and then back to the tide pool again.

*Sea of Cortez*

Chapter 21 (p. 217)

Paul P. Appel, Publisher. Mount Vernon, New York, USA. 1982

**Teller, Woolsey** 1890–1954

Essayist

Out of the star-dust man came, and into it he will sink again, as oblivious of his own passing existence as he was before that existence painfully and slowly evolved and separated him, for one brief instant, from the blindly-groping Whole.

*The Atheism of Astronomy*

Chapter VI (pp. 120–121)

Arno Press & The New York Times. New York, New York, USA. 1972

**Thierry, Paul Henri, Baron d'Holbach** 1723–89

German-born French philosopher

Man is the work of nature: he exists in nature: he is sub-

mitted to her laws: he cannot deliver himself from them: nor step beyond them, even in thought.

Translated by M. Mirabaud

*System of Nature, or The Laws of the Moral and Physical World* (Volume First)

Part First, Chapter First (p. 13)

The Wonderful Mistake (p. 29)

The Viking Press. New York, New York, USA. 1979

**Thomson, Sir John Arthur** 1861–1933

Scottish naturalist

Man needs to sojourn with Nature in order to get certain fundamental impressions without which he is impoverished – the impressions from the starry sky, the pathless sea, the mountain-top, the dense forest, the apple-blossom, the anthill, the swallows flying south in autumn. Man cannot safely dispense with the fundamental impressions of power, of largeness, of pervading order, of omnipresent beauty, of universal flux, of intricacy, of growth, of the web of life, of adaptiveness, of evolution.

*The System of Animate Nature: The Gifford Lectures Delivered in the University of St. Andrews in the Years 1915 and 1916* Volume 2

Lecture XX (p. 634)

Henry Holt & Co. New York, New York, USA. 1920

**Veblen, Thorstein** 1857–1929

Economist, social critic, and author

To modern civilised men, especially in their intervals of sober reflection, all these things that distinguish the barbarian civilisations seem of dubious value...futile in comparison with the achievements of science.

*The Place of Science in Modern Civilisation and Other Essays*

The Place of Science in Modern Civilization (p. 3)

B.W. Huebsch. New York, New York, USA. 1919

**Wallace, Alfred Russel** 1823–1913

English humanist, naturalist, and geographer

We are surroundings, our very existence to it [the universe]. Looking at it as an evolutionist, I believe that it is only by tracing it back to some necessary earlier state that we shall be able to form some rational conception of *how* it has evolved, *how* it has come to be what it is, how *we* have come to be where we are. Then, and then only, shall we be able to give any probable answer to the question, What advantages have we derived from our nearly central position?

Man's Place in the Universe, A Reply to the Criticism

*The Independent*, Volume 55, Number 2856, August 27, 1903 (p. 2030)

**Weller, Stuart**

**MAN AND NATURE****Jefferies, Richard** 1848–87

English naturalist and author

Part and parcel as we are of the great community of living beings, indissolubly connected with them from the lowest to the highest by a thousand ties, it is impossible for us to escape from the operation of this law ...

*The Hills and the Vale*  
Nature and Eternity (p. 299)  
Duckworth & Co. London, England. 1909

**MAN, ASCENT OF****Bronowski, Jacob** 1908–74

Polish-born British mathematician and polymath

We are all afraid – for our confidence, for the future, for the world. That is the nature of the human imagination. Yet every man, every civilization, has gone forward because of its engagement with what it has set itself to do. The personal commitment of a man to his skill, the intellectual commitment and the emotional commitment working together as one, has made the Ascent of Man.

*The Ascent of Man*  
Chapter 13 (p. 438)  
Little, Brown & Co. Boston, Massachusetts, USA. 1975

**MAN, CLASSIFICATION OF****Bates, Marston** 1906–74

American zoologist

There has, in fact, been so much contact through migrations and other types of population movements, that the anthropologists are unable to come to much agreement in attempts to classify man into subspecies (or races). Their problem is much like that of the botanists faced with the North American blackberries.

*The Nature of Natural History*

Chapter 2 (p. 16)

Scribner. New York, New York, USA. 1950

## MAN, MIND OF

**Dampier, Sir William Cecil** 1867–1952

English scientific writer

The mind of man, learning consciously and unconsciously lessons of experience, gradually constructs a mental image of its surroundings – as the mariner draws a chart of strange coasts to guide him in future voyages, and to enable those that follow after him to sail the same seas with ease and safety.

*The Recent Development of Physical Science*

Chapter I (p. 11)

P. Blakiston's Son & Co. Philadelphia, Pennsylvania, USA. 1904

**Langer, Susanne Katherina Knauth** 1895–1985

American philosopher

the mind of man is always fertile, ever creating and discarding, like the earth. There is always new life under old decay. Last year's dead leaves hide not merely the seeds, but the full-fledged green plants of this year's spring, ready to bloom almost as soon as they are uncovered.

*Philosophy in a New Key: A Study in the Symbolism of Reason,*

*Rite, and Art*

Chapter I (p. 17)

Harvard University Press. Cambridge, Massachusetts, USA. 1942

## MAN, ORIGIN OF

**Milton, John** 1608–74

English poet

Thou sun, said I, fair light, And thou enlightened earth so fresh and gay, Ye hills and dales, ye rivers, woods, and plains, And ye that live and move, fair creatures, tell – Tell if ye saw, how came I thus, how here?

*Paradise Lost*

Book VIII

George Routledge & Sons. London, England. 1905

## MAN, PREHISTORIC

**Smith, Langdon** 1858–1908

American poet

I flaked a flint to a cutting edge,  
And shaped it with brutish craft;  
I broke a shank from the woodland dank,  
And fitted it, head and haft.  
Then I hid me close to the reedy tarn,  
Where the Mammoth came to drink –  
Through brawn and bone I drave the stone,

And slew him upon the brink.

*Evolution, A Fantasy*

VIII

Luce & Co. 1909

I carved that fight on a reindeer bone,  
With rude and hairy hand,  
I pictured his fall on the cavern wall  
That men might understand.  
For we lived by blood, and the right of might,  
Ere human laws were drawn,  
And the Age of Sin did not begin  
Till our brutal tusks were gone.

*Evolution, A Fantasy*

X

Luce & Co. 1909

## MAN, WISE

**Fitch, Sir Joshua Girling** 1824–1903

English educationist

The difference between a wise man and one who is not wise consists less in the things he knows than in the way in which he knows them.

*Lectures on Teaching*

Chapter XI (p. 288)

The Macmillan Co. New York, New York, USA. 1906

## MANDELBROT SET

**Ewing, John**

No biographical data available

If the entire Mandelbrot set [a family of complex polynomials that describes a fractal] were placed on an ordinary sheet of paper, the tiny sections of boundary we examine would not fill the width of a hydrogen atom. Physicists think about such tiny objects; only mathematicians have microscopes fine enough to actually observe them.

Can We See the Mandelbrot Set?

*The College Mathematics Journal*, Volume 26, Number 2, March, 1995

## MANKIND

**Clarke, Arthur C.** 1917–

English science and science fiction writer

...when the first contact with the outer universe is made, one would like to think that Mankind played an active and not merely a passive role – that we were the discoverers, not the discovered.

*The Exploration of Space*

Chapter 17 (p. 182)

Harper & Brothers Publishers. New York, New York, USA. 1951

**Coon, Carleton** 1904–81

American anthropologist

If Africa was the cradle of mankind, it was only an indifferent kindergarten. Europe and Asia were our principal schools.

*The Origin of Races*

Chapter 12 (p. 656)

Alfred A. Knopf. New York, New York, USA. 1966

**Hooke, Robert** 1635–1703

English physicist

It is the great prerogative of Mankind above other Creatures, that we are not only able to behold the works of Nature, or barely to sustain our lives by them, but we have also the power of considering, comparing, altering, assisting, and improving them to various uses.

*Micrographia*

Preface (First page)

Printed by Jo. Martyn & Ja. Allestry. London, England. 1665

**Kirby, William** 1759–1850

English entomologist

**Spence, William** 1783–1860

English entomologist

Mankind in general, not excepting even philosophers, are prone to magnify, often beyond its just merit, the science or pursuit to which they have addicted themselves, and to depreciate any that seems to stand in competition with their favourite: like the redoubted champions of romance, each thinks himself bound to take the field against everyone that will not subscribe to the peerless beauty and accomplishments of his own *Dulcinea*.

*An Introduction to Entomology; Or, Elements of the Natural History of Insects* (7th edition)

Letter I (p. 1)

Longman, Brown, Green, Longmans & Robsrts. London, England. 1858

**Leakey, Richard Erskine** 1944–

Kenyan palaeoanthropologist and politician

**Lewin, Roger Amos**

Anthropologist

There is no law that declares the human species to be immortal.

*Origins: What New Discoveries Reveal About the Emergence of Our Species and Its Possible Future*

Chapter 10 (p. 256)

E.P. Dutton & Company, Inc. New York, New York, USA. 1977

**Ray, John** 1627–1705

English naturalist

Whatever may be said for ye Antiquity of the Earth itself and bodies lodged in it ye race of mankind is new.

In Charles Robert Gunther

*Further Correspondence of John Ray* (p. 260)

Printed for the Ray Society. London, England. 1928

**Sagan, Carl** 1934–96

American astronomer and author

In all the history of mankind, there will be only one gen-

eration that will be first to explore the Solar System, one generation for which, in childhood, the planets are distant and indistinct discs moving through the night sky, and for which, in old age, the planets are places, diverse new worlds in the course exploration.

*The Cosmic Connection: An Extraterrestrial Perspective*

Chapter 9 (p. 69)

Dell Publishing, Inc. New York, New York, USA. 1975

**Yalow, Rosalyn** 1921–

American medical physicist

If we are to have faith that mankind will survive and thrive on the face of the earth, we must believe that each succeeding generation will be wiser than its progenitors. We transmit to you, the next generation, the total sum of our knowledge. Yours is the responsibility to use it, add to it, and transmit it to your children.

[Maps]...art with a purpose.

*The Story of Maps*

The Earth Takes Shape (p. 32)

Little, Brown. Boston, Massachusetts, USA. 1949

**Bryan, Kirk**

No biographical data available

Time, thought, and money are never wasted on the production of a map which shows clearly the relation of one

thing to another on the earth's surface.

Physical Geography in the Training of the Geographer  
*Annals of the Association of American Geographers*, Volume 34, 1944  
(p. 185)

**Carroll, Lewis (Charles Dodgson)** 1832–1884  
English writer and mathematician

He had bought a large map representing the sea  
Without the least vestige of land:  
And the crew were much pleased when they found it  
to be

A map they could all understand.

*The Complete Works of Lewis Carroll*

*The Hunting of the Snark*

Fit the Second

The Bellman's Speech (p. 760)

The Modern Library. New York, New York, USA. 1936

**Gleick, James** 1954–

American author, journalist, and essayist

Physicists' models are like maps: never final, never complete until they grow as large and complex as the reality they represent.

*Genius: The Life and Science of Richard Feynman*

Epilogue (p. 436)

Pantheon Books. New York, New York, USA. 1992

**Robinson, Arthur H.** 1915–2004

American geographer

Mathematical equations and literary phrases are useful but they are no substitute for the spatial eloquence of the map.

Uniqueness of the Map

*American Cartographer*, Volume 5, Number 1, 1978

**Robinson, Arthur H.** 1915–2004

American geographer

**Petchenik, Barbara Bartz**

No biographical data available

[Map]... a graphic representation of the milieu...

*The Nature of Maps*

Chapter 1 (p. 16)

The University of Chicago Press. Chicago, Illinois, USA. 1976

**Sholander, Marlow**

Mathematician

Within your lifetime will, perhaps,  
As souvenirs from distant suns  
Be carried back to earth some maps  
Of planets and you'll find that one's  
So hard to color that you've got  
To use five crayons. Maybe, not.  
Maybe

*Mathematics Magazine*, Volume 35, Number 1, January, 1962 (p. 20)

**Yukawa, Hideki** 1907–81

Japanese theoretical physicist

Those who explore an unknown world are travelers without a map: the map is the result of the exploration. The position of their destination is not known to them, and the direct path that leads to it is not yet made.

In Robert P. Crease and Charles C. Mann

*The Second Creation: Makers of the Revolution in 20th Century Physics*  
Chapter 9 (p. 159)

The Macmillan Company. New York, New York, USA. 1986

## MARINE BIOLOGY

**Spenser, Edmund** 1552–99

English poet

But what an endlesse worke have I in hand,  
To count the seas abundant progeny,  
Whose fruitful seede farre passeth those on land,  
And also those which wonne in th' azure sky;  
For much more eath, to tell the starres on by,  
Albe they endlesse seem in estimation,  
Than to recount the seas posterity;  
So fertile be the floods in generation,  
So huge their numbers, and so numberlesse their nation.

*The Complete Poetical Works of Edmund Spenser*

*The Faerie Queene*

Book IV, Canto XII

Houghton Mifflin Company. Boston, Massachusetts, USA. 1908

## MARTIAN

**Lowell, Percival** 1855–1916

American astronomer

The evidence of handicraft, if such it be, points to a highly intelligent mind behind it. Irrigation, unscientifically conducted, would not give us such truly wonderful mathematical fitness in the several parts to the whole as we there behold. A mind of no mean order would seem to have presided over the system we see – a mind certainly of considerably more comprehensiveness than that which presides over the various departments of our own public works. Party politics at all events have had no part in them; for the system is planet wide. Quite possibly, such Martian folk are possessed of inventions of which we have not dreamed, and with them electrophones and kinoscopes are things of a bygone past, preserved with veneration in museums as relics of the clumsy contrivances of the simple childhood of the race. Certainly what we see hints at the existence of beings who are in advance of, not behind us, in the journey of life.

*Mars*

Chapter VI (p. 208)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1895

**MARTYRDOM**

**Hilbert, David** 1862–1943  
German mathematician

Only an idiot could believe that scientific truth needs martyrdom – that may be necessary in religion, but scientific results prove themselves in time.

In Constance Reid  
*Hilbert – Courant*  
Hilbert  
Chapter XII (p. 92)  
Springer-Verlag. New York, New York, USA. 1986

**MARVELOUS**

**Hugo, Victor** 1802–85  
French author, lyric poet, and dramatist

Every man has within him his Patmos. He is free to go, or not to go, out upon that frightful promontory of thought from which one perceives the shadow. If he goes not, he remains in the common life, with the common conscience, with the common virtue, with the common faith, or with the common doubt; and it is well. For inward peace it is evidently the best. If he goes out upon those heights, he is taken captive. The profound waves of the marvellous have appeared to him. No one views with impunity that ocean.

Translated by Melville Best Anderson  
*William Shakespeare*  
Part Second, Book V, Chapter I (p. 175)  
A.C. McClurg & Co. Chicago, Illinois, USA. 1887

**MASS**

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

The law refers to the product of the masses of the two bodies; but the mass depends on the velocity – a fact unknown in Newton's day. Are we to take the variable mass, or the mass reduced to rest? Perhaps a learned judge, interpreting Newton's statement like a last will and testament, could give a decision; but that is scarcely the way to settle an important point in scientific theory.

*Space, Time and Gravitation: An Outline of the General Relativity Theory*  
Chapter VI (p. 93)  
At The University Press. Cambridge, England. 1921

**Feynman, Richard P.** 1918–88  
American theoretical physicist

All mass is interaction.

In James Gleik  
*Genius: The Life and Science of Richard Feynman*  
Prologue (p. 5)  
Pantheon Books. New York, New York, USA. 1992

**Jammer, Max** 1915–  
Israeli physicist and philosopher

Although of primary importance in all branches of physics and an indispensable conceptual tool of scientific thought, the notion of mass seems to elude all attempts at a fully comprehensive elucidation and a logical as well as scientifically unobjectionable definition.

*Concepts of Mass in Classical and Modern Physics*  
The Concept of Mass in Quantum Mechanics and Field Theory (pp. 224–225)

**Laplace, Pierre Simon** 1749–1827  
French mathematician, astronomer, and physicist

It appears on the first view of the subject [mass and gravity] impossible to determine the respective masses of the Sun and planets, and to measure the height from which bodies fall in a given time, from the action of gravity at their surface. But the connection of truths with each other conducts us to results which appeared inaccessible, when the principle on which they depend was unknown.

Translated by J. Pond  
*The System of the World* (Volume 2)  
Chapter II (p. 27)  
Printed for Richard Phillips. London, England. 1809

**MATERIAL WORLD**

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

The familiar material world of everyday conception, though lacking somewhat in scientific truth, is good enough to live in; in fact the scientific world of pointer readings would be an impossible sort of place to inhabit. It is a symbolic world and the only thing that could live comfortably in it would be a symbol. But I am not a symbol; I am compounded of that mental activity which is from your point of view a nest of illusion, so that to accord with my own nature I have to transform even the world explored by my senses. But I am not merely made up of senses; the rest of my nature has to live and grow. I have to render account of that environment into which it has its outlet. My conception of my spiritual environment is not to be compared with your scientific world of pointer readings; it is an everyday world to be compared with the material world of familiar experience. I claim it as no more real and no less real than

that. Primarily it is not a world to be analysed, but a world to be lived in.

*The Nature of the Physical World*

Chapter XV (p. 324)

The University Press. New York, New York, USA. 1929

## MATERIALISM

**Chesterton, G. K. (Gilbert Keith)** 1874–1936

English author

A man who has lived and loved falls down dead and the worms eat him. That is Materialism if you like. That is Atheism if you like.

*All Things Considered*

Science and Religion (p. 193)

John Lane Co. New York, New York, USA. 1910

*Mathematics for the Modern Mind*

Introduction (p. 14)

The Macmillan Company. New York, New York, USA. 1967

**Pascal, Blaise** 1623–62

French mathematician and physicist

...dull minds are never either intuitive or mathematical.

In *Great Books of the Western World* (Volume 33)

*Pensées*

Section I, 1

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

...mathematical verities flow from a small number  
of self-evident propositions by a chain of impeccable

reasonings; they impose themselves not only on us, but on nature itself. They fetter, so to speak, the Creator and only permit him to chose between some relatively few solutions. A few experiments then will suffice to let us know what choice he has made. From each experiment a number of consequences will follow by a series of mathematical deductions, and in this way each of them will reveal to us a corner of the universe. This, to the minds of most people, and to students who are getting their first ideas of physics, is the origin of certainty in science.

*The Foundations of Science*

*Science and Hypothesis*, Introduction (p. 27)

The Science Press. New York, New York, USA. 1913

**Seneca (Lucius Annaeus Seneca)** 4 BCE–65 AD  
Roman playwright

The mathematical is, so to speak, a superficial science; it builds on a borrowed site, and the principles by aid of which it proceeds, are not its own...

*Edinburgh Review*, Volume 52, January, 1836 (p. 221)

**Siegel, Eli** 1902–78

American philosopher, poet, critic, and founder of Aesthetic Realism

Within all conflagrations mathematical things are related.

*Damned Welcome*

Aesthetic Realism, Maxims, Part One, #356 (p. 78)

Definition Press. New York, New York, USA. 1972

**Somerville, Mary** 1780–1872

English mathematician

There is a wide distinction between the degree of mathematical acquirement necessary for making discoveries, and that which is requisite for understanding what other have done.

*The Connection of the Physical Sciences* (9th edition)

Introduction (pp. 2–3)

John Murray. London, England. 1858

**Weyl, Hermann** 1885–1955

German mathematician

You should not expect me to describe the mathematical way of thinking much more clearly than one can describe, say, the democratic way of life.

In K. Chandrasekhar

*Hermann Weyl*

Hermann Weyl Memorabilia (p. 84)

Springer-Verlag. Berlin, Germany. 1986

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

It is a safe rule to apply that, when a mathematical or philosophical author writes with a misty profundity, he is talking nonsense.

*An Introduction to Mathematics*

Chapter 15 (p. 170)

Oxford University Press, Inc. New York, New York, USA. 1958

## MATHEMATICAL ABSTRACTION

**Birkhoff, George David** 1884–1944

American mathematician

...it is a faith in the uniformity of nature which remains the guiding star of the physicist just as for the mathematician it is a faith in the self-consistency of all mathematical abstractions, although these faiths are more sophisticated than ever before. The minds of both are tinged with an unwavering belief in the supreme importance of their own fields. The mathematician affirms with Descartes, *omnia apud me mathematica fiunt* – with me everything turns into mathematics; by this he means that all permanent forms of thought are mathematical. The physicist on his part is apt to think that there is no reality essentially other than physical reality, so that life itself is finally to be fully described in physical terms.

In Raymond George Ayoub

*Musings of the Masters: An Anthology of Mathematical Reflections*

Part II (p. 110)

Mathematical Association of America. Washington, D.C. 2004

**Rosenbaum, R. A.**

No biographical data available

Mathematical abstraction, to be considered significant, must someday pass the test of generality, of applicability, of relatedness. Mathematics too long divorced from reality, it has been said, becomes baroque, decadent, and sterile.

Mathematics, the Artistic Science

*The Mathematics Teacher*, Volume 55, Number 7, November, 1962 (p. 533)

## MATHEMATICAL ACCOUNT

**Kline, Morris** 1908–92

American mathematics professor and writer

Indeed it is paradoxical that abstractions so remote from reality should achieve so much. Artificial the mathematical account may be, a fairy tale perhaps, but one with a moral.

*Mathematics: A Cultural Approach*

Chapter 31–6 (p. 676)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1962

## MATHEMATICAL ACHIEVEMENT

**Dantzig, Tobias** 1884–1956

Russian mathematician

Mathematical achievement shall be measured by standards which are peculiar to mathematics. These standards

are independent of a crude reality of our senses. They are: freedom from logical contradictions, the generality of the laws governing the created form, the kinship which exists between this new form and those that have preceded it.

*Number: The Language of Science* (4th edition)  
Chapter Twelve, 2 (p. 231)  
The Macmillan Company. New York, New York, USA. 1954

## MATHEMATICAL ACTIVITY

### Pollak, Henry O.

No biographical data available

Mathematical activity – like all of Gaul – may be divided into three areas: Education, Research, and Applications...much of the strength of the mathematical fabric comes from the interaction among these three.

The Role of Industrial Members in the Mathematical Association of America  
*The American Statistician*, American Mathematical Monthly (p. 551)  
Volume 68, June–July 1961

## MATHEMATICAL ADAM

### Sylvester, James Joseph 1814–97

English mathematician

Perhaps I may without immodesty lay claim to the appellation of the Mathematical Adam, as I believe that I have given more names (passed into general circulation) to the creatures of the mathematical reason than all the other mathematicians of the age combined.

Note on a Proposed Addition to the Vocabulary of Ordinary Arithmetic  
*Nature*, Volume 37 1887–1888 (p. 152)

## MATHEMATICAL ANALYSIS

### Babbage, Charles 1792–1871

English mathematician

To examine the varied relations of necessary truth, and to trace through its successive developments, the simple principle to its ultimate result, is the peculiar province of Mathematical Analysis.

In Anthony Hyman  
*Science and Reform*  
Early Mathematical Work (p. 11)  
Cambridge University Press. Cambridge, England.

### Bell, E. T. (Eric Temple) 1883–1960

Scottish-American mathematician and educator

The toughminded suggest that the theory of the infinite elaborated by the great mathematicians of the Nineteenth and Twentieth Centuries, without which mathematical analysis as it is actually used today is impossible, has been committing suicide in an unnecessarily

prolonged and complicated manner for the past half century.

*Debunking Science*  
University of Washington Book Store. Seattle, Washington, USA. 1930

### Comte, Auguste 1798–1857

French philosopher

Mathematical Analysis is...the true rational basis of the whole system of our positive knowledge.

*The Positive Philosophy of Auguste Comte* (Volume 1)  
Book I, Chapter I (p. 42)  
John Chapman. London, England. 1853

### Cournot, Augustin 1801–77

French philosopher, mathematician, and economist

...those skilled in mathematical analysis know that its object is not simply to calculate numbers, but that it is also employed to find the relations between magnitudes which cannot be expressed in numbers and between functions whose law is not capable of algebraic expression.

*Researches into the Mathematical Principles of the Theory of Wealth*  
Preface (p. 3)  
The Macmillan Company. New York, New York, USA. 1927

### Cross, Hardy 1885–1959

American professor of civil and structural engineering

There is an unfortunate tendency to burden engineers, through books, with endless techniques and procedures of mathematical analysis. Few students know that at best books can furnish only a perishable net of large mesh through which they may begin to strain their information and that every fiber of that net must be rewoven from man's own thinking and that many new strands must be added if it is to be permanent and reliable in holding the selected data of years of engineering practice. Books present the sets of tools; it is the task of the analytical engineer to select those tools which can be used most advantageously.

*Engineers and Ivory Towers*  
For Man's Use of God's Gifts (p. 106)  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1952

### Fourier, (Jean Baptiste-) Joseph 1768–1830

French mathematician and physicist

...mathematical analysis is as extensive as nature itself; it defines all perceptible relations, measures times, spaces, forces, temperatures; this difficult science is formed slowly, but it preserves every principle which it has once acquired; it grows and strengthens itself incessantly in the midst of the many variations and errors of the human mind.

Its chief attribute is clearness; it has not marks to express confused notions. It brings together phenomena the most diverse, and discovers the hidden analogies which unite them. If matter escapes us, as that of air and light, by its extreme tenuity, if bodies are placed far from us in the

immensity of space, if man wishes to know the aspect of the heavens at successive epochs separated by a great number of centuries, if the actions of gravity and of heat are exerted in the interior of the earth at depths which will always be inaccessible, mathematical analysis can yet lay hold of the laws of these phenomena. It makes them present and measurable, and seems to be a faculty of the human mind destined to supplement the shortness of life and the imperfection of the senses; and what is still more remarkable, it follows the same course in the study of all phenomena; it interprets them by the same language, as if to attest the unity and simplicity of the plan of the universe, and to make still more evident that unchangeable order which presides over all natural causes.

*Great Books of the Western World* (Volume 43)  
*The Analytical Theory of Heat*  
 Preliminary Discourse (p. 173)  
 Encyclopaedia Britannica, Inc. Chicago, Illinois, USA. 1952

### More, Louis Trenchard

American educator

We have also constructed a symbolic language, called mathematical analysis, whose characters and terms are so removed from ordinary speech that it imposes on our minds an impression of not being limited by the bounds of logic.

*The Limitations of Science*  
 Chapter III (p. 71)  
 Henry Holt & Co. New York, New York, USA. 1915

## MATHEMATICAL ARGUMENT

### Darwin, Sir George Howard 1845–1912

English astronomer and mathematician

A mathematical argument is, after all, only organized common sense, and it is well that men of science should not always expound their work to the few behind a veil of technical language, but should from time to time explain to a larger public the reasoning which lies behind their mathematical notation.

*The Tides and Kindred Phenomena in the Solar System*  
 Preface (p. v)  
 Houghton Mifflin & Co. Boston, Massachusetts, USA. 1898

### de Staël (Anne-Louise-Germaine),

Mme. 1766–1817

French romantic writer

Nothing is less applicable to life than a mathematical argument.

Quoted in William Hamilton  
*Discussions on Philosophy and Literature, Education and University Reform*  
 On the Study of Mathematics as an Exercise of the Mind (p. 293)  
 Harper & Brothers Publishers. New York, New York, USA. 1861

## MATHEMATICAL ARTS

### Recordé, Robert 1510?–58

English mathematician and writer

Beside the mathematical arts there is no infallible knowledge, except it be borrowed from them.

In Morris Kline  
*Mathematics and the Physical World*  
 Chapter 9 (p. 130)  
 Dover Publications, Inc. New York, New York, USA. 1981

## MATHEMATICAL BEAUTY

### Dirac, Paul Adrien Maurice 1902–84

English theoretical physicist

Theoretical physicists accept the need for mathematical beauty as an act of faith.... For example, the main reason why the theory of relativity is so universally accepted is its mathematical beauty.

*From a Life of Physics*  
 Lecture 2, Methods in Theoretical Physics (p. 21)  
 World Scientific Publishing Company. Singapore. 1989

### Thompson, Sir D’Arcy Wentworth 1860–1948

Scottish zoologist and classical scholar

The harmony of the world is made manifest in Form and Number, and the heart and soul and all the poetry of Natural Philosophy are embodied in the concept of mathematical beauty.

*On Growth and Form* (Volume 1)  
 Epilogue (pp. 1096–1097)  
 At The University Press. Cambridge, England. 1951

## MATHEMATICAL BOOK

### Chrystal, George 1851–1911

Mathematician and academic

Every mathematical book that is worth reading must be read “backwards and forwards”, if I may use the expression. I would modify Lagrange’s advice a little and say, “Go on, but often return to strengthen your faith.” When you come on a hard or dreary passage, pass it over, and come back to it after you have seen its importance or found the need for it further on.

*Algebra: An Elementary Text Book for the Higher Classes of Secondary Schools and for Colleges* (part II)  
 Preface (p. viii)  
 Adam & Charles Black. London, England. 1889

### Davis, Philip J. 1923–

American mathematician

### Hersh, Reuben 1927–

American mathematician

All too many mathematical textbooks today have a nervous, breathless quality in which a fixed goal

is systematically and inexorably pursued. The goal having been attained, one is left not with a feeling of exhilaration but of anticlimax. Nowhere in such books is any appreciation to be found of why or how the goal is important, other, possibly, than the statement that the goal may now be used as the starting point for reaching other, deeper goals, which considerations of space, alas, prevent the author from pursuing. Blame it on Euclid, if you want, for the tendency was already in his exposition.

*The Mathematical Experience*

Utility (pp. 82–83)

Birkhäuser. Boston, Massachusetts, USA. 1981

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

In the great majority of mathematical text-books there is a total lack of unity in method and of systematic development of a central theme. Propositions of very diverse kinds are proved by whatever means are thought most easily intelligible, and much space is devoted to mere curiosities which in no way contribute to the main argument.

*Mysticism and Logic: And Other Essays*

Chapter IV (p. 66)

Longmans, Green & Co. London, England. 1919

## MATHEMATICAL CALCULATION

**Nordenholt, George F.**

No biographical data available

Smart creative workers are those who are quick to see the limitations of mathematical calculations.

A Graduate Can Measure a Bottle

Editorial

*Product Engineering*, April, 1953

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

...there is no more common error than to assume that, because prolonged and accurate mathematical calculations have been made, the application of the result to some fact of nature is absolutely certain.

*An Introduction to Mathematics*

Chapter 3 (p. 16)

Oxford University Press, Inc. New York, New York, USA. 1958

All mathematical calculations about the course of nature must start from some assumed law of nature.... Accordingly, however accurately we have calculated that some event must occur, the doubt always remains – Is it true?

*An Introduction to Mathematics*

Chapter 3 (p. 16)

Oxford University Press, Inc. New York, New York, USA. 1958

## MATHEMATICAL CERTAINTY

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

While the individual man is an insoluble puzzle, in the aggregate he becomes a mathematical certainty. You can, for example, never foretell what anyone man will be up to, but you can say with precision what an average number will be up to. Individuals vary, but percentages remain constant. So says the statistician.

In William S. Baring-Gould (ed.)

*The Annotated Sherlock Holmes* (Volume 1)

The Sign of the Four, Chapter 10 (p. 666)

Wings Books. New York, New York, USA. 1967

## MATHEMATICAL CONCEPT

**Browder, Felix E.** 1927–

American mathematician

**MacLane, Saunders** 1909–2005

American mathematician

The potential usefulness of a mathematical concept or technique in helping to advance scientific understanding has very little to do with what one can foresee before that concept or technique has appeared.

In Lynn Arthur Steen

*Mathematics Today: Twelve Informal Essays*

The Relevance of Mathematics (p. 348)

Springer-Verlag. New York, New York, USA. 1978

**Weaver, Jefferson Hane**

American science author

...one cannot merely plow ahead and expect to be able to master the intricacies of algebra, geometry, or even the calculus without having some awareness of the intellectual process by which mathematical concepts are formulated and tested.

*Conquering Calculus: The Easy Road to Understanding Mathematics*

Chapter 2 (p. 31)

Plenum Press. New York, New York, USA. 1998

## MATHEMATICAL CONGRESS

**Sarton, George** 1884–1956

Belgian-born American scholar and writer

A mathematical congress of today reminds one of the Tower of Babel, for few men can follow profitably the discussions of sections other than their own, and even there they are sometimes made to feel like strangers.

*The Study of the History of Mathematics*

The Study of the History of Mathematics (p. 14)

Dover Publications, Inc. New York, New York, USA. 1936

## MATHEMATICAL CONSEQUENCE

**Laplace, Pierre Simon** 1749–1827  
French mathematician, astronomer, and physicist

All the effects of nature are only the mathematical consequences of a small number of immutable laws.

In E.T. Bell

*Men of Mathematics* (p. 172)

Simon & Schuster. New York, New York, USA. 1937

## MATHEMATICAL CONSTRUCTION

**Einstein, Albert** 1879–1955  
German-born physicist

Experience remains, of course, the sole criterion of the physical utility of a mathematical construction.

*The World As I See It* (p. 36)

Philosophical Library. New York, New York, USA. 1949

## MATHEMATICAL CORRESPONDENCE

**Merz, John Theodore** 1840–1922  
German-born British chemist, historian, and industrialist

This conception of correspondence plays a great part in modern mathematics. It is the fundamental notion in the science of order as distinguished from the science of magnitude. If older mathematics were mostly dominated by the needs of mensuration, modern mathematics are dominated by the conception of order and arrangement. It may be that this tendency of thought or direction of reasoning goes hand in hand with the modern discovery in physics, that the changes in nature depend not only or not so much on the quantity of mass and energy as on their distribution or arrangement.

*A History of European Thought in the Nineteenth Century*

(Volume 2)

Chapter XIII (p. 736)

William Blackwood & Sons. Edinburgh, Scotland. 1903

## MATHEMATICAL DEMONSTRATION

**Franklin, Benjamin** 1706–90  
American printer, scientist, and diplomat

Mathematical demonstrations are a logic of as much or more use, than that commonly learned at schools, serving to a just formation of the mind, enlarging its capacity, and strengthening it so as to render the same capable of exact reasoning, and discerning truth from falsehood in all occurrences, even subjects not mathematical. For which reason it is said, the Egyptians, Persians, and Lacedaemonians, seldom elected any new kings, but such as had some knowledge in the mathematics, imagining those

who had not men of imperfect judgments, and unfit to rule and govern.

*Memoirs of the Life and Writings of Benjamin Franklin* (Volume 5)(2nd edition)

On the Usefulness of Mathematics (p. 90)

Printed for Henry Colburn. London, England. 1819

**Locke, John** 1632–1704  
English philosopher and political theorist

And thus all mathematical demonstrations, as well as first principles, must be received as native impressions on the mind; which I fear they will scarce allow them to be, who find it harder to demonstrate a proposition than assent to it when demonstrated. And few mathematicians will be forward to believe that all the diagrams they have drawn were but copies of those innate characters which nature had engraven upon their minds.

In *Great Books of the Western World* (Volume 35)

*An Essay Concerning Human Understanding*

Book I, Chapter I, Section 22 (p. 101)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Poincaré, Jules Henri** 1854–1912  
French mathematician and theoretical astronomer

It may be surprising to see emotional sensibility invoked a propos of mathematical demonstrations which, it would seem, can interest only the intellect. This would be to forget the feeling of mathematical beauty, of the harmony of numbers and forms, of geometric elegance. This is a true esthetic feeling that all real mathematicians know, and surely it belongs to emotional sensibility.

*The Foundations of Science*

*Science and Method*, Book I

Chapter III (p. 391)

The Science Press. New York, New York, USA. 1913

**Voltaire (François-Marie Arouet)** 1694–1778  
French writer

All certainty which does not consist in mathematical demonstration is nothing more than the highest probability; there is no other historical certainty.

*The Portable Voltaire*

Philosophical Dictionary, Concatenation of Events (p. 223)

The Viking Press. New York, New York, USA. 1959

## MATHEMATICAL DIFFICULTY

**Einstein, Albert** 1879–1955  
German-born physicist

God does not care about our mathematical difficulties; He integrates empirically.

In Leopold Infeld

*Quest – An Autobiography*

Book Three, Part VI (p. 279)

Chelsea Publishing Company. New York, New York, USA. 1980

Do not worry about your difficulties in mathematics; I can assure you that mine are still greater.

In Helen Dukas and Banesh Hoffman  
*Albert Einstein: The Human Side: New Glimpses from His Archives*  
 Letter dated 7 January, 1943 (p. 8)  
 Princeton University Press. Princeton, New Jersey, USA. 1979

**Schrödinger, Erwin** 1887–1961  
 Austrian theoretical physicist

...I do not refer to the mathematical difficulties, which eventually are always trivial, but rather to the conceptual difficulties.

*Science and the Human Temperament*  
 Chapter VIII (p. 189)  
 W.W. Norton & Company, Inc. New York, New York, USA. 1935

## MATHEMATICAL DISCIPLINE

**Neumann, John von** 1903–57  
 Hungarian-American mathematician

As a mathematical discipline travels far from its empirical sources, or still more, if it is second and third generation only indirectly inspired by ideas coming from “reality”, it is beset with very grave dangers. It becomes more and more purely aestheticizing, more and more purely *l’art pour l’art*.... There is a great danger that the subject will develop along the line of least resistance....: will separate into a multitude of insignificant branches...

In Raymond George Ayoub  
*Musings of the Masters: An Anthology of Mathematical Reflections*  
 The Mathematician (p. 183)  
 Mathematical Association of America. Washington, D.C. 2004

## MATHEMATICAL DISCOVERY

**Birkhoff, George David** 1884–1944  
 American mathematician

It will probably be the new mathematical discoveries which are suggested through physics that will always be most important, for, from the beginning, Nature has led the way and established the pattern which mathematics, the language of Nature, must follow.

Mathematical Nature of Physical Theories  
*American Scientist*, Volume 31, Number 4, October, 1943 (p. 310)

**Fourier, (Jean Baptiste-) Joseph** 1768–1830  
 French mathematician and physicist

Profound study of nature is the most fertile source of mathematical discoveries.

Translated by Alexander Freeman  
*The Analytical Theory of Heat*  
 Preliminary Discourses (p. 7)  
 At The University Press. Cambridge, England. 1878

**Gauss, Johann Carl Friedrich** 1777–1855  
 German mathematician, physicist, and astronomer

...mathematical discoveries, like springtime violets in the woods, have their season which no human can hasten or retard.

Quoted in E.T. Bell  
*The Development of Mathematics*  
 Chapter 11 (p. 263)  
 McGraw-Hill Book Company, Inc. New York, New York, USA. 1945

## National Research Council (USA)

A mathematical discovery has a permanent and universal validity; the worst fate that can overtake it is to be rendered uninteresting or trivial by enclosure within a more comprehensive structure.

*Physics in Perspective* (Volume 1)  
 Chapter 3 (p. 57)  
 National Academy of Sciences  
 Washington, D.C. 1972

**Poincaré, Jules Henri** 1854–1912  
 French mathematician and theoretical astronomer

The genesis of mathematical discovery is a problem which must intensely inspire the psychologist with the keenest interest. For this is the process in which the human mind seems to borrow least from the exterior world, in which it acts, or appears to act, only by itself and on itself, so that by studying the process of geometric thought we may hope to arrive at what is most essential in the human mind.

*The Foundations of Science*  
*Science and Method*, Book I  
 Chapter III (p. 383)  
 The Science Press. New York, New York, USA. 1913

...what is mathematical discovery? It does not consist in making new combinations with mathematical entities already known. Anyone could do that, but the combinations so made would be infinite in number and most of them absolutely without interest. To create consists precisely in not making useless combinations and in making those which are useful and which are only a small minority. Invention is discernment, choice.

*The Foundations of Science*  
*Science and Method*, Book I  
 Chapter III (p. 386)  
 The Science Press. New York, New York, USA. 1913

## MATHEMATICAL DOCTRINE

**Hadamard, Jacques** 1865–1963  
 French mathematician

The theory of integral equations, born yesterday, is already classical. It has been introduced in several university

courses. There is no doubt – perhaps further improvements – that it will soon impose itself as of current use in mathematics. This is a rare piece of good fortune for a mathematical doctrine, for mathematical doctrines so often become museum exhibits.

In A. d'Abro

*The Decline of Mechanism*

The Dim Past of Dusty Space (p. 118)

Dover Publications, Inc. New York, New York, USA. 1951

## MATHEMATICAL DOMAIN

**Weyl, Hermann** 1885–1955

German mathematician

In these days the angel of topology and the devil of abstract algebra fight for the soul of each individual mathematical domain.

In Morris Kline

*Mathematical Thought From Ancient to Modern Times* (p. 924)

Oxford University Press, Inc. New York, New York, USA. 1972

## MATHEMATICAL EQUATION

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

The world looks like a multiplication-table, or a mathematical equation, which, turn it how you will, balances itself.

*The Complete Works of Ralph Waldo Emerson* (Volume 2)

Essays: First Series

Chapter III (p. 102)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

The solution goes on famously; but just as we have got rid of the other unknowns, behold!  $V$  disappears as well, and we are left with the indisputable but irritating conclusion  $-0 = 0$ . This is a favorite device that mathematical equations resort to, when we propound stupid questions.

*The Nature of the Physical World*

Chapter II (p. 30)

The Macmillan Company. New York, New York, USA. 1930

## MATHEMATICAL EXERCISE

**Coleridge, Stephen** 1854–1936

English author, barrister, and opponent of vivisection

For such [mathematical] exercises of the mind pursued with determination render it averse from poetry, and all the imaginative study of human affairs, preclude it from appreciating all the loveliness of life, leave it untouched by the sanguine emotions, and quite indifferent to the

glamour of the arts, or to the divine gift of taste.

*The Idolatry of Science*

Chapter IV (p. 21)

John Lane Co. London, England. 1920

## MATHEMATICAL EXPLORER

**Eagar, Alexander R.**

No biographical data available

The Mathematical explorer is like all other explorers. He can enter new fields – if they are “there”: but the fields are not of his creation.

*Hermathena* (Volume 13)

Some Thoughts as to the Absolute (p. 546)

Hodges, Figgis & Co. Dublin, Ireland. 1905

## MATHEMATICAL EXPOSITION

**Heath, Thomas Little** 1861–1940

British civil servant, mathematician, and classical scholar

The treatises [of Archimedes] are, without exception, monuments of mathematical exposition; the gradual revelation of the plan of attack, the masterly ordering of the propositions, the stern elimination of everything not immediately relevant to the purpose, the finish of the whole, are so impressive in their perfection as to create a feeling akin to awe in the mind of the reader.

*A History of Greek Mathematics* (Volume 2)

Chapter XIII (p. 20)

At The Clarendon Press. Oxford, England. 1921

## MATHEMATICAL EXPRESSIONS

**Tobias, Sheila** 1935–

American academic and activist

Mathematical expressions like “the slope of the curve,” “zero sum,” “normalized distribution,” and “asymptotic” are no longer just the mutterings of bearded thinkers who cannot remember to wear socks of the same color.

They have become part of the basic vocabulary of business, politics, library management, health care, and even social work. . . . [M]athematical expressions give us a way of thinking about relationships that would otherwise be unavailable to us.

*Succeed With Math*

Chapter 1 (p. 4)

College Entrance Examination Board. New York, New York, USA. 1987

## MATHEMATICAL FACT

**Carlyle, Thomas** 1795–1881

English historian and essayist

It is a mathematical fact that the casting of this pebble from my hand alters the centre of gravity of the universe.

*Sartor Resartus*

Book III, Chapter VII (p. 223)

Ginn & Company. Boston, Massachusetts, USA. 1897

**Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

There is no elasticity in a mathematical fact; if you bring up against it, it never yields a hair's breadth; everything must go to pieces that comes in collision with it. What the mathematician knows being absolute, unconditional, incapable of suffering question, it should tend, in the nature of things, to breed a despotic way of thinking. So of those who deal with the palpable and often unmistakable facts of external nature; only to a less degree.

*The Autocrat of the Breakfast-Table*

Chapter III (p. 56)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1891

## MATHEMATICAL FAME

**Hardy, G. H. (Godfrey Harold)** 1877–1947

English pure mathematician

Mathematical fame, if you have the cash to pay for it, is one of the soundest and steadiest of investments.

*A Mathematician's Apology*

Section 8 (p. 82)

Cambridge University Press. Cambridge, England. 1967

## MATHEMATICAL FORMULA

**Coleridge, Samuel Taylor** 1772–1834

English lyrical poet, critic, and philosopher

...from the time of Kepler to that of Newton, and from Newton to Hartley, not only all things in external nature, but the subtlest mysteries of life and organization, and even of the intellect and moral being, were conjured within the magic circle of mathematical formulae.

*Hints Towards the Formation of a More Comprehensive Theory of Life*

The Nature of Life (p. 31)

John Churchill. London, England. 1847

**Hertz, Heinrich** 1857–94

German physicist

One cannot escape the feeling that these mathematical formulas have an independent existence and an intelligence of their own, that they are wiser than we are, wiser even than their discoverers, that we get more out of them than was originally put into them.

In Morris Kline

*Mathematics and the Search for Knowledge*

Chapter VII (p. 144)

Oxford University Press, Inc. New York, New York, USA. 1985

## MATHEMATICAL FOUNDATION

**Stewart, Ian** 1945–

English mathematician

Our world rests on mathematical foundations, and mathematics is unavoidably embedded in our global culture.

*Nature's Numbers*

Chapter 2 (p. 27)

BasicBooks. New York, New York, USA. 1995

## MATHEMATICAL FUNCTION

**Weyl, Hermann** 1885–1955

German mathematician

...it is the function of mathematics to be at the service of the natural sciences.

*Philosophy of Mathematics and Natural Science*

Part I, Chapter II (p. 61)

Princeton University Press. Princeton, New Jersey, USA. 1949

## MATHEMATICAL GENIUS

**Bostwick, Arthur Elmore** 1860–1942

No biographical data available

Mathematical genius is like an automobile – it is looked upon in two opposing fashions as one has it or has it not.

*A Librarian's Open Shelf: Essays on Various Subjects*

Simon Newcomb: America's Foremost Astronomer (p. 88)

The H.W. Wilson Co. New York, New York, USA. 1920

**Poiret, Pierre** 1646–1719

French mystic and Christian philosopher

The mathematical genius is wont, unless guarded against, to imbue the minds of its too intemperate votaries with the most pestilent dispositions. For it infects them with fatalism, spiritual insensibility, 'brutalism, disbelief, and an almost incurable presumption.' For when, in the handling of their numbers, figures, and machines, they perceive all things to follow each other, as it were by fate, to the exclusion of liberty; they hence become so accustomed to the consideration of necessary connection alone, that they altogether eliminate freewill from the nature and government of things spiritual, and establish the universal supremacy of a fatal necessity.

Quoted in William Hamilton

*Discussions on Philosophy and Literature, Education and University Reform*

On the Study of Mathematics as an Exercise of the Mind (p. 299)

Harper & Brothers Publishers. New York, New York, USA. 1861

**MATHEMATICAL HARMONY**

**Weyl, Hermann** 1885–1995  
German mathematician

We still share the belief of a mathematical harmony of the universe. It has withstood the test of ever-widening experience. But we no longer seek this harmony in static forms like the regular solids, but in dynamic laws.

*Symmetry*

Translatory, Rotational, and Related Symmetries (p. 77)  
Princeton University Press. Princeton, New Jersey, USA. 1952

**MATHEMATICAL HEAD**

**Ascham, Roger** 1515–68  
English scholar and writer

Mark all mathematical heads which be wholly and only bent on these [music, arithmetic and geometry] sciences, how solitary they be themselves, how unfit to be with others, how unapt to serve the world.

*The American Journal of Education*

The Biography of Roger Ascham  
Volume 3, Number 8, March, 1857 (p. 27)

**MATHEMATICAL HISTORY**

**Descartes, René** 1596–1650  
French philosopher, scientist, and mathematician

Mathematical history and mathematics have in common the property that they inspire with awe and amazement those who approach them as humble disciples with a view to learning all that is known. On the other hand, they are apt to appear glaringly lacking and feeble to those who approach them from various directions with a view to getting information as regards particular important questions, properly belonging to these domains of knowledge.

*Historical Introduction to Mathematical Literature*

Chapter 1 (p. 12)  
The Macmillan Co. New York, New York, USA. 1916

**Haldane, John Burdon Sanderson** 1892–1964  
English biologist

The permeation of biology by mathematics is only the beginning, but unless the history of science is an inadequate guide, it will continue, and the investigations here summarized represent the beginning of a new branch of applied mathematics.

*The Causes of Evolution*

Appendix (p. 215)  
Longmans, Green & Company. London, England. 1935

**MATHEMATICAL IDEA**

**Bruner, Jerome Seymour** 1915–  
American psychologist

If we are not to live in embarrassed dread in the century ahead, we will have to understand the mathematical ideas that lie behind the scientific advances that are shaping the modern world.

In Kenneth J. Travers

Through Clouds of Failure into Orbit  
*Arithmetic Teacher*, Volume 15, Number 7, November, 1968 (p. 591)

**Hardy, G. H. (Godfrey Harold)** 1877–1947  
English pure mathematician

...a mathematical idea is ‘significant’ if it can be connected, in a natural and illuminating way, with a large complex of other mathematical ideas.

*A Mathematician’s Apology*

Section 11 (p. 16)

**LeCam, Lucien**

No biographical data available

[In statistics] you have the fact that the concepts are not very clean. The idea of probability, of randomness, is not a clean mathematical idea. You cannot produce random numbers mathematically. They can only be produced by things like tossing dice or spinning a roulette wheel. With a formula, any formula, the number you get would be predictable and therefore not random. So as a statistician you have to rely on some conception of a world where things happen in some way at random, a conception which mathematicians don’t have.

In D. Albers, G. Alexanderson and C. Reid (eds.)

*More Mathematical People*

Lucien LeCam (p. 174)

Harcourt Brace Jovanovich. New York, New York, USA. 1990

**Leclerc, Georges-Louis, Comte de**

**Buffon** 1707–88

French naturalist

Those accustomed to mathematical ideas, which are very easily observed, and very easily discriminated from each other, when, by the rules of their science they attempt to judge of the administration of public or private affairs, arrive at conclusions the most absurd. For they take into account only the abstract possibilities, omitting in their reasonings certain dispositions of things and persons, which by their multiplicity and minuteness, almost elude the acutest observation.

Quoted in William Hamilton

*Discussions on Philosophy and Literature, Education and University Reform*

On the Study of Mathematics as an Exercise of the Mind (p. 291)

Harper & Brothers Publishers. New York, New York, USA. 1861

**Sylvester, James Joseph** 1814–97  
English mathematician

Number, place, and combination...the three intersecting but distinct spheres of thought to which all mathematical ideas admit of being referred.

*Philosophical Magazine*, Volume 24, (1844) (p. 285)

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

...mathematical ideas, because they are abstract, supply just what is wanted for a scientific description of the course of events.

*An Introduction to Mathematics*

Chapter I (p. 13)

Henry Holt & Co. New York, New York, USA. 1911

I will not go so far as to say that to construct a history of thought without profound study of the mathematical ideas...is like omitting Hamlet from the play which is named after him. That would be claiming too much. But it is certainly analogous to cutting out the part of Ophelia. This simile is singularly exact. For Ophelia is quite essential to the play, she is very charming – and a little mad. Let us grant that the pursuit of mathematics is a divine madness of the human spirit, a refuge from the goading urgency of contingent happenings, and the sort of beauty changeless mountains present to senses tried by the present-day kaleidoscope of events.

*Science and the Modern World*

Chapter II (p. 31)

The Macmillan Company. New York, New York, USA. 1929

## MATHEMATICAL IMAGINATION

**Dyson, Freeman J.** 1923–  
American physicist and educator

One factor that has remained constant through all the twists and turns of the history of physical science is the decisive importance of the mathematical imagination.

*Mathematics in the Modern World*,

Mathematics in the Physical Sciences (p. 249)

W.H. Freeman & Company. San Francisco, California, USA. 1968

## MATHEMATICAL INSPIRATION

**von Neumann, John** 1903–57  
Hungarian-American mathematician

...much of the best mathematical inspiration comes from experience and that it is hardly possible to believe in the existence of an absolute, immutable concept of mathematical rigor, dissociated from all human experience.

*Collected Works* (Volume 1)

The Works of the Mind. The Mathematician (p. 6)

Pergamon Press. New York, New York, USA. 1961–1963

## MATHEMATICAL INSTRUCTION

**Challis, James** 1803–82  
English astronomer

It seems to me that the tendency of our mathematical instruction and examinations has been of late years to promote the acquisition of a knowledge of formal relations of symbols and the power of readily producing them,

*Lectures on Practical Astronomy and Astronomical Instruments*

Preface (p. viii)

George Bell & Sons. London, England. 1879

## MATHEMATICAL INSTRUMENT

**Bohr, Niels Henrik David** 1886–1962  
Danish physicist

It will interest mathematical circles that the mathematical instruments created by the higher algebra play an essential part in the rational formulation of the new quantum mechanics. Thus the general proofs of the conservation theorems in Heisenberg's theory carried out by Born and Jordan are based on the use of the theory of matrices, which go back to Cayley and were developed by Hermite. It is to be hoped that a new era of mutual stimulation of mechanics and mathematics has commenced. To the physicist it will seem first deplorable that in atomic problems we have apparently met with such a limitation of our usual means of visualisation. This regret will, however, have to give way to thankfulness that mathematics, in this field too, presents us with the tools to prepare the way for further progress.

Atomic Theory and Mechanics

*Nature*, Volume 116, Supplement, December 5, 1925 (p. 852)

## MATHEMATICAL INTELLECT

**Pascal, Blaise** 1623–62  
French mathematician and physicist

There are then two kinds of intellect: the one able to penetrate acutely and deeply into the conclusions of given premises, and this is the precise intellect; the other able to comprehend a great number of premises without confusing them, and this is the mathematical intellect. The one has force and exactness, the other comprehension.

Translated by William Finlayson Trotter

*Thoughts*

Number 2 (p. 9)

P.F. Collier & Son. New York, New York, USA. 1910

## MATHEMATICAL INTUITION

**Dyson, Freeman J.** 1923–  
American physicist and educator

Mathematical intuition is more often conservative than revolutionary, more often hampering than liberating.

Mathematics in the Physical Sciences

*Scientific American*, Volume 211, Number 3, September, 1964 (p. 132)

## MATHEMATICAL INVENTION

**Dantzig, Tobias** 1884–1956

Russian mathematician

It is a remarkable fact that the mathematical inventions which have proved to be most accessible to the masses are also those which exercised the greatest influence on the development of pure mathematics.

*Number: The Language of Science* (4th edition)

Chapter Ten (p. 192)

The Macmillan Company. New York, New York, USA. 1954

**de Morgan, Augustus** 1806–71

English mathematician and logician

The moving power of mathematical *invention* is not reasoning, but imagination.

Quoted in Robert Perceval Graves

*Life of Sir William Rowan Hamilton* (Volume 3)

Chapter LI (p. 219)

Hodges, Figgis & Co. Dublin, Ireland. 1889

**Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

The genesis of mathematical invention is a problem which should inspire the most lively interest among psychologists. It is a process in which the human mind appears to borrow least from the external world, where it does not act, or does not appear to act, except by itself or upon itself, so that in studying the process of mathematical thought, what we hope to attain is that which is the most essential element in the human mind.

In Raymond George Ayoub

*Musings of the Masters: An Anthology of Mathematical Reflections*

Mathematical Invention (p. 20)

Mathematical Association of America. Washington, D.C. 2004

Inventing consists precisely in not constructing combinations that are useless, but in constructing those which are useful and these are a small minority. Inventing means discerning, means choosing.

In Raymond George Ayoub

*Musings of the Masters: An Anthology of Mathematical Reflections*

Mathematical Invention (p. 23)

Mathematical Association of America. Washington, D.C. 2004

## MATHEMATICAL INVESTIGATION

**Barry, Frederick** 1876–1943

Historian of science

No amount of logical or mathematical investigation alone, moreover, can ever establish a fact.

*The Scientific Habit of Thought: An Informal Discussion of the Source and Character of Dependable Knowledge* (p. 111)

Columbia University Press. New York, New York, USA. 1927

**Rowland, Henry Augustus** 1848–1901

American physicist

A mathematical investigation always obeys the law of the conservation of knowledge: we never get out more from it than we put in.

*The Physical Papers of Henry Augustus Rowland*

The Highest Aims of the Physicist (p. 674)

The Johns Hopkins Press. Baltimore, Maryland, USA. 1902

## MATHEMATICAL ISSUE

**Burger, Edward B.**

American mathematician

**Starbird, Michael**

American mathematician

Despite centuries of effort, the universe continues to hide answers to most mathematical issues.

*Coincidences, Chaos, and All That Math Jazz*

Chapter 4 (p. 74)

W.W. Norton & Co. New York, New York, USA. 2005

## MATHEMATICAL JOKE

**Littlewood, John Edensor** 1885–1977

English mathematician

A good mathematical joke is better, and better mathematics, than a dozen mediocre papers.

In Béla Bollobás (ed.)

*Littlewood's Miscellany*

Introduction to a Mathematician's Miscellany (p. 24)

Cambridge University Press. Cambridge, England. 1986

## MATHEMATICAL JUDGMENT

**Kant, Immanuel** 1724–1804

German philosopher

Mathematical judgments are always synthetical.

In *Great Books of the Western World* (Volume 42)

*Critique of Pure Reason*

Introduction, Section V (p. 720)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## MATHEMATICAL JUNGLE

**EcEntee, Howard G.**

No biographical data available

Every working day he deals with the intricacies of caster, camber, toe-in and kingpin inclination – all part of that mathematical jungle, front-end geometry, that confuses so many apprentice mechanics.

How an Expert Aligns an Auto's Front End

*Popular Science*, January, 1953 (p. 186)

## MATHEMATICAL KNOWLEDGE

**Arbuthnot, John** 1667–1735  
Scottish mathematician and physician

...Mathematical Knowledge adds a manly Vigour to the Mind, frees it from *Prejudice, Credulity* and *Superstition*.  
*An Essay on the Usefulness of Mathematical Learning* (3rd ed.) (p. 7)  
Printed for J. Barrett  
London, England. 1745

**Bacon, Roger** 1214–92  
English philosopher, scientist, and friar

The knowledge of mathematical things is almost innate in us.... This is the easiest of sciences, a fact which is obvious in that no one's brain rejects it; for laymen and people who are utterly illiterate know how to count and reckon.

Translated by Robert Belle Burke  
*The Opus Majus of Roger Bacon*  
Part 4, Chapter 1  
Oxford University Press, Inc. London, England. 1928

**Hilbert, David** 1862–1943  
German mathematician

...with all the variety of mathematical knowledge, we are still clearly conscious of the similarity of the logical devices, the relationship of the ideas in mathematics as a whole and the numerous analogies in its different departments. We also notice that, the farther a mathematical theory is developed, the more harmoniously and uniformly does its construction proceed, and unsuspected relations are disclosed between hitherto separated branches of the science. So it happens that, with the extension of mathematics, its organic character is not lost but manifests itself the more clearly.

Mathematical Problems  
*Bulletin of the American Mathematical Society*, Volume 8, 2nd series  
October 1901–July 1902

**Miller, George Abram** 1863–1951  
American mathematician

One of the difficult problems which present themselves to those interested in the diffusion of mathematical knowledge is how to establish a proper correspondence between the subject matter and the individual. This problem is especially serious in view of the fact that misfits along this line are often disastrous.

*Historical Introduction to Mathematical Literature*  
Preface (p. v)  
The Macmillan Co. New York, New York, USA. 1916

**Minto, Walter** 1753–96  
Scottish-American mathematician

Mathematical Knowledge is generally supposed to be acquired with difficulty. I can assure you, however, that

the difficulty arises rather from want of attention than from want of sagacity in those who make the attempt.

*An Inaugural Oration on the Progress and Importance of the Mathematical Sciences*.  
Princeton, preceding the Annual Commencement 1788 (p. 46)  
Printed by Isaac Collins. Trenton, New Jersey, USA. 1788

**Schubert, Hermann Cäsar Hannibal** 1848–1911  
Enumerative geometer

...the three positive characteristics that distinguish mathematical knowledge from other knowledge...may be briefly expressed as follows; first, mathematical knowledge bears more distinctly the imprint of truth on all its results than any other kind of knowledge; secondly, it is always a sure preliminary step to the attainment of other correct knowledge; thirdly, it has no need of other knowledge.

*Mathematical Essays and Recreations*  
On the Nature of Mathematical Knowledge (p. 35)  
The Open Court Publishing Company. Chicago, Illinois, USA. 1917

**von Liebig, Justus** 1803–73  
German organic chemist

...without the power of observation, without judgment, without sagacity, all mathematical knowledge is useless.

In John Gardner  
*Familiar Letters on Chemistry*  
Second Series  
Letter I (p. 12)  
Taylor & Walton. London, England. 1844

## MATHEMATICAL LANGUAGE

**Hamilton, William** 1788–1856  
Scottish philosopher

Mathematical language, precise and adequate, nay, absolutely convertible with mathematical thought, can afford us no example of those fallacies which so easily arise from the ambiguities of ordinary language; its study cannot, therefore, it is evident, supply us with any means of obviating those illusions from which it is itself exempt. The contrast of mathematics and philosophy, in this respect, is an interesting object of speculation; but, as imitation is impossible, one of no practical result.

*Discussions on Philosophy and Literature, Education and University Reform*  
On the Study of Mathematics as an Exercise of the Mind (pp. 283–284)  
Harper & Brothers Publishers. New York, New York, USA. 1861

**Koyré, Alexandre** 1892–1964  
Russian-born French philosopher

Nature responds only to questions posed in mathematical language, because nature is the domain of measure and order.

In H. Floris Cohen

*The Scientific Revolution: A Historiographical Inquiry*

Chapter Two (p. 77)

The University of Chicago Press. Chicago, Illinois, USA. 1994

**Thompson, Sir D'Arcy Wentworth** 1860–1948

Scottish zoologist and classical scholar

...the zoologist or morphologist has been slow, where the physiologist has long been eager, to invoke the aid of the physical or mathematical sciences; and the reasons for this difference lie deep.... Even now the zoologist has scarce begun to dream of defining in mathematical language even the simplest organic forms.

*On Growth and Form* (Volume 1)

Chapter I (p. 2)

At The University Press. Cambridge, England. 1951

## MATHEMATICAL LAW

**Boutroux, Émile** 1845–1921

French philosopher

The mathematical laws presuppose a very complex elaboration. They are not known exclusively either a priori or a posteriori, but are a creation of the mind; and this creation is not an arbitrary one, but, owing to the mind's resources, takes place with reference to experience and in view of it. Sometimes the mind starts with intuitions which it freely creates; sometimes, by a process of elimination, it gathers up the axioms it regards as most suitable for producing a harmonious development, one that is both simple and fertile. The mathematics is a voluntary and intelligent adaptation of thought to things, it represents the forms that will allow of qualitative diversity being surmounted, the moulds into which reality must enter in order to become as intelligible as possible.

Translated by Fred Rothwell

*Natural Law in Science and Philosophy* (pp. 40–41)

Macmillan Publishing Company. New York, New York, USA. 1914

**d'Abro, Abraham**

No biographical data available

Success has attended the efforts of mathematical physicists in so large a number of cases that, however marvellous it may appear, we can scarcely escape the conclusion that nature must be rational and susceptible to mathematical law.

*The Evolution of Scientific Thought from Newton to Einstein*

Foreword (pp. xii–xiii)

Dover Publications, Inc., New York, New York, USA. 1950

**Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

A reality completely independent of the spirit that conceives it, sees it or feels it, is an impossibility. A world so external as that, even if it existed, would be forever

inaccessible to us. What we call “objective reality” is, strictly speaking, that which is common to several thinking beings and might be common to all; this common part, we shall see, can only be the harmony expressed by mathematical laws.

Translated by George Bruce Halsted

*The Value of Science*

Introduction (p. 14)

The Science Press. New York, New York, USA. 1907

## MATHEMATICAL LEARNING

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

The Martians seem to have calculated their descent with amazing subtlety – their mathematical learning is evidently far in excess of ours...

*Seven Famous Novels by H.G. Wells*

*The War of the Worlds*

Book I, Chapter 1 (pp. 266–267)

Alfred A. Knopf. New York, New York, USA. 1934

## MATHEMATICAL LITERATURE

**Babbage, Charles** 1792–1871

English mathematician

The golden age of mathematical literature is undoubtedly past.

In Anthony Hyman

*Science and Reform*

Early Mathematical Work (p. 33)

Cambridge University Press. Cambridge, England.

**Glaisher, James Whitbread Lee** 1848–1928

English mathematician

The great mass of mathematical literature will be always contained in journals and transactions, but there is no reason why it should not be rendered far more useful and accessible than at present by means of treatises or higher text-books. The whole science suffers from want of avenues of approach, and many beautiful branches of mathematics are regarded as difficult and technical merely because they are not easily accessible.

*Report of the Sixtieth Meeting of the British Association for the Advancement of Science*

Presidential address (p. 724)

John Murray. London, England. 1891

**Miller, George Abram** 1863–1951

American mathematician

Shameless ignorance in regard to such serious intellectual conquests as are embodied in the mathematical literature does not represent a normal condition on the part of those interested in the history of the human race.

*Historical Introduction to Mathematical Literature*

Preface (pp. ix–x)

The Macmillan Co. New York, New York, USA. 1916

The mathematical literature is unusually rich in content and is composed of a great variety of elements. It contains many results that would appeal to everyone if they were presented in the proper form and at the proper time.

*Historical Introduction to Mathematical Literature*

Preface (p. v)

The Macmillan Co. New York, New York, USA. 1916

## MATHEMATICAL LOGIC

**Goodstein, Reuben L.** 1912–85

English mathematician

The function of mathematical logic is to reveal and codify the logical processes employed in mathematical reasoning and to clarify the concepts of mathematics; it is itself a branch of mathematics, employing mathematical symbolism and technique, a branch which has developed in its entirety during the past hundred years and which in its vigor and fecundity and the power and importance of its discoveries may well claim to be in the forefront of modern mathematics.

*Mathematical Logic* (p. 1)

Leicester University Press. Leicester, England. 1957

**Rota, Gian-Carlo** 1932–99

Italian-born American mathematician

Mathematical logic deals not with the truth but only with the game of truth.

*Indiscrete Thoughts* (p. 93)

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

Thus it would seem that wherever we infer from perceptions, it is only structure that we can validly infer; and structure is what can be expressed by mathematical logic, which includes mathematics.

*The Analysis of Matter*

Chapter XXIV (p. 254)

Harcourt, Brace & Company, Inc. New York, New York, USA. 1927

## MATHEMATICAL MEN

**Locke, John** 1632–1704

English philosopher and political theorist

When mathematical men will build systems upon fancy, and not upon demonstration, they are as liable to mistakes as others.

*The Works of John Locke*

Mr. Locke's Second Reply to the Bishop of Worcester (p. 427)

Printed for Thomas Tegg. London, England. 1823

## MATHEMATICAL METHOD

**Bell, E. T. (Eric Temple)** 1883–1960

Scottish-American mathematician and educator

The distinction between the mathematical method and the scientific is seen in the agonies of very young children to do what their teachers sometimes tell them is mathematics. Anyone who was subjected to elementary geometry when his infantile brain was as unripe as a green walnut will recall the protracted misery he endured.

*The Handmaiden of the Sciences*

Chapter 1 (p. 6)

Williams & Wilkins Co. Baltimore, Maryland, USA. 1937

**Butler, Nicholas Murray** 1862–1947

American educator and university administrator

The analytical geometry of Descartes and the calculus of Newton and Leibniz have expanded into the marvelous mathematical method – more daring than anything that the history of philosophy records...defying the senses to follow its splendid flights, is demonstrating today, as it never has been demonstrated before, the supremacy of the pure reason.

*The Meaning of Education and Other Essays and Addresses*

What Knowledge Is of Most Worth? (p. 45)

The Macmillan Company. London, England. 1898

**Comte, Auguste** 1798–1857

French philosopher

Every attempt to employ mathematical methods in the study of chemical questions must be considered profoundly, now as always, profoundly irrational, as being contrary to the nature of the phenomena. If mathematical analysis should ever hold a prominent place in chemistry – an aberration which is happily almost impossible – it would occasion a rapid and widespread degeneration of that science.

In G.H. Lewis

*Comte's Philosophy of the Sciences*

Section XI (p. 116)

Henry C. Bohn. London, England. 1853

**Wright, Thomas** 1711–86

English cosmologist

...I will try by some less mathematical Method than that of mere Numbers, to imprint an Idea in your Mind of the true Extent of the solar System.

*An Original Theory or New Hypothesis of the Universe*

Letter the Eighth (p. 68)

Printed for the Author. London, England. 1750

**MATHEMATICAL MILL**

**Hopkinson, John** 1849–98  
English physicist and electrical engineer

...we cannot get more out of the mathematical mill than we put into it, though we may get it in a form infinitely more useful for our purpose.

The Relation of Mathematics to Engineering  
*Nature*, Volume 50, Number 1280, May 10, 1894 (p. 46)

**MATHEMATICAL MIND**

**de Jouvenel, Bertrand** 1903–87  
French man of letters

...the social scientist who lacks a mathematical mind and regards a mathematical formula as a magic recipe, rather than as the formulation of a supposition, does not hold forth much promise. A mathematical formula is never more than a precise statement. It must not be made into a Procrustean bed – and that is what one is driven to by the desire to quantify at any cost. It is utterly implausible that a mathematical formula should make the future known to us, and those who think it can would once have believed in witchcraft. The chief merit of mathematicization is that it compels us to become conscious of what we are assuming.

Translated by Nikita Lary  
*The Art of Conjecture*  
Chapter 15 (p. 173)  
Basic Books, Inc. New York, New York, USA. 1967

**Jeans, Sir James Hopwood** 1877–1946  
English physicist and mathematician

...it can hardly be disputed that nature and our conscious mathematical minds work according to the same laws.

*The Mysterious Universe*  
Chapter V (p. 165)  
The Macmillan Company. New York, New York, USA. 1932

**Maxwell, James Clerk** 1831–79  
Scottish physicist

Professor Sylvester...gave us a noble vindication of pure mathematics by laying bare, as it were, the very working of the mathematical mind, and setting before us, not the array of symbols and brackets which form the armoury of the mathematician, or the dry results which are only the monuments of his conquests, but the mathematician himself, with all his human faculties directed by his professional sagacity to the pursuit, apprehension, and exhibition of that ideal harmony which he feels to be the root of all knowledge, the fountain of all pleasure, and the condition of all action.

*Report for the Fortieth Meeting of the British Association for the Advancement of Science*  
Mathematics and Physics (p. 1)  
John Murray. London, England. 1871

**MATHEMATICAL NOTION**

**Buddeus, Johann Franz** 1667–1729  
German Lutheran theologian and philosopher

Such is the nature of the human mind, that, if habituated to certain kinds of thought, it cannot forthwith divest itself thereof, when passing to the consideration of other objects, but conjures up notions concerning these analogous to those already eradicated in it by custom. This is the real cause of errors almost infinite. Thus they, who inconsiderately *carry over mathematical notions into morals and theology, seem to themselves to find in these new sciences the same necessary connection which they discovered in the old.*

Quoted in William Whewell  
On the Study of Mathematics as an Exercise of the Mind  
*Thoughts on the Study of Mathematics as a Part of a Liberal Education*, Volume 62, Number 126, January, 1836 (p. 439)

**MATHEMATICAL ORDER**

**Poincaré, Jules Henri** 1854–1912  
French mathematician and theoretical astronomer

...this intuition of mathematical order, which enables us to perceive harmonies and hidden relations, cannot be present in everyone.

In Raymond George Ayoub  
*Musings of the Masters: An Anthology of Mathematical Reflections*  
Mathematical Invention (p. 22)  
Mathematical Association of America. Washington, D.C. 2004

**MATHEMATICAL PAPERS**

**Kac, Mark** 1914–84  
Polish mathematician

**Rota, Gian-Carlo** 1932–99  
Italian-born American mathematician

**Schwartz, Jacob T.** 1930–  
American mathematician

On leafing through the collected papers of great mathematicians, one notices how few of their ideas have received adequate attention. It is like entering a hothouse and being struck by a species of flowers whose existence we did not even suspect.

*Discrete Thoughts: Essays on Mathematics, Science, and Philosophy*  
Chapter One (p. 1)  
Springer-Verlag. New York, New York, USA. 1992

**MATHEMATICAL PHILOSOPHY**

**Kasner, Edward** 1878–1955  
American mathematician

**Newman, James Roy** 1911–66  
Mathematician and mathematical historian

In purging mathematical philosophy of metaphysics, there has been... a real gain. No longer is mathematics to be looked upon as a key to the truth with a capital T. It may now be regarded as a woefully incomplete, though enormously useful, Baedeker [travel guide] in a mostly uncharted land. Some of the landmarks are fixed; some of the vast network of roads is made understandable; there are guideposts for the bewildered traveler.

*Mathematics and the Imagination*

Mathematics and the Imagination (p. 360)

Simon & Schuster. New York, New York, USA. 1940

## MATHEMATICAL PHYSICIST

**Swann, William Francis Gray** 1884–1962  
Anglo-American physicist

...the mathematical physicist... obtains much prestige from the physicists because they are impressed with the amount of mathematics he knows, and much prestige from the mathematicians, because they are impressed with the amount of physics he knows.

*The Architecture of the Universe*

Chapter I (p. 14)

The Macmillan Company. New York, New York, USA. 1934

## MATHEMATICAL PICTURES

**Jeans, Sir James Hopwood** 1877–1946  
English physicist and mathematician

The essential fact is simply that all the pictures which science now draws of nature, and which alone seem capable of according with observational fact, are mathematical pictures.

*The Mysterious Universe*

Chapter V (p. 150)

The Macmillan Company. New York, New York, USA. 1932

...it can hardly be disputed that nature and our conscious mathematical minds work according to the same laws.

*The Mysterious Universe*

Chapter V (p. 165)

The Macmillan Company. New York, New York, USA. 1932

## MATHEMATICAL POETRY

**Davis, Philip J.** 1923–  
American mathematician

**Hersh, Reuben** 1927–  
American mathematician

In the realm of ideas, of mental objects, those ideas whose properties are reproducible are called mathematical objects, and the study of mental objects with reproducible properties is called mathematics.

*The Mathematical Experience*

Intuition (p. 399)

Birkhäuser. Boston, Massachusetts, USA. 1981

## Guillen, Michael

American mathematician and physicist

...just as conventional poetry helps us to see deep *within* ourselves, mathematical poetry helps us to see far *beyond* ourselves ...

*Five Equations That Changed the World*

Introduction (p. 2)

Hyperion. New York, New York, USA. 1995

...equations are like poetry: They speak truths with a unique precision, convey volumes of information in rather brief terms, and often are difficult for the uninitiated to comprehend.

*Five Equations That Changed the World*

Introduction (p. 2)

Hyperion. New York, New York, USA. 1995

## MATHEMATICAL POWER

**Birkhoff, George David** 1884–1944  
American mathematician

What is the inner secret of mathematical power? Briefly stated, it is that mathematics discloses the skeletal outlines of all closely articulated relational systems. For this purpose mathematics uses the language of pure logic with its score or so of symbolic words, which, in its important forms of expression, enables the mind to comprehend systems of relations otherwise completely beyond its power. These forms are creative discoveries which, once made, remain permanently at our disposal. By means of them the scientific imagination is enabled to penetrate ever more deeply into the rationale of the universe about us.

In J.G. Crowther (ed.)

*Science Today*

Mathematics: Quantity and Order (p. 297)

Eyre & Spottiswoode. London, England. 1934

**Jacobi, Karl Gustav Jacob** 1804–51  
German mathematician

It must not be supposed... that it is to a gift of Nature that I owe such mathematical power as I possess. No, it has come by hard work, hard work. Not mere industry, but brain-splitting thinking – hard work; hard work that has often endangered my health.

In Sir Richard Arman Gregory

*Discovery; or, The Spirit and Service of Science*

Chapter I (p. 5)

Macmillan & Company Ltd. London, England. 1918

## MATHEMATICAL PROBABILITY

**Doob, J. L.** 1910–2004  
American mathematician

The basic difference between the roles of mathematical probability in 1946 and 1988 is that the subject is now accepted as mathematics whereas in 1946 to most mathematicians mathematical probability was to mathematics as black marketing to marketing; that is, probability was a source of interesting mathematics but examination of the background context was undesirable.

In Peter Duren (ed.)

*A Century of Mathematics in America*

Part II, Commentary on Probability (p. 353)

American Mathematical Society, Providence, Rhode Island, USA. 1989

## MATHEMATICAL PROBLEM

### Drew, Joseph

No biographical data available

...not all minds can grasp even a simple mathematical problem, and how few there are that ever master the higher mysteries of that delightful science; nevertheless, to those few, the contemplation of the starry worlds, their distance, size, and motion, with all the astounding theories and truths that result from such investigations, are intellectual pleasures, which approach nearer than any other human enjoyment, to that “feast of reason and flow of soul” found in the poet’s dream and the impassioned lover’s song.

*Our Home in the Stars*

Our Home in the Stars (pp. 18–19)

Elliot Stock. London, England. 1872

### Hankel, Hermann 1839–73

German mathematician

If we compare a mathematical problem with an immense rock, whose interior we wish to penetrate, then the work of the Greek mathematicians appear to us like that of a robust stonemason, who, with indefatigable perseverance, attempts to demolish the rock gradually from the outside by means of hammer and chisel; but the modern mathematician resembles an expert miner, who first constructs a few passages through the rock and then explodes it with a single blast, bringing to light its inner treasures.

*Die Entwicklung der Mathematik In den letzten Jahrhunderten* (p. 9)

Akademische Antrittsrede. Tübingen, Germany. 1884

### Hilbert, David 1862–1943

German mathematician

A mathematical problem should be difficult in order to entice us, yet not completely inaccessible, lest it mock at our efforts.

Mathematical Problems

*Bulletin of the American Mathematical Society*, Volume 8, 2nd Series, October 1901–July 1902

### Kline, Morris 1908–92

American mathematics professor and writer

The tantalizing and compelling pursuit of mathematical problems offers mental absorption, peace of mind amid endless challenges, repose in activity, battle without conflict, “refuge from the goading urgency of contingent happenings,” and the sort of beauty changeless mountains present to senses tried by the present-day kaleidoscope of events.

*Mathematics in Western Culture*

Chapter XXVIII (p. 470)

Oxford University Press, Inc. New York, New York, USA. 1953

### Peirce, Benjamin 1809–80

American mathematician

Throughout nature, the omnipresent beautiful revealed an all-pervading language spoken to the human mind, and to man’s highest capacity of comprehension. By whom was it spoken? Whether by the gods of the ocean and the land, by the ruling divinities of the sun, moon, and stars, or by the nymphs of the forest and the dryads of the fountain, it was one speech, and its written cipher was cabalistic. The cabala were those of number, and even if they transcended the gematric skill of the Rabbi and the hieroglyphical learning of the priest of Osiris, they were, distinctly and unmistakably, expressions of thought, uttered to mind by mind; they were the solutions of mathematical problems of extraordinary complexity.

*Address of Professor Benjamin Peirce, President of the American Association for the Year 1853, on Retiring from the Duties of President* (p. 5)

Unknown publisher 1853

### Rota, Gian-Carlo 1932–99

Italian-born American mathematician

Not only is every mathematical problem solved, but eventually every mathematical problem is proved trivial. The quest for ultimate triviality is characteristic of the mathematical enterprise.

*Indiscrete Thoughts* (p. 93)

### Shaw, George Bernard 1856–1950

Irish comic dramatist and literary critic

You propound a complicated mathematical problem: give me a slate and half an hour’s time, and I can produce a wrong answer.

In Evan Esar

*20,000 Quips and Quotes* (p. 509)

Doubleday, Garden City, New York, USA. 1968

## MATHEMATICAL PROGRESSION

### Tolstoy, Leo 1828–1910

Russian writer

The French army melted away at the uniform rate of a mathematical progression ...

*Great Books of the Western World* Volume 51

*War and Peace*

Chapter X (p. 626)  
The Encyclopedia Britannica, Inc. Chicago, Illinois, USA. 1952

## MATHEMATICAL PROOF

**Hardy, G. H. (Godfrey Harold)** 1877–1947  
English pure mathematician

A mathematical proof should resemble a simple and clear-cut constellation, not a scattered cluster in the Milky Way.

*A Mathematician's Apology*  
Section 18 (p. 113)  
Cambridge University Press. Cambridge, England. 1967

**Locke, John** 1632–1704  
English philosopher and political theorist

Mathematical proofs, like diamonds, are hard as well as clear, and will be touched with nothing but strict reasoning.  
In Stanley Gudder

*A Mathematical Journey* (p. 20)  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1976

## MATHEMATICAL PROPOSITION

**Kant, Immanuel** 1724–1804  
German philosopher

First of all, we ought to observe, that mathematical propositions, properly so called, are always judgments a priori, and not empirical, because they carry along with them necessity, which can never be deduced from experience. If people should object to this, I am quite willing to confine my statements to pure mathematics, the very concept of which implies that it does not contain empirical, but only pure knowledge a priori.

In *Great Books of the Western World* (Volume 42)  
*Critique of Pure Reason*  
Introduction, Section V (p. 720)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Keyser, Cassius Jackson** 1862–1947  
American mathematician

The validity of mathematical propositions is independent of the actual world – the world of existing subject-matters is logically prior to it, and would remain unaffected were it to vanish from being.

*The Pastures of Wonder*  
The Realm of Mathematics (p. 99)  
Columbia University Press. New York, New York, USA. 1929

## MATHEMATICAL PURSUIT

**Sylvester, James Joseph** 1814–97  
English mathematician

...mathematical pursuits unfit a person for the discharge of the common duties of life and cut him off from the exercise of Man's highest prerogative, "discourse of reason and faculty of speech divine,"...

*The Collected Mathematical Papers of James Joseph Sylvester*  
(Volume 2)

Address to the Mathematical and Physical (p. 652)  
Section of the British Association  
At The University Press. Cambridge, England. 1908

## MATHEMATICAL REALITY

**Hardy, G. H. (Godfrey Harold)** 1877–1947  
English pure mathematician

I believe that mathematical reality lies outside us, that our function is to discover or *observe* it, and that the theorems which we prove, and which we describe grandiloquently as our 'creations', are simply the notes of our observations. This view has been held, in one form or another by many philosophers of high reputation, from Plato onwards...

*A Mathematician's Apology*  
Section 22 (pp. 123–124)  
Cambridge University Press. Cambridge, England. 1967

**Thurston, William Paul** 1946–  
American mathematician

...people use these various things that have been proved in logic to try to make conclusions about mathematics. Some mathematicians then begin to take a sort of solipsistic attitude and say that we can make mathematics up, however we like. It's not determined. I guess I believe in a sort of mathematical reality, but it's a reality that we can't hope to understand completely. It's hard to justify mathematical reality solely on the basis of formal reasoning.

In D. Albers, G. Alexanderson and C. Reid  
*More Mathematical People: Contemporary Conversations* (p. 341)  
Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

## MATHEMATICAL REASONING

**Arbuthnot, John** 1667–1735  
Scottish mathematician and physician

There are very few things which we know, which are not capable of being reduc'd to a Mathematical Reasoning...and where a Mathematical Reasoning can be had, it's as great folly to make use of any other, as to grope for a thing in the dark when you have a Candle standing by you.

*Of the Laws of Chance*  
Preface  
Benjamin Motte. London, England. 1692

**Author undetermined**

There are very few things which we know, which are not capable of being reduced to a mathematical reasoning; and when they cannot, it is a sign our knowledge of them is very small and confused; and where a mathematical reasoning can be had, it is as great folly to make use of any other, as to grope for a thing in the dark when you have a candle standing by you.

In John William Lubbock & John Elliot Drinkwater Bethune  
*On Probability* (pp. 43–44)  
Baldwin & Cradock. London, England. 1830

**Bell, E. T. (Eric Temple)** 1883–1960

Scottish-American mathematician and educator

No satisfactory justification has ever been given for connecting in any way the consequences of mathematical reasoning with the physical world.

*Debunking Science*  
University of Washington Book Store. Seattle, Washington, USA. 1930

**Kline, Morris** 1908–92

American mathematics professor and writer

Perhaps the most unfortunate fact about mathematics is that it requires us to reason, whereas most human beings are not convinced that reasoning is worthwhile. Indeed, it is not at all obvious that reasoning in general and mathematical reasoning in particular are valuable.

*Mathematics and the Physical World*  
Chapter 1 (p. 1)  
Thomas Y. Crowell Co. New York, New York, USA. 1959

**Mill, John Stuart** 1806–73

English political philosopher and economist

If the practice of mathematical reasoning gives nothing else, it gives wariness of mind; it accustoms us to demand a sure footing: and though it leaves us no better judges of ultimate premises than it found us (which is no more than may be said of almost all metaphysics) at least it does not suffer us to let in, at any of the joints in the reasoning, any assumption which we have not previously faced in the shape of an axiom, postulate, or definition.

*An Examination of Sir William Hamilton's Philosophy*  
Chapter XXVII (p. 526)  
Longmans, Green & Co. London, England. 1865

**Stewart, Dugald** 1753–1828

Scottish philosopher

...how small is the number of individuals who are qualified to think justly on metaphysical, moral, or political subjects, in comparison of those, who may be trained by practice to follow the longest processes of mathematical reasoning.

*Elements of the Philosophy of the Human Mind* (Volume 1)

Part II, Section I (p. 42)

Hillard & Brown. Cambridge, England. 1829

**Whately, Richard** 1787–1863

English theologian

Mathematical reasoning is like a long flight of steps; moral, like a short clamber up a craggy rock.

In Elizabeth Jane Whatley  
*Miscellaneous Remains from the Commonplace Book of Richard Whately, D.D*

Apothegm 90 (p. 9)  
Longman, Green, Longman, Roberts & Green. London, England. 1865

**MATHEMATICAL RESEARCH****Hermes, Hans**

No biographical data available

It may be permissible to compare mathematical research with the opening up of a mountain range. There will always be the people whose principal interest it will be to try their ability in advanced mountaineering. They will go for the most difficult summits. Others will see their aim in making the mountain range accessible as a whole, by building convenient roads along the valleys and across the passes. They will also reach the summits eventually, but mainly for the sake of the beautiful views, and, if possible, by cable car.

In Walter R. Fuchs  
*Mathematics for the Modern Mind*  
Introduction (p. 18)  
The Macmillan Company. New York, New York, USA. 1967

**Schubert, Hermann Cäsar Hannibal** 1848–1911

Enumerative geometrist

The intrinsic character of mathematical research and knowledge is based essentially on three properties: first, on its conservative attitude towards old truths and discoveries of mathematics; secondly, on its progressive mode of development, due to the incessant acquisition of new knowledge on the basis of the old; and thirdly, on its self-sufficiency and its consequent absolute independence.

*Mathematical Essays and Recreations*  
On the Nature of Mathematical Knowledge (p. 27)  
The Open Court Publishing Company. Chicago, Illinois, USA. 1917

**MATHEMATICAL RIGOR****Simmons, George F.**

No biographical data available

Mathematical rigor is like clothing; in its style it ought to suit the occasion, and it diminishes comfort and restricts freedom of movement if it is either too loose or too tight.

Filler  
*The Mathematical Intelligencer*, Volume 13, Number 1, Winter, 1991  
(p. 69)

## MATHEMATICAL SCIENCE

**Arbuthnot, John** 1667–1735  
Scottish mathematician and physician

In all ages and countries where learning hath prevailed, the mathematical sciences have been looked upon as the most considerable branch of it.

In George Atherton Aitken

*The Life and Works of John Arbuthnot, M.D.*

Usefulness of Mathematical Learning (p. 409)

At The Clarendon Press. Oxford, England. 1892

**Babbage, Charles** 1792–1871  
English mathematician

Those who view mathematical science not merely as a vast body of abstract and immutable truths, whose intrinsic beauty, symmetry and logical completeness, when regarded in their connexion together as a whole, entitle them to a prominent place in the interest of all profound and logical minds, but as possessing a yet deeper interest for the human race, when it is remembered that this science constitutes the language through which alone we can adequately express the great facts of the natural world, and those unceasing changes of mutual relationship which, visibly or invisibly, consciously or unconsciously to our immediate physical perceptions, are interminably going on in the agencies of the creation we live amidst: those who thus think on mathematical truth as the instrument through which the weak mind of man can most effectually read his Creator's works, will regard with especial interest all that can tend to facilitate the translation of its principles into explicit practical forms.

*Scientific Memoirs* (Volume 3)

Sketch of the Analytical Engine, Translator's Notes (p. 696)

Printed by Richard & John E. Taylor. London, England. 1843

**Comte, Auguste** 1798–1857  
French philosopher

We can now define Mathematical science with precision. It has for its object the indirect measurement of magnitudes, and it proposes to determine magnitudes by each other, according to the precise relations which exist between them.

*The Positive Philosophy of Auguste Comte* (Volume 1)

Book I, Chapter I (p. 38)

John Chapman. London, England. 1853

The limitations of Mathematical science are not, then, in its nature. The limitations are in our intelligence: and by these we find the domain of the science remarkably restricted, in proportion as phenomena, in becoming special, become complex.

Translated by Harriet Martineau

*The Positive Philosophy of Auguste Comte* (Volume 1)

Book I, Chapter I (p. 46)

George Bell & Sons. London, England. 1896

It must be ever remembered that the true positive spirit first came forth from the pure sources of mathematical science; and it is only the mind that has imbibed it there, and which has been face to face with the lucid truths of geometry and mechanics, that can bring into full action its natural positively, and apply it in bringing the most complex studies into the reality of demonstration. No other discipline can fitly prepare the intellectual organ.

*The Positive Philosophy of Auguste Comte* (Volume 1)

Book III, Chapter I (p. 221)

John Chapman. London, England. 1853

**da Vinci, Leonardo** 1452–1519  
Italian High Renaissance painter and inventor

There is no certainty where one can neither apply any of the mathematical sciences nor any of those which are based upon the mathematical sciences.

Translated by Edward MacCurdy

*The Notebooks of Leonardo da Vinci* (Volume 1)

Mathematics (p. 619)

George Braziller. New York, New York, USA. 1958

**Davies, Charles** 1798–1876  
American mathematician

The knowledge which mathematical science imparts to the mind is – deep – profound – abiding. It gives rise to trains of thought, which are born in the pure ideal, and fed and nurtured by an acquaintance with physical nature in all its minuteness and in all its grandeur: which survey the laws of elementary organization, by the microscope, and weigh the spheres in the balance of universal gravitation.

*The Logic and Utility of Mathematics; With the Best Methods of Instruction Explained and Illustrated*

Introduction (p. 14)

A.S. Barnes & Burr Co. New York, New York, USA. 1860

The processes of mathematical science serve to give mental unity and wholeness. They impart that knowledge which applies the means of crystallization to a chaos of scattered particulars, and discovers at once the general law, if there be one, which forms a connecting link between them.

*The Logic and Utility of Mathematics; With the Best Methods of Instruction Explained and Illustrated*

Introduction (pp. 14–15)

A.S. Barnes & Burr Co. New York, New York, USA. 1860

The educator regards mathematical science as the great means of accomplishing his work.... The trains of reasoning which follow are combinations, according to logical rules, of what has been previously fully comprehended; and the mind and the argument grow together, so that the

thread of science and the warp of the intellect entwine themselves, and become inseparable.

*The Logic and Utility of Mathematics; With the Best Methods of Instruction Explained and Illustrated*

Introduction (p. 15)

A.S. Barnes & Burr Co. New York, New York, USA. 1860

### Everett, Charles Carroll 1829–1900

American theologian

There is as great a distinction between mathematics and the mathematical sciences as there is between induction and the inductive sciences. Practically, few cases of induction do not involve, to a greater or less extent, deductions; so few mathematical processes do not involve some strictly logical procedure.

*The Science of Thought*

Second Book (p. 105)

De Wolfe, Fiske & Co. Boston, Massachusetts, USA. 1890

### Farrar, John

No biographical data available

...in mathematical science, and in it alone, man sees things precisely as God sees them, handles the very scale and compass with which the Creator planned and built the universe...

in Florian Cajori

*The Teaching and History of Mathematics in the United States*

Chapter III (fn, p. 128)

Government Printing Office. Washington, D.C. 1890

### Glanvill, Joseph 1636–80

English clergyman and philosopher

And for Mathematical Sciences, he that doubts their certainty hath need of a dose of Hellebore.

*The Vanity of Dogmatizing*

Chapter XXI (p. 209)

Printed for Henry Eversden. London, England. 1661

### Hamilton, William 1788–1856

Scottish philosopher

Of all our intellectual pursuits, the study of the mathematical sciences is the one, whose utility as an intellectual exercise, when carried beyond a moderate extent, has been most peremptorily denied by the greatest number of the most competent judges; and the arguments, on which this opinion is established, have hitherto been evaded rather than opposed.

*Discussions on Philosophy and Literature, Education and University Reform*

On the Study of Mathematics as an Exercise of the Mind (p. 260)

Harper & Brothers Publishers. New York, New York, USA. 1861

### Hilbert, David 1862–1943

German mathematician

Mathematical science is in my opinion an indivisible whole, an organism whose vitality is conditioned upon

the connection of its parts.

Mathematical Problems

*Bulletin of the American Mathematical Society*, Volume 8, 2nd Series, October 1901–July 1902

...with all the variety of mathematical knowledge, we are still clearly conscious of the similarity of the logical devices, the relationship of the ideas in mathematics as a whole and the numerous analogies in its different departments. We also notice that, the farther a mathematical theory is developed, the more harmoniously and uniformly does its construction proceed, and unsuspected relations are disclosed between hitherto separated branches of the science. So it happens that, with the extension of mathematics, its organic character is not lost but manifests itself the more clearly.

Mathematical Problems

*Bulletin of the American Mathematical Society*, Volume 8, 2nd series October 1901–July 1902

### Hume, David 1711–76

Scottish philosopher and historian

The great advantage of the mathematical sciences above the moral consists in this, that the ideas of the former, being sensible, are always clear and determinate, the smallest distinction between them is immediately perceptible, and the same terms are still expressive of the same ideas, without ambiguity or variation. An oval is never mistaken for a circle, nor an hyperbola for an ellipsis. The isosceles and scalenum are distinguished by boundaries more exact than vice and virtue, right and wrong. If any term be defined in geometry, the mind readily, of itself, substitutes, on all occasions, the definition for the term defined: Or even when no definition is employed, the object itself may be presented to the senses, and by that means be steadily and clearly apprehended.

*An Enquiry Concerning Human Understanding and Selections from A Treatise of Human Nature*

Section VII, Part I (p. 61)

The Open Court Publishing Co. Chicago, Illinois, USA. 1907

### Huxley, Aldous 1894–1963

English writer and critic

I admit that mathematical science is a good thing. But excessive devotion to it is a bad thing.

In James R. Newman (ed.)

*The World of Mathematics* (Volume 4) (p. 2027)

Simon & Schuster. New York, New York, USA. 1956

### Kepler, Johannes 1571–1630

German astronomer

If there is anything that can bind the heavenly mind of man to this dreary exile of our earthly home and can reconcile us with our fate so that one can enjoy living – then it is verily the enjoyment of the mathematical sciences and astronomy.

In H.E. Huntley  
*The Divine Proportion: A Study In Mathematical Beauty*  
 Introduction (p. 6)  
 Dover Publications. New York, New York, USA. 1970

**Lowell, Percival** 1855–1916  
 American astronomer

The science of mathematics...might be called the most imaginative product of human thought; for it is simply one vast imagination based upon a few so-called axioms, which are nothing more or less than the results of experience. It is nonetheless imaginative because the discoveries always accord subsequently with fact, since man was not aware of them beforehand. Nor are its inevitable conclusions inevitable to any save those possessed of the mathematician's prophetic insight.

In William Graves Hoyt  
*Lowell and Mars*  
 Chapter 2 (p. 20)  
 University of Arizona Press. Tucson, Arizona, USA. 1976

**Maxwell, James Clerk** 1831–79  
 Scottish physicist

Thus, all the mathematical sciences are founded on relations between physical laws and laws of numbers.

In W.D. Niven (ed.)  
*The Scientific Papers of James Clerk Maxwell* (Volume 1) (p. 156)  
 At The University Press. Cambridge, England. 1890

**Minto, Walter** 1753–96  
 Scottish-American mathematician

The mathematical sciences, independently of their application to any particular purpose, are of the utmost consequence to the student.

*An Inaugural Oration on the Progress and Importance of the Mathematical Sciences.*  
 Princeton, preceding the Annual Commencement 1788 (p. 30)  
 Printed by Isaac Collins, 1788

**Mirandulanus, Johannes Picus** 1463–94  
 No biographical data available

Mathematical science does not bestow wisdom: it was therefore, by the ancients, made the discipline of boys. On the contrary, though preparing for philosophy, if previously sipped in moderation, when raised to an object of exclusive study, it affords the greatest occasions of philosophical error.

Quoted in William Hamilton  
*Discussions on Philosophy and Literature, Education and University Reform*  
 On the Study of Mathematics as an Exercise of the Mind (p. 295)  
 Harper & Brothers Publishers. New York, New York, USA. 1861

**Spottiswoode, William** 1825–83  
 English mathematician and physicist

So wide is the range of mathematical science, so indefinitely may it extend beyond our actual powers of manip-

ulation, that at some moments we are inclined to fall down with even more than reverence before her majestic presence.

*Report of the Forty-eighth Meeting of the British Association for the Advancement of Science*  
 Address of William Spottiswoode (p. 31)  
 John Murray. London, England. 1879

**Sylvester, James Joseph** 1814–97  
 English mathematician

There are three ruling ideas, three so to say, spheres of thought, which pervade the whole body of mathematical science, to someone or other of which, or to two or all three of them combined, every mathematical truth admits of being referred; these are the three cardinal notions, of Number, Space and Order.

Arithmetic has for its object the properties of number in the abstract. In algebra, viewed as a science of operations, order is the predominating idea. The business of geometry is with the evolution of the properties of space, or of bodies viewed as existing in space...

*The Collected Mathematical Papers of James Joseph Sylvester*  
 (Volume 2)

A Probationary Lecture on Geometry, Delivered before the Gresham Committee and the Members of the Common Council of the City of London, 4 December, 1854 (p. 5)  
 University Press. Cambridge, England. 1904–1912

**Veblen, Oswald** 1880–1960  
 American mathematician

**von Helmholtz, Hermann** 1821–94  
 German scientist and philosopher

We see in the science of mathematics the conscious logical activity of the human mind in its purest and most perfect form. While we are impressed with the arduous labor of its procedure and the difficulty of forming and comprehending its abstract conceptions, we at the same time learn to confide in the security, reach, and fruitfulness of its reasonings.

In Leo Koenigsberger  
*Annual Report of the Board of Regents of the Smithsonian Institution, 1896*

The Investigations of Hermann von Helmholtz on the Fundamental Principles of Mathematics and Mechanics (p. 93)  
 Government Printing Office. Washington, D.C. 1898

**Whitehead, J. H. C.** 1904–60  
 English mathematician

Any mathematical science is a body of theorems deduced from a set of axioms. A geometry is a mathematical science. The question then arises why the name geometry is given to some mathematical sciences and not to others. It is likely that there is no definite answer to this question, but that a branch of mathematics is called a geometry because the name seems good, on emotional and

traditional grounds, to a sufficient number of competent people.

*The Foundation of Differential Geometry* (p. 17)  
University Press. Cambridge, England 1932

In order that a mathematical science of any importance may be founded upon conventional definitions, the entities created by them must have properties which bear some affinity to the properties of existing things.

*A Treatise on Universal Algebra, with Applications*  
Preface (p. vii)  
Hafner Publishing Company. New York, New York, USA. 1960

### Young, John Wesley

Mathematician

A mathematical science is anybody of propositions which is capable of an abstract formulation and arrangement in such a way that every proposition of the set after a certain one is a formal logical consequence of some or all the preceding propositions. Mathematics consists of all such mathematical sciences.

*Lectures on Fundamental Concepts of Algebra and Geometry* (p. 122)  
Lecture XXI (p. 222)  
The Macmillan Company. New York, New York, USA. 1911

## MATHEMATICAL SPECULATION

### Burke, Edmund 1729–97

English statesman and philosopher

It is from this absolute indifference and tranquility of the mind, that mathematical speculations derive some of the most considerable advantages; because there is nothing to interest the imagination; because the judgment sits free and unbiassed to examine the point. All proportions, every arrangement of quantity, is alike to the understanding, because the same truths result to it from all; from greater from lesser, from equality and inequality.

*On the Sublime and the Beautiful*  
Part III, Section II (pp. 165–166)  
Printed for F.C. & J Rivington and others. London, England. 1812

## MATHEMATICAL SPIRIT

### Merz, John Theodore 1840–1922

German-born British chemist, historian, and industrialist

In every case, the awakening touch has been the mathematical spirit, the attempt to count, to measure, or to calculate. What to the poet or the seer may appear to be the very death of all his poetry and all his visions – the cold touch of the calculating mind – this has proved to be the spell by which knowledge has been born, by which new sciences have been created, and hundreds of definite problems put before the minds and into the hands of diligent students. It is the geometrical figure, the dry

algebraical formula, which transforms the vague reasoning of the philosopher into a tangible and manageable conception; which represents, though it does not explain, the things and processes of nature: this clothes the fruitful, but otherwise indefinite, ideas in such a form that the strict logical methods of thought can be applied, that the human mind can in its inner chamber evolve a train of reasoning the result of which corresponds to the phenomena of the outer world.

*A History of the European Thought in the Nineteenth Century*  
(Volume 1)  
The Astronomical View of Nature (p. 314)  
William Blackwood & Sons. Edinburgh, Scotland. 1907

## MATHEMATICAL STATISTICS

### Fisher, Sir Ronald Aylmer 1890–1962

English statistician and geneticist

I believe sanity and realism can be restored to the teaching of Mathematical Statistics most easily and directly by entrusting such teaching largely to men and women who have had personal experience of research in the Natural Sciences.

Scientific Thought and the Refinement of Human Reasoning  
*Journal of the Operations Research Society of Japan*, Volume 3, 1960

## MATHEMATICAL STUDIES

### Arbuthnot, John 1667–1735

Scottish mathematician and physician

...mathematical studies may serve for a pleasant entertainment for those hours which young men are apt to throw away upon their vices; the delightfulness of them being such as to make solitude not only easy, but desirable.

In Robert Chambers & Robert Carruthers  
*Cyclopaedia of English Literature* (Volume 3) (3rd edition)  
Usefulness of Mathematical Learning (p. 362)  
American Book Exchange. New York, New York, USA. 1879

### Mill, John Stuart 1806–73

English political philosopher and economist

Neither is it a small advantage of mathematical studies, even in their poorest and most meagre form, that they at least habituate the mind to resolve a train of reasoning into steps, and make sure of each step before advancing to another.

*An Examination of Sir William Hamilton's Philosophy*  
Chapter XXVII (p. 526)  
Longmans, Green & Co. London, England. 1865

## MATHEMATICAL STUDY

### Lodge, Sir Oliver 1851–1940

English physicist

For, observe, that the mathematical study of Nature, the discovery of truth with a piece of paper and a pen, has a perilous similarity at first sight to the straw-thrashing subtleties of the Greeks, whose methods of investigating nature by discussing the meaning of words and the usage of language and the necessities of thought, had proved to be so futile and unproductive.

*Pioneers of Science*

Lecture VI (p. 157)

Macmillan & Co Ltd. London, England. 1905

**Mordell, Louis Joel** 1888–1972

English mathematician

Mathematical study and research are very suggestive of mountaineering. Whymper made several efforts before he climbed the Matterhorn in the 1860s and even then it cost the life of four of his party. Now, however, any tourist can be hauled up for a small cost, and perhaps does not appreciate the difficulty of the original ascent. So in mathematics, it may be found hard to realise the great initial difficulty of making a little step which now seems so natural and obvious, and it may not be surprising if such a step has been found and lost again.

*Three Lectures on Fermat's Last Theorem* (p. 4)

Chelsea Publishing Company. New York, New York, USA. 1980

## MATHEMATICAL SUBJECT

**de Morgan, Augustus** 1806–71

English mathematician and logician

The greatest writers on mathematical subjects have a genius which saves them from their own slips, and guides them to true results through inaccurate expression, and sometimes through absolute error.

*The Differential and Integral Calculus* (p. 619)

Baldwin & Cradick. London, England. 1836

**Klein, Felix** 1849–1925

German mathematician

But it should always be required that a mathematical subject not be considered exhausted until it has become intuitively evident...

In Morris Kline

*Mathematical Thought from Ancient to Modern Times* (p. 904)

Oxford University Press, Inc. New York, New York, USA. 1972

**von Neumann, John** 1903–57

Hungarian-American mathematician

...at a great distance from its empirical source, or after much "abstract" inbreeding, a mathematical subject is in danger of degeneration. At the inception the style is usually classical; when it shows signs of becoming baroque, then the danger signal is up.... In any event, whenever

this stage is reached, the only remedy seems to me to be the rejuvenating return to the source: the reinjection of more or less directly empirical ideas. I am convinced that this was a necessary condition to conserve freshness and vitality of the subject and that this will remain equally true in the future.

*Collected Works* (Volume 1)

The Works of the Mind, The Mathematician (pp. 6, 9)

Pergamon Press. New York, New York, USA. 1961–1963

## MATHEMATICAL SYMBOLISM

### The Right Honorable Viscount Haldane

The difficulty that attends mathematical symbolism is the accompanying tendency to take the symbol as exhaustively descriptive of reality.

Translated by Joseph McCabe

*Einstein And The Universe: A Popular Exposition of The Famous Theory*

Preface (p. v)

Henry Holt & Co. New York, New York, USA. 1922

## MATHEMATICAL SYMBOLS

**Fisher, Sir Ronald Aylmer** 1890–1962

English statistician and geneticist

It would certainly be a mistake to say that the manipulation of mathematical symbols requires more intellect than original thought in biology; on the contrary, it seems much more comparable to the manipulation of the microscope and its appurtenances of stains and fixatives; whilst original thought in both spheres represents very similar activities of an identical faculty.

*Genetical Theory of Natural Selection*

Preface (p. viii)

At The Clarendon Press. Oxford, England. 1930

**O'Brien, Katharine**

Mathematician

Said an upside-down A to an inside-out E,

"*Universal's* the epithet measuring me.

Your scope is so small

Compared with *For all* –

*There is no more than of form of To be.*"

V and  $\exists$

*The Mathematical Magazine*, Volume 55, Number 1, January, 1982 (p. 41)

## MATHEMATICAL SYSTEM

**Lewis, Clarence Irving** 1883–1964

American philosopher

A mathematical system is any set of strings of recognizable marks in which some of the strings are taken initially and the remainder derived from these by operations performed according to rules which are independent of any meaning assigned to the marks. That a system should consist of marks instead of sounds or odors is immaterial, but it is convenient to discuss mathematics as written. The string-like arrangement is due simply to our habits of notation. And there is no theoretical reason why a single mark may not, in some cases, be recognized as a “string”.

*A Survey of Symbolic Logic*

Chapter VI (p. 355)

University of California. Berkeley, California, USA. 1918

## MATHEMATICAL TALENT

**Dieudonné, Jean** 1906–92

French mathematician and educator

...in the flowering of a mathematical talent social environment has an important part to play.

*Mathematics – The Music of Reason*

Chapter I, Section 2 (p. 9)

Springer-Verlag. Berlin, Germany. 1992

## MATHEMATICAL TEACHING

**Barnett, Percy Arthur** 1858–1941

English educator

A “rule” is not an axiom; and to set it forth baldly and without the preliminary of previous effort to formulate it, is, we must admit, not only to deprive the pupil of a valuable lesson in inferential reasoning, but also, by asking him to recite and believe a formula which does not easily carry conviction, to paralyse his reason at the outset, and to make his work mechanical and less interesting than it should be.

*Common Sense in Education and Teaching: An Introduction to Practice* (4th edition)

Chapter IX (p. 223)

Longmans, Green & Co. London, England. 1905

**Keyser, Cassius Jackson** 1862–1947

American mathematician

My conviction is, that hope of improvement in mathematics teaching, whether in secondary schools or in colleges, lies mainly in the possibility of humanizing it.

*The Human Worth of Rigorous Thinking: Essays and Addresses*

Chapter III (p. 62)

Columbia University Press. New York, New York, USA. 1916

**Mutchler, Fred**

No biographical data available

**Craig, J.**

No biographical data available

In [teaching] mathematics two ends are constantly kept in view: First, stimulation of the inventive faculty, exercise of judgment, development of logical reasoning, and the habit of concise statement; second, the association of the branches of pure mathematics with each other and with applied science, that the pupil may see clearly the true relations of principles and things.

*A Course of Study for the Preparation of Rural School Teachers* (p. 7)

Government Printing Office. Washington, D.C. 1912

The ends to be attained [in mathematical teaching] are the knowledge of a body of geometrical truths to be used in the discovery of new truths, the power to draw correct inferences from given premises, the power to use algebraic processes as a means of finding results in practical problems, and the awakening of interest in the science of mathematics.

*A Course of Study for the Preparation of Rural School Teachers* (p. 7)

Government Printing Office. Washington, D.C. 1912

## MATHEMATICAL THEOREM

**Jevons, William Stanley** 1835–82

English economist and logician

In abstract mathematical theorems the approximation to absolute truth is perfect, because we can treat of infinitesimals. In physical science, on the contrary, we treat of the least quantities which are perceptible.

*The Principles of Science: A Treatise on Logic and Scientific Method*

Chapter XXI (p. 478)

Macmillan & Co Ltd. London, England. 1887

**Neumann, John von** 1903–57

Hungarian-American mathematician

One expects a mathematical theorem or a mathematical theory not only to describe and to classify in a simple and elegant way numerous and a priori disparate special cases. One also expects “elegance” in its “architectural,” structural makeup. Ease in stating the problem, great difficulty in getting hold of it and in all attempts at approaching it, then again some very surprising twist by which the approach, or some part of the approach, becomes easy, etc. Also, if the deductions are lengthy or complicated, there should be some simple general principle involved, which “explains” the complications and detours, reduces the apparent arbitrariness to a few simple guiding motivations, etc. These criteria are clearly those of any creative art, and the existence of some underlying empirical, worldly motif in the background – often in a very remote background – overgrown by aestheticizing developments and followed into a multitude of labyrinthine variants, all

this is much more akin to the atmosphere of art pure and simple than to that of the empirical sciences.

In Raymond George Ayoub

*Musings of the Masters: An Anthology of Mathematical Reflections*

The Mathematician (p. 183)

Mathematical Association of America. Washington, D.C. 2004

## MATHEMATICAL THEORY

**Cayley, Arthur** 1821–95

English mathematician

As for everything else, so for a mathematical theory: beauty can be perceived but not explained.

In E.T. Bell and James R. Newman

*The World of Mathematics* (Volume 1)

Invariant Twins, Cayley and Sylvester (p. 341)

Simon & Schuster. New York, New York, USA. 1956

**Newman, M. H. A.**

No biographical data available

That mathematical theory is a lasting object to believe in few can doubt. Mathematical language is difficult but imperishable. I do not believe that any Greek scholar of today can understand the idiomatic undertones of Plato's dialogues, or the jokes of Aristophanes, as thoroughly as mathematicians can understand every shade of meaning in Archimedes' works.

What Is Mathematics?

*Mathematical Gazette*, Volume 43, Number 345, October, 1959 (p. 167)

**Veblen, Oswald** 1880–1960

American mathematician

...the abstract mathematical theory has an independent, if lonely existence of its own. But when a sufficient number of its terms are given physical definitions it becomes a part of a vital organism concerning itself at every instant with matters full of human significance. Every theorem can be given the form 'if you do so and so, such and such will happen.'

Remarks on the Foundation of Geometry

*Bulletin of the American Mathematical Society*, Volume 35, 1935

(p. 135)

## MATHEMATICAL THINKING

**Bill, Max** 1908–94

Swiss architect

I am of the opinion that it is possible to develop an art largely on the basis of mathematical thinking.

In Eli Maor

*To Infinity and Beyond: A Cultural History of the Infinite* (p. 139)

Birkhäuser. Boston, Massachusetts, USA. 1987

**Picard, Charles Emile** 1856–1941

French mathematician

I am not unaware of the difficulties of the task [explaining analysis] which I am undertaking. Activity in mathematical thinking today is such that it is perhaps presumptuous to attempt to sketch, in so vast an area, the present state of the science. The portrait, even if it is a good likeness, is fated, in parts at least, to become dated quickly. But that does not matter so long as I propose merely to be useful as a guide to those who wish to acquaint themselves with modern analysis and who fear that, alone, they may lose their way in the multiplicity of papers which fill the learned scientific periodicals.

*Traite d'analyse*

Preface

Gauthier-Villars et fils. Paris, France. 1893–1901

## MATHEMATICAL THOUGHT

**Hilbert, David** 1862–1943

German mathematician

The appearance of what we call intrinsic harmony is also striking, in a sense other than that used by Leibniz, that it is an embodiment and realization of mathematical thought.... We can only understand this agreement between nature and thought, between experiment and theory, if we take into consideration the formal component of both sides of nature and our understanding, and the mechanism on which it depends. The mathematical process of analysis gives us, or so it appears, the focus and footings to which matter in the real world, as well as thought in the world of the mind, withdraw and cede control and direction.

*Musings of the Masters: An Anthology of Mathematical Reflections*

Logic and the Understanding of Nature (p. 121)

Mathematical Association of America. Washington, D.C. 2004

**Keyser, Cassius Jackson** 1862–1947

American mathematician

The apodictic quality of mathematical thought, the certainty and correctness of its conclusions, are due, not to a special mode of ratiocination, but to the character of the concepts with which it deals. What is that distinctive characteristic? I answer: precision, sharpness, completeness of definition. But how comes your mathematician by such completeness? There is no mysterious trick involved; some ideas admit of such precision, others do not; and the mathematician is one who deals with those that do.

The Universe and Beyond

*Hilbert Journal*, Volume 3 (1904–1905) (p. 309)

**Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

The sole natural object of mathematical thought is the whole number. It is the external world which has

imposed the continuum upon us, which we doubtless have invented, but which it has forced us to invent. Without it there would be no infinitesimal analysis; all mathematical science would reduce itself to arithmetic or to the theory of substitutions.

Translated by George Bruce Halsted

*The Value of Science*

Part Second, Chapter V (p. 80)

The Science Press. New York, New York, USA. 1907

**Weyl, Hermann** 1885–1955

German mathematician

The stringent precision attainable for mathematical thought has led many authors to a mode of writing which must give the reader the impression of being shut up in a brightly illuminated cell where every detail sticks out with the same dazzling clarity, but without relief. I prefer the open landscape under the clear sky with its depth of perspective, where the wealth of sharply defined nearby details gradually fades away towards the horizon.

*The Classical Groups; Their Invariants and Representations*

Preface

Princeton University Press. Princeton, New Jersey, USA. 1946

## MATHEMATICAL TRAINING

**Huxley, Thomas Henry** 1825–95

English biologist

Mathematical training, is almost purely deductive. The mathematician starts with a few simple propositions, the proof of which is so obvious that they are called self-evident, and the rest of his work consists of subtle deductions from them.

Scientific Education: Notes of an After-Dinner Speech

New Series

*The Eclectic Magazine*, Volume X, July-December, 1869 (p. 155)

**Leacock, Stephen** 1869–1944

Canadian humorist

How can you shorten the subject? That stern struggle with the multiplication table, for many people not yet ended in victory, how can you make it less? Square root, as obdurate as a hardwood stump in a pasture – nothing but years of effort can extract it. You can't hurry the process. Or pass from arithmetic to algebra; you can't shoulder your way past quadratic equations or ripple through the binomial theorem. Instead, the other way; your feet are impeded in the tangled growth, your pace slackens, you sink and fall somewhere near the binomial theorem with the calculus in sight on the horizon. So died, for each of us, still bravely fighting, our mathematical training; except for a set of people called "mathematicians" – born so, like crooks.

*Too Much College* (p. 8)

Dodd, Mead & Co. New York, New York, USA. 1939

## MATHEMATICAL TREATMENT

**Bergson, Henri** 1859–1941

French philosopher

...calculation touches, at most, certain phenomena of organic destruction. Organic creation, on the contrary, the evolutionary phenomena which properly constitute life, we cannot in any way subject to mathematical treatment.

Translated by Arthur Mitchell

*Creative Evolution*

Chapter I (p. 20)

The Modern Library. New York, New York, USA. 1944

## MATHEMATICAL TRUTH

**Berry, John J.**

No biographical data available

They [women] can add or subtract; they can multiply and they can divide; but here their capacity for any mathematical truth ends. There is, indeed, as Sir Isaac Newton sadly remarked, something very mysterious in women, and the less we try to find it out the better.

*Life of David Belden*

Chapter V (p. 105)

Beldon Brothers. New York, New York, USA. 1891

**Colton, Charles Caleb** 1780–1832

English sportsman and writer

He that gives a portion of his time and talent to the investigation of mathematical truth will come to all other questions with a decided advantage over his opponents. He will be in argument what the ancient Romans were in the field: to them the day of battle was a day of comparative recreation because they were ever accustomed to exercise with arms much heavier than they fought; and reviews differed from a real battle in two respects: they encountered more fatigue, but the victory was bloodless.

*Lacon; or Many Things in a Few Words* (p. 178)

William Gowans. New York, New York, USA. 1849

**Davis, Philip J.** 1923–

American mathematician

**Hersh, Reuben** 1927–

American mathematician

As mathematicians, we know that we invent ideal objects, and then try to discover the facts about them. Any philosophy which cannot accommodate this knowledge is too small. We need not retreat to formalism when attacked by philosophers. Neither do we have to admit that our belief in the objectivity of mathematical truth is

Platonic in the sense of requiring an ideal reality apart from human thought. Lakatos' and Popper's work shows that modern philosophy is capable of accepting the truth of mathematical experience. This means accepting the legitimacy of mathematics as it is: fallible, correctible, and meaningful.

*The Mathematical Experience*

True Facts About Imaginary Objects (pp. 410–411)  
Birkhäuser. Boston, Massachusetts, USA. 1981

**Keyser, Cassius Jackson** 1862–1947  
American mathematician

Who is so unfortunate as not to know something of the religious awe, the solace and the peace that come from cloistral contemplation of the purity and everlastingness of mathematical truth?

*The Human Worth of Rigorous Thinking: Essays and Addresses*

Chapter II (p. 60)

Columbia University Press. New York, New York, USA. 1916

**Lemoine, Emile**

No biographical data available

A mathematical truth is neither simple nor complicated in itself, it is.

In E.T. Bell

*Men of Mathematics* (p. xv)

Simon & Schuster. New York, New York, USA. 1937

**Locke, John** 1632–1704

English philosopher and political theorist

And thus many are ignorant of mathematical truths, not out of any imperfection of their faculties, or uncertainty in the things themselves, but for want of application in acquiring, examining, and by due ways comparing those ideas.

*An Essay Concerning Human Understanding*

27th Book IV, Chapter 4 (p. 430)

Printed for T. Tegg & Son. London, England. 1836

I doubt not but it will be easily granted, that the knowledge we have of mathematical truths is not only certain, but real knowledge; and not the bare empty vision of vain, insignificant chimeras of the brain...

*An Essay Concerning Human Understanding*

27th Book IV, Chapter 4 (p. 433)

Printed for T. Tegg & Son. London, England. 1836

**Mill, John Stuart** 1806–73

English political philosopher and economist

The character of necessity ascribed to the truths of mathematics and even the peculiar certainty attributed to them is an illusion.

In Morris Kline

*Mathematical Thought from Ancient to Modern Times* (p. 861)

Oxford University Press, Inc. New York, New York, USA. 1972

The peculiarity of the evidence of mathematical truths is that all the argument is on one side. There are no objections, and no answers to objections.

In *Great Books of the Western World* (Volume 43)

*On Liberty*

Of the Liberty of Thought and Discussion (p. 284)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Nordmann, Charles** 1881–1940

French astronomer

Mathematical truths and scientific discoveries have an intrinsic value, and this must be judged and appreciated impartially, whoever their author may chance to be.

Translated by Joseph McAbe

*Einstein and the Universe: A Popular Exposition of the Famous Theory*

Chapter I (p. 18)

T. Fisher Unwin Ltd. London, England. 1922

**Whewell, William** 1794–1866

English philosopher and historian

The peculiar character of mathematical truth is that it is necessarily and inevitably true; and one of the most important lessons which we learn from our mathematical studies is a knowledge that there are such truths, and a familiarity with their form and character.

This lesson is not only lost, but read backward if the student is taught that there is no such difference [between necessary truths and empirical facts], and that mathematical truths themselves are learned by experience.

*Principles of English University Education*

Thoughts on the Study of Mathematics

John W. Parker. London, England. 1838

## MATHEMATICAL WORK

**Papert, Seymour** 1928–

South African mathematician

Mathematical work does not proceed along the narrow logical path of truth to truth to truth, but bravely or gropingly follows deviations through the surrounding marshland of propositions which are neither simply and wholly true nor simply and wholly false.

*Mindstorms: Children, Computers and Powerful Ideas*

Epilogue (p. 195)

Basic Books, Inc. New York, New York, USA. 1980

## MATHEMATICAL WRITING

**Halmos, Paul R.** 1916–2006

Hungarian-born American mathematician

I remember one occasion when I tried to add a little seasoning to a review, but I wasn't allowed to. The paper was by Dorothy Maharam, and it was a perfectly sound

contribution to abstract measure theory. The domains of the underlying measures were not sets but elements of more general Boolean algebras, and their range consisted not of positive numbers but of certain abstract equivalence classes. My proposed first sentence was: “The author discusses valueless measures in pointless spaces.”

*I Want to Be a Mathematician*

Chapter 7 (p. 120)

Springer-Verlag. New York, New York, USA. 1985

**Kac, Mark** 1914–84

Polish mathematician

**Rota, Gian-Carlo** 1932–99

Italian-born American mathematician

**Schwartz, Jacob T.** 1930–

American mathematician

Mathematicians, like Proust and everyone else, are at their best when writing about their first love.

*Discrete Thoughts: Essays on Mathematics, Science, and Philosophy*

Chapter One (p. 3)

Springer-Verlag. New York, New York, USA. 1992

## MATHEMATICALLY CERTAIN

**Dresden, Arnold**

Mathematician

To find something which is “mathematically certain” is still, as it ever was, the desire of every seeker after “truth.”

Some Philosophical Aspects of Mathematics

*Bulletin of the American Mathematical Society*, Volume 34 July-August, 1928 (p. 439)

## MATHEMATICALLY ILLITERATE

**Davies, Robertson** 1913–95

Canadian novelist

Although I am almost illiterate mathematically, I grasped very early in life that anyone who can count to ten can count upward indefinitely if he is fool enough to do so.

*The Table Talk of Samuel Marchbanks*

Of the Conservation of Youth (pp. 27–28)

Clarke, Irwin. Toronto, Ontario, Canada. 1949

## MATHEMATICIAN

**Adams, Henry Brooks** 1838–1918

American man of letters

Mathematicians practice absolute freedom.

*A Letter to American Teachers of History*

Chapter II (p. 169)

Press of J.H. Furst Company. Washington, D.C. 1910

Mathematicians assume the right to choose, within the

limits of logical contradiction, what path they please in reaching their results.

*A Letter to American Teachers of History*

Preface (p. v)

Press of J.H. Furst Company. Washington, D.C. 1910

He supposed that, except musicians, everyone thought Beethoven a bore, as everyone except mathematicians thought mathematics a bore.

In Ernest Samuels (ed.)

*The Education of Henry Adams*

Chapter V (p. 80)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1974

**Adler, Alfred** 1870–1937

Austrian psychiatrist

Each generation has its few great mathematicians, and mathematics would not even notice the absence of the others. They are useful as teachers, and their research harms no one, but it is of no importance at all. A mathematician is great or he is nothing.

In Douglas M. Campbell and John C. Higgins (eds.)

*Mathematics: People, Problems, Results* (Volume 2)

Mathematics and Creativity (p. 3)

Wadsworth, Inc. Belmont, California, USA. 1984

...the mathematician learns early to accept no fact, to believe no statement, however apparently reasonable or obvious or trivial, until it has been proved, rigorously and totally by a series of steps proceeding from universally accepted first principles.

In Douglas M. Campbell and John C. Higgins (eds.)

*Mathematics: People, Problems, Results* (Volume 2)

Mathematics and Creativity (p. 5)

Wadsworth, Inc. Belmont, California, USA. 1984

The mathematical life of a mathematician is short. Work rarely improves after the age of twenty-five or thirty. If little has been accomplished by then, little will ever be accomplished.

In Douglas M. Campbell and John C. Higgins (eds.)

*Mathematics: People, Problems, Results* (Volume 2)

Mathematics and Creativity (p. 5)

Wadsworth, Inc. Belmont, California, USA. 1984

Perhaps mathematicians, lacking the imagination to appreciate the scope and sophistication of the outside world, confuse minor success with real achievement and are satisfied with it. Then, too, they seldom recognize failure when they are confronted with it; rather, they tend to think of it as simply one more betrayal by a society that usually patronizes them while elevating armies of patently inferior claimants. In the academic world, on the other hand, mathematicians often enjoy rewards that they do no merit. They are engulfed by admirers from the department of philosophy and the social sciences...

In Douglas M. Campbell and John C. Higgins (eds.)

*Mathematics: People, Problems, Results* (Volume 2)

Mathematics and Creativity (p. 6)

Wadsworth, Inc. Belmont, California, USA. 1984

In the company of friends, writers can discuss their books, economists the state of the economy, lawyers their latest cases, and businessmen their latest acquisitions, but mathematicians cannot discuss their mathematics at all. And the more profound their work, the less understandable it is.

In Douglas M. Campbell and John C. Higgins (eds.)  
*Mathematics: People, Problems, Results* (Volume 2)  
Mathematics and Creativity (p. 7)  
Wadsworth, Inc. Belmont, California, USA. 1984

### Arms, Richard Allen

Mathematician

...the mathematician is always walking upon the brink of a precipice, for, no matter how many theorems he deduces, he cannot tell that some contradiction will not await him in the infinity of consequences.

*The Notion of Number and the Notion of Class*  
Mathematical Usage (p. 55)  
University of Pennsylvania. Pittsburgh, Pennsylvania, USA. 1917

### Ascham, Roger 1516–68

English humanist and scholar

Mark all Mathematical heads [he continued] which be wholly and only bent on these sciences, how solitary they be themselves, how unfit to live with others, how unapt to serve the world.

In E.G.R. Taylor  
*The Mathematical Practitioners of Tudor & Stuart England* (p. 5)

### Auden, W. H. 1907–72

English-born poet

How happy the lot of the mathematician! He is judged solely by his peers, and the standard is so high that no colleague or rival can ever win a reputation he does not deserve.

*The Dyer's Hand and Other Essays*  
Writing (p. 15)  
Random House. New York, New York, USA. 1962

### Author undetermined

Mathematicians are always found more eager to continue and extend the theories of others, than to investigate the original primary proposition, and it is difficult to obtain any reasoning upon a theory, but what has been copied from the works of the original inventor: they are willing to admit a theory correct, because they find the mechanical detail so: to calculation they are accustomed; but the abstruse theoretical part requires an exertion of the mind, which being rarely necessary, so the mind is seldom fit for such exertion. Hence, when the theory becomes extended, the results are found contradictory, at variance with practice, and often with common sense.

*Glasgow Mechanics' Magazine, and Annals of Philosophy*  
Miscellanies  
Number 133, July 8, 1826 (p. 306)

Rail-roads branching off towards infinity, offer great conveniences to tramping philosophers and amateurs of a metaphysical turn, and balloon communication is kept up with those dim regions, where certain mathematicians lie in a kind of opium-dream, and sail around in whirlpools, century after century, wrapped in a gorgeous delirium.

*The Knickerbocker*  
The Symbol of Darkness  
Volume 34 September, 1849 (p. 213)

The mathematician is either a beggar, a dunce, or a visionary, or the three in one.

*Edinburgh Review*, Volume 52 January, 1836

A MATHEMATICIAN is one who endeavors to secure the greatest possible consistency in his thoughts and statements by guiding the process of his reasoning into those well-worn tracks by which we pass from one relation among quantities to an equivalent relation. He who has kept his mind always in those paths which have never led him or anyone else to an inconsistent result, and has traversed them so often that the act of passage has become rather automatic than voluntary, is, and knows himself to be, an accomplished mathematician.

Quaternions  
*Nature*, Volume 9, Number 217, December 25, 1873 (p. 137)

Mathematicians may flatter themselves that they possess new ideas which mere human language is as yet unable to express. Let them make the effort to express these ideas in appropriate words without the aid of symbols, and if they succeed, they will not only lay us laymen under a lasting obligation, but, we venture to say, they will find themselves very much enlightened during the process, and will even be doubtful whether the ideas as expressed in symbols had ever quite found their way out of the equations into their minds.

Elements of Natural Philosophy  
*Nature*, Volume 7, Number 177, March 27, 1873 (p. 400)

### Barrow, Isaac 1630–77

English clergyman and mathematician

An accomplished mathematician, i.e. a most wretched orator.

*Mathematical Lectures* (p. 32)  
The Prefatory Oration (p. xxxii)  
Printed for Stephen Austen. London, England. 1734

It may be observed of mathematicians that they only meddle with such things as are certain, passing by those that are doubtful and unknown. They profess not to know all things, neither do they affect to speak of all things. What they know to be true, and can make good by invincible arguments, that they publish and insert among their theorems. Of other things they are silent and pass no judgment at all, choosing rather to acknowledge their ignorance, than affirm anything rashly.

*Mathematical Lecture*

Lecture IV (p. 64)

Printed for Stephen Austen. London, England. 1734

[Mathematicians] only take those things into consideration, of which they have clear and distinct ideas, designating them by proper, adequate, and invariable names, and premising only a few axioms which are most noted and certain to investigate their affections and draw conclusions from them, and agreeably laying down a very few hypotheses, such as are in the highest degree consonant with reason and not to be denied by anyone in his right mind. In like manner they assign generations or causes easy to be understood and readily admitted by all, they preserve a most accurate order, every proposition immediately following from what is supposed and proved before, and reject all things howsoever specious and probable which cannot be inferred and deduced after the same manner.

*Mathematical Lectures*

Lecture IV (p. 65)

Printed for Stephen Austen. London, England. 1734

**Bell, E. T. (Eric Temple)** 1883–1960

Scottish-American mathematician and educator

Guided only by their feeling for symmetry, simplicity, and generality, and an undefinable sense of the fitness of things, creative mathematicians now, as in the past, are inspired by the art of mathematics rather than by any prospect of ultimate usefulness.

*The Queen of the Sciences* (p. 2)

G.E. Stechert &amp; Co. New York, New York, USA. 1938

Mathematicians may safely be left to follow their own bent as their contributions to this age of science. What they did in the past century is enough for a vast region of science and technology as they exist today; what mathematicians as professionals are interested in today will, if there is any continuity at all in scientific and industrial history, be the indispensable framework of the science and technology of tomorrow.

*The Queen of the Sciences*

Chapter VI (p. 83)

The Williams &amp; Wilkins Company. Baltimore, Maryland, USA. 1931

That wretched monosyllable “all” has caused mathematicians more trouble than all the rest of the dictionary.

*The Queen of the Sciences*

Chapter X (p. 134)

The Williams &amp; Wilkins Company. Baltimore, Maryland, USA. 1931

The mathematician is a much rarer character in fiction than his cousin the scientist, and when he does appear in the pages of a novel or on the screen he is only too apt to be a slovenly dreamer totally devoid of common sense – comic relief.

*Men of Mathematics* (p. 8)

Simon &amp; Schuster. New York, New York, USA. 1937

Fools have always been governed by fools and doubtless always will be, but not all scientists and mathematicians are yet fools.

*Mathematics: Queen and Servant of Science*

Points of View (p. 13)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1951

If mathematics is indeed the science of self-evident things, mathematicians are a phenomenally stupid lot to waste the tons of good paper they do in proving the fact.

*Mathematics: Queen and Servant of Science*

Mathematical Truth (p. 20)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1951

Mathematicians are not, as a rule, credulous; their clients almost invariably are.

*Mathematics: Queen and Servant of Science*

Choice and Chance (p. 381)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1951

Experience has taught most mathematicians that much that looks solid and satisfactory to one mathematical generation stands a fair chance of dissolving into cobwebs under the steadier scrutiny of the next...

In Morris Kline

*Mathematics: The Loss of Certainty*

Chapter XI (p. 257)

Oxford University Press, Inc. New York, New York, USA. 1980

When a complicated mathematical argument ends in a spectacular prediction, subsequently verified by observation or experiment, a physicist may be excused for feeling that he has participated in a miracle. And then a skilled mathematician astounds himself with a discovery he had no conscious intention of striving after, he may well believe for a few moments as Pythagoras believed all his life, and may even repeat – after the eminent English mathematician, G.H. Hardy – the following confession of faith. [I believe that mathematical reality lies outside us, that our function is to discover or observe it, and that the theorems which we prove, and which we describe grandiloquently as our ‘creations’ are simply our notes of our observations.]

*The Magic of Numbers*

Chapter 1 (p. 8)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1946

Mathematics is but one of many expedients resorted to by scientists, and in many instances one of the less important. Scientists have checks on their work that no mathematician can ever have. At any stage of an investigation a scientist can compare the results of his calculations with nature itself. To indoctrinate a sanguine scientist with all the subtle dogmas concerning the meaning of continuity, on which mathematicians themselves see no immediate hope of agreement, is to invite the risk of sterilizing a potentially creative mind. Those self-righteous mathematicians or logicians who

carp at what they call the slap-dash mathematics of their scientific brothers might more profitably employ their squandered leisure in shoring up their own tottering shanties.

*The Handmaiden of the Sciences*

Chapter 4 (p. 63)

Williams & Wilkins Co. Baltimore, Maryland, USA. 1937

**Bellman, Richard** 1920–84

Applied mathematician

...mathematicians makes natural questions precise.

Chapter 9 (p. 114)

World Scientific Publishing Company. Ltd. Singapore. 1984

**Berlinski, David** 1942–

American mathematician

It is a fact. At some time or other the mathematicians of Europe looked out over the universe, noted its appalling clutter, and determined that on some level there must exist a simple representation of the world.

*A Tour of the Calculus*

Chapter 2 (p. 9)

Pantheon Books. New York, New York, USA. 1995

**Bernoulli, Daniel** 1700–82

Swiss mathematician

...there is no philosophy which is not founded upon knowledge of the phenomena, but to get any profit from this knowledge it is absolutely necessary to be a mathematician.

In C. Truesdell

*Essays in the History of Mechanics*

Chapter VII (p. 318)

Springer-Verlag, Inc. New York, New York, USA. 1968

**Bers, Lipman** 1914–93

Mathematician

Mathematics is an exceedingly cruel profession. You notice that if somebody has a bachelor's degree in chemistry, he describes himself as a chemist. But if somebody has been a professor of mathematics for ten years and you ask him, "Are you a mathematician?" he may say, "I'm trying to be one!".... The standard is so high, and you never know whether you will be able to hack it. First you are afraid that you won't be able to understand your professors. Then you are afraid that you won't be able to write a thesis. When I went to Loewner to ask for a thesis topic, I expected him to grab me by the neck and say, "What makes you think you can write a thesis on mathematics? OUT!!!"

In D. Albers, G. Alexanderson and C. Reid

*More Mathematical People: Contemporary Conversations*

Lipman Bers (p. 14)

Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

A working mathematician is always a Platonist. It doesn't matter what he says. He may not be a Platonist at other times. But I think that in mathematics he always has that feeling of discovery.

In D. Albers, G. Alexanderson and C. Reid

*More Mathematical People: Contemporary Conversations*

Lipman Bers (p. 19)

Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

I disagree with Adler, who wrote (in the New Yorker) that there is no point in being a mathematician unless you can be a great mathematician. That's nonsense. Mathematics is like a gothic cathedral. If you can build a little part of it, it is there – forever – in some sense. At least I have the illusion that it is so.

In D. Albers, G. Alexanderson and C. Reid

*More Mathematical People: Contemporary Conversations*

Lipman Bers (p. 20)

Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

Usually people do their best work when they are young. And this is probably true of very good mathematicians. But in my case – and I think that most people who know my work will agree – what I did after forty was more interesting and more important than what I did before forty.

In D. Albers, G. Alexanderson and C. Reid

*More Mathematical People: Contemporary Conversations*

Lipman Bers (p. 20)

Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

**Birkhoff, George David** 1884–1944

American mathematician

...[a mathematician] holds certain tacit beliefs and attitudes which scarcely ever find their way into the printed page.... when he recalls that in the past the most difficult mathematical questions have been ultimately answered, he is inclined to believe with the great German mathematician, Hilbert, that every mathematical fact is provable. Besides all this, he attributes certain values to his results and their mathematical demonstrations; some theories seem important; some proofs are regarded as elegant, others as profound or original, etc. Such somewhat vague ideas illustrate what I would call mathematical faith. Nearly all the greatest mathematicians have been led to take points of view falling in this broad category, and have attached the deepest significance to them.

In Raymond George Ayoub

*Musings of the Masters: An Anthology of Mathematical Reflections*

Part II (pp. 102, 102–1)

Mathematical Association of America. Washington, D.C. 2004

**Black, Max** 1909–88

Anglo-American philosopher

...a result once generally accepted by mathematicians is seldom retracted, and then only with great pangs.

*The Nature of Mathematics: A Critical Survey*

Section III (p. 169)

Routledge & Kegan Paul. London, England. 1933

**Boas, Jr., Ralph P.** 1913–92  
Mathematician

Real mathematicians, except for a small number of geniuses, don't do anything except mathematics.... Although I am fond of classical music, I never learned to play an instrument, and I am hopelessly unathletic. However, I grew up in the country and summered on Cape Cod, so I console myself by being able to do some things that my more cultivated colleagues probably can't. I do, for example, know how to sail a boat, shingle a roof, cut grass with a scythe, and fell a tree so that it will fall where I want it to.

In D. Albers, G. Alexanderson and C. Reid  
*More Mathematical People: Contemporary Conversations* (pp. 30–31)  
Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

**Boltzmann, Ludwig Edward** 1844–1906  
Austrian physicist

A mathematician will recognize Cauchy, Gauss, Jacobi, of Helmholtz after reading a few pages, just as musicians recognize, from the first few bars, Mozart, Beethoven, or Schubert.

In Arthur Koestler  
*The Act of Creation*  
Book One, Part Two, Chapter XI (p. 265)  
The Macmillan Company. New York, New York, USA. 1964

**Bonaparte, Napoleon** 1769–1821  
French soldier and emperor of France

Lagrange is the lofty pyramid of the mathematical sciences.

In E.T. Bell  
*Men of Mathematics* (p. 153)  
Simon & Schuster. New York, New York, USA. 1937

**Bourbaki, Nicholas**  
Mathematical discussion group leader

For twenty-five centuries mathematicians have been in the habit of correcting their errors – and seeing their science enriched rather than impoverished thereby. This gives them the right to contemplate the future with serenity.

In Lucienne Felix  
*The Modern Aspect of Mathematics* (p. 33)  
Basic Books. New York, New York, USA. 1960

Many mathematicians take up quarters in a corner of the domain of mathematics, which they do not intend to leave; not only do they ignore almost completely what does not concern their special field, but they are unable to understand the language and the terminology used by colleagues who are working in a corner remote from their own. Even among those who have the widest training, there are none who do not feel lost in certain regions of the immense world of mathematics; those who, like

Poincaré or Hilbert, put the seal of their genius on almost every domain, constitute a very great exception even among the men of greatest accomplishment.

In Morris Kline  
*Mathematics: The Loss of Certainty*  
Chapter XIII (p. 284)  
Oxford University Press, Inc. New York, New York, USA. 1980

**Boyd, William Andrew Murray** 1952–  
Writer

The natural world is full of irregularity and random alteration, but in the antiseptic, dust-free, shadowless, brightly lit, abstract realm of the mathematicians they like their cabbages spherical, please.

*Brazzaville Beach: A Novel*  
Cabbages Are Not Spheres (p. 86)  
William Morrow. New York, New York, USA. 1990

**Buchanan, Scott** 1895–1968  
American educator and philosopher

The mathematician has again been lured to an adventure with a symbolic hobbyhorse and has discovered new routes to the absolute or infinite. After a trial journey he has come back to earth and sets a new fashion in intellectual locomotion. The new vehicle feels like an airplane supported only by thin air, but the view from the rider's seat is familiar even though it involves distortions of the old perspectives. Newly discovered abstractions always have an exotic manner.

*Poetry and Mathematics*  
Chapter VIII  
The University of Chicago Press. Chicago, Illinois, USA. 1975

Book I: Life (p. 55)  
Duckworth & Co. London, England. 1906

**D'Alembert, Jean Le Rond** 1717–83  
French mathematician

It seems as if great *mathematicians* ought to be *excellent metaphysicians*, at least upon the objects about which their science proper is conversant: nevertheless, this is very far from being always the case. The logic of some of them is comprehended in their formulae, and does not extend beyond. The case resembles that of a man who has the sense of sight contrary to that of touch, or in whom the latter of these senses is only perfected at the expense of the former. These bad metaphysicians in a science in which it is so easy not to reason wrong, would infallibly be much worse, as experience proves, on matters in which they had not the calculus for a guide.

Quoted in William Hamilton  
*Discussions on Philosophy and Literature, Education and University Reform*

On the Study of Mathematics as an Exercise of the Mind (p. 293)  
Harper & Brothers Publishers. New York, New York, USA. 1861

**Dantzig, Tobias** 1884–1956  
Russian mathematician

The mathematician may be compared to a designer of garments, who is utterly oblivious of the creatures who his garments may fit. To be sure, his art originated in the necessity for clothing such creatures, but this was long ago; to this day a shape will occasionally appear which will fit into the garment as if the garment had been made for it. Then there is no end of surprise and of delight.

*The American Mathematical Monthly*, Volume 47, Number 9, November, 1940 (p. 606)

**Davis, Philip J.** 1923–  
American mathematician

**Hersh, Reuben** 1927–  
American mathematician

The ideal mathematician's work is intelligible only to a small group of specialists, numbering a few dozen or at most a few hundred. This group has existed for only a few decades, and there is every possibility that it may become extinct in another few decades. However, the mathematician regards his work as part of the very structure of the world, containing truths that are valid forever, from the beginning of time, even in the most remote corner of the universe.

*The Mathematical Experience*  
The Ideal Mathematician (p. 38)  
Birkhäuser. Boston, Massachusetts, USA. 1981

...the typical working mathematician is a Platonist on weekdays and a formalist on Sundays. That is, when he is doing mathematics he is convinced that he is dealing with an objective reality whose properties he is attempting to determine. But then, when challenged to give a philosophical account of this reality, he finds it easiest to pretend that he does not believe in it after all.

*The Mathematical Experience, Study Edition*  
The Philosophical Plight of the Working Mathematician (p. 321)  
Houghton Mifflin Co. Boston, Massachusetts, USA. 1998

**Day-Lewis, Cecil** 1904–72  
Irish poet

They say that a mathematician  
Once fell to such a passion

For x and y, he locked  
 His door to keep outside  
 Whatever might distract  
 Him from his heavenly bride:  
 And presently died  
 In the keenest of blisses  
 With a dozen untasted dishes  
 Outside his door.

On Infinity: and on the Sign of Equality (p. 145)

At The University Press. Cambridge, England. 1871

**Dieudonné, Jean** 1906–92

French mathematician and educator

...there is no criterion for appreciation which does not vary from one epoch to another and from one mathematician to another.... These divergences in taste recall the quarrels aroused by works of art, and it is a fact that mathematicians often discuss among themselves whether a theorem is more or less “beautiful.” This never fails to

surprise practitioners of other sciences: for them the sole criterion is the “truth” of a theory or formula.... Other criteria are therefore necessary to evaluate mathematical work, and these are unavoidably subjective, a fact which makes some people say that mathematics is much more an art than a science.

*Mathematics – The Music of Reason*

Chapter II, Section 2 (p. 28)

Springer-Verlag. Berlin, Germany. 1992

**Doxiadis, Apostolos** 1913–75

Greek filmmaker and former mathematician

As for mathematicians themselves: don’t expect too much help. Most of them are too far removed in their ivory towers to take up such challenges. And anyway, they are not competent. After all, they are just mathematicians – what we need is paramathe-maticians, like you.... It is you who can be the welding force, between mathematicians and stories, in order to achieve the synthesis.

Opening address to the Third Mediterranean Conference on Mathematics Education

January 3, 2003

**Digby, Sir Kenelm** 1603–65

English privateer

It is an observation which all the world can verify, that there is *nothing so deplorable as the conduct of some celebrated mathematicians in their own affairs, nor anything so absurd as their opinions on the sciences not within their jurisdiction.*

Quoted in William Hamilton

*Discussions on Philosophy and Literature, Education and University Reform*

On the Study of Mathematics as an Exercise of the Mind (p. 290)

Harper & Brothers Publishers. New York, New York, USA. 1861

**Dyson, Freeman J.** 1923–

American physicist and educator

On being asked what he meant by the beauty of a mathematical theory of physics, Dirac replied that if the questioner was a mathematician then he did not need to be told, but were he not a mathematician then nothing would be able to convince him of it.

Second Book (p. 104)

De Wolfe, Fiske & Co. Boston, Massachusetts, USA. 1890

**Faraday, Michael** 1791–1867  
English physicist and chemist

There is one thing I would be glad to ask you. When a mathematician engaged in investigating physical actions and results has arrived at his conclusions may they not be expressed in common language as fully, clearly, and definitely as in mathematical formulae? If so, would it not be a great boon to such as I to express them so? – translating them out of their hieroglyphics, that we also might work upon them by experiment. I think it must be so, because I have always found that you could convey to me a perfectly clear idea of your conclusions, which though they may give me no full understanding of the steps of your process, give me the results neither above nor below the truth, and so clear in character that I can think and work from them. If this be possible, would it not be a good thing if mathematicians, working on these subjects, were to give us the results in this popular, useful, working state, as well as in that which is their own and proper to them?

 Bd. 4, Altoma, 1862 (p. 387)  
 Publisher undetermined

**Glaisher, James Whitbread Lee** 1848–1928

English mathematician

...it always appears to me that there is a certain perfection, and also a certain luxuriance and exuberance, in the pure sciences which have resulted from the unaided, and I might almost say inspired, genius of the greatest mathematicians which is conspicuously absent from most of the investigations which have had their origin in the attempt to forge the weapons required for research in the less abstract sciences.

*Report of the Sixtieth Meeting of the British Association for the Advancement of Science*  
 Presidential Address (p. 720)  
 John Murray. London, England. 1891

Even the mathematician must sometimes ask himself the questions – not unfrequently put to him by his friends – ‘To what is it all tending? What will be the result of it all? Will there be any end?’ The last question is readily answered. There certainly can be no end; so wide and so various are the subject of investigation, so interesting and fascinating the results, so wonderful the fields of research laid open at each succeeding advance – no matter in what direction – that we may be sure that, while the love of learning and knowledge continues to exist in the human mind, there can be no relaxation of our efforts to penetrate still further into the mysterious worlds of abstract truth which lie so temptingly spread before us.

*Report of the Sixtieth Meeting of the British Association for the Advancement of Science*  
 Presidential address (p. 722)  
 John Murray. New York, New York, USA. 1891

The mathematician requires tact and good taste at every step of his work, and he has to learn to trust to his own instinct to distinguish between what is really worthy of his efforts and what is not.

Presidential Address, British Association for the Advancement of Science  
*Nature*, Section A, Volume 42, Number 1089, September 11, 1890 (p. 467)

**Gowers, Timothy** 1963–

English mathematician

...a mathematician is more anonymous than an artist. While we may greatly admire a mathematician who discovers a beautiful proof, the human story behind the discovery eventually fades away and it is, in the end, the mathematics itself that delights us.

 His Bosom vexes,  
 Reducing all the Doubts of Life  
 To Y’s and X’s.

*The Laughing Muse*  
 A Pure Mathematician (p. 40)  
 Harper & Brothers Publishers. New York, New York, USA. 1915

**Hamilton, Sir William Rowan** 1805–65

Anglo-Irish mathematician, physicist, and astronomer

Each mathematician for himself, and not anyone for any other, not even all for one, must tread that more than

royal road which leads to the palace and sanctuary of mathematical truth.

*Report of the Fifth Meeting of the British Association for the Advancement of Science*

Address by Sir William Hamilton (p. xliii)

John Murray. London, England. 1836

Each [mathematician], for himself, in his own personal being, must awaken and call forth to mental view the original intuitions of time and space; must meditate himself on those eternal forms, and follow for himself that linked chain of thought which leads, from principles inherent in the child and the peasant, from the simplest notions and marks of temporal and local site, from the questions when and where, to results so varied, so remote, and seemingly so inaccessible, that the mathematical intellect of full-grown and fully cultivated man cannot reach and pass them without wonder, and something of awe.

*Report of the Fifth Meeting of the British Association for the Advancement of Science*

Address by Sir William Hamilton (p. xliii)

John Murray. London, England. 1836

The mathematician, dwelling in that inner world [which depends not for its existence on the fleeting things of sense], has hopes, and fears, and vicissitudes of feeling of his own; and even if he be not disturbed by anxious yearnings for an immortality of fame, yet has he often joy, and pain, and ardour: the ardour of successful research, the pain of disappointed conjecture, and the joy that is felt in the dawning of a new idea.

*Life of Sir William Rowan Hamilton*

Introductory Lecture on astronomy (p. 644)

Hodges, Figgis & Co. Dublin, Ireland. 1882

...when, as on this earth of ours must sometimes happen, he [the mathematician] has sent forth his [mathematical] wishes and hopes from that lonely ark, and they return to him, having found no resting place: while he drifts along the turbulent current of passion, and is tossed about by the storm and agony of grief, some sunny bursts may visit him, some moments of delightful calm may be his, when his old habits of thought recur, and the "charm severe" of lines and numbers is felt at intervals again.

*Life of Sir William Rowan Hamilton*

Introductory Lecture on astronomy (p. 644)

Hodges, Figgis & Co. Dublin, Ireland. 1882

### **Hamilton, William** 1788–1856

Scottish philosopher

Huygens and Leibnitz, indeed, truly observe, that mathematicians can, and sometimes do, err in point of form. But this aberration is rare and exceptional; it requires, indeed, a most ingenious stupidity to go wrong, where it is far more easy to keep right. A mathematical reasoning may certainly transgress in form, and a railway locomotive may go off the rails. But as a railroad conductor need not look ahead for ditches and quagmires, so a mathematician,

in his process, is not compelled to be on guard against the fallacies which beset the route of the ordinary reasoner.

*Discussions on Philosophy and Literature, Education and University Reform*

On the Study of Mathematics as an Exercise of the Mind (p. 279)

Harper & Brothers Publishers. New York, New York, USA. 1861

### **Hammersley, J.**

No biographical data available

People do acquire a little brief authority by equipping themselves with jargon: they can pontificate and air a superficial expertise. But what we should ask of educated mathematicians is not what they can speechify about, nor even what they know about the existing corpus of mathematical knowledge, but rather what can they now do with their learning and whether they can actually solve mathematical problems arising in practice. In short, we look for deeds not words.

In Institute of Mathematics and Its Applications

On the Enfeeblement of Mathematical Skills by "Modern Mathematics" and by Similar Soft Intellectual Trash in Schools and Universities

*Bulletin of the Institute of Mathematics and its Applications*, Volume 4, Number 4, October, 1968

### **Hardenberg, Friedrich von** 1772–1801

German poet and novelist

The mathematicians are the only happy ones. He who does not reach for a mathematical book with devotion and read it as the word of God does not understand it.

In Walter R. Fuchs

*Mathematics for the Modern Mind*

Introduction (p. 18)

The Macmillan Company. New York, New York, USA. 1967

### **Hardy, G. H. (Godfrey Harold)** 1877–1947

English pure mathematician

It is a melancholic experience for a professional mathematician to find himself writing about mathematics. The function of a mathematician is to do something, to prove new theorems, to add to mathematics, and not to talk about what he or other mathematicians have done... there is no scorn more profound, or on the whole more justifiable, than that of the men who make for the men who explain. Exposition, criticism, appreciation, is work for second-rate minds.

*A Mathematician's Apology*

Section 1 (p. 61)

Cambridge University Press. Cambridge, England. 1967

No mathematician should ever allow himself to forget that that mathematics, more than any other art or science, is a young man's game.

*A Mathematician's Apology*

Section 4 (p. 70)

Cambridge University Press. Cambridge, England. 1967

If a man is in any sense a real mathematician, then it is a hundred to one that his mathematics will be better than

anything else he can do, and that he would be silly if he surrendered any decent opportunity of exercising his one talent in order to do undistinguished work in other fields.

*A Mathematician's Apology*

Section 3 (p. 70)

Cambridge University Press. Cambridge, England. 1967

Archimedes will be remembered when Aeschylus is forgotten, because languages die and mathematical ideas do not. 'Immortality' may be a silly word, but probably a mathematician has the best chance of whatever it may mean.

*A Mathematician's Apology*

Section 8 (p. 81)

Cambridge University Press. Cambridge, England. 1967

A MATHEMATICIAN, like a painter or a poet, is a maker of patterns. If his patterns are more permanent than theirs it is because [his] are made with *ideas*. A Painter makes patterns with shapes and colours, a poet with words.... A mathematician, on the other hand, has no material to work with but ideas, and so his patterns are likely to last longer...

*A Mathematician's Apology*

Section 10 (p. 84)

Cambridge University Press. Cambridge, England. 1967

...*reductio ad absurdum*...is one of a mathematician's finest weapons. It is a far finer gambit than any chess gambit: a chess player may offer the sacrifice of a pawn or even a piece, but the mathematician offers the game.

*A Mathematician's Apology*

Section 12 (p. 94)

Cambridge University Press. Cambridge, England. 1967

But is not the position of an ordinary applied mathematician in some ways a little pathetic? If he wants to be useful, he must work in a humdrum way, and he cannot give full play to his fancy even when he wishes to rise to the heights. 'Imaginary' universes are so much more beautiful than this stupidly constructed 'real' one; and the finest products of an applied mathematician's fancy must be rejected, as soon as they have been created, for the brutal but sufficient reason that they do not fit the facts.

*A Mathematician's Apology*

Section 26 (p. 135)

Cambridge University Press. Cambridge, England. 1967

The case for my life, then, or for that of anyone else who has been a mathematician in the same sense in which I have been one, is this: that I have added something to knowledge, and helped others to add more; and that these somethings have a value which differs in degree only, and not in kind, from that of the creations of the great mathematicians, or of any of the other artists, great or small, who have left some kind of memorial behind them.

*A Mathematician's Apology*

Section 29 (p. 151)

Cambridge University Press. Cambridge, England. 1967

I have myself always thought of a mathematician as in the first instance an *observer*, a man who gazes at a distant range of mountains and notes down his observations. His object is simply to distinguish clearly and notify to others as many different peaks as he can.

*Musings of the Masters: An Anthology of Mathematical Reflections*

Mathematical Proof (p. 59)

Mathematical Association of America. Washington, D.C. 2004

## Hayes, Brian

American scientist, columnist, and author

Dead diatoms are becoming rare elsewhere in the academic world, but mathematicians are still expected to be masters of blackboard technique.

Aftermath

*The Emissary*, Fall 1999 (p. 12)

## Heaviside, Oliver 1850–1925

English electrical engineer, mathematician, and physicist

Even Cambridge mathematicians deserve justice.

In Harold Jeffreys and Bertha Swirles

*Methods of Mathematical Physics*

Chapter 7 (p. 228)

At The University Press. Cambridge, England. 1962

But it is perhaps too much to expect a man to be both the prince of experimentalists and a competent mathematician.

*Electromagnetic Theory*

Chapter I, Volume I (p. 14)

"The Electrician" Publishing & Printing Company. London, England.

1894–1912

## Hill, Thomas

No biographical data available

There is something sublime in the secrecy in which the really great deeds of the mathematician are done. No popular applause follows the act; neither contemporary nor succeeding generations of the people understand it.

The Imagination in Mathematics

*The North American Review*, Volume LXXXV, Number 176, July, 1857

(p. 223)

## Hughes, Richard 1900–76

British author

Science, being human enquiry, can hear no answer except an answer couched somehow in human tones. Primitive man stood in the mountains and shouted against a cliff; the echo brought back his own voice and he believed it a disembodied spirit. The scientists of today stands counting out loud in the face of the unknown. Numbers come back to him – and he believes in the Great Mathematician.

In Jefferson Hane Weaver

*The World of Physics* (Volume 3)

X.3 (p. 597)

Simon & Schuster. New York, New York, USA. 1987

**Hugo, Victor** 1802–85

French author, lyric poet, and dramatist

A mathematician is a savant only on condition that he be also a sage.

Translated by Isabel F. Hapgood

*The Toilers of the Sea*

Part II, Book Third, Chapter III (p. 416)

The Heritage Press. New York, New York, USA. 1961

**Huxley, Thomas Henry** 1825–95

English biologist

In the...paper, there is a statement concerning the method of the mathematical sciences, which, repeated and expanded elsewhere, brought upon me, during the meeting of the British Association at Exeter, the artillery of our eminent friend Professor Sylvester. No one knows better than you do, how readily should defer to the opinion of so great a mathematician if the question at issue were really, as he seems to think it is, a mathematical one. But I submit, that the dictum of a mathematical athlete upon a difficult problem which mathematics offers to philosophy, has no more special weight, than the verdict of that great pedestrian Captain Barclay would have had, in settling a disputed point in the physiology of locomotion.

*Lay Sermons, Addresses and Reviews*

A Prefatory Letter (p. vi)

D. Appleton & Co. New York, New York, USA. 1903

The Mathematician deals with two properties of objects only, number and extension, and all the inductions he wants have been formed and finished ages ago. He is now occupied with nothing but deductions and verification.

*Lay Sermons, Addresses and Reviews* (p. 87)

D. Appleton & Company. New York, New York, USA. 1872

**Inge, William Ralph** 1860–1954

English religious leader and author

A mathematician, it has been suggested, might pray to xn.

*A Rustic Moralist*

Preface (p. 7)

G.P. Putnam's Sons. New York, New York, USA. 1937

**Jevons, William Stanley** 1835–82

English economist and logician

In place of the actual objects which we see and feel, the mathematician substitutes imaginary objects, only partially resembling those represented, but so devised that the discrepancies are not of an amount to alter seriously the character of the solution.

*The Principles of Science: A Treatise on Logic and Scientific Method*

Book IV, Chapter XXI (p. 458)

Macmillan & Co Ltd. London, England. 1877

As a science progresses, its power of foresight rapidly increases, until the mathematician in his library acquires the power of anticipating nature, and predicting what will

happen in circumstances which the eye of man has never examined.

*The Principles of Science: A Treatise on Logic and Scientific Method*

Chapter XXIV (p. 526)

Macmillan & Co Ltd. London, England. 1887

**Johnson, Samuel** 1696–1772

English critic, biographer, and essayist

The mathematicians are well acquainted with the difference between pure science, which has to do only with ideas, and the application of its laws to the use of life, in which they are constrained to submit to the imperfections of matter and the influence of accident.

*The Rambler* (Volume 1)

10th Number 14 (p. 82)

Printed for W. Strahan. London, England. 1784

**Kac, Mark** 1914–84

Polish mathematician

**Rota, Gian-Carlo** 1932–99

Italian-born American mathematician

**Schwartz, Jacob T.** 1930–

American mathematician

It is much easier for a mathematician to read a physics book after the physics becomes obsolete, and that is in fact what usually happens.

*Discrete Thoughts: Essays on Mathematics, Science, and Philosophy*

Chapter One (p. 1)

Springer-Verlag. New York, New York, USA. 1992

**Kasner, Edward** 1878–1955

American mathematician

**Newman, James Roy** 1911–66

Mathematician and mathematical historian

The mathematician is still regarded as the hermit who knows little of the ways of life outside his cell, who spends his time compounding incredible and incomprehensible theorems in a strange, clipped, unintelligible jargon.

*Mathematics and the Imagination*

Introduction (p. xiii)

Simon & Schuster. New York, New York, USA. 1940

**Kelvin, Lord William Thomson** 1824–1907

Scottish engineer, mathematician, and physicist

Let us then hear no more nonsense about the interference of mathematicians in matters with which they have no concern; rather let them be lauded for condescending from their proud preeminence to help out of a rut the too ponderous wagon of some scientific brother.

In Joe D. Burchfield

*Lord Kelvin and the Age of the Earth*

Chapter IV (p. 93)

The University of Chicago Press. Chicago, Illinois, USA. 1990

**Keyser, Cassius Jackson** 1862–1947

American mathematician

The critical mathematician has abandoned the search for truth. He no longer flatters himself that his propositions are or can be known to him or to any other human being to be true; and he contents himself with aiming at the correct, or the consistent. The distinction is not annulled nor even blurred by the reflection that consistency contains immanently a kind of truth. He is not absolutely certain, but he believes profoundly that it is possible to find various sets of a few propositions each such that the propositions of each set are compatible, that the propositions of each such set imply other propositions, and that the latter can be deduced from the former with certainty. That is to say, he believes that there are systems of coherent or consistent propositions, and he regards it his business to discover such systems. Any such system is a branch of mathematics.

*The Human Worth of Rigorous Thinking: Essays and Addresses*  
Chapter XII (p. 221)  
Columbia University Press. New York, New York, USA. 1916

The great mathematician, like the great poet or great naturalist or great administrator, is born.

*Lectures on Science, Philosophy and Art, 1907–1908*  
Mathematics (p. 22)  
The Columbia University Press. New York, New York, USA. 1908

To facilitate eyeless observation of his sense-transcending world, the mathematician invokes the aid of physical diagrams and physical symbols in endless variety and combination ...

*Lectures on Science, Philosophy and Art, 1907–1908*  
Mathematics (p. 27)  
The Columbia University Press. New York, New York, USA. 1908

The mathematician is curious about definite naked relationships, about logically possible modes of order, about varieties of implication, about completely determined or determinable functional relationships, considered solely in and of themselves, considered, that is, without the slightest concern about any question whether or no they have any external or sensuous validity or other sort of validity than that of being logically thinkable.

*Lectures on Science, Philosophy and Art, 1907–1908*  
Mathematics (p. 37)  
The Columbia University Press. New York, New York, USA. 1908

To think logically the logically thinkable – that is the mathematician's aim.

*Lectures on Science, Philosophy and Art, 1907–1908*  
Mathematics (p. 38)  
The Columbia University Press. New York, New York, USA. 1908

To think the thinkable – that is the mathematician's aim.

*The Universe and Beyond*  
*Hibbert Journal*, Volume 3, 1904–1905 (p. 312)

...it might have been to the advantage of mathematics and not only of mathematics but of science in general, of philosophy, too, and the general enlightenment, if in

course of the centuries mathematicians had been now and then really compelled by adverse criticism of their science to discover and to present not only to themselves but acceptably to their fellow-men the deeper justifications,

*The Human Worth of Rigorous Thinking: Essays and Addresses*  
Chapter I (p. 2)  
Columbia University Press. New York, New York, USA. 1916

...just as the astronomer, the physicist, the geologist, or other student of objective science looks abroad in the world of sense, so, not metaphorically speaking but literally, the mind of the mathematician goes forth into the universe of logic in quest of the things that are there; exploring the heights and depths for facts – ideas, classes, relationships, implications, and the rest; observing the minute and elusive with the powerful microscope of his Infinitesimal Analysis; observing the elusive and vast with the limitless telescope of his Calculus of the Infinite; making guesses regarding the order and internal harmony of the data observed and collocated; testing the hypotheses, not merely by the complete induction peculiar to mathematics, but, like his colleagues of the outer world, resorting also to experimental tests and incomplete induction; frequently finding it necessary, in view of unforeseen disclosures, to abandon a once hopeful hypothesis or to transform it by retrenchment or by enlargement ...

*The Human Worth of Rigorous Thinking: Essays and Addresses*  
Chapter XV (p. 294)  
Columbia University Press. New York, New York, USA. 1916

### King, Jerry P.

American mathematician

A mathematician, like everyone else, lives in the real world. But the objects with which he works do not. They live in that other place – the mathematical world. Something else lives here also. It is called truth.

*The Art of Mathematics*  
Chapter 2 (p. 29)  
Plenum Press. New York, New York, USA. 1992

A mathematician, however, almost always works alone...When a mathematician works at mathematics he sits alone in his study staring at equations scribbled on his blackboard or at a dog-eared reprint of the research paper whose results he is trying to extend. It is quiet work, like writing poetry, and includes lots of “dead time” when the mathematician, like the poet, does nothing but sit and stare at the blank page. When you walk in on a research mathematician and find him reclining with his feet up, gazing wistfully out the window, what you say is: “Sorry, I didn't know you were working.” Because he probably is.

*The Art of Mathematics*  
Chapter 2 (pp. 36–37)  
Plenum Press. New York, New York, USA. 1992

**Kline, Morris** 1908–92  
American mathematics professor and writer

Mathematicians create by acts of insight and intuition. Logic then sanctions the conquests of intuition. It is the hygiene that mathematics practice to keep its ideas healthy and strong. Moreover, the whole structure rests fundamentally on uncertain ground, the intuitions of man. Here and there an intuition is scooped out and replaced by a firmly built pillar of thought; however, this pillar is based on some deeper, perhaps less clearly defined intuition. Though the process of replacing intuitions by precise thoughts does not change the nature of the ground on which the mathematics ultimately rests, it does add strength and height to the structure.

*Mathematics in Western Culture*  
Chapter XXV (p. 408)  
Oxford University Press, Inc. New York, New York, USA. 1953

Mathematicians respond to intellectual challenge much as businessmen do to the excitement of making money. They enjoy the fascination of the quest, the sense of adventure, the thrill of discovery, the satisfaction of mastering difficulties, the pride and glory of achievement – or, if one wishes, the exaltation of the ego and the intoxication of success.

*Why the Professor Can't Teach: Mathematics and the Dilemma of University Education*  
Chapter 6 (p. 129)  
St. Martin's Press. New York, New York, USA. 1977

Mathematicians have always constituted a clannish, elitist, snobbish, highly individualistic community in which status is determined, above all, by the presumed importance or original contributions to mathematics; and in which the greatest rewards are bestowed upon those who, at least in the opinion of their peers, will leave a permanent mark on its evolution.

*Why the Professor Can't Teach: Mathematics and the Dilemma of University Education*  
Chapter 11 (p. 240)  
St. Martin's Press. New York, New York, USA. 1977

If potential application is the goal, then as the great physical chemist Josiah Willard Gibbs remarked, the pure mathematician can do what he pleases, but the applied mathematician must be at least partially sane.

*Mathematics: The Loss of Certainty*  
Chapter XIII (p. 285)  
Oxford University Press, Inc. New York, New York, USA. 1980

**Kovalevskaya, Sofia** 1850–91  
Russian mathematician

It is impossible to be a mathematician without being a poet in soul.

*Sónya Kovalévsky: Her Recollections of Childhood* (p. 316)  
The Century Co. New York, New York, USA. 1895

**Krantz, Steven** 1951–  
Mathematician

A mathematician experiments, amasses information, makes a conjecture, finds out that it does not work, gets confused and then tries to recover. A good mathematician eventually does so – and proves a theorem.

*Conformal Mappings*  
*American Scientist*, Sept.–Oct. 1999 (p. 445)

**Lakatos, Imre** 1922–74  
Hungarian-born philosopher

On the face of it there should be no disagreement about mathematical proof. Everybody looks enviously at the alleged unanimity of mathematicians; but in fact there is a considerable amount of controversy in mathematics. Pure mathematicians disown the proofs of applied mathematicians, while logicians in turn disavow those of pure mathematicians. Logicians disdain the proofs of formalists and some intuitionists dismiss with contempt the proofs of logicians and formalists.

*Mathematics, Science and Epistemology* (Volume 2)  
Chapter 4 (p. 61)  
Cambridge University Press. Cambridge, England. 1978

**Langer, Susanne Katherina Knauth** 1895–1985  
American philosopher

Mathematicians are rarely practical people, or good observers of events. They are apt to be cloistered souls, like philosophers and theologians.

*Philosophy in a New Key*  
Chapter I (p. 19)  
Harvard University Press. Cambridge, Massachusetts, USA. 1957

**Lavoisier, Antoine Laurent** 1743–94  
French chemist

...mathematicians obtain the solution of a problem by the mere arrangement of data, and by reducing their reasoning to such simple steps, to conclusions so very obvious, as never to lose sight of the evidence which guides them.

*Elements of Chemistry In a New Systematic Order*  
Preface of the Author (p. xviii)  
Printed for William Creech. Edinburgh, Scotland. 1790

**Lebesgue, Henri** 1875–1941  
French mathematician

Mathematicians have never been in full agreement on their science, though it is said to be the science of self-evident verities – absolute, indisputable and definitive. They have always been in controversy over the developing aspects of mathematics, and they have always considered their own age to be a period of crisis.

In Lucienne Felix  
*The Modern Aspect of Mathematics* (p. 3)  
Basic Books. New York, New York, USA. 1960

In my opinion a mathematician, in so far as he is a mathematician, need not preoccupy himself with philosophy – an opinion, moreover, which has been expressed by many philosophers.

In E.T. Bell

*Men of Mathematics* (p. xvii)

Simon & Schuster. New York, New York, USA. 1937

**Le Cam, Lucien** 1924–2000

Mathematician

There are mathematicians who do mathematics simply because they like it – it’s a work of art. Some people work very hard on problems that have no relation to anything else.

In D. Albers, G. Alexanderson and C. Reid

*More Mathematical People: Contemporary Conversations* (p. 174)

Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

**Lehmer, Derrick Henry** 1905–1991

American mathematician

**Lebesgue, Henri** 1875–1941

French mathematician

The real difficulty lies in the fact that only a finite number of angels can dance on the head of a pin, whereas the mathematician is more apt to be interested in the infinite angel problem only.

Mechanized Mathematics

*Bulletin of the American Mathematical Society*, Volume 72, Number 5, September, 1966 (p. 744)

**Lewis, Sinclair** 1885–1951

American novelist

“The regularity of the rate at which the streptolysin disappears suggests that an equation may be found.”

“Then why did you not make the equation?”

“Well – I don’t know. I wasn’t enough of a mathematician.”

“Then you should not have published till you knew your math!”

*Arrowsmith*

Chapter XXVI, Section I (p. 288)

Harcourt, Brace & World, Inc. New York, New York, USA. 1952

**Lichtenberg, Georg Christoph** 1742–99

German physicist and satirical writer

Mathematics are a noble science, but as for the mathematicians they are often not worth the hangman. It is nearly the same with mathematics as with theology; for, as those who apply themselves to the latter, especially if

they once obtain an office, forthwith arrogate to themselves the credit of peculiar sanctity and a closer alliance with God, though very many among them are in reality but good-for-nothing subjects; in like manner, he who is styled a mathematician very frequently succeeds

in passing for a *deep thinker*, although under that name are included the *veriest dunderheads* (die groessten Plunderkoepfe) in *existence*, incapable of any business whatsoever which requires *reflection*, since this cannot be immediately performed by the *easy* process of connecting symbols, which is more the product of routine than of thought.

Quoted in William Hamilton

*Discussions on Philosophy and Literature, Education and University Reform*

On the Study of Mathematics as an Exercise of the Mind (p. 293)

Harper & Brothers Publishers. New York, New York, USA. 1861

**Locke, William John** 1863–1930

Novelist and short story writer

Now all the world understands the irresistible force that compels the poet, at last, to give form to long haunting dreams; the need, also, of the astronomer to crystallize the results of his discoveries and formulate his epoch-making theories; but the passion of the mathematician to do the same is not so easily comprehensible. For years Baltazar had dreamed of an exhaustive and monumental treatise on the Theory of Groups which would revolutionize the study of the higher mathematics, a gorgeous vision, the mere statement of which must leave the ordinary being cold and the first attempt at explanation petty him with its icy unintelligibility.

*The House of Baltazar*

Chapter IV (p. 47)

John Lane. London, England. 1920

**Lodge, Sir Oliver** 1851–1940

English physicist

It is undeniable that mathematicians, with a self-denying ordinance about coefficients, can thus attain remarkable criteria, and are able to anticipate definite results; but we need not seek to engraft their modes of expression on the real world of physics.

Geometrization of Physics, and Its Supposed Bias on the Michelson–Morley Experiment

*Nature*, Volume 106, Number, 2677, February 17, 1921 (p. 798)

**Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

Mathematicians are reputed to be rare and special people, exulting in the exercise of a gift far beyond the performance, and perhaps even the conception, of ordinary people.

*The Limits of Science*

An Essay on Scians [Science] (p. 9)

Harper & Row, Publishers. New York, New York, USA. 1984

**Mencken, H. L. (Henry Louis)** 1880–1956

American journalist and literary critic

Even if we admit that mathematicians are of great value to the world, the fact remains that there are many charlatans (*circulatores*) among them. They talk too much of

their discoveries, and nothing grieves them more than to see some other mathematician get ahead of them. How vast is their joy when they solve a problem within the time limits set by him who posited it! They use up every ounce of their energy in that struggle for fame.

In Johann B. Mencke

*The Charlatanry of the Learned*

Lecture II, fn 74 (p. 152)

Alfred A. Knopf. New York, New York, USA. 1937

**Mill, John Stuart** 1806–73

English political philosopher and economist

It is one of the peculiar excellencies of mathematical discipline that the mathematician is never satisfied with ‘*a peu pres*’. He requires the ‘exact’ truth.

*An Examination of Sir William Hamilton’s Philosophy* (2nd edition)

Chapter XXVII (p. 525)

Longmans, Green & Co. London, England. 1865

**Mittag-Leffler, Gosta** 1846–1927

Swedish mathematician

The mathematician’s best work is art... a high and perfect art, as daring as the most secret dreams of imagination, clear and limpid. Mathematical genius and artistic genius touch each other.

In Havelock Ellis

*The Dance of Life*

Chapter III, Section V (p. 139)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1923

**Morawetz, Cathleen Synge** 1923–

Canadian mathematician

Ah, there’s no excitement to beat the excitement of proving a theorem! Until you find out the next day that it’s wrong.... I’ll tell you, though, there is something about being a mathematician that is extremely difficult. One of my children put it this way: It’s that you’re on stage all the time. You can’t fake or shift the subject of conversation and so on. That’s very demanding of people.

In D. Albers, G. Alexanderson and C. Reid

*More Mathematical People: Contemporary Conversations* (p. 238)

Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

**Mordell, Louis Joel** 1888–1972

English mathematician

No one will get very far or become a real mathematician without certain indispensable qualities. He must have hope, faith, and curiosity, and prime necessity is curiosity.

*Reflections of a Mathematician*

Chapter II (p. 7)

Canadian Mathematical Congress. 1959

**More, Louis Trenchard**

American educator

It is the privilege of mathematicians to deal with symbols; the physical universe is no more important to them than any other universe which can be developed symbolically. The trouble occurs when the distinction between the real or physical universe and symbolical or metaphysical universes is obliterated in the minds of men of science.

*The Limitations of Science*

Chapter V (p. 186)

Henry Holt & Co. New York, New York, USA. 1915

**Morley, Christopher** 1890–1957

American writer

Sweep the pale hair, like wings, above the ears;

Whittle the nose, and carve and bone the jaw;

Blank the studying eyes, till human fears

Eliminate in universal law.

Slack the mortal shirt, stiffen the hands,

Holding the dear old pipe, half-smoked, unlit –

So, lovingly, we lose Orion’s Bands

And write equation with the Infinite.

*The Ballad of New York, New York, and Other Poems 1930–1956*

Portrait of a Mathematician

Doubleday & Company, Inc. Garden City, New York, USA. 1950

**Morse, Harold Calvin Marston** 1892–1977

American mathematician

...what is it that a mathematician wants as an artist. I believe that he wishes merely to understand and to create. He wishes to understand, simply, if possible – |but in any case to understand; and to create, beautifully, if possible – but in any case to create.

In Raymond George Ayoub

*Musings of the Masters: An Anthology of Mathematical Reflections*

Mathematics and the Arts (p. 90)

Mathematical Association of America. Washington, D.C. 2004

Mathematicians of today are perhaps too exuberant in their desire to build new logical foundations for everything. Forever the foundation and never the cathedral.

In Raymond George Ayoub

*Musings of the Masters: An Anthology of Mathematical Reflections*

Mathematics and the Arts (p. 91)

Mathematical Association of America. Washington, D.C. 2004

**Morton, Henry Vollam** 1892–1979

English travel writer

In the dusk of a lane I met a shepherd with his sheep.  
A small dog with the expression of a professor of mathematics does all the work.

*In Search of Scotland*

Chapter 1, Section 3 (p. 8)

Methuen & Company Ltd. London, England. 1949

**National Research Council (USA)**

Mathematicians make up, or one could say discover, their own questions in the timeless universe of logical connection.

*Physics in Perspective* (Volume 1)  
Chapter 3 (p. 57)  
National Academy of Sciences  
Washington, D.C. 1972

**Newton, Sir Isaac** 1642–1727  
English physicist and mathematician

Mathematicians that find out, settle & do all the business must content themselves with being nothing but dry calculators and drudges & another that does nothing but pretend and grasp at all things must carry away all the invention...

*Lives of Eminent Persons*  
Letter to Edmund Halley, 20 June, 1686 (p. 21)  
Society for the Diffusion of Useful Knowledge. Great Britain. 1833

...if instead of sending the Observations of seamen to able Mathematicians at Land, the Land would send able Mathematicians to Sea, it would signify much more to the improvement of Navigation and safety of Men's lives and estates on the alimant.

In E.G.R. Taylor  
*The Mathematical Practitioners of Tudor & Stuart England* (p. 119)  
At The University Press. Cambridge, England. 1954

Now is not this very fine? Mathematicians that find out, settle, and do all the business must content themselves with being nothing but dry calculators and drudges; and another that does nothing but pretend and grasp at all things must carry away all the invention...

In George D. Birkhoff  
*Science for a New World*  
Mathematics, Quantity and Order (p. 293)  
Harper & Brothers Publishers. New York, New York, USA. 1934

**Novalis (Friederich von Hardenberg)** 1772–1801  
German poet

All heavenly messengers must be mathematicians.  
Quoted in Panthea  
*The Reasoner*  
Eclectic Gatherings  
Volume 6 1849 (p. 374)

The mathematician knows everything.  
*Main Currents in Nineteenth, Century Literature*  
Chapter XII  
The Macmillan Co. New York, New York, USA. 1906

There may be mathematicians of the first magnitude who cannot cipher. One can be a great cipherer without a conception of mathematics.

In Kuno Francke and Isidore Singer  
*The German Classics: Masterpieces of German Literature Translated Into English*  
*Aphorism* (p. 188)  
The German Publication Society. New York, New York, USA. 1914

**Oldham, Richard Dixon** 1858–1936  
English geologist

Many theories of the earth have been propounded at different times: the central substance of the earth has been supposed to be fiery, fluid, solid, and gaseous in turn, till geologists have turned in despair from the subject and become inclined to confine their attention to the outermost crust of the earth, leaving its center as a playground for mathematicians.

*The Constitution of the Interior of the Earth as Revealed by Earthquakes*  
*The Quarterly Journal of the Geological Society of London*, Volume 62, August, 1906 (p. 456)

**Pappas, Theoni**  
Mathematician

Contrary to popular belief, mathematics is a passionate subject. Mathematicians are driven by creative passions that are difficult to describe, but are no less forceful than those that compel a musician to compose or an artist to paint. The mathematician, the composer, the artist succumb to the same foibles as any human—love, hate, addictions, revenge, jealousies, desire for fame, and money.

*Mathematical Scandals*  
Introduction (p. 4)  
Wide World Publishing. San Carlos, California, USA. 1997

**Pascal, Blaise** 1623–62  
French mathematician and physicist

Mathematicians who are only mathematicians have exact minds, provided all things are explained to them by means of definitions and axioms; otherwise they are inaccurate and insufferable, for they are only right when the principles are quite clear.

In *Great Books of the Western World* (Volume 33)

French mathematician and theoretical astronomer

Need we add that mathematicians themselves are not infallible?

*The Foundations of Science*

*Science and Method*, Book I

Chapter III (p. 384)

The Science Press. New York, New York, USA. 1913

The mathematician does not study pure mathematics because it is useful; he studies it because he delights in it and he delights in it because it is beautiful.

In H.E. Huntley

*The Divine Proportion: A Study in Mathematical Beauty*

Introduction (p. 1)

Dover Publications. New York, New York, USA. 1970

Mathematicians do not deal in objects, but in relations between objects; thus, they are free to replace some objects by others so long as the relations remain unchanged. Content to them is irrelevant: they are interested in form only.

In Tobias Dantzig

*Number: The Language of Science* (4th edition)

Chapter D (p. 317)

The Macmillan Company. New York, New York, USA. 1954

A scientist worthy of the name, above all a mathematician, experiences in his work the same impressions as an artist; his pleasure is as great and of the same nature.

In Stanley Gudder

*A Mathematical Journey* (p. 55)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1976

It is impossible to study the works of the great mathematicians, or even those of the lesser, without noticing and distinguishing two opposite tendencies, or rather two entirely different kinds of minds. The one sort are above all preoccupied with logic; to read their works, one is tempted to believe they have advanced only step by step, after the manner of a Vauban who pushes on his trenches against the place besieged, leaving nothing to chance. The other sort are guided by intuition and at the first stroke make quick but sometimes precarious conquests, like bold cavalymen of the advance guard.

The Value of Science

*The Popular Science Monthly*, Volume LXIX, Number 3, September,

1906 (p. 197)

...mathematician ought not to be for the physicist a simple provider of formulae ...

*Bulletin of the American Mathematical Society*, Volume IV, Number 6,

March, 1898 (p. 248)

**Poiret, Pierre** 1646–1719  
French mystic and Christian philosopher

From the same source, mathematicians are also infested with an overweening presumption or incurable arrogance; for, believing themselves in possession of demonstrative certainty in regard to the objects of their peculiar

science, they persuade themselves that, in like manner, they possess a knowledge of many things beyond its sphere. Then, co-ordinating these with the former, as if demonstrated by equal evidence, they spurn every objection to every opinion, with the contempt or indignation they would feel at an endeavor to persuade them that two plus two are not four, or that the angles of a triangle are not equal to two right angles.

Quoted in William Hamilton

*Discussions on Philosophy and Literature, Education and University Reform*

On the Study of Mathematics as an Exercise of the Mind (pp. 296–297)  
Harper & Brothers Publishers. New York, New York, USA. 1861

### **Pólya, George** 1887–1985

Hungarian mathematician

The mathematician as the naturalist, in testing some consequence of a conjectural general law by a new observation, addresses a question to Nature: “I suspect that this law is true. Is it true?” If the consequence is clearly refuted, the law cannot be true. If the consequence is clearly verified, there is some indication that the law may be true. Nature may answer Yes or No, but it whispers one answer and thunders the other, its Yes is provisional, its No is definitive.

*Induction and Analogy in Mathematics* (Volume 1)

Chapter I (p. 10)

Princeton University Press. Princeton, New Jersey, USA. 1954

### **Pringsheim, Alfred** 1850–1941

German mathematician

The true mathematician is always a great deal of an artist, an architect, yes, of a poet. Beyond the real world, though perceptibly connected with it, mathematicians have created an ideal world which they attempt to develop into the most perfect of all worlds, and which is being explored in every direction. None has the faintest conception of this world except him who knows it; only presumptuous ignorance can assert that the mathematician moves in a narrow circle. The truth which he seeks is, to be sure, broadly considered, neither more nor less than consistency; but does not his mastership show, indeed, in this very limitation? To solve questions of this kind he passes unenviously over others.

*Jahresberichte der Deutschen Mathematiker Vereinigung*, Volume 13,  
1904 (p. 381)

A mathematician’s work is mostly a tangle of guesswork, analogy, wishful thinking and frustration, and proof, far from being the core of discovery, is more often than not a way of making sure that our minds are not playing tricks.

In Philip J. Davis and Reuben Hersh

*The Mathematical Experience*

Introduction (p. xviii)

Birkhäuser. Boston, Massachusetts, USA. 1981

### **Pycroft, James** 1813–95

English writer

A mathematician is always a mathematician, even without his formulas and diagrams.

*A Course of English Reading* (4th edition)

Chapter XII (p. 265)

Longman, Green, Longman & Roberts. London, England. 1861

### **Queen of Prussia**

...of all who meddled with philosophy, the mathematicians satisfied her [the first Queen of Prussia] the least, more especially when they attempted to explain the origin of things in general, or the nature of the soul in particular; and that she was surprised, that, notwithstanding their geometrical exactness metaphysical notions were, for most of them, lost countries, and exhaustless sources of chimeras.

Quoted in William Hamilton

*Discussions on Philosophy and Literature, Education and University Reform*

On the Study of Mathematics as an Exercise of the Mind (p. 296)

Harper & Brothers Publishers. New York, New York, USA. 1861

### **Rees, Mina** 1902–97

American mathematician

In dealing with academics, it is absolutely superb to be able to say you’re a mathematician! Nobody dares to say mathematics is not important or not significant.... No discipline surpasses mathematics in pure academic prestige.

In Donald J. Albers and G.L. Alexanderson (eds.)

*Mathematical People*

Mina Rees (p. 260)

Birkhäuser. Boston, Massachusetts, USA. 1985

### **Reid, Constance**

Mathematical biographer

The answer to the question Can there be a general method for solving all mathematical problems? is no!

Perhaps, in a world of unsolved and apparently unsolvable problems, we would have thought that the desirable answer to this question from any point of view, would have been yes. But from the point of view of mathematicians a yes would have been far less satisfying than a no is. Not only are the problems of mathematics infinite and hence inexhaustible, ...mathematics itself is inexhaustible.

*Introduction to Higher Mathematics for the General Reader* (p. 180)

Thomas Y. Crowell. New York, New York, USA. 1959

Mathematics is a world created by the mind of man, and the mathematicians are people who devote their lives to what seems to me a wonderful kind of play!

In G.L. Anderson

An Interview with Constance Reid

*Two Year College Mathematical Journal*, Volume 11, 1980 (p. 238)

**Reid, Thomas** 1710–96  
Scottish philosopher

The mathematician pays not the least regard either to testimony or conjecture, but deduces everything by demonstrative reasoning, from his definitions and axioms. Indeed, whatever is built upon conjecture, is improperly called science; for conjecture may beget opinion, but cannot produce knowledge.

*Essays on the Intellectual Powers of Man*  
Essay I, Chapter III (p. 46)  
Printed for John Bell. London, England. 1785

**Richardson, David Lester** 1801–65  
Poet and writer

Mathematicians are like helpless children beyond the pale of their own science. They cannot walk steadily out of their own go-cart.

*Literary Chit-Chat*  
Chapter X (p. 83)  
P.S. D'Rozario and Co. Calcutta, India. 1848

Mathematicians have too often neither common sense nor rare sense.

*Literary Chit-Chat*  
Chapter X (p. 83)  
P.S. D'Rozario and Co. Calcutta, India. 1848

**Robinson, Julia** 1919–85  
American mathematician

What I really am is a mathematician. Rather than being remembered as the first woman this or that, I would prefer to be remembered, as a mathematician should, simply for the theorems I have proved and the problems I have solved.

In D. Albers, G. Alexanderson and C. Reid  
*More Mathematical People: Contemporary Conversations* (p. 280)  
Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

**Rota, Gian-Carlo** 1932–99  
Italian-born American mathematician

Philosophers and psychiatrists should explain why it is that we mathematicians are in the habit of systematically erasing our footsteps. Scientists have always looked askance at this strange habit of mathematicians, which has changed little from Pythagoras to our day.

Two Turning Points in Invariant Theory  
*The Mathematical Intelligencer*, 21(1) Winter 1999 (p. 26)

Mathematicians have to attend (secretly) physics meetings in order to find out what is going on in their fields. Physicists have the P.R., the savoir-faire, and the chutzpah to write readable, or at least legible accounts of subjects that are not yet obsolete, something few mathematicians would dare to do, fearing expulsion from the A.M.S.

*Indiscrete Thoughts*  
Chapter XX (p. 215)  
Birkhäuser. Boston, Massachusetts, USA. 1997

There is nothing deadlier for a mathematician than to be placed in a beautiful office and instructed to lay golden eggs.

*Indiscrete Thoughts*  
Chapter XX (p. 210)  
Birkhäuser. Boston, Massachusetts, USA. 1997

Grade school teachers, high school teachers, administrators and lobbyists are as much mathematicians as you or Hilbert. They contribute to the well-being of mathematics as much as or more than you or other mathematicians. They are right in feeling left out by snobbish research mathematicians who do not know on which side their bread is buttered. It is our best interest, as well as the interest of justice, to treat all who deal with mathematics in whatever way as equals. By being united we will increase the probability of our survival.

*Indiscrete Thoughts* (pp. 207–208)

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

...mathematicians do not read Plato, while those who read him know no mathematics ...

*Mysticism and Logic: And Other Essays*  
Chapter IV (p. 60)  
Longmans, Green & Co. London, England. 1919

Remote from human passions, remote even from the pitiful facts of nature, the generations have gradually created an ordered cosmos, where pure thought can dwell as in its natural home, and where one, at least, of our nobler impulses can escape from the dreary exile of the actual world.

*Mysticism and Logic: And Other Essays*  
Chapter IV (p. 61)  
Longmans, Green & Co. London, England. 1919

**Sarton, George** 1884–1956  
Belgian-born American scholar and writer

The main source of mathematical invention seems to be within man rather than outside of him: his own inveterate and insatiable curiosity, his constant itching for intellectual adventure; and likewise the main obstacles to mathematical progress seem to be also within himself; his scandalous inertia and laziness, his fear of adventure, his need of conformity to old standards, and his obsession by mathematical ghosts.

*The Study of the History of Mathematics*  
The Study of the History of Mathematics (p. 16)  
Dover Publications, Inc. New York, New York, USA. 1936

Mathematicians and other scientists, however great they may be, do not know the future. Their genius may enable them to project their purpose ahead of them; it is as if they had a special lamp, unavailable to lesser men, illuminating their path; but even in the most favorable cases

the lamp sends only a very small cone of light into the infinite darkness.

*The Study of the History of Mathematics*

The Study of the History of Mathematics (pp. 17–18)

Dover Publications, Inc. New York, New York, USA. 1936

The concatenations of mathematical ideas are not divorced from life, far from it, but they are less influenced than other scientific ideas by accidents, and it is perhaps more possible, and more permissible, for a mathematician than for any other man to secrete himself in a tower of ivory.

*The Study of The History of Mathematics*

The Study of the History of Mathematics (pp. 19–20)

Dover Publications, Inc. New York, New York, USA. 1936

The main duty of the historian of mathematics, as well as his fondest privilege, is to explain the humanity of mathematics, to illustrate its greatness, beauty and dignity, and to describe how the incessant efforts and accumulated genius of many generations have built up that magnificent monument, the object of our most legitimate pride as men, and of our wonder, humility, and thankfulness, as individuals. The study of the history of mathematics will not make better mathematicians but gentler ones, it will enrich their minds, mellow their hearts, and bring out their finer qualities.

*The American Mathematical Monthly*, Volume 102, Number 4, April, 1995 (p. 369)

### Schuster, Sir Arthur 1851–1934

English physicist

Mathematicians are always sufficiently resourceful to cope with any problem set to them by the experimentalist, and as Poincare likes to tell us, we can always find a new hypothesis to fit a new fact.

*The Progress of Physics During 33 Years (1875–1908)*

Lecture III (p. 109)

At The University Press. Cambridge, England. 1911

### Serge, Corrado

No biographical data available

[A] mathematician cannot be really content with a result which he has obtained by non-rigorous methods; he will not feel sure of it until he has rigorously proved it. But he will not reject summarily these imperfect methods in the case of difficult problems when he is unable to substitute better ones, since the history of the science precisely shows what service such methods have always rendered.

On Some Tendencies in Geometric Investigations

*Bulletin of the American Mathematical Society*, 2nd Series, Volume 10, June, 1904 (pp. 453–454)

### Shaw, James Byrnie

American mathematician

The mathematician does not build in stone, nor paint on canvas, nor construct a symphony, though his harmonies

are in and through all these; his medium is more ethereal; but is his creation therefore the less beautiful?

Henri Poincare as An Investigator

*Popular Science Monthly*, March, 1913 (p. 221)

The mathematician builds because he enjoys the building, and the fascination of his creation is the impetus that keeps him creating. It is not the usefulness of what he creates, but the innate beauty of it that he is forever thirsting for.

*Lectures on the Philosophy of Mathematics*

Chapter XVI (p. 186)

The Open Court Publishing Co. Chicago, Illinois, USA. 1918

The mathematician is fascinated with the marvelous beauty of the forms he constructs, and in their beauty he finds everlasting truth.

*Lectures on the Philosophy of Mathematics*

Chapter XVI (p. 194)

The Open Court Publishing Co. Chicago, Illinois, USA. 1918

### Shchatunovski, Samuil

Chapter 1 (p. 24)

The Viking Press. New York, New York, USA. 1979

### Shulman, Milton 1925–

Canadian writer and journalist

I knew a mathematician who said, “I do not know as much as God. But I know as much as God knew at my age.”

*Stop the Week*

BBC Radio 4, year unknown

### Solzhenitsyn, Aleksandr Isayevich 1918–

Russian novelist and historian

All my life I have thought of mathematicians as Rosicrucians of some kind, and I always regretted that I never had the opportunity of being initiated into their secrets.

*The First Circle*

Chapter 9 (p. 39)

Harper & Row. New York, New York, USA. 1968

### Stewart, Dugald 1753–1828

Scottish philosopher

...I have never met with a mere mathematician who was not credulous to a fault...

*The Collected Works of Dugald Stewart* (Volume 4)

Part Third, Chapter I, Section 3 (p. 209)

T & T Clark. Edinburgh, Scotland. 1877

It is a certain fact, that, in mathematicians who have confined their studies to mathematics alone, there has often been observed a proneness to that species of religious enthusiasm in which imagination is the

predominant element, and which, like a contagion, is propagated in a crowd.

Quoted in William Hamilton

*Discussions on Philosophy and Literature, Education and University Reform*

On the Study of Mathematics as an Exercise of the Mind (p. 295)

Harper & Brothers Publishers. New York, New York, USA. 1861

The bias now mentioned, is strengthened by another circumstance – the confidence which the mere mathematician naturally acquires in his powers of reasoning and judgment – in consequence of which, though he may be prevented in his own pursuits from going far astray, by the absurdities to which his errors lead him, he is seldom apt to be revolted by absurd conclusions in the other sciences. Even in physics, mathematicians have been led to acquiesce in conclusions which appear ludicrous to men of different habits.

Quoted in William Hamilton

*Discussions on Philosophy and Literature, Education and University Reform*

On the Study of Mathematics as an Exercise of the Mind (p. 297)

Harper & Brothers Publishers. New York, New York, USA. 1861

**Stewart, Ian** 1945–

English mathematician and science writer

The true mathematician is not a juggler of numbers, but a juggler of concepts.

*Concepts of Modern Mathematics*

Preface to the First Edition (p. vii)

Dover Publications, Inc. New York, New York, USA. 1995

Mathematicians don't worry about what things *really* are. They just want to find effective ways to work out what they can do.

*Flatterland*

One Hundred and One Dimensions (p. 49)

Perseus Publishing. Cambridge, Massachusetts, USA. 2001

**Strachey, Kytton** 1880–1932

English writer and critic

In pure mathematics the maximum of detachment appears to be reached: the mind moves in an infinitely complicated pattern, which is absolutely free from temporal considerations. Yet this very freedom – the essential condition of the mathematician's activity – perhaps gives him an unfair advantage. He can only be wrong – he cannot cheat.

*Portraits in Miniature*

Hume (pp. 141–142)

Chatto & Windus. London, England. 1931

**Swann, William Francis Gray** 1884–1962

Anglo-American physicist

It has been said that the pure mathematician is never as happy as when he does not know what he is talking about...

*The Architecture of the Universe*

Chapter IV (p. 117)

The Macmillan Company. New York, New York, USA. 1934

**Swift, Jonathan** 1667–1745

Irish-born English writer

...what I chiefly admired, and thought altogether unaccountable, was the strong disposition I observed in them [the mathematicians of Laputa] towards news and politics; perpetually enquiring into publick affairs; giving their judgments in matters of state; and passionately disputing every inch of party opinions. I have indeed observed the same disposition among most of the mathematicians I have known in Europe; although I could never discover the least analogy between the two sciences...

In *Great Books of the Western World* (Volume 36)

*Gulliver's Travels*

Part III, Chapter II (pp. 97–98)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Sylvester, James Joseph** 1814–97

English mathematician

The mathematician lives long and lives young; the wings of his soul do not early drop off, nor do its pores become clogged with the earthy particles blown from the dusty highways of vulgar life.

*The Collected Mathematical Papers of James Joseph Sylvester*

(Volume 2)

Presidential Address to the British Association (p. 658)

University Press. Cambridge, England. 1904–1912

It is the constant aim of the mathematician to reduce all his expressions to their lowest terms, to retrench every superfluous word and phrase, and to condense the Maximum of meaning into the Minimum of Language.

*The Collected Mathematical Papers of James Joseph Sylvester*

(Volume 3)

On Recent Discoveries in Mechanical Conversion of Motion (pp. 72–73)

Views and Opinions (p. 1139)  
Macmillan & Company Limited. London, England. 1910

**Thurston, William Paul** 1946–  
American mathematician

There are mathematicians, and then there’s the rest of the world, and not much interaction between the two. In D. Albers, G. Alexanderson and C. Reid  
*More Mathematical People: Contemporary Conversations* (p. 335)  
Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

...mathematicians enjoy being in the ivory tower. I think that most mathematicians love mathematics for mathematics’ sake. They really do like the feeling of being in an ivory tower. For the most part they are not motivated by applications. But I believe that, whatever their personal motivation is for doing mathematics, in most cases the mathematics they generate will ultimately have significant applications. The important thing is to do the mathematics. But, of course, it’s important to have people thinking about applications too. In D. Albers, G. Alexanderson and C. Reid  
*More Mathematical People: Contemporary Conversations* (p. 335)  
Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

**Todhunter, Isaac** 1820–84  
English mathematician

Another great and special excellence of mathematics is that it demands earnest voluntary exertion. It is simply impossible for a person to become a good mathematician by the happy accident of having been sent to a good school; this may give him a preparation and a start, but by his own continued efforts alone can he reach an eminent position.

*The Conflict of Studies, and Other Essays on Subjects Connected With Education*  
Chapter I (p. 11)  
Macmillan & Co Ltd. London, England. 1873

Nor do I know any study which can compete with mathematics in general in furnishing matter for severe and continued thought. Metaphysical problems may be even more difficult; but then they are far less definite, and, as they rarely lead to any precise conclusion, we miss the power of checking our own operations, and of discovering whether we are thinking and reasoning or merely fancying and dreaming. *The Conflict of Studies, and Other Essays on Subjects Connected With Education*  
Chapter I (p. 13)  
Macmillan & Co Ltd. London, England. 1873

**Tomlinson, Henry Major** 1873–1958  
English novelist

We may doubt the warranty of the priest, but never that of the mathematician. *All Our Yesterdays*

Published by the editors. 1900

**Veblen, Oswald** 1880–1960  
American mathematician

The conclusion seems inescapable: that formal logic has to be taken over by the mathematicians. The fact is that there does not exist an adequate logic at the present time, and unless the mathematicians create one, no one else is likely to do so. *A Century of Mathematics In America* (Volume 2)  
Retiring address of the AMS 1924 (p. 219)  
American Mathematical Society. Providence, Rhode Island, USA. 1989

...let me remind any non-mathematicians...that when a mathematician lays down the elaborate tools by which he achieves precision in his own domain, he is unprepared and awkward in handling the ordinary tools of language. This is why mathematicians always disappoint the expectation that they will be precise and reasonable and clear-cut in their statements about everyday affairs,

and why they are, in fact, more fallible than ordinary mortals.

Geometry and Physics

*Science*, Volume 57, Number 1466, February 2, 1923 (p. 130)

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

Mathematicians are like Frenchmen: whatever you say to them they translate into their own language and forthwith it is something entirely different.

*The Maxims and Reflections of Goethe*

Macmillan & Company Limited. London, England. 1908

The mathematician is only in so far complete as he is a complete man, and feels within himself the beauty of truth. Then only will his work be profound, lucid, wise, genuine, pleasant, and even graceful.

In John Stuart Blackie

*The Wisdom of Goethe*

Philosophy, Metaphysics, Logic, Truth and Science (p. 171)

William Blackwood & Sons. Edinburgh, Scotland. 1883

A thorough advocate in a just cause, a penetrating mathematician facing the starry heavens, both alike bear the semblance of divinity.

In JoAnne S. Growney

Are Mathematics and Poetry Fundamentally Similar?

*The American Mathematical Monthly*, Volume 99, Number 2, February, 1992 (p. 131)

The saying that no one who is unacquainted with, or a stranger to, geometry, should enter the school of the philosopher, does not mean that a man must be a mathematician in order to become a sage.

*Criticisms, Reflections, and Maxims of Goethe* (p. 207)

Walter Scott Publishing Company. London, England. 1897

**Walther, Hans**

Take the mathematician away: He is a stupid augur, blind prophet, a crazy soothsayer. Man may know the present; only God can foresee the future.

In Jan Gullberg

*Mathematics: From the Birth of Numbers* (p. 17)

W.W. Norton & Company, Inc. New York, New York, USA. 1997

**Weaver, Jefferson Hane**

American science author

Whether this apparent inability [of mathematicians] to be affectionate with each other is the result of childhoods spent with parents who were distant and cold or due to the long-term effects of smoking pipes and wearing tweed jackets has never been scientifically investigated.

*Conquering Calculus: The Easy Road to Understanding Mathematics*

Chapter I (p. 11)

Plenum Press. New York, New York, USA. 1998

**Weierstrass, Karl** 1815–97

German mathematician

A mathematician who is not also something of a poet will never be a complete mathematician.

In Oswald Spengler

*The Decline of the West* (Volume 1)

Chapter II, Section iv (p. 62)

Alfred A. Knopf, Inc. New York, New York, USA. 1926

**Weil, André** 1906–98

French mathematician

Rigor is to the mathematician what morality is to man. It does not consist in proving everything, but in maintaining a sharp distinction between what is assumed and what is proved, and in endeavoring to assume as little as possible at every stage.

Mathematical Teaching in Universities

*The American Mathematical Monthly*, Volume 61, Number 1, January, 1954 (p. 35)

But, if logic is the hygiene of the mathematician, it is not his source of food; the great problems furnish the daily bread on which he thrives.

The Future of Mathematics

*The American Mathematical Monthly*, Volume 57, Number 5, May, 1950 (p. 297)

...the mathematician...believe[s] that he will be able to slake his thirst at the very sources of knowledge, convinced as he is that they will always continue to pour forth, pure and abundant, while others have to have recourse to the muddy streams of a sordid reality.

The Future of Mathematics

*The American Mathematical Monthly*, Volume 57, Number 5, May, 1950 (p. 306)

...it [the mathematician] be asked why he persists on the high glaciers whither no one but his own kind can follow him, he will answer.... For the honor of the human spirit.

The Future of Mathematics

*The American Mathematical Monthly*, Volume 57, Number 5, May, 1950 (p. 306)

We know that mathematicians are seldom influenced in their work by philosophical considerations, even when they profess to take them seriously; we know that they have their own way of dealing with foundational matters by an alternation between possibly reckless disregard and the most painful critical attention. Above all, we have learnt the difference between original thinking and the kind of routine reasoning which a mathematician often feels he has to spin out for the record in order to satisfy his peers, or perhaps only to satisfy himself.

In Raymond George Ayoub

*Musings of the Masters: An Anthology of Mathematical Reflections*

History of Mathematics (p. 210)

Mathematical Association of America. Washington, D.C. 2004

**Weinberg, Steven** 1933–  
American nuclear physicist

It is positively spooky how the physicist finds the mathematician has been there before him or her.  
Lectures on the Applicability of Mathematics  
*Notices of the American Mathematical Society*, October, 1986

**Weyl, Hermann** 1885–1955  
German mathematician

It cannot be denied, however, that in advancing to higher and more general theories the inapplicability of the simple laws of classical logic eventually results in an almost unbearable awkwardness. And the mathematician watches with pain the larger part of his towering edifice which he believed to be built of concrete dissolve into mist before his eyes.

*Philosophy of Mathematics and Natural Science*  
Part I, Chapter II (p. 54)  
Princeton University Press. Princeton, New Jersey, USA. 1949

**Whewell, William** 1794–1866  
English philosopher and historian

We pass with admiration along the great series of mathematicians, by whom the science of theoretical mechanics has been cultivated, from the time of Newton to our own. There is no group of men of science whose fame is higher or brighter. The great discoveries of Copernicus, Galileo, Newton, had fixed all eyes on those portions of human knowledge on which their successors employed their labours. The certainty belonging to this line of speculation seemed to elevate mathematicians above the students of other subjects; and the beauty of mathematical relations, and the subtlety of intellect which may be shown in dealing with them, were fitted to win unbounded applause. The successors of Newton and the Bernoullis, as Euler, Clairaut, D'Alembert, Lagrange, Laplace, not to introduce living names, have been some of the most remarkable men of talent which the world has seen.

*History of the Inductive Sciences from the Earliest to the Present Time*  
(Volume 2) (3rd edition)  
Book VI, Chapter VI (pp. 76–77)  
John W. Parker & Son. London, England. 1857

We may thus, with the greatest propriety, deny to the mechanical philosophers and mathematicians of recent times any authority with regard to their views of the administration of the universe; we have no reason whatever to expect from their speculations any help, when we attempt to ascend to the first cause and supreme ruler of the universe. But we might perhaps go further, and assert that they are in some respects less likely than men employed in other pursuits, to make any clear advance towards such a subject of speculation.

*Astronomy and General Physics*

Social Processes and Proofs of Theorems and Programs (p. 29)  
Wadsworth, Inc. Belmont, California, USA. 1984

**Wittgenstein, Ludwig Josef Johann** 1889–1951  
Austrian-born English philosopher

The mathematician is an inventor, not a discoverer.  
*Remarks on the Foundations of Mathematics*  
Appendix I, 167 (p. 47e)  
The MIT Press. Cambridge, Massachusetts, USA. 1967

**Zygmund, Antoni** 1900–92  
Polish-born American mathematician

Concentrate only on the achievements, and ignore the mistakes. When judging a mathematician you should only integrate  $f^+$  and ignore the negative part. Perhaps this should apply more generally to all evaluations of your fellow men.

*A Century of Mathematics in America* Volume 3  
The School of Antoni Zygmund (p. 348)  
American Mathematical Society. Providence, Rhode Island, USA. 1989

## MATHEMATICS

**Adams, Henry Brooks** 1838–1918  
American man of letters

In the one branch he most needed – mathematics – barring the few first scholars, failure was so nearly universal that no attempt at grading could have had value, and whether he stood fortieth or ninetieth must have been an accident or the personal favor of the professor. Here his education failed lamentably. At best he could never have been a mathematician; at worst he would never have cared to be one; but he needed to read mathematics, like any other universal language, and he never reached the alphabet.

In Ernest Samuels (ed.)  
*The Education of Henry Adams*  
Chapter IV (p. 60)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1974

**Adler, Alfred** 1870–1937  
Austrian psychiatrist

Mathematics, like chess, requires too direct and personal a confrontation to allow graceful defeat.

In Douglas M. Campbell and John C. Higgins (eds.) *Mathematics: People, Problems, Results* (Volume 2) Mathematics and Creativity (p. 3)  
Wadsworth, Inc. Belmont, California, USA. 1984

**Allen, Woody** 1935–  
American motion picture director and actor

Standard mathematics has recently been rendered obsolete by the discovery that for years we have been writing the numeral five backward. This has led to a reevaluation of counting as a method of getting from one to ten.

*Getting Even*  
Spring Bulletin (p. 58)  
Random House, Inc. New York, New York, USA. 1971

**Anglin, William S.**  
Canadian philosopher and mathematician

Mathematics is not a careful march down a well-cleared highway, but a journey into a strange wilderness, where the explorers often get lost. Rigor should be a signal to the historian that the maps have been made, and the real explorers have gone elsewhere.

Mathematics and History  
*The Mathematical Intelligencer*, Volume 14, Number 4, Fall, 1992 (p. 10)

**Arago, Francois** 1786–1853  
French physicist

The mathematics have been in all ages the implacable adversaries of scientific romances.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1874*  
Laplace (p. 156)  
Government Printing Office. Washington, D.C. 1875

**Arbuthnot, John** 1667–1735  
Scottish mathematician and physician

...mathematics make the mind attentive to the objects which it considers. This they do by entertaining it with a great variety of truths, which are delightful and evident, but not obvious.

In Robert Chambers & Robert Carruthers  
*Cyclopaedia of English Literature* (Volume 3) (3rd edition)  
Usefulness of Mathematical Learning (p. 362)  
American Book Exchange. New York, New York, USA. 1879

The mathematics are the friends to religion, inasmuch as they charm the passions, restrain the impetuosity of the imagination, and purge the mind from error and prejudice. Vice is error, confusion and false reasoning; and all truth is more or less opposite to it. Besides, mathematical truth may serve for a pleasant entertainment for those hours

which young men are apt to throw away upon their vices; the delightfulness of them being such as to make solitude not only easy but desirable.

*An Essay on the Usefulness of Mathematical Learning*  
Printed at the Theater in Oxford. 1701

Mathematics makes the mind attentive to the objects which it considers. This they do by entertaining it with a great variety of truths, which are delightful and evident, but not obvious. Truth is the same thing to the understanding as music to the ear and beauty to the eye. The pursuit of it does really as much to gratify a natural faculty implanted in us by our wise Creator as the pleasing of our senses: only in the former case, as the object and faculty are more spiritual, the delight is more pure, free from regret, turpitude, lassitude, and intemperance, that commonly attend sensual pleasures.

*An Essay on the Usefulness of Mathematical Learning*  
Printed at the Theater in Oxford. 1701

**Aristo, Chian**

Chapter Five (p. 119)  
W. H. Freeman & Company, Oxford, England. 1992

### Author undetermined

Here's to mathematics, may it never be of use to anyone.

Old Cambridge toast

COGDELL, GA – The Cogdell School Board banned the teaching of the controversial “Theory Of Math” in its schools Monday. “We are simply not confident of this mysterious process by which numbers turn, as if by magic, into other numbers,” board member Gus Reese said. “Those mathematicians are free to believe 3 times 4 equals 12, but that dun [sic] give them the right to force it on our children.” Under the new ruling, all math textbooks will carry a disclaimer noting that math is only one of many valid theories of number-manipulation.

*The Onion Ad Nauseam: Complete News Archives* (p. 255)  
Three Rivers Press. New York, New York, USA. 2003

### Bacon, Roger 1214–92

English philosopher, scientist, and friar

There are four great sciences.... Of these sciences the gate and key is mathematics, which the saints discovered at the beginning of the world...

Translated by Robert Belle Burke

*The Opus Majus of Roger Bacon*

Part 4, Chapter. 1 (p. 116)

Oxford University Press, Inc. London, England. 1928

### Bacon, Sir Francis 1561–1626

English lawyer, statesman, and essayist

For it being the nature of the mind of man (to the extreme prejudice of knowledge) to delight in the spacious liberty of generalities, as in a champaign region, and not in the enclosures of particularity, the mathematics of all other knowledge were the goodliest fields to satisfy that appetite.

In *Great Books of the Western World* (Volume 30)

*The Advancement of Learning*

Second Book, Chapter VIII, Section 1 (p. 46)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

For many parts of nature can neither be invented with sufficient subtlety nor demonstrated with sufficient perspicuity nor accommodated unto use with sufficient dexterity, without the aid and intervening of the mathematics: of which sort are perspective, music, astronomy, cosmography, architecture, enginery, and divers others.

In *Great Books of the Western World* (Volume 30)

*The Advancement of Learning*

Second Book, Chapter VIII, Section 2 (p. 46)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

The mathematic is either pure or mixed: To pure mathematic belong those sciences which handle quantity entirely severed from matter and from axioms of natural philosophy; these are two, geometry and arithmetic; the one handling quantity continued, the other dissevered.... Mixed Mathematic has for its subject some axioms and parts of natural philosophy, and considers quantity in so far as it assists to explain, demonstrate and actuate these.

In *Great Books of the Western World* (Volume 30)

*Advancement of Learning*

Second Book, Chapter VIII, Section 2 (p. 46)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

In mathematics I can report no deficiency, except it be that men do not sufficiently understand the excellent use of the pure mathematics.

In *Great Books of the Western World* (Volume 30)

*The Advancement of Learning*

Book II, Chapter VIII, Section 2 (p. 46)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...as for the mixed mathematics, I may only make this prediction, that there cannot fail to be more kinds of them, as nature grows farther disclosed.

*The Works of Francis Bacon* (Volume 1)

*Of the Advancement of Learning*

Book II (p. 108)

Printed for W. Baynes & Son

London, England. 1824

Mathematic is either Pure or Mixed. To Pure Mathematic belong those sciences which handle Quantity entirely severed from matter and from axioms of natural philosophy. These are two, Geometry and Arithmetic ; the one handling quantity continued, and the other dissevered.... Mixed Mathematic has for its subject some axioms and parts of natural philosophy, and considers quantity in so far as it assists to explain, demonstrate, and actuate these.

In James Spedding, Robert L. Ellis and Douglas Heath (eds.)

*Works* (Volume 8)

*Advancement of Learning*

Book 2 (p. 519)

Taggard & Thompson. Boston, Massachusetts, USA. 1864

So if a man's wit be wandering, let him study the mathematics; for in demonstrations, if his wit be called away [ever] so little, he must begin again.

*Bacon's Essays*

Of Studies (p. 211)

Donohue, Henneberry & Company. Chicago, Illinois, USA. 1883

Histories make men wise; poets, witty; the mathematics, subtle; natural philosophy, deep; moral, grave; logic and rhetoric, able to contend.

*Essays*

Of Studies (p. 74)

Longmans, Green & Co. London, England. 1899.

**Bain, Alexander** 1818–1903  
Scottish philosopher and psychologist

Those that can readily master the difficulties of Mathematics find a considerable charm in the study, sometimes amounting to fascination. This is far from universal; but the subject contains elements of strong interest of a kind that constitutes the pleasures of knowledge. The marvelous devices for solving problems elate the mind with the feeling of intellectual power; and the innumerable constructions of the science leave us lost in wonder.

*Education as a Science*

Chapter 5 (p. 153)

C. Kegan Paul & Company. London, England. 1879

**Barbeyac, Jean** 1674–1744  
French jurist

Never was there seen aught more wretched; and we might be surprised that a *mathematician could reason so ill*, had we not other, and far more illustrious examples, which clearly evince, that the *study of the mathematics does not always render the mind more correct in relation to subjects beyond the sphere of the sciences*.

Quoted in William Hamilton

*Discussions on Philosophy and Literature, Education and University Reform*

On the Study of Mathematics as an Exercise of the Mind (p. 291)

Harper & Brothers Publishers. New York, New York, USA. 1861

**Barrow, Isaac** 1630–77  
English clergyman and mathematician

Mathematics – the unshaken Foundation of Sciences, and the plentiful Fountain of Advantage to human affairs.

In Carl B. Boyer

*A History of Mathematics* (p. 404)

John Wiley & Sons, Inc. New York, New York, USA. 1968

**Baum, Lyman Frank.** 1856–919  
American author

...it's merely a question of mathematics. I've seen the professor work lots of sums on the blackboard, and he claimed anything could be done with x's and y's and a's, and such things, by mixing them up with plenty of pluses and minuses and equals, and so forth.

*The Marvelous Land of Oz*

Chapter 19 (p. 224)

The Reilly & Britton Co. Chicago, Illinois, USA. 1904

...Your mathematics seem to me very like a bottle of mixed pickles the more you fish for what you want the less chance you have of getting it.

*The Marvelous Land of Oz*

Chapter 19

The Reilly & Britton Co. Chicago, Illinois, USA. 1904

**Beebe, William** 1877–1962  
American ornithologist

Having an I.Q. in mathematics lower than would be thought possible in any human being alive, my mind is always excited at any simple kindergarten problems.

*High Jungle*

Chapter X (p. 164)

Duell, Sloan & Pearce. New York, New York, USA. 1949

**Bell, E. T. (Eric Temple)** 1883–1960  
Scottish-American mathematician and educator

Even stranger things have happened; and perhaps the strangest of all is the marvel that mathematics should be possible to a race akin to the apes.

*The Development of Mathematics*

Uncertainties and Probabilities (p. 546)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1945

Just as “beauty is its own excuse for being,” so mathematics needs no apology for existing.

*The Queen of the Sciences*

Chapter VI (p. 82)

The Williams & Wilkins Company. Baltimore, Maryland, USA. 1931

It is customary to call mathematics a science and to place it first in the classification of the sciences. So long as we remember the radical difference between mathematics and the physical or biologic sciences no harm is done in calling mathematics a science. Something of the distinction between the mathematical method and the strictly scientific must be seen before attempting to uncover the mystery of mathematical prophecy in scientific discovery. The matter is extremely simple but none the less profound.

*The Handmaiden of the Sciences*

Chapter 1 (p. 5)

Williams & Wilkins Co. Baltimore, Maryland, USA. 1937

The longer mathematics lives the more abstract – and therefore, possibly also the more practical – it becomes.

*Men of Mathematics* (p. 525)

Simon & Schuster. New York, New York, USA. 1986

The task of cleaning up mathematics and salvaging whatever can be saved from the wreckage of the past twenty years will probably be enough to occupy one generation.

*Debunking Science*

University of Washington Book Store. Seattle, Washington, USA. 1930

...we shall leave to the antiquarians the difficult and delicate task of restoring the roses to the cheeks of mathematical mummies.

*The Development of Mathematics*

To Any Prospective Reader (p. v)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1945

“Obvious” is the most dangerous word in mathematics.

*Mathematics: Queen and Servant of Science*

Points of View (p. 16)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1951

Mathematics by itself has seldom got very far in the exploration of nature, as is attested by the numerous

attempts of pure mathematicians of the past and present to resolve the universe with pencil and paper.

*Mathematics: Queen and Servant of Science*

A Metrical Universe (p. 211)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1951

“If it is not abstract it is not mathematics” might be taken as a touchstone for discriminating between mathematics and other departments of precise investigation.

*Mathematics: Queen and Servant of Science*

Abstraction and Prediction (p. 259)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1951

For my own part I have swallowed mathematics enough in my life to be immune to just one more dose, and I shall continue to get smallpox vaccinations whenever I contemplate a vacation in any of the filthier parts of the North American continent.

*Mathematics: Queen and Servant of Science*

Choice and Chance (p. 381)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1951

Mathematics has a light and wisdom of its own, above any possible applications to science, and it will richly reward any intelligent human being to catch a glimpse of what mathematics means to itself. This is not the old doctrine of art for art’s sake; it is art for humanity’s sake.

In Stanley Gudder

*A Mathematical Journey* (p. 107)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1976

If a lunatic scribbles a jumble of mathematical symbols it does not follow that the writing means anything merely because to the inexpert eye it is indistinguishable from higher mathematics.

In James R. Newman (ed.)

*The World of Mathematics* (Volume 1)

The Prince of Mathematics (p. 308)

Simon & Schuster. New York, New York, USA. 1956

**Berlinski, David** 1942–

American mathematician

...there is no explaining mathematics without from time to time using mathematics, and the mathematician’s symbolism, which to an outsider looks as inviting as Chinese ...

*A Tour of the Calculus*

A Note to the Reader (p. xv)

Pantheon Books. New York, New York, USA. 1995

Mathematician

Mathematics develops, somehow, by its own inner laws.

In Donald J. Albers and Constance Reid

An Interview with Lipman Bers

*The College Mathematics Journal*, Volume 18, September, 1987 (p. 288)

I alternate between two attitudes [about attempts to communicate the beauty of mathematics to a wide audience].

Mondays, Wednesdays and Fridays I believe it can be done if we do it properly; Tuesdays, Thursdays and Saturdays I believe it cannot.

In D. Albers, G. Alexanderson and C. Reid

*More Mathematical People: Contemporary Conversations*

Lipman Bers (p. 15)

Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

**Berthelot, Marcellin (or Marcelin) Pierre**

**Eugène** 1827–1907

French chemist and politician

Mathematics gives the young man a clear idea of demonstration and accustoms him to form long trains of thought and reasoning methodically connected and sustained by the final certainty of the result; and it has the further advantage, from a purely moral point of view, of inspiring an absolute and fanatical respect for truth.

Science as an Instrument of Education

*Popular Science Monthly*, Volume 51 1897 (p. 253)

**Bishop, Errett** 1928–83

American mathematician

Mathematics belongs to man, not to God. We are not interested in properties of the positive integers that have no descriptive meaning for finite man. When a man proves a positive integer to exist, he should show how to find it. If God has mathematics of his own that need to be done, let him do it himself.

*Foundations of Constructive Analysis*

Chapter 1 (p. 2)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1967

**Bloor, David**

No biographical data available

...mathematics like morality is designed to meet the requirements of men, who hold a great deal in common in their physiology and in their physical environment.

*Knowledge and Social Imagery*

Chapter Six (p. 109)

The University of Chicago Press. Chicago, Illinois, USA. 1991

**Boas, Jr., Ralph P.** 1913–92

Mathematician

Some years ago, after I had given a talk, somebody said, “You seem to make mathematics sound like so much fun.” I was inspired to reply, “If it isn’t fun, why do it?” I am proud of the sentiment, even if it is overstated.

In D. Albers, G. Alexanderson and C. Reid

*More Mathematical People: Contemporary Conversations* (p. 41)

Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

**Bôcher, Maxime** 1867–1918

American mathematician

I like to look at mathematics almost more as an art than as a science; for the activity of the mathematician,

constantly creating as he is, guided though not controlled by the external world of senses, bears a resemblance, not fanciful I believe but real, to the activities of an artist, of a painter let us say. Rigorous deductive reasoning on the part of the mathematician may be likened here to technical skill in drawing on the part of the painter. Just as no one can become a good painter without a certain amount of this skill, so no one can become a mathematician without the power to reason accurately up to a certain point. Yet these qualities, fundamental though they are, do not make a painter or mathematician worthy of the name, nor indeed are they the most important factors in the case. Other qualities of a far more subtle sort, chief among which in both cases is imagination, go to the making of a good artist or of a good mathematician.

The Fundamental Conceptions and Methods in Mathematics  
*Bulletin of the American Mathematical Society*, 2nd Series, Volume 11, 1904 (p. 133)

If we have a certain class of objects and a certain class of relations and if the only questions which we investigate are whether ordered groups of these objects do or do not satisfy the relations, the results of the investigations are called mathematics.

*Congress of Arts and Science: Universal Exposition, St. Louis, 1904*  
(Volume 1)

The Fundamental Conceptions and Methods of Mathematics (p. 466)  
Houghton Mifflin & Co. Boston, Massachusetts, USA. 1905

### **Bochner, Salomon** 1899–1982

Galician-born American mathematician

Ours is an age in which scientists are Wise Men, and the root of this Wisdom is in Mathematics.

*The Role of Mathematics in the Rise of Science*

Preface (p. v)

Princeton University Press. Princeton, New Jersey, USA. 1966

What indeed is mathematics? This question, if asked in earnest, has no answer, not a satisfactory one; only part answers and observations can be attempted.

*The Role of Mathematics in the Rise of Science*

Chapter I (p. 13)

Princeton University Press. Princeton, New Jersey, USA. 1966

The word “mathematics” is a Greek word, and, by origin, it means “something that has been learned or understood,” or perhaps “acquired knowledge,” and perhaps even, somewhat against grammar, “acquirable knowledge,” that is, “learnable knowledge,” that is, “knowledge acquirable by learning.”

*The Role of Mathematics in the Rise of Science*

Chapter I (pp. 24–25)

Princeton University Press. Princeton, New Jersey, USA. 1966

If science is viewed as an industrial establishment, then mathematics is an associated power plant which feeds a certain kind of indispensable energy into the establishment.

Why Mathematic Grows

*Journal of the History of Ideas*, Volume 26, Number 1, 1965 (p. 18)

### **Bossut, Charles** 1730–1814

French mathematician

The term mathematics, implying from its etymology discipline, science, represents with justice and precision the high idea that we ought to form of what is signified by it. In fact mathematics are a methodical concatenation of principles, reasonings, and conclusions, always accompanied by certainty as their truth is always evident: an advantage that particularly characterises accurate knowledge, and the true sciences, with which we must be careful not to associate metaphysical notions, conjectures, or even the strongest probabilities.

*A General History of Mathematics from the Earliest Times to the Middle of the Eighteenth Century*

Introduction (p. 1)

Printed for J. Johnson. London, England. 1803

### **Boutroux, Émile** 1845–1921

French philosopher

Science is reduction. Mathematics is its ideal, its form par excellence, for it is in mathematics that assimilation, identification, is most perfectly realized. The universe, scientifically explained, would be a certain formula, one and eternal, regarded as the equivalent of the entire diversity and movement of things.

Translated by Fred Roth Well

*Natural law in Science and Philosophy*

Preface (p. 5)

The Macmillan Co. New York, New York, USA. 1914

### **Boyle, Robert** 1627–91

English natural philosopher and theological writer

Mathematicks may help the naturalist, both to frame hypotheses, and to judge of those that are proposed to them, especially such as relate to mathematical subjects in conjunction with others.

In William Thompson Sedgwick and H.W. Tyler

*A Short History of Science* (p. 335)

The Macmillan Company. New York, New York, USA. 1917

### **Bragdon, Claude Fayette** 1866–1945

American architect, writer, and stage designer

The modern mind has adventured far and fearlessly in the new realms of thought opened up by research and discovery, but it has left no trail of beauty. That it has not done so is the fault of the artist, who has failed to interpret and portray the movement of the modern mind.... The new beauty, which corresponds to the new knowledge, is the beauty of principles...the world order. The world order is most perfectly embodied in mathematics.

In Stanley Gudder

*A Mathematical Journey* (p. 94)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1976

**Bridges, Robert Seymour** 1844–1930

English poet

...and see how Mathematick rideth as a queen, cheer'd on her royal progress thru' out nature's realm.

*The Testament of Beauty*

Book IV, l. 856–7

Oxford University Press, Inc. Oxford, England. 1930

**Bridgman, Percy Williams** 1882–1961

American physicist

As at present constructed, mathematics reminds one of the loquacious and not always coherent orator, who was said to be able to set his mouth going and go off and leave it.

*The Logic of Modern Physics*

Chapter II (p. 63)

The Macmillan Company. New York, New York, USA. 1927

**Browne, Sir Thomas** 1605–82

English author and physician

...indeed what reason may not go to School to the wisdom of Bees, Ants, and Spiders? What wise hand teacheth them to do what reason cannot teach us? Ruder heads stand amazed at those prodigious pieces of Nature, Whales, Elephants, Dromedaries and Camels; these, I confess, are the Colossus and Majestick pieces of her hand: but in these narrow Engines there is more curious Mathematicks; and the civility of these little Citizens, more neatly sets forth the Wisdom of their Maker.

In Charles Sayle

*The Works of Sir Thomas Browne* (Volume 1)*Religio Medici*

Section 12 (p. 24)

Grant Richards. London, England. 1904

**Buchanan, Scott** 1895–1968

American educator and philosopher

Mathematics is not a compendium or memorizable formula and magically manipulated figures.

*Poetry and Mathematics*

Chapter I (p. 35)

The University of Chicago Press. Cambridge, England. 1975

Mathematics suffers much, but most of all from its teachers.

In Robert M. Hutchins and Mortimer J. Adler

*The Great Ideas Today* 1974*Poetry and Mathematics* (p. 415)

Encyclopaedia Britannica, Inc. Chicago, Illinois, USA. 1975

The structures with which mathematics deals are more like lace, the leaves of trees, and the play of light and shadow on a human face, than they are like buildings and machines, the least of their representatives. The best proofs in mathematics are short and crisp like epigrams, and the longest have swings and rhythms that are like music. The structures of mathematics and the propositions about them are ways for the imagination to travel

and the wings, or legs, or vehicles to take you where you want to go.

*Poetry and Mathematics*

Chapter I (p. 36)

The University of Chicago Press. Chicago, Illinois, USA. 1975

Mathematics...becomes the ladder by which we all may climb into the heavens of perfect insight and eternal satisfaction, and the solution of arithmetic and algebraic problems is connected with and the salvation of our souls.

*Poetry and Mathematics*

Chapter I (p. 37)

The University of Chicago Press. Cambridge, England. 1975

The prestige of the engineer is another accretion to the tradition of mathematics. This more than any other one thing accounts for our present mathematical complex. The engineer is fast taking the position of authority, superseding the priest, the scholar, and the statesman in our organized thought and action.

*Poetry and Mathematics*

Chapter I (pp. 37–38)

The University of Chicago Press. Chicago, Illinois, USA. 1975

**Bullock, James O.**

Theoretical cosmologist

Mathematics is not a way of hanging numbers on things so that quantitative answers to ordinary questions can be obtained. It is a language that allows one to think about extraordinary questions.

Literacy in the Language of Mathematics

*The American Mathematical Monthly*, Volume 101, Number 8, October, 1994 (p. 737)**Burger, Edward B.**

American mathematician

**Starbird, Michael**

American mathematician

Mathematics is not constrained by mundane reality. It can build castles in the air and concepts in the mind whose beauty, magnificence, and intrigue are as boundless as the ideas themselves.

*Coincidences, Chaos, and All That Math Jazz*

Part IV (p. 199)

W.W. Norton &amp; Co. New York, New York, USA. 2005

Mathematics and our imaginations have no bounds, no ends, no finish line. Every horizon reached opens new horizons more glorious still.

*Coincidences, Chaos, and All That Math Jazz*

Closing Thoughts (p. 267)

W.W. Norton &amp; Co. New York, New York, USA. 2005

**Burton, Leone** 1936–

Mathematics professor

Three shifts can be detected over time in the understanding of mathematics itself. One is a shift from completeness to

incompleteness, another from certainty to conjecture, and a third from absolutism to relativity.

Femmes et Mathematiques: Y a-t-il une?

*Association for Women in Mathematics Newsletter*, Intersection 18 (November–December, 1988)

**Butler, Nicholas Murray** 1862–1947

American educator and university administrator

Modern mathematics, that most astounding of intellectual creations, has projected the mind's eye through infinite time and the mind's hand into boundless space.

*The Meaning of Education and Other Essays and Addresses*

What Knowledge Is of Most Worth? (p. 44)

The Macmillan Company. London, England. 1898

**Cajori, Florian** 1859–1930

Swiss-born American educator and mathematician

One of the most baneful delusions by which the minds, not only of students, but even of many teachers of mathematics in our classical colleges, have been afflicted is that mathematics can be mastered by the favored few, but lies beyond the grasp and power of the ordinary mind.

*The Teaching and History of Mathematics in the United States*

Chapter III (p. 100)

Government Printing Office. Washington, D.C. 1890

**Carmichael, Robert Daniel** 1879–1967

American mathematician

Mathematics, by exhibiting a body of truth which can live through millenniums without needed connections, and at the same time can grow in magnitude and range and interest, has given the human spirit new ground for believing in itself and for rejoicing in its power of consistent thought.

*The Logic of Discovery*

Chapter IX (pp. 263–264)

The Open Court Publishing. Chicago, Illinois, USA. 1930

**Carus, Paul** 1852–1919

American philosopher

There is no science which teaches the harmonies of nature more clearly than mathematics...

In William Symes Andrews

*Magic Squares and Cubes*

Introduction

The Open Court Publishing Company. Chicago, Illinois, USA. 1908

There is no prophet that preaches the super personal God more plainly than mathematics.

The God Problem

*The Monist*, Volume XVI, Number 1, January, 1906 (p. 147)

**Cassiodorus** ca. 485–585

Roman statesman and author

It is given to us to live for the most part under the guidance of mathematics.... It is impossible to distinguish from other living creatures anyone who does not understand how to quantify.

In David Ewing Duncan

*The Calendar*

Fourth Estate. London, England. 1998

**Casson, Stanley**

No biographical data available

The nearer man approaches mathematics the farther away he moves from the animals.

*Progress and Catastrophe: An Anatomy of Human Adventure*

Chapter VI (p. 93)

Harper & Brothers. New York, New York, USA. 1937

**Cayley, Arthur** 1821–95

English mathematician

Mathematics connect themselves on the one side with common life and the physical sciences; on the other side with philosophy, in regard to our notions of space and time, and in the questions which have arisen as to the universality and necessity of the truths of mathematics, and the foundation of our knowledge of them.

*The Collected Mathematical Papers of Arthur Cayley*

Presidential Address to the British Association, Southport, September, 1883 (p. 430)

At The University Press. Cambridge, England. 1896

**Chan, Tony**

Author, educator, filmmaker, and journalist

Math never gets into the story.... Everyone else gets the credit.

Math Whizzes Want Respect in Equation

*Los Angeles Times*, July 14, 1998 (p. 1)

**Chapman, C. H.**

No biographical data available

There is probably no other science which presents such different appearances to one who cultivates it and one who does not, as mathematics. To [the noncultivator] it is ancient, venerable, and complete; a body of dry, irrefutable, unambiguous reasoning. To the mathematician, on the other hand, his science is yet in the purple of bloom of vigorous youth, everywhere stretching out after the "attainable but unattained," and full of the excitement of nascent thoughts; its logic is beset with ambiguities, and its analytic processes, like Bunyan's road, have a quagmire on one side and a deep ditch on the other, and branch off into innumerable by-paths that end in a wilderness.

*Bulletin of the New York Mathematical Society*, 1892 (p. 61)

**Chesterton, G. K. (Gilbert Keith)** 1874–1936

English author

...the common idea [is] that mathematics is a dull subject whereas the testimony of all those who have any dealings with it shows that it is one of the most thrilling and tantalising and enchanting subjects in the world.

*Lunacy and Letters*

A Defense of Bores (pp. 58–59)

Sneed & Ward, Inc. New York, New York, USA. 1958

**Chrystal, George** 1851–1911

Mathematician and academic

Any conception which is definitely and completely determined by means of a finite number of specifications, say by assigning a finite number of elements, is a mathematical conception. Mathematics has for its function to develop the consequences involved in the definition of a group of mathematical conceptions. Interdependence and mutual logical consistency among the members of the group are postulated, otherwise the group would either have to be treated as several distinct groups, or would lie beyond the sphere of mathematics.

*Encyclopædia Britannica* (9th edition)

Mathematics

Adam &amp; Charles Black. Edinburgh, Scotland. 1879

**Churchill, Winston Spencer** 1882–1965

British prime minister, statesman, soldier, and author

I had a feeling once about Mathematics – that I saw it all. Depth beyond Depth was revealed to me – the Byss and the Abyss. I saw – as one might see the transit of Venus or even the Lord Mayor’s Show – a quantity passing through infinity and changing its sign from plus to minus. I saw exactly why it happened and the tergiversation was inevitable – but it was after dinner and I let it go.

In Clifton Fadiman

*The Mathematical Magpie* (p. 255)

Simon &amp; Schuster. New York, New York, USA. 1962

**Clawson, Calvin C.**

Frequently, when studying mathematics, one slips into another world, a world of exquisite beauty and truth. This traveling to another plane of mental existence can be so addicting that the practitioner is lost...to ordinary, daily stimulus.

*Mathematical Mysteries: The Beauty and Magic of Numbers*

Introduction (p. 4)

Perseus Books. Cambridge, Massachusetts, USA. 1996

The single most compelling reason to explore the world of mathematics is that it is beautiful, and pondering its intriguing ideas is great fun.

*Mathematical Mysteries: The Beauty and Magic of Numbers***Coleridge, Samuel Taylor** 1772–1834

English lyrical poet, critic, and philosopher

Some people have contended that mathematics ought to be taught by making illustrations obvious to the senses. Nothing can be more absurd or injurious: It ought to be our never-ceasing effort to make people think, not feel.

*Lectures and Notes on Shakespeare and Other English Poets*

Lecture II (p. 52)

G. Bell &amp; Sons. London, England. 1907

I have often been surprised that Mathematics, the quintessence of Truth, should have found admirers so few and

so languid. Frequent consideration and minute scrutiny have at length unravelled the cause; viz. that though Reason is feasted, Imagination is starved; whilst Reason is luxuriating in its proper Paradise, Imagination is wearily travelling on a dreary desert.

*The Poetical and Dramatic Works of Samuel Taylor Coleridge*

A Mathematical Poem (p. 22)

Basil Montagu Pickering. London, England. 1877

**Coleridge, Stephen** 1854–1936

English author, barrister, and opponent of vivisection

The binomial theorem, trigonometry, conic sections, and all the rest of the higher mathematics are fields of knowledge that can be acquired with dreary labour by anyone who persistently applies his mind to them.

*The Idolatry of Science*

Chapter IV (pp. 19–20)

John Lane Co. London, England. 1920

**Comte, Auguste** 1798–1857

French philosopher

Mathematics will always necessarily be the last link in the chain of the sciences ...

Translated by Richard Congreve

*The Catechism of Positive Religion*

Second Part, Chapter VI (p. 190)

John Chapman. London, England. 1858

...it is only through Mathematics that we can thoroughly understand what true science is. Here alone can we find in the highest degree simplicity and severity of scientific law, and such abstraction as the human mind can attain.

Translated by Harriet Martineau

*The Positive Philosophy of Auguste Comte* (Volume 1)

Book I, Chapter I (p. 41)

George Bell &amp; Sons. London, England. 1896

The business of concrete mathematics is to discover the equations which express the mathematical laws of the phenomenon under consideration; and these equations are the starting-point of the calculus, which must obtain from them certain quantities by means of others.

Translated by Harriet Martineau

*Positive Philosophy*

Book I, Chapter II (p. 61)

Calvin Blanchard. New York, New York, USA. 1851

Geometrical and Mechanical phenomena are the most general, the most simple, the most abstract of all – the most irreducible to others, the most independent of them; serving, in fact, as a basis to all others. It follows that the study of them is an indispensable preliminary to that of all others. Therefore must Mathematics hold the first place in the hierarchy of the sciences, and be the point of departure of all Education, whether general or special.

*The Positive Philosophy of Auguste Comte* (Volume 1)

Introduction, Chapter II (p. 33)

John Chapman. London, England. 1853

In mathematics we find the primitive source of rationality; and to mathematics must the biologists resort for means to carry on their researches.

*The Positive Philosophy of Auguste Comte* (Volume 1)  
Book 5, Chapter 1, To Mathematics (p. 321)  
John Chapman. London, England. 1853

In the present state of our knowledge we must regard Mathematics less as a constituent part of natural philosophy than as having been, since the time of Descartes and Newton, the true basis of the whole natural philosophy; though it is, exactly speaking, both the one and the other. To us it is of less value for the knowledge of which it consists, substantial and valuable as that knowledge is, than as being the most powerful instrument that the human mind can employ in the investigation of the laws of natural phenomena.

*The Positive Philosophy of Auguste Comte* (Volume 1)  
Introduction, Chapter II (p. 32)  
John Chapman. London, England. 1853

Book One, Introductory (p. 510)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### **Courant, Richard** 1888–1972

German-born American mathematician

The interplay between generality and individuality, deduction and construction, logic and imagination – this is the profound essence of live mathematics. Anyone or another of these aspects of mathematics can be found at the center of a given achievement. In a far reaching development all of them will be involved. Generally speaking, such a development will start from the “concrete,” then discard ballast by abstraction and rise to the lofty layers of thin air where navigation and observation are easy: after this flight comes the crucial test for learning and reaching specific goals in the newly surveyed low plains of individual “reality.” In brief, the flight into abstract generality must start from and return again to the concrete and specific.

Mathematics in the Modern World  
*Scientific American*, Volume 211, Number 3, September, 1964 (p. 43)

The question “What is mathematics?” cannot be answered meaningfully by philosophical generalities, semantic definitions or journalistic circumlocutions. Such characterizations also fail to do justice to music or painting. No one can form an appreciation of these arts without some experience with rhythm, harmony and structure, or with form, color and composition. For the appreciation of mathematics actual contact with its substance is even more necessary.

Mathematics in the Modern World  
*Scientific American*, Volume 211, Number 3, September, 1964 (p. 42)

Mathematics must take its motivation from concrete specific substance and aim again at some layer of “reality.”

The flight into abstraction must be something more than a mere escape; start from the ground and reentry are both indispensable, even if the same pilot cannot handle all phases of the trajectory.

Quoted in Stanley Gudder

*A Mathematical Journey* (p. 201)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1976

**Courant, Richard** 1888–1972

German-born American mathematician

**Robbins, Herbert** 1915–2001

American mathematician

For scholars and layman alike it is not philosophy but active experience in mathematics itself that alone can answer the question: What is mathematics?

*What Is Mathematics?* (p. xix)

Oxford University Press, Inc. London, England. 1941

Mathematics as an expression of the human mind reflects the active will, the contemplative reason, and the desire for aesthetic perfection. Its basic elements are logic and intuition, analysis and construction, generality and individuality. Though different traditions may emphasize different aspects, it is only the interplay of these antithetic forces and the struggle for their synthesis that constitute the life, usefulness, and supreme value of mathematical science.

*What Is Mathematics?* (p. xv)

Oxford University Press, Inc. London, England. 1941

**Coxeter, H. S. M.** 1907–2003

Geometer and author

In our times, geometers are still exploring those new Wonder-lands, partly for the sake of their applications to cosmology and other branches of science but much more for the sheer joy of passing through the looking glass into a land where the familiar lines, planes, triangles, circles, and spheres are seen to behave in strange but precisely determined ways.

*Non-Euclidean Geometry*

Committee on the Support of Research in the Mathematical Sciences,

The Mathematical Sciences (p. 58)

The MIT Press. Cambridge, Massachusetts, USA. 1969

**Crichton, Michael** 1942–

American novelist

The mathematics of uncontrolled growth are frightening. A single cell of the bacterium *E. coli* would, under ideal circumstances, divide every twenty minutes. That is not particularly disturbing until you think about it, but the fact is that bacteria multiply geometrically: one becomes two, two becomes four, four becomes eight, and so on.

In this way, it can be shown that in a single day, one cell of *E. coli* could produce a super-colony equal in size and weight to the entire planet earth.

*The Andromeda Strain*

Day 4 – Spread (p. 247)

Alfred A. Knopf. New York, New York, USA. 1969

**Crick, Francis Harry Compton** 1916–2004

English biochemist

Mathematics cares neither for science nor for engineering (except as a source of problems) but only about the relationship between abstract entities.

In the secular labour of ideas...mathematics plays the part that is played by capital in the history of societies; it is the crystallization of intellectual labour; it represents acquisitions of which we are proud, a security well earned; it may even serve as a basis and a point of departure for new enterprises themselves.

In Maurice Maeterlinck

*The Life of Space*

The Fourth Dimension, VI (p. 21)

Dodd, Mead &amp; Company. New York, New York, USA. 1928

**de Staël (Anne-Louise-Germaine),****Mme.** 1766–1817

French romantic writer

I shall be told, I know, that Mathematics render the attention peculiarly close (appliquee); but they do not habituate to collect, to appreciate, to concentrate; the attention they require is, so to speak, in a straight line; the human mind acts in mathematics as a spring tending in one uniform direction.

Quoted in William Hamilton

*Discussions on Philosophy and Literature, Education and University Reform*

On the Study of Mathematics as an Exercise of the Mind (pp. 309–310) Harper &amp; Brothers Publishers. New York, New York, USA. 1861

The mathematics lead us to lay out of account all that is not proved; while the primitive truths, those which sentiment and genius apprehend, are not susceptible of demonstration.

*Edinburgh Review*, Volume 52, January, 1836 (p. 248)**Dehn, Max**

No biographical data available

Mathematics is the only instructional material that can be presented in an entirely undogmatic way.

The Mentality of the Mathematician

*The Mathematical Intelligencer*, Volume 5, Number 2, 1983 (p. 73)**Descartes, René** 1596–1650

French philosopher, scientist, and mathematician

But as I considered the matter carefully it gradually came to light that all those matters only were referred to Mathematics in which order and measurement are investigated, and it makes no difference whether it be in numbers, figures, stars, sounds or any other objects that the question of measurement arises.

In *Great Books of the Western World* (Volume 31)*Rules for the Direction of the Mind*

Rule IV (p. 7)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

I am accustomed to distinguish two things in the mathematics, the history and the science. By history I mean what is already discovered, and is committed to books. And by the science, the skill of resolving all questions.

In George Abram Miller

*Historical Introduction to Mathematical Literature*

Chapter 1 (p. 8)

The Macmillan Co. New York, New York, USA. 1916

I was especially delighted with the mathematics, on account of the certitude and evidence of their reasonings: but I had not as yet a precise knowledge of their true use; and, thinking that they but contributed to the advancement of the mechanical arts, I was astonished that foundations so strong and solid should have had no loftier superstructure reared on them.

*Discourse on the Method of Rightly Conducting the Reason, and Seeking Truth in the Sciences*

Part I (p. 50)

Sutherland &amp; Knox. Edinburgh, Scotland. 1850

...all the sciences which have for their end investigations concerning order and measure, are related to mathematics, it being of small importance whether this measure be sought in numbers, forms, stars, sounds, or any other object; that, accordingly, there ought to exist a general science which should explain all that can be known about order and measure, considered independently of any application to a particular subject, and that, indeed, this science has its own proper name, consecrated by long

usage, to wit, *mathematics*; since it contains that in consideration of which the other sciences are said to form a part of mathematics. And a proof that it far surpasses in facility and importance the sciences which depend upon it is that it embraces at once all the objects to which these are devoted and a great many others besides ...

I love my Love from A to Z,  
As I love Mathematics;  
My inmost soul delights in her,  
As in Cubics and Quadratics.  
I love her dearly with an A,  
As Arcs and Angles, Altitudes;  
And next I love her with a B –  
My pet Binomials this includes – ;  
I love her with a capital C,  
Like Circles, Conies, Calculus;  
I love her through the alphabet,  
As much as Decimals, and plus.  
Dearer she is to me than Loci, Polars, Ellipses, Axes,  
Foci,  
Than Logarithms and Mantissas,  
Or Graphics, Ordinates, Abscissas.  
I love her more than Integration,  
More even than a fine Equation;  
Any, non-Euclidean dreams of Space  
And Four Dimensions have no place  
Within my heart like her sweet face.  
I love her through the X. Y. Z's,  
For even Unknown Quantities  
Cannot boast greater charms than she.  
I love her to Infinity,  
And that's the limit – Q. E. D.

American physicist

Now you may ask, “What is mathematics doing in a physics lecture?” We have several possible excuses: first, of course, mathematics is an important tool, but that would only excuse us for giving the formula in two minutes. On the other hand, in theoretical physics we discover that all our laws can be written in mathematical form; and that this has a certain simplicity and beauty about it. So, ultimately, in order to understand nature it may be necessary to have a deeper understanding of mathematical relationships. But the real reason is that the subject is enjoyable, and although we humans cut nature up in different ways, and we have different courses in different departments, such compartmentalization is really artificial, and we should take our intellectual pleasures where we find them.

*The Feynman Lectures on Physics* (Volume 1)  
Chapter 22-1 (p. 22-1)  
Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1983

**Finkel, Benjamin Franklin** 1865–1947  
American mathematician

It will not be denied by any intelligent educator that the so-called “Short Cuts” and “Lightning Methods” are positively injurious to beginners in mathematics. All the “whys” are cut out by these methods and the student robbed of the very object for which he is studying mathematics; viz., the development of the reasoning faculty

and the power to express his thoughts in a forcible and logical manner.

*A Mathematical Solution Book Containing Systematic Solutions to Many of the Most Difficult Problems*  
Preface (p. 1)  
Kibler & Co. Springfield, Missouri, USA. 1888

Mathematics has not only commercial value, but educational and ethical value as well, and that to a degree not excelled by any other science. No other science offers such rich opportunity for original investigation and discovery. So far from being a perfected and complete body of doctrine “handed down from heaven” and incapable of growth, as many suppose, it is a subject which is being developed at such a marvelous rate that it is impossible for any but the best to keep in sight of its ever-increasing and receding boundary.

C.C. Thomas. Springfield, Illinois, USA. 1944

**Forsyth, A. R.**  
Mathematician

It is not so long since, during one of the meetings of the Association, one of the leading English newspapers briefly described a sitting of this Section in the words – Saturday morning was devoted to pure mathematics, and so there was nothing of any general interest”: still, such toleration is better than undisguised and ill-informed hostility. But the attitude of respect, I might almost say of reverence, is even more trying: we mathematicians are supposed to be of a different mould, to live far up the heights above the driving gales of controversy, breathing a rarer intellectual atmosphere, serene in impenetrable calm. It is difficult for us to maintain the gravity of demeanor proper to such superior persons; and perhaps it is best to confess at once that we are of the earth, earthy, that we have our differences of opinion and of judgment, and that we can even commit the Machiavellian crime of making blunders.

*Report of the Sixty-seventh Meeting of the British Association for the Advancement of Science*  
Address Toronto 1897 (p. 542)

Mathematics is one of the oldest of the sciences; it is also one of the most active, for its strength is the vigor of perpetual youth.

If a healthy minded person takes an interest in science, he gets busy with his mathematics and haunts the laboratory.

In Henry Crew

*General Physics* (p. 54)

The Macmillan Company. New York, New York, USA. 1927

**Frege, Friedrich Ludwig Gottlob** 1848–1925

German logician

The idea of a strictly scientific method in mathematics, which I have attempted to realize, and which might indeed be named after Euclid, I should like to describe as follows. It cannot be demanded that everything be proved, because that is impossible; but we can require that all propositions used without proof be expressly declared as such, so that we can see distinctly what the whole structure rests upon. After that we must try to diminish the number of primitive laws as far as possible, by proving everything that can be proved. Furthermore, I demand – and in this I go beyond Euclid – that all methods of inference employed be specified in advance...

*The Fundamental Laws of Arithmetic* (Volume 1)

Foreword (p. vi)

Publisher undetermined

**Gardner, Martin** 1914–

American writer and mathematics games editor

Mathematics is not only real, but it is the only reality. The entire universe is made out of particles. Now what are the particles made out of? They're not made out of anything. The only thing you can say about the reality of an electron is to cite its mathematical properties. There's a sense in which matter has completely dissolved and what is left is just a mathematical structure.

*Focus – The Newsletter of the Mathematical Association of America*  
December, 1994

**Gassendi, Pierre** 1592–1655

French logician and philosopher

If we know anything we know it by mathematics; but those people have no concern for the true and legitimate science of things! they cling to trivialities!

Chapter 9 (p. 110)

D. Reidel Publishing Company. Dordrecht, Germany. 1980

**Geroch, Robert**

American theoretical physicist

One sometimes hears express the view that some sort of uncertainty principle operates in the interaction between mathematics and physics: the greater the mathematical care used to formulate a concept, the less the physical insight to be gained from that formulation. It is not difficult to imagine how such a viewpoint could come to be popular. It is often the case that essential physical ideas of a discussion are smothered by mathematics through excessive definitions, concern over irrelevant generality, etc. Nonetheless one can make a case that mathematics as mathematics, if used thoughtfully, is almost always useful – and occasionally essential – to progress in theoretical physics..

*Mathematical Physics*

Chapter 1 (p. 1)

University of Chicago Press. Chicago, Illinois, USA. 1985

...it takes a certain amount of effort to learn mathematics...

*Mathematical Physics*

Chapter 1 (p. 1)

University of Chicago Press. Chicago, Illinois, USA. 1985

One takes care at the beginning to be sure that “the mathematics is appropriate for the physics,” that is, that everything in the mathematics has physical meaning and that all of the physics one wishes to talk about is describable in terms of the mathematics.

*Mathematical Physics*

Chapter 15 (p. 86)

**Glaisher, James Whitbread Lee** 1848–1928

English mathematician

I am sure that no subject loses more than mathematics by any attempt to dissociate it from its history.

Opening Address

*Nature*, Volume 42, Number 1089, September 11, 1890 (p. 466)

It would seem at first sight as if the rapid expansion of the region of mathematics must be a source of danger to its future progress. Not only does the area widen, but the subjects of study increase rapidly in number, and the work of the mathematician tends to become more and more specialised. It is of course merely a brilliant exaggeration to say that no mathematician is able to under-

stand the work of any other mathematician, but it is certainly true that it is daily becoming more and more difficult for a mathematician to keep himself acquainted, even in a general way, with the progress of any of the branches of mathematics except those which form the field of his own labours.

**Gleason, Andrew M.** 1921–

American mathematician

It is notoriously difficult to convey a proper impression of the frontiers of mathematics to non-specialists.... Ultimately the difficulty stems from the fact that mathematics is an easier subject than the other sciences.... Consequently, many of the important primary problems of the subject – that is, problems which can be understood by an intelligent outsider – have either been solved or carried to a point where an indirect approach is clearly required. The great bulk of pure mathematical research is concerned with secondary, tertiary or higher-order problems, the very statement of which can hardly be understood until one has mastered a great deal of technical mathematics.

Sing a song of sixpence –  
A mathman full of rye.

Four times twenty square feet

Multiplied by n  
 Gives the total ground he covers  
 While weaving an ellipse;  
 His path would have no area,  
 If he had no nips.

*Ingenious Mathematical Problems and Methods*

Mathematical Nursery Rhyme Number 7

Dover Publications, Inc. New York, New York, USA. 1959

### Guillen, Michael

American mathematician and physicist

...mathematics is not a science – it is not capable of proving or disproving the existence of real things. In fact, a mathematician's ultimate concern is that his or her inventions be logical, not realistic.

*Bridges to Infinity: The Human Side of Mathematics*

Introduction (p. 4)

Jeremy P. Tarcher, Inc. Los Angeles, California, USA. 1983

...as measured by the millions of those who speak it fluently...*mathematics* is arguable the most successful global language ever spoken.

*Five Equations That Changed the World*

Introduction (p. 2)

Hyperion. New York, New York, USA. 1995

### Haeckel, Ernst Heinrich Philipp

**August** 1834–1919

German biologist and philosopher

The great regard which mathematics enjoys as an exact science in all branches of knowledge is chiefly due to its formal accuracy, and to the possibility of expressing infallibly spatial and time quantities in number and mass.

Translated by Joseph McCabe

*The Wonders of Life: A Popular Study of Biological Philosophy*

Part IV, Chapter XX (p. 457)

Harper & Brothers Publishers. New York, New York, USA. 1905

### Hall, Granville Stanley 1844–1924

American psychologist and educator

Mathematics...the ideal and norm of all careful thinking.

*Educational Problems* (p. 393)

D. Appleton & Company. New York, New York, USA. 1911

### Halsted, George Bruce 1853–1922

American mathematician

...mathematics, that giant pincers of scientific logic...

Biology and Mathematics

*Science*, Volume 27, Number 554, Friday, August 11, 1905 (p. 162)

### Halmos, Paul R. 1916–2006

Hungarian-born American mathematician

...many people think of mathematics itself as a static art – a body of eternal truth that was discovered by a few ancient, shadowy figures, and upon which engineers and scientists can draw as needed.

Innovation in Mathematics

*Scientific American*, Volume 199, Number 3, September, 1958 (p. 66)

It saddens me that educated people don't even know that my subject exists.

Mathematics as a Creative Art

*American Scientist*, Volume 56, Number 4, Winter 1968 (p. 380)

The only way to learn mathematics is to do mathematics.

*A Hilbert Space Problem Book*

Preface (p. vii)

Springer-Verlag. New York, New York, USA. 1982

Mathematics is abstract thought, mathematics is pure logic, mathematics is creative art. All these statements are wrong, but they are all a little right, and they are all nearer the mark than "mathematics is number" or "mathematics is geometric shapes." For the professional pure mathematician, mathematics is the logical dovetailing of a carefully selected sparse set of assumptions along with their surprising conclusions via a conceptually elegant proof. Simplicity, intricacy, and above all, logical analysis are the hallmarks of mathematics.

Mathematics as a Creative Art

*American Scientist*, Volume 56, Number 4, Winter 1968 (p. 380)

Mathematics is not a deductive science – that's a cliché. When you try to prove a theorem, you don't just list the hypotheses, and then start to reason. What you do is trial and error, experimentation, guesswork.

*I Want to Be A Mathematician* (p. 27)

MAA Spectrum. Washington, D.C. 1985

### Hamilton, Sir William Rowan 1805–65

Anglo-Irish mathematician, physicist, and astronomer

These purely mathematical sciences of algebra and geometry are sciences of the pure reason, deriving no weight and no assistance from experiment, and isolated, or at least isolable, from all outward and accidental phenomena. The idea of order, with its subordinate ideas of number and of figure, we must not indeed call innate ideas, if that phrase be defined to imply that all men must possess them with equal clearness and fullness; they are, however, ideas which seem to be so far born with us, that the possession of them, in any conceivable degree, appears to be only the development of our original powers, the unfolding of our proper humanity.

In Robert Perceval Graves

*Life of Sir William Rowan Hamilton* (Volume 1)

Introductory Lecture on astronomy (p. 643)

Hodges, Figgis & Co. Dublin, Ireland. 1882

### Hamilton, William 1788–1856

Scottish philosopher

Mathematics may distort, but can never rectify, the mind.  
*Discussions on Philosophy and Literature, Education and University Reform*

On the Study of Mathematics as an Exercise of the Mind (p. 310)

Harper & Brothers Publishers. New York, New York, USA. 1861

Mathematics afford us no assistance, either in conquering the difficulties, or in avoiding the dangers which we

encounter in the great field of probabilities wherein we live and move.

*Discussions on Philosophy and Literature, Education and University Reform*

On the Study of Mathematics as an Exercise of the Mind (p. 284)  
Harper & Brothers Publishers. New York, New York, USA. 1861

In mathematics, genus and species are hardly known.

*Discussions on Philosophy and Literature, Education and University Reform*

On the Study of Mathematics as an Exercise of the Mind (p. 275)  
Harper & Brothers Publishers. New York, New York, USA. 1861

**Hankel, Hermann** 1839–73

German mathematician

The purely formal sciences, logic and mathematics, deal with those relations which are, or can be, independent of the particular content or the substance of objects. To mathematics in particular fall those relations between objects which involve the concepts of magnitude, of measure and of number.

*Theorie der Complexen Zahlensysteme insbesondere der gemeinen imaginären Zahlen und der Hamilton'schen Quaternionen nebst ihrer geometrischen Darstellung* (p. 1)

Leopold Voss, Leipzig, Germany. 1867

Mathematics, considered as a science, owes its origin to the idealistic needs of the Greek philosophers, and not as fable has it, to the practical demands of Egyptian economics.... Adam was no zoologist when he gave names to the beasts of the field, nor were the Egyptian surveyors mathematicians.

*Die Entwicklung der Mathematik in den letzten Jahrhunderten* (p. 7)

Akademische Antrittsrede. Tübingen, Germany. 1884

Mathematics pursues its own course unrestrained, not indeed with an unbridled license which submits to no laws, but rather with the freedom which is determined by its own nature and in conformity with its own being.

*Die Entwicklung der Mathematik In den letzten Jahrhunderten* (p. 16)

Akademische Antrittsrede. Tübingen, Germany. 1884

In most sciences one generation tears down what another has built and what one has established another undoes. In mathematics alone each generation adds a new story to the old structure.

*Die Entwicklung der Mathematik In den letzten Jahrhunderten* (p. 25)

Akademische Antrittsrede. Tübingen, Germany. 1884

If we consult reason, experience, and the common testimony of ancient and modern times, none of our intellectual studies tend to cultivate *a smaller number of the faculties, in a more partial or feeble manner, than mathematics*. This is acknowledged by every writer on education of the least pretension to judgment and experience.

*Discussions on Philosophy and Literature, Education and University Reform*

Education, I (p. 268)

Harper & Brothers Publishers. New York, New York, USA. 1861

**Hardy, G. H. (Godfrey Harold)** 1877–1947

English pure mathematician

The fact is that there are few more “popular” subjects than mathematics. Most people have some appreciation of mathematics, just as most people can enjoy a pleasant tune; and there are probably more people really interested in mathematics than in music. Appearances may suggest the contrary, but there are easy explanations. Music can be used to stimulate mass emotion, while mathematics cannot; and musical incapacity is recognized (no doubt rightly) as mildly discreditable, whereas most people are so frightened of the name of mathematics that they are ready, quite unaffectedly, to exaggerate their own mathematical stupidity.

*A Mathematician's Apology*

Section 10 (p. 86)

Cambridge University Press. Cambridge, England. 1967

A chess problem is genuine mathematics, but it is in some way ‘trivial’ mathematics. However ingenious and intricate, however original and surprising the moves, there is something essential lacking. Chess problems are unimportant. The best mathematics is serious as well as beautiful.

*A Mathematician's Apology*

Section 11 (p. 88)

Cambridge University Press. Cambridge, England. 1967

...I will say only that if a chess problem is, in the crude sense, ‘useless’, then that is equally true of most of the best mathematics; that very little of mathematics is useful practically, and that the little [that is] is comparatively dull.

*A Mathematician's Apology*

Section 11 (p. 89)

Cambridge University Press. Cambridge, England. 1967

...I am interested in mathematics only as a creative art.

*A Mathematician's Apology*

Section 19 (p. 115)

Cambridge University Press. Cambridge, England. 1967

It is undeniable that a good deal of elementary mathematics – and I use the word “elementary” in the sense in which professional mathematicians use it, in which it includes, for example, a fair working knowledge of the differential and integral calculus – has considerable practical utility. These parts of mathematics are, on the whole, rather dull; they are the parts which have the least aesthetic value. The ‘real’ mathematics of the ‘real’ mathematicians, the mathematics of Fermat and Euler and Gauss and Abel and Riemann, is almost wholly ‘useless’ (and this is as true of ‘applied’ as of ‘pure’ mathematics). It is not possible to justify the life of any genuine professional mathematician on the ground of the ‘utility’ of his work.

*A Mathematician's Apology*

Section 21 (pp. 119–120)

Cambridge University Press. Cambridge, England. 1967

There is one comforting conclusion which is easy for a real mathematician. Real mathematics has no effects on war. No one has yet discovered any warlike purpose to be served by the theory of numbers or relativity, and it seems very unlikely that anyone will do so for many years.

*A Mathematician's Apology*

Section 28 (p. 140)

Cambridge University Press. Cambridge, England. 1967

For mathematics is, of all the arts and sciences, the most austere and the most remote, and a mathematician should be of all men the one who can most easily take refuge where, as Bertrand Russell says, "one...of our nobler impulses can best escape from the dreary exile of the actual world."

*A Mathematician's Apology*

Section 28 (p. 143)

Cambridge University Press. Cambridge, England. 1967

### Harish-Chandra 1923–83

Indian-born American mathematician

In mathematics there is an empty canvas before you which can be filled without reference to external reality.

*Biographical Memoirs of Fellows of the Indian National Science Academy* (Volume 12) (p. 202)

Indian National Science Academy

New Delhi, India. 1987

### Harris, William Torrey 1835–1909

American educator and philosopher

Mathematics in its pure form as arithmetic, algebra, geometry, and the application of the analytical method, as well as mathematics applied to matter and force, or statics and dynamics, furnishes us the peculiar study that gives to us, whether as children or as men, the command of Nature in this its quantitative aspect. Mathematics furnishes the instrument, the tool of thought which we wield in this realm.

*Psychologic Foundations of Education*

Chapter XXXVI (pp. 325–326)

D. Appleton & Co. New York, New York, USA. 1898

### Hauffman, Paul

No biographical data available

That Mathematics could be a jewel may come as a surprise to those of us who struggled with multiplication tables as kids and now need help completing W-4 forms.

The Man Who Loves Only Numbers

*The Atlantic Magazine*, Volume 260, Number 5, November, 1987

...mathematics is order and beauty at its purest, order that transcends the physical world.

The Man Who Loves Only Numbers

*The Atlantic Magazine*, Volume 260, Number 5, November, 1987 (p. 66)

### Heaviside, Oliver 1850–1925

English electrical engineer, mathematician, and physicist

There are men of a certain type of mind who are never wearied with gibing at mathematics, at mathematicians, and at mathematical methods of inquiry. It goes almost without saying that these men have themselves little mathematical bent.

*Electromagnetic Theory* (Volume 1)

Chapter I (p. 7)

D. van Nostrand Co. New York, New York, USA. 1893

### Heinlein, Robert A. 1907–88

American science fiction writer

Anyone who cannot cope with mathematics is not fully human. At best he is a tolerable subhuman who has learned to wear shoes, bathe, and not make messes in the house.

*Time Enough for Love*

Intermission (p. 265)

G.P. Putnam's Sons. New York, New York, USA. 1973

...mathematics can never prove anything. No mathematics has any content. All any mathematics can do is – sometimes – turn out to be useful in describing some aspects of our so-called "physical universe." That is a bonus; most forms of mathematics are as meaning-free as chess.

*The Number of the Beast*

Chapter V (pp. 45–46)

Fawcett Columbine Books. New York, New York, USA. 1980

### Hempel, Carl G. 1905–97

German philosopher of science

The most distinctive characteristic which differentiates mathematics from the various branches of empirical science, and which accounts for its fame as the queen of the sciences, is no doubt the peculiar certainty and necessity of its results.

In James R. Newman (ed.)

*The World of Mathematics* (Volume 3)

Geometry and Empirical Science (p. 1635)

Simon & Schuster. New York, New York, USA. 1956

### Herbart, Johann Friedrich 1776–1841

German philosopher and educator

The idea that aptitude for mathematics is rarer than aptitude for other subjects is merely an illusion which is caused by belated or neglected beginners.

In Stanley Gudder

*A Mathematical Journey* (p. ix)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1976

Everything that the greatest minds of all times have accomplished toward the comprehension of forms by means of concepts is gathered into one great science, mathematics.

*Werke*

Pestalozzi's Idee eines A B C der Anschauung, Bd. 1 (p. 163)

Druck und Verlag von Hermann Beyer & Sohne. Langensalza, Germany. 1890

Mathematics, the priestess of definiteness and clearness.

*Werke*

Pestalozzi's Idee eines A B C der Anschauung, Bd. 1 (p. 171)  
Druck und Verlag von Hermann Beyer & Sohne. Langensalza, Germany.  
1890

All that the greatest minds of all the ages have done toward the apperception of form through concepts, we find gathered into a single great science – mathematics.

Translated by William J. Eckoff

*Herbart's ABC of Sense-perception, and Minor Pedagogical Works*

Part ii, Chapter IV (p. 143)

D. Appleton & Co. New York, New York, USA. 1903

...the priestess of definiteness and clearness – Mathematics.

Translated by William J. Eckoff

*Herbart's ABC of Sense-perception, and Minor Pedagogical Works*

Part ii, Chapter IV (p. 157)

D. Appleton & Co. New York, New York, USA. 1903

**Herschel, Sir John Frederick William** 1792–1871

English astronomer and chemist

A clever man, shut up alone and allowed unlimited time, might reason out for himself all the truths of mathematics, by proceeding from those simple notions of space and number of which he cannot divest himself without ceasing to think.

*A Preliminary Discourse on the Study of Natural Philosophy*

Part II, Chapter I (p. 76)

Longman, Rees, Orman, Brown & Green. London, England. 1830

**Hersh Reuben** 1927–

American mathematician

Formalized mathematics, to which most philosophizing has been devoted in recent years, is in fact hardly to be found anywhere on earth or in heaven outside the texts and journals of symbolic logic.

In John D. Barrow

*Pi in the Sky: Counting, Thinking, and Being* (p. 140)

Clarendon Press. Oxford, England. 1992

**Hesse, Hermann** 1877–1962

German poet and novelist

You treat world history as a mathematician does mathematics, in which nothing but laws and formulas exist, no reality, no good and evil, no time, no yesterday, no tomorrow, nothing but an eternal, shallow, mathematical present.

*The Glass Bead Game*

Chapter 4

Holt, Rinehart & Winston. New York, New York, USA. 1969

**Hilbert, David** 1862–1943

German mathematician

We hear within us the perpetual call: There is the problem. Seek its solution. You can find it by pure reason, for in mathematics there is no ignorabimus.

Mathematical Problems

*Bulletin of the American Mathematical Society*, Volume 8, 2nd Series,

October 1901–July 1902

For mathematics hoch – hoch – hoch [hip, hip hooray]

*Hilbert – Courant*

Hilbert

Chapter XXIII (p. 202)

Springer-Verlag. New York, New York, USA. 1986

Mathematics is not a popular subject, even though its importance may be generally conceded. The reason for this is to be found in the common superstition that mathematics is but a continuation, a further development, of the fine art of arithmetic, of juggling with numbers.

In D. Hilbert and S. Cohen-Vossen

*Geometry and the Imagination* (p. iv)

Chelsea Publishing Company. New York, New York, USA. 1952

Mathematics must be cherished and strengthened as a unified, vital branch in the broad river of science; it dares not trickle away in the sand.

*Hilbert – Courant*

Hilbert

Chapter XXV (p. 220)

Springer-Verlag. New York, New York, USA. 1986

[Mathematics] should be to us a guide post on the mazy paths to hidden truths, and ultimately a reminder of our pleasure in the successful solution.

Mathematical Problems

*Bulletin of the American Mathematical Society*, Volume 8, 2nd Series,

October 1901–July 1902

**Hilbert, David** 1862–1943

German mathematician

**Cohn-Vossen, Stephan** 1902–36

Polish mathematician

In mathematics, as in any scientific research, we find two tendencies present. On the one hand, the tendency towards abstraction seeks to crystallize the *logical* relations inherent in the maze of material that is being studied, and to correlate the material in a systematic and orderly manner. On the other hand, the tendency towards *intuitive understanding* fosters a more immediate grasp of the objects one studies, a live *rapport* with them, so to speak,

Translated by P. Nemenyi

*Geometry and the Imagination*

Preface (p. iii)

AMS Chelsea Publishing Co. Providence, Rhode Island, USA. 1999

**Hilbert, David** 1862–1943

German mathematician

The tool which governs the mediation between theory and practice, between thought and observation is mathematics; it builds the bridge and carries more and more of the load. It thereby happens that the basis of our entire present day culture, in so far as it is based on investigations dealing with nature, can be found in mathematics.

*Musings of the Masters: An Anthology of Mathematical Reflections*

Logic and the Understanding of Nature (p. 125)

Mathematical Association of America. Washington, D.C. 2004

**Hill, Thomas**

No biographical data available

The mathematics are usually considered as being the very antipodes of Poesy. Yet Mathesis and Poesy are of the closest kindred, for they are both works of the imagination. ... [They are] the utterance of the same power of imagination, only that in the one case it is addressed to the head, in the other, to the heart.

The Imagination in Mathematics

*North American Review*, Volume 85, July 1857 (pp. 229–230)

**Hobson, Ernest William** 1856–1933

English mathematician

Probably no other department of knowledge plays a larger part outside its own narrower domain than mathematics. Some of its more elementary conceptions and methods have become part of the common heritage of our civilization, interwoven in the every-day life of the people.

Address to the Mathematical and Physical Section of the British Association for the Advancement of Science  
*Science*, N.S. Volume 32, September 23, 1910 (p. 386)

A great department of thought must have its own inner life, however transcendent may be the importance of its relations to the outside. No department of science, least of all one requiring so high a degree of mental concentration as Mathematics, can be developed entirely, or even mainly, with a view to applications outside its own range.

Address to the Mathematical and Physical Section of the British Association for the Advancement of Science  
*Science*, N.S. Volume 32, Number 821, September 23, 1910 (p. 389)

The increased complexity and specialisation of all branches of knowledge makes it true in the present, however it may have been in former times, that important advances in such a department as Mathematics can be expected only from men who are interested in the subject for its own sake, and who, whilst keeping an open mind for suggestions from outside, allow their thought to range freely in those lines of advance which are indicated by the present state of their subject, untrammelled by any preoccupation as to applications to other departments of science.

Address to the Mathematical and Physical Section of the British Association for the Advancement of Science  
*Science*, N.S. Volume 32, Number 821, September 23, 1910 (p. 389)

Perhaps the least inadequate description of the general scope of modern Pure Mathematics – I will not call it a definition – would be to say that it deals with form, in a very general sense of the term; this would include algebraic form, functional relationship, the relations of order in any ordered set of entities such as numbers, and the analysis of the peculiarities of form of groups of operations.

Presidential Address British Association for the Advancement of Science

*Nature*, Volume 84, Number 2131, September 1, 1910 (p. 287)

**Hodges, Wilfrid**

Cambridge University Press. Cambridge, England. 1985

**Hoffman, Paul** 1956–

American writer and television presenter

In mathematics madness often comes with the territory.

*The Man Who Loved Only Numbers*

*We Mathematicians Are All A Little Crazy* (p. 263)

Hyperion. New York, New York, USA. 1998

**Hogben, Lancelot** 1895–1975

English zoologist

If mathematics is a game, there is no reason why people should play it if they do not want to. With football, it belongs to those amusements without which life would be endurable.

*Mathematics for the Millions*

Chapter I (p. 31)

W.W. Norton & Company, Inc. New York, New York, USA. 1917

**Honsberger, Ross** 1929–

Mathematician

Mathematics abounds in bright ideas. No matter how long and hard one pursues her, mathematics never seems to run out of exciting surprises. And by no means are these gems to be found only in difficult work at an advanced level. All kinds of simple notions are full of ingenuity.

*Mathematical Morsels* (p. vii)

Mathematical Association of America. Washington, D.C. 1978

**Hubbard, John**

No biographical data available

The Mathematicks too our thoughts employ,

Which nobly elevate the Student's joy:

The little Euclids round the table set

And at their rigid demonstrations sweat.

In Florian Cajori

*The Teaching and History of Mathematics in the United States*

Chapter I (p. 30)

Government Printing Office. Washington, D.C. 1890

**Hudson, Hilda Phoebe** 1881–1965

Mathematician

To all of us who hold the Christian belief that God is truth, anything that is true is a fact about God, and mathematics is a branch of theology.

In E.T. Bell

*The Magic of Numbers*

Chapter 26 (p. 385)  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1946

The two main divisions of mathematics, analysis and geometry, correspond with some exactness to the two great mysteries of the Christian faith, the Trinity and the Incarnation.

In E.T. Bell  
*The Magic of Numbers*  
Chapter 26 (p. 386)  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1946

But however we think of heaven, it is hard to imagine astronomy and botany surviving as they are, and having much interest or importance there.... On the other hand it is just as hard to imagine pure mathematics not surviving. The laws of thought, and especially of number, must hold good in heaven, whether it is a place or a state of mind; for they are independent of any particular sphere of existence, essential to Being itself, to God's being as well as ours, laws of His mind before we learned them. The multiplication table will hold good in heaven...

In E.T. Bell  
*The Magic of Numbers*  
Chapter 26 (pp. 385–386)  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1946

**Hume, David** 1711–76  
Scottish philosopher and historian

The principal difficulty in the mathematics is the length of inferences and compass of thought, requisite to the forming of any conclusion.

Italian-born American mathematician

### **Schwartz, Jacob T.** 1930–

American mathematician

For as long as we have a record of man's curiosity and quest for understanding we find mathematics cultivated and cherished, practiced and taught. Throughout the ages

it has stood as an ultimate in rational thought and as a monument to man's desire to probe the workings of his own mind.

In Marc Kac

*Discrete Thoughts: Essays on Mathematics, Science, and Philosophy*

*Mathematics: Tensions*

Chapter Two (p. 7)

Birkhäuser. Boston, Massachusetts, USA. 1986

To find the simple in the complex, the finite in the infinite – that is not a bad description of the aim and essence of mathematics.

*Discrete Thoughts: Essays on Mathematics, Science, and Philosophy*

Chapter Seven (p. 64)

Springer-Verlag. New York, New York, USA. 1992

### **Kant, Immanuel** 1724–1804

German philosopher

But mathematics, certainly, does not play the smallest part in the charm and movement of the mind produced by music. Rather is it only the indispensable condition (*conditio sine qua non*) of that proportion of the combining as well as changing impressions which makes it possible to grasp them all in one and prevent them from destroying one another, and to let them, rather, conspire towards the production of a continuous movement and quickening of the mind by affections that are in unison with it, and thus towards a serene self-enjoyment.

*The Critique of Judgment*

Critique of Aesthetic Judgment, Section 53

Hafner Publishing Company. New York, New York, USA. 1951

In every department of physical science there is only so much science, properly so-called, as there is mathematics.

In Morris Kline

*Mathematics and the Physical World*

Preface (p. vii)

Dover Publications, Inc. New York, New York, USA. 1981

### **Kaplan, Abraham** 1918–93

American philosopher of science, author, and educator

Mathematics is not yet capable of coping with the naiveté of the mathematician himself.

In James Roy Newman (ed.)

*The World of Mathematics* (Volume 2)

Sociology Learns the Language of Mathematics (p. 1301)

Simon & Schuster. New York, New York, USA. 1956

### **Kasner, Edward** 1878–1955

American mathematician

### **Newman, James Roy** 1911–66

Mathematician and mathematical historian

Here, then, in mathematics we have a universal language, valid, useful, intelligible everywhere in place and in time – in banks and insurance companies, on the parchments of the architects who raised the Temple of Solomon, and on the blueprints of the engineers who,

with their calculus of chaos, master the winds. Here is a discipline of a hundred branches, fabulously rich, literally without limit in its sphere of application, laden with honors for an unbroken record of magnificent accomplishment. Here is a creation of the mind, both mystic and pragmatic in appeal. Austere and imperious as logic, it is still sufficiently sensitive and flexible to meet each new need.

*Mathematics and the Imagination*

Mathematics and the Imagination (p. 358)

Simon & Schuster. New York, New York, USA. 1940

**Keller, Helen** 1880–1968

American author and lecturer

Now I feel as if I should succeed in doing something in mathematics, although I cannot see why it is so very important...The knowledge doesn't make life any sweeter or happier, does it?

*The Story of My Life*

Letter to Mrs. Laurence Hutton, May 29, 1898 (p. 242)

Grosset & Dunlap, Publishers. New York, New York, USA. 1905

...I've said goodbye to Mathematics forever, and I assure you, I was delighted to see the last of those horrid goblins!

*The Story of My Life*

Letter to Mr. John D. Wright, December 9, 1900 (p. 270)

Grosset & Dunlap, Publishers. New York, New York, USA. 1905

**Kelvin, Lord William Thomson** 1824–1907

Scottish engineer, mathematician, and physicist

Do not imagine that mathematics is harsh and crabbed, and repulsive to common sense. It is merely the etherealisation of common sense.

*Popular Lectures and Addresses* (Volume 1)

Presidential Address

Birmingham and Midland Institute

October 3, 1883 (p. 273)

Macmillan & Company Ltd. London, England. 1894

**Keyser, Cassius Jackson** 1862–1947

American mathematician

But for the unattainable ideal of logical perfection, we should be without the miracles of modern Mathematics.

*Mole Philosophy and Other Essays*

Chapter I (p. 3)

E.P. Dutton & Company, Inc. New York, New York, USA. 1927

Every major concern among the intellectual concerns of man is a concern of mathematics.

*Mole Philosophy and Other Essays*

Chapter XVII (p. 93)

E.P. Dutton & Company, Inc. New York, New York, USA. 1927

Mathematics, like any other cardinal activity of the human spirit, has an individuality of its own.

*Mathematics and the Question of Cosmic Mind with Other Essays*

The Meaning of Mathematics (p. 3)

Scripta Mathematica. New York, New York, USA. 1935

It can, you see, be said, with the same approximation to truth, that the whole of science, including mathematics, consists in the study of transformations or in the study of relations.

*Mathematical Philosophy: A Study of Fate and Freedom*

Chapter X (p. 168)

E.P. Dutton & Company, Inc. New York, New York, USA. 1922

Mathematics is no more the art of reckoning and computation than architecture is the art of making bricks or hewing wood, no more than painting is the art of mixing colors on a palette, no more than the science of geology is the art of breaking rocks, or the science of anatomy the art of butchering.

*Lectures on Science, Philosophy and Art, 1907–1908*

Mathematics (p. 29)

The Columbia University Press. New York, New York, USA. 1908

It seems indeed as if the entire surface of the world of human consciousness were predestined to be covered over, in varying degrees of luxuriance, by the flora of mathematic science.

*Lectures on Science, Philosophy and Art, 1907–1908*

Mathematics (p. 36)

The Columbia University Press. New York, New York, USA. 1908

But while mathematics may spring up and flourish in any and all experimental and observational fields, it is by no means to be expected that 'experiment and' observation will ever thus be superseded.

*Lectures on Science, Philosophy and Art, 1907–1908*

Mathematics (p. 37)

The Columbia University Press. New York, New York, USA. 1908

Mathematics is, in a word, the study of Fate. Let me hasten to say that the Fate is not physical, it is spiritual – the unbreakable binding thread of destiny runs through the universum of rigorous Thought: the fate is logical Fate.

*Mathematical Philosophy*

Lecture IX (p. 136)

E.P. Dutton & Co. New York, New York, USA. 1922

Mathematics has been often praised by the scientifically incompetent; it has not, so far as I am aware, been dispraised, or its worth challenged or denied, by the scientifically competent.

*The Human Worth of Rigorous Thinking: Essays and Addresses*

Chapter I (p. 1)

Columbia University Press. New York, New York, USA. 1916

...mathematics may be viewed either as an enterprise or as a body of achievements. As an enterprise mathematics is characterized by its aim, and its aim is to think rigorously whatever is rigorously thinkable or whatever may become rigorously thinkable in course of the upward striving and refining evolution of ideas. As a body of achievements mathematics consists of all the results that have come, in the course of the centuries, from the prosecution of that enterprise: the truth discovered by it; the doctrines created by it; the

influence of these, through their applications and their beauty, upon the advancement of civilization and the weal of man.

*The Human Worth of Rigorous Thinking: Essays and Addresses*  
Chapter I (p. 3)  
Columbia University Press. New York, New York, USA. 1916

Mathematics may be legitimately pursued for its own sake or for the sake of its applications or with a view to understanding its logical foundations and internal structure or in the interest of magnanimity or for the sake of its bearings upon the supreme concerns of man as man or from two or more of these motives combined.

*The Human Worth of Rigorous Thinking: Essays and Addresses*  
Chapter II (p. 30)  
Columbia University Press. New York, New York, USA. 1916

And now what, he [he critic] would ask, is the answer of mathematics? The answer, he would have to say, is this: Transcending the flux of the sensuous universe, there exists a stable world of pure thought, a divinely ordered world of ideas, accessible to man, free from the mad dance of time, infinite and eternal.

*The Human Worth of Rigorous Thinking: Essays and Addresses*  
Chapter II (p. 58)  
Columbia University Press. New York, New York, USA. 1916

Mathematics is, in many ways, the most precious response that the human spirit has made to the call of the infinite and eternal.

*The Human Worth of Rigorous Thinking: Essays and Addresses*  
The Human Significance of Mathematics (p. 59)  
Columbia University Press. New York, New York, USA. 1925

[The] hope of improvement in mathematics teaching, whether in secondary schools or in colleges, lies mainly in the possibility of humanizing it.

*The Human Worth of Rigorous Thinking: Essays and Addresses*  
The Humanization of Teaching Mathematics (p. 62)  
Columbia University Press. New York, New York, USA. 1916

...the average pupil's interest in mathematics is but slight, is a matter of common knowledge. His lack of interest is, in my opinion, due, not to a lack of the appropriate faculty in him, but to the circumstance that he is a human being, whilst mathematics, though it teems with human interest, is not presented to him in its human guise.

*The Human Worth of Rigorous Thinking: Essays and Addresses*  
Chapter III (p. 65)  
Columbia University Press. New York, New York, USA. 1916

It [mathematics] is not merely as a giant tree throwing out and aloft myriad branching arms in the upper regions of clearer light, and plunging deep and deeper roots in the darker soil beneath. It is rather an immense forest of such oaks, which, however, literally grow into each other, so that, by the junction and intercrease of root with root and limb with limb, the manifold wood becomes a single living organic whole.

*The Human Worth of Rigorous Thinking: Essays and Addresses*  
Chapter VI (p. 129)  
Columbia University Press. New York, New York, USA. 1916

Mathematics is no more the art of reckoning and computation than architecture is the art of making bricks or hewing wood, no more than painting is the art of mixing colors on a palette, no more than the science of geology is the art of breaking rocks, or the science of anatomy the art of butchering.

*The Human Worth of Rigorous Thinking: Essays and Addresses*  
Chapter XV (p. 298)  
Columbia University Press. New York, New York, USA. 1916

What is mathematics? I inquire, not about the word, but about the thing. Many have been the answers of former years, but none has approved itself as final. All of them, by nature belonging to the "literature of knowledge," have fallen under its law and "perished by supersession."

*Mathematics* (p. 9)  
The Columbia University Press. New York, New York, USA. 1907

### **Klein, Felix** 1849–1925

German mathematician

Mathematics in general is fundamentally the science of self evident things.

*Mathematics: Queen and Servant of Science*  
Mathematical Truth (pp. 19–20)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1951

In fact, mathematics has grown like a tree, which does not start at its tiniest rootlets and grow merely upward, but rather sends its roots deeper and deeper at the same time and rate that its branches and leaves are spreading upward... We see, then, that as regards the fundamental investigation in mathematics, there is no final ending, and therefore on the other hand, no first beginning...

Translated by E.R. Hedrick and C.A. Noble  
*Elementary Mathematics from an Advanced Standpoint*  
Part First, Chapter I, Section 3 (p. 15)  
Dover Publications. New York, New York, USA. 1939

### **Kline, Morris** 1908–92

American mathematics professor and writer

...mathematics has determined the direction and content of much philosophic thought, has destroyed and rebuilt religious doctrines, has supplied substance to economic and political theories, has fashioned major painting, musical, architectural, and literary styles, has fathered our logic, and has furnished the best answers we have to fundamental questions about the nature of man and his universe. As the embodiment and most powerful advocate of the rational spirit, mathematics has invaded domains ruled by authority, custom, and habit, and supplanted them as the arbiter of thought and action. Finally, as an incomparably fine human achievement mathematics offers satisfactions and aesthetic values at least equal to those offered by any other branch of our culture.

*Mathematics in Western Culture*  
Preface (p. ix)

Oxford University Press, Inc. New York, New York, USA. 1953

When we consider the number of fields on which mathematics impinges and the number of these over which it already gives us mastery or partial mastery, we are tempted to call it a method of approach to the universe of physical, mental, and emotional experiences. It is distillation of highest purity that exact thought has extracted from man's efforts to understand nature, to impart order to the confusion of events occurring in the physical world, to create beauty, and to satisfy the natural proclivity of the healthy brain to exercise itself.

*Mathematics in Western Culture*

Chapter XXVIII (pp. 471–472)

Oxford University Press, Inc. New York, New York, USA. 1953

We should drop the ideas that mathematics and what mathematics says about the world are indubitable truths. Today there is no agreement among mathematicians on fundamental principles.... Mathematics is not the universally accepted, precise body of knowledge that it was thought to be 100 years ago when scholars believed that it revealed the design of the universe.

*Mathematics: From Precision to Doubt in 100 Years*

*US News and World Report*, January 26, 1981

The conquest of new domains of mathematics proceeds somewhat as do military conquests. Bold dashes into enemy territory capture strongholds. These incursions must then be followed up and supported by broader, more thorough and more cautious operations to secure what has been only tentatively and insecurely grasped.

*Mathematical Thought from Ancient to Modern Times*

Chapter 19 (p. 400)

Oxford University Press, Inc. New York, New York, USA. 1972

Science provides the understanding of the universe in which we live. Mathematics provides the dies by which science is molded. Our world is to a large extent what mathematics says it is.

In Douglas M. Campbell and John C. Higgins (eds.)

*Mathematics: People, Problems, Results* (Volume 2)

The Meaning of Mathematics (p. 18)

Wadsworth, Inc. Belmont, California, USA. 1984

Perhaps the best reason for regarding mathematics as an art is not so much that it affords an outlet for creative activity as that it provides spiritual values. It puts man in touch with the highest aspirations and loftiest goals. It offers intellectual delight and the exaltation of resolving the mysteries of the universe.

*Mathematics: A Cultural Approach*

Chapter 31–4 (p. 671)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1962

As man's greatest and most successful intellectual experiment, mathematics demonstrates manifestly how powerful our rational faculty is. It is the finest expression of man's intellectual strength. His reason has, for example, far outstripped his imagination. He can think about stars

so distant that only numbers convey any meaning about spaces which cannot be pictured, and about electrons too small to be seen with the most powerful microscopes.

*Mathematics: A Cultural Approach*

Chapter 31–15 (p. 674)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1962

Indeed it is paradoxical that abstractions so remote from reality should achieve so much. Artificial the mathematical account may be, a fairy tale perhaps, but one with a moral.

*Mathematics: A Cultural Approach*

Chapter 31–6 (p. 676)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1962

Mathematics then is a formidable and bold bridge between ourselves and the external world. Though it is a purely human creation it has given us to some domains of nature enable us to progress far beyond all expectations.

The mere fact that there can be alternative geometries was in itself a shock. But the greater shock was that one could no longer be sure which geometry was true or whether anyone of them was true.... Mathematicians were in the position described by Mark Twain: "Man is the religious animal. He's the only one who's got the true religion – several of them."

*Mathematics: The Loss of Certainty*

Chapter IV (p. 88)

Oxford University Press, Inc. New York, New York, USA. 1980

From dust thou are to dust returneth may perhaps not be spoken of the soul but it is well spoken of earthborn mathematics.

*Mathematics and the Physical World*

Chapter 1 (p. 13)

Thomas Y. Crowell Co. New York, New York, USA. 1959

Mathematics may be the queen of the sciences and therefore entitled to royal prerogatives, but the queen who loses touch with her subjects may lose support and even be deprived of her realm. Mathematicians may like to rise into the clouds of abstract thought, but they should and indeed they must, return to earth for nourishing food or else die of mental starvation. They are on safer and saner ground when they stay close to nature. As Wordsworth put it, "Wisdom oft is nearer when we stoop than when we soar."

*Mathematics and the Physical World*

Chapter 27 (p. 475)

Thomas Y. Crowell Co. New York, New York, USA. 1959

### **Kovalevskaya, Sofia** 1850–91

Russian mathematician

Many who have never had an opportunity of knowing anymore about mathematics confound it with arithmetic, and consider it an arid science.

Translated by Isabel f. Hapgood  
 In Lily Wolffsohn  
*Sónya Kovalévsky: Her Recollections of Childhood* (p. 316)  
 The Century Co. New York, New York, USA. 1895

### Krylov, A. N.

Russian mathematician

Mathematics, like a millstone, grinds everything placed under it and, just as you won't get wheat flour by grinding Deadly Nightshade, you won't get the truth from the false premises even if you cover the page with formulae ...

Translated by Valerii Ilyushchenko  
 Quoted in V.I. Denisov and A.A. Logunov  
*Gravitation and Elementary Particle Physics*  
*The Theory of Space-Time and Gravitation* (p. 27)  
 MIR Publishers. Moscow, Russia. 1983

### Lakatos, Imre 1922–74

Hungarian-born philosopher

Mathematics has been trivialized, derived from indubitable, trivial axioms in which only absolutely clear trivial terms figure, and from which truth pours down in clear channels.

*Mathematics, Science and Epistemology* (Volume 2)  
 Chapter 1 (p. 10)  
 Cambridge University Press. Cambridge, England. 1978

Mathematics does not grow through a monotonous increase of the number of indubitably established theorems, but through the incessant improvement of guesses by speculation and criticism.

In Michael Guillen  
*Bridges to Infinity: The Human Side of Mathematics*  
 Part I, A Certain Treasure (p. 19)  
 Jeremy P. Tarcher, Inc. Los Angeles, California. USA. 1983

### Lamb, Sir Horace 1848–1934

English applied mathematician

A traveler who refuses to pass over a bridge until he has personally tested the soundness of every part of it is not likely to go far; something must be risked, even in mathematics.

In Morris Kline  
*Mathematical Thought from Ancient to Modern Times* (p. 468)  
 Oxford University Press, Inc. New York, New York, USA. 1972

### Langer, R. E.

No biographical data available

Rich in its past, dynamic in the present, prodigious for the future, replete with simple and yet profound ideas and methods, surely mathematics can give something to anyone's culture.

The Things I Should Have Done, I Did Not Do  
*The American Mathematical Monthly*, Volume 59, Number 7, August–September, 1952 (p. 445)

### Lasserre, Francois

No biographical data available

Ask a philosopher “What is philosophy?” or a historian “What is history?” and they will have no difficulty in giving an answer. Neither of them, in fact, can pursue his own discipline without knowing what he is searching for. But ask a mathematician “What is mathematics?” and he may justifiably reply that he does not know the answer but that does not stop him from doing mathematics.

In John D. Barrow  
*Pi in the Sky: Counting, Thinking, and Being* (p. 1)  
 Clarendon Press. Oxford, England. 1992

### Lec, Stanislaw 1909–66

Polish poet and aphorist

I don't agree with mathematics; the sum total of zeros is a frightening figure.

Translated by Jacek Galazka  
*More Unkempt Thoughts* (p. 26)  
 Funk & Wagnalls. New York, New York, USA. 1968

### Levitt, Norman

American mathematician

The dictum that everything that people do is “cultural” licenses the idea that every cultural critic can meaningfully analyze even the most intricate accomplishments of art and science.... It is distinctly weird to listen to pronouncements on the nature of mathematics from the lips of someone who cannot tell you what a complex number is!

The Flight from Science and Reason  
*Science*, October 11, 1996 (p. 183)

### Lewes, George Henry 1817–78

English philosopher

...mathematicians and philosophers resist the notion of Mathematics being classed among the sciences of observation and experiment; a classification which is supposed to degrade Mathematics from its supreme position, arid to introduce contingency into its results.

*Problems of Life and Mind* (Volume 1)  
 Problem I, Chapter XIV (p. 384)  
 James R. Osgood & Co. Boston, Massachusetts, USA. 1874

### Libchaber, Albert 1934–

Chaos theorist

A physicist would ask me, How does this atom come here and stick there? And what is the sensitivity to the surface? And can you write the Hamiltonian of the system? And if I tell him, I don't care, what interests me is this shape, the mathematics of the shape and the evolution, the bifurcation from this shape to that shape to this shape, he will tell me, that's not physics, you are doing mathematics.

In James Gleick  
*Chaos: Making a New Science*

The Experimenter (pp. 210–211)  
The Viking Press. New York, New York, USA. 1987

**Lichtenberg, Georg Christoph** 1742–99

German physicist and satirical writer

Mathematics is truly a splendid science, but mathematicians often are not worth a nickel. . . very often the so-called mathematician expects to be considered a deep thinker; yet the greatest blockheads are among them, unfit for any kind of occupation which requires contemplation if it cannot be done directly through that easy combination of symbols, which is more the work of routine than of thought.

*Tag and Donnerung*

Aphorismen (p. 305)

Publisher undetermined

**Lieber, Lillian R.**

Mathematician

When we learn to drive a car we are able to “go places” easily and pleasantly instead of walking to them with a great deal of effort. And so you will see that the more Mathematics we know the EASIER life becomes, for it is a TOOL with which we can accomplish things that we could not do at all with our bare hands. Thus Mathematics helps our brains and hands and feet, and can make a race of supermen out of us.

*Mathematics Tomorrow*

Growth and New Intuitions: Can We Meet the Challenge? (p. 65)

Springer-Verlag. New York, New York, USA. 1981

**Mach, Ernst** 1838–1916

Austrian physicist and philosopher

Mathematics may be defined as the economy of counting. There is no problem in the whole of mathematics which cannot be solved by direct counting. But with the present implements of mathematics many operations of counting can be performed in a few minutes, which, without mathematics, would take a lifetime.

In J.W. Mellor

*Higher Mathematics for Students of Chemistry and Physics* (p. 184)

Dover Publications. New York, New York, USA. 1955

**MacLane, Saunders** 1909–2005

American mathematician

Mathematics, springing from the soil of basic human experience with numbers and data and space and motion, builds up a far-flung architectural structure composed of theorems which reveal insights into the reasons behind appearances and of concepts which relate totally disparate concrete ideas.

Of Course and Courses

*The American Mathematical Monthly*, Volume 61, Number 3, March,

1954 (p. 152)

**Mazur, Barry** 1937–

American mathematician

The wonderful thing about mathematics is that, in the end as well as in the beginning, it can depend upon no authority other than one’s own (your own) mind; its verification comes from thinking alone, an activity open to anyone. If we have no theoretical equipment, we use the mathematical eyes and ears with which we were born and just experiment with our guesses to see whether we have faith in them.

*Imagining Numbers*

Part II, Chapter 10, Section 57 (p. 188)

Farrar Straus & Giroux. New York, New York, USA. 2003

**McDuff, Dusa** 1945–  
Mathematician

Gel'fand amazed me by talking of mathematics as though it were poetry. He once said about a long paper bristling with formulas that it contained the vague beginnings of an idea which he could only hint at and which he had never managed to bring out more clearly. I had always thought of mathematics as being much more straightforward: a formula is a formula, and an algebra is an algebra, but Gel'fand found hedgehogs lurking in the rows of his spectral sequences!

*Mathematical Notices*, Volume 38, Number 3, March, 1991 (p. 186)

**Mellor, Joseph William** 1863–1938  
Chemist

Higher Mathematics is the art of reasoning about numerical relations between natural phenomena; and the several sections of Higher Mathematics are different modes of viewing these relations.

*Higher Mathematics for Students of Chemistry and Physics*

Prologue

New York, New York, USA. 1902

**Mencke, J. B.** 1674–1732  
Poet

[Mathematics] guides our minds in an orderly way, and furnishes us simple and rational principles by means of which ambiguities are clarified, disorder is converted into order, and complexities are analyzed into their component parts.

*The Charlatanry of the Learned*

Lecture II (p. 152)

Alfred A. Knopf. New York, New York, USA. 1937

[Mathematics] includes much that will neither hurt one who does not know it nor help one who does.

*The Charlatanry of the Learned*

Lecture II (p. 152)

Alfred A. Knopf. New York, New York, USA. 1937

**Mendés, Michel**

**Mivart, St. George Jackson** 1827–1900

English biologist

...the study of that which is thus common to all things, is the study of mathematics; and therefore mathematics, or the science of number, is and must be the most fundamental of all sciences, since it pertains to every other, and no other can be pursued without it.

*An Introduction to the Elements of Science*

Chapter 1 (p. 5)

Little, Brown & Co. Boston, Massachusetts, USA. 1894

**Modjeski, Ralph** 1861–1940

Polish-born American engineer

**Waddell, John Alexander Low** 1854–1938

American bridge engineer

...one does not know a foreign language unless one is able to think in that language; one does not know mathematics unless one is able to think mathematically.

*The Teaching of Mathematics to Students of Engineering*

*Science*, New Series, Volume 28, Number 710, August 7, 1908 (p. 163)

**Morawetz, Cathleen Synge** 1923–

Canadian mathematician

I find that I may have emphasized the need to escape from the devils of mathematics to embark on the pleasures of the real world. But it works both ways, and sometimes the devils of the real world drive one into the pleasures of studying mathematics.

In D. Albers, G. Alexanderson and C. Reid

*More Mathematical People: Contemporary Conversations* (p. 238)

Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

**Mordell, Louis Joel** 1888–1972

English mathematician

...what is mathematics? It has so many different aspects that the difficulties in trying to give a definition are similar to those encountered in trying to determine whether some living organisms are animal or vegetable.

*Reflections of a Mathematician*

Chapter 1 (pp. 1–2)

Canadian Mathematical Congress. 1959

**More, Louis Trenchard**

American educator

The supreme value of mathematics to science is due to the fact that scientific laws and theories have their best, if not their only complete, expression in mathematical formulae; and the degree of accuracy with which we can

express scientific theory in mathematical terms is a measure of the state of a science.

*The Limitations of Science*

Chapter V (p. 150)

Henry Holt & Co. New York, New York, USA. 1915

**Morse, Harold Calvin Marston** 1892–1977

American mathematician

As Durer knew full well, there is a center and final substance in mathematics whose perfect beauty is rational, but rational “in retrospect.” The discovery which comes before, those rare moments which elevate man, and the searchings of the heart which come after are not rational. They are groupings filled with wonder and sometimes sorrow.

In Raymond George Ayoub

*Musings of the Masters: An Anthology of Mathematical Reflections*

Mathematics and the Arts (p. 92)

Mathematical Association of America. Washington, D.C. 2004

**Musès, Charles** 1919–2000

American mathematician, philosopher, and computer scientist

Between what we call the subjective and the objective, mathematics is strangely, fascinatingly ambivalent. It maps, penetrating as nothing else can, both the nature of the observable worlds and that of the mind that perceives the world by means of the body and its senses. Mathematics assumes a fundamental place in science, which represents nothing else than our attempt to understand the world we experience (including our bodies and minds). mathematics can do this because it provides a language by which we can explore, and describe precisely and profoundly, any possible set of characteristics or relationships – sometimes more accurately than words alone.

*Explorations in Mathematics*

UNESCO

Impact of Science on Society

Volume 27, Number 1, 1977

Mathematics penetrates, as nothing else can, both the nature of the observable world and that of the mind that perceives the world by means of the body and its senses. Mathematics assumes a fundamental place in science, which represents nothing else than our attempt to understand the world we experience (including our bodies and minds). Mathematics can do this because it provides a language by which we can explore, and describes precisely and profoundly, any possible set of characteristics or relationships – sometimes more accurately than words alone would allow.

**Moultrie, John** 1799–1874

English poet

There’s nothing in the world (that is in Trinity)

To make us poets happy; –

I detest

Your Hebrew, Greek and heathenish Latinity,  
And Mathematics are a bore at best.

*Poems*

Sir Launfal, xii

William Pickering. London, England. 1838

### National Research Council (USA)

Citizens who are bombarded daily with conflicting quantitative information need to be aware of both the power and the limitations of mathematics.

*Everybody Counts: A Report to the Nation on the Future of Mathematics Education*

Opportunity (p. 9)

National Academy Press. Washington, D.C. 1989

Without strong mathematics, there can be no strong science.

*Everybody Counts: A Report to the Nation on the Future of Mathematics Education*

Opportunity (p. 35)

National Academy Press. Washington, D.C. 1989

To participate fully in the world of the future, America must tap the power of mathematics.

*Everybody Counts: A Report to the Nation on the Future of Mathematics Education*

Opportunity (p. 1)

National Academy Press. Washington, D.C. 1989

Everyone depends on the success of mathematics education; everyone is hurt when it fails.

*Everybody Counts: A Report to the Nation on the Future of Mathematics Education*

Opportunity (p. 7)

National Academy Press. Washington, D.C. 1989

...each individual's knowledge of mathematics is uniquely personal. Mathematics becomes useful to a student only when it has been developed through a personal intellectual engagement that creates new understanding.

*Everybody Counts: A Report to the Nation on the Future of Mathematics Education*

Opportunity (p. 6)

National Academy Press. Washington, D.C. 1989

Mathematics deals with questions that can be answered by thought and only by thought.

*Physics in Perspective* (Volume 1)

Chapter 3 (p. 57)

National Academy of Sciences

Washington, D.C. 1972

### Newman, James Roy 1911–66

Mathematician and mathematical historian

Mathematics has its paradoxes, astronomy its uncertainties (about what is being measured), physics having suffered certain metaphysical relapses can survive only by swallowing entire jugs of wholly contradictory measurements. As for psychology, its most brilliant and its most scandalous success has been in a realm of theory in which measurement is as welcome as Macduff at Dunsinane.

*The World of Mathematics* (Volume 2) (p. 1147)

Here, then, in mathematics we have a universal language, valid, useful, intelligible everywhere in place and in time – in banks and insurance companies, on the parchments of the architects who raised the Temple of Solomon, and on the blueprints of the engineers who, with their calculus of chaos, master the winds. Here is a discipline of a hundred branches, fabulously rich, literally without limit in its sphere of application, laden with honors for an unbroken record of magnificent accomplishment. Here is a creation of the mind, both mystic and pragmatic in appeal. Austere and imperious as logic, it is still sufficiently sensitive and flexible to meet each new need.

*Mathematics and the Imagination*

Mathematics and the Imagination (p. 358)

Simon & Schuster. New York, New York, USA. 1940

### Nietzsche, Friedrich Wilhelm 1844–1900

German philosopher

...mathematics...would certainly have not originated if it had been known from the beginning that there is no exactly straight line in nature, no real circle, no absolute measure.

Translated by Marion Faber

It is as if mathematics were the vegetables of the academic dinner: Everyone knows that they are good for you, but no one forces you to eat them.

It's Time to Stop

*FOCUS*, February, 1997 (pp. 14–15)

### Northrop, Eugene

No biographical data available

Consider mathematics as a discipline in itself – that is to say, as a body of concepts and methods which constitute a way of thinking. Surely mathematics is such a discipline. It deals almost exclusively with premises and conclusions, and with deductive reasoning, which is one of the

more important methods of drawing conclusions from premises. Moreover, clarity and precision of definitions and assumptions, and rigor in reasoning, can be more nearly attained and more simply studied in mathematics than in the other disciplines. Is this not the real place of mathematics in a liberal education – not simply as a subject matter, or as a discipline applicable only to its own subject matter, but as a discipline which is applicable to almost every intellectual activity of man?

Mathematics in a Liberal Education

*The American Mathematical Monthly*, Volume 52, Number 3, March, 1945 (p. 133)

**Novalis (Friederich von Hardenberg)** 1772–1801  
German poet

All Mathematics is, properly speaking, an equation on a great scale for the other sciences.

Quoted in Panthea

*Eclectic Gatherings*

*The Reasoner*, Volume 6 1849 (p. 373)

In music, mathematics appears formally, as revelation, as creative idealism. All enjoyment is musical, consequently mathematical. The highest life is mathematics.

In Kuno Francke and Isidore Singer

*The German Classics: Masterpieces of German Literature Translated Into English*

*Aphorisms* (p. 188)

The German Publication Society. New York, New York, USA. 1914

The life of the Gods is mathematics. All divine messengers must be mathematicians. Pure mathematics is religion. Mathematicians are the only fortunate ones. The mathematician is naturally an enthusiast. Without enthusiasm no mathematics.

In James Byrnie Shaw

*Bulletin of the American Mathematical Society*

Book Review

Volume XIX, February, 1913 (p. 253)

The highest life is mathematics. Without enthusiasm no mathematics. The life of the gods is mathematics. Pure mathematics is religion. It is arrived at only by revelation.

*Main Currents in Nineteenth, Century Literature*

Chapter XII (p. 197)

The Macmillan Co. New York, New York, USA. 1906

**O. Henry (William Sydney Porter)** 1862–10  
American short story writer and journalist

His mathematics carried with it a momentary qualm and a lesson. The thought had not occurred to him that the thought could possibly occur to me not to ride at his side on that red road to revenge and justice. It was the higher calculus. I was booked for the trail. I began to eat more beans.

*Tales of O. Henry*

A Technical Error (p. 1059)

Doubleday & Company, Inc. Garden City, New York, USA. 1953

**Oppenheimer, James Robert** 1904–67  
American theoretical physicist

Today, it is not only that our kings do not know mathematics, but our philosophers do not know mathematics and – to go a step further – our mathematicians do not know mathematics.

The Tree of Knowledge

*Harper's Magazine*, Volume 217, Number 1301, October, 1958 (p. 55)

**Pappas, Theoni**  
Mathematician

Many people associate cold logic with mathematics. They consider the subject sterile and difficult to comprehend, and those that create it are often perceived as superior... nerdy... strange.

*Mathematical Scandles*

Introduction (p. 4)

Wide World Publishing. San Carlos, California, USA. 1997

**Pascal, Blaise** 1623–62  
French mathematician and physicist

For it is to judgment that perception belongs, as science belongs to intellect. Intuition is the part of judgment, mathematics of intellect.

In *Great Books of the Western World* (Volume 33)

*Pensées*

Section I, 4

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Paulos, John Allen** 1945–  
American mathematician

Mathematics is no more computation than writing is typing.

*Bend Numeracy*

Computation and Rote (p. 54)

Alfred A. Knopf. New York, New York, USA. 1991

**Peirce, Benjamin** 1809–80  
American mathematician, astronomer, and educator

Mathematics is not the discoverer of laws, for it is not induction; neither is it the framer of theories, for it is not hypothesis; but it is the judge over both, and it is the arbiter to which each must refer its claims; and neither law can rule nor theory explain without the sanction of mathematics.

Linear Associative Algebra

*American Journal of Mathematics*, Volume 4, 1881 (p. 97)

**Peirce, Charles Sanders** 1839–1914  
American scientist, logician, and philosopher

...metaphysics has always been the ape of mathematics.

The Architecture of Theories

*The Monist*, Volume 1, Number 2, January, 1891 (p. 174)

**Peter, Rozas**

No biographical data available

Mathematics can give to the world such worthwhile things – about infinity; and yet how essentially human it is – unlike the dull multiplication table, it bears on it forever the stamp of man’s handiwork.

*Playing With Infinity*

Preface (p. v)

Simon & Schuster. New York, New York, USA. 1962

I love mathematics not only for its technical applications, but principally because it is beautiful; because man has breathed his spirit of play into it and because it has given him his greatest game – the encompassing of the infinite.

*Playing With Infinity*

Preface (p. v)

Simon & Schuster. New York, New York, USA. 1962

### Peterson, Ivars

Mathematics and computer writer and editor

To most outsiders, modern mathematics is unknown territory. Its borders are protected by dense thickets of technical terms; its landscapes are a mass of indecipherable equations and incomprehensible concepts. Few realize that the world of modern mathematics is rich with vivid images and provocative ideas.

*The Mathematical Tourist: Snapshots of Modern Mathematics*

Preface (p. xiii)

W.H. Freeman & Company. New York, New York, USA. 1988

...mystery is an inescapable ingredient of mathematics. Mathematics is full of unanswered questions, which far outnumber known theorems and results. It’s the nature of mathematics to pose more problems than it can solve. Indeed, mathematics itself may be built on small islands of truth comprising the pieces of mathematics that can be validated by relatively short proofs. All else is speculation.

*Islands of Truth: A Mathematical Mystery Cruise*

Preface (p. xvi)

W.H. Freeman & Company. New York, New York, USA. 1990

### Philips, J. D.

No biographical data available

Students must learn that mathematics is the most human of endeavors. Flesh and blood representatives of their own species engaged in a centuries long creative struggle to uncover and to erect this magnificent edifice. And the struggle goes on today. On the very campuses where mathematics is presented and received as an inhuman discipline, cold and dead, new mathematics is created. As sure as the tides.

Mathematics as an Aesthetic Discipline

*Humanistic Mathematics Network Journal*, Number 12, October, 1995

### Poe, Edgar Allan 1809–49

American short story writer

The mathematics are the science of form and quantity, mathematical reasoning is merely logic applied to observation upon form and quantity.

Translated by Jessie Haynes

*The Fall of the House of Usher*

The Purloined Letter (p. 230)

Walter Scott. London, England. 1889

The word “Verse” is used here as the term most convenient for expressing, and without pedantry, all that is involved in the consideration of rhythm, rhyme, meter, and versification...the subject is exceedingly simple; one tenth of it, possibly, may be called ethical; nine tenths, however, appertains to the mathematics.

Quoted in Stanley Gudder

*A Mathematical Journey* (p. 55)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1976

### Poiani, Eileen L.

Mathematician

Like it or not, mathematics opens career doors, so it’s downright practical to be prepared.

In Lynn Arthur Steen

*Mathematics Tomorrow*

The Real Energy Crisis (p. 158)

Springer-Verlag. New York, New York, USA. 1981

Mathematics plays the critical filter role not only at the college level, but also in the work force.

In Lynn Arthur Steen

*Mathematics Tomorrow*

The Real Energy Crisis (p. 160)

Springer-Verlag. New York, New York, USA. 1981

### Poincaré, Jules Henri 1854–1912

French mathematician and theoretical astronomer

Mathematics has a triple end. It is to furnish an instrument for the study of nature. But that is not all. It has a philosophic end, and I dare say it, an esthetic end.... Those skilled in mathematics find in it pleasure akin to those which painting and music give. They admire the delicate harmony of numbers and of forms; they marvel when a new discovery opens an unexpected perspective; and is this pleasure not esthetic, even though the senses have no part in it?

*Sur les rapports de l’analyse pur et de la physique mathématique*

Report to the Zurich International Congress of Mathematics, 1897

(p. 82)

The true method of forecasting the future of mathematics lies in the study of its history and its present state.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1909*

The Future of Mathematics (p. 123)

Government Printing Office. Washington, D.C. 1910

I do not know whether or not I have said somewhere that mathematics is the art of giving the same name to different things.

*Annual Report of the Board of Regents of the Smithsonian Institution*, 1909

The Future of Mathematics (p. 128)

Government Printing Office, Washington, D.C. 1910

How does it happen that there are people who do not understand mathematics? If mathematics invokes only the rules of logic, such as are accepted by all normal minds; if its evidence is based on principles common to all men, and that none could deny without being mad, how does it come about that so many persons are here refractory?

*The Foundations of Science*

*Science and Method*, Book I

Chapter III (p. 383)

The Science Press, New York, New York, USA. 1913

**Polanyi, Michael** 1891–1976

Hungarian-born English scientist, philosopher, and social scientist

While applied mathematics is object-directed, pure mathematics has no outside object; being concerned with objects of its own creation, it may be described as “object creating.”

*Personal Knowledge*

Chapter 5, Section 2 (p. 76)

Harper & Row, Publishers, New York, New York, USA. 1962

Nowhere is intellectual beauty so deeply felt and fastidiously appreciated in its various grades and qualities as in mathematics, and only the informal appreciation of mathematical value can distinguish what is mathematics from a welter of formally similar, yet altogether trivial statements and operations.

*Personal Knowledge*

Chapter 6, Section 10 (p. 188)

Harper & Row, Publishers, New York, New York, USA. 1962

All these difficulties are but consequences of our refusal to see that mathematics cannot be defined without acknowledging its most obvious feature: namely, that it is interesting.

*Personal Knowledge*

Chapter 6, Section 10 (p. 188)

Harper & Row, Publishers, New York, New York, USA. 1962

We should declare instead candidly that we dwell on mathematics and affirm its statements for the sake of its intellectual beauty, which betokens the reality of its conceptions and the truth of its assertions. For if this passion were extinct, we would cease to understand mathematics; its conceptions would dissolve and its proofs carry no conviction. Mathematics would become pointless and would lose itself in a welter of insignificant tautologies and of Heath Robinson operations, from which it could no longer be distinguished.

*Personal Knowledge*

Chapter 6, Section 11 (p. 192)

Harper & Row, Publishers, New York, New York, USA. 1962

**Pólya, George** 1887–1985

Hungarian mathematician

The traditional mathematics professor of the popular legend is absentminded. He usually appears in public with a lost umbrella in each hand. He prefers to face a blackboard and to turn his back on the class. He writes a, he says b, he means c, but it should be d.

*How to Solve It: A New Aspect of Mathematical Method*

Part III, The Traditional Mathematics Professor (p. 208)

Princeton University Press, Princeton, New Jersey, USA. 1973

Mathematics presented with rigor is a systematic deductive science but mathematics in the making is an experimental inductive science.

*How to Solve It: A New Aspect of Mathematical Method*

Part III, Induction and Mathematical Induction (p. 117)

Princeton University Press, Princeton, New Jersey, USA. 1937

**Pope, Alexander** 1688–1744

English poet

See *Mystery to Mathematics fly!*

*The Complete Poetical Works (Volume 4)*

The Duncaid, Book IV, 1 647

Houghton Mifflin Company, New York, New York, USA. 1903

**Pratter, Frederick**

No biographical data available

Music and higher mathematics share some obvious kinship. The practice of both requires a lengthy apprenticeship, talent, and no small amount of grace. Both seem to spring from some mysterious workings of the mind. Logic and system are essential for both, and yet each can reach a height of creativity beyond the merely mechanical.

How Music and Math Seek Truth in Beauty

*Christian Science Monitor*, May 24, 1995

**Pringsheim, Alfred** 1850–1941

German mathematician

It is true that mathematics, owing to the fact that its whole content is built up by means of purely logical deduction from a small number of universally comprehended principles, has not unfittingly been designated as the science of the self-evident. Experience however, shows that for the majority of the cultured, even of scientists, mathematics remains the science of the incomprehensible.

*Jahresbericht der Deutschen Mathematiker Vereinigung*

Ueber Wert and angeblichen Unwert der Mathematik, 1904 (p. 357)

**Poisson, Simeon-Denis** 1781–1840

French mathematician

Life is good for only two things, discovering mathematics and teaching mathematics.

Filler

*Mathematical Magazine*, Volume 64, Number 1, February, 1991

(p. 44)

**Proclus** 411–485  
Greek philosopher

This, therefore, is mathematics: she reminds you of the invisible form of the soul; she gives life to her own discoveries; she awakens the mind and purifies the intellect; she brings light to our intrinsic ideas; she abolishes oblivion and ignorance which are ours by birth.

In Morris Kline

*Mathematical Thought from Ancient to Modern Times* (p. 24)  
Oxford University Press, Inc. New York, New York, USA. 1972

**Quine, Willard van Orman** 1908–2000  
American logician and philosopher

Irrefragability, thy name is mathematics.

*The Ways of Paradox and Other Essays*

Chapter 3 (p. 24)

Random House, Inc. New York, New York, USA. 1966

**Reid, Thomas** 1710–96  
Scottish philosopher

The science [mathematics], once fairly established on the foundation of a few axioms and definitions, as upon a rock, has grown from age to age, so as to become the most solid fabric that human reason can boast.

*Essays on the Intellectual Power of Man* (4th edition)

Chapter III (p. 348)

Printed for John Bell. London, England. 1785

In mathematics [sophistry] had no place from the beginning: Mathematicians having had the wisdom to define accurately the terms they use, and to lay down, as axioms, the first principles on which their reasoning is grounded. Accordingly we find no parties among mathematicians, and hardly any disputes.

*Essays on the Intellectual Powers of Man*

Essay I, Chapter I (p. 1)

Printed for John Bell. London, England. 1785

**Röntgen, Wilhelm Conrad** 1845–1923  
German physicist

The physicist in preparing for his work need three things, mathematics, mathematics, and mathematics.

*The Mathematical Gazette*, Volume 22, Number 252, December, 1938, 1225

**Rota, Gian-Carlo** 1932–1999  
Italian-born American mathematician

Of all escapes from reality, mathematics is the most successful ever.

*Indiscrete Thoughts*

Chapter VI (p. 70)

Birkhäuser. Boston, Massachusetts, USA. 1997

Very little mathematics has direct applications – though fortunately most of it has plenty of indirect ones.

*Indiscrete Thoughts*

Chapter XX (p. 213)

Birkhäuser. Boston, Massachusetts, USA. 1997

We thought that the generalization of the notion of space had ended with topoi, but we were mistaken. We probably know less about space now than we pretended to know fifty years ago. As mathematics progresses, our understanding of it regresses.

*Indiscrete Thoughts*

Chapter XX (p. 220)

Birkhäuser. Boston, Massachusetts, USA. 1997

**Rota, Gian-Carlo** 1932–99  
Italian-born American mathematician

**Pringsheim, Alfred** 1850–1941  
German mathematician

We often hear that mathematics consists mainly of “proving theorems.” Is a writer’s job mainly that of “writing sentences?”

In Philip J. Davis and Reuben Hersh

*The Mathematical Experience*

Introduction (p. xviii)

Birkhäuser. Boston, Massachusetts, USA. 1981

**Rózsa, Péter** 1905–77  
Hungarian mathematician

The eternal lesson is that Mathematics is not something static, closed, but living and developing. Try as we may to constrain it into a closed form, it finds an outlet somewhere and escapes alive.

*Playing with Infinity: Mathematical Explorations and Excursions*

Chapter 22 (p. 265)

Dover Publications, Inc. New York, New York, USA. 1961

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

But mathematics takes us...into the region of absolute necessity, to which not only the actual world, but every possible world, must conform...

*Mysticism and Logic and Other Essays*

Chapter IV (p. 69)

Longmans, Green & Company. London, England. 1925

I like mathematics because it is not human and has nothing particular to do with this planet or with the whole accidental universe – because like Spinoza’s God, it won’t love us in return.

Letter To Lady Ottoline Morrell, March, 1912

Source undetermined

...the rules of logic are to mathematics what those of structure are to architecture.

*Mysticism and Logic and Other Essays*

Chapter IV (p. 61)

Longmans, Green & Company. London, England. 1925

The true spirit of delight, the exaltation, the sense of being more than Man, which is the touchstone of the highest excellence, is to be found in mathematics as surely as in poetry.

*Mysticism and Logic and Other Essays*

Chapter IV (p. 60)

Longmans, Green & Company. London, England. 1925

Mathematics, rightly viewed, possess not only truth, but supreme beauty – a beauty cold and austere, like that of a sculpture...

*Mysticism and Logic and Other Essays*

Chapter IV (p. 60)

Longmans, Green & Company. London, England. 1925

There was a footpath leading across fields to New Southgate, and I used to go there alone to watch the sunset and contemplate suicide. I did not, however, commit suicide, because I wished to know more of mathematics.

*The Autobiography of Bertrand Russell*

Chapter II (p. 53)

Little, Brown & Company. Boston, Massachusetts, USA. 1967

Pure mathematics consists entirely of asseverations to the effect that, if such and such a proposition is true of anything, then such and such another proposition is true of that thing. It is essential not to discuss whether the first proposition is really true, and not to mention what the anything is, of which it is supposed to be true.... If our hypothesis is about anything, and not about some one or more particular things, then our deductions constitute mathematics. Thus mathematics may be defined as the subject in which we never know what we are talking about, nor whether what we are saying is true.

*Mysticism and Logic and Other Essays*

Chapter V (p. 75)

Longmans, Green & Company. London, England. 1925

The nineteenth century which prides itself upon the invention of steam and evolution, might have derived a more legitimate title to fame from the discovery of pure mathematics.

Recent Work on the Principles of Mathematics

*International Monthly*, Volume 4, July–December, 1901 (p. 83)

Every great study is not only an end in itself, but also a means of creating and sustaining a lofty habit of mind; and this purpose should be kept always in view throughout the teaching and learning of mathematics.

*Mysticism and Logic: And Other Essays*

Chapter IV (p. 73)

Longmans, Green & Co. London, England. 1919

If we are considering mathematics as an end in itself, and not as a technical training for engineers, it is very desirable to preserve the purity and strictness of its reasoning.

*Mysticism and Logic: And Other Essays*

Chapter IV (p. 65)

Longmans, Green & Co. London, England. 1919

In this respect, the discovery that the true principles [of symbolic logic] are as much a part of mathematics as any of their consequences has very greatly increased the intellectual satisfaction to be obtained. This satisfaction ought not to be refused to learners capable of enjoying it, for it is of a kind to increase our respect for human powers and our knowledge of the beauties belonging to the abstract world.

*Mysticism and Logic: And Other Essays*

Chapter IV (p. 68)

Longmans, Green & Co. London, England. 1919

One of the chief ends served by mathematics, when rightly taught, is to awaken the learner's belief in reason, his confidence in the truth of what has been demonstrated, and in the value of demonstration.

*Mysticism and Logic: And Other Essays*

Chapter IV (p. 62)

Longmans, Green & Co. London, England. 1919

The discovery that all mathematics follows inevitably from a small collection of fundamental laws is one which immeasurably enhances the intellectual beauty of the whole; to those who have been oppressed by the fragmentary and incomplete nature of most existing chains of deduction this discovery comes with all the overwhelming force of a revelation; like a palace emerging from the autumn mist as the traveler ascends an Italian hill-side, the stately storeys of the mathematical edifice appear in their due order and proportion, with a new perfection in every part.

*Mysticism and Logic: And Other Essays*

Chapter IV (pp. 67–68)

Longmans, Green & Co. London, England. 1919

What is best in mathematics deserves not merely to be learnt as a task, but to be assimilated as a part of daily thought, and brought again and again before the mind with ever-renewed encouragement.

*Mysticism and Logic: And Other Essays*

Chapter IV (p. 60)

Longmans, Green & Co. London, England. 1919

...mathematics takes us still further from what is human, into the region of absolute necessity, to which not only the actual world, but every possible world, must conform; and even here it builds a habitation, or rather finds a habitation eternally standing, where our ideals are fully satisfied and our best hopes are not thwarted. It is only when we thoroughly understand the entire independence of ourselves, which belongs to this world that reason finds, that we can adequately realise the profound importance of its beauty.

*Mysticism and Logic: And Other Essays*

Chapter IV (p. 69)

Longmans, Green & Co. London, England. 1919

**Santayana, George (Jorge Agustín Nicolás Ruiz de Santillana)** 1863–1952

Spanish-born American philosopher

If all the arts aspire to the condition of music, all the sciences aspire to the condition of mathematics.

*Some Turns of Thought of the Modern Mind*

Chapter 3 (p. 80)

At The University Press. Cambridge, England. 1933

**Sarton, May** 1912–5

American poet and novelist

...I see a certain order in the universe and math is one way of making it visible.

*As We Are Now* (p. 38)

W.W. Norton & Co. New York, New York, USA. 1973

**Saunders, Kenneth James**

No biographical data available

Most of us will be forgiven if the pure and sublime beauty of mathematics has eluded us, and the parallel is particularly apt, for whilst the higher mathematics do make their appeal to a few peculiarly constituted minds, they leave the majority of us cold ...

*Gotama Buddha: A Biography (based on the Canonical Books of the Theravādin)*

Chapter VII (p. 93)

Association Press. New York, New York, USA. 1920

**Sawyer, Walter Warwick** 1911–

Mathematician

The scientist who uses mathematics should be aware that much new mathematical knowledge is being discovered; nearly all of it will be irrelevant to his research, but he should keep his eyes open for the small piece that may be of great value to him.

Algebra

*Scientific American*, Volume 211, Number 3, September, 1964 (p. 78)

Any part of modern mathematics is the end-product of a long history. It has drawn on many other branches of earlier mathematics, it has extracted various essences from them and has been reformulated again and again in increasingly general and abstract forms. Thus a student may not be able to see what it is all about, in much the same way that a caveman confronted with a vitamin pill would not easily recognize it as food.

*A First Look at Numerical Functional Analysis*

Chapter 1 (p. 1)

Clarendon Press. Oxford, England. 1978

In other arts, if we see a pattern we can admire its beauty; we may feel that it has significant form, but we cannot say what the significance is. And it is much better not to try.... But in mathematics it is not so. In mathematics, if a pattern occurs, we can go on to ask, Why does it occur? What does it signify? And we can find answers to these

questions. In fact, for every pattern that appears, a mathematician feels he ought to know why it appears.

*Prelude to Mathematics* (p. 23)

Penguin Books. Baltimore, Maryland, USA. 1957

A point that should be borne in mind is that, generally speaking, higher mathematics is simpler than elementary mathematics. To explore a thicket on foot is a troublesome business; from an aeroplane the task is easier.

*Prelude to Mathematics* (p. 11)

Penguin Books. Baltimore, Maryland, USA. 1957

**Schlicter, Dean**

No biographical data available

Go down deep enough into anything and you will find mathematics.

In Margaret Joseph

The Future of Geometry

*The Mathematics Teacher*, Volume XXIX, Number 1, January, 1936 (p. 29)

**Schrödinger, Erwin** 1887–1961

Austrian theoretical physicist

“Mathematics” appears to be at the bottom of everything, since we find it unexpectedly where we have not put it in.

*Nature and the Greeks*

Chapter III (p. 38)

At The University Press. Cambridge, England. 1954

**Schubert, Hermann Cäsar Hannibal** 1848–1911

Enumerative geometer

Whenever, therefore, a controversy arises in mathematics, the issue is not whether a thing is true or not, but whether the proof might not be conducted more simply in some other way, or whether the proposition demonstrated is sufficiently important for the advancement of the science as to deserve especial enunciation and emphasis, or finally, whether the proposition is not a special case of some other and more general truth which is just as easily discovered.

*Mathematical Essays and Recreations*

On the Nature of Mathematical Knowledge (p. 28)

The Open Court Publishing Company. Chicago, Illinois, USA. 1917

**Schützenberger, Marcel-Paul** 1927–96

French mathematician

Ere long mathematics will be as useful to the chemist as the balance.

In J.W. Mellor

*Higher Mathematics for Students of Chemistry and Physics* (p. xvii)

Dover Publications. New York, New York, USA. 1955

**Schuyler, A.**

With mathematics as a key we are enabled to unlock the door of the temple of science, to enter, and to read

therein the profoundest mysteries, and to drink refreshing draughts from the purest fountains.

*The Chautauquan*

The Utility of mathematics

Volume 9, Number 9, June, 1886 (p. 505)

**Serge, Lang** 1927–

Mathematician

I think rather that one does mathematics because one likes to do this sort of thing, and also, much more naturally, because when you have a talent for something, usually you don't have any talent for something else, and you do whatever you have talent for, if you are lucky enough to have it. I must also add that I do mathematics also because it is difficult, and it is a very beautiful challenge for the mind. I do mathematics to prove to myself that I am capable of meeting this challenge, and win it.

*The Beauty of Doing Mathematics: Three Public Dialogues*

What Does A Mathematician Do and Why? (p. 5)

Springer-Verlag. New York, New York, USA. 1985

**Shadwell, Thomas** 1642?–92

English dramatist and poet

Wood to La. Vaine. 'Tis true, Madame, Sir Positive and Poet Ninny are excellent men, and brave Bully-Rocks; but they must grant, that neither of e'm understand Mathematicks but myself.

*The Complete Works of Thomas Shadwell* (Volume 1)

The Sullen Lovers, Act IV (p. 71)

The Fortune Press. London, England. 1927

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

Music and poesy used to quicken you;  
The mathematics and metaphysics,  
Fall to them as you find your stomach serves you;  
No profit grows where is no pleasure ta'en:  
In brief, sir, study what you most affect.

*In Great Books of the Western World* (Volume 26)

*The Plays and Sonnets of William Shakespeare* (Volume One)

*The Taming of the Shrew*

Act I, Scene i, l. 36

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

I do present you with a man of mine,  
Cunning in music and mathematics,  
To instruct her fully in those sciences,  
Whereof, I know, she is not ignorant.

*In Great Books of the Western World* (Volume 26)

*The Plays and Sonnets of William Shakespeare* (Volume One)

*The Taming of the Shrew*

Act II, Scene i, l. 55

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Shaw, George Bernard** 1 856–1950

Irish comic dramatist and literary critic

It is a monstrous thing to force a child to learn Latin or Greek or mathematics on the ground that they are an

indispensable gymnastic for the mental powers. It would be monstrous even if it were true.

*Misalliance*

Preface (p. lxix)

Brentano's, New York, New York, USA, 1904

...the more reasonable a student was in mathematics, the more unreasonable she was in the affairs of real life, concerning which few trustworthy postulates have yet been ascertained.

*An Unsocial Socialist*

Chapter VI (p. 117)

Brentano's, New York, New York, USA, 1904

**Shaw, James Byrnie**

American mathematician

It [mathematics] is not the study simply of forms that the mind imposes upon the helpless universe of sense, nor is it the study of the laws of thought. Nor equally is the spirit of mathematics the goddess Athena, sprung from the head of Zeus – an astounding miracle in the universe of thought – but is rather spirit animating flesh.

*Lectures on the Philosophy of Mathematics*

Chapter I (pp. 10–11)

The Open Court Publishing Co. Chicago, Illinois, USA. 1918

We are today heirs of the whole past in mathematics. Nothing is wasted, nothing is dissipated, but the wealth, the flashing gems of learning, which are the reward of painful toil of men long since dead, are ours today, a capital which enables us to advance the faster and to increase the riches all the more.

*Lectures on the Philosophy of Mathematics*

Chapter XVI (p. 187)

The Open Court Publishing Co. Chicago, Illinois, USA. 1918

...we find a domain for the validity of mathematics in a region that might seem at first remote indeed. But nevertheless the truth in mathematics, a free creation of the imagination incarnated in forms of the reason, guarantees the truth of other free creations of the imagination when they are set forth in the realities of life.

*Lectures on the Philosophy of Mathematics*

Chapter XVI (p. 194)

The Open Court Publishing Co. Chicago, Illinois, USA. 1918

...because mathematics contains truth, it extends its validity to the whole domain of art and the creatures of the constructive imagination. Because it contains freedom, it guarantees freedom to the whole realm of art. Because it is not primarily utilitarian, it validates the joy of imagination for the pure pleasure of imagination.

*Lectures on the Philosophy of Mathematics* (pp. 194–195)

The Open Court Publishing Company. Chicago, Illinois. 1918

**Slosson, Edwin E.** 1865–1929

American chemist and journalist

A professor of chemistry was once commiserating the professor of mathematics on the fewness of his students, and the latter, resenting the implication that popularity

was a proof of good teaching, replied: “The trouble with mathematics is that nothing ever happens. If, when an equation is solved, it would blow up or give off a bad odor, I would get as many students as you.

Great American Universities – XV

*The Independent*, Volume LXVIII, Number 3196, March 3, 1910 (p. 463)

**Smith, David Eugene** 1860–1945  
Mathematician

...if we are to teach mathematics at all, real success is not possible unless we know that the subject is beautiful as well as useful.

*The Poetry of Mathematics and Other Essays*

Chapter I (p. 10)

Scripta Mathematica. New York, New York, USA. 1934

...we cannot convey mathematics to the great mass of people unless we first dwell upon the utility of the subject and imagine what would happen to the world if every trace of mathematics and of mathematical knowledge should cease to exist.

*The Poetry of Mathematics and Other Essays*

Chapter I (p. 10)

Scripta Mathematica. New York, New York, USA. 1934

...I would rather be a dreamer without mathematics, than a mathematician without dreams.

*The Poetry of Mathematics and Other Essays*

Religio Mathematici (p. 30)

Scripta Mathematica. New York, New York, USA. 1934

One thing that mathematics early implants, unless hindered from so doing, is the idea that here, at last, is an immortality that is seemingly tangible – the immortality of a mathematical law.

*The Poetry of Mathematics and Other Essays*

Religio Mathematici (pp. 31–32)

Scripta Mathematica. New York, New York, USA. 1934

Voltaire remarked that “one merit of poetry few persons will deny; it says more in fewer words than prose”; and why may we not with perfect truth continue – “one merit of mathematics no one can deny – it says more in fewer words than any other science in the world”?

*Teachers College Record*

Mathematics in the Training for Citizenship

Volume XVIII, Number 3, May, 1917 (p. 216)

I would teach mathematics for citizenship because it is one of the eternal verities, just as I would lead the youth to a great desert or to the mountains, there to commune with his soul; to a solemn tropical forest, “God’s first temple,” there to feel the uplift of loneliness; to the black silence that surrounds the tomb of Akbar the Great, or to the mists in the cryptomerias that stand guard beside the resting place of Ieyasu. I would lead him to these places because they rouse his soul to a contemplation of the truths that endure.

*Teachers College Record*

Mathematics in the Training for Citizenship

Volume XVIII, Number 3, May, 1917 (p. 217)

**Speiser, A.**

No biographical data available

...mathematics has liberated itself from language; and one who knows the tremendous labor put into this process and its ever-recurring surprising success, cannot help feeling that mathematics nowadays is more efficient in its particular sphere of the intellectual world than, say, the modern languages in their deplorable condition of decay or even music are on their fronts.

In Hermann Weyl

*Philosophy of Mathematics and Natural Science*

Part I, Chapter II (p. 65)

Princeton University Press. Princeton, New Jersey, USA. 1949

Already the pronounced tendency toward tediousness, which seems to be inherent in elementary mathematics, might plead for its late origin, since the creative mathematician would prefer to pay his attention to the interesting and beautiful problems.

In Dirk, J. Struik

*A Concise History of Mathematics*

Chapter I (p. 15)

Dover Publications, Inc. New York, New York, USA. 1967

**Spencer-Brown, George** 1923–

English mathematician and polymath

That mathematics, in common with other art forms, can lead us beyond ordinary existence, and can show us something of the structure in which all creation hangs together, is no new idea. But mathematical texts generally begin the story somewhere in the middle, leaving the reader to pick up the thread as best he can.

*Laws of Form*

A Note on the Mathematical Approach (p. v)

George Allen & Unwin Ltd. London, England. 1969

**Spengler, Oswald** 1880–1936

German philosopher

...mathematics, accessible in its full depth only to the very few, holds a quite peculiar position amongst the creation of the mind. It is a science of the most rigorous kind, like logic but more comprehensive and very much fuller; it is a true art, along with sculpture and music, as needing the guidance of inspiration and as developing under great conventions of form...

*The Decline of the West* (Volume 1)

Chapter II, Section ii (p. 56)

Alfred A. Knopf, Inc. New York, New York, USA. 1926

Gothic cathedrals and Doric temples are mathematics in stone.

*The Decline of the West* (Volume 1)

Chapter II, Section ii (p. 58)

Alfred A. Knopf, Inc. New York, New York, USA. 1926

The mathematic, then, is an art. As such it has its styles and style periods. It is not, as the layman and the philosopher (who is in this matter a layman too) imagine, substantially unalterable, but subject like every art to unnoticed changes from epoch to epoch. The development of the great arts ought never to be treated without an (assuredly not unprofitable) side-glance at contemporary mathematics.

*The Decline of the West* (Volume 1)

Chapter II, Section iv (p. 62)

Alfred A. Knopf, Inc. New York, New York, USA. 1926

And so the development of the new mathematic consists of a long, secret, and finally victorious battle against the notion of magnitude.

*The Decline of the West* (Volume 1)

Chapter II, Section ix (p. 76)

Alfred A. Knopf, Inc. New York, New York, USA. 1926

### **Spottiswoode, William** 1825–83

English mathematician and physicist

Conterminous with space and coeval with time is the kingdom of Mathematics; within this range her dominion is supreme; otherwise than according to her order nothing can exist; in contradiction to her laws nothing takes place. On her mysterious scroll is to be found written for those who can read it that which has been, that which is, and that which is to come.

*Report of the Forty-eighth Meeting of the British Association for the Advancement of Science*

Address of William Spottiswoode (p. 31)

John Murray. London, England. 1879

[The] connexions between Mathematics and other subjects, to prove that hers is not after all such a far-off region, nor so undecipherable an alphabet, and to show that even at unlikely spots we may trace under-currents of thought which having issued from a common source fertilise alike the mathematical and the non-mathematical world.

*Report of the Forty-eighth Meeting of the British Association for the Advancement of Science*

Address of William Spottiswoode (pp. 17–18)

John Murray. London, England. 1879

### **Stallone, Sylvester** 1946–

American actor

If you hang around with nice people you get nice friends, hang around with smart people and you get smart friends, hang around with yo-yos and you get yo-yos for friends. It's simple mathematics.

*Rocky*

Film (1976)

### **Steen, Lynn Arthur**

American mathematician

One of the big misapprehensions about mathematics that we perpetrate [sic] in our classrooms is that the

teacher always seems any problem that is discussed. This gives students the idea that there is a book somewhere with all the right answers to all of the interesting questions, and that teachers know those answers. And if one could get hold of the book, one would have everything settled. That is so unlike the true nature of mathematics.

*Teaching Teachers, Teaching Students* (p. 89)

Birkhäuser. Boston, Massachusetts, USA. 1997

### **Steinbeck, John** 1902–68

American novelist

...I drove up the mountain and found a dairy, bought some milk, and asked permission to camp under an apple tree. The dairy man had a Ph.D. in mathematics, and he must have had some training in philosophy. He liked what he was doing and didn't want to be anywhere else – one of the very few contented people I met in my whole journey.

*Travels with Charley: In Search of America*

Part Two (pp. 25–26)

The Viking Press. New York, New York, USA. 1962

### **Stewart, Ian** 1945–

English mathematician

Many pages have been expended on polemics in favor of rigor over intuition, or of intuition over rigor.

Both extremes miss the point: the power of mathematics lies precisely in the combination of intuition and rigor.

*Concepts of Modern Mathematics*

Chapter 1 (p. 4)

Dover Publications, Inc. New York, New York, USA. 1995

To criticize mathematics for its abstraction is to miss the point entirely. Abstraction is what makes mathematics work. If you concentrate too closely on too limited an application of a mathematical idea, you rob the mathematician of his most important tools: analogy, generality, and simplicity. Mathematics is the ultimate in technology transfer.

*Does God Play Dice: The New Mathematics of Chaos*

Chapter 17 (p. 363)

Blackwell Publishing Ltd. Malden, Massachusetts, USA. 2002

Not all ideas are mathematics; but all good mathematics must contain an idea.

*From Here to Infinity*

The Nature of Mathematics (p. 6)

Oxford University Press, Inc. Oxford, England. 1996

Mathematics is not just a collection of isolated facts: it is more like a landscape; it has an inherent geography that its users and creators employ to navigate through what would otherwise be an impenetrable jungle.

*Nature's Numbers: The Unreal Reality of Mathematical Imagination*

Chapter 3 (p. 38)

Basic Books. New York, New York, USA. 1995

Mathematics is not a long-dead subject preserved in dusty tomes, in which all the questions have been solved and all the answers are listed at the back of the book. It is a vibrant, lively, ever-growing subject: Indeed, more new mathematics is being created today than ever before. Further, this new mathematics is not just ever-more-complicated answers to bigger and bigger sums. It lies on a far higher conceptual level. Mathematics is the study of patterns, regularities, rules, and their consequences – the science of significant form – and nowhere is form more significant than in biology.

*Life's Other Secret: The New Mathematics of the Living World*  
Chapter 2 (pp. 29–30)  
John Wiley & Sons, Inc. New York, New York, USA. 1998

**Stone, Marshall H.** 1903–89  
American mathematician

...science is reasoning; reasoning is mathematics; and, therefore, science is mathematics.

Mathematics and the Future of Science  
*Bulletin of the American Mathematical Association*, Volume 63, Number 2 March, 1957 (p. 61)

**Strutt, John William (Lord Rayleigh)** 1842–1919  
English physicist

Examples...which might be multiplied ad libitum show how difficult it often is for an experimenter to interpret his results without the aid of mathematics.

In E.T. Bell  
*Men of Mathematics* (p. xvi)  
Simon & Schuster. New York, New York, USA. 1937

**Sylvester, James Joseph** 1814–97  
English mathematician

...there is no study in the world which brings into more harmonious action all the faculties of the mind than the one [mathematics] of which I as the humble representative and advocate. There is none other which prepares so many agreeable surprises for its followers, more wonderful than the transformation scene of a pantomime, or, like this, seems to raise them, by successive steps of initiation to higher and higher states of conscious intellectual being.

A Plea for the Mathematician  
*Nature*, Volume 1, Thursday, January 6, 1870 (p. 261)

Others find its [mathematics] justification, its “raison d’être” in its being either the torch-bearer leading the way, or the handmaiden holding up the train of Physical Science; and a very clever writer in a recent magazine article, expresses his doubts whether it is, in itself, a more serious pursuit, or more worthy of interesting an intellectual human being, than the study of chess problems or Chinese puzzles.

*The Collected Mathematical Papers of James Joseph Sylvester*  
(Volume 2)

Presidential Address to the British Association (p. 658)  
University Press. Cambridge, England. 1904–12

Some people have been found to regard all mathematics, after the 47th proposition of Euclid, as a sort of morbid secretion, to be compared only with the pearl said to be generated in the diseased oyster, or, as I have heard it described, “une excroissance malade de Tesprit humain.”

*The Collected Mathematical Papers of James Joseph Sylvester*  
(Volume 2)

Address to the Mathematical and Physical (p. 658)  
At The University Press. Cambridge, England. 1908

The world of ideas which it [mathematics] discloses or illuminates, the contemplation of divine beauty and order which it induces, the harmonious connexion of its parts, the infinite hierarchy and absolute evidence of the truths with which it is concerned, these, and such like, are the surest grounds of the title of mathematics to human regard, and would remain unimpeached and unimpaired were the plan of the universe unrolled like a map at our feet, and the mind of man qualified to take in the whole scheme of creation at a glance.

*The Collected Mathematical Papers of James Joseph Sylvester*  
(Volume 2)

Presidential Address to the British Association (p. 659)  
University Press. Cambridge, England. 1904–12

What is it to us, they say, if the three angles of a triangle are equal to two right angles, or if every even number is, or may be, the sum of two primes, or if every equation of an odd degree must have a real root. How dull, stale, flat, and unprofitable are such and such like announcements! Much more interesting to read an account of a marriage in high life, or the details of an international boat-race. But this is like judging of architecture from being shown some of the brick and mortar, or even a quarried stone of a public building, or of painting from the colours mixed on the palette, or of music by listening to the thin and screechy sounds produced by a bow passed haphazard over the strings of a violin.

*The Collected Mathematical Papers of James Joseph Sylvester*  
(Volume 2)

Address to the Mathematical and Physical (pp. 658–659)  
At The University Press. Cambridge, England. 1908

...I have used the word mathematics in the plural; but I think it would be desirable that this form of word should be reserved for the applications of the science, and that we should use mathematic in the singular number to denote the science itself ...

*The Collected Mathematical Papers of James Joseph Sylvester*  
(Volume 2)

Address to the Mathematical and Physical (p. 659)  
Section of the British Association  
At The University Press. Cambridge, England. 1908

Mathematics is not a book confined within a cover, and bound between brazen clasps, whose contents it needs only patience to ransack; it is not a mine, whose treasures may take long to reduce into possession, but which fill only a limited number of veins and lodes; it is not a soil, whose fertility can be exhausted by the yield of successive harvests; it is not a continent or an ocean, whose area can be mapped out, and its contour defined – it is limitless as that space which it finds too narrow for its aspirations; its possibilities are as infinite as the worlds which are forever crowding in and multiplying upon the astronomer’s gaze; it is as incapable of being restricted within assigned boundaries, or being reduced to definitions of permanent validity, as the consciousness, the life, which seems to slumber in each monad, in every atom of matter, in each leaf and bud and cell, and is forever ready to burst forth into new forms of vegetable and animal existence.

Commemoration Day At “Johns Hopkins” University  
*The Educational Times*  
September 1, 1877 (p. 131)

Time was when all the parts of the subject were dissevered, when algebra, geometry, and arithmetic either lived apart or kept up cold relations of acquaintance confined to occasional calls upon one another; but that is now at an end; they are drawn together and are constantly becoming more and more intimately related and connected by a thousand fresh ties, and we may confidently look forward to a time when they shall form but one body with one soul.

*The Collected Mathematical Papers of James Joseph Sylvester*  
(Volume 2)  
Presidential Address to the British Association (p. 659)  
University Press. Cambridge, England. 1904–1912

The object of pure Physic is the unfolding of the laws of the intelligible world; the object of pure Mathematic that of the unfolding the laws of human intelligence.

*The Collected Mathematical Papers of James Joseph Sylvester*  
(Volume 3)  
On a Theorem Connected with Newton’s Rule (p. 424)  
University Press. Cambridge, England. 1904–1912

May not Music be described as the Mathematic of Sense, Mathematics as Music of the Reason?

Algebraical Researches, Containing a Disquisition on Newton’s Rule for the Discovery of Imaginary Roots  
*Philosophical Transactions of the Royal Society*, Volume 154, 1864

I think it would be desirable that this form of word [mathematics] should be reserved for the applications of the science, and that we should use mathematic in the singular to denote the science itself, in the same way as we speak of logic, rhetoric, or (own sister to algebra) music.

*Collected Mathematical Papers*  
Presidential Address to the British Association, Exeter British Association Report (1869), (Volume 2) (p. 659)

**Swift, Jonathan** 1667–1745  
Irish-born English writer

The knowledge I had in mathematicks gave me great assistance in acquiring their [the Laputans’] phraseology, which depended much upon that science and musick; and in the latter I was not unskilled. Their ideas are perpetually conversant in lines and figures. If they would, for example, praise the beauty of a woman, or any other animal, they describe it by rhombs, circles, parallelograms, ellipses, and other geometrical terms, or by words of art drawn from music, needless here to repeat. I observed in the king’s kitchen all sorts of mathematical and musical instruments, after the figures of which they cut up the joyns that were served to his Majesty’s table.

*In Great Books of the Western World* (Volume 36)  
*Gulliver’s Travels*  
Part III, Chapter II (p. 97)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Synge, John L.** 1897–1995  
Irish mathematician and physicist

Logic is the railway track along which the mind glides easily. It is the axioms that determine our destination by setting us on this track or the other, and it is in the matter of choice of axioms that applied mathematics differs most fundamentally from pure. Pure mathematics is controlled (or should we say “uncontrolled?”) by a principle of ideological isotropy: any line of thought is as good as another, provided that it is logically smooth. Applied mathematics on the other hand follows only those tracks which offer a view of natural scenery; if sometimes the track dives into a tunnel it is because there is prospect of scenery at the far end.

Postcards on Applied Mathematics  
*The American Mathematical Monthly*, Volume 46, Number 3, March, 1939 (p. 156)

Mathematics begins in bewilderment and ends in bewilderment.

*Kandelman’s Krim* (p. 17)  
Jonathan Cape. London, England. 1957

**Thurston, William Paul** 1946–  
American mathematician

Very little [of mathematics] is easily accessible. But I think a lot more of it can be explained so that a lot more people understand it. On the level we’re talking about. I like to try to make mathematics easy, not to make it hard. I think there is a tendency among mathematicians to try to make it hard. I try to combat that when I see people wrap up their mathematics in formal fancy theories that make it less accessible.

In D. Albers, G. Alexanderson and C. Reid  
*More Mathematical People: Contemporary Conversations* (p. 337)  
Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

As one reads mathematics, one needs to have an active mind, asking questions, forming mental connections between the current topic and other ideas from other contexts, so as to develop a sense of the structure, not just familiarity with a particular tour through the structure.

*Three-Dimensional Geometry and Topology*

Reader's Advisory (p. ix)

Princeton University Press. Princeton, New Jersey, USA. 1997

**Tobias, Sheila** 1935–  
American academic and activist

...the paradox of our time is that as mathematics becomes increasingly powerful, only the powerful seem to benefit from it.

*Succeed With Math*

Foreword (p. xviii)

College Entrance Examination Board. New York, New York, USA. 1987

...mathematics provides an invisible framework that molds the more visible surfaces of daily life.

*Succeed With Math*

Foreword (p. xvii)

College Entrance Examination Board. New York, New York, USA. 1987

People who don't know what math is don't know what math isn't.

*Overcoming Math Anxiety*

Chapter 1 (p. 33)

W.W. Norton. New York, New York, USA. 1993

**Todhunter, Isaac** 1820–84  
English mathematician

One striking peculiarity of mathematics is its unlimited power of evolving examples and problems. A student may read through a book of Euclid, or a few chapters of Algebra; and within that limited range of knowledge it is possible to set him exercises as real and as interesting as the propositions themselves which he has studied; deductions which might have pleased the Greek geometers, and algebraical properties which Pascal and Fermat would not have disdained to investigate.

*The Conflict of Studies, and Other Essays on Subjects Connected With Education*

Chapter III (p. 82)

Macmillan & Co Ltd. London, England. 1873

...the pursuits of the University mathematics pre-eminently demand selfdenial, patience, and perseverance from youth, precisely at that period when they have liberty to act for themselves, and when on account of obvious temptations habits of restraint and application are peculiarly valuable.

*The Conflict of Studies, and Other Essays on Subjects Connected With Education*

Chapter I (p. 12)

Macmillan & Co Ltd. London, England. 1873

Another great and special excellence of mathematics is that it demands earnest voluntary exertion. It is simply

impossible for a person to become a good mathematician by the happy accident of having been sent to a good school; this may give him a preparation and a start, but by his own individual efforts alone can he reach an eminent position.

*Conflict of Studies and Other Essays*

The Conflict of Studies (p. 11)

Macmillan & Company. London, England. 1873

Nor do I know any study which can compete with mathematics in general in furnishing matter for severe and continued thought. Metaphysical problems may be even more difficult; but then they are far less definite, and, as they rarely lead to any precise conclusion, we miss the power of checking our own operations, and of discovering whether we are thinking and reasoning or merely fancying and dreaming.

*Conflict of Studies and Other Essays*

The Conflict of Studies (p. 13)

Macmillan & Company. London, England. 1873

**Tolstoy, Leo** 1828–1910  
Russian writer

“Mathematics are most important, madam! I don't want to have you like our silly ladies. Get used to it and you'll like it,” and he patted her cheek. “It will drive all the nonsense out of your head.”

*In Great Books of the Western World* (Volume 51)

*War and Peace*

Book One, Chapter XXV (p. 48)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

A modern branch of mathematics having acquired the art of dealing with the infinitely small can now yield solutions in other more complex problems of motion which used to appear insoluble. The modern branch of mathematics, unknown to the ancients, when dealing with problems of motion admits the conception of the infinitely small, and so conforms to the chief condition of motion (absolute continuity) and thereby corrects the inevitable error which the human mind cannot avoid when it deals with separate elements of motion instead of examining continuous motion.

*In Great Books of the Western World* (Volume 51)

*War and Peace*

Book Eleven, Chapter I (p. 469)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Trevelyan, George Otto** 1838–1928  
English historian

He gave himself diligently to mathematics, which he liked “vastly.” “I believe they are useful,” he writes, “and I am sure they are entertaining, which is alone enough to recommend them to me.”

*The Early History of Charles James Fox*

Chapter II (p. 50)

Longmans, Green & Company. London, England. 1901

**Turnbull, Herbert Westren** 1885–1961

English mathematician

Mathematics transfigures the fortuitous concourse of atoms into the tracery of the finger of God.

In James Roy Newman

*The World of Mathematics* (Volume 1)

The Great Mathematicians (p. 168)

Simon &amp; Schuster. New York, New York, USA. 1956

The usefulness of mathematics in furthering the sciences is commonly acknowledged; but outside the ranks of the experts there is little inquiry into its nature and purpose as a deliberate human activity. Doubtless this is due to the inevitable drawback that mathematical study is saturated with technicalities from beginning to end.

*The Great Mathematicians*

Preface (p. xi)

New York University Press. New York, New York, USA. 1961

The greatest mathematics has the simplicity and inevitableness of supreme poetry and music, standing on the borderland of all that is wonderful in Science, and all that is beautiful in Art.

In James Roy Newman

*The World of Mathematics* (Volume 1)

The Great Mathematicians (p. 168)

Simon &amp; Schuster. New York, New York, USA. 1956

There is a largeness about mathematics that transcends race and time: mathematics may humbly help in the market-place, but it also reaches to the stars.

In James Roy Newman

Harper &amp; Brothers Publishers. New York, New York, USA. 1904

**Ulam, Stanislaw** 1909–84

Polish-born mathematician

Do not lose your faith. A mighty fortress is our mathematics. Mathematics will rise to the challenge, as it always has.

In Heinz R. Pagels

*The Dreams of Reason: The Computer and the Rise of the Sciences of Complexity*

Chapter 3 (p. 94)

Simon &amp; Schuster. New York, New York, USA. 1988

**Venn, John** 1834–1923

English logician and philosopher

Without consummate mathematical skill, on the part of some investigators at any rate, all the higher physical, problems would be sealed to us; and without competent skill on the part of the ordinary student no idea can be formed of the nature and cogency of the evidence on which they rest. Mathematics are here not merely a gate through which we may approach if we please, but they are the only mode of approach to large and important districts of thought.

*Symbolic Logic*

Introduction (p. xix)

Macmillan &amp; Co Ltd. London, England. 1881

**Viereck, George S.** 1884–1962

German American poet and writer

**Eldridge, Paul** 1888–1982

American novelist, poet, and writer

We are two parallel lines drawn very close to each other.... So close indeed that no third line, however thin, could be drawn between them.

Will the two parallel lines ever meet?

Yes, In infinity.

Ali Hasan! I exclaimed, had you ever dreamed that there was so much poetry and pathos and sorrow in mathematics?

*My First Two Thousand Years: The Autobiography of the**Wandering Jew*

Chapter XLIV (p. 218)

Sheridan House. New York, New York, USA. 1963

**Voltaire (François-Marie Arouet)** 1694–1778

French writer

The mathematics will always be a kind of mystery to the bulk of the nation, and consequently will always be an object of veneration.

*The Works of Voltaire: A Contemporary Version With Notes* (Volume 37)

The Profession of Letters (p. 74)

The Werner Co. Akron, Ohio, USA. 1904

...when Newton worked, with the bandage removed from his eyes, on his mathematics, his sight pierced to the utmost limits of nature.

*The Works of Voltaire: A Contemporary Version With Notes* (Volume 37)  
Descartes and Newton (pp. 172–173)  
The Werner Co. Akron, Ohio, USA. 1904

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

I have heard myself accused of being an opponent, an enemy of mathematics, which no one can value more highly than I, for it accomplishes the very thing whose achievement has been denied me.

In E.T. Bell

*Men of Mathematics* (p. xv)

Simon & Schuster. New York, New York, USA. 1937

Applied to practice, it [mathematics] becomes an art, like RHETORIC. In both these arts the form is everything, the substance nothing. To mathematics it is indifferent whether it reckons pence or pounds; to RHETORIC, whether it defends truth or falsehood.

In John Stuart Blackie

*The Wisdom of Goethe*

Philosophy, Metaphysics, Logic, Truth and Science (pp. 170–171)

William Blackwood & Sons. Edinburgh, Scotland. 1883

I receive mathematics as the most sublime and useful science, so long as they are applied in their proper place; but I cannot commend the misuse of them in matters which do not belong to their sphere, and in which, noble science as they are, they seem to be mere nonsense.

*Conversations of Goethe With Eckermann and Soret*

Wed., Dec. 20 (p. 181)

George Bell & Sons. London, England. 1883

Mathematics, like dialectics, is an instrument of the inner higher understanding. Applied to practice, it becomes an art, like RHETORIC. In both these arts the form is everything, the substance nothing. To mathematics it is indifferent whether it reckons pence or pounds; to RHETORIC, whether it defends truth or falsehood.

In John Stuart Blackie

*The Wisdom of Goethe*

Philosophy, Metaphysics, Logic, Truth and Science (pp. 170–171)

William Blackwood & Sons. Edinburgh, Scotland. 1883

Mathematics can remove no prejudices and soften no obduracy. It has no influence in sweetening the bitter strife of parties; and in the moral world generally its action is perfectly null.

In John Stuart Blackie

*The Wisdom of Goethe*

Philosophy, Metaphysics, Logic, Truth and Science (p. 171)

William Blackwood & Sons. Edinburgh, Scotland. 1883

Mathematics must subdue the flights of our reason; they are the staff of the blind; no one can take a step without them; and to them and experience is due all that is certain in physics.

*Oeuvres Complètes*

t. 35 (p. 219)

Publisher undetermined

**von Helmholtz, Hermann** 1821–94

German scientist and philosopher

[In mathematics] we behold the conscious logical activity of the human mind in its purest and most perfect form. Here we learn to realize the laborious nature of the process, the great care with which it must proceed, the accuracy which is necessary to determine the exact extent of the general propositions arrived at, the difficulty of forming and comprehending abstract concepts; but here we learn also to place confidence in the certainty, scope and fruitfulness of such intellectual activity.

*Vorträge und Reden*

Ueber das Verhältniss der Naturwissenschaften zur Gesamtheit der

Wissenschaft, Bd. 1 (p. 176)

Publisher undetermined. 1896

**von Humboldt, Alexander** 1769–1859

German naturalist and explorer

While the telescope serves as a means of penetrating space, and of bringing its remotest regions nearer to us, mathematics, by inductive reasoning, have led us onward to the remotest regions of heaven, and brought a portion of them within the range of our possession; nay, in our own times so propitious to extension of knowledge the application of all the elements yielded by the present condition of astronomy has even revealed to the intellectual eye a heavenly body, and assigned to it its place, orbit, and mass, before a single telescope had been directed toward it.

Translated by E.C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 2)

Part II (p. 179)

D. Appleton & Co. New York, New York, USA. 1850

**von Neumann, John** 1903–57

Hungarian-American mathematician

...in mathematics you don't understand things. You just get used to them.

In G. Zukav

*The Dancing Wu Li Masters: An Overview of the New Physics*

Part One

I Clutch My Ideas

Chapter 1 (fn, p. 226)

William Morrow. New York, New York, USA. 1979

After all, classical mathematics was producing results which were both elegant and useful, and, even though one could never again be absolutely certain of its reliability, it stood on at least as sound a foundation as, for example, the existence of the electron. Hence, if one was willing to accept the sciences, one might as well accept the classical system of mathematics.

*Collected Works* (Volume 1)

The Works of the Mind. The Mathematician (p. 6)  
Pergamon Press. New York, New York, USA. 1961–1963

...mathematics is not an empirical science, or at least that it is practiced in a manner which differs in several decisive respects from the techniques of the empirical sciences.

*Collected Works* (Volume 1)  
The Works of the Mind, The Mathematician (p. 6)  
Pergamon Press. New York, New York, USA. 1961–1963

There are two ways to teach mathematics. One is to take real pains toward creating understanding visual aids, that sort of thing. The other is the old British system of teaching until you're blue in the face.

*The New York Times Book Review*, Volume 2, September, 1956 (p. 43)

Mathematics falls into a great number of subdivisions, differing from one another widely in character, style, aims, and influence. It shows the very opposite of the extreme concentration of theoretical physics. A good theoretical physicist may today still have a working knowledge of more than half of his subject. I doubt that any mathematician now living has much of a relationship to more than a quarter.

In Cecil M. DeWitt and John A. Wheeler  
*Battelle Recontres 67* (p. ix)

**von Raumer, Karl** 1783–1865  
German geologists and mineralogists

Mathematics are the root and blood of a knowledge of the laws of nature and of art.

Instruction in Natural Science  
*The American Journal of Education*, Number 20, 1860 (p. 135)

**Waismann, Friedrich** 1896–1959  
Austrian mathematician, physicist, and philosopher

We could compare mathematics so formalized to a game of chess in which the symbols correspond to the chessmen; the formulae, to definite positions of the men on the board; the axioms, to the initial positions of the chessmen; the directions for drawing conclusions, to the rules of movement; a proof, to a series of moves which leads from the initial position to a definite configuration of the men.

*Introduction to Mathematical Thinking: The Formation of Concepts in Modern Mathematics*  
Chapter 6 (pp. 76–77)  
Frederick Ungar Publishing Company. New York, New York, USA. 1951

**Waldo, Clarence Abiathar** 1852–1926  
American mathematician, author, and educator

To the workaday world the higher ranges of mathematics have been a sealed book; the man who traverses them successfully a magician – a man whose mental occupations awaken mingled feelings of awe and pity, awe that he can soar so high, pity that he wastes his strength in

such useless flight.

Mathematics and Engineering  
*Proceedings of the American Association for the Advancement of Science*, December 1903–January 1904 (p. 456)

**Walton, Izaak** 1593–1683  
English writer

For Angling may be said to be so like the Mathematicks, that it can never be fully learnt...

*The Complete Angler*  
The Epistle to the Reader (p. 7)  
T.N. Foulis. London, England. 1913

**Warburton, William** 1698–1779  
English critic and churchman

It may seem, perhaps, too much a paradox to say, that long habit in this science (mathematics) incapacitates the mind for reasoning at large, and especially in the search of moral truth. And yet, I believe, nothing is more certain. The object of geometry is demonstration, and its subject admits of it, and is almost the only one that doth. In this science, whatever is not demonstration is nothing, or, at least, below the sublime inquirer's regard. Probability, through its almost infinite degrees from simple ignorance up to absolute certainty, is the terra incognita of the geometrician.

*The Works of the Right Reverend William Warburton* (Volume 8)  
Introduction (p. xiv)  
Printed by Luke Hansard. London, England. 1811

**Weaver, Warren** 1894–1978  
American mathematician

There is a common tendency to consider mathematics so strange, subtle, rigorous, difficult and deep a subject that if a person is a mathematician he is of course a "great mathematician" – their being, so to speak, no small giants. This is very complimentary, but unfortunately not necessarily true.

Lewis Carroll: Mathematician  
*Scientific American*, Volume 194, Number 4, April, 1956 (p. 116)

**Webster, John** 1580?–1625?  
English playwright

Bosola: Didst thou never study mathematics?

Old Lady: What's that, sir?

Bosola: Why, to know the trick how to make many lines met in one centre.

*The Duchess of Malfi*  
Act II, Scene ii  
Chatto & Windus. London, England. 1958

**Weil, André** 1906–98  
French mathematician

When a branch of mathematics ceases to interest any but the specialists, it is very near its death, or at any rate dangerously close to paralysis, from which it can be rescued

only by being plunged back into the vivifying source of the science.

The Future of Mathematics

*The American Mathematical Monthly*, Volume 57, Number 5, May, 1950 (p. 304)

Mathematics has this peculiarity, that it is not understood by non-mathematicians.

*Oeuvres Scientifiques*

Organisation et désorganisation en mathématique, Volume II (p. 465)  
Springer-Verlag, New York, New York, USA. 1980

**Weil, Simone** 1909–43

French philosopher and mystic

Mathematics alone make us feel the limits of our intelligence. For we can always suppose in the case of an experiment that it is inexplicable because we don't happen to have all the data. In mathematics we have all the data...and yet we don't understand. We always come back to the contemplation of our human wretchedness. What force is in relation to our will, the impenetrable opacity of mathematics is in relation to our intelligence.

Translated by Arthur Wills

*The Notebooks of Simone Weil* (Volume 2) (p. 511)

G.P. Putnam's Sons, New York, New York, USA. 1935

**Westaway, Frederic William**

No biographical data available

Mathematics, like all other subjects, has now to take its turn under the microscope and reveal to the world any weaknesses there may be in its foundations.

In E.T. Bell

*Men of Mathematics* (p. 555)

Simon & Schuster, New York, New York, USA. 1937

**Weyl, Hermann** 1885–1955

German mathematician

Without the concepts, methods and results found and developed by previous generations right down to Greek antiquity one cannot understand either the aims or the achievements of mathematics in the last fifty years.

In Morris Kline

*Mathematical Thought From Ancient to Modern Times* (p. 101)

Oxford University Press, Inc. New York, New York, USA. 1972

Kierkegaard once said religion deals with what concerns man unconditionally. In contrast (but with equal exaggeration) one may say that mathematics talks about the things which are of no concern at all to man. Mathematics has the inhuman quality of starlight, brilliant and sharp, but cold. But it seems an irony of creation that man's mind knows how to handle things the better the farther removed they are from the center of his existence. Thus we are cleverest where knowledge matters least: in mathematics, especially in number theory.

A Half-century of Mathematics

*The American Mathematical Monthly*, Volume 58, Number 8, October, 1951 (p. 523)

The axiomatic approach has often revealed inner relations between, and has made for unification of methods within, domains that apparently lie far apart. This tendency of several branches of mathematics to coalesce is another conspicuous feature in the modern development of our science, and one that goes side by side with the apparently opposite tendency of axiomatization. It is as if you took a man out of a milieu in which he had lived not because it fitted him but from ingrained habits and prejudices, and then allowed him, after thus setting him free, to form associations in better accordance with his true inner nature.

A Half-Century of Mathematics

*The American Mathematical Monthly*, Volume 58, Number 8, October, 1951 (p. 524)

The states of affairs with which mathematics deals are, apart from the very simplest ones, so complicated that it is practically impossible to bring them into full givenness in consciousness and in this way to grasp them completely.

Translated by Stephen Pollard and Thomas Bole

*The Continuum: A Critical Examination of the Foundation of Analysis*  
Chapter 1 (p. 17)

The Thomas Jefferson University Press, Kirksville, Missouri, USA. 1987

Mathematizing may well be a creative activity of man, like language or music, of primary originality, whose historical decisions defy complete objective rationalizations.

Obituary for David Hilbert

*Royal Society Biographies*, Volume 4, 1944

In mathematics the inquiry into the genuineness or non-genuineness of the inner working of our entire western culture urges towards a more rigorous decision than can be attained in the other hazier fields of knowledge.

Gravitation and the Electron, Mathematical Lectures

*The Rice Institute Pamphlet*, Volume 16, Number 4 (p. 246)

**Whewell, William** 1794–1866

English philosopher and historian

In mathematics, the student is rendered familiar with the most perfect examples of strict inference; he is compelled habitually to fix his attention on those conditions on which the cogency of the demonstration depends; and, in the mistaken or imperfect attempts at demonstration made by himself or others, he is presented with examples of the most natural fallacies, which he sees exposed and corrected.

*On the Principles of English University Education* (2nd edition)

Thoughts on the Study of Mathematics as a Part of a Liberal Education  
(p. 12)

John W. Parker, London, England. 1838

I will not suppose, that any person who has paid any attention to mathematics does not see clearly the

difference between necessary truths and empirical facts; between the evidence of the properties of a triangle, and that of the general laws of the structure of plants. The peculiar character of mathematical truth is, that it is necessarily and inevitably true; and one of the most important lessons which we learn from our mathematical studies is a knowledge that there are such truths, and a familiarity with their form and character.

*On the Principles of English University Education* (2nd edition)  
Thoughts on the Study of Mathematics as a Part of a Liberal Education  
(p. 163)  
John W. Parker. London, England. 1838

...the ideas which these sciences involve extend to all the objects and changes which we observe in the external world; and hence the consideration of mathematical relations forms a large portion of many of the sciences which treat of the phenomena and laws of external nature, as Astronomy, Optics, and Mechanics. Such sciences are hence often termed Mixed Mathematics, the relations of space and number being, in these branches of knowledge, combined with principles collected from special observation; while Geometry, Algebra, and the like subjects, which involve no result of experience, are called Pure Mathematics.

*History of Scientific Ideas: Being the First Part of The Philosophy of the*

He must be a “practical” man who can see no poetry in mathematics.

*A Scrap-Book of Elementary Mathematics: Notes, Recreations, Essays*  
(p. 208)  
The Open Court Publishing Company. La Salle, Illinois, USA. 1942

Mathematics, the science of the ideal, becomes the means of investigating, understanding and making known the world of the real. The complex is expressed in terms of the simple. From one point of view mathematics may be defined as the science of successive substitutions of simpler concepts for more complex...

*A Scrap-Book of Elementary Mathematics: Notes, Recreations, Essays* (p. 215)  
The Open Court Publishing Company. La Salle, Illinois, USA. 1942

### Whitehead, Alfred North

1861–1947  
English mathematician and philosopher

The first acquaintance which most people have with mathematics is through arithmetic.... Arithmetic, therefore, will be a good subject to consider in order to discover, if possible, the most obvious characteristic of the science. Now, the first noticeable fact about arithmetic is that it applies to everything, to tastes and to sounds, to apples and to angels, to the ideas of the mind and to the bones of the body.

*An Introduction to Mathematics*  
Chapter 1 (p. 2)  
Oxford University Press, Inc. New York, New York, USA. 1958

No part of Mathematics suffers more from the triviality of its initial presentation to beginners than the great subject of series...the general ideas are never disclosed and thus the examples, which exemplify nothing, are reduced to silly trivialities.

*An Introduction to Mathematics*  
Chapter 14 (p. 144)  
Oxford University Press, Inc. New York, New York, USA. 1958

### Wiener, Norbert

1894–1964  
American mathematician

It [mathematics] is a field which has often been compared with chess, but differs from the latter in that it is only one’s best moments that count and not one’s worst.

*Ex-prodigy: My Childhood and Youth* (p. 21)  
Simon & Schuster. New York, New York, USA. 1953

### Willerding, Margaret F.

No biographical data available

It is strange but true that most of the greatest strides in mathematics were made at a time and in an atmosphere when the need for mathematics was the least. Mathematics flourishes when it is free to follow any course it desires and when there is no pressure for practical results limiting its scope and freedom.

The Uselessness of Mathematics  
*School Science and Mathematics*, Part II, Volume LXVIII, Number 6, June, 1968 (p. 495)

### Wittgenstein, Ludwig Josef Johann

1889–1951  
Austrian-born English philosopher

There is no religious denomination in which the misuse of metaphysical expressions has been responsible for so much sin as it has in mathematics.

Translated by Peter Winch  
*Culture and Value* (p. 1e)  
The University of Chicago Press. Chicago, Illinois, USA. 1980

With my full philosophical rucksack I can only climb slowly up the mountain of mathematics.

Translated by Peter Winch

*A Century of Mathematics in America* Volume 3 (p. 348)

American Mathematical Society. Providence, Rhode Island, USA. 1989

**MATHEMATICS AND BEAUTY**

**Cayley, Arthur** 1821–95  
English mathematician

It is difficult to give an idea of the vast extent of modern mathematics. This word “extent” is not the right one: I mean extent crowded with beautiful detail – not an extent of mere uniformity such as an objectless plain, but of a tract of beautiful country seen at first in the distance, but which will bear to be rambled through and studied in every detail of hillside and valley, stream, rock, wood, and flower. But, as for anything else, so for a mathematical theory – beauty can be perceived, but not explained.

*A Week on the Concord and the Merrimack Rivers*

Friday (p. 478)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

**MATHEMATICS AND LITERATURE**

**Woolf, Virginia** 1882–1941  
English novelist and essayist

When she was rid of the pretense of paper and pen, phrase-making and biography, she turned her attention in a more legitimate direction, though, strangely enough, she would rather have confessed her wildest dreams of hurricane and prairie than the fact that, upstairs, alone in her room, she rose early in the morning or sat up late at night to... work at mathematics. No force on earth would have made her confess that. Her actions when thus engaged were furtive and secretive, like those of some nocturnal animal.... Perhaps the uncommonly nature of the science made her instinctively wish to conceal her love of it. But the more profound reason was that in her mind mathematics were directly opposed to literature. She would not have cared to confess how infinitely she preferred the exactitude, the star-like impersonality, of figures to the confusion, agitation, and vagueness of the finest prose.

*Night and Day* (pp. 45–46)

Hogarth Press. London, England. 1950

**MATHEMATICS AND MUSIC**

**Boltzmann, Ludwig Edward** 1844–1906  
Austrian physicist

Mathematics and music! the most glaring possible opposites of human thought! and yet connected, mutually sustained! It is as if they would demonstrate the hidden

consensus of all the actions of our mind, which in the revelations of genius makes us forefeel unconscious utterances of a mysteriously active intelligence.

Translated by E. Atkinson

*Popular Lectures on Scientific Subjects*

On the Physiological Causes of Harmony in Music (p. 62)

D. Appleton & Co. New York, New York, USA. 1897

**Dyson, Freeman J.** 1923–

American physicist and educator

I see some parallels between the shifts of fashion in mathematics and in music. In music, the popular new styles of jazz and rock became fashionable a little earlier than the new mathematical styles of chaos and complexity theory. Jazz and rock were long despised by classical musicians, but have emerged as art-forms more accessible than classical music to a wide section of the public. Jazz and rock are no longer to be despised as passing fads. Neither are chaos and complexity theory. But still, classical music and classical mathematics are not dead. Mozart lives, and so does Euler. When the wheel of fashion turns once more, quantum mechanics and hard analysis will once again be in style.

Book Review of “Nature’s Numbers”

*The American Mathematical Monthly*, Volume 103, Number 7, August–September, 1996 (p. 612)

**Morse, Harold Calvin Marston** 1892–1977

American mathematician

Most convincing to me of the spiritual relations between mathematics and music, is my own very personal experience. Composing in an amateurish way, I get exactly the same elevation from a prelude that has come to me at the piano, as I do from a new idea that has come to me in mathematics.

In Raymond George Ayoub

*Musings of the Masters: An Anthology of Mathematical Reflections*

Mathematics and the Arts (p. 88)

Mathematical Association of America. Washington, D.C. 2004

**Pliny (C. Plinius Secundus)** 23–79

Roman savant and author

...Pythagoras at the same Time uses the Terms of Music, by calling the Space between the Earth and the Moon a Tone; saying, that from her to Mercury is Half a Tone: and from him to Venus about the same Space. But from her to the Sun so much and a Half more: but from the Sun to Mars a Tone, that is to say, as much as from the Earth to the Moon.

*Pliny’s Natural History*. In Thirty-seven Books

Book II, Chapter XXII (p. 59)

Printed for the Club by G. Barclay. London, England. 1847–1849

**Santayana, George (Jorge Agustín Nicolás**

**Ruiz de Santillana)** 1863–1952

Spanish-born American philosopher

If all the arts aspire to the condition of music, all the sciences aspire to the condition of mathematics.

*Some Turns of Thought in Modern Philosophy: Five Essays*

Chapter III (p. 80)

Charles Scribner’s Sons. New York, New York, USA. 1933

**Sylvester, James Joseph** 1814–97

English mathematician

May not Music be described as the Mathematic of sense, Mathematic as the Music of the reason? the soul of each the same! Thus the musician feels Mathematic, the mathematician thinks Music – Music the dream, Mathematic the working life – each to receive its consummation from the other when the human intelligence, elevated to its perfect type, shall shine forth glorified in some future Mozart-Dirichlet or Beethoven-Gauss – a union already not indistinctly foreshadowed in the genius and labours of a Helmholtz!

*The Collected Mathematical Papers of James Joseph Sylvester*

(Volume 2)

On Newton’s Rule for the Discovery of Imaginary Roots (fn, p. 419)

University Press. Cambridge, England. 1904–1912

**von Helmholtz, Hermann** 1821–94

German scientist and philosopher

Mathematics and music! the most glaring possible opposites of human thought! and yet connected, mutually sustained!

*Popular Lectures on Scientific Subjects*

Lecture III (p. 62)

D. Appleton & Company. New York, New York, USA. 1885

## MATHEMATICS AND PHILOSOPHY

**Hamilton, William** 1788–1856

Scottish philosopher

Mathematics have from the first been triumphant over the husk; Philosophy is still militant for the kernel.

*Discussions on Philosophy and Literature, Education and University Reform*

On the Study of Mathematics as an Exercise of the Mind (p. 278)

Harper & Brothers Publishers. New York, New York, USA. 1861

**Keyser, Cassius Jackson** 1862–1947

American mathematician

Mathematicians sometimes speak contemptuously of philosophy; and philosophers sometimes speak contemptuously of mathematics. The contempt thus manifested does not spring from mathematics in the former case, nor from philosophy in the latter; in both cases it springs out of ignorance – philosophical ignorance of mathematicians and mathematical ignorance of philosophers.

*Mathematical Philosophy*

Lecture I (pp. 1–2)

E.P. Dutton & Co. New York, New York, USA. 1922

## MATHEMATICS AND POETRY

**Buchanan, Scott** 1895–1968

American educator and philosopher

...mathematics and poetry move together between two extremes of mysticism, the mysticism of the common-place where ideas illuminate and create facts, and the mysticism of the extraordinary where God, the Infinite, the Real, poses the riddles of desire and disappointment, sin and salvation, effort and failure, question and paradoxical answer...

*Poetry and Mathematics*

Chapter I (p. 42)

The University of Chicago Press. Chicago, Illinois, USA. 1975

**Carmichael, Robert Daniel** 1879–1967

American mathematician

Mathematics and poetry lie, if not on, at least not far from the extremes, the one of systematic and the other of unsystematic thought, and thus are about as far removed as possible one from the other.

*The Logic of Discovery*

Chapter IX (p. 244)

The Open Court Publishing. Chicago, Illinois, USA. 1930

**Carus, Paul** 1852–1919

American philosopher

A mathematical theorem and its demonstration are prose. But if the mathematician is overwhelmed with the grandeur and wondrous harmony of geometrical forms, of the importance and universal application of mathematical maxims, or, of the mysterious simplicity of its manifold laws which are so self-evident and plain and at the same time so complicated and profound, he is touched by the poetry of his science; and if he but understands how to give expression to his feelings, the mathematician turns poet, drawing inspiration from the most abstract domain of scientific thought.

*Friedrich Schiller: A Sketch of His Life and an Appreciation of His Poetry*

Schiller, A Philosophical Poet (p. 33)

The Open Court Publishing Co. Chicago, Illinois, USA. 1905

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

...we do not listen with the best regard to the verses of a man who is only a poet, nor to his problems if he is only an algebraist; but if a man is at once acquainted with the geometric foundation of things and with their festal splendor, his poetry is exact and his arithmetic musical.

*Society and Solitude: Twelve Chapters*

Works and Data (p. 171)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1893

**Hill, Thomas**

No biographical data available

The Mathematics are usually considered as being the very antipodes of Poesy. Yet Mathesis and Poesy are of the closest kindred, for they are both works of the imagination. Poetry is a creation, a making, a fiction; and the

Mathematics have been called, by an admirer of them, the sublimest and most stupendous of fictions.

*The North American Review*

The Imagination in Mathematics

Volume LXXXV, Number 176, July, 1857 (p. 229)

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

The true spirit of delight, the exaltation, the sense of being more than man, which is the touchstone of the highest excellence, is to be found in Mathematics as surely as in poetry.

*Mysticism and Logic: And Other Essays*

Chapter IV (p. 60)

Longmans, Green & Co. London, England. 1919

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

We have heard much about the poetry of mathematics, but very little of it has yet been sung. The ancients had a juster notion of their poetic value than we. The most distinct and beautiful statements of any truth must take at last the mathematical form.

*A Week on the Concord and Merrimack Rivers*

Friday (p. 452)

Thomas Y. Crowell Co. New York, New York, USA. 1911

**Williams, Charles**

No biographical data available

Love was even more mathematical than poetry; it was the pure mathematics of the spirit.

*Descent into Hell*

Chapter Four (p. 69)

William B. Eerdmans. Grand Rapids, Michigan, USA. 1979

## MATHEMATICS AND RELIGION

**Arbuthnot, John** 1667–1735

Scottish mathematician and physician

...the mathematics are friends to religion; inasmuch as they charm the passions, restrain the impetuosity of imagination, and purge the mind from error and prejudice.

In George Atherton Aitken

*The Life and Works of John Arbuthnot, M.D.*

Usefulness of Mathematical Learning (p. 412)

At The Clarendon Press. Oxford, England. 1892

## MATHEMATICS AND SCIENCE

**Keyser, Cassius Jackson** 1862–1947

American mathematician

Their [mathematics and science] combined scope is the two-fold world of the Actual and the logically Possible ...

*The Meaning of Mathematics*

*Scripta Mathematica*, Volume I, Number 1, September, 1932 (p. 26)

**Teller, Edward** 1908–2003  
Hungarian-born American nuclear physicist

**Sylvester, James Joseph** 1814–97  
English mathematician

Science attempts to find logic and simplicity in nature. Mathematics attempts to establish order and simplicity in human thought.

*The Pursuit of Simplicity* (p. 17)  
Pepperdine University Press. Malibu, California, USA. 1980

## MATHEMATICS AND THE ARTS

**Shaw, James Byrnie**  
American mathematician

Poetry, music, painting, sculpture, architecture – may we call them the other fine arts? – create the beautiful and give expression to the longings and hopes of man. But they have been told for centuries that these were but dreams, visions of that which did not exist, sad to say, fictions that one could but view for awhile, then, with a sigh, return to cold reality. Mathematics vindicates the right of all these to stand in the front rank of the pioneers that search the real truth and find it crystallized forever in brilliant gems.

*Lectures on the Philosophy of Mathematics*  
Chapter XVI (p. 194)  
The Open Court Publishing Co. Chicago, Illinois, USA. 1918

## MATHEMATICS AND WOMEN

**Berry, John J.**  
No biographical data available

When, however, we come to mensuration we suddenly find the limitations of the female mind. A deep-rooted hatred of all accuracy in measurements, or, at all events, a total inability to understand the yard-stick or the tables of dry measure, is one of the prominent characteristics of the sex. No woman, for example, can form any correct idea of the distance from her house to any other geographical point.

*Life of David Belden*  
Chapter V (p. 104)  
Beldon Brothers. New York, New York, USA. 1891

**Disraeli, Isaac** 1766–1848  
British writer and scholar

Should a female mathematician be united to a poet, it is probable that she would be left amidst her abstractions, to demonstrate to herself how many a specious diagram fails when brought into its mechanical operation; or while discovering the infinite varieties of a curve, she might take occasion to deduce her husband's versatility. If she becomes as jealous of his books as other wives are of the

mistresses of their husbands, she may act the virago even over his innocent papers.

*Curiosities of Literature: And The Literary Character Illustrated*  
*The Literary Character Illustrated*  
Chapter XIII (p. 434)  
Leavitt & Co. New York, New York, USA. 1851

**Hammond, William A.**  
No biographical data available

The attempt to convert a woman into a mathematician is generally very much like trying to make a hare drink brandy and soda. You may, it is true, sometimes succeed, but then you find not only that the animal has acquired a useless accomplishment, but that the qualities characteristic of a hare have disappeared.

*The North American Review*  
Woman in Politics  
Volume 88, Number 321, August, 1883 (p. 143)

it is true, sometimes succeed

## MATHEMATICS EDUCATION

**Begle, Edward Griffith** 1914–78  
Mathematician

Mathematics education is much more complicated than you expected, even though you expected it to be more complicated than you expected.

*School Mathematics Study Group*  
Research and Evaluation in Mathematics Education  
1971

## MATHEMATICS IS

**Adler, Alfred** 1870–1937  
Austrian psychiatrist

Mathematics is pure language – the language of science.  
In Douglas M. Campbell and John C. Higgins (eds.)  
*Mathematics: People, Problems, Results* (Volume 2)  
Mathematics and Creativity (p. 3)  
Wadsworth, Inc. Belmont, California, USA. 1984

...mathematics is whatever mathematicians are doing.  
In Douglas M. Campbell and John C. Higgins (eds.)  
*Mathematics: People, Problems, Results* (Volume 2)  
Mathematics and Creativity (p. 4)  
Wadsworth, Inc. Belmont, California, USA. 1984

**Apostle, Hippocrates George**  
No biographical data available

That mathematics is a theoretical science is evident from those who have pursued that science; they have been lovers of wisdom and have sought to discover eternal truths... those who have investigated the objects of mathematics have done so not for gain or use but for the sake of truth.

*Aristotle's Philosophy of Mathematics*  
Chapter I (p. 3)  
The University of Chicago Press. Chicago, Illinois, USA. 1952

**Aristotle** 384 BCE–322 BCE  
Greek philosopher

Mathematics...is concerned with a wider domain than that domain which it is the object of the natural sciences to describe and categorize. The natural sciences are concerned with the actual world. Mathematics is concerned with “all possible worlds.”

*A Combinatorial Theory of Possibility*  
Part II, Chapter 9, Section iv (p. 126)  
Cambridge University Press. Cambridge, England. 1989

**Atiyah, Sir Michael** 1922–  
English mathematician

Mathematics is always a continuum, linked to its history, the past – nothing comes out of zero.

24th of May 2004 prior to the Abel prize celebrations  
Interview with Michael Atiyah and Isadore Singer  
Martin Raussen and Christian Skau are the interviewers

**Bacon, Roger** 1214–92  
English philosopher, scientist, and friar

Neglect of mathematics works injury to all knowledge, since he who is ignorant of it cannot know the other sciences or the things of this world. And what is worse, men who are thus ignorant are unable to perceive their own ignorance and so do not seek a remedy.

Translated by Robert Belle Burke  
*The Opus Majus of Roger Bacon*  
Part 4, Distinctia Prima, cao. 1  
Oxford University Press, Inc. London, England. 1928

...mathematics is absolutely necessary and useful to other sciences.

Translated by Robert Belle Burke  
*The Opus Majus of Roger Bacon*  
Part 4, Chapter 3 (p. 126)  
Oxford University Press, Inc. London, England. 1928

**Bers, Lipman** 1914–93  
Mathematician

...mathematics is very much like poetry...what makes a good poem – a great poem – is that there is a large amount of thought expressed in very few words. In this sense formulas like  $e^{i\pi} + 1 = 0$ ...are poems.

In D. Albers, G. Alexanderson and C. Reid (eds.)  
*More Mathematical People: Contemporary Conversations*  
Lipman Bers (p. 16)  
Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

**Birkhoff, George David** 1884–1944  
American mathematician

Mathematics is the codified body of all logical thought.

*George David Birkhoff: Collected Mathematical Papers* (Volume 3)  
Mathematics: Quantity and Order (p. 552)  
Dover Publications, Inc. New York, New York, USA. 1968

**Bochner, Salomon** 1899–1982  
Galician-born American mathematician

[Mathematics] is a form of poetry which transcends poetry in that it proclaims a truth; a form of reasoning which transcends reasoning in that it wants to bring about the truth it proclaims; a form of action, of ritual behavior, which does not find fulfillment in the act but must proclaim and elaborate a poetic form of truth.

*The Role of Mathematics in the Rise of Science*  
Chapter I  
Paraphrasing Henri Frankfort (p. 14)  
Princeton University Press. Princeton, New Jersey, USA. 1966

**Boyer, Carl** 1906–76  
Mathematical historian

Mathematics is neither a description of nature nor an explanation of its operation; it is not concerned with physical motion or with the metaphysical generation of quantities. It is merely the symbolic logic of possible relations, and as such is concerned with neither approximate nor absolute truth, but only with hypothetical truth. That is, mathematics determines what conclusions will follow logically from given premises. The conjunction of mathematics and philosophy, or of mathematics and science is frequently of great service in suggesting new problems and points of view.

*The History of the Calculus and Its Conceptual Development* (p. 308)  
Dover Publications. New York, New York, USA. 1959

...mathematics is an aspect of culture as well as a collection of algorithms.

*The History of the Calculus and Its Conceptual Development*  
Preface to second printing  
Dover Publications. New York, New York, USA. 1959

**Bragdon, Claude Fayette** 1866–1945  
American architect, writer, and stage designer

Mathematics is the handwriting on the human consciousness of the very Spirit of Life itself.

In John D. Barrow  
*Pi in the Sky: Counting, Thinking, and Being* (p. 21)  
Clarendon Press. Oxford, England. 1992

**Brooks, Edward**  
No biographical data available

Mathematics is the instrument by which the engineer tunnels out mountains, bridges our rivers, constructs our aqueducts, erects out factories and makes them musical by the busy hum of spindles. Take away the results of the reasoning of mathematics, and there would go with it nearly all the material achievements which give convenience and glory to modern civilization.

*Mental Science and Culture* (p. 255)  
Normal Publishing. Philadelphia, Pennsylvania, USA. 1891

**Bridgman, Percy Williams** 1882–1961  
American physicist

It is the merest truism, evident at once to unsophisticated observation, that mathematics is a human invention.

*The Logic of Modern Physics*

Chapter II (p. 60)

The Macmillan Company. New York, New York, USA. 1927

**Burger, Edward B.**  
American mathematician

**Starbird, Michael**  
American mathematician

Mathematics is a liberating entertainment. We can discard the kid gloves of reality's restrictions and let our minds play where they will.

*Coincidences, Chaos, and All That Math Jazz*

Closing Thoughts (p. 267)

W.W. Norton & Co. New York, New York, USA. 2005

**Cantor, Georg** 1845–1918  
German mathematician

Mathematics is perfectly free in its development and is subject only to the obvious consideration, that its concepts must be free from contradictions in themselves, as well as definitely and orderly related by means of definitions to the previously existing and established concepts.

*Grundlagen einer allgemeinen Manigfaltigkeitslehre*

Section 8

Publisher undetermined. Leipzig, Germany. 1883

**Comte, Auguste** 1798–1857  
French philosopher

The business of concrete mathematics is to discover the equations which express the mathematical laws of the phenomenon under consideration; and these equations are the starting point of the calculus, which must obtain from them certain quantities by means of others.

*The Positive Philosophy of Auguste Comte* (Volume 1)

Book I, Chapter II (p. 47)

John Chapman. London, England. 1853

**Condorcet, Marie Jean** 1743–94  
French philosopher and mathematician

Mathematics is the science that yields the best opportunity to observe the working of the mind...and has the advantage that by cultivating it, we may acquire the habit of a method of reasoning which can be applied afterwards to the study of any subject and can guide us in the pursuit of life's object.

Filler

*The Mathematical Intelligencer*, Volume 10, Number 4, Fall, 1988 (p. 43)

**Dantzig, Tobias** 1884–1956

Chapter IV

Of Time and Mathematics (p. 193)

Harcourt Brace Jovanovich. San Diego, California, USA. 1986

**Devlin, Keith** 1947–  
English mathematician and writer

Mathematics is a product – a discovery – of the human mind. It enables us to see the incredible, simple, elegant, beautiful, ordered structure that lies beneath the universe we live in. It is one of the greatest creations of mankind – if it is not indeed the greatest.

*Life By the Numbers* (p. 209)

Wiley. New York, New York, USA. 1998

**Dirac, Paul Adrien Maurice** 1902–84  
English theoretical physicist

Mathematics is the tool specially suited for dealing with abstract concepts of any kind and there is no limit to its power in this field [quantum mechanics].

*The Principles of Quantum Mechanics* (4th edition)

Preface to the First Edition (p. viii)

At The Clarendon Press. Oxford, England. 1956

**Dunham, William**  
American mathematician

Mathematics is the product of real flesh-and-blood human beings whose lives may reflect the inspiration, the tragic, or the bizarre.

*Journey Through Genius*

Preface (p. vi)

Wiley. New York, New York, USA. 1990

**Everett, Charles Carroll** 1829–1900  
American theologian

Mathematics is an instrument of thought. It is a sort of machine by which the crude and imperfect results of thought are taken and disentangled, and arranged in such a way that the thought can act upon them most readily.

*The Science of Thought*  
Second Book (p. 104)  
De Wolfe, Fiske & Co. Boston, Massachusetts, USA. 1890

**Garrity, Thomas A.**  
Mathematician

Math is Hard. Unfortunately, people are just not that good at mathematics. While intensely enjoyable, it also requires hard work and self-discipline. I know of no serious mathematician who finds math easy. In fact, most, after a few beers, will confess as to how stupid and slow they are.

*All the Mathematics You Missed: But Need to Know for Graduate School*

Preface (p. xiii)  
Cambridge University Press. Cambridge, England. 2002

**Gauss, Johann Carl Friedrich** 1777–1855  
German mathematician, physicist, and astronomer

Mathematics .. is concerned only with the enumeration and comparison of relations.

Quoted in E.T. Bell  
*The Development of Mathematics*  
Chapter 9 (p. 211)  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1945

Mathematics is the Queen of the Sciences, and Arithmetic the Queen of Mathematics.

In E.T. Bell  
*Men of Mathematics* (p. xv)  
Simon & Schuster. New York, New York, USA. 1937

*History of the Problems of Philosophy* (Volume 1)

Part I, Chapter I (p. 11)

Macmillan & Co Ltd. London, England. 1902

**Kanigel, Robert** 1946–  
Scientific journalist

Mathematics...is mired in a language of symbols foreign to most of us, [it] explores regions of the infinitesimally small and the infinitely large that elude words, much less understanding. So specialized is mathematics today...that most mathematical papers appearing in most mathematics journals are indecipherable even to most mathematicians.

*The Man Who Knew Infinity: A Life of the Genius Ramanujan*

Prologue (p. 6)

Charles Scribner's Sons. New York, New York, USA. 1991

...mathematics is not best learned passively; you don't sop it up like a romance novel. You've got to go out to it, aggressive, and alert, like a chess master pursuing checkmate.

*The Man Who Knew Infinity: A Life of the Genius Ramanujan*  
Chapter Two (p. 44)

Charles Scribner's Sons. New York, New York, USA. 1991

**Kasner, Edward** 1878–1955  
American mathematician

**Newman, James Roy** 1911–66  
Mathematician and mathematical historian

Mathematics is an activity governed by the same rules imposed upon the symphonies of Beethoven, the paintings of daVinci, and the poetry of Homer. Just as scales, as the laws of perspective, as the rules of metre seem to lack fire, the formal rules of mathematics may appear to be without lustre. Yet ultimately, mathematics reaches pinnacles as high as those attained by the imagination in its most daring reconnoiters. And this conceals, perhaps, the ultimate paradox of science. For in their prosaic plodding both logic and mathematics often outstrip their advance guard and show that the world of pure reason is stranger than the world of pure fancy.

*Mathematics and the Imagination*

Mathematics and the Imagination (p. 362)

Simon & Schuster. New York, New York, USA. 1940

Symbolic Logic is Mathematics, Mathematics is Symbolic Logic, the twain are one.

*Lectures on Science, Philosophy and Art, 1907–1908*

Mathematics (p. 19)

The Columbia University Press. New York, New York, USA. 1908

Mathematics is, in many ways, the most precious response that the human spirit has made to the call of the infinite and eternal.

*The Human Worth of Rigorous Thinking: Essays and Addresses*

Chapter II (p. 60)

Columbia University Press. New York, New York, USA. 1916

Mathematics is precisely the ideal handling of the problems of life, and the central ideas of the science, the great concepts about which its stately doctrines have been built up, are precisely the chief ideas with which life must always deal and which, as it tumbles and rolls about them through time and space, give it its interests and problems, and its order and rationality.

*The Human Worth of Rigorous Thinking: Essays and Addresses*

Chapter III (p. 77)

Columbia University Press. New York, New York, USA. 1916

**King, Jerry P.**  
American mathematician

Mathematics is precise or it is nothing...

*The Art of Mathematics*

Introduction (p. 9)

Plenum Press. New York, New York, USA. 1992

**Kingsbury, Donald** 1929–

American–Canadian science fiction author and mathematician

Mathematics is the Queen of Science but she isn't very Pure; she keeps having babies by handsome young upstarts and various frog princes.

*Psychohistorical Crisis*

Chapter 29 (p. 382)

Tom Doherty Associates. New York, New York, USA. 2001

**Kline, Morris** 1908–92

American mathematics professor and writer

Mathematics is a model of exact reasoning, an absorbing challenge to the mind, an esthetic experience for creators and some students, a nightmarish experience to other students, and an outlet for the egotistic display of mental power.

*Mathematics and the Physical World*

Preface (p. vii)

Thomas Y. Crowell Co. New York, New York, USA. 1959

**Lowell, Percival** 1855–1916

American astronomer

...mathematics is merely formalized logic and deals not with the matter concerned but with the manner of its manipulation. If you put peascods into a machine you cannot take out flour, however fine you grind. Or, to drop analogy, if you apply mathematics to physics or optics, you must first be sure your physical data are correct before you proceed to deduce results from them.

The Canals of Mars, Optically and Psychologically Considered

*The Astrophysical Journal*, Volume XXVI, Number 3, October, 1907 (p. 131)

**McKay, Herbert**

No biographical data available

Mathematics is a way of looking at things. No one pretends that it is the only way, but it is an important way. Those who have failed to cultivate the mathematical outlook are missing a good deal, even though they may be unaware of what they are missing. Just as a colour-blind man is unaware of the colours denied to him. The ignorant or unfortunate live in a less interesting world than those who use all their talents.

*The World of Numbers*

Preface

Cambridge University Press. Cambridge, England. 1946

**Miller, George Abram** 1863–1951

American mathematician

Mathematics is the science of saving thought.

Definition of the Term "Mathematics"

*The American Mathematical Monthly*, Volume 15, Number 11, November, 1908 (p. 197)

**Morse, Harold Calvin Marston** 1892–1977

American mathematician

... mathematics is the sister, as well as the servant, of the arts and is touched with the same madness and genius.

In Stanley Gudder

Mathematics is abused by “consultants” to lend speculations an aura of objectivity and precision that they do not possess.

International Congress of Mathematics 2002

Beijing, August 22, 2002

**Price, Bartholomew** 1818–98

English mathematician and educator

Mathematics is the most powerful instrument, which we possess, for this purpose [to trace into their farthest results those general laws which an inductive philosophy has supplied]: in many sciences a profound knowledge of mathematics is indispensable for a successful investigation. In the most delicate researches into the theories of light, heat, and sound it is the only instrument; they have properties which no other language can express; and their argumentative processes are beyond the reach of other symbols.

*Treatise on Infinitesimal Calculus* (Volume 3) (p. 5)

Oxford University Press, Inc. Oxford, England. 1868

**Richard Feynman (Fictional character)**

Mathematics is a language. It's very difficult. It's subtle. You couldn't say those things any other way – and I can talk to dead people with it. I talk to Copernicus every day.

*Infinity*

Film (1996)

**Richardson, Moses**

No biographical data available

...I propose the following, if not as a definition, then at least as a partial description; mathematics is persistent intellectual honesty.

Mathematics and Intellectual Honesty

*The American Mathematical Monthly*, Volume 59, Number 2, February, 1952 (p. 73)

**Rota, Gian-Carlo** 1932–1999

Italian-born American mathematician

Mathematics is a cruel profession. Solving a mathematical problem is for most mathematicians an arduous and lengthy process which may take years, even a lifetime. The final conquest of the truth comes, if ever, inevitably tinged with disillusion, soured by the realization of the ultimate irrelevance of all intellectual endeavor.

*Indiscrete Thoughts*

Chapter V (p. 60)

Birkhäuser. Boston, Massachusetts, USA. 1997

Mathematics is the study of analogies between analogies. All science is. Scientists want to show that things that don't look alike are really the same. That is one of their innermost Freudian motivations. In fact, that is what we mean by understanding.

*Indiscrete Thoughts*

Chapter XX (p. 214)

Birkhäuser. Boston, Massachusetts, USA. 1997

**Rudin, Mary Ellen** 1924–

American mathematician

Mathematics is obviously something that women should be able to do very well. It's very intuitive. You don't need a lot of machinery, and you don't need a lot of physical strength. You just need stamina, and women often have a great deal of stamina.

In D. Albers, G. Alexanderson and C. Reid

*More Mathematical People: Contemporary Conversations* (p. 301)

Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

...mathematics is the manhood of logic...

*Introduction to Mathematical Philosophy*

Chapter XVIII (p. 194)

Dover Publications, Inc. New York, New York, USA. 1993

Pure Mathematics is the class of all propositions of the form “p implies q,” where p and q are propositions containing one or more variables, the same in the two propositions, and neither p or q contains any constants except logical constants. And logical constants are all notions definable in terms of a class of the following: Implication, the relation of a term to a class of relation, and such further notions as may be involved in the general notion of propositions of the above form. In addition to these, Mathematics uses a notion which is not a constituent of the propositions which it considers – namely, the notion of truth.

*Principles of Mathematics* (2nd edition)  
Chapter 1 (p. 1)  
W.W. Norton & Company, Inc. New York, New York, USA. 1938.

### Safford, Truman Henry

American calculating prodigy

The modern, and to my mind the true, theory is that mathematics is the abstract form of the natural sciences; and that it is valuable as a training of the reasoning powers, not because it is abstract, but because it is a representative of actual things.

*Mathematical Teaching and Its Modern Methods*  
Introduction (pp. 9–10)  
D.C. Heath & Co. Boston, Massachusetts, USA. 1887

### Sampson, R. A.

Astronomer

...mathematics is much more than a general parable of our view of nature. It is far the most promising engine of research, and almost the only fully reliable one, for separating what is necessary from what is accidental, in any analysis of thought and its method; in affording examples in which logic is incapable of furnishing any single solution to a problem, owing to the conditions being themselves indeterminate; in illustrating what is arbitrary in our connection of cause and effect by showing how our logical steps are in many vital ways a matter of definition; in showing the dangers of argument upon ideas which are ill-defined or which perhaps are impossible to define, by exhibiting the almost endless subtleties to which the full discussion of such simple ideas as those of number lead when investigated thoroughly.

*Mathematics as A Means and As A End*  
*Proceedings of the University of Durham Philosophical Society*, Volume 2, 1907 (pp. 91–92)

### Santayana, George (Jorge Augustín Nicolás

Ruiz de Santillana) 1863–1952

Spanish-born American philosopher

...mathematics is like music, freely exploring the possibilities of form. And yet, notoriously, mathematics holds true of things; hugs and permeates them far more closely than does confused and inconstant human perception; so that the dream of many exasperated critics of human error has been to assimilate all science to mathematics, so as to make knowledge safe by making it, as Locke wished, direct perception of the relations between ideas...

*The Realm of Truth: Book Third of Realms of Being*  
Chapter I (pp. 2–3)  
Constable & Company Ltd. London, England. 1937

### Schwinger, Julian 1918–94

American theoretical physicist

Mathematics is the natural language of theoretical physics. It is the irreplaceable instrument for the penetration

of realms of physical phenomena far beyond the ordinary experience upon which conventional language is based.

*Nobel Lectures, Physics 1963–1970*  
*Relativistic Quantum Field Theory* (p. 140)  
Elsevier Publishing Co. Amsterdam, The Netherlands. 1972

### Shaw, James Byrnie

American mathematician

Mathematics is, on the artistic side, a creation of new rhythms, orders, designs and harmonies, and on the knowledge side, is a systematic study of the various rhythms, orders, designs and harmonies. We may condense this into the statement that mathematics is, on the one side, the qualitative study of the structure of beauty, and on the other side is the creator of new artistic forms of beauty. The mathematician is at once creator and critic.

In W.L. Schaaf (ed.)  
*Mathematics: Our Great Heritage*  
*Mathematics – The Subtle Fine Art* (p. 50)  
Harper & Brothers. New York, New York, USA. 1948

### Simmons, George F.

No biographical data available

There is an old Armenian saying, “He who lacks a sense of the past is condemned to live in the narrow darkness of his own generation.” Mathematics without history is mathematics stripped of its greatness: for, like the other arts – and mathematics is one of the supreme arts of civilization – it derives its grandeur from the fact of being a human creation.

American college president

To be told that mathematics is good training for the mind does not insure either the intelligent or ardent pursuit of this branch of science.

Physical Training And Athletics

*Educational Review*, Volume 34 November, 1907 (p. 387)

**Stewart, Ian** 1945–

English mathematician

Mathematics is to nature as Sherlock Holmes is to evidence.

*Nature's Numbers*

Chapter 1 (p. 2)

BasicBooks. New York, New York, USA. 1995

Mathematics is much like the Mississippi. There are sideshoots and dead ends and minor tributaries; but the mainstream is there, and you can find it where the current – the mathematical power – is strongest. Its delta is research mathematics: it is growing, it is going

somewhere (but it may not always be apparent where), and what today looks like a major channel may tomorrow clog up with silt and be abandoned. Meanwhile a minor trickle may suddenly open out into a roaring torrent. The best mathematics always enriches the mainstream, sometimes by diverting it in an entirely new direction.

*From Here to Infinity*

The Nature of Mathematics (p. 11)

In Jozef Kurschak

*Hungarian Problem Book I* (p. 6)

Mathematical Association of America. Washington, D.C. 1963

**Thurston, William Paul** 1946–

American mathematician

I think of myself as learning the outskirts of mathematics. I think mathematics is a vast territory. The outskirts

of mathematics are the outskirts of mathematical civilization. Then are certain subjects that people learn about and gather together. Then there is a sort of inevitable development in those fields. You get to the point where a certain theorem is bound to be proved, independent of any particular individual, because it is just in the path of development. I enjoy trying to find mathematical topics that people haven't thought to think about. Then I work there. I like elbow room.

In D. Albers, G. Alexanderson and C. Reid  
*More Mathematical People: Contemporary Conversations* (p. 332)  
Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

Mathematics is a huge and highly interconnected structure...Think of a tinker toy set. The key is the pieces which have holes, allowing you to join them with rods to form interesting and highly interconnected structures. No interesting mathematical topic is self-contained or complete: rather it is full of "holes," or natural questions and ideas not readily answered by techniques native to the topic. These holes often give rise to connections between the given topic and other topics that seem at first unrelated. Mathematical exposition often conceals these holes, for the sake of smoothness – but what good is a tinker toy set if the holes are all filled in with modeling clay?

Reader's Advisory (p. ix)  
Princeton University Press. Princeton, New Jersey, USA. 1997

**Ulam, Stanislaw** 1909–84  
Polish-born mathematician

In many cases, mathematics is an escape from reality. The mathematician finds his own monastic niche and happiness in pursuits that are disconnected from external affairs. Some practice it as if using a drug. Chess sometimes plays a similar role. In their unhappiness over the events of this world, some immerse themselves in a kind of self-sufficiency in mathematics.

*Adventures of a Mathematician*  
Chapter 6 (p. 120)  
Charles Scribner's Sons. New York, New York, USA. 1976

**von Helmholtz, Robert**  
No biographical data available

Mathematics is the most convenient instrument in the exact science of nature because it is the tongue in which the latter can express its conclusions in the quickest and most precise way. That is why the exact study of nature becomes more and more mathematical; physics, after astronomy, has made the most progress in this direction...

*Annual Report of the Board of Regents of the Smithsonian Institution, 1889*  
A Memoir of Gustav Robert Kirchhoff (p. 528)  
Government Printing Office. Washington, D.C. 1889

**von Neumann, John** 1903–57  
Hungarian-American mathematician

It is commonplace that mathematics is an excellent school of thinking, that it conditions you to logical thinking, that after having experienced it you can somehow think more validly than otherwise. I don't know whether all these statements are true, the first one is probably least doubtful. However, I think it has a very great importance in thinking in an area which is not so precise. I feel that one of the most important contributions of mathematics to our thinking is, that it has demonstrated an enormous flexibility in the formation of concepts, a degree of flexibility to which it is very difficult to arrive in a nonmathematical mode.

In John A. Taub (ed.)  
*John von Neumann Collected Works*  
Volume VI, The Role of Mathematics in The Sciences and Society (p. 482)  
Pergamon. New York, New York, USA. 1963

Mathematics is nourished by dreamers – as it nourishes them...

*Mathematics*  
Forward (p. ix)  
New York University Press. New York, New York, USA. 1963

**Waldo, Clarence Abiathar** 1852–1926  
American mathematician, author, and educator

The time is passed when mathematics is referred to by the thinkers of the day as being principally a discipline. It is, of course, true that, rightly pursued, mathematics is a discipline, but it is far more, it is a knowledge, a tool, a power, a civilizer.

Mathematics and Engineering

*Proceedings of the American Association for the Advancement of Science*, December 1903–January 1904 (p. 449)

**Wall, Hubert Stanley** 1902–71

American mathematician

Mathematics is a creation of the mind. To begin with, there is a collection of things, which exist only in the mind, assumed to be distinguishable from one another; and there is a collection of statements about these things, which are taken for granted. Starting with the assumed statements concerning these invented or imagined things, the mathematician discovers other statements, called theorems, and proves them as necessary consequences. This, in brief, is the pattern of mathematics. The mathematician is an artist whose medium is the mind and whose creations are ideas.

*Creative Mathematics* (p. 3)

University of Texas Press. Austin, Texas, USA. 1963

**Walpole, Horace** 1717–97

English art historian, writer, antiquarian, and politician

The profound study of mathematics seems to injure the more general and useful mode of reasoning – that by induction. Mathematical truths being, so to speak, palpable, the moral feelings become less sensitive to impalpable truths. As when one sense is carried to great perfection, the others are usually less acute, so mathematical reasoning seems, in some degree, to injure the other modes of ratiocination.

*Walpoliana*

CLXXXII (p. 85)

**Warner, Sylvia Townsend** 1893–1978

English novelist and poet

Theology, Mr. Fortune found, is a more accommodating subject than mathematics; its technique of exposition allows greater latitude. For instance when you are graveled for matter there is always the moral to fall back upon. Comparisons too may be drawn, leading cases cited, types and antetypes analysed and anecdotes introduced. Except for Archimedes mathematics is singularly naked of anecdotes.

*Mr. Fortune's Maggot*

Mr. Fortune's Maggot (p. 111)

New York Review of Books. New York, New York, USA. 1927

**Waugh, John Hugh W.**

No biographical data available

Mathematics is peculiarly and pre-eminently the science of relations, and whether quantity or direction

may severally form its object, these are never contemplated in characters purely absolute, but invariably in comparison with other objects like themselves; and it is hence that relations once established by the unerring theorems of the science, we are enabled, disregarding magnitude in itself, to pass indifferently from the finite to the infinite, from the limited regions of sense to those of conception, and with all the assurance and all the certainty that even the geometry of the ancients could confer.

*Mathematical Essays*

ESSAY IV (p. 69)

Johnstone & Hunter. Edinburgh, Scotland. 1854

**Weil, André** 1906–98

French mathematician

God exists since mathematics is consistent, and the Devil exists since we cannot prove it.

In John D. Barrow

*The World within The World* (p. 254)

Clarendon Press. Oxford, England. 1988

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

...the new mathematics is a sort of supplement to language, affording a means of thought about form and quantity and a means of expression, more exact, compact, and ready than ordinary language. The great body of physical science, a great deal of the essential facts of financial science, and endless social and political problems are only accessible and only thinkable to those who have had a sound training in mathematical analysis, and the time may not be very remote when it will be understood that for complete initiation as an efficient citizen of one of the new great complex world wide states that are now developing, it is as necessary to be able to compute, to think in averages and maxima and minima, as it is now to be able to read and to write.

Mathematics is the language of definiteness, the necessary vocabulary of those who know. Hence the intimate connection between mathematics and science.

*A Scrap-book of Elementary Mathematics: Notes, Recreations, Essays*  
Preface (p. 7)  
The Open Court Publishing Co. Chicago, Illinois, USA. 1908

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

The point of mathematics is that in it we have always got rid of the particular instance, and even of any particular sorts of entities. So that for example, no mathematical truths apply merely to fish, or merely to stones, or merely to colours. So long as you are dealing with pure mathematics, you are in the realm of complete and absolute abstraction.... Mathematics is thought moving in the sphere of complete abstraction from any particular instance of what it is talking about.

*Science and the Modern World*  
Chapter II (pp. 31–32)  
The Macmillan Company. New York, New York, USA. 1929

For mathematics is the science of the most complete abstractions to which the human mind can attain.

*Science and the Modern World*  
Chapter II (p. 51)  
The Macmillan Company. New York, New York, USA. 1929

Mathematics is merely an apparatus for analyzing the deductions which can be drawn from any particular premises, supplied by common sense, or by more refined scientific observation, so far as these deductions depend on the forms of the propositions.

The Organization of Thought  
*Science*, N.S. Volume 44, Number 1134, September 22, 1916 (p. 417)

The essence of applied mathematics is to know what to ignore.

In R. A. Fisher Presidential Address  
Presidential Address, First Indian Statistical Conference  
*Sankhya*, 1938, Volume 4, 1938 (p. 16)

Mathematics in its widest significance is the development of all types of formal, necessary, deductive reasoning.

**Wilder, Raymond L.** 1896–1982  
American mathematician

...mathematics is what we make it; not by each of us acting without due regard for what constitutes mathematics in our culture, but by seeking to build up new theories in the light of the old, and to solve outstanding problems generally recognized as valuable for the progress of mathematics as we know it. Until we make it, it fails to "exist." And, having been made, it may at some future time even fail to be "mathematics" any longer.

*Introduction to the Foundations of Mathematics*  
Chapter XII (p. 284)  
John Wiley & Sons, Inc. New York, New York, USA. 1952

**Wiles, Andrew** 1953–  
English-born American research mathematician

Mathematics...is a bit like discovering oil.... But mathematics has one great advantage over oil, in that no one has yet...found a way that you can keep using the same oil forever.

*Notices of the American Mathematical Society*, May, 1997 (p. 588)

**Wittgenstein, Ludwig Josef Johann** 1889–1951  
Austrian-born English philosopher

...mathematics is a MOTLEY of techniques and proofs.

*Remarks on the Foundations of Mathematics*  
Appendix II, 46 (p. 84e)  
The MIT Press. Cambridge, Massachusetts, USA. 1967

**Wright, Will**  
Mathematician

Mathematics is found to be the special, necessary lens through which nature must be observed since nature is defined as being exactly a structure of mathematical entities and relations ...

*Wild Knowledge: Science, Language, and Social Life in a Fragile Environment* (p. 75)  
University of Minnesota Press. Minneapolis, Minnesota, USA. 1992

**Young, Jacob William Albert** 1865–1948  
American mathematician

Mathematics is a type of thought which seems ingrained in the human mind, which manifests itself to some extent with even the primitive races, and which is developed to a high degree with the growth of civilization.

*The Teaching of Mathematics in the Elementary and the Secondary School*  
Chapter II (p. 14)  
Longmans, Green & Co. New York, New York, USA. 1907

**Young, John Wesley**  
Mathematician

Mathematics is a type of thought which seems ingrained in the human mind, which manifests itself to some extent with even the primitive races, and which is developed to a high degree with the growth of civilization.... A type of thought, a body of results, so essentially characteristic of the human mind, so little influenced by environment, so uniformly present in every civilization, is one of which no well-informed mind today can be ignorant.

*The Teaching of Mathematics*  
Chapter II (p. 14)  
Longmans, Green & Company. London, England. 1929

**Zeilberger, Doron**  
Israeli-American mathematician

Mathematics is infinitely wide, while the language that describes it is finite. It follows from the pigeonhole principle that there exist distinct concepts that are referred to by the same name. Mathematics is also infinitely deep and sometimes entirely different concepts turn out to be intimately and profoundly related.

Closed form (pun intended!)  
*Contemporary Mathematics*, Volume 143, 1988

## MATHEMATICS MAJOR

**Heller, Joseph** 1923–99  
American writer

She was a crazy mathematics major from the Wharton School of Business who could not count to twenty-eight each month without getting into trouble.

*Catch-22*  
Chapter Eight (p. 72)  
Dell Publishing Company, Inc. New York, New York, USA. 1985

## MATHEMATICS, ABSTRACT

**Boehm, George A. W.** 1922–93  
American editor and mathematician

Never before have so many people applied such abstract mathematics to so great a variety of problems. To meet the demands of industry, technology, and other sciences, mathematicians have had to invent new branches

of mathematics and expand old ones. They have built a superstructure of fresh ideas that people trained in the classical branches of the subject would hardly recognize as mathematics at all.

*Annual Report of the Board of Regents of the Smithsonian Institution (1959)*  
The New Uses of the Abstract (p. 309)  
Government Printing Office. Washington, D.C. 1960

## MATHEMATICS, APPLICATION OF

**Bernard, Claude** 1813–78  
French physiologist

The application of mathematics to natural phenomena is the aim of all science.

Translated by Henry Copley Greene  
*An Introduction to the Study of Experimental Medicine*  
Part One, Chapter I, Section vi (p. 129)  
Henry Schuman, Inc. New York, New York, USA. 1927

**Merz, John Theodore** 1840–1922  
German-born British chemist, historian, and industrialist

All applications of mathematics consist in extending the empirical knowledge which we possess of a limited number or region of accessible phenomena into the region of the unknown and inaccessible; and much of the progress of pure analysis consists in inventing definite conceptions, marked by symbols, of complicated operations; in ascertaining their properties as independent objects of research; and in extending their meaning beyond the limits they were originally invented for – thus opening out new and larger regions of thought.

*A History of European Thought in the Nineteenth Century (Volume 2)*  
Chapter XIII (p. 698)  
William Blackwood & Sons. Edinburgh, Scotland. 1903

**Tukey, John W.** 1915–2000  
American statistician

Just as there is an applied mathematics of games, genetics, and mechanics, so there should be an applied mathematics (at least in terms of concepts, perhaps with techniques and operations) of the applications of mathematics. When there is, mathematicians will be able to teach the applications of mathematics.

*The Teaching of Concrete Mathematics*  
*The American Mathematical Monthly*, Volume 65, Number 1, January, 1958 (p. 8)

## MATHEMATICS, APPLIED

**Boehm, George A. W.** 1922–93  
American editor and mathematician

Applied mathematicians have been grappling successfully with the world's problems at a time, curiously enough, when pure mathematicians seem almost to have lost touch with the real world.

*Annual Report of the Board of Regents of the Smithsonian Institution (1959)*  
The New Uses of the Abstract (p. 309)  
Government Printing Office. Washington, D.C. 1960

**Keyser, Cassius Jackson** 1862–1947  
American mathematician

Applied mathematics is mathematics simply or is not mathematics at all.

*Lectures on Science, Philosophy and Art, 1907–1908*  
Mathematics (p. 35)  
The Columbia University Press. New York, New York, USA. 1908

## MATHEMATICS, APPROXIMATION OF

**Artstein, Zvi**  
Mathematician

Nature is a good approximation of Mathematics.  
*Rutgers University Colloquium*  
December 6, 2002

## MATHEMATICS, BOOK OF

**Holmes, Jr., Oliver Wendell** 1841–1935  
American jurist

The law embodies the story of a nation's development through many centuries, and it cannot be dealt with as if it contained only the axioms and corollaries of a book of mathematics.

*The Common Law*  
Lecture I (p. 1)  
Little, Brown & Company. Boston, Massachusetts, USA. 1923

**Keyser, Cassius Jackson** 1862–1947  
American mathematician

The domain of mathematics is the sole domain of certainty.  
*The Human Worth of Rigorous Thinking: Essays and Addresses*  
Chapter VI (p. 138)  
Columbia University Press. New York, New York, USA. 1916

**Smith, David Eugene** 1860–1945  
Mathematician

...in the domain of mathematics, we are surrounded by clouds, and success drives back these clouds a little way, and a discovery is made; then someone makes another discovery and drives them back a little more; and at rare intervals in time a Newton comes and drives them back, what seems a long, long way – and still there is the surrounding mist of mystery. It is a great experience, this piercing the clouds; but try as we may, there is still the mist about us.

*The Poetry of Mathematics and Other Essays*  
Chapter I (p. 11)  
Scripta Mathematica. New York, New York, USA. 1934

## MATHEMATICS, COMPASS OF

**Voltaire (François-Marie Arouet)** 1694–1778  
French writer

When we cannot use the compass of mathematics or the torch of experience...it is certain that we cannot take a single step forward.

In Morris Kline  
*Mathematical Thought from Ancient to Modern Times* (p. 614)  
Oxford University Press, Inc. New York, New York, USA. 1972

## MATHEMATICS, CONCEPT OF

**Berlinski, David** 1942–  
American mathematician

The concepts of mathematics, despite their unfamiliarity, are infinitely accessible. At their deaths, those who have minded mathematics will have known the continuous functions better than the crooked human heart. That so abstract a consideration should in the end be so lucid is a source of wonder.

*A Tour of Calculus*  
Chapter 15 (p. 143)  
Pantheon Books. New York, New York, USA. 1995

## MATHEMATICS, ENGINEERING

**Author undetermined**

The first law of Engineering Mathematics: All infinite series converge, and moreover converge to the first term.

Source undetermined

## MATHEMATICS, ESSENCE OF

**Boole, George** 1815–64  
English mathematician

It is not of the essence of mathematics to be conversant with the ideas of number and quantity.

*An Investigation of the Laws of Thought*  
Chapter I (p. 12)  
Walton & Maberly. London, England. 1854

**Cantor, Georg** 1845–1918  
German mathematician

The essence of mathematics lies in its freedom.  
*Mathematische Annalen*  
Bd. 21, 1883 (p. 564)

## MATHEMATICS, FACTS OF

**Rota, Gian-Carlo** 1932–99  
Italian-born American mathematician

The facts of mathematics are verified and presented by the axiomatic method. One must guard, however, against confusing the presentation of mathematics with the content of mathematics. As axiomatic presentation of a mathematical fact differs from the fact that is being

presented as medicine differs from food. It is true that this popular medicine is necessary to keep the mathematician at a safe distance from the self-delusions of the mind. Nonetheless, understanding mathematics means being able to forget the medicine and enjoy the food.

*Indiscrete Thoughts*

Chapter II (p. 96)

Birkhäuser. Boston, Massachusetts, USA. 1997

## MATHEMATICS, FOUNDATION OF

**Kline, Morris** 1908–92

American mathematics professor and writer

The developments in this century bearing on the foundations of mathematics are best summarized in a story. On the banks of the Rhine, a beautiful castle had been standing for centuries. In the cellar of the castle, an intricate network of webbing had been constructed by industrious spiders who lived there. One day a strong wind sprang up and destroyed the web. Frantically, the spiders worked to repair the damage. They thought it was their webbing that was holding up the castle.

*Mathematics: The Loss of Certainty*

Chapter XII (p. 277)

Oxford University Press, Inc. New York, New York, USA. 1980

**Weyl, Hermann** 1885–1955

German mathematician

...it is the function of mathematics to be at the service of the natural sciences.

*Philosophy of Mathematics and Natural Science*

Part I, Chapter II (p. 61)

Princeton University Press. Princeton, New Jersey, USA. 1949

## MATHEMATICS, GOAL OF

**Graham, Ronald L.** 1935–

American mathematician

**Knuth, Donald E.** 1938–

American computer scientist

The ultimate goal of mathematics is to eliminate all need for intelligent thought.

*Concrete Mathematics: A Foundation for Computer Science*

Chapter 2.6 (p. 56)

Addison-Wesley Publishing. Reading, Massachusetts, USA. 1990

## MATHEMATICS, GOLDEN AGE OF

**Pierpont, James** ?–1938

No biographical data available

We who stand on the threshold of a new century can look back on an era of unparalleled progress. Looking into the future an equally bright prospect greets our eyes; on all sides fruitful fields of research invite our labor and

promise easy and rich returns. Surely this is the golden age of mathematics!

*The History of Mathematics in the Nineteenth Century*

*Bulletin of the American Mathematical Society*, 2nd Series, Volume 11, 1904–1905 (p. 159)

## MATHEMATICS, HISTORY OF

**Cajori, Florian** 1859–1930

Swiss-born American educator and mathematician

The history of mathematics is important also as a valuable contribution to the history of civilization. Human progress is closely identified with scientific thought. Mathematical and physical researches are a reliable record of intellectual progress.

*A History of Mathematics*

Introduction (p. 3)

The Macmillan Company. London, England. 1919

**Hogben, Lancelot** 1895–1975

English zoologist

The history of mathematics is the mirror of civilization.

*Mathematics for the Million*

Chapter I (p. 36)

W.W. Norton & Company, Inc. New York, New York, USA. 1917

**Lakatos, Imre** 1922–74

Hungarian-born philosopher

Under the present dominance of formalism, one is tempted to paraphrase Kant: the history of mathematics, lacking the guidance of philosophy, has become blind, while the philosophy of mathematics, turning its back on the most intriguing phenomena in the of mathematics, has become empty.

*Proofs and Refutations: The Logic of Mathematical Discovery*

Cambridge University Press. Cambridge, England. 1976

**Smith, David Eugene** 1860–1945

Mathematician

The whole history of the development of mathematics has been a history of the destruction of old definitions, old hobbies, old idols.

*American Mathematical Monthly*, Volume 1, Number 1, 1894 (p. 74)

**Sullivan, John William Navin** 1886–1937

Mathematician

...a history of mathematics is largely a history of discoveries which no longer exist as separate items, but are merged into some more modern generalization, these discoveries have not been forgotten or made valueless. They are not dead, but transmuted.

*The History of Mathematics in Europe*

Introduction (p. 10)

Oxford University Press, Inc. New York, New York, USA. 1925

**MATHEMATICS, HUMANIZATION OF**

**Keyser, Cassius Jackson** 1862–1947  
American mathematician

To humanize the teaching of mathematics means so to present the subject, so to interpret its ideas and doctrines, that they shall appeal, not merely to the computatory faculty or to the logical faculty but to all the great powers and interests of the human mind.

*The Human Worth of Rigorous Thinking: Essays and Addresses*  
The Humanization of Teaching Mathematics (p. 62)  
Columbia University Press. New York, New York, USA. 1916

**MATHEMATICS, IDEA OF**

**Novalis (Friederich von Hardenberg)** 1772–1801  
German poet

The idea of mathematics is the idea of science in general.

Quoted in Panthea  
Eclectic Gatherings  
*The Reasoner*, Volume 6, 1849 (p. 373)

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

The ideal of mathematics should be to erect a calculus to facilitate reasoning in connection with every province of thought, or of external experience, in which the succession of thoughts, or of external experience, in which the succession of thoughts, or of events, can be definitely ascertained and precisely stated. So that all serious thought which is not philosophy, or inductive reasoning, or imaginative literature, shall be mathematics developed by means of a calculus.

*A Treatise on Universal Algebra, with Applications*  
Preface (p. viii)  
Hafner Publishing Company. New York, New York, USA. 1960

...the anxious precision of modern mathematics is necessary for accuracy...it is necessary for research. It makes for clearness of thought and for fertility in trying new combinations of ideas. When the initial statements are vague and slipshod, at every subsequent stage of thought, common sense has to step in to limit applications and to explain meanings. Now in creative thought common sense is a bad master. Its sole criterion for judgment is that the new ideas shall look like the old ones, in other words it can only act by suppressing originality.

*An Introduction to Mathematics*  
Chapter 11 (p. 116)  
Oxford University Press, Inc. New York, New York, USA. 1958

**MATHEMATICS, KNOWLEDGE OF**

**Aleksandrov, Aleksandre Danilovic** 1912–99  
Russian mathematician and physicist

With even a superficial knowledge of mathematics, it is easy to recognize certain characteristic features: its

abstractions, its precision, its logical rigor, the indisputable character of its conclusions, and finally, the exceptionally broad range for its applications.

In A.D. Aleksandrov, A.N. Kolmogorov and M.A. Lavrent'ev (eds.)  
*Mathematics: Its Contents, Methods, and Meaning* (p. 1)  
The MIT Press. Cambridge, Massachusetts. 1963

**Glanvill, Joseph** 1636–80  
English clergyman and philosopher

...the knowledge we have of the Mathematicks, hath no reason to elate us; since by them we know but numbers, and figures, creatures of our own, and are yet ignorant of our Maker's.

*The Vanity of Dogmatizing*  
Chapter XXI (pp. 209–210)  
Printed for Henry Eversden. London, England. 1661

**Herschel, Sir John Frederick William** 1792–1871  
English astronomer and chemist

Admission to [astronomy's] sanctuary, and to the privileges and feelings of a votary, is only to be gained by one means – sound and sufficient knowledge of mathematics, the greatest instrument of all exact inquiry, without which no man can ever make such advances in this or any other of the higher departments of science as can entitle him to form an independent opinion on any subject of discussion within their range.

*Outlines of Astronomy*  
Part I, Introduction (p. 5)  
Longman, Brown, Green & Longmans. London, England. 1849

**Richardson, David Lester** 1801–65  
Poet and writer

...a knowledge of mathematics is of so little use in daily life that you may know a man intimately for half a century without discovering whether he has mastered the first proposition in Euclid. But ignorance in the elements of a literary education cannot be concealed for a day – not for an hour – not indeed for five minutes, if the ignoramus will only attempt to speak or write.

*Literary Chit-Chat*  
Chapter X (p. 77)  
P.S. D'Rozario and Co. Calcutta, India. 1848

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

Philosophers, when they have possessed a thorough knowledge of mathematics, have been among those who have enriched the science with some of its best ideas. On the other hand it must be said that, with hardly an exception, all the remarks on mathematics made by those philosophers who have possessed but a slight or hasty or late-acquired knowledge of it are entirely worthless, being either trivial or wrong.

*An Introduction to Mathematics*  
Chapter 9 (pp. 81–82)  
Oxford University Press, Inc. New York, New York, USA. 1958

**Young, Jacob William Albert** 1865–1948  
American mathematician

Little can be understood of even the simplest phenomena of nature without some knowledge of mathematics, and the attempt to penetrate deeper into the mysteries of nature compels simultaneous development of the mathematical processes.

*The Teaching of Mathematics in the Elementary and the Secondary School*

Chapter II (p. 16)

Longmans, Green & Co. New York, New York, USA. 1907

## MATHEMATICS, LANGUAGE OF

**Bentley, Arthur**

No biographical data available

The every-day language reeks with philosophies.... It shatters at every touch of advancing knowledge. At its heart lies paradox. The language of mathematics, on the contrary, stands and grows in firmness. It gives service to men beyond all other language.

*Linguistic Analysis of Mathematics*

Forward (p. viii)

The Principia press, Inc. Bloomington, Indiana, USA. 1932

**Hill, Thomas**

No biographical data available

The language of Mathesis is special and untranslatable. In its simplest forms it can be translated, as, for instance, we may explain a right angle to mean a square corner. But go a little higher in the science of mathematics, and it is impossible to dispense with a peculiar language. It would defy all the power of Mercury himself to explain to a person ignorant of the science what is meant by the simple phrase “functional exponent.”

*The Imagination in Mathematics*

*The North American Review*, Volume LXXXV, Number 176, July, 1857 (p. 224)

**Sylvester, James Joseph** 1814–97

English mathematician

Little could Plato have imagined, when indulging his instinctive love of the true and beautiful for their own sakes, he entered upon these refined speculations and revealed in a world of his own creation, that he was writing the grammar of the language in which it [mathematics] would be demonstrated in after ages that the pages of the universe are written.

*The Collected Mathematical Papers of James Joseph Sylvester* (Volume 2)

A Probationary Lecture on Geometry (p. 7)

University Press. Cambridge, England. 1904–1912

**Thom, René** 1923–2002

French mathematician

Just as, when learning to speak, a baby babbles in all the phonemes of all the languages of the world, but after

listening to its mother’s replies soon learns to babble in only the phenomena of its mother’s language, so we mathematicians babble in all possible branches of mathematics, and ought to listen to mother nature in order to find out which branches of mathematics are natural.

In John Ziman

*Reliable Knowledge*

Chapter 2 (p. 18, fn 14)

Cambridge University Press. Cambridge, England. 1978

**Thomas, Lewis** 1913–93

American physician and biologist

The universal language of the future, in the view of the tiny minority who now use it for their lives, will be mathematics. It could be so. Certainly, no other human endeavor can present so powerful an argument for a long survival in the centuries ahead, nor so solid a case for having already influenced and changed, largely for the better, the human condition. Among the sciences, mathematics has advanced more rapidly and at the same time penetrated the human mind more profoundly than any other field. I would include, most conspicuously, physics, for all the showiness of its accomplishments, and even cosmophysics; these disciplines would still be studying Galileo were it not for events that have happened in just the last three centuries in pure mathematics.

*Et Cetera, Et Cetera: Notes of a Word-Watcher*

Chapter 38 (p. 161)

Little, Brown & Company. Boston, Massachusetts, USA. 1990

**Wigner, Eugene Paul** 1902–95

Hungarian-born American physicist

The miracle of the appropriateness of the language of mathematics for the formulation of the laws of physics is a wonderful gift, which we neither understand nor deserve.

*The Unreasonable Effectiveness of Mathematics in the Natural Sciences Communications on Pure and Applied Mathematics*, Volume XIII, Number 1, February, 1960 (p. 14)

## MATHEMATICS, LITERATURE OF

**Hayes, Brian**

American scientist, columnist, and author

...the collected literature of mathematics is treated as a sacred text to be guarded against corruption and dilution.

Aftermath

*The Emissary*, Fall 1999 (p. 14)

## MATHEMATICS, LIVING

**Hilbert, David** 1862–1943

German mathematician

Living mathematics rests on the fluctuation between the antithesis powers of intuition and logic, the individuality of “grounded” problems and the generality of far-reaching abstractions. We ourselves must prevent

the development being forced to only one pole of the life-giving antithesis.

*Hilbert – Courant*

Hilbert

Chapter XXV (p. 220)

Springer-Verlag. New York, New York, USA. 1986

## MATHEMATICS, LOVE OF

### Lalande, Andre

No biographical data available

The love of mathematics is daily on the increase, not only with us but in the army. The result of this was unmistakably apparent in our last campaigns. Bonaparte himself has a mathematical head, and though all who study this science may not become geometricians like Laplace and Lagrange, or heroes like Bonaparte, there is yet left an influence upon the mind which enables them to accomplish more than they could possibly have achieved without this training.

Translated by Jane and Caroline Lassell

In Karl Bruhns

*Life of Alexander Von Humboldt* (Volume 1)

I, Chapter V (p. 232)

Longmans, Green & Co. London, England. 1873

## MATHEMATICS, LURE OF

### Lindley, David 1956–

English astrophysicist and author

The lure of mathematics is hard to resist. When, by dint of great effort and ingenuity, a previously vague, ill-formed idea is encapsulated in a neat mathematical formulation, it is impossible to suppress the feeling that some profound truth has been discovered. Perhaps it has, but if science is to work properly the idea must be tested, and thrown away if it fails.

*The End of Physics: The Myth of a Unified Theory*

Prologue: The Lure of Numbers (p. 13)

Basic Books, Inc. New York, New York, USA. 1993

## MATHEMATICS, MERIT OF

### Smith, David Eugene 1860–1945

Mathematician

...the merit of mathematics, in all its forms, consists in its truth; truth conveyed to the understanding, not directly by words but by symbols which serve as the world's only universal written language.

*The Poetry of Mathematics and Other Essays*

Chapter I (p. 6)

Scripta Mathematica. New York, New York, USA. 1934

## MATHEMATICS, MODERN

### Peirce, Charles Sanders 1839–1914

American scientist, logician, and philosopher

Modern mathematics is highly artistic. A simple theme is chosen, some conception pretty and charming in itself. Then it is shown that by simply holding this idea up to one's eye and looking through it, a whole forest that before seemed a thick and tangled jungle of bushes and briars is seen to be in reality an orderly garden.

In A.G. Sedgwick

*The 19th Century: A Review of Progress During the Past One Hundred Years in the Chief Departments of Human Activity*

The Century's Great Men in Science (p. 317)

G.P. Putnam's Sons. New York, New York, USA. 1901

### Poincaré, Jules Henri 1854–1912

French mathematician and theoretical astronomer

Modern mathematics can be kept alive only by a large number of mathematicians cultivating different parts of the same system of values: a community which can be kept coherent only by the passionate vigilance of universities, journals and meetings, fostering these values and imposing the same respect for them on all mathematicians.

*Personal Knowledge*

Chapter 6, Section 11 (p. 192)

Harper & Row, Publishers. New York, New York, USA. 1962

## MATHEMATICS, OBJECT OF

### Papperitz, E. 1897–1938

No biographical data available

The object of pure mathematics is those relations which may be conceptually established among any conceived elements whatsoever by assuming them contained in some ordered manifold; the law of order of this manifold must be subject to our choice; the latter is the case in both of the only conceivable kinds of manifolds, in the discrete as well as in the continuous.

*Jahresbericht der Deutschen Mathematiker-Vereinigung*

Über das System der rein mathematischen Wissenschaften, Bd. 1 (p. 36)

## MATHEMATICS, PLACE OF

### Dyson, Freeman J. 1923–

American physicist and educator

The place of mathematics in the physical sciences is not something that can be defined once and for all. The interrelations of mathematics with science are as rich and various as the texture of science itself.

*Mathematics in the Physical Sciences*

*Scientific American*, Volume 211, Number 3, September, 1964 (p. 129)

**MATHEMATICS, POTENCY OF****Kelvin, Lord William Thomson** 1824–1907

Scottish engineer, mathematician, and physicist

A single curve, drawn in the manner of the curve of prices of cotton, describes all that the ear can possibly hear as a result of the most complicated musical performances.... That to my mind is a wonderful proof of the potency of mathematics.

In E.T. Bell

*Men of Mathematics* (p. xvi)

Simon &amp; Schuster. New York, New York, USA. 1937

**MATHEMATICS, POWER OF****Mach, Ernst** 1838–1916

Austrian physicist and philosopher

Strange as it may sound, the power of mathematics rests on its evasion of all unnecessary thought and on its wonderful saving of mental operations.

In E.T. Bell

*Men of Mathematics* (p. xvi)

Simon &amp; Schuster. New York, New York, USA. 1937

**MATHEMATICS, PROBLEMS OF****Weyl, Hermann** 1885–1955

German mathematician

The problems of mathematics are not isolated problems in a vacuum; there pulses in them the life of ideas which realize themselves in concerto through our human endeavors in our historical existence, but forming an indissoluble whole transcend any particular science.

In K. Chandrasekhar

*Hermann Weyl*

Hermann Weyl Memorabilia (p. 84)

Springer-Verlag. Berlin, Germany. 1986

**MATHEMATICS, PROFESSOR OF****Karpinski, Lewis Charles**

Mathematician

As a professor of mathematics I am practically required by the ethics of the profession to be absent-minded, unmethodical, and inconsistent in many ways fatal to bibliographical excellence.

*Bibliography of Mathematical Works Printed in America Through 1850*

Preface (p. viii)

University of Michigan Press. Ann Arbor, Michigan, USA. 1940

**MATHEMATICS, PROGRESS OF****Black, Max** 1909–88

Anglo-American philosopher

The progress of mathematics is not smooth, nor is the science, as the layman imagines, a collection of subtle principles and infallible results, springing mysteriously yet convincingly into the minds of their inventors.

*The Nature of Mathematics: A Critical Survey*

Section III (p. 169)

Routledge &amp; Kegan Paul. London, England. 1933

**Bronowski, Jacob** 1908–74

Polish-born English mathematician and polymath

...I find both a special pleasure and constraint in describing the progress of mathematics, because it has been part of so much speculation: a ladder for mystical as well as rational thought in the intellectual ascent of man.

*The Ascent of Man*

Chapter 5 (p. 155)

Little, Brown &amp; Company. Boston, Massachusetts, USA. 1973

**Dirac, Paul Adrien Maurice** 1902–84

English theoretical physicist

The steady progress of physics requires for its theoretical formulation a mathematics which get continually more advanced. This is only natural and to be expected. What however was not expected by the scientific workers of the last century was the particular form that the line of advancement of mathematics would take, namely it was expected that mathematics would get more and more complicated, but would rest on a permanent basis of axioms and definitions, while actually the modern physical developments have required a mathematics that continually shifts its foundation and gets more abstract.

Quantised Singularities in the Electromagnetic Field (p. 505)

Cambridge University Press. Cambridge, England. 1995

**Rota, Gian-Carlo** 1932–99

Italian-born American mathematician

The progress of mathematics can be viewed as progress from the infinite to the finite.

*Indiscrete Thoughts*

Chapter XX (p. 214)

Birkhäuser. Boston, Massachusetts, USA. 1997

**MATHEMATICS, PROPORTIONS OF****Hempel, Carl G.** 1905–97

German philosopher of science

The propositions of mathematics have, therefore, the same unquestionable certainty which is typical of such propositions as “All bachelors are unmarried,” but they also share the complete lack of empirical content which is associated with that certainty: The propositions of mathematics are devoid of all factual content; they convey no information whatever on any empirical subject matter.

*The Philosophy of Carl G. Hempel*  
Part I, Chapter 1 (p. 13)  
Oxford University Press. Oxford, England. 2001

## MATHEMATICS, PURE

**Begley, Sharon** 1956–  
Science editor

Pure mathematics is a sucker's game. It lures the curious and the confident with its seeming simplicity only to make them look like fools.

New Answer for an Old Question  
*Newsweek*, July 5, 1993 (p. 52)

**Cantor, Georg** 1845–1918  
German mathematician

The pure mathematician knows that pure mathematics has an end in itself which is more allied with philosophy.

Translated by Philip Edward Bertrand Jourdain  
*Contributions to the Founding of the Theory of Transfinite Numbers*  
Introduction (p. 2)  
The Open Court Publishing Co. Chicago, Illinois, USA. 1915

**Dillmann, E.**  
No biographical data available

Pure mathematics proves itself a royal science both through its content and form, which contains within itself the cause of its being and its methods of proof. For in complete independence mathematics creates for itself the object of which it treats, its magnitudes and laws, its formulas and symbols.

*Die Mathematik die Fackelträgerin einer neuen Zeit* (p. 94)  
Publisher undetermined. Stuttgart, Germany. 1889

**Einstein, Albert** 1879–1955  
German-born physicist

Pure mathematics is, in its way, the poetry of logical ideas.

Professor Einstein Writes in Appreciation of a Fellow-Mathematician  
*New York Times*, May 5, 1935

**Everett, Edward** 1794–1865  
Whig Party politician

In the pure mathematics we contemplate absolute truths, which existed in the divine mind before the morning stars sang together, and which will continue to exist there, when the last of their radiant host shall have fallen from heaven.

*Inauguration of Washington University at Saint Louis, Missouri. April 23, 1857*  
Mr. Everett's Inaugural Address on Academic Education (p. 91)  
Little, Brown & Co. Boston, Massachusetts, USA. 1857

**Fitch, G. D.**  
No biographical data available

Pure mathematics is a collection of hypothetical, deductive theories, each consisting of a definite system of primitive, undefined concepts or symbols and primitive, unproved, but self-consistent assumptions (commonly called axioms) together with their logically deducible consequences followed by rigidly deductive processes without appeal to intuition.

In Henry P. Manning  
*The Fourth Dimension Simply Explained*  
Non-Euclidean Geometry of the Fourth Dimension (p. 58)  
Munn & Company, Inc. New York, New York, USA. 1910

**Glaisher, James Whitbread Lee** 1848–1928  
English mathematician

By pure mathematics I do not mean the ordinary processes of algebra, differential and integral calculus, &c., which every worker in the so-called mathematical sciences should have at his command. I refer to the abstract sciences which do not rest upon experiment in the ordinary sense of the term, their fundamental principles being derived from observations so simple as to be more or less axiomatic.

*Report of the Sixtieth Meeting of the British Association for the Advancement of Science*  
Presidential Address  
John Murray. London, England. 1891

**Godwin, William** 1756–1836  
English political philosopher

Pure mathematics are concerned only with abstract propositions, and have nothing to do with the realities of nature. There is no such thing in actual existence as a mathematical point, line or surface. There is no such thing as a circle or square. But that is of no consequence. We can define them in words, and reason about them. We can draw a diagram, and suppose that line to be straight which is not really straight, and that figure to be a circle which is not strictly a circle. It is conceived therefore by the generality of observers, that mathematics is the science of certainty.

*Thoughts on Man*  
On Astronomy  
A.M. Kelley. New York, New York, USA. 1969

**Halmos, Paul R.** 1916–2006  
Hungarian-born American mathematician

All of pure mathematics, it is said, comes from the real world, the way geometry, according to legend, comes from measuring the effect of the floods on the Nile. (If that's false, if geometry existed before it was needed, the argument begins on a shaky foundation. If it's true, the

argument tends to prove only that applied mathematics cannot get along without pure [mathematics], as an ant-eater cannot get along without ants, but not necessarily the reverse.)

In Ian Stewart

*The Problems of Mathematics*

Chapter 20 (p. 223)

Oxford University Press, Inc. Oxford, England. 1987

Pure mathematics can be practically useful and applied mathematics can be artistically elegant.

In Lynn Arthur Steen

*Mathematics Tomorrow*

Applied Mathematics Is Bad Mathematics (p. 12)

Springer-Verlag. New York, New York, USA. 1981

**Hardy, G. H. (Godfrey Harold)** 1877–1947

English pure mathematician

...pure mathematics is on the whole distinctly more useful than applied. For what is useful above all is technique, and mathematical technique is taught mainly through pure mathematics.

*A Mathematician's Apology*

Chapter 26 (p. 134)

Cambridge University Press. Cambridge, England. 1967

**Iyer, S. Sandaram**

No biographical data available

Pure mathematics exist by themselves; no will produces them, no power can limit them. They are eternal Laws, that no man can infringe, and from which it is impossible to escape.

*Thoughts on the Metaphysics of Theosophy*

Synthetic Recapulation (p. 91)

The Calcutta Central Press. Calcutta, India. 1883

**Keyser, Cassius Jackson** 1862–1947

American mathematician

...pure mathematics is a house of many chambers; he [the mathematician] knows that its foundations lie far beneath the level of common thought; and that the superstructure, quickly transcending the power of imagination to follow it, ascends higher and higher, ever keeping open to the sky; he knows that the manifold chambers – each of them a mansion in itself – are all of them connected in wondrous ways, together constituting a fit laboratory and dwelling for the spirit of men of genius.

*The Human Worth of Rigorous Thinking: Essays and Addresses*

Chapter II (p. 31)

Columbia University Press. New York, New York, USA. 1916

**King, Jerry P.**

American mathematician

...pure mathematics is mathematics for mathematics' sake and applied mathematics is mathematics for something else.

*The Art of Mathematics*

Chapter 2 (p. 26)

Plenum Press. New York, New York, USA. 1992

**Lemon, Harvey Brace**

Physicist

...it appears that we may be led to the discovery of new facts not only by direct experimentation, but also through the somewhat mysterious rites and rituals of the symbolism of pure mathematics. In this fact alone would mathematics as a leading science find ample justification in the mind of the experimental investigator – were such justification at all necessary.

In H.H. Newman (ed.)

*The Nature of the World and of Man*

Atomic Structure (p. 101)

The University of Chicago Press. Chicago, Illinois, USA. 1927

**Novalis (Friederich von Hardenberg)** 1772–1801

German poet

Pure mathematics is the intuition of the understanding.

Quoted in Panthea

*Eclectic Gatherings*

*The Reasoner*, Volume 6, 1849 (p. 374)

**Stewart, Dugald** 1753–1828

Scottish philosopher

In pure mathematics, where all the various truths are necessarily connected with each other, (being all necessarily connected with those hypotheses which are the principles of the science,) an arrangement is beautiful in proportion as the principles are few; and what we admire perhaps chiefly in the science, is the astonishing variety of consequences which may be demonstrably deduced from so small a number of premises.

*Elements of the Philosophy of the Human Mind* (Volume 3)

Part Third, Chapter I, Section III (pp. 186–187)

Carey, Lea & Carey. Philadelphia, Pennsylvania, USA. 1827

**Trudeau, Richard J.**

No biographical data available

Pure mathematics is the world's best game. It is more absorbing than chess, more of a gamble than poker, and lasts longer than Monopoly. It's free. It can be played anywhere – Archimedes did it in a bathtub. It is dramatic, challenging, endless, and full of surprises.

*Dots and Lines*

Chapter 1 (p. 9)

The Kent State University Press. Kent, Ohio, USA. 1973

**Whewell, William** 1794–1866

English philosopher and historian

...the ideas which these sciences [Geometry, Theoretical Arithmetic and Algebra] involve extend to all objects and changes which we observe in the external world; and

hence the consideration of mathematical relations forms a large portion of many of the sciences which treat of the phenomena and laws of external nature, as Astronomy, Optics, and Mechanics. Such sciences are hence often termed Mixed Mathematics, the relations of space and number being, in these branches of knowledge, combined with principles collected from special observation; while Geometry, Algebra, and the like subjects, which involve no result of experience, are called Pure Mathematics.

*The Philosophy of the Inductive Sciences Founded Upon Their History* (Volume 1)

Part I, Book 2, Chapter I, Section 4 (p. 83)

John W. Parker. London, England. 1847

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

The science of Pure Mathematics, in its modern developments, may claim to be the most original creation of the human spirit.

*Science and the Modern World*

Chapter II (p. 29)

The Macmillan Company. New York, New York, USA. 1929

## MATHEMATICS, PURPOSE OF

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

To those who inquire as to the purpose of mathematics, the usual answer will be that it facilitates the making of machines, the travelling from place to place, and the victory over foreign nations, whether in war or commerce.

*Mysticism and Logic: And Other Essays*

Chapter IV (p. 59)

Longmans, Green & Co. London, England. 1919

## MATHEMATICS, RIGOR OF

**Keyser, Cassius Jackson** 1862–1947

American mathematician

...the rigor of mathematics is not absolute – absolute rigor is an ideal, to be, like other ideals, aspired unto, forever approached, but never quite attained, for such attainment would mean that every possibility of error or indetermination, however slight, had been eliminated from idea, from symbol, and from argumentation.

*The Human Worth of Rigorous Thinking: Essays and Addresses*

The Human Significance of Mathematics (pp. 48–49)

Columbia University Press. New York, New York, USA. 1916

## MATHEMATICS, RULES OF

**Hogben, Lancelot** 1895–1975

English zoologist

If the rules of mathematics are rules of grammar, there is no stupidity involved when we fail to see that a mathematical truth is obvious.

*Mathematics for the Millions*

Chapter I (p. 32)

W.W. Norton & Company, Inc. New York, New York, USA. 1917

## MATHEMATICS, SEA OF

**Dawson, John William** 1820–99

Canadian geologist

...as we begin to add and subtract, we have launched ourselves on the boundless sea of mathematics.

*Fossil Men and Their Modern Representatives*

Chapter XI (p. 313)

Hodder and Stoughton. London, England. 1880

## MATHEMATICS, SCIENCE OF

### Author undetermined

The science of mathematics, both pure and mixed, can never cease to be interesting and important to man, as long as the relations of quantity shall exist, as long as ships shall traverse the ocean, as long as man shall measure the surface or heights of the earth on which he lives, or calculates the distances and examine the relations of the planets and stars; and as long as the *iron reign of war* shall demand the discharge of projectiles, or the construction of complicated defences.

Introductory Remarks

*The American Journal of Science*, Volume 1, Number 1, 1819 (p. 8)

## MATHEMATICS, SERVICE OF

**Birkhoff, George David** 1884–1944

American mathematician

The primary service of modern mathematics is that it alone enables us to understand the vast abstract permanences which underlie the flux of things, without requiring us to regard its self-consistent abstractions as more than specific limited instruments of thought.

In J.G. Crowther (ed.)

*Science Today*

Mathematics: Quantity and Order (p. 317)

Eyre & Spottiswoode. London, England. 1934

## MATHEMATICS, SPEAK OF

**Keyser, Cassius Jackson** 1862–1947

American mathematician

It is customary to speak of mathematics, of pure mathematics, and of applied mathematics, as if the first were

a genus owning the other two as species. The custom is unfortunate because it is misleading.

*Mole Philosophy and Other Essays*

Chapter XVIII (pp. 109–110)

E.P. Dutton & Company. New York, New York, USA. 1927

## MATHEMATICS, SPIRIT OF

**Pascal, Blaise** 1623–62

French mathematician and physicist

There is a great difference between the spirit of Mathematics and the spirit of Observation. In the former, the principles are palpable, but remote from common use; so that from want of custom it is not easy to turn our head in that direction; but if it be thus turned ever so little, the principles are seen fully confessed, and it would argue a mind incorrigibly false to reason inconsequentially on principles so obtrusive that it is hardly possible to overlook them.

*Edinburgh Review*, Volume 52, January, 1836 (p. 241)

## MATHEMATICS, STRUCTURE OF

**Buchanan, Scott** 1895–1968

American educator and philosopher

The structure of mathematics and their propositions about them are ways for the imagination to travel and the wings, or legs, or vehicles to take you where you want to go.

*Poetry and Mathematics*

Chapter I (p. 36)

The University of Chicago Press. Cambridge, England. 1975

## MATHEMATICS, STUDENT OF

**Lovett, E. O.**

Mathematician

...the student of mathematics should trust no middleman, but go with his own head to original sources, to the masters themselves. Second-hand ideas are as full of bacteria as second-hand books and clothing.

*Bulletin of the American Mathematical Society*

Volume IV 1898 (p. 552)

**Mach, Ernst** 1838–1916

Austrian physicist and philosopher

The student of mathematics often finds it hard to throw off the uncomfortable feeling that his science, in the person of his pencil, surpasses him in intelligence – an impression which the great Euler confessed he often could not get rid of. This feeling finds a sort of justification when we reflect that the majority of the ideas we deal

with were conceived by others, often centuries ago. In a great measure it is really the intelligence of other people that confronts us in science.

*Popular Scientific Lectures*

The Economical Nature of Physical Inquiry (p. 196)

The Open Court Publishing Company. Chicago, Illinois, USA. 1898

## MATHEMATICS, STRENGTH OF

**Barnett, Percy Arthur** 1858–1941

English educator

The strength of mathematics is derived from the very fact that its truths are detachable by abstraction from the concretes in which they exist for our senses. We argue *in vacuo*, so to speak, without any possibility of error arising from the accidents of individual experience, prejudice, opinion, or the imperfection of our senses.

*Common Sense in Education and Teaching*

Chapter IX (p. 222)

Longmans, Green & Company. London, England. 1899

## MATHEMATICS, STUDY OF

**Chancellor, William Estabrook** 1867–1963

American academic and writer

The motive for the study of mathematics is insight into the nature of the universe. Stars and strata, heat and electricity, the laws and processes of becoming and of being, incorporate mathematical truths. If language imitates the voice of the Creator, revealing His heart, mathematics discloses His intellect, repeating the story of how things came into being. And the value of mathematics, appealing as it does to our energy and to our honor, to our desire to know the truth and thereby to live as of right in the household of God, is that it establishes us in larger and larger certainties. As literature develops emotion, understanding, and sympathy, so mathematics develops observation, imagination, the reason.

*A Theory of Motives, Ideals, and Values in Education*

Chapter XIX (p. 406)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1907

**de Morgan, Augustus** 1806–71

English mathematician and logician

No person commences the study of mathematics without soon discovering that it is of a very different nature from those to which he has been accustomed.

*On the Study and Difficulties of Mathematics*

Chapter I (p. 1)

The Open Court Publishing Co. Chicago, Illinois, USA. 1898

**de Staël (Anne-Louise-Germaine),**

**Mme.** 1766–1817

French romantic writer

The study of mathematics, habituating us to certainty, inflames us against all opinions in contradiction with our own, &c.

Quoted in William Hamilton

*Discussions on Philosophy and Literature, Education and University Reform*

On the Study of Mathematics as an Exercise of the Mind (p. 297)  
Harper & Brothers Publishers. New York, New York, USA. 1861

### **Edwards, Tyron** 1809–94

American theologian

The study of mathematics is like climbing up a steep and craggy mountain; when once you reach the top, it fully recompenses your trouble, by opening a fine, clear, and extensive prospect.

*The New Dictionary of Thoughts: A Cyclopaedia of Quotations* (p. 380)  
Standard Book Company. New York, New York, USA. 1948

The study of mathematics cultivates the reason; that of the languages, at the same time, the reason and the taste. The former gives the grasp and power to the mind; the latter both power and flexibility. The former by itself, would prepare us for a state of certainties, which nowhere exists; the later, for a state of probabilities which is that of common life. Each, by itself, does but an imperfect work: in the union of both, is the best discipline for the mind, and the best mental training for the world as it is.

*The New Dictionary of Thoughts: A Cyclopaedia of Quotations* (p. 380)  
Standard Book Company. New York, New York, USA. 1948

### **Hardy, G. H. (Godfrey Harold)** 1877–1947

English pure mathematician

...the study of mathematics is, if an unprofitable, a perfectly harmless and innocent occupation.

*A Mathematician's Apology*

Section 6 (p. 74)

Cambridge University Press. Cambridge, England. 1967

### **Holliday, Francis**

No biographical data available

In short, the study of the mathematics is not only an agreeable and beneficial amusement in a retired and country life, but is the best expedient for forming the minds of youth, by taking them off from the fruitless and airy exercises of the fancy, and rendering them serious, diligent and inquisitive in the search of knowledge and truth.

In Francis Holliday

*Miscellanea Curiosa Mathematica* (Volume 1)

Preface (p. viii)

Printed for Edward Cave. London, England. 1749

### **Leslie, Sir John** 1766–1832

Scottish physicist and mathematician

The study of mathematics holds forth two capital objectives; while it traces the beautiful relations of figure and quantity, it likewise accustoms the mind to the invaluable

exercise of patient attention and accurate reasoning. Of these distinct objects the last is perhaps the most important in a course of liberal education. For this purpose, the geometry of the ancients is the most powerfully recommended, as bearing the stamp of that acute people, and displaying the finest specimens of logical deduction. Some of the propositions, indeed, might be reached by a sort of algebraic calculation; but such an artificial mode of procedure gives only an apparent facility, and leaves no clear or permanent impression on the mind.

*Elements of Geometry, Geometrical Analysis, and Plane Trigonometry*  
Preface (pp. v–vi)

Printed by James Ballentyne & Company. Edinburgh, Scotland. 1809

### **Locke, John** 1632–1704

English philosopher and political theorist

...the study of mathematics would show them [learned men] the necessity there is in reasoning, to separate all the distinct ideas, and see the habitudes that all those concerned in the present inquiry have to one another, and to lay by those which relate not to the proposition in hand, and wholly to leave them out of the reckoning.

*An Essay Concerning Human Understanding* (Volume 2)

On the Conduct of the Understanding (p. 224)

Printed for Thomas Tegg. London, England. 1828

### **Mann, Thomas** 1875–1955

German-born American novelist

I tell them that if they will occupy themselves with the study of mathematics they will find in it the best remedy against the lusts of the flesh.

*The Magic Mountain*

Chapter VI

Choler and Worse (p. 417)

Alfred A. Knopf. New York, New York, USA. 1966

### **Monboddo, Lord James Burnett** 1714–99

Scottish anthropologist

Those who have studied mathematics much, and no other science, are apt to grow so fond of them, as to believe that there is no certainty in any other science, nor any other axioms than those of Euclid.

*Edinburgh Review*, Volume 52, January 1836 (p. 248)

### **Salat, J.**

No biographical data available

The study of Mathematics, unless special precaution be taken, is rather a hindrance than an aid – For, in so far as the mathematician, accustomed to his own mode of thinking, and ignorant of any other, applies, or does not apply it to the supersensible – what must follow? In the former case, the supersensible world is denied, inasmuch as it cannot be mathematically demonstrated; and, in the latter, affirmed only on the ground of feeling and imagination. Thus, on the one alternative, the mathematician becomes necessarily a Materialist; on the other, a Mystic.

Quoted in William Hamilton  
*Discussions on Philosophy and Literature, Education and University Reform*  
 On the Study of Mathematics as an Exercise of the Mind (p. 294)  
 Harper & Brothers Publishers. New York, New York, USA. 1861

**Smith, David Eugene** 1860–1945  
 Mathematician

I know of nothing which acts as such a powerful antidote that which I ventured to call “opinionatedness,” as a study of mathematics.

*The Poetry of Mathematics and Other Essays*  
 Religio Mathematici (p. 35)  
 Scripta Mathematica. New York, New York, USA. 1934

**Somerville, Mary** 1780–1872  
 English mathematician

That the study of mathematics and their application to astronomy are full of interest will be allowed by all who have devoted their time and attention to these pursuits; and they only can estimate the delight of arriving at truth, whether it be in the discovery of a world, or of a new property of numbers.

*Mechanism of the Heavens*  
 Preliminary Dissertation (p. 2)  
 John Murray. London, England. 1831

**Sylvester, James Joseph** 1814–97  
 English mathematician

I know, indeed, and can conceive of no pursuit so antagonistic to the cultivation of the oratorical faculty...as the study of Mathematics. An eloquent mathematician must, from the nature of things, ever remain as rare a phenomenon as a talking fish, and it is certain that the more anyone gives himself up to the study of oratorical effect the less will he find himself in a fit state to mathematics.

*The Collected Mathematical Papers of James Joseph Sylvester* (Volume 3)  
 Address  
 Johns Hopkins University, 22 February, 1877 (p. 72)  
 University Press. Cambridge, England. 1904–1912

**Whitehead, Alfred North** 1861–1947  
 English mathematician and philosopher

The study of mathematics is apt to commence in disappointment. The important applications of the science, the theoretical interest of its ideas, and the logical rigor of its methods, all generate the expectation of a speedy introduction to processes of interest. We are told that by its aid the stars are weighed and the billions of molecules in a drop of water are counted. Yet, like the ghost of Hamlet’s father, this great science eludes the efforts of our mental weapons to grasp it.

*An Introduction to Mathematics*  
 Chapter 1 (p. 1)  
 Oxford University Press, Inc. New York, New York, USA. 1958

**Wright, Frank Lloyd** 1867–1959  
 American architect

You can study mathematics all your life and never do a bit of thinking.

In Robert B. Heywood (ed.)  
*The Works of The Mind*  
 The Architect (pp. 57–58)  
 The University of Chicago Press. Chicago, Illinois, USA. 1947

## MATHEMATICS, SYSTEM OF

**Weyl, Hermann** 1885–1955  
 German mathematician

No Hilbert will be able to assure us of consistency forever; we must be content if a simple axiomatic system of mathematics has met the test of our elaborate mathematical experiments so far.... A truly realistic mathematics should be conceived, in line with physics, as a branch of the theoretical construction of the one real world, and should adopt the same sober and cautious attitude toward hypothetic extensions of its foundations as is exhibited by physics.

*Philosophy of Mathematics and Natural Science*  
 Appendix A (p. 235)  
 Princeton University Press. Princeton, New Jersey, USA. 1949

## MATHEMATICS, TEACHER OF

**Buchanan, Scott** 1895–1968  
 American educator and philosopher

In general the teacher of mathematics has been the high priest of an occult ritual, the keeper in many senses of an esoteric doctrine which only his superiors or predecessors have understood.

*Poetry and Mathematics*  
 Chapter I (p. 35)  
 The University of Chicago Press. Cambridge, England. 1975

## MATHEMATICS, TRANSLATING

**Slosson, Edwin E.** 1865–1929  
 American chemist and journalist

Translating mathematics into ordinary language is like translating music. It cannot be done. One could describe in detail a sheet of music and tell the shape of each note and where it is placed on the staff, but that would not convey any idea of how it would sound when played. So, too, I suppose that even the most complicated equation could be described in common words, but it would be so verbose and involved that nobody could get the sense of it.

*Chats on Science*  
 Chapter LXXIV (pp. 226–227)  
 G. Bell & Sons Ltd. London, England. 1924

## MATHEMATICS, UNIVERSE OF

**Stein, Sherman K.**  
 No biographical data available

The universe of mathematics grows out of the world about us like dreams out of the events of the day.

*Mathematics: The Man-Made Universe*

Chapter 19 (p. 471)

Dover Publications. Mineola, New York, USA. 1999

The universe of mathematics is now so vast that in order to have some idea of its nature and extent, it is necessary to divide it into smaller constellations, even though these constellations are not separated by clearcut barriers.

*Mathematics: The Man-Made Universe*

Chapter 19 (p. 471)

Dover Publications. Mineola, New York, USA. 1999

## MATHEMATICS, USEFULNESS OF

**Wigner, Eugene Paul** 1902–95

Hungarian-born American physicist

The enormous usefulness of mathematics in the natural sciences is something bordering on the mysterious.

The Unreasonable Effectiveness of Mathematics in the Natural Sciences

*Communications on Pure and Applied Mathematics*, Volume XIII,

Number 1, February, 1960 (p. 2)

## MATHEMATICS, WHOLE OF

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

The whole of Mathematics consists in the organization of a series of aids to the imagination in the process of reasoning.

*A Treatise on Universal Algebra, with Applications*

Chapter I (p. 12)

Hafner Publishing Company. New York, New York, USA. 1960

## MATHEMATICS, WILDS OF

**Weaver, Jefferson Hane**

American science author

To meander through the wilds of mathematics is to engage in a journey for which one must make certain basic preparations. Unlike a safari through the African subcontinent, however, one does not need to take 50 boxes of supplies or hire an entire village of stewards to help carry the load. No, it is possible to travel through the densest thickets of mathematics using only a pencil and paper and an active imagination.

*Conquering Calculus: The Easy Road to Understanding Mathematics*

Chapter 2 (p. 31)

Plenum Press. New York, New York, USA. 1998

## MATHEMATICS, WORLD OF

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

The world of mathematics, which you condemn, is really a beautiful world; it has nothing to do with life and death and human sordidness, but is eternal, cold and passionless.

To me pure mathematics is one of the highest forms of art; it has a sublimity quite special to itself, and an immense dignity derived from the fact that its world is exempt from change and time. I am quite serious in this.... [M]athematics is the only thing we know of that is capable of perfection; in thinking about it we become Gods.

In N. Griffin (ed.)

*The Selected Letters of Bertrand Russell* (Volume 1)

Letter Number 98 (p. 224)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1922

## MATHEMATICS, YOUTHFULNESS OF

**Bell, E. T. (Eric Temple)** 1883–1960

Scottish-American mathematician and educator

It is the perennial youthfulness of mathematics itself which marks it off with a disconcerting immortality from the other sciences.

*The Queen of the Sciences* (p. 5)

Strechert. New York, New York, USA. 1938

## MATHIVERSE

**Stewart, Ian** 1945–

English mathematician

The Mathiverse transcends Time and Space...it transcends Intelligence and Extelligence...it transcends Thought; it transcends Transcendence itself.

*Flatterland*

The Visitation (p. 28)

Perseus Publishing. Cambridge, Massachusetts, USA. 2001

## MATTER

There is naught in all that science has disclosed to man more utterly – one might say more hopelessly – mysterious than that power by which in an instant, throughout the whole universe, matter acts on matter.

*Other Suns Than Ours*

Chapter XIX (p. 303)

Longmans, Green & Co. London, England. 1896

**Anaxagoras** ca. 500 BCE–428 BCE

Greek philosopher of nature

The Greeks are wrong to recognize coming into being and perishing; for nothing comes into being nor perishes, but is rather compounded or dissolved from things that are. So they would be right to call coming into being composition and perishing dissolution.

In Geoffrey Stephen Kirk, John Earle Raven and Malcolm Schofield (eds.)

*The Presocratic Philosophers: A Critical History With a Selection of Texts* (2nd edition) (p. 358)

**Andrews, Thomas** 1813–85  
Irish chemist and physicist

We have seen that the gaseous and liquid states are only distant stages of the same condition of matter, and are capable of passing into one another by a process of continuous change. A problem of far greater difficulty yet remains to be solved, the possible continuity of the liquid and solid states of matter. The fine discovery made some years ago by James Thomson, of the influence of pressure on the temperature at which liquefaction occurs, and verified experimentally by Sir W. Thomson, points, as it appears to me, to the direction this inquiry must take: and in the case at least of those bodies which expand in liquefying, and whose melting points are raised by pressure, the transition may possibly be effected. But this must be a subject for future investigation; and for the present I will not venture to go beyond the conclusion I have already drawn from direct experiment, that the gaseous and liquid forms of matter may be transformed into one another by a series of continuous and unbroken changes.

On the Continuity of the Gaseous and Liquid States of Matter  
*Chemical News and Journal of Industrial Science*, March, 1870 (p. 113)

We may indeed live yet to see, or at least we may feel some confidence that those who come after us will see, such bodies as oxygen and hydrogen in the liquid, perhaps even in the solid state, and the question of their metallic or non-metallic nature thereby finally settled.

On the Continuity of the Liquid and Gaseous States of Matter  
*The Journal of the Royal Dublin Society*, Volume 6, Number 40, 1872 (p. 55)

**Aurelius Antoninus, Marcus** 121–180  
Roman emperor

I consist of figure and matter: neither of these will be annihilated, as neither of them were created from nothing. Therefore, every part of me, when a change shall take place, will go into something else in the world, and this again will be changed into some other thing, and so on ad infinitum.

Edward Howell. Liverpool, England. 1864

**Bacon, Sir Francis** 1561–1626  
English lawyer, statesman, and essayist

For there is nothing more true in nature than the twin propositions, that “nothing is produced from nothing,” and “nothing is reduced to nothing,” but that the absolute quantum or sum total of matter remains unchanged, without increase or diminution.

*The Works of Francis Bacon* (Volume 4)  
The New Organon, Aphorisms, Book II (p. 197)  
Longman & Co. London, England. 1858

...there is no doubt but that the seeds of things, though equal, as soon as they have thrown themselves into

certain groups and knots, completely assume the nature of dissimilar bodies, till those groups or knots are dissolved.

**Bicknell, Alexander** ?–1796  
English writer

So when we view a castle-wall  
Rent by a ponderous cannon ball,  
We must conclude from your new rules  
(Our reas'ning fathers being fools),  
That 'tis not solid brick or stone  
Which solid iron has o'erthrown;  
But that a Nothing did attract,  
And had not strength to counteract,  
By its repulsive force the thing,  
(The Thing your pardon Sir, the Nothing).
