Scottish biographer and diarist

I shall always remember the alacrity with which Johnson answered, striking his foot with mighty force against a large stone, till he rebounded from it – “I refute it thus.”

*Boswell's "Life of Samuel Johnson"*  
6 August, 1763 (p. 333)  
Oxford University Press, Inc. Oxford, England. 1965

**Boyle, Robert** 1627–91  
English natural philosopher and theological writer

Proposition 1. *It seems not absurd to conceive that at the first Production of mixt Bodies, the Universal Matter whereof they among other Parts of the Universe consisted, was actually divided into little Particles of Several Sizes and Shapes variously mov'd.*

*The Sceptical Chymist*

The First Part (p. 30)

Printed by H. Hall for R. Davis & B. Took. 1680

**Brady, Nicholas** 1659–1726

Anglican divine and poet

Soul of the World, inspir'd by Thee,  
The jarring Seeds of Matter did agree.  
Thou didst the scattr'd Atoms bind,  
Which, by thy Laws of True Proportion join'd,  
Made up of various Parts  
One Perfect Harmony.

In John Bell

*Bell's Classical Arrangement of Fugitive Poetry* (Volume 3)

Ode for St. Cecelia's Day

Printed by John Bell. London, England. 1793

**Brunstein, Karl A.**

No biographical data available

Matter on this planet has so organized itself that finally, in the form of man, it has now come – for that brief instant of cosmic time represented by the several millennia of human civilization – to contemplate its own properties, its own origin, its own fate.

*Beyond the Four Dimensions*

Chapter Six (p. 118)

Walker & Co. New York, New York, USA. 1979

**Bryson, Bill** 1951–

Author

In three minutes, 98% of all the matter there is or will ever be has been produced. We have a universe. It is a place of the most wondrous and gratifying possibility, and beautiful, too. And it was all done in about the time it takes to make a sandwich.

*A Short History of Nearly Everything*

Chapter 1 (p. 10)

Broadway Books. New York, New York, USA. 2003

**Burroughs, John** 1837–1921

American naturalist and essayist

How many things may be affirmed of the visible, ponderable bodies on the earth's surface which are just the opposite of what is true of the invisible, imponderable bodies of the interior world of matter, and which also do not hold among the bodies of celestial space!

*Under The Apple Tree*

Scientific Faith Once More (p. 159)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1916

**Čapek, Milič** 1909–97

Czechoslovakian philosopher and physicist

This concept [matter] has hardly changed from the times of Leucippus to the beginning of the twentieth century: an impenetrable something, which fills completely certain

regions of space and which persists through time even when it changes its location.

*The Philosophical Impact of Contemporary Physics*

Chapter IV (p. 54)

D. van Nostrand Company, Inc. Toronto, Ontario, Canada. 1961

**Chaudhuri, Haridas** 1913–75

Scholar of Indian religions

We know too much about matter today to be materialists any longer.

*The Philosophy of Integralism: The Metaphysical Synthesis of Sri*

*Aurobindo's Teaching* (p. 146)

English organic chemist

...the business of chemists is matter...

Scientists as Citizens

*Australian Journal of Chemistry*, Volume 46, 1993 (p. 268)

**Darling, David** 1953–

Freelance science writer

You are roughly eighteen billion years old and made of matter that has been cycled through the multimillion-degree heat of innumerable giant stars. You are composed of particles that once were scattered across thousands of light-years of interstellar space, particles that were blasted out of exploding suns and that for eons drifted through the cold, starlit vacuum of the Galaxy. You are very much a child of the cosmos.

*Equations of Eternity: Speculations on Consciousness, Meaning, and the Mathematical Rules that Orchestrate the Cosmos*

Introduction (p. xiii)

Hyperion. New York, New York, USA. 1993

**Dastre, A.**

No biographical data available

Between the organic and the inorganic worlds is an apparent abyss.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1902*

The Life of Matter (p. 393)

Government Printing Office. Washington, D.C. 1903

**Descartes, René** 1596–1650

French philosopher, scientist, and mathematician

...with respect to the general cause, it seems manifest to me that it is none other than God himself, who, in the beginning, created matter along with motion and rest, and now by his ordinary concourse alone preserves in the whole the same amount of motion and rest that he then placed in it. For although motion is nothing in the matter moved but its mode, it has yet a certain and determinate quantity, which we easily understand may remain always the same in the whole universe, although it changes in each of the parts of it.

*The Method, Meditations, and Selections from the Principles of Descartes*  
 Note X (p. 291)  
 William Blackwood & Sons. Edinburgh, Scotland. 1907

### Dewar, Redcote

No biographical data available

Some scientists...endeavor to discover what matter is from the point of view of a matterless being, even as metaphysicians endeavor to discover what mind is from the point of view of an eviscerated brain. Both of them are but speculations for bedlam.

*From Matter to Man: A New Theory of the Universe*  
 Chapter III (p. 36)  
 Chapman & Hall, Ltd. London, England. 1898

### Dewey, John 1859–1952

American philosopher and educator

It would be difficult to find a greater distance between any two terms than that which separates “matter” in the Greek-medieval tradition and the technical signification, suitably expressed in mathematical symbols, that the word bears in science today.

In Yervant H. Krikorian (ed.)  
*Naturalism and the Human Spirit*  
 Antinaturalism in extremis (p. 3)  
 Columbia University Press. New York, New York, USA. 1944

### Dirac, Paul Adrien Maurice 1902–84

English theoretical physicist

To get an interpretation of some modern experimental results one must suppose that particles can be created and annihilated. Thus if a particle is observed to come out from another particle, one can no longer be sure that the latter is composite. The former may have been created. The distinction between elementary particles and composite particles now becomes a matter of convenience. This reason alone is sufficient to compel one to give up the attractive philosophical idea that all matter is made up of one kind, or perhaps two kinds of bricks.

*Nobel Lectures, Physics 1922–1941*  
 Nobel lecture for award received in 1933  
 Theory of Electrons and Positrons (p. 321)  
 Elsevier Publishing Company. Amsterdam, Netherlands. 1965

### Dyson, Freeman J. 1923–

American physicist and educator

We have learned that matter is weird stuff. It is weird enough, so that it does not limit God’s freedom to make it do what he pleases.

*Infinite in All Directions*  
 Part One, Chapter One (p. 8)  
 Harper Collins Publisher, Inc. New York, New York, USA. 1988

### Elliot, Hugh Samuel Roger 1881–1930

No biographical data available

In the physicist’s mind, the properties of matter are numberless. It is divided up into molecules and atoms, too

small by a millionfold to be perceived by any microscope, and these are divided up again into particles still smaller. That is to say, the number of sensations, or possible sensations, bound together in the physicist’s mind under the title of matter show little trace of the humble origin from which they started to evolve.

*Modern Science and Materialism* (p. 178)  
 Longmans, Green & Co. London, England. 1919

### Frost, Robert 1874–1963

American poet

It was in a state  
 Of Atomic One  
 Matter was begun –  
 And in fact complete  
 One and yet discrete  
 To conflict and pair.

Everything was there  
 Every single thing  
 Waiting was to bring  
 Clear from hydrogen  
 All the way to men.

*Complete Poems of Robert Frost*  
 A Never Naught Song  
 Henry Holt & Company. New York, New York, USA. 1949

### Gould, Stephen Jay 1941–2002

American paleontologist, evolutionary biologist, and historian of science

Darwin applied a consistent philosophy of materialism to his interpretation of nature. Matter is the ground of all existence; mind, spirit, and God as well, are just words that express the wondrous results of neuronal complexity.

*Ever Since Darwin: Reflections in Natural History*  
 Prologue (p. 13)  
 W.W. Norton & Company, Inc. New York, New York, USA. 1977

[Darwin’s notebooks] include many statements showing that he espoused but feared to expose something he perceived as far more heretical than evolution itself: philosophical materialism – the postulate that matter is the stuff of all existence and that all mental and spiritual phenomena are its by-products.

*Ever Since Darwin: Reflections in Natural History*  
 Chapter 1. Darwin’s Delay (p. 24)  
 W.W. Norton & Company, Inc. New York, New York, USA. 1977

### Hawking, Stephen William 1942–

English theoretical physicist

The point is that the new raw material doesn’t really have to come from anywhere.... The universe can start off with zero energy and still create matter.

In Renée Weber  
*Dialogues with Scientists and Sages: The Search for Unity* (p. 51)  
 Routledge & Kegan Paul. London, England. 1986

### Heaviside, Oliver 1850–1925

English electrical engineer, mathematician, and physicist

Even if we resolve all matter into one kind, that kind will need explaining, and so on forever and ever deeper and deeper into the pit at whose bottom truth lies, without ever reaching it, for the pit is bottomless.

In Joseph William Mellor

*Mellor's Modern Inorganic Chemistry*

Chapter 10 (p. 133)

Longmans, Green & Company. London, England. 1967

### **Hegel, Georg Wilhelm Friedrich** 1770–1831

German philosopher

Motion is the process, the transition of Time into Space and of Space into Time: Matter, on the other hand, is the relation of Space and Time as a peaceful identity.

*Hegel's Philosophy of Nature*

Section 261 (p. 44)

Clarendon Press. Oxford, England. 1970

### **Herbert, Nick**

American physicist

The world is one substance. As satisfying as this discovery may be to philosophers, it is profoundly distressing to physicists as long as they do not understand the nature of that substance. For if quantum stuff is all there is and you don't understand quantum stuff, your ignorance is complete.

*Quantum Reality: Beyond the New Physics*

Chapter 3 (p. 40)

Anchor Press. Garden City, New York, USA. 1985

### **Hilton, Harold**

No biographical data available

It is now generally assumed that *matter is not continuous but course grained*, i.e. that matter is composed of atoms which are practically indivisible and are situated at very small but not infinitesimal distances apart.

*Mathematical Crystallography and the Theory of Groups of Movements*

Part II, Chapter XII (p. 113)

Clarendon Press. Oxford, England. 1903

### **Holbach, Paul Henri Thiry** 1723–89

French philosopher

...as all the world are nearly agreed that matter can, never be totally annihilated, or cease to exist, how can we understand, that that which cannot cease to be. could ever have had a beginning?

Translated by H.D. Robinson

*The System of Nature, Or, Laws of the Moral and Physical World*

(Volume 1)

Chapter 2 (p. 21)

J.P. Mendum

Boston, Massachusetts, USA. 1889

### **Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

If there is anything more wonderful than matter in the sheer versatility of its behavior, I have yet to hear tell of it.

*Frontiers of Astronomy*

Chapter Twelve (p. 224)

Harper & Row, Publishers. New York, New York, USA. 1955

### **Huxley, Julian** 1887–1975

English biologist, philosopher, and author

I am Matter. I am the condensation,  
The Kink in empty space that provides resistance,  
Precious inertia – mine the sole foundation  
On which swift Energy's flow of fluid emanation  
Fraternally builds reality into existence.

*The Captive Shrew and Other Poems of a Biologist*

Matter, Energy, Time and Space

Harper & Brothers. New York, New York, USA. 1933

### **Huxley, Thomas Henry** 1825–95

English biologist

...there are three great problems of our time.... One of these is that doctrine concerning the constitution of matter which, for want of a better name, I'll call "molecular"; the second is the doctrine of the conservation of energy; the third is the doctrine of evolution.

*Collected Essays* (Volume 1)

Method and Result

The Progress of Science (p. 66)

Macmillan & Company Ltd. London, England. 1904

Living matter differs from other matter in degree and not in kind; the microcosm repeats the macrocosm; and one chain of causation connects the nebulous original of suns and planetary systems with the protoplasmic foundation of life and organisation.

In Michael Foster and E. Ray Lankester

*The Scientific Memoirs of Thomas Henry Huxley* (Volume 4)

Chapter XXVIII (p. 506)

Macmillan & Co Ltd. London, England. 1902

...matter and force are the two names of the one artist who fashions the living as well as the lifeless.

*Lay Sermons, Addresses and Reviews*

The Origin of Species (p. 288)

Macmillan & Company Ltd. London, England. 1870

### **Jastrow, Robert** 1925–

American space scientist

Such clouds [gaseous matter] are the stuff out of which stars and planets are made. Appearing, disappearing, and appearing again in endless succession since the beginning of time in the Cosmos, they mark the first step on the path to life.

*Until the Sun Dies*

Chapter 6 (p. 54)

W.W. Norton & Co. New York, New York, USA. 1977

### **Jeans, Sir James Hopwood** 1877–1946

English physicist and mathematician

...matter being nothing but a sort of congealed radiation travelling at less than its normal speed.

*The Mysterious Universe*

Chapter III (p. 93)

The Macmillan Co. New York, New York, USA. 1952

**Joule, James Prescott** 1818–89

English physicist

Matter is endowed with an exceedingly great variety of wonderful properties, some of which are common to all matter, while others are present variously, so as to constitute a difference between one body and another.

*Memoir of James Prescott Joule*

Chapter I (p. 3)

Manchester Literary and Philosophical Society. Manchester, England. 1892

In our notion of matter two ideas are generally included, namely those of *impenetrability* and *extension*. By the extension of matter we mean the space which it occupies; by its impenetrability we mean that two bodies cannot exist at the same time in the same place. Impenetrability and extension cannot with much propriety be reckoned among the *properties* of matter, but deserve rather to be called its *definitions*, because nothing that does not possess the two qualities bears the name of matter. If we conceive of impenetrability and extension we have the idea of matter, and of matter only.

*The Scientific Papers of James Prescott Joule*

On Matter, Living Forces and Heat (p. 265)

Taylor & Francis. London, England. 1884

**Kant, Immanuel** 1724–1804

German philosopher

Give me matter and I will construct a world out of it!

In W. Hastie (ed.)

*Kant's Cosmogony*

Preface (p. 17)

Greenwood Publishing Corporation. New York, New York, USA. 1968

**Kelvin, Lord William Thomson** 1824–1907

Scottish engineer, mathematician, and physicist

If the motion of every particle of matter in the universe were precisely reversed at any instant, the course of nature would be simply reversed forever after. The bursting bubble of foam at the foot of a waterfall would reunite and descend into the water; the thermal motions would reconcentrate their energy, and throw the mass up the fall in drops reforming in a close column of ascending water...living creatures would grow backwards, with conscious knowledge of the future, but no memory of the past, and would become again unborn.

In John D. Barrow

*The World Within The World* (p. 126)

Clarendon Press. Oxford, England. 1988

**Kline, Morris** 1908–92

American mathematics professor and writer

...where is the good, old-fashioned, solid matter that obeys precise, compelling mathematical laws? The stone that Dr. Johnson once kicked to demonstrate the reality of matter has become dissipated in a diffuse distribution of mathematical probabilities.

*Mathematics in Western Culture*

Chapter XXIV (p. 382)

Oxford University Press, Inc. New York, New York, USA. 1953

**Lodge, Sir Oliver** 1851–1940

English physicist

There seems to be a regular gradation of size [of cosmic matter], therefore, ranging from Sirius to dust; and apparently we must regard all space as full of these cosmic particles—stray fragments, as it were, perhaps of some older world, perhaps going to help to form a new one someday.

*Pioneers of Science*

Lecture XVI (p. 332)

Macmillan & Co Ltd. London, England. 1905

**Macfie, Ronald Campbell** 1867–1931

Poet and physician

Matter is the miracle of miracles, the most mystical of all things mystical.

*Science, Matter and Immortality*

Chapter XVI (p. 196)

William & Norgate. London, England. 1909

**Marett, Robert Randolph** 1866–1943

Social anthropologist

Matter moves. Life evolves.

*Anthropology*

Chapter I (p. 14)

Henry Holt & Co. New York, New York, USA. 1912

**Marshall, Roy K.** 1907–

No biographical data available

When we start to wonder about the ultimate structure of matter, we get involved in what is at once the most fascinating and the most provoking field of modern science. We very glibly describe, in words and pictures, the internal structure of an atom, as though we knew what we were talking about.

*The Nature of Things* (2nd edition)

Chapter 1 (p. 1)

Macmillan & Company Ltd. London, England. 1981

**Maxwell, James Clerk** 1831–79

Scottish physicist

Science is incompetent to reason upon the creation of matter itself out of nothing. We have reached the utmost

limit of our thinking faculties when we have admitted that because matter cannot be eternal and self-existent it must have been created.

Molecules

*Nature*, September, 1873 (p. 441)

### **Mendeleyev, Dmitry Ivanovich** 1834–1907

Russian chemist

By gradually studying matter, people finally take command of it. Their predictions concerning it, proved by the facts, become ever more accurate. They use it more widely and more frequently to satisfy their needs. There are no grounds to think that knowledge and our mastery over matter have bounds.

Compiled by V.V. Vorontsov

*Words of the Wise: A Book of Russian Quotations*

Translated by Vic Schneerson

Progress Publishers. Moscow, Russia. 1979

### **Momerie, Alfred Williams** 1848–1900

No biographical data available

To the vulgar man, matter is but another name for dirt: to the man who is a physicist and only a physicist, it is a curious combination of atoms; but to poets and philosophers it is the Shechinah of infinite mystery.

*The Origin of Evil* (6th edition)

The Supernaturalness of Nature (p. 249)

William Blackwood & Sons. Edinburgh, Scotland. 1890

### **Newton, Sir Isaac** 1642–1727

English physicist and mathematician

The quantity of matter is the measure of the same, arising from its density and bulk conjointly.

*In Great Books of the Western World* (Volume 34)

*Mathematical Principles of Natural Philosophy*

Definitions, Definition 1 (p. 5)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

It seems to me, that if the matter of our Sun and Planets and all ye matter in the Universe was evenly scattered throughout all the heavens, and every particle had an innate gravity towards all the rest and the whole space throughout which this matter was scattered was but finite: the matter on ye outside of this space would by its gravity tend towards all ye matter on the inside and by consequence fall down to ye middle of the whole space and there compose one great spherical mass. But if the matter was evenly diffused through an infinite space, it would never convene into one mass.

*Four Letters from Sir Isaac Newton to Doctor Bentley*

Letter to Richard Bentley, 10 December, 1692

Printed for R. & J. Dodsley. London, England. 1756

And much harder it is to suppose that all ye particles in an infinite space should be so accurately poised one among another as to stand still in a perfect equilibrium. For I reckon this as hard as to make not one needle only

but an infinite number of them (so many as there are particles in an infinite space) stand accurately poised upon their points.

*Four Letters from Sir Isaac Newton to Doctor Bentley*

Letter to Richard Bentley, 10 December, 1692

Printed for R. & J. Dodsley. London, England. 1756

As to your first query, it seems to me that if the matter of our sun and planets and all the matter of the universe were evenly scattered throughout all the heavens, and every particle had an innate gravity toward all the rest, and the whole space throughout which this matter was scattered was but finite, the matter on the outside of this space would, by its gravity, tend toward all the matter on the inside and, by consequence, fall down into the middle of the whole space and there compose one great spherical mass.

*Four Letters from Sir Isaac Newton to Doctor Bentley*

Letter to Richard Bentley, 10 December, 1692 (p. 211)

Printed for R. & J. Dodsley. London, England. 1756

...it seems probable to me that God in the beginning formed matter in solid, massy, hard, impenetrable, moveable particles, of such sizes and figures, and with such other properties, and in such proportion to space, as most conduced to the end for which he formed them; and that these primitive particles being solids, are incomparably harder than any porous bodies compounded of them; even so very hard as never to wear or break in pieces; no ordinary power being able to divide what God himself made one in the first creation.

*In Great Books of the Western World* (Volume 34)

*Optics*

Book II, Part I (very near the end)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### **Nichols, Ernest Fox** 1869–1924

American physicist

Matter has two indisputable hallmarks, two properties in the possession of which all the infinitely varied forms of matter unite, inertia and weight.

*Physics*

Lecture (p. 8)

The Columbia University Press. New York, New York, USA. 1907

Matter whose movement moves us all  
 Moves to its random funeral,  
 And Gresham's law that fits the purse  
 Seems to fit the universe.

In Helen Plotz  
*Imagination's Other Place*  
 Entropy (p. 90)  
 Thomas Y. Crowell Company. New York, New York, USA. 1955

**Tait, Peter Guthrie** 1831–1901  
 Scottish physicist and mathematician

Nothing is so preposterously unscientific than to assert... that with the utmost strides attempted by science we should necessarily be sensibly nearer to a conception of the ultimate nature of matter.

*Lectures on Some Recent Advances in Physical Science* (p. 284)  
 Macmillan & Company Ltd. London, England. 1876

Only sheer ignorance could assert that there is any limit to the amount of information which human beings may in time acquire of the constitution of matter. However far we may manage to go, there will still appear before us

something further to be assailed. The small separate particles of a gas are each, no doubt less complex in structure than the whole visible universe, but the comparison is a comparison of two infinities.

*Lectures on Some Recent Advances in Physical Science*  
Lecture XII (pp. 288–289)  
Macmillan & Company Ltd. London, England. 1876

An exact or adequate conception of matter itself, could we obtain it, would almost certainly be something extremely unlike any conception of it which our senses and our reason will ever enable us to form.... [T]he discovery of the ultimate nature of matter is probably beyond the range of human intelligence.

*Properties of Matter* (2nd edition)  
Chapter I (pp. 13, 16)  
Adam & Charles Black. Edinburgh, Scotland. 1890

**Teilhard de Chardin, Pierre** 1881–1955  
French Jesuit, paleontologist, and biologist

...the more we split and pulverise matter artificially, the more insistently it proclaims its fundamental unity.

*The Phenomenon of Man*  
Book One, Chapter I, Section 1 (p. 41)  
Harper & Brothers Publishers. New York, New York, USA. 1959

We do not get what we call matter as a result of the simple aggregation and juxtaposition of atoms. For that, a mysterious identity must absorb and cement them, an influence at which our mind rebels in bewilderment at first, but which in the end must perforce accept.

*The Phenomenon of Man*  
Book One, Chapter I, Section 2 (p. 42)  
Harper & Brothers Publishers. New York, New York, USA. 1959

**Tesla, Nikola** 1865–1943  
Electrical engineer and inventor

...but now a mechanism of a finite number of parts and few at that, cannot perform an infinite number of definite motions, hence the impulses which govern its movements must come from the environment. So the atom, the ulterior element of the Universe's structure is tossed about in space eternally, a play of external influences, like a boat in a troubled sea. Were it to stop its motion it would die. Matter at rest, if such a thing could exist, would be matter dead. Death of matter! Never has a sentence of deeper philosophical meaning been uttered.... There is no death of matter, for throughout the infinite universe, all has to move to vibrate, that is, to live.

*Lectures, Patents, Articles*  
On light and other high frequency phenomena, delivered before the Franklin Institute, Philadelphia, February, 1893.  
N. Tesla Museum, Beograd, Yugoslavia, 1956

**Thompson, Sir D'Arcy Wentworth** 1860–1948  
Scottish zoologist and classical scholar

Cell and tissue, shell and bone, leaf and flower, are so many portions of matter, and it is in obedience to the laws

of physics that their particles have been moved, molded and conformed. They are no exceptions to the rule that God always geometrizes. Their problems of form are in the first instance mathematical problems, their problems of growth are essentially physical problems, and the morphologist is, ipso facto, a student of physical science.

*On Growth and Form* (Volume 1)  
Chapter I (p. 10)  
At The University Press. Cambridge, England. 1951

**Thomson, Sir John Arthur** 1861–1933  
Scottish naturalist

...when we pass from ordinary sight to scientific vision, how subtle and ethereal matter becomes! What pictures modern physics gives us of a restless activity suggestive of life!

*The System of Animate Nature* (Volume 1)  
Lecture II (p. 67)  
William & Norgate. London, England. 1920

**Thomson, Sir Joseph John** 1856–1940  
English physicist

From the point of view of the physicist, a theory of matter is a policy rather than a creed; its object is to connect or co-ordinate apparently diverse phenomena, and above all to suggest, stimulate and direct experiment. It ought to furnish a compass which, if followed, will lead to observer further and further into previously unexplored regions.

*The Corpuscular Theory of Matter*  
Chapter I (p. 1)  
Charles Scribner's Sons. New York, New York, USA. 1907

It [a theory] ought to furnish a compass which, if followed, will lead the observer further and further into previously unexplored regions. Whether these regions will be barren or fertile experience alone will decide; but, at any rate, one who is guided in this way will travel onward in a definite direction, and will not wander aimlessly to and fro.

*The Corpuscular Theory of Matter*  
Chapter I (p. 1)  
Charles Scribner's Sons. New York, New York, USA. 1907

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

Talk of mysteries! – Think of our life in nature – daily to be shown matter, to come in contact with it – rocks, trees, wind on our cheeks! the *solid* earth! the *actual world!* the *common sense!* *Contact!* *Contact!* *Who* are we? *Where* are we?

*The Maine Woods*  
15th Ktaadn (p. 71)  
Houghton Mifflin & Co. Boston, Massachusetts, USA. 1884

**Updike, John** 1932–  
American novelist, short story writer, and poet

There is infinitely more nothing in the universe than anything else.

*The Poorhouse Fair*

Chapter II (p. 93)

Random House, Inc. New York, New York, USA. 2004

**von Helmholtz, Hermann** 1821–94

German scientist and philosopher

...we cannot triumph over the machinery of matter by ignoring it; we can triumph over it only by subordinating it to the aims of our moral intelligence. We must familiarise ourselves with its levers and pulleys, fatal though it be to poetic contemplation, in order to be able to govern them after our own will, and therein lies the complete justification of physical investigation, and its vast importance for the advance of human civilisation.

In David Cahan (ed.)

*Science and Culture: Popular and Philosophical Essays*

On Goethe's Scientific Researches

Lecture, 1853 (p. 17)

The University of Chicago Press. Chicago, Illinois, USA. 1995

**Ward, Henshaw**

No biographical data available

Every particle of matter large enough to be seen is composed of quadrillions of regions of electrical energy.... And each one of the regions is a complication of secrets that are quite unfathomable.

In Frederick Houk Law

*Science in Literature*

A Drop of Water (pp. 276, 277)

Harper & Brothers Publishers. New York, New York, USA. 1929

**Weyl, Hermann** 1885–1955

German mathematician

Not the state of rest, but the states of uniform translation form an objectively distinguished class of motions, and this puts an end to the substantial ether. Finally, and fourthly, the general relativity theory re-endows this metric world structure with the capacity of reacting to the forces of matter. Thus, in a sense, the circle is closed.

*Philosophy of Mathematics and Natural Science*

Part II, Chapter III (p. 176)

Princeton University Press. Princeton, New Jersey, USA. 1949

And now, in our time, there has been unloosed a cataclysm which has swept away space, time and matter, hitherto regarded as the firmest pillars of natural science, but only to make place for a view of things of wider scope, and entailing a deeper vision.

Translated by Henry L. Brose

*Space – Time – Matter*

Introduction (p. 2)

Dover Publications, Inc. New York, New York, USA. 1922

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

Thus, to a really learned man, matter exists in test tubes, animals in cages, art in museums, religion in churches, knowledge in libraries.

Some Problems in Theorizing (pp. 263–264)

William & Norgate. London, England. 1936

**Bell, E. T. (Eric Temple)** 1883–1960

Scottish-American mathematician and educator

All measurements in science are statistical in character.

*The Handmaiden of the Sciences*

Chapter 1 (p. 8)

Williams & Wilkins Co. Baltimore, Maryland, USA. 1937

**Bell, J. A.**

No biographical data available

The concept of “measurement” becomes so fuzzy on reflection that it is quite surprising to have it appearing in physical theory at the most fundamental level.

*Speakable and Unspeakable in Quantum Mechanics*

Chapter 15 (p. 117)

Cambridge University Press. Cambridge, England. 1987

### **Berry, John J.**

No biographical data available

Every man who has entrusted to a woman the work of manufacturing a shirt has had painful experience of her inability to comprehend the importance of accurate measurement. Mr. Smith, for example, permits Mrs. Smith to make a new shirt, to be modeled precisely after an old one which measures, say fifteen inches around the neck. When the new garment is completed Mr. Smith finds that it chokes him, and calls his wife’s attention to the fact. She declares that it measures precisely the same as the model, and, appealing to the tape-measure in proof of her assertion, finds that the new shirt measures only thirteen inches around the neck. Under these circumstances a male shirt-maker would confess that he had made a mistake. Not so Mrs. Smith. She exclaims with every appearance of triumph, “There, what did I tell you. One is almost exactly the same size as the other. There isn’t two inches difference between them.” Nothing could illustrate more forcibly woman’s total inability to grasp the importance of accurate measurements.

*Life of David Belden*

Chapter V (p. 104)

Beldon Brothers. New York, New York, USA. 1891

### **Bondi, Sir Hermann** 1919–2005

English mathematician and cosmologist

A quantity like time, or any other physical measurement, does not exist in a completely abstract way. We find no sense in talking about something unless we specify how we measure it. It is the definition by the method of measuring a quantity that is the one sure way of avoiding talking nonsense...

*Relativity and Common Sense: A New Approach to Einstein*

Chapter VII (p. 65)

Doubleday & Company, Inc. Garden City, New York. 1964

### **Brouwer, L. E. J.**

No biographical data available

It is well to notice in this connection [the mutual relations between the results of counting and measuring] that a natural law, in the statement of which measurable magnitudes occur, can only be understood to hold in nature with a certain degree of approximation; indeed natural laws as a rule are not proof against sufficient refinement of the measuring tools.

Intuitionism and Formalism

*Bulletin of the American Mathematical Society*, Volume 20, November, 1913 (p. 82)

### **Deming, William Edwards** 1900–93

American statistician, educator, and consultant

It is important to realize that it is not the one measurement, alone, but its relation to the rest of the sequence that is of interest.

*Statistical Adjustment of Data* (p. 3)

John Wiley & Sons, Inc. New York, New York, USA. 1938

### **Dewey, John** 1859–1952

American philosopher and educator

Insistence upon numerical measurement when it is not inherently required by the consequence to be effected, is a mark of respect for the ritual of scientific practice at the expense of its substance.

*Logic: The Theory of Inquiry*

Chapter XI (p. 205)

Henry Holt & Company. New York, New York, USA. 1938

### **Dickens, Charles** 1812–70

English novelist

The intervals between the ultimate particles of bodies will probably ever remain beyond our ken and measurement, visible only to the eye of the mind.

*The Universe*

*All the Year Round: A Weekly Journal*, Volume 2, June 5 to November 27, 1869 (p. 12)

With a rule and a pair of scales, and the multiplication table always in his pocket, sir, ready to weigh and measure any parcel of human nature, and tell you exactly what it comes to.

*Hard Times*

Book I, Chapter II (p. 206)

Chapman & Hall, Ltd. London, England. 1858

### **Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

I really cannot tell you anything about it, if you will not let me make measurements of any kind. Measurement is my only means of finding out about nature. I am not a metaphysicist.

*Space, Time and Gravitation: An Outline of the General Relativity Theory*

Prologue (p. 2)

At The University Press. Cambridge, England. 1921

Measurement is my only means of finding out about nature. I am not a metaphysicist.

Alfred A. Knopf. New York, New York, USA. 1959

**Hales, Stephen** 1677–1761

English physiologist and clergyman

Since we are assured that the all-wise Creator has observed the most exact proportions of number, weight and measure in the make of all things, the most likely way therefore to get any insight into the nature of those parts of the Creation which come within our observation must in all reason be to number, weigh and measure.

*Vegetable Statics*

The Introduction (p. xxxi)

The Scientific Book Guild. London, England. 1961

**Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

Astronomical distances have the air of a conjuring trick. The vastness of cosmic dimensions fills us with astonishment. Yet like a conjuring trick it all looks very obvious when we see how it is done. The methods of measurement are indeed of a very mundane character.

*Frontiers of Astronomy*

Chapter Ten (p. 163)

Harper &amp; Row, Publishers. New York, New York, USA. 1955

**Jevons, William Stanley** 1835–82

English economist and logician

There is little use in obtaining exact measurements of an effect unless we can also exactly measure its conditions.

*The Principles of Science: A Treatise on Logic and Scientific Method*

Book IV, Chapter XX (p. 441)

Macmillan &amp; Co Ltd. London, England. 1887

**Jones, William** 1746–94

English philologist and student of ancient India

There is no part of mathematical science more truly calculated to interest and surprize mankind, than the measurement of the relative positions and distances of inaccessible objects.

*Astronomical and Geographical Essays* (6th edition)

Essay IV (p. 435)

W. &amp; S. Jones. London, England. 1812

**Kaplan, Abraham** 1918–93

American philosopher of science, author, and educator

One of the subjects of Kinsey's study of sexual behavior in the human male afterwards complained bitterly of the injury to his masculine ego. "No matter what I told him," he explained, "he just looked me straight in the eye and asked, "How many times?"...The principle, "Let's get it down to something we can count!" does not always formulate the best research strategy.

*The Conduct of Inquiry: Methodology for Behavioral Science*

Chapter V, Section 20 (p. 171)

Chandler Publishing Company. San Francisco, California, USA. 1964

Proleptically [anticipatively], I would say that whether we can measure something depends, not on that thing, but on how we have conceptualized it, on our knowledge of it, above all on the skill and ingenuity which we can bring to bear on the process of measurement which our inquiry can put to use.

*The Conduct of Inquiry: Methodology for Behavioral Science*

Chapter V, Section 20 (p. 176)

Chandler Publishing Company. San Francisco, California, USA. 1964

Measurement, we have seen, always has an element of error in it. The most exact description or prediction that a scientist can make is still only approximate. If, as sometimes happens, a perfect correspondence with observation does appear, it must be regarded as accidental, and, as Jevons ...remarks, it "should give rise to suspicion rather than to satisfaction."

*The Conduct of Inquiry: Methodology for Behavioral Science*

Chapter VI, Section 25 (p. 215)

Chandler Publishing Company. San Francisco, California, USA. 1964

**Kelvin, Lord William Thomson** 1824–1907

Scottish engineer, mathematician, and physicist

Measurement is a means, not an end.

Address to the British Association

*Life*, Volume 2, 1871 (p. 200)

Accurate and minute measurement seems to the non-scientific imagination a less lofty and dignified work than

looking for something new. But nearly all the grandest discoveries of science have been but the rewards of accurate measurement and patient long contained labor in the minute sifting of numerical results.

*Report of the British Association For the Advancement of Science*, Volume 41, xci, 1871

**Lewis, Gilbert Newton** 1875–1946

American chemist

I have no patience with attempts to identify science with measurement, which is but one of its tools, or with any definition of the scientist which would exclude a Darwin, a Pasteur, or a Kekulé.

*The Anatomy of Science*

Chapter I (p. 6)

Yale University Press. New Haven, Connecticut, USA. 1926

**Lichtenberg, Georg Christoph** 1742–99

German physicist and satirical writer

We are ourselves the measure of the miraculous; if we should find a universal measure, the miraculous elements would disappear, and all things would be of equal size.

*Lichtenberg: Aphorisms & Letters*

Aphorisms (p. 27)

Jonathan Cape. London, England. 1969

**Onnes, Heike Kamerlingh** 1853–1926

Dutch physicist

Through measure to knowing is the motto I would like to write above every physics laboratory.

Coomb's Law. If you can't measure it, I'm not interested.

Peter's People

*Human Behavior*, August, 1976 (p. 9)

**Planck, Max** 1858–1947

German physicist

The ideal aim before the mind of the physicist is to understand the external world of reality. But the means which he uses to attain this end are what are known in physical science as measurements, and these give no direct information about external reality. are only a register or representation of reactions to physical phenomena. As such they contain no explicit information and have to be interpreted.

Translated by James Murphy

*Where Is Science Going?*

Chapter III (p. 84)

Norton. New York, New York, USA. 1932

Every measurement first acquires its meaning for physical science through the significance which a theory gives it.

Translated by James Murphy

*Where Is Science Going?*

Chapter III (p. 92)

Norton. New York, New York, USA. 1932

**Plato** 428 BCE–347 BCE

Greek philosopher

The points that I mean are length and shortness, excess and defect, with all of which the art of measurement is conversant.

*In Great Books of the Western World* (Volume 7)

*Statesman*

Section 283 (p. 594)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Rankine, William John Macquorn** 1820–72

Scottish engineer and physicist

A party of astronomers went measuring of the earth,  
And forty million meters they took to be its girth;  
Five hundred million inches, though, go through from  
pole to pole;  
So let's stick to inches, feet, and yards, and the good old  
three-foot rule.

*Songs and Fables*

The Three-Foot Rule, Stanza III

J. Maclehose. Glasgow, Scotland. 1874

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

...measurement demands some one-one relations between the numbers and magnitudes in question – a relation which may be direct or indirect, important or trivial, according to circumstances.

*The Principles of Mathematics*

Chapter XXI (p. 176)

W.W. Norton & Company. New York, New York, USA. 1938

**Read, Herbert** 1893–1968

English poet

Beauty had been born, not, as we so often conceive it nowadays, as an ideal of humanity, but as measure, as the reduction of the chaos of appearances to the precision of linear symbols. Symmetry, balance, harmonic division, mated and mensurated intervals – such were its abstract characteristics.

*Icon and Idea: The Function of Art in the Development of Human Consciousness*

Chapter IV (p. 75)

Harvard University Press. Cambridge, Massachusetts, USA. 1955

**Reynolds, H. T.**

No biographical data available

Crude measurement usually yields misleading, even erroneous conclusions no matter how sophisticated a technique is used.

*Analysis of Nominal Data*

Chapter 3 (p. 56)

Sage Publications. Beverly Hills, California, USA. 1977

**Schrödinger, Erwin** 1887–1961

Austrian theoretical physicist

The rejection of realism has logical consequences. In general, a variable has no definite value before I measure it; then measuring it does not mean ascertaining the value that it has. But then what does it mean? There must still be some criterion as to whether a measurement is true or false, a method is good or bad, accurate, or inaccurate – whether it deserves the name of measurement process at all.

The Present Situation in Quantum Mechanics

*Proceedings of the American Philosophical Society*, Volume 124, 1980

**Schwinger, Julian** 1918–94

American theoretical physicist

Microscopic measurement has no meaning apart from a theory, and the idealized measurement concepts that are implicit in a particular theory must be accepted or rejected in accordance with the final success or failure of that theory to fulfill its avowed aims.

*Nobel Lectures, Physics 1963–1970*

Relativistic Quantum Field Theory (p. 142)

Elsevier Publishing Co. Amsterdam, The Netherlands. 1972

**Singer, Charles** 1876–1960

Historian of science and medicine

Galileo showed men of science that weighing and measuring are worthwhile. Newton convinced a large proportion of them that weighing and measuring are the only investigations that are worthwhile.

*A Short History of Medicine*

Chapter V, Section 1 (p. 138)

At The Clarendon Press, Oxford, England. 1928

**Sophocles** 496 BCE–406 BCE

Greek playwright

Nay, if these measures give any ground of confidence, we think that thy design is not amiss.

*In Great Books of the Western World* (Volume 5)

*The Plays of Sophocles*

*Trachiniae*, l. 587

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Spearman, Charles** 1863–1945

English psychologist

...great as may be the potency of this [the experimental method], or of the preceding methods, there is yet another one so vital that, if lacking it, any study is thought by

many authorities not to be scientific in the full sense of the word. This further and crucial method is that of measurement...

*Psychology Down the Ages* (Volume 1) (p. 89)

Macmillan & Company Ltd. London, England. 1937

**Standen, Anthony**

Anglo-American science writer

If the idols of scientists were piled on top of one another in the manner of a totem pole the topmost would be a grinning fetish called Measurement.

*Science Is a Sacred Cow*

Chapter III (p. 82)

E.P. Dutton & Company, Inc. New York, New York, USA. 1950

**Thomson, Sir John Arthur** 1861–1933

Scottish naturalist

Science begins with measurement and there are some people who cannot be measurers; and just as we distinguish carpenters who can work to this or that fraction of an inch of accuracy, so we must distinguish ourselves and our acquaintances as able to observe and record to this or that degree of truthfulness.

*Introduction to Science*

Chapter I (p. 19)

Henry Holt & Co. New York, New York, USA. 1911

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

Search for measurable elements among your phenomena, and then search for relations between these measures of physical quantities.

*Science and the Modern World*

Chapter III (p. 66)

The Macmillan Company. New York, New York, USA. 1929

**Wilson, O. C.**

The measurement of distance is still a fundamental problem at every level of astronomy.

A New Scale of Stellar Distances

*Scientific American*, Volume 204, Number 1, January, 1961 (p. 107)

**Wordsworth, William** 1770–1850

English poet

I've measured it from side to side:

'Tis three feet long, and two feet wide.

*The Complete Poetical Works of William Wordsworth*

The Thorn, iii (Early Reading)

Crowell. New York, New York, USA. 1888

**MECHANICAL**

**Newton, Sir Isaac** 1642–1727

English physicist and mathematician

I would that all other natural phenomena might similarly be deduced from mechanical principles. For many things move me to suspect that everything depends upon certain forces in virtue of which the particles of bodies, through forces not yet understood, are either impelled together so as to cohere in regular figures, or are repelled and recede from one another.

*Mathematical Principles of Mathematical Philosophy*

Preface

## MECHANICAL SKILL

**von Liebig, Justus** 1803–73

German organic chemist

The success of an experiment, or of a process, depends far less upon mechanical skill, than upon knowledge. Failure is the result of ignorance, and discoveries are made, not by manual dexterity, but by skill in combination, and by that intellectual power which creates new thoughts.

In John Blyth (ed.)

*Familiar Letters on Chemistry*

Letter I (p. 12)

Walton & Maberly. London, England. 1859

## MECHANICS

**Adams, George** 1750–95

English instrument maker

The knowledge of mechanics is one of those things that contribute to distinguish civilized nations from barbarians. From it the works of art derive much of their beauty and value; without it we can make very little progress in the knowledge of the works of nature. By this science we are enabled to improve every power and force in nature, and render the motions of the elements water, air, and fire, subservient to the purposes of life.

*Lectures on Natural and Experimental Philosophy* (Volume 3)

Chapter XXXI (p. 257)

Printed by R. Hindmarsh. London, England. 1794

### Author undetermined

A book on mechanics which does not mention friction is like a work on astronomy which takes no notice of refraction or precession.

Young's Elements of Mechanics

*The Quarterly Journal of Education*, Volume IV, Number 7, July, 1832 (p. 121)

**Cross, Hardy** 1885–1959

American professor of civil and structural engineering

Mechanics, for instance, is a diamond of many facets and scintillates with different colors for the mathematician, the student of pure physics, the student of cosmic physics or the engineer.

*Engineers and Ivory Towers*

The Education of an Engineer (p. 55)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1952

**da Vinci, Leonardo** 1452–1519

Italian High Renaissance painter and inventor

Mechanics is the paradise of the mathematical sciences because by means of it one comes to the fruit of mathematics.

Translated by Edward MacCurdy

*The Notebooks of Leonardo da Vinci* (Volume 1)

Mathematics (p. 613)

George Braziller. New York, New York, USA. 1958

**Descartes, René** 1596–1650

French philosopher, scientist, and mathematician

And there are absolutely no judgments (or rules) in Mechanics which do not also pertain to Physics, of which Mechanics is a part or type: and it is as natural for a clock, composed of wheels of a certain kind, to indicate the hours, as for a tree, grown from a certain kind of seed, to produce the corresponding fruit. Accordingly, just as when those who are accustomed to considering automata know the use of some machine and see some of its parts, they easily conjecture from this how the other parts which they do not see are made: so, from the perceptible effects and parts of natural bodies, I have attempted to investigate the nature of their causes and of their imperceptible parts.

Translated by Valentine Rodger Miller and Reese P. Miller

*Principles of Philosophy*

Part IV (pp. 285–286)

Kluwer Academic Publishers. Dordrecht, The Netherlands. 1983

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

I am standing on the threshold about to enter a room. It is a complicated business. In the first place I must shove against an atmosphere pressing with a force of fourteen pounds on every square inch of my body. I must make sure of landing on a plank traveling at twenty miles a second round the sun – a fraction of a second too early or too late, the plank would be miles away. I must do this whilst hanging from a round planet, head outward in space, and with a wind of aether blowing at no one knows how many miles a second through every instance of my body.

*The Nature of the Physical World*

Chapter XV (p. 342)

The Macmillan Company. New York, New York, USA. 1930

**Einstein, Albert** 1879–1955

German-born physicist

Just now I am teaching the foundations of poor deceased mechanics, which is so beautiful. What will her successor look like? With that question I torment myself incessantly.

In Keith Hannabuss

*An Introduction to Quantum Theory*

Letter to Heinrich Zangger, November 14, 1911 (p. 246)

Oxford University Press, Inc. Oxford, England. 1997

### **Gauss, Johann Carl Friedrich** 1777–1855

German mathematician, physicist, and astronomer

Proper is it that in the gradual development of a science, and in the instruction of individuals, the easy should precede the difficult, the simple the complex, the special the general, yet the mind, when once it has reached a higher point of view, demands the contrary course, in which all statics shall appear simply as a special case of mechanics.

In Ernst Mach

*History and Root of the Principle of the Conservation of Energy*

Chapter II (p. 34)

The Open Court Publishing Company. Chicago, Illinois, USA. 1911

### **Gregory, Olinthus** 1774–1841

English mathematician

The science of mechanics, whether considered in its theory as a subject of curious and refined speculations, calculated for the learned, ingenious, and contemplative, or in practice as contribution to the conveniences and elegancies of life, and the wealth of nations, may be ranked the first and most important of all human acquirements.

A Treatise of Mechanics

*American Journal of Science*, Volume 7, 1824 (p. 72)

### **Haeckel, Ernst Heinrich Philipp**

**August** 1834–1919

German biologist and philosopher

...all natural phenomena, without exception, from the motions of the celestial bodies to the growth of plants and the consciousness of men.... Are ultimately to be reduced to atomic mechanics.

In St. George Jackson Mivart

*Essays and Criticisms*

Chapter 11 (p. 338)

James R. Osgood & Co. London, England. 1892

### **Hertz, Heinrich** 1857–94

German physicist

All physicists agree that the problem of physics consists in tracing the phenomena of nature back to the simple laws of mechanics.

In D.E. Jones and J.T. Walley

*The Principles of Mechanics Presented in a New Form*

Preface (p. xxi)

Dover Publications, Inc. New York, New York, USA. No date

*The New Physics and Its Evolution*

Chapter I (pp. 9–10)

Kegan Paul, Trench, Trubner & Company Ltd. London, England. 1907

### **Kirchoff, Gustav Robert** 1824–87

German physicist

The highest object to which the natural sciences are constrained to aim, but which they will never reach, is the determination of the forces, which are present in nature, and of the state of matter at any given moment – that is, the reduction of all the phenomena of nature to mechanics.

Über das Ziel der Naturwissenschaften (p. 24)

*Prorektoratsrede*, s. 9, 1865 (p. 24)

If we were acquainted with all the forces of nature and knew what is the state of matter at a certain moment of time, we should be able to deduce by means of mechanics its state at every subsequent moment, and to deduce how the various natural phenomena follow and accompany each other. The highest goal the natural sciences must strive to attain is the realization of the just mentioned supposition – viz, the reduction of all natural phenomena to mechanics. We shall never attain the goal of the natural sciences, but even the fact that it is recognized as such offers us certain satisfaction, and in approximating to it lies the highest pleasure to be derived from the study of natural phenomena.

In Robert von Helmholtz

*Annual Report of the Board of Regents of the Smithsonian Institution*, 1889

A Memoir of Gustav Robert Kirchoff (p. 538)

Government Printing Office. Washington, D.C. 1889

Mechanics is the science of motion; its object may be stated to be to describe in the most *complete and simple way* the motion that takes place in nature.

In Robert von Helmholtz

*Annual Report of the Board of Regents of the Smithsonian Institution*, 1889

A Memoir of Gustav Robert Kirchoff (p. 538)

Government Printing Office. Washington, D.C. 1889

### **Mach, Ernst** 1838–1916

Austrian physicist and philosopher

No one is competent to predicate things about facts, absolute space and absolute motion; they are pure things of thought, pure mental constructs, that cannot be produced in experience. All our principles of mechanics are, as we have shown in detail, experimental knowledge concerning the relative positions and motions of bodies. Even in the provinces in which they are now recognised as valid, they could not, and were not, admitted without previously being subjected to experimental tests. No one is warranted in extending these principles beyond the boundaries of experience. In fact, such an extension is meaningless, as no one possesses the requisite knowledge to make use of it.

Translated by Thomas Joseph McCormick

*The Science of Mechanics: A Critical and Historical Account of Its Development of Mechanics*

Chapter II, Section VI (p. 229)

The Open Court Publishing Co. Chicago, Illinois, USA. 1919

That branch of physics which is at once the oldest and the simplest and which is therefore treated as introductory to other departments of this science, is concerned with the motions and equilibrium of masses. It bears the name of mechanics.

*The Science of Mechanics* (5th edition)

Introduction (p. 1)

The Open Court Publishing Company, La Salle, Illinois, USA. 1942

Purely mechanical phenomena do not exist...are abstractions, made, either intentionally or from necessity, for facilitating our comprehension of things. The science of mechanics does not comprise the foundations, no, nor even a part of the world, but only an aspect of it.

*The Science of Mechanics* (5th edition)

Chapter V, Part I, Section 1 (p. 597)

The Open Court Publishing Company, La Salle, Illinois, USA. 1942

### **Newton, Sir Isaac** 1642–1727

English physicist and mathematician

The ancients considered mechanics in a twofold respect; as rational, which proceeds accurately by demonstration; and practical. To practical mechanics all the manual arts belong, from which mechanics took its name. But as artificers do not work with perfect accuracy, it comes to pass that mechanics is so distinguished from geometry, that what is perfectly accurate is called geometrical; what is less so, is called mechanical. But the errors are not in the art, but in the artificers. He that works with less accuracy is an imperfect mechanic; and if any could work with perfect accuracy, he would be the most perfect mechanic of all; for the description of right lines and circles, upon which geometry is founded, belongs to mechanics. Geometry does not teach us to draw these lines, but requires them to be drawn; for it requires that the learner should first be taught to describe these accurately, before he enters upon geometry; then it shows how by these operations problems may be solved. To describe right lines and circles are problems, but not geometrical problems. The solution of these problems is required from mechanics; and by geometry the use of them, when so solved, is shown; and it is the glory of geometry that from those few principles, brought from without, it is able to produce so many things. Therefore geometry is founded in mechanical practice, and is nothing but that part of universal mechanics which accurately proposes and demonstrates the art of measuring.

Translated by Andrew Motte

*Newton's Principia: Mathematical Principles of Mathematical Philosophy*

Preface (p. 65)

*Essays and Criticisms*

Chapter 11 (p. 338)

James R. Osgood & Co. London, England. 1892

## MECHANICS, TEACHING OF

**Planck, Max** 1858–1947  
German physicist

In my opinion the teaching of mechanics will still have to begin with Newtonian force, just as optics begins in the sensation of colour and thermodynamics with the sensation of warmth, despite the fact that a more precise basis is substituted later on.

*The Universe in the Light of Modern Physics* (p. 69)

## MECHANISM

**Pearson, Karl** 1857–1936  
English mathematician

...although we cannot definitely assert that life is a mechanism until we know more exactly what we mean by the term mechanism as applied to organic corpuscles, there still seems little doubt that some of the generalisations of physics – notably the great principle of the conservation of energy – do describe at least part of our perceptual experience of living organisms.

*The Grammar of Science* (2nd edition)

Chapter XII (p. 528)

Adam & Charles Black. London, England. 1900

## MEDIAN

**Gould, Stephen Jay** 1941–2002  
American paleontologist and evolutionary biologist

The median isn't the message.

The Median Isn't the Message

*Discover*, June, 1985 (p. 40)

## MEDICAL CONSPIRACY

**Shaw, George Bernard** 1856–1950  
Irish playwright

[All professions] are all conspiracies against the laity; and I do not suggest that the medical conspiracy is either better or worse than the military conspiracy, the legal conspiracy, the sacerdotal conspiracy, the pedagogic conspiracy, the royal and aristocratic conspiracy, the literary and artistic conspiracy, and the innumerable industrial, commercial, and financial conspiracies, from the trade unions to the great exchanges, which make up the huge conflict which we call society. But it is less suspected.

*The Doctor's Dilemma*

Preface (p. 16)

Penguin Books. Baltimore, Maryland, USA. 1954

## MEDICAL EDUCATION

**Flexner, Abraham** 1866–1959  
American educator

It follows that in other respects, too, the clinical professors will be on the common university basis: salaried, as other professors are. Of course, their salaries will be inadequate, i.e., less than they can earn outside – all academic salaries paid to the right men are. But there is no inherent reason why a professor of medicine should not make something of the financial sacrifice that the professor of physics makes: both give up something – less and less, let us hope, as time goes on – in order to teach and to investigate.

*Medical Education in the United States and Canada*

Chapter VI (p. 102)

The Carnegie Foundation. New York, New York, USA. 1910

## MEDICAL ETHICS

**Shaw, George Bernard** 1856–1950  
Irish playwright

Nobody supposes that doctors are less virtuous than judges; but a judge whose salary and reputation depended on whether the verdict was for plaintiff or defendant, prosecutor or prisoner, would be as little trusted as a general in the pay of the enemy.... It is simply unscientific to allege or believe that doctors do not under existing circumstances perform unnecessary operations and manufacture and prolong lucrative illnesses.

*The Doctor's Dilemma*

Preface (p. 9)

Penguin Books. Baltimore, Maryland, USA. 1954

## MEDICAL FAME

**Burton, Sir Richard Francis** 1821–90  
English explorer

Here there is no such royal road to medical fame. You must begin by sitting with the porter, who is sure to have bleary eyes, into which you drop a little nitrate of silver, whilst you instil into his ear the pleasing intelligence that you never take a fee from the poor. He recovers; his report of you spreads far and wide, crowding your door with paupers...

A Pilgrimage to Medinah and Mecca

*Eclectic Magazine*, November, 1855 (p. 957)

## MEDICAL KNOWLEDGE

**Abernethy, John** 1680–1740  
Irish Presbyterian minister, theologian, and dissenter

There is no short cut, nor 'royal road' to the attainment of medical knowledge. The path which we have to pursue is

long, difficult, and unsafe. In our progress, we must frequently take up our abode with death and corruption, we must adopt loathsome diseases for our familiar associates, or we shall never be acquainted with their nature and dispositions; we must risk, nay, even injure our own health, in order to be able to preserve, or restore that of others.

*The Hunterian Oration, for the Year 1819* (pp. 33–34)  
 Publisher undetermined. 1819

## MEDICAL MEN

**Bigelow, Jacob** 1787–1879  
 American Physician

The death of medical men is an occurrence which eminently demands our attention, for it speaks to us of our science, and of ourselves. It reminds us, that we, in turn, are to become victims of the incompetency of our own art.

*Nature in Disease, Illustrated in Various Discourses and Essays*  
 On Self-limited Diseases (p. 1)  
 Ticknor & Fields. Boston, Massachusetts, USA. 1854

## Jewett, Sarah Orne

The practical medical men are the juries who settle all the theories of the hour, as they meet emergencies day after day.

*A Country Doctor*  
 Chapter IX (p. 110)  
 Houghton Mifflin Co. Boston, Massachusetts, USA. 1884

## MEDICAL PRACTICE

**DeBakey, Lois**  
 Professor of Scientific Communication

In a highly regimented, regulated, or restrictive environment, medical practice can frustrate, oppress, and enslave – unless the physician holds his noble purpose uppermost in mind. In a humanitarian and intellectually stimulating environment, on the other hand, medicine can be intriguing, exhilarating, and engrossing. It is the continual search for ways to maintain or restore health and well-being to patients and the achievement of that goal that preserve the passion for medicine.

In Lois Debakery and Phil R. Manning  
*Medicine: Preserving the Passion in the 21st Century*  
 Chapter 1 (p. 1)  
 Springer-Verlag. Berlin, Germany. 2004

## MEDICAL PROFESSION

**Eliot, George (Mary Ann Evans Cross)** 1819–80  
 English novelist

...I might have got into some stupid draught-horse work or other, and lived always in blinkers. I should never have been happy in any profession that did not call forth

the highest intellectual strain, and yet keep me in good warm contact with my neighbors. There is nothing like the medical profession for that: one can have the exclusive scientific life that touches the distance and befriend the old fogies in the parish too.

*The Works of George Eliot* (Volume 6)  
*Middlemarch*  
 Book Two, Chapter IV (p. 239)  
 The Century Co. New York, New York, USA. 1910

**Osler, Sir William** 1849–1919  
 Canadian physician and professor of medicine

The greatest art is in the concealment of art, and I may say that we of the medical profession excel in this respect.

*Aequanimitas: With Other Addresses to Medical Students, Nurses and Practitioners of Medicine*  
 Chapter VII (p. 124)  
 P. Blackiston's Sons & Co. Philadelphia, Pennsylvania, USA. 1905

## MEDICAL SCHOOL

**MacPhail, Sir Andrew** 1864–1938  
 Professor of the history of medicine

Scientific research in itself will not make a medical school, graduate or undergraduate; but a medical school without research is like a ship without a compass.

In students of William Osler

*An Introduction to the Study of Experimental Medicine*

Introduction (p. 1)

Henry Schuman, Inc. New York, New York, USA. 1927

**Bigelow, Jacob** 1786–1879

Physician

Most men form an exaggerated estimate of the powers of medicine, founded on the common acceptance of the name, that medicine is the art of curing diseases. That this is a false definition is evident from the fact that many diseases are incurable, and that one such disease must at last happen to every living man. A far more just definition would be that medicine is the art of understanding diseases, and of curing or relieving them when possible.

*Nature in Disease*

Chapter 2 (p. 69)

Phillips, Sampson & Company. Boston, Massachusetts, USA. 1859

**Bloom, Samuel W.**

No biographical data available

Art and science march hand in hand through the history of medicine, each taking turns at the lead. A century or more ago science became the dominant partner and has remained so ever since. The art of medicine meanwhile, like an honored but neglected wife, walked behind, passive and obedient to call at those odd moments when the master needed a change of pace.

Russian author and playwright

Medicine is my lawful wife and literature is my mistress.  
When I get tired of one I spend the night with the other.

*Letters on the Short Story, the Drama, and Other Literary Topics*

Letter to A.S. Souvorin, September 11, 1888 (p. 42)

Minton, Balch & Company. New York, New York, USA. 1924

**Churchill, Winston Spencer** 1882–1965  
British prime minister, statesman, soldier, and author

I have been inclined to feel from time to time that there  
ought to be a hagiology of medical science and that we  
ought to have saints' days to commemorate the great dis-  
coveries which have been made for all mankind, and per-  
haps for all time – or for whatever time may be left to us.  
Nature, like many of our modern statesmen, is prodigal  
of pain. I should like to find a day when we can take a  
holiday, a day of jubilation, when we can fête good Saint  
Anaesthesia and chaste and pure Saint Antiseptic.

In F.B. Czarnomski

*The Wisdom of Winston Churchill*

Speech, Guildhall, London, September 10, 1947 (p. 59)

George Allen & Unwin Ltd. London, England. 1956

I do not profess to be very deeply acquainted with the  
science of medicine. I am not a surgeon myself. My  
experiences in medicine have been vivid and violent, and  
completely absorbing while they were going on. Nev-  
ertheless, I cannot claim that they have given me that  
broad, detached, general experience which, I believe, is  
the foundation for all correct scientific action.

Speech

March 2, 1944, Royal College of Physicians

**Colman, George (The Younger)** 1762–1836  
English playwright

When taken,  
To be well shaken.

*Broad Grins*

The Newcastle Apothecary, Stanza 12

Printed for M'Creery. London, England. 1819

**Croll, Oswald** 1560–1609  
German chemist and physician

The choice also of the Medicines must always be consid-  
ered, and their preparations and compositions made by  
the Physitian himself, and not carelessly left to others.  
He is truly a genuine Physitian who can tell how (not  
only by Reason, as mear Rationall Physitians doe, but)  
by their own hand to prepare the medicaments...

*Philosophy Reformed and Improved in Four Profound Tractates*

(pp. 151–152)

Printed by M.S. for Lodowick Lloyd. London, England. 1657

**Crookshank, Francis Graham** 1873–1933  
English chemist and physicist

Medicine is today an Art or Calling, to whose exercise  
certain Sciences are no doubt ancillary; but she has for-  
feited pretension to be deemed a Science, because her  
Professors and Doctors decline to define fundamentals  
or to state first principles, and to refuse to consider, in  
express terms, the relations between Things, Thoughts  
and Words involved in their communications to others.

In C.K. Ogden and I.A. Richards

*The Meaning of Meaning*

Supplement II, The Importance of a Theory of Signs and a Critique of  
Language in the Study of Medicine (p. 338)

Harcourt, Brace & Company. New York, New York, USA. 1949

**da Costa, J. Chalmers** 1863–1933  
American physician

A medical man in the plumage of pretense resembles the  
humming bird, which, when stripped of its plumage, is  
not larger than the bumble bee.

*The Trials and Triumphs of the Surgeon*

Stepping Stones and Stumbling Blocks, Part III (p. 230)

Dorrance & Company. Philadelphia, Pennsylvania, USA. 1944

**de Madariaga, Salvador** 1886–1978  
Spanish writer and statesman

There is no medicine; there are only medicine-men.

*Essays with a Purpose*

On Medicine (p. 172)

Hollis & Carter. London, England. 1954

**Descartes, René** 1596–1650

French philosopher, scientist, and mathematician

The mind is so intimately dependent upon the condition and relation of the organs of the body, that if any means can ever be found to render men wiser and more ingenious than hitherto, I believe that it is in medicine they must be sought for.

*A Discourse on Method*

Part IV

J.M. Dent & Sons Ltd. London, England. 1912

**Dickens, Charles** 1812–70

English novelist

Some medical beast had revived tar-water in those days as a fine medicine, and Mrs. Joe always kept a supply of it in the cupboard; having a belief in its virtues correspondent to its nastiness. At the best of times, so much of this elixir was administered to me as a choice restorative, that I was conscious of going about, smelling like a new fence.

*Great Expectations*

Chapter II (p. 10)

Rinehart & Company, Inc. New York, New York, USA. 1948

**Dickinson, Emily** 1830–86

American lyric poet

It knew no Medicine –

It was not Sickness – then –

Nor any need of Surgery –

And therefore – 'twas not Pain –

*The Complete Poems of Emily Dickinson*

No. 559 (p. 271)

Little, Brown & Company. Boston, Massachusetts, USA. 1960

Is Heaven a physician?

They say that He can heal;

But medicine posthumous

Is unavailable.

*The Complete Poems of Emily Dickinson*

No. 1270 (p. 555)

Little, Brown & Company. Boston, Massachusetts, USA. 1960

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

There are one or two elementary rules to be observed in the way of handling patients, he remarked, seating himself on the table and swinging his legs. The most obvious

is that you must never let them see that you want them. It should be pure condescension on your part seeing them at all; and the more difficulties you throw in the way of it, the more they think of it. Break your patients in early, and keep them well to heel.

*The Stark Munro Letters*

Letter VII (p. 152)

D. Appleton & Company. New York, New York, USA. 1895

Dr. Munro, sir, said he, I am a walking museum. You could fit what isn't the matter with me on to the back of a visiting card. If there's any complaint you want to make a special study of, just you come to me, sir, and see what I can do for you. It's not everyone that can say that he has had cholera three times, and cured himself by living on red pepper and brandy.

*The Stark Munro Letters*

Letter XII (p. 278)

D. Appleton & Company. New York, New York, USA. 1895

And now, Doctor, perhaps you would kindly attend to my thumb, or rather to the place where my thumb used to be.

In William S. Baring-Gould (ed.)

*The Annotated Sherlock Holmes* (Volume 2)

*The Adventure of the Engineer's Thumb* (p. 210)

Wings Books. New York, New York, USA. 1967

**Drake, Daniel** 1785–1852

American physician

Medicine is not a science of meditations, but of observation.

*An Introductory Lecture, on the Means of Promoting the Intellectual*

*Improvement of the Students* (p. 13)

Prentice & Wessinger. Louisville, Kentucky, USA. 1844

**Dryden, John** 1631–1700

English poet, dramatist, and literary critic

Better to hunt in Fields, for Health unbought,

Than fee the Doctor for a nauseous Draught.

The Wise, for Cure, on Exercise depend;

God never made his Work for Man to mend.

*The Poems of John Dryden* (Volume 4)

To John Dryden, of Chesterton, l. 92–95 (p. 1532)

Longman. London, England. 1995

**Dubos, René Jules** 1901–82

French-born American microbiologist and environmentalist

Throughout history, and whatever the level of civilization, the structure of medicine has been determined not only by the state of science but also by religious and philosophical beliefs. This is just as true of the most evolved urban and industrialized societies as it is of the most primitive populations. Like his Stone Age ancestors, modern man lives by myths.

*Man, Medicine, and Environment* (p. 53)

Frederick A. Praeger. New York, New York, USA. 1968

**Flexner, Abraham** 1866–1959  
American educator

The student...does not have to be a passive learner, just because it is too early for him to be an original explorer. He can actively master and securely fix scientific technique and method in the process or acquiring the already known.... The undergraduate student of medicine will for the most part acquire the methods, standards, and habits of science by working over territory which has been traversed before, in an atmosphere freshened by the search for truth.  
*Medical Education in the United States and Canada: A Report to the Carnegie Foundation for the Advancement of Teaching Bulletin 4* (p. 57)  
The Carnegie Foundation. New York, New York, USA. 1910

**Galsworthy, John** 1867–1933  
English novelist and dramatist

I'm bad, he said, pouting – been bad all the week; don't sleep at night. The doctor can't tell why. He's a clever fellow, or I shouldn't have him, but I get nothing out of him but bills.  
*The Forsyte Saga*  
Book I, Part I, Chapter I (p. 11)  
Charles Scribner's Sons. New York, New York, USA. 1948

Act III (p. 67)  
Row, Peterson & Company. Evanston, Illinois, USA. 1941

**Hoffmann, Friedrich** 1660–1742  
German physician

In physics experience can best be sought from mathematics and mechanics, chemistry, and anatomy; in medical practice experience derives most abundantly from the observations of diseases, and from more accurate histories and cures.  
*Fundamenta Medicinæ*  
Physiology, Chapter I, 8 (p. 5)  
American Elsevier. New York, New York, USA. 1971

To live in a medical fashion, that is, according to the strict and academic rules of the physicians, is to live miserably and uncomfortably.

*Fundamenta Medicinæ*

Medical Hygiene, Chapter I, 10 (p. 103)

American Elsevier. New York, New York, USA. 1971

### **Hippocrates** 460 BCE–377 BCE

Greek physician

For the art of Medicine would not have been invented at first, nor would it have been made a subject of investigation (for there would have been no need of it) if when men [were] indisposed, the same food and other articles of regimen which they eat and drink when in good health were proper for them, and if no others were preferable to these. But now necessity itself made medicine to be sought out and discovered by men.

In *Great Books of the Western World* (Volume 10)

*Hippocratic Writings*

On Ancient Medicine, 3 (p. 1)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Let us inquire then regarding what is admitted to be Medicine; namely, that which was invented for the sake of the sick, which possesses a name and practitioners.

In *Great Books of the Western World* (Volume 10)

*Hippocratic Writings*

On Ancient Medicine, 2 (p. 2)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

The physician must be able to tell the antecedents, know the present, and foretell the future – must mediate these things, and have two special objects in view with regard to diseases, namely, to do good or to do no harm. The art consists in three things – the disease, the patient, and the physician. The physician is the servant of the art, and the patient must combat the disease along with the physician.

In *Great Books of the Western World* (Volume 10)

*Hippocratic Writings*

Of the Epidemics, 5 (p. 46)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Medicine is of all the Arts the most noble, but, owing to the ignorance of those who practice it, and of those who, inconsiderately, form a judgment of them, it is at present far behind all the other arts. Their mistakes appear to me to arise principally from this, that in the cities there is no punishment connected with the practice of medicine (and with it alone)...

In *Great Books of the Western World* (Volume 10)

*Hippocratic Writings*

The Law, 1 (p. 144)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Instruction in medicine is like the culture of the productions of the earth. For our natural disposition is, as it were, the soil; the tenets of our teacher are, as it were, the seed in the ground at the proper season; the place where

the instruction is communicated is like the food imparted to vegetables by the atmosphere; diligent study is like the cultivation of the fields; and it is time which imparts strength to all things and brings them to maturity.

In *Great Books of the Western World* (Volume 10)

*Hippocratic Writings*

The Law, 3 (p. 144)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### **Hoffmann, Friedrich** 1660–1742

German physician

As far as medicine uses the principles of physics, it can be properly called a science; as far as it relies on practice, it can be called an art.

*Fundamenta Medicinæ*

Physiology, Chapter I, 9 (p. 6)

American Elsevier. New York, New York, USA. 1971

Frequent changes of medicines proclaims the ignorance of the physician and is calamitous for the patients.

*Fundamenta Medicinæ*

Therapeutics, Chapter I, 37 (p. 137)

American Elsevier. New York, New York, USA. 1971

### **Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

I firmly believe that if the whole *materia medica* could be sunk to the bottom of the sea, it would be all the better for mankind and all the worse for the fishes.

Address to the Harvard Medical School

May 30, 1860

### **Hulme, Keri** 1947–

New Zealand writer

What is your objection to hospitalisation and treatment? The doctor is curious but dispassionate. Primarily, that I forgo control over myself and my destiny. Secondly, medicine is in a queer state of ignorance. It knows a lot, enough to be aware that it is ignorant, but practitioners are loath to admit that ignorance to patients. And there is no holistic treatment. Doctor does not confer with religious who does not confer with dietician who does not confer with psychologist.... What you are saying basically is that you have no trust in doctors or current medicine? Right on.

*The Bone People*

IV, 12 (pp. 415–416)

Spiral in association with Hodder & Stoughton, Auckland, New Zealand.

1985

### **Hurston, Zora Neale** 1891–1960

American writer and anthropologist

...if science ever gets to the bottom of Voodoo in Haiti and Africa, it will be found that some important medical secrets, still unknown to medical science, give it its power, rather than the gestures of ceremony.

An inquiring, analytical mind; an unquenchable thirst for new knowledge; and a heartfelt compassion for the ailing – these are prominent traits among the committed clinicians who have preserved the passion for medicine.

*Medicine: Preserving the Passion*

Precedes First Chapter

Springer-Verlag. New York, New York, USA. 1987

### **Martin, Walter**

No biographical data available

The very success of medicine in a material way may now threaten the soul of medicine. Medicine is something more than the cold mechanical application of science to human disease. Medicine is a healing art. It must deal with individuals, their fears, their hopes and their sorrows. It must reach back further than a disease that the patient may have to those physical and emotional environmental factors which condition the individual for the reception of disease.

Inaugural Address

American Medical Association, news report of June, 23, 1954

### **Mather, Cotton** 1663–1728

American minister and religious writer

...[there is an] angelical conjunction of medicine with divinity.

In Harvey Cushing

*The Life of Sir William Osler* (Volume 1)

Chapter III (p. 69)

Clarendon Press. Oxford, England. 1925

### **Mayo, Charles Horace** 1865–1939

American physician

While medicine is a science, in many particulars it cannot be exact, so baffling are the varying results of varying conditions human life.

*Collected Papers of the Mayo Clinic & Mayo Foundation (1905–1909)*

President's Address

W.B. Saunders Company. Philadelphia, Pennsylvania, USA. 1909

It would seem that the study of medicine does not always contribute to broadmindedness, as men who choose medicine as a profession are apt to lose rather than gain breadth of perception. It could be said rather that medicine develops individualism.

The Value of Broadmindedness

*Medical Life*, Volume 34, April, 1927

Medicine can be used only as people are educated to its accomplishments.

International Medical Progress

*Collected Papers of the Mayo Clinic & Mayo Foundation*, Volume 23, 1931

### **Mayo, William J.** 1861–1939

American physician

The aim of medicine is to prevent disease and prolong life; the ideal of medicine is to eliminate the need of a physician.

The Aims and Ideals of the American Medical Association

*Proceedings of the National Education Association*, Volume 66, 1928

The church and the law deal with the yesterdays of life; medicine deals with the tomorrows.

The Preliminary Education of the Clinical Specialist

*Collected Papers of the Mayo Clinic & Mayo Foundation*, Volume 23, 1931

### **Mencken, H. L. (Henry Louis)** 1880–1956

American journalist and literary critic

The aim of medicine is surely not to make men virtuous; it is to safeguard and rescue them from the consequences of their vices. The true physician does not preach repentance; he offers absolution.

In Herbert V. Prochnow and Herbert V. Prochnow, Jr

*A Treasury of Humorous Quotations: For Speakers, Writers, and Home Reference*

#3942 (p. 219)

Harper & Row, Publishers. New York, New York, USA. 1969

One of the chief objects of medicine is to save us from the natural consequences of our vices and follies. The moment it becomes moral it becomes quackery. A scientific physician should have no opinion about the ethical standards and deserts of his patient.

*Minority Report: H.L. Mencken's Notebooks*

Number 7 (p. 7)

Alfred A. Knopf. New York, New York, USA. 1956

### **Merck, George** 1894–1957

American scientist

Medicine is for the patient. Medicine is for the people. It is not for the profits.

*Time*, November 3, 1952

**Paracelsus (Theophrastus Phillippus Aureolus Bombastus von Hohenheim)** 1493–1541

Swiss alchemist and mystic

The art of medicine cannot be inherited nor can it be copied from books.

*Das Zweite Buch der Grossen Wundarznei*

Foreword

Publisher undetermined

**Pavlov, Ivan Petrovich** 1849–1936

Russian physiologist

Only by passing through the fire of experiment will medicine as a whole become what it should be, namely a conscious and, hence, always purposefully acting science.

*Experimental Psychology and Other Essays*

Fusion of Principal, Branches of Medicine in Modern Experimentation as Demonstrated by the Example of Digestion (p. 493)

Philosophical Library. New York, New York, USA. 1957

**Peabody, Francis Weld** 1881–1927

Physician

Medicine is not a trade to be learned but a profession to be entered.

*The Care of the Patient*

The Care of the Patient (p. 9)

Harvard University Press. Cambridge, Massachusetts, USA. 1928

There is no more contradiction between the science of medicine and the art of medicine than between the science of aeronautics and the art of flying.

*The Care of the Patient*

The Care of the Patient (p. 10)

Harvard University Press. Cambridge, Massachusetts, USA. 1928

**Petrarch (Francesco Petrarca)** 1304–74

Italian poet and humanist

When we see how doctors themselves live, how their slight illnesses turn to tragic ends, we may well suspect that this thing called medicine, whatever it may be in itself, is yet among men a certain art of deception,

invented to men's peril, to enrich a few and endanger many. Or we may think it a true art, contrived for useful ends, but little understood by men of our time. Or perhaps better, it may be understood, but hardly applicable to men's natures, in their infinite and incredible variety.

*Letters from Petrarch*

Letters; Book XII, 2

To Giovanni Dondi of Padua (p. 283)

Indiana University Press. Bloomington, Indiana, USA. 1966

**Porter, Roy** 1946–2002

English historian

Medicine is a notoriously messy mix of laboratory research and clinical crisis, the itch for knowledge and the need to act. Different experts contribute diverse skills, and the whole has been likened to a jigsaw [puzzle] being pieced together by total strangers, each of whom is only guessing at the picture.

Offering Resistance: The Checkered History and Contemporary Travails of Cancer Immunotherapy

*The New York Times*, 29 June, 1997 (p. 9)

**Proust, Marcel** 1871–1922

French novelist

For, medicine being a compendium of the successive and contradictory mistakes of medical practitioners, when we summon the wisest of them to our aid, the chances are that we may be relying on a scientific truth the error of which will be recognized in a few years' time.

Translated by Mark Treharne

Good medicine is man's salvation;

Excessive use gives aggravation.

*Encyclopedia of Thoughts*

Couplets

Ithaca Heritage Books. Ithaca, New York, USA. 1975

**Sacks, Oliver W.** 1933–

American neurologist and author

We rationalize, we dissimilate, we pretend: we pretend that modern medicine is a rational science, all facts, no nonsense, and just what it seems. But we have only to tap its glossy veneer for it to split wide open, and reveal to us its roots and foundations, its old dark heart of metaphysics, mysticism, magic and myth.

*Awakenings*

Prologue (p. 28)

Vintage Books. New York, New York, USA. 1990

**Sammonicus, Serenus** ? 2nd century

Roman savant

Thou shalt on paper write the spell divine,  
Abracadabra called, in many a line;  
Each under each in even order place,  
But the last letter in each line efface.  
As by degrees the elements grow few  
Still take away, but fix the residue,  
Till at the last one letter stands alone  
And the while dwindles to a tapering cone.  
Tie this about the neck with flaxen string;  
Mighty the good 'twill to the patient bring.  
Its wondrous potency shall guard his head –  
And drive disease and death far from his bed.

In Victor Robinson

**Smollett, Tobias George** 1721–71

Scottish novelist

...Sir, the practice of medicine is one of the most honourable professions exercised among the sons of men; a profession which hath been revered at all periods and in all nations, and even held sacred in the most polished ages of antiquity.

*The Life and Adventures of Sir Launcelot Greaves*

Chapter XXIV (p. 192)

Oxford University Press, Inc. London, England. 1973

**Starr, Paul** 1949–

Professor of sociology

Modern medicine is one of those extraordinary works of reason: an elaborate system of specialised knowledge, technical procedures, and rules of behavior.

*The Social Transformation of American Medicine*

Introduction (p. 3)

Basic Books, Inc., Publishers. New York, New York, USA. 1982

The medical profession has had an especially persuasive claim to authority. Unlike the law and the clergy, it enjoys close bonds with modern science, and at least for most of the last century, scientific knowledge has held a privileged status in the hierarchy of belief.

*The Social Transformation of American Medicine*

Introduction (p. 4)

Basic Books, Inc., Publishers. New York, New York, USA. 1982

The organizational culture of medicine used to be dominated by the ideals of professionalism and volunteerism which softened the underlying acquisitive activity. The restraint exercised by these ideals now grows weaker, the health center of one era is the profit center of the next.

*The Social Transformation of American Medicine* (p. 448)

Basic Books, Inc., Publishers. New York, New York, USA. 1982

**Steinbeck, John** 1902–68

American novelist

The medical profession is unconsciously irritated by lay knowledge.

*East of Eden*

Chapter 54, Section 1 (p. 589)

The Viking Press. New York, New York, USA. 1952

**Sydenham, Thomas** 1624–89

English physician

Inasmuch as the structure of the human frame has been so set together by Nature, that it is unable, from the continuous flux of particles, to remain unchanged; whilst, from

the action of external causes, it is subjected to influences beyond its own: and since, for these reasons, a numerous train of diseases has pressed upon the earth since the beginning of time; so without doubt the necessity of investigations into the Art of Healing has exercised the wit of mankind for many ages.

*The Works of Thomas Sydenham, MD* 3rd ed., (Volume 1)  
Classics of Medicine Library, Birmingham. 1979

**Szasz, Thomas** 1920–  
Hungarian-born American psychiatrist

Formerly, when religion was strong and science weak, men mistook magic for medicine; now, when science is strong and religion weak, men mistake medicine for magic.

Printed by R. Nobels for R. Edwards. London, England. 1797

## MEDICINE

**Bacon, Sir Francis** 1561–1626  
English lawyer, statesman, and essayist

Medicine is a science which hath been (as we have said) more professed than laboured, and yet more laboured than advanced; the labour having been, in my judgment, rather in circle than in progression.

In James Spedding, Robert Leslie Ellis and Douglas Denon Heath  
*The Works of Francis Bacon* (Volume 2)  
Of the Advancement of Learning (p. 373)  
Longman & Co. London, England. 1857

**Bartlett, Elisha** 1804–55  
American physician

The hold which medicine has so long held upon the popular mind is loosened; there is a wide-spread skepticism as to the power of its curing diseases, and men are everywhere to be found who deny its pretensions as a science, and reject the benefits and blessings which it proffers them as an art.

In William E. Stempsey  
*Elisha Bartlett's Philosophy of Medicine*  
Part II, Chapter XII (p. 146)  
Springer-Verlag. Dordrecht, The Netherlands. 2005

The first essential and fundamental condition of all therapeutical science, is to fix as far as possible – its variable and fluctuating element. The problem to be solved is this: given a certain pathological condition or process, and a certain substance or agent, or a combination of substances and agencies of the *materia medica* – to find the true relation between them – to ascertain the changes effected in the former by the latter.

In William E. Stempsey

*Elisha Bartlett's Philosophy of Medicine*

The Philosophy in Therapeutics (p. 201)

Springer-Verlag, Dordrecht, The Netherlands. 2005

The science of medicine issues finally in the end of therapeutics. This is its consummation – its great end and purpose. Anatomy, physiology, pathology – the entire natural history of disease – *materia medica* – all are preliminary, more or less direct and essential, for the cure or mitigation of disease.

In William E. Stempsey

*Elisha Bartlett's Philosophy of Medicine*

The Philosophy in Therapeutics (pp. 211–212)

Springer-Verlag, Dordrecht, The Netherlands. 2005

### **Bigelow, Jacob** 1787–1879

American Physician

Most men form an exaggerated estimate of the powers of medicine, founded on the common acceptance of the name, that medicine is the art of curing diseases. That this is a false definition, is evident from the fact that many diseases are incurable, and that one such disease must at last happen to every living man. A far more just definition would be, that medicine is the art of understanding diseases, and of curing or relieving them when possible.

*Nature in Disease, Illustrated in Various Discourses and Essays*

On the Treatment of Disease (p. 64)

Ticknor & Fields. Boston, Massachusetts, USA. 1854

### **Brinton, William**

English physician

It is the especial character of the science of Medicine, that it interests all classes; and that, even if we may not claim for it in its original meaning, the celebrated dictum, “the proper study of mankind is man,” we may at least assert of it, that, in some form or other, it is essential to the application of all kinds of knowledge, and reacts upon every subject of scientific inquiry.

Introductory Lecture

*The London Lancet*, Volume 2, Number 6, December, 1857 (p. 433)

### **DeBakey, Lois**

Professor of Scientific Communication

At once one of the most demanding and most rewarding of all professions, medicine can be tyrannizing or exhilarating.

In Lois Debakery and Phil R. Manning

*Medicine: Preserving the Passion in the 21st Century*

Chapter 1 (p. 1)

Springer-Verlag, Berlin, Germany. 2004

The practice of medicine is admittedly a strict taskmaster, requiring daily decisions about puzzling, often life-threatening illnesses, as well as constant awareness of the newest, most authentic information.

In Lois Debakery and Phil R. Manning

*Medicine: Preserving the Passion in the 21st Century*

Chapter 1 (p. 1)

Springer-Verlag, Berlin, Germany. 2004

### **Huxley, Thomas Henry** 1825–95

English biologist

Medicine was the foster-mother of Chemistry, because it has to do with the preparation of drugs and the detection of poisons; of Botany, because it enabled the physician to recognise medicinal herbs; of Comparative Anatomy and Physiology, because the man who studied Human Anatomy and Physiology for purely medical purposes was led to extend his studies to the rest of the animal world.

*Science and Education: Essays*

Universities: Actual and Ideal (pp. 215–216)

D. Appleton & Co. New York, New York, USA. 1896

### **Latham, Peter Mere** 1789–1875

English physician

Of the great cosmogony of medicine there are several departments, and each professor never fails to magnify his own, by counting the cost of time and labour, which you must be prepared to bestow if you wish to make any reasonable progress in it.

*Lectures on Subjects Connected With Clinical Medicine*

Lecture I (p. 9)

Longman, Rees, Orme, Brown, Green & Longman. London, England. 1836

...in so far as it [medicine] is certain, in so far as it has taken the form of a science at all, it is built upon the same foundation with all other sciences; namely, upon facts: and in so far as it is uncertain, beyond what, in its own nature, it ever need to have been; in so far as it has not deserved the name of a science, it is raised upon a foundation which never would have been deemed sufficient for any other department of human knowledge.

*Lectures on Subjects Connected With Clinical Medicine*

Lecture V (pp. 114–115)

Longman, Rees, Orme, Brown, Green & Longman. London, England. 1836

### **Lewis, Sir Thomas** 1881–1945

No biographical data available

In no science, in the true sense of the word, is there the almost open vaunting of and reliance upon personal skill, in no science is there the veneration of supposed manipulative dexterity which we discover in our realm of medicine.

*The Mechanism and Graphic Registration of the Heart Beat*  
 Preface (p. v)  
 Shaw & Sons. London, England. 1920

**Norton, William Harmon** 1856–1944  
 American geologist

Medicine no longer attacks disease with charm, exorcism and nostrum; she obtains her weapons from the armory of science.

*The Proceedings of the Iowa Academy of Science*  
 Presidential Address  
 Volume 8 1901 (p. 18)

**Osler, Sir William** 1849–1919  
 Canadian physician and professor of medicine

...it must be confessed that the practice of medicine among our fellow creatures is often a testy and choleric business.

*Aequanimitas: With Other Addresses to Medical Students, Nurses and Practitioners of Medicine*  
 Chapter XIV (p. 303)  
 P. Blackiston's Sons & Co. Philadelphia, Pennsylvania, USA. 1905

As the practice of medicine is not a business and can never be one the education of the heart – the moral side of the man – must keep pace with the education of the head. Our fellow creatures cannot be dealt with as man deals in corn and coal; “the human heart by which we live” must control our professional relations.

*Aequanimitas: With Other Addresses to Medical Students, Nurses and Practitioners of Medicine*  
 Chapter XVII (p. 350)  
 P. Blackiston's Sons & Co. Philadelphia, Pennsylvania, USA. 1905

Use your five senses. The art of the practice of medicine is to be learned only by experience; 'tis not an inheritance; it cannot be revealed. Learn to see, learn to hear, learn to feel, learn to smell, and know that by practice alone can you become expert.

In W.S. Thayer  
*Sir William Osler, Bart.: Brief Tributes to His Personality, Influence and Public Service*  
 Osler, The Teacher (p. 51)  
 The Johns Hopkins Press. Baltimore, Maryland, USA. 1920

**Timiriazeff, C. A.**  
 Russian botanist

Medicine is the art under whose wing the physiology of animals developed.

Translated by Anna Sheremeteva  
*Die Sinne der Pflanzen*  
 Chapter I (p. 7)  
 Longmans, Green & Co. London, England. 1912

**Trousseau, Armand** 1801–67  
 French internist

Literature, painting and music, do not yield an enjoyment more keen than that which is afforded by the study

of medicine, and whoever does not find in it, from the commencement of his career, an almost irresistible attraction, ought to renounce the intention of following our profession.

Translated by John Rose Cormack  
*Lectures on Clinical Medicine, Delivered at the Hotel-Dieu* (Volume 2)  
 Introduction (pp. 4–5)  
 Lindsay & Blakiston. Philadelphia, Pennsylvania, USA. 1869

**Whittaker, James Thomas**

No biographical data available

The study of medicine is peculiarly excellent in developing the mental faculties. Having elements in it belonging to both literature and science – the bride and her spouse in modern education – it most happily blends the virtues and balances the faults, pertaining to a purely literary or a purely scientific pursuit.

*Physiology*  
 Lecture I (p. 22)  
 Chancy R. Murry. Cincinnati, Ohio, USA. 1879

## MEDICINE AND ART

**Dubos, René Jules** 1901–82  
 French-born American microbiologist and environmentalist

Directly or indirectly, the various forms of art reflect the strivings, the struggles, and the sufferings of mankind. The state of health and the ills of a society are recorded not only in the writings of its physicians and scholars but also in the themes and moods of its artists and poets.

*Mirage of Health*  
 Chapter VII (p. 215)  
 Harper & Brothers Publishers. New York, New York, USA. 1959

## MEDICINE, HISTORY OF

**Professor Jacobs (Fictional character)**

The history of medicine is the history of the unusual.  
*Tarantula*  
 Film (1955)

## MEDICINE, SCIENTIFIC

**Flexner, Abraham** 1866–1959  
 American educator

Scientific medicine...brushes aside all historic dogma. It gets down to details immediately. No man is asked in whose name he comes – whether that of Hahnemann, Rush, or of some more recent prophet. But all are required to undergo rigorous cross-examination. Whatsoever makes good is accepted, becomes in so far part, and organic part, of the permanent structure.

*Medical Education in the United States and Canada* Bulletin  
Number Four  
Chapter X (p. 157)  
The Carnegie Foundation. New York, New York, USA. 1910

## MEDITATION

**Everett, Edward** 1794–1865

Whig Party politician

Immeasurably above all the delights of sense is the serene rapture of meditation, the calm ecstasy of pure thought, sounding the depths of its own consciousness, and ruling all else which is subject to man, in the heaven above and the earth beneath, with the sovereign mastery of mind.

*Inauguration of Washington University at Saint Louis, Missouri. April 23, 1857*

Mr. Everett's Inaugural Address on Academical Education (p. 76)  
Little, Brown & Co. Boston, Massachusetts, USA. 1857

## MEMORY

**Bacon, Sir Francis** 1561–1626

English lawyer, statesman, and essayist

The general root of superstition is that men observe when things hit, and not when they miss and commit to memory the one, and pass over the other.

In James Spedding, Robert Leslie Ellis and Douglas Denon Heath  
In James

*The Works of Francis Bacon* (Volume 2)

*Philosophical Works*

Volume II (p. 668)

Longmans & Co. London, England. 1876

**Osler, Sir William** 1849–1919

Canadian physician and professor of medicine

Memory plays strange pranks with facts. The rocks and fissures and gullies of the mountain-side melt quickly into the smooth, blue outlines of the distant panorama. Viewed through the perspective of memory, an unrecorded observation, the vital details long since lost, easily changes its countenance and sinks obediently into the frame fashioned by the fancy of the moment.

*Sir William Osler, Bart.*

Osler, The Teacher (p. 51)

The Johns Hopkins Press. Baltimore, Maryland, USA. 1920

**Thorne, Kip S.** 1940–

American theoretical physicist

Memories are fallible; different people, experiencing the same events, may interpret and remember them in very different ways.

*Black Holes and Time Warps: Einstein's Outrageous Legacy*

Preface (p. 19)

W.W. Norton & Company, Inc. New York, New York, USA. 1994

## MENSTRUATION

**Butler, Brett**

No biographical data available

I would like it if men had to partake in the same hormonal cycles to which we're subjected monthly. Maybe that's why men declare war – because they have a need to bleed on a regular basis.

In Roz Warren

*Glibquips* (p. 107)

Crossing Press, Freedom, California, USA. 1994

**Crimmins, Cathy**

Humorist

A period is just the beginning of a lifelong sentence.

In Roz Warren

*Glibquips* (p. 107)

Crossing Press, Freedom, California, USA. 1994

**Harrison, R. J.**

No biographical data available

**Montagna, William**

Dermatological researcher

The specific purpose of menstruation is obscure. Not least of its imponderables is why it should occur only in certain primates. It would seem to be a waste of tissue and essential substances such as iron. Several hundred milliliters of blood are lost each month and this is obviously a drain on a woman's reserves and a constant call on her blood-forming bone marrow. Apart from its social disadvantages and discomfort, it often leads to tiredness, bad temper and anemia. From a biological point of view, menstruation should not occur at all!

*Man* (p. 326)

Appleton-Century-Crofts. New York, New York, USA. 1973

**Paglia, Camille** 1947–

American social critic, intellect, and writer

It is not menstrual blood per se which disturbs the imagination – unstaunchable as that red flood may be – but rather the albumen in the blood, the uterine sheds, placental jellyfish of the female sea. This is the chthonian matrix from which we rose. We have an evolutionary revulsion from slime, our site of biological origins. Every month, it is woman's fate to face the abyss of time and being, the abyss which is herself.

*Sexual Personae. Art and Decadence from Nefertiti to Emily Dickinson*

Yale University Press. New Haven, Connecticut, USA. 1990

**Pliny (C. Plinius Secundus)** 23–79

Roman savant and author

But nothing could easily be found that is more remarkable than the monthly flux of women. Contact with it

turns new wine sour, crops touched by it become barren, grafts die, seeds in gardens are dried up, the fruit of trees falls off, the bright surface of mirrors in which it is merely reflected is dimmed, the edge of steel and the gleam of ivory are dulled, hives of bees die, even bronze and iron are at once seized by rust...

*Natural History*

Volume II, Book VII, sec 64

Harvard University Press. Cambridge, Massachusetts, USA. 1947

## MENTAL EYE

**Jefferies, Richard** 1848–87

English naturalist and author

...how can words depict the glowing wonder, the marvelous beauty of all the plant, the insect, the animal life, which presses upon the mental eye?

*The Hills and the Vale*

Nature and Eternity (p. 294)

Duckworth & Co. London, England. 1909

## MENTAL PROCESS

**Huxley, Thomas Henry** 1825–95

English biologist

So, the vast results obtained by Science are won, by no mystical faculties, by no mental processes, other than those which are practised by everyone of us, in the humblest and meanest affairs of life. A detective policeman discovers a burglar from the marks made by his shoe, by a mental process identical with that by which Cuvier restored the extinct animals of Montmartre from fragments of their bones.

*Science and Education: Essays*

Of the Educational Value of the Natural History of Science (pp. 45–46)

D. Appleton & Co. New York, New York, USA. 1896

**Tyndall, John** 1820–93

Irish-born English physicist

Two distinct mental processes are linked in the treatment of such a question [about the Parallel Roads of Glen Roy]. Firstly, the faithful and sufficient observation of the data; and secondly, that higher mental process in which the constructive imagination comes into play, connecting the separate facts of observation with their common cause, and weaving them into an organic whole.

*Reviews* (Volume 1)

Chapter VIII (p. 207)

D. Appleton & Co. New York, New York, USA. 1896

## MERIT

**Bossut, Charles** 1730–1814

French mathematician

Experience shows, that there is more danger in humbling ourselves too much, than ridiculousness in proclaiming our own merits.

*A General History of Mathematics from the Earliest Times to the Middle of the Eighteenth Century*

Author's Preface (p. xx)

Printed for J. Johnson. London, England. 1803

## METAL

**Agricola, Georgius** 1494–1555

German mineralogist

...the earth does not conceal metals in her depths because she does not wish that men should dig them out, but because provident and sagacious Nature has appointed for each thing its place.

Translated by Herbert Hoover and Lou Henry Hoover

*De Re Metallica*

Book I (p. 12)

The Mining magazine

London, England. 1912

...If we remove metals from the service of man, all methods of protecting and sustaining health and more carefully preserving the course of life are done away with. If there were no metals, men would pass a horrible and wretched existence in the midst of wild beasts; they would return to the acorns and fruits and berries of the forest. They would feed upon the herbs and roots which they plucked up with their nails. They would dig out caves in which to lie down at night, and by day they would rove in the woods and plains at random like beasts, and inasmuch as this condition is utterly unworthy of humanity, with its splendid and glorious natural endowment, will anyone be so foolish or obstinate as not to allow that metals are necessary for food and clothing and that they tend to preserve life?

Translated by Herbert Hoover and Lou Henry Hoover

*De Re Metallica*

Book I (p. 14)

The Mining magazine

London, England. 1912

**Baker, Russell** 1925–

American writer and journalist

So there he is at last. Man on the moon. The poor magnificent bungler. He can't even get to the office without undergoing the agonies of the damned, but give him a little metal, a few chemicals, some wire and \$20 or \$30 billion dollars and, vroom!

French novelist

**Bronze.** Metal of the classic centuries.

*Dictionary of Accepted Ideas*

M. Reinhardt. London, England. 1954

**Henry, William**

No biographical data available

The metals are not presented immediately to the hand of man, like the objects of the animal and vegetable kingdoms, but, they are, for the most part, buried in darkness, in the bowels of the earth, where they are so much disguised, by a combination of mixture with other substances, that they often appear entirely unlike themselves.

*The Elements of Experimental Chemistry* (Volume 2)

Notes (p. 389)

Thomas & Andres. Boston, Massachusetts, USA. 1814

**Hutton, W.**

No biographical data available

When we penetrate the dark and subterraneous magazine of Nature, we find veins fraught with the richest Metals; from hence comes that which gives value to the monarch's crown, and weight to his sceptre; which, formed into coins, gives energy and life to traffic, rewards the toils of labour, and puts it in the power of the affluent to warm the bosom of adversity, and make the widow and the orphan sing for joy, or, beaten out into an inconceivable thinness, is made to cover with a transcendent lustre some of the coarsest of nature's productions, and render them ornamental in the palace of the great.

*The Book of Nature Laid Open, in a Popular Survey of the Phenomena and Constitution of the Universe*

Chapter II (p. 8)

J. Milligan. Georgetown, District of Columbia. 1822

**Lavoisier, Antoine Laurent** 1743–94

French chemist

One will not deny me, I trust, all the theory of oxidation and combustion; the analysis and decomposition of air by metals and combustible bodies ...

*Mémoires de Chimie* (Volume 2) (p. 87)

Dupont. Paris, France. 1803

**Rawlings, Majorie Kinnan** 1896–1953

American writer

Cast iron is so superior for cooking utensils to our modern aluminum that I not only cannot grieve for the pioneer hardship of cooking in iron over the hearth, but shall retire if necessary to the back yard with my two Dutch ovens, turning over all my aluminum cookers for airplanes with a secret delight.

*Cross Creek*

Charles Scribner's Sons. New York, New York, USA. 1942

## METAL INDUSTRY

**Agricola, Georgius** 1494–1555

German mineralogist

Many persons hold the opinion that the metal industries are fortuitous and that the occupation is one of sordid toil, and altogether a kind of business requiring not so much skill as labour.

Translated by Herbert Hoover and Lou Henry Hoover

*De Re Metallica*

Book I (p. 1)

The Mining magazine

London, England. 1912

## METAMATHEMATICS

**Hofstadter, Douglas R.** 1945–

American academic

All the limitative Theorems of metamathematics and the theory of computation suggest that once the ability to represent your own structure has reached a certain critical point, that is the kiss of death: it guarantees that you can never represent yourself totally. Gödel's Incompleteness Theorem, Church's Undecidability Theorem, Turing's Halting Problem, Tarski's Truth Theorem – all have the flavour of some ancient fairy tale which warns you that “To seek self-knowledge is to embark on a journey which...will always be incomplete, cannot be charted on a map, will never halt, cannot be described.”

*Gödel, Escher, Bach*

Part II, Chapter XX (p. 697)

Basic Books, Inc. New York, New York, USA. 1999

## METAMORPHOSIS

**Carpenter, George Herbert**

Zoologist

Among the manifold operations of living creatures few have more strongly impressed the casual observer or more deeply interested the thoughtful student than the transformations of insects.

*The Life-story of Insects*

Chapter I (p. 1)

G.P. Putnam's Sons. New York, New York, USA. 1913

### **Peeples, Elizabeth K.**

This is the worm,  
That ate the leaves,  
That grew on the tree,  
That stands in front of my house.

This is the cocoon,  
Spun by the worm,  
That ate the leaves,  
That grew on the tree,  
That stands in front of my house.

This is the moth,  
From out the cocoon,  
Spun by the worm,  
That ate the leaves,  
That grew on the tree,  
That stands in front of my house.

These are the eggs,  
Laid by the moth,  
From out the cocoon,  
Spun by the worm,  
That ate the leaves,  
That grew on the tree,  
That stands in front of my house.

Adventures with Caterpillars

*Nature Magazine*, Volume II, Number 4, October, 1923 (pp. 244, 250)

### **Pouchet, Félix Archimède** 1800–72

French biologist

Born in one shape the insect dies in another, and the metamorphoses which it undergoes are the most important act of its life, and the most extraordinary phenomenon in physiology.

*The Universe*

The Animal Kingdom, Book III (p. 137)

Blackie & Son. London, England. 1870

## **METAPHOR**

### **Bergson, Henri** 1859–1941

French philosopher

The metaphor never goes very far, anymore than a curve can long be confused with its tangent.

Translated by Arthur Mitchell

*Creative Evolution*

Chapter III (p. 213)

Henry Holt & Co. New York, New York, USA. 1913

### **Bullock, James O.**

Theoretical cosmologist

Mathematical metaphors are not different from other forms of human understanding. They may provide some significant insights, but are not a holy grail of ultimate truth....Despite our desires to the contrary, nature is not obligated to limits complexity to the confines of the human imagination.

Literacy in the Language of Mathematics

*American Mathematical Monthly*, Volume, Number 8, October, 1994 (p. 739)

### **Calvin, William H.** 1939–

Theoretical neurophysiologist

Kant said that our metaphors comprise the conceptual spectacles through which we view the world.... If we are to have meaningful, connected experiences; ones that we can comprehend and reason about; we must be able to discern patterns to our actions, perceptions, and conceptions. Underlying our vast network of interrelated literal meanings (all of those words about objects and actions) are those imaginative structures of understanding such as schema and metaphor, such as the mental imagery that allows us to extrapolate a path, or zoom in on one part of the whole, or zoom out until the trees merge into a forest.

*The Cerebral Code* (pp. 159–160)

The MIT Press. 1996

### **Capra, Fritjof** 1939–

Austrian-born American physicist

Gradually, physicists began to realize that nature, at the atomic level, does not appear as a mechanical universe composed of fundamental building blocks, but rather as a network of relations, and that, ultimately, there are no parts at all in this interconnected web. Whatever we call a part is merely a pattern that has some stability and therefore captures our attention.

*The Tao of Physics: An Exploration of the Parallels Between Modern Physics and Eastern Mysticism* (p. 329)

Shambhala. Boston, Massachusetts, USA. 1991

### **Cole, K. C.** 1942–

American science writer

So much of science consists of things we can never see: light “waves” and charged “particles”; magnetic “fields” and gravitational “forces”; quantum “jumps” and electron “orbits.” In fact, none of these phenomena is literally what we say it is. Light waves do not undulate through empty space in the same way that water waves ripple over a still pond; a field is only a mathematical description of the strength and direction of a force; an atom does not literally jump from one quantum state to another, and electrons do not really travel around the atomic nucleus in orbits. The words we use are merely metaphors.

On Imagining the Unseeable

*Discover Magazine*, December, 1982 (p. 70)

**Davy, Sir Humphry** 1778–1829  
English chemist

...the tropes and metaphors of the speaker were like the brilliant wild flowers in a field of corn, very pretty, but which did very much hurt to the corn.

*Consolations in Travel, or the Last Days of a Philosopher*  
Dialogue V (p. 253)  
J. Murray. London, England. 1830

The works of scientific men are like the atoms of gold, of sapphire and diamonds, that exist in the mountain; they form no perceptible part of the mass of the mountain; they are neglected and unknown when it is entire; they are covered with vegetable mould, and by forests. But when time has sapped its foundation – when its fragments are scattered abroad by the elements, and its decayed materials carried down the rivers, then they glitter, and are found; then their immortality is known, and they are employed to ornament the diadems of emperors and the scepters of kings.

*The Collected Works of Sir Humphry Davy* (Volume 1)  
Memories of the Life of Sir Humphry Davy  
Chapter IV (p. 218)  
London, England. 1839–1849

**Duke of Argyll (George Douglas Campbell)** 1823–1900

English statesman and writer on science, religion, and politics

...the facts of Nature are best brought home and explained to the understanding, and to the intelligence of man, by stating them in terms of the relation which they obviously bear to the familiar operations of our own mind and spirit.

*The Unity of Nature*  
Chapter 8 (p. 174)  
G.P. Putnam's Sons. New York, New York, USA. 1885

**Flammarion, Camille** 1842–1925  
French astronomer and writer

O popes of the Aryans! O priests of the Incas! O therapeutists of Egypt! and you philosophers of Greece, alchemists of the Middle Ages, scientists of modern times! O thinkers of all ages! you should be dumb before the sublime star! What is our voice in nature? We may pile up metaphors on metaphors, we shall only lower these magnitudes to our own size. We are but pigmies pretending to scale the sky.

Translated by John Ellard Gore  
*Popular Astronomy: A General Description of the Heavens*  
Book III, Chapter VIII (p. 247)  
Chatto & Windus. London, England. 1907

**Fulford, Robert**  
No biographical data available

Metaphor, the life of language, can be the death of meaning. It should be used in moderation, like vodka. Writers

drunk on metaphor can forget they are conveying information and ideas.

*Globe & Mail (Toronto)*, December 4, 1996

**Goleman, Daniel** 1946–  
American writer and psychologist

The logic of the emotional mind is associative; it takes elements that symbolize a reality, or trigger a memory of it, to be the same as that reality. That is why similes, metaphors and images speak directly to the emotional mind.... If the emotional mind follows this logic and its rules, with one element standing for another, things need not necessarily be defined by their objective identity: what matters is how they are perceived; things are as they seem.... Indeed, in emotional life, identities can be like a hologram in the sense that a single part evokes the whole.

*Emotional Intelligence* (p. 294)  
Bloomsbury. London, England. 1996

**Goodwin, Brian Carey** 1931–  
Biologist

The point...is not to conclude that there is something wrong with Darwin's theory because it is clearly linked to some very powerful cultural myths and metaphors. All theories have metaphorical dimensions which I regard as not only inevitable but also extremely important. For it is these dimensions that give depth and meaning to scientific ideas, that add to their persuasiveness, and colour the way we see reality.

*How the Leopard Changed Its Spots: The Evolution of Complexity* (p. 32)  
Phoenix. London, England. 1994

**Gould, Stephen Jay** 1941–2002  
American paleontologist, evolutionary biologist, and historian of science

If we must deal in metaphors [when discussing evolution], I prefer a very broad, low and uniform slope. Water drops randomly at the top and usually dries before flowing anywhere. Occasionally, it works its way downslope and carves a valley to channel future flows. The myriad valleys could have arisen anywhere on the landscape. The current positions are quite accidental. If we could repeat the experiment, we might obtain no valleys at all, or a completely different system. Yet we now stand at the shore line contemplating the fine spacing of valleys and their even contact with the sea. How easy it is to be misled and to assume that no other landscape could possibly have arisen.

...all words are metaphor...

*The Laws of Media: The New Science*

Chapter 3 (p. 120)

University of Toronto Press. Toronto, Ontario, Canada. 1988

**McPhee, John** 1931–

American journalist and nonfiction writer

It [geology] was a fountain of metaphor – of isostatic adjustments and degraded channels, of angular unconformities and shifting divides, of rootless mountains and bitter lakes. Streams eroded headward, digging from two sides into mountain or hill, avidly struggling toward each other until the divide between them broke down, and the two rivers that did the breaking now became confluent (one yielding to the other, giving up its direction of flow and going the opposite way) to become a single stream.

*Basin and Range* (p. 24)

Farrar, Straus, Giroux. New York, New York, USA. 1981

**Moore, James R.**

No biographical data available

Clever metaphors die hard. Their tenacity of life approaches that of the hardiest micro-organisms. Living relics litter our language, their *raison d'être* forever past, ignored if not forgotten, and their present fascination seldom impaired by the confusions they may create.

*The Post-Darwinian Controversies: A Study of the Protestant Struggle to Come to Terms with Darwin in Great Britain and America*

Chapter 1 (p. 19)

Cambridge University Press. Cambridge, England. 1979

**Poynting, John Henry** 1852–1914

English physicist

To take an old but never-worn-out metaphor, the physicist is examining the garment of Nature, learning of how many, or rather of how few different kinds of thread it is woven, finding how each separate thread enters into the pattern, and seeking from the pattern woven in the past to know the pattern yet to come.

*Collected Scientific Papers*

Presidential Address

The Mathematical and Physical Section

The British Association (Dover) 1899 (p. 603)

**METAPHYSICAL****More, Louis Trenchard**

American educator

A metaphysical hypothesis, valuable solely for its utility, is always dangerous, for by constant use we tend inevitably to give an objective reality to things which in the beginning we knew to exist only in our own minds. And this tendency is especially deplorable in science, which does little for education if it does not recognize clearly the limits of our knowledge and distinguish accurately between reality and speculation.

*The Limitations of Science*

Chapter 1 (p. 16)

Henry Holt &amp; Co. New York, New York, USA. 1915

**Whewell, William** 1794–1866

English philosopher and historian

...metaphysical discussions are not to be put in opposition to the study of facts; but are to be stimulated, nourished and directed by a constant recourse to experiment and observation.

Preface (pp. 6–7)

Longmans, Green &amp; Co. New York, New York, USA. 1912

**METAPHYSICS****Barrett-Browning, Elizabeth** 1806–61

English poet

I walked on, musing with myself ...  
whether, after all, A larger metaphysics might not help  
Our physics ...

*Aurora Leigh*

Aurora Leigh

C.S. Francis & Co. New York, New York, USA. 1857

**Bradley, Francis Herbert** 1846–1924

English philosopher

Metaphysics is the finding of bad reasons for what we believe upon instinct, but to find these reasons is no less an instinct.

*Appearance and Reality: A Metaphysical Essay*

Preface (p. xiv)

Swan Sonnenschein & Co. London, England. 1893

We may agree, perhaps, to understand by Metaphysics an attempt to know reality as against mere appearance, or the study of first principles or ultimate truths, or again the effort to comprehend the universe, not simply piecemeal or by fragments, but somehow as a whole.

*Appearance and Reality: A Metaphysical Essay* (2nd edition)

Introduction (p. 1)

Swan Sonnenschein & Co. London, England. 1908

Metaphysical knowledge... may be possible theoretically, and even actual, if you please, to a certain degree; but, for all that, it is practically no knowledge worth the name.

*Appearance and Reality: A Metaphysical Essay*

Introduction (p. 2)

Swann Sonnenschein & Co. London, England. 1893

... when the sense of mystery and enchantment no longer draws the mind to wander aimlessly and to love it knows not what; when, in short, twilight has no charm – then metaphysics will be worthless.

*Appearance and Reality: A Metaphysical Essay*

Introduction (pp. 3–4)

Swann Sonnenschein & Co. London, England. 1893

**Butler, Samuel** 1612–80

English novelist, essayist, and critic

There is no drawing the line between physics and metaphysics. If you examine every day facts at all closely, you are a physicist; but if you press your physics at all home, you become a metaphysician; if you press your metaphysics at all home, you are in a fog.

*The Note-Books of Samuel Butler* (Volume 1)

1874–1883 (p. 259)

University Press of America, Inc. Lanham, Maryland, USA. 1984

**Carus, Paul** 1852–1919

American philosopher

Many a scientist is inclined simply to ignore the pretensions of metaphysics, but that will not do; for there is a truth at the bottom of its vagaries which should not be neglected, and the declaration that the nature of knowledge of any kind, in matters philosophical or scientific, is a description of facts will not be satisfactory until we understand the full importance of this definition.

*The Surd of Metaphysics*

Things-in-Themselves (p. 6)

The Open Court Publishing Co. Chicago, Illinois, USA. 1903

**Colton, Charles Caleb** 1780–1832

English sportsman and writer

The study of the mathematics, like the Nile, begins in minuteness, but ends in magnificence; but the study of metaphysics begins with a torrent of tropes, and a copious current of words, yet loses itself at last, in obscurity and conjecture, like the Niger in his barren deserts of sand.

*Lacon: Or, Many Things in Few Words*

CCCXLII (p. 162)

Longman, Rees, Orme, Brown & Green. London, England. 1826

**Darwin, Charles Robert** 1809–82

English naturalist

Origin of man now proved – Metaphysics must flourish – He who understands [the] baboon would do more towards metaphysics than Locke.

*M Notebook*

84e, 16 August, 1838

**Douglas, James** 1753–1819

No biographical data available

Metaphysical truths can only be established by producing effects from corresponding causes; and though we may confront such demonstrative evidence with the immutable laws of mathematical decision, we must be sensible that there will still remain some pretense for doubt; thus the basis of that knowledge, which on these principles we have been long labouring to accomplish, will become an endless toil, an endless force for controversy: and having the passions and the prejudices of mankind to combat, which mathematical certainty can alone effectually suppress, we must content ourselves only with making converts of those who have minds sufficiently expansive without the shackles of Euclid, and the vanity of displaying their own learning and pedantry.

*A Dissertation on the Antiquity of the Earth*

Preface (pp. i–ii)

Printed at the Logographic Press. London, England. 1785

**Elliot, Hugh Samuel Roger** 1881–1930

No biographical data available

Metaphysical systems generally, however we may admire their wonderful ingenuity and subtlety, can have no interest for science unless they are founded on gross material facts, which can be examined and verified. As a rule their beautifully interwoven gossamer threads are of far too fine a texture to bear contact with the brutal hardness and reality of a fact. They can float gaily in the air without any solid support: while thus floating, they have no practical interest for us, who are compelled to crawl painfully along the earth. But when one of these ethereal systems attempts to take root on solid ground, it is apt to

get mangled and torn, wherever it touches earth; and the best chance of safety for the superstructure is to float off again into the rarified atmosphere whence it came.

*Modern Science and the Illusions of Professor Bergson*  
Chapter I (p. 1)

Longmans, Green & Co. New York, New York, USA. 1912

### Frank, Philipp

No biographical data available

...metaphysics divides people and science and unites them.

*Modern Science and Its Philosophy* (p. 276)

Harvard University Press. Cambridge, Massachusetts, USA. 1949

### Herrick, Charles Judson 1868–1960

American neurologist

If, now, a naturalist or anybody else wishes to speculate about what may lie beyond the range of possible human experience, that is his privilege. The scientist cannot object to it provided these excursions into transcendentalism do not invade his own domain. It is legitimate to extrapolate from the known facts into the unknown but not to reverse the procedure. Our metaphysics must not be divorced from our physics and from veridical knowledge.

*The Evolution of Human Nature*

Epilogue: The Unknown God (p. 463)

University of Texas Press. Austin, Texas, USA. 1956

### Kant, Immanuel 1724–1804

German philosopher

Time was, when she [metaphysics] was the *queen* of all the sciences; and, if we take the will for the deed, she certainly deserves, so far as regards the high importance of her object-matter, this title of honor. Now, it is the fashion of the time to heap contempt and scorn upon her...

Translated by J.M.D. Meiklejohn

*Critique of Pure Reason*

Preface to the First Edition (pp. 13–14)

P.F. Collier & Son. New York, New York, USA. 1901

### Leighton, Joseph Alexander

No biographical data available

Metaphysics, the heart of philosophy, seeks by persistent reflection to see things steadily and to see them whole; in Goethe's words, "Im Ganzen, Guten, Wahren resolut zu leben." In other words, metaphysics seeks a consistent and total interpretation of experience.

*Man and the Cosmos: An Introduction to Metaphysics*

Chapter I (p. 3)

D. Appleton & Co. New York, New York, USA. 1922

### Lewes, George Henry 1817–78

English philosopher

Few researches can be conducted in anyone line of inquiry without sooner or later abutting on some metaphysical problem, were it only that of Force, Matter, or Cause; and since Science will not, and Metaphysic cannot solve it,

the result is a patchwork of demonstration and speculation very pitiable to contemplate.

*Problems of Life and Mind* (Volume 1)

Part I, Chapter I (p. 9)

Trübner & Co. London, England. 1874–75

### Morris, Robert Tuttle 1857–1945

American surgeon

Metaphysics is a bower of safety in the garden of a fool's paradise. If men can run to such a bower whenever they encounter difficulties, there is lack of incentive to face genuine scientific labor bravely. A bower which gives protection is often chosen, instead of a steed which carries one to the winning front of battle.

*Microbes and Men*

Chapter I (p. 13)

Doubleday Page & Co. Garden City, New York, USA. 1916

### Russell, Bertrand Arthur William 1872–1970

English philosopher, logician, and social reformer

Metaphysics, or the attempt to conceive the world as a whole by means of thought, has been developed, from the first, by the union and conflict of two very different human impulses, the one urging men towards mysticism, the other urging them towards science.

*Mysticism and Logic: And Other Essays*

Chapter I (p. 1)

Longmans, Green & Co. London, England. 1919

### von Goethe, Johann Wolfgang 1749–1832

German poet, novelist, playwright, and natural philosopher

There are not a few problems in the natural sciences of which a man cannot speak justly without calling metaphysics to his aid; not technical words about knowing and being, such as make a show in the schools, but that wisdom of thought which was before all physics, lives with it, and will endure after it.

In John Stuart Blackie

Philosophy, Metaphysics, Logic, Truth and Science (pp. 160–161)

William Blackwood & Sons. Edinburgh, Scotland. 1883

### von Mises, Richard 1883–1953

Austrian-born American mathematician

There is no field that will always remain the special province of metaphysics and into which scientific research can never carry any light; there are no "eternally unexplorable" areas.

*Positivism: A Study in Human Understanding*

Chapter 21 (p. 273)

Harvard University Press. Cambridge, Massachusetts, USA. 1951

## METEOR

### Author undetermined

Far better 'tis, to die  
the death that flashes gladness,

than alone, in frigid dignity,  
to line on high.  
Better, in burning sacrifice,  
be thrown against the world  
to perish, than the sky  
to circle endlessly  
a barren stone.

Nature and Science in Poetry

*Nature*, Volume 132, Number 3330, August 26, 1933 (p. 295)

A rock from space that falls to earth is called a meteorite. However, if it lands to the left of you it's called a meteorite.

Source undetermined

**Butler, Samuel** 1612–80

English novelist, essayist, and critic

This hairy meteor did denounce  
The fall of Scepters and of Crowns.

Part I, Canto I, II, l. 115

Jones & Company. London, England. 1825

**Devaney, James** 1890–1976

Australian poet, novelist, journalist, and teacher

The coming of this lovely night  
Lifted the world's great roof of blue  
And bared the awful Infinite –  
So grand an hour, so vast a view,  
Abashed I stand each night anew:  
When out of unimagined deeps  
Spectacular you burst upon  
The dark, and down the starry steeps  
A trail of whitest fire you shone

One breathless moment – and were gone.

*Where the Wind Goes*

To a Falling Star

Angus & Robertson. Sydney, Australia. 1939

**Dodd, Robert** 1936–

No biographical data available

It is much too early to tell whether the idea of periodic impacts by extraterrestrial objects will blossom into a still grander view of the Earth's relation to the other members of the Sun's family or will wither before a fiery blast of new data, but it shows that the romance between geology and planetary astronomy that began with the manned space program is far from over.

*Thunderstones and Shooting Stars*

Chapter 11 (p. 186)

Harvard University Press. Cambridge, Massachusetts, USA. 1986

**Dorman, Imogen**

No biographical data available

Down thru the cold blue depths you've gone  
A wanderer lone  
Bearing a message written on  
Metallic stone.

Cast from the planet of your birth

Thru cold you've flown,

Cold such as mortals on the earth

Have never known.

Heat you have found in wintry skies

Earth's atmosphere

Set you aflame, to many eyes

An omen drear.

Lucky the ones who, searching, read

Your message true,

Wanderer of the lightning speed

Down from the blue.

The Meteor

*Popular Astronomy*, Volume 38, Number 3, March, 1930 (p. 133)

**Dryden, John** 1631–1700

English poet, dramatist, and literary critic

And oft, before tempestuous winds arise,  
The seeming stars fall headlong from the skies,  
And shooting through the darkness, gild the night  
With sweeping glories and long trails of light.

*The Poetical Works of Dryden*

Virgil's Georgics, Book I, l. 501–504

The Riverside Press. Cambridge, Massachusetts, USA. 1949

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

I would rather believe in ghosts than in hyperbolic meteors.

The Double Axe: The Inhumanist (p. 283)

Stanford University Press. Stanford, California, USA. 1988

**Jefferson, Thomas** 1743–1826

3rd president of the USA

We certainly are not to deny whatever we cannot  
account for. A thousand phenomena present themselves

daily which we cannot explain, but where facts are sug-  
gested, bearing no analogy with the laws of nature as  
yet known to us, their verity needs proof proportioned  
to their difficulty. A cautious mind will weigh the  
opposition of the phenomenon to everything hitherto  
observed, the strength of the testimony by which it is  
supported, and the error and misconceptions to which  
even our senses are liable. It may be very difficult to  
explain how the stone you possess came into the posi-  
tion in which it was found. But is it easier to explain  
how it got into the clouds from whence it is supposed  
to have fallen? The actual fact however is the thing to  
be established.

In Andrew A. Lipscomb (ed.)

*The Writings of Thomas Jefferson* (Volume 11) (p. 440)

Thomas Jefferson Memorial Association. Washington, D.C. 1905

I could more easily believe that two Yankee professors  
would lie than that stones would fall from the heaven.

In R.V. Jones

*The Natural Philosophy of Flying Saucers**Physics Bulletin*, Volume 19, 1968 (p. 225)**Joule, James Prescott** 1818–89

English physicist

You have, no doubt, frequently observed what are called  
*shooting-stars*, as they appear to emerge from the dark  
sky of night, pursue a short and rapid course, burst, and  
are dissipated in shining fragments. From the velocity  
with which these bodies travel, there can be little doubt  
that they are small planets which, in the course of their  
revolution round the sun, are attracted and drawn to the  
earth.

*The Scientific Papers of James Prescott Joule*

On Matter, Force, and Heat (p. 272)

Taylor &amp; Francis. London, England. 1884

**London, Jack** 1876–16

American author

I would rather be a meteor, every atom of me in magnifi-  
cent glow, than a sleepy and permanent planet.

*StarDate*, May/June, 1955 (p. 3)**Martin, Florence Holcomb**

No biographical data available

Slashed by the earth the comets orbit glares  
With tiny meteors; each fiery tail  
Now into incandescence sparks and flares  
In earth's rare upper atmosphere.

The Riddle of the Skies

### Mooch (Fictional character)

You mean that this little pebble's been out there hot-  
roddin' around the universe?

*The Blob*

Film (1958)

### Narrator

From time immemorial the Earth has been bombarded by  
objects from outer space. Bits and pieces of the Universe  
piercing our atmosphere in an invasion that never ends.  
Meteor, the shooting stars on which so many earthly  
wishes have been born! Of the thousands that plummet  
toward us, the greater part are destroyed in a fiery flash  
as they strike the layers of the air that encircle us. Only  
a small percentage survives. Most of those fall into the  
water which covers two-thirds of our world. But from  
time to time from the beginning of time a very few  
meteors have struck the crust of the Earth and formed  
craters – craters of all sizes sought after, poured over by  
scientists of all nations for the priceless knowledge bur-  
ied within them. In every moment of every day they come  
from planets belonging to stars whose dying light is too  
far away to be seen. From infinity they come. Meteors!  
Another strange calling card from the limitless regions  
of space – its substance unknown, its secrets unexplored.  
The meteor lies dormant in the night – waiting!

*The Monolith Monsters*

Film (1957)

**Pliny (C. Plinius Secundus)** 23–79

Roman savant and author

Stars are also seen to shoot hither and thither, but never  
to any purpose ...

Act II, Scene i, l. 153

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Silliman, G. S.**

No biographical data available

It seems not in accordance with ascertained science to  
ascribe mysterious appearances on the earth, or in its  
atmosphere, to causes preceding from the planets, or  
spheres, moving in space, independent of the earth and  
its system.... Is it not more in harmony with the integrity  
and perfection of His work that this phenomenon [mete-  
orites] should originate in a meteorological process, than  
that the symmetry of the creation should be violated by  
a visit to the earth of a lone, foreign intruder from the  
depths of space?

*On the Origin of Aerolites*

W.C. Bryant. New York, New York, USA. 1859

**Smythe, Daniel** 1908–81

American poet

A curve of fire traces the dark

And warns us of a visitor.

It makes an unfamiliar mark

And then is seen no more.

*The Meteor*

*Nature Magazine*, Volume 50, Number 9, November, 1957 (p. 493)

**Teasdale, Sara** 1884–1933

American writer and poet

I saw a star slide down the sky,  
Blinding the north as it went by,  
Too burning and too quick to hold,  
Too lovely to be bought or sold,  
Good only to make wishes on  
And then forever to be gone.

*The Collected Poems of Sara Teasdale*

The Falling Star (p. 198)

Collier Books. New York, New York, USA. 1966

**Tennyson, Alfred (Lord)** 1809–92

English poet

Now slides the silent meteor on, and leaves

A shining furrow, as thy thoughts in me.

*Alfred Tennyson's Poetical Works*

The Princess, VII

Oxford University Press, Inc. London, England. 1953

### The Bible (King James Version)

I saw a star fall from heaven unto the earth...

Revelation 9:1

**Virgil** 70 BCE–19 BCE

Roman epic, didactic, and idyllic poet

As oft, from heaven unfix'd, shoot flying stars,

And trail their locks behind them.

In *Great Books of the Western World* (Volume 13)

*The Aeneid*

Book V, l. 528–529 (pp. 200–201)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

When it struck our earth there was to be a magnificent spectacle, no doubt, for those who were on the right side of our planet to see; but beyond that nothing. It was doubtful whether we were on the right side. The meteor would loom larger and larger in the sky, but with the umbra of our earth eating its heart of brightness out, and at last it would be the whole sky, a sky of luminous green clouds, with a white brightness about the horizon west and east. Then a pause – a pause of not very exactly definite duration – and then, no doubt, a great blaze of shooting stars. They might be of some unwonted colour because of the unknown element that line in the green revealed. For a little while the zenith would spout shooting stars. Some, it was hoped, would reach the earth and be available for analysis.

*Seven Famous Novels by H.G. Wells*

*In the Days of the Comet*

Book I, Chapter 5 (p. 774)

Alfred A. Knopf. New York, New York, USA. 1934

**Winchell, Alexander** 1824–91

American geologist

That mysterious visitant which paints its luminous streak along the evening sky – sudden, brilliant, but evanescent.

*World-life; Or, Comparative Geology* (3rd edition)

Part I, Chapter I (p. 4)

S.C. Griggs & Co. Chicago, Illinois, USA. 1889

...let us not lose sight of the matter [meteor] which underwent ignition; it is not annihilated; it has not been returned to the regions beyond our atmosphere; those are physical impossibilities. Unseen, unheard, millions of

particles of cooled vapor remain floating in our air. Being ponderable, being mineral and mostly metallic, they must settle toward the earth. They are plunged into the vortices of the winds; they are soaked up by aqueous vapors; they are floated by clouds, they are washed down by rains and added to the volume of the globe.

*World-life; Or, Comparative Geology* (3rd edition)

Part I, Chapter I (p. 6)

S.C. Griggs & Co. Chicago, Illinois, USA. 1889

Could our vision be unsealed, we should behold the infinite firmament dotted with meteors hurrying to and fro, as snow-flakes in the wildest wintry storm.

*World-life; Or, Comparative Geology* (3rd edition)

Part I, Chapter I (p. 22)

S.C. Griggs & Co. Chicago, Illinois, USA. 1889

These meteoric matters are samples of the stuff which exists in the far regions where the stars are shining. It comes to us and we handle it and investigate it, and find it exactly like the stuff from which our world is made. We are not isolated, as we had thought, from the starry realm. Even the meteors are messengers – flaming messengers – bringing us these tidings from distant provinces, and assuring us that the government whose details are administered upon our earth is loyally recognized in the regions lying on the distant verge of the visible universe.

*World-life; Or, Comparative Geology* (3rd edition)

Part I, Chapter I (p. 23)

S.C. Griggs & Co. Chicago, Illinois, USA. 1889

## METEORITE

**Alexander, William**

No biographical data available

**Street, Arthur**

No biographical data available

Meteorites usually consist of an alloy of iron with about 8 per cent of nickel, with a small amount of cobalt. No doubt primitive man, whose local culture was thus by accident raised from the level of the stone age to that of the iron age, thought metallic meteorites were valuable gifts from the gods. Nowadays, however, meteorites are hardly regarded as a useful source of iron. For one thing the delivery service is erratic and the unheralded arrival of a meteorite in one's back garden would be more embarrassing than profitable.

*Metals In the Service of Man*

Penguin Books Ltd. Harmondsworth, England. 1945

**Chlandni, E. F. F.**

No biographical data available

If the planets had a beginning, then either they must have formed from pieces of matter in an unconsolidated and chaotic state, which had been dispersed throughout a vast space before gravitational attraction gathered them into large masses; or else new planetary bodies were

formed from the fragments of much larger ones that were broken to pieces, either by some external impact or by an internal explosion.... [I]t seems likely that many of these original pieces would not have joined the larger accumulating planets, because they were too far from them or traveling at excessive velocities, but would have remained independent...continuing their journeys in space until each entered the sphere of attraction of some planet, whereupon it would fall, giving rise to the meteoritic phenomenon.

In John A. Wood

*Meteorites and the Origin of Planets*

Chapter 5 (p. 77)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1968

**Clinton, William Jefferson** 1946–  
42nd president of the USA

Today, rock 84001 speaks to us across all those billions of years and millions of miles. It speaks of the possibility of life. If this discovery is confirmed, it will surely be one of the most stunning insights into our universe that science has ever uncovered. Its implications are as far-reaching and awe-inspiring as can be imagined. Even as it promises answers to some of our oldest questions, it poses still others even more fundamental.

The White House

Office of the Press Secretary August 7, 1996

**Frost, Robert** 1874–1963  
American poet

Never tell me that not one star of all  
That slipped from heaven at night and softly fall  
Has been picked up with stones to build a wall.

*Complete Poems of Robert Frost*

A Star in a Stone-Boat

Henry Holt & Company. New York, New York, USA. 1949

**Hamilton, W.**  
No biographical data available

The outside of every stone that has been found [in the Siennese territory], and has been ascertained to have fallen from the cloud near Sienna, is evidently freshly vitrified, and is black, having every sign of having passed through an extreme heat; when broken, the inside is of a light-gray color mixed with black spots, and some shining particles, which the learned here have decided to be pyrites....

In John A. Wood

*Meteorites and the Origin of Planets*

Chapter 2 (p. 13)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1968

**Kelvin, Lord William Thomson** 1824–1907  
Scottish engineer, mathematician, and physicist

Because we all confidently believe that there are at present, and have been from time immemorial, many worlds of life besides our own, we must regard it as probable in the highest degree that there are countless, seed-bearing meteoric

stones moving about through space. If at the present instant no life existed upon this Earth, one such stone falling upon it might, by what we blindly call natural causes, lead to its becoming covered with vegetation.... The hypothesis that life originated on this Earth through moss-grown fragments from the ruins of another world may seem wild and visionary: all I maintain is that it is not unscientific.

*Address of Sir William Thomson, Knt., L.L.D., F.R.S., President*

Taylor & Francis. London, England. 1871

**Meunier, M. S.**  
No biographical data available

[I have concluded that] the meteorites are pieces of debris from a disrupted planet. Now just as one can, from exhumed remains of extinct animals, reconstruct the beings of past epochs, so it should be possible by examining meteorites to reconstruct the celestial body that supplies these fossil vestiges....

In John A. Wood

*Meteorites and the Origin of Planets*

Chapter 3 (p. 29)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1968

**Paneth, F. A.**  
No biographical data available

As is well known, the most exact way of determining the ages of rocks depends on the regularity of radioactive decay processes. Obviously the same method can be applied to meteorites.... In our present state of ignorance of how they were formed, we must admit the possibility that there may be meteorites substantially older than the oldest strata of the earth.

In John A. Wood

*Meteorites and the Origin of Planets*

Chapter 4 (p. 55)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1968

**Peattie, Donald Culross** 1898–1964  
American botanist, naturalist, and author

Of all the astronomical events, the fall of a meteorite is the most unnerving and yet the most reassuring. Reassuring because it proves to us that the depths of space are inhabited by bodies made of the same elements we have here on earth, that, at rock bottom, a man and a star are built of the same stuff.

*An Almanac for Moderns*

August Eleventh (p. 155)

G.P. Putnam's Sons. New York, New York, USA. 1935

**Tennyson, Alfred (Lord)** 1809–92  
English poet

Must my day be dark by reason, O ye Heavens, of your boundless nights, Rush of Suns, and roll of systems, and your fiery clash of meteorites?

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

...there are no imports [into the world] but meteorites, and no exports at all.

*The Works of H.G. Wells* (Volume 9)  
*A Modern Utopia*  
section 2 (p. 73)

T. Fisher Unwin. London, England. 1924

## METEOROLOGICAL INSTRUMENTS

**Daniell, John Frederic** 1790–1845  
English chemist

Many and ingenious are the instruments which the science [meteorology] of modern ages has constructed for the accurate appreciation of these perpetual changes; and diligent have been the observers who have dedicated their time to the science of meteorology: but, from the first contrivance of the barometer to the present day, the great and unceasing fluctuations of the vast aerial ocean, denoted by that instrument, are unexplained.

*Meteorological Essays and Observations*

An Essay on the Constitution of the Atmosphere (p. 2)

Printed for Thomas & George Underwood. London, England. 1823

## METEOROLOGIST

**Daniell, John Frederic** 1790–1845  
English chemist

Man may almost with propriety be said to be a meteorologist by nature: he is naturally placed in such a state of dependance upon the elements, that to watch their vicissitudes and anticipate their disturbances, becomes a necessary portion of the labour to which he is born.

*Meteorological Essays and Observations*

An Essay on the Constitution of the Atmosphere (p. 1)

Printed for Thomas & George Underwood. London, England. 1823

## Scott, Robert Henry

...the meteorologist is like a mussel or an oyster, anchored to one spot, and obliged to make the best of such nutriment as may chance to be swept within his reach.

*Elementary Meteorology* (6th edition)

Chapter I (p. 3)

Kegan Paul, Trench, Trubner & Co. La Salle, Indiana, USA. 1893

## METEOROLOGY

**Herschel, Sir John Frederick William** 1792–1871  
English astronomer and chemist

Meteorology, so far as the prediction of the weather is concerned (which most persons consider, very erroneously, to be its only practical object), may be regarded as a science still in its infancy; though if such be the case, to judge from the voluminous nature of its records, and the multitude of books which have been written on it, its maturity, if ever attained, would promise to be gigantic indeed; were it not that the progress of all real science is towards compression and condensation, and its whole aim to supersede the endless detail of individual cases by the announcement of easily remembered and readily applicable laws.

*Familiar Lectures on Scientific Subjects*

Lecture IV (p. 144)

George Routledge & Sons. New York, New York, USA. 1871

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

Meteorology constantly and persistently aims at prophecy, and it will never stand in a place of honor until it can certainly foretell.

*Annual Report of the Board of Regents of the Smithsonian Institution* (1902)

The Discovery of the Future (p. 384)

Government Printing Office. Washington, D.C. 1903

## METHOD

**Bernard, Claude** 1813–78  
French physiologist

...good methods can teach us to develop and use to better purpose the faculties with which nature has endowed us, while poor methods may prevent us from turning them to good account. Thus the genius of inventiveness, so precious in the sciences, may be diminished or even smothered by a poor method, while a good method may increase and develop it.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Part One, Chapter II, Section ii (p. 35)

Henry Schuman, Inc. New York, New York, USA. 1927

**Billroth, Theodor** 1829–84  
No biographical data available

The method of research, however, of posing the questions and solving the questions posited, is invariably the same, whether we have before us a blooming rose, a diseased grape-vine, a shining beetle, the spleen of a leopard, a bird's feather, the intestines of a pig, the brain of a poet or philosopher, a sick poodle, or a hysterical princess.

*The Medical Sciences in the German Universities (Part II)*

The Descriptive Sciences (p. 53)

The Macmillan Company. New York, New York, USA. 1924

Algerian-French novelist, essayist, and playwright

When one has no character one has to apply a method.

*The Fall* (p. 11)

Alfred A. Knopf. New York, New York, USA. 1958

**Carroll, Lewis (Charles Dodgson)** 1832–98

English writer and mathematician

The method employed I would gladly explain,  
While I have it so clear in my head,  
If I had but the time and you had but the brain –  
But much yet remains to be said.

*The Complete Works of Lewis Carroll*

*The Hunting of the Snark*

Fit the Fifth (p. 771)

The Modern Library. New York, New York, USA. 1936

**Chapin, Charles Value** 1856–1941

American physician and public health officer

Science can never be a closed book. It is like a tree,  
ever growing, ever reaching new heights. Occasionally  
the lower branches, no longer giving nourishment to the  
tree, slough off. We should not be ashamed to change our  
methods; rather we should be ashamed never to do so.

Science and Public Health

*American Journal of Public Health* Volume XVII, Number 11, November, 1927 (p. 1115)

**Chargaff, Erwin** 1905–2002

Austrian biochemist

The availability of a large number of established methods  
serves in modern science often as a surrogate of thought.

*Heraclitean Fire: Sketches from a Life Before Nature*

Part III

Science or an Obsession (p. 170)

Rockefeller University Press. New York, New York, USA. 1978

**Cohen, Morris Raphael** 1880–1947

American philosopher

...the safety of science depends on there being men who  
care more for the justice of their methods than for any  
results obtained by their use.

*An Introduction to Logic and Scientific Method*

Chapter XX, Section 2 (p. 402)

Harcourt, Brace & Company. New York, New York, USA. 1934

**Committee on the Conduct of Science**

The fallibility of methods means that there is no cookbook  
approach to doing science, no formula that can be applied  
or machine that can be built to generate scientific knowl-  
edge.... The skillful application of methods to a challeng-  
ing problem is one of the great pleasures of science.

*On Being a Scientist*

The Nature of Scientific Research (p. 6)

National Academy Press. Washington, D.C. 1989

Some methods, such as those governing the design of  
experiments or the statistical treatment of data, can be  
written down and studied. But many methods are learned  
only through personal experience and interactions with  
other scientists. Some are even harder to describe or  
teach. Many of the intangible influences on scientific  
discovery – curiosity, intuition, creativity – largely defy  
rational analysis, yet they are often the tools that scien-  
tists bring to their work.

*On Being a Scientist*

The Nature of Scientific Research (p. 6)

National Academy Press. Washington, D.C. 1989

**Descartes, René** 1596–1650

French philosopher, scientist, and mathematician

Method consists entirely in the order and disposition of  
the objects towards which our mental vision must be  
directed if we would find out any truth.

Wings Books. New York, New York, USA. 1967

**Egler, Frank E.** 1911–96

American botanist and ecologist

Concepts are games we play with our heads; methods  
are games we play with our hands, which at times are so  
handy they can be played without a head.

*The Way of Science*

Holism (p. 34)

Hafner Publishing Company. New York, New York, USA. 1970

For all their value, the application of a method, alone, is  
not science, anymore than a pile of bricks is architecture.  
I would sooner trust a good mind without a method than  
a good method without a mind.

*The Way of Science*

Methodology of Science (p. 36)

Hafner Publishing Company. New York, New York, USA. 1970

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

The method of nature: who could ever analyze it?

*Ralph Waldo Emerson: Essays and Lectures*

*Nature: Addresses, and Lectures*

The Method of Nature (p. 119)

The Library of America. New York, New York, USA. 1983

**Fuller, Thomas** 1608–61

English clergyman and author

Marshal thy notions into a handsome method – One will carry twice more weight trussed and packed up in bundles, than when it lies towardly flapping and hanging about his shoulders.

*The Holy State, and the Profane State*

Chapter X (p. 167)

Printed for Thomas Tegg. London, England. 1841

**Gay-Lussac, Joseph Louis** 1778–1850

French chemist and physicist

We are convinced that exactitude in experiments is less the outcome of faithful observation of the divisions of an instrument than of exactitude of method.

In Maurice Crosland

*Gay-Lussac: Scientist and bourgeois*

Chapter 3 (p. 70)

Cambridge University Press. Cambridge, England. 1978

**Greenstein, George** 1940–

American astronomer

The scientist immersed in research is more bound up by the methods he employs than by the object of his study.

*Frozen Star*

Chapter 1 (p. 6)

Freundlich Books. New York, New York, USA. 1983

**Hertz, Heinrich** 1857–94

German physicist

For the moment I am blundering without precise method. I repeat old experiments in this field and demonstrate others which pass through my head...I hope that, among the hundred remarkable phenomena which I come across, some light will shine from one or another.

In René Taton

*Reason and Chance in Scientific Discovery*

Chapter III (p. 4)

Philosophical Library. New York, New York, USA. 1957

**Hilbert, David** 1862–1943

German mathematician

...for he who seeks for methods without having a definite problem in mind seeks for the most part in vain.

Hilbert: Mathematical Problems

*Bulletin of the American Mathematical Society*, Volume 8, July 1902 (p. 444)

**Hubble, Edwin Powell** 1889–1953

American astronomer

The methods of science may be described as the discovery of laws, the explanation of laws by theories, and the testing of theories by new observations. A good analogy is that of the jigsaw puzzle, for which the laws are the individual pieces, the theories local patterns suggested by a few pieces, and the tests the completion of these patterns with pieces previously unconsidered.

*The Nature of Science and Other Lectures*

Part I, The Nature of Science (p. 11)

The Huntington Library, San Marino, California, USA. 1954

**Laplace, Pierre Simon** 1749–1827

French mathematician, astronomer, and physicist

The knowledge of the method which has guided a man of genius is not less serviceable to the progress of the sciences, and even to his own glory, than his discoveries...

*The System of the World* (Volume 2)

Book V, Chapter V (p. 347)

Printed for Richard Phillips. London, England. 1809

**Lewis, Sir Thomas** 1881–1945

No biographical data available

A physical sign or method, for lack of better, may serve the purpose of the moment, it serves no purpose in the pursuit of science till the measure of its fallibility is taken, clinical observers, for the most part, do not yet recognise that many methods which they regularly employ, useful as they may be in the practice of an art, are inadmissible to the science.

*The Mechanism and Graphic Registration of the Heart Beat*

Preface (p. vi)

Shaw & Sons. London, England. 1920

**Lonergan, Bernard J. F.** 1904–84

Canadian philosopher, theologian, and educator

It is in the measure that special methods acknowledge their common core in transcendental method, that norms common to all the sciences will be acknowledged, that a secure basis will be attained for tackling interdisciplinary problems, and that the sciences will be mobilized within a higher unity of vocabulary, thought and orientation, in which they will be able to make their quite significant contribution to the solution of fundamental problems.

*Method in Theology*

Chapter 1 (p. 23)

Herder & Herder. New York, New York, USA. 1972

**Maxwell, James Clerk** 1831–79

Scottish physicist

...though the professed aim of all scientific work is to unravel the secrets of nature, it has another effect, not less valuable, on the mind of the worker. It leaves him in possession of methods which nothing but scientific work could have led him to invent, and it places him in a position from which many regions of nature, besides that which he has been studying, appear under a new aspect.

Molecules

*Nature*, September, 1873 (p. 440)

**Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

It is a layman's illusion that in science we caper from pinnacle to pinnacle of achievement and that we exercise a Method which preserves us from error. Indeed we do not; our way of going about things takes it for granted that we guess less often right than wrong, but at the same time ensures that we need not persist in error if we earnestly and honestly endeavor not to do so.

*The Limits of Science* (p. 101)

Harper &amp; Row Publishers. New York, New York, USA. 1984

**Pavlov, Ivan Petrovich** 1849–1936

Russian physiologist

Everything is in the method, in the chances of attaining a steadfast, lasting truth...

In Daniel P. Todes

*Pavlov's Physiology Factory: Experiment, Interpretation, Laboratory Enterprise*

Chapter 3 (p. 83)

The Johns Hopkins University Press. Baltimore, Maryland, USA. 2002

With a good method even a rather untalented person can accomplish much.

In Daniel P. Todes

*Pavlov's Physiology Factory: Experiment, Interpretation, Laboratory Enterprise*

Chapter 3 (p. 101)

The Johns Hopkins University Press. Baltimore, Maryland, USA. 2002

**Pearson, Karl** 1857–1936

English mathematician

The insight into method and the habit of dispassionate investigation which follow from acquaintance with the scientific classification of even some small range of natural facts, give the mind an invaluable power of dealing with other classes of facts as the occasion arises.

*The Grammar of Science* (2nd edition)

Chapter I (p. 7)

Adam &amp; Charles Black. London, England. 1900

Letter II (p. 40)

George Bell &amp; Sons. London, England. 1908

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

Content without method leads to fantasy; method without content to empty sophistry; matter without form to unwieldy erudition, form without matter to hollow speculation.

*Scientific Studies* (Volume 12)

Chapter VIII (p. 306)

Suhrkamp. New York, New York, USA. 1988

**Walker, Kenneth** 1882–1966

Physician

To understand the true function of science and to be able to evaluate its theories it will first be necessary to have a very clear idea of the method by which it works.

*Meaning and Purpose*

Chapter II (p. 16)

Jonathan Cape. London, England. 1944

**Wilson, Edwin B.** 1879–1964

American statistician

A method is a dangerous thing unless its underlying philosophy is understood, and none [is] more dangerous than the statistical. Our aim should be, with care, to avoid in the main erroneous conclusions. In a mathematical and strictly logical discipline the care is one of

technique; but in the natural science and in statistics the care must extend not only over the technique but to the matter of judgment, as is necessarily the case in coming to conclusions upon any problem of real life where the complications are great. Over-attention to technique may actually blind one to the dangers that lurk about on every side – like the gambler who ruins himself with his system carefully elaborated to beat the game. In the long run it is only clear thinking, experienced methods, that win the strongholds of science.

The Statistical Significance of Experimental Data  
*Science*, Volume 58, Number 1493, 10 August, 1923 (p. 94)

## METHOD OF DIFFERENCES

**Babbage, Charles** 1792–1871

English mathematician

“Pray, Mr. Babbage, can you explain to me in two words what is the principle of this machine?” Had the querist possessed a moderate acquaintance with mathematics I might in four words have conveyed to him the required information by answering, “The method of differences.”

*Passages from the Life of a Philosopher*

Chapter V (p. 67)

Longman, Green, Longman, Roberts & Green. London, England. 1864

## METRICS

**Lederman, Leon** 1922–

American high-energy physicist

In the 1990s the USA, not to be left too far behind, is inching toward the metric system.

*The God Particle: If the Universe Is the Answer, What Is the Question?*

Chapter 4 (p. 108)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1993

## MICROBE

### Author undetermined

Sing a song of microbes,  
Dainty little things,  
Eyes and ears and horns and tails,  
Claws and fangs and stings.  
Microbes in the carpet,  
Microbes in the wall,  
Microbes in the vestibule,  
Microbes in the hall.  
Microbes on my money,  
Microbes in my hair,  
Microbes on my meat and bread,  
Microbes everywhere.  
Microbes in the butter,  
Microbes in the cheese,

Microbes on the knives and forks,  
Friends are little microbes,  
Enemies are big,  
Life among the microbes is –  
Nothing ‘*infra dig.*’  
Fussy little microbes,  
Millions at a birth,  
Make our flesh and blood and bones,  
Keep us on the earth.

In Rennie Wilbur Doane

*Insects and Disease: A Popular Account of the Way in which Insects May*

Chapter I (p. 10)

Henry Holt & Co. New York, New York, USA. 1910

In the nineteenth century men lost their fear of God and acquired a fear of microbes.

Canadian physician and professor of medicine

In war the microbe kills more than the bullet.

In Harvey Cushing

*The Life of Sir William Osler* (Volume 2) (p. 427)

Clarendon Press. Oxford, England. 1925

**Waksman, Selman A.** 1888–1973

Ukrainian-born American biochemist

With the removal of the danger lurking in infectious diseases and epidemics, society can face a better future, can prepare for a time when other diseases not now subject to therapy will be brought under control. Let us hope that in contributing the antibiotics, the microbes will have done their part to make the world a better place to live in.

*Les Prix Nobel. The Nobel Prizes in 1952*

Nobel banquet speech for award received in 1952

Nobel Foundation. Stockholm, Sweden. 1953

**Wolfe, Humbert** 1885–1940

Poet and civil servant

The doctor lives by chicken pox,  
by measles, and by mumps.  
He keeps a microbe in a box  
and cheers him when he jumps.

*Cursory Rhymes*

Poems Against Doctors II

E. Benn Limited. London, England. 1927

## MICROBIOLOGY

**Collard, Patrick**

No biographical data available

Microbiology, like all the sciences, is founded upon the twin pillars of craft technique and philosophical speculation.

*The Development of Microbiology*

Chapter 1 (p. 1)

Cambridge University Press. London, England. 1976

## MICROCOSM

**Forbes, A.**

No biographical data available

[A lake] is a little world within itself, a microcosm in which all the elemental forces are at work and the play of life goes on in full, but on a scale so small as to be easily grasped.

In F.E. Clements and V.E. Shelford

*Bio-Ecology*

Chapter I (p. 14)

John Wiley & Sons, Inc. New York, New York, USA. 1939

## MICROFLORA

**Leopold, Aldo** 1886–1948  
American naturalist

The existence of the term microflora implies, to the layman, that science knows all the citizens of the underground community, and is able to push them around at will. As a matter of fact, science knows little more than that the community exists, and that it is important. In a few simple communities like alfalfa, science knows how to add certain bacteria to make the plants grow. In a complex forest, science knows only that it is best to let well enough alone.

In Susan L. Flader and J. Baird Callicott  
*The River of the Mother of God* (p. 293)  
The University of Wisconsin Press. Madison, Wisconsin, USA. 1991

## MICROPALAEONTOLOGY

**Lipps, Jere**  
No biographical data available

Micropaleontology is a strange subject. It is not easily defined, its history is fairly dull, and it seems to focus only on geologic topics. Biologists by and large ignore those organisms that when fossilized become microfossils. Evolutionary biologists disdain them. Paleobiologists snub them, and “micropaleontologists” seem not to know what to do with them as once living animals or plants. Most “micropaleontologists” are not trained in biology, and the literature of micropaleontology is an enormous edifice testifying to that fact. Although not a mere flunky of geology, micropaleontology is nevertheless largely a servant of geology, albeit an extremely powerful one.

What, If Anything, Is Micropaleontology?  
*Paleobiology*, Volume 7, Number 2, 1981

## MICROSCOPE

**Agassiz, Jean Louis Rodolphe** 1807–73  
Swiss-born American naturalist, geologist, and teacher

A superficial familiarity with the microscope gives no idea of the exhausting kind of labor which the naturalist must undergo who would make an intimate microscopic study of these [ovarian egg] minute living spheres.

*Methods of Study in Natural History*  
Chapter XVI (p. 296)  
Houghton Mifflin & Co. Boston, Massachusetts, USA. 1896

**Arbuthnot, John** 1667–1735  
Scottish mathematician and physician

By it [the microscope] Men have pursued Nature into its most retired recesses; so that now it can hardly anymore hide its greatest Mysteries from us.

*An Essay on the Usefulness of Mathematical Learning* (3rd edition) (p. 25)  
Printed for J. Barrett  
London, England. 1745

**Bajer, Francis J.**  
No biographical data available

The curiosity of man remains undaunted since the dawn of civilization. It has manifested itself in many ways, not the least of which has been the burning desire to see but a little more or a little more clearly. Surely this is understandable when one realizes that almost all knowledge is first gleaned through visual inspection and observation.

Scanning a Tiny World's Wonders with the Magic of Electron Microscopy  
*Science Digest*, Volume 83, Number 3, March, 1978 (p. 42)

**Baker, Henry** 1698–1774  
English naturalist

When you employ the Microscope, shake off all Prejudice, nor harbor any favorite Opinions; for, if you do, 'tis not unlikely Fancy will betray you into Error, and make you see what you wish to see.

*The Microscope Made Easy*  
Part I, Chapter XV, Cautions in Viewing Objects (p. 62)  
Printed for R. Dodsley. London, England. 1743

**Damon, William E.**  
No biographical data available

The invisible is often more curious than that which meets the eye, and a microscope of even moderate power will reveal in sea-water the marvelous resources of Nature in furnishing the minutest creations with organs as perfectly adapted to their mode of life as are those of the gigantic whale or the vertebrate land animals.

*Ocean Wonders: Companion for the Seaside*  
Preface (pp. v–vi)  
D. Appleton & Co. New York, New York, USA. 1879

**Darby, William Arthur**  
No biographical data available

The Microscope brings up the minute world of Nature, and astonishes us with evidences of the Divine wisdom, power, and goodness, far away down into what we have often considered veritable nothingness, and at every step down we are startled into amazement to discover and explore world on world of new creatures ...

*The Astronomical Observer, A Handbook to the Observatory and the Common Telescope*  
Introduction (p. x)  
Robert Hardwick. London, England. 1864

**de Laubenfels, M. W.**

O why embark on distant seas  
Your taste for novel sights to please?  
There's nothing there that's strange or new  
But only just what's in the Zoo  
Much better visit a fairyland  
Where dragons writhe on every ,  
Where elves and goblins gallop by,  
And gaudy gems delight the eye.

Impossible? Don't give up hope,  
You merely need a microscope.

Fairyland Discovered in Julian D. Corrington  
Under the Microscope  
*Nature Magazine*, Volume 43, Number 1, January, 1950 (p. 110)

**Dickens, Charles** 1812–70  
English novelist

Yes, I have a pair of eyes, replied Sam, and that's just it.  
If they was a pair o' patent double million magnifyin'  
gas microscopes of hextra power, p'raps I might be able  
to see through a flight o' stairs and a deal door; but bein'  
only eyes, you see my wision's limited.

*The Posthumous Papers of the Pickwick Club*

American lyric poet

Faith is a fine invention  
For gentlemen who see;  
But microscopes are prudent  
In an emergency.

*The Complete Poems of Emily Dickinson*  
No. 185 (p. 87)  
Little, Brown & Company. Boston, Massachusetts, USA. 1960

**Eliot, George (Mary Ann Evans Cross)** 1819–80  
English novelist

...very close and diligent looking at living creatures,  
even through the best microscope, will leave room for  
new and contradictory discoveries.

*Felix Holt, The Radical*  
Chapter XXII (p. 226)  
William L. Allison Company. New York, New York, USA. No date

**Gilliam, Charles Edgar**

A microscope creates  
Gigantic miracles  
Of wide-eyed mites,  
That peering up may see,  
Haloed in lights  
Against the wall,  
Man as he is –  
Small.

Two-Way Tube  
*Nature Magazine*, Volume 43, Number 1, January, 1950 (p. 56)

**Hendrick, Ellwood**  
American chemical engineer

The world beyond the microscope is as vast as that  
beyond the telescope.

*Everyman's Chemistry*  
Chapter II (p. 16)  
Harper & Brothers Publishers. New York, New York, USA. 1917

**Holmes, Oliver Wendell** 1809–94  
American physician, poet, and humorist

I was sitting with my microscope,  
upon my parlor rug,  
With a very heavy quarto and a very lively bug;  
The true bug had been organized  
with only two antennae,  
But the humbug in the copperplate would have them  
twice as many.

*The Complete Poetical Works of Oliver Wendell Holmes*  
Nux Postcoenatica, Stanza 1  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1899

**Hooke, Robert** 1635–1703  
English physicist

...me thinks it seems very probable, that nature has  
in these passages, as well as in those of Animal bod-  
ies, very many appropriated Instruments and contriv-  
ances, whereby to bring her designs and end to pass,  
which 'tis not improbable, but that some diligent  
Observer, if help'd with better Microscopes, may in  
time detect.

*Micrographia*  
Observation, XVIII (p. 116)  
Printed by Jo. Martyn & Ja. Allestry. London, England. 1665

Of all the Inventions none there is Surpasses  
the Noble Florentine's Dioptrick Glasses  
For what a better, fitter guift Could bee  
in this World's Aged Luciosity.  
To help our Blindnesse so as to devize  
a paire of new & Articial eyes  
By whose augmenting power wee now see more  
than all the world Has ever down Before.

In S. Bradbury

*The Microscope Past and Present*

In Commendation of ye Microscope (p. v)

Printed for R. Dodsley. London, England. 1743

**Molyneux, William** 1656–98  
Irish astronomer

I have been often delighted with the curious Appearance of many Objects seen through the Microscope. But none ever surprised me more, than the visible Circulation of the Blood in Water-Newts (*Lacerta aquatica*) to be seen as plainly as Water running in a River, and proportionably much more rapid.

*Dioptrica Nova* (p. 261)

Printed for Benjamin Tooke. London, England. 1692

**O'Brien, Fitz James** 1828–62  
Author

Accompanying it was a small treatise on the microscope – its history, uses, and discoveries. I comprehended then for the first time the “Arabian Nights’ Entertainments.” The dull veil of ordinary existence that hung across the world seemed suddenly to roll away, and to lay bare a land of enchantments-. I felt towards my companions as the seer might feel towards the ordinary masses of men. I held conversations with nature in a tongue which they could not understand. I was in daily communication with living wonders, such as they never imagined in their wildest visions. I penetrated beyond the external portal of things, and roamed through the sanctuaries.

In William Winter

*The Diamond Lens*

Chapter I (p. 4)

Charles Scribner's Sons. New York, New York, USA. 1885

**Pouchet, Félix Archimède** 1800–72  
French biologist

The torch of anatomy has shed a flood of light upon the organization of the inferior animals, and the microscope, by allowing us to pry into the most inaccessible nooks of it, has unfolded before our eyes a horizon as vast as it was unexpected.

*The Universe*

The Animal Kingdom, Book II (p. 99)

Blackie & Son. London, England. 1870

**Selye, Hans** 1907–82  
Austrian-American endocrinologist

The microscope can see things the naked eye cannot, but the reverse is equally true.

*From Dream to Discovery: On Being a Scientist*

McGraw-Hill Book Company, Inc. New York, New York, USA. 1950

**Shiple, Arthur Everett** 1861–1927  
Zoologist

If you have a microscope and a drop or two of the right kind of dirty water you can enter a new world of interest.

*Hunting Under the Microscope* (p. 50)

The Macmillan Company. New York, New York, USA. 1928

**Strindberg, Johann** 1849–1912  
Swedish dramatist and novelist

Then, is it reasonable to think that one can see, by looking in a microscope, what is going on in another planet?

*Chief Contemporary Dramatists; Twenty Plays from the Recent Drama of England, Ireland, America, Germany, France, Belgium, Norway, Sweden, and Russia*

Translated by N. Erichsen

The Father (p. 608)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1915

**van Leeuwenhoek, Antony** 1632–1723  
Dutch biology researcher and microscope developer

I have oft-times been besought, by divers gentlemen, to set down on paper what I have beheld through my newly invented Microscopia: but I have generally declined: first, because I have no style, or pen, wherewith to express my thoughts properly; secondly, because I have not been brought up to languages or arts, but only to business; and in the third place, because I do not gladly suffer contradiction or censure from others.

Observations Communicated to the Publisher in a Dutch Letter of the 9th of October, 1676

*Philosophical Transactions of the Royal Society of London*, Volume 12, 1677

**Whewell, William** 1794–1866  
English philosopher and historian

...if the discoveries made by the Telescope should excite in anyone's mind, difficulties respecting those doctrines of Natural Religion – the adequacy of the Creator to the support and guardianship of all the animal life which may exist in the universe – the discoveries of the Microscope may remove such difficulties: but...that train of thought which leads men to dwell upon such difficulties does not seem to be common.

*Of the Plurality of Worlds*

Chapter IV (p. 30)

John W. Parker & Son. London, England. 1853

**Wood, John George** 1827–1889  
English writer on natural history

...even to those who aspire to no scientific eminence, the microscope is more than an amusing companion, revealing many of the hidden secrets of Nature, and unveiling endless beauties which were heretofore enveloped in the impenetrable obscurity of their own minuteness...a good observer will discover with a common pocket magnifier many a secret of nature which has escaped the notice of a whole array of dilettanti microscopists in spite of all their expensive and accurate instruments.

*Common Objects of the Microscope*

Chapter I (p. 2)

George Routledge & Sons. London, England. 1861

## MICROSCOPIC

**Thomson, Sir John Arthur** 1861–1933  
Scottish naturalist

...nowadays, except in the outskirts of civilisation, there are few wild beasts that worry man much, the serpent that bites his heel is usually more or less microscopic ...

*Darwinism and Human Life: The South African Lectures for 1909*

Chapter VI (p. 213)

Henry Holt & Co. New York, New York, USA. 1910

## MICROSCOPIST

**O'Brien, Fitz James** 1828–62  
Author

I was like one who, having discovered the ancient Eden still existing in all its primitive glory, should resolve to enjoy it in solitude, and never betray to mortal the secret of its locality. The rod of my life was bent at this moment. I destined myself to be a microscopist.

In William Winter

*The Diamond Lens*

Chapter I (p. 5)

The Macmillan Company. New York, New York, USA. 1928

## MIDDLE AGE

**Whewell, William** 1794–1866  
English philosopher and historian

Men [during the middle ages] forgot, or feared, to consult nature, to seek for new truths, to do what the great discoverers of other times had done; they were content to consult libraries, to study and defend old opinions, to talk of what great geniuses had said. They sought their philosophy in accredited treatises, and dared not question such doctrines as they there found.

*History of the Inductive Sciences from the Earliest to the Present Time* (3rd edition)

Book IV, Chapter IIV (p. 238)

John W. Parker & Son. London, England. 1857

## MIGRATION

**Allen, Glover M.** 1879–1942  
American zoologist

Mankind delights in a mystery of whatever sort, that thrill of something unknown to be discovered. For long years the migration of birds has stood as a delightful and mysterious riddle of Nature, but now bids fair to clear away and unfold more wonderful things than we dreamed of.

*Birds and Their Attributes*

Chapter XIII (p. 277)

Marshall Jones Co. Boston, Massachusetts, USA. 1925

**O'Neill, Gerard K.** 1927–92  
American physicist

Every star around us is a favorable target for human migration. You don't have to wait for just those stars that happen to have earthlike planets; they may be very few and far between.

In Pamela Weintraub (ed.)

*The Omni Interviews*

Cosmic Colonies (p. 297)

Ticknor & Fields. New York, New York, USA. 1984

## MIMIC

**Eiseley, Loren C.** 1907–77  
American anthropologist, educator, and author

...all this masquerade is only skin deep. The mimic never becomes the model, anymore than the walking-stick insect becomes the twig. The mask may fool the mimic's enemies, but it will not deceive a zoologist.

Is Man Alone in Space?

*Scientific American*, Volume 189, Number 1, July, 1953 (p. 84)

## MIND

**Tyndall, John** 1820–93  
Irish-born English physicist

...the human mind began its operations among the powers of Nature; winning first a little knowledge and a little strength, and then turning the knowledge and the strength so won back upon Nature, with the view of winning more. Action and reaction have thus gone on from prehistoric ages to the present time. The result is that stored body of scientific knowledge, and that developed power of scientific investigation, which have revolutionised philosophy, and begotten those marvels of practical Science in the midst of which we dwell.

*Heat A Mode of Motion* (6th edition) (pp. 1–2)

**Adams, George** 1750–95  
English instrument maker

The human mind, like a mirror, must be smoothed and polished, freed from false imaginations and perverted notions, before it is fit to receive and reflect the light of truth, and just information.

*Lectures on Natural and Experimental Philosophy* (Volume 2)  
Lecture XIV (p. 101)  
Printed by R. Hindmarsh. London, England. 1794

**Albert Einstein (Fictional character)**

My mind is my office, and I take it with me wherever I go. At dinner parties, lectures, concerts – I often part company with those around me and adjourn to my office.

In Willard Simms  
*Einstein: A Stage Portrait* (p. 16)  
The Dramatic Publishing Co.

**Beck, Stanley D.**  
No biographical data available

If the human mind were to become so sluggish that it was uninterested in the mysteries of nature, insensitive to the staggering challenge of the unknown, but involved only in a menial existence of food, drink, sleep, and reproduction, man would be distinguishable from the mammalian beasts only automatically.

*The Simplicity of Science*  
Chapter I (p. 10)  
Doubleday & Company, Inc. Garden City, New York, USA. 1959

**Bernard, Claude** 1813–78  
French physiologist

The nature of our mind leads us to seek the essence or the *why* of things.

Translated by Henry C. Greene  
*An Introduction to the Study of Experimental Medicine*  
Chapter III  
Henry Schuman, Inc. New York, New York, USA. 1927

**Beveridge, William Ian Beardmore** 1908–  
Australian zoologist

It is true that much time and effort is devoted to training and equipping the scientist's mind, but little attention is paid to the technique of making the best use of it.

*The Art of Scientific Investigation*  
Preface (p. iv)  
W.W. Norton & Company, Inc. New York, New York, USA. 1957

Elaborate apparatus plays an important part in the science of today, but I sometimes wonder if we are not inclined to forget that the most important instrument in research must always be the mind of man.

*The Art of Scientific Investigation*  
Preface (p. ix)  
W.W. Norton & Company, Inc. New York, New York, USA. 1957

**Blaise, Clarke**  
No biographical data available

Our minds soar with instant connection, but our feet are stuck in temporal boots.

*Time Lord*  
Chapter 1 (p. 19)  
Weidenfeld & Nicolson. London, England. 2000

**Boas, George** 1891–1980  
American philosopher

Though the solution of a problem may flash into the mind of the person without his knowing how it arose, nevertheless he has always done a good bit of thinking, puzzling, wondering about it before the flash occurs.

*The Inquiring Mind*  
Chapter XV (p. 397)  
Open Court Publishing Company. La Salle, Illinois, USA. 1959

**Boole, George** 1815–64  
English mathematician

To unfold the secret laws and relations of those high faculties of thought by which all beyond the merely perceptive knowledge of the world and of ourselves is attained or matured, is an object which does not stand in need of commendation to a rational mind.

*An Investigation of the Laws of Thought*  
Chapter I (p. 3)  
Walton & Maberly. London, England. 1854

**Burroughs, John** 1837–1921  
American naturalist and essayist

A mind that has a lively fancy and a sense of mystery will interpret phenomena quite differently from a mind in which these things are absent.

*Under The Apple Tree*  
Literature and Science (p. 176)  
Houghton Mifflin Co. Boston, Massachusetts, USA. 1916

**Bronowski, Jacob** 1908–74  
Polish-born British mathematician and polymath

...the great mind, like the small, experiments with different alternatives, works out their consequences for some distance, and thereupon guesses (much like a chess

player) that one move will generate richer possibilities than the rest.... It still remains to ask how the great mind comes to guess better than another, and to make leaps that turn out to lead further and deeper than yours or mine. We do not know.

*The Identity of Man* (p. 126)

**Butler, Samuel** 1612–80  
English novelist, essayist, and critic

**Chandrasekhar, Subrahmanyan** 1910–95  
Indian-born American astrophysicist

When a supremely great creative mind is kindled, it leaves a blazing trail that remains a beacon for centuries.

Newton and Michelangelo

*Current Science*, Volume 67, Number 7, 10 October, 1994 (p. 499)

**Cobbold, Thomas Spencer** 1828–86  
English man of science

The average mind, being either essentially commercial or ridiculously sentimental, as the case may be, is totally incapable of comprehending the motive power that animates and guides the votary of science.

*Parasites*

Preface (p. vii)

J.&A. Churchill. London, England. 1879

**Darwin, Charles Robert** 1809–82  
English naturalist

My mind seems to have become a kind of machine for grinding general laws out of large collections of facts...

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 1)

Chapter II, Autobiography (p. 81)

D. Appleton & Company. New York, New York, USA. 1896

But then arises the doubt, can the mind of man, which has, as I full believe, been developed from a mind as low as that possessed by the lowest animals, be trusted when it draws such grand conclusions?

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 1)

Chapter VIII (p. 282)

D. Appleton & Company. New York, New York, USA. 1896

...the difference in mind between man and the higher animals, great as it is, certainly is one of degree and not of kind.

*The Descent of Man, and Selection in Relation to Sex*

Part I, Chapter IV (p. 193)

John Murray. London, England. 1901

**Davy, Sir Humphry** 1778–1829  
English chemist

By accustoming the mind to strict reasoning, and minute observation as to matters of fact, the judgment is strengthened, and rendered more acute and distinct in its application to common affairs. Unhealthy

sensibilities are destroyed, and the imagination refined and exalted.

In John Davy (ed.)

*Memoirs of the Life of Sir Humphry Davy* (Volume 1)

Chapter III

Longman, Rees, Orme, Brown, Green & Longman London, England. 1836

**de La Bruyère, Jean** 1645–96  
French philosopher, moralist, and writer

The mind, like all other things, will become impaired, the sciences are its food – they nourish, but at the same time they consume it.

Quoted in Henry Thomas Loomis

*Spelling and Letter Writing: For Use in Commercial School, Normal*

*Schools, Colleges, Academies and High Schools*

Lesson 84 (p. 60)

The Practical Textbook Company

Cleveland, Ohio, USA 1902

**Descartes, René** 1596–1650  
French philosopher, scientist, and mathematician

The greatest minds, as they are capable of the highest excellencies, are open likewise to the greatest aberrations ...

*Discourse on the Method of Rightly Conducting the Reason, and Seeking Truth*

Part I (p. 45)

Sutherland & Knox. Edinburgh, Scotland. 1850.

**Doyle, Sir Arthur Conan** 1859–1930  
Scottish writer

To a great mind, nothing is little.

In William S. Baring-Gould (ed.)

*The Annotated Sherlock Holmes* (Volume 1)

*A Study in Scarlet*, Chapter 6 (p. 187)

Wings Books. New York, New York, USA. 1967

The true scientific mind is not to be tied down by its own conditions of time and space. It builds itself an observatory erected upon the border line of present, which separates the infinite past from the infinite future. From this sure post it makes its sallies even to the beginning and to the end of all things.

*The Poison Belt*

Chapter III

...the ideal scientific mind should be capable of thinking out a point of abstract knowledge in the interval between its owner falling from a balloon and reaching the earth. Men of this strong fiber are needed to form the conquerors of nature and the bodyguard of truth.

*The Poison Belt*

Chapter III

**Dyson, Freeman J.** 1923–  
American physicist and educator

It appears to me that the tendency of mind to infiltrate and control matter is a law of nature. The infiltration of mind into the universe will not be permanently halted by any catastrophe or by any barrier that I can imagine.

If our species does not choose to lead the way, others will do so, or may have already done so. If our species is extinguished, others will be wiser or luckier. Mind is patient. Mind has waited for 3 billion years on this planet before composing its first string quartet. It may have to wait for another 3 billion years before it spreads all over the galaxy. I do not expect that it will have to wait so long. But if necessary, it will wait. The universe is like a fertile soil spread out all around us, ready for the seeds of mind to sprout and grow. Ultimately, late or soon, mind will come into its heritage.

*Infinite in All Directions*

Part One, Chapter Six (p. 118)

HarperCollins Publisher, Inc. New York, New York, USA. 1988

I do not make any clear distinction between mind and God. God is what mind becomes when it is passed beyond the scale of our comprehension. God may be considered to be either a world-soul or a collection of world-souls. We are the chief inlets of God on this planet at the present stage of his development.

*Infinite in All Directions*

Part One, Chapter Six (p. 119)

HarperCollins Publisher, Inc. New York, New York, USA. 1988

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

Scientific theories have blundered no doubt in the past; they blunder no doubt today; yet we cannot doubt that along with the error there come gleams of a truth for which the human mind is impelled to strive.

*Science and the Unseen World*

Chapter II (p. 22)

The Macmillan Company. New York, New York, USA. 1929

If we are to discern controlling laws of Nature not dictated by the mind it would seem necessary to escape as far as possible from the cut-and-dried framework into which the mind is so ready to force everything that it experiences.

*The Nature of the Physical World*

Chapter X (p. 210)

The Macmillan Company. New York, New York, USA. 1930

**Einstein, Albert** 1879–1955

German-born physicist

The human mind is not capable of grasping the Universe. We are like a little child entering a huge library. The walls are covered to the ceiling with books in many different tongues. The child knows that something must have written these books. It does not know who or how. It does not understand the languages in which they are written. But the child notes a definite plan in the arrangement of the books – a mysterious order which it does not comprehend, but only dimly suspects.

In M. Taube

*Evolution of Matter and Energy*

Chapter 1 (p. 1)

Springer-Verlag. New York, New York, USA. 1985

It seems that the human mind has first to construct forms independently before we can find them in things.

*Essays in Science*

Johannes Kepler (p. 27)

Philosophical Library. New York, New York, USA. 1934

**Fabre, Jean-Henri** 1823–1915

French entomologist and author

The trained mind, alone, more discerning than our retina, sees clearly that which defies the perceptive faculties of the eye.

Translated by Alexander Teixeira de Mattos

*The Life of the Spider*

Appendix (p. 386)

Dodd, Mead & Co. Boston, Massachusetts, USA. 1917

**Farrar, Frederic William** 1831–1903

English clergyman and author

The mind is not only an instrument for advancing science, but, what is more to our present point, science is an instrument for advancing the mind.

*Essays on a Liberal Education* (2nd edition)

Essay Six (p. 250)

Macmillan & Co Ltd. London, England. 1868

**Feynman, Richard P.** 1918–88

American theoretical physicist

This law [the Law of Gravitation] has been called “the greatest generalization achieved by the human mind”, and you can guess already from my introduction that I am interested not so much in the human mind as in the marvel of a nature which can obey such an elegant and simple law as this law of gravitation. Therefore our main concentration will not be on how clever we are to have found it all out, but on how clever nature is to pay attention to it.

*The Character of Physical Law*

Chapter 1 (p. 14)

BBC. London, England. 1965

In this chapter we shall discuss one of the most far-reaching generalizations of the human mind. While we are admiring the human mind, we should take some time off to stand in awe of a nature that could follow with such completeness and generality such an elegantly simple principle as the law of gravitation.

*Six Easy Pieces: Essentials of Physics Explained by Its Most Brilliant Teacher*

The Theory of Gravitation (p. 89)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1995

**Fiske, John** 1842–1901

American philosopher and historian

The human mind, however “scientific” its training, must often recoil from the conclusion that this is all; and there are moments when one passionately feels that this cannot be all. On warm June mornings in green country lanes,

with sweet pine-odours wafted in the breeze which sighs through the branches, and cloud-shadows flitting over far-off blue mountains, while little birds sing their love-songs, and golden-haired children weave garlands of wild roses; or when in the solemn twilight we listen to wondrous harmonies of Beethoven and Chopin that stir the heart like voices from an unseen world; at such times one feels that the profoundest answer which science can give to our questionings is but a superficial answer after all.

*The Unseen World, and Other Essays*

The Unseen World (p. 56)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1899

### **Flammarion, Camille** 1842–1925

French astronomer and writer

I have fitted your mind, my dear old friend, to receive such strange impressions as no earthly spectacle has produced or could produce.

Translated by S.R. Crocker

*Stories of Infinity: Lumen – History of a Comet – In Infinity*

Fourth Story (p. 103)

Roberts Brothers. Boston, Massachusetts, USA. 1873

The human mind is insatiable for knowledge. It is of its essence to desire to penetrate into the nature of things, and to make conjectures on all points which it cannot thoroughly comprehend.

Translated by J. Ellard Gore

*Popular Astronomy: A General Description of the Heavens*

Book II, Chapter IV (p. 113)

Chatto & Windus. London, England. 1894

### **Fletcher, Colin** 1922–2007

English backpacker and writer

In that first moment of shock, with my mind already exploding beyond old boundaries, I knew that something had happened to the way I looked at things.

*The Man Who Walked Through Time*

The Dream (p. 6)

Alfred A. Knopf. New York, New York, USA. 1967

### **Frazer, Sir James George** 1854–1941

Scottish classicist and anthropologist

The mind of man refuses to acquiesce in the phenomena of sense. By an instinctive, an irresistible impulse it is driven to seek something beyond, something which it assumes to be more real and abiding than the shifting phantasmagoria of this sensible world.

*The Worship of Nature* (Volume 1)

Chapter I (p. 1)

Macmillan & Company Ltd. London, England. 1926

### **Galilei, Galileo** 1564–1642

Italian physicist and astronomer

And who can doubt that it will lead to the worst disorders when minds created free by God are compelled to submit slavishly to an outside will? When we are told to

deny our senses and subject them to the whim of others? When people devoid of whatsoever competence are made judges over experts and are granted authority to treat them as they please? These are the novelties which are apt to bring about the ruin of commonwealths and the subversion of the state.

Quoted in Charles Coulston Gillispie

*The Edge of Objectivity: An Essay in the History of Scientific Ideas*

Chapter I (p. 53)

Princeton University Press. Princeton, New Jersey, USA. 1966

### **Gauss, Johann Carl Friedrich** 1777–1855

German mathematician, physicist, and astronomer

Astronomy and Pure Mathematics are the magnetic poles toward which the compass of my mind ever turns.

In Franz Schmidt and Paul Stäckel (eds.)

*Briefwechsel zwischen Carl Friedrich Gauss und Wolfgang Bolyai*

Letter XXIII, Letter to Bolyai, June 30, 1803 (p. 55)

B.G. Teubner. Leipzig, Germany. 1899

### **Gould, Stephen Jay** 1941–2002

American paleontologist and evolutionary biologist

I shall not, either in this forum or anywhere, resolve the age-old riddle of epistemology: How can we “know” the “realities” of nature? I will, rather, simply end by restating a point well recognized by philosophers and self-critical scientists, but all too often disregarded at our peril. Science does progress toward more adequate understanding of the empirical world, but no pristine, objective reality lies “out there” for us to capture as our technologies improve and our concepts mature. The human mind is both an amazing instrument and a fierce impediment – and the mind must be interposed between observation and understanding.

*Dinosaur in a Haystack: Reflections in Natural History*

Part Four, Chapter 16 (p. 214)

Random House, Inc. New York, New York, USA. 1995

### **Gray, David** 1838–61

Scottish poet

...does not the mind, fed with the solid acquisitions of science, or stimulated by its splendid discoveries, grow less and less tolerant of imaginings which add nothing to stock of knowledge, and melodies which convey no information?

*Letters, Poems and Selected Prose Writings of David Gray*

Science and Poetry (p. 324)

The Courier Co. Buffalo, New York, USA. 1888

### **Gregory, Sir Richard Arman** 1864–1952

British science writer and journalist

Many men have been laughed at...for gazing heavenward when their minds might have been occupied with affairs of earth. There will always be the mind that strives to reach to the skies, and the scoffer who regards all such aspirations as folly.

Two men stood looking through the bars,  
One saw mud, the other saw the stars.

*Discovery; or, The Spirit and Service of Science*

Chapter I (pp. 21–22)

Macmillan & Company Ltd. London, England. 1918

**Guillemin, Amédée** 1826–93

French journalist and scientific writer

The human mind seems so organised that it attaches itself with more obstinacy and perseverance to the pursuit of those questions which it is impossible to solve than to those which are more accessible. At the risk of a kind of intellectual vertigo, it loves to lean over the cliffs of those abysses of thought, at the bottom of which lie in confusion the solutions of so many grave problems, the origin and the end of all things, the essence of the first cause, and many other questions which are rather in the domain of metaphysics than of science.

In Norman Lockyer and Richard Anthony Proctor

*The Heavens: An Illustrated Handbook of Popular Astronomy*

(7th edition)

Part the third, V (p. 391)

Richard Bentley & Son. London, England. 1878

**Heaviside, Oliver** 1850–1925

English electrical engineer, mathematician, and physicist

Every mind should receive fair development (in good directions) for what it is capable of doing fairly well.

*Electromagnetic Theory* (Volume 1)

Chapter I (p. 8)

D. van Nostrand Co. New York, New York, USA. 1893

People who do not cultivate their minds have no conception of what they lose. They become mere eating and drinking and money-grabbing machines. And yet they seem happy! There is some merciful dispensation at work, no doubt.

*Electromagnetic Theory* (Volume 1)

Chapter I (p. 8)

D. van Nostrand Co. New York, New York, USA. 1893

**Herrick, Charles Judson** 1868–1960

American neurologist

We already know enough about our natural cosmos to be humbled by the stupendous magnitude and splendor of it and to be inspired by the realization that the human population of it plays a part in cosmic evolution that is by no means insignificant. For the mind of man, with its capacity for intelligent control of his own cultural development and of the natural resources which are available for his use, is nature's noblest product so far as we know.

*The Evolution of Human Nature*

Epilogue: The Unknown God (p. 465)

University of Texas Press. Austin, Texas, USA. 1956

**Herschel, Sir John Frederick William** 1792–1871

English astronomer and chemist

A mind which has once imbibed a taste for scientific inquiry, and has learnt the habit of applying its principles readily to the cases which occur, has within itself an inexhaustible source of pure and exciting contemplations...

*The Cabinet of Natural Philosophy*

Part I, Chapter I, Section 11 (p. 14)

Longman, Rees, Orme, Brown & Green. London, England. 1831

**Hey, Nigel S.** 1936–

American science writer

Think of the myriad interconnected cells that we call a human being – living, dying and regenerating almost without our knowledge.... Think of the richness of their connectivity with the rest of creation. Think of their uncountable linkages with all the molecules – for example in air, in food, in water – that encounter us and enter into us almost without our knowledge, and leave us again, transformed, to visit some other resident, living or nonliving, of the world, the galaxy, the cosmos. This beautiful dance is what I see through the telescope of my mind.

*Why People Need Space*

Lecture, National Space Centre, October, 2002

**Hickok, Laurens Perseus** 1798–1888

No biographical data available

Nothing can make the journey easy to a mind that refuses to go alone and waits to be carried.

*Rational Cosmology: Or, The Eternal Principles and the Necessary*

*Laws of the Universe*

Preface (p. 7)

D. Appleton & Co. New York, New York, USA. 1858

**Hobson, Ernest William** 1856–1933

English mathematician

The habits of mind and the ideals of the mathematician and of the physicist cannot be of an identical character. The concepts of the mathematician necessarily lack, in their pure form, just that element of concreteness which is an essential condition of the success of the physicist, but which to the mathematician would often only obscure those aspects of things which it is his province to study.

Address to the Mathematical and Physical Section of the British Association for the Advancement of Science

*Science*, New Series, Volume 32, September 23, 1910 (p. 388)

**Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

Every now and then a man's mind is stretched by a new idea or sensation, and never shrinks back to its former dimensions.

*The Autocrat of the Breakfast-Table*

Chapter XI (p. 266)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1891

Nothing more clearly separates a vulgar from a superior mind, than the confusion in the first between the little that

it truly knows, on the one hand, and what it half knows and what it thinks it knows on the other.

*Medical Essays: 1842–1882*

Essay IV (p. 211)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1911

**Hugo, Victor** 1802–85

French author, lyric poet, and dramatist

The mind, like Nature, abhors a vacuum.

*The Novels and Poems of Victor Marie Hugo* (p. 262)

Dumont, New York, New York, USA. 1896

**Humphrey, Heman**

No biographical data available

It is the intelligent and immortal mind, which pre-eminently distinguishes man from the countless forms of animated nature around him.

*Miscellaneous Discourses and Reviews*

Inaugural Discourse (p. 231)

J.S. & C. Adams. Amherst, Massachusetts, USA. 1834

...it [the mind] may be likened to a quarry of fine marble, or to a mine of the precious metals. The former never starts up spontaneously into Cyprian Venuses, nor does the latter, of its own accord, assume the shape and value of a shining currency.

*Miscellaneous Discourses and Reviews*

Inaugural Discourse (p. 232)

J.S. & C. Adams. Amherst, Massachusetts, USA. 1834

**Huxley, Thomas Henry** 1825–95

English biologist

The mind is so constituted that it does not willingly rest in facts and immediate causes, but seeks always after a knowledge of the remoter links in the chain of causation.

*Discourses Biological and Geological*

On a Piece of Chalk

D. Appleton & Company, New York, New York, USA. 1897

**Jevons, William Stanley** 1835–82

English economist and logician

Summing up, then, it would seem as if the mind of the great discoverer must combine contradictory attributes. He must be fertile in theories and hypotheses, and yet full of facts and precise results of experience. He must entertain the feeblest analogies, and the merest guesses at truth, and yet he must hold them as worthless till they are verified in experiment. When there are any grounds of probability he must hold tenaciously to an old opinion, and yet he must be prepared at any moment to relinquish it when a clearly contradictory fact is encountered.

*The Principles of Science: A Treatise on Logic and Scientific Method*

Book IV, Chapter XXVI (p. 592)

Macmillan & Company Ltd. London, England. 1887

**Johnson, Samuel** 1696–1772

English critic, biographer, and essayist

...the truth is, that the knowledge of external nature, and the sciences which that knowledge requires or includes, are not the great or the frequent business of the human mind.

In Arthur Murphy

*The Works of Samuel Johnson* (Volume 2)

*Milton* (p. 25)

Alexander van Blake, Publisher. New York, New York, USA. 1838

**Kepler, Johannes** 1571–1630

German astronomer

A mind accustomed to mathematical deduction, when confronted with the faulty foundations [of astrology] resists a long, long time, like an obstinate mule, until compelled by beating and curses to put its foot into that dirty puddle.

In Arthur Koestler

*The Sleepwalkers*

Part Four, Chapter I, Section 5 (p. 243)

The Macmillan Company. New York, New York, USA. 1966

**Klein, Felix** 1849–1925

German mathematician

Apart from the fact that pure mathematics cannot be supplanted by anything else as a means for developing the purely logical powers of the mind, there must be considered here as elsewhere the necessity of the presence of a few individuals in each country developed in a far higher degree than the rest, for the purpose of keeping up and gradually raising the general standard. Even a slight raising of the general level can be accomplished only when some few minds have progressed far ahead of the average.

*The Evanston Colloquium: Lectures on Mathematics Delivered from*

*Aug. 28 to Sept. 9, 1893*

Lecture VI (p. 49)

American Mathematical Association. New York, New York, USA. 1911

**Land, Edwin** 1909–91

American scientist and inventor

Each stage of human civilization is defined by our mental structures: the concepts we create and then project upon the universe. They not only redescribe the universe but also in so doing modify it, both for our own time and for subsequent generations. This process – the revision of old cortical structures and the formulation of new cortical structures whereby the universe is defined – is carried on in science and art by the most creative and talented minds in each generation...

Remarks at Opening of New American Academy of Arts and Sciences

Cambridge, Massachusetts April 2, 1979

**Laplace, Pierre Simon** 1749–1827

French mathematician, astronomer, and physicist

The mind has its illusions as the sense of sight; and in the same manner that the sense of feeling corrects the latter, reflection and calculation correct the former.

Translated by Frederick Wilson Truscott and Frederick Lincoln  
*A Philosophical Essay on Probabilities*  
 Chapter XVI (p. 160)  
 John Wiley & Sons. New York, New York, USA. 1902

**Lorentz, Hendrik Antoon** 1853–1928  
 Dutch physicist

We wish to obtain a representation of phenomena and form an image of them in our minds. Till now, we have always attempted to form these images by means of the ordinary notions of time and space. These notions are perhaps innate; in any case they have been developed by our daily observations. For me, these notions are clear, and I confess that I am unable to gain any idea of physics without them.... For me, an electron is a corpuscle which at any given instant is situated at a determinate point of space, and if I believe that at the following instant this corpuscle is situated elsewhere, I attempt to imagine its path, which is a line in space. And if this electron meets an atom and penetrates into its interior and, after several adventures, leaves the atom, I attempt to construct a theory in which this electron has retained its individuality... I would like to retain this ideal of other days and describe everything that occurs in this world in terms of clear pictures.

In A. d'Abro  
*The Rise of the New Physics* (Volume One)  
 Chapter XIII (p. 108)  
 Dover Publications, Inc. New York, New York, USA. 1951

**Lovecraft, H. P. (Howard Phillips)** 1890–1937  
 American writer of fantasy, horror, and science fiction

The most merciful thing in the world, I think, is the inability of the human mind to correlate all its contents. We live on a placid island of ignorance in the midst of black seas of infinity, and it was not meant that we should voyage far. The sciences, each straining in its own direction, have hitherto harmed us little; but someday the piecing together of dissociated knowledge will open such terrifying vistas of reality, and of our own frightful position therein, that we shall either go mad from the revelation or flee from the deadly light into the peace and safety of a new dark age.

 Introductory lecture (p. 20)  
 Baker & Scribner. New York, New York, USA. 1848

**Moore, Benjamin** 1745–1816  
 Episcopal writer and professor of rhetoric

Whether the human mind be dealing with the problems of some branch of natural science, or constructing systems

of ethics, philosophy, or religion, it is equally essential to clothe its thoughts in language derived from those things in the material world which appeal to the human senses.

*The Origin and Nature of Life*

Chapter I

Henry Holt & Co. New York, New York, USA.

**Playfair, John** 1748–1819

Scottish geologist, physicist, and mathematician

But to reason and to arrange are very different occupations of the mind; and a man may deserve praise as a mineralogist, who is but ill qualified for the researches of geology.

*Illustrations of the Huttonian Theory of the Earth*

Section 422 (p. 482)

Dover Publications, Inc. New York, New York, USA. 1964

**Puiseux, P.**

No biographical data available

It is an illogical peculiarity of the human mind that while it cannot comprehend an infinite universe it readily refuses to limit it.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1912*

The Year's Progress in Astronomy (p. 135)

Government Printing Office. Washington, D.C. 1913

**Rice, Harvey** 1800–91

American lawyer and newspaper publisher

The powers of the human mind, if not infinite, may admit of infinite culture. What is supposed to be “unknowable” may, therefore, become known. However this may be, there is no divine injunction which prescribes a limit to human possibilities.

*Nature and Culture*

Chapter 1 (p. 7)

Lee & Shepard. Boston, Massachusetts, USA. 1875

**Rosseland, Svein** 1894–1985

Norwegian astronomer

Who has not experienced the mysterious thrill of spring-time in a forest, with sunbeams flickering through the foliage, and the low humming of insect life? It is the feeling of unity with nature, which is the counterpart of the attitude of the scientist, analysing the sunbeams into light quanta and the soft rustling of the dragon-fly into condensations and rarefactions of the air. But what is lost in fleeting sentiment is more than regained in the feeling of intellectual security afforded by the scientific attitude, which may grow into a trusting devotion, challenging the peace of the religious mystic. For in the majestic growth of science, analytical in its experimental groping for detail, synthetic in its sweeping generalizations, we are watching at least one aspect of the human mind, which may be believed to have a future of dizzy heights and nearly unlimited perfectibility.

*Theoretical Astrophysics: Atomic Theory and the Analysis of Stellar Atmospheres and Envelopes*

Introduction (p. xi)

At The Clarendon Press. Oxford, England. 1936

**Rowland, Henry Augustus** 1848–1901

American physicist

I value in a scientific mind, most of all, that love of truth, that care in its pursuit, and that humility of mind which makes the possibility of error always present more than any other quality. This is the mind which has built up modern science to its present perfection, which has laid one stone upon the other with such care that it today offers to the world the most complete monument to human reason.

In Sir Richard Arman Gregory

*Discovery; or, The Spirit and Service of Science*

Chapter II (pp. 26–27)

Macmillan & Company Ltd. London, England. 1918

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

The mind of the most rational among us may be compared to a stormy ocean of passionate convictions based upon desire, upon which float perilously a few tiny boats carrying a cargo of scientifically tested beliefs. Nor is this to be altogether deplored: life has to be lived, and there is no time to rest rationally all the beliefs by which our conduct is regulated. Without a certain wholesome rashness, no one could long survive. Scientific Method, therefore, must in its very nature, be confined to the more solemn and official of our opinions.

*The Scientific Outlook* (p. 14)

**Smollett, Tobias George** 1721–71

Scottish novelist

I find my spirits and my health affect each other reciprocally – that is to say, everything that decomposes my mind produces a correspondent disorder in my body; and my bodily complaints are remarkably mitigated by those considerations that dissipate the clouds of mental chagrin.

*The Works of Tobias Smollett* (Volume 6)

*The Expedition of Humphry Clinker* (p. 2340)

John D. Morris & Company. Philadelphia, Pennsylvania, USA. 1902

**Spencer, Herbert** 1829–1903

English social philosopher

If we imagine that into a gorgeously-decorated hall a rush-light is brought, and being held near to some part of the wall, makes visible the pattern over a small area of it, while everything else remains in darkness; arid if, instead of this, we imagine that electric lights turned on reveal simultaneously the whole room with its varied contents; we may form some idea of the different appearance under which Nature is contemplated by

the utterly uncultured mind and by the highly cultured mind.

**Stewart, Dugald** 1753–1828

Scottish philosopher

In mathematics, on the other hand, and in natural philosophy since mathematics was applied to it, we see the noblest instances of the force of the human mind, and of the sublime heights to which it may rise by cultivation.

*Elements of the Philosophy of the Human Mind*

Part Third, Chapter I, Section III (p. 182)

Carey, Lea & Carey. Philadelphia, Pennsylvania, USA. 1827

**Stokes, Sir George** 1819–1903

English mathematician and physicist

When from the phenomena of life we pass on to those of mind, we enter a region still more profoundly mysterious. We can readily imagine that we may here be dealing with phenomena altogether transcending those of mere life, in some such way of those of life transcend, as I have endeavored to infer, those of chemistry and molecular attractions, or as the laws of chemical affinity in their turn transcend those of mere mechanics. Science can be expected to do but little to aid us here, since the instrument of research is itself the object of investigation. It can but enlighten us as to the depth of our ignorance, and lead us to look to a higher aid for that which most nearly concerns our well-being.

British Association, Meeting at Exeter

*Journal of Botany, British and Foreign*, Volume 7 1869 (p. 288)

**Thompson, Sir J. Arthur** 1861–93

Scottish biologist

The simple and open mind is always impressed by the bigness of Nature.

*The Bible of Nature*

Chapter I (p. 9)

Charles Scribner's Sons. New York, New York, USA. 1908

**Thomson, Sir Joseph John** 1856–1949

English physicist

There is a widespread belief that the mind itself is desperately speculative, that it is only kept from wild imaginings by the control of its stolid and prosaic partner, the physical facts. The true state of affairs is, I think, that it is the mind which acts as the brake in this combination, that the impulsive partner is the facts, and that these spur on the mind to take leaps which it would shudder at when not under the influence of this stimulus.

*The Atomic Theory* (p. 4)

Clarendon Press. 1914

**Tyndall, John** 1820–93

Irish-born English physicist

The mind of man may be compared to a musical instrument with a certain range of notes, beyond which in both directions we have an infinitude of silence.

*Fragments of Science for Unscientific People*

Chapter IV (p. 93)

D. Appleton & Co. New York, New York, USA. 1875

As the eye is formed to see, and the ear to hear, so the human mind is formed to explore and understand the basis and relationship of natural phenomena.

*Heat a Mode of Motion* (6th edition)

Lecture I (p. 1)

D. Appleton & Co. New York, New York, USA. 1915

**von Humboldt, Alexander** 1769–1859

German naturalist and explorer

That which, in the vagueness of our impressions, loses all distinctness of form, like some distant mountain shrouded from view by a veil of mist, is clearly revealed by the light of mind, which, by its scrutiny into the causes of phenomena, learns to resolve and analyze their different elements, assigning to each its individual character.

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)

Introduction (pp. 33–34)

Harper & Brothers, Publishers. New York, New York, USA. 1869

When the human mind first attempts to subject to its control the world of physical phenomena, and strives by meditative contemplation to penetrate the rich luxuriance of living nature, and the mingled web of free and restricted natural forces, man feels himself raised to a height from whence, as he embraces the vast horizon, individual things blend together in varied groups, and appear as if shrouded in a vapory veil.

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)

Delineation of Nature. General Review of Natural Phenomena (p. 79)

Harper & Brothers. New York, New York, USA. 1869

...besides the pleasure derived from acquired knowledge, there lurks in the mind of man, and tinged with a shade of sadness, an unsatisfied longing for something beyond the present – a striving towards regions yet unknown and unopened.

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)

Delineation of Nature. General Review of Natural Phenomena (p. 80)

Harper & Brothers, Publishers. New York, New York, USA. 1869

**von Liebig, Justus** 1803–73

German organic chemist

Every experimental method comes to an end when the senses are no longer sufficient for the perception of facts; when no new circumstance is presented to the senses for perception; when, in short, everything has been tried, and the facts resulting from such trials have been adopted into the particular art or trade. Further progress can then only be looked for, if hidden facts are sought out, the senses are sharpened for their perception, and the means of investigation are improved. But such a course is not

possible without reflection, without the mind also taking its share in the operation.

In John Blyth

*Letters on Modern Agriculture*

Letter I (p. 5)

Walton & Maberly. London, England. 1859

**von Schelling, Friedrich Wilhelm Joseph** 1775–1854  
German philosopher

When the human mind first attempts to subject to its control the world of physical phenomena, and strives by meditative contemplation to penetrate the rich luxuriance of living nature, and the mingled web of free and restricted natural forces, man feels himself raised to a height from whence, as he embraces the vast horizon, individual things blend together in varied groups, and appear as if shrouded in a vapory veil.

In Alexander von Humboldt

*Cosmos* (Volume I)

Chapter I (p. 62)

Henry G. Bohn. London, England. 1849

**Waddington, Conrad Hal** 1905–75  
British biologist and paleontologist

We are part of nature, and our mind is the only instrument we have, or can conceive of, for learning about nature or about ourselves.

*The Nature of Life*

Chapter 5 (p. 124)

Harper & Row, Publishers. New York, New York, USA. 1960

**Weidlein, Edward Ray**  
Chemical engineer

The endless frontiers of science now stretching to the stars can provide rich opportunities for the best creative minds.

Cooperation – A Responsibility of the Scientist

*American Scientist*, March, 1962 (p. 35)

**Weinberg, Steven** 1933–  
American nuclear physicist

...I do not believe that scientific progress is always best advanced by keeping an altogether open mind. It is often necessary to forget one's doubts and to follow the consequences of one's assumptions wherever they may lead – the great thing is not to be free of theoretical prejudices, but to have the right theoretical prejudices. And always, the test of any theoretical preconception is where it leads.

*The First Three Minutes*

Chapter V (p. 119)

Basic Books, Inc., Publishers. New York, New York, USA. 1988

## MIND AND MATTER

**Dircks, Henry** 1806–73  
English engineer

Every sentient being, from the first dawn of intelligence, recognises the existence of mind and matter; of an inner and an outer world ; or, to adopt the quaint phraseology of the past, a microcosm and a macrocosm.

*Nature-study*

Chapter I (p. 1)

E. Moxon, Son & Co. London, England. 1869

## MIND, HUMAN

**Poincaré, Jules Henri** 1854–1912  
French mathematician and theoretical astronomer

Does the harmony the human intelligence thinks it discovers in nature exist outside of this intelligence? No, beyond doubt, a reality completely independent of the mind which conceives it, sees or feels it, is an impossibility.

Translated by George Bruce Halsted

*The Value of Science*

Introduction (p. 14)

The Science Press. New York, New York, USA. 1907

## MIND, PEASANT'S

**Newton, Charles Thomas** 1816–94  
English archaeologist

The peasant's mind reflects what has been rather than what is. It revolves in the same circle as the more cultivated mind of the nation, but at a much slower rate. On the great dial-plate of time, one is the hour-hand while the other is the minute-hand.

*Essays on Art and Archaeology*

On the Studies of Archaeology (p. 6)

Macmillan & Company Ltd. London, England. 1880

## MIND, SCIENTIFIC HABIT OF

**Pearson, Karl** 1857–1936  
English mathematician

The scientific habit of mind is one which may be acquired by all, and the readiest means of attaining to it ought to be placed within the reach of all.

*The Grammar of Science* (2nd edition)

Chapter I (p. 7)

Adam & Charles Black. London, England. 1900

## MIND, UNSCIENTIFIC

**Rowland, Henry Augustus** 1848–1901  
American physicist

...the unscientific mind differs from the scientific in this, that it is willing to accept and make statements of which it has no clear conception to begin with and of

whose truth it is not assured. It is an irresponsible state of mind without clearness of conception, where the connection between the thought and its object is of the vaguest description. It is the state of mind where opinions are given and accepted without ever being subjected to rigid tests, and it may have some connection with that state of mind where everything has a personal aspect and we are guided by feelings rather than reason.

*The Physical Papers of Henry Augustus Rowland*

The Physical Laboratory in Modern Education (p. 615)

The Johns Hopkins Press. Baltimore, Maryland, USA. 1902

## MIND'S EYE

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

The first look at the world, by the mind's eye, as well as by the bodily organs of vision, conveys no distinct impression, either to our heads or to our hearts. We see things without perceiving them, and it takes a long time before we learn to understand the things we see.

Translated by Otto Wenckstern

*Goethe's Opinions on the World, Mankind, Literature, Science, and Art* (p. 23)

John W. Parker & Son. London, England. 1853

## MIND-STUFF

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

...the stuff of the world is mind-stuff.... The mind-stuff is not spread in space and time...

*The Nature of the Physical World*

Chapter XIII (pp. 276, 277)

The University Press. New York, New York, USA. 1929

## MINE

**Agricola, Georgius** 1494–1555

German mineralogist

...of all ways whereby great wealth is acquired by good and honest means, none is more advantageous than mining; for although from fields which are well tilled (not to mention other things) we derive rich yields, yet we obtain richer products from mines; in fact, one mine is often much more beneficial to us than many fields.

Translated by Herbert Hoover and Lou Henry Hoover

*De Re Metallica*

Preface (p. xxv)

The Mining magazine

London, England. 1912

## MINER

**Agricola, Georgius** 1494–1555

German mineralogist

...a miner must have the greatest skill in his work, that he may know first of all what mountain or hill, what valley or plain, can be prospected most profitably, or what he should leave alone; moreover, he must understand the veins, stringers and seams in the rocks. Then he must be thoroughly familiar with the many and varied species of earths, juices, gems, stones, marbles, rocks, metals, and compounds.

Translated by Herbert Hoover and Lou Henry Hoover

*De Re Metallica*

Book I (p. 1)

The Mining magazine

London, England. 1912

...there are many arts and sciences of which a miner should not be ignorant. First there is Philosophy, that he may discern the origin, cause, and nature of subterranean things; for then he will be able to dig out the veins easily and advantageously, and to obtain more abundant results from his mining. Secondly, there is Medicine, that he may be able to look after his diggers and other workmen, that they do not meet with those diseases to which they are more liable than workmen in other occupations, or if they do meet with them, that he himself may be able to heal them or may see that the doctors do so. Thirdly follows Astronomy, that he may know the divisions of the heavens and from them judge the direction of the veins. Fourthly, there is the science of Surveying that he may be able to estimate how deep a shaft should be sunk to reach the tunnel which is being driven to it, and to determine the limits and boundaries in these workings, especially in depth. Fifthly, his knowledge of Arithmetical Science should be such that he may calculate the cost to be incurred in the machinery and the working of the mine. Sixthly, his learning must comprise Architecture, that he himself may construct the various machines and timber work required underground, or that he may be able to explain the method of the construction to others. Next, he must have knowledge of Drawing, that he can draw plans of his machinery. Lastly, there is the Law, especially that dealing with metals, that he may claim his own rights, that he may undertake the duty of giving others his opinion on legal matters, that he may not take another man's property and so make trouble for himself, and that he may fulfill his obligations to others according to the law.

Translated by Herbert Hoover and Lou Henry Hoover

*De Re Metallica*

Book I (pp. 3–4)

The Mining magazine

London, England. 1912

Those who think mining of no advantage to the men who follow the occupation assert, first, that scarcely one in a hundred who dig metals or other such things derive profit there from; and again, that miners, because they entrust their certain and well-established wealth to dubious and slippery fortune, generally deceive themselves, and as a

result, impoverished by expenses and losses, in the end spend the most bitter and most miserable of lives.

Translated by Herbert Hoover and Lou Henry Hoover

*De Re Metallica*

Book I (pp. 4–5)

The Mining magazine

London, England. 1912

**Simonin, Louis** 1830–86

French mineralogist

See those men who emerge from the shaft in the dusk of the evening, walking with heavy tread, with blackened faces, with clothes and hats wet and covered with mud. Where are they going? They rejoin their families in calmness and silence. Recognize in them the obscure and manly combatants of the abyss, the pioneers of the subterranean world.

*Underground Life: or, Mines and Miners*

Chapter XI (p. 230)

Chapman & Hall. London, England. 1869

## MINERAL

**Agricola, Georgius** 1494–1555

German mineralogist

The earth does not conceal and remove from our eyes those things which are useful and necessary to mankind, but on the contrary, like a beneficent and kindly mother she yields in large abundance from her bounty and brings into the light of day the herbs, vegetables, grains, and fruits, and the trees. The minerals on the other hand she buries far beneath in the depth of the ground; therefore, they should not be sought. But they are dug out by wicked men who, as the poets say, are the products of the Iron Age.

Translated by Herbert Hoover and Lou Henry Hoover

*De Re Metallica*

Book I (pp. 6–7)

The Mining magazine

London, England. 1912

**Ruskin, John** 1819–1900

English writer, art critic, and social reformer

These [clay, lime and flint] being what we have usually to deal with, Nature seems to have set herself to make these three substances as interesting to us, and as beautiful for us, as she can. The clay, being a soft and changeable substance, she doesn't take much pains about, as we have seen, till it is baked; she brings the colour into it only when it receives a permanent form. But the limestone and flint she paints, in her own way, in their native state: and her object in painting them seems to be much the same as in her painting of flowers; to draw us, careless and idle human creatures, to watch her a little, and see what she is about ...

*The Complete Works of John Ruskin*

*Iron, in Nature, Art, and Policy* (p. 109)

Rehwee, Wattle & Walsh. Philadelphia, Pennsylvania, USA. 1891

## Smith, Godfrey

Human life would certainly have enjoyed more innocence and satisfaction, were it not for the riches and luster which nature dazzles their eyes with, and makes them indefatigable searchers into the innermost recesses of the earth, to her hidden treasures.

*The Laboratory; or, School of Arts*

Appendix

Of Mines and How to Discover Them

Printed by C. Whittingham. London, England. 1799

## Streeter, Edwin William

No biographical data available

It is a familiar fact that Organic Nature does not present an equal development of life in every part of the world. Each country – or at least each zone of climate – has its own fauna and flora – Its peculiar assemblage of animals and plants. No one needs to be reminded that the animals and plants of the tropics are widely different from those of temperate zones, while these again differ from those of the Polar regions. But when we turn to the Inorganic world, we fail to detect any similar laws of distribution. Climate, so far as we know, is without sensible effect on the development of minerals and rocks.

The Neale Publishing Co. New York, New York, USA. 1911

## FICTITIOUS MINERALS

### ADAMANT

**Bierce, Ambrose** 1842–1914

American newspaperman, wit, and satirist

ADAMANT, n. A mineral frequently found beneath a corset. Soluble in solicitate of gold.

*The Collected Works of Ambrose Bierce*

*The Devil's Dictionary* (p. 19)

The Neale Publishing Co. New York, New York, USA. 1911

## BILITERIUM

### de Fourestier, Jeffrey

No biographical data available

A scarce lucent crystalline aggregate which can be transformed into a powerful explosive using an antimatter converter.

The Mineralogy of Star Trek

*Axis*, Volume 1, Number 3, 2005 (p. 9)

**BORONITE****de Fourestier, Jeffrey**

No biographical data available

A rare mineral used to construct Vostigye space stations. It is the only raw material that can be used to create Omega molecules.

The Mineralogy of Star Trek

*Axis*, Volume 1, Number 3, 2005 (p. 9)

**CAVORITE****Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

On the 14th of October 1899 this [Cavorite an artificial mineral that possesses anti-gravity properties] incredible substance was made!

*The First Men in the Moon*

Chapter II (p. 28)

George Newnes. London, England. 1901

**DENIVAN CRYSTAL****de Fourestier, Jeffrey**

No biographical data available

Valuable and illicit iridescent white crystals. They form sprays of sharply terminated elongate opaque crystals.

The Mineralogy of Star Trek

*Axis*, Volume 1, Number 3, 2005 (p. 10)

**DILITHIUM****de Fourestier, Jeffrey**

No biographical data available

Rare and incalculably valuable crystalline mineral used as the primary element in the matter/antimatter reactors necessary for warp speed travel.

The Mineralogy of Star Trek

*Axis*, Volume 1, Number 3, 2005 (p. 10)

**FORTANIUM****de Fourestier, Jeffrey**

No biographical data available

A mineral that occurs in the core of a comet.

The Mineralogy of Star Trek

*Axis*, Volume 1, Number 3, 2005 (p. 11)

**KEMACITE****de Fourestier, Jeffrey**

No biographical data available

Hazardous, unpredictable substance associated with temporal incidents, which if exploded, can send someone back in time.

The Mineralogy of Star Trek

*Axis*, Volume 1, Number 3, 2005 (p. 12)

**NEUTRONIUM****de Fourestier, Jeffrey**

No biographical data available

A naturally occurring, very dense and strong mineral composed of densely packed neutrons held together by gravity.

The Mineralogy of Star Trek

*Axis*, Volume 1, Number 3, 2005 (p. 13)

**REAL MINERALS****ALABASTER****Flaubert, Gustave** 1821–90

French novelist

Alabaster. Its use is to describe the most beautiful parts of a woman's body.

*Dictionary of Accepted Ideas*

M. Reinhardt. London, England. 1954

**AMBER****Herrick, Robert** 1591–1674

English poet

I saw a flie within a beade

Of amber cleanly buried.

In J. Max Patrick (ed.)

*The Complete Poetry of Robert Herrick*

The Amber Bead

W.W. Norton & Company, Inc. New York, New York, USA. 1968

**Pope, Alexander** 1688–1744

English poet

Pretty! in amber to observe the forms

Of hairs, or straws, or dirt, or grubs, or worms!

The things, we know, are neither rich nor rare,

But wonder how the devil they got there.

*The Complete Poetical Works*

Epistle to Arbuthnot, l. 169

Houghton Mifflin Company. New York, New York, USA. 1903

**AMETHYST****The Bible (King James Version)**

And the foundations of the wall of the city were garnished with all manner of precious stones. The first foundation

was jasper; the second, sapphire; the third, a chalcedony; the fourth, an emerald;... the twelfth, an amethyst.

Revelation 21:19–20

## CHALK

**Huxley, Thomas Henry** 1825–95

English biologist

A great chapter of the history of the world is written in the chalk. Few passages in the history of man can be supported by such an overwhelming mass of direct and indirect evidence as that which testifies to the truth of the fragment of the history of the globe.... Let me add, that few chapters of human history have a more profound significance for ourselves. I weigh my words well when I assert, that the man who should know the true history of the bit of chalk which every carpenter carries about in his breeches-pocket, though ignorant of all other history, is likely, if he will think his knowledge out to its ultimate results, to have a truer, and therefore a better, conception of this wonderful universe, and of man's relation to it, than the most learned student who is deep-read in the records of humanity and ignorant of those of Nature.

*Collected Essays* (Volume 8)

*Discourses, Biological and Geological*

On a Piece of Chalk (p. 4)

Macmillan & Company Ltd. London, England. 1904

The earth, from the time of the chalk to the present day, has been the theater of a series of changes as vast in their amount as they were slow in their progress. The area on which we stand has been first sea and then land for at least four alterations and has remained in each of these conditions for a period of great length.

*Collected Essays* (Volume 8)

*Discourses, Biological and Geological*

On a Piece of Chalk (p. 29)

Macmillan & Company Ltd. London, England. 1904

A small beginning has led us to a great ending. If I were to put the bit of chalk with which we started into the hot but obscure flame of burning hydrogen, it would presently shine like the sun. It seems to me that this physical metamorphosis is no false image of what has been the result of our subjecting it to a jet of fervent, though nowise brilliant, thought to-night. It has become luminous, and its clear rays, penetrating the abyss of the remote past, have brought within our ken some stages of the evolution of the earth. And in the shifting "without haste, but without rest" of the land and sea, as in the endless variation of the forms assumed by living beings, we have observed nothing but the natural product of the forces originally possessed by the substance of the universe.

*Collected Essays* (Volume 8)

*Discourses, Biological and Geological*

On a Piece of Chalk (p. 36)

Macmillan & Company Ltd. London, England. 1904

## COAL

**Huxley, Thomas Henry** 1825–95

English biologist

The position of the beds which constitute the coal-measures is infinitely diverse. Sometimes they are tilted up vertically, sometimes they are horizontal, sometimes curved into great basins; sometimes they come to the surface, sometimes they are covered up by thousands of feet of rock. But, whatever their present position, there is abundant and conclusive evidence that every under-clay was once a surface soil. Not only do carbonized root-fibers frequently abound in these under-clays; but the stools of trees, the trunks of which are broken off and confounded with the bed of coal, have been repeatedly found passing into radiating roots, still embedded in the under-clay. On many parts of the coast of England, what are commonly known as "submarine forests" are...seen at low water. They consist, for the most part, of short stools of oak, beech, and fir-trees, still fixed by their long roots in the bed of blue clay in which they originally grew. If one of these submarine forest beds should be gradually depressed and covered up by new deposits, it would present just the same characters as an under-clay of the coal, if the *Sigillaria* and *Lepidodendron* of the ancient world were substituted for the oak, or the beech, of our own times.

*Collected Essays* (Volume 8)

*Discourses, Biological and Geological*

On the Formation of Coal (p. 147)

Macmillan & Company Ltd. London, England. 1904

## CRYSTAL

**Bergman, Torbern Olaf** 1735–84

Swedish chemist and naturalist

Crystals are bodies which, though destitute of organic structure, yet externally resemble geometrical figures more or less regular.

Quoted in Joseph William Mellor

*A Comprehensive Treatise on Inorganic and Theoretical Chemistry* (Volume 1)

Chapter XI (p. 597)

Longman, Green, & Co. London, England. 1922

**Čapek, Karel** 1890–1938

Czechoslovakian author

There are crystals as big as cathedral pillars, delicate as mildew and sharp as needles; plain, blue, green like nothing in the world, of fiery colours or black; mathematical, perfect, like the contrivances of queer and bewildered sages; or recalling livers, hearts, gigantic human organs and animal fluids.

*Letters from England* (p. 44)

Doubleday, Page & Co. Garden City, New York, USA. 1924

**Davidson, John** 1857–1909  
Scottish poet

“Who affirms that crystals are alive?”  
I affirm it, let who will deny:  
Crystals are engendered, wax and thrive,  
Wane and wither; I have seen them die.

*Fleet Street: And Other Poems*

Snow

Grant Richards. London, England. 1909

**Hauy, Abbé René Just** 1743–1822  
French mineralogist

A casual glance at crystals may lead to the idea that they were sports of nature, but this is simply an eloquent way of declaring our ignorance. With a thoughtful examination of them, we discover laws of arrangement.... How variable, and at the same time how precise and regular are these laws! How simple they are ordinarily, without losing anything of their significance.

*Traité de Minéralogie* (p. xiii)

Chez Louis. Paris, France. 1801

**Hearn, Lafcadio** 1850–1904  
Writer, translator, and teacher

I feel like a white granular mass of amorphous crystals – my formula appears to be isomeric with Spasmotoxin. My aurochloride precipitates into beautiful prismatic needles. My Platinochloride develops octohedron crystals, with fine blue florescence. My physiological action is not indifferent. One millionth of a grain injected under the skin of a frog produced instantaneous death accompanied by an orange blossom odor.

In Elizabeth Bisland

*The Life and Letters of Lafcadio Hearn* (Volume 1)

Letter to George M. Gould, 1889 (p. 462)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1900

**Mann, Thomas** 1875–1955  
German-born American novelist

I shall never forget the sight. The vessel of crystallization was three-quarters full of slightly muddy water – that is, dilute water-glass – and from the sandy bottom there strove upwards a grotesque little landscape of variously colored growths: a confused vegetation of blue, green, and brown shoots which reminded one of algae, mushrooms, attached polyps, also moss, then mussels, fruit pods, little trees or twigs from trees, here, and there of limbs. It was the most remarkable sight I ever saw, and remarkable not so much for its profoundly melancholy nature.”

*Doktor Faustus*

Chapter III (p. 19)

Alfred A. Knopf. New York, New York, USA. 1948

**Marx, Carl M.**  
No biographical data available

In these crystalline structures, the formative forces of the earth seem to manifest themselves most directly, as if they were merely slumbering lightly beneath the rigid surface, resting from the first day of creation.

In Norman E. Emerton

*The Scientific Reinterpretation of Form*

Chapter One (p. 19)

Cornell University Press. Ithaca, New York, USA. 1984

**Ruskin, John** 1819–1900  
English writer, art critic, and social reformer

The mineral crystals group themselves neither in succession, nor in sympathy; but great and small recklessly strive for place, and deface or distort each other as they gather into opponent asperities. The confused crowd fills the rock cavity, hanging together in a glittering, yet sordid heap, in which nearly every crystal, owing to their vain contention, is imperfect, or impure. Here and there one, at the cost and in defiance of the rest, rises into unwarped shape or unstained clearness.

*Modern Painters* (Volume 5)

Chapter IV, Part 6 (p. 33)

John Wiley & Sons. New York, New York, USA. 1879

**Shaw, George Bernard** 1856–1950  
Irish comic dramatist and literary critic

Tyndall declared that he saw in Matter the promise and potency of all forms of life, and with his Irish graphic lucidity made a picture of a world of magnetic atoms, each atom with a positive and a negative pole, arranging itself by attraction and repulsion in orderly crystalline structure. Such a picture is dangerously fascinating to thinkers oppressed by the bloody disorders of the living world. Craving for purer subjects of thought, they find in the contemplation of crystals and magnets a happiness more dramatic and less childish than the happiness found by mathematicians in abstract numbers, because they see in the crystals beauty and movement without the corrupting appetites of fleshly vitality.

*Back to Methuselah*

Preface (pp. lxii–lxiii)

Constable & Company Ltd. London, England. 1921

**Thompson, Sir D’Arcy Wentworth** 1860–1948  
Scottish zoologist and classical scholar

Crystals lie outside the province of this book; yet snow-crystals, and all the rest besides, have much to teach us about the variety, the beauty and the very nature of form.

*On Growth and Form* (Volume 2)

Chapter IX (p. 696)

At The University Press. Cambridge, England. 1951

**DIAMOND**

**Crookes, Sir William** 1832–1919  
English chemist and physicist

I think, without exception, the diamond is the most sensitive substance I have yet met for ready and brilliant phosphorescence.

In James Samuelson and William Crookes  
Chapter IV

Modern Physics in High Vacua  
*The Journal of Science, and Annals of Astronomy, Biology, Geology,*  
Volume 1, (Third series) June, 1879 (p. 426)

**Fleming, Ian** 1908–64  
English author, journalist, and ex-Navy Commander

It was domination by a beauty so pure that it held a kind of truth, a divine authority before which all other material things turned, like the bit of quartz, to clay. In these few minutes Bond understood the myth of diamonds, and he knew that he would never forget what he had suddenly seen inside the heart of this stone.

*Diamonds Are Forever*  
Film (1971)

Bond put down the piece of quartz and gazed again into the heart of the diamond. Now he could understand the passion that diamonds had inspired through the centuries.... It was domination by a beauty so pure that it held a kind of truth, a divine authority before which all other material things turned, like the bit of quartz, to clay. In these few minutes Bond understood the myth of diamonds, and he knew that he would never forget what he had suddenly seen inside the heart of this stone.

*Diamonds are Forever*  
Chapter II (p. 10)  
The Macmillan Co. New York, New York, USA. 1956

**Gibran, Kahlil** 1883–1931  
Lebanese-American philosophical essayist

Perhaps time's definition of coal is the diamond.  
*Sand and Foam: A Book of Aphorisms* (p. 55)  
Alfred A. Knopf. New York, New York, USA. 1959

**Hershey, Willard**  
No biographical data available

From the earliest times the diamond has fascinated mankind. The diamond is the best known and most admired ornament which Nature has provided for man, "a thing of beauty and a joy forever." Of many of her beauties, Nature gives us glimpses only. The diamond sparkles and flashes whenever and wherever the light finds it, while the generations which successively enjoy its beauty fade and are forgotten.

*Book of the Diamond*  
Chapter I (p. 9)  
Hearthside Press. New York, New York, USA. 1940

**King, Charles William** 1818–88  
English writer

The Diamond, true king of gems, not content with its own inimitable purity, takes a pleasure, as it were, to assume in turns the proper colours of its subject-classes, and again to surpass each one in its own peculiar excellence.

*The Natural History, Ancient and Modern, of Precious Stones and Gems, and of the Precious Metals*  
Adamus (p. 60)  
Bell & Daldy. London, England. 1867

**McCarthy, James Remington**  
No biographical data available

...out of this heat and pressure came what are known as igneous rocks and out of these rocks – although of this no man is sure – came something else, the product of Time and Nature, which kept crowding carbon atoms together in a compact mass, trapping them in molten lava and then, through the same relentless heat and pressure, forcing them to burst through the earth's crust from enormous depths – cool crystals of unquenchable flame.

*Fire in the Earth: The Story of the Diamond*  
Chapter I (p. 2)  
Harper & Brothers Publishers. New York, New York, USA. 1942

**Meydendauer, A.**  
German mineralogist

The diamond can only be of cosmic origin, having fallen as a meteorite at later periods of the earth's formation. The available localities of the diamond contain the residues of not very compact meteoric masses, which may, perhaps, have fallen in the prehistoric ages, and which have penetrated more or less deeply, according to the more or less resistant character of the surface where they fell. Their remains are crumbling away on exposure to the air and sun, and the rain has long ago washed away all prominent masses. The enclosed diamonds have remained scattered in the river-beds, while the fine, light matrix has been swept away.

In Frederick Houk Law  
*Science in Literature*  
The Romance of the Diamonds (p. 109)  
Harper & Brothers. New York, New York, USA. 1929

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

Now, a year or so ago, I had occupied my leisure in taking a London science degree, so that I have a smattering of physics and mineralogy. The thing was not unlike an uncut diamond of the darker sort, though far too large, being almost as big as the top of my thumb. I took it, and saw it had the form of a regular octahedron, with the curved faces peculiar to the most precious of minerals. I took out my penknife and tried to scratch it – vainly.

Leaning forward towards the gas-lamp, I tried the thing on my watch-glass, and scored a white line across that with the greatest ease.

*Best Science Fiction Stories of H.G. Wells*  
*The Diamond Maker*

Dover Publications, Inc. New York, New York, USA. 1966

## EMERALD

### Salzberg, Hugh W.

No biographical data available

Take white lead, one part, and of any glass you choose, two parts, fuse together in a crucible and then pour the mixture. To this crystal, add the urine of an ass and after forty days you will find emeralds.

*From Caveman to Chemist*

Chapter III (p. 36)

American Chemical Society. Washington, D.C. 1991

## FLINT

### Bierce, Ambrose 1842–1914

American newspaperman, wit, and satirist

FLINT, n. A substance much in use as a material for hearts. Its composition is silica, 98.00; oxide of iron, 0.25; alumina, 0.25; water, 1.50. When an editor's heart is made, the water is commonly left out; in a lawyer's more water is added – and frozen.

*The Enlarged Devil's Dictionary* (p. 96)

Doubleday & Company, Inc. Garden City, New York, USA. 1967

## GRANITE

### Cloos, Hans 1885–1951

German geologist

However silent, these large, simple shapes have a wordless language. They say that the granite has grown in secure and secluded depths, guided wholly by its own laws; and that no disturbing outside influence has intervened in the slow tranquil growth of the crystals.

*Conversation with the Earth* (p. 105)

Alfred A. Knopf. New York, New York, USA. 1953

### Hutton, James 1726–97

Scottish geologist, chemist, and naturalist

Granite, considered by itself, does not appear to have any claim to originality in its nature. It is composed of bodies which are capable of being analysed; and these are then found to be compositions of different substances, which are also sometimes variously proportioned.

*Theory of the Earth: With Proofs and Illustrations* (Volume 1)

Chapter IV (p. 312)

H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

## JADE

### Author undetermined

When I think of a wise man, he seems like jade. Wise men have seen in jade all different virtues. It is soft, smooth and shining like kindness. It is hard, fine and strong like intelligence. Its edges seem sharp but do not cut, like justice. It hangs down to the ground like humility. When struck, it gives a clear, ringing sound, like music. The stains in it, which are not hidden and which add to its beauty, are like thoughtfulness. Its brightness is like heaven while its firm substance, born of the mountain and the waters, is like the earth. That is why wise men love jade.

In Joan M. Hartman

*Chinese Jade of Five Centuries*

C.E. Tuttle Company. Rutland, Vermont, USA. 1969

## LOADSTONE

### Gilbert, William 1544–1603

English scientist and physician

...the more advanced one is in the science of the loadstone, the more trust he has in the hypotheses, and the greater the progress he makes; nor will one reach anything like certitude in the magnetic philosophy, unless all, or at all events most, of its principles are known to him.

In *Great Books of the Western World* (Volume 28)

*On the Loadstone and Magnetic Bodies and on the Great Magnet the Earth*

Preface (p. 2)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## MARBLE

### Ruskin, John 1819–1900

English writer, art critic, and social reformer

This rock [marble], then, is prepared by Nature for the sculptor and architect, just as paper is prepared by the manufacturer for the artist, with as great – nay, with greater – care, and more perfect adaptation of the material to the requirements.

*The Stones of Venice* (Volume 2)

Chapter I (p. 33)

Bernhard Touchnitz. Leipzig, Germany. 1906

### Twain, Mark (Samuel Langhorne

Clemens) 1835–1910

American author and humorist

Verily it is one thing to have cash and another to know how to spend it. The man ought to die a violent death that put it into people's heads to try to make cherished, beloved, sacred homes out of such cold, ghostly, unfeeling stuff as marble – a material which God intended for

only gravestones. You can build a house out of it, and put a door-plate on it, and call it a dwelling, but it isn't any use – it is bound to look like a mausoleum, after all. Stewart's house looks like a stately tomb, now, and after it is finished it will never look entirely natural without a hearse in front of it.

Letter to San Francisco  
*Alta California*, July 28, 1867

## OPAL

**Wilcox, Ella Wheeler** 1850–1919

American poet and journalist

And lo! The beautiful Opal,  
That rare and wondrous gem,  
Where the moon and sun blend into one,  
Is the child that was born to them.

*How Salvador Won & Other Recitations*  
The Birth of the Opal  
Edgar S. Werner. New York, New York, USA. 1891

## PEARL

**Gibran, Kahlil** 1883–1931

Lebanese-American philosophical essayist

A pearl is a temple built by pain around a grain of sand.

*Sand and Foam: A Book of Aphorisms* (p. 4)  
Alfred A. Knopf. New York, New York, USA. 1959

Perhaps the sea's definition of a shell is the pearl.

*Sand and Foam: A Book of Aphorisms* (p. 55)  
Alfred A. Knopf. New York, New York, USA. 1959

**Verne, Jules** 1828–1905

French novelist

...to the poet the pearl is a tear of the ocean; to the Orientals it is a drop of solidified dew; to the ladies it is a jewel of an oblong form, of a glass-like brilliancy, of a mother-of-pearl substance, which they wear on their fingers, their necks, or their ears; to the chemist it is a mixture of phosphate and carbonate of lime, with a little gelatine; and, lastly, to naturalists it is simply an unhealthy secretion of the organ which produces mother-of-pearl in certain bivalves.

*Twenty Thousand Leagues Under The Sea*  
Part II, Chapter II (p. 158)  
Ward, Lock & Co., Ltd. London, England. n.d.

## SALT

### Author undetermined

A Salt is a substance which has been naturalized.

Classroom Emanations  
*Journal of Chemical Education*, Volume 2, Number 7, July 1925 (p. 611)

**Boerhaave, Herman** 1668–1738

Dutch chemist, physician, and botanist

Whomsoever is not acquainted with the taste of Salts will never arrive at the knowledge of our Arcana.

*Elements of Chemistry* (Volume 1)  
Part III (p. 438)  
Printed for J. & J. Pemberton. London, England. 1735

**Darwin, Erasmus** 1731–1802

English physician and poet

Hence with diffusive salt old Ocean steeps  
His emerald shallows, and his sapphire deeps.  
Oft in wide lakes, around their warmer brim  
In hollow pyramids the crystals swim;  
Or, fused by earth-born fires, in cubic blocks  
Shoot their white forms, and harden into rocks.

*The Botanic Garden*  
Part I, Canto II, V  
Canto II, l. 120–125 (pp. 29–30)  
Jones & Company. London, England. 1825

**Sagan, Carl** 1934–96

American astronomer and author

But let us look a little more deeply at our microgram of salt. Salt happens to be a crystal in which, except for defects in the structure of the crystal lattice, the position of every sodium and chlorine atom is predetermined. If we could shrink ourselves into this crystalline world, we would see rank upon rank of atoms in an ordered array, a regularly alternating structure – sodium, chlorine, sodium, chlorine, specifying the sheet of atoms we are standing on and all the sheets above us and below us. An absolutely pure crystal of salt could have the position of every atom specified by something like 10 bits of information. (Chlorine is a deadly poison gas employed in European battlefields in World War I. Sodium is a corrosive metal which burns upon contact with water. Together they make a placid and unpoisonous material, table salt. Why each of these substances has the properties it does is a subject called chemistry, which requires more than 10 bits of information to understand.) This would not strain the information-carrying capacity of the brain.

*Broca's Brain: Reflections on the Romance of Science*  
Part I, Chapter 2 (p. 15)  
Random House, Inc. New York, New York, USA. 1979

If the universe had natural laws that governed its behavior to the same degree of regularity that determines a crystal of salt, then, of course, the universe would be knowable. Even if there were many such laws, each of considerable complexity, human beings might have the capability to understand them all. Even if such knowledge exceeded the information-carrying capacity of the brain, we might store the additional information outside our bodies – in books, for example,

or in computer memories – and still, in some sense, know the universe.

*Broca's Brain: Reflections on the Romance of Science*

Part I, Chapter 2 (p. 15)

Random House, Inc. New York, New York, USA. 1979

## SANDSTONE

**Abbey, Edward** 1927–89

American environmentalist and nature writer

The sandstone walls rise higher than ever before, a thousand, two thousand feet above the water, rounding off on top as half-domes and capitols, golden and glowing in the sunlight, a deep radiant red in the shade.

*Desert Solitaire*

Down the River (p. 205)

Ballantine Books. New York, New York, USA. 1968

## SAPPHIRE

**Gübelin, Eduard**

No biographical data available

In the close mesh of fiction and truth sapphire is more closely ensnared than any of its noble peers. Out of mankind's long acquaintance with it, towers of Babylonian dimensions have pressed heavily on its brazen back, built out of the tough ashlar of pagan and Christian magic, which sought to make use of supernatural powers through the stone of heavenly blue.

*The Color Treasury of Gemstones*

Crowell. New York, New York, USA. 1975

## MINERALOGIST

**Landes, K. K.**

No biographical data available

Let there be more geological mineralogists! The only requirements, outside of educational background, are a prodigious curiosity, a vivid imagination, and a thick skin.

*Geological Mineralogy*

*American Mineralogist*, Volume 31, Number 3 & 4, March–April, 1946 (p. 134)

**Levi, Primo** 1919–87

Italian writer and chemist

In running through a list of names of minerals one is confronted by an orgy of personalities. It would seem that no mineralogist was ever resigned to ending his career without linking his name to a mineral, adding to the ending *-ite* as a laurel wreath: garnierite, senarmontite, and thousands of others.

Translated by Raymond Rosenthal

*Other People's Trades*

The Language of Chemistry (II) (p. 119)

Summit Books. New York, New York, USA. 1989

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

If you ask a mathematician, a mineralogist, a historian, or any other man of learning, what definite body of truths has been ascertained by his science, his answer will last as long as you are willing to listen.

*The Problems of Philosophy*

Chapter XV (p. 154)

Oxford University Press, Inc. London, England. 1959

**Trimmer, Joshua** 1795–1857

English geologist

It has been said that a man may be too consummate a mineralogist to make a good geologist, or, in other words, that the constant study of minute details, necessary for the discrimination of individual minerals, unfits the mind for the apprehension of the sublime generalizations of geology; but, on the other hand, it is no less true, that a certain amount of mineralogical knowledge is an essential requisite to the successful study of that science.

*Practical Geology and Mineralogy*

Preface (p. vii)

Lea & Blanchard. Philadelphia, Pennsylvania, USA. 1842

## MINERALOGY

### Author undetermined

Mineralogy is the Alphabet of Geology.

In William Knight

*Facts and Observations Towards Forming a New Theory of the Earth*

Introduction (p. 3)

**Kett, Henry** 1761–1825

English college teacher and writer

The curiosity of man, still restless and active, continues its progress along the paths of nature with unabating ardour. After he has surveyed the wonders of the animal and vegetable kingdoms, he proceeds to those masses of unorganized matter, which are either found upon the surface, or concealed in the recesses of the earth; and thus he is led to mineralogy.

*Elements of General Knowledge* (Volume 2)

Chapter IV (p. 127)

Printed by E. Bronson. Philadelphia, Pennsylvania, USA. 1805

**Richardson, George Fleming** 1796–1848

Man of letters, lecturer, and geological curator

How fascinating is mineralogy! how instructive that science which, from the icicle to the diamond, and from the drop of water to the starry orbs above us, teaches the laws

which regulate form, and which are as prevalent as they are powerful, as simple as they are sublime!

*Geology for Beginners* (2nd edition)

Conclusion (p. 568)

Longman, Brown, Green & Longmans. London, England. 1843

**Verne, Jules** 1828–1905

French novelist

I loved mineralogy, I loved geology. To me there was nothing like pebbles – and if my uncle had been in a little less of a fury, we should have been the happiest of families.

*A Journey to the Center of the Earth*

Chapter 1 (p. 6)

The Limited Editions Club. New York, New York, USA. 1966

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

...mineralogy is a science for the Understanding, for practical life; for its subjects are something dead which cannot rise again, and there is no room for synthesis.

In Johann Peter Eckermann

*Conversations with Goethe*

Friday, February 13, 1829 (p. 294)

J.M. Dent & Sons Ltd. London, England. 1970

## MINING

**Agricola, Georgius** 1494–1555

German mineralogist

Since there has always been the greatest disagreement amongst men concerning metals and mining, some praising, others utterly condemning them, therefore I have decided that before imparting my instruction, I should carefully weigh the facts with a view to discovering the truth in this matter.

Translated by Herbert Hoover and Lou Henry Hoover

*De Re Metallica*

Book I (p. 4)

The Mining magazine

London, England. 1912

[I]f mining is a shameful and discreditable employment for a gentleman because slaves once worked mines, then agriculture also will not be a very creditable employment, because slaves once cultivated the fields, and even today do so among the Turks; nor will architecture be considered honest, because some slaves have been found skilful in that profession; nor medicine, because not a few doctors have been slaves; nor will any other worthy craft, because men captured by force of arms have practised it.

*De Re Metallica*

Book I (p. 23)

Dover Publications, Inc. New York, New York, USA. 1950

[I]nasmuch as the chief callings are those of the moneylender, the soldier, the merchant, the farmer, and the

miner, I say, inasmuch as usury is odious, while the spoil cruelly captured from the possessions of the people innocent of wrong is wicked in the sight of God and man, and inasmuch as the calling of the miner excels in honour and dignity that of the merchant trading for lucre, while it is not less noble though far more profitable than agriculture, who can fail to realize that mining is a calling of peculiar dignity?

*De Re Metallica*

Book I (p. 24)

Dover Publications, Inc. New York, New York, USA. 1950

**Hoover, Herbert** 1874–1964

26th president of the USA

I told him that as nearly as I can determine from my two months' experience in mining, the difference between mining and geology is like that between the old-time bear-hunters and the city man. When they came upon bear tracks the old hunter became excited and started to tear through the brush on a dead run after the bear. But the city man finally gasped out, 'What are you doing? Let's go back up the tracks and see where he came from!

In Rose Wilder Lane

*The Making of Herbert Hoover*

Chapter VI (pp. 181–182)

The Century Co. New York, New York, USA. 1920

The investor who wants to eliminate all risk in mining is like a man who expects to go bathing without getting wet.

In T.A. Rickard

*The Economics of Mining* (2nd edition)

Mining Investment (p. 69)

Hill Publishing Co. New York, New York, USA. 1907

**Muir, John** 1838–1914

American naturalist

Mining discoveries and progress, retrogression and decay, seem to have been crowded more closely against each other here than on any other portion of the globe.

*Steep Trails*

Chapter XVI (p. 198)

Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

The drifts and tunnels in the rocks may perhaps be regarded as the prayers of the prospector, offered for the wealth he so earnestly craves; but like the prayers of any kind not in harmony with nature, they are unanswered.

*Steep Trails*

Chapter XVI (p. 203)

Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

## MIRACLE

**Bradbury, Ray** 1920–

American writer

We live in miracles which cannot be explained. The scientist, the theologian, the artist – each attempts impossible explanations.

In Ray Bradbury, Arthur C. Clarke, Bruce Murray, Carl Sagan, and Walter Sullivan  
*Mars and the Mind of Man*  
 Ray Bradbury (p. 139)  
 Harper & Row, Publishers. New York, New York, USA. 1973

**Buchner, Ludwig** 1824–99  
 German physician and philosopher

We have the fullest right, and are scientifically correct, in asserting there is no such thing as a miracle; everything that happens, does so in a natural way ...

*Force and Matter*  
 Chapter VI (p. 34)  
 Trübner & Co  
 London, England. 1864

We should only waste words in our endeavor to prove the natural impossibility of a miracle. No educated, much less a scientific person, who is convinced of the immutable order of things, can now-a-days believe in miracles.

*Force and Matter*  
 Chapter VI (p. 36)  
 Trübner & Co  
 London, England. 1864

**Davis, Andrew Jackson**  
 No biographical data available

The thinking mind knows too much of the laws of matter to believe in miracles. *The more we know the less we believe!*

*The Present Age and Inner Life* (3rd edition)  
 A Survey of Human Needs (p. 7)  
 W. White & Co. Boston, Massachusetts, USA. 1873

**Dawkins, Richard** 1941–  
 English ethologist, evolutionary biologist, and popular science writer

Evolution is very possibly not, in actual fact, always gradual. But it must be gradual when it is being used to explain the coming into existence of complicated, apparently designed objects, like eyes. For if it is not gradual in these cases, it ceases to have any explanatory power at all. Without gradualness in these cases, we are back to miracle, which is simply a synonym for the total absence of explanation.

*River Out of Eden: A Darwinian View of Life*  
 Chapter 3 (p. 83)  
 Basic Books. New York, New York, USA. 1995

**Dürrenmatt, Friedrich** 1921–90  
 Swiss playwright and novelist

...in the realm of science there is nothing more repugnant than a miracle.

Translated by James Kirkup  
*The Physicists*  
 Act One (p. 48)  
 Grove Press, Inc. New York, New York, USA. 1964

**Einstein, Albert** 1879–1955  
 German-born physicist

That this [analogy of the atom with the solar system] insecure and contradictory foundation was sufficient to enable a man of Bohr's unique instinct and tact to discover the major laws of the spectral lines and of the electron shells of the atoms together with their significance to chemistry appeared to me like a miracle – and appears to me as a miracle even today. This is the highest form of musicality in the sphere of thought.

In Paul Arthur Schlipp (ed.)  
*Albert Einstein: Philosopher-Scientist*  
 Autobiographical Notes (pp. 45, 47)  
 The Library of Living Philosophers, Inc. Evanston, Illinois, USA. 1949

**Haldane, J. S. (John Scott)** 1860–1936  
 Scottish physiologist

The more we discover as to physiological activity and inheritance, the more difficult does it become to imagine any physical or chemical description or explanation which could in any way cover the facts as to the persistent co-ordination. From the standpoint of the physical sciences the maintenance and reproduction of a living organism is nothing less than a standing miracle, and for that reason the co-ordinated maintenance of structure and activity is inconsistent with the physical conception of self-existent matter and energy.

*The Philosophical Basis of Biology: Donnellan Lectures, University of Dublin, 1930*  
 Lecture I, Mechanistic Biology (p. 11)  
 Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1931

**Hume, David** 1711–76  
 Scottish philosopher and historian

A miracle is a violation of the laws of nature ...

*Essays and Treatises on Several Subjects*  
 Of Miracles (p. 346)  
 A. Millar. London, England. 1758

**Leibniz, Gottfried Wilhelm** 1646–1716  
 German philosopher and mathematician

Miracles are not to be multiplied beyond necessity.

Quoted in Guido de Ruggiero  
*Modern Philosophy* (p. 51)  
 The Macmillan Co. New York, New York, USA. 1921

**Novalis (Friederich von Hardenberg)** 1772–1801  
 German poet

Miracles, as unnatural facts, are unmathematical; but there are no miracles of this kind, and what passes by that name is exactly that which becomes comprehensible through mathematics, for nothing is wonderful to mathematics.

Quoted in Panthea  
 Eclectic Gatherings  
*The Reasoner*, Volume 6 1849 (p. 374)

**MIRAGE**

**Strobridge, Idah Meacham** 1855–1932  
American writer

The mirage is, in very truth, a part of the Desert itself – just as the sagebrush, and the coyote, and the little horned toads, and the sand-storms are part. To those who know Desert-land, the picture would be incomplete without them.

*In Miners' Mirage-land*

Mirages of the Desert (p. 2)

Baumgardt Publishing Co. Los Angeles, California, USA. 1904

**MIRROR**

**Durell, Clement V.** 1882–1968  
English mathematician

...a reception was held and the science departments were on view. A young lady, entering the physical laboratory and seeing an inverted image of herself in a large concave mirror, naively remarked to her companion: "They have hung that looking glass upside down."

*Readable Relativity*

Chapter II (p. 12)

Harper & Brothers. New York, New York, USA. 1960

**Woodbury, David Oakes**

The figure of a mirror is rather like the figure of a woman-a curve that is not only beautiful but exactly adapted to its purpose. No sculptor ever smoothed the contours of a statue with more loving care than the optician who works a lustrous surface upon glass down to the perfect parabolic curve which will capture not only the admiration of his fellows but the secrets of the stars.

*The Glass Giant of Palomar* (p. 75)

**MISERY**

**Darwin, Charles Robert** 1809–82  
English naturalist

...if the misery of our poor be caused not by the laws of nature, but by our institutions, great is our sin...

*The Voyage of the Beagle*

Chapter XXI (p. 500)

Heron Books. 1968

I am the most miserable, bemuddled, stupid dog in all England, and am ready to cry with vexation at my blindness and presumption.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 1)

Letter to J.D. Hooker, July 14, 1857? (p. 461)

D. Appleton & Company. New York, New York, USA. 1896

**MISQUOTATION**

**Gould, Stephen Jay** 1941–2002  
American paleontologist and evolutionary biologist

My response to nearly all misquotation is the effective retort of preference: utter silence. (Honorable intellectual disagreement should always be addressed; misquotation should be ignored, when possible and politically practical).

*Eight Little Piggies: Reflections in Natural History*

Chapter 2 (p. 45)

W.W. Norton & Co. New York, New York, USA. 1993

**MISSING LINK**

**Wasmann, Erich** 1859–1931  
Jesuit biologist

If man were really descended from a prehistoric ancestor, common to him and to the apes of the present day, there must surely be some fossil trace left of his branch of the genealogical tree, and not only traces of the branch leading to apes!

Translated by A.M. Buchanan

*Modern Biology and the Theory of Evolution* (3rd edition)

Chapter X (p. 404)

B. Herder Book Co. St. Louis, Missouri, USA. 1923

**MISTAKE**

**Bayliss, Sir William Maddock** 1860–1925  
English physiologist

...there must never be the least hesitation in giving up a position the moment it is shown to be untenable. It is not going too far to say that the greatness of a scientific investigator does not rest on the fact of his having never made a mistake, but rather on his readiness to admit that he has done so, whenever the contrary evidence is cogent enough.

*Principles of General Physiology* (3rd edition)

Preface (pp. xvi–xvii)

Longmans, Green, & Co. London, England. 1920

**Braddon, Mary Elizabeth** 1837–1915  
English novelist

We spend the best part of our lives in making mistakes, and the poor remainder in reflecting how very easily we might have avoided them.

*Aurora Floyd* (p. 241)

Ward, Lock & Tyler. London, England. 1875

**Charlie Chan (Fictional character)**

Even wisest man sometimes mistake bumblebee for blackberry.

*The Black Camel*

Film (1931)

**Editor**

In common affairs a mistake may have but a short life, but in the study of nature an imperfect observation may cause infinite trouble to thousands. Accuracy  
*The Chemical News and Industrial News*, Volume XIX, Number 474, January 1, 1869 (p. 3)

**Faraday, Michael** 1791–1867

English physicist and chemist

I think it likely that I have made many mistakes in the preceding pages, for even to myself, my ideas on this point appear only as the shadow of a speculation, or as one of those impressions on the mind which are allowable for a time as guides to thought and research. He who labours in experimental inquiries knows how numerous these are, and how often their apparent fitness and beauty vanish before the progress and development of real natural truth.

*Experimental Researches in Chemistry and Physics*

On Ice and Freezing Water (p. 372)

Richard Taylor & William Francis. London, England. 1859

**Gombrich, Ernst Hans** 1909–2001

English art historian and scholar

In order to learn, we must make mistakes, and the most fruitful mistakes which nature could have implanted in us would be the assumption of even greater simplicities than we are likely to meet in this bewildering world of ours.... To probe a hole we first use a straight stick to see how far it takes us. To probe the visible world we use the assumption that things are simple until they prove to be otherwise.

In John Pottage

*Geometrical Investigations* (p. 15)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA.

1983

**Kelvin, Lord William Thomson** 1824–1907

Scottish engineer, mathematician, and physicist

There cannot be a greater mistake, than that of looking superciliously upon practical applications of science. The life and soul of science is its practical application, and just as the great advances in mathematics have been made through the desire of discovering the solution of problems which were of a highly practical kind in mathematical science; so in physical science many of the greatest advances that have been made, from the beginning of the world to the present time, have been made in the earnest desire to torn the knowledge of the properties of matter to some purpose useful to mankind.

In Robert Montgomery Bird

*Modern Science Reader: With Special Reference to Chemistry*

Electrical Units of Measurements (pp. 151–152)

The Macmillan Co. New York, New York, USA. 1911

**Mayr, Ernst** 1904–2005

German-born American biologist

In science one learns not only by one's own mistakes but by the history of the mistakes of others.

*The Growth of Biological Thought: Diversity, Evolution and Inheritance*  
Chapter 1 (p. 20)

Harvard University Press. Cambridge, Massachusetts, USA. 1982

**Miller, Henry George**

American philosopher, poet, critic, and founder of Aesthetic Realism

If a mistake is not a stepping stone, it is a mistake.

*Damned Welcome*

Aesthetic Realism, Maxims, Part One, #139 (p. 39)

Definition Press. New York, New York, USA. 1972

**Smiles, Samuel** 1812–1904

Scottish author and reformer

We often discover what will do, by finding out what will not do; and probably he who never made a mistake never made a discovery.

*Self-Help*

Chapter XII (p. 339)

John Murray. London, England. 1876

**Teller, Edward** 1908–2003

Hungarian-born American nuclear physicist

**Teller, Wendy**

No biographical data available

**Talley, Wilson**

No biographical data available

If there was ever a misnomer, it is “exact science.” Science has always been full of mistakes. The present day is no exception. And our mistakes are good mistakes; they require a genius to correct them.

*Conversations on the Dark Secrets of Physics*

Chapter 3 (p. 37)

Plenum Press. New York, New York, USA. 1991

**MITOCHONDRION**

**Gould, Stephen Jay** 1941–2002  
American paleontologist and evolutionary biologist

Surely, the mitochondrion that first entered another cell was not thinking about the future benefits of cooperation and integration; it was merely trying to make its own living in a tough Darwinian world.

*Wonderful Life: The Burgess Shale and the Nature of History*  
Chapter V (p. 310)  
W.W. Norton & Company, Inc. New York, New York, USA. 1989

**MIXTURE**

**Huxley, Thomas Henry** 1825–95  
English biologist

Mix salt and sand, and it shall puzzle the wisest of men, with his mere natural appliances, to separate all the grains of sand from all the grains of salt; but a shower of rain will effect the same object in ten minutes.

*Collected Essays* (Volume 2)  
*Darwiniana*  
The Origin of Species (p. 76)  
Macmillan & Company Ltd. London, England. 1904

**MODEL**

**Chargaff, Erwin** 1905–2002  
Austrian biochemist

Most students no longer study nature; they test models.  
*Heraclitean Fire: Sketches from a Life before Nature* (p. 106)  
The Rockefeller University Press. New York, New York, USA. 1978

**Andrewartha, H. G.** 1907–  
Australian ecologist

Model-making, the imaginative and logical steps which precede the experiment, may be judged the most valuable part of scientific method because skill and insight in these matters are rare. Without them we do not know what experiment to do. But it is the experiment which provides the raw material for scientific theory. Scientific theory cannot be built directly from the conclusions of conceptual models.

*Introduction to the Study of Animal Population* (p. 181)  
The University of Chicago Press. Chicago, Illinois, USA. 1961

**Ball, John**

No biographical data available

To make progress in understanding all this, we probably need to begin with simplified (oversimplified?) models and ignore the critics' tirade that the real world is more complex. The real world is always more complex, which has the advantage that we shan't run out of work.

Memes as Replicators  
*Ethology and Sociobiology*, Volume 5, Number 3, 1984 (p. 159)

**Bianco, Margery Williams** 1880–1944  
English-American author

The Rabbit could not claim to be a model of anything, for he didn't know that real rabbits existed; he thought they were all stuffed with sawdust like himself, and he understood that sawdust was quite out-of-date and should never be mentioned in modern circles.

*The Velveteen Rabbit: Or How Toys Become Real*  
Athenaeum Books for Young Readers. New York, New York, USA. 2002

**Born, Max** 1882–1970  
German-born English physicist

All great discoveries in experimental physics have been due to the intuition of men who made free use of models, which were for them not products of the imagination, but representatives of real things.

Physical Reality  
*Philosophical Quarterly*, Volume 3, Number 11, April, 1953 (p. 140)

**Box, George E. P.** 1919–  
English statistician

All models are wrong but some are useful.  
Apocryphal

**Bronowski, Jacob** 1908–74  
Polish-born English mathematician and polymath

The pre-eminence of astronomy rests on the peculiarity that it can be treated mathematically; and the progress of physics, and most recently biology, has hinged equally on finding formulations of their laws that can be displayed as mathematical models.

*The Ascent of Man*  
Chapter 5 (p. 165)  
Little, Brown & Company. Boston, Massachusetts, USA. 1973

**Chargaff, Erwin** 1905–2002  
Austrian biochemist

Models – in contrast to those who sat for Renoir – improve with age.

*Heraclitean Fire: Sketches from a Life before Nature*  
Part III  
Science as a Profession (p. 171)  
Rockefeller University Press. New York, New York, USA. 1978

**Cheeseman, Peter**  
Australian computer scientist

The apparent simplicity of a model is due to a failure of imagination and limited data, unless the domain really is simple. If the world were really random, chemistry, cooking, and credit would not be possible, so our models cannot be figments of our imagination.

In J. Shrager and P. Langley (eds.)  
*Computational Models of Scientific Discovery and Theory Formation*  
On Finding the Most Probable Model (p. 91)  
Morgan Kaufmann Publishers. San Mateo, California, USA. 1990

**Crick, Francis Harry Compton** 1916–2004  
English biochemist

...no good model ever accounted for all the facts, since some data was bound to be misleading if not plain wrong. A theory that did fit all the data would have been “carpentered” to do this and would thus be open to suspicion.

*What Mad Pursuit: A Personal View of Scientific Discovery*  
Chapter 5 (p. 60)  
Basic Books, Inc. New York, New York, USA. 1988

**Dampier, Sir William Cecil** 1867–1952  
English scientific writer

we can only study Nature through our senses – that is... we can only study the model of Nature that our senses enable our minds to construct; we cannot decide whether that model, consistent though it be, represents truly the real structure of Nature; whether, indeed, there be any Nature as an ultimate reality behind its phenomena.

*The Recent Development of Physical Science*  
Chapter I (p. 14)  
John Murray. London, England. 1904

**Davies, Paul Charles William** 1946–  
British-born physicist, writer, and broadcaster

When it comes to very highly organized systems, such as a living cell, the task of modeling by approximation to simple, continuous and smoothly varying quantities is hopeless. It is for this reason that attempts by sociologists and economists to imitate physicists and describe their subject matter by simple mathematical equations is rarely convincing.

*The Cosmic Blueprint: New Discoveries in Nature's Creative Ability to Order the Universe*  
Chapter 3 (p. 22)  
Simon & Schuster. New York, New York, USA. 1988

The incorporation of imaginary elements into physical theories is one of the most difficult practices for a professional physicist to justify to the layman. Of course, if a particular feature, such as isotopic spin symmetry, renders the model a brilliant success, then the physicist can simply reply, “I put it in because it works!”

*Superforce: The Search for a Grand Unified Theory of Nature*  
Chapter 4 (pp. 66–67)  
Simon & Schuster. New York, New York, USA. 1984

A model of the universe does not require faith, but a telescope. If it is wrong, it is wrong.

*Space and Time in the Modern Universe*  
Chapter 7 (p. 201)  
Cambridge University Press. Cambridge, England. 1977

**Deutsch, Karl W.** 1912–92  
Czech-born American international political scientist

Men think in terms of models.  
Mechanism, Organism and Society  
*Philosophy of Science*, Volume 18, Number 3, July, 1951 (p. 230)

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

Our model of Nature...should be like an engine with movable parts. We need not fix the position of anyone lever; that is to be adjusted from time to time as the latest observations indicate. The aim of the theorist is to know the train of wheels which the lever sets in motion – that binding of the parts which is the soul of the engine.

*The Internal Constitution of Stars*  
*Nature*, Volume 106, Number 2603, 2 September, 1920 (p. 20)

**Eigen, Manfred** 1927–  
German biophysicist

A theory has only the alternative of being right or wrong. A model has a third possibility: it may be right, but irrelevant.

In J. Mehra (ed.)  
*The Physicist's Conception of Nature: Symposium on the Development of the Physicist's Conception of Nature in the Twentieth Century*  
Chapter 30 (p. 618)  
Reidel. Boston, Massachusetts, USA. 1973

**Ferris, Timothy** 1944–  
American science writer

The model of the natural world we build in our minds by such a process will forever be inadequate, just a little cathedral in the mountains. Still it is better than no model at all.

*The Red Limit: The Search for the Edge of the Universe*  
Preface (p. 8)  
William Morrow & Company, Inc. New York, New York, USA. 1977

**Feynman, Richard P.** 1918–88  
American theoretical physicist

...the more you see how strangely Nature behaves, the harder it is to make a model that explains how even the simplest phenomena actually work. So theoretical physics has given up on that.

*QED: The Strange Theory of Light and Matter*  
Chapter 3 (p. 82)  
Princeton University Press. Princeton, New Jersey, USA. 1985

**Gould, Stephen Jay** 1941–2002  
American paleontologist and evolutionary biologist

I do not know that my view is more correct; I do not even think that “right” and “wrong” are good categories for assessing complex mental models of external reality – for models in science are judged [as] useful or detrimental, not as true or false.

*Dinosaur in a Haystack: Reflections in Natural History*  
Part Three, Chapter 8 (p. 96)  
Random House, Inc. New York, New York, USA. 1995

**Greedman, D. A.**  
No biographical data available

**Navidi, W. C.**

No biographical data available

Models are often used to decide issues in situations marked by uncertainty. However statistical differences from data depend on assumptions about the process which generated these data. If the assumptions do not hold, the inferences may not be reliable either. This limitation is often ignored by applied workers who fail to identify crucial assumptions or subject them to any kind of empirical testing. In such circumstances, using statistical procedures may only compound the uncertainty.... Statistical modeling seems likely to increase the stock of things you think you know that ain't so.

Regression Models for Adjusting the 1980 Census  
*Statistical Science*, Volume 1, Number 1, 1986 (p. 3)

**Gribbin, John** 1946–

English science writer

No matter how beautiful the whole model may be, no matter how naturally it all seems to hang together now, if it disagrees with experiment, then it is wrong.

*Almost Everyone's Guide to Science*

Chapter Eleven (p. 220)

Yale University Press. New Haven, Connecticut, USA. 1999

**Greenwood, H. J.**

No biographical data available

Let us not grace loose thinking with the word "model."

On Models and Modeling

*Canadian Mineralogist*, Volume 27, 1989

**Jeans, Sir James Hopwood** 1877–1946

English physicist and mathematician

The making of models or pictures to explain mathematical formulae and the phenomena they describe is not a step towards, but a step away from reality; it is like making graven images of a spirit.... All the same, the mathematical physicist is still busily at work making graven images of the concepts of the wave-mechanics.

*The Mysterious Universe*

Chapter V (pp. 176, 177)

The Macmillan Company. New York, New York, USA. 1932

...we have found out that nature does not function in a way that can be made comprehensible to the human mind through models or pictures.

*Physics and Philosophy*

Chapter I (p. 10)

Dover Publications. Mineola, New York, USA. 1981

**Kaplan, Abraham** 1918–93

American philosopher of science, author, and educator

The words "model" and "mode" have, indeed, the same root; today, model building is science a la mode.

*The Conduct of Inquiry: Methodology for Behavioral Science*

Chapter VII, Section 30 (p. 258)

Chandler Publishing Company. San Francisco, California, USA. 1964

**Karlin, Samuel**

No biographical data available

The purpose of models is not to fit the data but to sharpen the questions.

11th R. A. Fisher Memorial Lecture

Royal Society 20 April, 1983

**Kelvin, Lord William Thomson** 1824–1907

Scottish engineer, mathematician, and physicist

I never satisfy myself until I can make a mechanical model of a thing. If I can make a mechanical model, I understand it.

*Baltimore Lectures on Molecular Dynamics, and the Wave Theory of Light* (p. 270)

C.J. Clay & Sons. London, England. 1904

**Kolb, Edward W. (Rocky)** 1951–

American cosmologist

To try to ferret out the important and interesting objects from the multitude of things in the sky, every cosmologist looks at the universe through a filter of a model, for without the conceptual framework of a model the staggering number of things in the universe would overwhelm anyone.

*Blind Watchers of the Sky*

Chapter Eleven (p. 285)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

If you want to know whether you should take a model seriously or just regard it as a calculational tool, you can imagine that you are building a wall out of stones. For instance, if the stones represent models for various phenomena seen in the sky, and the wall represents all of astronomy, then choosing a model to explain a phenomenon is like choosing a stone to be incorporated into the wall. Sometimes the stone seems to fit naturally into a space in the wall; more often it has to be trimmed a bit to fit in. But it is impossible to judge whether it is a "beautiful" stone or the "correct" stone for that place in the wall when it is first inserted, because the true beauty or utility of the stone can't be judged in isolation from the rest of the wall. The two real criteria to judge the stone are whether it is one on which other stones can be placed and whether it exists harmoniously with the surrounding stones. If the stone not only fulfills the function of taking up spaces in the wall but also provides a platform on which to place other stones, it a beautiful stone.

*Blind Watchers of the Sky*

Chapter Ten (pp. 287–288)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA.

1996

**Lewis, C. S. (Clive Staples)** 1898–1963

British author, scholar, and popular theologian

It is not impossible that our own Model will die a violent death, ruthlessly smashed by an unprovoked assault of

new facts... But I think it is more likely to change when, and because, far-reaching changes in the mental temper of our descendants demand that it should. The new Model will not be set up without evidence, but the evidence will turn up when the inner need for it becomes sufficiently great. It will be true evidence. But nature gives most of her evidence in answer to the questions we ask her. Here, as in the courts, the character of the evidence depends on the shape of the examination, and a good cross-examiner can do wonders.

*The Discarded Image: An Introduction to Medieval and Renaissance Literature*

Epilogue (pp. 222–223)

University Press. Cambridge, England. 1964

**Lewis, Gilbert Newton** 1875–1946

American chemist

As we continue the great adventure of scientific exploration our models must often be recast. New laws and postulates will be required, while those that we already have must be broadened, extended and generalized in ways that we are now hardly able to surmise.

*The Anatomy of Science*

Chapter VIII (p. 219)

Yale University Press. New Haven, Connecticut, USA. 1926

**Lindley, David** 1956–

English astrophysicist and author

There is no guarantee that any simple model will be able to explain everything.

*The End of Physics: The Myth of a Unified Theory*

Part I, Chapter 4 (p. 131)

Basic Books. New York, New York, USA. 1993

**Lloyd, David**

No biographical data available

**Volkov, Evgenii I.**

No biographical data available

One good experiment is worth a thousand models...; but one good model can make a thousand experiments unnecessary.

In C. Mosekilde and L. Mosekilde (eds.)

*Complexity, Chaos, and Biological Evolution*

The Ultradian Clock: Timekeeping for Intracellular Dynamics (p. 51)

Plenum Press. New York, New York, USA. 1991

**Maxwell, James Clerk** 1831–79

Scottish physicist

As long as the training of a naturalist enables him to trace the action only of a particular material system, without giving him the power of dealing with the general properties of all such systems, he must proceed by the method so often described in histories of science – he must imagine model after model of hypothetical apparatus, till he finds one which will do the required work. If this apparatus should afterwards be found capable of accounting for many of

the known phenomena, and not demonstrably inconsistent with any of them, he is strongly tempted to conclude that his hypothesis is a fact, at least until an equally good rival hypothesis has been invented.

Tait's Thermodynamics

*Nature*, Volume XVII, Number 431, January 31, 1878 (p. 258)

**Miall, Andrew**

No biographical data available

There are those who try to generalize, synthesize, and build models, and there are those who believe nothing and constantly call for more data. The tension between these two groups is a healthy one; science develops mainly because of the model builders, yet they need the second group to keep them honest.

*Principles of Sedimentary Basin Analysis*

Chapter 8 (p. 363)

Springer-Verlag. New York, New York, USA. 1984

**Milton, John** 1608–74

English poet

Hereafter, when they come to model Heav'n  
And calculate the Stars, how they will wield  
The mightier frame, how build, unbind, contrive  
To save appearances, how gird the Shear  
With Centric and Eccentric scribbled ore,  
Cycle and Epicycle, Orb in Orb.

In *Great Books of the Western World* (Volume 32)

*Paradise Lost*

Book VIII, l. 79–84

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Morrison, Foster**

No biographical data available

Much of the technical literature is difficult to read, even for scientists and engineers. Even the best books tend to dwell on the mathematical models and don't give the slightest hint what to do if one is lucky enough to have some data.

*The Art of Modeling Dynamic Systems: Forecasting for Chaos, Randomness & Determinism*

Preface (p. vii)

John Wiley & Sons, Inc. New York, New York, USA. 1991

**Oreskes, Naomi**

No biographical data available

**Belitz, K.**

No biographical data available

A model, like a novel, may resonate with nature, but it is not a "real" thing. Like a novel, a model may be convincing – it may "ring true" if it is consistent with our experience of the natural world. But just as we may wonder how much the characters in a novel are drawn from real life and how much is artifice, we might ask the same of a model: How much is based on observation and measurement of accessible phenomena, how much is

convenience? Fundamentally, the reason for modeling is a lack of full access, either in time or space, to the phenomena of interest.

*Science*, Volume 263, 1944

**Paulos, John Allen** 1945–

American mathematician

The once-surprising existence of non-Euclidean models of Euclid's first four axioms can be seen as a sort of mathematical joke.

*Once Upon a Number: The Hidden Mathematical Logic of Stories*

Appendix: Humor and Computation (p. 132)

Basic Books. New York, New York, USA. 1998

**Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

We should always aim toward the economy of thought. It is not enough to give models for imitation. It must be possible to pass beyond these models and, in place of repeating their reasoning at length each time, to sum this in a few words.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1909*

The Future of Mathematics (p. 128)

Government Printing Office. Washington, D.C. 1910

**Poynting, John Henry** 1852–1914

English physicist

...while the building of Nature is growing spontaneously from within, the model of it, which we seek to construct in our descriptive science, can only be constructed by means of scaffolding from without, a scaffolding of hypotheses. While in the real building all is continuous, in our model there are detached parts which must be connected with the rest by temporary ladders and passages, or which must be supported till we can see how to fill in the understructure. To give the hypotheses equal validity with facts is to confuse the temporary scaffolding with the building itself.

*Collected Scientific Papers*

Part VII, Article 52 (p. 607)

At The University Press. Cambridge. 1920

**Sciama, Dennis** 1926–99

English physicist

Since we find it difficult to make a suitable model of a certain type, Nature must find it difficult too. This argument neglects the possibility that Nature may be cleverer than we are. It even neglects the possibility that we may be cleverer tomorrow than we are today.

In Neil de Grasse Tyson

Galactic Engines

*Natural History*, Volume 106, Number 4, May, 1997 (p. 71)

**Sophocles** 496 BCE–406 BCE

Greek playwright

Nay, Knowledge must come through action; thou canst have no test which is not fanciful, save by trial.

In *Great Books of the Western World* (Volume 5)

*The Plays of Sophocles*

*Trachiniai*, l. 589

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Stewart, Ian** 1945–

English mathematician and science writer

Construction of models, I said, was an art. On this occasion the art is conjuring: I can do no better than wave the magic wand and extract the rabbit from the hat.

*Concepts of Modern Mathematics*

Chapter 8 (p. 120)

Dover Publications, Inc. New York, New York, USA. 1995

**Stocking, Martha**

No biographical data available

Building statistical models is just like this. You take a real situation with real data, messy as this is, and build a model that works to explain the behavior of real data.

*New York Times*, February 10, 2000

**von Neumann, John** 1903–57

Hungarian-American mathematician

To begin, we must emphasize a statement which I am sure you have heard before, but which must be repeated again and again. It is that the sciences do not try to explain, they hardly even try to interpret, they mainly make models. By a model is meant a mathematical construct which, with the addition of certain verbal interpretations, describes observed phenomena. The justification of such a mathematical construct is solely and precisely that it is expected to work – that is, correctly to describe phenomena from a reasonably wide area. Furthermore, it must satisfy certain aesthetic criteria – that is, in relation to how much it describes, it must be rather simple.

*The Neumann Compendium*

Method in the Physical Sciences (p. 628)

World Scientific. Singapore. 1995

**Walker, Marshall John**

American physicist

Scientists have learned by humiliating experience that their model is not reality.

*The Nature of Scientific Thought*

Chapter XIV (p. 158)

Prentice-Hall, Inc., Englewood Cliffs, New Jersey, USA. 1963

**Weisskopf, Victor Frederick** 1908–2002

Austrian-American physicist

What is a model? A model is like an Austrian timetable. Austrian trains are always late. A Prussian visitor asks the Austrian conductor why they bother to print timetables. The conductor replies "If we did not, how would we know how late the trains are?"

In H. Frauenfelder and E.M. Henley  
*Subatomic Physics*  
 Part V (p. 351)  
 Prentice-Hall, Inc., Englewood Cliffs, New Jersey, USA. 1974

## MODESTY

**Bossut, Charles** 1730–1814  
 French mathematician

Modesty is a desertion of ourselves, a kind of avowal .of inferiority, at which mediocrity catches greedily as a source of consolation, which it endeavors to interpret in the literal sense, and which it frequently employs as a weapon to keep at a distance the timid man of genius,  
*A General History of Mathematics from the Earliest Times to the Middle of the Eighteenth Century*  
 Author's Preface (p. xx)  
 Printed for J. Johnson. London, England. 1803

## MOLAR SOLUTION

### Author undetermined

A molar solution is one which contains one g.m.w. [gram molecular weight] per liter.  
 Classroom Emanations  
*Journal of Chemical Education*, Volume 2, Number 7, July 1925 (p. 611)

## MOLECULAR BIOLOGIST

**Chargaff, Erwin** 1905–2002  
 Austrian biochemist

The extreme dislike, and therefore ignorance, of chemistry I have often encountered among molecular biologists are puzzling.  
*Voices in the Labyrinth: Nature, Man and Science* (p. 57)  
 The Seabury Press. New York, New York, USA. 1977

## MOLECULAR BIOLOGY

### Atsbury, W. T.

No biographical data available

We are at the dawn of a new era, the era of 'molecular biology' as I like to call it, and there is an urgency about the need for more intensive application of physics and chemistry, and specially of structure analysis, that is still not sufficiently appreciated.  
 On the Structure of Biological Fibres and the Problem of Muscle  
*Proceedings of the Royal Society of London, Series B, Biological Sciences*, Volume 134, Number 876, July 2, 1947 (p. 326)

**Chargaff, Erwin** 1905–2002  
 Austrian biochemist

...molecular biology [is] the practice of biochemistry without a license.

*Essays on Nucleic Acids*  
 Amphisbaena  
 Elsevier Publishing Company. Amsterdam, Netherlands. 1963

The definition of molecular biology is the practice of biochemistry without a license.

*Heraclitean Fire: Sketches from a Life before Nature* (p. 140)  
 The Rockefeller University Press. New York, New York, USA. 1978

**Crick, Francis Harry Compton** 1916–2004  
 English biochemist

...molecular biology can be defined as anything that interests molecular biologists.  
 Molecular Biology in the Year 2000  
*Nature*, Volume 228, Number 5272, November 14, 1970 (p. 613n)

**Dobzhansky, Theodosius** 1900–75  
 Russian-American scientist

Molecular biology is Cartesian in its inspiration.

*The Biology of Ultimate Concern*  
 Chapter 2 (p. 20)  
 The New American Library, Inc. New York, New York, USA. 1967

**Kornberg, Arthur** 1918–  
 American biochemist

Molecular biology falters when it ignores the chemistry of the DNA blueprint – the enzymes and proteins, and their products – the integrated machinery and framework of the cell.

The Two Cultures: Chemistry and Biology  
*Biochemistry*, Volume 26, Number 22, November 3, 1987 (p. 6890)

**Ludwig, Carl Friedrich Wilhelm** 1816–95  
 German physiologist

Whenever the body of an animal is subdivided to its ultimate parts, one always finally arrives at a limited number of chemical atoms.... One draws the conclusion in harmony with this observation, that all forms of activity arising in the animal body must be a result of the simple attractions and repulsions which would be observed in the coming together of those elementary objects.  
*Quarterly Review*, 2nd ed., Winter, 1858

**Luria, Salvador Edward** 1912–91  
 Italian-American microbiologist

Molecular biology deals with questions of molecular structure, and therefore is biochemistry; but it is not the classical biochemistry that emerged earlier in the twentieth century out of the concerns of medical, agricultural, and industrial researchers. Molecular biology is genetics because it deals with genes, their functions, and their products; but, in contrast with classical genetics, it has

dealt mainly with organisms such as bacteria and viruses rather than peas, maize or fruit flies, whose study had established the classical rules of genetics.

*A Slot Machine, a Broken Test Tube: An Autobiography*

The Science Path: II. The High Reaches (pp. 83–84)

Harper & Row, Publishers. New York, New York, USA. 1984

**Maddox, John Royden** 1925–

Welsh chemist and physicist

...coffee-breaks in molecular laboratories are as marked by speculation as in any other field, but the published literature gives the impression that its authors are more concerned with the correctness of their observations than with their significance. Those with the good fortune to have the time to think about the data accumulated in the literature would probably reap a rich harvest of understanding. The explanation of the unreflective state of molecular biology is easily accounted for: competitiveness.

The Dark Side of Molecular Biology

*Nature*, Volume 363, Number 6424, 6 May, 1993 (p. 13)

**Wolpert, Lewis** 1929–

British embryologist

...the revolution in molecular biology changed the paradigm from metabolism to information.

*The Unnatural Nature of Science*

Chapter 5 (p. 93)

Harvard University Press. Cambridge, Massachusetts, USA. 1992

## MOLECULAR HYPOTHESIS

**Kelvin, Lord William Thomson** 1824–1907

Scottish engineer, mathematician, and physicist

There must be something in this molecular hypothesis and that as a mechanical symbol it is certainly not a mere hypothesis, but a reality.

*Baltimore Lectures on Molecular Dynamics and the Wave Theory of Light*

Lecture I (p. 15)

At The University Press. Cambridge, England. 1905

## MOLECULAR PHYSICS

**Huxley, Thomas Henry** 1825–95

English biologist

...we live in the hope and in the faith that, by the advance of molecular physics, we shall by and by be able to see our way as clearly from the constituents of water to the properties of water, as we are now able to deduce the operations of a watch from the form of its parts and the manner in which they are put together.

*Autobiography and Selected Essays*

On the Physical Basis of Life (p. 112)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1909

## MOLECULAR SCIENCE

**Maxwell, James Clerk** 1831–79

Scottish physicist

...molecular science teaches us that our experiments can never give us anything more than statistical information, and that no law deduced from them can pretend to absolute precision. But when we pass from the contemplation of our experiments to that of the molecules themselves, we leave the world of chance and change, and enter a region where everything is certain and immutable.

Molecules

*Nature*, September, 1873 (p. 440)

## MOLECULE

**Aldersey-Williams, Hugh** 1959–

English author and journalist

A molecule is a messy thing. It has a gangling skeleton whose bones are chemical bonds and whose joints are its component atoms.

*The Most Beautiful Molecule*

Chapter 1 (p. 11)

John Wiley & Sons, Inc. New York, New York, USA. 1995

**Ball, Philip** 1962–

English science writer

...molecules are the smallest units of meaning in chemistry. It is through molecules, not atoms, that one can tell stories in the sub-microscopic world. They are the words: atoms are just the letters... And in molecules, as in words, the order in which the component parts are put together matters: “save” and “vase” do not mean the same thing.

*Stories of the Invisible*

Chapter 1 (p. 13)

Oxford University Press, Inc. Oxford, England. 2001

Once upon a time molecular scientists had to deduce all they knew about molecules from measurements made on many billions of them simultaneously. This can be a risky business, since we cannot always be sure how such measurements are related to the properties of individual molecules, just as the noise that emanates from a football stadium or theatre hall reveals nothing of the individual conversations people are having. But advances in experimental techniques that enable studies of single molecules...what they look like, how they interact, how they move...have over the past two decades opened up an entirely new realm of molecular studies. We are starting to get to know molecules in person.

*Stories of the Invisible*

Chapter 5 (p. 127)

Oxford University Press, Inc. Oxford, England. 2001

**Barrow, Gordon M.**

Chemist

The chemist must learn to live in, and to feel at home in, the world of molecules. It is not enough that he knows the chemical constitution and chemical reactions of the materials around him. To be really effective and successful, he must also develop an intimacy with the molecular world. He must fit himself into the molecular scale of things. He must put that first drummed-in chemical fact that molecules are small in the very back of his mind and replace it by a consciousness that molecules are real, intricate, structural arrangements of atoms in space.

*The Structure of Molecules*

Introduction (p. 1)

W.A. Benjamin, Inc. New York, New York, USA. 1964

**Brown, Samuel** 1817–56

Chemist

[The theory of molecules is an] ideal conception, placed by the mind like another Atlas underneath a measureless world of facts, to give them intelligible cohesion and hold them up to view.

*Lectures on the Atomic Theory and Essays Scientific and Literary*

(Volume I)

The Atomic Theory Before Christ and Since (p. 126)

Thomas Constable &amp; Co. Edinburgh, Scotland. 1858

**Chargaff, Erwin** 1905–2002

Austrian biochemist

Chemists do not have to bother about the sociology of molecules.

*Voices in the Labyrinth: Nature, Man and Science* (p. 5)

The Seabury Press. New York, New York, USA. 1977

**Clifford, William Kingdon** 1845–79

English philosopher and mathematician

...we look forward to the time when the structure and motions in the inside of a molecule will be so well known that some future Kant or Laplace will be able to make an hypothesis about the history and formation of matter.

In Leslie Stephen and Frederick Pollock (eds.)

*Lectures and Essays* (Volume 1)

Atoms (p. 190)

Macmillan &amp; Company Ltd. London, England. 1879

**Collins, Wilkie** 1824–89

English novelist

We were all monkeys before we were men, and molecules before we were monkeys!

*Law and the Lady*

Chapter XXXIX (p. 282)

Harper &amp; Brothers Publishers. New York, New York, USA. 1875

**Cooke, Josiah Parsons** 1827–94

American chemist

[If] we would become imbued with the spirit of the new philosophy of chemistry, we must begin by believing in molecules ...

*The New Chemistry*

Lecture III (p. 77)

D. Appleton &amp; Co. New York, New York, USA. 1897

**Crick, Francis Harry Compton** 1916–2004

English biochemist

Almost all aspects of life are engineered at the molecular level, and without understanding molecules we can only have a very sketchy understanding of life itself.

*What Mad Pursuit: A Personal View of Scientific Discovery*

Chapter 5 (p. 61)

Basic Books, Inc., Publishers. New York, New York, USA. 1988

**Dawkins, Richard** 1941–

English ethologist, evolutionary biologist, and popular science writer

[Molecules of living things] are put together in much more complicated patterns than the molecules of nonliving things, and this putting together is done following programs, sets of instructions for how to develop, which the organisms carry around inside themselves. Maybe they do vibrate and throb and pulsate with “irritability,” and glow with “living” warmth, but these properties all emerge incidentally. What lies at the heart of every living thing is not a fire, not warm breath, not a “spark of life.” It is information, words, instructions. If you want a metaphor, don’t think of fire and sparks and breath. Think instead of a billion discrete, digital characters carved in tablets of crystal. If you want to understand life, don’t think about vibrant, throbbing gels and oozes, think about information technology.

*The Blind Watchmaker*

Chapter 5 (p. 112)

W.W. Norton &amp; Company, Inc. New York, New York, USA. 1986

**Dennett, Daniel Clement** 1942–

American philosopher

Any assortment of objects, especially “sticky” objects like molecules, randomly stirred for long enough will give rise to every conceivable possible combination.

*Consciousness Explained* (p. 11)

Little, Brown &amp; Company. Boston, Massachusetts, USA. 1991

**Frankel, Felice** 1945–

Science photographer

**Whitesides, George M.**

American chemist

Molecules – like ants, lemmings, herring, people – are happiest when surrounded by their own kind.

*On the Surface of Things: Images of the Extraordinary in Science*

Introduction (p. 7)

Chronicle Books. San Francisco, California, USA. 1997

No biographical data available

A farm is a factory where the energy of light is used to make cheap simple molecules into valuable complex molecules.

When Physics Goes Farming  
*The Atlantic Monthly*, July 1937

**Hoffmann, Roald** 1937–

Polish-born American chemist

It's a wild dance floor there at the molecular level.

In Philip Ball

*Designing the Molecular World: Chemistry at the Frontier* (p. 83)  
Princeton University Press. Princeton, New Jersey, USA. 1994

Men (and women) are not as different from molecules as they think.

*The Metamict State*

Men and Molecules (p. 43)  
University of Central Florida Press. Orlando, Florida, USA. 1987

**Jeans, Sir James Hopwood** 1877–1946

English physicist and mathematician

If we assume that the last breath of, say, Julius Caesar has by now become thoroughly scattered through the atmosphere, then the chances are that each of us inhales one molecule of it with every breath we take.

*An Introduction to the Kinetic Theory of Gases*

Chapter II (p. 32)  
At The University Press. Cambridge, England. 1940

**Kropotkin, Peter Alekseyevich** 1842–1921

Russian revolutionary and geographer

The molecule becomes a particle of the universe on a microscopic scale – a microcosmos which lives the same life.

Recent Science

*Nineteenth Century*, Volume 34, 1893 (p. 252)

**Latham, Peter Mere** 1789–1875

English physician

The very existence of ultimate molecules, or atoms, with the qualities which we so confidently assign to them, is a matter of the purest conjecture; it is entirely a fiction of the mind.

*An Essay on the Philosophy of Medical Science*

Part I, Chapter 4  
Lea & Blanchard. Philadelphia, Pennsylvania, USA. 1844

**Macfie, Ronald Campbell** 1867–1931

Poet and physician

...molecules of different elements throb in different ways, and thus produce different light waves, which, when analysed by a spectroscope...give definite characteristic colours...we can discover what any substance is by heating it so as to agitate its molecules, and then

analysing, by a spectroscope, the ripples of light caused by the throbbing molecules. In this way we may be said to be able to tell any substance by feeling its pulse, or by listening to its heart, and the spectroscope may be compared to a stethoscope.

*Science, Matter and Immortality*

Chapter 4 (p. 55)  
William & Norgate. London, England. 1909

Life in living tissue is like nothing perhaps so much as a candle-flame. In the candle-flame the molecules are composed and decomposed, yet the candle-flame keeps always the same shape; but let us change the environment of these dancing, partner-changing molecules – let us conduct away their heat by means of some copper wire, or let us deprive the flame of oxygen – and out goes the candle.

Protoplasm is only a slow flame, easily extinguished. It is easy to understand how a little thing – a needle, a few grains of poison – may destroy a large organism when we remember how intricately correlated it is in its minutest parts. Break but a single thread in the warp and woof of life and the whole wonderful web, with its pictures and patterns, all comes asunder. Take but a single brick out of the great house of life and it falls into ruin. The construction of the wonderful organisms of vegetables and animals is a miracle and mystery, but their death is merely a chemical or mechanical commonplace.

*Science, Matter and Immortality*

Chapter 21 (p. 268)  
William & Norgate. London, England. 1909

**Mann, Thomas** 1875–1955

German-born American novelist

For the molecule was composed of atoms, and the atom was nowhere near large enough even to be spoken of as extraordinarily small. It was so small, such a tiny, early, transitional mass, a coagulation of the unsubstantial, of the not-yet-substantial and yet substance-like, of energy, that it was scarcely possible yet – or, if it had been, was now no longer possible – to think of it as material, but rather as mean and border-line between the material and immaterial.

Translated by H.T. Lowe-Poeter

*The Magic Mountain*

Chapter V (p. 283)  
Alfred A. Knopf. New York, New York, USA. 1966

**Maxwell, James Clerk** 1831–79

Scottish physicist

[Molecular science is] one of those branches of study which deal with things invisible and imperceptible by our senses, and which cannot be subjected to direct experiment.

In W.D. Niven (ed.)

*The Scientific Papers of James Clerk Maxwell* (Volume 2)

Molecules (p. 361)  
At The University Press. Cambridge, England. 1890

As long as we have to deal with only two molecules, and have all the data given us, we can calculate the result of their encounter; but when we have to deal with millions of molecules, each of which has millions of encounters in a second, the complexity of the problem seems to shut out all hope of a legitimate solution.

In W.D. Niven (ed.)

*The Scientific Papers of James Clerk Maxwell* (Volume 2)

Molecules (p. 373)

At The University Press. Cambridge, England. 1890

...though in the course of ages catastrophes have occurred and may yet occur in the heavens, though ancient systems may be dissolved and new systems evolved out of their ruins, the molecules out of which these systems are built – the foundation-stones of the material universe – remain unbroken and unworn.

In W.D. Niven (ed.)

*The Scientific Papers of James Clerk Maxwell* (Volume 2)

Molecules (p. 377)

At The University Press. Cambridge, England. 1890

I come from empyrean fires  
From microscopic spaces,  
Where molecules with fierce desires,  
Shiver in hot embraces  
The atoms clash, the spectra flash,  
Projected on the screen,  
The double D, magnesian b,  
And Thallium's living green.

*The Life of James Clerk Maxwell*

To the Chief Musician upon Nabla: A Tyndallic Ode (p. 634)

Macmillan & Company Ltd. London, England. 1882

Each molecule...throughout the universe bears impressed upon it the stamp of a metric system as distinctly as does the metre of the Archives at Paris, or the double royal cubit of the temple of Karnac.

Quoted in Frederick Soddy

*The Interpretation of Radium and the Structure of the Atom*

Chapter X (p. 215)

J. Murray. London, England. 1909

An atom is a body which cannot be cut in two. A molecule is the smallest possible portion of a particular substance. No one has ever seen or handled a single molecule. Molecular science, therefore, is one of those branches of study which deal with things invisible and imperceptible by our senses, and which cannot be subjected to direct experiment.

A Discourse on Molecules

*The London, Edinburgh and Dublin Philosophical Magazine and Journal of Science*, Volume XLVI, December, 1873 (p. 453)

We have now to conceive the molecules of the air in this hall flying about in all directions, at a rate of about seventeen miles in a minute.

A drop of water, to return to our former example, may be divided into a certain number, and no more, of portions

similar to each other. Each of these the modern chemist calls a molecule of water. But it is by no means an atom, for it contains two different substances, oxygen and hydrogen, and by a certain process the molecule may be actually divided into two parts, one consisting of oxygen and the other of hydrogen. According to the received doctrine, in each molecule of water there are two molecules of hydrogen and one of oxygen. Whether these are or are not ultimate atoms I shall not attempt to decide.

We now see what a molecule is, as distinguished from an atom.

Molecules

*Nature*, September, 1873 (p. 437)

If all these molecules were flying in the same direction, they would constitute a wind blowing at the rate of seventeen miles a minute, and the only wind which approaches this velocity is that which proceeds from the mouth of a cannon. How, then, are you and I able to stand here? Only because the molecules happen to be flying in different directions, so that those which strike against our backs enable us to support the storm which is beating against our faces. Indeed, if this molecular bombardment were to cease, even for an instant, our veins would swell, our breath would leave us, and we should, literally, expire.

Molecules

*Nature*, September, 1873 (p. 438)

If we wish to form a mental representation of what is going on among the molecules in calm air, we cannot do better than observe a swarm of bees, when every individual bee is flying furiously, first in one direction, and then in another, while the swarm, as a whole, either remains at rest, or sails slowly through the air.

Molecules

*Nature*, September, 1873 (p. 438)

...molecular science teaches us that our experiments can never give us anything more than statistical information, and that no law deduced from them can pretend to absolute precision. But when we pass from the contemplation of our experiments to that of the molecules themselves, we leave the world of chance and change, and enter a region where everything is certain and immutable.

Molecules

*Nature*, September, 1873 (p. 440)

...in the heavens we discover by their light, and by their light alone, stars so distant from each other that no material thing can ever have passed from one to another, and yet this light, which is to us the sole evidence of the existence of these distant worlds, tells us also that each of them is built up of molecules of the same kinds as those which we find on earth. A molecule of hydrogen, for example, whether in Sirius or in Arcturus, executes its vibrations in precisely the same time.

Molecules

*Nature*, Volume VIII, Number 204, September 25, 1873 (p. 441)

None of the processes of Nature, since the time when Nature began, have produced the slightest difference in the properties of any molecule. We are therefore unable to ascribe either the existence of the molecules or the identity of their properties to the operation of any of the causes which we call natural.

Molecules

*Nature*, Volume VIII, Number 204, September 25, 1873 (p. 441)

They [molecules] continue this day as they were created, perfect in number and measure and weight, and from the ineffaceable characters impressed on them we may learn that those aspirations alter accuracy in measurement, truth in statement, and justice in action, which we reckon among our noblest attributes as men, are ours because they are essential constituents of the image of Him Who in the beginning created, not only the heaven and the earth, but the materials of which heaven and earth consist.

Molecules

*Nature*, Volume VIII, Number 204, September 25, 1873 (p. 441)

Natural causes, as we know, are at work, which tend to modify, if they do not at length destroy, all the arrangements and dimensions of the earth and the whole solar system. But though in the course of ages catastrophes have occurred, and may yet occur, in the heavens, though ancient systems may be dissolved and new systems evolved out of their ruins, the molecules out of which these systems are built – the foundation-stones of the material universe – remain unbroken and unworn.

The Theory of Molecules

*The Popular Science Monthly*, Volume IV, January, 1874 (p. 290)

### Meldola, R.

No biographical data available

The present position of structural chemistry may be summed up in the statement that we have gained an enormous insight into the anatomy of molecules, while our knowledge of their physiology is as yet in a rudimentary condition.

*Report of the Sixty-fifth Meeting of the British Association for the Advancement of Science*

The State of Chemical Science in 1851 (p. 648)

John Murray. London, England. 1895

### Montague, James J.

Though men may boast of brain or brawn  
And maids of soft attractions,  
Such qualities depend upon  
Their chemical reactions.  
When Daniel, placid and serene,  
Defied a den of lions,  
He owed his calm, unflinching mien  
To molecules and ions.

What's the Use of Worrying?

*Industrial and Engineering Chemistry: News Edition*, Volume 10, Number 20, 1932 (p. 257)

### Morrison, Jim 1943–71

American singer, song writer, and poet

Love hides in molecular structures.

*Absolutely Live*

Love Hides

Sung by The Doors

July 1969

### Newman, Joseph S. 1892–1960

American poet

There's none to say how carbon first  
Conceived it ocy-hydric thirst –  
How nitrogen, in right proportion,  
And sulphur joined the strange consortion –  
But close upon the tenuous verge  
Where shadows end, does life emerge,  
And from these elemental five  
Sprang proteid molecules alive!

*Poems for Penguins and Other Lyrical Lapses*

Biochemistry

Greenburg. New York, New York, USA. 1941

Quite recently to be exact,  
Within a billion years, in fact.  
Some time before the glacial drift  
Had given the planet's face a lift,  
A group of shameless molecules  
Broke all the inorganic rules  
And (C.I.O. epitomized!)  
Spontaneously organized.

*Poems for Penguins and Other Lyrical Lapses*

Biology

Greenburg. New York, New York, USA. 1941

### O'Brien, Flann 1911–66

Irish novelist and political commentator

Did you ever study the Mollycule Theory when you were a lad? he asked. Mick said not, not in any detail.

That is a very serious defalcation and an abstruse exacerbation, he said severely, but I'll tell you the size of it. Everything is composed of small Mollycules of itself, and they are flying around in concentric circles and arcs and segments and innumerable various other routes too numerous to mention collectively, never standing still or resting but spinning away and darting hither and thither and back again, all the time on the go.

...

Mollycules is a very intricate theorem and can be worked out with algebra but you would want to take it by degrees with rulers and cosines and familiar other instruments and then at the wind-up not believe what you had proved at all.

*The Dalkey Archive*

Chapter 9 (pp. 87–88)

Hart-Davis, MacGibbon. London, England. 1968

**von Baeyer, Hans Christian** 1938–  
Physicist and author

Coiled serpents capture the essence of the molecule that is missing from mechanical models – the element of mystery. They remind us that just beneath the surface of the dazzling atomic landscape recorded by modern technology, the paradoxes of quantum mechanics lurk like venomous snakes.

*Taming the Atom*

Chapter 5 (p. 88)

Random House, Inc. New York, New York, USA. 1992

**Wald, George** 1906–97  
American biologist and biochemist

I have lived much of my life among molecules. They are good company. I tell my students to try to know molecules, so well that when they have some question involving molecules, they can ask themselves, What would I do if I were that molecule? I tell them, Try to feel like a molecule; and if you work hard, who knows? Someday you may get to feel like a big molecule!

*Les Prix Nobel. The Nobel Prizes in 1967*

Nobel banquet speech for award received in 1967

Nobel Foundation. Stockholm, Sweden. 1968

**Weinberg, R. A.**  
No biographical data available

Can – and should – life be described in terms of molecules? For many, such description seems to diminish the beauty of Nature. For others of us, the wonder and beauty of nature are nowhere more manifest than in the submicroscopic plan of life.

The Molecules of Life

*Scientific American*, Volume 253, Number 4, October, 1985 (p. 57)

**Weiss, Paul A.** 1898–1985  
Chemist

...there is no phenomenon in a living system that is not molecular, but there is none that is only molecular, either.

*Within the Gates of Science and Beyond*

The Living System: Determinism Stratified (p. 270)

Hafner Publishing Company. New York, New York, USA. 1971

## MOMENTUM

### Author undetermined

A rolling stone gathers momentum.  
Source undetermined

**Descartes, René** 1596–1650  
French philosopher, scientist, and mathematician

We must consider motion in its two causes, the primary and universal cause, to which is due all the motion that is in the world, and the particular cause to which it is

due that various portions of matter acquire the movements which before they had not. As to the former, it is evident to me that it must be attributed to God Himself, who in the beginning created matter along with motion and rest, and ever since has preserved these in the same quantity. For, though motion is nothing but a mode in the thing which is moved, yet it is of a definite amount that remains constant for the whole universe, though it varies in regard to the several parts.

*Principles of Philosophy*

Part II, 36, 42

E. Mellen Press. Lewistown, New York, USA. 1988

**Duhem, Pierre-Maurice-Marie** 1861–1916  
French physicist and mathematician

If one wishes to draw a line of separation between the realm of ancient and modern science, it must be drawn at the instant when Jean Buridan conceived his theory of momentum, when he ceased to think of stars as kept in motion by certain divine beings and proclaimed that motions, celestial and terrestrial, are each controlled by the same mechanical laws.

*Études, sur Leonardo da Vinci*

A. Hermann. Paris, France. 1906–09

**Gilmore, Robert**  
No biographical data available

If you want to be a force in the community and to push things around, then you have to be able to transfer momentum.

*Alice in Quantum Land*

Chapter 6 (p. 95)

Springer-Verlag. New York, New York, USA. 1955

## MONEY

**Mitchell, Maria** 1818–89  
American astronomer and educator

The chemist should have had a laboratory, and the observatory should have had an astronomer; but we are too apt to bestow money where there is no man, and to find a man where there is no money.

In Phebe Mitchell Kendall

*Maria Mitchell: Life, Letters, and Journals*

Chapter IX (p. 184)

Lea & Shepard Publishers. Boston, Massachusetts, USA. 1896

## MONKEYS AND TYPEWRITERS

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

...If I let my fingers wander idly over the keys of a typewriter it might happen that my screed made an intelligible sentence. If an army of monkeys were strumming on typewriters they might write all the books in the British

Museum. The chance of their doing so is decidedly more favourable than the chance of the molecules returning to one half of the vessel.

*The Nature of the Physical World*

Chapter IV (p. 72)

The Macmillan Company. New York, New York, USA. 1930

**Jeans, Sir James Hopwood** 1877–1946

English physicist and mathematician

It was, I think, Huxley, who said that six monkeys, set to strum unintelligently on typewriters for millions of millions of years, would be bound in time to write all the books in the British Museum. If we examined the last page which a particular monkey had typed, and found that it had chanced, in its blind strumming, to type a Shakespeare sonnet, we should rightly regard the occurrence as a remarkable accident, but if we looked through all the millions of pages the monkeys had turned off in untold millions of years, we might be sure of finding a Shakespeare sonnet somewhere amongst them, the product of the blind play of chance. In the same way, millions of millions of stars wandering blindly through space for millions of millions of years are bound to meet with every sort of accident, and so are bound to produce a certain limited number of planetary systems in time. Yet the number of these must be very small in comparison with the total number of stars in the sky.

*The Mysterious Universe*

Chapter I (p. 4)

The Macmillan Company. New York, New York, USA. 1932

**Koestler, Arthur** 1905–83

Hungarian-born English writer

Neo-Darwinism does indeed carry the nineteenth-century brand of materialism to its extreme limits – to the proverbial monkey at the typewriter, hitting by pure chance on the proper keys to produce a Shakespeare sonnet.

*The Case of the Midwife Toad* (p. 30)

New York, New York, USA. 1972

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

There is a special department of hell for students of probability. In this department there are many typewriters and many monkeys. Every time that a monkey walks on a typewriter, it types by chance one of Shakespeare's sonnets.

*Nightmares of Eminent Persons*

The Metaphysician's Nightmare (p. 29)

The Bodley Head. London, England. 1954

**Russo, Richard** 1949–

American novelist

In a novel, two characters discuss the glitch in a computer which causes it to scroll an endless series of meaningless

symbols: He sighs. "It casts serious doubt on the old theory that an infinite number of monkeys at an infinite number of typewriters would eventually write the Great American Novel, doesn't it?"

*Straight Man* (p. 129)

Random House, Inc. New York, New York, USA. 1996

**Synge, John L.** 1897–1995

Irish mathematician and physicist

"But not the sonnets?" asked the Orc, quizzically. "Yes, of course," retorted the Plumber, "The sonnets too. And the Bible. And the Koran. And that poem of mine which you have just recited...."

"But suppose," said the Orc, "that our monkey became very fond of some particular word, perhaps some naughty little four-letter word, and went on typing that word over and over again and never any other. I cannot see, in that case, how he would type even one play." "That would be quite an exceptional case," answered the Plumber. "Eddington had in mind a haphazard performance. The monkey types the keys at random, and the outcome is governed by pure chance. And by pure chance the plays of Shakespeare emerge, after a long time of course." "Doubtless, doubtless," muttered the Orc, reflectively. "Poor monkey! How bored he would get! For he would reproduce the plays of Shakespeare not once but many times, in fact an infinite number of times."

*Kandelman's Krim*

Chapter Eleven (p. 145)

Jonathan Cape. London, England. 1957

## MONOGRAPH

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

"Oh, didn't you know?" he cried, laughing. "Yes, I have been guilty of several monographs. They are all upon technical subjects. Here, for example, is one 'Upon the Distinction between the Ashes of the Various Tobaccos.' In it I enumerate a hundred and forty forms of cigar, cigarette, and pipe tobacco, with coloured plates illustrating the difference in the ash. It is a point which is continually turning up in criminal trials, and which is sometimes of supreme importance as a clue. If you can say definitely, for example, that some murder has been done by a man who was smoking an Indian lunkah, it obviously narrows your field of search. To the trained eye there is as much difference between the black ash of a Trichinopoly and the white fluff of bird's-eye as there is between a cabbage and a potato."

In William S. Baring-Gould (ed.)

*The Annotated Sherlock Holmes* (Volume 1)

*The Sign of the Four*, Chapter 1 (p. 612)

Wings Books. New York, New York, USA. 1967

## MONOPOLE

**Dirac, Paul Adrien Maurice** 1902–84  
English theoretical physicist

From the theoretical point of view one would think that monopoles [magnets with one pole] should exist, because of the prettiness of the mathematics. Many attempts to find them have been made, but all have been unsuccessful. One should conclude that pretty mathematics by itself is not an adequate reason for nature to have made use of a theory. We still have much to learn in seeking for the basic principles of nature.

In Heinz R. Pagels

*Perfect Symmetry: The Search for the Beginning of Time*  
Part Three, Chapter 1 (p. 284)  
Simon & Schuster. New York, New York, USA. 1985

**Gamow, George** 1904–68  
Russian-born American physicist

Two Monopoles worshipped each other,  
And all of their sentiments clicked.  
Still, neither could get to his brother,  
Dirac was so fearfully strict!

*Thirty Years That Shook Physics*

Second Part (p. 202)

Doubleday & Company, Inc. Garden City, New York, USA. 1966

## MONSTER

**Miller, Hugh** 1802–56  
Scottish geologist and theologian

...the night comes on, and the shadows of the woods and rocks deepen: there are uncouth sounds along the beach and in the forest; and new monsters of yet stranger shape are dimly discovered moving amid the uncertain gloom.

*Sketch-Book of Popular Geology*

### Marten, Michael

No biographical data available

In the days when zoomancy and zoolatry were common, the zoic anthologies had a strongly zoophobic or zootheistic basis. But the zeal of zoologists, zoographers, and the zonomy and zoometry of zootomistists has changed all that. We now recognize that each of us, every individual of every species – and the whole zeotrope itself – began as a single zooblast. So our definitions are wider and the alphabetical zootaxy of this zoographia runs from the simplest zochronic zoobiotics to the largest zoophagic zoons, including ourselves, the human zoons.

Chapter XX (p. 360)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1898

**de Bergerac, Cyrano** 1619–55

French dramatist

Our Eyes being fixed upon that stately Planet [the moon], everyone spoke what he thought of it: One would needs have it be a Garret Window of Heaven; another presently affirmed, That it was the Pan whereupon Diana smoothed Apollo's Bands; whilst another was of Opinion, That it might very well be the Sun himself, who putting his Locks up under his Cap at Night, peeped through a hole to observe what was doing in the World during his absence.

*A Voyage to the Moon*

Chapter I (p. 10)

Doubleday & McClure Co. New York, New York, USA. 1849

...I believe that the Moon is a World like ours, to which this of ours serves likewise for a Moon.

*A Voyage to the Moon*

Chapter I (p. 11)

Doubleday & McClure Co. New York, New York, USA. 1849

**Empedocles of Acragas** ca. 490 BCE–430 BCE

Greek pre-Socratic philosopher

A borrowed light, circular in form, it revolves about the earth, as if following the track of a chariot.

In Arthur Fairbanks

*The First Philosophers of Greece*

Book I

Fragment 154 (p. 177)

Charles Scribner's Sons. New York, New York, USA. 1898

**Fitz-Gerald, Charles Egerton**

English physician

There are probably few of us who, when abroad on a moonlight night, have not speculated as to the nature

of that beautiful and mysterious looking body which is inundating the landscape with its pure and silvery light.

*Semi-scientific Lectures*

Ten Minutes in the Moon (p. 1)

J. English. Folkstone, England. 1880

**Flammarion, Camille** 1842–1925

French astronomer and author

It is the delightful hour when all Nature pauses in the tranquil calm of the silent night.

The Sun has cast his farewell gleams upon the weary Earth. All sound is hushed. And soon the stars will shine out one by one in the bosom of the somber firmament. Opposite to the sunset, in the east, the Full Moon rises slowly, as it were calling our thoughts toward the mysteries of eternity, while her limpid night spreads over space like a dew from Heaven.

Translated by Frances Alice Welby

*Astronomy for Amateurs*

Chapter IX (p. 232)

D. Appleton & Co. New York, New York, USA. 1915

The silent star of night is the first halting-place on a voyage towards the infinite.

Translated by J. Ellard Gore

*Popular Astronomy: A General Description of the Heavens*

Book II, Chapter I (p. 81)

Chatto & Windus. London, England. 1894

Orb of dream and mystery, pale sun of the night, solitary globe wandering in the silent firmament, the moon has in all times and among all nations peculiarly attracted attention and thought.

*Popular Astronomy: A General Description of the Heavens*

Book II, Chapter VI (p. 145)

Chatto & Windus. London, England. 1894

Nothing could be more beautiful, nothing purer, and more celestial, than this lunar globe floating in the silence of space, and sending back to us as in some fairy dream the solar illumination that floods it.

Translated by Frances Alice Welby

*Astronomy for Amateurs*

Chapter IX (p. 257)

D. Appleton & Co. New York, New York, USA. 1915

**Frost, Robert** 1874–1963

American poet

The Moon for all her light and grace  
Has never learned to know her place.

The notedest astronomers  
Have set the dark aside for hers.

*Complete Poems of Robert Frost*

Two Leading Lights

Henry Holt & Company. New York, New York, USA. 1949

**Fry, Christopher** 1907–2005  
English playwright

...the moon is nothing  
But a circumambulating aphrodisiac  
Divinely subsidized to provoke the world  
Into a rising birth-rate.  
*The Lady's Not for Burning*  
Act Three (p. 66)  
Oxford University Press, Inc. New York, New York, USA. 1950

**Haggard, H. Rider** 1856–1925  
English novelist

The sky aft was dark as pitch, but the moon still shone brightly ahead of us and lit up the blackness. Beneath its sheen a huge white-topped breaker, twenty feet high or more, was rushing on to us. It was on the break – the moon shone on its crest and tipped its foam with light. On it rushed beneath the inky sky, driven by the awful squall behind it.  
*The Favorite Novels of H. Rider Haggard*  
She (p. 195)  
Blue Ribbon Books, Inc. New York, New York, USA. 1928

**Hawthorne, Nathaniel** 1804–64  
American novelist and short story writer

By this time the sun had gone down, and was tinting the clouds toward the zenith with those bright hues which are not seen there until sometime after sunset, and when the horizon has quite lost its richer brilliancy. The moon, too, which had long been climbing overhead, and unobtrusively melting its disk into the azure – like an ambitious demagogue who hides his aspiring purpose by assuming the prevalent hue of popular sentiment – now began to shine out, broad and oval, in its middle pathway.  
*The House of the Seven Gables* (p. 251)  
Scott, Foresman & Co. Chicago, Illinois, USA. 1919

**Homer** fl. 750 BCE  
Greek poet

As when the stars shine clear, and the moon is bright – there is not a breath of air, not a peak nor glade nor jutting headland, but it stands out in the ineffable radiance that breaks from the serene of heaven...  
In *Great Books of the Western World* (Volume 4)  
*The Iliad of Homer*  
Book VIII, l. 555 (p. 56)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Hood, Thomas** 1582–98  
English poet and editor

Mother of light! how fairly dost thou go  
Over those hoary crests, divinely led!  
Art thou that huntress of the silver bow  
Fabled of old? Or rather dost thou tread  
Those cloudy summits thence to gaze below,  
Like the wild chamois from her Alpine snow,

Where hunters never climbed – secure from dread?  
*The Complete Poetical Works of Thomas Hood*  
Ode to the Moon  
Greenwood Press, Publishers. Westport, Connecticut, USA. 1980

**Huxley, Julian** 1887–1975  
English biologist, philosopher, and author

By death the moon was gathered in  
Long ago, ah long ago;  
Yet still the silver corpse must spin  
And with another's light must glow.  
Her frozen mountains must forget  
Their primal hot volcanic breath,  
Doomed to revolve for ages yet,  
Void amphitheatres of death.  
*The Captive Shrew and Other Poems of a Biologist*  
Cosmic Death  
Harper & Brothers. New York, New York, USA. 1933

**Ingelow, Jean** 1820–97  
English poet and novelist

Such a slender moon, going up and up,  
Waxing so fast from night to night,  
And swelling like an orange flower-bud, bright,  
Fated, methought, to round as to a golden cup,  
And hold to my two lips life's best of wine.  
*The Poetical Works of Jean Ingelow*  
Songs of the Night Watches  
The First Watch, pt. II  
John B. Alden. New York, New York, USA. 1883

**Jastrow, Robert** 1925–  
American space scientist

**Newell, Homer E.**  
No biographical data available

The moon is the Rosetta stone of the solar system, and to the student of the origin of the earth and planets, this lifeless body is even more important than Mars and Venus.  
Why Land on the Moon?  
*The Atlantic Monthly*, Volume 211, Number 2; August, 1963 (p. 43)

**Jonson, Ben** 1573?–1637  
English dramatist and poet

Queen and huntress, chaste and fair,  
Now the sun is laid to sleep,  
Seated in thy silver car,  
State in wonted manner keep.  
Hesperus entertains thy light  
Goddess, excellently bright!  
*Hymn*  
To Cynthia

**Keats, John** 1795–1821  
English Romantic lyric poet

The moon put forth a little diamond peak  
No bigger than an unobserved star,

Or tiny point of fairy scimitar.

Endymion

Book IV, l. 499

Houghton Mifflin Company. Boston, Massachusetts, USA. 1890

**Lawrence, D. H. (David Herbert)** 1885–1930

English writer

...when we have seen the pock-marked face of the moon in scientific photographs, need that be the end of the moon for us? Even rationally? I think not. It is a great blow: but the imagination can recover from it. Even if we have to believe the pock-marked photographs, even if we believe in the cold and snow and utter deadness of the moon – which we *don't* quite believe – the moon is not therefore a dead nothing. The moon is a white strange world, great, white, soft-seeming globe in the night sky, and what she actually communicates to me across space I shall never fully know.

In Edward D. McDonald (ed.)

*Phoenix*

Preface to 'The Dragon of the Apocalypse' (pp. 299–300)

The Viking Press. New York, New York, USA. 1936

The Moon is a white strange world, great, white, soft-seeming globe in the night sky, and what she actually communicates to me across space I shall never fully know. But the Moon that pulls the tides, and the Moon that controls the menstrual periods of women, and the Moon that touches the lunatics, she is not the mere dead lump of the astronomist.... When we describe the Moon as dead, we are describing the deadness in ourselves. When we find space so hideously void, we are describing our own unbearable emptiness.

*Phoenix*

Introduction to 'The Dragon'

The Viking Press. New York, New York, USA. 1936

**Lear, Edward** 1812–88

English humorist and artist

They dined on mince, and slices of quince,  
Which they ate with a runcible spoon;  
And hand in hand, on the edge of the sand,  
They danced by the light of the moon,  
The moon, the moon,  
They danced by the light of the moon.

In Tony Palazzo

**Armstrong, Neil A.** 1930–

American astronaut

That's one small step for a man, one giant leap for man-  
kind.

Men Walk on Moon

*New York Times*, L5, column 3, 21 July 1969

**Beckett, Chris**

No biographical data available

The Moon landings were not about gathering data or  
testing hypotheses; they were about theatre, about the  
enactment of many mythical themes that were fed and  
nurtured by such a spectacular event. It was about the  
power of humankind, the power of technology, our abil-  
ity to overcome the apparently impossible and to con-  
quer not just Earth but the whole Universe. And yet at  
the same time it was about the smallness of humankind,  
our vulnerability the fact that we inhabit a single small  
planet, surrounded by emptiness...

*New Scientist*, November 11, 1989

Opinions

*New York Times*, A6, column 6, 21 July 1969

**Nabokov, Vladimir Vladimirovich** 1899–1977

Russian-born American novelist

Treading the soil of the moon, palpating its pebbles, tast-  
ing the panic and splendor of the event, feeling in the  
pit of one's stomach the separation from terra...these  
form the most romantic sensation an explorer has ever  
known...this is the only thing I can say about the matter.  
The utilitarian results do not interest me.

Reactions to Man's Landing on the Moon Show Broad Variations in  
Opinions

*New York Times*, A6, column 5, 21 July 1969

**MOON, PHASES OF**

**King, Leonard William** 1869–1919

English archaeologist

The Moon-god he caused to shine forth, the night he  
entrusted to him.

He appointed him, a being of the night, to determine the days;  
Every month without ceasing with the crown he covered  
him, saying:

“At the beginning of the month, when thou shinest upon  
the land,

Thou commandest the horns to determine six days,

And on the seventh day to divide the crown.

On the fourteenth day thou shalt stand opposite, the  
half...

Kessinger Publications. Whitefish, Montana, USA. 2004

**MORAL**

**Thomson, Sir John Arthur** 1861–1933

Scottish naturalist

Many animals are delightfully good, but only man is moral.

*The Bible of Nature*

Man's Place in Nature (p. 187)

Charles Scribner's Sons. New York, New York, USA. 1908

**MORAL REPROOF**

**Chamberlin, Thomas Chrowder** 1843–1928

American geologist

Narrow and loose habits of thought, prejudiced atti-  
tudes towards evidence, bias from previous opinions and

feelings, shallowness and superficiality in observation, and carelessness in reasoning are appropriate subjects of moral reproof.

The Ethical Functions of Scientific Study

*The Journal of Geology*, Volume 2, Number 6, December, 1888 (p. 380)

## MORALS

**Bernard, Claude** 1813–78

French physiologist

...we must not deceive ourselves: morals do not forbid making experiments on one's neighbour or one's self; in everyday life, men do nothing but experiment on one another.

Translated by Henry Copley Green

*An Introduction to the Study of Experimental Medicine*

Part Two, Chapter 4 (p. 102)

Henry Schuman, Inc. New York, New York, USA. 1949

## MORPHOLOGY

**Goodsir, John** 1814–67

Scottish anatomist

As morphology deals with forms and relations of position, it demands a careful selection of terms, and a methodised nomenclature.

*The Anatomical Memoirs of John Goodsir* (Volume 2)

Chapter V (pp. 83–84)

Adam & Charles Black. Edinburgh, Scotland. 1868

**Gould, Stephen Jay** 1941–2002

American paleontologist and evolutionary biologist

The flowering of functional morphology has yielded a panoply of elegant individual examples and few principles beyond the unenlightening conclusion that animals work well...Newtonian procedures yield Newtonian answers, and who doubts that animals tend to be well designed.

The Promise of Paleobiology as a Nomothetic, Evolutionary Discipline.

*Paleobiology*, Volume 6 1980 (p. 101)

**Thompson, Sir D'Arcy Wentworth** 1860–1948

Scottish zoologist and classical scholar

The waves of the sea, the little ripples on the shore, the sweeping curve of the sandy bay between the headlands, the outline of the hills, the shape of the clouds, all these are so many riddles of form, so many problems of morphology.

*On Growth and Form* (Volume 1)

Chapter I (p. 10)

At The University Press. Cambridge, England. 1951

## MOTHER NATURE

**Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

Our old mother Nature has pleasant and cheery tones enough for us when she comes in her dress of blue and gold over the eastern hill-tops; but when she follows us up-stairs to our beds in her suit of black velvet and diamonds, every creak of her sandals and every whisper of her lips is full of mystery and fear.

*The Professor at the Breakfast-table*

Chapter VII (p. 237)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1916

## MOTION

**Boyle, Robert** 1627–91

English natural philosopher and theological writer

...I am apt to think, that men will never be able to explain the phenomena of nature, while they endeavor to deduce them only from the presence and proportion of such or such material ingredients, and consider such ingredients or elements as bodies in a state of rest; whereas indeed the greatest part of the affections of matter, and consequently of the phenomena of nature, seems to depend upon the motion and the contrivance of the small parts of bodies. For 'tis by motion that one part of matter acts upon another; and 'tis, for the most part, the texture of the body upon which the moving parts strike, that modifies the motion or impression, and concurs with it to the production of those effects which make up the chief part of the naturalists theme.

*The Sceptical Chymist*

The Fifth Part (pp. 178–179)

**Brooke, Frances** 1724–89

English novelist, essayist, playwright, and translator

A state of rest is ungraceful; all nature is most beautiful in motion: trees agitated by the wind, a ship under sail, a horse in the course, a fine woman dancing.

*Emily Montague* (Volume 1)

Chapter I (p. 45)

Printed for J. Dodsley. London, England. 1769

**Brown, Carrie**

No biographical data available

He thought of all the infinitesimal motions of the world, the obstinate, heartbreaking progress of an earthworm, eating its own route forward.

*Rose's Garden: A Novel*

Chapter Nine (p. 165)

Algonquin Books of Chapel Hill. Chapel Hill, North Carolina, USA. 1998

**Burton, Robert** 1577–1640

English clergyman and scholar

The heavens themselves run continually round, the sun riseth and sets, the moon increaseth, stars and planets keep their constant motions, the air is tossed by the

winds, the waters ebb and flow, to their conservation no doubt, to teach us that we should ever be in motion.

*The Anatomy of Melancholy* (Volume 2)

Part II, Sect. II, Memb. IV (p. 80)

AMS Press, Inc. New York, New York, USA. 1973

**Butterfield, Herbert** 1900–79

English historian and philosopher of history

Of all the intellectual hurdles which the human mind has confronted and has overcome in the last fifteen hundred years, the one which seems to me to have been the most amazing in character and the most stupendous in the scope of its consequences is the one relating to the problem of motion...

*The Origins of Modern Science*

Chapter One (p. 3)

The Macmillan Company. New York, New York, USA. 1961

**Carroll, Lewis (Charles Dodgson)** 1832–98

English writer and mathematician

“Well, in our country,” said Alice, still panting a little, “you’d generally get to somewhere else – if you ran very fast for a long time, as we’ve been doing.”

“A slow sort of country!” said the Queen. “Now here, you see, it takes all the running you can do, to keep in the same place. If you want to get somewhere else, you must run at least twice as fast as that.”

*The Complete Works of Lewis Carroll*

*Through the Looking-Glass*

Chapter II (p. 166)

The Modern Library. New York, New York, USA. 1936

**Dee, John** 1527–1609

English mathematician and occultist

Whatever is in the universe is continuously moved by some species of motion.

Translated by Wayne Schumaker

*John Dee on Astronomy*

XVI (p. 129)

University of California Press. Berkeley, California, USA. 1978

**Descartes, René** 1596–1650

French philosopher, scientist, and mathematician

...God always preserves in the world just so much motion as He impressed on it at its first creation.

*Principles of Philosophy*

Part II, 36, 42

E. Mellen Press. Lewistown, New York, USA. 1988

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

We not merely deduce [a] three-dimensional world; we see it. But we have no such aid in synthesising different motions. Perhaps if we had been endowed with two eyes moving with different velocities our brains would have developed the necessary faculty; we should have perceived a kind of relief in the fourth dimension so as to

combine into one picture the aspect of things seen with different motions.

*Space, Time and Gravitation: An Outline of the General Relativity Theory*

Chapter II (p. 32)

At The University Press. Cambridge, England. 1921

It is curious that the philosophical denial of absolute motion is readily accepted, whilst the denial of absolute simultaneity appears to many people revolutionary.

*Space, Time and Gravitation: An Outline of the General Relativity Theory*

Chapter III (p. 51)

At The University Press. Cambridge, England. 1921

**Flammarion, Camille** 1842–1925

French astronomer and writer

Thus perpetual motion bears the world along! The sun moves through space; the earth moves round him, letting herself be carried along in his flight; the moon moves, circulating round us, while we gravitate round the radiant hearth which precipitates itself into the eternal void.

Translated by J. Ellard Gore

*Popular Astronomy: A General Description of the Heavens*

Book II, Chapter III (p. 109)

Chatto & Windus. London, England. 1894

**Galilei, Galileo** 1564–1642

Italian physicist and astronomer

My purpose is to set forth a very new science dealing with a very ancient subject. There is, in nature, perhaps nothing older than motion, concerning which the books written by philosophers are neither very few nor small; nevertheless, I have discovered by experiment some properties of it which are worth knowing and which have not hitherto been either observed or demonstrated.

In *Great Books of the Western World* (Volume 28)

*Dialogues Concerning the Two New Sciences*

Third Day, Change of Position (p. 197)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...so far as I know, no one has yet pointed out that the distances traversed, during equal intervals of time, by a body falling from rest, stand to one another in the same ratio as the odd numbers beginning with unity,

Translated by Henry Crew and Alfonso de Salvio

*Dialogues Concerning Two New Sciences*

Third Day (p. 153)

The Macmillan Co. New York, New York, USA. 1914

...we have decided to consider the phenomena of bodies falling with an acceleration such as actually occurs in nature and to make this definition of accelerated motion exhibit the essential features of observed accelerated motions.

In *Great Books of the Western World* (Volume 28)

Third Day, Naturally Accelerated Motion (p. 200)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Grove, William Robert** 1811–96  
Judge and physical scientist

Of absolute rest Nature gives us no evidence: all matter, as far as we can ascertain, is ever in movement, not merely in masses, as with the planetary spheres, but also molecularly, or throughout its most intimate structure: thus every alteration of temperature produces a molecular change throughout the whole substance heated or cooled; slow chemical or electrical actions, actions of light or invisible radiant forces, are always at play, so that as a fact we cannot predicate of any portion of matter that it is absolutely at rest.

The Correlation of Physical Forces (pp. 26–27)  
D. Appleton & Co. New York, New York, USA. 1865

**Herschel, Friedrich Wilhelm**  
(**Sir William**) 1738–1822  
English astronomer

“Does it not seem natural that these observations should cause a strong suspicion that most probably every star in the heavens is more or less in motion?” For though their proper motions could not cause all these changes, yet we may well suppose that motion is in some way concerned.

On the Proper Motion of the Sun and Solar System  
*Philosophical Transactions of the Royal Society of London*,  
Volume 73, 1783 (p. 259)

If the proper motion of the stars be admitted, who can deny that of our sun? Admitting this for granted, the greatest difficulty will be to discern the proper motion of the sun between so many other motions of the stars. This is an arduous task indeed, but we are not to be discouraged in the attempt. Let us at all events endeavor to lay a good foundation for those who are to come after us.

On the Proper Motion of the Sun and Solar System  
*Philosophical Transactions of the Royal Society of London*,  
Volume 73, 1783 (p. 260)

**Hobbes, Thomas** 1588–1679  
English philosopher and political theorist

...when a thing lies still, unless somewhat else stir it, it will lie still forever, is a truth that no man doubts of. But that when a thing is in motion, it will eternally be in motion, unless somewhat else stay it, though the reason be the same, namely, that nothing can change itself, is not so easily assented to.

Motion is the soul of the universe...

*The Book of Nature Laid Open*  
Chapter XV (p. 173)  
Joseph Milligan, Georgetown. 1822

**Huxley, Thomas Henry** 1825–95  
English biologist

In nature, nothing is at rest, nothing is amorphous; the simplest particle of that which men in their blindness are pleased to call “brute matter” is a vast aggregate of molecular mechanisms performing complicated movements of immense rapidity, and sensitively adjusting themselves to every change in the surrounding world.

*Science and Education: Essays*  
Chapter XIV (p. 371)  
D. Appleton & Co. New York, New York, USA. 1896

**Huygens, Christiaan** 1629–95  
Dutch mathematician, astronomer, and physicist

It is inconceivable to doubt that light consists in the motion of some sort of matter. For when one considers its production, one sees that here upon the earth it is chiefly engendered by fire and flame which contain without doubt bodies that are in rapid motion, since they dissolve and melt many other bodies, even the most solid; or when one considers its effects, one sees that when light is collected, as by concave mirrors, it has the property of burning as a fire does, that is to say, it disunites the particles of bodies. This is assuredly the mark of motion, at least in the true philosophy, in which once conceives the cause of all natural effects in terms of mechanical motions. This, in my opinion, we must necessarily do, or else renounce all hopes of ever comprehending anything in physics.

In *Great Books of the Western World* (Volume 34)  
*Treatise on Light*  
Chapter One. On Rays Propagated in Straight Lines (p. 553)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Jeans, Sir James Hopwood** 1877–1946  
English physicist and mathematician

...the laws which nature obeys are less suggestive of those which a machine obeys in its motion than of those which a musician obeys in writing a fugue, or a poet in composing a sonnet. The motions of electrons and atoms do not resemble those of the parts of a locomotive so much as those of the dancers in a cotillion. And if the “true essence of substances” is forever unknowable, it does not matter whether the cotillion is danced at a ball in real life, or on a cinematography screen, or in a story of Boccaccio.

*The Mysterious Universe*

Chapter V (p. 168)

The Macmillan Company. New York, New York, USA. 1932

The motion of the stars over our heads is as much an illusion as that of the cows, trees and churches that flash past the windows of our train.

*The Stars in Their Courses*

Chapter 1 (p. 3)

The Macmillan Co. New York, New York, USA.

**Le Marquis de Sade** 1740–1814

French aristocrat, revolutionary, politician, and writer

If matter acts, is moved by combinations unknown to us, if movement is inherent in Nature; if, in short, she alone, by reason of her energy is able to create, produce, preserve, maintain, hold in equilibrium within the immense plains of space all the spheres that stand before our gaze and whose uniform march, unvarying, fills us with awe and admiration, what then becomes of the need to seek out a foreign agent, since this active faculty is essentially to be found in Nature herself, who is naught else than matter in motion?

*Philosophy in the Bedroom* (pp. 210–211)

Grove Press. New York, New York, USA. 1990

**Leacock, Stephen** 1869–1944

Canadian humorist

It was Einstein who made the real trouble. He announced in 1905 that there was no such thing as absolute rest. After that there never was.

*The Boy I Left Behind Me*

Chapter VI (p. 171)

The Bodely Head. London, England. 1947

**Locke, John** 1632–1704

English philosopher and political theorist

The parts of pure space are immovable, which follows from their inseparability; motion being nothing but change of distance between any two things; but this cannot be between parts that are inseparable; which therefore must needs be at perpetual rest one amongst other.

In *Great Books of the Western World* (Volume 35)

*An Essay Concerning Human Understanding*

Book II, Chapter XIII, Section 14 (p. 151)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...let us suppose the matter of the next pebble we meet with, eternal, closely united, and the parts firmly at rest together; if there were no other being in the world, must it not eternally remain so, a dead, inactive lump? Is it possible to conceive it can add motion to itself, being purely matter, or produce anything? Matter then, by its own strength, cannot produce in itself so much as motion: the motion it has, must also be from eternity, or else be produced, and added to matter by some other being more powerful than matter: matter, as is evident, having not power to produce motion in itself.

*An Essay Concerning Human Understanding*

24th Book IV, Chapter 10 (p. 544)

Printed for William Baynes & Son. London, England. 1823

**Lucretius** ca. 99 BCE–55 BCE

Roman poet

For whenever bodies fall through water and thin air, they must quicken their descents in proportion to their weights, because the body of water and subtle nature of air cannot retard everything in equal degree, but more readily give way [when] overpowered by the heavier...

Act V, Scene iv

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Steele, Joel Dorman** 1836–86

American educator and textbook writer

Rest is nowhere. The winds that come and go, the ocean that uneasily throbs along the shore, the earth that revolves about the sun, the light that darts through space – all tell of a universal of Nature. The solidest body hides within it inconceivable velocities. Even the molecules of garnet and iron have their orbits as do the stars, and move as ceaselessly.

*Popular Physics*

Chapter II (p. 19)

American Book Company. New York, New York, USA. 1896

**Thierry, Paul Henri, Baron d’Holbach** 1723–89

German-born French philosopher

Everything in the universe is in motion; the essence of nature is to act; and if we consider attentively its parts, we shall see that there is not a particle which enjoys absolute repose.

Translated by M. Mirabaud

*System of Nature or, The Laws of the Moral and Physical World*

(Volume First)

Part First, Chapter II (p. 27)

Published by R. Benson. Philadelphia, Pennsylvania, USA. 1808

**Thomson, Thomas**

No biographical data available

Substances may either be examined in a state of rest, or as acting upon each other and producing changes on each other. The knowledge derived from the first of these views, is called Natural History; that which we can obtain by the second, is distinguished by the name Science. But bodies cannot act upon each other without producing motion, and the motions produced by such actions are of two kinds; either so great as to be visible to our senses, and capable of being measured by the space passed over; or so small as not to be distinguishable by our senses, except by the effects produced. The phenomena connected with the first of these kinds of motions constitute what is called Natural Philosophy or Mechanical Philosophy in this country, and on the Continent, Physics. The phenomena connected with the imperceptible motion belong to the science called Chemistry.

**Austin, Mary Hunter** 1868–1934  
American novelist and essayist

Who shall say what another will find most to his liking in the streets of the mountains. As for me, once set above the country of the silver firs, I must go on until I find white columbine.

*The Land of Little Rain*  
The Streets of the Mountain (pp. 194–195)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1903

**Avicenna** 908–1037  
Islamic physician

Mountains may be due to two different causes. Either they are effects of upheavals of the crust of the earth, such as might occur during a violent earthquake, or they are the effect of water, which, cutting for itself a new route, has denuded the valleys, the strata being of different kinds, some soft, some hard. The winds and waters disintegrate the one, but leave the other intact. Most of the eminences of the earth have had this latter origin. It would require a long period of time for all such changes to be accomplished, during which the mountains themselves might be somewhat diminished in size. But that water has been the main cause of these effects is proved by the existence of fossil remains of aquatic and other animals on many mountains.

Educator

[M]ountains are always the children of the sea.  
*This Puzzling Planet*  
Chapter XIII (p. 217)  
The Bobbs-Merrill Company, Indianapolis, Indiana. 1928

**Bucke, Charles** 1781–1846  
English writer

A Country destitute of mountains may be rich, well cultivated, and even beautiful, but it can in no instance be

sublime or transporting; and to what a degree boldness of scenery has the power of elevating the fancy, may be in some measure conceived from an anecdote recorded of a celebrated poet.

*On the Beauties, Harmonies, and Sublimities of Nature*  
Mountain (p. 41)

Harper & Brothers Publishers. New York, New York, USA. 1841

**Burnet, Thomas** 1635–1715  
English cleric and scientist

Look upon those great ranges of Mountains in Europe or in Asia, whereof we have given a short survey, in what confusion do they lie? They have neither form nor beauty, nor shape, nor order, no more than the Clouds in the Air. Then how barren, how desolate, how naked are they? how they stand neglected by Nature? neither the Rains can soften them, nor the Dews from Heaven make them fruitful.

*The Sacred Theory of the Earth* (2nd edition)  
Book I, Chapter XI (p. 111)  
Printed by R. Norton. London. 1691

The greatest objects of Nature are, methinks, the most pleasing to behold; and next to the great Concave of the Heavens, and those boundless Regions where the Stars inhabit, there is nothing that I look upon with more pleasure than the wide Sea and the Mountains of the Earth.... And yet these Mountains we are speaking of, to confess the truth, are nothing but great ruins; but such as show a certain magnificence in Nature; as from old Temples and broken Amphitheatres of the Romans we collect the greatness of that people. But the grandeur of a Nation is less sensible to those that never see the remains and monuments that they have left, and those that never see the mountainous parts of the Earth, scarce ever reflect upon the causes of them, or what power in Nature could be sufficient to produce them.

*The Sacred Theory of the Earth* (2nd edition)  
Book I, Chapter XI, Concerning the Mountains of the Earth (p. 109)  
Printed by R. Norton. London. 1691

There is nothing in Nature more shapeless and ill-figur’d than an old Rock or a Mountain, and all that variety that is among them is but the various modes of irregularity; so as you cannot make a better character of them, in short, than to say they are of all forms and figures, except regular.

Chapter One (p. 26)  
Oxford University Press, Inc. New York, New York, USA. 1930

### Freshfield, Douglas W.

1845–1934  
British barrister, mountaineer, writer, poet, and geographer

Of all natural objects the most impressive is a vast snowy peak rising as a white island above the waves of green hills – a fragment of the arctic world left behind to commemorate its past predominance – and bearing on its broad shoulders a garland of the Alpine flora that has been destroyed on the lower ground by the rising tide of heat and drought that succeeded the last glacial epoch.

*Annual Report of the Board of Regents of the Smithsonian Institution (1904)*  
On Mountains and Mankind (p. 337)  
Government Printing Office. Washington, D.C. 1905

...for us creatures of a day the mountains stand fast.  
*Annual Report of the Board of Regents of the Smithsonian Institution (1904)*  
On Mountains and Mankind (p. 354)  
Government Printing Office. Washington, D.C. 1905

### Hare, Julius Charles

1795–1855  
English theological writer

### Hare, Augustus William

Mountains never shake hands. Their roots may touch: they may keep together some way up: but at length they part company, and rise into individual, insulated peaks.  
*Guesses at Truth* (p. 185)  
Macmillan & Company Ltd. London, England. 1876

### Hawthorne, Nathaniel

1804–64  
American novelist and short story writer

Mountains are Earth's undecaying monuments.  
Mosses from an Old Manse  
Sketches from Memory (p. 478)  
Houghton Mifflin & Co. Boston, Massachusetts, USA. 1886

### Howitt, William

1792–1879  
English author

Mountains! how one's heart leaps up at the very word! There is a charm connected with mountains so powerful, that the merest mention of them, the merest sketch of their magnificent features kindles the imagination, and carries the spirit at once into the bosom of their enchanted regions.

*The Book of the Seasons*  
September (p. 323)  
Henry Colburn & Richard Bentley. London, England. 1831

Thanks be to God for mountains! The variety which they impart to the glorious bosom of our planet were no small advantage; the beauty which they spread out to our vision in their woods and waters; their crags and slopes, their clouds and atmospheric hues were a splendid gift; the sublimity which they pour into our deepest souls from their majestic aspects; the poetry which breathes from their streams, and dells, and airy heights, from the sweet abodes, the garbs and manners of their inhabitants, the songs and legends which have awoken in them, were a proud heritage to imaginative minds; but what are all these when the thought comes, that without mountains the spirit of man must have bowed to the brutal and the base, and probably have sunk to the monotonous level of the unvaried plain.

*The Book of the Seasons*  
September (p. 328)  
Henry Colburn & Richard Bentley. London, England. 1831

### Hutchinson, Thomas

1711–80  
Royal governor of the British North American Province of Massachusetts Bay

I told him his nerves were affected: Every molehill was a mountain.

*Diary*

### Hutton, W.

No biographical data available

Deformities, indeed, they [mountains] cannot be called; for if the human mind delights in variety, these inequalities present us with a variety the most pleasing and picturesque; and if the contemplative philosopher is captivated by the multiplicity of nature's productions, these furnish food for the most keen researcher into the wonders of creation.

*The Book of Nature Laid Open, in a Popular Survey of the Phenomena and Constitution of the Universe*  
Chapter III (p. 16)  
J. Milligan. Georgetown, District of Columbia. 1822

### King, Thomas Starr

1824–64  
American Unitarian clergyman

Going close to a great mountain is like going close to a powerfully painted picture; you see only the roughnesses,

the blotches of paint, the coarsely contrasted hues, which at the proper distance alone are grouped into grandeur and mellowed into beauty.

*The White Hills: Their Legends, Landscape, and Poetry*  
The Four Balleys (p. 6)  
Crosby & Ainsworth. Boston, Massachusetts, USA. 1866

The majesty of a mountain is determined by the outlines of its bulk; its expression depends on the distance, and the states of the air through which it is seen.

*The White Hills: Their Legends, Landscape, and Poetry*  
The Four Balleys (p. 6)  
Crosby & Ainsworth. Boston, Massachusetts, USA. 1866

...in rushing so fast as many of us do through the mountains, the mountains do not have time to come to us.

*The White Hills: Their Legends, Landscape, and Poetry*  
The Four Balleys (p. 19)  
Crosby & Ainsworth. Boston, Massachusetts, USA. 1866

**Lubbock, John, First Baron Avebury** 1834–1919  
English banker, politician, biologist, and archaeologist

On low ground one may be in the clouds, but not above them. But as we look down from mountains and see the clouds floating far below us, we almost seem as if we were looking down on earth from one of the heavenly bodies.

*The Beauties of Nature and the Wonders of the World We Live In*  
Chapter VI (p. 213)  
Macmillan & Company Ltd. London, England. 1903

Geography moreover acquires a new interest when we once realise that mountains are no mere accidents, but that for every mountain chain, for every peak and valley, there is a cause and an explanation.

*The Beauties of Nature and the Wonders of the World We Live In*  
Chapter VI (pp. 214–215)  
Macmillan & Company Ltd. London, England. 1903

**Malan, Solomon Caesar** 1812–94  
British divine and orientalist

Every mountain has distinct features, as characteristic and as marked as those of the human face.

*Aphorisms on Drawing*  
LXI (p. 56)  
Longman, Brown, Green, Longmans & Roberts. London, England. 1856

**Marvell, Andrew** 1621–78  
English metaphysical poet

Here learn, ye mountains more unjust, Which to abrupter greatness thrust, Which do, with your hook-shoulder'd height, The earth deform, and heaven fright, For whose excrescence, ill design'd, Nature must a new centre find, Learn here those humble steps to tread, Which to securer glory lead.

*The Poetical Works of Andrew Marvell*  
Upon the Hill and Grove at Billborow  
Andrew Murray. London, England. 1870

**Moore, Dudley** 1935–2002  
English actor and pianist

**Cook, Peter** 1937–1995  
English comedian

DUDLEY: And will this wind be so mighty as to lay low the mountains of the earth?

PETER: No. It will not be quite as mighty as that. That is why we have come up on the mountain, you stupid nit. Up here we shall be safe – safe as houses.

*Beyond the Fringe*  
The End of the World  
British stage comedy revue. 1961

**Cyrano Jones (Fictional character)**

Twice nothing is still nothing.

*Star Trek*  
The Trouble with Tribbles  
Television program, Season 2, 1967

**Muir, John** 1838–1914  
American naturalist

Thousands of God's wild blessings will search you and soak you as if you were a sponge, and the big days will go by uncounted.

*Our National Parks*  
Chapter I (p. 17)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

The time will not be taken from the sum of your life. Instead of shortening, it will indefinitely lengthen it and make you truly immortal. Nevermore will time seem short or long, and cares will never again fall heavily on you, but gently and kindly as gifts from heaven.

*Our National Parks*  
Chapter I (p. 19)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

Climb the mountains and get their good tidings. Nature's peace will flow into you as sunshine flows into trees. The winds will blow their own freshness into you and the storms their energy, while care will drop off like autumn leaves.

*Our National Parks*  
Chapter II (p. 56)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

Fear not, therefore, to try the mountain-passes. They will kill care, save you from deadly apathy, set you free, and call forth every faculty into vigorous, enthusiastic action. Even the sick should try these so-called dangerous passes, because for every unfortunate they kill, they cure a thousand.

*Mountains of California*  
Chapter V (p. 79)  
The Century Company. New York, New York, USA. 1911

The mountains are fountains not only of rivers and fertile soil, but of men.

*Steep Trails*

Chapter III (p. 47)

Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

...perhaps more than all, I was animated by a mountaineer's eagerness to get my feet in the snow once more, and my head into the clear sky, after lying dormant all winter at the level of the sea.

*Steep Trails*

Chapter IX (p. 128)

Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

Here I could stay tethered forever with just bread and water, nor would I be lonely; loved friends and neighbors, as love for everything increased, would seem all the nearer however many the miles and mountains between us.

*My First Summer in the Sierra*

June 6 (p. 29)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

**Nicolson, Marjorie Hope** 1894–1981

Professor of English

Theology, philosophy, geology, astronomy – basic and radical changes in all these occurred before the 'Mountain Gloom' gave way to 'Mountain Glory.'

*Mountain Gloom and Mountain Glory*

Introduction (p. 3)

University of Washington Press. Seattle, Washington, USA. 1997

**Peattie, Roderick** 1891–1955

Geographer and romanticist

To a large extent, then, a mountain is a mountain because of the part it plays in popular imagination. It may be hardly more than a hill; but if it has distinct individuality, or plays a more or less symbolic role to the people, it is likely to be rated a mountain by those who live about its base.

*Mountain Geography* (p. 4)

Harvard University Press. Cambridge, Massachusetts, USA. 1936

**Pouchet, Félix Archimède** 1800–72

French biologist

It is in the midst of lofty mountains that Nature develops her most magnificent scenes. Their winding-sheets of eternal snow, their diadems of ice, and their burning volcanoes, by turns strike and astonish the traveller.

*The Universe: Or, The Infinitely Great and the Infinitely Little*

Book III (p. 323)

Blackie &amp; Son. London, England. 1892

**Rice, Cale Young** 1872–1943

American poet and dramatist

Under the sea, which is their sky, they rise

To watery altitudes as vast as those

Of far Himalayan peaks ...

*Collected Plays and Poems* (Volume 1)

Submarine Mountains (p. 326)

Doubleday &amp; Co., Inc. Garden City, New York, USA. 1915

**Ruskin, John** 1819–1900

English writer, art critic, and social reformer

[Mountains] seem to have been built for the human race, as at once their schools and cathedrals; full of treasures of illuminated manuscript for the scholar, kindly in simple lessons to the worker, quiet in pale cloisters for the thinker, glorious in holiness for the worshipper. ... [G]reat cathedrals of the earth, with their gates of rock, pavements of cloud, choirs of stream and stone, altars of snow, and vaults of purple traversed by the continual stars...

*Selections from the Works of John Ruskin*

The Mountain Glory (p. 16)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1908

One of the principal charms of mountain scenery is its solitude.

*The Poetry of Architecture: Cottage, Villa, Etc*

The Cottage (p. 42)

John Wiley &amp; Sons. New York, New York, USA. 1877

...mountains are the beginning and the end of all natural scenery ...

*Modern Painters*

Chapter XX (p. 353)

Smith, Elder &amp; Co. London, England. 1873

**Semple, Ellen Churchill** 1863–1932

American geographer

The important characteristic of plains is their power to facilitate every phase of historical movement; that of mountains is their power to retard, arrest, or deflect it. Man, as part of the mobile envelope of the earth, like air and water feels always the pull of gravity.

*Influences of Geographic Environment***Sedgwick, Adam** 1854–1913

English geologist

My present objective is to convey some notion of the structure of the great mountain masses, and to show how the several parts are fitted one to another. This can only be done after great labour. The cliffs where the rocks are laid bare by the sea, the clefts and fissures in the hills and valleys, the deep grooves through which the water flows – all must in turn be examined; and out of such seeming confusion order will at length appear. We must, in imagination, sweep off the drifted matter that clogs the surface of the ground; we must suppose all the covering of moss and heath and wood to be torn away from the sides of the mountains, and the green mantle that lies near their feet to be lifted up; we may see the muscular integuments and sinews and bones of our mother Earth, and so judge of the parts played by each of them during those old convulsive movements whereby her limbs were contorted and drawn up into their present positions.

In John Hudson  
*Complete Guide to the Lakes*  
 Second Letter  
 Longman & Company. London, England. 1842

**Simler, Josias** 1530–56  
 Swiss theologian and classicist

...lofty mountains are most worth of deep study. For everywhere you turn, they present to every sense a multitude of objects to excite and delight the mind. They offer problems to our intellect; they amaze our souls. They remind us of the infinite variety of creation, and offer an unequalled field for the observation of the processes of nature.

*De Alpibus Commentarius*

**Thoreau, Henry David** 1817–62  
 American essayist, poet, and practical philosopher

The tops of mountains are among the unfinished parts of the globe, whither it is a slight insult to the gods to climb and pry into their secrets, and try their effects upon our humanity.

*The Writings of Henry David Thoreau* (Volume 3)

*The Maine Woods*

Ktaadn (p. 85)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

Science knows that the isolated mountains in the horizon are but portions of an unseen range.

In Robert Sattelmeyer (ed.)

*Journal 1842–1848* (Volume 2) (p. 40)

Princeton University Press. Princeton, New Jersey, USA. 1984

**Tyndall, John** 1820–93  
 Irish-born English physicist

The aspects of Nature are more varied and impressive in Alpine regions than elsewhere. The mountains in their setting of deep-blue sky; the glow of firmament and peaks at sunrise and sunset; the formation and distribution of clouds; the descent of rain, hail, and snow; the stealthy slide of glaciers and the rush of avalanches and rivers; the fury of storms; thunder and lightning, with their occasional accompaniment of blazing woods – all these things tend to excite the feelings and to bewilder the mind.

*Fragments of Science for Unscientific People*

Chapter II (p. 35)

D. Appleton & Co. New York, New York, USA. 1875

## MOUNTAIN RANGE

**King, Clarence** 1842–1901  
 American geologist and mountaineer

The western margin of this continent [North America] is built of a succession of mountain chains folded in broad

corrugations, like waves of stone upon whose seaward base beat the mild, small breakers of the Pacific.

*Mountaineering in the Sierra Nevada*

Chapter I (p. 1)

Charles Scribner's Sons. New York, New York, USA. 1905

## MOUNTAIN, LUNAR

**Herschel, Friedrich Wilhelm**

**(Sir William)** 1738–1822

English astronomer

From these observations I believe it is evident that the height of the lunar mountains in general is greatly over-rated; and that when we have excepted a few, the generality do not exceed half a mile in their perpendicular elevation.

Astronomical Observations Relating to the Mountains of the Moon

*Philosophical Transactions of the Royal Society of London*,

Volume 70, 1780 (p. 517)

## MOVEMENT

**Mendeleev, Dmitry Ivanovich** 1834–1907

Russian chemist

It is evident, however, that not only does reaction itself consist of movements, but that in the compound formed (in the molecules) the elements (atoms) forming it are in harmonious stable movement (like the planets in the solar system), and this movement will affect the stability and capacity for reaction, and therefore these depend not only on the affinity of the participating substances, but also on the conditions of reaction which change the state of movement of the elements in the molecules, as well as on the nature, form, and intensity of those movements which the elements have in their given state. In a word, the mechanical side of chemical action must be exceedingly complex.

Translated by George Kamensky

*The Principles of Chemistry* (Volume 1)

Introduction (p. 84)

Longmans, Green & Co. London, England. 1891

## MUCOUS

**Pain, Roger H.**

No biographical data available

If it is love that makes the world go round, then it is surely mucus and slime which facilitate its translational motion.

In Steven Vogel

*Life's Devices: The Physical World of Animals*

Chapter 9 (p. 177)

Princeton University Press. Princeton, New Jersey, USA. 1988

**MUD**

**Geikie, Sir Archibald** 1835–1924  
English geologist

I know no recent observation in physical geography more calculated to impress deeply the imagination than the testimony of this presumably meteoric iron from the most distant abysses of the ocean. To be told that mud gathers on the floor of these abysses at an extremely slow rate conveys but a vague notion of the tardiness of the process. But to learn that it gathers so slowly. that the very star-dust which falls from outer space forms an appreciable part of it, brings home to us, as hardly anything else could do, the idea of undisturbed and excessively slow accumulation.

*Geological Sketches at Home and Abroad*

Chapter XIII (p. 282)

Macmillan & Co. New York, New York, USA. 1882

To be told that mud gathers on the floor of these abysses at an extremely slow rate conveys but a vague notion of the tardiness of the process. But to learn that it gathers so slowly. that the very star-dust which falls from outer space forms an appreciable part of it, brings home to us, as hardly anything else could do, the idea of undisturbed and excessively slow accumulation.

*Geological Sketches at Home and Abroad*

Chapter XIII (p. 282)

The Macmillan Co. New York, New York, USA. 1882

**MULTITUDE**

**Thompson, Sir J. Arthur** 1861–93  
Scottish biologist

Whether we gather shells on the shore or collect snow crystals; whether we study birds or brambles, hydroids or hawkweeds, we get the same impression of an overflowing form-fountain, of prodigal multiplicity, of endless resources.

*The Bible of Nature*

Chapter I (p. 11)

Charles Scribner's Sons. New York, New York, USA. 1908

**MUMMY**

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910  
American author and humorist

“See, genteelmen! – Mummy! Mummy!” The eye-glass came up as calmly, as deliberately as ever. “Ah, – Ferguson – what did I understand you to say the gentleman’s name was?”

“Name? – he got no name! – Mummy! – ‘Gyptian mummy!’”

“Yes, yes. Born here?”

“No! ‘Gyptian mummy!’”

“Ah, just so. Frenchman, I presume?”

“No! – *not* Frenchman, not Roman! – born in Egypta!!”

“Born in Egypta. Never heard of Egypta before. Foreign locality, likely. Mummy – mummy. How calm he is – how self-possessed. Is, ah – is he dead?”

*The Innocents Abroad* (Volume 1) (p. 372)

The American Publishing Co. Hartford, Connecticut, USA. 1901

**MUON**

**Penman, Sheldon**

No biographical data available

For the time being, however, the muon itself qualifies as a “riddle wrapped in a mystery inside an enigma.”

The Muon

*Scientific American*, Volume 205, Number 1, July 1961 (p. 55)

**Rabi, Isidor Isaac** 1898–1988

Austrian-born American physicist

Who ordered that?

Attributed, upon learning of the muon

**MUSE**

**Tennyson, Alfred (Lord)** 1809–92

English poet

These are Astronomy and Geology, terrible Muses!

*The Works of Alfred Lord Tennyson, Poet Laureate*

Parnassus – By An Evolutionist (p. 810)

The Macmillan Co. New York, New York, USA. 1898

**MUSEUM**

**Belloc, Hilaire** 1870–1953

French-born poet and historian

The Dodo used to walk around,

And take the sun and air,

The sun yet warms his native ground –

The Dodo is not there!

The voice which used to squawk and squeak

Is now forever dumb –

You may you see his bones and beak

All in the Mu-se-um.

*Complete Verse*

The Dodo (p. 238)

G. Duckworth. London, England. 1970

**Burroughs, John** 1837–1921

American naturalist and essayist

I seldom... go into a natural history museum without feeling as if I were attending a funeral. There lie the birds and animals stark and stiff, or else, what is worse, stand

up in ghastly mockery of life, and the people pass along and gaze at them through the glass with the same cold and unprofitable curiosity that they gaze upon the face of their dead neighbor in his coffin.

*Indoor Studies*

Science and Literature (p. 49)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1904

### Edwards, R. Y.

No biographical data available

The physical heart of a museum is its collection, in fact having a collection is what makes a museum a museum, and most activity in most museums is involved with the acquisition, care, understanding, and use of their collections.

Research: A Museum Cornerstone

*Occasional Papers of the British Columbia Provisional Museum,*

Volume 25, 1985 (p. 1)

### Flower, Sir William Henry 1831–99

English zoologist

A museum is like a living organism; it requires constant and tender care; it must grow or it will perish.

A finished museum is a dead museum, and a dead museum is a useless museum.

In Museums Association

*The Principles of Museum Administration*

*Report of Proceedings*, Newcastle, 1895 (p. 78)

### Levi, Primo 1919–87

Italian writer and chemist

As happens with all well-structured exhibits, indeed as happens anytime one partakes of spiritual food, one leaves the exhibit nourished and at the same time hungrier than before.

Translated by Raymond Rosenthal

*Other People's Trades*

Butterflies (p. 16)

Summit Books. New York, New York, USA. 1989

### St. Clair, George

No biographical data available

The crust of the earth, with its embedded fossils, must not be looked at as a well-filled museum, but as a poor collection made at hazard and at rare intervals.

*Darwinism and Design, or, Creation by Evolution*

Chapter III (p. 52)

Hodder & Stoughton. London, England. 1873

### Thoreau, Henry David 1817–62

American essayist, poet, and practical philosopher

I hate museums – there is nothing so weighs upon my spirits. They are the catacombs of nature.... They are dead nature collected by dead men. I know not whether I muse most – at the bodies stuffed with cotton and sawdust – or those stuffed with bowels and fleshy fibre outside the cases.

In Robert Sattelmeyer (ed.)

*Journal 1842–1848* (Volume 2) (p. 77)

Princeton University Press. Princeton, New Jersey, USA. 1984

### von Goethe, Johann Wolfgang 1749–1832

German poet, novelist, playwright, and natural philosopher

A museum of natural history always seems to me like the tombs of Egyptian kings, in which various sorts of beasts and plants are preserved in mummified rigidity.

In John Stuart Blackie

*The Wisdom of Goethe*

Nature – Natural History (p. 183)

William Blackwood & Sons. Edinburgh, Scotland. 1883

## MUTATION

### Crow, J. F.

American geneticist

...we could still be sure on theoretical grounds that mutants would usually be detrimental. For a mutation is a random change of a highly organized, reasonably smoothly functioning human body. A random change in the highly integrated system of chemical processes which constitute life is certain to impair – just as a random interchange of connections in a television set is not likely to improve the picture.

Genetic Effects of Radiation

*Bulletin of the Atomic Scientists*, Volume 14, Number 1, January 14,

1958 (pp. 19, 20)

### Dobzhansky, Theodosius 1900–75

Russian-American scientist

...a majority of mutations, both those arising in laboratories and those stored in natural populations, produce deteriorations of...viability, hereditary disease and monstrosities. Such changes it would seem, can hardly serve as evolutionary building blocks.

*Genetics and the Origin of Species*

Chapter III (p. 73)

Columbia University Press. New York, New York, USA. 1951

...the mutation process alone, not corrected and guided by natural selection, would result in degeneration and extinction rather than improved adaptiveness.

On Methods of Evolutionary Biology and Anthropology

*American Scientist*, Volume 45, 1957 (p. 385)

### Heinlein, Robert A. 1907–88

American science fiction writer

“Mutation” is never an explanation; it is simply a name for an observed fact.

*Time Enough for Love*

Chapter IX (p. 246)

G.P. Putnam's Sons. New York, New York, USA. 1973

**Huxley, Julian** 1887–1975

English biologist, philosopher, and author

One would expect that any interference with such a complicated piece of chemical machinery as the genetic constitution would result in damage. And, in fact, this is so: the great majority of mutant genes are harmful in their effects on the organism.

*Evolution in Action*

Chapter 2 (p. 39)

Harper & Brothers. New York, New York, USA. 1953

**Muller, Hermann Joseph** 1890–1967

American geneticist

It is entirely in line with the accidental nature of natural mutations that extensive tests have agreed in showing the vast majority of them detrimental to the organism in its job of surviving and reproducing, just as changes accidentally introduced into any artificial mechanism are predominantly harmful to its useful operation.

How Radiation Changes the Genetic Constitution

*Bulletin of the Atomic Scientists*, Volume 11, Number 9, November, 1955 (p. 331)

**Pauling, Linus** 1901–94

American chemist

Every species of plant and animal is determined by a pool of germ plasm that has been most carefully selected over a period of hundreds of millions of years. We can understand now why it is that mutations in these carefully selected organisms almost invariably are detrimental. The situation can be suggested by a statement by Dr. J.B.S. Haldane: "My clock is not keeping perfect time. It is conceivable that it will run better if I shoot a bullet through it; but it is much more probable that it will stop altogether." Professor George Beadle, in this connection, has asked: "What is the chance that a typographical error would improve Hamlet?"

*No More War!*

Chapter 4 (p. 53)

Dodd, Mead & Company. New York, New York, USA. 1958

## MUTUALISM

**Pound, Roscoe** 1870–1964

American jurist

It is not necessary...in order to establish mutualism to show that the organisms do no injury to each other. Mutualism of the kind we meet with in the vegetable kingdom involves sacrifice on the part of the host. The parasite is not there gratuitously. It is there to steal from its host the living it is hereditarily and constitutionally indisposed to make for itself. If the host gains any advantage from the

relation, it can only do so by sacrificing – by giving the parasite the benefit of its labor that it may subsist.

Symbiosis and Mutualism

*The American Naturalist*, Volume XXVII, Number 318, June, 1893 (p. 519)

## MYRMECOLOGIST

**Hölldobler, Bert** 1936–

German myrmecologist

**Wilson, Edward O.** 1929–

American biologist and author

Like all myrmecologists...we are prone to view the Earth's surface idiosyncratically, as a network of ant colonies. We carry a global map of these relentless little insects in our heads. Everywhere we go their ubiquity and predictable natures makes us feel at home, for we have learned to read part of their language and we understand certain designs of their social organization better than anyone understands the behavior of our fellow humans.

*Journey to the Ants: A Story of Scientific Exploration*

The Dominance of Ants (p. 1)

Harvard University Press. Cambridge, Massachusetts, USA. 1994

## Robert Graham (Fictional character)

Myrmecologist. You see that's what I mean. Why can't we all speak English?

*Them*

Film (1954)

## MYSTERY

**Asimov, Isaac** 1920–92

American author and biochemist

The mysteries of the universe and the questions that scientists strive to answer never come to an end. For that we should be grateful. A universe in which there were no mysteries for curious men to ponder would be a very dull universe indeed.

*The Search for the Elements*

Chapter 16 (p. 152)

Basic Books. New York, New York, USA. 1962

## Author undetermined

"Give me the facts," said My Lord Judge, "thy conclusions are but the guess-work of imagination; which puzzle the brain, and tend not to solve the mystery."

In Colin Mackenzie

*One Thousand Experiments in Chemistry*

On Cover page

Printed for Sir Richard Phillips & Company. London, England. 1821

**Barrow, John D.** 1952–

English theoretical physicist

A mystery lurks beneath the magic carpet of science, something that scientists have not been telling, something

too shocking to mention except in rather esoterically refined circles: that at the root of the success of twentieth-century science there lies a deeply 'religious' belief – a belief in an unseen and perfect transcendental world that controls us in an unexplained way, yet upon which we seem to exert no influence whatsoever.

*Pi in the Sky*

Chapter 1 (p. 1)

Back Bay Books. 1993

### Bray, Henry Truro

No biographical data available

The universe is full of mystery. Wherever mystery is found, there is a natural desire to fathom it; and though we often fail in our attempts, nevertheless to continue the search after the truth, is better for the advancement of man than to have discovered it.

*The Living Universe* (3rd edition)

Elucidative (p. 1)

The Truro Publishing Co. Chicago, Illinois, USA. 1914

### Burnham, Sarah Maria 1818–1901

No biographical data available

A desire to penetrate the hidden mysteries of nature's operations is innate in man, and has led to some of the grandest and the most useful achievements of the human mind.

*Precious Stones in Nature, Art and Literature*

Chapter I (p. 6)

Bradley Whidden. Boston, Massachusetts, USA. 1886

### Burroughs, John 1837–1921

American naturalist and writer

...after science has done its best the mystery is as great as ever, and the imagination and the emotions have just as free a field as before.

*Indoor Studies Science and Literature*

Science and Literature (pp. 51–52)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1889

### Chargaff, Erwin 1905–2002

Austrian biochemist

It is the sense of mystery that, in my opinion, drives the true scientist: the same force, blindly seeing, deafly hearing, unconsciously remembering, that drive the larvae into the butterfly. If he has not experienced, at least a few times in his life, this cold shudder down his spine, this confrontation with an immense, invisible face whose breath moves him to tears, he is not a scientist. The blacker the night, the brighter the light.

*Heraclitean Fire: Sketches from a Life Before Nature*

Part II

In the Light of Darkness (p. 114)

Rockefeller University Press. New York, New York, USA. 1978

### Dana, James Dwight 1813–95

American geologist, mineralogist, and naturalist

Science, while it penetrates deeply the system of things about us, sees everywhere, in the dim limits of vision, the word mystery.

*Corals and Coral Islands* (3rd edition)

Chapter I (pp. 17–18)

Dodd, Mead & Co. New York, New York, USA. 1890

### Dawkins, Richard 1941–

English ethologist, evolutionary biologist, and popular science writer

There is mystery in the universe, beguiling mystery, but it isn't capricious, whimsical, frivolous in its changeability. The universe is an orderly place and, at a deep level, regions of it behave like other regions, times behave like other times.

*Science, Delusion and the Appetite for Wonder*

Richard Dimpleby Lecture, BBC1 Television, November 12th, 1996

Newton, Keats agreed with Lamb, had destroyed all the poetry of the rainbow, by reducing it to the prismatic colours.... Newton's dissection of the rainbow into light of different wavelengths led on to Maxwell's theory of electromagnetism and thence to Einstein's theory of special relativity. If you think the rainbow has poetic mystery, you should try relativity.

*Unweaving the Rainbow: Science, Delusion and the Appetite for Wonder*

Chapter 3 (p. 39)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1998

Mysteries do not lose their poetry when solved. Quite the contrary; the solution often turns out more beautiful than the puzzle and, in any case, when you have solved one mystery you uncover others, perhaps to inspire greater poetry.

*Unweaving the Rainbow: Science, Delusion and the Appetite for Wonder*

Chapter 3 (p. 41)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1998

The real universe has mystery enough to need no help from obscurantist hucksters.

The Real Romance in the Stars

*The Independent*, 31 Dec 1995

### de Quincey, Thomas 1785–1859

English author

Great is the mystery of Space, greater is the mystery of Time. Either mystery grows upon man, as man himself grows; and either seems to be a function of the godlike which is in man. In reality, the depths and the heights which are in man, the depths by which he searches, the heights by which he aspires, are but projected and made objective externally in the three dimensions of space which are outside of him.

In *Last Days of Immanuel Kant and Other Essays*

*The Works of Thomas de Quincey*

*System of the Heavens as Revealed by Lord Rosse's Telescope* (p. 176)

Adam & Charles Black. Edinburgh, Scotland. 1871

**Dircks, Henry** 1806–73  
English engineer

To ordinary minds all creation is mystery; to cultivated minds there is much that is *not* quite inexplicable.

*Nature-study*

Chapter I (p. 1)

E. Moxon, Son & Co. London, England. 1869

**Disraeli, Benjamin, First Earl of Beaconsfield** 1804–81

English prime minister, founder of Conservative Party, and novelist

All is mystery, but he is a slave who will not struggle to penetrate the dark veil.

*Contarini Fleming: A Romance*

Chapter XVIII (p. 295)

Bernh. Leipzig, Germany. 1846

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

It is a mistake to confound strangeness with mystery.

In William S. Baring-Gould (ed.)

*The Annotated Sherlock Holmes* (Volume 1)

*A Study in Scarlet*, Chapter 7 (p. 194)

Wings Books. New York, New York, USA. 1967

As a rule, said Holmes, the more bizarre a thing is the less mysterious it proves to be.

In William S. Baring-Gould (ed.)

*The Annotated Sherlock Holmes* (Volume 1)

*The Red Headed League* (p. 429)

Wings Books. New York, New York, USA. 1967

**Einstein, Albert** 1879–1955

German-born physicist

The most beautiful experience we can have is the mysterious. It is the fundamental emotion which stands at the cradle of true art and true science. Whoever does not know it and can no longer wonder, no longer marvel, is as good as dead, and his eyes are dimmed.

*Ideas and Opinions*

The World As I See It (p. 11)

Crown Publishers, Inc. New York, New York, USA. 1954

I claim credit for nothing. Everything is determined, the beginning as well as the end, by forces over which we have no control. It is determined for the insect as well as for the star. Human beings, vegetables, or cosmic dust, we all dance to a mysterious tune, intoned in the distance by an invisible player.

What Life Means to Einstein: An Interview by George Sylvester Viereck  
*The Saturday Evening Post*, October 26, 1929 (p. 117)

**Feynman, Richard P.** 1918–88

American theoretical physicist

We choose to examine a phenomenon which is impossible, absolutely impossible to explain in any classical way, and which has in it the heart of quantum mechanics.

In reality, it contains the only mystery.

*The Feynman Lectures on Physics* (Volume 1)

Chapter 37-1 (p. 37-2)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1983

...the idea that it [science] takes away mystery or awe or wonder in nature is wrong. It's quite the opposite. It's much more wonderful to know what something's really like than to sit there and just simply, in ignorance, say, "Oooh, isn't it wonderful!"

In Christopher Sykes

*No Ordinary Genius: The Illustrated Richard Feynman*

Chapter Four (p. 108)

W.W. Norton & Company, Inc. New York, New York, USA. 1994

With more knowledge comes a deeper, more wonderful mystery, luring one on to penetrate deeper still. Never concerned that the answer may prove disappointing, with pleasure and confidence we turn over each new stone to find unimagined strangeness leading on to more wonderful questions and mysteries – certainly a grand adventure.

*What Do You Care What Other People Think?*

The Value of Science (p. 243)

W.W. Norton & Company, Inc. New York, New York, USA. 1988

[The law of gravity] is not exact; Einstein had to modify it, and we know it is not quite right yet, because we have still to put the quantum theory in. That is the same with all our other laws – they are not exact. There is always an edge of mystery, always a place where we have some fiddling around to do yet. This may or may not be a property of Nature, but it certainly is common to all the laws as we know them today. It may be only a lack of knowledge.

*The Character of Physical Law*

Chapter 1 (p. 33)

BBC. London, England. 1965

It is a great adventure to contemplate the universe, beyond man, to contemplate what it would be like without man, as it was in a great part of its long history and as it is in a great majority of places. When this objective view is finally attained, and the mystery and majesty of matter are fully appreciated, to then turn the objective eye back on man viewed as matter, to view life as part of this universal mystery of greatest depth, is to sense an experience which is very rare, and very exciting. It usually ends up in laughter and a delight in the futility of trying to understand what this atom in the universe is, this thing – atoms with curiosity – that looks at itself and wonders why it wonders.

*The Meaning of It All: Thoughts of a Citizen Scientist*

Chapter II (p. 39)

Perseus Books. Reading, Massachusetts, USA. 1998

[T]hese scientific views end in awe and mystery, lost at the edge in uncertainty, but they appear to be so deep and so impressive that the theory that it is all arranged as a

stage for God to watch man's struggle for good and evil seems inadequate.

*The Meaning of It All: Thoughts of a Citizen Scientist*  
Chapter II (p. 39)  
Perseus Books. Reading, Massachusetts, USA. 1998

...I can live with doubt and uncertainty and not knowing. I think it's much more interesting to live not knowing than to have answers which might be wrong. I have approximate answers and possible beliefs and different degrees of certainty about different things, but I'm not absolutely sure of anything and there are many things I don't know anything about, such as whether it means anything to ask why we're here...I don't have to know an answer, I don't feel frightened by not knowing things, by being lost in a mysterious universe without any purpose, which it is the way it really is so far as I can tell. It doesn't frighten me.

In Jeffrey Robbins (ed.)  
*The Pleasure of Finding Things Out: The Best Short Works of Richard P. Feynman*  
Chapter 1 (pp. 24–25)  
Perseus Books. Cambridge, Massachusetts, USA. 1999

**Fosdick, Harry Emerson** 1878–1969  
American clergyman and educator

I would rather live in a world where my life is surrounded by mystery than live in a world so small that my mind could comprehend it.

*Riverside Sermons*  
The Mystery of Life (p. 22)  
Harper & Brothers Publishers. New York, New York, USA. 1958

**Frater, Alexander**  
Travel writer and journalist

Each veil lifted revealed a multitude of others. They perceived a chain of interlocking and interdependent mysteries, the meteorological equivalent of DNA and the double helix.

*Chasing the Monsoon* (p. 190)  
Alfred A. Knopf. New York, New York, USA. 1991

**Gregory, Sir Richard Arman** 1864–1952  
English scientific writer and journalist

Mystery is...not destroyed by knowledge but removed to a higher plane.

The Message of Science  
*Science*, Volume LIV, Number 1402, November, 1921 (p. 452)

**Kelvin, Lord William Thomson** 1824–1907  
Scottish engineer, mathematician, and physicist

When you call a thing mysterious, all that means is that you don't understand it.

In Sir Richard Arman Gregory  
*Discovery; or, The Spirit and Service of Science*

Chapter IV (p. 56)  
Macmillan & Company Ltd. London, England. 1918

**Lightman, Alan** 1948–  
Physicist, novelist, and essayist

A painter paints a sunset, and a scientist measures the scattering of light. The beauty of nature lies in its logic as well as appearance. And we delight in that logic: The square of the orbital period of each planet equals the cube of its distance from the sun; the shape of a raindrop is spherical, to minimize the area of its surface. Why it is that nature should be logical is the greatest mystery of science. But it is a wonderful mystery.

*Great Ideas in Physics*  
Introduction (p. 1)  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1997

**Lindbergh, Anne Morrow** 1906–2001  
American aviator and writer

Today's mystery is not the old veiling by superstition of the things man does not understand, but a new unblinking gaze at the mysteries of the universe that may never be unveiled.

*Earth Shine*  
Back to Earth (pp. 42–43)  
Harcourt, Brace & World, Inc. New York, New York, USA. 1969

**Lowell, Percival** 1855–1916  
American astronomer

Discoveries in science have a fatal facility for lying lost in the technical publications which record them. Few persons attend to what is not alluring and columns of figures form but an uninviting protocol to the learning within. Yet these very people would take the keenest interest in scientific progress could its beauty and real simplicity be adequately set out for them. For the whole object of science is to explain and make comprehensible the universe around us. Science consists in solving mysteries not, as the layman might imagine, in making them.

In William Graves Hoyt  
*Lowell and Mars*  
Chapter 7 (p. 96)  
University of Arizona Press. Tucson, Arizona, USA. 1976

**Margenau, Henry** 1901–97  
American physicist

I recognize no subjects and no facts which are alleged to be forever closed to inquiry or understanding: a mystery is but a challenge.

*Open Vistas*  
Chapter III Section 3 (p. 76)  
Yale University Press. New Haven, Connecticut, USA. 1961

**Pearson, Karl** 1857–1936  
English mathematician

Does science leave no mystery? On the contrary, it proclaims mystery where others profess knowledge. There is mystery enough in the universe of sensation and in its capacity for containing those little corners of consciousness which project their own products, of order and law and reason, into an unknown and unknowable world. There is mystery enough here, only let us clearly distinguish it from ignorance within the field of possible knowledge. The one is impenetrable, the other we are daily subduing.

*The Grammar of Science*

Chapter VII (pp. 111–112)

Meridian Books. New York, New York, USA. 1957

**Penrose, Roger** 1931–

English mathematical physicist

...once you have put more and more of your physical world into a mathematical structure, you realize how profound and mysterious this mathematical structure is. How you can get all these things out of it is very mysterious...

In Alan Lightman and Robert Brawer (eds.)

*Origins: The Lives and Worlds of Modern Cosmologists*

Roger Penrose (p. 433)

Harvard University Press. Cambridge, Massachusetts, USA. 1990

**Peterson, Ivars**

Mathematics and computer writer and editor

The voyage of discovery into our own solar system has taken us from clockwork precision into chaos and complexity. This still unfinished journey has not been easy, characterized as it is by twists, turns, and surprises that mirror the intricacies of the human mind at work on a profound puzzle. Much remains a mystery. We have found chaos, but what it means and what its relevance is to our place in the universe remains shrouded in a seemingly impenetrable cloak of mathematical uncertainty.

*Newton's Clock: Chaos in the Solar System*

Chapter 12 (p. 293)

W.H. Freeman & Company. New York, New York, USA. 1993

**Proctor, Mary** 1862–1957

American popularizer of astronomy

In vain do we strive to penetrate the mysteries which surround us on all sides, for around us and before us, and extending into the infinite depths of space, we find still greater mysteries.

The Silver River of Heaven

*The Chautauquan*, Volume 21, Number 4, July, 1895 (p. 460)

**Proctor, Richard Anthony** 1837–88

English astronomer

...men found more and more of mystery as they learned more and more of actual facts, until *now* that which of old was confidently explained is found to be utterly

inexplicable, save as a part – an infinitely minute part – of the mysterious Infinity and Eternity we call The Universe.

*Mysteries of Time and Space*

Preface

R. Worthington

New York, New York, USA. 1883

**Richards, Theodore William** 1868–1928

American chemist

No one can predict how far we shall be enabled by means of our limited intelligence to penetrate into the mysteries of a universe immeasurably vast and wonderful; nevertheless, each step in advance is certain to bring new blessings to humanity and new inspiration to greater endeavor.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1911*

(Faraday Lecture) The Fundamental Properties of the Elements (p. 215)

Government Printing Office. Washington, D.C. 1912

**Sarton, George** 1884–1956

Belgian-born American scholar and writer

Mysteries which we have driven outside of the boundaries of our knowledge and which we have located and encompassed, such mysteries which will not harm us; on the contrary they will stimulate and inspire us in many ways; the dangerous mysteries are those which are hopelessly mingled with our knowledge, and of which we are perhaps unaware.

*The History of Science and the New Humanism*

Chapter I (p. 60)

H. Holt & Co. New York, New York, USA. 1931

**Schiller, Friedrich** 1759–1805

German poet, philosopher, historian, and dramatist

Mystery ever is that which lies broad open to all men; Circles you round and round, yet not a body observes.

*The Poems of Schiller*

To the Mystics (p. 310)

H. Holt & Co. New York, New York, USA. 1902

**Shah, Idries** 1924–96

Persian author and teacher in the Sufi tradition

People who know nothing, or know very little and should be studying instead of teaching, are fond of creating an air of mystery.

*Thinkers of the East*

Mystery (p. 98)

Jonathan Cape. London, England. 1971

**Smullyan, Raymond** 1919–

American mathematician and logician

...I certainly believe that some things may in principle be mysteries, but of what use is a hypothesis for explaining a mystery when the very hypothesis raises another mystery just as baffling as the one it explains?

*5000 B.C. and Other Philosophical Fantasies*

Chapter 13 (p. 165)  
St. Martin's Press. New York, New York, USA. 1983

**Snyder, Carl** 1869–1946  
American economist and statistician

There can never be in human knowledge any such thing as finality. Always at the end there is a mystery; it will always be there.

*The World Machine: The First Phase the Cosmic Mechanism*  
Chapter XXXIII (p. 445)  
Longmans Green. London, England. 1904

**von Goethe, Johann Wolfgang** 1749–1832  
German poet, novelist, playwright, and natural philosopher

Mysteries are not necessarily miracles.

Translated by Otto Wenckstern  
*Goethe's Opinions on the World, Mankind, Literature, Science, and Art*  
(p. 114)  
John W. Parker & Son. London, England. 1853

We all walk in mysteries. We are surrounded by an atmosphere of which we do not know what is stirring in it, or how it is connected with our own spirit.

In John Stuart Blackie  
*The Wisdom of Goethe*  
Philosophy, Metaphysics, Logic, Truth and Science (p. 151)  
William Blackwood & Sons. Edinburgh, Scotland. 1883

**Wilson, Edward O.** 1929–  
American biologist and author

The unsolved mysteries of the rain forest are formless and seductive. They are like unnamed islands hidden in the blank spaces of old maps, like dark shapes glimpsed descending the far wall of a reef into the abyss.

*The Diversity of Life*  
Chapter One (p. 7)  
W.W. Norton & Company, Inc. New York, New York, USA. 1992

Our sense of wonder grows exponentially: the greater the knowledge, the deeper the mystery and the more we seek knowledge to create new mystery.

*Biophilia*  
Bernhardsdorp (p. 10)  
Harvard University Press. Cambridge, Massachusetts, USA. 1984

**Young, John Zachary** 1907–97  
English zoologist

The scientist is in a better position than anyone else to see that we are set about with mysteries. It is his business to grapple with ghosts every day of his life and he must refuse to allow them to be laid by the process of labeling them with a primitive nomenclature. The mysteries of the universe are too great to be expressed by such simple comparisons as are implicit in either the words "spirit" or "matter."

*Doubt and Certainty in Science: A Biologist's Reflections on the Brain*  
Comment on the First Lecture (p. 23)  
Oxford University Press, Inc. Oxford, England. 1960

## MYSTICISM

**Capra, Fritjof** 1939–  
Austrian-born American physicist

Science does not need mysticism and mysticism does not need science, but man needs both. Mystical experience is necessary to understand the deepest nature of things, and science is essential for modern life. What we need, therefore, is not a synthesis, but a dynamic interplay between mystical intuition and scientific analysis.

*The Tao of Physics: An Exploration of the Parallels Between Modern Physics and Eastern Mysticism*  
Epigraph (p. 297)  
Shambhala. Berkeley, California, USA. 1975

**Hawking, Stephen William** 1942–  
English theoretical physicist

The universe of Eastern mysticism is an illusion, A physicist who attempts to link it with his own work has abandoned physics.

Quoted in John Boslough  
*Beyond the Black Hole: Stephen Hawking's Universe*  
The Anthropic Principle (p. 115)  
1989

**Whewell, William** 1794–1866  
English philosopher and historian

Experience collected her stores in vain, or ceased to collect them, when she had only to pour them into the flimsy folds of the lap of Mysticism; who was, in truth, so much absorbed in looking for the treasures which were to fall from the skies, that she heeded little how scantily she obtained, or how loosely she held, such riches as might be found near her.

*History of the Inductive Sciences from the Earliest to the Present Time*  
(3rd edition)  
Book IV, Chapter III (p. 236)  
John W. Parker & Son. London, England. 1857

## MYTH

**Bernal, John Desmond** 1901–71  
Irish-born physicist and X-ray crystallographer

Science, in one aspect, is ordered technique; in another, it is rationalized mythology.

*Science in History*  
Preface (p. ix)  
Watts. London, England. 1957

**Clift, Wallace B.**  
No biographical data available

However, for most of us, science functions like myth in that we have no personal experience in the matter.

We put our trust in the scientific view given us by our culture and enshrined in its myths. If asked why leaves are green, most of us would probably mutter something about “chlorophyll.” But unless we were specialists, we would simply be repeating the story of someone else’s experience.

*Jung and Christianity* (pp. 62–63)  
 Publisher undetermined

**Hubbard, Ruth** 1924–  
 American biologist

The mythology of science asserts that with many different scientists all asking their own questions and evaluating the answers independently, whatever personal bias creeps into their individual answers is canceled out when the large picture is put together. This might conceivably be so if scientists were women and men from all sorts of different cultural and social backgrounds who came to science with very different ideologies and interests. But since, in fact, they have been predominantly university-trained white males from privileged social backgrounds, the bias has been narrow and the product often reveals more about the investigator than about the subject being researched.

*Women Look at Biology Looking at Women  
 Have Only Men Evolved?* (p. 31)  
 Schenkman Publishing Company. Cambridge, Massachusetts, USA. 1979

**Jacob, François** 1920–  
 French biologist

...myths and science fulfill a similar function: they both provide human beings with a representation of the world and the forces that are supposed to govern it.

*The Possible and the Actual*  
 Myth and Science (p. 9)  
 Pantheon Books. New York, New York, USA. 1982

**Koestler, Arthur** 1905–83  
 Hungarian-born English writer

Myths grow like crystals, according to their own, recurrent pattern; but there must be a suitable core to start their growth.

*The Sleep Walkers: A History of Man’s Changing Vision of the Universe*  
 Chapter 1 (p. 27)  
 The Macmillan Co. New York, New York, USA. 1959

**Lerner, Eric J.** 1947–  
 American popular science book

The ability of a scientific theory to be refuted is the key criterion that distinguishes science from metaphysics. If a theory cannot be refuted, if there is *no* observation that will disprove it, then nothing can prove it – it cannot predict anything, it is a worthless myth.

*The Big Bang Never Happened*  
 Chapter 1 (p. 54)  
 Time Books. New York, New York, USA. 1991

**Mahadeva, M.**  
 No biographical data available

Myths are errors that result [both from] scientists bringing societal preconceptions into science and...scientists feeding society ideas that masquerade as science.

From *Misinterpretations to Myths*  
*Science Teacher*, Volume 56, Number 4, 1989

**Popper, Karl R.** 1902–94  
 Austrian/British philosopher of science

Thus science must begin with myths – and with the criticism of myths...

In C.A. Mace (ed.)  
*British Philosophy in the Mid-Century*  
 Philosophy of Science: A Personal Report, VII (p. 177)

Science never starts from scratch; it can never be described as free from assumptions; for at every instant it presupposes a horizon of expectations – yesterday’s horizon of expectations, as it were. Today’s science is built upon yesterday’s science (and so it is the result of yesterday’s searchlight); and yesterday’s science, in turn, is based on the science of the day before. And the oldest scientific theories are built on pre-scientific myths, and these, in their turn, on still older expectations.

*Objective Knowledge: An Evolutionary Approach*  
 Appendix (pp. 346–347)  
 Clarendon Press. Oxford, England. 1972

Science must begin with myths, and with the criticism of myths ...

*Conjectures and Refutations*  
 Chapter 1 (p. 66)  
 Routledge. London, England. 2002

**Rota, Gian-Carlo** 1932–99  
 Italian-born American mathematician

We take offense at those truths that threaten any of the myths we profess to believe in. Taking offense is an effective way we have of shutting off some unpleasant truth. It works. It enables us to restore a hold on our dearest myths, to last until the next offending myth comes along.

*Indiscrete Thoughts*  
 Introduction (p. xix)  
 Birkhäuser. Boston, Massachusetts, USA. 1997

**von Goethe, Johann Wolfgang** 1749–1832  
 German poet, novelist, playwright, and natural philosopher

Neither myths nor legends are to be tolerated in science; let us then leave to the poet, whose province it is, to use them for the benefit and amusement of the world. The scientific man should limit himself to the nearest and clearest material that lies before him. If, however, he chooses occasionally to come forth in the oratorical vein, this also may be allowed him, provided he remembers what he is about.

In John Stuart Blackie

*The Wisdom of Goethe*

Philosophy, Metaphysics, Logic, Truth and Science (p. 159)

William Blackwood & Sons. Edinburgh, Scotland. 1883

**Whyte, Lancelot Law** 1896–1972

Scottish physicist

In the ultimate analysis science is born of myth and religion, all three being expressions of the ordering spirit of the human mind.

*The Unconscious Before Freud*

Chapter V (pp. 82–83)

Julian Friedmann Publishers. London, England. 1978

## MYTHOLOGY

**Pearson, Karl** 1857–1936

English mathematician

If the reader has once fully grasped that science is an intellectual résumé of past experience and a mental balancing of the probability of future experience, he will be in no danger of contrasting the “mechanical explanation” of science with the “intellectual description” of mythology.

*The Grammar of Science* (2nd edition)

Chapter IV (pp. 113–114)

Adam & Charles Black. London, England. 1900

## N

### NAME

**Abbey, Edward** 1927–89  
American environmentalist and nature writer

...the itch for naming things is almost as bad as the itch for possessing things.

*Desert Solitaire*  
Terra Incognita: Into the Maze (p. 288)  
Ballantine Books. New York, New York, USA. 1968

**Agassiz, Jean Louis Rodolphe** 1807–73  
Swiss-born American naturalist, geologist, and teacher

The first thing to be determined about a new specimen is not its name, but its most prominent character. Until you know an animal, care not for its name.

In James Orton  
*Comparative Zoology; Structural and Systematic*  
Preceding Chapter I (p. 18)  
Harper & Brothers. New York, New York, USA. 1877

Every art and science has a language of technical terms peculiar to itself. With those terms every student must make himself familiarly acquainted at the outset; and first of all, he will desire to know the names of the objects about which he is to be engaged.

*Principles of Zoology*  
Introduction (p. xiii)  
Gould, Kendall & Lincoln. Boston, Massachusetts, USA. 1848

Nothing is more to be deprecated than an over-appreciation of technicalities, valuing the name more highly than the thing; but some knowledge of this scientific nomenclature is necessary to every student of Nature.

*Methods of Study in Natural History*  
Chapter II (p. 18)  
Ticknor & Fields. Boston, Massachusetts, USA. 1863

The names of objects in Natural History are double; that is to say, they are composed of two terms. Thus, we speak of the white-bear, the black-bear, the hen-hawk, the sparrow-hawk; or, in strictly scientific terms, we have *Felis leo*, the lion, *Felis tigris*, the tiger, *Felis catus*, the cat, *Canis lupus*, the wolf, *Canis vulpes*, the fox, *Canis familiaris*, the dog, &c.

*Principles of Zoology*  
Introduction (p. 17)  
Gould & Lincoln. Boston, Massachusetts, USA. 1867

**Agassiz, Jean Louis Rodolphe** 1807–73  
Swiss-born American naturalist, geologist, and teacher

**Gould, Augustus Addison** 1805–66  
American conchologist

Every art and science has a language of technical terms peculiar to itself. With those terms every student must make himself familiarly acquainted at the outset; and, first of all, he will desire to know the names of the objects about which he is to be engaged.

*Principles of Zoology*  
Introduction (p. 17)  
Gould & Lincoln. Boston, Massachusetts, USA. 1867

**Bates, Marston** 1906–74  
American zoologist

...most technical names still have a queer, foreign, pedantic sound, and if we see very many of them in a stretch of print we get frightened off and hastily look for something else to read.

*The Nature of Natural History*  
Chapter 1 (p. 10)  
Scribner. New York, New York, USA. 1950

**Borland, Hal** 1900–78  
American writer

There is folk poetry in the common names; but science, devoted to order and systematic knowledge, insists on classifying and defining. The poet's buttercup is the botanist's Ranunculus. If you would walk with scientist as well as poet, learn both languages.

*Beyond Your Doorstep: A Handbook to the Country*  
Chapter 15 (p. 359)  
Alfred A. Knopf. New York, New York, USA. 1962

**Carroll, Lewis (Charles Dodgson)** 1832–98  
English writer and mathematician

"What's the use of their having names," the Gnat said, "if they won't answer to them?"

"No use to them," said Alice; "but it's useful to the people that name them, I suppose."

*The Complete Works of Lewis Carroll*  
*Through the Looking-Glass*  
Chapter III (p. 173)  
The Modern Library. New York, New York, USA. 1936

"My name is Alice...."

"It's a stupid name enough!" Humpty Dumpty interrupted impatiently. "What does it mean?"

"Must a name mean something?" Alice asked doubtfully.

"Of course it must," Humpty Dumpty said with a short laugh; "my name means the shape I am.... With a name like yours, you might be any shape, almost."

*The Complete Works of Lewis Carroll*  
*Through the Looking-Glass*  
Chapter VI (p. 209)  
The Modern Library. New York, New York, USA. 1936

**Darwin, Charles Robert** 1809–82  
English naturalist

...I have lately been trying to get up an agitation (but I shall not succeed, and indeed doubt whether I have time and strength to go on with it), against the practice of Naturalists appending for perpetuity the name of the first describer to species. I look at this as a direct premium to hasty work, to naming instead of describing. A species ought to have a name so well known that the addition of the author's name would be superfluous, and a [piece] of empty vanity.... Why should Naturalists append their own names to new species, when Mineralogists and Chemists do not do so to new substances?

In Francis Darwin (ed.)  
*The Life and Letters of Charles Darwin* (Volume 1)  
 Letter to J.D. Hooker, October 6, 1848 (pp. 332–333)  
 D. Appleton & Company. New York, New York, USA. 1896

I do not think more credit is due a man for defining a species, than to a carpenter for making a box. But I am foolish and rabid against species-mongers, or rather against their vanity; it is useful and necessary work which must be done; but they act as if they had actually made the species, and it was their own property.

In Francis Darwin (ed.)  
*The Life and Letters of Charles Darwin* (Volume 1)  
 Letter to Hugh Strickland, February 4, 1849 (pp. 338–339)  
 D. Appleton & Company. New York, New York, USA. 1896

How dreadfully difficult it is to name plants.

In Francis Darwin (ed.)  
*The Life and Letters of Charles Darwin* (Volume 1)  
 Letter to J.D. Hooker, June 5, 1855 (p. 418)  
 D. Appleton & Company. New York, New York, USA. 1896

**de Montaigne, Michel Eyquem** 1533–92

French Renaissance writer

There is the name and the thing; the name is a sound, which sets a mark on and denotes the thing. The name is no part of the thing nor of its substance; 'tis an extraneous piece joined to the thing, and outside of it.

Translated by Charles Cotton  
 In William Carew Hazlitt  
*Essays of Montaigne* (Volume 2)  
 Chapter XVI (p. 390)  
 Reeves & Turner  
 London, England. 1877

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

Man, it's Witchcraft! Where in the name of all that is wonderful did you get those names?

In William S. Baring-Gould (ed.)  
*The Annotated Sherlock Holmes* (Volume 1)  
*The Valley of Fear*  
 Part I, Chapter 1 (p. 476)  
 Wings Books. New York, New York, USA. 1967

**Eliot, George (Mary Ann Evans Cross)** 1819–80

English novelist

The mere fact of naming an object tends to give definiteness to our conception of it – we have then a sign that at once calls up in our minds the distinctive qualities which mark out for us that particular object from all others.

*The George Eliot Letters* (Volume 11) (p. 251)  
 Yale University Press. New Haven, Connecticut, USA. 1954–78

**Ellis, Havelock** 1859–1939

English sexuality researcher

For even the most sober scientific investigator in science, the most thoroughgoing Positivist, cannot dispense with fiction; he must at least make use of categories, and they are already fictions, analogical fictions, or labels, which give us the same pleasure as children receive when they are told the “name” of a thing.

*The Dance of Life*  
 Chapter III, Section II (p. 94)  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1923

**Everett, Charles Carroll** 1829–1900

American theologian

[Science] must have a name for everything – some fixed, hard word, that shall stand for this one thing, and for nothing else. Thus, at first sight, any science is a mass of terms.

*The Science of Thought*  
 Second Book (p. 304)  
 De Wolfe, Fiske & Co. Boston, Massachusetts, USA. 1890

**Faraday, Michael** 1791–1867

English physicist and chemist

...I am fully aware that names are one thing and science another.

*Experimental Researches in Electricity* (Volume 1)  
 Seventh Series, 666 (p. 198)  
 Richard and John Edward Taylor. London, England. 1839–1855

**Ferris, G. F.**

No biographical data available

The proper aim is not to *name* species but to *know* them.

*Stanford University Publications: Biological Studies* (Volume 5)  
 The Principles of Systematic Entomology (p. 105)  
 Stanford University. Stanford, California, USA. 1920–53

**Gahan, A. B.**

No biographical data available

Objects without names cannot well be talked about or written about; without descriptions they cannot be identified and such knowledge as may have accumulated regarding them is sealed.

The Role of the Taxonomist in Present Day Entomology  
*Entomological Society of Washington Proceedings*, Volume 25, 1923 (p. 73)

**Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

A Pseudo-science consists of a nomenclature, with a self-adjusting arrangement, by which all positive evidence, or such as favors its doctrines, is admitted, and all negative evidence, or such as tells against it, is excluded. It is invariably connected with some lucrative practical application.

*The Professor at the Breakfast Table*

Chapter VIII (p. 249)

Ticknor & Fields. Boston, Massachusetts, USA. 1860

### Isidorus

No biographical data available

If you know not the names, the knowledge of things is wasted.

In Carl von Linné

*Critica Botanica*

Generic Names (p. 1)

The Ray Society. London, England. 1938

### Juster, Norton 1929–

American architect and writer

Words and numbers are of equal value, for, in the cloak of knowledge, one is warp and the other woof. It is no more important to count the sands than it is to name the stars.

*The Phantom Tollbooth*

Chapter 6 (p. 77)

Alfred A. Knopf. New York, New York, USA. 1989

### Lavoisier, Antoine Laurent 1743–94

French chemist

The impossibility of separating the nomenclature of a science from the science itself, is owing to this, that every branch of physical science must consist of three things; the series of facts which are the objects of the science, the ideas which represent these facts, and the words by which these ideas are expressed.

*Elements of Chemistry in a New Systematic Order*

Preface of the Author (p. xiv)

Printed for William Creech. Edinburgh, Scotland. 1790

### Le Févre, Nicholas 1615–69

No biographical data available

This Principle, as well as the others, hath received several names; for it is called Oil, Natural Fire, Light, Vital Fire, Balsom of Life and of Sulphur, and besides, many other appellations have been given by the Sons of Art, which we will not fill up this Section: According to our usual custom, we will content ourselves, with examining the nature of the thing, leaving the niceties of Names to the over-curious.

*A Complete Body of Chymistry*

Chapter III, Section IV (p. 25)

Printed for O. Pullyn. London, England. 1640

### Levi, Primo 1919–87

Italian writer and chemist

To give a name to a thing is as gratifying as giving a name to an island, but it is also dangerous: the danger consists in one's becoming convinced that all is taken care of and that once named, the phenomenon has also been explained.

Translated by Raymond Rosenthal

*Other People's Trades*

The Force of Amber (p. 138)

Summit Books. New York, New York, USA. 1989

### Linnaeus, Carl (von Linné) 1707–78

Swedish botanist

The first step of science is to know one thing from another. This knowledge consists in their specific distinctions; but in order that it may be fixed and permanent distinct names must be given to different things, and those names must be recorded and remembered.

In Sir James Edward Smith

*A Selection of the Correspondence of Linnaeus and Other Naturalists*

from the Original Manuscripts (Volume 2) (p. 460)

Longman, Hurst, Rees, Orme and Brown. London, England. 1821

The first step in wisdom is to know the things themselves; this notion consists in having the true idea of the object; objects are distinguished and known by their methodical classification and appropriate naming; therefore Classification and Naming will be the foundation of our Science.

In P. F. Stevens

*The Development of Biological Systematics: Antoine-Laurent de*

*Jussieu, Nature and the Natural System*

Chapter Nine (p. 201)

Columbia University Press. New York, New York, USA. 1994

For, even though the knowledge of the true and genuine Tree of Life, which might have delayed the coming of old age, is lost, still herbs remain and renew their flowers, and with perennial gratitude will always breathe forth the sweet memory of your names, and make them more enduring than marble, to outlive the names of kings and heroes. For wealth disappears, the most magnificent houses fall into decay, the most numerous family at some time or other comes to an end: the greatest states and the most prosperous kingdoms can be overthrown: but the whole of Nature must be blotted out before the race of plants passes away, and he is forgotten who in Botany held up the torch.

*Critica Botanica*

Generic Names (p. 68)

The Ray Society. London, England. 1938

Name and plant are two ideas, which ought to be so closely united that they cannot possibly be separated: in order to secure this, the plant ought to lend a hand to the name, and the name in its turn to the plant, while the name in its turn rejoices in the sound principle on which it was given: since there is no connexion between botanist and plant, there is also no sound principle in naming it after him: and so the naming is bad.

*Critica Botanica*

Generic Names (p. 61)

The Ray Society, London, England. 1938

### Lloyd, C. G.

No biographical data available

Botanists meet and pass rules for the naming of plants, but they cannot agree on any set of rules, and never will as long as the members are vitally interested in the particular rules that perpetuate their own names and the plant names that have been proposed by themselves.

Personal Names in Nomenclature

*The American Botanist*, Volume 4, Number 3, March, 1903 (p. 48)

### Melville, Herman 1819–91

American novelist

I wonder whether mankind could not get along without all those names which keep increasing every day, and hour, and moment; till at last the very air will be full of them; and even in a great plain men will be breathing each other's breath, owing to the vast multitude of words they use that consume all of the air.... But people seem to have a great love for names; for to know a great many names seems to look like knowing a good many things.

*Redburn*

Chapter XIII

A. & C. Boni. New York, New York, USA. 1924

### Mill, John Stuart 1806–73

English political philosopher and economist

Mankind in all ages have had a strong propensity to conclude that wherever there is a name, there must be a distinguishable separate entity corresponding to the name ...

*A System of Logic, Ratiocinative and Inductive*

Book V, Chapter III (p. 463)

Harper & Brothers Publishers. New York, New York, USA. 1867

### Page, Jake

No biographical data available

To name something is, in a sense, to own it.... [It] has been said that it is only by its name that anything can enter into thought and discourse. Naming, in other words, is a serious business.

*Pastorale: A Natural History of Sorts*

What Is in a Name? (p. 119)

W.W. Norton & Company, Inc. New York, New York, USA. 1985

### Savory, Theodore

Preface (p. vii)

English Universities Press. London, England. 1962

### Sylvester, James Joseph 1814–97

English mathematician

Perhaps I may without immodesty lay claim to the appellation of Mathematical Adam, as I believe that I have given more names (passed into general circulation) of the creatures of the mathematical reason than all the other mathematicians of the age combined.

Notes on a Proposed Addition to the Vocabulary of Ordinary Arithmetic  
*Nature*, Volume 37, Number 946, December 15, 1887 (p. 152, fn 1)

### Turnbull, Charles D.

No biographical data available

According to Genesis, "Adam gave names to all cattle and to the fowl of the air and to every beast of the field," and we have therefore authority to declare that although Father Adam named both birds and beasts, he woefully neglected the flower, and left the task to the fancy and haphazard desires of his descendants.

Concerning Nomenclature

*The American Botanist*, Volume 4, Number 3, March, 1903 (p. 45)

### Twain, Mark (Samuel Langhorne Clemens) 1835–1910

American author and humorist

Names are not always what they seem. The common Welsh name Bzjxxlwep is pronounced Jackson.

*Following the Equator* (Volume 1)

Chapter XXXVI (p. 339)

Harper & Brothers. New York, New York, USA. 1899

### Whitehead, Alfred North 1861–1947

English mathematician and philosopher

...in the garden of Eden God saw the animals before he named them; in the traditional system [of education] children named the animals before they saw them.

*Science and the Modern World*

Chapter XIII (p. 285)

The Macmillan Company. New York, New York, USA. 1929

## NATURAL HISTORY

### Agassiz, Jean Louis Rodolphe 1807–73

Swiss-born American naturalist, geologist, and teacher

...Natural History must in good time become the analysis of the thoughts of the Creator of the Universe as manifested in the animal and vegetable kingdoms, as well as in the inorganic world.

*Essay on Classification*

Chapter I, Section XXXII (p. 137)

Harvard University Press. Cambridge, Massachusetts, USA. 1962

A laboratory of Natural History is a sanctuary where nothing profane should be tolerated. I feel less agony at improprieties in churches than in a scientific laboratory.

In David Stair Jordan

*Popular Science Monthly*, Volume 40, 1891

**Borlase, William** 1696–1772  
Cornish antiquary

Natural History is the handmaid to Providence, collects into a narrow space what is distributed through the Universe, arranging and disposing the several Fossils, Vegetables and Animals, so as the mind may more readily examine and distinguish their beauties, investigate their causes, combinations, and effects, and rightly know how to apply them to the calls of private and public life.

*The Natural History of Cornwall*

The Air, Climate, Waters, Rivers, Lakes, Seas and Tides, to the Nobility and Gentry of the County of Cornwall (p. iv)  
Publisher undetermined

**Carroll, Lewis (Charles Dodgson)** 1832–98  
English writer and mathematician

In one moment I've seen what has hitherto been  
Enveloped in absolute mystery,  
And without extra charge I will give you at large  
A Lesson in Natural History.

*The Complete Works of Lewis Carroll*

*The Hunting of the Snark*

Fit the Fifth (p. 771)

The Modern Library. New York, New York, USA. 1936

English naturalist

What a splendid pursuit Natural History would be if it  
was all observing and no writing!

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 11)

Letter to J.D. Hooker, February 3, 1868 (p. 258)

D. Appleton & Company. New York, New York, USA. 1896

Nobody but a person fond of Natural History can imagine the pleasure of strolling under cocoa-nuts in a thicket of bananas and coffee-plants, and an endless number of wildflowers.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 1)

Chapter VI (pp. 201–202)

D. Appleton & Company. New York, New York, USA. 1896

**Fitz-Gerald, Charles Egerton**  
English physician

If a love of Natural History be once awakened, its study becomes the most fascinating of pursuits; every surrounding object, however familiar and commonplace, assumes a new interest; it is like the first dawn of love in the human breast, when every object takes a more roseate and lovely hue, and unlike, too often, the grosser passion, the love of nature lasts until the termination of our life.

*Semi-scientific Lectures*

First Annual Address (p. 20)

J. English. Folkstone, England. 1880

**Fleming, Donald**  
No biographical data available

For the colonial investigator himself, natural history was the ideal refuge from the more perilous enterprise of embarking upon theoretical constructions by which he would be pitched into naked competition with the best scholars of all countries. To be a forager for Linnaeus or correspondent of the Hookers might be an identity in science purchased by bondage to the local and particular; but it was also a shelter against the more bracing winds that would promptly blow upon any man who tried to grapple with undifferentiated Nature in physics.

*Proceedings of the 10th International Congress of the History of Science, Ithaca, 1962*

Science in Australia, Canada, and the United States: Some Comparative Remarks (p. 182)

Cornell University Press. Ithaca, New York, USA. 1964

**Herschel, Sir John Frederick William** 1792–1871  
English astronomer and chemist

Natural History...is either the beginning or the end of physical science.

*A Preliminary Discourse on the Study of Natural Philosophy*

Part III, Chapter I (p. 221)

Longman, Brown, Green & Longmans. London, England. 1845

Natural history may be considered in two very different lights: either, first, as a collection of facts and objects presented by nature, from the examination, analysis, and combination of which we acquire whatever knowledge we are capable of attaining both of the order of nature, and of the agents she employs for producing her ends, and from which, therefore, all sciences arise; or, secondly, as an assemblage of phenomena to be explained; of effects to be deduced from causes; and of materials prepared to our hands, for the application of our principles to useful purposes.

*A Preliminary Discourse on the Study of Natural Philosophy*

Part III, Chapter I (p. 221)

Longman, Brown, Green & Longmans. London, England. 1845

**Hobbes, Thomas** 1588–1679  
English philosopher and political theorist

The register of *knowledge of fact* is called history.... [Natural history] is the history of such facts, or effects of nature, as have no dependence on man's *will*; such as are the histories of *metals, plants, animals, regions*, and the like.

*The English Works of Thomas Hobbes of Malmesbury* (Volume 3)

The First Part, Chapter 9 (p. 71)

John Bohn. London, England. 1839

**Huxley, Thomas Henry** 1825–95  
English biologist

To a person uninstructed in natural history, his country or sea-side stroll is a walk through a gallery filled with wonderful works of art, nine-tenths of which have their faces turned to the wall. Teach him something of natural history, and you will place in his hands a catalogue of

those which are worth turning around.

*Lay Sermons, Addresses and Reviews*

On the Educational Value of the Natural History Sciences (p. 91)

D. Appleton & Company. New York, New York, USA. 1872

**Smellie, William** 1740–95

Scottish encyclopedist

Natural History is the most extensive, and perhaps the most instructive and entertaining of all the sciences.

It is the chief source from which human knowledge is derived. To recommend the study of it from motives of utility were to affront the understanding of mankind. Its importance, accordingly, in the arts of life, and in storing the mind with just ideas of external objects, as well as of their relations to the human race, was early perceived by all nations in their progress from rudeness to refinement.

In Buffon, Comte de Georges, Louis Leclerc

*Natural History, General and Particular* (Volume 1)

Preface by the Translator (p. ix)

T. Caldwell and W. Davies. London, England. 1812

## NATURAL HISTORY SURVEY

**Forbes, S. A.**

No biographical data available

I cannot too strongly emphasize the fact...that a comprehensive survey of our entire natural history is absolutely essential to a good *working knowledge* of those parts of it which chiefly attract popular attention – that is, its edible fishes, its injurious and beneficial insects, and its parasitic plants. Such a survey, however, should not stop with a study of the dead forms of nature, ending in mere lists and descriptions. To have an *applicable* value, it must treat the life of the region as an organic unit, must study it in action, and direct principal attention to the laws of its activity.

*Bulletin Illinois State Laboratory of Natural History*

The First Food of the Common Whitefish

1883

## NATURAL LAW

**Adams, George** 1750–95

English instrument maker

The end of natural philosophy is to increase either the knowledge or power of man, and enable him to understand the ways and procedure of nature. By discovering the laws of nature, he acquires knowledge, and obtains power; for when these laws are discovered, he can use them as rules of practice, to equal, subdue, or even excel nature by art.

*Lectures on Natural and Experimental Philosophy* (Volume 2)

Lecture XIV (pp. 100–101)

Printed by R. Hindmarsh. London, England. 1794

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

Dismiss the idea that natural law may swallow up religion; it cannot even tackle the multiplication table single-handed.

*Science and the Unseen World*

Lecture V (p. 58)

The Macmillan Co. New York, New York, USA. 1929

**Hopper, Grace Murray** 1906–92

American mathematician and computer scientist

If you do something once, people will call it an accident.

If you do it twice, they call it a coincidence. But do it a third time and you've just proven a natural law.

In Ethlie Ann Vare and Greg Ptacek

*Mothers of Invention: From the Bra to the Bomb*

From Eggbeaters to Eggheads (p. 187)

Morrow. New York, New York, USA. 1988

**Jevons, William Stanley** 1835–82

English economist and logician

The truth or untruth of a natural law, when carefully investigated, resolves itself into a high or low degree of probability, and this is the case whether or not we are capable of producing precise numerical data.

*The Principles of Science: A Treatise on Logic and Scientific Method*

Chapter X (p. 217)

Macmillan & Company Ltd. London, England. 1892

**Playfair, John** 1748–1819

Scottish geologist, physicist, and mathematician

Amid all the revolutions of the Globe, the economy of nature has been uniform and her laws are the only things which have resisted the general movement. The rivers and the rocks, the seas and the continents have been changed in all their parts; but the laws which direct those changes, and the rules to which they are subject, have remained invariably the same.

*The Works of John Playfair* (Volume 1)

Note XIX (p. 415)

Printed for Archibald Constable & Co. Edinburgh, Scotland 1822

**Vogt, Carl** 1817–95

German physician and naturalist

The natural laws are rude unbending powers, which have neither morals nor heart.

In Ludwig Buchner

*Force and Matter*

Chapter VI (p. 35)

Trubner & Company. London, England. 1864

**Whewell, William** 1794–1866

English philosopher and historian

When we speak of material nature as being governed by laws, it is sufficiently evident that we use the term in a manner somewhat metaphorical.

Astronomy and General Physics Considered with Reference to Natural Theology

Chapter II (p. 17)

Carey, Lea & Blanchard. Philadelphia, Pennsylvania, USA. 1833

## NATURAL LIFE

**Lowell, Percival** 1855–1916

American astronomer

To all forms of life of which we have any conception, two things in nature are vital, air and water. A planet must possess these two requisites to be able to support any life at all upon its surface. For there is no creature, no plant, no anything endowed with the possibility of that kind of change we call life, which is not in some measure dependent upon both of them.

*Mars*

Chapter II (p. 31)

Longmans, Green & Co. London, England. 1896

## NATURAL PHILOSOPHER

**Heaviside, Oliver** 1850–1925

English electrical engineer, mathematician, and physicist

For my part I always admired the old fashioned term “natural philosopher.” It was so dignified, and raised up visions of the portraits of Count Rumford, Young, Herschel, Sir H. Davy, &c., usually highly respectable-looking elderly gentlemen, with very large bald heads, and much wrapped up about the throats, sitting in their studies pondering calmly over the secrets of nature revealed to them by their experiments. There are no natural

*Electromagnetic Theory* (Volume 1)

Chapter I (p. 5)

D. van Nostrand Co. New York, New York, USA. 1893

**Herschel, Sir John Frederick William** 1792–1871

English astronomer and chemist

Accustomed to trace the” operation of general causes, and the exemplification of general laws, in circumstances where the uninformed and unenquiring eye perceives neither novelty nor beauty, he [the natural philosopher] walks in the midst of wonders: every object which falls in his way elucidates some principle, affords some instruction, and impresses him with a sense of harmony and order.

*A Preliminary Discourse on the Study of Natural Philosophy*

Part I, Chapter I (p. 15)

Longman, Brown, Green & Longmans. London, England. 1845

To the natural philosopher there is no natural object unimportant or trifling.

*A Preliminary Discourse on the Study of Natural Philosophy*

Part I, Chapter I (p. 14)

Longman, Brown, Green & Longmans. London, England. 1845

**Schoedler, Friedrich Karl Ludwig** 1813–84

No biographical data available

To the natural philosopher to whom the whole extent of nature belongs, all the individual branches of science constitute the links of an endless chain, from which not a single link can be detached without destroying the harmony of the whole.

*The Book of Nature: An Elementary Introduction to the Sciences of Physics*

Astronomy (p. 140)

Sheldon & Co. Publishers. New York, New York, USA. 1870

**Swann, William Francis Gray** 1884–1962

English physicist

The place of the mathematician, of the dreamer, in natural philosophy, is not always apparent to the layman.

*Annual Report of the Board of Regents of the Smithsonian Institution* (1928)

Three Centuries of Natural Philosophy (p. 238)

Government Printing Office. Washington, D.C. 1929

## NATURAL SCIENCE

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

We need scarcely add that the contemplation in natural science of a wider domain than the actual leads to a far better understanding of the actual.

*The Nature of the Physical World*

Chapter XXII (pp. 266–267)

The Macmillan Company. New York, New York, USA. 1930

**Faraday, Michael** 1791–1867

English physicist and chemist

I do not think that the study of natural science is so glorious a school for the mind that, with the laws impressed on all created things by the Creator, and the wonderful unity and stability of matter and the forces of matter, there cannot be a better school for the education of the mind.

In Sir Richard Arman Gregory

*Discovery; or, The Spirit and Service of Science*

Chapter I (p. 13)

Macmillan & Company Ltd. London, England. 1918

**Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

Natural science always presupposes man, and we must become aware of the fact that...we are not only spectators but also always participants on the stage of life.

*Daedalus*

The Representation of Nature in Contemporary Physics Summer 1958 (p. 100)

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

...science conceived as resting on mere sense-perception, with no other source of observation, is bankrupt, so far as

concerns its claim to self-sufficiency. Science can find no individual enjoyment in nature: Science can find no aim in nature: Science can find no creativity in nature; it finds mere rules of succession. These negations are true of Natural Science. They are inherent in its methodology.

*Modes of Thought*

Chapter III, Lecture Eight (p. 211)

The Macmillan Company. New York, New York, USA. 1938

## NATURAL SCIENCE, STUDENT OF

**Eliot, Charles William** 1834–1926

American academic

The student of natural science scrutinizes, touches, weighs, measures, analyzes, dissects, and watches things. By these exercises his powers of observation and judgment are trained, and he acquires the precious habit of observing the appearances, transformations, and processes of nature. Like the hunter and the artist, he has open eyes and an educated judgment in seeing. He is at home in some large tract of nature's domain.

*Educational Reform: Essays and Addresses*

What is a Liberal Education? (p. 110)

The Century Co. New York, New York, USA. 1905

## NATURAL SELECTION

**Bateson, William** 1861–1926

English biologist and geneticist

Natural Selection is stern, but she has her tolerant moods.

In A.C. Seward

*Darwin and Modern Science*

Heredity and Variation in Modern Lights (p. 100)

University Press. Cambridge, England. 1910

**Crick, Francis Harry Compton** 1916–2004

English biochemist

Once we have become adjusted to the idea that we are here because we have evolved from simple chemical compounds by a process of natural selection, it is remarkable how many of the problems of the modern world take on a completely new light.

*Of Molecules and Men*

The Prospect Before Us (p. 93)

University of Washington Press. Seattle, Washington, USA. 1966

**Darwin, Charles Robert** 1809–82

English naturalist

To suppose that the eye with all its inimitable contrivances for adjusting the focus to different distances, for admitting different amounts of light, and for the correction of spherical and chromatic aberration, could have been formed by natural selection, seems, I freely confess, absurd in the highest degree.

In *Great Books of the Western World* (Volume 49)

*The Origin of Species by Means of Natural Selection*

Chapter VI (p. 185)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

We can no longer argue that, for instance, the beautiful hinge of a bivalve must have been made by an intelligent being, like the hinge of a door by man. There seems to be no more design in the variability of organic beings, and in the action of natural selection, than in the course which the wind blows.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 1)

Chapter VIII (p. 279)

D. Appleton & Company. New York, New York, USA. 1896

When we descend to details, we can prove that no one species has changed (*i.e.*, we cannot prove that a single species has changed); nor can we prove that the supposed changes are beneficial, which is the groundwork of the theory. Nor can we explain why some species have changed and others have not.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 2)

Chapter IV (p. 210)

Letter to G. Bentham, May 22, 1863

D. Appleton & Company. New York, New York, USA. 1887

But then arises the doubt, can the mind of man, which has, as I fully believe been developed from a mind as low as that possessed by the lowest animal, be trusted when it draws such grand conclusions?

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 1)

Chapter VIII (p. 282)

D. Appleton & Company. New York, New York, USA. 1896

I could show fight on natural selection having done and doing more for the progress of civilization than you seem inclined to admit. Remember what risk the nations of Europe ran, not so many centuries ago of being overwhelmed by the Turks, and how ridiculous such an idea now is! The more civilised so-called Caucasian races have beaten the Turkish hollow in the struggle for existence. Looking to the world at no very distant date, what an endless number of the lower races will have been eliminated by the higher civilized races throughout the world.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 1)

Religion (p. 285)

Letter To W. Graham, July 3rd, 1881

D. Appleton & Company. New York, New York, USA. 1887

It may metaphorically be said that natural selection is daily and hourly scrutinising, throughout the world, the slightest variations; rejecting those that are bad, preserving and adding up all that is good; silently and insensibly working, whenever and wherever opportunity offers, at the improvement of each organic being in relation to its

organic and inorganic condition of life. We see nothing of these slow changes in progress, until the hand of time has marked the long lapse of ages...

In *Great Books of the Western World* (Volume 49)

*The Origin of Species by Means of Natural Selection*

Chapter IV (p. 42)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Slow though the process of selection may be, if feeble man can do much by artificial selection, I can see no limit to the amount of change, to the beauty and complexity of the coadaptations between all organic beings, one with another and with their physical conditions of life, which may have been effected in the long course of time through nature's power of selection...

In *Great Books of the Western World* (Volume 49)

*The Origin of Species by Means of Natural Selection*

Chapter IV (p. 52)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

As buds give rise by growth to fresh buds, and these, if vigorous, branch out and overtop on all sides many a feebler branch, so by generation I believe it has been with the great Tree of Life, which fills with its dead and broken branches the crust of the earth, and covers the surface with its ever branching and beautiful ramifications.

In *Great Books of the Western World* (Volume 49)

*The Origin of Species by Means of Natural Selection*

Chapter IV (p. 64)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...extinction and natural selection go hand in hand.

In *Great Books of the Western World* (Volume 49)

*The Origin of Species by Means of Natural Selection*

Chapter VI (p. 80)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

If it could be demonstrated that any complex organ existed, which could not possibly have been formed by numerous, successive, slight modifications, my theory would absolutely break down.

In *Great Books of the Western World* (Volume 49)

*The Origin of Species by Means of Natural Selection*

Chapter VI (p. 87)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

But just in proportion as this process of extermination has acted on an enormous scale, so must the number of intermediate varieties, which have formerly existed, be truly enormous. Why then is not every geological formation and every stratum full of such intermediate links? Geology assuredly does not reveal any such finely graduated organic chain; and this, perhaps, is the most obvious and serious objection which can be urged against the theory. The explanation lies, as I believe, in the extreme imperfection of the geological record.

In *Great Books of the Western World* (Volume 49)

*The Origin of Species by Means of Natural Selection*

Chapter X (p. 152)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

By the theory of natural selection all living species have been connected with the parent-species of each genus by differences not greater than we see between the varieties of the same species at the present day; and these parent-species, now generally extinct, have in their turn been similarly connected with more ancient species; and so on backwards, always converging to the common ancestor of each great class. So that the number of intermediate and transitional links, between all living and extinct species, must have been inconceivably great. But assuredly, if this theory be true, such have lived upon this earth.

In *Great Books of the Western World* (Volume 49)

*The Origin of Species by Means of Natural Selection*

Chapter X (p. 153)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

He who rejects this view of the imperfection of the geological record, will rightly reject the whole theory. For he may ask in vain where are the numberless transitional links which must formerly have connected the closely allied or representative species found in the successive stages of the same great formation?

In *Great Books of the Western World* (Volume 49)

*The Origin of Species by Means of Natural Selection*

Chapter XI (p. 179)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

As natural selection acts solely by accumulating slight, successive, favorable variations, it can produce no great or sudden modification; it can act only by very short and slow steps. Hence the canon of "*Natura non facit saltum*" [Nature does not make jumps], [to] which every fresh addition to our knowledge tends to conform, is on this theory simply intelligible.

In *Great Books of the Western World* (Volume 49)

*The Origin of Species by Means of Natural Selection*

Chapter XV (p. 235)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

[Evolution by natural selection] absolutely depends on what we in our ignorance call spontaneous or accidental variability. Let an architect be compelled to build an edifice with uncut stones, fallen from a precipice. The shape of each fragment may be called accidental. Yet the shape of each has been determined...by events and circumstances, all of which depend on natural laws; but there is no relation between these laws and the purpose for which each fragment is used by the builder. In the same manner the variations of each creature are determined by fixed and immutable laws; but these bear no relation to the living structure which is slowly built up through the power of selection.

*The Variation of Animals and Plants Under Domestication*

Chapter XXI (p. 236)

D. Appleton & Company. New York, New York, USA. 1896

**Dawkins, Richard** 1941–

English ethologist, evolutionary biologist, and popular science writer

All appearances to the contrary, the only watchmaker in nature is the blind forces of physics, albeit deployed in a very special way. A true watchmaker has foresight: he designs his cogs and springs, and plans their interconnections, with a future purpose in his mind's eye. Natural selection, the blind, unconscious, automatic process which Darwin discovered, and which we now know is the explanation for the existence and apparently purposeful form of all life, has no purpose in mind. It has no mind and no mind's eye. It does not plan for the future. It has no vision, no foresight, no sight at all. If it can be said to play the role of the watchmaker in nature, it is the blind watchmaker.

*The Blind Watchmaker*

Chapter 1 (p. 5)

W.W. Norton &amp; Company, Inc. New York, New York, USA. 1986

As an academic scientist I am a passionate Darwinian, believing that natural selection is, if not the only driving force in evolution, certainly the only known force capable of producing the illusion of purpose which so strikes all who contemplate nature.

*A Devil's Chaplain: Reflections on Hope, Lies, Science, and Love* (p. 10)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 2003

It is forever true that DNA is a double helix, true that if you are a chimpanzee (or an octopus or a kangaroo) [and] trace your ancestors back far enough you will eventually hit a shared ancestor. To a pedant, these are still hypotheses which might be falsified tomorrow. But they never will be.

*A Devil's Chaplain: Reflections on Hope, Lies, Science, and Love* (pp. 17–18)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 2003

Darwin's achievement, like Einstein's, is universal and timeless.

*A Devil's Chaplain: Reflections on Hope, Lies, Science, and Love* (p. 79)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 2003

Maybe we are neo-Darwinists today, but let us spell neo with a very small n! Our neo-Darwinism is very much in the spirit of Darwin himself.

*A Devil's Chaplain: Reflections on Hope, Lies, Science, and Love* (p. 80)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 2003

Natural selection is the only workable explanation for the beautiful and compelling illusion of "design" that pervades every living body and every organ. Knowledge of evolution may not be strictly useful in everyday commerce. You can live some sort of life and die without ever hearing the name of Darwin. But if, before you die, you want to understand why you lived in the first place, Darwinism is the one subject that you must study.

In John Maynard Smith

*The Theory of Evolution*

Forward (p. xvi)

Penguin Books Ltd. Harmondsworth, England. 1958

**Fabre, Jean-Henri** 1823–1915

French entomologist and author

The law of natural selection impresses me with the vastness of its scope; but, whenever I try to apply it to actual facts, it leaves me whirling in space, with nothing to help me to interpret realities. It is magnificent in theory, but it is a mere gas-bubble in the face of existing conditions. It is majestic, but sterile. Then where is the answer to the riddle of the world? Who knows? Who will ever know?

Translated by Alexander Teixeira de Mattos

*Bramble Bees and Others*

Chapter 1 (p. 30)

Dodd, Mead &amp; Co. New York, New York, USA. 1915

**Fisher, Sir Ronald Aylmer** 1890–1962

English statistician and geneticist

Natural Selection is not Evolution. Yet, ever since the two words have been in common use, the theory of Natural Selection has been employed as a convenient abbreviation for the Theory of Evolution by means of Natural Selection.... This has had the unfortunate consequences that the theory of Natural Selection itself has scarcely ever, if ever, received separate consideration.

*The Genetical Theory of Natural Selection*

Preface (p. vii)

Dover Publications, Inc. New York, New York, USA. 1958

We may consequently state the fundamental theorems of Natural Selection in the form:

The rate of increase in fitness of any organism at any time is equal to its genetic variance in fitness at that time.

*The Genetical Theory of Natural Selection*

Chapter II (p. 37)

Dover Publications, Inc. New York, New York, USA. 1958

The million, million, million...to one chance happens once in a million, million, million...times no matter how surprised we may be that it results in us.

In K. Mather

*Heredity*, Volume 30, 1973

...it was Darwin's chief contribution, not only to Biology but to the whole of natural science, to have brought to light a process by which contingencies a priori improbable, are given, in the process of time, an increasing probability, until it is their non-occurrence rather than their occurrence which becomes highly improbable.... Let the reader...attempt to calculate the prior probability that a hundred generations of his ancestry in the direct male line should each have left at least one son. The odds against such a contingency as it would have appeared to his hundredth ancestor (about the time of King Solomon) would require for their expression forty-four figures of the decimal notation; yet this improbable event has certainly happened.

In J.S. Huxley, A.C. Hardy and E.B. Ford (eds.)

*Evolution as a Process*

Retrospect of Criticisms of the Theory of Natural Selection (p. 91)

George Allen &amp; Unwin Ltd. London, England. 1954

**Ford, E. B.** 1901–88  
English ecological geneticist

...organisms automatically generate their own cycles of abundance and rarity and...the changes in selection pressures with which these are associated may greatly increase the speed of evolution.

*Ecological Genetics*

Chapter 3 (p. 34)

Chapman & Hall Ltd. London, England. 1971

**Gould, Stephen Jay** 1941–2002

American paleontologist, evolutionary biologist, and historian of science

Natural selection can only produce adaptation to immediately surrounding (and changing) environments. No feature of such local adaptation should yield any expectation of general progress (however such a vague term be defined). Local adaptation may as well lead to anatomical simplification as to greater complexity.

*Full House*

Chapter 12 (p. 139)

Harmony Books. New York, New York, USA. 1996

The theory of natural selection would never have replaced the doctrine of divine creation if evident, admirable design pervaded all organisms. Charles Darwin understood this, and he focused on features that would be out of place in a world constructed by perfect wisdom.... Darwin even wrote an entire book on orchids to argue that the structures evolved to ensure fertilization by insects are jerry-built of available parts used by ancestors for other purposes. Orchids are Rube Goldberg machines; a perfect engineer would certainly have come up with something better.

This principle remains true today. The best illustrations of adaptation by evolution are the ones that strike our intuition as peculiar or bizarre.

*Ever Since Darwin: Reflections in Natural History*

Chapter 10. Organic Wisdom or Why Should a Fly Eat Its Mother from Inside (p. 91)

W.W. Norton & Company, Inc. New York, New York, USA. 1977

**Hamilton, William D.** 1936–

English ethologist, evolutionary biologist, and popular science writer

To express the matter more vividly, in the world of our model organisms, whose behavior is determined strictly by genotype, we expect to find that no one is prepared to sacrifice his life for any single person, but that everyone will sacrifice it when he can thereby save more than two brothers, or four half-brothers, or eight first-cousins...

*The Genetical Evolution of Social Behavior*

*The Journal of Theoretical Biology*, Volume 7, 1964 (p. 16)

With very few exceptions, the only parts of the theory of natural selection which have been supported by mathematical models admit to no possibility of the evolution of any characters which are on average to the disadvantage of the individuals possessing them. If natural selection

followed the classical model exclusively, species would not show any behavior more positively social than the coming together of the sexes and parental care.

*The Genetical Evolution of Social Behavior*

*The Journal of Theoretical Biology*, Part I, Volume 7, 1964

**Jacob, François** 1920–

French biologist

Natural selection has no analogy with any aspect of human behavior. However, if one wanted to play with a comparison, one would have to say that natural selection does not work as an engineer works. It works like a tinkerer – a tinkerer who does not know exactly what he is going to produce ...

*Science*, Volume 196, Number 4295, 10 June, 1977 (p. 1163)

**Monod, Jacques** 1910–76

French biochemist

Drawn out of the realm of pure chance, the accident enters into that of necessity, of the most implacable certainties. For natural selection operates at the macroscopic level, the level of organisms.... In effect natural selection operates upon the products of chance and can feed nowhere else; but it operates in a domain of very demanding conditions, and from this domain chance is barred. It is not to chance but to these conditions that evolution owes its generally progressive course, its successive conquests, and the impression it gives of a smooth and steady unfolding.

*Chance and Necessity: An Essay on the Natural Philosophy of Modern Biology*

Chapter VII (pp. 118–119)

Vintage Books. New York, New York, USA. 1972

**Shaw, George Bernard** 1856–1950

Irish comic dramatist and literary critic

For “Natural Selection” has no moral significance: it deals with that part of evolution which has no purpose, no intelligence, and might more appropriately be called accidental selection, or better still, Unnatural Selection, since nothing is more unnatural than an accident. If it could be proved that the whole universe had been produced by such Selection, only fools and rascals could bear to live.

*Back to Methuselah*

Preface (p. liv)

Constable & Company Ltd. London, England. 1921

**Waddington, Conrad Hal** 1905–75

British biologist and paleontologist

The meaning of natural selection can be epigrammatically summarized as “the survival of the fittest.” Here “survival” does not, of course, mean the bodily advance of a single individual outliving Methuselah. It implies, in its present-day interpretation, perpetuation as a source for future generations. That individual “survives” best which

leaves the most offspring. Again, to speak of an animal as “fittest” does not necessarily imply that it is stronger or most healthy, or would win a beauty competition. Essentially it denotes nothing more than leaving most offspring. The general principle of natural selection, in fact, merely amounts to the statement that the individual which leaves most offspring are those which leave most offspring. It is a tautology.

*The Strategy of the Genes: A Discussion of Some Aspects of Theoretical Biology*

Chapter 3 (pp. 64–65)

George Allen & Unwin Ltd. London, England. 1957

**Wallace, Alfred Russel** 1823–1913

English humanist, naturalist, and geographer

The proof that there is a selective agency at work is, I think, to be found in the general stability of species during the period of human observation, notwithstanding the large amount of variability that has been proved to exist. If there were no selection constantly going on, why should it happen that the kind of variations that occur so frequently under domestication never maintain themselves in a state of nature? Examples of this class are white blackbirds or pigeons, black sheep, and unsymmetrically marked animals generally. These occur not unfrequently, as well as such sports as six-toed or stumptailed cats, and they all persist and even increase under domestication, but never in a state of nature; and there seems no reason for this but that in the latter case they are quickly eliminated through the struggle for existence – that is, by natural selection.

Variation and Natural Selection

*Nature*, Volume 44, Number 1144, October 1, 1891 (p. 518)

**Wallin, Ivan E.** 1883–1969

American biologist

Natural Selection, by itself, is not sufficient to determine the direction of organic evolution.... Natural Selection can only deal with that which has been formed; it has no creative powers. Any directing influence that Natural Selection may have in organic evolution, must, in the nature of the process, be secondary to some other unknown factor.

*Symbioticism and the Origin of Species*

Chapter I (p. 5)

Williams & Wilkins Company. Baltimore, Maryland, USA. 1927

**Weismann, August** 1834–1914

German biologist

It has lately become the fashion, at least among the younger school of biologists, to attach small value to natural selection, if not, indeed, to regard it as a superseded formula; mathematical proofs are demanded or, at any rate, desired.

Translated by J. Arthur Thomson and Margaret R. Thomson

*The Evolution Theory* (Volume 2)

Chapter XXXVI (p. 391)

Edward Arnold. London, England. 1904

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

Has anything arisen to show...that where the life and breeding of every individual of a species is about equally secure, a degenerative process must not inevitably supervene?...Natural Selection grips us more grimly than it ever did, because the doubts thrown upon the inheritance of acquired characteristics have deprived us of our trust in education as a means of redemption for decadent families. In our hearts we wish that the case were not so, we all hate Death and his handiwork; but the business of science is not to keep up the courage of men, but to tell the truth.

Bio-Optimism

*Nature*, Volume 52, Number 1348, August 29, 1895 (p. 411)

**Wright, Robert**

American journalist and author

...natural selection “wants” us to behave in certain ways. But, so long as we comply, it doesn’t care whether we are made happy or sad in the process, whether we get physically mangled, even whether we die. The only thing natural selection ultimately “wants” to keep in good shape is the information in our genes, and it will countenance any suffering on our part that serves this purpose.

*The Moral Animal: Why We Are the Way We Are*

Chapter 7 (pp. 162–163)

Vintage Books. New York, New York, USA. 1994

## NATURAL THEOLOGY

**Butler, Joseph** 1692–1752

English bishop and exponent of natural theology

...the only distinct meaning of the word “natural” is stated, fixed, or settled; since what is natural as much requires and presupposes an intelligent agent to render it so, *i.e.*, to effect it continually or at stated times, as what is supernatural or miraculous [requires] to effect it for once.

*The Analogy of Religion, Natural and Revealed to the Constitution and Course of Nature*

Part 2, Chapter I (p. 105)

Harper & Brothers. New York, New York, USA. 1880

## NATURAL UNITS

**Wilson, Edward O.** 1929–

American biologist and author

And so the search proceeds relentlessly for natural units until, like the true grail, they are found and all rejoice. Scientific fame awaits those who discover the lines of

fracture and the processes by which lesser natural units are joined to create larger natural units.

*The Diversity of Life*

Chapter Four (pp. 37–38)

Harvard University Press. Cambridge, Massachusetts, USA. 1992

## NATURALISM

**Dembski, William A.** 1960–

Mathematician and philosopher

Naturalism is the view that the physical world is a self-contained system that works by blind, unbroken natural laws. Naturalism doesn't come right out and say there's nothing beyond nature. Rather, it says that nothing beyond nature could have any conceivable relevance to what happens in nature. Naturalism's answer to theism is not atheism but benign neglect. People are welcome to believe in God, though not a God who makes a difference in the natural order.

*The Design Revolution: Answering the Toughest Questions About Intelligent Design*

Preface (p. 21)

InterVarsity Press. Downers Grove, Illinois, USA. 2004

**Johnson, Philip**

Law professor

The assumption of naturalism is the realm of speculative philosophy, and the rule against negative argument is arbitrary. It is as if a judge were to be charged with the crime.

Evolution as Dogma: The Establishment of Naturalism

*First Things*, October, 1990

Scientists committed to philosophical naturalism do not claim to have found the precise answer to every problem, but they characteristically insist that they have the important problems sufficiently well in hand that they can narrow the field of possibilities to a set of naturalistic alternatives.

Absent that insistence, they would have to concede that their commitment to naturalism is based upon faith rather than proof. Such a concession could be exploited by promoters of rival sources of knowledge, such as philosophy and religion, who would be quick to point out that faith in naturalism is no more "scientific" (i.e., empirically based) than any other kind of faith.

Evolution as Dogma: The Establishment of Naturalism

*First Things*, October, 1990

The worldview of scientific naturalism preserves a place for beliefs: a place, that is, among things to be explained by science. The Christian religion thus enters the university with a status precisely that of other comparable religious systems – say, the Aztec system of human sacrifice. Any individual, even a person of eminence in science, can make a personal choice to be "religious."

Such choices are made on the basis of "faith," meaning subjective preference. A problem arises only if the Aztecs or the Christians claim access to knowledge. If they do that they are claiming that their own beliefs are normative for unbelievers. Only scientists can claim that kind of authority, because what the scientific community endorses constitutes knowledge, not belief. That is why Darwinian evolution can be taught in schools as fact, however strongly parents or students object, whereas a simple prayer acknowledging God as our Creator is deemed unacceptable – because somebody might object.

How the Universities Were Lost

*First Things*, March, 1995

## NATURALIST

**Abbey, Edward** 1927–89

American environmentalist and nature writer

For I am not a naturalist.... If a label is required say that I am one who loves unfenced country. The open range. Call me a ranger... The only higher honor I've ever heard of is to be called a man.

*The Journey Home: Some Words in Defense of the American West*

Introduction (p. xiii)

E.P. Dutton. New York, New York, USA. 1977

I am – really am – an extremist, one who lives and loves by choice far out on the very verge of things, on the edge of the abyss, where this world falls off into the depths of another. That's the way I like it.

*The Journey Home: Some Words In Defense of the American West*

Introduction (p. xiv)

E.P. Dutton & Company. New York, New York, USA. 1977

**Agassiz, Jean Louis Rodolphe** 1807–73

Swiss-born American naturalist, geologist, and teacher

The education of a naturalist now consists chiefly in learning how to compare.

*Methods of Study in Natural History*

Chapter II (p. 23)

Ticknor & Fields. Boston, Massachusetts, USA. 1863

**Allen, Grant** 1848–99

Naturalist

There are two kinds of naturalists, you know.... The superior class live in London or Paris, examine everything minutely with a big microscope, tack on inches of Greek nomenclature to an insignificant mite or bit of moss, and split hairs against anybody with marvelous dexterity. That's science. It dwells in a museum. For my part I detest it. The inferior class live in Europe, Asia, Africa or America, as fate or fancy carries; and, instead of looking at everything in a dried specimen, go out into the woods with rifle on shoulder, or box in hand, and observe the birds, and beasts, and green things of the earth, as God made them, in their own

natural and lovely surroundings. That's natural history, old-fashioned, simple, commonplace natural history; and I, for my part, am an old-fashioned naturalist.

*The Tents of Shem*

Chapter I (p. 8)

Chatto & Windus. London, England. 1890

### **Barrett, Edward**

American scientist

The naturalist studies nature in all its relations in its own habitat – the woods, the field, the water, the air. The scientist removes nature from its own realm and studies it in the laboratory under the microscope.

*Famous Living Americans, With Portraits*

John Burroughs (p. 82)

Charles Webb & Co. Greencastle, Indiana, USA. 1915

### **Beard, Dan** 1850–1941

American illustrator, writer and social reformer

To the young nature student it often seems as if the old naturalists and professors who write books lie awake nights to think of difficulties which they may put in the path of the amateur. They rummage among their Latin and Greek dictionaries to find long and impossible names to hitch on to the tiniest and smallest of creatures, names which no small boy may pronounce and which no big boy loves.

*The American Boys' Book of Bugs, Butterflies and Beetles*

Chapter Three (p. 56)

J.B. Lippincott & Co. Philadelphia, Pennsylvania, USA. 1915

### **Bürgel, Bruno Hans** 1875–1948

German astronomer

A naturalist must be fitted out with a gift for shrewd observation, with a logical and preeminently philosophical mind that does not lose itself in the narrowness of his own special branch of science, but endeavors to keep a wide grasp of the whole material, fitting his deductions at the proper time and place into the great general mass.

Translated by Stella Bloch

*Astronomy for All*

Chapter II (p. 21)

Cassell & Co., Ltd. London, England. 1911

### **Darwin, Charles Robert** 1809–82

English naturalist

A naturalist's life would be a happy one if he had only to observe, and never to write.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 2)

C. Darwin to C. Lyell, June 1st [1867] (p. 248)

D. Appleton & Company. New York, New York, USA. 1896

It is well to remember that Naturalists value observations far more than reasoning...

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 2)

Darwin to Farrar, November 26, 1868 (p. 453)

D. Appleton & Company. New York, New York, USA. 1896

### **Darwin, Charles Galton** 1809–82

English naturalist

...nothing can be more improving to a young naturalist than a journey in distant countries.

*A Naturalist's Voyage*

Chapter XXI (p. 603)

John Murray. London, England. 1889

### **Einstein, Albert** 1879–1955

German-born physicist

In every naturalist there must be a kind of religious feeling; for he cannot imagine that the connections into which he sees have been thought of by him for the first time. He rather has the feeling of a child, over whom a grown-up person rules.

*Cosmic Religion, with Other Opinions and Aphorisms*

On Science (pp. 100–101)

Covici-Fiede. New York, New York, USA. 1931

### **Fitz-Gerald, Charles Egerton**

English physician

What greater difference can there be then between the dull “constitutional” along an uninteresting road, taken perhaps at the urgent instigation of some tyrannical doctor, and the happy “ramble” of the Naturalist, to whom every blade of grass, every peeping wild flower or graceful fern, every stone becomes an object of rational interest, to whom every little pond swarms with curious and interesting life ...

*Semi-scientific Lectures*

First Annual Address (p. 20)

J. English. Folkstone, England. 1880

### **Forbes, Edward** 1815–54

English naturalist

The naturalists of yore esteemed the ocean to be a treasury of wonders, and sought therein for monstrosities and organisms contrary to the law of nature, such as they interpreted it. The naturalists of our own time hold equal faith in the wonders of the sea, but seek therein rather for the links of nature's chain than for apparent exceptions.

*The Natural History of the European Seas*

Chapter I (pp. 4–5)

John van Voorst. London, England. 1859

### **Heaviside, Oliver** 1850–1925

English electrical engineer, mathematician, and physicist

...the real object of true naturalists, in Sir W. Thomson's meaning of the word, when they employ mathematics to assist them, is not to make mathematical exercises (though that may be necessary), but to find out the connections of known phenomena, and by deductive reasoning, to obtain a knowledge of hitherto unknown phenomena.

*Electromagnetic Theory* (Volume 1)

Chapter I (p. 2)

D. van Nostrand Co. New York, New York, USA. 1893

**Himstedt, Franz** 1852–1933  
German physicist

The naturalist of today is not pessimistic. If at first we are allowed to lift only a little corner of the veil with which nature has so carefully concealed the secret we pursue, we will not relinquish hope ...

*Annual Report of the Board of Regents of the Smithsonian Institution (1906)*  
Radioactivity (p. 130)  
Government Printing Office. Washington, D.C. 1907

**Hornaday, William Temple** 1854–1937  
American naturalist

The librarian who expects to store ten thousand books in such a manner that each one may be instantly available, wisely provides twenty-five alcoves and two hundred and fifty shelves; and thereafter each new accession of books is a source of joy, because the place for each volume is ready. The young naturalist without a zoological foundation is like a librarian who has no shelves and must create a place for each new book.

In Francis Rolt-Wheeler  
*The Science-history of the Universe*  
Introduction (p. xiii)  
The Current Literature Publishing Co. New York, New York, USA. 1909

**Hutton, James** 1726–97  
Scottish geologist, chemist, and naturalist

To a naturalist nothing is indifferent; the humble moss that creeps upon the stone is equally interesting as the lofty pine which so beautifully adorns the valley or the mountain: but to a naturalist who is reading in the face of rocks the annals of a former world, the mossy covering which obstructs his view, and renders undistinguishable the different species of stone, is no less than a serious subject of regret.

*Theory of the Earth: With Proofs and Illustrations* (Volume 3)  
Chapter V (p. 46)  
Geological Society. London, England. 1899

How valuable for science to have naturalists who can distinguish properly what they see, and describe intelligibly that which they distinguish.

*Theory of the Earth: With Proofs and Illustrations* (Volume 1)  
Chapter IV (p. 354)  
H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

**Jones, Thomas Rymer** 1810–80  
English zoologist

And now, gentle reader, let to hasten to the beach: the tide is near its ebb, and yonder rocks, baring their shoulders to the sunshine, seem to rest themselves in grim repose. This is the time for work. Come, boy! the fishing basket and the muslin landing-net – a hammer and an iron chisel. Mind, too, you don't forget the large glass jar with handles made of rope, wherein to put what specimens we find.

*The Aquarian Naturalist: A Manual for the Sea-side*  
Chapter I (p. 27)  
John van Voorst. London, England. 1858

**Kett, Henry** 1761–1825  
English college teacher and writer

It is the object of the naturalist to examine all the visible works of the creation; he is therefore employed in the most extensive province of human knowledge, as nature appears to have fixed no bounds to her productions.

*Elements of General Knowledge* (Volume 2)  
Chapter IV (p. 90)  
Printed by E. Bronson. Philadelphia, Pennsylvania, USA. 1805

**Linnaeus, Carl (von Linné)** 1707–78  
Swedish botanist and explorer

After he [the traveler] has commenced his journey and has become transplanted, so to speak, into a new world, he should consider it his duty to observe everything, not carelessly or at random, but so that nothing will escape his keen vision and alert attention. In describing objects he must endeavor to depict nature so faithfully that he who reads the description must needs believe he is beholding the very things himself.

In A.G. Nathorst  
*Annual Report of the Board of Regents of the Smithsonian Institution, 1908*  
Carl von Linné as a Geologist (p. 711)  
Government Printing Office. Washington, D.C. 1909

**Lydekker, Richard** 1849–1915  
English naturalist and geologist

To the more observant class of sportsmen the stay-at-home naturalist is, of necessity, indebted for most of his information with regard to the habits of large animals and their adaptation to their inanimate environment.

*Mostly Mammals, Zoological Essays*  
Part I (p. 8)  
Dodd, Mead & Co. New York, New York, USA. 1903

**Montagu, George**  
No biographical data available

As natural history has, within the last half century, occupied the attention and pens of the ablest philosophers of the more enlightened parts of the globe, there needs no apology for the following sheets; since the days of darkness are now past, when the researches of the naturalist were considered as trivial and uninteresting.

*Testacea Britannica*  
Introduction (p. 1)  
J. White. London, England. 1803

**Muir, John** 1838–1914  
American naturalist

Like Thoreau they see forests in orchards and patches of huckleberry brush, and oceans in ponds and drops of dew.

*Our National Parks*  
Chapter I (p. 2)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

**Pavlov, Ivan Petrovich** 1849–1936  
Russian physiologist

For the naturalist everything lies in the method, in the chance of obtaining an unshakeable, lasting truth; and solely from this point of view, which for him is obligatory, the soul, as a naturalistic principle, is not only unnecessary but even harmful to his work, in vain limiting his courage and the depth of his analysis.

*Experimental Psychology and Other Essays*  
Experimental Psychology and Psychopathology in Animals (p. 168)  
Philosophical Library. New York, New York, USA. 1957

**Peattie, Donald Culross** 1898–1964  
American botanist, naturalist, and author

When a naturalist is thoroughly comfortable and settled, it is time to uproot him.

*Flowering Earth*  
Chapter 13 (p. 162)  
G.P. Putnam's Sons. New York, New York, USA. 1939

**Peirce, Charles Sanders** 1839–1914  
American scientist, logician, and philosopher

A great naturalist, as well as I can make out, is a man whose capacious skull allows of his being on the alert to a hundred different things at once, this same alertness being connected with a power of seeing the relations between different complicated sets of phenomena when they are presented in their entirety.

In A.G. Sedgwick  
*The 19th Century: A Review of Progress During the Past One Hundred Years in the Chief Departments of Human Activity*  
The Century's Great Men in Science (p. 321)  
G.P. Putnam's Sons. New York, New York, USA. 1901

**Pouchet, Félix Archimède** 1800–72  
French biologist

When we read the works of naturalists, and see them penetrating so deeply into the most hidden secrets of the anatomy and manners of beings, the mere existence of which the eye could not lead us to suspect, we are apt to

*The Universe: Or, The Infinitely Great and the Infinitely Little*  
Book I (p. 8)  
Blackie & Son. London, England. 1870

**Riley, James Whitcomb** 1849–1916  
American poet

In gentlest worship has he bowed  
To Nature. Rescued from the crowd  
And din of town and thoroughfare,  
He turns him from all worldly care  
Unto the sacred fastness of

The forest, and the peace and love  
That beats there prayer-like in the breeze.  
*The Complete Works of James Whitcomb Riley* (Volume 7)  
*The Naturalist*

P.F. Collier & Son, Company. New York, New York, USA. 1916

**Roberts, Mary** 1788–1864  
English botanist and author

The objects which engage the attention of the naturalist, succeed each other like the moving pictures in La Fata Morgana of the Sicilians.

*The Sea-side Companion; or, Marine Natural History*  
Letter V (p. 36)  
Printed for Whittaker & Co. London, England. 1835

**Rolt-Wheeler, Francis** 1876–1960  
No biographical data available

The young naturalist without a zoological foundation is like a librarian who has no shelves and must create a place for each new book.

*The Science-history of the Universe*  
Introduction (p. xiii)  
The Current Literature Publishing Co. New York, New York, USA. 1910

**Rowland, Henry Augustus** 1848–1901  
American physicist

The only qualifications required for the study of Nature's story-book are devotion to truth, and sincerity of spirit; all the other qualities will come to the possessor of these, and a habit of mind will be developed that tries to face all facts squarely and honestly, despises shams and false conventions, and exposes superstition whenever it is encountered.

*Discovery, Or, The Spirit and Service of Science*  
Chapter III (p. 44)  
Macmillan & Co Ltd. London, England. 1916

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

Man cannot afford to be a naturalist, to look at Nature directly, but only with the side of his eye. He must look through and beyond her. To look at her is as fatal as to look at the head of Medusa. It turns the man of science to stone.

*The Journal of Henry David Thoreau*  
March 23, 1853 (p. 43)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1906

**Whately, Richard** 1787–1863  
English theologian

Most naturalists arrange the volumes of the great book of nature, and then forget to peruse them.

In Elizabeth Jane Whately  
*Miscellaneous Remains from the Commonplace Book of Richard Whately, D.D.*  
Apothegm 29 (p. 3)  
Longman, Green, Longman, Roberts & Green. London, England. 1865

**Wilson, Edward O.** 1929–  
American biologist and writer

For the naturalist every entrance into a wild environment rekindles an excitement that is childlike in spontaneity,

often tinged with apprehension – in short, the way life ought to be lived, all the time.

*The Future of Life*

Chapter 6 (p. 146)

Alfred A. Knopf. New York, New York, USA. 2002

## NATURE

**Abbey, Edward** 1927–89

American environmentalist and nature writer

I am here not only to evade for a while the clamor and filth and confusion of the cultural apparatus but also to confront, immediately and directly, if it's possible, the bare bones of existence, the elemental and fundamental, the bedrock which sustains us. I want to be able to look at and into a juniper tree, a piece of quartz, a vulture, a spider, and see it as it is in itself, devoid of all humanly ascribed qualities, anti-Kantian, even the categories of scientific description. To meet God or Medusa face to face, even if it means risking everything human in myself. I dream of a hard and brutal mysticism in which the naked self merges with a nonhuman world and yet somehow survives still intact, individual, separate. Paradox and bedrock.

*Desert Solitaire*

The First Morning (p. 6)

Ballantine Books. New York, New York, USA. 1968

There are no vacant lots in nature.

*Desert Solitaire*

Down the River (p. 189)

Ballantine Books. New York, New York, USA. 1968

There are enough cathedrals and temples and altars here for a Hindu pantheon of divinities. Each time I look up one of the secretive little side canyons I half expect to see not only the cottonwood tree rising over its tiny spring – the leafy god, the desert's liquid eye – but also a rainbow-colored corona of blazing light, pure spirit, pure being, pure disembodied intelligence, about to speak my name. If a man's imagination were not so weak, so easily tired, if his capacity for wonder not so limited, he would abandon forever such fantasies of the supernal. He would learn to perceive in water, leaves and silence more than sufficient of the absolute and marvelous, more than enough to console him for the loss of the ancient dreams.

*Desert Solitaire*

Down the River (p. 200)

Ballantine Books. New York, New York, USA. 1968

**Ackerman, Diane** 1948–

American writer

Nature neither gives nor expects mercy.

*The Moon by Whale Light, and Other Adventures Among Bats and Crocodilians, Penguins and Whales*

Chapter 4 (pp. 239–240)

Random House, Inc. New York, New York, USA. 1991

Just because we have evolved minds that crave order doesn't mean that nature is orderly. Evolution is a sleeping watchdog. It is possible for us to disturb it, or it may wake on its own. Either way, expect commotion.

*The Rarest of the Rare: Vanishing Animals, Timeless Worlds*

Introduction (p. xii)

Vintage Books. New York, New York, USA. 1997

[N]ature is also great fun. To pretend that nature isn't fun is to miss much of the joy of being alive...

*The Rarest of the Rare: Vanishing Animals, Timeless Worlds*

Introduction (p. xx)

Vintage Books. New York, New York, USA. 1997

**Ackoff, Russell Lincoln** 1919–

American operations research and systems scientist

Nature is not organized in the same way that universities are.

Toward an Idealized University

*Management Science*, Volume 15, December, 1970 (p. B-127)

**Adams, George** 1750–95

English instrument maker

Man has before him all nature, the whole world with which he is surrounded for the object of his view, and the subject of his consideration; but his capacity is so circumscribed, his knowledge so straightened, his powers so limited, that he can by no means conceive the mechanism of so vast and complicate a structure.

*Lectures on Natural and Experimental Philosophy* (Volume 3)

Chapter XXXV (p. 510)

Printed by R. Hindmarsh. London, England. 1794

**Addison, Joseph** 1672–1719

English essayist, poet, and statesman

If there's a power above us, (and that there is all nature cries aloud through all her works) he must delight in virtue.

*Cato*

Act V, Scene 1

J. Dicks. London, England. 1883

...when Nature is in her desolation, and presents us with nothing but bleak and barren prospects, there is something unspeakably cheerful in a spot of ground which is covered with trees that smile amidst all the rigors of winter, and give us a view of the most gay season in the midst of that which is the most dead and melancholy.

*The Spectator*, Volume VII, Number 477, September 6, 1712 (pp. 19–20)

**Agassiz, Jean Louis Rodolphe** 1807–73

Swiss-born American naturalist, geologist, and teacher

As long as men inquire, they will find opportunities to know more upon these topics than those who have gone before them, so inexhaustibly rich is nature in the innermost diversity of her treasures of beauty, order, and intelligence.

*Essay on Classification*

Chapter II, Section I (p. 141)

Harvard University Press. Cambridge, Massachusetts, USA. 1962

...it must be for truth's sake, and not even for the sake of its usefulness to humanity, that the scientific man studies Nature.

*Methods of Study in Natural History*

Chapter II (p. 24)

Ticknor & Fields. Boston, Massachusetts, USA. 1863

...Nature does not open her sanctuary without exacting due penance from her votaries.

*Methods of Study in Natural History*

Chapter XVI (p. 297)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1896

**Aldrich Thomas Bailey** 1836–1907

American writer and editor

Nature, who loves to do a gentle thing even in her most savage moods, had taken one of those empty water-courses and filled it from end to end with forget-me-nots.

*Queen of Sheba*

IX (p. 205)

J.R. Osgood & Company. Boston, Massachusetts, USA. 1877

**Allen, Grant** 1848–99

Canadian-born writer

...Nature as a whole is intensely utilitarian; each kind fights for its own hand alone, and regards as little the feelings of other kinds as the fisherman regards the feelings of herrings, or as the fishmonger minds the objection of lobsters to be boiled alive for our human convenience.

*Flashlights on Nature*

Chapter IV (p. 70)

Doubleday, Page & Co. New York, New York, USA. 1905

**Anderson, Lorraine**

American nature writer

Nature has been for me, for as long as I can remember, a source of solace, inspiration, adventure, and delight; a home, a teacher, a companion.

*Sisters of the Earth: Women's Prose and Poetry About Nature*

Preface

Vintage Books. New York, New York, USA. 1991

**Areopagus**

If the structure of the world with all its order and beauty is only an effect of matter left to its own universal laws of motion, and if the blind mechanics of the natural forces can evolve so glorious a product out of chaos, and can attain to such perfection of themselves, then the proof of the Divine Author which is drawn from the spectacle of the beauty of the universe wholly loses its force. Nature is thus sufficient for itself; the Divine government is unnecessary; Epicurus lives again in the midst of Christendom, and a profane philosophy tramples underfoot the faith which furnishes the clear light needed to illuminate it.

Translated by W. Hastie

Quoted in Kant's *Cosmogony*

*Kant's Cosmogony*

Preface (p. 18)

James Maclehose & Sons. Glasgow, Scotland. 1900

**Aristotle** 384 BCE–322 BCE

Greek philosopher

Nature proceeds little by little from things lifeless to animal life in such a way that it is impossible to determine the exact line of demarcation, nor on which side thereof an intermediate form should lie.

In *Great Books of the Western World* (Volume 8)

*History of Animals*

Book VIII, Chapter 1

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

No one finds fault with defects which are the result of nature.

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Arnold, Matthew** 1822–88

English poet and critic

Nature's great law,  
and law of all men's minds? –

To its own impulse every creature stirs;

Live by thy light, and earth will live by hers!

*The Poetical Works of Matthew Arnold*

Religious Isolation

Stanza 4

Oxford University Press, Inc. New York, New York, USA. 1950

Man must begin, know this, where Nature ends; Nature and man can never be fast friends.

*The Poetical Works of Matthew Arnold*

In *Harmony with Nature*, l. 12–13

Oxford University Press, Inc. New York, New York, USA. 1950

Know, man hath all which Nature hath, but more,  
And in that more lie all his hopes of good.

Nature is cruel, man is sick of blood;

Nature is stubborn, man would fain adore.

*The Poetical Works of Matthew Arnold*

In *Harmony with Nature*

Oxford University Press, Inc. New York, New York, USA. 1950

**Atwater, Caleb** 1778–1867

American educator and archaeologist

Nature has already done her part, for this region, and man has done, is doing and will continue to do his, to make it all that man can ever desire it to be, forever ...

*A History of the State of Ohio, Natural and Civil*

Part I, Little Miami (p. 49)

Glezen & Shephard. Cincinnati, Ohio, USA. 1838

**Audubon, John James** 1785–1851

West Indian-born American ornithologist and artist

From Nature! – How often are these words used, when at a glance he who has seen the perfect and beautiful forms of birds, quadrupeds or other objects, as they have come from the hand of Nature, discovers that the representation is not that of living Nature!

*Ornithological Biography* (Volume 1)  
The Yellow-Billed Cuckoo (p. 18)  
Adam Black. Edinburgh, Scotland. 1831

**Austen, Jane** 1775–1817  
English novelist

...how astonishing a variety of nature! In some countries we know the tree that sheds its leaf is the variety, but that does not make it less amazing, that the same soil and the same sun should nurture plants differing in the first rule and law of their existence.

*Mansfield Park*  
Chapter IV (p. 185)  
Richard Bentley. London, England. 1833

### Author undetermined

The heavens and the earth are as nothing to man, if they do not excite his awe and call forth his thanksgiving. We might almost suppose that it is for this purpose that the sea rolls its waves on the shore, and the violet smiles by the wayside, and the moon floods the night with its silver radiance.

*The Story of The Herschels: A Family of Astronomers*  
Chapter I  
T. Nelson & Sons. London, England. 1889

**Bacon, Sir Francis** 1561–1626  
English lawyer, statesman, and essayist

Those who become practically versed in nature are, the mechanic, the mathematician, the physician, the alchemist, and the magician, but all (as matters now stand) with faint efforts and meager success.

In *Great Books of the Western World* (Volume 30)  
*Novum Organum*  
First Book, Aphorism 5 (p. 107)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...we can command nature only by obeying her...

In *Great Books of the Western World* (Volume 30)  
*Novum Organum*  
First Book, Aphorism 129 (p. 135)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

In nature things move violently to their place, and then calmly in their place.

*Bacons Essays*  
Of Great Places (p. 27)  
The Macmillan Company. New York, New York, USA. 1930

...men should frequently call upon nature to render her account; that is, when they perceive that a body which was before manifest to the sense has escaped and disappeared, they should not admit or liquidate the account before it has been shown them where the body has gone to, and into what it has been received.

In James Spedding, Robert Leslie Ellis and Douglas Denon Heath

### Baron von Frankenstein (Fictional Character)

Nothing in nature is terrifying when one understands it.  
*The Son of Frankenstein*  
Film (1939)

**Barrell, Joseph** 1869–1919  
American geologist

Nature vibrates with rhythms, climatic and diastrophic, those finding stratigraphic expression ranging in period from the rapid oscillation of surface waters, recorded in ripple-mark, to those long-deferred stirrings of the deep imprisoned titans which have divided earth history into periods and eras. The flight of time is measured by the weaving of composite rhythms – day and night, calm and storm, summer and winter, birth and death – such as these are sensed in the brief life of man. But the career of the earth recedes into a remoteness against which these lesser cycles are as unavailing for the measurement of that abyss of time as would be for human history the beating of an insect's wing. We must seek out, then, the nature of those longer rhythms whose very existence was unknown until man by the light of science sought

to understand the earth. The larger of these must be measured in terms of the smaller, and the smaller must be measured in terms of years.

Rhythm and the Measurement of Geologic Time  
*Bulletin of the Geological Society of America*, Volume 28 1917 (p. 746)

**Beaumont, Francis** 1584–1616  
English playwright and dramatic poet

**Fletcher, John** 1579–1625  
Jacobean playwright

Nature too unkind;  
That made no medicine for a troubled mind!

*Philaster*  
Act III, Scene 1  
D.C. Heath. Boston, Massachusetts, USA. 1906

**Berkeley, George** 1685–1753  
Irish prelate and metaphysical philosopher

Oh nature! the genuine beauty of pure nature!

American physicist

In nature nothing remains constant. Everything is in a perpetual state of transformation, motion, and change.

*Causality and Chance in Modern Physics*  
Chapter One (p. 1)  
University of Pennsylvania Press. Philadelphia, Pennsylvania, USA. 1957

**Bohr, Niels Henrik David** 1886–1962  
Danish physicist

In our description of nature the purpose is not to disclose the real essence of phenomena but only to track down as far as possible relations between the multifold aspects of our experiences.

*Atomic Theory and the Description of Nature*  
Introductory Survey (p. 18)  
Cambridge University Press. Cambridge, England. 1934

**Borland, Hal** 1900–78  
American writer

Nature seems to look after her own only up to a certain point; beyond that they are supposed to fend for themselves.

*The Enduring Pattern*  
Life – Flesh and Blood: Amphibians (p. 185)  
Simon & Schuster. New York, New York, USA. 1959

Nothing in nature is as simple as it sometimes seems when reduced to words.

*The Enduring Pattern*  
Life – Flesh and Blood: Reptiles (p. 189)  
Simon & Schuster. New York, New York, USA. 1959

**Boyle, Robert** 1627–91  
English natural philosopher and theological writer

Nature always looks out for the preservation of the universe.

In Edward B. Davis and Michael Hunter (eds.)  
*A Free Enquiry into the Vulgarly Received Notions of Nature*  
Section IV (p. 31)  
Cambridge University Press. Cambridge, England. 1996

It is one thing to be able to help nature to produce things, and another thing to understand well the nature of the things produc'd.

*The Sceptical Chymist*

The Third Part (p. 95)

Dawsons of Pall Mall. London, England. 1965

**Bradley, Jr., John Hodgdon** 1898–1962

American geologist

Nature flips the coin with a “Heads I win – tails you lose.” She offers her children stagnation and degeneracy on the one hand, or over-specialization and extinction on the other.

*Parade of the Living*

Part III, Chapter XX (p. 290)

Coward-McCann, Inc. New York, New York, USA. 1930

**Brewster, George**

No biographical data available

She [nature] speaks the language of uniformity and consistency throughout her wide dominions, and you will never find her conduct, one time, or in one respect, at variance with her conduct in another.

*A New Philosophy of Matter, Showing the Identity of All the Imponderables*

Lecture II (p. 22)

Crocker & Brewster. Boston, Massachusetts, USA. 1843

There is no deception in nature. She is no coquette. She speaks the language of uniformity and consistency throughout her wide dominions, and you will never find her conduct, at one time, or in one respect, at variance with her conduct in another.

*A New Philosophy of Matter, Showing the Identity of All the Imponderables* (3rd edition)

Chapter IV (p. 40)

Edward H. Fletcher. New York, New York, USA. 1858

**Bridgman, Helen Bartlett**

Nature seems positively to enjoy playing pranks which turn all preconceived notions topsy-turvy.

*Gems*

How It Began (p. 5)

Brooklyn, New York, USA. 1916

**Bridgman, Percy Williams** 1882–1961

American physicist

...our conviction that nature is understandable and subject to law arose from the narrowness of our horizons, and that if we sufficiently extend our range we shall find that nature is intrinsically and in its elements neither understandable nor subject to law...

The New Vision of Science

*Harper's Magazine*, Volume 158, March, 1929 (p. 444)

**Bronowski, Jacob** 1908–74

Polish-born English mathematician and polymath

A new conception was being made...that whatever fundamental units the world is put together from, they are more delicate, more fugitive, more startling than we catch in the Butterfly Net of our senses.

*The Ascent of Man*

Chapter 11 (p. 364)

Little, Brown & Company. Boston, Massachusetts, USA. 1973

**Bronte, Charlotte** 1816–55

English author

The universal mother, Nature.

*Jane Eyre*

Chapter XXVIII (p. 320)

Harcourt, Brace & World, Inc. New York, New York, USA. 1962

**Brooks, William Keith** 1848–1908

American zoologist

Nature, as we know it, consists, in the main of permutations and combinations.

*The Foundations of Zoology*

Lecture VI (p. 128)

The Macmillan Co. New York, New York, USA. 1899

**Brown, William Hill** 1765–93

American novelist

Nature is everywhere liberal in dispensing her beauties and her variety...

*The Power of Sympathy and The Coquette*

Chapter 19 (p. 38)

Rowman & Littlefield. Lanham, Maryland, USA. 1970

**Browne, Sir Thomas** 1605–82

English writer and physician

All things are artificial, for nature is the art of God.

*Religio Medici*

Part I, Section xvi (p. 29)

Elliot Stock. London, England. 1883

There are no grotesques in nature; not anything framed to fill up empty cantons, and unnecessary spaces.

*Religio Medici*

Part XV

Elliot Stock. London, England. 1883

Now nature is not at variance with art, nor art with nature; they being both the servants of his providence. Art is the perfection of nature. Were the world now as it was the sixth day, there were yet a chaos. Nature hath made one world, and art another. In brief, all things are artificial; for nature is the art of God.

*Religio Medici*

Section 16

Elliot Stock. London, England. 1883

**Browning, Robert** 1812–89

English poet

I trust in Nature for the stable laws  
Of beauty and utility. Spring shall plant  
And Autumn garner to the end of time.  
I trust in God – the right shall be the right  
And other than the wrong, while he endures;  
I trust in my own soul, that can perceive

The outward and the inward, Nature's good  
And God's.

*The Poems and Plays of Robert Browning*

A Soul's Tragedy, Act I (p. 458)

The Modern Library. New York, New York, USA. 1934

...what I call God.

...fools call Nature...

*The Poems and Plays of Robert Browning*

The Pope, l. 1073–1074

The Modern Library. New York, New York, USA. 1934

### Bryan, J. Ingram

No biographical data available

Nature does not tolerate the whimsical and the inane; all  
her structures are on principles, and she allows no others.

*The Interpretation of Nature in English Poetry*

Chapter I (p. 6)

Kaitakusha. Tokyo, Japan. 1932

### Bryant, William Cullen 1794–1878

American poet

To him who in the love of Nature holds  
Communion with her visible forms, she speaks  
A various language.

*Poems*

Thanatopsis

D. Appleton & Company. New York, New York, USA. 1874

Go forth under the open sky, and list

To Nature's teachings.

*Poems*

Thanatopsis

D. Appleton & Company. New York, New York, USA. 1874

### Buchner, Ludwig 1824–99

German physician and philosopher

Wherever fire and water meet, vapours must arise and  
exert their irresistible power. Where the seed falls in  
the ground, there it will grow; where the thunderbolt is  
attracted, there it will strike. Can there exist any doubt  
as to these truths? No one who has only superficially  
observed the phenomena by which he is surrounded, who  
knows only superficially the results of science, can fail to  
be convinced of the necessity and unchangeableness of  
the laws of nature.

*Force and Matter*

Chapter VI (p. 35)

Trübner & Co. London, England. 1864

### Bucke, Charles 1781–1846

English writer

As there are in nature many contrasts, there are, also,  
many resemblances, though there are no likenesses.

*On the Beauties, Harmonies, and Sublimities of Nature* (Volume 3) (2nd  
edition)

Book VII, Chapter I (p. 1)

G. & W.B. Whittaker. London, England. 1823

### Burke, Edmund 1729–97

English statesman and philosopher

Nature is never more truly herself, than in her grandest  
form.

*The Works of the Right Hon. Edmund Burke: With a Biographical and  
Critical Introduction*

Letters on a Regicide Peace (p. 324)

Holdsworth & Ball. London, England. 1834

Never, no never, did nature say one thing and wisdom  
say another.

nature

*The Works of the Right Hon. Edmund Burke: With a Biographical and  
Critical Introduction* (Volume 2)

Letters on a Regicide Peace (p. 324)

Holdsworth & Ball. London, England. 1834

### Burney, Fanny 1752–1840

English novelist and diarist

...the lifeless symmetry of architecture, however beauti-  
ful the design and proportion, no man would be so mad  
as to put in competition with the animated charms of  
nature.

*Evelina*

Letter XXIII (p. 100)

J.M. Dent & Sons Ltd. London, England. 1909

### Burroughs, John 1837–1921

American naturalist and writer

Originality is Nature expressed, imitation is Nature sup-  
pressed.

*The Heart of Burroughs's Journals*

May 15, 1857 (p. 9)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1928

Nature exists for man no more than she does for mon-  
keys, and is as regardless of his life or pleasure or success  
as she is of the fleas. Her waves will drown him, her fire  
burn him, and her earth devour him, her storms and light-  
nings smite him, as if he were only a dog.

*The Heart of Burroughs's Journals*

Jan. 17, 1866 (p. 45)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1928

What is size? What is time, distance, etc., to Nature?  
Nothing. She knows no time, no space, no great, no  
small, no beginning, no end, no life, no death; that is, she  
works without reference to these things.

*The Heart of Burroughs's Journals*

Jan. 17, 1866 (p. 46)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1928

Nature will not be conquered, but gives herself freely to  
her true lover – to him who revels with her, bathes in her  
seas, sails her rivers, camps in her woods, and, with no  
mercenary ends, accepts all.

*The Heart of Burroughs's Journals*

Jan. 17, 1866 (p. 47)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1928

You find in Nature only what you bring to her. If you are joyful, she is joyful; if you are sad, she is sad. The religious soul find Nature very religious. To the scientist she means science, and to the poet she means picture and parable. She is all things to all men.

*The Heart of Burroughs's Journals*

November 27, 1878 (p. 72)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1928

Nature works with such simple means! A little more or a little of this or that, and behold the difference!

*The Breath of Life*

Chapter III (p. 55)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1915

Nature teaches more than she preaches. There are no sermons in stone. It is easier to get a spark out of a stone than a moral.

*Time and Change*

The Gospel of Nature (p. 247)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1912

Nature exists to the mind not as an absolute realization, but as a condition, as something constantly becoming.... It is suggestive and prospective; a body in motion, and not an object at rest.

Expression

*The Atlantic Monthly*, Volume 6, Number XXXVII, November, 1860 (p. 572)

Nature comes home to one most when he is at home; the stranger and traveler finds her a stranger and traveler also.

*Signs and Seasons*

Chapter I (p. 5)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1904

One goes to Nature only for hints and half truths. Her facts are crude until you have absorbed them or translated them. Then the ideal steals in and lends a charm in spite of one. It is not so much what we see as what the thing seen suggests. We all see about the same; to one it means much, to another little.

*Signs and Seasons*

Chapter I (p. 36)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1904

Man can have but one interest in nature, namely, to see himself reflected or interpreted there, and we quickly neglect both poet and philosopher who fail to satisfy, in some measure, this feeling.

*Signs and Seasons*

Chapter I (p. 37)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1904

She [Nature] works with reference to no measure of time, no limit of space, and with an abundance of material not expressed by exhaustless.

*Birds and Poets With Other Papers*

Touches of Nature (p. 62)

David Douglas Edinburgh, Scotland. 1884

Nature does not work by prefixes and suffixes, but by unfolding and ever unfolding, or developing out of latent innate powers and possibilities ...

*Studies in Nature and Literature*

The Devine Soil (p. 77)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1908

Nature does not guard against waste or delay. All time and all matter are hers, and her losses and gains are all one.

*Under The Apple Tree*

Life and Chance (p. 235)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1916

**Burton, Sir Richard Francis** 1821–90

English explorer

much to learn!

Old Nature's ways

Of glee and gloom with rapt amaze

To study, probe, and paint – brown earth,

Salt sea, blue heavens, their tilth and dearth, Birds,

grasses, trees – the natural things

That throb or grope or poise on wings.

*Memorial Day*

So Much to Learn (p. 8)

Copeland & Day. Boston, Massachusetts, USA. 1847

**Burton, Robert** 1577–1640

English clergyman and scholar

See one promontory, said Socrates of old, one mountain, one sea, one river, & see all.

*The Anatomy of Melancholy* (Volume 1)

Part I, Sect. II, Memb. IV, Subsec. 7 (p. 422)

AMS Press, Inc. New York, New York, USA. 1973

**Butler, Samuel** 1612–80

English novelist, essayist, and critic

That one great lie she told about the earth being flat, when it was round all the time – and again how she stuck to it that the sun went round us when it was we who are going round her – this double falsehood has irretrievably ruined my confidence in her. There is no lie which she will not tell and stick to like a Gladstonian. How plausibly she told her tale, and how many ages was it before she was so much as suspected, and then when things did begin to look bad for her, how she brazened it out and what a desperate business it was to bring all her shifts and prevarications to book.

*The Note-Books of Samuel Butler* (Volume 1)

1874–1883 (p. 74)

University Press of America, Inc. Lanham, Maryland, USA. 1984

**Byron, George Gordon, 6th Baron Byron** 1788–1824

English romantic poet and satirist

There is a pleasure in the pathless woods,

There is a rapture on the lonely shore,

There is society, where none intrudes,  
By the deep sea, and music in its roar:  
I love not man the less, but nature more.

*Childe Harold's Pilgrimage*  
Canto IV, clxxvii–clxxxiv  
Cassell. London, England. 1886

**Cable, George W.** 1844–1925

American writer and reformer

Shall we ever subdue Nature and make her always sub-  
missive and compliant? Who knows what man may do  
with her when once he has got self, the universal self,  
under perfect mastery?

*Bonaventure*  
Book III, XVIII (p. 291)  
Charles Scribner's Sons. New York, New York, USA. 1888

**Campbell, Jeremy C.**

No biographical data available

Evidently nature can no longer be seen as matter and  
energy alone. Nor can all her secrets be unlocked with  
the keys of chemistry and physics, brilliantly successful  
as these two branches of science have been in our cen-  
tury. A third component is needed for any explanation  
of the world that claims to be complete. To the powerful  
theories of chemistry and physics must be added a late  
arrival: a theory of information. Nature must be inter-  
preted as matter, energy, and information.

*Grammatical Man: Information, Entropy, Language and Life*  
Chapter 1 (p. 16)  
Simon & Schuster. New York, New York, USA. 1982

**Campbell, Thomas** 1777–1844

Scottish poet

There shall be love, when genial morn appears,  
Like pensive Beauty smiling in her tears,  
To watch the brightening roses of the sky,  
And muse on Nature with a poet's eye.

*The Complete Poetical Works*  
The Pleasures of Hope, Part ii, 1. 98–101  
Chadwyck-Healey. Cambridge, England. 1992

**Carlyle, Thomas** 1795–1881

English historian and essayist

Nature admits no lie; most men profess to be aware of  
this, but few in any measure lay it to heart.

*Letter-Day Pamphlets*  
No. 5 (p. 170)  
Chapman & Hall. London, England. 1850

**Cawein, Madison Julius** 1865–14

American poet

I am a part of all you see  
In Nature: part of all you feel:  
I am the impact of the bee  
Upon the blossom; in the tree

I am the sap – that shall reveal  
The leaf, the bloom – that flows and flutes  
Up from the darkness through its roots.

*Poems*  
Penetralia  
The Macmillan Company. New York, New York, USA. 1911

**Chaisson, Eric J.** 1946–

American astrophysicist

Without a brainy seat of consciousness and its inherent  
awareness of self and environment, galaxies would twirl  
and stars would shine, but no one or thing could compre-  
hend the majesty of the reality that is nature.

*The Life Era: Cosmic Selection and Conscious Evolution*  
Chapter 1 (p. 43)  
The Atlantic Monthly Press. New York, New York, USA. 1987

**Chant, A. C.**

No biographical data available

Every year we hear of large numbers of people making  
trips at the expense of much money and a great deal  
of time, in order to look upon the far-famed dress of  
Nature, or to gaze at and study the wonderful produc-  
tions, ancient And modern, of daring skilful architect or  
revered masterpainter. And I do not think that this is to  
be deplored; but, nevertheless, there is no reason why the  
most of us, who cannot afford such a great outlay, should  
sit aside and bemoan the fact; for, if ever there was a true  
saying, it is the statement that all about us, beneath our  
feet, above our head, on the right hand, on the left – yes,  
everywhere – are to be found subjects which are as well  
worth our careful attention as in the loveliest combina-  
tion of water, hill and dale that the earth can show, or, as  
is the most cleverly carved sculpture that the hand of man  
has produced.

*Papers Read Before the Mathematical and Physical Society of Toronto  
during the Year 1890–91*  
The Structure of Matter (p. 31)  
Rowsell & Hutchison. Toronto, Ontario, Canada. 1891

We manipulate nature as if we were stuffing an Alsatian  
goose. We create new forms of energy; we make new  
elements; we kill crops; we wash brains. I can hear them  
in the dark sharpening their lasers.

*The Paradox of Biochemistry*  
*Columbia Forum*, Volume 12, Number 2, Summer, 1969 (p. 18)

To the scientist nature is like a mirror that breaks every thirty  
years; and who cares about the broken glass of past times.

*The Parliament of Fowls*, l. 379  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1933

**Cherry, Colin** 1914–79  
English cognitive scientist

There is a belief amongst laymen that science purports to represent a system of absolute truth, which is furthermore wholly independent of language; that the world behaves in such and such a way according to “blind immutable laws” – forgetting that such laws are man-made and expressed in human language. Scientific laws are not sets of rules that Nature must obey...they are rules which we ourselves must accept, if we are to communicate with one another in scientific discussion.

*On Human Communication* (p. 253)  
John Wiley & Sons. New York, New York, USA. 1957

**Chiras, Daniel D.**

Oxford University Press, Inc. Oxford, England. 1987

**Coleridge, Samuel Taylor** 1772–1834  
English lyrical poet, critic, and philosopher

And what if all of animated nature  
Be but organic harps diversely fram'd,  
That tremble into thought, as o'er them sweeps,  
Plastic and vast, one intellectual breeze,  
At once the soul of each, and God of all?  
*The Complete Poetical Works of Samuel Taylor Coleridge* (Volume 1)  
The Eolian Harp, Stanza 4  
The Clarendon Press. Oxford, England. 1912

In nature there is nothing melancholy.  
*The Complete Poetical Works of Samuel Taylor Coleridge* (Volume 1)  
The Nightingale, Stanza I, l. 15  
The Clarendon Press. Oxford, England. 1912

A poet ought not to pick nature's pocket: let him borrow, and so borrow as to repay by the very act of borrowing. Examine nature accurately, but write from recollection; and trust more to your imagination than to your memory.  
*The Complete Works of Samuel Taylor Coleridge* (Volume 6)  
Dialogue between Demosius and Mystes (pp. 345–346)  
Harper & Brothers Publishers. New York, New York, USA. 1884

**Collingwood, Robin George** 1889–1943  
English historian and philosopher

...Nature was no longer a sphinx asking man riddles; it was man that did the asking, and Nature, now, that he

put to the torture until she gave him the answer to his questions.

*An Autobiography* (p. 78)

Oxford University Press. Oxford, England. 1939

**Collins, Wilkie** 1824–89

English novelist

Nature has so much to do in this world, and is engaged in generating such a vast variety of co-existent productions, that she must surely be now and then too flurried and confused to distinguish between the different processes that she is carrying on at the same time.

*The Woman in White*

Part I, Chapter VIII (p. 40)

Harper & Brothers. New York, New York, USA. 1873

**Colman, George (The Younger)** 1762–1836

English playwright

All argument will vanish before one touch of nature.

*The Poor Gentleman*

Act V, 1

J. Dicks. London, England. 1883

**Coman, Dale Rex** 1906–

American research physician and wildlife writer

My beloved planet has reminded me of my lowly and inconsequential place in her affairs, and I have no answer fit to offer, no excuses to give, no apologies I know how to phrase.

*The Endless Adventure*

The Off-Shore Islands (p. 9)

Henry Regnery Company. Chicago, Illinois, USA. 1972

Nature is neither harsh nor cruel nor sentimentally sweet and kind.

*The Endless Adventure*

From Mushrooms to Bats (p. 19)

Henry Regnery Company. Chicago, Illinois, USA. 1972

**Commoner, Barry** 1917–

American biologist, ecologist, and educator

Nature knows best.

*The Closing Circle: Nature, Man & Technology*

Chapter 2 (p. 41)

**Sousa, Wayne**

No biographical data available

If a balance of nature exists, it has proved exceedingly hard to demonstrate.

On the Evidence Needed to Judge Ecological Stability or Persistence

*The American Naturalist*, Volume 121, Number 6, June, 1983 (p. 808)

**Conrad, Joseph** 1857–1924

Polish-born English novelist

...Nature – the balance of colossal forces.... Nature – the great artist.

*Lord Jim*

Chapter XIX (p. 179)

Rinehart & Company, Inc. New York, New York, USA. 1957

**Cooke, Josiah Parsons** 1827–94

American chemist

Nature at once manifests and conceals an Infinite Presence: her methods and orderly successions are the manifestations of Omnipotent Will; her contrivances and laws the embodiment of Omniscent Thought.

*Scientific Culture: And Other Essays* (2nd edition)

Scientific Culture (p. 8)

D. Appleton & Co. New York, New York, USA. 1855

The path to the great truths which Nature hides often leads through a far denser and a more bewildering forest...but then there is not infrequently a “blaze” on the trees which points out the way, although it may require a sharp eye in a clear head to see the marks.

*Scientific Culture: And Other Essays* (2nd edition)

Scientific Culture (p. 15)

D. Appleton & Co. New York, New York, USA. 1855

**Cousins, Norman** 1912–90

American editor and writer

It is unscientific to say that within the many billions of galactic systems, ours is the only planet that supports life in advanced form. Nature shuns one of a kind as much as it abhors a vacuum. Given infinite time and space, anything that occurs at one place or time in the universe will occur elsewhere or “elsewhen.”

Rendezvous with Infinity

*Cosmic Search Magazine*, Volume 1, Number 1, January 1, 1979 (p. 30)

**Cowper, William** 1731–1800

English poet

Nature, exerting an unwearied power,  
Forms, opens, and gives scent to every flower;  
Spreads the fresh verdure of the field, and leads  
The dancing Naiads through the dewy meads.

*The Poetical Works of William Cowper*

Table Talk, l. 690

John W. Lovell Company. New York, New York, USA. No date

Nor rural sights alone, but rural sounds,  
Exhilarate the spirit, and restore  
The tone of languid Nature.

*The Poetical Works of William Cowper*

The Task

Book I, The Sofa, l. 181

John W. Lovell Company. New York, New York, USA. No date

Nature indeed looks prettily in rhyme.

*The Poetical Works of William Cowper*

Retirement, l. 576

John W. Lovell Company. New York, New York, USA. No date

**Crick, Francis Harry Compton** 1916–2004  
English biochemist

The basic trouble is that nature is so complex that many quite different theories can go some way to explaining the results.... [W]hat constraints can be used as a guide through the jungle of possible theories? It seems to me that the only useful constraints are contained in the experimental evidence.

*What Mad Pursuit: A Personal View of Scientific Discovery*  
Chapter 13 (p. 141)  
Basic Books, Inc., Publishers. New York, New York, USA. 1988

**Crookes, Sir William** 1832–1919  
English chemist and physicist

...Nature – the word that stands for the baffling mysteries of the Universe. Steadily, unflinchingly, we strive to pierce the inmost heart of Nature, from what she is to reconstruct what she has been, and to prophesy what she yet shall be. Veil after veil we have lifted, and her face grows more beautiful, august, and wonderful, with every barrier that is withdrawn.

In William Walker Atkinson  
*Practical Mind Reading*  
Lesson I (p. 9)  
Address  
British Association for the Advancement of Science, Bristol, England  
Advanced Thought Publishing Company. Chicago, Illinois, USA. 1908

**da Vinci, Leonardo** 1452–1519  
Italian High Renaissance painter and inventor

Whoever flatters himself that he can retain in his memory all the effects of Nature is deceived, for our memory is not so capacious: therefore consult Nature for everything.

*A Treatise on Painting*  
#365 (p. 156)  
J.B. Nichols and Son. London, England. 1835

Necessity is the theme and the inventress of nature, the curb and law and theme.

In Jean Paul Richter  
*The Literary Works of Leonardo da Vinci* (Volume 2)  
Philosophical Maxims, 1135 (p. 237)  
University of California Press. Berkeley, California, USA. 1977

In nature there is no effect without cause; once the cause is understood there is no need to test it by experience.

In Jean Paul Richter  
*The Literary Works of Leonardo da Vinci* (Volume 2)  
Philosophical Maxims, 1148B (p. 239)  
University of California Press. Berkeley, California, USA. 1977

Nature is constrained by the order of her own law which lives and works within her.

...  
Nature never breaks her own law.  
*Leonardo da Vinci's Note Books*  
Book I, Life (p. 55)  
Duckworth & Company. London, England. 1906

In the study of the sciences which depend on mathematics, those who do not consult nature, but authors, are not the children of nature; they are only her grandchildren. Nature alone is the master of true genius.

Quoted in David Brewster  
*The Life of Sir Isaac Newton*  
Chapter XVIII (p. 295)  
J. & J. Harper. New York, New York, USA. 1833

**Damon, William E.**  
No biographical data available

Nature throws her choicest treasures at their [visitors to the seaside] feet, but they walk over them disregardful and insensible; while it is true that some even of the commonest productions of the sea productions which are unnoticed from their very abundance would well repay careful study and patient investigation.

*Ocean Wonders:*  
*Companion for the Seaside*  
Preface (p. v)  
D. Appleton & Co. New York, New York, USA. 1879

**Darwin, Charles Robert** 1809–82  
English naturalist

Nature will tell you a direct lie if she can.

In W.I.B. Beveridge  
*The Art of Scientific Investigation*  
Chapter Two (p. 25)  
W.W. Norton & Company, Inc. New York, New York, USA. 1957

Nature...cares nothing for appearances, except insofar as they are useful to any being. She can act on every internal organ, on every shade of constitutional difference, on the whole machinery of life.

In *Great Books of the Western World* (Volume 49)  
*The Origin of Species by Means of Natural Selection*  
Chapter IV (p. 41)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

The more I study Nature, the more I become impressed with ever-increasing force that the contrivances and beautiful adaptations slowly acquired through each part, occasionally varying in a slight degree, but in many ways, with the preservation of those variations which were beneficial to the organism under complex and ever-varying conditions of life, transcend in an incomparable manner the contrivances and adaptations which the most fertile imagination of man could invent.

*The Various Contrivances by which Orchids are Fertilised by Insects*  
Chapter IX (p. 285)  
John Murray. London, England. 1904

**Darwin, Erasmus** 1731–1802  
English physician and poet

Nature may seem to have been niggardly to mankind in bestowing upon them so few senses; since a sense to have perceived electricity, and another to have perceived magnetism might have been of great service to them, many

ages before these fluids were discovered by accidental experiment, but it is possible an increased number of senses might have incommoded us by adding to the size of our bodies.

*The Botanic Garden*

Part I, Canto I (p. 19, fn l. 365)

Jones & Company, London, England. 1825

In earth, sea, air, around, below, above,  
Life's subtle woof in Nature's loom is wove,  
Points glued to points in living line extends,  
Touch'd by some goad approach the bending ends.

*The Botanic Garden*

Production of Life, Canto I, IV, l. 251–4

Jones & Company, London, England. 1825

**Davies, William H.** 1871–1940

English poet

When a man gives his whole heart to Nature, and has no cares outside, it is surprising how observant he becomes, and how curious he is to know the cause of things.

*Nature*

Chapter I (p. 15)

B.T. Batsford, Ltd. London, England. 1914

**Davy, Sir Humphry** 1778–1829

English chemist

Oh, most magnificent and noble Nature!  
Have I not worshipped thee with such a love  
As never a mortal man before displayed?  
Adored thee in thy majesty of visible creation,  
And searched into thy hidden and mysterious ways  
As Poet, as Philosopher, as Sage?

In J. Davy

*Fragmentary Remains, Literary and Scientific, of Sir Humphry Davy*

Chapter I (p. 14)

John Churchill. London, England. 1858

Nature is beautiful, and you [J. King] are in her bosom. That the voice of comfort which speaks in the breezes of morning, may visit your mind, that the delightful influences which the green leaves, the blue sky, the moonbeams and the clouds of the evening diffuse over the universe, may in their powers of soul-healing, visit your day visions, is my desire and hope.

*Fragmentary Remains, Literary and Scientific, of Sir Humphry Davy*

Chapter III (p. 64)

John Churchill. London, England. 1858

**Dawson, Sir John William** 1820–99

Canadian geologist and educator

Few words are used among us more loosely than “nature.” Sometimes it stands for the material universe as a whole. Sometimes it is personified as a sort of goddess, working her own sweet will with material things. Sometimes it expresses the forces which act on matter, and again it stands for material things themselves. It is spoken of as

subject to law, but just as often natural law is referred to in terms which imply that nature itself is the lawgiver.

*Some Salient Points in the Science of the Earth*

Chapter XVIII (p. 481)

Hodder & Stroughton. London, England. 1893

**de Fontenelle, Bernard le Bovier** 1657–1757

French writer

There is no need of fance...do but trust your eyes, and you will easily perceive how nature diversifies her works in these several worlds.

*Conversations on the Plurality of Worlds*

The Third Evening (p. 95)

Printed for Peter Wilson. Dublin, Ireland. 1761

**de Montaigne, Michel Eyquem** 1533–92

French Renaissance writer

Let us a little permit Nature to take her own way; she better understands her own affairs than we.

Translated by Charles Cotton

Well, there's nothink lower than Nature, *An She Goes As 'Igh As 'Eaven!*

*One Braver Thing*

Chapter LXXI (p. 597)

Duffield & Co. New York, New York, USA. 1910

**Delacroix, Eugene** 1798–1863

French romantic painter

The true wisdom of the philosopher ought to consist in enjoying everything. Yet we apply ourselves to dissecting and destroying everything that is good in itself, that has virtue, albeit the virtue there is in mere illusions. Nature gives us this life like a toy to a weak child. We want to see how it all works; we break everything. There remains in our hands and before our eyes, stupid and opened too late, the sterile wreckage, fragments that will not again make a whole. The good is so simple.

Translated by Walter Pach

*The Journal of Eugene Delacroix*

Tuesday, June 1, 1824 (p. 92)

Covici. New York, New York, USA. 1937

**Desaguliers, J. T.** 1683–1744

French-born English natural philosopher

Nature compell'd, his piercing Mind obeys,  
And gladly shows him all her secret Ways;  
'Gainst Mathematicks she has no Defence,  
And yields t' experimental Consequence.

In H.N. Fairchild

**Dickinson, Emily** 1830–86  
American lyric poet

Nature – the Gentlest Mother is,  
Impatient of no Child –  
The feeblest – or the waywardest –  
Her Admonition mild –

*The Complete Poems of Emily Dickinson*

No. 790 (p. 385)

Little, Brown & Company. Boston, Massachusetts, USA. 1960

How Strange that Nature does not knock, and yet does not intrude!

*Letters of Emily Dickinson*

Letter to Mrs. J.S. Cooper (p. 395)

Robert Brothers. Boston, Massachusetts, USA. 1894

**Dickinson, G. Lowes** 1862–1932  
English historian and political activist

I'm not much impressed by the argument you attribute to Nature, that if we don't agree with her we shall be knocked on the head. I, for instance, happen to object strongly to her whole procedure: I don't much believe in the harmony of the final consummation...and I am sensibly aware of the horrible discomfort of the intermediate stages, the pushing, kicking, trampling of the host, and the wounded and dead left behind on the march. Of all this I venture to disapprove; then comes Nature and says, "but you ought to approve!" I ask why, and she says, "Because the procedure is mine." I still demur, and she comes down on me with a threat – "Very good, approve or no, as you like; but if you don't approve you will be eliminated!" "By all means," I say, and cling to my old

opinion with the more affection that I feel myself invested with something of the glory of a martyr.... In my humble opinion it's nature, not I, that cuts a poor figure!

*The Meaning of Good*

Good as the End of Nature (p. 46)

Brimley Johnson & Ince. London, England. 1906

**Diderot, Denis** 1713–84

French encyclopedist and materialist philosopher

Man is merely a common product, the monster an uncommon product; both equally natural, equally necessary, equally part of this universal and general order of things.... And what is astonishing about this?... All creatures intermingle with each other, consequently all species...everything is in perpetual flux.... Every animal is more or less man; every mineral is more or less plant; every plant more or less animal. There is nothing precise in nature...

Translated by Jean Stewart and Jonathan Kemp

*Diderot: Interpreter of Nature*

D'Alembert's Dream (pp. 78–79)

International Publishers. New York, New York, USA. 1938

...Nature, equal in her distributions, entirely destitute of malice, follows only necessary and immutable laws, when she either produces beings or destroys them, when she causes those to suffer, whose construction creates sensibility; when she scatters among them good and evil; when she subjects them to incessant change ...

Translated by H. D. Robinson

*System of Nature or, The Laws of the Moral and Physical World*

(Volume 1)

Chapter I (p. 13)

J.P. Mendum. Boston, Massachusetts, USA. 1889

**Dillard, Annie** 1945–

American poet, essayist, novelist, and writing teacher

Nature will try anything once. This is what the sign of the insects says. If you're dealing with organic compounds, then let them combine. If it works, if it quickens, set it clacking in the grass; there's always room for one more...

*Pilgrim at Tinker Creek*

Chapter 4, II (p. 65)

Harper's Magazine Press. New York, New York, USA. 1974

In nature, improbabilities are the one stock in trade.

*Pilgrim at Tinker Creek*

Chapter 8, II (p. 144)

Harper's Magazine Press. New York, New York, USA. 1974

Certainly nature seems to exult in abounding radicality, extremism, anarchy. If we were to judge nature by its common sense or likelihood, we wouldn't believe the world existed. In nature, improbabilities are the one stock in trade. The whole creation is one lunatic fringe. If creation had been left up to me, I'm sure I wouldn't have had the imagination or courage to do more than shape a

single, reasonably sized atom, smooth as a snowball, and let it go at that. No claims of any and all revelations could be so far-fetched as a single giraffe.

*Pilgrim at Tinker Creek*

Chapter 7 (p. 146)

Harper's Magazine Press. New York, New York, USA. 1974

The creator is no puritan.... There is something that profoundly fails to be exuberant about these crawling, translucent lice and white, fat-bodied grubs, but there is an almost manic exuberance about a creator who turns them out, creature after creature after creature, and sets them buzzing and lurking and flying and flying and swimming about.

*Pilgrim at Tinker Creek*

Chapter 13, II (p. 233)

Harper's Magazine Press. New York, New York, USA. 1974

**Dirac, Paul Adrien Maurice** 1902–84

English theoretical physicist

It has become increasingly evident in recent times, however, that nature works on a different plan. Her fundamental laws do not govern the world as it appears in our mental picture in any very direct way, but instead they control a substratum of which we cannot form a mental picture without introducing irrelevancies.

*The Principles of Quantum Mechanics*

Preface to the First Edition (p. vi)

At the Clarendon Press. Oxford, England. 1935

**Dobzhansky, Theodosius** 1900–75

Russian-American scientist

One may detest nature and despise science, but it becomes more and more difficult to ignore them. Science in the modern world is not an entertainment for some devotees. It is on its way to becoming everybody's business.

*The Biology of Ultimate Concern*

Chapter 1 (p. 9)

The New American Library, Inc. New York, New York, USA. 1967

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

I look out at the sunrise – that fateful sunrise which will shine upon an unpeopled world. The human race is gone, extinguished in a day, but the planets swing round and the tides rise or fall, and the wind whispers, and all nature goes her way, down, as it would seem, to the very amoeba, with never a sign that he who styled himself the lord of creation had ever blessed or cursed the universe with his presence.

*The Poison Belt*

Chapter IV (p. 132)

Hodder & Stroughton. London, England. 1913

**Dryden, John** 1631–1700

English poet, dramatist, and literary critic

For Art may err, but Nature cannot miss.

*The Poetical Works of Dryden*

The Cock and the Fox, I. 452

The Riverside Press. Cambridge, Massachusetts, USA. 1949

By viewing nature, nature's handmaid, art,  
Makes mighty things from small beginnings grow;  
That fishes first to shipping did impart,  
Their tail the rudder, and their head the prow.

*The Poetical Works of Dryden*

Annus Mirabilis

Stanza 155

The Riverside Press. Cambridge, Massachusetts, USA. 1949

Section 8 (p. 41)

Trubner & Company, London, England. 1883

**Dubos, René Jules** 1901–82

French-born American microbiologist and environmentalist

Nature does not know how to deal with situations that have no precedents in the evolutionary past.

Humanizing the Earth

*Science*, Volume 179, Number 4075, February 23, 1973 (p. 770)

**Duke of Argyll (George Douglas**

**Campbell)** 1823–1900

English statesman and writer on science, religion, and politics

The first and, so to speak, the lowest sense in which law is applied to natural phenomena is that in which it is used to express simply "an observed order of facts" that is to say, facts which under the same conditions always follow each other in the same order.

*The Reign of Law* (4th American edition)

Chapter 2 (p. 66)

George Routledge & Sons. New York, New York, USA. 1873

Those who, by special study, have laid their minds alongside the mind of Nature in any of her provinces have generally imparted to them a true sense, so far as it goes, in the interpretation of her mysteries.

*The Reign of Law* (4th American edition)

Chapter 5 (p. 231)

George Routledge & Sons. New York, New York, USA. 1873

**Dulbecco, Renato** 1914–

Italian-born American virologist

Nature does not abide by hard and fast rules – it follows opportunity.

*The Design of Life*

Chapter 4 (p. 88)

Yale University Press. New Haven, Connecticut, USA. 1987

In biology, once a door is opened, the space behind it is quickly filled.

*The Design of Life*

Chapter 9 (p. 190)

Yale University Press. New Haven, Connecticut, USA. 1987

**Dunbar, Paul Laurence** 1872–06

African-American poet

There is no rebel like Nature. She is an iconoclast.

*The Uncalled*

VI (p. 57)

International Association of Newspapers and Authors. New York, New York, USA, 1901

**Durell, Clement V.** 1882–1968

English mathematician

The scientists, in playing their game with Nature, are meeting an opponent on her own ground, who has not only made the rules of the game to suit herself, but may have even queered the pitch or cast a spell over the visiting team.

*Readable Relativity*

Chapter II (p. 11)

Harper & Brothers. New York, New York, USA. 1960

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

The future is not predetermined, and Nature has no need to protect herself from giving away plans which she has not yet made.

*New Pathways in Science*

Chapter V, Section II (p. 102)

At The University Press. Cambridge, England. 1947

Philosophically the notion of a beginning of Nature is repugnant to me.

The End of the World: From the Standpoint of Mathematical Physics

*Nature*, Supplement, Volume 127, Number 3203, March 21, 1931 (p. 447)

So far as broader characteristics are concerned we see in Nature what we look for or are equipped to look for.

*The Nature of the Physical World*

Chapter XV (p. 330)

The Macmillan Company. New York, New York, USA. 1930

**Einstein, Albert** 1879–1955

German-born physicist

What I see in Nature is a magnificent structure that we can comprehend only imperfectly, and that must fill a thinking person with a feeling of “humility.” This is a genuinely religious feeling that has nothing to do with mysticism.

In Helen Dukas and Banesh Hoffman

*Albert Einstein: The Human Side: New Glimpses from His Archives* (p. 39)

Princeton University Press. Princeton, New Jersey, USA. 1979

Nature is not an engineer or contractor...

In Helen Dukas and Banesh Hoffman

Letter dated 12 November, 1930 (p. 92)

Princeton University Press. Princeton, New Jersey, USA. 1979

**Eliot, George (Mary Ann Evans Cross)** 1819–80

English novelist

Nature has her language, and she is not ungenerous; but we don't know all the intricacies of her syntax just yet, and in a hasty reading we may happen to extract the very opposite of her real meaning.

*Adam Bede*

Chapter XV (p. 142)

Dodd, Mead & Company. New York, New York, USA. 1947

Nature repairs her ravages – repairs them with her sunshine, and with human labor. ... Nature repairs her ravages, but not all. The upturned trees are not rooted again; the parted hills are left scarred; if there is a new growth, the trees are not the same as the old, and the hills underneath their green vesture bear the marks of the past rending. To the eyes that have dwelt on the past, there is not thorough repair.

*Mill on the Floss*

Book VII, Conclusion (p. 472)

The Heritage Press. New York, New York, USA. 1963

...the presence of Nature in all her awful loveliness.

*The Lifted Veil and Brother Jacob*

Chapter I (p. 20)

Bernhard Tauchnitz. Leipzig, Germany. 1878

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

What power does Nature not owe to her duration, of amassing infinitesimals into cosmical forces!

*Emerson's Complete Works: Letters and Social Aims*

Resources (p. 136)

Houghton, Mifflin Company. Boston, Massachusetts, USA. 1889

To the intelligent, nature converts itself into a vast promise, and will not be rashly explained. Her secret is untold. Many and many an Oedipus arrives: he has the whole mystery teeming in his brain.

*Ralph Waldo Emerson: Essays and Lectures*

*Essays: Second Series*

Nature (p. 554)

The Library of America. New York, New York, USA. 1983

The first steps in Agriculture, Astronomy, Zoology (those first steps which the farmer, the hunter, and the sailor take,) teach that nature's dice are always loaded; that in her heaps and rubbish are concealed sure and useful results.

*Ralph Waldo Emerson: Essays and Lectures*

*Nature: Addresses, and Lectures*

Discipline (p. 27)

The Library of America. New York, New York, USA. 1983

The great mother Nature will not quite tell her secret to the coach or the steamboat, but says, One to one, my dear, is my rule also, and I keep my enchantments and oracles for the religious soul coming alone, or as good as alone, in true-love.

In James Elliot Cabot

*A Memoir of Ralph Waldo Emerson* (Volume 2)

Letter to Mrs. Emerson, 20 May, 1871 (p. 650)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1888

Nature, like a cautious testator, fires up her estate so as not to bestow it all on one generation, but has a forelooking tenderness and equal regard to the next and the next, and the fourth and the fortieth age.

*The Complete Works of Ralph Waldo Emerson* (Volume 10)

*Society and Solitude*

Farming (p. 143)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

Nature never hurries: atom by atom, little by little, she achieves her work.

*The Complete Works of Ralph Waldo Emerson* (Volume 10)

*Society and Solitude*

Farming (p. 139)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1903

Everything in nature contains all the powers of nature.

In Eva March Tappan

*Select Essays and Poems*

Compensation (p. 7)

Allyn & Bacon. Boston, Massachusetts, USA. 1898

By fate, not option, frugal Nature gave  
One scent to hyson and to wall-flower,  
One sound to pine-groves and to waterfalls,  
One aspect to the desert and the lake.

It was her stern necessity.

*The Complete Works of Ralph Waldo Emerson* (Volume 9)

*Xenophanes* (p. 137)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

Nature does not like to be observed, and likes that we should be her fools and playmates.

*Essays (Second Series)*

Experience (p. 46)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1889

Nature does not cocker us: we are children, not pets: she is not fond: everything is dealt to us without fear or favor, after severe universal laws.

*Essays (Second Series)*

Experience (p. 131)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1889

...all natural objects make a kindred impression, when the mind is open to their influence. Nature never wears a mean appearance.

*Essays, Orations and Lectures*

*Nature*

Chapter I (p. 3)

William Tegg & Co. London, England. 1848

Nature never became a toy to a wise spirit. The flowers, the animals, the mountains, reflected all the wisdom of his best hour, as much as they had delighted the simplicity of his childhood.

*Essays, Orations and Lectures*

*Nature*

Chapter I (p. 3)

William Tegg & Co. London, England. 1848

### **Fermi, Enrico** 1901–54

Italian-born American physicist

Whatever nature has in store for mankind, unpleasant as it may be, men must accept, for ignorance is never better than knowledge.

In Laura Fermi

*Atoms in the Family*

Part II, Chapter 23 (p. 244)

The University of Chicago Press. Chicago, Illinois, USA. 1954

### **Feuerbach, Ludwig** 1804–72

German philosopher

Nature returns no answer to the questions and lamentations of man; inexorably it refers him to himself.

In Ludwig Buchner

*Force and Matter*

Chapter VI (p. 35)

Trubner & Company. London, England. 1864

### **Fevre, R. W.**

No biographical data available

The real truth is that, not only has man failed to overcome nature in any sphere whatsoever but that at best he has merely succeeded in getting hold of and lifting a tiny corner of the enormous veil which she has spread over her eternal mysteries and secret. He never creates anything. All he can do is discover something. He does not master nature but has only come to be the master of those living things who have not gained the knowledge he has arrived at by penetrating into some of nature's laws and mysteries. Apart from all this, an idea can never subject to its own sway those conditions which are necessary for the existence and development of mankind; for the idea itself has come only from man. Without man there would be no human idea in this world. The idea as such is therefore always dependent on the existence of man and consequently is dependent on those laws which furnish the conditions of his existence.

*The Demoralization of Western Culture: Social Theory and the Dilemmas of Modern Living* (p. 28)

Continuum. London, England. 2000

### **Feyerabend, Paul K.** 1924–94

Austrian-born American philosopher of science

Trying to understand the way nature works involves a most terrible test of human reasoning ability. It involves

subtle trickery, beautiful tightropes of logic on which one has to walk in order not to make a mistake in predicting what will happen.

*The Meaning of It All: Thoughts of a Citizen Scientist*  
Chapter I (p. 15)  
Perseus Books. Reading, Massachusetts, USA. 1998

Everywhere science is enriched by unscientific methods and unscientific results...the separation of science and non-science is not only artificial but also detrimental to the advancement of knowledge. If we want to understand nature, if we want to master our physical surroundings, then we must use all ideas, all methods, and not just a small selection of them.

*Against Method: Outline of an Anarchistic Theory of Knowledge*  
Chapter 18 (pp. 305, 306)  
Verso. London, England. 1978

**Feynman, Richard P.** 1918–88  
American theoretical physicist

There was a moment when I knew how nature worked. It had elegance and beauty. The goddamn thing was gleaming.

In Lee Edson  
Two Men in Search of a Quark  
*New York Times Magazine*, October 8, 1967

Nature uses only the longest threads to weave her patterns, so each small piece of her fabric reveals the organization of the entire tapestry.

*The Character of Physical Law*  
Chapter 1 (p. 34)  
The M.I.T. Press. Cambridge, Massachusetts, USA. 1967

People may come along and argue philosophically that they like one better than another; but we have learned from much experience that all philosophical intuitions about what nature is going to do fail.

*The Character of Physical Law*  
Chapter 2 (p. 53)  
BBC. London, England. 1965

**Fielding, Henry** 1707–54  
English novelist, playwright, and barrister

Nature seems to wear one universal grin.  
*The Tragedy of Tragedies, or, The Life and Death of Tom Thumb the Great*  
Act I, Scene 1  
Printed by S. Powell. Dublin, Ireland. 1730

**Fitz-Gerald, Charles Egerton**  
English physician

[Nature] swarms and palpitates with life under a myriad of unseen and unsuspected forms ...

*Semi-scientific Lectures*  
First Annual Address (p. 21)  
J. English. Folkstone, England. 1880

**Flammarion, Camille** 1842–1925  
French astronomer and writer

Nature, O immense, fascinating, infinite Nature! Who can divine, who can hear, the sounds of thy celestial harmony! What can we include in these childish formulae of our young science? We lisped an alphabet while the eternal Bible is still closed to us. But it is thus when all reading begins, and these first words are surer than all the antique affirmations of ignorance and human vanity.

*Popular Astronomy: A General Description of the Heavens*  
Book II, Chapter III (p. 112)  
Chatto & Windus. London, England. 1894

The dial of the heavens is eternal, and the inexorable hand which slowly marks their destinies shall turn forever. It is we who say *yesterday* or *to-morrow*. For nature it is always *today*.

Translated by J. Ellard Gore  
*Popular Astronomy: A General Description of the Heavens*  
Book II, Chapter IX (p. 163)  
Chatto & Windus. London, England. 1894

...it has been said that nature has implanted in our bosoms a craving after the discovery of truth, and assuredly that glorious instinct is never more irresistibly awakened than when our notice is directed to what is going on in the heavens.

*Popular Astronomy: A General Description of the Heavens*  
Book III, Chapter VII (p. 328)  
Chatto & Windus. London, England. 1894

**Fraenkel, Aviezri S.**  
Applied mathematician

Nature might be somehow more powerful than a digital computer.

*New York Times*, March 25, 1997 (p. C5, col. 6)

**Galilei, Galileo** 1564–1642  
Italian physicist and astronomer

...it is astonishing and incredible to us, but not to Nature; for she performs with utmost ease and simplicity things which are even infinitely puzzling to our minds, and what is very difficult for us to comprehend is quite easy for her to perform.

Translated by Stillman Drake  
*Dialogue Concerning Two Chief World Systems*  
Fourth Day (p. 448)  
University of California Press. Berkeley, California, USA, 1967

**Garth, Sir Samuel** 1661–1719  
English physician and poet

As distant prospects please us, but when near  
We find but desert rocks and fleeting air.

*The Dispensary*  
Canto III, l. 27  
Printed by J. Lister, at St. John's Gate. London, England. 1768

**Gay, John** 1685–1732  
English poet and dramatist

But he who studies nature's laws  
From certain truth his maxims draws.

*The Poetical Works of John Gay* (Volume 3)  
Introduction to the Fables, l. 76–77  
Lawrence & Bullen. London, England. 1893

**Gillispie, Charles Coulston** 1918–  
French writer and editor of philosophy and history of science

[T]he renewals of the subjective approach to nature make a pathetic theme. Its ruins lie strewn like good intentions all along the ground traversed by science, until it survives only in strange corners like Lysenkoism [doctrine centered on belief in acquired characteristics] and anthroposophy, where nature is socialized or moralized.

*The Edge of Objectivity: An Essay in the History of Scientific Ideas*  
Chapter V (pp. 199–200)  
Princeton University Press. Princeton, New Jersey, USA. 1960

**Gould, Stephen Jay** 1941–2002  
American paleontologist and evolutionary biologist

I do not believe that nature frustrates us by design, but I rejoice in her intransigence nonetheless.

*Hen's Teeth and Horses Toes*  
What, if Anything, Is a Zebra? (p. 365)  
W.W. Norton & Company, Inc. New York, New York, USA. 1983

The need to distinguish sturdy facts (pervasive pattern) from shaky factual claim (single cases with dubious documentation) has never been more evident to me than in the current debate between evolutionists and so-called “scientific creationists.” The fact of evolution is as sturdy as any claim in science. Its sturdiness resides in a pervasive pattern detected by several disciplines – for examples, the age of the earth and life as affirmed by astronomy and geology, and the pattern of imperfections in organisms that record a history of physical descent.

*Hen's Teeth and Horses Toes*  
Quaggas, Coiled Oysters, and Flimsy Facts (p. 384)  
W.W. Norton & Company, Inc. New York, New York, USA. 1983

Nature, to cite a modern cliché, always bats last. She will not succumb to the simplicities of our hopes or mental foibles, but she remains eminently comprehensible. Evolution follows the syncopated drumbeats of complex and contingent histories, shaped by the vagaries and uniquenesses of time, place, and environment. Simple laws with predictable outcomes cannot fully describe the pageant and pathways of life. A linear march of progress must fail as a model for evolution, but a luxuriantly branching tree does capture the basic geometry of history.

*Branching Through A Wormhole*  
*Natural History*, Volume 108, March, 1999

**Gray, George W.**  
Freelance science writer

Nature seems to be held in a mathematical web of relationship; and as we penetrate deeper into its infinite world of secrecy the relationships become more purely mathematical, and less obviously material or physically perceptual.

*New World Picture*  
Chapter II (p. 44)  
Little, Brown & Co. Boston, Massachusetts, USA. 1935

**Gray, Thomas** 1716–71  
English poet

E'en from the tomb the voice of nature cries,  
E'en in our ashes live their wonted fires.

*The Complete Poetical Works of Gray, Beattie, Blair, Collins, Thomson, and Kirke White*  
Elegy in a Country Churchyard  
Stanza 23  
J. Blackwood. London, England. 1800

**Greene, Brian** 1963–  
American physicist

You must allow Nature to dictate what is, and what is not, sensible.

*The Elegant Universe: Superstrings, Hidden Dimensions, and the Quest for the Ultimate Theory*  
Part II, Chapter 5 (p. 111)  
W.W. Norton & Company, Inc. New York, New York, USA. 2003

**Gregory, Dick** 1932  
American comedian and social activist

Nature is not affected by finance. If someone offered you ten thousand dollars to let them touch you on your eyeball without your blinking, you would never collect the money. At the very last moment, Nature would force you to blink your eye. Nature will protect her own.

*The Shadow that Scares Me*  
Chapter VIII (p. 175)  
Doubleday & Company, Inc. Garden City, New York, USA. 1968

**Gregory, Sir Richard Arman** 1864–1952  
British science writer and journalist

...direct contact with Nature and inquiry into her laws produce a habit of mind which cannot be acquired in literary fields, and they are associated with a wide outlook on life more often than is usually supposed.

*Discovery; Or: The Spirit and Service of Science*  
Preface (p. vi)  
Macmillan & Co Ltd. London, England. 1918

Nature, like the rich man of the parable, requires importunate pleading before she will bestow any of her riches upon a suppliant at her temple.

*Discovery; or: The Spirit and Service of Science*  
Chapter I (p. 12)  
Macmillan & Company Ltd. London, England. 1918

Nature must be loved for herself and not for her dowry.  
*Discovery; or, The Spirit and Service of Science*  
 Chapter III (p. 54)  
 Macmillan & Company Ltd. London, England. 1918

Nature must be loved for herself and not for her dowry.  
 The rewards which the world can give may come; but the  
 discoveries which may bring them can only be secured in  
 the pure quest for the advancement of knowledge.  
*Discovery, Or, The Spirit and Service of Science*  
 Chapter III (p. 54)  
 Macmillan & Co Ltd. London, England. 1916

**Gull, Sir William Withey** 1816–90  
 English physician

Do not explain Nature, but by patient attention to the  
 facts let her explain herself.  
*A Collection of the Published Writings of William Withey Gull* (Volume 2)  
 Notes and Aphorisms (p. lvi)  
 The New Sydenham Society. London, England. 1896

**Harkness, William** 1837–1903  
 Scottish-American astronomer and surgeon

All nature is one, but for convenience of classification  
 we have divided our knowledge into a number of sci-  
 ences which we usually regard as quite distinct from each  
 other.  
*Annual Report of the Board of Regents of the Smithsonian Institution,*  
 1896  
 On the Magnitude of the Solar System (p. 93)  
 Government Printing Office. Washington, D.C. 1896

**Hartwell, Leland H.** 1939–  
 American genome scientist

Sometimes nature rewards foolish optimism.  
*Lex Prix Nobel. The Nobel Prizes in 2001*  
 Nobel banquet speech for award received in 2001  
 Nobel Foundation. Stockholm, Sweden. 2002

**Harvey, Moses** 1820–1901  
 Irish clergyman, essayist, and naturalist

Like the fabled Sphinx of old she [Nature] propounds  
 her riddles; and man, the intellectual monad, is the inter-  
 preter whose powers are at once taxed and developed by  
 the demands she makes. Onward the beautiful Sphinx  
 leads him [the man of science], showing him, as he pen-  
 etrates one secret after another, that deeper ones remain  
 undisclosed, that mightier mazes of mystery open -as  
 he advances, that law within law rules the play of her  
 mighty forces, in their marches and combinations; thus  
 directing his steps along.  
 Science and Religion  
*The Maritime Monthly*, Volume 2, Number 5, November, 1873 (p. 478)

Not at once, or even readily, does nature disclose the  
 secret laws and processes by which she works. Like the  
 fabled Sphinx of old she propounds her riddles; and man,  
 the intellectual monad, is the interpreter whose powers

are at once taxed and developed by the demands she  
 makes.  
 Science and Religion  
*The Maritime Monthly*, Volume II, November, 1873 (p. 478)

**Heaviside, Oliver** 1850–1925  
 English electrical engineer, mathematician, and physicist

...there is no absolute scale of size in nature, and the  
 small may be as important, or more so, than the great.  
*Electromagnetic Theory: Including an Account of Heaviside's Unpub-  
 lished Notes* (Volume 2)  
*Trojan Horse Cloud*  
 Scientific Limitations on Human Knowledge (p. 519)  
 "The Electrician" Publishing & Printing Co. London, England.  
 1894–1912

**Heine, Heinrich** 1797–1856  
 German poet

Nature, like a true poet, abhors abrupt transitions.  
*The German Classics of the Nineteenth and Twentieth Centuries*  
 (Volume 6)  
 Translated by Charles Godfrey Leland  
 The Journey to the Harz (p. 73)  
 The German Publication Society. New York, New York, USA. 1913–1914

Nature knows how to produce the greatest effects with  
 the most limited means.  
*The German Classics of the Nineteenth and Twentieth Centuries*  
 (Volume 6)  
 Translated by Charles Godfrey Leland  
 The Journey to the Harz (p. 73)  
 The German Publication Society. New York, New York, USA.  
 1913–1914

Like a great poet, Nature produces the greatest results  
 with the simplest means. These are simply a sun, trees,  
 flowers, water and love. Of course, if the spectator be  
 without the last, the whole will present but a pitiful  
 appearance, and, in that case, the sun is merely so many  
 miles in diameter, the trees are good for fuel, the flowers  
 are classified by stamens, and the water is simply wet.  
 Translated by Simon Alder Stern  
*Scintillations from the Prose Works of Heinrich Heine*  
 Miscellaneous (p. 169)  
 Henry Holt & Co. New York, New York, USA. 1873

**Heinlein, Robert A.** 1907–88  
 American science fiction writer

He shut up, realizing that grim old Mother Nature, red of  
 tooth and claw, invariably punished damn fools who tried  
 to ignore Her or repeal Her ordinances.  
*Time Enough for Love*  
 Chapter VI (p. 205)  
 G.P. Putnam's Sons. New York, New York, USA. 1973

**Henley, William Ernest** 1849–1903  
 English poet

What Nature has writ with her lusty wit  
 Is worded so wisely and kindly

That whoever has dipped in her manuscript  
Must up and follow her blindly.

*Echoes of Life and Death*

Number XXXIII

T.B. Mosher. Portland, Maine, USA. 1908

**Heraclitus** 540 BCE–480 BCE

Greek philosopher

The real constitution of things is accustomed to hide  
itself.

In G.S. Kirk and J.E. Raven

*The Pre-Socratic Philosophers: A Critical History with a Selection of  
Texts*

Fragment 211 (p. 193)

At The University Press. Cambridge, England. 1963

Nature loves to hide.

*Fragments*

Fragment x (p. 4)

Publisher undetermined

**Herschel, Sir John Frederick William** 1792–1871

English astronomer and chemist

From the least of nature's work he may learn the greatest  
lesson.

*A Preliminary Discourse on the Study of Natural Philosophy*

Part I, Chapter I, Section 10 (p. 14)

Printed for Longman, Rees, Orme, Brown & Green. London, England.  
1831

...Nature builds up by her refined and invisible archi-  
tecture, with a delicacy eluding our conception, yet with  
a symmetry and beauty which we are never weary of  
admiring.

*The Cabinet of Natural Philosophy*

Part III, Chapter II, Section 292 (p. 263)

Longman, Rees, Orme, Brown & Green. London, England. 1831

Instances...where great, and indeed immeasurable, steps  
in our knowledge of nature are made at once, and almost  
without intellectual effort, are well calculated to raise our  
hopes of the future progress of science, and by pointing  
out the simplest and most obvious combinations – as  
those which are actually found to be most agreeable to  
the harmony of creation – to hold out the cheering pros-  
pect of difficulties diminishing as we advance, instead of  
thickening around us in increasing complexity.

In Henry Enfield Roscoe

*John Dalton and the Rise of Modern Chemistry*

Chapter VII (p. 160)

Macmillan & Co. New York, New York, USA. 1895

**Hibbard, Shirley**

No biographical data available

When man looks upon Nature, he sees everywhere the  
records of death's work among the representatives of cre-  
ative energy. The stratified rocks are but the tombstones  
in the great graveyard of the world; they cover the bones

of a million generations, and their inscription is, "The  
dust we tread upon was once alive."

The Balance of Life in the Aquarium

*The Popular Science Monthly*, August, 1872 (p. 434)

**Hickok, Laurens Perseus** 1798–1888

No biographical data available

Nothing in nature, and equally so not nature itself, can be  
made intelligible except as it has been subjected to ratio-  
nal principle, and such principle must both have been, and  
been made controlling, in the very origination of nature,  
or nature must forever be without meaning or end.

*Rational Cosmology: Or, The Eternal Principles and the Necessary*

*Laws of the Universe*

Preface (p. 3)

D. Appleton & Co. New York, New York, USA. 1858

**Hinman, Russell**

No biographical data available

Nothing in nature is permanent; everything is constantly  
changing. Day changes into night, fair weather into foul,  
plants and animals die and decay, and even the solid rocks  
gradually wear away into soil or sand. These changes do  
not occur by chance, but each is the result of some defi-  
nite cause, and, under similar circumstances, precisely  
the same effects are produced by the same causes. The  
invariable relations between causes and resulting effects  
constitute the *laws of nature*.

*Eclectic Physical Geography*

Introduction (p. 7)

American Book Co. New York, New York, USA. 1916

**Hobbes, Thomas** 1588–1679

English philosopher and political theorist

Nature (the Art whereby God hath made and governs the  
World) is by the *Art* of man, as in many other things, so in  
this also imitated, that it can make an Artificial Animal.  
For seeing life is but a motion of Limbs, the beginning  
whereof is in some principal part within; why may we  
not say, that all *Automata* (Engines that move themselves  
by springs and wheels as doth a watch) have an artificial  
life? For what is the *Heart*, but a *Spring*; and the *Nerves*,  
but so many *Strings*; and the *Joynts*, but so many *Wheels*,  
giving motion to the whole *Body*, such as was intended  
by the Artificer?

In A.R. Waller (ed.)

*Leviathan*

The Introduction (p. xviii)

At the University Press. Cambridge, England. 1904

**Holbach, Paul Henri Thiry** 1723–89

French philosopher

Let us, then, be content with an honest avowal, that  
Nature contains resources of which we are ignorant; but  
never let us substitute phantoms, fictions, or imaginary

causes, senseless terms, for those causes which! escape our research; because, by such means, we only confirm ourselves in ignorance, impede our inquiries, and obstinately remain in error.

Translated by H.D. Robinson

*The System of Nature, Or, Laws of the Moral and Physical World* (Volume 1)

Chapter 4 (p. 28)

J.P. Mendum. Boston, Massachusetts, USA. 1889

**Holland, Elihu Goodwin** 1817–78

No biographical data available

Nature is a harp, not of a thousand, but of ten times ten thousand strings, not one of which can be struck, without yielding harmony.

*Reviews and Essays*

The Infinite Harmony (p. 281)

Wm. Crosby & H.P. Nichols. Boston, Massachusetts, USA. 1849

**Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

Our old mother Nature has pleasant and cheery tones enough for us when she comes in her dress of blue and gold over the eastern hill-tops; but when she follows us up-stairs to our beds in her suit of black velvet and diamonds, every creak of her sandals and every whisper of her lips is full of mystery and fear.

*The Professor at the Breakfast Table*

Chapter VII (p. 237)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1916

**Horace (Quintus Horatius Flaccus)** 65 BCE–8 BCE

Roman philosopher and dramatic critic

You may turn nature out of doors with violence, but she will still return.

*Satires, Epistles, and Ars Poetica*

Epistles, Book I, Epistle 10, l. 24

W. Heinemann. London, England. 1929

**Housman, Alfred Edward** 1859–1936

English poet, scholar, and satirist

For nature, heartless, witless nature,

Will neither care nor know

What stranger's feet may find the meadow

And trespass there and go.

*Last Poems*

Number XL (p. 76)

Henry Holt & Company. New York, New York, USA. 1922

**Hovenden, Frederick**

No biographical data available

Every deep thinker and observer of the Natural Laws is convinced that Nature is an orderly arrangement of matter and forces; that, in a word, Nature is not chaos, but cosmos.

*What is Life?, Or, Where are We? What are We? Whence Did We Come? And Whither Do We Go?* (2nd edition)

Preface (p. vii)

Chapman & Hall, Ltd. London, England. 1899

**Hudson, William Henry** 1841–1922

Argentinean/English ornithologist, naturalist, and author

Here Nature is unapproachable with her green, airy canopy, a sun-impregnated cloud – cloud above cloud – and though the highest may be reached by the eye, the beams yet filter through, illuming the wide spaces beneath – chambers succeeded by chamber, each with its own special lights and shadows.

*Green Mansions*

Chapter 2 (p. 28)

Grosset & Dunlap. New York, New York, USA. 1931

**Hugo, Victor** 1802–85

French author, lyric poet, and dramatist

Nature has no candor. She shows herself to man with her face turned away.

Translated by Isabel F. Hapgood

*The Toilers of the Sea*

Part II, Book Third, Chapter III (p. 415)

The Heritage Press. New York, New York, USA. 1961

**Hutton, James** 1726–97

Scottish geologist, chemist, and naturalist

Where so many living creatures are to ply their respective powers, in pursuing the end for which they were intended, we are not to look for nature in a quiescent state; matter itself must be in motion, and the scenes of life a continued or repeated series of agitations and events.

*Theory of the Earth: With Proofs and Illustrations* (Volume 1)

Chapter I, Section I (p. 4)

H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

It is of importance to the happiness of man, to find consummate wisdom in the constitution of this earth, by which things are so contrived that nothing is wanting, in the bountiful provision of nature, for the pleasure and propagation of created beings; more particularly of those who live in order to know their happiness, and who know their happiness on purpose to see the bountiful source from whence it flows.

*Theory of the Earth: With Proofs and Illustrations* (Volume 2)

Chapter VI (p. 183)

H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

**Huxley, Thomas Henry** 1825–95

English biologist

There is not throughout Nature a law of wider application than this, that a body impelled by two forces takes the direction of their resultant.

*Collected Essays* (Volume 2)

*Darwiniana*

The Origin of Species (p. 32)

Macmillan & Company Ltd. London, England. 1904

Harmonious order governing eternally continuous progress – the web and woof of matter and force interweaving by slow degrees, without a broken thread, that veil which lies between us and the Infinite – that universe which

alone we know or can know; such is the picture which science draws of the world, and in proportion as any part of that picture is in unison with the rest, so may we feel sure that it is rightly painted.

*Collected Essays* (Volume 2)

*Darwintiana*

The Origin of Species (p. 59)

Macmillan & Company Ltd. London, England. 1904

To everyone of us the world was once as fresh and new as to Adam. And then, long before we were susceptible of any other mode of instruction, Nature took us in hand, and every minute of waking life brought its educational influence, shaping our actions into rough accordance with Nature's laws, so that we might not be ended untimely by too gross disobedience. Nor should I speak of this process of education as past for anyone, be he as old as he may. For every man the world is as fresh as it was at the first day, and as full of untold novelties for him who has the eyes to see them. And Nature is still continuing her patient education of us in that great university, the universe, of which we are all members – Nature having no Test-Acts.

*Collected Essays* (Volume 3)

*Science and Education*

A Liberal Education; and Where to Find It (p. 84)

Macmillan & Company Ltd. London, England. 1904

Those who take honours in Nature's university, who learn the laws which govern men and things and obey them, are the really great and successful men in this world. The great mass of mankind are the "Poll," who pick up just enough to get through without much discredit. Those who won't learn at all are plucked; and then you can't come up again. Nature's pluck means extermination.

*Collected Essays* (Volume 3)

*Science and Education*

A Liberal Education; and Where to Find It (p. 85)

Macmillan & Company Ltd. London, England. 1904

My business with my scientific friends is something like yours with the Puritans, nature being our Paul.

Chapter XXIV (p. 353)

D. Appleton & Co. New York, New York, USA. 1916

**Huygens, Christiaan** 1629–95

Dutch mathematician, astronomer, and physicist

...we may mount from this dull Earth, and viewing it from on high, consider whether Nature has laid out all her cost and finery upon this small speck of Dirt. So, like Travelers into other distant Countries, we shall be better able to judge of what's done at home, know how to make a true estimate of, and set its own value upon everything.

*The Celestial Worlds Discover'd, or, Conjectures Concerning the Planetary Worlds, their Inhabitants and Productions*

Book the First, These Studies useful to Religion (p. 10)

Printed for T. Childe. London, England. 1698

Nature seems to court variety in her Works, and may have made them widely different from ours either in their matter or manner of Growth, in their outward Shape, or their inward Contexture; she may have made them such as neither our Understanding nor Imagination can conceive.

*The Celestial Worlds Discover'd, or, Conjectures Concerning the Planetary Worlds, their Inhabitants and Productions*

Book the First, Not to be imagin'd too unlike ours (p. 22)

Printed for T. Childe. London, England. 1698

**Irwin, Keith Gordon**

No biographical data available

It is nature, of course, that is the great chemist. Every growing plant is a marvelous chemical factory, every living thing a brilliant shifter of atoms from one bewildering compound to another. And down in the depths of the earth enormous forces operate to create the minerals that someday may be close to the earth's surface.

*The Romance of Chemistry*

Forward (p. xi)

The Viking Press. New York, New York, USA. 1959

**Jefferies, Richard** 1848–87

English naturalist and author

*Stoop and touch the earth*, and receive its influence; touch the flower, and feel its life; face the wind, and have its meaning; let the sunlight fall on the open hand as if you could hold it. Something may be grasped from them all, invisible yet strong. It is the sense of a wider existence – wider and higher.

*The Hills and the Vale*

The Idle Earth (p. 273)

Duckworth & Co. London, England. 1909

**Jevons, William Stanley** 1835–82

English economist and logician

It must be the ground of all reasoning and inference that *what is true of one thing will be true of its equivalent*, and that under carefully ascertained conditions *Nature repeats herself*.

*The Principles of Science: A Treatise on Logic and Scientific Method*

Introduction (p. 2)

Macmillan & Co Ltd. London, England. 1887

...that what is true of one thing will be true of its equivalent, and that under carefully ascertained conditions *Nature repeats herself*.

*The Principles of Science: A Treatise on Logic and Scientific Method*

(2nd edition)

Introduction (p. 2)

Macmillan & Co Ltd. London, England. 1877

**Juvenal (Decimus Junius Juvenal)**

Roman poet

*Nunquam aliud Natura aliud Sapientia dicit.*

Nature never says one thing, Wisdom another.

*Satires*

Chapter XIV, 321

Indiana University Press. Bloomington, Indiana, USA. 1958

Nature and Wisdom always speak alike.

*Decii Junii Juvenalis et A. Persii Flacci Satirae*

Satire XIV (p. 308)

Whittaker & Co. London, England. 1857

**Kearton, Richard** 1862–1928

English naturalist

Nature appeals to us in a thousand tongues everyone of which may be known and loved.

*Wild Nature's Ways*

Introduction (p. ix)

Cassell & Co., Ltd. London, England. 1903

**Kepler, Johannes** 1571–1630

German astronomer

...the closer I approach her [Nature], the more petulant her games become, and the more she again and again sneaks out of the seeker's grasp just when he is about to seize her through some circuitous route. Nevertheless, she never ceases to invite me to seize her, as though delighting in my mistakes.

Translated by William H. Donahue

*New Astronomy*

Part IV, 58 (p. 573)

At the University Press. Cambridge, England. 1992

**Kett, Henry** 1761–1825

English college teacher and writer

At the same time that she [nature] solicits him [man] to follow her not only into her open walks, but likewise to explore her secret recesses, she – fails not to reward him with the purest gratifications of the mind, because at every step he takes, new instances of beauty, variety, and perfection are unfolded to his view.

*Elements of General Knowledge* (Volume 2)

Chapter IV (p. 89)

Printed by E. Bronson. Philadelphia, Pennsylvania, USA. 1805

Nature speaks by her works an universal language, the rudiments of which are peculiarly adapted to the inclination and capacity of the young, whose curiosity may be gratified and excited by turns: but more profound and extensive inquiries are suitable to the contemplation of persons of every age; and no subject can be more worthy of their attentive observation.

*Elements of General Knowledge* (Volume 2)

Chapter IV (p. 90)

Printed by E. Bronson. Philadelphia, Pennsylvania, USA. 1805

**Keyser, Cassius Jackson** 1862–1947

American mathematician

To assume that nature is thinkable, an incarnate rational logos, and to seek the thought supposed incarnate there – these are at once the principle and the hope of the nature student.

*The Human Worth of Rigorous Thinking: Essays and Addresses*

The Universe and Beyond (p. 136)

Columbia University Press. New York, New York, USA. 1916

**Kingsley, Charles** 1819–75

English clergyman and writer

Ay! there is no lie in Nature, no discord in the revelations of science, in the laws of the universe.

*Alton Locke*

Chapter XVIII (p. 143)

Macmillan & Co Ltd. London, England. 1862

Nature's deepest laws, her own true laws, are her invisible ones.

*Alton Locke, Taylor and Poet*

Chapter XXXVIII (p. 289)

Macmillan & Company Ltd. London, England. 1911

Madame Nature allows no dangerous classes, in the modern sense. She has, doubtless for some wise reason, no mercy for the weak. She rewards each organism according to its works; and if anything grows too weak or stupid to take care of itself, she gives it its due deserts by letting it die and disappear.

*Scientific Essays and Lectures*

On Bio-Geology (p. 3)

Publisher undetermined

...see how nature is not only "maxima in minimis – greatest in her least, but often" pulcherrima in abditis – fairest in her most hidden...works.

*Glaucus; Or, The Wonders of the Shore* (p. 88)

Macmillan & Co Ltd. London, England. 1890

...there is no lie in Nature, no discord in the revelations of science, in the laws of the universe. Infinite, pure, unfallen, earth-supporting Titans, fresh as on the morning of creation, those great laws endure; your only true democrats, too – for nothing is too great or too small for them to take note of. No tiniest gnat, or speck of dust, but they feed it, guide it, and preserve it.

*Novels, Poems and Letters of Charles Kingsley* (Volume 2)

*Alton Locke*

My Fall (p. 37)

The Co-Operative Publication Society. New York, New York, USA. 1898

**Krutch, Joseph Wood** 1893–1970

American naturalist, conservationist, and writer

To those who study her, Nature reveals herself as extraordinarily fertile and ingenious in devising means, but she has no ends which the human mind has been able to discover or comprehend.

*The Modern Temper*

Chapter Two, Section iii (p. 27)

Harcourt, Brace & Company. New York, New York, USA. 1929

**Lamarck, Jean-Baptiste Pierre Antoine** 1744–1829

French biologist

Do we not therefore perceive that by the action of the laws of organization...nature has in favorable times, places, and climates multiplied her first germs of animality, given place to developments of their organizations...

and increased and diversified their organs? Then...aided by much time and by a slow but constant diversity of circumstances, she has gradually brought about in this respect the state of things which we now observe. How grand is this consideration, and especially how remote is it from all that is generally thought on this subject!

In *Alpheus Spring Packard*

*Lamarck, the Founder of Evolution: His Life and Work*

Chapter 16 (p. 259)

Longmans, Green & Company. London, England. 1901

Nature has produced all the species of animals in succession, beginning with the most imperfect or simplest, and ending her work with the most perfect, so as to create a gradually increasing complexity in their organisation; these animals have spread at large throughout all the habitable regions of the globe, and every species has derived from its environment the habits that we find in it and the structural modifications which observation shows us.

Translated by Hugh Elliot

*Zoological Philosophy: An Exposition with Regard to the Natural History of Animals*

Chapter VII (p. 126)

The University of Chicago Press. Chicago, Illinois, USA. 1984

### **Lankester, Edwin Ray** 1847–1929

English zoologist

Nature, it has been said, gives no reply to a general inquiry – she must be interrogated by questions which already contain the answer she is to give; in other words, the observer can only observe that which he is led by hypothesis to look for: the experimenter can only obtain the result which his experiment is designed to obtain.

*The Advancement of Science*

Chapter I (p. 9)

Macmillan & Company Ltd. London, England. 1890

### **Laplace, Pierre Simon** 1749–1827

French mathematician, astronomer, and physicist

...[if] the result of a long series of precise observations approximates a simple relation so closely that the remaining difference is undetectable by observation and may be attributed to the errors to which they are liable, then this relation is probably that of nature.

*Pierre Simon Laplace 1749–1827: A Life in Exact Science*

Chapter 16 (p. 130)

Princeton University Press. Princeton, New Jersey, USA. 1997

### **Lardner, Dionysius** 1793–1859

British physicist and astronomer

Nature has raised the curtain of futurity, and displayed before him [Man] the succession of her decrees, so far as they effect the physical universe, for countless ages to come; and the revelations of which she has made him the instrument, are supported and verified by a never-ceasing train of predictions fulfilled.

*Popular Lectures on Science and Art* (Volume 1)

Haley's Comet (p. 171)

Henry W. Law. New York, New York, USA. 1856

### **Lavoisier, Antoine Laurent** 1743–94

French chemist

It is a maxim universally admitted in geometry, and indeed in every branch of knowledge, that, in the progress of investigation, we should proceed from known facts to what is unknown. In early infancy, our ideas spring from our wants; the sensation of want excites the idea of the object by which it is to be gratified. In this manner, from a series of sensations, observations, and analyses, a successive train of ideas arises, so linked together, that an attentive observer may trace back to a certain point the order and connection of the whole sum of human knowledge.

*Elements of Chemistry* (Volume 1) (5th edition)

Preface of the Author (p. xx)

Printed for W. Creech. Edinburgh, Scotland. 1802

### **Leclerc, Georges-Louis, Comte de Buffon** 1707–88

French naturalist

Nature turns upon two steady pivots, unlimited fecundity which she has given to all species; and those innumerable causes of destruction which reduce the product of this fecundity...

*Natural History, General and Particular* (Volume 5) (p. 88)

T. Caldwell and W. Davies. London, England. 1812

### **Lehmann, Karl Gotthelf**

No biological data available

Even if Nature really knows her own mind, there are certain things she has no intention of letting us know in advance.

*Physiological Chemistry*

Chapter IX (p. 129)

Blanchard & Lea. Philadelphia, Pennsylvania, USA. 1855

### **Lewis, C. S. (Clive Staples)** 1898–1963

British author, scholar, and popular theologian

If ants had a language they would, no doubt, call their anthill an artifact and describe the brick wall in its neighborhood as a natural object. Nature in fact would be for them all that was not “ant-made.” Just so, for us, nature is all that is not man-made; the natural state of anything is its state when not modified by man.

*Studies In Words*

Nature (pp. 45–46)

The University Press. Cambridge, England. 1960

### **Lewes, George Henry** 1817–78

English philosopher

Come with me, and lovingly study Nature, as she breathes, palpitates, and works under myriad forms of Life forms unseen, unsuspected, or unheeded by the mass of ordinary men.

*Studies in Animal Life*

Chapter I (p. 1)

Smith, Elder & Co. London, England. 1862

Nature *lives*: every pore is bursting with Life; every death is only a new birth, every grave a cradle.

*Studies in Animal Life*

Chapter I (p. 3)

Smith, Elder & Co. London, England. 1862

### Lewis, Exum Percival

No biographical data available

Nature does not always afford us the best opportunities for observing her phenomena. They may occur so rarely or so fitfully, or on such a small scale, that we cannot study them; or they may be so complex as to make it very difficult to resolve them into their simplest elements.

*Notes on the Properties of Matter and Heat*

Introductory (pp. 2–3)

Percival Lewis. Berkeley, California, USA. 1903

### Lockley, Martin

American geologist

When we lose touch with nature, we lose touch with our own natures, and so begin to think of rocks, plants, animals, and even people as somehow less important than the stressful job of fitting into the artificial world we are so busy creating. We lose our sense of perspective on history, and time becomes something we save or make, despite our awareness that there are no time banks or time storage units. We are so befuddled that we have to make time for people, and even make time to eat! All the while the Bushman's dream is dreaming us, and the inconceivably vast space-time continuum rolls on as it has from time immemorial.

*The Eternal Trail: A Tracker Looks at Evolution*

Chapter One (p. 12)

Perseus Publishing. Cambridge, Massachusetts, USA. 2000

### Locy, William Albert

No biographical data available

The growth of the knowledge of organic nature is a long story, full of human interest. Nature has been always the same, but the capacity of man as its interpreter has varied.

*Biology and Its Makers: With Portraits and Other Illustrations* (3rd edition)

Part I, Chapter I (p. 7)

Henry Holt & Co. New York, New York, USA. 1908

### Longfellow, Henry Wadsworth 1807–82

American poet

Nature with folded hand seemed there,  
Kneeling at her evening prayer!

*The Poetical Works of Henry Wadsworth Longfellow*

Voices of The Night

Prelude, Stanza 11

Houghton Mifflin Company. Boston, Massachusetts, USA. 1883

No tears

Dim the sweet look that Nature wears.

*The Poetical Works of Henry Wadsworth Longfellow*

Sunrise on the Hills, l. 35

Houghton Mifflin Company. Boston, Massachusetts, USA. 1883

So Nature deals with us, and takes away  
Our playthings one by one, and by the hand  
Leads us to rest so gently, that we go,  
Scarce knowing if we wish to go or stay,  
Being too full of sleep to understand  
How far the unknown transcends the what we know.

*The Poetical Works of Henry Wadsworth Longfellow*

Nature, l. 9

Houghton Mifflin Company. Boston, Massachusetts, USA. 1883

And Nature, the old nurse, took  
The child upon her knee,  
Saying: "Here is a story-book  
Thy Father has written for thee."  
"Come, wander with me," she said,  
"Into regions yet untrod;  
And read what is still unread  
In the manuscripts of God."

*Fiftieth Birthday of Agassiz*

Sackett & Wilhelms Lithographing Corp. New York, New York, USA. 1935

### Lubbock, John, First Baron Avebury 1834–1919

English banker, politician, biologist and archaeologist

... we are not the only tenants of our farms – that the fields and hedges, woods and waters, all around us, teem with a complex, rich, and interesting life. ... [N]ature will speak only to those who listen with love and sympathy...

In Henry C. McCook

*Tenants of an Old Farm; Leaves from the Note-Book of a Naturalist*

Introduction (p. vi)

George W. Jacobs & Company. Philadelphia, Pennsylvania, USA. 1895

To most of us, surely, Nature when sombre, or even gloomy, is soothing and consoling; when bright and beautiful, not only raises the spirits, but inspires and elevates our whole being –

*The Beauties of Nature and the Wonders of the World We Live In*

Chapter I (p. 5)

Macmillan & Company Ltd. London, England. 1904

### Luther Standing Bear 1868–1939

Oglala Lakota chief, 1905–1939

Only to the white man was nature a "wilderness" and only to him was the land "infested" with "wild" animals and "savage" people. To us it was tame. Earth was bountiful and we were surrounded with the blessings of the Great Mystery. Not until the hairy man from the east came and with brutal frenzy heaped injustices upon us and the families that we loved was it "wild" for us. When the very animals of the forest began fleeing from his approach, then it was that for us the "Wild West" began.

*Land of the Spotted Eagle*

Boyhood (p. 38)

University of Nebraska Press. Lincoln, Nebraska, USA. 1978

### Lyell, Sir Charles 1797–1875

English geologist

So in Geology, if we could assume that it is part of the plan of nature to preserve, in every region of the globe,

an unbroken series of monuments to commemorate the vicissitudes of the organic creation, we might infer the sudden extirpation of species, and the simultaneous introduction of others, as often as two formations in contact include dissimilar organic fossils. But we must shut our eyes to the whole economy of the existing causes, aqueous, igneous, and organic, if we fail to perceive that such is not the plan of Nature.

*Principles of Geology* (Volume 3)

Chapter III (p. 34)

John Murray. London, England. 1830

**Macfie, Ronald Campbell** 1867–1931

Poet and physician

Nature never errs in the long-run. She made man from a shred of the Milky Way, and she may be trusted to look after the creature she has made.

*Science, Matter and Immortality*

Chapter XVIII (p. 224)

William & Norgate. London, England. 1909

**Maclaurin, Colin** 1698–1746

Scottish mathematician and natural philosopher

A strong curiosity has prompted men in all times to study nature; every useful art has some connexion with the science; and the unexhausted beauty and variety of things makes it ever agreeable, new and surprising.

*An Account of Sir Isaac Newton's Philosophical Discoveries, in Four Books*

Book I, Chapter I (p. 3)

Printed for the Author's Children. London, England. 1748

**Malan, Solomon Caesar** 1812–94

British divine and orientalist

In Nature everything has a meaning; that is, every object is exactly adapted to the place it occupies, and to the purpose for which it was made.

*Aphorisms on Drawing*

IV (p. 5)

Longman, Brown, Green, Longmans & Roberts. London, England. 1856

**Manning, Richard**

No biographical data available

Now I take this thought as necessary to humble our science, to understand that everything we know was taught us by nature, but nature gave us brains evolved to their niche, so they are limited in their understanding. All that we know we have learned from nature, but we do not know all that nature knows.

*Grassland*

Chapter 12 (p. 263)

The Viking Press. New York, New York, USA. 1995

**Marcet, Mrs. (Jane Haldimand)** 1769–1858

English expository author in chemistry, botany, religion, and economics

**Comstock, John Lee** 1789–1858

American physician and writer

**Blake, John Lauris**

No biographical data available

Nature...has her laboratory, which is the universe, and there she is incessantly employed in chemical operations.

*Conversations on Chemistry*

Conversation I (p. 9)

John Beach. Boston, Massachusetts, USA. 1836

**Marsh, George Perkins** 1801–82

American scholar, writer, and statesman

Nature, left undisturbed, so fashions her territory as to give it almost unchanging permanence of form, outline, and proportion, except when shattered by geologic convulsions; and in these comparatively rare cases of derangement, she sets herself at once to repair the superficial damage, and to restore, as nearly as practicable, the former aspect of her dominion.

*The Earth as Modified by Human Action: A New Edition of Man and Nature*

Chapter I (p. 26)

Scribner, Armstrong & Company. New York, New York, USA. 1874

**Mason, Frances**

No biographical data available

Nature shows nothing finished and perfect in the beginning; she shows orderly divergence and an advance from lower to higher levels of creation.

*Creation by Evolution*

Editors Preface (p. vii)

The Macmillan Company. New York, New York, USA. 1928

**McCarthy, James Remington**

No biographical data available

Now Time took into partnership Nature to help it carry out the remainder of the program. Time is ruthless but patient. Nature is beautiful but calculatingly cruel. She had on her agenda something more than a lifeless, cold ball whirling in space. She visualized vast and contrary things.

*Fire in the Earth: The Story of the Diamond*

Chapter I (p. 1)

Harper & Brothers Publishers. New York, New York, USA. 1942

**McKibben, Bill** 1960–

Freelance writer

The end of nature sours all my material pleasures. The prospect of living in a genetically engineered world sickens me. And yet it is toward such a world that our belief in endless material advancement hurries us. As long as that desire drives us, there is no way to set limits.

*The End of Nature*

A Path of More Resistance (p. 173)

Random House, Inc. New York, New York, USA. 1989

**McLennan, Evan**

No biographical data available

There is a charm for man in the study of Nature. It elevates his soul to real greatness. It frees his mind from stormy life, and thrills him with the purest joy.

...not from Nature up to Nature's God,  
But down from Nature's God look Nature through.

*Luther: Or, the Spirit of the Reformation*

A Landscape of Domestic Life

Francis Baisler. London, England. 1843

**Morley, John First Viscount Morley of Blackburn** 1838–1923

English statesman and writer

Nature, in her most dazzling aspects or stupendous parts, is but the background and theatre of the tragedy of man.

*Critical Miscellanies*

Byron (p. 140)

Macmillan &amp; Company Ltd. London, England. 1886

**Morris, Robert Tuttle** 1857–1945

American surgeon

If we ask why nature has such definite plans, the answer lies with infinity – out of our reach.

*Microbes and Men*

Chapter I (p. 11)

Doubleday Page &amp; Co. Garden City, New York, USA. 1916

**Morrison, A. Cressy** 1884–1951

American scientist

Although nature, the great chemist, has provided man with the prototypes and methods by which he has attempted, with considerable success, to conquer his environment,

her motives and objectives have seldom been man's. The beautiful silks with which man bedecks himself and his womankind...were created for far different purposes than those to which man has put them.

*Man in a Chemical World*

Chapter 2 (p. 13)

Charles Scribner's Sons. New York, New York, USA. 1937

**Motherwell, William** 1797–1835

Scottish poet

And we, with Nature's heart in tune,  
Concerted harmonies.

In Frederick Saunders and Minnie K. Davis (eds.)

*Gems of Genius in Poetry and Art*

Jeannie Morrison

Thompson & Thompson. Chicago, Illinois, USA. 1899

**Muir, John** 1838–1914

American naturalist

Then to think of the infinite numbers of smaller fellow mortals, invisibly small, compared with which the smallest ants are as mastodons.

*My First Summer in the Sierra*

June 13 (p. 62)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

None of Nature's landscapes are ugly so long as they are wild.

*Our National Parks*

Chapter I (p. 4)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

Thus review the eventful past, we see Nature working with enthusiasm like a man, blowing her volcanic forges like a blacksmith blowing his smithy fires, shoving glaciers over the landscapes like a carpenter shoving his planes, clearing, ploughing, harrowing, irrigating, planting, and sowing broadcast like a farmer and gardener, doing rough work and fine work, planting sequoias and pines, rosebushes and daisies; working in gems, filling every crack and hollow with them; distilling fine essences; painting plants and shells, clouds, mountains, all the earth and heavens, like an artist, ever working toward beauty higher and higher.

*Our National Parks*

Chapter II (p. 73)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

Nature...leading us with work...yet cheers us like a mother with tender prattle words of love...

In Linnie Marsh Wolfe (ed.)

*John of the Mountains*

Chapter II, Section 2, Undated (pp. 66–67)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1938

When we are with Nature we are awake, and we discover many interesting things and reach many a mark we are not aiming at.

In Linnie Marsh Wolfe (ed.)

*John of the Mountains*

Chapter VII, Section I, June, 1890 (p. 300)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1938

None may wholly escape the Good of Nature, however imperfectly exposed to her blessings.

*Steep Trails*

Chapter III (p. 48)

Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

[I]n every walk with Nature one receives far more than he seeks.

*Steep Trails*

Chapter IX (p. 128)

Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

Nature has always something rare to show us...and the danger to life and limb is hardly greater than one would experience crouching deprecatingly beneath a roof.

*Mountains of California*

Chapter X (p. 249)

The Century Company. New York, New York, USA. 1911

How fiercely, devoutly wild is Nature in the midst of her beauty loving tenderness.

*My First Summer in the Sierra*

July 29 (p. 177)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

**Munroe, J.**

No biographical data available

In the young prime of the world, before the era of positive Science, Nature could not but be viewed with unchecked feelings. She was looked at with the eye of the poet and the artist. Her beautiful forms and colours inspired delight and wonder: the play of her varied energies invoked sympathetic moods and feelings in the soul.

Science and the Sense of Beauty

*The Journal of Science*

Volume IV, Number c, April, 1882 (p. 201)

By occupying ourselves so much with the little we have learned to understand of her [nature] insensible to what is still beyond our knowledge. By classifying the shells in the bay we have lost some respect for the ocean still unexplored.

Science and the Sense of Beauty

*The Journal of Science, and Annals of Astronomy, Biology, Geology,*

Volume IV, (Third series), April, 1882 (p. 203)

**Myres, John Linton** 1869–1954

English archaeologist

...in separate favoured regions, various kinds of men set out to domesticate and master the gifts and forces around them: to "live well," in the old Greek phrase, under the given conditions of their home, or failing this, to seek and make a new one: in either event, to comply as well as to command; to conquer Nature by observance of her laws.

*The Dawn of History*

Chapter II (p. 44)

Henry Holt & Co. New York, New York, USA. 1911

## National Research Council (US)

Nature offers no greater splendor than the starry sky on a clear, dark night. Silent, timeless, jeweled with the constellations of ancient myth and legend, the night sky has inspired wonder throughout the ages. It is a wonder that leads our imagination far from the confines of Earth and the pace of present day, out into boundless space and cosmic time itself.

*Astronomy and Astrophysics for the 1980's* (Volume 1)  
Chapter 1 (p. 3)  
National Academy Press. Washington, D.C. 1982

**Newcomb, Simon** 1835–1909  
Canadian-American astronomer

In our time we think of the process of development in nature as one going continuously forward through the combination of the opposite processes of evolution and dissolution. The tendency of our thought has been in the direction of banishing cataclysms to the theological limbo, and viewing Nature as a sleepless plodder, endowed with infinite patience, waiting through long ages for results.

*Side-Lights on Astronomy and Kindred Fields of Popular Science*  
Chapter XVI (p. 239)  
Harper & Brothers Publishers. New York, New York, USA. 1906

**Nichols, Ernest Fox** 1869–1924  
American physicist

It is doubtful if our understanding of the unity of external nature can ever be illuminated by the lamp of anyone of the natural sciences.

*Lectures on Science, Philosophy and Art, 1907–1908*  
Physics (p. 5)  
The Columbia University Press. New York, New York, USA. 1908

**Nicolson, Marjorie Hope** 1894–1981  
Professor of English

...we see in Nature what we have been taught to look for, we feel what we have been prepared to feel.

*Mountain Gloom and Mountain Glory*  
Introduction (p. 1)  
University of Washington Press. Seattle, Washington, USA. 1997

**Nietzsche, Friedrich Wilhelm** 1844–1900  
German philosopher

...while you rapturously pose as deriving the canon of your law from nature, you want something quite the reverse from that, you strange actors and self-deceivers! Your pride wants to prescribe your morality, your ideal, to nature, yes to nature itself, and incorporate them in it; you...would like to make all existence exist only after your own image.... All your love of truth notwithstanding, you have compelled yourselves for so long and with such persistence and hypnotic rigidity to view nature *falsely*...you are no longer capable of viewing it in any

other way – and some abysmal arrogance infects you at last with the Bedlamite hope that, *because* you know how to tyrannize over yourselves...nature too can be tyrannized over...

*Beyond Good and Evil*  
Part One (p. 39)  
Penguin Books. London, England. 2003

**Oliver, Mary** 1935–  
American poet

Nature, the total of all of us, is the wheel that drives our world; those who ride it willingly might yet catch a glimpse of a dazzling, even a spiritual restfulness, while those who are unwilling simply to hang on, who insist that the world must be piloted by man for his own benefit, will be dragged around and around all the same, gathering dust but no joy.

*Blue Pastures*  
A Few Words (p. 92)  
Harcourt Brace & Company. New York, New York, USA. 1995

**Pagels, Heinz R.** 1939–88  
American physicist and science writer

Nature has been generous to astronomers, offering an abundance of different stars and galaxies at all stages in their lives to look at.

*Perfect Symmetry: The Search for the Beginning of Time*  
Part One, Chapter 1 (p. 28)  
Simon & Schuster. New York, New York, USA. 1985

Nature avoids infinities.

*Perfect Symmetry: The Search for the Beginning of Time*  
Part Four, Chapter 1 (p. 354)  
Simon & Schuster. New York, New York, USA. 1985

**Pascal, Blaise** 1623–62  
French mathematician and physicist

Nature has placed us so well in the middle that if we change one side of the balance, we change the other also.

In Roger Ariew  
*Pensees*  
Miscellaneous Thoughts 1 (p. 140)  
Hackett. Indianapolis, Indiana, USA. 2004

## Pater, Walter

...nature, with its unlimited space, its innumerable suns, and the earth but a mote in the beam; how different the strange new awe, or superstition, with which it fills our minds!

*The Renaissance*  
Pico Della Mirandola (p. 43)  
The Macmillan Company. New York, New York, USA. 1899

**Peattie, Donald Culross** 1898–1964  
American botanist, naturalist and author

It is Nature herself, as we grow in comprehension of her, who weans us from our early faith.

*An Almanac for Moderns*

March Thirtieth (p. 12)

G.P. Putnam's Sons. New York, New York, USA. 1935

### Peters, Ted

No biographical data available

Nature as we daily experience it is ambiguous, fraught with benefits and liabilities.

*Playing God?: Genetic Determinism and Human Freedom*

Playing God with DNA (p. 20)

Routledge. New York, New York, USA. 1997

### Planck, Max 1858–1947

German physicist

If one wishes to obtain a definite answer from Nature one must attack the question from a more general and less selfish point of view.

Translated by R. Jones and D.H. Williams

*A Survey of Physics: A Collection of Lectures and Essays*

The Unity of the Physical Universe (p. 15)

Methuen & Company Ltd. London, England. 1925

In all cases, the quantum hypothesis has given rise to the idea, that in Nature, changes occur which are not continuous, but of an explosive nature.

Translated by R. Jones and D.H. Williams

*A Survey of Physics: A Collection of Lectures and Essays*

New Paths of Physical Knowledge (p. 51)

Methuen & Company Ltd. London, England. 1925

...compared with immeasurable rich, ever young nature, advanced as man may be in scientific knowledge and insight, he must forever remain the wondering child and must constantly be prepared for new surprises.

Translated by F. Gaynor

*Scientific Autobiography and Other Papers* (p. 117)

Philosophical Library. New York, New York, USA. 1949

### Pliny (C. Plinius Secundus) 23–79

Roman savant and writer

Hail, Nature, mother of all creation, and mindful that I alone of the men of Rome have praised thee in all thy manifestations, be gracious to me.

*Natural History* (Volume 10)

Book XXXVII, sec 205

Harvard University Press. Cambridge, Massachusetts, USA. 1947

### Plutarch 46–119

Greek biographer and author

Nature without learning is like a blind man; learning without nature is like the maimed; practice without both these is incomplete. As in agriculture a good soil is first sought for, then a skilful husbandman, and then good seed: in the same way nature corresponds to the soil; the teacher to the husbandman; precepts and instruction to the seed.

In Craufurd Tait Ramage

*Beautiful Thoughts from Greek Authors* (p. 283)

Edward Howell. Liverpool, England. 1864

### Poincaré, Jules Henri 1854–1912

French mathematician and theoretical astronomer

The scientist does not study nature because it is useful; he studies it because he delights in it, and he delights in it because it is beautiful. If nature were not beautiful, it would not be worth knowing, and if nature were not worth knowing, life would not be worth living.

*The Foundations of Science*

*Science and Method*, Book I

Chapter I (p. 366)

The Science Press. New York, New York, USA. 1913

### Pope, Alexander 1688–1744

English poet

See plastic Nature working to this end,  
The single atoms each to other tend,  
Attract, attracted to, the next in place  
Form'd and impell'd its neighbor to embrace.

*The Complete Poetical Works* (Volume 2)

An Essay on Man

Epistle III, l. 9

Houghton Mifflin Company. New York, New York, USA. 1903

Eye nature's walks, shoot folly as it flies,  
And catch the manners, living as they rise;  
Laugh where we must, be candid where we can,  
But vindicate the ways of God to man.

*The Complete Poetical Works* (Volume 2)

An Essay on Man

Epistle I, l. 13

Houghton Mifflin Company. New York, New York, USA. 1903

All are but parts of one stupendous whole,  
Whose body Nature is, and God the soul;  
That chang'd thro' all, and yet in all same,  
Great in the earth as in th' ethereal frame;  
Warms in the sun, refreshes in the breeze,  
Glow in the stars, and blossoms in the trees;  
Lives thro' all life, extends thro' all extent,  
Spreads undivided, operates unspent;  
Breathes in our soul, informs our mortal part,  
As full, as perfect, in a hair as heart.

*The Complete Poetical Works* (Volume 2)

An Essay on Man

Epistle I, l. 267

Houghton Mifflin Company. New York, New York, USA. 1903

All nature is but art, unknown to thee.

*The Complete Poetical Works* (Volume 2)

An Essay on Man, Epistle I, l. 289

Houghton Mifflin Company. New York, New York, USA. 1903

### Pouchet, Félix Archimède 1800–72

French biologist

In her slightest sketches nature knows how to unite power to an exquisite fineness of mechanism; the first glance at insects proves this, and thus so soon as their interesting history is displayed before us, we feel no longer tempted

to treat them with the disdain that poets have shown. A simple butterfly, a single fly humbles the pride of man, and despite of him levels his forests, devours his crops, and reduces him to despair.

*The Universe: Or, The Infinitely Great and the Infinitely Little*  
Book III, Chapter I (p. 100)  
Blackie & Son. London, England. 1870

The more we study nature the grander does she appear. Science, by penetrating her secrets, often shows us the hidden and imposing forces exist where we only see inertia.

*The Universe: Or, The Infinitely Great and the Infinitely Little*  
The Vegetable Kingdom, Chapter II (p. 414)  
Blackie & Son. London, England. 1870

**Quammen, David** 1948–  
American science writer and naturalist

Nature grants no monopolies in resourcefulness. She does not even seem to hold much with the notion of portioning it out hierarchically. Gold, she decrees, is where you find it.

*Natural Acts: A Sidelong View of Science and Nature*  
A Better Idea (p. 3)  
Shocken Books. New York, New York, USA. 1985

**Quintilian** ca. 35–ca. 100  
Roman rhetorician

Nature herself has never attempted to effect great changes rapidly.

*De Institutione Oratoria*  
X,3,4  
Publisher undetermined  
London, England. 1822

**Reichenbach, Hans** 1891–1953  
German philosopher of science

Perhaps there has been no greater revolution in the history of mankind than this gradual transition, from the nature, full of gods, of primitive peoples, through the metaphysical nature of the philosophers, to the dispassionate nature of the physics of today, in which there are only facts and conceptual relations between them.

*Atom and Cosmos: The World of Modern Physics*  
Chapter 19 (pp. 287–288)  
The Macmillan Co. New York, New York, USA. 1933

**Rey, Jean** 1583–1645  
French physician and chemist

Nature in her inscrutable wisdom has...set limits which she never oversteps.

*Essays of Jean Rey*  
Essay XXVI (p. 52)  
William F. Clay. Edinburgh, Scotland. 1895

**Rice, Harvey** 1800–91  
American lawyer and newspaper publisher

Nature declares herself in her works. What exists beyond her domain, if anything, becomes necessarily a matter of faith or imagination.

*Nature and Culture*  
Chapter 1 (p. 7)  
Lee & Shepard. Boston, Massachusetts, USA. 1875

Nature seems to delight in creating the wonderful, as well as the beautiful, and often combines both in the same exhibition. Hence she entertains us, occasionally, with a magnificent display of fireworks, known as northern lights; or with an apparent shower of falling stars; or with the sudden descent of an aerolite, all ablaze, as if dropped from the fiery forge of the sun; or with a brilliant comet, which, with its long and glittering trail, sweeps in lady-like style the star-dust from the pavement of the sky.

*Nature and Culture*  
Chapter 1 (p. 31)  
Lee & Shepard. Boston, Massachusetts, USA. 1875

**Richet, Charles** 1850–1935  
French physiologist

Nature guards her secrets jealously: it is necessary to lay violent siege to her for a long time to discover a single one of them, however small it be.

*The Natural History of a Savant*  
Chapter XIII (p. 149)  
J.M. Dent & Sons Ltd. London, England. 1927

**Roberts, Nora** 1950–  
American author

Nature will kill you without a minute's thought, and in nastier ways than a crazy guy with a gun. It doesn't make her any less beautiful.

*Northern Lights*  
Twenty-six (p. 534)  
Penguin Group (USA)  
New York, New York, USA. 2004

**Rolleston, George** 1916–2001  
English physician and physiologist

Let us hope that in the interludes of rhetoric the logic of facts may find a moment to make itself heard. It will teach men...to hold of Nature that her ways are not as our ways, nor her thoughts as our thoughts.

*Scientific Papers and Addresses* (Volume 1)  
Chapter IV (p. 61)  
At The Clarendon Press. Oxford, England. 1884

**Romanes, George John** 1848–94  
Canadian-born English evolutionary biologist and physiologist

...wherever we tap organic nature, it seems to flow with purpose ...

*Mind and Motion and Monism*  
Monism (p. 108)  
Longmans, Green & Co. London, England. 1896

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

A strange mystery it is that Nature, omnipotent but blind, in the revolutions of her secular hurrying through the

abysses of space, has brought forth at last a child [man], subject still to her power, but gifted with sight, with knowledge of good and evil, with the capacity of judging all the works of his unthinking Mother.

*Mysticism and Logic: And Other Essays*

Chapter III (p. 48)

Longmans, Green & Co. London, England. 1919

Literature embodies what is general in particular circumstances whose universal significance shines through their individual dress; but mathematics endeavors to present whatever is most general in its purity, without any irrelevant trappings.

*Mysticism and Logic: And Other Essays*

Chapter IV (p. 61)

Longmans, Green & Co. London, England. 1919

**Russell, Henry Norris** 1877–1957

American astronomer

In the grandeur of its sweep in space and time, and the beauty and simplicity of the relations which it discloses between the greatest and the smallest things of which we know, it reveals as perhaps nothing else does, the majesty of the order about us which we call nature, and, as I believe, of that Power behind the order, of which it is but a passing shadow.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1923*

Constitution of the Stars (p. 158)

Government Printing Office. Washington, D.C. 1925

**Sagan, Carl** 1934–96

American astronomer and author

Scientists do not seek to impose their needs and wants on Nature, but instead humbly interrogate Nature and take seriously what they find.

*The Demon-Haunted World: Science as a Candle in the Dark*

Chapter 2 (p. 32)

Random House, Inc. New York, New York, USA. 1995

**Sayers, Dorothy L.** 1893–1957

English novelist and essayist

**Eustace, R.**

No biographical data available

Nature never worked by rule and compass.

*The Documents in the Case*

Letter 16, Agatha Milsom to Olive Farebrother (p. 56)

Victor Gollancz. London, England. 1978

**Scheffer, Victor B.**

Zoologist

Nature having hit upon certain practical blueprints for building an animal, uses them over and over again. Nature is parsimonious.

*Spires of Form*

Problems and Solutions

University of Washington Press. Seattle, Washington, USA. 1983

**Schiller, Friedrich** 1759–1805

German poet, philosopher, historian, and dramatist

Just because thou reatest in Nature what thou hast written,  
Just because thine eye all her phenomena marks, Reck-  
oning on the bonds which man upon Nature imposes,  
Does thy mind presume infinite Nature to know?

*The Poems of Schiller*

Human Knowledge (p. 303)

H. Holt & Co. New York, New York, USA. 1902

**Schrieber, Hermann** 1920–

Austrian historian

If nature and earth, those kindest of mother-goddesses,  
were so aroused as to annihilate cities, men could only  
conclude that the fault was theirs.

Translated by Richard and Clara Winston

*Vanished Cities*

Part One (p. 4)

Alfred A. Knopf. New York, New York, USA. 1962

**Schreiner, Olive**

No biographical data available

Nature, ever, like the old Hebrew God, cries out, “Thou  
shalt have no other gods before me.”

*The Story of an African Farm*

Part II, Chapter XIV (p. 372)

Little Brown, & Co. Boston, Massachusetts, USA. 1924

**Schrödinger, Erwin** 1887–1961

Austrian theoretical physicist

As our mental eye penetrates into smaller and smaller  
distances and shorter and shorter times, we find nature  
behaving so entirely differently from what we observe in  
visible and palpable bodies of our surroundings that no  
model shaped after our large-scale experiences can ever  
be “true.” A complete satisfactory model of this type  
is not only practically inaccessible, but not even think-  
able. Or, to be precise, we can, of course, think of it, but  
however we think it, it is wrong; not perhaps quite as  
meaningless as a “triangular circle,” but more so than a  
“winged lion.”

*Science and Humanism*

The Nature of Our “Models” (p. 25)

At The University Press. Cambridge, England. 1952

**Seeley, John Robert** 1834–95

English essayist and historian

He who studies it [nature] has continually the exquisite  
pleasure of discerning or half discerning and divining  
laws; regularities glimmer through an appearance of con-  
fusion; analogies between phenomena of a different order  
suggest themselves and set the imagination in motion;  
the mind is haunted with the sense of a vast unity not yet  
discoverable or nameable. There is food for contempla-  
tion which never runs short; you gaze at an object which

is always growing clearer, and yet always, in the very act of growing clearer, presenting new mysteries. And this arresting and absorbing spectacle, so fascinating by its variety, is at the same time overwhelming by its greatness; so that those who have devoted their lives to the contemplation scarcely ever fail to testify to the endless delight it gives them, and also to the overpowering awe with which from time to time it surprises them.

*Natural Religion, by the Author of 'Ecce homo'*  
Chapter I (pp. 21–22)  
Macmillan & Co Ltd. London, England. 1882

Nature, even if we hesitate to call it good, is infinitely interesting, infinitely beautiful.

*Natural Religion, by the Author of 'Ecce homo'*  
Chapter I (p. 21)  
Macmillan & Co Ltd. London, England. 1882

### **Selye, Hans** 1907–82

Austrian-American endocrinologist

To me nature created man, and nature is superior.

In Denis Brian  
*Genius Talk: Conversations with Nobel Scientists and Other Luminaries*  
Chapter 13 (p. 267)  
Plenum Press. New York, New York, USA. 1995

### **Seneca (Lucius Annaeus Seneca)** 4 BCE–65 AD

Roman playwright

Nature does not turn out her work according to a single pattern; she prides herself upon her power of variation...

*Physical Science in the Time of Nero, Being a Translation of the Quaestiones Naturales of Seneca*  
Book VII, Chapter XXVII (p. 301)  
Macmillan & Company Ltd. London, England. 1910

Nature does not reveal all her secrets at once. We imagine we are initiated in her mysteries: we are, as yet, but hanging around her outer courts.

*Physical Science in the Time of Nero, Being a Translation of the Quaestiones Naturales of Seneca*  
Book VII, Chapter XXXI (p. 306)  
Macmillan & Company Ltd. London, England. 1910

### **Shakespeare, William** 1564–1616

English poet, playwright, and actor

Thou, nature, art my goddess; to thy laws  
My services are bound.

In *Great Books of the Western World* (Volume 27)  
*The Plays and Sonnets of William Shakespeare* (Volume 2)  
*King Lear*  
Act I, Scene ii, l. 1–2  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

One touch of nature makes the whole world kin,  
That all with one consent praise new-born gawds,  
Though they are made and moulded of things past,  
And give to dust that is a little gilt  
More laud than gilt o'er-dusted.

In *Great Books of the Western World* (Volume 27)  
*The Plays and Sonnets of William Shakespeare* (Volume 2)  
*Troilus and Cressida*  
Act III, Scene iii, l. 175–179  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

How sometimes nature will betray its folly,  
Its tenderness, and make itself a pastime  
To harder bosoms!

In *Great Books of the Western World* (Volume 27)  
*The Plays and Sonnets of William Shakespeare* (Volume 2)  
*The Winter's Tale*  
Act I, Scene ii, l. 151–153  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...nature is made better by no mean  
But nature makes that mean.

So, over that art  
Which you say adds to nature, is an art  
That nature makes.

In *Great Books of the Western World* (Volume 27)  
*The Plays and Sonnets of William Shakespeare* (Volume 2)  
*The Winter's Tale*  
Act IV, Scene iv, l. 88–90  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

In Nature's infinite book of secrecy  
A little I can read.

In *Great Books of the Western World* (Volume 27)  
*The Plays and Sonnets of William Shakespeare* (Volume 2)  
*Anthony and Cleopatra*  
Act I, Scene ii, l. 9–10  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### **Shaw, George Bernard** 1856–1950

Irish comic dramatist and literary critic

The notion that Nature does not proceed by jumps is only one of the budget of plausible lies that we call classical education. Nature always proceeds by jumps. She may spend twenty thousand years making up her mind to jump; but when she makes it up at last, the jump is big enough to take us into a new age.

*Back to Methuselah*  
Part II, XXXIII (p. 81)  
Constable & Company Ltd. London, England. 1921

### **Shelley, Mary Wollstonecraft** 1797–1851

English Romantic writer

...the moon gazed on my midnight labours, while, with  
unrelaxed and breathless eagerness, I pursued nature to  
her hiding-places.

*Frankenstein: Or, The Modern Prometheus*  
Chapter IV (p. 74)  
George Routledge & Sons. London, England. 1891

### **Sherman, Mrs. John Dickinson**

No biographical data available

Give to the child of today an opportunity to acquire an  
intimate knowledge of Nature's products and Nature's

ways, and future generations will avoid many of the mistakes of those gone before.

The Study of Nature for Children

*Nature Magazine*, Volume 1, Number 1. 1923 (p. 45)

**Slossin, Edwin Emery** 1865–1919

Chemist and author

Imitate Nature? Yes, when we cannot improve upon her. Admire Nature? Possibly, but be not blinded to her defects. Learn from Nature? We should sit humbly at her feet until we can stand erect and go our own way. Love Nature? Never! She is our treacherous and unsleeping foe, ever to be feared and watched and circumvented, for at any moment and in spite of all our vigilance she may wipe out the human race by famine, pestilence or earthquake and within a few centuries obliterate every trace of its achievement.

*Creative Chemistry*

Chapter I (p. 10)

The Century Co. New York, New York, USA. 1919

**Smyth, Nathan A.**

No biographical data available

By the pull of pleasure and prod of pain nature keeps the individual in tune with her purposes.

*Through Science to God*

Chapter X (p. 146)

The Macmillan Company. New York, New York, USA. 1936

**Sonneberg, Walter**

No biographical data available

Men enter into competition with Nature without in the least understanding the rules of the game.

*Social Eccentricities*

Social Eccentricities (p. 3)

Broadway Publishing Co. New York, New York, USA. 1906

Nature must have many a laugh at her disciples' antics.

*Social Eccentricities*

Social Eccentricities (p. 14)

Broadway Publishing Co. New York, New York, USA. 1906

**Spencer, Herbert** 1820–1903

English social philosopher

Is it not, indeed, an absurd and almost sacrilegious belief that the more a man studies Nature the less he reveres it? Think you that a drop of water, which to the vulgar eye is but a drop of water, loses anything in the eye of the physicist who knows that its elements are held together by a force which, if suddenly liberated, would produce a flash of lightning?

*Education: Intellectual, Moral and Physical*

A.L. Fowle. New York, New York, USA. 1860

Sad, indeed, is it to see how men occupy themselves with trivialities, and are indifferent to the grandest phenomena – care not to understand the architecture of

the Heavens, but are deeply interested in some contemptible controversy about the intrigues of Mary Queen of Scots! – are learnedly critical over a Greek ode, and pass by without a glance that grand epic written by the finger of God upon the strata of the Earth!

*Education: Intellectual, Moral, and Physical*

Chapter I (p. 83)

D. Appleton & Co. New York, New York, USA. 1891

Nature's rules...have no exceptions.

*Social Statics*

Introduction, Lemma II (p. 39)

John Chapman. London, England. 1851

With a perfect economy, Nature turns all forces to account.

*Social Statics*

National Education (p. 178)

D. Appleton & Co. New York, New York, USA. 1899

Pervading all nature we may see at work a stern discipline, which is a little cruel that it may be very kind.

*Social Statics*

Part III, Chapter XXV (p. 352)

Dover Publications. New York, New York, USA. 1890

We hear a great deal about “the vile body;” and many are encouraged by the phrase to transgress the laws of health. But Nature quietly suppresses those who treat thus disrespectfully one of her highest products, and leaves the world to be peopled by the descendants of those who are not so foolish.

*Essays, Scientific, Political, and Speculative*

The Americans (pp. 482–483)

D. Appleton & Co. New York, New York, USA. 1892

Either unknowingly or in spite of themselves, Nature leads men by purely personal motives to fulfil her ends: Nature being one of our expressions for the Ultimate Cause of things, and the end, remote when not proximate, being the highest form of human life.

*Essays, Scientific, Political, and Speculative* (Volume 2)

The Americans (p. 491)

D. Appleton & Co. New York, New York, USA. 1892

**Spenser, Edmund** 1552–99

English poet

Yet neither spinnes, nor cards, ne cares nor fretts,

But to her mother Nature all her care she lets.

*The Complete Poetical Works of Edmund Spenser*

The Faerie Queene

Book II, Canto VI

Houghton Mifflin Company. Boston, Massachusetts, USA. 1908

**Stanton, Elizabeth Cady** 1810–87

American social activist

Nature, like a loving mother, is ever trying to keep land and sea, mountain and valley, each in its place, to hush the angry winds and waves, balance the extremes of heat and cold, of rain and drought, that peace, harmony, and beauty may reign supreme.

*A Library of American Literature* (Volume 7)  
A Plea for Woman Suffrage (p. 321)  
Charles L. Webster & Co. New York, New York, USA. 1889

**Steele, Joel Dorman** 1836–86  
American educator and textbook writer

In Nature all is common, and no use is base. She keeps no selected elements done up in gilt papers for sensitive people.  
*A Fourteen Weeks Course in Chemistry*  
Conclusion (p. 223)  
A.S. Barnes & Company. New York, New York, USA. 1870

**Stevenson, Robert Louis** 1850–94  
Scottish essayist and poet

The seeming significance of nature's appearances, their unchanging strangeness to the senses, and the thrilling response which they awaken in the mind of man.... If we could only write near enough to the facts, and yet with no pedestrian calm, but ardently, we might transfer the glamour of reality direct upon our pages.  
*The Novels and Tales of Robert Louis Stevenson*  
*Character and Opinions* (p. 134)  
Charles Scribner's Sons. New York, New York, USA. 1902

...Nature, the great Moloch, which exacts a frightful tax of human blood, sparing neither young nor old; taking the child from the cradle, the mother from her babe, and the father from the family.  
*Underwoods* (7th edition)  
Doctor and Nurse (p. 18)  
Chatto & Windus. London, England. 1895

**Swammerdam, Jan**  
No biographical data available

...Nature far surpasses all the writings and treatises that can be compiled, and in this and all other cases will teach more in one instant of time than anyone can learn in a long series of years out of the best library.  
In Thomas Medwin  
*The Angler in Wales* (Volume 1)  
Treatise on the Ephemerus (p. 311)  
Richard Bentley. London, England. 1834

**Swann, William Francis Gray** 1884–1962  
Anglo-American physicist

There are times...in the growth of human thought when nature, having led man to the hope that he may understand her glories, turns for a time capricious and mockingly challenges his powers to harmonize her mysteries by revealing new treasures.  
In Bernard Jaffe  
*Crucibles: The Story of Chemistry*  
Chapter XVI (p. 322)  
Dover Publications. New York, New York, USA. 1976

**Tennyson, Alfred (Lord)** 1809–92  
English poet

Who trusted  
God was love indeed

And love Creation's final law –  
Tho' Nature, red in tooth and claw  
With ravine, shriek'd against his creed.  
*Alfred Tennyson's Poetical Works*  
In Memoriam A.H.H., LVI, Stanza IV  
Oxford University Press, Inc. London, England. 1953

Nothing in Nature is unbeautiful.  
*Alfred Tennyson's Poetical Works*  
Lover's Tale, I. 348  
Oxford University Press, Inc. London, England. 1953

A void was made in Nature;  
all her bonds  
Crack'd; and I saw the flaring atom-streams  
And torrents of her myriad universe  
Ruining along the illimitable inane,  
Fly on to clash together again...  
*Alfred Tennyson's Poetical Works*  
Lucretius, I. 37–39  
Oxford University Press, Inc. London, England. 1953

**Thierry, Paul Henri, Baron d'Holbach** 1723–89  
German-born French man of leisure

Instead...of seeking out of the world he inhabits for beings who can procure him a happiness denied to him by Nature, let man study this Nature, let him learn her laws, contemplate her energies [and] observe the immutable rules by which she acts ...  
Translated by H.D. Robinson  
*The System of Nature, Or, Laws of the Moral and Physical World*  
(Volume 1)  
Chapter I (p. 2)  
J.P. Mendum. Boston, Massachusetts, USA. 1889

**Thompson, Vance** 1863–1925  
American literary critic, novelist, and poet

Nature never says anything to a child. To read its message one must look at it with eyes already old.  
*The Ego Book*  
Chapter II (p. 37)  
E.P. Dutton & Co. New York, New York, USA. 1919

**Thomson, Sir John Arthur** 1861–1933  
Scottish naturalist

In her manifold opportunities Nature has thus helped man to polish the mirror of [man's] mind, and the process continues. Nature still supplies us with abundance of brain-stretching theoretical puzzles and we eagerly tackle them; there are more worlds to conquer and we do not let the sword sleep in our hand; but how does it stand with feeling? Nature is beautiful, gladdening, awesome, mysterious, wonderful, as ever, but do we feel it as our forefathers did?  
*The System of Animate Nature* (Volume 1)  
Lecture I (p. 25)  
William & Norgate. London, England. 1920

When we are thrilled with the wonder of the world, the heights and depths of things; when our Nature-feeling is

informed with knowledge; when our science leaves us with a conviction of the mysteriousness of Nature – the unfathomed universe; when our philosophical outlook leads us towards a realisation of a meaning behind the process; then there may be a total reaction on our part worthy of the name of Natural Religion.

*The System of Animate Nature* (Volume 1)

Lecture I (p. 42)

William & Norgate. London, England. 1920

All roads lead to Rome, and he must be a bold man who will declare any of Nature's beckonings to be unworthy of attention.

*Introduction to Science*

Chapter III (pp. 62–63)

Henry Holt & Co. New York, New York, USA. 1911

As we begin to feel at home in Nature, our wonder grows into delight and what may almost be called affection. This is true of those who have what Meredith called "love exceeding a simple love of the things that glide in grasses and rubble of woody wreck."

*Introduction to Science*

Chapter VI (p. 171)

Henry Holt & Co. New York, New York, USA. 1911

### Thomson, James 1700–48

Scottish poet

O nature!...

Enrich me with the knowledge of thy works;  
Snatch me to Heaven.

*Seasons*

Autumn, I. 1,352

Printed by John Mycall. Newburyport, Massachusetts, USA. 1790

I care not, Fortune, what you me deny;  
You cannot rob me of free Nature's grace,  
You cannot shut the windows of the sky,  
Through which Aurora shows her brightening face;  
You cannot bar my constant feet to trace  
The woods and lawns, by living stream, at eve.

*Castle of Indolence*

Canto II, Stanza 3

William Smith. London, England. 1842

### Thoreau, Henry David 1817–62

American essayist, poet, and practical philosopher

I seek acquaintance with Nature to know her moods and manners.

In Harrison Gray Otis Blake (ed.)

*The Writings of Henry David Thoreau* Volume 5

*Early Spring in Massachusetts: From the Journals of Henry David Thoreau*

May 23, 1856 (p. 230)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1893

Nature will bear the closest inspection; she invites us to lay our eye level with the smallest leaf, and take an insect view of its plain. She has no interstices; every part is full of life.

*The Writings of Henry David Thoreau* (Volume 9)

*Natural History of Massachusetts* (p. 132)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

Nature must be viewed humanly to be viewed at all; that is, her scenes must be associated with humane affections, such as are associated with one's native place. She is most significant to a lover. A lover of Nature is preeminently a lover of man. If I have no friend, what is Nature to me? She ceases to be morally significant...

*The Journal of Henry David Thoreau* (Volume 4)

June 30, 1852 (p. 163)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1906

I love Nature partly *because* she is not man, but a retreat from him. None of his institutions control or pervade her. There a different kind of right prevails. In her midst I can be glad with an entire gladness. If this world were all man, I could not stretch myself, I should lose all hope. He is constraint, she is freedom to me. He makes me wish for another world. She makes me content with this.

*The Journal of Henry David Thoreau* (Volume 4)

January 3, 1853 (p. 440)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1906

I have a room all to myself; it is nature.

*The Journal of Henry David Thoreau* (Volume 4)

January 3, 1853 (p. 446)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1906

I sit in my boat on Walden, playing the flute this evening, and see the perch, which I seem to have charmed, hovering around me, and the moon traveling over the bottom, which is strewn with the wrecks of the forest, and feel that nothing but the wildest imagination can conceive of the manner of life we are living. Nature is a wizard. The Concord nights are stranger than the Arabian nights.... Heaven lies above, because the air is deep.

*Journal (Volume 1): 1837–1844*

May 27, 1841 (p. 311)

Princeton University Press. Princeton, New Jersey, USA. 1981

We can never have enough of nature.

*Walden*

Chapter XVII (p. 350)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1910

Let us not succumb to nature. We will marshal the clouds and restrain tempests; we will bottle up pestilent exhalations; we will probe for earthquakes, grub them up, and give vent to the dangerous gas; we will disembowel the volcano, and extract its poison, take its seed out. We will wash water, and warm fire, and cool ice, and underprop the earth. We will teach birds to fly, and fishes to swim, and ruminants to chew the cud. It is time we had looked into these things.

*The Writings of Henry David Thoreau*

*Paradise (to be) Regained* (p. 283)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1906

Every child should be encouraged to study not man's system of nature but Nature's.

In Robert Sattelmeyer (ed.)  
*Journal 1842–1848* (Volume 2)  
Princeton University Press. Princeton, New Jersey, USA. 1984

**Tomonaga, Sin-Itiro** 1906–79  
Japanese physicist

We are too powerless to make assumptions based only on reasoning. We must beg instruction from Nature herself.

T. Miyazima (ed.)  
*Scientific Papers* (Volume 1) (p. 545)  
Misuzu-Shobo, Tokyo, Japan. 1971

**Trotter, Spencer**  
No biographical data available

Technical nomenclature is the embodiment of that orderly and definite arrangement of knowledge which constitutes a science. It serves to symbolize a conception of the relationships that exist between living beings, one with another, and is at once the expression of a logical system of classification; a working basis for the ideal scheme which the mind constructs from observed facts. It is eminently a rational process.

*Annual Report of the Board of Regents of the Smithsonian Institution* (1909)  
An Inquiry into the History of the Current English Names of North American Land Birds (p. 505)  
Government Printing Office. Washington, D.C. 1910

**Turgenev, Ivan** 1818–83  
Russian novelist and dramatist

However much you knock at nature's door, she will never answer you in comprehensible words because she is dumb. She will utter a musical sound, or a moan like a harp string, but you don't expect a song from her.

*On the Eve*  
Chapter I (p. 10)  
Charles Scribner's Sons. New York, New York, USA. 1903–04

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910  
American author and humorist

Architects cannot teach nature anything.  
*The Complete Essays of Mark Twain*  
A Memorable Midnight Experience (p. 30)  
De Capo Press. New York, New York, USA. 2000

...Nature's attitude toward all life is profoundly vicious, treacherous and malignant.

*Mark Twain's Notebook*  
Chapter XXIII (pp. 255–256)  
Harper & Brothers. New York, New York, USA. 1935

**Tyndall, John** 1820–93  
Irish-born English physicist

Would it not seem that Nature harboured the intention of educating us for other enjoyments than those derivable

from meat and drink? At all events, whatever Nature meant – and it would be mere presumption to dogmatize as to what she meant – we find ourselves here, as the upshot of her operations, endowed with capacities to enjoy not only the materially useful, but endowed with others of indefinite scope and application, which deal alone with the beautiful and the true.

*Six Lectures on Light Delivered in America in 1872–1873* (3rd edition)  
Lecture I (p. 41)  
D. Appleton & Co. New York, New York, USA. 1901

We have no reason to believe that the sheep or the dog, or indeed any of the lower animals, feel an interest in the laws by which natural phenomena are regulated. A herd may be terrified by a thunder-storm; birds may go to roost, and cattle return to their stalls during a solar eclipse; but neither birds nor cattle, so far as we know, ever think of inquiring into the causes of these things. It is otherwise with man. The presence of natural objects, the occurrence of natural events, the varied appearances of the universe in which he dwells, penetrate beyond his organs of sense, and appeal to an inner power of which the senses are the mere instruments and excitants. No fact is to him either final or original. He cannot limit himself to the contemplation of it alone, but endeavors to ascertain its position in a series to which the constitution of his mind assures him it must belong. He regards all that he witnesses in the present as the afflux and sequence of something that has gone before, and as the source of a system of events which is to follow. The notion of spontaneity, by which in his ruder state he accounted for natural events, is abandoned; the idea that nature is an aggregate of independent parts also disappears, as the connection and mutual dependence of physical powers become more and more manifest; until he is finally led to regard Nature as an organic whole, as a body each of whose members sympathizes with the rest, changing, it is true, from age to age, but without any real break of continuity, or interruption of the fixed relations of cause and effect.

*Fragments of Science* (Volume 1)  
Chapter XV (pp. 343–344)  
D. Appleton & Co. New York, New York, USA. 1915

**van Dyke, John Charles** 1856–1932  
American art historian and critic

Nature seems a benevolent or a malevolent goddess just as our own inadequate vision happens to see her. If we have eyes only for her creative beauties we think her all goodness; if we see only her power of destruction we incline to think she is all evil.

*The Desert*  
Chapter VIII (p. 128)  
Charles Scribner's Sons. New York, New York, USA. 1930

Nature's work is all of it good, all of it purposeful, all of it wonderful, all of it beautiful. We like or dislike certain things which may be a way of expressing our prejudice

or our limitation ; but the work is always perfect of its kind irrespective of human appreciation. We may prefer the sunlight to the starlight, the evening primrose to the bisnaga, the antelope to the mountain lion, the mockingbird to the lizard ; but to say that one is good and the other bad, that one is beautiful and the other ugly, is to accuse Nature herself of preference – something which she never knew.

*The Desert*

Chapter X (p. 192)

Charles Scribner's Sons. New York, New York, USA. 1930

### **Vaughan, Thomas** 1857–1942

Writer

Nature moves not by the theorie of men, but by their practice, and surely wit and reason can perform no miracles, unlesse the hands supplie them.

Translated by Arthur Edward Waite

*The Magical Writings of Thomas Vaughan (Eugenius Philatethes)*

A Perfect and Full Discovere of the True Coleum Terrae (p. 144)

George Redway. London, England. 1888

### **Voltaire (François-Marie Arouet)** 1694–1778

French writer

What are you, Nature? Live in you? But I have been searching for you for fifty years, and have never been able to find you.

*The Works of Voltaire* (Volume 12)

*Philosophical Dictionary* (Volume 8)

Nature (p. 48)

The St. Hubert Guild. Akron, Ohio, USA. 1901

### **von Baeyer, Adolf** 1835–1917

German research chemist

What makes a great scientist? He must not command but listen; he must adapt himself to what he hears and reshape himself accordingly.... The ancient empiricists already did this. They put their ear to Nature. The modern scientist does the same.... Coming nearer to Nature has a very special effect on people. They develop very differently from someone who confronts Nature with preconceived ideas. Someone who approaches Nature with set ideas will, so to speak, stand before it like a general. He will want to issue orders to Nature.

In Richard Willstätter

*From My Life: The Memoirs of Richard Willstätter*

Chapter 6 (p. 140)

W.A. Benjamin. New York, New York, USA. 1965

### **von Baeyer, Hans Christian** 1938–

German-born physicist and author

Not the scientist, but nature has the last word.

*Rainbows, Snowflakes, and Quarks: Physics and the World Around Us*

The Measure of Things (p. 189)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1984

### **von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

When a man of lively intellect first responds to Nature's challenge to be understood, he feels irresistibly tempted to impose his will upon the natural objects he is studying. Before long, however, they close in upon him with such force as to make him realize that he in turn must now acknowledge their might and hold in respect the authority they exert over him.

*Goethe's Botanical Writings*

Formation and Transformation (p. 21)

University of Hawaii Press. Honolulu, Hawaii, USA. 1952

We live in her midst and know her not. She is incessantly speaking to us, but betrays not her secret. We constantly act upon her, and yet have no power over her.

Translated by Thomas Huxley

Nature: Aphorisms by Goethe

*Nature*, Volume 1, Thursday, November 4, 1869 (p. 9)

That which is most unnatural is still Nature; the stupidest philistinism has a touch of her genius. Whoso cannot see her everywhere, sees her nowhere rightly.

Translated by Thomas Huxley

Nature: Aphorisms by Goethe

*Nature*, Volume 1, Thursday, November 4, 1869 (p. 9)

She tosses her creatures out of nothingness, and tells them not whence they came, nor whither they go. It is their business to run, she knows the road.

Translated by Thomas Huxley

Nature: Aphorisms by Goethe

*Nature*, Volume 1, Thursday, November 4, 1869 (p. 9)

She loves herself, and her innumerable eyes and affections are fixed upon herself. She has divided herself that she may be her own delight. She causes an endless succession of new capacities for enjoyment to spring up, that her insatiable sympathy may be assuaged.

Translated by Thomas Huxley

Nature: Aphorisms by Goethe

*Nature*, Volume 1, Thursday, November 4, 1869 (p. 9)

She rejoices in illusion. Whoso destroys it in himself and others, him she punishes with the sternest tyranny. Whoso follows her in faith, him she takes as a child to her bosom.

Translated by Thomas Huxley

Nature: Aphorisms by Goethe

*Nature*, Volume 1, Thursday, November 4, 1869 (p. 9)

She has always thought and always thinks; though not as a man, but as Nature. She broods over an all-comprehending idea, which no searching can find out.

Translated by Thomas Huxley

Nature: Aphorisms by Goethe

*Nature*, Volume 1, Thursday, November 4, 1869 (p. 9)

Each of her works has an essence of its own; each of her phenomena a special characterisation: and yet their diversity is in unity.

Translated by Thomas Huxley

Nature: Aphorisms by Goethe

*Nature*, Volume 1, Thursday, November 4, 1869 (p. 9)

The one thing she seems to aim at is Individuality; yet she cares nothing for individuals. She is always building up and destroying; but her workshop is inaccessible.

Translated by Thomas Huxley

Nature: Aphorisms by Goethe

*Nature*, Volume 1, Thursday, November 4, 1869 (p. 9)

Her mechanism has few springs – but they never wear out, are always active and manifold.

Translated by Thomas Huxley

Nature: Aphorisms by Goethe

*Nature*, Volume 1, Thursday, November 4, 1869 (p. 9)

Every instant she commences an immense journey, and every instant she has reached her goal.

Translated by Thomas Huxley

Nature: Aphorisms by Goethe

*Nature*, Volume 1, Thursday, November 4, 1869 (p. 10)

She creates needs because she loves action. Wondrous! that she produces all this action so easily. Every need is a benefit, swiftly satisfied, swiftly renewed. Every fresh want is a new source of pleasure, but she soon reaches an equilibrium.

Translated by Thomas Huxley

Nature: Aphorisms by Goethe

*Nature*, Volume 1, Thursday, November 4, 1869 (p. 10)

Her crown is love. Through love alone dare we come near her. She separates all existences, and all tend to intermingle. She has isolated all things in order that all may approach one another. She holds a couple of draughts from the cup of love to be fair payment for the pains of a lifetime.

Translated by Thomas Huxley

Nature: Aphorisms by Goethe

*Nature*, Volume 1, Thursday, November 4, 1869 (p. 10)

Whoever wishes to deny nature as an organ of the divine must begin by denying all revelation.

In D. Miller (ed.)

*Scientific Studies* (Volume 12)

Chapter VIII (p. 303)

Suhrkamp. New York, New York, USA. 1988

It is not easy for us to grasp the vast, the super colossal, in nature; we have lenses to magnify tiny objects but none to make things smaller. And even for the magnifying glass we need eyes like Carus and Nees to profit intellectually from its use. However, since nature is always the same, whether found in the vast or the small, and every piece of turbid glass produces the same blue as the whole of the atmosphere covering the globe, I think it right to seek out prototypal examples and assemble them before me. Here, then, the enormous is not reduced; it is present within the small, and remains as far beyond our grasp as it was when it dwelt in the infinite.

In D. Miller (ed.)

*Scientific Studies* (Volume 12)

Chapter VIII (p. 304)

Suhrkamp. New York, New York, USA. 1988

Nature goes her own way, and all that to us seems an exception is really according to order.

In Johann Peter Eckermann

*Conversations with Goethe*

Thursday, December 9, 1824 (p. 75)

J.M. Dent & Sons Ltd. London, England. 1970

Mere communion with nature, mere contact with the free air, exercise a soothing yet strengthening influence on the wearied spirit, calm the storm of passion, and soften the heart when shaken by sorrow to its inmost depths.

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)

Introduction (p. 25)

Harper & Brothers. New York, New York, USA. 1869

In order to depict nature in its exalted sublimity, we must not dwell exclusively on its external manifestations, but we must trace its image, reflected in the mind of man, at one time filling the dreamy land of physical myths with forms of grace and beauty, and at another developing the noble germ of artistic creations.

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 2)

Description of Nature by the Ancients (p. 20)

Harper & Brothers. New York, New York, USA. 1869

**von Schelling, Friedrich Wilhelm Joseph** 1775–1854  
German philosopher

What then is that secret bond which couples our mind to Nature, or that hidden organ through which Nature speaks to our mind or our mind to Nature? For what we want is not that Nature should coincide with the laws of our mind by chance (as if through some third intermediary), but that she herself, necessarily and originally, should not only express, but even realize, the laws of our mind, and that she is, and is called, Nature only insofar as she does so.

Nature should be Mind made visible, Mind the invisible Nature. Here then, in the absolute identity of Mind in us and Nature outside us, the problem of the possibility of a Nature external to us must be resolved.

Translated by Errol E. Harris and Peter Heath

*Ideas for a Philosophy of Nature as Introduction to the Study of this Science*

Introduction (pp. 41–42)

Cambridge University Press. Cambridge, England. 1988

The purest exercise of man's rightful dominion over dead matter, which was bestowed upon him together with reason and freedom, is that he spontaneously operates upon Nature, determines her according to purpose and intention, lets her act before his eyes, and as it were spies on her at work. But that the exercise of this dominion is possible, he owes yet again to Nature, whom he would strive in vain to dominate, if he would not put her in conflict with herself and set her own forces in motion against her.

Translated by Errol E. Harris and Peter Heath

*Ideas for a Philosophy of Nature as Introduction to the Study of this Science*

Book I (p. 57)

Cambridge University Press. Cambridge, England. 1988

Nature! We are surrounded by her and locked in her clasp: powerless to leave her, and powerless to come closer to her. Unasked and unwarned she takes us up into the whirl of her dance, and hurries on with us till we are weary and fall from her arms.

Translated by Thomas Bailey Saunders

*The Maxims and Reflections of Goethe*

Nature: Aphorisms (p. 207)

The Macmillan Co. New York, New York, USA. 1906

We live in the midst of her [Nature] and are strangers. She speaks to us unceasingly and betrays not her secret. We are always influencing her and yet can do her no violence.

Translated by Thomas Bailey Saunders

*The Maxims and Reflections of Goethe*

Nature: Aphorisms (p. 207)

The Macmillan Co. New York, New York, USA. 1906

Nature knows no trifling; she is always sincere, always serious, always stern; she is always in the right, and the errors and mistakes are invariably ours.

Quoted in Richard Arman Gregory

*Discovery, Or, The Spirit and Service of Science*

Chapter II (p. 26)

Macmillan & Co Ltd. London, England. 1916

You are engrossed in botany? in optic? What are you doing? Is it not much nicer to move a tender heart? Ah well, those tender hearts! A bungler can easily move them; Let my only happiness be to stay in touch with you, Oh Nature!

Translated by Aterman K. Frankfurt

In R. Otto (ed.)

*Romische Elegien und Venezianische Epigramme* (p. 53)

### **von Helmholtz, Hermann** 1821–94

German scientist and philosopher

We have taught the forces of inanimate nature to minister to the wants of human life and the designs of the human intellect.

Translated by E. Atkinson

*Popular Lectures on Scientific Subjects*

First Series

On the Relation of Natural Science to General Science (pp. 26–27)

D. Appleton & Co. New York, New York, USA. 1897

The artist cannot transcribe Nature; he must translate her

...

Translated by E. Atkinson

*Popular Lectures on Scientific Subjects*

Second Series

On the Relation of Optics to Painting (pp. 135–136)

Longmans, Green & Co. London, England. 1903

### **von Humboldt, Alexander** 1769–1859

German naturalist and explorer

He, therefore, who amid the discordant strife of nations would seek intellectual repose, turns with delight to contemplate the silent life of plants, and to study the hidden

forces of Nature in her sacred sanctuaries; or, yielding to that inherent impulse which for thousands of years has glowed in the breast of man, directs his mind, by a mysterious presentiment of his destiny, towards the celestial orbs, which, in undisturbed harmony, pursue their ancient and eternal course.

Translated by E.C. Otte

*Views of Nature, Or, Contemplations on the Sublime Phenomena of Creation*

Steppes and Deserts (p. 21)

Henry G. Bohn. London, England. 1850

In the uniform plain bounded only by a distant horizon, where the lowly heather, the cistus, or waving grasses, deck the soil; on the ocean shore, where the waves, softly rippling over the beach, leave a track, green with the weeds of the sea; everywhere, the mind is penetrated by the same sense of the grandeur and vast expanse of nature, revealing to the soul, by a mysterious inspiration, the existence of laws that regulate the forces of the universe.

*Cosmos* (Volume 1)

Introduction (p. 3)

Henry G. Bohn. London, England. 1849

...nature may by degrees lose a portion of the charm and magic of her power, as we learn more and more how to unveil her secrets, comprehend the mechanism of the movements of the heavenly bodies, and estimate numerically the intensity of natural forces. It is true that, properly speaking, the forces of nature can only exercise a magical power over us, as long as their action is shrouded in mystery and darkness, and does not admit of being classed among the conditions with which experience has made us acquainted.

*Cosmos* (Volume 1)

Introduction (p. 18)

Henry G. Bohn. London, England. 1849

Nature considered *rationaly*, that is to say, submitted to the process of thought, is a unity in diversity of phenomena; a harmony, blending together all created things, however dissimilar in form and attributes; one great whole animated by the breath of life.

Translated by E. C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)

Introduction (p. 24)

Harper & Brothers Publishers. New York, New York, USA. 1858

When man began to interrogate nature, and, not content with observing, learned to evoke phenomena under definite conditions; when once he sought to collect and record facts, in order that the fruit of his labors might aid investigation after his own brief existence had passed away, the 'philosophy of Nature' cast aside the vague and poetic garb in which she had been enveloped from her origin, and, having assumed a severer aspect, she now weighs the value of observations, and substitutes induction and reasoning for conjecture and assumption.

Translated by E. C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)  
Introduction (p. 24)  
Harper & Brothers Publishers. New York, New York, USA. 1858

Mere communion with Nature, mere contact with the free air, exercise a soothing yet strengthening influence on the wearied spirit, calm the storm of passion, and soften the heart when shaken by sorrow to its inmost depths. Everywhere, in every region of the globe, in every stage of intellectual culture, the same sources of enjoyment are alike vouchsafed to man.

Translated by E.C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)  
Introduction (p. 25)  
D. Appleton & Co. New York, New York, USA. 1850

Communion with nature awakens within us perceptive faculties that had long lain dormant; and we thus comprehend at a single glance the influence exercised by physical discoveries on the enlargement of the sphere of intellect, and perceive how a judicious application of mechanics, chemistry, and other sciences may be made conducive to national prosperity.

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)  
Introduction (p. 32)  
Henry G. Bohn. London, England. 1849

It is almost with reluctance that I am about to speak of a sentiment, which appears to arise from narrow-minded views, or from a certain weak and morbid sentimentality – I allude to the fear entertained by some persons, that nature may by degrees lose a portion of the charm and magic of her power, as we learn more and more how to unveil her secrets, comprehend the mechanism of the movements of the heavenly bodies, and estimate numerically the intensity of natural forces.

Translated by E. C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)  
Introduction (p. 38)  
Harper & Brothers Publishers. New York, New York, USA. 1858

...nature can only exercise a magical power over us as long as their action is shrouded in mystery and darkness, and does not admit of being classed among the conditions with which experience has made us acquainted.

Translated by E. C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)  
Introduction (p. 38)  
Harper & Brothers Publishers. New York, New York, USA. 1858

Discord of the Elements Lost in Higher Unity. The knowledge of the laws of Nature, whether we can trace them in the alternate ebb and flow of the ocean, in the measured path of comets, or in the mutual attractions of multiple stars, alike increases our sense of the calm of Nature, while the chimera so long cherished by the human mind in its early and intuitive contemplations, the belief in a “discord of the elements,” seems gradually to vanish in proportion as science extends her empire.

Translated by E.C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)  
Introduction (p. 42)  
Harper & Brothers Publishers. New York, New York, USA. 1850

An equal appreciation of all branches of the mathematical, physical, and natural sciences is a special requirement of the present age, in which the material wealth and the growing prosperity of nations are principally based upon a more enlightened employment of the products and forces of Nature.

Translated by E.C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)  
Introduction (p. 53)  
D. Appleton & Co. New York, New York, USA. 1850

Man cannot act upon Nature, or appropriate her forces to his own use, without comprehending their full extent and having an intimate acquaintance with the laws of the physical world.

Translated by E.C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)  
Introduction (p. 53)  
D. Appleton & Co. New York, New York, USA. 1850

Nature, in the manifold signification of the word – whether considered as the universality of all that is and ever will be – as the inner moving force of all phenomena, or as their mysterious prototype – reveals itself to the simple mind and feelings of man as something earthly, and closely allied to himself.

Translated by E. C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)  
General Review of Natural Phenomena (p. 82)  
Harper & Brothers Publishers. New York, New York, USA. 1858

In the simple consideration of the incitements to a scientific study of Nature, I would not omit calling attention to the fact that impressions arising from apparently accidental circumstances often as is repeatedly confirmed by experience exercise so powerful an effect on the youthful mind as to determine the whole direction of a man’s career through life.

Translated by E.C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 2)  
Part I (p. 20)  
D. Appleton & Co. New York, New York, USA. 1850

If the starry heavens, by incalculable numbers, magnitude, space, duration, and length of periods, impress man with the conviction of his own insignificance, his physical weakness, and the ephemeral nature of his existence; he is, on the other hand, cheered and invigorated by the consciousness of having been enabled, by the application and development of intellect, to investigate very many important points in reference to the laws of Nature and the sidereal arrangement of the universe.

**Watts, Alan Wilson** 1915–73

American philosopher

For the point is not, in our accustomed ego-centric mode of thinking, that it would be good to return to our original integrity with nature. The point is that it is simply impossible to get away from it, however vividly we may imagine that we have done so. Similarly, it is impossible to experience the future and not to experience the present. But trying to realize this is another attempt to experience the future. Some logician may object that this is a merely tautological statement which has no consequence, and he will be right. But we are not looking for a consequence. We are no longer saying "So what?" to everything, as if the only importance of our present experience were in what it is leading to, as if we should constantly interrupt a dancer, saying, "Now just where are you going, and what, exactly, is the meaning of all these movements?"

*Nature, Man, and Woman* (p. 21)

Pantheon. New York, New York, USA. 1958

In [some people's] world flowers have scent and color in order to attract bees, and chameleons change their skin-tone with the intent of concealing themselves. Or, if what they are projecting upon nature is not mind but machinery, bees are attracted to flowers because they have scent and color, and chameleons survive because they have skin which changes its tone. They do not see the world of color and scented bee-visited flowers growing – without the abstract and divisive "because." Instead of interrelated patterns wherein all the parts grow simultaneously together, they see conglomerations of "billiard ball" things, strung together by the temporal sequence of cause and effect. In such a world things are what they are only in relation to what was and what will be, but in the goalless world of the Tao, things are what they are in relation to each other's presence.

*Nature, Man, and Woman* (p. 122)

Pantheon. New York, New York, USA. 1958

The rush of waterfalls and the babbling of streams are not loved for their resemblance to speech; the irregularly scattered stars do not excite us because of the formal constellations which have been traced out between them; and it is for no symmetry or suggestion of pictures that we delight in the patterns of foam, of the veins in rock, or of the black branches of trees in wintertime.

**Weyl, Hermann** 1885–1955  
German mathematician

Once and for all I wish to record my unbounded admiration for the work of the experimenter in his struggle to wrest interpretable facts from an unyielding Nature who knows so well how to meet our theories with a decisive No – or with an inaudible Yes.

Translated by H.P. Robertson

*The Theory of Groups and Quantum Mechanics*

Introduction (p. xx)

Methuen & Company Ltd. London, England. 1931

**Wheeler, John Archibald** 1911–  
American physicist and educator

... nature at the quantum level is not a machine that goes its inexorable way. Instead what answer we get depends on the question we put, the experiment we arrange, the registering device we choose. We are inescapably involved in bringing about that which appears to be happening.

In John Archibald Wheeler and Wojciech Hubert Zurek (eds.)

*Quantum Theory and Measurement* (p. 185)

Princeton University Press. Princeton, New Jersey, USA. 1982

**Whipple, Edwin Percy** 1819–86  
American essayist

Nature does not capriciously scatter her secrets as golden gifts to lazy pets and luxurious darlings, but imposes tasks when she presents opportunities, and uplifts him whom she would inform. The apple that she drops at the feet of Newton is but a coy invitation to follow her to the stars.

*Character and Characteristic Men*

Chapter III (p. 78)

James R. Osgood & Co. Boston, Massachusetts, USA. 1877

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

... nature can be thought of as a closed system whose mutual relations do not require the expression of the fact that they are thought about.

*The Concept of Nature*

Chapter I (p. 3)

The University Press. Cambridge, England. 1920

The primary task of a philosophy of natural science is to elucidate the concept of nature, considered as one complex fact for knowledge, to exhibit the fundamental entities and the fundamental relations between entities in terms of which all laws of nature have to be stated, and to secure that the entities and relations thus exhibited are adequate for the expression of all the relations between entities which occur in nature.

*The Concept of Nature*

Chapter II (p. 46)

At The University Press. Cambridge, England. 1920

... nature gets credit which in truth should be reserved for ourselves: the rose for its scent: the nightingale for his song: and the sun for his radiance. The poets are entirely mistaken. They should address their lyrics to themselves, and should turn them into odes of self-congratulation on the excellence of the human mind. Nature is a dull affair, soundless, scentless, colorless; merely the hurrying of material, endlessly, meaninglessly.

*Science and the Modern World*

Chapter III (p. 80)

The Macmillan Company. New York, New York, USA. 1929

Thus we gain from the poets the doctrine that a philosophy of nature must concern itself with at least these five notions: change, value, eternal objects, endurance, organism, interfusion.

*Science and the Modern World*

Chapter V (p. 127)

The Macmillan Company. New York, New York, USA. 1929

You cannot talk vaguely about Nature in general.

*Nature and Life*

Part I (p. 1)

At the University Press. Cambridge, England. 1934

We have to remember that while nature is complex with timeless subtlety, human thought issues from the simple-mindedness of beings whose active life is less than half a century.

*An Enquiry Concerning the Principles of Natural Knowledge*

Part I (p. 15)

At the University Press. Cambridge, England. 1919

Nature, even in the act of satisfying anticipation, often provides a surprise.

*Adventures of Ideas*

Chapter VIII (p. 161)

The Macmillan Company. New York, New York, USA. 1956

**Whitman, Walt** 1819–92  
American poet, journalist, and essayist

The fields of Nature long prepared and fallow,  
the silent, cyclic chemistry,  
The slow and steady ages plodding, the unoccupied  
surface ripening, the rich ores forming beneath.

*Complete Poetry and Collected Prose*

Song of the Redwood Tree

The Library of America. New York, New York, USA. 1982

I believe a leaf of grass is no less than the journey-work  
of the stars,

And the pismire is equally perfect, and a grain of sand,  
and the egg of the wren,

And the tree-toad is a chef-d'oeuvre for the highest,

And the running blackberry would adorn the parlors of  
heaven,

And the narrowest hinge in my hand puts to scorn all  
machinery,

And the cow crunching with depress'd head surpasses  
any statue,

And a mouse is miracle enough to stagger sextillions of  
infidels.

*Leaves of Grass*

Song of Myself

Doubleday, Page & Co. Garden City, New York, USA. 1919

The Earth never tires,

The Earth is rude, silent, incomprehensible at first,

Nature is rude, silent, incomprehensible at first;

Be not discouraged, keep on, there are divine things well  
envelop'd,

I swear to you there are divine things more beautiful than  
words can tell.

*Leaves of Grass*

Song of the Open Road

Doubleday, Page & Co. Garden City, New York, USA. 1919

**Wilde, Oscar** 1854–1900

Irish wit, poet, and dramatist

It seems to me that we all look at nature too much, and  
live with her too little.

*The Complete Writings of Oscar Wilde*

*De Profundis* (p. 158)

Nottingham Society. New York, New York, USA. 1907

**Willstätter, Richard** 1872–1942

German chemist

It is the scientist's lot, as it is the artist's, to be less impor-  
tant than his work. He who is chosen to lift the veil from  
Nature's secrets will be easily overshadowed by the crea-  
tion he has revealed and which will make him immortal.

*From My Life: The Memoirs of Richard Willstätter*

Chapter 6 (p. 141)

W.A. Benjamin. New York, New York, USA. 1965

**Wilson, Andrew** 1852–1912

No biographical data available

Before our eyes, for instance, we see *Madre Natura*  
spending her wherewithal in apparent thriftlessness

and woeful waste. The proverb, "Waste not, want  
not," so thoroughly and repeatedly dinned into youth-  
ful ears, would seem to have no application to the  
works and ways of the prodigal All-mother that sur-  
rounds and encompasses us. The flower that "blooms  
unseen and wastes its sweetness on the desert air,"  
is a very mild illustration of a nature-spirit which  
appeals in more forcible ways to the mind as an example  
of needless contrivance, wasted effort, and useless  
prodigality.

*Leisure-time Studies, Chiefly Biological: A Series of Essays and  
Lectures*

Chapter II (p. 22)

Chatto & Windus. London, England. 1898

**Wilson, Edward O.** 1929–

American biologist and author

Nature first, then theory. Or, better, Nature and theory  
closely intertwined while you throw all your intel-  
lectual capital at the subject. Love the organisms for  
themselves first, then strain for general explanations,  
and, with good fortune, discoveries will follow. If  
they don't, the love and the pleasure will have been  
enough.

*Naturalist*

Part 2, Chapter Ten (p. 191)

Island Press. Washington, D.C. 1994

When you have seen one ant, one bird, one tree, you have  
not seen them all.

*Time*, Volume 128, October 13, 1986 (p. 12)

**Winchell, Alexander** 1824–91

American geologist

We have learned to look upon Nature with a profounder  
respect; and, though the alphabet of our philosophy be  
trees, and birds, and rocks, and fossils, and other mate-  
rial things which metaphysics affects to despise, we have  
found that they combine themselves into a language  
freighted with grand conceptions ...

*Sketches of Creation*

Chapter I (p. 15)

Harper & Brothers Publishers. New York, New York, USA. 1870

**Wöhler, Friedrich** 1800–82

German chemist

**von Liebig, Justus** 1803–73

German organic chemist

When in the dark province of organic nature, we succeed  
in finding a light point, appearing to be one of those inlets  
whereby we may attain to the examination and investiga-  
tion of this province, then we have reason to congratulate  
ourselves, although conscious that the object before us is  
unexhausted.

Letter the Fifth (p. 37)

Printed for the Author. London, England. 1750

**Yogananda, Paramahansa** 1893–1952

Indian yogi

Because modern science tells us how to utilize the powers of Nature, we fail to comprehend the Great Life in back of all names and forms. Familiarity with Nature has bred a contempt for her ultimate secrets; our relation with her is one of practical business. We tease her, so to speak, to discover the ways in which she may be forced to serve our purposes; we make use of her energies, whose Source yet remains unknown. In science our relation with Nature is like that between an arrogant man and his servant; or, in a philosophical sense, Nature is like a captive in the witness box. We cross-examine her, challenge her, and minutely weigh her evidence in human scales that cannot measure her hidden values.

*Autobiography of a Yogi*

Chapter 35 (pp. 337–338)

Gould & Lincoln. Boston, Massachusetts, USA. 1862

**NATURE, AUTHOR OF**

**Playfair, John** 1748–1819

Scottish geologist, physicist, and mathematician

...in the planetary motions, where geometry has carried the eye so far both into the future and the past, we discover no mark either of the commencement or termination of the present order. It is unreasonable, indeed, to suppose that such marks should any where exist. The Author of nature has not given laws to the universe, which, like the institutions of men, carry in themselves the elements of their own destruction; he has not permitted in his works any symptom of infancy or of old age, or any sign by which we may estimate either their future or their past duration. He may put an end, as he no doubt gave a beginning, to the present system, at some determinate period of time; but we may rest assured, that this great catastrophe will not be brought about by the laws now existing, and that it is not indicated by anything which we perceive.

## NATURE, BOOK OF

### Agassiz, Jean Louis Rodolphe 1807–73

Swiss-born American naturalist, geologist, and teacher

Lay aside all conceit. Learn to read the book of nature for yourself. Those who have succeeded best have followed for years some slim thread which has once in a while broadened out and disclosed some treasure worth a life-long search.

In David Starr Jordan  
*Popular Science Monthly*, Volume 40, 1891

The book of Nature is always open, and all that I can do or say shall be to lead young people to study that book, and not to pin their faith to any other.

Quoted in David Starr Jordan  
*Science Sketches*  
Agassiz at Penikese (p. 135)  
A.C. McClurg & Co. Chicago, Illinois, USA. 1896

### Ansted, David Thomas 1814–80

English geologist

All know what is meant by the Book of Nature. But Nature is rather a Library than a Book; for it is the general and well-stored receptacle of all that has ever been created – of all that we know and all we have not yet learned – of all that is animate and all that is inanimate – of all that is happening and all that has happened, not only on the earth, but above the earth and within it and around it.

*The Great Stone Book of Nature*  
The Book of Nature (p. 3)  
Macmillan & Co Ltd. London, England. 1864

### Cable, George W. 1844–1925

American writer and reformer

The book of nature is a catechism. But, after it answers the first question with “God,” nothing but questions follow.

*Madame Delphine*  
Chapter V  
Charles Scribner's Sons. New York, New York, USA. 1896

### Corbett, Jim 1875–1955

Indian-born hunter and naturalist

...for the book of nature has no beginning as it has no end. Open the book where you will at any point of your life, and if you have the desire to acquire knowledge, you will find it of intense interest, and no matter how long or how intently you study the pages, your interest will not flag for in nature there is no finality.

*Jungle Lore*  
Chapter IV (p. 33)  
Oxford University Press, Inc. New York, New York, USA. 1953

### Eckert, Allan W. 1931–

American historian, naturalist, and author

...in nature's book, everything has its place and its time; there exists a persistent interdependency of its creatures one upon another.

And there is never waste.

*Wild Season*  
Epilogue (p. 244)  
Little, Brown & Company. Boston, Massachusetts, USA. 1967

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

The book of Nature is the book of Fate. She turns the gigantic pages – leaf after leaf – never re-turning one. One leaf she lays down, a floor of granite; then a thousand ages, and a bed of slate; a thousand ages, and a measure of coal; a thousand ages, and a layer of marl and mud: vegetable forms appear: her first misshapen animals, zoophyte, trilobium, fish; then, saurians – rude forms, in which she has only blocked her future statue, concealing under these unwieldy monsters the fine type of her coming king. The face of the planet cools and dries, the races meliorate, and man is born. But when a race has lived its term, it comes no more again.

*The Prose Works of Ralph Waldo Emerson* (Volume 2)

Fate (p. 323)

Fields, Osgood &amp; Co. Boston, Massachusetts, USA. 1870

**Linnaeus, Carl (von Linné)** 1707–78

Swedish botanist and explorer

It is the exclusive property of man, to contemplate and to reason on the great book of nature. She gradually unfolds herself to him, who with patience and perseverance, will search into her mysteries; and when the memory of the present and of past generations shall be obliterated, he shall enjoy the high privilege of living in the minds of his successors, as he has been advanced in the dignity of his nature, by the labours of those who went before him.

In Thomas Steele Hall

*A Source Book in Animal Biology* (p. 32)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1951

**Peirce, Benjamin** 1809–80

American mathematician

To translate a great poem demands months and years of earnest devotion, coupled with poetic inspiration. But to read the book of Nature is the province and privilege of consummate genius, submissive to unremitting discipline.

*Ideality in the Physical Sciences*

Lecture I (p. 15)

Little, Brown &amp; Co. Boston, Massachusetts, USA. 1881

**Scott, Sir Walter** 1771–1832

Scottish novelist and poet

It is from the great book of Nature, the same through a thousand editions, whether of black-letter, or wire-wove, and hot-pressed, that I have venturously essayed to read a chapter to the public.

*Waverley Novels* (Volume 1)

Chapter I (p. 64)

Adam &amp; Charles Black. Edinburgh, Scotland. 1852

**von Liebig, Justus** 1803–73

German organic chemist

...to enable us to read the book of nature, to understand its language, to perceive the truth of the theories of the philosopher, to subject to our will and examine at our pleasure the phenomena upon which a theory is based, and the powers producing them, we must necessarily learn the alphabet of the language, we must become familiar with the use of the signs or symbols employed, and by practice acquire skill in their management, and a knowledge of the laws which regulate their combinations.

*Familiar Letters on Chemistry*

Letter I (pp. 11–12)

Walton &amp; Maberly. London, England. 1859

**Whewell, William** 1794–1866

English philosopher and historian

The *Senses* place before us the *Characters* of the Book of Nature; but these convey no knowledge to us, till we have discovered the Alphabet by which they are to be read.

*Aphorisms Concerning Ideas, Science & the Language of Science*

Aphorisms Concerning Ideas (p. 1)

Harrison &amp; Co. London, England. 1840

**NATURE, COMPLEXITY OF****Dampier, Sir William Cecil** 1867–1952

English scientific writer

Whether we look inwards or outwards the complexity of Nature seems boundless: “Boundless inward in the atom; boundless outward in the whole.”

*The Recent Development of Physical Science*

Chapter I (p. 15)

P. Blakiston’s Son &amp; Co. Philadelphia, Pennsylvania, USA. 1904

**NATURE, CONQUEST OF****Lewis, C. S. (Clive Staples)** 1898–1963

British author, scholar, and popular theologian

Man’s conquest of Nature turns out, in the moment of its consummation, to be Nature’s conquest of Man.

*The Abolition of Man*

Chapter 3 (p. 68)

HarperCollins. New York, New York, USA. 2001

**NATURE, CONTROL OF****Carson, Rachel** 1907–64

American marine biologist and writer

The “control of nature” is a phrase conceived in arrogance, born of the Neanderthal age of biology and philosophy, when it was supposed that nature exists for the convenience of man. The concepts and practices of applied entomology for the most part date from that Stone Age of science. It is our alarming misfortune that so primitive a science has armed itself with the most modern and terrible weapons,

and that in turning them against the insects it has also turned them against the earth.

*Silent Spring*

Chapter 17 (p. 297)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1961

## NATURE, COURSE OF

**Bailey, Philip James** 1816–1902

English poet

The course of Nature seems a course of Death,  
And nothingness the whole substantial thing.

*Festus: A Poem*

Scene III (p. 58)

George Routledge & Sons, Ltd. London, England. 1893

**Huxley, Thomas Henry** 1825–95

English biologist

The course of nature as it is, as it has been, and as it will be, is the object of scientific inquiry; whatever lies beyond, above, or below this, is outside science. But the philosopher need not despair at the limitation of his field of labour: in relation to the human mind Nature is boundless; and, though nowhere inaccessible, she is everywhere unfathomable.

*The Crayfish: An Introduction to the Study of Zoology* (p. 3)

C. Kegan Paul & Co. London, England. 1880

## NATURE, CONTEMPLATION OF

**Bates, Henry Walter** 1825–92

English naturalist and explorer

...the contemplation of Nature alone is not sufficient to fill the human heart and mind.

*The Naturalist on the River Amazons* (2nd edition)

Chapter X (p. 308)

John Murray. London, England. 1864

**Burnet, Thomas** 1635–1715

English cleric and scientist

SINCE I was first inclin'd to the Contemplation of Nature, and took pleasure to trace out the Causes of Effects, and the dependence of one thing upon another in the visible Creation, I had always, methought, a particular curiosity to look back into the first Sources and ORIGINAL of Things; and to view in my mind, so far as I was able, the Beginning and Progress of a RISING WORLD.

*The Sacred Theory of the Earth* (2nd edition)

Book I, Chapter I (p. 23)

Printed by R. Norton. London. 1691

## NATURE, DANCE OF

**Kaku, Michio** 1947–

Japanese-American theoretical physicist

For most of human history, we could only watch, like bystanders, the beautiful dance of Nature. But today,

we are on the cusp of an epoch-making transition, from being passive observers of Nature to being active choreographers of Nature. The Age of Discovery in science is coming to a close, opening up an Age of Mastery.

*Visions – How Science Will Revolutionize the 21st Century*

Chapter 1 (p. 12)

Anchor Books. New York, New York, USA. 1998

## NATURE, DEHUMANISATION OF

**Reichenbach, Hans** 1891–1953

German philosopher of science

We may regret this dehumanisation of nature, we may say that it takes the soul out of physical nature and thus makes it lifeless and uninteresting – these are all concepts to which the physicist pays no attention, because they judge physical research by criteria which are taken from the world of the poet and the painter, and which, therefore, have significance for another sphere only. Rather must it be regarded as a matter of intellectual integrity to avoid applying such criteria to scientific research; and the man with artistic sensibility should possess the power to effect such a purgation, since artistic creation is itself pervaded by such a power of moral purgation.

*Atom and Cosmos: The World of Modern Physics*

Chapter 19 (p. 286)

The Macmillan Co. New York, New York, USA. 1933

## NATURE, DESTRUCTION OF

**Marsh, George Perkins**

The ravages committed by man subvert the relations and destroy the balance which nature had established between her organized and her inorganic creations, and she avenges herself upon the intruder, by letting loose upon her defaced provinces destructive energies hitherto kept in check by organic forces destined to be his best auxiliaries, but which he has unwisely dispersed and driven from the field of action.

*The Earth As Modified by Human Action*

Chapter I (p. 42)

Charles Scribner's Sons. New York, New York, USA. 1885

## NATURE, EFFECT OF

**Pascal, Blaise** 1623–62

French mathematician and physicist

Let this effect of nature, which previously seemed to you impossible, make you know that there may be others of which you are still ignorant. Do not draw this conclusion from your experiment, that there remains nothing for you to know; but rather that there remains an infinity for you to know.

*Thoughts*

231 (p. 83)

P.F. Collier & Son. New York, New York, USA. 1910

## NATURE, END OF

**Burroughs, John** 1837–1921  
American naturalist and essayist

What is the end of Nature? Where is the end of a sphere? The sphere balances at any and every point. So everything in Nature is at the top, and yet no one thing is at the top.

*Birds and Poets With Other Papers*

Touches of Nature (p. 62)

David Douglas Edinburgh, Scotland. 1884

## NATURE, ENERGY OF

**Tyndall, John** 1820–93  
Irish-born English physicist

The energy of Nature is a constant quantity, and the utmost man can do in the pursuit of physical truth, or in the applications of physical knowledge, is to shift the constituents of the never-varying total, sacrificing one if he would produce another.

*Heat Considered as a Mode of Motion*

Chapter XIV (p. 467)

D. Appleton & Company. New York, New York, USA. 1875

## NATURE, ENJOYMENT OF

**von Humboldt, Alexander** 1769–1859  
German naturalist and explorer

The fear of sacrificing the free enjoyment of nature, under the influence of scientific reasoning, is often associated with an apprehension that every mind may not be capable of grasping the truths of the philosophy of nature.

Translated by E. C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)

Introduction (p. 40)

Harper & Brothers Publishers. New York, New York, USA. 1858

## NATURE, EXPLORING

**Carson, Rachel** 1907–64  
American marine biologist and writer

Exploring nature with your child is largely a matter of becoming receptive to what lies around you. It is learning again to use your eyes, ears, nostrils, and finger tips, opening up the disused channels of sensory impression.

*The Sense of Wonder* (p. 52)

Harper & Row, Publishers, New York 1984

## NATURE, FACE OF

**Harvey, Moses** 1820–1901  
Irish clergyman, essayist and naturalist

The face of nature is veiled, and it is for man, who had been so wondrously endowed for the task by his Creator,

reverently yet fearlessly to lift the veil, and gaze into that awful but lovely face which dimly yet truly mirrors the Omnipotent One.

Science and Religion

*The Maritime Monthly*, Volume II, November, 1873 (p. 478)

**Hazlitt, William Carew** 1834–1913  
English bibliographer

There are only three pleasures in life pure and lasting, and all are derived from inanimate things – books, pictures, and the face of nature.

*Criticisms on Art* (2nd edition)

The Marquis of Stanford's Gallery (p. 40)

C. Templeman. London, England. 1856

**Playfair, John** 1748–1819  
Scottish geologist, physicist, and mathematician

Every new improvement in science affords the means of delineating more accurately the face of nature as it *now* exists, and of transmitting, to future ages, an account, which may be compared with the face of nature as it shall *then* exist.

*The Works of John Playfair* (Volume 1)

*Illustrations of the Huttonian Theory*, Paragraph 134 (p. 150)

Printed for Archibald Constable & Co. Edinburgh, Scotland. 1822

**Priestley, Joseph** 1733–1804  
English theologian and scientist

I view with rapture the glorious face of nature, and I admire its wonderful constitution, the laws of which are daily unfolding themselves to our view.

In F.W. Gobbs

*Joseph Priestley: Adventure in Science and Champion of Truth*

Chapter 10 (p. 168)

Thomas Nelson & Sons Ltd. London, England. 1965

**Raman, Chandrasekhar Venkata** 1888–1970  
Indian physicist

The face of Nature as presented to us is infinitely varied, but to those who love her it is ever beautiful and interesting.

*The New Physics: Talks on Aspects of Science*

Chapter V (p. 29)

Philosophical Library, New York. 1951

## NATURE, FACTS OF

**Tyndall, John** 1820–93  
Irish-born English physicist

Brightness and freshness take possession of the mind when it is crossed by the light of principles, shewing the facts of Nature to be organically connected.

*Six Lectures on Light Delivered in America in 1872–1873* (3rd edition)

Lecture II (p. 42)

D. Appleton & Co. New York, New York, USA. 1901

**NATURE, FASCINATION OF**

**Beebe, William** 1877–1962  
American ornithologist

There was the ending still unfinished, the finale buried in the future – and in this we find the fascination of Nature and Science.

In William H. Carr  
*The Stir of Nature*

Chapter Thirteen (p. 167)

Oxford University Press, Inc. New York, New York, USA. 1930

**NATURE, FERTILITY OF**

**Muir, John** 1838–1914  
American naturalist

One is constantly reminded of the infinite lavishness and fertility of Nature – inexhaustible abundance amid what seems enormous waste. And yet when we look into any of her operations that lie within reach of our minds, we learn that no particle of her material is wasted or worn out. It is eternally flowing from use to use, beauty to yet higher beauty.

*Gentle Wilderness* (p. 139)

Ballantine Books. New York, New York, USA. 1968

**NATURE, FOOTSTEPS OF**

**Hooke, Robert** 1635–1703  
English physicist

... the footsteps of Nature are to be trac'd, not in her ordinary course, but when she seems to be put to her shifts, to make many doublings and turnings, and to use some kind of art in endeavoring to avoid our discovery.

*Micrographia*

Preface (third page)

Printed by Jo. Martyn and Ja. Allestry. London, England. 1665

**NATURE, FORCES OF**

**Čapek, Karel** 1890–1938  
Czechoslovakian author

We must be exact, mathematical and geometrical, in order to be equal to nature. Number and fantasy, law and abundance are the feverish forces of nature; not sitting down beneath a green tree, but creating crystals and ideas denotes becoming as nature; creating laws and forms; penetrating matter with glowing flashes of divine computation.

*Letters from England* (p. 44)

Doubleday, Page & Co. Garden City, New York, USA. 1924

**Doyle, Sir Arthur Conan** 1859–1930  
Scottish writer

How sweet the morning air is! See how that one little cloud floats like a pink feather from some giant flamingo.

Now the red rim of the sun pushes itself over the London cloud-bank. It shines on a good many folk, but on none, I dare bet, who are on a stranger errand than you or I. How small we feel with our petty ambitions and strivings in the presence of the great elemental forces of Nature.

In William S. Baring-Gould (ed.)

*The Annotated Sherlock Holmes* (Volume 1)

*The Sign of the Four*, Chapter 7 (p. 648)

Wings Books. New York, New York, USA. 1967

**Peattie, Donald Culross** 1898–1964  
American botanist, naturalist, and author

Futile for science to try to discover what the forces of Nature are; it can only discover how they operate.

*An Almanac for Moderns*

March Twenty-Eighth (p. 10)

G.P. Putnam's Sons. New York, New York, USA. 1935

**NATURE, FORM OF**

**Watts, Alan Wilson** 1915–73  
American philosopher

The form of Christianity differs from the form of nature because in the Church and in its spiritual atmosphere we are in a universe that has been made. Outside the Church we are in a universe that has grown.

*Nature, Man, and Woman*

Part I, Chapter 1 (p. 40)

Vintage Books. New York, New York, USA. 1970

**NATURE, GOLD OF**

**Burroughs, John** 1837–1921  
American naturalist and writer

The gold of nature does not look like gold at the first glance. It must be smelted and refined in the mind of the observer. And one must crush mountains of quartz and wash hills of sand to get it.

*Signs and Seasons*

Chapter I (p. 35)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1904

**NATURE, HARMONY OF**

**Tuttle, Hudson** 1836–1910  
American medium

We find in the constant harmony of nature a sufficient proof in favor of the immutability of its laws. Every miracle would involve their infraction; a process to which nature would submit as little as to any other intervention in its empire; in which everything, from the gnat which dances in the sunbeam up to the human mind which issues from the brain, is governed by fixed principles.

In Ludwig Buchner

*Force and Matter*

Chapter VI (p. 38)

Trubner & Company. London, England. 1864

## NATURE, HISTORY OF

**Collingwood, Robin George** 1889–1943  
English historian and philosopher

The only condition on which there could be a history of nature is that the events of nature are actions on the part of some thinking being or beings, and that by studying these actions we could discover what were the thoughts which they expressed and think these thoughts for ourselves. This is a condition which probably no one will claim is fulfilled. Consequently the processes of nature are not historical processes and our knowledge of nature, though it may resemble history in certain superficial ways, e.g., by being chronological, is not historical knowledge.

*The Idea of History*

Part V, Section 5 (p. 302)

At The Clarendon Press. Oxford, England. 1967

## NATURE, IGNORANCE OF

**Holbach, Paul Henri Thiry** 1723–89  
French philosopher

If the ignorance of nature gave birth to the Gods, the knowledge of nature is calculated to destroy them.

Translated by H.D. Robinson

*The System of Nature, Or, Laws of the Moral and Physical World*  
(Volume 1)

Chapter XVIII (p. 174)

J.P. Mendum

Boston, Massachusetts, USA. 1889

**Thierry, Paul Henri, Baron d’Holbach** 1723–89  
German-born French man of leisure

Man is only unhappy because he is ignorant of nature.

Translated by M. Mirabaud

*System of Nature or, The Laws of the Moral and Physical World* (Volume 1)

Preface by the Author (p. vii)

Published by R. Benson. Philadelphia, Pennsylvania, USA. 1808

## NATURE, IMAGINATION OF

**Feyerabend, Paul K.** 1924–94  
Austrian-born American philosopher of science

But see that the imagination of nature is far, far greater than the imagination of man. No one who did not have some inkling of this through observations could ever have imagined such a marvel as nature is.

*The Meaning of It All: Thoughts of a Citizen Scientist*

Chapter I (p. 10)

Perseus Books. Reading, Massachusetts, USA. 1998

**Feynman, Richard P.** 1918–88  
American theoretical physicist

...see that the imagination of nature is far, far greater than the imagination of man. No one who did not have

some inkling of this through observations could ever have imagined such a marvel as nature is.

*The Meaning of It All*

Chapter I (p. 10)

Perseus Books. Reading, Massachusetts, USA. 1998

## NATURE, IMITATION OF

**Child, Lydia M.** 1802–80  
American writer and abolitionist

That man’s best works should be such bungling imitations of Nature’s infinite perfection, matters not much: but that he should make himself an imitation, this is the fact which Nature moans over, and deprecates beseechingly. Be spontaneous, be truthful, be free, and thus be individuals! is the song she sings through warbling birds, and whispering pines, and roaring waves, and screeching winds.

*Letters from New York*

Letter XXXVIII (p. 276)

C.S. Francis & Company. New York, New York, USA. 1945

## NATURE, IMMUTABILITY OF THE LAWS

### Author undetermined

We are about to venture a few suggestions...on one short phrase, which is insensibly stealing into general circulation, and which seems to require considerable watchfulness and caution. They are offered for the consideration of Physical Science and Inductive Logic – not in any spirit of antagonism to them, and still less dogmatically. But the phrase itself appears not only to involve a violation of the first laws of accurate inductive reasoning, but to be charged with most perilous conclusions to Christian faith, unless it be carefully modified. This phrase is “the Immutability of the Laws of Nature.”

Immutability of Nature

*The Living Age*, Number 913, November 30, 1861 (p. 387)

## NATURE, INTERPRETER OF

**Bacon, Sir Francis** 1561–1626  
English lawyer, statesman, and essayist

Man, as the minister and interpreter of nature, dies and understands as much as his observations on the order of nature, either with regard to things or the mind permit him, and neither knows or is capable of more.

In *Great Books of the Western World* (Volume 30)

*Novum Organum*

First Book, Aphorism 1 (p. 107)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**NATURE, INTERRELATEDNESS OF**

**Watts, Alan Wilson** 1915–73  
American philosopher

For the notion that the interrelatedness of nature is complex and highly detailed is merely the result of translating it into the linear units of thought. Despite its rigor and despite its initial successes, this is an extremely clumsy mode of intelligence. Just as it is a highly complicated task to drink water with a fork instead of a glass, so the complexity of nature is not innate but a consequence of the instruments used to handle it. There is nothing complex about walking, breathing, and circulating one's blood. Living organisms have developed these functions without thinking about them at all.

*Nature, Man, and Woman*

Part I, Chapter 2 (p. 62)

Vintage Books. New York, New York, USA. 1970

**NATURE, INVESTIGATION OF**

**Huxley, Thomas Henry** 1825–95  
English biologist

The investigation of Nature is an infinite pasture-ground, where all may graze, and where the more bite, the longer the grass grows, the sweeter is its flavor, and the more it nourishes.

*Collected Essays* (Volume 1)

*Method and Result*

Administrative Nihilism (p. 282)

Macmillan & Company Ltd. London, England. 1904

**Poynting, John Henry** 1852–1914  
English physicist

While the investigation of Nature is ever increasing our knowledge, and while each new discovery is a positive addition never again to be lost, the range of the investigation and the nature of the knowledge gained from the theme of endless discussion.

*Collected Scientific Papers*

Presidential Address

The Mathematical and Physical Section

The British Association (Dover) 1899 (p. 599)

At The University Press. Cambridge. 1920

**NATURE, KINGDOM OF**

**Orton, James** 1830–77  
Explorer

The Kingdom of Nature is a literal Kingdom. Order and beauty, law and dependence, are seen everywhere. Amidst the great diversity of the forms of life, there is unity; and this suggests that there is one general plan, but carried out in a variety of ways.

*Comparative Zoology, Structural and Systematic*

Chapter XXI (p. 222)

Harper & Brothers. New York, New York, USA. 1877

**NATURE, KNOWLEDGE OF**

**Adams, George** 1750–  
English instrument maker

As you advance in the knowledge of nature's varieties, your mind will be opened, and you will find fresh ornament in truth, fresh dignity in devotion, and fresh reason in religion.

*Lectures on Natural and Experimental Philosophy* (Volume 2)

Lecture XII (p. 2)

Printed by R. Hindmarsh. London, England. 1794

**Gray, George W.**  
Freelance science writer

Our knowledge of nature is limited by our ability to apprehend the materials and the forces which meet us – both those of the Earth, which we encounter in their hurrying to and fro, and those of the Universe outside, which beat upon us from the stars and the darkness beyond the stars.

*The Advancing Front of Science*

Chapter I, Section 5 (pp. 20–21)

Whittlesey House. New York, New York, USA. 1937

**Kirchoff, Gustav Robert** 1824–87  
German physicist

...there are such limits to our knowledge of nature, must be borne with patience by every sound mind whether he be a scientist or a workman. I can only advise you to leave off all impossible aspirations and trying to conceive things that are beyond conception. This requires a struggle, but a struggle is the lot of many men of all professions.

In Robert von Helmholtz

*Annual Report of the Board of Regents of the Smithsonian Institution, 1889*

A Memoir of Gustav Robert Kirchhoff (p. 533)

Government Printing Office. Washington, D.C. 1889

**Soddy, Frederick** 1877–1956  
English chemist

...our knowledge of Nature is always of necessity partial, and is bounded in all directions by certain inevitable but too often forgotten limitations connected, for example, with the briefness of human life and the physical impossibility of pursuing investigations except under conditions where the life of the investigator can be maintained.

*The Interpretation of Radium and the Structure of the Atom*

Part I, Chapter I (p. 4)

G.P. Putnam's Sons. New York, New York, USA. 1920

**von Schelling, Friedrich Wilhelm Joseph** 1775–1854  
German philosopher

The knowledge of nature is a good thing; but it must be studied primarily in its natural and healthy connection with ourselves. I would not force young people to court a

curious intimacy with worms, and beetles, and monkeys, and other creatures removed from the natural range of human sympathy.

In John Stuart Blackie  
*The Wisdom of Goethe*

Nature – Natural History (p. 182)

William Blackwood & Sons. Edinburgh, Scotland. 1883

## NATURE, LANGUAGE OF

**Davy, Sir Humphry** 1778–1829

English chemist

The whole language of nature informs us, that in animated beings there is something above our powers of investigation ; something which employs, combines, and arranges the gross elements of matter – a spark of celestial fire, by which life is kindled and preserved, and which, if even the instruments it employs are indestructible in their essence, must itself, of necessity, be immortal.

In John Davy (ed.)

*Memoirs of the Life of Sir Humphry Davy* (Volume 1)

Chapter III (p. 218)

Longman, Rees, Orme, Brown, Green & Longman London, England. 1836

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

If I am overflowing with life, am rich in experience for which I lack expression, then nature will be my language full of poetry – all nature will fable, and every natural phenomenon be a myth.

*The Writings of Henry David Thoreau* (Volume 5)

Chapter III (p. 135)

Houghton Mifflin & Co. New York, New York, USA. 1906

## NATURE, LAW OF

**Barrow, Hohn D.** 1952–

English theoretical physicist

For millennia Nature has slowly been fashioning first our minds, and then, within them, an imitation of her workings that we have come to call the law of Nature. This imitation of Nature we have found effective from the microscopic inner world of matter to the farthest reaches of the Universe. We have built it up. Step by step, through observation, and trial and error, from the mundane everyday world around us to the extremities of inner=

*The World Within the World*

Prologue (p. 1)

Clarendon Press. Oxford, England. 1988

**Boole, George** 1815–64

English mathematician

The general laws of Nature are not, for the most part, immediate objects of perception.

*An Investigation of the Laws of Thought*

Chapter I (p. 4)

Walton & Maberly. London, England. 1854

**Camus, Albert** 1913–60

Algerian-French novelist, essayist, and playwright

The laws of nature may be operative up to a certain limit, beyond which they turn against themselves to give birth to the absurd.

Translated by Justin O'Brien

*The Myth of Sisyphus and Other Essays*

Philosophical Suicide (p. 37)

Alfred A. Knopf. New York, New York, USA. 1961

**Chargaff, Erwin** 1905–2002

Austrian biochemist

Often the regularities in the “laws of nature” are only the reflection of the regularity of the method employed in their formulation!

*Heraclitean Fire: Sketches from a Life before Nature* (p. 57)

The Rockefeller University Press. New York, New York, USA. 1978

**Commoner, Barry** 1917–

American biologist, ecologist, and educator

The separation of the laws of nature among the different sciences is a human conceit; nature itself is an integrated whole.

*Science and Survival*

Chapter 2 (p. 25)

The Viking Press. New York, New York, USA. 1966

**da Vinci, Leonardo** 1452–1519

Italian High Renaissance painter and inventor

Nature is constrained by the cause of her laws which dwell inborn in her.

Translated by Maurice Baring

*Thoughts on Art and Life*

Thoughts on Science (p. 168)

The Merrymount Press. Boston, Massachusetts, USA. 1906

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

It isn't true that the laws of Nature have been capriciously disturbed, that snakes have talked, that women have been turned to salt, that rods have brought water out of rocks.

*The Stark Munro Letters*

III (p. 47)

D. Appleton & Co. New York, New York, USA. 1895

**Duke of Argyll (George Douglas**

**Campbell)** 1823–1900

English statesman and writer on science, religion, and politics

...the laws of Nature appear to be employed in the system of Nature in a manner precisely analogous to that in which we ourselves employ them. The difficulties and obstructions which are presented by one law in the way of accomplishing a given purpose are met and overcome exactly on the same principle on which they are met and overcome by man, viz., by knowledge of other laws and by resource in applying them that is, by ingenuity in

mechanical contrivance. It cannot be too much insisted on that this is a conclusion of pure science.

*The Reign of Law* (4th American edition)

Chapter 2 (p. 99)

George Routledge & Sons. New York, New York, USA. 1873

...laws of nature are seen to be nothing but combinations of force with a view to purpose: combinations which indicate complete knowledge, not only of what is, but of what is to be, and which foresees the end from the beginning.

*The Works of the Duke of Argyll*

Chapter IV (p. 123)

John B. Alden, Publisher. New York, New York, USA. 1884

**Dumas, Jean Baptiste-Andre** 1800–84

French biochemist

Everything must give way to the laws of Nature, and he alone who has mastered those laws can control her processes. But the mastery cannot be obtained with a struggle. The fable of Proteus is a true picture of the combat between man, eager for knowledge, and the stubborn guardian, charged with the protection of the secrets of destiny. Proteus changed himself into a thousand shapes before speaking, and yielded only to the hero who, far from being moved by his transformations, bound him with bands of ever increasing strength. Such is Nature herself, her answers are always truthful, but like the ancient shepherd of Neptune's flocks, before allowing Truth to shine forth, she arrays herself in the garments of error, or hides herself behind the phantom of illusion, and will only assume her proper shape under the determined assaults of a resolute disciple of Science.

The Faraday Lecture

*Chemical News and Journal of Physical Science*, Volume V, No. 3, 1870 (p. 122)

**Faraday, Michael** 1791–1867

English physicist and chemist

It will be impossible for us to consider the Laws of Nature, and what they effect, unless we now and then give our sole attention, so as to obtain a clear idea upon the subject. Give me now that attention, and then I trust we shall not part without your knowing something about those Laws, and the manner in which they act.

In William Crookes

*A Course of Six Lectures on the Various Forces of Matter and Their Relations to Each Other*

Lecture II (p. 31)

Richard Griffin & Co. London, England. 1860

**Feuerbach, Ludwig** 1804–72

German philosopher

Who suspends one law of nature suspends them all.

In Ludwig Buchner

*Force and Matter*

Chapter VII (p. 44)

Trubner & Company. London, England. 1864

**Fielding, Henry** 1707–54

English novelist, playwright, and barrister

The law of nature is a jargon of words, which means nothing.

*The History of Tom Jones, A Foundling*

Book IV, Chapter IV (p. 134)

George Bell & Sons. London, England. 1876

**Fisher, H. A. L.** 1865–1940

English historian

The fact of progress is written plain and large on the page of history; but progress is not a law of nature.

*A History of Europe*

Preface (p. v)

Edward Arnold Publishers Ltd. London, England. 1936

**Gregory, Sir Richard Arman** 1864–1952

British science writer and journalist

Those who transgress the laws of man sometimes escape punishment; but the laws of Nature can never be broken without paying the penalty. The man who steps over the side of a cliff, consciously or unconsciously, meets the consequences of his action swiftly, whether he be sinner or saint ...

*Discovery, Or, The Spirit and Service of Science*

Chapter VIII (p. 201)

Macmillan & Co Ltd. London, England. 1916

**Haeckel, Ernst Heinrich Philipp August** 1834–1919

German biologist and philosopher

The anthropomorphic notion of a deliberate architect and ruler of the world has gone forever from this field; the “eternal iron laws of nature” have taken its place.

*The Riddle of the Universe*

Chapter XIV (p. 267)

Watts & Company. London, England. 1900

The highest triumph of the human mind, the true knowledge of the most general laws of nature, ought not to remain the private possession of a privileged class of learned men, but ought to become the common property of all mankind.

Translated by E. Ray Lankester

*The History of Creation, Or, The Development of the Earth and Its Inhabitants by the Action of Natural Causes* (Volume 1) (4th edition)

Chapter I (p. 4)

D. Appleton & Co. New York, New York, USA. 1892

**Hawking, Stephen William** 1942–

English theoretical physicist

...there are grounds for cautious optimism that we may now be near the end of the search for the ultimate laws of nature.

*A Brief History of Time: From the Big Bang to Black Holes*

Chapter 10 (p. 156)

Bantam Books. Toronto, Ontario, Canada. 1988

**Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

The laws of nature [that] we formulate mathematically in quantum theory deal no longer with the particles themselves but with our knowledge of the elementary particles.

*Daedalus*, Volume 87, 1958 (p. 99)

**Herschel, Sir John Frederick William** 1792–1871

English astronomer and chemist

But the laws of nature are not only permanent, but consistent, intelligible, and discoverable with such a moderate degree of research, as is calculated rather to stimulate than to weary curiosity.

*The Cabinet of Natural Philosophy*

Part I, Chapter III, Section 33 (pp. 42–43)

Longman, Rees, Orme, Brown & Green. London, England. 1831

**Hugo, Victor** 1802–85

French author, lyric poet, and dramatist

This is no dream; it is the universal law of Nature. But how to extract from Nature the secret of this universal law?

Translated by Jessie Haynes

*Notre Dame de Paris*

Book VII, Chapter III (p. 266)

P.F. Collier & Son. New York, New York, USA. 1902

**Huxley, Thomas Henry** 1825–95

English biologist

This universe is, I conceive, like to a great game being played out, and we poor mortals are allowed to take a hand. By great good fortune the wiser among us have made out some few of the rules of the game, as at present played. We call them “Laws of Nature,” and honour them because we find that if we obey them we win something for our pains. The cards are our theories and hypotheses, the tricks our experimental verifications.

In Leonard Huxley

*Life and Letters of Thomas Henry Huxley* (Volume 1)

Chapter XVII (p. 262)

D. Appleton & Co. New York, New York, USA. 1901

The chess-board is the world; the pieces are the phenomena of the universe; the rules of the game are what we call the laws of Nature. The player on the other side is hidden from us. We know that his play is always fair, just, and patient. But also we know, to our cost, that he never overlooks a mistake, or makes the smallest allowance for ignorance.

*Lay Sermons, Addresses and Reviews*

A Liberal Education (pp. 31–32)

New York, New York, USA. 1872

...the “Law of Nature” is not a command to do, or to refrain from doing, anything. It contains, in reality, nothing but a statement of that which a given being tends to do under the circumstances of its existence; and which, in

the case of a living and sensitive being, it is necessitated to do, if it is to escape certain kinds of disability, pain, and ultimate dissolution.

*Collected Essays* (Volume 1)

*Method and Result*

Natural and Political Rights (p. 349)

Macmillan & Company Ltd. London, England. 1904

Education is the instruction of the intellect in the laws of Nature, under which name I include not merely things and their forces, but men and their ways; and the fashioning of the affections and of the will into an earnest and loving desire to move in harmony with those laws.

*Collected Essays* (Volume 3)

*Science and Education*

A Liberal Education; and Where to Find It (p. 83)

Macmillan & Company Ltd. London, England. 1904

**Jordan, David Starr** 1851–1931

American scientist and university administrator

The laws of nature have in themselves no necessary principle of progress. Their functions, each and all, may be defined as cosmic order. The law of gravitation brings order in rest or motion. The laws of chemical affinity bring about molecular stability. Heredity repeats strength or weakness, good or ill, with like indifference. The past will not let go of us; we cannot let go of the past.

*Evolution and Animal Life*

Chapter I (p. 10)

D. Appleton & Co. New York, New York, USA. 1907

**Kingsley, Charles** 1819–75

English clergyman and author

Nature’s deepest laws, her own true laws, are her invisible ones.

*Alton Locke*

Chapter XXXVIII (p. 291)

Chapman & Hall. London, England. 1856

**Laplace, Pierre Simon** 1749–1827

French mathematician, astronomer, and physicist

All events, even those which on account of their insignificance do not seem to follow the great laws of nature, are a result of it just as necessarily as the revolutions of the sun.

Translated by Frederick Wilson Truscott and Frederick Lincoln

*A Philosophical Essay on Probabilities*

Chapter II (p. 3)

John Wiley & Sons. London, England. 1902

**Lederman, Leon** 1922–

American high-energy physicist

The laws of nature must have existed before even time began in order for the beginning to happen. We say this, we believe it, but can we prove it?

*The God Particle: If the Universe Is the Answer, What Is the Question?*

Chapter 9 (p. 401)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1993

**Lucretius** ca. 99 BCE–55 BCE  
Roman poet

This terror then and darkness of mind must be dispelled not by the rays of the sun and glittering shafts of day, but by the aspects and the law of nature; the warp of whose design we shall begin with this first principle, nothing is ever gotten out of nothing by divine power.

In *Great Books of the Western World* (Volume 12)

*Lucretius: on the Nature of Things*

Book One, l. 146 (pp. 2–3)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Lyell, Sir Charles** 1797–1875  
English geologist

Our estimate, indeed, of the value of all geological evidence, and the interest derived from the investigation of the earth's history, must depend entirely on the degree of confidence which we feel in regard to the permanency of the laws of nature. Their immutable constancy alone can enable us to reason from analogy, by the strict rules of induction, respecting the events of former ages, or, by a comparison of the state of things at two distinct geological epochs, to arrive at the knowledge of general principles in the economy of our terrestrial system.

*Principles of Geology*

Chapter IX (p. 165)

John Murray. London, England. 1830

**Lynch, John Joseph**  
No biographical data available

The laws of nature are written deep in the folds and faults of the earth. By encouraging men to learn those laws one can lead them further to a knowledge of the Author of all laws.

*New York Times*, December 5, 1963

**Mather, Kirtley F.** 1888–1978  
American geologist

The laws of nature are not chains which shackle man, nor gods which drive him down any predetermined alley. They are tools which strengthen his hands and increase his efficiency; implements which have waited long for his master mind to make them useful.

In Edward H. Cotton

*Has Science Discovered God?*

Sermons from Stones (p. 17)

Thomas Y. Crowell Company. New York, New York, USA. 1931

**Moleschott, Jacob** 1822–93  
Dutch scientist, physiologist, and philosopher

The law of nature is a stringent expression of necessity.

In Ludwig Buchner

*Force and Matter*

Chapter VI (p. 33)

Trubner & Company. London, England. 1864

**Needham, Joseph** 1900–95  
English biochemist and sinologist

There was no confidence that the code of Nature's laws could be unveiled and read, because there was no assurance that a divine being, even more rational than ourselves, had ever formulated such a code capable of being read.

*The Grand Titration: Science and Society in East and West* (p. 350)

University of Toronto Press. Toronto, Ontario, Canada. 1969

**Pareto, Vilfredo Federico Damaso** 1848–1923  
Italian sociologist, economist, and philosopher

Above, far above the prejudices and passions of men soar the laws of nature. Eternal and immutable, they are the expression of the creative power they represent what is, what must be, what otherwise could not be. Man can come to understand the: he is incapable of changing them.

Translated by Samuel Edward Finer

*Sociological Writings* (p. 122)

Praeger. New York, New York, USA. 1966

**Playfair, John** 1748–1819  
Scottish geologist, physicist, and mathematician

Amid all the revolutions of the globe the economy of Nature has been uniform, and her laws are the only things that have ever resisted the general movement. The rivers and the rocks, the seas and the continents, have been changed in all their parts; but the laws which direct those changes, and the rules to which they are subject, have remained invariably the same.

*The Works of John Playfair* (Volume I)

Note XIX, section 117 (p. 415)

Printed for Archibald Constable & Co. Edinburgh, Scotland. 1822

**Richards, Theodore William** 1868–1928  
American chemist

The laws of nature cannot be intelligently applied until they are understood, and in order to understand them, many experiments bearing upon the ultimate nature of things must be made, in order that all may be combined in a far-reaching generalization impossible without the detailed knowledge upon which it rests.

*Annual Report of the Board of Regents of the Smithsonian Institution* (1918)

The Problem of Radioactive Lead (p. 219)

Government Printing Office

Washington, D.C. 1919

**Schrödinger, Erwin** 1887–1961  
Austrian theoretical physicist

The laws of physics are generally looked upon as a paradigm of exactitude. Therefore one would naturally take it for granted that probably no other science would be able to give such a clear and definite answer when asked what is meant when we speak of the law of nature.

*Science and the Human Temperament*

Chapter VI (p. 133)

W.W. Norton & Company, Inc. New York, New York, USA. 1935

### Scriven, Michael

No biographical data available

The most interesting fact about laws of nature is that they are virtually all known to be in error.

In H. Feigl and G. Maxwell (eds.)

*Current Issues in the Philosophy of Science – Proceedings of Section L of the American Association for the Advancement of Sciences*

The Key Property of Physical Laws – Inaccuracy (p. 91)

Holt, Rinehart & Winston. New York, New York, USA. 1961

### Sterne, Laurence 1713–68

English novelist and humorist

The laws of nature will defend themselves ...

*Tristram Shandy*

Chapter XIX (p. 127)

Derby & Jackson. New York, New York, USA. 1857

### Thoreau, Henry David 1817–62

American essayist, poet, and practical philosopher

If we knew all the laws of Nature, we should need only one fact, or the description of one actual phenomenon, to infer all the particular results at that point. Now we know only a few laws, and our result is vitiated, not, of course, by any confusion or irregularity in Nature, but by our ignorance of essential elements in the calculation. Our notions of law and harmony are commonly confined to those instances which we detect; but the harmony which results from a far greater number of seemingly conflicting, but really concurring, laws, which we have not detected, is still more wonderful. The particular laws are as our points of view, as to the traveler, a mountain outline varies with every step, and it has an infinite number of profiles, though absolutely but one form. Even when cleft or bored through it is not comprehended in its entirety.

*The Writings of Henry David Thoreau* (Volume 2)

*Walden*

Chapter XVI (p. 448)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

### Trefil, James

The laws of nature are the skeleton of the universe.

*The Nature of Science*

Introduction (p. vii)

### Twain, Mark (Samuel Langhorne

Clemens) 1835–1910

American author and humorist

How blind and unreasoning and arbitrary are some of the laws of nature – most of them, in fact!

*The Man That Corrupted Hadleyburg, and Other Stories and Essays*

A Double-Barreled Detective Story

Chapter III (p. 296)

Harper & Brothers. New York, New York, USA. 1917

### van Dyke, John Charles 1856–1932

American art historian and critic

There is no appeal from the law of nature. It was made for beast and bird and creeping things. Will the human never learn that in the eye of the law he is not different from the things that creep?

*The Desert*

Chapter VI (p. 108)

Charles Scribner's Sons. New York, New York, USA. 1930

### von Schelling, Friedrich Wilhelm Joseph 1775–1854

German philosopher

There is here little that is universal and subjective, for the isolated manifestations of the laws of nature lie without us – all sphynx-like, motionless, firm, and dumb.

*Conversations of Goethe With Eckermann and Soret*

Tues., Dec. 30 (p. 47)

George Bell & Sons. London, England. 1883

### Weyl, Hermann 1885–1955

German mathematician

The truth as we see it today is this: The laws of nature do not determine uniquely the one world that actually exists.

*Symmetry*

Bilateral Symmetry (p. 27)

Princeton University Press. Princeton, New Jersey, USA. 1960

### Whewell, William 1794–1866

English philosopher and historian

When we speak of material nature as being governed by laws, it is sufficiently evident that we use the term in a manner somewhat metaphorical.

*Astronomy and General Physics*

Chapter II (p. 17)

Carey, Lea & Blanchard. Philadelphia, Pennsylvania, USA. 1833

### Wigner, Eugene Paul 1902–95

Hungarian-born American physicist

The regularities in the phenomena which physical science endeavors to uncover are called the laws of nature. The name is actually very appropriate. Just as legal laws regulate actions and behavior under certain conditions but do not try to regulate all action and behavior, the laws of physics also determine the behavior of its objects of interest only under certain well-defined conditions but leave much freedom otherwise.

*Nobel Lectures, Physics 1963–1970*

Nobel lecture for award received in 1914

Events, Laws of Nature, and Invariance principles (p. 6)

Elsevier Publishing Company. Amsterdam, Netherlands. 1972

### Witten, Edward 1951–

American theoretical physicist

Understanding natural science has been, historically, an important source of mathematical inspiration. So it is

frustrating that, at the outset of the new century, the main framework used by physicists for describing the laws of nature is not accessible mathematically.

Physical Law and the Quest for Mathematical Understanding  
*Bulletin of the American Mathematical Society*, Volume 40, Number 1, October 2, 2002 (p 23).

## NATURE, LEARN OF

**Hutton, James** 1726–97

Scottish geologist, chemist, and naturalist

It is our business to learn of nature (that is by observation) the ways and means, which in her wisdom are adopted; and we are to imagine these only in order to find means for further information, and to increase our knowledge from the examination of things which actually have been. It is in this manner, that intention may be found in nature; but this intention is not to be supposed, or vainly imagined, from what we may conceive to be.

*Theory of the Earth: With Proofs and Illustrations* (Volume 1)  
Chapter I, Section IV (p. 197)  
H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

## NATURE, LOOM OF

**Jeans, Sir James Hopwood** 1877–1946

English physicist and mathematician

Nothing is gained by saying that the loom of nature works like our muscles if we cannot explain how our muscles work.

*Physics and Philosophy*  
Chapter I (p. 15)  
Dover Publications. New York, New York, USA. 1981

**Poynting, John Henry** 1852–1914

English physicist

...the loom of Nature is weaving a pattern with no mere geometrical design. The threads of life, coming in we know not where, now twining together, now dividing, are weaving patterns of their own, ever increasing in intricacy, ever gaining in beauty.

*Report of the Sixty-ninth Meeting British Association for the Advancement of Science*  
The President's Address (p. 624)  
John Murray. London, England. 1900

## NATURE, LOVE OF

**Burroughs, John** 1837–1921

American naturalist and writer

The love of nature is different from the love of science, though the two may go together.

*The Breath of Life*  
Preface (p. vii)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1915

**Davies, William H.** 1871–1940

English poet

It takes more than a short holiday to get a real love of Nature; such a love as makes trees like human companions, and green the colour we look for everywhere we go.

*Nature*  
Chapter I (p. 1)  
B.T. Batsford, Ltd. London, England. 1914

**Hamilton, Frank L.**

No biographical data available

Next to a knowledge of himself, man should have a love of nature deeply planted in his soul.

The Round Table  
*The Connecticut Magazine: An Illustrated Monthly*, Volume 1, Number 3, 1895 (p. 308)

**Kearton, Richard** 1862–1928

English naturalist

Men are coming to know that there are greater possessions than those which can be measured by the surveyor's chain or locked in iron safes. A love of Nature is one of them, and it has the unspeakably good quality of endurance.

*Wild Nature's Ways*  
Introduction (p. ix)  
Cassell & Co., Ltd. London, England. 1903

**Lubbock, John, First Baron Avebury** 1834–1919

English banker, politician, biologist, and archaeologist

The love of Nature is a great gift, and if it is frozen or crushed out, the character can hardly fail to suffer from the loss.

*The Pleasures of Life*  
Chapter VII (p. 147)  
The Macmillan Co. New York, New York, USA. 1891

**Roe, Edward Payson** 1837–88

American author, horticulturalist, and clergyman

The love of Nature is something that may be developed in every heart, and it is a love that rarely fails to purify and exalt. To many she is a cold, indifferent beauty. They see, but do not know and appreciate her, and she passes on her way as if they were nothing to her. But when wooed patiently and lovingly, she stops to smile, caress, and entertain with exhaustless diversion.

*Nature's Serial Story*  
Preface (p. viii)  
Harper & Brothers Publishers. New York, New York, USA. 1885

**Webb, Mary Gladys Meredith** 1881–1927

English romantic novelist

...the love of nature is a passion for those in whom it once lodges. It can never be quenched. It cannot change.

It is a furious, burning, physical greed, as well as a state of mystical exaltation. It will have its own.

*The House in Dormer Forest*

Chapter XXIV (p. 277)

George H. Doran Co. New York, New York, USA. 1921

## NATURE, LOVERS OF

### Saunders, W. E.

Naturalist

Lovers of nature feel so confidently that their hobby is an enormous asset in life that there is no feeling of hesitancy in advocating that every person should become acquainted with new species of birds, trees, insects, etc., just as often as opportunity offers. And the time to do so is always NOW!

In R.J. Rutter (ed.)

*W.E. Saunders, Naturalist: A Memorial Volume*

Saundersisms (p. 50)

Federation of Ontario Naturalists. Toronto, Ontario, Canada. 1949

## NATURE, MACHINES OF

### Leibniz, Gottfried Wilhelm 1646–1716

German philosopher and mathematician

...the machines of nature, namely, living bodies, are still machines in their smallest parts *ad infinitum*.

*The Monadology and Other Philosophical Writings*

Section 64 (p. 254)

At The Clarendon Press. Oxford, England. 1898

## NATURE, MECHANISMS OF

### Leopold, Aldo 1886–1948

American naturalist

In a surprising number of men there burns a curiosity about machines and a loving care in their construction, maintenance, and use. This bent for mechanisms, even though clothed in greasy overalls, is often the pure fire of intellect. It is the earmark of our times.

Everyone knows this, but what few realize is that an equal bent for the mechanisms of nature is a possible earmark of some future generation.

In Susan L. Flader and J. Baird Callicott

*The River of the Mother of God*

The Farmer as a Conservationist (p. 257)

The University of Wisconsin Press. Madison, Wisconsin, USA. 1991

## NATURE, METHOD OF

### Morehouse, George Wilkinson 1840–?

American naturalist

We cannot become too familiar with the methods of Nature, whether on an extensive scale, or, as is often more instructive, on a minute or microscopic scale.

*The Wilderness of Worlds*

Chapter XIV (p. 189)

Peter Eckler, Publisher. New York, New York, USA. 1898

## NATURE, MONUMENTS OF

### Davy, Sir Humphry 1778–1829

English chemist

If we look with wonder upon the great remains of human works, such as the columns of Palmyra, broken in the midst of the desert, the temples of Paestum, beautiful in the decay of twenty centuries, or the mutilated fragments of Greek sculpture, in the Acropolis of Athens, or in our own Museum, as proofs of the genius of artists, and power and riches of nations now passed away; with how much deeper a feeling of admiration must we consider those grand monuments of nature, which mark the revolutions of the globe: continents broken into islands; one land produced, another destroyed; the bottom of the ocean become a fertile soil; whole races of animals extinct, and the bones and exuviae of one class covered with the remains of another; and upon these graves of past generations, the marble or rocky tombs, as it were, of a former animated world, new generations rising, and order and harmony established, and a system of life and beauty produced, as it were, out of chaos and death; proving the infinite power, wisdom, and goodness of the Great Cause of all being!

In John Davy (ed.)

*The Collected Works of Sir Humphry Davy* (Volume 7)

Award of the Copley Medal (pp. 43–44)

Smith, Elder & Co. London, England. 1840

### Younghusband, Sir Francis 1863–1942

English army officer, explorer, and spiritual writer

The Mystery of Nature only serves to draw us on. We cannot Resist. But then comes our reward. The deeper we penetrate the higher is our exaltation. Those who pierce farthest into the mystery of Nature enjoy the purst delight. So on and on we have to go – layman and scientist alike. And we shall never stop. The lure is too great.

In Francis Mason (ed.)

*The Great Design*

The Mystery of Nature (p. 255)

The Macmillan Co. New York, New York, USA. 1934

## NATURE, MYSTERIES OF

### Chambers, Robert 1802–71

Scottish journalist and geologist

It is most interesting to observe into how small a field the whole of the mysteries of nature thus ultimately resolve themselves. The inorganic has one final comprehensive law, GRAVITATION. The organic, the other great department of mundane things, rests in like manner on one law, and that is – DEVELOPMENT. Nor may even these be

after all twain, but only branches of one still more comprehensive law, the expression of that unity which man's wit can scarcely separate from Deity itself.

*Vestiges of the Natural History of Creation*  
Mental Constitution of Animals (pp. 263–264)  
George Routledge & Sons. London, England. 1887

## NATURE, NOTIONS OF

**von Liebig, Justus** 1803–73  
German organic chemist

Our children have more correct notions of nature and natural phenomena than had Plato! they may treat with ridicule the errors which Pliny has committed in his *Natural History*!

In John Blyth (ed.)  
*Familiar Letters on Chemistry*  
Letter I (p. 3)  
Walton & Maberly. London, England. 1859

## NATURE, OPERATION OF

**Agassiz, Jean Louis Rodolphe** 1807–73  
Swiss-born American naturalist, geologist, and teacher

I may say that here, as in most cases where the operations of nature interfere with the designs of man, it is not by a direct intervention on our part that we may remedy the difficulties, but rather by a precise knowledge of [nature's] causes, which may enable us, if not to check, at least to avoid the evil consequences.

*Annual Report of the Superintendent of the Coast Survey, Showing the Progress of that Work During the Year Ending November, 1851*  
Extracts from the report of Professor Agassiz to the Superintendent of the Coast Survey, on the examination of the Florida reefs, keys, and coast (p. 158)  
Printed by Robert Armstrong, Washington. 1852

**Hales, Stephen** 1677–1761  
English physiologist and clergyman

...our reasonings about the wonderful and intricate operations of Nature are so full of uncertainty, that, as the wise-man truly observes, hardly do we guess aright at the things that are upon earth, and with labour do we find the things that are before us.

*Vegetable Staticks*  
Chapter VII (p. 181)  
The Scientific Book Guild. London, England. 1961

**Morehouse, George Wilkinson** 1840–?  
American naturalist

The flood of light now thrown on the orderly evolution of worlds in the past, enables us to project the powerful search-light of the fundamental truth of the uniformity of the operations of Nature into the darkness of the future.

*The Wilderness of Worlds*  
Chapter XVII (p. 218)  
Peter Eckler, Publisher. New York, New York, USA. 1898

## NATURE, OBSERVERS OF

**Sturm, Christoph Christian** 1740–68  
Evangelical preacher

I am convinced there would be more attentive observers of nature, if, for example, the spider spun threads of gold, if the lobsters contained pearls, or if the flowers of the field could make old people young.

*Reflections on the Works of God and of His Providence Throughout All Nature* (Volume 2)  
On Our Indifference to the Works of Nature (p. 197)  
Printed for J. Walker. London, England. 1808

## NATURE, ORDER OF

**Brooks, William Keith** 1848–1908  
American zoologist

...the order of nature presents infinite diversity: the different ways in which events may be combined are innumerable; and no natural response can be judicious or beneficial under all circumstances.

*The Foundations of Zoology*  
Lecture I (p. 13)  
The Macmillan Co. New York, New York, USA. 1899

**Lankester, Edwin Ray** 1847–1929  
English zoologist

The whole order of nature, including living and lifeless matter – man, animal and gas – is a network of mechanism the main features and many details of which have been made more or less obvious to the wondering intelligence of mankind by the labor and ingenuity of scientific investigators. But no sane man has ever pretended, since science became a definite body of doctrine, that we know, or ever can hope to know or conceive of the possibility of knowing, whence this mechanism has come, why it is there, whither it is going, and what there may or may not be beyond and beside it which our senses are incapable of appreciating.

*The Limits of Science*  
*Science*, Volume 18, Number 448, July 31, 1903 (p. 144)

**Spencer, Herbert** 1820–1903  
English social philosopher

If we contemplate the order of nature, we see that everywhere vast results are brought about by accumulations of minute actions.

*The Study of Sociology*  
Conclusion (pp. 366–367)  
D. Appleton & Co. New York, New York, USA. 1873

**NATURE, PART OF****Rey, Hans Augusto** 1898–1977

Author and illustrator of children's books

No matter what part of nature one studies – microbes or Milky Ways – there is a point where one begins, but never an end.

*The Stars: A New Way to See Them*

Part 4 (p. 108)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1967

**NATURE, PASSIONS OF****Bloom, James Harvey**

No biographical data available

What man who can witness unmoved the moods and passions of Nature, whether seen in some mighty cataclysm or in the pure calm of moonlit landscape, must be very strangely composed; but in Nature's many varied colourings and harmonies what more glorious than her lavish display of flower and fruit, some long stretch of hillside sheeted with golden gorse or dyed by the setting sun with a thousand purpling shades of ling and heather, where all things – rock, foliage, and sky – speak alike the glory of the Divine Father?

*Shakespeare's Garden*

Introduction (p. 1)

Methuen &amp; Co. London, England. 1903

**NATURE, PHENOMENA OF****Herschel, Friedrich Wilhelm****(Sir William)** 1738–1822

English astronomer

The phenomena of nature, especially those that fall under the inspection of the astronomer, are to be viewed, not only with the usual attention to facts as they occur, but with the eye of reason and experience.

An Account of Three Volcanoes in the Moon

*Philosophical Transactions of the Royal Society of London*,

Volume 67, 1787 (p. 229)

**Horne, George** 1730–92

English divine

I wish we could derive the rest of the phenomena of nature by the same kind of reasoning from mechanical principles; for I am induced by many reasons to suspect that they may all depend on certain forces by which the particles of bodies, by some causes hitherto unknown, are either mutually impelled towards each other, and cohere in regular figures, or are repelled and recede from each other; which forces being unknown, philosophers have hitherto attempted the search of nature in vain; but I hope the principles here laid down will

afford some light either to that or some truer method of philosophy.

*The Works of the Right Reverend George Horne* (Volume 1)*State of the Case Between Sir Isaac Newton and Mr. Hutchinson*

(pp. 465–466)

Printed for F.C. &amp; J. Rivington. London, England. 1818

**Huggins, Sir William** 1824–1910

English astronomer

Since the time of Newton our knowledge of the phenomena of nature has wonderfully increased, but man asks, perhaps more earnestly now than in his days, What is the ultimate reality behind the reality of the perceptions? Are they only the pebbles of the beach with which we have been playing? Does not the ocean of ultimate reality and truth lie beyond?

*Annual Report of the Board of Regents of the Smithsonian Institution, 1891*

Celestial Spectroscopy (p. 102)

Government Printing Office. Washington, D.C. 1893

**Newton, Sir Isaac** 1642–1727

English physicist and mathematician

I wish we could derive the rest of the phenomena of Nature by the same kind of reasoning from mechanical principles, for I am induced by many reasons to suspect that they may all depend upon certain forces by which the particles of bodies, by some causes hitherto unknown, are either mutually impelled toward one another, and cohere in regular rigors, or are repelled and recede from one another.

In *Great Books of the Western World* (Volume 34)*Mathematical Principles*

Preface to the First Edition (p. 2)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Winchell, Alexander** 1824–91

American geologist

The phenomena of Nature are the premises of our reasoning instead of its conclusions. We have learned to look upon Nature with a profounder respect; and, though the alphabet of our philosophy be trees, and birds, and rocks, and fossils, and other material things which metaphysics affects to despise, we have found that they combine themselves into a language freighted with grand conceptions, and rich in utterances of the unseen, the high, and the holy.

*Sketches of Creation*

Chapter I (p. 15)

Harper &amp; Brothers Publishers. New York, New York, USA. 1870

**NATURE, PHILOSOPHY OF****Hutton, James** 1726–97

Scottish geologist, chemist, and naturalist

It is in the philosophy of nature that the natural history of this earth is to be studied; and we must not

allow ourselves ever to reason without proper data, or to fabricate a system of apparent wisdom in the folly of a hypothetical delusion.

*Theory of the Earth: With Proofs and Illustrations* (Volume 2)

Chapter XIV (p. 564)

H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

## NATURE, PLAN OF

**Winchell, Alexander** 1824–91

American geologist

Anything which is a plan has been thought out. The plans of Nature are the expressions of the mind.

*Walks and Talks in the Geological Field*

Chapter XXXII (p. 190)

Chautauqua Press. New York, New York, USA. 1890

## NATURE, POWER OF

**Hutton, James** 1726–97

Scottish geologist, chemist, and naturalist

If we knew all the powers of nature, and all the different conditions in which those powers may have their action varied, that is to say, if we were acquainted with every physical cause, then every natural effect, or all appearances upon the surface of this earth, might be explained in a theory that were just.

*Theory of the Earth: With Proofs and Illustrations* (Volume 1)

Chapter III (p. 298)

H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

**White, George Starr**

No biographical data available

The secret powers of NATURE ar [sic] generally discovered unsolicited.

*Prostatic Disease [sic] and Impotency*

Introduction (p. vii)

Los Angeles, California, USA. 1919

## NATURE, PRESENCE OF

**Hamerton, Philip Gilbert** 1834–94

English artist and art critic

The whole subject of landscape is a world of illusions, the only thing about it that is certainly not an illusion belong the effect upon the mind of each particular human being who fancies that he sees something, and *knows* that he feels something, when he stands in the presence of Nature.

*Landscape*

Chapter II (p. 13)

Roberts Brothers. Boston, Massachusetts, USA. 1885

## NATURE, PROCESS OF

**Maclaurin, Colin** 1698–1746

Scottish mathematician and natural philosopher

The processes of nature lie so deep, that, after all the pains we can take, much, perhaps, will remain undiscovered beyond the reach of human art or skill. But this is no reason why we should give ourselves up to the belief of fictions, be they ever so ingenious, instead of hearkening to the unerring voice of nature...

*An Account of Sir Isaac Newton's Philosophical Discoveries, in Four Books*

Book I, Chapter I (p. 12)

Printed for the Author's Children. London, England. 1748

## NATURE, PROFUSENESS OF

**Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

there are certain patches of ground, which, having lain neglected for a time, Nature, who always has her pockets full of seeds, and holes in all her pockets, has covered with hungry plebeian growths, which fight for life with each other, until some of them get broadleaved and succulent, and you have a coarse vegetable tapestry which Raphael would not have disdained to spread over the foreground of his masterpiece.

*The Autocrat of the Breakfast-table*

Chapter XII (p. 278)

A.L. Burt Co. New York, New York, USA. 1900

## NATURE, PROGRESS OF

**Butler, Samuel** 1612–80

English novelist, essayist, and critic

The progress of Nature is effected by steps that are often imperceptible and blend into one another with the utmost gentleness...

*The Note-Books of Samuel Butler* (Volume 1)

1874–1883 (p. 158)

University Press of America, Inc. Lanham, Maryland, USA. 1984

**Porter, Jermain Gildersleeve** 1852–1933

Astronomer

The progress of civilization tends to wean us away from nature. We do indeed make use of her forces and her laws, but the knowledge and skill which such use implies and necessitates are confined mostly to scientists and inventors; and the scientific spirit which insists on uncovering all the secret springs of the cosmos reacts also on the popular mind and leads to unromantic views of nature. The rising and setting of the sun, the waxing and waning

of the moon, the solemn march of the glittering star host across the firmament, are taken as matters of course and excite no wonder and inspire no awe.

*The Stars in Song and Legend*

Introduction (p. xi)

Ginn & Co. Boston, Massachusetts, USA. 1901

## NATURE, REALITY OF

**Joad, Cyril Edwin Mitchinson** 1891–1953

English philosopher and broadcasting personality

...if the nature of reality is revealed to us, albeit fleetingly and uncertainly, in aesthetic and mystical experience, if we are entitled to conceive it as the artist conceives the beauty that excites, or the mystic the Deity that awes him, our conception of it must be governed by two conditions. We must not conceive it in the likeness of ourselves, and we must not conceive it as capable of oneness of being with ourselves.

*Philosophical Aspects of Modern Science*

Chapter XI (p. 339)

G. Allen & Unwin Ltd. London, England. 1932

## NATURE, REALM OF

**Müller, Johann Heinrich Jacob** 1809–75

Physicist

The grand spectacle that is ever present to our eyes in the vast realm of nature excites within us so ardent a thirst for knowledge, that we feel ourselves irresistibly impelled to the consideration of the combined causes that have produced these wondrous results.

*Principles of Physics and Meteorology*

Introduction (p. 1)

Hippolyte Bailliere. London, England. 1847

## NATURE, RICHES OF

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

We shall never succeed in exhausting the immeasurable riches of nature; and no generation of men will ever have cause to boast of having comprehended the total aggregation of phenomena.

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)

Introduction (p. 73)

Harper & Brothers. New York, New York, USA. 1869

## NATURE, RULES OF

**Ford, Kenneth William** 1926–

Physicist

One of the elementary rules of nature is that, in the absence of a law prohibiting an event or phenomenon,

it is bound to occur with some degree of probability. To put it simply and crudely: Anything that can happen does happen.

Magnetic Monopoles

*Scientific American*, Volume 209, Number 6, December, 1963 (p. 122)

**Musser, George**

No biographical data available

The basic rules of nature are simple, but their consummation may never lose its ability to surprise.

From the Editors

*Scientific American*, Volume 280, Number 1, January, 1999 (p. 6)

## NATURE, SAVAGE

**Goldsmith, Oliver** 1728–74

Anglo-Irish writer, poet, and physician

The first desires of savage nature are merely to gratify the importunities of sensual appetite, and to neglect the contemplation of things, barely satisfied with their enjoyment: the beauties of nature, and all the wonders of creation, have but little charms for a being taken up in obviating the wants of the day, and anxious for precarious subsistence.

*A History of the Earth and Animated Nature* (Volume 1)

Chapter I (p. 9)

Claxton, Remson & Haffelfinger. Philadelphia, Pennsylvania, USA.

1875

## NATURE, SCIENCE OF

**Porter, Noah** 1811–92

American educator and philosopher

...an inductive science of nature presupposes a science of induction, and a science of induction presupposes a science of man.

*The Sciences of Nature Versus the Science of Man* (p. 29)

Dodd & Mead. New York, New York, USA. 1871

## NATURE, SECRET OF

**Bergman, Torbern Olaf** 1735–84

Swedish chemist and naturalist

The philosophical method, by pretending to unlock the secrets of nature with ease and expedition, soothes a natural impulse to explain all things; and by assuming everything to be accessible to the human intelligence, administers pleasing flattery to vanity and arrogance.

Quoted in Joseph William Mellor

*A Comprehensive Treatise on Inorganic and Theoretical Chemistry* (Volume I)

Chapter I (p. 4)

Longman, Green & Co. London, England. 1922

**Gregory, Sir Richard Arman** 1864–1952  
British science writer and journalist

The secrets of Nature are...reserved for those who seek them purely for the love of truth and desire for understanding. The “just and faithful knight” can see Nature unveiled and pass into the spiritual city of science, where purer joys than all earthly fame can give will be his prize.

*Discovery, Or, The Spirit and Service of Science*  
Chapter III (p. 55)  
Macmillan & Co Ltd. London, England. 1916

**Petrarch (Francesco Petrarca)** 1304–74  
Italian poet and humanist

There are fools who seek to understand the secrets of nature.

In Richard Olson  
*Science Deified and Science Defied: The Historical Significance of Science in Western Culture* (Volume 1)  
Chapter 7 (p. 210)  
University of California Press. Berkeley, California, USA. 1982

## NATURE, SIGHTS OF

**Curie, Marie Skłodowska** 1867–1934  
Polish-born French physical chemist

All my life through, the new sights of Nature made me rejoice like a child.

*Pierre Curie*  
Autobiographical Notes  
Chapter I (p. 162)  
The Macmillan Company. New York, New York, USA. 1926

## NATURE, SIMPLICITY OF

**Spottiswoode, William** 1825–83  
English mathematician and physicist

...the simplicity of nature which we at present grasp is really the result of infinite complexity; and that below the uniformity there underlies a diversity whose depths we have not yet probed, and whose secret places are still beyond our reach.

*Report of the Forty-eighth Meeting of the British Association for the Advancement of Science*  
Address of William Spottiswoode (p. 16)  
John Murray. London, England. 1879

## NATURE, SPIRIT OF

**Jefferies, Richard** 1848–87  
English naturalist and author

The forest is gone; but the spirit of nature stays...and will always be ...

*The Open Air*  
Outside London (p. 218)  
Chatto & Windus. London, England. 1908

## NATURE, STUDENT OF

**Huxley, Thomas Henry** 1825–95  
English biologist

The student of Nature wonders the more and is astonished the less, the more conversant he becomes with her operations; but of all the perennial miracles she offers to his inspection, perhaps the most worthy of admiration is the development of a plant or of an animal from its embryo.

*Darwiniana*  
The Origin of Species (p. 29)  
D. Appleton & Co. New York, New York, USA. 1896

## NATURE, STUDY OF

**Adams, George** 1750–95  
English instrument maker

The study of nature is as much distinguished from other subjects by the importance of its matter, as by the variety of its topics.

*Lectures on Natural and Experimental Philosophy* (Volume 2)  
Lecture XII (p. 1)  
Printed by R. Hindmarsh. London, England. 1794

**Agassiz, Jean Louis Rodolphe** 1807–73  
Swiss-born American naturalist, geologist, and teacher

The study of nature is an intercourse with the highest mind. You should never trifle with nature. At the lowest her works are the works of the highest powers – the highest something, in whatever way we may look at it.

In David Stair Jordan  
*Popular Science Monthly*, Volume 40, 1891

...in the study of Nature, we may be astonished at the infinite variety of her products; we may even study some portion of her works with enthusiasm, and nevertheless remain strangers to the spirit of the whole, ignorant of the plan on which it is based, and fail to acquire a proper conception of the varied affinities which combine beings together, so as to make of them that vast picture in which each animal, each plant, each group, each class, has its place, and from which nothing could be removed without destroying the proper meaning of the whole.

*Principles of Zoology*  
Chapter First (p. 26)  
Gould & Lincoln. Boston, Massachusetts, USA. 1867

**Agassiz, Jean Louis Rodolphe** 1807–73  
Swiss-born American naturalist, geologist, and teacher

**Gould, Augustus Addison** 1805–66  
American conchologist

So, in the study of Nature, we may be astonished at the infinite variety of her products; we may even study some portion of her works with enthusiasm, and nevertheless

remain strangers to the spirit of the whole, ignorant of the plan on which it is based, and fail to acquire a proper conception of the varied affinities which combine beings together, so as to make of them that vast picture in which each animal, each plant, each group, each class, has its place, and from which nothing could be removed without destroying the proper meaning of the whole.

*Principles of Zoology*

Chapter First (p. 26)

Gould & Lincoln. Boston, Massachusetts, USA. 1870

**Bucke, Charles** 1781–1846

English writer

I have ever had an inclination towards the study of Nature, and found inexhaustible delight in the contemplation of her varied phenomena. Never do I behold a beautiful landscape, but it is fixed so firmly in my mind that I could write a description of it at any distance of time. The features of men I frequently forget; those of the natural world, never.

*On the Beauties, Harmonies, and Sublimities of Nature*

Preface (p. v)

Harper & Brothers Publishers. New York, New York, USA. 1841

No pleasures are so pure – and none so worthy the capacities of the human mind, as those derived from the study of Nature. And though nothing is entirely within our limited comprehension, yet, as things seen afford presumptive evidence in regard to things unseen, what more noble employment than to trace in the beauties, harmonies, and sublimities of the material universe those proofs of power, wisdom, and goodness which lead to the acknowledgment and adoration of the Supreme Architect!

*On the Beauties, Harmonies, and Sublimities of Nature*

Preface (p. ix)

Harper & Brothers Publishers. New York, New York, USA. 1841

**Chargaff, Erwin** 1905–2002

Austrian biochemist

What makes the study of nature so magnificent is its very givenness; it is because it is; it is as it is; and tolle, lege! (pick up and read!) remains its eternal admonition.

*Voices in the Labyrinth: Nature, Man and Science*

Chapter 3 (pp. 18–19)

The Seabury Press. New York, New York, USA. 1977

**Dumas, Jean Baptiste-Andre** 1800–84

French biochemist

In the study of Nature conjecture must be entirely put aside, and vague hypothesis carefully guarded against. The study of Nature begins with facts, ascends to laws, and raises itself, as far as the limits of man's intellect will permit, to the knowledge of causes, by the threefold means of observation, experiment and logical deduction. In Faraday Lectures

*Lectures Delivered Before the Chemical Society*

The First Faraday Lecture (p. 2)

The Chemical Society. London, England. 1928

**Gregory, Sir Richard Arman** 1864–1952

British science writer and journalist

The study of Nature is elevating, and its material value is of the highest, yet it is deplorably neglected with the result that only very rarely is the simplest scientific subject referred to accurately in the works of literary men.

*Discovery; or, The Spirit and Service of Science*

Chapter I (p. 13)

Macmillan & Company Ltd. London, England. 1918

**Holton, Gerald** 1922–

Research professor of physics and science history

The study of nature is a study of the artifacts that appear during an engagement between the scientist and the world in which he finds himself.

*The Roots of the Complementarity*

*Daedalus*, Number 4, Fall 1970 (p. 1019)

**Huggins, Sir William** 1824–1910

English astronomer

One of the great charms of the study of Nature lies in the circumstance that no new advance, however small, is ever final. There are no blind alleys in scientific investigation. Every new fact is the opening of a new path.

*Photographic Spectra of Stars* (p. 12)

Oxford, England. February 6, 1880

**Kant, Immanuel** 1724–1804

German philosopher

...in every study of nature there can be only so much genuine science as there is a priori knowledge, by the same token, natural philosophy will contain genuine science only to the extent in which mathematics can be applied to it.

Translated by James Ellington

*Metaphysical Foundations of Natural Science*

Preface (p. 7)

The Bobbs–Merrill Company, Inc. Indianapolis, Indiana, USA. 1970

**Thierry, Paul Henri, Baron d'Holbach** 1723–89

German-born French man of leisure

...man disdains the study of nature, to pursue phantoms, which resemble the Will with the Wisp, which at once terrifies and dazzles the benighted traveler, and which make him quit the simple road to truth, without pursuing which, he can never arrive at happiness.

Translated by M. Mirabaud

*System of Nature or, The Laws of the Moral and Physical World* (Volume 1)

Preface by the Author (p. vii)

Published by R. Benson. Philadelphia, Pennsylvania, USA. 1808

**von Humboldt, Alexander** 1769–1859

German naturalist and explorer

The higher enjoyments yielded by the study of nature depend upon the correctness and the depth of our views,

and upon the extent of the subjects that may be comprehended in a single glance.

*Cosmos* (Volume I)

Introduction (p. 18)

Henry G. Bohn. London, England. 1849

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

The study of Nature makes a man at last as remorseless as Nature.

*Seven Science Fiction Novels of H. G. Wells*

*The Island of Dr. Moreau*

Chapter the Fourteenth (p. 134)

Dover Publications, Inc. New York, New York, USA. 1934

## NATURE, SYSTEM OF

**Hutton, James** 1726–97

Scottish geologist, chemist, and naturalist

Surely, if there is in the system of nature wisdom, we may look for compensation between the destroying and repairing operations of the globe.

*Theory of the Earth: With Proofs and Illustrations* (Volume 2)

Chapter VII (p. 221)

H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

**Swift, Jonathan** 1667–1745

Irish-born English writer

He said that new systems of nature were but new fashions, which would vary in every age; and even those who pretend to demonstrate them from mathematical principles, would flourish but a short period of time, and be out of vogue when that [system of nature] was determined.

In *Great Books of the Western World* (Volume 36)

*Gulliver's Travels*

Part III, Chapter VIII (pp. 118–119)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Winchell, Alexander** 1824–91

American geologist

It has been revealed to us that the vast system of Nature is the expression of a divine thought – that the wide, blue, restless ocean is the symbol of a divine idea – the swelling prairie, the rocky cordillera, the teeming populations of land, and sea, and air, are the utterances of divine conceptions – the stirring leaf, the basking butterfly, the glistening pebble on the strand, are thoughts of the Infinite, crystallized in visible things, thrown down before us to arrest our attention – strewn over our pathway to provoke our curiosity and arouse the powers of the soul.

*Sketches of Creation*

Chapter I (pp. 15–16)

Harper & Brothers Publishers. New York, New York, USA. 1870

## NATURE, TEMPLE OF

**Jaeger, Benedict** 1789–1869

Austrian-born American entomologist

As no human eye can ever penetrate the spangled heavens that roll over us, covered with ruby and sapphire, and the thousand changing tints that dye the firmament – as no created being can ever bring into his scope of vision that illimitable space, where the glittering stars unceasingly twinkle and glow, and where, o'reaching all, the Milky Way presents the blended light of billions of shining worlds – so no human mind can ever attain perfection in the knowledge of those countless animated beings which surround man in the vast green temple of Nature.

*The Life of North American Insects*

ORDER II (p. 62)

Harper & Brothers Publishers. New York, New York, USA. 1859

## NATURE, THINK OF

**Ovrut, Burt**

Physicist

You can think of it [matter] as a violin string or a guitar string. If you pluck it in a certain way you get a certain frequency, but if you pluck it a different way you can get more frequencies on this string and in fact you have different notes. Nature is made of all the little notes, the musical notes, that are played on these super-strings.

Parallel Universes

BBC broadcast February 14, 2002

## NATURE, TREASURES OF

**Jefferies, Richard** 1848–87

English naturalist and author

...Nature flings treasures abroad, puffs them with open lips along on every breeze, piles up lavish layers of them in the free open air, packs countless numbers together in the needles of a fir-tree. Prodigality and superfluity are stamped on everything she does. The ear of wheat returns a hundredfold the grain from which it grew. The surface of the earth offers to us far more than we can consume – the grains, the seeds, the fruits, the animals, the abounding products are beyond the power of all the human race to devour. They can, too, be multiplied a thousandfold. There is no natural lack. Whenever there is lack among us it is from artificial causes, which intelligence should remove. From the littleness, and meanness, and niggardliness forced upon us by circumstances, what a relief to turn aside to the exceeding plenty of Nature! There are no bounds to it, there is no comparison to parallel it, so great is this generosity.

*The Life of the Fields*

Meadow Thoughts (p. 62)

Chatto & Windus. London, England. 1902

**Kett, Henry** 1761–1825  
English college teacher and writer

...the treasures of nature...are so rich and inexhaustible, that they may furnish employment for his greatest diligence, stimulated by the most ardent curiosity, and assisted by the most favourable opportunities.

*Elements of General Knowledge* (Volume 2)

Chapter IV (p. 89)

Printed by E. Bronson. Philadelphia, Pennsylvania, USA. 1805

## NATURE, UNDERSTANDING OF

### Ferguson, Marilyn

Real progress in understanding nature is rarely incremental. All important advances are sudden intuitions, new principles, new ways of seeing. We have not fully recognized this process of leaping ahead, however, in part because textbooks tend to tame revolutions, whether cultural or scientific. They describe the advances as if they had been logical in their day, not at all shocking.

*The Aquarian Conspiracy*

## NATURE, VARIETY OF

**Mach, Ernst** 1838–1916  
Austrian physicist and philosopher

In the infinite variety of nature many ordinary events occur; while others appear uncommon, perplexing, astonishing, or even contradictory to the ordinary run of things. As long as this is the case we do not possess a well-settled and unitary conception of nature.

*The Science of Mechanics* (5th edition)

Introduction (p. 6)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

## NATURE, VIEW OF

**Adams, George** 1750–  
English instrument maker

...our views of nature are like the map of an inland country, where you see rivers without any sources continually discharging their waters without a sea to receive them; roads that you know not whence they come, nor whither they go; mountains, forests, and plains, cut off in the middle by the marginal lines of the paper: but even of those things which we know well, there is much that surpasses the extent of our faculties.

*Lectures on Natural and Experimental Philosophy* (Volume 3)

Chapter XXXV (pp. 510–511)

Printed by R. Hindmarsh. London, England. 1794

**Maclaurin, Colin** 1838–1916  
Scottish mathematician

Our views of nature, however imperfect, serve to represent to us, in a most sensible manner, that mighty power which prevails throughout, acting with a force and efficacy that suffers no diminution from the greatest distances of space, or intervals of time; and to prove that all things are ordered by infinite wisdom and perfect goodness; scenes which should excite and animate us to correspond with the general harmony of nature.

*An Account of Sir Isaac Newton's Philosophical Discoveries*

Chapter I Section 5

London, England. 1748

## NATURE, VISIBLE

**James, William** 1842–1910  
American philosopher and psychologist

Visible nature is all plasticity and indifference – a moral multiverse...and not a moral universe. To such a harlot we owe no allegiance; with her as a whole we can establish no moral communion; and we are free in our dealing with her several parts to obey or to destroy, and to follow no law but that of prudence in coming to terms with such of her particular features as will help us to our private ends.

*The Will to Believe and Other Essays in Popular Philosophy*

Is Life Worth Living? (p. 43)

Dover Publications, Inc. New York, New York, USA. 1956

## NATURE, VOICE OF

**Thomson, Sir John Arthur** 1861–1933  
Scottish naturalist

These are the three voices of Nature. She joins hands with us; and says Struggle, Endeavor. She comes close to us, we hear her heart beating; she says Wonder, Enjoy, Revere. She whispers secrets to us, we cannot always catch her words; she says Search, Enquire. These three voices appeal to Hand and Heart and Head, to the trinity of our being.

*The System of Animate Nature: The Gifford Lectures Delivered in the University of St. Andrews in the Years 1915 and 1916* (Volume 2)

Lecture XX (p. 648)

Henry Holt & Co. New York, New York, USA. 1920

**Tyndall, John** 1820–93  
Irish-born English physicist

No human authority, however high, can maintain itself against the voice of Nature speaking through experiment. But the voice of Nature may be an uncertain voice, through the scantiness of data.

*Six Lectures on Light Delivered in America in 1872–1873*

Lecture II (p. 49)

D. Appleton & Co. New York, New York, USA. 1901

**NATURE, VOLUME OF****Hutton, W.**

No biographical data available

Every page of the volume of Nature is fraught with instruction.

*The Book of Nature Laid Open*

Chapter I (p. 1)

Joseph Milligan. Georgetown, Virginia, USA. 1822

**Rice, Harvey** 1800–91

American lawyer and newspaper publisher

Whatever we may think or believe, the volume of Nature contains nothing but truth. It is, in fact, God's manuscript, which awaits interpreters, and which, if read aright, leaves nothing to conjecture.

*Nature and Culture*

Chapter 1 (p. 8)

Lee & Shepard. Boston, Massachusetts, USA. 1875

**NATURE, WAYS OF****Mann, Charles Riborg** 1869–1942

Physicist

**Twiss, George Ransom**

No biographical data available

He who knows the ways of Nature and is able to reason most clearly about them is the one who can best control her forces.

*Physics*

Part I, Chapter I (p. 17)

Scott Foresman & Co. New York, New York, USA. 1910

**NATURE, WILD THINGS OF****Cott, Hugh Bamford** 1900–87

British zoologist

...fortunate are those who have learned to see, in the wild things of nature, something to be loved, something to be wondered at, something to be revered, for they will have found the key to a never-failing source of recreation and refreshment.

*Adaptive Colouration in Animals*

Preface (p. xvi)

Methuen. London, England. 1957

**NATURE, WISDOM OF****Copernicus, Nicolaus** 1473–1543

Polish astronomer

But we should rather follow the wisdom of nature, which, as it takes very great care not to have produced anything

superfluous or useless, often prefers to endow one thing with many effects.

In *Great Books of the Western World* (Volume 16)

*On the Revolutions of the Heavenly Spheres*

Book One, Chapter 10 (p. 526)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**NATURE, WONDERS OF****Darwin, Charles Robert** 1809–82

English naturalist

Truly the schemes and wonders of Nature are illimitable.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 1)

Letter to C. Lyell, September 14, 1849 (p. 345)

D. Appleton & Company. New York, New York, USA. 1896

**Duke of Argyll (George Douglas****Campbell)** 1823–1900

English statesman and writer on science, religion, and politics

Among the many wonders of Nature there is nothing more wonderful than this the adaptability of the one Vertebrate Type to the infinite variety of Life to which it serves as an organ and a home.

*The Reign of Law* (4th American edition)

Chapter IV (p. 206)

George Routledge & Sons. New York, New York, USA. 1873

**Kingsley, Charles** 1819–75

English clergyman and writer

I have so long enjoyed the wonders of nature; never, I can honestly say, alone; because when man was not with me, I had companions in every bee, and flower, and pebble; and never idle, because I could not pass a swamp, or a tuft of heather, without finding in it a fairy tale of which I could but decipher here and there a line or two, and yet found them more interesting than all the books, save one, which were ever written upon earth.

*Scientific Lectures and Essays*

How to Study Natural History (p. 310)

Macmillan & Company Ltd. London, England. 1893

**Wallace, Alfred Russel** 1820–1913

English humanist, naturalist, and geographer

The wonders of Nature have been the delight and solace of my life. From the day when I first saw a bee-orchis in ignorant astonishment, to my first view of the grand forests of the Amazon; thence to the Malay Archipelago, where every fresh island with its marvellous novelties and beauties was an additional delight – Nature has afforded me an ever-increasing rapture, and the attempt to solve some of her myriad problems an ever-growing sense of mystery and awe.

Quoted in Richard Arman Gregory

*Discovery, Or, The Spirit and Service of Science*

Chapter I (p. 18)

Macmillan & Co Ltd. London, England. 1916

**NATURE, WORKS OF**

**Atterbury, Francis** 1662–1732  
English prelate

...the works of nature will bear a thousand views and reviews: the more frequently and narrowly we look into them, the more occasion we shall have to admire their beauty.

*Sermons and Discourses on Several Subjects and Occasions* (Volume 2)  
Sermon II (p. 25)  
Printed for John Cuthell. London, England. 1820

**Darwin, Charles Robert** 1809–82  
English naturalist

What a book a devil's chaplain might write on the clumsy, wasteful, blundering, low, and horribly cruel works of nature.

*More Letters of Charles Darwin*  
Letter To J.D. Hooker, 13 July, 1856 (p. 94)  
D. Appleton and Company. New York, New York, USA. 1903

**Kett, Henry** 1761–1825  
English college teacher and writer

The study of the works of nature is in itself capable of affording the most refined pleasure, and the most edifying instruction. All the objects with which we are surrounded, the smallest as well as the greatest, teach us some useful lesson. All of them speak a language directed to man, and to man alone.

*Elements of General Knowledge* (Volume 2)  
Chapter IV (p. 89)  
Printed by E. Bronson. Philadelphia, Pennsylvania, USA. 1805

**NATURE, WORLD OF**

**Oppenheimer, James Robert** 1904–67  
American theoretical physicist

Despite all the richness of what men have learned about the world of nature, of matter and of space, of change and of life, we carry with us today an image of the giant machine as a sign of what the objective world is really like.

*Science and the Common Understanding*  
Chapter I (pp. 14–15)  
Simon & Schuster. New York, New York, USA. 1954

**NATURE, WORSHIP OF**

**O'Rourke, P. J.** 1947–  
Political satirist

Worship of nature may be ancient, but seeing nature as cuddlesome, hug-a-bear and too cute for words is strictly a modern fashion.

*Parliament of Whores: A Lone Humorist Attempts to Explain the Entire U.S. Government*  
Dirt of the Earth (p. 196)  
Vintage Books. New York, New York, USA. 1992

**NATURE AND ART**

**Beecher, Henry Ward** 1813–87  
American Congregational preacher and orator

It is the end of art to inoculate men with the love of nature. But those who have a passion for nature in the natural way, need no pictures nor galleries. Spring is their designer, and the whole year their artist.

*Star Papers*  
Experiences of Nature, I (p. 94)  
J.B. Ford & Co. New York, New York, USA. 1873

**Malan, Solomon Caesar** 1812–94  
British divine and orientalist

Nature is Truth; and Art is but a poor attempt at an imitation of it.

*Aphorisms on Drawing*  
X (p. 17)  
Longman, Brown, Green, Longmans & Roberts. London, England. 1856

**Pascal, Blaise** 1623–62  
French mathematician and physicist

Nature has made all her truths independent of one another. Our art makes one dependent on the other. But this is hot natural. Each keeps its own place.

Translated by William Finlayson Trotter  
*Thoughts*  
Number 21 (p. 14)  
P.F. Collier & Son. New York, New York, USA. 1910

**Ruskin, John** 1819–1900  
English writer, art critic, and social reformer

Nature is always mysterious and secret in her use of means; and art is always likest her when it is most inexplicable.

*Modern Painters* (Volume 1)  
Section II, Chapter II (p. 36)  
Smith, Elder & Co. London, England. 1873

**Wilde, Oscar** 1854–1900  
Irish wit, poet, and dramatist

Nature is no great mother who has borne us. She is our creation. It is our brain that she quickens to life. Things are because we see them, and what we see, and how we see it, depends on the Arts that have influenced us.

*Intentions*  
The Decay of Lying (p. 41)  
Brentano's. New York, New York, USA. 1905

## NATURE AND POETRY

### Apollinaire, Guillaume (Wilhelm Apollinaris de Kostrowitzki) 1880–1918

Polish-Italian avant-garde poet

Without poets, without artists, men would soon weary of nature's monotony.

Translated by Lionel Abel

*The Cubist Painters*

On Painting (p. 13)

Wittenborn and Co. New York, New York, USA. 1944

### Munroe, J.

No biographical data available

We cannot enjoy to the full the beauty of the rose for thinking of its cellular tissue, and the tender hues of sunset lose their poetic spell because they remind us of the refraction of light. And yet, as we have said, the scientific and the poetical views of Nature ought not, in a well-regulated mind, to war with each other.

Science and the Sense of Beauty

*The Journal of Science, and Annals of Astronomy, Biology, Geology,*

Volume IV, (Third series), April, 1882 (pp. 204–205)

## NATURE AND RELIGION

### von Goethe, Johann Wolfgang 1749–1832

German poet, novelist, playwright, and natural philosopher

Assuredly there is no more lovely worship of God than that for which no image is required, but which springs up in our breast spontaneously, when nature speaks to the soul, and the soul speaks to nature face to face.

In John Stuart Blackie

*The Wisdom of Goethe*

Nature – Natural History (p. 187)

William Blackwood & Sons. Edinburgh, Scotland. 1883

## NATURE IS

### Abbey, Edward 1927–89

American environmentalist and nature writer

Nature is indifferent to our love, but never unfaithful.

*A Voice Crying in the Wilderness: Notes from a Secret Journal*

Chapter 9 (p. 86)

St. Martin's Press. New York, New York, USA. 1989

Nature, like Maimonides said, is mainly a good place to throw beer cans on Sunday afternoons.

*A Voice Crying in the Wilderness: Notes from a Secret Journal*

Chapter 9 (p. 83)

St. Martin's Press. New York, New York, USA. 1989

### Adams, Abby 1939–

American astronaut and solar physicist

Nature is what wins in the end.

*The Gardener's Gripe Book*

What Is a Garden Anyway? (p. 10)

Workman Publishing. New York, New York, USA. 1995

### Alcott, Amos Bronson 1799–1888

American educational and social reformer

Nature is the armory of genius. Cities serve it poorly, books and colleges at second hand; the eye craves the spectacle of the horizon; of mountain, ocean, river and plain, the clouds and star; actual contact with the elements, sympathy with the seasons as they rise and roll.

*The Journals of Bronson Alcott*

January (Undated.) (p. 187)

Little, Brown & Co. Boston, Massachusetts, USA. 1938

Nature is thought immersed in matter ...

Pantheon

*The Journal of Speculative Philosophy*, Volume II, Number 1, 1868 (p. 47)

### Armstrong, L. O.

No biographical data available

Nature is a good mother, but she sternly resists any interference with her prerogatives.

*Report of the Fifth Annual Meeting of the Canadian Forestry Association*

The Lovers of Out-Of-Doors Life and the Forests (p. 113)

Government Printing Office. Ottawa, Canada. 1904

### Atherton, Gertrude 1857–1948

American novelist

Nature is a wicked old matchmaker.

*Senator North*

Book II, VII (p. 174)

John Lane: The Bodley Head. New York, New York, USA. 1900

### Besant, Anne 1847–1933

English social reformer

Nature is always lavish of her gifts even to the most insignificant forms. The butterflies and moths are richly dowered in this respect.

The Clothes' Moth

*Our Corner*, Volume 4, Number 1, July, 1884 (p. 40)

### Beston, Henry 1888–1968

American writer

Nature is a part of our humanity, and without some awareness and experience of that divine mystery, man ceases to be man.

*The Outermost House*

Forward (p. ix)

Rinehart & Company. New York, New York, USA. 1928

### Borland, Hal 1900–78

American writer

There are some things, but not too many, toward which the countryman knows he must be properly respectful if he would avoid pain, sickness, and injury. Nature is neither punitive nor solicitous, but she has thorns and fangs as well as bowers and grassy banks.

*Beyond Your Doorstep: A Handbook to the Country*

Chapter 13 (p. 303)

Alfred A. Knopf. New York, New York, USA. 1962

Nature is an infinitely complex series of facts; it is not an object lesson, and it is not a ready-made sermon on conduct or morality.

*The Enduring Pattern*

A Place to Live: Time (p. 20)

Simon & Schuster. New York, New York, USA. 1959

**Bronowski, Jacob** 1908–74

Polish-born English mathematician and polymath

Nature is a network of happenings that do not unroll like a red carpet into time, but are intertwined between every part of the world; and we are among those parts. In this nexus, we cannot reach certainty because it is not there to be reached; it goes with the wrong model, and the certain answers ironically are the wrong answers. Certainty is a demand that is made by philosophers who contemplate the world from outside; and scientific knowledge is knowledge for action, not contemplation. There is no God's eye view of nature, in relativity, or in any science: only a man's eye view.

*The Identity of Man*

The Machinery of Nature, Section 6 (p. 38)

Doubleday & Company, Inc. Garden City, New York, USA. 1972

**Bryan, J. Ingram**

No biographical data available

Nature is not static but dynamic; she is not now what she will be, for she moves toward a goal.

*The Interpretation of Nature in English Poetry*

Chapter I (p. 7)

Kaitakusha. Tokyo, Japan. 1932

**Burroughs, John** 1837–1921

American naturalist and writer

Nature is not benevolent; Nature is just, gives pound for pound, measure for measure, makes no exceptions, never tempers her decrees with mercy, or winks at any infringement of her laws.

*Harvest of a Quiet Eye: The Natural World of John Burroughs*

The Gospel of Nature, 5 (p. 149)

Tamarack Press. Madison, Wisconsin, USA. 1976

**Carlyle, Thomas** 1795–1881

English historian and essayist

Nature, like the Sphinx, is of womanly celestial loveliness and tenderness; the face and bosom of a goddess, but ending in claws and the body of a lioness.... Nature, Universe, Destiny, Existence, howsoever we name this grand unnamable Fact in the midst of which we live and struggle, is as a heavenly bride and conquest to the wise and brave, to them who can discern her behests and do them; a destroying fiend to them who cannot.

*Past and Present*

Chapter II (p. 7)

Chapman & Hall. London, England. 1843

**Carus, Carl Gustav** 1789–1869

German physiologist and painter

[Nature is] that which is ever growing and ever unfolding itself in new forms.

Quoted in Alexander von Humboldt

*Cosmos* (Volume I)

Introduction (p. 21)

Henry G. Bohn. London, England. 1849

**Dillard, Annie** 1945–

American poet, essayist, novelist, and writing teacher

Unfortunately, nature is very much a now-you-see-it, now-you-don't affair. A fish flashes, then dissolves in the water before my eyes like so much salt. Deer apparently ascend bodily into heaven; the brightest oriole fades into leaves.

*Pilgrim at Tinker Creek*

Chapter 2 (p. 16)

Harper's Magazine Press. New York, New York, USA. 1974

**Douglas, Andrew Ellicott** 1867–1962

American astronomer

Nature is a book of many pages and each page tells a fascinating story to him who learns her language. Our fertile valleys and craggy mountains recite an epic poem of geologic conflicts. The starry sky reveals gigantic suns and space and time without end.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1922*

Some Aspects of the Use of the Annual Rings of Trees in Climatic Study (p. 223)

Government Printing Office. Washington, D.C. 1924

Nature is, above all, profligate. Don't believe them when they tell you how economical and thrifty nature is, whose leaves return to the soil. Wouldn't it be cheaper to leave them on the tree in the first place?

*Pilgrim at Tinker Creek*

Chapter 4, II (p. 65)

Harper's Magazine Press. New York, New York, USA. 1974

The general rule in nature is that live things are soft within and rigid without. We vertebrates are living dangerously...like so many peeled trees.

*Pilgrim at Tinker Creek*

Chapter 6, II (p. 91)

Harper's Magazine Press. New York, New York, USA. 1974

**Draper, John William** 1811–82

American scientist, philosopher, and historian

As a cataract shows from year to year an invariable shape, though the water composing it is perpetually changing, so the aspect of Nature is nothing more than a flow of matter presenting an impermanent form. The universe considered as a whole is unchangeable. Nothing is eternal but space, atoms, force. The forms of

Nature that we see are essentially transitory, they must all pass away.

*History of the Conflict between Religion and Science*

Chapter I (p. 24)

D. Appleton & Company. New York, New York, USA. 1898

**Durell, Clement V.** 1882–1968

English mathematician

Nature is a conjurer for supermen. Generations of scientists have attempted to penetrate her secrets. Bit by bit the disguise is being torn away, but each new discovery seems only to open out fresh avenues demanding further exploration. Nature is a true woman, who will have the last word.

*Readable Relativity*

Chapter I (p. 9)

Harper & Brothers. New York, New York, USA. 1960

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

Nature is a rag-merchant, who works up every shred and ort and end into new creations; like a good chemist, whom I found, the other day, in his laboratory, converting his old shirts into pure white sugar.

*Ralph Waldo Emerson: Essays and Lectures*

*The Conduct of Life*

Considerations by the Way (p. 1088)

The Library of America. New York, New York, USA. 1983

Nature is an endless combination and repetition of a very few laws. She hums the old well-known air through innumerable variations.

*Ralph Waldo Emerson: Essays and Lectures*

*Essays: First Series*

History (p. 243)

The Library of America. New York, New York, USA. 1983

Nature is no spendthrift, but takes the shortest way to her ends.

*Ralph Waldo Emerson: Essays and Lectures*

*The Conduct of Life*

Fate (p. 961)

The Library of America. New York, New York, USA. 1983

Nature is a mutable cloud which is always and never the same.

*Essays*

History (p. 18)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1888

Nothing bizarre, nothing whimsical will endure. Nature is ever interfering with Art. You cannot build your house or pagoda as you will but as you must. Gravity, Wind, sun, rain, the size of men & animals, & such other aliens have more to say than the architect. Beneath the almighty necessity therefore I regard what is artificial in man's life & works as petty & insignificant by the side of what is natural. Every violation, every suicide, every miracle, every willfulness however large it may show near us,

melts quickly into the All, & at a distance is not seen. The outline is as smooth as the curve of the moon.... A writer must have l'abandon, he must be content to stand aside & let truth & beauty speak for him, or he cannot expect to be heard far.

*Journals of Ralph Waldo Emerson*

May 28, 1836 (p. 56)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1910

Nature is full of a sublime family likeness throughout her works, and delights in startling us with resemblances in the most unexpected quarters.

*Essays: First Series*

Essay I (p. 20)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1884

Nature is a frugal mother, and never gives without measure.

In James Elliot Cabot

*A Memoir of Ralph Waldo Emerson (Volume 2)*

Appendix F (p. 779)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1887

To the dull mind all nature is leaden. To the illuminated mind the whole world burns and sparkles with light.

*Journals of Ralph Waldo Emerson: 1824–32*

May 20, 1831 (p. 381)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1909

**Flammarion, Camille** 1842–1925

French astronomer and writer

Nature is so varied in its modes of action, so multiple in the manifestations of its power, that we have no right to set any limits to its capabilities.

Translated by J. Ellard Gore

*Popular Astronomy: A General Description of the Heavens*

Book II, Chapter V (p. 134)

Chatto & Windus. London, England. 1894

Nature is immense in the little as in the great, or, to speak more correctly, for here there is neither little nor great.

*Popular Astronomy: A General Description of the Heavens*

Book III, Chapter II (p. 239)

Chatto & Windus. London, England. 1894

**Florio, John** 1553?–1625

English teacher, writer, and translator

Nature is the right law.

*Florio's Firste Fruites* (p. 88)

Taihoku Imperial University. Formosa, Japan. 1936

**Foster, Sir Michael** 1836–1907

English physiologist and educator

Nature is ever making signs to us, she is ever whispering to us the beginnings of her secrets; the scientific man must be ever on the watch, ready at once to lay hold of Nature's hint, however small, to listen to her whisper, however low.

In J.A. Thomson

*Introduction to Science*

Chapter I (p. 16)

Williams & Norgate Ltd. London, England. 1916

**Fuller, R. Buckminster** 1895–1983  
American engineer and architect

Nature is trying very hard to make us succeed, but nature does not depend on us. We are not the only experiment.  
*Minneapolis Tribune*, 30 April, 1978

**Gregory, Sir Richard Arman** 1864–1952  
British science writer and journalist

[Nature] is a Katharine to be tamed by the Petruchil of Science rather than a Juliet to be worshiped by a love-sick Romeo.

*Discovery, Or, The Spirit and Service of Science*  
Chapter I (p. 5)  
Macmillan & Co Ltd. London, England. 1918

**Harvey, William** 1578–1657  
English physician

Nature...is the best and most faithful interpreter of her own secrets; and what she presents either more briefly or obscurely in one department, that she explains more fully and clearly in another.

In *Great Books of the Western World* (Volume 28)  
*Anatomical Exercises on the Generation of Animals*  
Dedication (p. 329)  
Encyclopedia Britannica, Inc. Chicago, Illinois, USA. 1952

Nature is herself to be addressed; the paths she shows us are to be boldly trodden; for thus, and whilst we consult our proper senses, from inferior advancing to superior levels, shall we penetrate at length into the heart of her mystery.

*The Works of William Harvey*  
Introduction (p. 153)  
Printed for the Sydenham Society. London, England. 1847

**Hastings, Horace Lorenzo** 1831–99  
No biographical data available

Nature is but the garment of Deity. Reason untwists a fringe, puzzles over a pattern, and investigates the frayed border of this royal robe, and slowly discovers some marks of wisdom and design in its wondrous texture; but faith looks up and adores the God who wove the whole magnificent fabric, spangled with the starry splendors of the skies, embroidered with auroras and rainbows and emeralds, and adorned with gems that gleam in the silent depths, unseen by human eyes.

*Atheism & Arithmetic: Or, Mathematical Law in Nature*  
Chapter I (p. 17)  
H.L. Hastings. Boston, Massachusetts, USA. 1889

**Hawkins, Michael** 1942–  
English astronomer

Nature is mindless, and is in itself essentially incoherent and chaotic.

*Hunting Down the Universe*  
Chapter I (p. 5)  
Addison – Wesley. Reading, Massachusetts, USA. 1997

**Hazlitt, William Carew** 1834–1913  
English bibliographer

Nature is stronger than reason: for nature is, after all, the text, reason but the comment.

In W. Carew Hazlitt (ed.)  
*The Round Table; Northcotes Conversations; Characteristics*  
Characteristics, CXXXV (p. 476)  
George Bell & Sons. London, England. 1884

**Hugo, Victor** 1802–85  
French author, lyric poet, and dramatist

Nature eludes calculation. Number is a grim pullulation. Nature is the thing that cannot be numbered.

Because of nature's unity it has been concluded that she is simple. An error.

Translated by Isabel F. Hapgood  
*The Toilers of the Sea*  
Part II, Book Third, Chapter III (p. 405)  
The Heritage Press. New York, New York, USA. 1961

**Hutton, James** 1726–97  
Scottish geologist, chemist, and naturalist

Nature is considered as absolutely true; no error or contradiction can be found in nature. For, if such contradiction were truly found, if the stone, for example, which fell today were to rise again tomorrow, there would be an end of natural philosophy, our principles would fail, and we would no longer investigate the rules of nature from our observations.

*Theory of the Earth: With Proofs and Illustrations* (Volume 1)  
Chapter III (p. 297)  
H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

**Huxley, Thomas Henry** 1825–95  
English biologist

Nature is never in a hurry, and seems to have had always before her eyes the adage, "keep a thing long enough and you will find a use for it.

*Collected Essays* (Volume 8)  
*Discourses, Biological and Geological*  
On the Formation of Coal (p. 159)  
Macmillan & Company Ltd. London, England. 1904

**Jevons, William Stanley** 1835–82  
English economist and logician

Nature is a spectacle continually exhibited to our senses, in which phenomena are mingled in combinations of endless variety and novelty.

*The Principles of Science: A Treatise on Logic and Scientific Method*  
Book I, Chapter I (p. 1)  
Macmillan & Company Ltd. London, England. 1892

**Kolb, Edward W. (Rocky)** 1951–  
American cosmologist

Nature, as read by patient observation and experiment, is the ultimate philosopher.

*Blind Watchers of the Sky*

Chapter Three (p. 59)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

**Laplace, Pierre Simon** 1749–1827

French mathematician, astronomer, and physicist

Nature is so various in her productions and phenomena, that it is extremely difficult to ascertain their causes, hence it is requisite for a great number of men to unite their intellect and exertions in order to comprehend and develop her laws.

*System of the World* (Volume 2)

Book V, Chapter IV (p. 286)

Longman, Rees, Orme, Brown & Green. Dublin, Ireland. 1830

**Lawrence, Louise de Kiriline** 1894–1992

Canadian naturalist, author, and nurse

Nature is a deep reality and whether we understand it or not it is true and elemental.

*The Lovely and the Wild*

Chapter Three (p. 33)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1968

**Leclerc, Georges-Louis, Comte de Buffon** 1707–88

French naturalist

Nature is that system of laws established by the Creator for regulating the existence of bodies, and the succession of beings. Nature is not a body; for this body would comprehend everything. Either is it a being; for this being would necessarily be God. But nature may be considered as an immense living power, which animates the universe, and which, in subordination to the first and supreme Being, began to act by his command, and its action is still continued by his concurrence or consent.

*Natural History, General and Particular* (Volume 6)

Of Nature, First View (p. 249)

T. Caldwell and W. Davies. London, England. 1812

**Lewes, George Henry** 1817–78

English philosopher

Nature is economic as well as prodigal of space. She fills the illimitable heavens with planetary and starry grandeurs, and the tiny atoms moving over the crust of earth she makes the homes of the infinitely little. Far as the mightiest telescope can reach, it detects worlds in clusters, like pebbles on the shore of infinitude; deep as the microscope can penetrate, it detects life within life, generation within generation, as if the very universe itself were not vast enough for the energies of life.

*Studies in Animal Life*

Chapter I (pp. 26–27)

Smith, Elder & Co. London, England. 1862

**Long, J. M.**

No biographical data available

To the savage, nature is a Sibyl whose scattered leaves have no meaning; to the philosopher who carefully collects her leaves and places them in their true connection, she reveals the mysteries of ancient time.

*The Synthetic Philosophy an Organon of the Sciences*

*The Kansas City Review of Science and Industry*, Volume 4, Number 11, March, 1881 (p. 653)

**Maeterlinck, Maurice** 1862–1949

Belgian playwright and poet

Scientifically, Nature is a riddle without a definite solution to satisfy man's curiosity.

Translated by Maurice Maeterlinck

In Jean-Henri Fabre

*The Life of the Spider*

Preface (p. 34)

Dodd, Mead & Co. New York, New York, USA. 1913

**Melville, Herman** 1819–91

American novelist

...nature is an immaculate virgin, forever standing unrobed before us.

*Typee, Omoo, Mardi*

Mardi

Chapter 137 (p. 1094)

The Library of America. New York, New York, USA. 1982

**Meredith, Owen (Edward Robert Bulwer-Lytton, First Earl Lytton)** 1831–91

English statesman and poet

Nature is the great agent of the external universe...

*The Last Days of Pompeii*

Book One, VIII

George Routledge & Sons, Ltd. London, England. 1900

**Merezhkovsky, Dmitry Sergeyeveich** 1865–1941

Russian novelist and critic

The Laws of nature, which are outside man's will, outside good and evil, are the laws which guide the life of every society.

*The Romance of Leonardo da Vinci: The Forerunner*

Chapter XII (p. 328)

G.P. Putnam's Sons. New York, New York, USA. 1903

**Mill, John Stuart** 1806–73

English political philosopher and economist

To account for a law of nature means, and can mean, no more than to assign other laws more general, together with collocations, which laws and collocations being supposed, the partial law follows without any additional supposition.

*A System of Logic, Ratiocinative and Inductive*

Chapter XII (p. 277)

Harper & Brothers Publishers. New York, New York, USA. 1867

**Miller, Hugh** 1802–56  
Scottish geologist and theologian

It cannot be too extensively known, that nature is vast and knowledge limited; and that no individual, however humble in place or acquirement, need despair of adding to the general fund.

*The Old Red Sandstone*

Chapter I (p. 14)

John B. Alden, Publisher. New York, New York, USA. 1892

Nature is a vast tablet, inscribed with signs, each of which has its own significancy, and becomes poetry in the mind when read; and geology is simply the key by which myriads of these signs, hitherto undecipherable, can be unlocked and perused, and thus a new province added to the poetical domain.

*Popular Geology*

Lecture Third (p. 131)

Gould & Lincoln. Boston, Massachusetts, USA. 1860

**Muir, John** 1838–1914  
American naturalist

Nature is a good mother, and sees well to the clothing of her many bairns – birds with smoothly imbricated feathers, beetles with shining jackets, and bears with shaggy furs.

*Steep Trails*

Chapter I (p. 5)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1918

**Newcomb, Simon** 1835–1909  
Canadian-American astronomer

We cannot set any limit either to the discovery of new laws of nature or to the ingenious combination of devices to attain results which now look impossible.

*Side-Lights on Astronomy and Kindred Fields of Popular Science*

Chapter XII (p. 182)

Harper & Brothers Publishers. New York, New York, USA. 1906

**Newton, Sir Isaac** 1642–1727  
English physicist and mathematician

For Nature is very consonant and conformable to herself.

In Eugene Hecht

*Optics*

Book III, Part 1, Question 31 (p. 531)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Robinson, Henry Peach** 1830–1901  
English pictorialist photographer

Nature is always wise, but has no mercy.

*The Elements of a Pictorial Photograph*

Chapter XX (p. 155)

Memorial Hall. London, England. 1896

**Roe, Edward Payson** 1837–88  
American author, horticulturalist, and clergyman

Nature is a good mother, after all, in our latitude. She does not coddle and over-indulge her children, but rewards their love abundantly, invigorates them if they dwell in her presence, and develops mind and muscle, heart and soul, if they obey her laws and seek to know her well.

*Nature's Serial Story*

Preface (p. viii)

Harper & Brothers Publishers. New York, New York, USA. 1885

**Root-Bernstein, Robert Scott**

Nature is always right, scientists rarely are.

*Discovering*

Day Six (p. 341)

Harvard University Press. Cambridge, Massachusetts, USA. 1989

**Ruskin, John** 1819–1900  
English writer, art critic, and social reformer

Though nature is constantly beautiful, she does not exhibit her highest powers of beauty constantly, for then they would satiate us and pall upon our senses. It is necessary to their appreciation that they should be rarely shown. Her finest touches are things which must be watched for; her most perfect passages of beauty are the most evanescent.

*Modern Painters* (Volume 1)

Part II, Section I, Chapter IV (p. 65)

John Wiley & Sons. New York, New York, USA. 1888

...nature is never distinct and never vacant, she is always mysterious, but always abundant; you always see something, but you never see all.

*Modern Painters* (Volume 1)

Section II, Chapter V (p. 193)

John Wiley & Sons. New York, New York, USA. 1888

**Sears, Paul Bigelow** 1891–1990  
American plant ecologist and conservationist

Nature is not to be conquered save on her own terms. She is not conciliated by cleverness or industry in devising means to defeat the operation of one of her laws through the workings of another.

*Deserts on the March*

Chapter I (p. 3)

University of Oklahoma Press. Norman, Oklahoma, USA. 1935

**Stedman, Edmund Clarence** 1833–1908  
American poet, critic, and essayist

Nature is strong and rank, but not externally so. She, too, has her sweet and sacred sophistries, and the delight of Art is to heighten her beguilement, and, far from making her ranker than she is, to portray what she might be in ideal combinations. Nature, I say, covers her slime, her

muck, her ruins, with garments that to us are beautiful.  
She conceals the skeleton, the frame-work, the intestinal  
thick of life, and makes fair the outside of things.

*Poets of America*

Chapter X (p. 368)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1885

**Sterne, Laurence** 1713–68

English novelist and humorist

Nature is shy, and hates to act before spectators.

*A Sentimental Journey through France and Italy* (Volume 1)

The Act of Charity, Paris (p. 128)

London, England. 1780

**Stevenson, Adlai E.** 1900–65

American political leader and diplomat

Nature is neutral. Man has wrested from nature the power  
to make the world a desert or to make the deserts bloom.

*High Fidelity Record Annual* 1955

Speech (p. 338)

30 April, 1946, House of Commons

J. B. Lippincott & Company. Philadelphia, Pennsylvania, USA. 1956

Nature is indifferent to the survival of the human species,  
including Americans.

*Adlai's Almanac: The Wit and Wisdom of Stevenson of Illinois* (p. 27)

H. Schuman. New York, New York, USA. 1952

**Stewart, John**

No biographical data available

Nature is the great integer of being, or matter and motion,  
without beginning and without end.

*The Moral State of Nations*

The Religion of Nature (p. 75)

Granville. Middletown, New Jersey, USA. 1837

**Teale, Edwin Way** 1899–1980

American naturalist

Nature is shy and noncommittal in a crowd. To learn her  
secrets, visit her alone or with a single friend, at most.

*Circle of the Seasons*

May 4 (p. 85)

Dodd, Mead & Company. New York, New York, USA. 1953

**Thomson, Sir Joseph John** 1856–1949

English physicist

Nature is far more wonderful and unconventional than  
anything we can evolve from our inner consciousness.  
The most far-reaching generalizations which may influ-  
ence philosophy as well as revolutionize physics, may be  
suggested, nay, forced on the mind by the discovery of  
some trivial phenomenon.

*The Atomic Theory* (p. 4)

Clarendon Press. 1914

**Thurlow, Lord Edward, First Baron**

**Thurlow** 1731–1806

English jurist and statesman

Nature is always wise in every part.

*Select Poems*

The Harvest Moon

Chadwyck-Healey. Cambridge, England. 1992

**Turgenev, Ivan** 1818–83

Russian novelist and dramatist

Nature is no temple, but a workshop, and man is the  
worker therein.

Translated by Bernard Guilbert Guerney

*Fathers and Sons*

Chapter 9 (p. 58)

The Modern Library. New York, New York, USA. 1961

**von Humboldt, Alexander** 1769–1859

German naturalist and explorer

Nature is a free domain ; and the profound conceptions  
and enjoyments she awakens within us can only be viv-  
idly delineated by thought clothed in exalted forms of  
speech, worthy of bearing witness to the majesty and  
greatness of the creation.

Translated by E. C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume I)

Introduction (p. 1)

George Bell & Sons. London, England. 1901

**von Schelling, Friedrich Wilhelm Joseph** 1775–1854

German philosopher

...nature is always lavish, even prodigal ...

Translated by John Oxenford

*Conversations of Goethe With Eckermann and Soret*

Tues., Oct 7 (p. 331)

George Bell & Sons. London, England. 1883

**Warner, Charles Dudley** 1829–1900

American editor and author

Nature is, in fact, a suggester of uneasiness, a promoter of  
pilgrimages and of excursions of the fancy which never  
come to any satisfactory haven.

*Backlog Studies*

Ninth Study, Section II (p. 203)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1892

**Wilde, Oscar** 1854–1900

Irish wit, poet, and dramatist

And then Nature is so indifferent, so unappreciative.  
Whenever I am walking in the park here, I always feel  
that I am no more to her than the cattle that browse on the  
slope, or the burdock that blooms in the ditch.

*The Works of Oscar Wilde* (Volume 10)

*Intentions*

The Decay of Lying

AMS Press. New York, New York, USA. 1909

Nature is so uncomfortable. Grass is hard and lumpy and damp, and full of dreadful insects.

*The Works of Oscar Wilde* (Volume 10)

*Intentions*

The Decay of Lying

AMS Press. New York, New York, USA. 1909

### Wilson, David Scofield

No biographical data available

Nature is present to naturalists the way God is to saints or the past is to humanists – not simply as a matter of fact but as an insistent and live reality.

*In the Presence of Nature*

Chapter I (p. 1)

University of Massachusetts Press. Amherst. 1978

## NATURE STUDY

### Bailey, Liberty Hyde 1858–1954

American horticulturist and botanist

Nature-study, as a process, is seeing the things that one looks at, and the drawing of proper conclusions from what one sees. Its purpose is to educate the child in terms of his environment, to the end that his life may be fuller and richer. Nature-study is not the study of a science, as of botany, entomology, geology, and the like. That is, it takes the things at hand and endeavors to understand them, without reference primarily to the systematic order or relationships of the objects.

*Cornell Nature-study Leaflets*

Leaflet I (p. 11)

J.B. Lyon Co. Albany, New York, USA. 1904

Real nature-study cannot pass away. We are children of nature, and we have never appreciated the fact so much as we do now. But the more closely we come into touch with nature, the less do we proclaim the fact abroad. We may hear less about it, but that will be because we are living nearer to it and have ceased to feel the necessity of advertising it.

*Cornell Nature-study Leaflets*

Leaflet I (p. 13)

J.B. Lyon Co. Albany, New York, USA. 1904

### Hodge, Clifton Fremont

American biologist

Nature study is learning those things in nature that are best worth knowing, to the end of doing those things that make life most worth the living.

*Nature Study and Life* (p. xvi)

Ginn & Co. Boston, Massachusetts, USA. 1902

### Scott, Geoffrey 1884–1929

Architect, biographer, and architectural historian

Nature is strange, fantastic, unexpected, terrible. Like the past, Nature is remote. Indifferent to human preoccupa-

tions and disowning human agency, Nature possesses all the more forcibly and imaginative appeal.

*The Architecture of Humanism: A Study in the History of Taste*

Chapter III (p. 66)

Constable & Co. London, England. 1924

### von Humboldt, Alexander 1769–1859

German naturalist and explorer

...nature is the domain of liberty; and to give a lively picture of those ideas and those delights which a true and profound feeling in her contemplation inspires, it is needful that thought should clothe itself freely and without constraint in such forms and with such elevation of language, as may be least unworthy of the grandeur and majesty of creation.

*Cosmos: A Sketch of a Physical Description of the Universe*

Introduction (pp. 3–4)

Longman, Brown, Green & Longmans. London, England. 1849

Nature is a free domain, and the profound conceptions and enjoyments she awakens within us can only be vividly delineated by thought clothed in exalted forms of speech, worthy of bearing witness to the majesty and greatness of the creation.

Translated by E. C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)

Introduction (p. 23)

Harper & Brothers Publishers. New York, New York, USA. 1858

## NAVIGATION

### London, Jack 1876–1916

American author

...with the sextant he made obeisance to the sun-god, he consulted ancient tomes and tables of magic characters, muttered prayers in a strange tongue that sounded like Indexerrorparallaxrefraction, made cabalistic signs on paper, added and carried one, and then, on a piece of holy script called the Grail – I mean, the Chart – he placed his finger on a certain space conspicuous for its blankness and said, “Here we are.” When we looked at the blank space and asked, “And where is that?” he answered in the cipher-code of the higher priesthood, “31 -15 - 47 north, 133-5 - 30 west.” And we said, “Oh,” and felt mighty small.

*The Cruise of the Snark*

Chapter IV (p. 51)

The Macmillan Co. New York, New York, USA. 1919

The Snark sailed *Snark* sailed from Fiji on Saturday, June 6, and the next day, Sunday, on the wide ocean, out of sight of land, I proceeded to endeavor to find out my position by a chronometer sight for longitude and by a meridian sight for latitude. The chronometer sight was taken in the morning, when the sun was some 21 degrees above the horizon. I looked in the Nautical Almanac and

found that on that very day, June 7, the sun was behind time 1 minute and 26 seconds, and that it was catching up at a rate of 14/67 seconds per hour. The chronometer said that at the precise moment of taking the sun's altitude it was 25 minutes after 8:00 in Greenwich. From this date it would seem a schoolboy's task to correct the Equation of Time. Unfortunately I was not a schoolboy.

*The Cruise of the Snark*

Chapter XIV (p. 245)

The Macmillan Co. New York, New York, USA. 1919

**Markham, Beryl** 1902–86

British-born Kenyan horse trainer and adventurer

One day the stars will be as familiar to each man as the landmarks, the curves, and the hills on the road that leads to his door, and one day this will be an airborne life. But by then men will have forgotten how to fly; they will be passengers on machines whose conductors are carefully promoted to a familiarity with labeled buttons, and in whose minds the knowledge the sky and the wind and the way of the weather will be as extraneous as passing fiction.

*West with the Night*

Chapter XV (p. 186)

North Point Press. San Francisco, California, USA. 1983

**Melville, Herman** 1819–91

American novelist

Foolish toy! babies' plaything of haughty Admirals, and Commodores, and Captains; the world brags of thee, of thy cunning and might; but what after all canst thou do, but tell the poor, pitiful point, where thou thyself happenest to be on this wide planet and the hand that holds thee: no! not one jot more! Thou canst not tell where one drop of water or one grain of sand will be to-morrow noon; and yet with thy impotence thou insultest the sun! Science!

*Moby Dick*

Chapter CXVII (pp. 466–467)

L.C. Page & Co. Boston, Massachusetts, USA. 1892

**Mitchel, Ormsby MacKnight** 1805–62

American astronomer

Like the ocean islands which guided the early mariners, so God has given to us the stars of heaven as the fixed points to which we can ever refer, in all parts of their revolution, the places of the wandering planets, and the swiftly revolving moon.

*The Orbs of Heaven*

Introductory (p. 8)

Office of the National Illustrated Library. London, England. 1851

**Slocum, Joshua** 1844–1909

Canadian-American seaman and adventurer

I sailed with a free wind day after day, marking the position of my ship on the chart with considerable preci-

sion; but this was done by intuition, I think, more than by slavish calculations. For one whole month my vessel held her course true; I had not, the while, so much as a light in the binnacle. The Southern Cross I saw every night abeam; the sun every morning came up astern; every evening it went down ahead. I wished for no other compass to guide me, for these were true. If I doubted my reckoning after a long time at sea I verified it by reading the clock aloft made by the Great Architect, and it was

*Sailing Alone Round the World*

Chapter XI (p. 145)

The Century Co. New York, New York, USA. 1919

**NEANDERTHAL**

**Constable, George** 1941–

No biographical data available

Place him in a landscape of tall, waving grass, with the sun shining down and the bubbling music of summer in the air. Who is this man? He is an evolutionary bridge, just shy of fully modern status. He is a true human – our ancestor. We should regard him with honour, because almost everything that we are springs directly from him.

*The Neanderthals*

Chapter Five (p. 134)

Time-Life Books. New York, New York, USA. 1973

**Margulis, Lynn** 1938–

American cell biologist and evolutionist

**Sagan, Dorion** 1959–

American science writer

Neanderthalers, whatever else they were, were people. They were artists and poets and buriers of the dead.

*Microcosmos*

Chapter 12 (p. 225)

Summit Books. New York, New York, USA. 1986

**Osborn, Henry Fairfield**

We have only indirect means of knowing the courage and activity of the Neanderthals in the chase, through the bones of animals hunted for food which are found intermingled with the flints around their ancient hearths.

*Men of the Old Stone Age* (2nd edition)

Cave Life (p. 211)

Charles Scribner's Sons. New York, New York, USA. 1916

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

Hairy or grisly, with a big face like a mask, great brow ridges and no forehead, clutching an enormous flint, and running like a baboon with his head forward, and not, like a man, with his head up, he must have been a fearsome creature for our forefathers to come upon.

*The Grisly Man*

*Storyteller Magazine*, April, 1921

## NEBULA

**de Quincey, Thomas** 1785–1859  
English author

...the famous *nebula* in the constellation of Orion; famous for the unexampled defiance with which it resisted all approaches from the most potent of former telescopes; famous for its frightful magnitude, and for the frightful depth to which it is sunk in the abysses of the heavenly wilderness; famous just now for the submission with which it has begun to render up its secrets to the all-conquering telescope; and famous in all time coming for the horror of the regal phantasma which it has perfected to eyes of flesh.

*The Works of Thomas de Quincey*

System of the Heavens as Revealed by Lord Rosse's Telescope (p. 179)  
Adam & Charles Black. Edinburgh, Scotland. 1871

**Flammarion, Camille** 1842–1925  
French astronomer and writer

It seems that the hand of ages has outlined this universe, that the numberless suns collected there are lengthened out into a line and directed towards the central focus, that a second focus is condensed near the confines of this universe, and that the whole is displaced in space, leaving a luminous train behind it. The imagination is confounded in the presence of such a grand spectacle. On the hypothesis of a complete resolvability into stars, the mind is lost in numbering the myriads of suns, the agglomerated individual lights of which produce these nebulous fringes of such different intensities.

Translated by John Ellard Gore

*Popular Astronomy: A General Description of the Heavens*

Book VI, Chapter X (p. 662)

Chatto & Windus. London, England. 1907

These are lights which glimmer on the frontiers of creation; they are the beginnings which show us the birth of other universes; they are the voices of the past which speak to us from the depths of the vanished ages.

*Popular Astronomy: A General Description of the Heavens*

Book VI, Chapter X (p. 668)

Chatto & Windus. London, England. 1894

**Herschel, Friedrich Wilhelm (Sir William)** 1738–1822  
English astronomer

On the 15th of February, 1786, I discovered that one of my planetary nebula, had a spot in the center, which was more luminous than the rest, and with long attention, a very bright, round, well defined center became visible. I remained not a single moment in doubt, but that the bright center was connected with the rest of the apparent disk.

On Nebulous Stars, Properly So Called

*Philosophical Transactions of the Royal Society of London,*

Volume 81, 1791

...nebulae were generally detected in certain directions rather than in others, that the spaces preceding them were generally quite deprived of stars, that the nebulae appeared some time after among stars of a certain considerable size and but seldom among very small stars, that when I came to one nebula I found several more in the same neighbourhood, and afterwards a considerable time passed before I came to another parcel.

*Philosophical Transactions*, 1784 (p. 448)

**Herschel, Sir John Frederick William** 1792–1871  
English astronomer and chemist

I know not how to describe it [the great nebula in the constellation of Orion] better than by comparing it with a curdling liquid, or a surface strewn over with flocks of wool, or to the breaking up of a mackerel sky, when the clouds of which it consists begin to assume a cirrus appearance.

Quoted in Dionysius Lardner

*Popular Lectures on Science and Art* (Volume 2)

The Stellar Universe (Second Lecture) (p. 388)

Greeley & McElrath

New York, New York, USA. 1846

They [nebula] have, as their name imports, exactly the appearance 'of planets; round or slightly oval disks, in some instances quite sharply terminated, in others a little hazy at the borders, and of a light exactly equable or only a very little mottled, which, in some of them, approaches in vividness to that of actual planets. Whatever their nature, they must be of enormous magnitude.

Quoted in Dionysius Lardner

*Popular Lectures on Science and Art* (Volume 2)

The Stellar Universe (Second Lecture) (p. 391)

Greeley & McElrath

New York, New York, USA. 1846

**Hubble, Edwin Powell** 1889–1953  
American astronomer

The term nebulae offers the values of tradition...the term galaxies, the glamour of romance.

In Timothy Ferris

*The Red Limit: The Search for the Edge of the Universe*

Chapter 1 (p. 41)

William Morrow & Company, Inc. New York, New York, USA. 1977

**Huggins, Sir William** 1824–1910  
English astronomer

On the evening of August 29, 1864, I directed the spectroscope for the first time to a planetary nebula in Draco. I looked into the spectroscope. No spectrum such as I had expected. A single bright line only!...The riddle of the nebulae was solved. The answer, which had come to us in the light itself, read: Not an aggregation of stars, but a luminous gas.

In George E. Hale  
*Annual Report of the Board of Regents of the Smithsonian Institution, 1902*  
 Stellar Evolution in the Light of Recent Research (p. 155)  
 Government Printing Office. Washington, D.C. 1903

**Hugo, Victor** 1802–85  
 French author, lyric poet, and dramatist

A nebula is, as it were, a universe in the cocoon.  
 Translated by Isabel F. Hapgood

 English physicist and mathematician

...nebulae are the birthplaces of the stars, so that each  
 nebula consists of stars born and stars not yet born.  
*The Universe Around Us*  
 Chapter I (p. 67)  
 The Macmillan Company. New York, New York, USA. 1929

**Tennyson, Alfred (Lord)** 1809–92  
 English poet

Regions of lucid matter taking forms,  
 Brushes of fire, hazy gleams.  
 Clusters and beds of worlds, and bee-like swarms Of  
 suns, and starry streams.  
*The Works of Tennyson*  
 Notes (p. 697)  
 The Macmillan Co. New York, New York, USA. 1913

## NECESSITY

**Brooks, William Keith** 1848–1908  
 American zoologist

Science has nothing to do with the notion of “necessity,”  
 and is quite content to leave it in the hands of its originators,  
 the metaphysicians and theologians and “philosophers,”  
 who alone are responsible for all the mental confusion  
 it has brought about.  
*The Foundations of Zoology*  
 Lecture VI (p. 133)  
 The Macmillan Co. New York, New York, USA. 1899

**da Vinci, Leonardo** 1452–1519  
 Italian High Renaissance painter and inventor

Necessity is the mistress and guide of nature. Necessity  
 is the theme and artificer of nature, the bridle and the  
 eternal law.  
 In Edward McCurdy  
*Leonardo da Vinci's Note-books*  
 Book I: Life (p. 55)  
 Duckworth & Co. London, England. 1906

**Huxley, Thomas Henry** 1825–95  
 English biologist

Fact I know; and Law I know; but what is this Necessity,  
 save an empty shadow of my own mind's throwing?  
*Collected Essays (Volume 1)*  
*Method and Result*  
 On the Physical Basis of Life (p. 161)  
 Macmillan & Company Ltd. London, England. 1904

## NEURON

**Crick, Francis Harry Compton** 1916–2004  
 English molecular biologist, physicist, and neuroscientist

A single neuron may be rather dumb, but it is dumb in  
 many subtle ways.  
*The Astonishing Hypothesis: The Scientific Search for the Soul*  
 Chapter 8 (p. 104)  
 Touchstone. New York, New York, USA. 1995

**Sherrington, Sir Charles** 1857–1952  
 English physiologist

More than one way for doing the same thing is provided  
 by the natural constitution of the nervous system. This  
 luxury of means of compassing a given combination  
 seems to offer the means of restitution of an act after its  
 impairment or loss in one of its several forms.  
*Nobel Lectures, Physiology or Medicine 1922–1941*  
 Nobel lecture for award received in 1932  
 Inhibition as a Coordinative Factor (p. 289)  
 Elsevier Publishing Company. Amsterdam, Netherlands. 1965

## NEMATODE

**Cobb, Nathan Augustus** 1859–1932  
 American plant pathologist

In short, if all the matter in the universe except the nema-  
 todes were swept away, our world would still be dimly  
 recognizable, and if, as disembodied spirits, we could  
 then investigate it, we should find its mountains, hills,  
 vales, rivers, lakes, and oceans represented by a film of  
 nematodes. The location of towns would be decipherable,  
 since for every massing of human beings there  
 would be a corresponding massing of certain nematodes.  
 Trees would still stand in ghostly rows representing our  
 streets and highways.  
*Yearbook, Department of Agriculture, 1914*  
 Department of Agriculture. Washington, D.C. 1914

## NEUROPHYSIOLOGY

**Hodgkin, Alan L.** 1914–98  
 English physiologist and biophysicist

Research in neurophysiology is much more like paddling  
 a small canoe on a mountain river. The river which is  
 fed by many distant springs carries you along all right,  
 though often in a peculiar direction. You have to paddle

quite hard to keep afloat. And sooner or later some of your ideas are upset and are carried downstream like an upturned canoe.

*Lex Prix Nobel. The Nobel Prizes in 1963*  
Nobel banquet speech for award received in 1963  
Nobel Foundation. Stockholm, Sweden. 1964

## NEUROSCIENCE

**Young, John Zachary** 1907–97  
English zoologist

What would be the use of a neuroscience that cannot tell us anything about love?

*Programs of the Brain*  
Chapter 14 (p. 143)  
Oxford University Press. Oxford, England. 1978

## NEUTRINO

**Adams, Douglas** 1952–2001  
English author, comic radio dramatist, and musician

The chances of a neutrino actually hitting something as it travels through all this howling emptiness are roughly comparable to that of dropping a ball bearing at random from a cruising 747 and hitting, say, an egg sandwich.

*The Ultimate Hitchhiker's Guide to the Galaxy*  
*Mostly Harmless*  
Chapter 3 (p. 656)  
The Ballantine Book Company. New York, New York, USA. 2002

### Author undetermined

The neutrino is about as close to intangibility as we can get in this world – the human soul, perhaps is the next stage.

*Engineering and Science*, February, 1973 (p. 15)

Mister Jordan  
Takes neutrinos  
And from those he  
Builds the light.  
And in pairs they  
Always travel  
One neutrino's  
Out of sight.

In Abraham Pais  
*Inward Bound*  
To the tune "Mac the Knife" (p. 419)  
Clarendon Press. Oxford, England. 1986

**Crane, H. Richard** 1907–2997  
Experimental physicist

Not everyone would be willing to say that he believes in the existence of the neutrino, but it is safe to say there is

hardly one of us who is not served by the neutrino hypothesis as an aid in thinking about beta-decay process.

The Energy and Momentum Relations in the Beta-Decay and the Search for the Neutrino  
*Review of Modern Physics*, Volume 20, Number 2, March, 1948 (p. 278)

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

The neutrino is just barely a fact.

The Two-Neutrino Experiment  
*Scientific American*, Volume 208, Number 3, March, 1963 (p. 60)

In an ordinary way I might say that I do not believe in neutrinos. But I have to reflect that a physicist may be an artist, and you never know where you are with artists. My old-fashioned kind of disbelief in neutrinos is scarcely enough. Dare I say that experimental physicists will not have sufficient ingenuity to make neutrinos? Whatever I may think, I am not going to be lured into a wager against the skill of the experimenters under the impression that it is a wager against the truth of a theory. If they succeed in making neutrinos, perhaps even in developing industrial application of them, I suppose I shall have to believe – though I may feel they have not been playing quite fair.

*The Philosophy of Physical Science*  
Chapter VII, Section II (p. 112)  
The Macmillan Company. New York, New York, USA. 1939

**Gamow, George** 1904–68  
Russian-born American physicist

My mass is zero,  
My Charge is the same.  
You are my hero,  
Neutrino's my name.

*Thirty Years That Shook Physics*  
First Part (p. 188)  
Doubleday & Company, Inc. Garden City, New York, USA. 1966

...one of the students asked whether the "Chadwick neutron" was the same "neutron" proposed by Pauli for the phenomena of beta transformation. "No," answered Fermi, "*il neutrone di Pauli è mol to più piccolo, cio è un neutrino.*" The name stuck.

The Reality of Neutrinos  
*Physics Today*, Volume 1, Number 3, July, 1948 (p. 5)

**Haag, Joel**

Alfred A. Knopf. New York, New York, USA. 1969

**NEUTRON****Chadwick, James** 1891–1974

English physicist

I think we shall have to make a real search for the neutron.

In Henry Abraham Boorse and Lloyd Motz

*The World of the Atom*

Letter to E. Rutherford (p. 1293)

Basic Books, Inc., Publishers. New York, New York, USA. 1966

It is to be expected that many of the effects of a neutron in passing through matter should resemble those of a quantum of high energy, and it is not easy to reach the final decision between the two hypotheses. Up to the present, all the evidence is in favor of the neutron, while the quantum hypothesis can only be upheld if the conservation of energy and momentum be relinquished at some point.

Possible Existence of a Neutron

*Nature*, Volume 129, Number 3252, February 27, 1932 (p. 312)

**Dr. Ruth Adams (Fictional character)**

It's only Neutron. We call him that because he's so positive.

*This Island Earth*

Film (1955)

**Gamow, George** 1904–68  
Russian-born American physicist

The Neutron has come to be.  
Loaded with Mass is he.  
Of Charge, forever free.  
Pauli, do you agree?

*Thirty Years That Shook Physics*

Finale (p. 213)

Doubleday & Company, Inc. Garden City, New York, USA. 1966

**Heisenberg, Werner Karl** 1901–76  
German physicist and philosopher

The basic idea is: shove all fundamental difficulties on to the neutron and practice quantum mechanics inside the nucleus.

In Abraham Pais

*Inward Bound*

Letter to Niels Bohr, 20 June, 1932 (p. 413)

Clarendon Press. Oxford, England. 1986

**Pauli, Wolfgang** 1900–58  
Austrian-born physicist

Dear Radioactive Ladies and Gentlemen,  
As the bearer of these lines, for whom I pray the favor of a hearing will explain in more detail, I have...hit upon a desperate remedy for rescuing the "alternation law"... This is the possibility that there might exist in the nuclei electrically neutral particles, which I call neutrons...

In Charles P. Enz

*No Time to Be Brief*

Chapter 6 (p. 215)

Oxford University Press, Inc. Oxford, England. 2002

## NEW

**Mitchison, Naomi** 1897–1999  
Scottish novelist and poet

...nothing utterly new succeeds at once.

*Solution Three*

Chapter One (p. 8)

The Feminist Press at the City University of New York. New York, New York, USA. 1995

## NEWTON, ISAAC

**Beecher, Henry Ward** 1813–87  
American Congregational preacher and orator

Newton sat in an orchard, and an apple, plumping down on his head, started a train of thought which opened the heavens to us. Had it been in California, the size of the apples there would have saved him the trouble of much thinking thereafter, perhaps, opening the heavens to him, and not to us.

*Pleasant Talk About Fruits, Flowers and Farming*

Chapter I (p. 6)

J.B. Ford & Co. New York, New York, USA. 1874

**Einstein, Albert** 1879–1955  
German-born physicist

No one must think that Newton's great creation can be overthrown in any real sense by this or by any other theory. His clear and wide ideas will forever retain their significance as the foundation on which our modern conceptions of physics have been built.

Time, Space and Gravitation

*Science*, Volume LI, Number 1305, January 2, 1920 (p. 10)

**Sonneberg, Walter**  
No biographical data available

Newton stands responsible for much grave trespassing upon Nature.

*Social Eccentricities*

Social Eccentricities (p. 46)

Broadway Publishing Co. New York, New York, USA. 1906

## NEWTONIAN MECHANICS

**Davies, Paul Charles William** 1946–  
British-born physicist, writer, and broadcaster

However much we may feel free, everything that we do is, according to Laplace, completely determined. Indeed the entire cosmos is reduced to a gigantic clockwork mechanism, with each component slavishly and unfailingly executing its preprogrammed instructions to mathematical precision. Such is the sweeping implication of Newtonian mechanics.

*The Cosmic Blueprint: New Discoveries in Nature's Creative Ability to Order the Universe*

Chapter 2 (p. 11)

Simon & Schuster. New York, New York, USA. 1988

## NIGHT

**Ackerman, Diane** 1948–  
American writer

It is nighttime on the planet Earth. But that is only a whim of nature, a result of our planet rolling in space at 1,000 miles per minute. What we call "night" is the time we spend facing the secret reaches of space, where other solar systems and, perhaps, other planetarians dwell. Don't think of night as the absence of day; think of it as a kind of freedom. Turned away from our sun, we see the dawning of far-flung galaxies. We are no longer sun-blind to the star-coated universe we inhabit.

*A Natural History of the Senses*

Vision, How to Watch the Sky (p. 245)

Random House, Inc. New York, New York, USA. 1990

**Amaldi, Ginestra Giovane**  
No biographical data available

The night sky looks like a giant fistful of glittering diamonds flung carelessly upon a black carpet.

*Our World and the Universe Around Us* (Volume 1)  
The Universe (p. 13)  
Abradale Press. New York, New York, USA. 1966

**Atwood, Margaret** 1939–  
Canadian poet, novelist, and critic

Night falls. Or has fallen. Why is it that night falls, instead of rising, like the dawn? Yet if you look east, at sunset, you can see night rising, not falling; darkness lifting into the sky, up from the horizon, like a black sun behind cloud cover. Like smoke from an unseen fire, a line of fire just below the horizon, brushfire or a burning city. Maybe night falls because it's heavy, a thick curtain pulled up over the eyes. Wool blanket. I wish I could see in the dark.

*The Handmaid's Tale*  
Chapter 30 (p. 201)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1986

**Beston, Henry** 1888–1968  
American writer

It is dark to-night, and over the plains of ocean the autumnal sky rolls up the winter stars.

*The Outermost House*  
Chapter I (p. 18)  
Rinehart & Company. New York, New York, USA. 1928

...today's civilization is full of people who have never even seen night. Yet to live thus, to know only artificial night, is as absurd and evil as to know only artificial day.

*The Outermost House*  
Chapter VIII (p. 169)  
Rinehart & Company. New York, New York, USA. 1928

With lights and ever more lights, we drive the holiness and beauty of night back to the forests and the sea; the villages, the crossroads even, will have none of it.

*The Outermost House*  
Chapter VIII (p. 168)  
Rinehart & Company. New York, New York, USA. 1928

For a moment of night we have a glimpse of ourselves and of our world islanded in its stream of stars – pilgrims of mortality, voyaging between horizons across the eternal seas of space and time.

*The Outermost House*  
Chapter VIII (p. 176)  
Rinehart & Company. New York, New York, USA. 1928

**Bürger, Bruno Hans** 1875–1948  
German astronomer

This is the hour when the stars awake. The ruddiness in the west has paled, the fiery lines that glowed across the horizon like streams of molten gold have vanished, and night approaches on its raven-hued wings.

Translated by Stella Bloch  
*Astronomy for All*  
Chapter I (p. 1)  
Cassell & Co., Ltd. London, England. 1911

**de Saint-Exupéry, Antoine** 1900–44  
French aviator and writer

Night, the beloved. Night, when words fade and things come alive. When the destructive analysis of day is done, and all that is truly important becomes whole and sound again. When man reassembles his fragmentary self and grows with the calm of a tree.

Translated by Bernard Lamotte  
*Flight to Arras*  
Chapter I (p. 23)  
Reynal & Hitchcock. New York, New York, USA. 1942

**Diamond, Neil** 1941–  
American pop/folk singer, composer, and musician

I thank the Lord for the night time  
To forget the day...

*Classics: The Early Years (1966–1967)*  
Thank the Lord for the Nighttime  
Columbia Records #38792. 1983

**Flammarion, Camille** 1842–1925  
French astronomer and writer

O Night, diapered with fires innumerable! hast thou not written in flaming letters on these Constellations the syllables of the great enigma of Eternity? The contemplation of thee is a wonder and a charm. How rapidly canst thou efface the regrets we suffered on the departure of our beloved Sun! What wealth, what beauty hast thou not reserved for our enraptured souls! Where is the man that can remain blind to such a pageant and deaf to its language!

Translated by Frances Alice Welby  
*Astronomy for Amateurs*  
Introduction (p. 11)  
D. Appleton & Co. New York, New York, USA. 1915

O Night, mysterious, sublime, and infinite! withdrawing from our eyes the veil spread above us by the light of day, giving back transparency to the Heavens, showing us the prodigious reality, the shining casket of the celestial diamonds, the innumerable stars that succeed each other interminably in immeasurable space!

Translated by Frances Alice Welby  
*Astronomy for Amateurs*  
Introduction (p. 26)  
D. Appleton & Co. New York, New York, USA. 1915

**Murdin, Paul**  
British astronomer

Astronomers, literally, and human beings in general, figuratively, need the interruption of the night.

In Derek McNally  
*The Vanishing Universe*  
The Aims of Astronomy in Science and the Humanities: Why Astronomy Must Be Protected (p. 19)  
Cambridge University Press. Cambridge, England. 1994

**Stevenson, Robert Louis** 1850–94

Scottish essayist and poet

Night is a dead monotonous period under a roof; but in the open world it passes lightly, with its stars and dews and perfumes, and the hours are marked by changes in the face of Nature.

*Travels with a Donkey in the Cevennes*

A Night Among the Pines (p. 79)

C. Kegan Paul & Company. London, England. 1879

**Tagore, Rabindranath** 1861–1941

Indian poet and philosopher

The night is like a dark child just born of her mother day. Millions of stars crowding round its cradle watch it, standing still, afraid lest it should wake up.

*Personality*

The World of Personality (p. 57)

The Macmillan Company. New York, New York, USA. 1917

**Williams, Frederick Smeeton**

No biographical data available

It is night. Awhile ago the sun tinged the western hemisphere with his last golden beams, and sank to rest behind the distant hills. Earth has drawn around her the sable robe of darkness. The hum of the world's busy on-going is silenced – nature is hushed to repose – the birds have ceased their song, and the stillness is broken only by the bat's almost noiseless wing, the soft sighing of the evening breeze among the foliage, and the distant lowing of the cattle. These are voices of the night, calling us, with timid accents, to solitude and meditation.

*The Wonders of the Heavens*

Chapter I (p. 9)

John Cassell. London, England. 1852

Night is ever beautiful. Day has its peculiar charms, and night no less. Day shows us earth; night reveals to us the heavens. Day declares the greatness of our world; night the majesty and immensity of God's universe. Day awakens the harmonies of earth; night the music of the spheres.

*The Wonders of the Heavens*

Chapter I (p. 10)

John Cassell. London, England. 1852

...its [night sky] its solemnity awes and its beauty fascinates: and we cannot look upon the glittering bosom of the heavens without being beguiled into meditation on its wonders.

*The Wonders of the Heavens*

Chapter I (p. 10)

John Cassell. London, England. 1852

**NOBEL PRIZE****Wilson, Edward O.** 1929–

American biologist and author

Humanists are the shamans of the intellectual tribe, wise men who interpret knowledge and transmits the folklore, rituals, and sacred texts. Scientists are the scouts and hunters. No one rewards a scientist for what he knows. Nobel Prizes and other trophies are bestowed for the new facts and theories he brings home to the tribe.

*Biophilia*

The Poetic Species (p. 58)

Harvard University Press. Cambridge, Massachusetts, USA. 1984

**NOCTURNAL****Holland, W. J.**

There are whole armies of living things, which when we go to sleep, begin to awaken; and when we awaken, go to sleep.

*The Moth Book: A Popular Guide to a Knowledge of the Moths of North America*

The World of the Dark (p. 77)

Doubleday, Page & Company. New York, New York, USA. 1904

There are two worlds; the world of sunshine, and the world of the dark. Most of us are more or less familiarly acquainted with the first; very few of us are well acquainted with the latter. Our eyes are well adapted to serve us in the daylight, but they do not serve us as well in the dark, and we therefore fail to know, unless we patiently study them, what wonders this world of the dark holds within itself.

*The Moth Book: A Popular Guide to a Knowledge of the Moths of North America*

The World of the Dark (p. 77)

Doubleday, Page & Company. New York, New York, USA. 1904

**NOMENCLATURE****Lavoisier, Antoine Laurent** 1743–94

French chemist

The impossibility of separating the nomenclature of a science from the science itself, is owing to this, that every branch of physical science must consist of three things; the series of facts which are the objects of the science, the ideas which represent these facts, and the words by which these ideas are expressed. Like three impressions of the same seal, the word ought to produce the idea, and the idea to be a picture of the fact. And, as ideas are preserved and communicated by means of words, it necessarily follows that we cannot improve the language of any science without at the same time improving the science itself; neither can we, on the other hand, improve a science, without improving the language or nomenclature which belongs to it. However certain the facts of any science may be, and, however just the ideas we may have formed of these facts, we can only communicate false

impressions to others, while we want words by which these may be properly expressed.

Translated by Robert Kerr

*Elements of Chemistry* (Volume 1) (5th edition)

Preface (pp. xviii–xix)

Printed for W. Creech. Edinburgh, Scotland. 1802

...while I thought myself employed only in forming a Nomenclature, and while I proposed to myself nothing more than to improve the chemical language, my work transformed itself by degrees, without my being able to prevent it, into a treatise upon the Elements of Chemistry.

*Elements of Chemistry*

Preface (p. xiii)

Publisher undetermined

Edinburgh, Scotland 1799

**Wilde, Oscar** 1854–1900

Irish wit, poet, and dramatist

Chapter XVII (p. 313)

Charles Carrington. Paris, France. 1908

**Dunglison, Robley** 1798–1869

English physician

In all sciences, Nomenclature is an object of importance; and each term should convey to the student a definite meaning.

*Medical Lexicon*

12th (p. 25)

Blanchard & Lea. Philadelphia, Pennsylvania, USA. 1855

**Fabre, Jean-Henri** 1823–1915

French entomologist and author

To enter on eternity under the safe-conduct of a diminutive animal which saves us from speedy oblivion under the mal-lows and rockets is no contemptible advantage. Most men disappear without leaving an echo to repeat their name; they lie buried in forgetfulness, the worst of graves.

Others, among the naturalists, benefit by the designation given to this or that object in life's treasure-house: it is the skiff wherein they keep afloat for a brief while. A patch of lichen on the bark of an old tree, a blade of grass, a puny beastie: anyone of these hands down a man's name to posterity as effectively as a new comet. For all its abuses, this manner of honouring the departed is eminently respectable. If we would carve an epitaph of some duration, what could we find better than a Beetle's wing-case, a Snail shell or a Spider's web? Granite is worth none of them. Entrusted to the hard stone, an inscription becomes obliterated; entrusted to a Butterfly's wing, it is indestructible.

Translated by Alexander Teixeira de Mattos

## NONSENSE

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

That which in the physical world shadows the nonsense in the mind affords no ground for its condemnation. In a world of aether and electrons we might perhaps encounter nonsense; we could not encounter damned nonsense.

*The Nature of the Physical World*

Conclusion (p. 345)

The Macmillan Company. New York, New York, USA. 1930

## NOTATION

**Berkeley, George** 1685–1753

Irish prelate and metaphysical philosopher

As arithmetic and algebra are sciences of great clearness, certainty, and extent, which are immediately conversant about signs, upon the skilful use and management whereof they entirely depend, so a little attention to them may possibly help us to judge of the progress of the mind in other sciences; which, though differing in nature, design, and object, may yet agree in the general methods of proof and inquiry.

*The Works of George Berkeley* (Volume 2) (p. 342)

At The Clarendon Press. Oxford, England. 1901

**Brough, J. C.**

No biographical data available

Though Frankland's notation commands admiration,  
As something exceedingly clever,  
And Mr. Kay Shuttleworth praises its subtle worth,  
I give it up sadly forever:  
Its brackets and braces, and dashes and spaces,  
And letters decreased and augmented  
Are grimly suggestive of Lunes to make restive  
A chemical printer demented.  
I've tried hard, but vainly, to realize plainly  
Those bonds of atomic connexion  
Which Crum Brown's clear vision discerns with precision  
Projecting in every direction.

In C.A. Russell

*The History of Valencey*

Chapter V (p. 106)

For what one has, in black and white,  
One carries home and then goes through it.

*Faust*

IV (p. 67)

The Modern Publisher. New York, New York, USA. 1912

## NOTHING

**Faraday, Michael** 1791–1867  
English physicist and chemist

Nothing is too wonderful to be true, if it be consistent with the laws of nature ...

In Bence Jones

*The Life and Letters of Faraday* (Volume 2) (p. 253)

J.B. Lippincott & Co. Philadelphia, Pennsylvania, USA. 1870

**Kepler, Johannes** 1571–1630  
German astronomer

I am well aware how fond you are of Nothing, not so much for low price as for the sport, as delightful as it is witty, that it affords your pert sparrow; and so I can really guess that the closer a gift comes to Nothing the more welcome and acceptable it will be to you.

*The Six-cornered Snowflake*

To the Illustrious Counsellor at the Court of His Sacred Imperial Majesty (p. 3)

Oxford University Press. Oxford, England. 1966

**Updike, John** 1932–

American novelist, short story writer, and poet

The chief characteristic of the universe is, I would say, emptiness. There is infinitely more nothing in the universe than anything else.

*The Poorhouse Fair* (p. 113)

Alfred A. Knopf. New York, New York, USA. 1977

## NOTION

**Gauss, Johann Carl Friedrich** 1777–1855  
German mathematician, physicist, and astronomer

*Non notaiones, sed notiones*

Not notation, but notions.

Apocryphal

**Hazen, Robert M.**

No biographical data available

If science has taught us anything, it's that cherished notions about our place in the natural world often turn out to be dead wrong.

*Gen e sis*

Chapter 7 (p. 95)

Joseph Henry Press. Washington, D.C. 2005

**Mach, Ernst** 1838–1916

Austrian physicist and philosopher

Everyone who busies himself with science recognises how unsettled and indefinite the notions are which he has brought with him from common life, and how, on a minute examination of things, old differences are effaced and new ones introduced.

Translated by Thomas Joseph McCormack

*Popular Scientific Lectures* (3rd edition)

The Forms of Liquids (pp. 1–2)

The Open Court Publishing Co. Chicago, Illinois, USA. 1898

**Reichenbach, Hans** 1891–1953

German philosopher of science

If our everyday notions of the world are filled with pictorial descriptions, in which nature is constructed after the fashion of man; if, for instance, we compare the force of a spring under tension to the effort of a man lifting a burden uphill; if we compare the obedience of a falling stone to Galileo's law with human obedience to police law; if we regard light as the fine, coloured substance which our eye takes it to be – all these ideas merely amount to filling natural laws with a graphic content, which is borrowed from another world and is here out of place.

*Atom and Cosmos: The World of Modern Physics*

Chapter 19 (p. 286)

The Macmillan Co. New York, New York, USA. 1933

## NOTORIETY

**Jordan, David Starr** 1851–1931

American scientist and university administrator

In science and literature as well as in other fields notoriety is due either to the personality of the man or to the

work which he has accomplished, while in certain cases both contribute to his fame.

*Leading American Men of Science*

John James Audubon (p. 71)

Henry Holt & Co. New York, New York, USA. 1910

## NOVAE

**Gaposchkin, Sergei** 1898–1984

Russian-born astronomer

When the greatest, the cosmic,  
 And the most fascinating explosion  
 Has been probed by the fabulous light  
 Of the human (but god-like) mind,  
 It will be remembered  
 That you shouldered the task  
 Of exploring the Novae  
 With intrepid boldness  
 And richness of thought.  
 In Arthur Beer  
*Vistas in Astronomy* (Volume 2)  
*Novae Observed* (p. 1506)  
 Pergamon Press. New York, New York, USA. n.d.

## NUCLEUS

**Cudmore, Lorraine Lee**

American cell biologist

Despite its comparatively prosaic name, like the unassuming nanny who turns out to be the head of the espionage network, the nucleus is the structural and actual center of the cell.

*The Center of Life: A Natural History of the Cell*

Cellular Evolution (p. 50)

New York Times Book Company. New York, New York, USA. 1977

**Rutherford, Ernest** 1871–1937

English physicist

It is my personal conviction that if we knew more about the nucleus, we should find it much simpler than

we suppose. I am always a believer in simplicity, being a simple fellow.

Guttingen Lecture  
December 14, 1931

## NULL HYPOTHESIS

### Dunnette, Marvin D.

...most of us still remain content to build our theoretical castles on the quicksand of merely rejecting the null hypothesis.

Fads, Fashions, and Folderol in Psychology  
*American Psychologist*, Volume 21, 1966 (p. 345)

### Fisher, Sir Ronald Aylmer 1890–1962

English statistician and geneticist

In relation to any experiment we may speak of this hypothesis as the “null hypothesis,” and it should be noted that the null hypothesis is never proved or established, but is possibly disproved, in the course of experimentation. Every experiment may be said to exist only in order to give the facts a chance of disproving the null hypothesis.

*The Design of Experiments*  
II, 8 (p. 16)

Hafner Publishing Company. New York, New York, USA. 1971

### Tukey, John W. 1915–2000

American statistician

The worst, i.e., most dangerous, feature of “accepting the null hypothesis” is the giving up of explicit uncertainty.... Mathematics can sometimes be put in such black-and-white terms, but our knowledge or belief about the external world never can.

The Philosophy of Multiple Comparisons  
*Statistical Science*, Volume 6, Number 1, February, 1991 (pp. 100–101)

## NUMBER

### Aeschylus 525 BCE–426 BCE

Greek playwright

...but utterly without knowledge  
Moiled, until I the rising of the stars  
Showed them, and when they set, Though much  
obscure.

Moreover, number, the most excellent  
Of all inventions, I for them devised,  
And gave them writing that retaineth all,  
The serviceable mother of the Muse.

In *Great Books of the Western World* (Volume 5)

*The Plays of Aeschylus*  
*Prometheus Bound*, 457

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### Airy, Sir George Biddell 1801–92

English mathematician and astronomer, Astronomer Royal from 1835 to 1881

I have not the smallest confidence in any result which is essentially obtained by the use of imaginary symbols. I am very glad to use them as conveniently indicating a conclusion which it may afterwards be possible to obtain by strictly logical methods: but, until these logical methods shall have been discovered, I regard the result as requiring further demonstration.

Supplement to a Proof of the Theorem that Every Algebraic Equation has a Root

*Transactions of the Cambridge Philosophical Society*, Volume X, 1864 (p. 327)

### Archimedes of Syracuse 287 BCE–212 BCE

Sicilian mathematician

There are some, King Gelon, who think that the number of the sand is infinite in multitude; and I mean by the sand not only that which exists about Syracuse and the rest of Sicily but also that which is found in every region inhabited or uninhabited. Again there are some who, without regarding it as infinite, yet think that no number has been named which is great enough to exceed its multitude.... But I will try to show you by means of geometrical proofs, which you will be able to follow, that, of the numbers named by me, and given in the work which I sent to Zeuxippus, some exceed not only the number of the mass of sand equal in magnitude to the earth, but also that of a mass equal in magnitude to the universe.

*The Works of Archimedes*

*The Sand-Reckoner*

At The University Press. Cambridge, England. 1897

### Aristotle 384 BCE–322 BCE

Greek philosopher

...the attributes of numbers are present in a musical scale and in the heavens...

In *Great Books of the Western World* (Volume 8)

*Metaphysics*

Book XIV, Chapter 3 (p. 622)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### Asimov, Isaac 1920–92

American author and biochemist

Human beings are very conservative in some ways and virtually never change numerical conventions once they grow used to them. They even come to mistake them for laws of nature.

*Foundation and Earth* (p. 376)

Doubleday & Company, Inc. Garden City, New York, USA. 1986

### Auster, Paul 1947–

American writer

I’ve dealt with numbers all my life, of course, and after a while you begin to feel that each number has a personality

of its own. A twelve is very different from a thirteen, for example. Twelve is upright, conscientious, intelligent, whereas thirteen is a loner, a shady character who won't think twice about breaking the law to get what he wants. Eleven is tough, an outdoorsman who likes tramping through woods and scaling mountains; ten is rather simpleminded, a bland figure who always does what he's told; nine is deep and mystical, a Buddha of contemplation.... Numbers have souls, and you can't help but get involved with them in a personal way.

*The Music of Chance*

Chapter 4 (p. 73)

Viking Penguin. New York, New York, USA. 1990

### **Bacon, Sir Francis** 1561–1626

English lawyer, statesman, and essayist

...insomuch as we see in the schools both of Democritus and of Pythagoras, that the one did ascribe figure to the first seeds of things, and the other did suppose numbers to be the principles and originals of things.

In *Great Books of the Western World* (Volume 30)

*The Advancement of Learning*

Second Book, Chapter VIII, Section 1 (p. 46)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### **Barrett-Browning, Elizabeth** 1806–61

English poet

How do I love thee?

Let me count the ways.

*The Complete Poetical Works of Elizabeth Barrett Browning*

Sonnets from the Portuguese, XLIII

Houghton Mifflin Company. Boston, Massachusetts, USA. 1900

### **Begley, Sharon** 1956–

Science editor

...number theory... is a field of almost pristine irrelevance to everything except the wondrous demonstration that pure numbers, no more substantial than Plato's shadows, conceal magical laws and orders that the human mind can discover after all.

New Answer for an Old Question

*Newsweek*, 5 July, 1993 (p. 53)

### **Bell, E. T. (Eric Temple)** 1883–1960

Scottish-American mathematician and educator

Roughly it amounts to this: mathematical analysis as it works today must make use of irrational numbers (such as the square root of two); the sense in which such numbers exist is hazy. Their reputed mathematical existence implies the disputed theories of the infinite. The paradoxes remain. Without a satisfactory theory of irrational numbers, among other things, Achilles does not catch up with the tortoise, and the earth cannot turn on its axis. But as Galileo remarked, it does. It would seem to follow that something is wrong with our attempts to compass the infinite.

*Debunking Science*

University of Washington Book Store. Seattle, Washington, USA. 1930

If "Number rules the universe" as Pythagoras asserted, Number is merely our delegate to the throne, for we rule Number.

*Men of Mathematics* (p. 16)

Simon & Schuster. New York, New York, USA. 1986

The algebraic numbers are spotted over the plane like stars against a black sky; the dense blackness is the firmament of the transcendentals.

*Men of Mathematics* (p. 569)

Simon & Schuster. New York, New York, USA. 1937

The next fundamental assumption of the Pythagoreans lies much deeper, so deep in fact that civilized man can scarcely hope to fetch it up to the full light of reason. Odd numbers are male; even numbers, female. We can only ask why, expecting no answer except possibly a hesitant allusion to a vestigial phallicism or a forgotten Orphism.

*The Magic of Numbers*

Chapter 14 (p. 155)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1946

The theory of numbers is the last great uncivilized continent of mathematics. It is split up into innumerable countries, fertile enough in themselves, but all the more or less indifferent to one another's welfare and without a vestige of a central, intelligent government. If any young Alexander is weeping for a new world to conquer, it lies before him.

*The Queen of the Sciences*

Chapter VII (p. 91)

The Williams & Wilkins Company. Baltimore, Maryland, USA. 1931

### **Berry, Daniel M.**

No biographical data available

### **Yavne, Moshe**

No biographical data available

In the beginning, everything was void, and J. H. W. H. Conway began to create numbers. Conway said, "Let there be two rules which bring forth all numbers large and small. This shall be the first rule: Every number corresponds to two sets of previously created numbers, such that no member of the left set is greater than or equal to any member of the right set.

And the second rule shall be this: One number is less than or equal to another number if and only if no member of the first number's left set is greater than or equal to the second number, and no member of the second number's right set is less than or equal to the first number." And Conway examined these two rules he had made, and behold! they were very good.

*Mathematics Magazine*, Volume 49, Number 4, September, 1976 (p. 208)

**Boethius, Anicius Manlius Severinus** ca. 475–524  
Roman philosopher and statesman

...in the science of numbers ought to be preferred as an acquisition before all others, because of its necessity and because of the great secrets and other mysteries which there are in the properties of numbers. All sciences partake of it, and it has need of none.

In J Fauvel and J Gray  
*The History of Mathematics: A Reader*  
Chapter 7  
Section 7.B2 (p. 247)  
Macmillan Press Ltd. Houndmills, England. 1987

**Borel, Félix Edouard Justin Emile** 1871–1956  
French mathematician

One grain of wheat does not constitute a pile, nor do two grains, nor three and so on. On the other hand, everyone will agree that a hundred million grains of wheat do form a pile. What, then, is the threshold number? Can we say that 325,647 grains of wheat do not form a pile, but that 325,648 grains do? If it is impossible to fix a threshold number, it will also be impossible to know what is meant by a pile of wheat; the words can have no meaning, although, in certain extreme cases, everybody will agree about them.

Translated by Douglas Scott  
*Probability and Certainty*  
Chapter 8 (p. 98)  
Walker & Company. New York, New York, USA. 1963

All of mathematics can be deduced from the sole notion of an integer; here we have a fact universally acknowledged today.

*A l'analyse arithmétique du continu*  
Oeuvres 3, 1439–1485

Introduction (p. 1)

American Enterprise Institute. Washington, D.C. 1995

**Eco, Umberto** 1932–

Italian novelist, essayist, and scholar

With numbers you can do anything you like. Suppose I have the sacred number 9 and I want to get a number 1314, date of the execution of Jacques de Molay – a date dear to anyone who, like me, professes devotion to the Templar tradition of knighthood. What do I do? I multiply nine by one hundred and forty-six, the fateful day of destruction of Carthage. How do I arrive at this? I divided thirteen hundred and fourteen by two, by three, *et cetera*, until I found a satisfying date. I could also have divided thirteen hundred and fourteen by 6.28, the double of 3.14, and I would have got two hundred and nine. That is the year Attalus I, king of Pergamon, ascended the throne. You see?

**Feynman, Richard P.** 1918–88

American theoretical physicist

You know...there are about a hundred billion stars in the galaxy – ten to the eleventh power. That used to be considered a huge number. Today it’s less than the national debt. We ought to call them “economical numbers.”

In David L. Goodstein and Judith R. Goodstein  
*Feynman’s Lost Lecture: The Motion of Planets Around the Sun*  
Chapter 2 (p. 62)  
W.W. Norton & Company, Inc. New York, New York, USA. 1996

**Gass, Fredrick**

No biographical data available

Adam, did you find a good system for naming ordinals?

A: Ordinals? I thought you said “animals.”

Constructive Ordinal Notation Systems  
*Mathematics Magazine*, Volume 57, Number 3, May, 1984 (p. 131)

**Gibran, Kahlil** 1883–1931

Lebanese-American philosophical essayist

And he who is versed in the science of numbers can tell of the regions of weight and measures, but he cannot conduct you thither.

For the vision of one man lends not its wings to another man.

*The Prophet*  
On Teaching (pp. 56–57)  
Alfred A. Knopf. New York, New York, USA. 1969

**Ginsey, Gurney**

No biographical data available

There are numbers I don’t trust...take  
One – too proud, too pointed, much too  
Sure that all begins with him – and  
Two, that sits cross-legged on the  
Path and sneers as though he knows all secrets...

Numbers  
*Mathematics Magazine*, Volume 38, Number 3, May, 1965 (p. 168)

**Gould, Stephen Jay** 1941–2002

American paleontologist and evolutionary biologist

Numbers have undoubted powers to beguile and benumb, but critics must probe behind numbers to the character of arguments and the biases that motivate them.

*An Urchin in the Storm: Essays About Books and Ideas*  
Chapter 8 (p. 144)  
W.W. Norton & Company, Inc. New York, New York, USA. 1987

**Hales, Stephen** 1677–1761

English physiologist and clergyman

...since we are assured that the all-wise Creator has observed the most exact proportions, of number, weight, and measure, in the make of all things; the most likely way therefore, to get any insight into the nature of these parts of the creation, which come within our observation, must in all reason be to number, weigh and measure.

*Vegetable Statics*  
The Introduction (p. xxxi)  
The Scientific Book Guild. London, England. 1961

**Hardy, G. H. (Godfrey Harold)** 1877–1947

English pure mathematician

The elementary theory of numbers should be one of the very best subjects for early mathematical instruction. It demands very little previous knowledge; its subject matter is tangible and familiar; the processes of reasoning which it employs are simple, general and few; and it is unique among the mathematical sciences in its appeal to natural human curiosity. A month’s intelligent instruction in the theory of numbers ought to be twice as instructive, twice as useful, and at least ten times as entertaining as the same amount of calculus for engineers.

An Introduction to the Theory of Numbers  
*Bulletin of the American Mathematical Society*, Volume 35, 1929 (p. 818)

**Henle, James M.**

American mathematician

Belief in a large number is no more daring, I should think, than belief in Tolstoy’s *War and Peace*.

The Happy Formalist  
*The Mathematical Intelligencer*, Volume 13, Number 1, Winter, 1991 (p. 14)

**Høeg, Peter** 1957–

Danish writer

Do you know what the foundation of mathematics is?... The foundation of mathematics is numbers. If anyone asks me what makes me truly happy, I would say: numbers. Snow and ice and numbers. And do you know why?...Because the number system is like human life. First you have the natural numbers. The ones that are whole and positive. The numbers of a small child. But human consciousness expands. The child discovers a sense of longing, and do you know what the mathematical expression is for longing.... The negative numbers. The formalization of the feeling that you are missing something. And human consciousness expands and grows even more, and the child discovers the in between spaces. Between stones, between pieces of moss on the stones, between people. And between numbers. And do

you know what that leads to? It leads to fractions. Whole numbers plus fractions produce rational numbers. And human consciousness doesn't stop there. It wants to go beyond reason. It adds an operation as absurd as the extraction of roots. And produces irrational numbers.... It's a form of madness.

*Smilla's Sense of Snow*

The City (pp. 114–115)

Dell Publishing. New York, New York, USA. 1993

**Hofstadter, Douglas R.** 1945–

American academic

People enjoy inventing slogans which violate basic arithmetic but which illustrate “deeper” truths, such as “1 and 1 make 1” (for lovers), or “1 plus 1 plus 1 equals 1” (the Trinity)... Two raindrops running down a window pane merge; does one plus one make one? A cloud breaks up into two clouds – more evidence for the same? ...Numbers as realities misbehave. However, there is an ancient and innate sense in people that numbers ought not to misbehave. There is something clean and pure in the abstract notion of number...and there ought to be a way of talking about numbers without always having the silliness of reality come in and intrude. The hard-edged rules that govern “ideal” numbers constitute arithmetic, and their more advanced consequences constitute number theory.

*Gödel, Escher, Bach: An Eternal Golden Braid*

Part I, Chapter II (p. 56)

Basic Books, Inc. New York, New York, USA. 1979

**Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

Dr. Hooke, the famous English mathematician and philosopher, made a calculation of the number of separate ideas the mind is capable of entertaining, which he estimated as 3,155,760,000.

*Pages from an Old Volume of Life*

Chapter VIII (p. 274, fn a)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1895

The power of dealing with numbers is a kind of “detached lever” arrangement, which may be put into a mighty poor watch. I suppose it is about as common as the power of moving the ears voluntarily, which is a moderately rare endowment.

*The Autocrat of the Breakfast Table*

Breakfast I (p. 8)

Alexander Strahan & Co. Edinburgh, Scotland. 1859

**Hume, David** 1711–76

Scottish philosopher and historian

...I observe that when we mention any great number, such as a thousand, the mind has generally no adequate idea of it, but only a power of producing such an idea by its adequate idea of the decimals, under which the number is comprehended.

*A Treatise of Human Nature*

Book I, Part I, Section VII (p. 70)

Penguin Books. Baltimore, Maryland, USA. 1969

**Huxley, Aldous** 1894–1963

English writer and critic

A million million spermatozoa,  
All of them alive:  
Out of their cataclysm but one poor Noah  
Dare hope to survive.  
And among that billion minus one  
Might have chanced to be  
Shakespeare, another Newton, a new Donne –  
But the One was Me.

*Stories, Essays, and Poems*

Fifth Philosopher's Song (p. 410)

English economist and logician

Number is but another name for diversity.

*The Principles of Science: A Treatise on Logic and Scientific Method*

Book I, Chapter VIII (p. 156)

Macmillan & Company. London, England. 1887

**Johnson, Samuel** 1696–1772

English critic, biographer, and essayist

Round numbers, she said, are always false.

In Mrs. Piozzi, Richard Cumberland, Bishop Percy and other book

*Johnsoniana*

Apothegms, Sentiment, Opinions, &c

G. Bell. London, England. 1884

**Juster, Norton** 1929–

American architect and writer

“How terribly confusing,” he cried. “Everything here is called exactly what it is. The triangles are called triangles, the circles are called circles, and even the same numbers have the same name. Why, can you imagine what would happen if we named all the twos Henry or

George or Robert or John or lots of other things? You'd have to say Robert plus John equals four, and if the four's name were Albert, things would be hopeless."

*The Phantom Tollbooth*

Chapter 14 (pp. 173–174)

Alfred A. Knopf. New York, New York, USA. 1989

"I don't think numbers are very important," confessed Milo, too embarrassed to admit the truth.

"NOT IMPORTANT!" roared the Dodecahedron, turning red with fury. "Could you have tea for two without the two? Or three blind mice without the three? Would there be four corners of the earth if there weren't a four? And how could you sail the seven seas without a seven? If you had high hopes, how would you know how high they were? And did you know that narrow escapes come in different widths? How could you do anything at long last," waving his arms over his head, "without knowing how long the last was? Why, numbers are the most beautiful and valuable things in the world."

*The Phantom Tollbooth*

### **Kaminsky, Kenneth**

American mathematics professor, writer, and editor

How poor were we? Why, we were so poor we only had imaginary numbers to play with.

Professor Fogelfroie

*Mathematics Magazine*, Volume 69, Number 4, October, 1996 (p. 303)

### **Kelvin, Lord William Thomson** 1824–1907

Scottish engineer, mathematician, and physicist

When you can measure what you are speaking about and express it in numbers you know something about it; but when you cannot express it in numbers, your knowledge is of a meager and unsatisfactory kind: it may be the beginning of knowledge, but you have scarcely, in your thoughts, advanced to the stage of science, whatever the matter may be.

*Popular Lectures and Addresses* (Volume 1)

Lecture, Institution of Civil Engineering

3 May, 1883 (p. 73)

Macmillan & Company Ltd. London, England. 1894

### **Klein, William**

No biographical data available

Numbers are friends, for me, more or less. It doesn't mean the same for you, does it – 3,844? For you it's just a three and an eight and a four and a four. But I say, "Hi! 62 squared."

In Oliver Sacks

*The Man Who Mistook His Wife for a Hat and Other Clinical Tales*

The Twins (pp. 198–199)

Summit Books. New York, New York, USA. 1985

### **Kline, Morris** 1908–92

American mathematics professor and writer

The theory of infinite numbers is only one of the creations of the nineteenth-century critical thinkers. Almost bizarre in its contents it is nevertheless both logical and useful.

*Mathematics in Western Culture*

Chapter XXV (p. 409)

Oxford University Press, Inc. New York, New York, USA. 1953

### **Kronecker, Leopold** 1823–91

German mathematician

Number theorists are like lotus-eaters – having once tasted of this food they can never give it up.

In Howard W. Eves

*Mathematical Circles* (Volume 2)

Mathematical Circles Squared

302 (p. 149)

The Mathematical Association of America, Inc. 2003

*Die Ganzen Zahlen hat Gott gemacht, andere ist Menschenwerk.*

God created the natural numbers; everything else is man's handiwork.

In Sir Arthur Stanley Eddington

*The Nature of the Physical World* (p. 246)

At The University Press. Cambridge, England. 1929

### **Le Corbusier (Charles-Edouard**

### **Jeanneret)** 1887–1965

Swiss architect and city planner

The mathematical phenomenon always develops out of simple arithmetic, so useful in everyday life, out of numbers, those weapons of the gods; the gods are there, behind the wall, at play with numbers.

*The Modulor*

Part III, Chapter 7 (p. 220)

Birkhäuser. Basel, Switzerland. 2000

### **Leibniz, Gottfried Wilhelm** 1646–1716

German philosopher and mathematician

There is an old saying that God created everything according to weight, measure and number.

*Philosophical Papers and Letters* (Volume 1)

On the General Characteristic (pp. 339–340)

The University of Chicago Press. Chicago, Illinois, USA. 1956

Some things cannot be weighed, as having no force and power; some things cannot be measured, by reason of having no parts; but there is nothing which cannot be numbered.

In G. Frege

*The Foundations of Arithmetic* (p. 31e)

Northwestern University Press. Evanston, Illinois, USA. 1968

...a miracle of analysis, a monster of the ideal world, almost an amphibian between being and not being.

In Walter R. Fuchs

Chapter 7, Section 7. 1 (p. 168)

Macmillan & Company Ltd. New York, New York, USA. 1967

### **Lichtenberg, Georg Christoph** 1742–99

German physicist and satirical writer

People don't like to choose lot #1 in a lottery. "Choose it," Reason cries loudly. "It has as good a chance of winning the 12,000 thalers as any other." "In Heaven's name don't choose it," *a je ne sais quoi* whispers. "There's no example of such little numbers being listed before great winnings." And actually no one takes it.

*Lichtenberg: Aphorisms & Letters*

Aphorisms (p. 46)

Jonathan Cape. London, England. 1969

### **Locke, John** 1632–1704

English philosopher and political theorist

For number applies itself to men, angels, actions, thoughts; everything that either doth exist, or can be imagined.

In *Great Books of the Western World* (Volume 35)

*An Essay Concerning Human Understanding*

Book II, Chapter XVI, Section 1 (p. 165)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

The simple modes of numbers are of all other the most; every the distinct, least variation, which is an unit, making each combination as clearly different from that which approacheth nearest to it, as the most remote: two being as distinct from one, as two hundred; and the idea of two as distinct from the idea of three, as the magnitude of the whole earth is from that of a mite.

*The Works of John Locke: In Nine Volumes* (Volume 1)

12th Chapter XVI (p. 189)

Printed for C. & J. Rivington. London, England. 1824

### **Longfellow, Henry Wadsworth** 1807–82

American poet

Tell me not, in mournful numbers,

Life is but an empty dream!

*The Poetical Works of Henry Wadsworth Longfellow*

A Psalm of Life, Stanza 1

Houghton Mifflin Company. Boston, Massachusetts, USA. 1883

### **Mallon, Thomas** 1951–

American writer

Her columns grew longer, and if she squinted at them, the confetti of inklings began to resemble a skyful of stars. She had time to let her mind wander. The Magi's search for Bethlehem; the music of Milton's crystal spheres... they could all be reduced to these numbers. There was actually no need to squint and pretend that the digits

were the stars. They were, by themselves, wildly alive, fact and symbol of the vast, cool distances in which one located the light of different worlds.

*Two Moons: A Novel*

Chapter One (p. 11)

Harcourt, Orlando, Florida, USA. 2000

### **Marquis, Don** 1878–1937

American newspaperman, poet, and playwright

...large numbers have an odd effect upon the mind of man. Briefly and bluntly, they make him wicked. They seduce his spirit into all manner of vainglory and irreverence and megalomania.

*Prefaces*

Preface to a Moral Book of Arithmetic (p. 196)

D. Appleton & Co. New York, New York, USA. 1919

Large numbers exert a malign influence upon the imagination; something unsocial and sinister and detached from reality and demoniac steals out of them like a vapor to corrode and corrupt the pink and innocent convolutions of the brain.

*Prefaces*

Preface to a Moral Book of Arithmetic (p. 197)

D. Appleton & Co. New York, New York, USA. 1919

### **Maxwell, James Clerk** 1831–79

Scottish physicist

Thus numbers may be said to rule the whole world of quantity, and the four rules of arithmetic may be regarded as the complete equipment of the mathematician.

In E.T. Bell

*Men of Mathematics* (p. xv)

Simon & Schuster. New York, New York, USA. 1937

### **Mayer, Robert**

No biographical data available

In physics numbers are everything, in physiology they are a little, in metaphysics, they are nothing.

Translated by Henry Downton

In Jules Ernest Naville

*Modern Physics, Studies Historical and Philosophical*

First Essay (p. 54)

T.&T. Clark. Edinburgh, Scotland. 1884

One single number has more real and permanent value than an expensive library full of hypotheses.

*Gesammelten Schriften*

Letter to Greisinger, July 20, 1844 (p. 145)

Stuttgart, Germany. 1893

### **Mazur, Barry** 1937–

American mathematician

In the history of the concept of number, number has been adjective (three cows, three monads) and noun (three, pure and simple), and now..., number seems to be more like a verb (to triple).

*Imagining Numbers*

Part II, Chapter 8, Section 37 (p. 138)

Farrar, Straus & Giroux. New York, New York, USA. 2003

**Newman, James Roy** 1911–66

Mathematician and mathematical historian

It is strange that we know so little about the properties of numbers. They are our handiwork, yet they baffle us; we can fathom only a few of their intricacies. Having defined their attributes and prescribed their behavior, we are hard pressed to perceive the implications of our formulas.

*The World of Mathematics* (Volume 1)

Commentary on The Mysteries of Arithmetic (p. 497)

Simon & Schuster. New York, New York, USA. 1956

**O'Brien, Flann** 1911–66

Irish novelist and satirist

The Pooka MacPhellimey, a member of the devil class, sat in his hut in the middle of the firewood meditating on the nature of numerals and segregating in his mind the odd ones from the even.

*At Swim-Two-Birds*

Chapter I (p. 1)

Longmans, Green & Co. London, England. 1939

**Parker, F. W.**

No biographical data available

Number was born in superstition and reared in mystery... numbers were once made the foundation of religion and philosophy, and the tricks of figures have had a marvelous effect on a credulous people.

*Talks on Pedagogics*

Chapter IV (p. 64)

A.S. Barnes & Company. New York, New York, USA. 1909

**Paulos, John Allen** 1945–

American mathematician

The mathematician G. H. Hardy was visiting his protégé, the Indian mathematician Ramanujan, in the hospital. To make small talk, he remarked that 1729, the number of the taxi which had brought him, was a rather dull number, to which Ramanujan replied immediately, “No, Hardy! It is a very interesting number. It is the smallest number expressible as the sum of two cubes in two different ways.

*Innumeracy*

Examples and Principles (p. 6)

Hill & Wang. New York, New York, USA. 1988

**Peirce, Charles Sanders** 1839–1914

American scientist, logician, and philosopher

The rudest numerical scales, such as that by which the mineralogists distinguish different degrees of hardness, are found useful. The mere counting of pistils and stamens sufficed to bring botany out of total chaos into some kind of form. It is not, however, so much from counting as a measuring, not so much from the conception of number as from that of continuous quantity, that the advantage of mathematical treatment comes.

Number, after all, only serves to pin us down to a precision in our thoughts which, however beneficial, can seldom lead to lofty conceptions, and frequently descends to pettiness.

*Chance, Love and Logic: Philosophical Essays*

The Doctrine of Chances (pp. 61–62)

Harcourt, Brace & Company, Inc. New York, New York, USA. 1923

**Philolaus** ca. 480 BCE

Greek philosopher

All things which can be known have number; for it is not possible that without number anything can be either conceived or known.

In Carl B. Boyer

*A History of Mathematics* (p. 60)

John Wiley & Sons, Inc. New York, New York, USA. 1968

**Plato** 428 BCE–347 BCE

Greek philosopher

SOC: And all arithmetic and calculations have to do with number?

GLAUCON: Yes.

SOC: And they appear to lead the mind towards truth?

GLAUCON: Yes, in a very remarkable manner.

In *Great Books of the Western World* (Volume 7)

*The Republic*

Book VII, Section 525 (p. 393)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Pliny (C. Plinius Secundus)** 23–79

Roman savant and writer

Why do we believe that in all matters the odd numbers are more powerful.

*Natural History* (Volume 8)

Book XXVIII, sec 23

Harvard University Press. Cambridge, Massachusetts, USA. 1947

**Plotinus** ca. 205–70

Egyptian-Roman philosopher

Objects of sense are not unlimited and therefore the Number applying to them cannot be so. Nor is an enumerator able to number to infinity; though we double, multiply over and over again, we still end with a finite number...

In *Great Books of the Western World* (Volume 17)

*The Six Enneads*

Sixth Ennead VI.2 (p. 311)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Greek philosopher

Wherever there is number, there is beauty.

In Morris Kline  
*Mathematical Thought from Ancient to Modern Times* (p. 131)  
Oxford University Press, Inc. New York, New York, USA. 1972

**Recorde, Robert** 1510?-58  
English mathematician and writer

Master. – Wherefore in all great works are clerks so much desired? Wherefore are auditors so richly fed?

What causeth geometricians so highly to be enhaused?  
Why are astronomers so greatly advanced? Because that by number such things they find, Which else would far excel man's mind.

In R.H. Carothers  
A Chapter On Figures  
*The Lafayette Monthly*, Volume V, September, 1874 (p. 132)

### The Bible (King James Version)

Let him that hath understanding count the number of the beast: for it is the number of a man; and his number is Six hundred threescore and six.

*Revelation 13:18*

**Robinson, Julia** 1919–85  
American mathematician

I think that I have always had a basic liking for the natural numbers. To me they are the one real thing. We can conceive of a chemistry that is different from ours, or a biology, but we cannot conceive of a different mathematics of numbers. What is proved about numbers will be a fact in any universe.

In D. Albers, G. Alexanderson and C. Reid  
*More Mathematical People: Contemporary Conversations* (p. 264)  
Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

We are the finite numbers.  
We are the stuff of the world.  
Whatever confusion cumber  
The earth is by us unfurled.  
We revere our master Pythagoras  
And deeply despise every hag or ass.  
Not Endor's witch nor Balaam's mount  
We recognize as wisdom's fount.  
But round and round in endless baller  
We move like comets seen by Halley.  
And honored by the immortal Plato  
We think no later mortal great-o.  
We follow the laws

Without a pause,  
For we are the finite numbers.

*The Collected Stories of Bertrand Russell*  
*Nightmares of Eminent Persons, The Mathematician's Nightmare* (p. 43)  
George Allen & Unwin Ltd. London, England. 1972

**Sagan, Carl** 1934–96  
American astronomer and author

Hiding between all the ordinary numbers was an infinity of transcendental numbers whose presence you would never have guessed until you looked deeply into mathematics.

*Contact: A Novel*  
Chapter 1 (p. 21)  
Simon & Schuster. New York, New York, USA. 1985

**Waismann, Friedrich** 1896–1959  
Austrian mathematician, physicist, and philosopher

Will anyone seriously assert that the existence of negative numbers is guaranteed by the fact that there exist in the world hot assets and cold, and debts? Shall we refer to these things in the structure of arithmetic? Who does not see that thereby an entirely foreign element enters into arithmetic, which endangers the pureness and clarity of its concepts?

*Introduction to Mathematical Thinking: The Formation of Concepts in Modern Mathematics*

Chapter 2 (p. 15)

Frederick Ungar Publishing, Company. New York, New York, USA. 1951

**Whewell, William** 1794–1866  
English philosopher and historian

The Ideas on which the Pure Sciences depend, are those of Space and Number; but Number is a modification of the conception of Repetition, which belongs to the Idea of Time.

*The Philosophy of the Inductive Sciences: Founded Upon Their History* (Volume 2) (2nd edition)

Aphorisms Concerning Ideas (p. 446)

John W. Parker. London, England. 1847

**Williams, Charles**  
No biographical data available

"Nought usually comes at the beginning," Ralph said.

"Not necessarily," said Sibyl. "It might come anywhere. Nought isn't a number at all. It's the opposite of number."

Nancy looked up from the cards. "Got you, aunt," she said. "What about ten? Nought's a number there – it's part of ten."

"Well, if you say that any mathematical arrangement of one and nought really makes ten –" Sibyl smiled. "Can it possibly be more than a way of representing ten?"

*The Greater Trumps*

Chapter I (p. 15)

Pellegrini & Cudahy . New York, New York, USA. 1950

## BARYON

**Feinberg, Gerald** 1933–92  
American physicist and futurist

**Goldhaber, Maurice** 1911–2011  
American physicist

...in the absence of a firm theoretical basis for the law [conservation of baryon number], we can only conclude that it is known to be true with great accuracy.

The Conservation Laws of Physics  
*Scientific American*, Volume 209, Number 4, October, 1963 (p. 45)

## COMPLEX

**Needham, Tristram**  
No biographical data available

Often problems that do not appear to involve complex numbers are nevertheless solved most elegantly by viewing them through complex spectacles.

*Visual Complex Analysis*  
Chapter I (p. 14)  
Oxford University Press. Oxford, England. 1998

Even with the benefit of enormous hindsight, it is hard to introduce complex numbers in a compelling manner.

*Visual Complex Analysis*  
Chapter I (p. 30)  
Oxford University Press. Oxford, England. 1998

## FIBONACCI

**Baumel, Judith** 1956–  
American poet

Learn the particular strength  
of the Fibonacci series,  
a balanced spiraling  
outward of shapes,  
those golden numbers  
which describe dimensions  
of sea shells, rams' horns,  
collections of petals  
and generations of bees.

*The Weight of Numbers*  
Fibonacci (p. 21)  
Wesleyan University Press, Middletown, Connecticut, USA; 1988

**Lindon, J. A.**

Each wife of Fibonacci,  
Eating nothing that wasn't starchy  
Weighed as much as the two before her.  
His fifth was some signora!

In Martin Gardner  
*Mathematical Circus*  
Chapter 13 (p. 152)  
Alfred A. Knopf. New York, New York, USA. 1979

## IMAGINARY

**Leibniz, Gottfried Wilhelm** 1646–1716  
German philosopher and mathematician

The imaginary number is a fine and wonderful recourse of the divine spirit, almost an amphibian between being and not being.

*Werke* Bd. 5.2 (p. xxx)  
1997

## NEGATIVE

**Kline, Morris** 1908–92  
American mathematics professor and writer

Negative numbers were not accepted by all the Hindus. Even Bhaskara said, while giving 50 and  $-5$  as solutions of a problem, "The second value is in this case not to be taken, for it is inadequate; people do not approve of negative solutions."

*Mathematics: The Loss of Certainty*  
Chapter V (p. 110)  
Oxford University Press, Inc. New York, New York, USA. 1980

## RANDOM

**Coveyou, R. R.**  
No biographical data available

The generation of random numbers is too important to be left to chance.

Random Number Generation Is Too Important to Be Left to Chance  
*Studies in Applied Mathematics*, Volume 3, 1970

## WHOLE

**Schroeder, Manfred Robert** 1926–  
Physicist

What could be more beautiful than a deep, satisfying relation between whole numbers? (One is almost tempted to call them the wholesome numbers.) In fact, it is hard to come up with a more appropriate designation than their learned name: the integers – meaning "the untouched ones". How high they rank, in the realms of pure thought and aesthetics, above their lesser brethren: the real and complex numbers ...

*Number Theory in Science and Communication* (3rd edition)  
Foreword (p. vii)

**Berlinski, David** 1942–  
American mathematician

Like the human soul, an irrational number is only partly known, and however more is known of either there is always infinitely more to know.

*A Tour of the Calculus*  
Chapter 9 (p. 55)  
Pantheon Books. New York, New York, USA. 1995

## NUMBER THEORY

**Barnett, I. A.**  
No biographical data available

...to discover mathematical talent, there is no better course in elementary mathematics than number theory. Any student who can work the exercises in a modern text in number theory should be encouraged to pursue a mathematical career.

The Theory of Numbers as A Required Course in the College Curriculum for Majors

*American Mathematical Monthly*, Volume 73, November, 1966 (pp. 1002–1003)

**Hardy, G. H. (Godfrey Harold)** 1877–1947

English pure mathematician

The theory of numbers has always occupied a peculiar position among the purely mathematical sciences. It has the reputation of great difficulty and mystery among many who should be competent to judge; I suppose that there is no mathematical theory of which so many well qualified mathematicians are so much afraid.

The Sixth Josiah Willard Gibbs Lecture

*Bulletin of the American Mathematical Society*, Volume 35, 1929

**Hilbert, David** 1862–1943

German mathematician

A problem in number theory is as timeless as a true work of art.

In Legh Wilber Reid

*The Elements of the Theory of Algebraic Numbers*

Introduction

The Macmillan Company. New York, New York, USA. 1910

**Mazur, Barry** 1937–

American mathematician

[Number theory] produces, without effort, innumerable problems which have a sweet, innocent air about them, tempting flowers; and yet...number theory swarms with bugs, waiting to bite the tempted flower-lovers who, once bitten, are inspired to excesses of effort!

Number Theory as Gadfly

*The American Mathematical Monthly*, Volume 98, 1991

## NUMBER, UNKNOWN

**Smith, Elmer Boyd**

Kits, cats, sacks and wives,

How many were going to St. Ives?

*The Boyd Smith Mother Goose*

As I Was Going to Saint Ives

G.P. Putnam's Sons. New York, New York, USA. 1919

## NUMERICAL

**Jevons, William Stanley** 1835–82

English economist and logician

Numerical facts, like other facts, are but the raw materials of knowledge, upon which our reasoning faculties

must be exerted in order to draw forth the principles of nature.

*The Principles of Science: A Treatise on Logic and Scientific Method*

Chapter XXII (p. 483)

Macmillan & Co Ltd. London, England. 1887

## NURSE

**Cooke, Genevieve** 1867–1928

American nurse

Inadequate as the numbers of nurses may be to succor more than an infinitesimal fraction of the precious lives now being sacrificed in battle, it is some small consolation to realize that even the simple title Nurse means one who protects, one who nourishes, never one who destroys.

Address of the President

*The American Journal of Nursing*, Volume 15 (p. 920)

**Fisher, Alice** 1839–1888

American nurse

My dear, erase the word discouragement from your dictionary and your mind; it isn't worthy of a woman who hopes to be a nurse; never let me hear you say it again ...

In Marion E. Smith

The Pioneer Work of Alice Fisher

*The American Journal of Nursing*, Volume IV (p. 806)

**Flikke, Julia Otteson** 1879–1965

American nurse

It is for the purpose of affording to each soldier the highest type of professional skill that nurses are asked to accept the responsibility of rendering professional care to the young defenders of their country, regardless of sacrifices which in many instances must be made.

*Nurses in Action*

Chapter 11 (p. 89)

J.B. Lippincott. Philadelphia, Pennsylvania, USA. 1943

**Gray, Carolyn**

American nurse

One is reluctantly forced to admit that many nurses are not in any true sense of the word educators. This is a lamentable fact, and the responsibility for it must be put on the schools that have attempted to train them, but have failed to make them realize how numerous and diversified their opportunities are.

*Report* Volume 23

The Relation of the Private Duty Nurse to the Public as an Educator (p. 268)

Williams & Wilkins Co. Baltimore, Baltimore, Maryland, USA. 1917

**Krausz, Sigmund**

No biographical data available

Nurses, like poets, are born and not made, and it is quite a difference to the sick whether a nurse takes care of

them whose heart is in her work or one who, like an automaton, simply takes the temperature and administers with clock-like regularity the prescribed doses of medicine.

*Street Types of Great American Cities*

Trained Nurses (p. 30)

The Werner Co. Chicago, Illinois, USA. 1896

**Lambertsen, Eleanor C.** 1916–1998

American nurse

As long as groups of nurses continue to curtail progresses in clearly defining nursing functions of a professional nature and impede progress through advances in education because their “status is showing,” the quality of nursing care will remain at an elementary and superficial level. Tradition rightfully belongs to history: complacency must be replaced by vigorous effort.

In Thelma M. Schorr and Anne Zimmerman

*Making Choices, Taking Chances: Nurse Leaders Tell Their Story*

Eleanor C. Lambertsen (p. 184)

Mosby. St. Louis, Missouri, USA. 1988

**Osler, Sir William** 1849–1919

Canadian physician and professor of medicine

The trained nurse as a factor in life may be regarded from many points of view – philanthropic, social, personal, professional and domestic. To her virtues we have been exceeding kind – tongues have dropped manna in their description. To her faults – well let us be blind ...

*Aequanimitas: With Other Addresses to Medical Students, Nurses and Practitioners of Medicine*

Chapter IX (p. 155)

P. Blackiston's Sons & Co. Philadelphia, Pennsylvania, USA. 1905

Marriage is the natural end of the trained nurse. So truly as a young man married is a young man marred, is a woman unmarried, in a certain sense, a woman undone.

*Aequanimitas: With Other Addresses to Medical Students, Nurses and Practitioners of Medicine*

Chapter IX (p. 162)

P. Blackiston's Sons & Co. Philadelphia, Pennsylvania, USA. 1905

The trained nurse is a modern representative, not of the Roman Vestal, but of the female guardian in Plato's republic – a choice selection from the very best women of the community who know the laws of health, and whose sympathies have been deepened by contact with the best and worst of men.

*Aequanimitas: With Other Addresses to Medical Students, Nurses and Practitioners of Medicine*

Chapter IX (pp. 162–163)

P. Blackiston's Sons & Co. Philadelphia, Pennsylvania, USA. 1905

**Parsons, Sara Elisabeth** 1864–1949

American nurse

The nurse is the doctor's assistant, but her work is no less responsible than his. His success and the patient's recovery often depend upon her intelligent interpretation

of his orders. She must not allow her work to be underestimated.

*Nursing Problems and Obligations*

Chapter V (p. 58)

Whitcomb & Barrows. Boston, Massachusetts, USA. 1916

**Robinson, Victor** 1886–1947

Physician and medical journalist

Woman is an instinctive nurse, taught by Mother Nature. The nurse has always been a necessity, thus lacked social status. In primitive times she was a slave, and in the civilized era a domestic. Overlooked in the plans of legislators, and forgotten in the curricula of pedagogues, she was left without protection and remained without education. She was not an artisan who could obtain the help of a hereditary guild; there was no Hanseatic League for nurses. Drawn from the nameless and numberless army of poverty, the nurse worked as a menial and obeyed as a servant. Denied the dignity of a trade, a devoid of professional ethics, she could not rise above the degradation of her environment. It never occurred to the Aristotles of the past that it would be safer for the public welfare if nurses were educated instead of lawyers. The untrained nurse is as old as the human race; the trained nurse is a recent discovery. The distinction between the two is a sharp commentary on the follies and prejudices of mankind.

*White Caps: The Story of Nursing* (p. ix)

J.B. Lippincott. Philadelphia, Pennsylvania, USA. 1946

**Strong, Anne Hervey** 1876–1925

American nurse

Every thoughtful woman in public health work sees on the one hand enormous need of the work that nurses can do, not only to save life but to increase the physical efficiency of the nation; on the other hand, she sees the totally inadequate number of nurses already trained for public health, the prospect of greatly increased need in the future, and the possibility of greatly decreased numbers of women preparing to meet it.... Of all our national resources, human life is the most important. Public health nursing directly contributes toward the conservation of human life ...

In National League of Nursing Education

*Report* Volume 23

Teaching Problems of Public Health Instructors (p. 260)

*The American Journal of Nursing*

Williams & Wilkins Co. Baltimore, Baltimore, Maryland, USA. 1917

**Wheeler, Claribel Augusta** 1881–1963

American nurse

...to be a nurse is to belong to a profession which has the highest ideals of service, and one in which the lives of its followers are dedicated to the service of humanity.

*The Profession of Nursing*

*The Public Health Nurse*, Volume 13, April, 1921 (p. 204)

**Wyche, Mary Lewis** 1858–1936

American nurse

A nurse needs an occasional snapshot of herself, for her own scrutiny, to see her manners or lack of manners, and phonographic record of her tone, which might force her to exclaim:

“Wad some power the giftie gie us  
To see oursels as ithers see us.”

In some pictures one cries, “A saint I see with voice and touch that soothes and inspires with hope.” We need more of a professional character, “That ingrained regard for standards and ideas, for special knowledge and special skill, which marks the professional man and his readiness to put the claims of public service and of intrinsic excellence of performers above considerations of private or personal gain.”

Nursing Conditions in the South

*The American Journal of Nursing* Volume 7. 1907 (p. 868)**NURSE, PUBLIC HEALTH****Brink, Frances V.** 1889–1978

American nurse

First. Do not diagnose, do not use curative methods without a physician’s orders and a parent’s permission. Do not take children to clinics without parents’ permission. Second. Do not confide your difficulties and criticisms to the teachers and town people, take them to your nursing committee.

Third. Do not make of your office a reception room for teachers or friends, keep your office private for all patients, old and young.

Fourth. Attend as many nurses’ district, state and national meetings, conventions and institutes as possible.

Fifth. Do not fail to demonstrate public health nursing through necessary bedside nursing whenever possible.

Sixth. Gain your teacher’s confidence and give information as to how she may assist in bettering the physical condition of pupils.

Seventh. Remember that one hour home calling is worth more than four hours in the office.

Eighth. Do have a plan of work most definitely mapped out – *system accomplishes much*.

Ninth. Do not give up your work in the community in a short time after entering because it seems discouraging – this is pioneer work.

Tenth. In case of a reported epidemic of contagious diseases in any part of your county be ready and willing to offer assistance to the Health Officer of the district where the epidemic exists. If the Health Officer makes a request for your assistance, drop the routine work and answer this request.

Suggestions for the County Nurse

*The Public Health Nurse*, Volume 13, Number 4, April, 1921 (p. 173)**NURSE, SPIRIT OF****Roberts, Mary May** 1877–1959

American nurse

...the spirit of the true nurse is one of the most beautiful gifts of a beautiful Creator.

The Spirit of Nursing

*The American Journal of Nursing* Volume 25, Number 9, September, 1925 (p. 734)

The spirit of nursing is one of the most indestructible elements of the lives of those who possess it. Like fine steel, it gives form and substance but yet it is flexible, it is shining but durable.

The Spirit of Nursing

*The American Journal of Nursing* Volume 25, Number 9, September, 1925 (p. 734)

It [the spirit of nursing] is made up of such qualities as *courage...love of truth*, with the accompanying characteristics of frankness, fidelity and sincerity; *kindness, tolerance, courtesy, generosity, compassion, sympathy and benevolence...* It is one on the things of which nurses rarely speak and of which the possessor is probably unaware ...

Why modern doctors  
Have more leisure time  
For golf and cards

And things maritime  
Than ever before

In history  
While nurses don't,

Is a mystery.

Leisure Gap

*American Journal of Nursing*, January, 1969 (p. 212)

**Donahue, Mary Patricia** 1939–  
American nurse

Nursing has long been defined as both an art and a science. The primary emphasis, however, has been on the scientific aspects of nursing with little consideration given to its state as an art. Nursing is a fine art. According to Florence Nightingale, it is "the finest of the fine arts." Nursing is not merely a technique but a process that incorporates the elements of soul, mind, and imagination. Its very essence lies in the creative imagination, the sensitive spirit, and the intelligent understanding that provide the very foundation for effective nursing care. These have been captured consistently in a wide range of illustrative material that can greatly enhance the study of nursing history through visual representation. Every art gallery has its nursing saints, nurturing mothers, healing miracles, sick beds, and lying-in chambers. Many of the finest paintings and sculptures dealing with nursing subjects have been done by the "great masters" and contemporary artists. All of these serve to capture the art of nursing.

*Nursing, the Finest Art: An Illustrated History*

Preface to the First Edition (p. ix)

Mosby. St. Louis, Missouri, USA. 1996

**Euripides** ca. 480 BCE–406 BCE  
Greek playwright

Better be sick than tend the sick; the first is but a single ill, the last unites mental grief with manual toil.

In *Great Books of the Western World* (Volume 5)

*The Plays of Euripides*

Hippolytus, l. 186

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Hanson, Elayne Clipper**  
No biographical data available

It seems to be a well known fact  
That nurses fairly ooze with tact.

Their smiles so warm,  
 And full of charm,  
 Match voices, low  
 And movements slow.  
 Then why, if I may venture bold  
 Are nurses' hands so icy cold?

Paradox

*American Journal of Nursing*, March, 1969 (p. 672)

**Jewett, Sarah Orne** 1849–1909

American novelist and short story writer

She had no equal in sickness, and knew how to brew every old-fashioned dose and to make every variety of herb-tea, and when her nursing was put to an end by her patient's death, she was commander-in-chief at the funeral.

*Deephaven*

*Nursing, the Finest Art: An Illustrated History* (2nd edition)

Foreword (p. vii)

Mosby. St. Louis, Missouri, USA. 1996

**Leone, Lucile Petry** 1902–1999

American nurse

The horizon for nursing expands exhilaratingly.. The depth has not been sounded. So we explore depths and distances. The nugget of truth lies in the nurse-patient relation. The distant star is the health of the people.

In Gwendolyn Safier (ed.)

*Contemporary American Leaders in Nursing: An Oral History* (p. 179)

McGraw-Hill Book Co, Inc. New York, New York, USA. 1997

**Lewis, Lucille**

No biographical data available

The central focus of nursing is to help the person cope with his physiological, psychological, and spiritual reactions to health problems and maintain his integrity in these experiences. To be therapeutic, the nurse must con-

tribute to the wholeness of man, to the interrelationships of the parts to the whole, to the person's here-and-now as well as to his future, to the health of all the parts so that the person may attain and maintain his highest potential. All of these are essential.

This I Believe

*Nursing Outlook*, Volume 15, Number 5, May, 1968 (p. 27)

**Lindeman, Carol A.** 1935–

American nurse

Knowledge...has value if it serves as a guide to effective action in day-to-day reality. Contemporary nursing requires the use of all sources of knowledge in the moment-to-moment reality of a patient care situation.

*Fundamentals of Contemporary Nursing Practice*

Chapter 2 (p. 35)

W.B. Saunders Philadelphia, Pennsylvania, USA. 199p

**Lydston, George Frank** 1858–1923

American urologist

How absurd the situation! It is demanded that a woman should slave for three years and go through what would be a fair medical course, were it conscientiously given, for the privilege of finally earning a salary which, were she constantly employed – which, by the way, she never is – would just equal that of a good stenographer.

The Training School Fake and Its Victims

*New York Medical Journal*, Volume 79, 1904

**Manfreda, Margurite Lucy**

People turn to God in times of crisis, and illness is among those times when people feel the need for spiritual guidance. Nurses, therefore, are in a unique position to bring spiritual aid to their patients and to the patients' families.

In Sharon Fish and Judith Allen Shelly

*Spiritual Care: The Nurse's Role*

Chapter I (p. 17)

InterVarsity Press. Dover Grove, Illinois, USA. 1978

**Matthews, Marian**

No biographical data available

Where are the interns I recall?  
 Fountains of wisdom, one and all.  
 Men in white, mature and strong –  
 They were the Doctors, never wrong.  
 Something happened to them, or me;  
 They're not the giants they used to be.  
 With stethoscopes like shiny toys  
 They seem to me like little boys.  
 Excuse me for crying on your shoulder –  
 They're not younger – I am older.

Interns

*American Journal of Nursing*, November, 1968 (p. 2492)

**Mayo, Charles Horace** 1865–1939  
American physician

The trained nurse has given nursing the human, or shall we say, the divine touch, and made the hospital desirable for patients with serious ailments regardless of their home advantages.

The Trained Nurse  
*Collected Papers of the Mayo Clinic & Mayo Foundation*, Volume 13, 1921

**Nightingale, Florence** 1820–1910  
English nursing pioneer and statistician

For us who Nurse, our Nursing is a thing, which, unless in it we are making progress every year, every month, every week – take my word for it we are going back.

Address  
“Nightingale Fund” School  
St Thomas Hospital, 1872

Conceit and Nursing cannot exist in the same person any more than new patches on an old garment.

Address  
“Nightingale Fund” School  
St. Thomas Hospital, 1872

In watching disease, both in private houses and in public hospitals, the thing which strikes the experienced observer most forcibly is this, that the symptoms or the sufferings generally considered to be inevitable and incident to the disease are very often not symptoms of the disease at all, but of something quite different – of the want of fresh air, or of light, or of warmth, or of quiet, or of cleanliness, or of punctuality and care in the administration of diet, of each or of all of these. And this quite as much in private as in hospital nursing.

*Notes on Nursing: What It Is and What It Is Not*  
*Notes on Nursing: What It Is and What It Is Not* (p. 5)  
Harrison. London, England. 1859

I use the word nursing for want of a better. It has been limited to signify little more than the administration of medicines and the application of poultices. It ought to signify the proper use of fresh air, light, warmth, cleanliness, quiet, and the proper selection and administration of diet – all at the least expense of vital power to the patient. It has been said and written scores of times, that every woman makes a good nurse. I believe, on the contrary, that the very elements of nursing are all but unknown.

*Notes on Nursing: What It Is and What It Is Not*  
*Notes on Nursing: What It Is and What It Is Not* (p. 6)  
Harrison. London, England. 1859

Never to allow a patient to be wakened, intentionally or accidentally, is a sine qua non of all good nursing.

*Notes on Nursing: What It Is and What It Is Not*  
Noise (p. 25)  
Harrison. London, England. 1859

A nurse who rustles (I am speaking of nurses professional and unprofessional) is the horror of a patient, though perhaps he does not know why.

*Notes on Nursing: What It Is and What It Is Not*  
Noise (p. 27)  
Harrison. London, England. 1859

The most important practical lesson that can be given to nurses is to teach them what to observe – how to observe – what symptoms indicate improvement – what the reverse – which are of importance – which are of none – which are the evidence of neglect – and of what kind of neglect.

*Notes on Nursing: What It Is and What It Is Not*  
Chapter XIII (p. 59)  
Harrison. London, England. 1859

It seems a commonly received idea among men and even among women themselves that it requires nothing but a disappointment in love, the want of an object, a general disgust, or incapacity for other things to turn a woman into a good nurse.

*Notes on Nursing: What It Is and What It Is Not*  
Conclusion (p. 75)  
Harrison. London, England. 1859

**Nutting, Mary Adelaide**  
American nurse

**Dock, Lavinia L.**  
American nurse

Nursing is an art, and an art requiring an organised practical and scientific training. For nursing is the skilled servant of medicine, surgery, and hygiene.

*A History of Nursing* Volume 2  
Chapter III (p. 171)  
G.P. Putnam’s Sons. New York, New York, USA. 1907

**Osler, Sir William** 1849–1919  
Canadian physician and professor of medicine

...the trained nurse has become one of the great blessings of humanity, taking a place beside the physician and the priest, and not inferior to either in her mission.

*Aequanimitas, with Other Addresses to Medical Students, Nurses, and Practitioners of Medicine*  
Nurse and Patient (p. 156)  
The Blakiston Company. Philadelphia, Pennsylvania, USA. 1932

**Parsons, Sara Elisabeth** 1864–1949  
American nurse

If ever there was a profession that was a natural expression of a tendency born with most women to give love and service to the weak and suffering, it is nursing. If ever there was a profession that is acknowledged to be eminently suitable for women it is nursing. If ever there was a profession called into existence by the real needs of humanity, it is nursing. If ever there was a profession exalted by noble leadership, personifying spirituality, intellect and culture, all exemplified in a superlative degree by Florence Nightingale, it is nursing.

*Report*  
Address (p. 56)  
Williams & Wilkins Co. Baltimore, Baltimore, Maryland, USA. 1917

**Ray, John** 1627–1705  
English naturalist

A nurse's tongue is privileged to talk.  
*A Complete Collection of English Proverbs* (p. 17)  
Printed for G. Cowie. London, England. 1813

English novelist

Male nurses are unnatural creatures!  
*Sir Charles Grandison*  
Part 2, Volume 3, Letter XI (p. 58)  
G. Allen. London, England. 1895

**Roosevelt, Franklin Delano** 1882–1945  
32nd president of the USA

...I urge that the Selective Service Act be amended to provide for the induction of nurses into the armed forces...  
Annual Message to Congress  
January 6, 1945

**Ruth Watson Lubic** 1927  
American nurse

Nursing prepares you for excellence. Be proud you are a nurse.  
*Making Choices, Taking Chances: Nurse Leaders Tell Their Stories*  
Ruth Watson Lubic (p. 235)  
Mosby. St. Louis, Missouri, USA. 1988

**Schmitz, Jacqueline T.**  
No biographical data available

Compressing an hour into a half,  
Busy, yet heedful  
Rushes the nurse  
Bringing earnest solace to the  
Sick and the needful.  
Who must come first? How can she know?  
Inverted scope, focused by Death,  
Grants new perspective as He robs breath.  
Point of View  
*Journal of Nursing*, November, 1968 (p. 2492)

**Styles, Margaretta M.**  
No biographical data available

In the beginning, God created nursing.  
He (or She) said, I will take a solid, simple,  
significant system of *education* and an adequate,  
applicable base of clinical, and  
On these rocks, will I build My greatest gift  
to Mankind – nursing practice.  
On the seventh day, He – threw up His hands. And has  
left it up to us.  
*On Nursing: Toward a New Endowment* (p. 154)  
Mosby. St. Louis, Missouri, USA. 1982

## NURSING EDUCATION

**Tracy, Margaret Anthony** 1893–1959  
American Nurse

Ours is the fault if the student sees her patient as an “acute appendix” or a “fractured skull,” not as an individual with family and community relationships. As we help them acquire the very necessary skills which they need, to care for surgical patients, we must do so in a way which will also enable them to see those skills as a tool to help them in the role of teacher and promoter of the public health.

Supervision and Teaching of Surgical Nursing  
*The American Journal of Nursing* Volume 26, October, 1926 (p. 797)

## NURSING PLEDGE

**Gretter, Lystra Eggert** 1858–1951  
American nurse

I solemnly pledge myself before God, and in the presence of this assembly, to pass my life in purity and to practise my profession faithfully. I will abstain from whatever is deleterious and mischievous, and will not take or knowingly administer any harmful drug. I will do all in my power to maintain and elevate the standard of my profession and will hold in confidence all personal matters committed to my keeping and all family affairs coming to my knowledge in the practice of my calling. With loyalty will I endeavor to aid the physician in his work and devote myself to the welfare of those committed to my care.

In Lavinia L. Dock  
*A Short History of Nursing from the Earliest Times to the Present Day*  
Appendix II (p. 381)  
G.P. Putnam's Sons. New York, New York, USA. 1920

**Jones, Caldwell**  
No biographical data available

You do solemnly swear, each by whatever she holds most sacred:

That you will be loyal to the physicians under whom you serve, as a good soldier is loyal to his officers.

That you will be just and generous to all worthy members of your profession, hiding them when it will be in your power to do so.

That you will live your lives and lead your profession in uprightness and honour.

That into whatsoever house you shall enter, it shall be for the good of the sick to the utmost of your power, and that you will hold yourselves aloof from all temptation.

That whatsoever you shall see or hear of the lives of men and women, whether they be your patients or members

of their households, you will keep inviolably secret, whether you are in other households, or among your own friends.

In Lavinia L. Dock

*A Short History of Nursing from the Earliest Times to the Present Day*

Appendix II (pp. 381–382)

G.P. Putnam's Sons. New York, New York, USA. 1920

## NURSING PRAYER

**Clark, Mildred Irene** 1915–1994

American nurse

Hear my prayer in silence before Thee

As I ask for courage each day.

Grant that I may be worthy of the sacred pledge of my profession,

And the lives of those entrusted to my care.

Help me to offer hope and cheer in the hearts of men and my country.

For their faith inspires me to give the world and nursing my best.

Instill in me the understanding and compassion of those who led the way,

For I am thankful to You for giving me this life to live.

In Mary May Roberts

*The Army Nurse Corps: Yesterday and Today*

Army Nurse (p. 49)

US Army Nursing Corps. 1958

## NURSING STANDARDS

**Nutting, Mary Adelaide**

American nurse

I am not a worshipper at the shrine of uniformity, nor a believer in any system which is directed solely towards averaging up the capacities and powers of human beings, but in our education of nurses we have gone so far in the other direction, have had and still have so many and such wide diversities of opinion and method, that it has been difficult to say what our common standards really are.

*A Sound Economic Basis for Schools of Nursing and Other Addresses* (Volume 1)

Some Results of Preparatory Courses for Nurses (p. 91)

G.P. Putnam's Sons. New York, New York, USA. 1926

## NURSING, DEVELOPMENT OF

**Bullough, Bonnie** 1927–1996

American nurse

**Bullough, Vern** 1928–2006

American historian and sexologist

To explain the development of nursing it is necessary to consider a society's attitude toward its sick, its wounded, its mentally ill, toward its paupers and lepers, toward

the crippled and malformed, toward the infant and the infirm.

*The Emergence of Modern Nursing*

Preface (p. v)

The Macmillan Co. New York, New York, USA. 1964

It has often been said that modern nursing could not have developed independently of modern medicine, but... modern medicine could not have developed without the emergence of modern nursing.

*The Emergence of Modern Nursing*

Preface (p. v)

The Macmillan Co. New York, New York, USA. 1964

## NURSING, IMAGE OF

**McBride, Angela Barron** 1941–

American nurse

The best way to improve the image of nursing is for all nurses to become image makers.

In Thelma M. Schorr and Anne Zimmerman

*Making Choices, Taking Chances: Nurse Leaders Tell Their Stories*

Angela Barron McBride (p. 265)

Mosby. St. Louis, Missouri, USA. 1988

## NURTURE

**Thomson, Sir John Arthur** 1861–1933

Scottish naturalist

Our inheritances are diverse and unequal, and they limit us; yet much can be gained by “nurture” and much lost for the lack of it.

*Introduction to Science*

Chapter I (p. 32)

Henry Holt & Co. New York, New York, USA. 1911

## NUTRITION

**Coleridge, Samuel Taylor** 1772–1834

English lyrical poet, critic, and philosopher

...nutrition by digestion is certainly necessary to life, only under certain circumstances, but that life is previously necessary to digestion is absolutely certain under all circumstances.

*Hints Towards the Formation of a More Comprehensive Theory of Life*

The Nature of Life (p. 26)

John Churchill. London, England. 1847

**Davis, Adelle** 1904–74

Nutritionist

Nutrition is a young subject; it has long been kicked around like a puppy that cannot take care of itself. Food faddists and crackpots have kicked it pretty cruelly.... They seem to believe that unless food tastes like Socratic hemlock, it cannot build health. Frankly, I often wonder

what such persons plan to do with good health in case they acquire it.

*Let's Eat Right to Keep Fit*

Chapter 1 (p. 3)

New American Library. New York, New York, USA. 1970

...eat breakfast like a king, lunch like a prince, and dinner like a pauper.

*Let's Eat Right to Keep Fit*

Chapter 2 (p. 19)

New American Library. New York, New York, USA. 1970

## O

### OBJECT

#### **Tillman, Samuel D.**

No biographical data available

...above and below the narrow zone of the visible are objects too far off and too fine for human scrutiny. Although the SEEMING ALL is rounded by intimations of other and brighter regions, Science can never compass them by any extension of her domain! In those unsounded depths which form the boundary and background of the known, thought grown dizzy finds no support...

Atoms and Molecules

*The American Chemist*, Volume 2, Number 10, April, 1872 (p. 362)

### OBJECTION

#### **Spencer, Herbert** 1829–1903

English social philosopher

When made by a competent reader, an objection usually implies one of two things. Either the statement to which he demurs is wholly or partially untrue; or, if true, it is presented in such a way as to permit misapprehensions.

Replies to Criticism

*The Popular Science Monthly*, Volume IV December, 1873 (p. 295)

### OBJECTIVENESS

#### **Pavlov, Ivan Petrovich** 1849–1936

Russian physiologist

Do not allow haughtiness to take you in possession. Due to that you will refuse useful advice and friendly help, you will lose the standard of objectiveness.

Bequest of Pavlov to the Academic Youth of His Country  
*Science*, Volume 83, Number 2155, April 17, 1936 (p. 369)

### OBJECTIVITY

#### **Gould, Stephen Jay** 1941–2002

American paleontologist and evolutionary biologist

Objectivity is not an unobtainable emptying of mind, but a willingness to abandon a set of preferences – for or against some view, as Darwin said – when the world seems to work in a contrary way.

*Dinosaur in a Haystack: Reflections in Natural History*

Part Three, Chapter 11 (p. 136)

Random House, Inc. New York, New York, USA. 1995

Objectivity cannot be equated with mental blankness; rather, objectivity resides in recognizing your prefer-

ences and then subjecting them to especially harsh scrutiny – and also in a willingness to revise or abandon your theories when the tests fail (as they usually do).

*The Lying Stones of Marrakech: Penultimate Reflections in Natural History*

The Proof of Lavoisier's Plates (pp. 104–105)

Harmony Books. New York, New York, USA. 2000

#### **Schiebinger, Londa** 1952–

American professor and writer of science history

Objectivity in science cannot be proclaimed, it must be built.

*Nature's Body: Gender in the Making of Modern Science*

Chapter 3 (p. 114)

Beacon Press. Boston, Massachusetts, USA. 1993

### OBSCURATIONISM

#### **Dawkins, Richard** 1941–

English ethologist, evolutionary biologist, and popular science writer

Dawkin's Law of the Conservation of Difficulty states that obscuratationism in an academic subject expands to fill the vacuum of its intrinsic simplicity.

*A Devil's Chaplain: Reflections on Hope, Lies, Science, and Love* (p. 8)

Houghton Mifflin Company. Boston, Massachusetts, USA. 2003

### OBSCURITY

#### **Pearson, Karl** 1857–1936

English mathematician

The obscurity which envelops the *principia* of science is not only due to an historical evolution influenced by the authority which attaches even to the phraseology used by great discoverers, but to the fact that science, as long as it had to carry on a difficult warfare with metaphysics and dogma, like a skilful general conceived it best to hide its own deficient organisation.

*The Grammar of Science* (2nd edition)

Preface to the First Edition (p. x)

Adam & Charles Black. London, England. 1900

### OBSERVATION

#### **Abbott, Donald Putnam** 1920–86

American marine biologist and professor

Get the experience of looking at fresh things. If you watch live animals, you gain clearer insights in shorter time than you would watching dead animals for much longer.

In Galen Howard Hilgard (ed.)

*Observing Marine Invertebrates: Drawings from the Laboratory*

Author's Preface (p. xvi)

Stanford University Press. Stanford, California, USA. 1987

**Adams, Douglas** 1952–2001  
English author, comic radio dramatist, and musician

...a scientist must also be absolutely like a child. If he sees a thing, he must say that he sees it, whether it was what he thought he was going to see or not. See first, think later, then test. But always see first. Otherwise you will only see what you were expecting.

*The Ultimate Hitchhiker's Guide to The Galaxy*

*So Long and Thanks for All the Fish*

Chapter 31 (p. 587)

The Ballantine Book Company. New York, New York, USA. 2002

See first, think later, then test. But always see first. Otherwise you will only see what you were expecting. Most scientists forget that.

*So Long, and Thanks for All the Fish*

Chapter 31 (p. 161)

Harmony Books. New York, New York, USA. 1984

**Altmann, Jeanne**  
Biologist

The true situation may be the opposite of the apparent one.

*Baboon Mothers and Infants*

Introduction (p. 6)

The University of Chicago Press. Chicago, Illinois, USA. 1980

**Anscombe, Francis John** 1918–2001  
English-born American statistician

No observations are absolutely trustworthy.

Rejection of Outliers

*Technometrics*, Volume 2, Number 2, May, 1960 (p. 124)

**Ansted, David Thomas** 1814–80  
English geologist

There is much to be learned even from the very simplest things in nature, and when we begin to inquire about such of them as are seen and made use of every day, it is astonishing how little is really known, even by well-informed persons, and how large is the field of observation.

*Geological Gossip: Or, Stray Chapters on Earth and Ocean*

Chapter I (p. 1)

Routledge, Warne & Routledge. London, England.

**Argelander, Friedrich Wilhelm August** 1799–1875  
German astronomer

Observations buried in a desk are no observations.

In Harlow Shapley and Helen E. Howarth

*The Meditations of Marcus Aurelius*

Book IV, # 10 (p. 264)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### Author Undetermined

I am an observation.

I was captured in the Field.

My conscience said ‘co-operate’

My instinct said ‘don't yield’.

But I yielded up my data

Now behold my sorry plight

I'm part of a statistic

Which is not a pretty sight.

The Bootstrap and the Jackknife

Oh, the tortures I've endured

They analyze my variance

Until my meaning is obscured.

But I've a plan to beat them

I'll climb up in the trees

Pretend I am a chi-square

And get freedom by degrees.

Source undetermined

**Ayres, Clarence Edwin** 1891–1972  
No biographical data available

When Moses emerged from the cloudy obscurity of Mount Sinai and stood before the people with the stone tablets in his hand, he announced that his laws were based on direct observation. It is not recorded that anyone doubted him.

*Science: The False Messiah*

Chapter III (p. 42)

**Baker, Henry** 1698–1774  
English naturalist

Beware of determining and declaring your Opinion suddenly on any Object; for Imagination often gets the Start of judgment, and makes People believe they see Things, which better Observations will convince them could not possibly be seen: Therefore assert nothing till after

repeated Experiments and Examinations in all Lights and in all Positions.

*The Microscope Made Easy*

Part I, Chapter XV, Cautions in Viewing Objects (p. 62)

Printed for R. Dodsley. London, England. 1743

### **Bauer, Georg (Agricola or Georgius**

**Agricola)** 1494–1555

German scholar and scientist

I have omitted all those things which I have not myself seen, or have not read or heard of from persons upon whom I can rely. That which I have neither seen, nor carefully considered after reading or hearing of, I have not written about. The same rule must be understood with regard to all my instruction, whether I enjoin things which ought to be done, or describe things which are usual, or condemn things which are done.

*De Re Metallica*

Preface (pp. xxx–xxxii)

Dover Publications, Inc. New York, New York, USA. 1950

### **Bergman, Torbern Olaf** 1735–84

Swedish chemist and naturalist

A vast number of observations without order or regularity is not unlike a confused heap of stones, lime, beams, and rafters requisite for constructing an edifice, but which being combined with no skill fail in producing the proposed effect.

Quoted in Joseph William Mellor

*A Comprehensive Treatise on Inorganic and Theoretical Chemistry* (Volume 1)

Chapter I (p. 9)

Longman, Green, & Co. London, England. 1922

### **Berkeley, George** 1685–1753

Irish prelate and metaphysical philosopher

...the largest views are not always the clearest, and that he who is short-sighted will be obliged to draw the object nearer, and may, perhaps, by a close and narrow survey, discern that which had escaped far better eyes.

*A Treatise Concerning the Principles of Human Knowledge*

Introduction (p. 7)

The Open Court Publishing Co. Chicago, Illinois, USA. 1904

... a mind at liberty to reflect on its own observations, if it produce nothing useful to the world, seldom fails of entertainment to itself.

*The Works of George Berkeley* (Volume 2)

First Dialogue (p. 32)

At The Clarendon Press. Oxford, England. 1901

### **Bernard, Claude** 1813–78

French physiologist

Only within very narrow boundaries can man observe the phenomena which surround him; most of them naturally escape his senses, and mere observation is not enough.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Part One, Chapter I (p. 5)

Henry Schuman, Inc. New York, New York, USA. 1927

Men sometimes seem to confuse experiment with observation.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Part One, Chapter I (p. 6)

Henry Schuman, Inc. New York, New York, USA. 1927

Observation, then, is what shows facts.; experiment is what teaches about facts and gives experience in relation to anything.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Part One, Chapter I, Section ii (p. 11)

Henry Schuman, Inc. New York, New York, USA. 1927

Speaking concretely, when we say “making experiments or making observations,” we mean that we devote ourselves to investigation and to research, that we make attempts and trials in order to gain facts from which the mind, through reasoning, may draw knowledge or instruction.

Speaking in the abstract, when we say, “relying on observation and gaining experience,” we mean that observation is the mind’s support in reasoning, and experience the mind’s support in deciding, or still better, the fruit of exact reasoning applied to the interpretation of facts.

Observation, then, is what shows facts; experiment is what teaches about facts and gives experience in relation to anything.

Translated by Henry Copley Greene

D. Appleton & Company. New York, New York, USA. 1896

**Davis, William Morris** 1850–1934  
American geographer, geologist, and teacher

...if earth-science were really limited to facts of direct observation, it would be at best a dreary subject.

How uninspiring would be such a knowledge of tides as could be gained only by actual observation along the seashore! A collection of such records would be like an orphanage, where the foundlings are doubtless well cared for and thoroughly drilled in their little duties, and yet left without the inspiriting, enlarging influence of parental care that they find on adoption into the family of earth, moon, and sun.

*Congress of Arts and Science: Universal Exposition, St. Louis, 1904*  
Volume 4  
The Relations of the Earth-Sciences in View of Their Progress in the Nineteenth Century (p. 489)  
Houghton Mifflin & Co. Boston, Massachusetts, USA. 1906

**Davy, Sir Humphry** 1778–1829  
English chemist

The grandest as well as the most correct views are those that have been gained by minute observation, and by the application of all the more precise and accurate methods of science.

*The Collected Works of Sir Humphry Davy* (Volume 1)  
*Memories of the Life of Sir Humphry Davy*  
Chapter III (p. 153)  
Smith, Elder & Company. London, England. 1839–1849

American physician

If observation be the soil, reading is the manure of intellectual culture.

*Physician to the West: Selected Writings of Daniel Drake on Science and Society* (p. 307)  
University Press of Kentucky. Lexington, Kentucky, USA. 1970

**du Noüy, Pierre Lecomte** 1883–1947  
French scientist

...I said that an observed fact only becomes a scientific fact when all the observers are in unanimous agreement.

*The Road to Reason*

Chapter I (pp. 29–30)

Longmans, Green & Company. London, England. 1949

**Dumas, Jean Baptiste-Andre** 1800–84  
French biochemist

The art of observation and that of experimentation are very distinct. In the first case, the fact may either proceed from logical reasons or be mere good fortune; it is sufficient to have some penetration and a sense of truth in order to profit by it. But the art of experimentation leads from the first to the last link of the chain, without hesitation and without a blank, making successive use of Reason, which suggests an alternative, and of Experience, which decides on it, until, starting from a faint glimmer, the full blaze of light is reached.

In Sir Richard Arman Gregory

*Discovery; or, The Spirit and Service of Science*

Chapter VI (p. 126)

Macmillan & Company Ltd. London, England. 1918

**Durkheim, Emile** 1858–1917  
French sociologist

Even one well-made observation will be enough in many cases, just as one well-constructed experiment often suffices for the establishment of a law.

Translated by Sarah A. Solovay and John H. Mueller

*The Rules of Sociological Method*

Chapter IV (p. 80)

The Free Press. Glencoe, Illinois, USA. 1938

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

We should be unwise to trust scientific inference very far when it becomes divorced from opportunity for observational test.

*The Internal Constitution of the Stars*

Chapter I (p. 1)

At The University Press. Cambridge, England. 1930

For the truth of the conclusions of physical science, observation is the supreme Court of Appeal. It does not follow that every item which we confidently accept as physical knowledge has actually been certified by the Court; our confidence is that it would be certified by the Court if it were submitted. But it does follow that every item of physical knowledge is of a form which might be submitted to the Court. It must be such that we can specify (although it may be impracticable to carry out) an observational procedure which would decide whether it is true or not. Clearly a statement cannot be tested by observation unless it is an assertion about the results of observation.

Every item of physical knowledge must therefore be an assertion of what has been or would be the result of carrying out a specified observational procedure.

*The Philosophy of Physical Science*

Chapter I, Section IV (pp. 9–10)

The Macmillan Company. New York, New York, USA. 1939

Let us suppose that an ichthyologist is exploring the life of the ocean. He casts a net into the water and brings up a fishy assortment. Surveying his catch, he proceeds in the usual manner of a scientist to systematise what it reveals...In applying this analogy, the catch stands for the body of knowledge which constitutes physical science, and the net for the sensory and intellectual equipment which we use in obtaining it. The casting of the net corresponds to observation; for knowledge which has not been or could not be obtained by observation is not admitted into physical science.

*The Philosophy of Physical Science*

Chapter II, Section I (p. 16)

The Macmillan Company. New York, New York, USA. 1939

I hope I shall not shock the experimental physicists too much if I add that it is also a good rule not to put over-much confidence in the observational results that are put forward until they have been confirmed by theory...

*New Pathways In Science*

Chapter X, Section II (p. 211)

The Macmillan Company. New York, New York, USA. 1935

There are two parties to every observation – the observed and the observer.

*Space, Time and Gravitation*

Chapter II (p. 30)

At the University Press. Cambridge, England. 1921

**Einstein, Albert** 1879–1955  
German-born physicist

It is the theory which decides what we can observe.

In Werner Heisenberg

*Physics and Beyond: Encounters and Conversations*

Chapter 6 (p. 77)

Harper & Row, Publishers. New York, New York, USA. 1971

A man should look for what is, and not for what he thinks should be...

In Peter Michelmoro

*Einstein, Profile of the Man* (p. 20)

Dodd & Mead Publishers. New York, New York, USA. 1962

**Euler, Leonhard** 1707–83  
Swiss mathematician and physicist

It will seem not a little paradoxical to ascribe a great importance to observations even in that part of the mathematical sciences which is usually called Pure Mathematics, since the current opinion is that observations are restricted to physical objects that make impressions on the senses.

In G. Polya

*Induction and Analogy in Mathematics* (Volume 1)  
Chapter I (p. 3)  
Princeton University Press. Princeton, New Jersey, USA. 1954

...in the theory of numbers, which is still very imperfect, we can place our highest hopes in observations; they will lead us continually to new properties which we shall endeavor to prove afterwards.

In G. Polya  
*Induction and Analogy in Mathematics* (Volume 1)  
Chapter I (p. 3)  
Princeton University Press. Princeton, New Jersey, USA. 1954

**Faraday, Michael** 1791–1867  
English physicist and chemist

...the mind of man is not confined like the matter of his body, and thus he may and does travel outwards, for wherever his sight can pierce, there his observations can penetrate ...

In William Crookes  
*A Course of Six Lectures on the Various Forces of Matter and Their Relations to Each Other*  
Lecture 1 (p. 6)  
Richard Griffin & Co. London, England. 1860

**Fischer, Martin H.** 1879–1962  
German-American physician

You must acquire the ability to describe your observations and your experience in such language that whoever observes or experiences similarly will be forced to the same conclusion.

In Howard Fabing and Ray Marr  
*Fischerisms* (p. 8)  
C.C. Thomas. Springfield, Illinois, USA. 1944

**Faraday, Michael** 1791–1867  
English physicist and chemist

If in such strivings, we...see but imperfectly, still we should endeavor to see, for even an obscure and distorted vision is better than none.

On the Conservation of Force  
*Philosophical Magazine*, Volume 13, Number 4, 1857 (p. 238)

**Feynman, Richard P.** 1918–88  
American theoretical physicist

The principle that the observation is the judge imposes a severe limitation to the kind of questions that can be answered. They are limited to questions that you can put this way: "if I do this, what will happen?" There are ways to try and see. Questions like, "should I do this?" and "what is the value of this?" are not of the same kind.

*The Meaning of It All: Thoughts of a Citizen Scientist*  
Chapter I (p. 16)  
Perseus Books. Reading, Massachusetts, USA. 1998

**Galilei, Galileo** 1564–1642  
Italian physicist and astronomer

It is not in ancient tomes, but in close observations and personal consecration that a grain of truth may be found.

It is so very easy to seek the significance of things in the papers of this or that man rather than in the works of nature which, ever alive and active, are constantly before our eyes.

In Helen Wright  
*Palomar: The World's Largest Telescope*  
Origin of the Telescope (p. 9)  
The Macmillan Company. New York, New York, USA. 1952

...to command the professors of astronomy to confute their own observations is to enjoin an impossibility, for it is to command them not to see what they do see ...

*The World's Greatest Books* (Volume 13) (p. 175)  
McKinley, Stoke & Mackekzu. 1910

**Gide, Andre** 1869–1951  
French author

On carelessly made or insufficient observations how many fine theories are built up which do not bear examination.

Translated by Justin O'Brien  
*Journals* (Volume 3)  
August 5, 1931 (p. 182)  
University of Illinois Press. Urbana, Illinois, USA. 2000

**Gore, George** 1826–1909  
English electrochemist

Observation differs from experiment. By experiment we evolve facts, by observation we find them.

*The Art of Scientific Discovery*  
Part III, Chapter XXXIIIIV (p. 316)  
Longmans, Green & Co. London, England. 1878

**Gregory, Sir Richard Arman** 1864–1952  
English scientific writer and journalist

It may be impossible for human intelligence to comprehend absolute truth, but it is possible to observe Nature with an unbiased mind and to bear truthful testimony of things seen.

*Discovery, Or, The Spirit and Service of Science*  
Chapter II (p. 26)  
Macmillan & Co Ltd. London, England. 1916

**Greer, Scott**  
No biographical data available

...the link between observation and formulation is one of the most difficult and crucial in the scientific enterprise. It is the process of interpreting our theory or, as some say, of "operationalizing our concepts." Our creations in the world of possibility must be fitted in the world of probability; in Kant's epigram, "Concepts without precepts are empty." It is also the process of relating our observations to theory; to finish the epigram, "Precepts without concepts are blind."

*The Logic of Social Inquiry*  
Part III, Chapter 14 (p. 160)  
Aldine Publishing Company. Chicago, Illinois, USA. 1969

**Gregg, Alan** 1890–1957

American medical educator and philosopher

...most of the knowledge and much of the genius of the research worker lie behind selection of what is worth observing. It is a crucial choice, often determining the success or failure of months of work, often differentiating the brilliant discoverer from the...plodder.

*The Furtherance of Medical Research*

Chapter I (p. 8)

Yale University Press. New Haven, Connecticut, USA. 1941

**Gregory, Sir Richard Arman** 1864–1952

British science writer and journalist

In the world of natural knowledge, no authority is great enough to support a theory when a crucial observation has shown it to be untenable.

*Discovery; or, The Spirit and Service of Science*

Chapter I (p. 12)

Macmillan &amp; Company Ltd. London, England. 1918

An accurate observation remains unaltered throughout the ages. Its scientific value is determined by its truth to Nature; and the more complete the testimony, the less room is there for elaboration by investigators in succeeding generations.

*Discovery; or, The Spirit and Service of Science*

Chapter IV (p. 70)

Macmillan &amp; Company Ltd. London, England. 1918

**Grew, Nehemiah** 1641–1712

Scientific writer and journalist

If...an inquiry into the Nature of Vegetation may be of good Import; It will be requisite to see, first of all, What may offer itself to be enquired of; or to understand, what or Scope is: That so doing, we may take our aim the better in making, and having made, in applying our Observations thereunto.

*The Anatomy of Plants*

An Idea of a Philosophical History of Plants (p. 3)

Printed by W. Rawlins. London, England. 1682

**Hales, Stephen** 1677–1761

English physiologist and clergyman

...it is from long experience chiefly that we are to expect the most certain rules of practice, yet it is withal to be remembered, that observations, and to put us upon the most probable means of improving any art, is to get the best insight we can into the nature and properties of those things which we are desirous to cultivate and improve.

*Vegetable Statics*

The Conclusion (p. 214)

The Scientific Book Guild. London, England. 1961

**Hamilton, Sir William Rowan** 1805–65

Anglo-Irish mathematician, physicist, and astronomer

...in every science which rests partly on the observation of nature, and not solely on the mind of man, a faith in

testimony is required, that the human race may not be stationary, and that the accumulated treasures of one man or of one generation of men may not be lost to another ...

*Report of the Fifth Meeting of the British Association for the Advancement of Science*

Address by Sir William Hamilton (p. xliii)

John Murray. London, England. 1836

**Hanson, Norwood Russell** 1924–67

American philosopher of science

...there is more to seeing than what meets the eyeball.

*Patterns of Discovery*

Chapter I (p. 7)

At The University Press. Cambridge, England. 1958

The observer may not know what he is seeing: he aims only to get his observations to cohere against the background of established knowledge. This seeing is the goal of observation.

*Patterns of Discovery*

Chapter I (p. 20)

At The University Press. Cambridge, England. 1958

**Harvey, William** 1578–1657

English physician

...the dull and unintellectual are indisposed to see what lies before their eyes...

*In Great Books of the Western World* (Volume 28)*An Anatomical Disquisition on the Motion of the Heart and Blood in Animals*

Dedication (p. 268)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

This assumption is not permissible in atomic physics; the interaction between observer and object causes uncontrollable and large changes in the system being observed, because of the discontinuous changes characteristic of atomic processes.

*The Physical Principles of the Quantum Theory*

Introductory (p. 3)

The University of Chicago Press. Chicago, Illinois, USA. 1930

This again emphasizes a subjective element in the description of atomic events, since the measuring device has been constructed by the observer, and we have to remember that what we observe is not nature in itself but nature exposed to our method of questioning.

*Physics and Philosophy: The Revolution in Modern Science*

Chapter III (p. 58)

Harper &amp; Row, Publishers. New York, New York, USA. 1958

...what we observe is not nature itself, but nature exposed to our method of questioning.

*Physics and Philosophy: The Revolution in Modern Science*

Chapter III (p. 58)

Harper &amp; Row, Publishers. New York, New York, USA. 1958

The idea that we do observe something already indicates something irreversible. If we draw a pencil line

on a paper, for instance, we have established something which cannot be undone, so to speak. Every observation is irreversible, because we have gained information that cannot be forgotten.

In Paul Buckley and F. David Peat

*Glimpsing Reality: Ideas in Physics and the Link to Biology*

Werner Heisenberg (p. 12)

University of Toronto Press, Toronto, Ontario, Canada. 1996

A real difficulty in the understanding of this interpretation arises, however, when one asks the famous question: But what happens “really” in an atomic event? It has been said before that the mechanism and the results of an observation can always be stated in terms of the classical concepts. But what one deduces from an observation is a probability function, a mathematical expression that combines statements about possibilities or tendencies with statements about our knowledge of facts. So we cannot completely objectify the result of an observation, we cannot describe what “happens” between this observation and the next.

In T. Ferris (ed.)

*World Treasury of Physics, Astronomy, and Mathematics*

The Copenhagen Interpretation of Quantum Mechanics (pp. 90–91)

Little, Brown & Company, Boston, Massachusetts, USA. 1991

### von Helmholtz, Robert

No biographical data available

To observe is to notice, and to collect what you have noticed. In proportion however as the collecting of things is done according to higher and higher standards, observation comes nearer to thinking, collecting approaches interpretation, and natural history verges into exact study of nature.

*Annual Report of the Board of Regents of the Smithsonian Institution,*

1889

A Memoir of Gustav Robert Kirchhoff (p. 528)

Government Printing Office, Washington, D.C. 1889

### Herschel, Friedrich Wilhelm

(Sir William) 1738–1822

English astronomer

If I should mention any observations that are difficult to be verified I beg the indulgence of observers. I hope it will be found that I have sufficiently guarded against optical illusions, and that I have all along had truth and reality in view as the sole object of my endeavors.

On the Parallax of the Fixed Stars

*Philosophical Transactions of the Royal Society of London,*

Volume 72, 1782 (p. 98)

A little practice in this business [looking through a telescope] soon makes it easy, especially to one who has already been used to look with both eyes open.

Description of a Lamp Micrometer, and the Method of Using It

*Philosophical Transactions of the Royal Society of London,*

Volume 72, 1782 (p. 170)

Familiar objects and events are far from presenting themselves to our senses in that aspect and with those connections under which science requires them to be viewed, and which constitute their rational explanation.

*Outlines of Astronomy: By Sir John F. W. Herschel*

Introduction (p. 21)

American Home Library Co. New York, New York, USA. 1902

### Herschel, Sir John Frederick William 1792–1871

English astronomer and chemist

There is scarcely any well-informed person, who, if he has but the will, has not also the power to add something essential to the general stock of knowledge, if he will only observe regularly and methodically some particular class of facts which may most excite his attention...

*A Preliminary Discourse on the Study of Natural Philosophy*

Part II, Chapter IV, Section 128 (p. 133)

Printed for Longman, Rees, Orme, Brown & Green, London, England. 1831

Seeing is in some respects an art which must be learnt. To make a person see with such a power is nearly the same as if I were asked to make him play one of Handel’s fugues upon the organ. Many a night I have been practicing to see, and it would be strange if one did not acquire a certain dexterity by such constant practice.

In William Hoyt

*Planets X and Pluto*

Chapter 1 (p. 12)

The University of Arizona Press, Tucson, Arizona, USA. 1981

### Hinshelwood, Sir Cyril 1897–1967

English chemist

Again and again, the key to a great discovery has been an unexpected observation.

Science and Scientists

### Hobbs, William Herbert 1864–1952

American geologist

It is a truism that the influence of things seen is more potent than that of things merely heard of or read about.

*Characteristics of Existing Glaciers*

Introduction (p. 2)

The Macmillan Co. New York, New York, USA. 1911

### Holton, Gerald 1922–

Research professor of physics and science history

### Roller, Duane H. D. ?–1994

Science historian

All intelligent endeavor stands with one foot on observation and the other on contemplation.

*Foundations of Modern Physical Science*

Chapter 13 (p. 218)

Addison-Wesley Publishing Company, Reading, Massachusetts, USA. 1950

**Hooke, Robert** 1635–1703  
English physicist

The truth is, the Science of Nature has been already too long made only a work of the Brain and the Fancy: It is now high time that it should return to the plainness and soundness of Observations on material and obvious things.

*Micrographia*

Preface (Fifth page)

Printed by Jo. Martyn and Ja. Allestry. London, England. 1665

**Hoyle, Sir Fred** 1915–2001  
English mathematician and astronomer

You take a number of radioactive nuclei of a particular kind, the number being chosen so that there's an even chance of one of them going off in a certain period of time, say ten seconds. Then for ten seconds you surround them with counters, or any other detecting device you might like to use. At the end of the time the question is, has one of them decayed or not. To decide this you take a look at your counters. The conventional notion is that the state of the counters decides whether a nucleus has gone off or not...my problem now concerns an individual case.... It is perfectly possible to put your counters, or your bubble chamber, your camera, all your gobbledygook in fact, into your calculations – and we know quite definitely that any attempt to get a definite answer out of calculation will prove completely fruitless. The thing that gives the answer isn't the camera or the counter, it's the actual operation of looking yourself at your equipment. It seems that only when we ourselves take a subjective decision can we improve our description of the world, over and above the uncertainty of our theories. I'm talking about quantum theories now.

*October the First Is Too Late*

Chapter Five (pp. 52–53)

Harper & Row, Publishers. New York, New York, USA. 1966

**Hubble, Edwin Powell** 1889–1953  
American astronomer

...observation and theory are woven together, and it is futile to attempt their complete separation. Observation always involve theory. Pure theory may be found in mathematics, but seldom in science. Mathematics, it has been said, deals with possible worlds – logically consistent systems. Science attempts to discover the actual world we inhabit. So in cosmology, theory presents an infinite array of possible universes, and observation is eliminating them, class by class, until now the different types among which our particular universe must be included have become increasingly comprehensible.

*The Realm of the Nebulae*

Chapter I (p. 35)

Dover Publications, Inc. New York, New York, USA. 1958

**Huxley, Thomas Henry** 1825–95  
English biologist

There is no question in the mind of anyone acquainted with the facts that, so far as observation and experiment can take us, the structure and the functions of the nervous system are fundamentally the same in an ape, or in a dog, and in a man. And the suggestion that we must stop at the exact point at which direct proof fails us, and refuse to believe that the similarity which extends so far stretches yet further, is no better than a quibble. Robinson Crusoe did not feel bound to conclude, from the single human footprint which he saw in the sand that the maker of the impression had only one leg.

*Hume, with Helps to the Study of Berkeley* (p. 123)

D. Appleton & Company. New York, New York, USA. 1896

**James, William** 1842–1910  
American philosopher and psychologist

Roundabout the accredited and orderly facts of every science there ever floats a sort of dust-cloud of exceptional observations, of occurrences minute and irregular and seldom met with, which it always proves more easy to ignore than to attend to... Anyone will renovate his science who will steadily look after the irregular phenomena, and when science is renewed, its new formulas often have more of the voice of the exceptions in them than of what were supposed to be the rules.

*The Will to Believe and Other Essays in Popular Philosophy*

What Psychical Research Has Accomplished (pp. 299, 300)

Longmans, Green & Co. New York, New York, USA. 1919

**Jeans, Sir James Hopwood** 1877–1946  
English physicist and mathematician

Each observation destroys the bit of the universe observed, and so supplies knowledge only of a universe which has already become past history...

*The New Background of Science*

Chapter I (p. 2)

The University of Michigan Press. Ann Arbor, Michigan, USA. 1959

We can only see nature blurred by the clouds of dust we ourselves make; we can still only see the rainbow, but a sun of some sort must exist to produce the light by which we see it.

*The New Background of Science*

Chapter I (p. 4)

The University of Michigan Press. Ann Arbor, Michigan, USA. 1959

**Jeffreys, Sir Harold** 1891–1989  
English astronomer and geophysicist

An observation, strictly, is only a sensation. Nobody means that we should reject everything but sensations. But as soon as we go beyond sensations we are making inferences.

*Theory of Probability*

General Questions (p. 412)

Clarendon Press. Oxford, England. 1961

**Jevons, William Stanley** 1835–82  
English economist and logician

It is difficult to find persons who can with perfect fairness register facts for and against their own peculiar views. Among uncultivated observers the tendency to remark favourable and forget unfavourable events is so great, that no reliance can be placed upon their supposed observations.

*The Principles of Science: A Treatise on Logic and Scientific Method*  
(2nd edition)  
Book IV, Chapter VIII (p. 402)  
Macmillan & Co Ltd. London, England. 1877

**Jones, Steve**  
No biographical data available

Observation and experiment are what count, not opinion and introspection. Few working scientists have much respect for those who try to interpret nature in metaphysical terms. For most wearers of white coats, philosophy is to science as pornography is to sex: it is cheaper, easier, and some people seem, bafflingly, to prefer it. Outside of psychology it plays almost no part in the functions of the research machine.

Review of *How the Mind Works* by Steve Pinker  
*The New York Review of Books*, November 6, 1997 (p. 13)

**Jonson, Ben** 1573–1637  
English dramatist and poet

...let me alone to observe, till I turned myself into nothing but observation.

*The Poetaster*  
Act II, Scene I, l. 193  
Henry Holt & Company. New York, New York, USA. 1905

**Kearton, Richard** 1862–1928  
English naturalist

Nature's children do not reveal their intimate ways to the bustling, human noise-maker, and he who would seek to know something of their interesting daily doings must first of all acquire the faculty to observe whilst remaining unobserved, and hear without being heard.

*Wild Nature's Ways*  
Chapter I (p. 1)  
Cassell & Co., Ltd. London, England. 1903

**Kett, Henry** 1761–1825  
English college teacher and writer

It is the glorious privilege of man, while other animals are confined within the limits which instinct has prescribed, to carry his observations beyond his own immediate wants, and to contemplate the universe at large.

*Elements of General Knowledge* (Volume 2)  
Chapter IV (p. 88)  
Printed by E. Bronson. Philadelphia, Pennsylvania, USA. 1805

Objects that are open to daily observation lose their effect upon our minds; but such as are rare and uncommon seldom fail to strike us with admiration.

*Elements of General Knowledge* (Volume 2)  
Chapter IV (p. 100)  
Printed by E. Bronson. Philadelphia, Pennsylvania, USA. 1805

**Kolb, Edward W. (Rocky)** 1951–  
American cosmologist

The art of science is knowing which observations to ignore and which are the key to the puzzle.

*Blind Watchers of the Sky*  
Chapter Seven (p. 189)  
Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

**Kuhn, Thomas S.** 1922–96  
American historian of science

Observation and experience can and must drastically restrict the range of admissible scientific belief, else there would be no science. But they cannot alone determine a particular body of such belief. An apparently arbitrary element, compounded of personal and historical accident, is always a formative ingredient of the beliefs espoused by a given scientific community at a given time.

*The Structure of Scientific Revolutions*  
Chapter I (p. 4)  
The University of Chicago Press. Chicago, Illinois, USA. 1970

**Langer, Susanne Katherina Knauth** 1895–1985  
American philosopher

The faith of scientists in the power of mathematics is so implicit that their work has gradually become less and less observation, and more and more calculation. The promiscuous collection and tabulation of data have given way to a process of assigning possible meanings, merely supposed real entities, to mathematical terms, working out the logical results, and then staging certain crucial experiments to check the hypothesis against the actual, empirical results. But the facts...accepted by virtue of these tests are not actually observed at all.

*Philosophy in a New Key*  
Chapter I (pp. 19–20)  
Harvard University Press. Cambridge, Massachusetts, USA. 1957

Observation has become almost entirely indirect; and readings take the place of genuine witness.

*Philosophy in a New Key*  
Chapter I (p. 20)  
Harvard University Press. Cambridge, Massachusetts, USA. 1957

The men in the laboratory...cannot be said to observe the actual objects of their curiosity at all.... They sense data on which the propositions of modern science rest are, for the most part, little photographic spots and blurs, or inky curved lines on paper.... What is directly observable is only a sign of the "physical fact"; it requires interpretation to yield scientific propositions.

*Philosophy in a New Key*  
Chapter I (p. 20)  
Harvard University Press. Cambridge, Massachusetts, USA. 1957

**Laplace, Pierre Simon** 1749–1827

French mathematician, astronomer, and physicist

The more numerous the number of observations and the less they vary among themselves the more their results approach the truth. We fulfill this last condition by the choice of the methods of observations, by the precision of the instruments, and by the care which we take to observe closely; then we determine by the theory of probabilities the most advantageous mean results or those which give the least value of the error. But that is not sufficient; it is further necessary to appreciate the probability that the errors of these results are comprised in the given limits; and without this we have only an imperfect knowledge of the degree of exactitude obtained.

*A Philosophical Essay on Probabilities*

Chapter IX (p. 73)

John Wiley &amp; Sons. New York, New York, USA. 1902

... it may be laid down as a general rule that, if the result of a long series of precise observations approximates a simple relation so closely that the remaining difference is undetectable by observation and may be attributed to the errors to which they are liable, then this relation is probably that of nature.

In Charles Coulston Gillispie

*Pierre-Simon Laplace, 1749–1827: A Life in Exact Science*

Chapter XVI (p. 130)

Princeton University Press. Princeton, New Jersey, USA. 1997

**Latham, Peter Mere** 1789–1875

English physician

...you cannot tax the faculty of observation beyond its common powers and capacities.

*Lectures on Subjects Connected With Clinical Medicine*

Lecture I (p. 6)

Longman, Rees, Orme, Brown, Green &amp; Longman. London, England. 1836

...without observation of the living body, there can be no pathology. Observation needs certain helps to give it a pathological aim; but these are only subordinate; and it still belongs to observation to concentrate all that they are capable of teaching in the real knowledge of disease.

*Lectures on Subjects Connected With Clinical Medicine*

Lecture IV (p. 89)

Longman, Rees, Orme, Brown, Green &amp; Longman. London, England. 1836

**Lee, Oliver Justin** 1881–1964

American astronomer

Every bit of knowledge we gain and every conclusion we draw about the universe or about any part or feature of it depends finally upon some observation or measurement. Mankind has had again and again the humiliating experience of trusting to intuitive, apparently logical conclusions without observations, and has seen Nature sail by in her radiant chariot of gold in an entirely different direction.

*Measuring Our Universe: From the Inner Atom to Outer Space*

Chapter 3 (p. 33)

Ronald Press Company. New York, New York, USA. 1950

**Leslie, Sir John** 1766–1832

Scottish physicist and mathematician

The range of Observation is limited by the position of the spectator, who can seldom expect to follow Nature through her winding and intricate paths.

*Elements of Natural Philosophy: Including Mechanics and Hydrostatics* (Volume 1)

Introduction (p. x)

Oliber &amp; Boyd. Edinburgh, Scotland. 1829

**Lubbock, John, First Baron Avebury** 1834–1919  
English banker, politician, biologist, and archaeologist

What we do see depends mainly on what we look for. When we turn our eyes to the sky, it is in most cases merely to see whether it is likely to rain. In the same field the farmer will notice the crop, geologists the fossils, botanists the flowers, artists the coloring, sportsmen the cover for game. Though we may all look at the same things, it does not at all follow that we should see them.

*The Beauties of Nature and the Wonders of the World We Live In*  
Introduction (pp. 3–4)  
The Macmillan Company. New York, New York, USA. 1893

**Mach, Ernst** 1838–1916  
Austrian physicist and philosopher

Everything which we observe in nature imprints itself uncomprehended and unanalyzed in our percepts and ideas which then, in their turn, mimic the processes of nature in their most general and most striking features.

*The Science of Mechanics* (5th edition)  
Chapter I, Part II, Section 2 (p. 36)  
The Open Court Publishing Company. La Salle, Illinois, USA. 1942

Chapter XI (p. 104)  
Charles Scribner's Sons. New York, New York, USA. 1924

**Mellor, Joseph William** 1863–1938  
Chemist

However successful a theory or law may have been in the past, directly it fails to interpret new discoveries its work is finished, and it must be discarded or modified. However plausible the hypothesis, it must be ever ready for sacrifice on the altar of observation.

*A Comprehensive Treatise on Inorganic and Theoretical Chemistry*  
Chapter I (p. 17)  
Longman, Green & Co. London, England. 1922

**Mill, John Stuart** 1806–73  
English political philosopher and economist

...in almost every act of our perceiving faculties, observation and inference are intimately blended. What we are said to observe is usually a compound result, of which one-tenth may be observation and the remaining nine-tenths inference.

*A System of Logic, Ratiocinative and Inductive*  
Book IV, Chapter I (p. 384)  
Harper & Brothers Publishers. New York, New York, USA. 1867

**Minnaert, M.**  
No biographical data available

It is indeed wrong to think that the poetry of Nature's moods in all their infinite variety is lost on one who observes them scientifically, for the habit of observation refines our sense of beauty and adds a brighter hue to the richly coloured background against which each separate fact is outlined. The connection between events, the relation of cause and effect in different parts of a landscape, unite harmoniously what would otherwise be merely a series of detached sciences.

*The Nature of Light and Colour in the Open Air*  
Preface (p. v)  
Dover Publications. New York, New York, USA. 1954

**Minot, Charles Sedgwick** 1852–1914  
American anatomist

A generalization is a mountain of observations; from the summit the outlook is broad. The great observer climbs to the outlook, while the mere thinker struggles to imagine it.

Fifty-first meeting  
The Problem of Consciousness in Its Biological Aspects  
*Proceedings of the American Association for the Advancement of Science*, June–July 1902 (p. 269)

**Mitchell, Maria** 1818–89  
American astronomer and educator

Nothing comes out more clearly in astronomical observations than the immense activity of the universe.

In Phebe Mitchell Kendall

Chapter XI (p. 237)  
Lee & Shepard. Boston, Massachusetts, USA. 1896

**Morris, Richard** 1939–2003  
American physicist and science writer

Simple observation generally gets us nowhere. It is the creative imagination that increases our understanding by finding connections between apparently unrelated phenomena, and forming logical, consistent theories to explain them. And if a theory turns out to be wrong, as many do, all is not lost. The struggle to create an imaginative, correct picture of reality frequently tells us where

to go next, even when science has temporarily followed the wrong path.

Yale University Press. New Haven, Connecticut, USA. 1941

**Müller, Johannes** 1801–58  
German physiologist

Observation is simple, indefatigable, industrious, upright, without any preconceived opinion. Experiment is artificial, impatient, busy, digressive, passionate, unreliable.

In V.J.E. Kruta  
*Purkyne Physiologist: A Short Account of His Contributions to the Progress of Physiology* (p. 20)  
Publisher undetermined

**Newton, Sir Isaac** 1642–1727  
English physicist and mathematician

As in mathematics, so in natural philosophy the investigation of difficult things by the method of analysis ought ever to precede the method of composition. This analysis consists of making experiments and observations, and in drawing general conclusions from them by induction.... By this way of analysis we may proceed from compounds to ingredients, and from motions to the forces producing them; and in general from effects to their causes, and from particular causes to more general ones till the argument end in the most general. This is the method of analysis: and the synthesis consists in assuming the causes discovered and established as principles, and by them explaining the phenomena preceding from them, and proving the explanations.

1946, 36 (p. 125)  
Harcourt, Brace & World. New York, New York, USA. 1968

**Osler, Sir William** 1849–1919  
Canadian physician and professor of medicine

Observation plus thinking has given us the bodies of living creatures in health and disease. There have been two inherent difficulties – to get men to see straight and to get men to think clearly; but in spite of the frailty of the instrument, the method has been one of the most powerful ever placed in the hands of man.

The Pathological Institute of a General Hospital  
*Glasgow Medical Journal*, Volume 76, 1911

Note with accuracy and care everything that comes within your professional ken.... Let nothing slip by you; the ordinary hum-drum cases of the morning routine may have been accurately described and pictured, but study each one separately as though it were new – so it is so far as your special experience goes; and if the spirit of the student is in you the lesson will be there.

*Aequanimitas, with Other Addresses to Medical Students, Nurses, and Practitioners of Medicine*  
The Army Surgeon (p. 104)  
The Blakiston Company. Philadelphia, Pennsylvania, USA. 1932

The whole art of medicine is in observation, as the old motto goes, but to educate the eye to see, the ear to hear and the finger to feel takes time, and to make a beginning, to start a man on the right path, is all that we can do. We expect too much of the student and we try to teach him too much. Give him good methods and a proper point of view, and all other things will be added, as his experience grows.

*Aequanimitas, with Other Addresses to Medical Students, Nurses, and Practitioners of Medicine*  
The Hospital as a College (pp. 315–316)  
The Blakiston Company. Philadelphia, Pennsylvania, USA. 1932

Man can do a great deal by observation and thinking, but with them alone he cannot unravel the mysteries of Nature. Had it been possible the Greeks would have done it; and could Plato and Aristotle have grasped the value of experiment in the progress of human knowledge, the course of European history might have been very different.

*Man's Redemption of Man*  
Address, University of Edinburgh, July 1910 (p. 22)

See, and then reason and compare and control. But see first. No two eyes see the same thing. No two mirrors give forth the same reflection.

In W.S. Thayer

*Sir William Osler, Bart.: Brief Tributes to His Personality, Influence and Public Service*  
Osler, The Teacher (p. 51)  
The Johns Hopkins Press. Baltimore, Maryland, USA. 1920

Viewed through the perspective of memory, an unrecorded observation, the vital details long since lost, easily changes its countenance and sinks obediently into the frame fashioned by the fancy of the moment.

In W.S. Thayer  
*Sir William Osler, Bart.: Brief Tributes to His Personality, Influence and Public Service*  
Osler, The Teacher (p. 51)  
The Johns Hopkins Press. Baltimore, Maryland, USA. 1920

The collection and study of your own observations is much, but he who works in his own small compartment leads, after all, a restricted and circumscribed life. Go out among your fellows, and learn of them. The good observer is not limited to the large hospital. The modest country doctor may furnish you the vital link in your chain, and the simple rural practitioner is often a very wise man.

In W.S. Thayer  
*Sir William Osler, Bart.: Brief Tributes to His Personality, Influence and Public Service*  
Osler, The Teacher (p. 52)  
The Johns Hopkins Press. Baltimore, Maryland, USA. 1920

**Owen, Ed** 1896–1981  
American geologist

I wandered far and saw many things over a long time. Most of the things which I saw I did not understand. I looked about me and did not see that any others understood the complex pattern either. But as I wandered I could not escape the feel of things and of places and of the people in them.

July 14 (p. 150)

Dodd, Mead & Company. New York, New York, USA. 1953

## The Bible (King James Version)

Seeing many things, but thou observest not; ...  
Isaiah 42:20

**Thiele, T. N.** 1838–1910  
Danish astronomer

An isolated sensation teaches us nothing, for it does not amount to an observation. Observation is a putting together of several results of sensation which are or are supposed to be connected with each other according to the law of causality, so that some represent causes and others their effects.

*Theory of Observations* (p. 2)  
Cahales & Edwin Layton. London, England. 1903

**Thomas, Lewis** 1913–93  
American physician and biologist

The role played by the observer in biological research is complicated but not bizarre: he or she simply observes, describes, interprets, maybe once in a while emits a hoarse shout, but that is that; the act of observing does not alter fundamental aspects of the things observed, or anyway isn't supposed to.

*The Medusa and the Snail: More Notes of a Biology Watcher*  
An Apology (p. 88)  
The Viking Press. New York, New York, USA. 1979

**Thompson, Silvanus P.** 1851–1916  
English physics professor and author

The seemingly useless or trivial observation made by one worker leads on to a useful observation by another; and so science advances, "creeping on from point to point."

In Sir Richard Arman Gregory  
*Discovery; or, The Spirit and Service of Science*  
Chapter XI (p. 292)  
Macmillan & Company Ltd. London, England. 1918

**Thompson, William Robin** 1887–1972  
Canadian entomologist

The mathematical machine works with unerring precision; but what we get out of it is nothing more than a rearrangement of what we put into it. In the last analysis observation – the actual contact with real events – is the only reliable way of securing the data of natural history.

*Science and Common Sense*  
Chapter Six (pp. 114–115)  
Yale University Press. New Haven, Connecticut, USA. 1951

**Thomson, Sir John Arthur** 1861–1933  
Scottish naturalist

...the raw material of observation is not rare like gold or diamonds, but near to us as sunshine and rain-drops.

*The Study of Animal Life* (2nd Edition)  
Part I, Chapter I (p. 1)  
John Murray. London, England. 1892

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

The question is not what you look at – but how you look & whether you see.

*Journal* (Volume 3: 1848–1851)  
August 5, 1851 (pp. 354–355)  
Princeton University Press. Princeton, New Jersey, USA. 1981

...the naturalist's observations is not in new genera or species, but in new contemplations still, and science is only a more contemplative man's recreation.

*A Week on the Concord and Merrimack Rivers*  
Saturday (p. 16)  
Charles Scribner's Sons. New York, New York, USA. 1921

**Tyndall, John** 1820–93  
Irish-born English physicist

...observation tends to chasten the emotions and to check those structural efforts of the intellect which have emotion for their base.

*Fragments of Science for Unscientific People*  
Chapter II (p. 35)  
D. Appleton & Co. New York, New York, USA. 1875

**van Hise, Charles** 1857–1918  
American academic

The difference between bad observation and good observation is that the former is erroneous; the latter is incomplete.

*Proceedings of the American Association for the Advancement of Science*  
The Training and Work of a Geologist  
Fifty-first meeting, Pittsburgh, Pennsylvania June-July 1902

**von Goethe, Johann Wolfgang** 1749–1832  
German poet, novelist, playwright, and natural philosopher

An extremely odd demand is often set forth but never met, even by those who make it; *i.e.*, that empirical data should be presented without any theoretical context, leaving the reader, the student, to his own devices in judging it. This demand seems odd because it is useless simply to look at something. Every act of looking turns into observation, every act of observation into reflection, every act of reflection into the making of associations; thus it is evident that we theorize every time we look carefully at the world.

In Douglas Miller  
*Scientific Studies* (Volume 12)  
Theory of Color  
Preface (p. 159)  
Suhrkamp. New York, New York, USA. 1988

Individual observations, drawn from the natural objects with which we are in contact, are often the more valuable, the less the observer professionally belongs to the particular department of science which he illustrates.

In John Stuart Blackie  
*The Wisdom of Goethe*  
Nature – Natural History (p. 187)  
William Blackwood & Sons. Edinburgh, Scotland. 1883

**von Humboldt, Alexander** 1769–1859  
German naturalist and explorer

The belief in the uncommon and the wonderful lends a definite outline to every manifestation of ideal creation; and the realm of fancy a fairy-land of cosmological, geognostical and magnetic visions becomes thus involuntarily blended with the domain of reality.

Translated by E.C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)  
General Review of Natural Phenomena (p. 81)  
D. Appleton & Co. New York, New York, USA. 1850

True cosmical views are the result of observation and ideal combination, and of a long-continued communion with the external world; nor are they a work of a single people, but the fruits yielded by reciprocal communication, and by a great, if not general, intercourse between different nations.

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 2)  
Physical Contemplation of the Universe (p. 116)  
Harper & Brothers. New York, New York, USA. 1869

**von Liebig, Justus** 1803–73  
German organic chemist

However numerous our observations may be, yet, if they only bear on one side of a question, they will never enable us to penetrate the essence of a natural phenomenon in its full significance.

*Animal Chemistry*

Preface (p. xxxii)

Johnson Reprint Corporation. New York, New York, USA. 1964

When a power of nature, invisible and impalpable, is the subject of scientific inquiry, it is necessary, if we would comprehend its essence and properties, to study its manifestations and effects. For this purpose simple observation is insufficient, since error always lies on the surface, whilst truth must be sought in deeper regions.

*Familiar Letters on Chemistry*

Letter I (pp. 16–17)

Walton & Maberly. London, England. 1859

...a thousand unconnected observations have no more value, as a demonstrative proof, than a single one.

In John Gardner

*Familiar Letters on Chemistry*

Second Series

Letter I (pp. 26–27)

Taylor & Walton. London, England. 1844

The art of observing is like a piece of glass destined for a mirror, which requires to be polished with the utmost care, to produce the reflection of a clear and undistorted image.

*Familiar Letters on Chemistry*

Letter II (p. 28)

Walton & Maberly. London, England. 1859

There is no art so difficult as that of observation; it requires a cultivated, sober mind, and a well schooled

experience, which is only acquired by long practice. *The man who only seen with his eyes an object before him, has no claim to the title of an observer, which is reserved for him only who takes notice of the different parts of the object, and sees the connection between the parts and the whole.*

*Familiar Letters on Chemistry*

Letter II (p. 28)

Walton & Maberly. London, England. 1859

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

...nothing destroys the powers of general observation quite so much as a life of experimental science.

*The Food of the Gods*

Chapter 2 (p. 540)

Alfred A. Knopf. New York, New York, USA. 1934

**Westaway, Frederic William**  
Science writer

It is the essence of good observation that the eye shall not only see a thing itself, but of what parts that thing is composed. And if an observer is to become a successful investigator in any department of Science, he must have an extreme acquaintance with what has already been done in that particular department. Only then will he be prepared to seize upon anyone of those minute indications which often connect phenomena apparently quite remote from each other. His eyes will thus be struck with any occurrence which, according to received theories, ought not to happen; for these are the facts which serve as clues to new discoveries.

*Scientific Method: Its Philosophy and Its Practice*

Chapter XVI, Section 3 (p. 196)

Blackie & Sons Ltd. London, England. 1919

Chapter X (p. 37)  
G. Routledge & Co. London, England. 1855

**Wöhler, Friedrich** 1800–82  
German chemist

My imagination is pretty active, but in thinking I am very slow. No one is less made to be a critic than I. The organ for philosophical thought I lack completely, as you well know, as completely as that for mathematics. Only for observing, do I possess, or at least I believe I do, a passable arrangement in my brain. A kind of instinct that allows me to become aware of relations among data may well be connected with [this arrangement].

In O. Theodor Benfey  
*From Vital Force to Structural Formulas*  
Chapter 3 (p. 18)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1964

**Wright, R. D.**  
No biographical data available

Whatever happened to the terms probability and observation? Are statements of high probability now to be deified by calling them truths? Does a set of consistent observations become fact? When I teach biology to the college student, the nature of information mandates that the class and I preserve a healthy skepticism regarding both the broad generalizations and the specific statements of the discipline. Fact and truth are terms we almost never use. There is nothing shameful in describing what we know as having a certain probability, following from observations that have a degree of imprecision. That’s the nature of science, including the science of evolution.

Letters  
*BioScience*, Volume 31, Number 11, December, 1981 (p. 788)

**Zinsser, Hans** 1878–1940  
American bacteriologist

The scientist takes off from the manifold observations of predecessors, and shows his intelligence, if any, by his ability to discriminate between the important and the negligible, by selecting here and there the significant stepping-stones that will lead across the difficulties to new understanding. The one who places the last stone and steps across the terra firma of accomplished discovery gets all the credit. Only the initiated know and honor those whose patient integrity and devotion to exact observation have made the last step possible.

On the Telescope (p. 163)

Simon & Schuster. New York, New York, USA. 1944

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

What is so good in a college as an observatory? The sublime attaches to the door and to the first stair you ascend; – and this is the road to the stars...

*Journals of Ralph Waldo Emerson 1864–1876*

November 14, 1865 (p. 118)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

**Hale, George Ellery** 1868–1938

American astronomer

An observatory, like any other laboratory of research, may concentrate its attention upon either one of two widely different objects: the accumulation of great stores of data in existing departments of knowledge, or the opening up and exploration of new fields of investigation.

*Ten Years' Work of a Mountain Observatory*

Ten Years' Work of a Mountain Observatory (p. 4)

Carnegie Institution of Washington. Washington, D.C. 1915

**Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

Go to yon tower, where busy science plies  
Her vast antennae, feeling thro' the skies;  
That little vernier, on whose slender lines  
The midnight taper trembles as it shines,  
A silent index, tracks the planets' march  
In all their wanderings thro' the ethereal arch,  
Tells through the mist where dazzled Mercury burns,

And marks the spot where Uranus returns.

*Urania: A Rhymed Lesson* (3rd edition)

Poem (pp. 9–10)

William D. Ticknor & Co. Boston, Massachusetts, USA. 1846

**Hugo, Victor** 1802–85

French author, lyric poet, and dramatist

An astronomer is a sort of police constable of the heavens. The observatory is but a sentry box.

*Napoleon the Little*

Book Seventh (p. 193)

Vizetelly & Co. London, England. 1852

**Lowell, Percival** 1855–1916

American astronomer

A steady atmosphere is essential to the study of planetary detail; size of instrument being a very secondary matter.

A large instrument in poor air will not begin to show what a smaller one in good air will. When this is recognized, as it eventually will be, it will become the fashion to put up observatories where they can see rather than be seen.

*Mars*

Preface (p. v)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1895

**Mitchell, Maria** 1818–89

American astronomer and educator

There is no observatory in this land, nor in any land, probably, of which the question is not asked, "Are they doing anything? Why don't we hear from them? They should make discoveries, they should publish."

In Phebe Mitchell Kendall

*Maria Mitchell: Life, Letters, and Journals*

Chapter XI (p. 223)

Lee & Shepard. Boston, Massachusetts, USA. 1896

**Rosseland, Svein** 1894–1985

Norwegian astronomer

...an astronomical observatory of today looks more like a factory plant than an abode for philosophers. The poetry of constellations has given way to the lure of plate libraries, and the angel of cosmogenic speculation has been caught in a cobweb of facts insistently clamoring for explanations.

Part One, Chapter I (p. 6)  
Henry Schuman, Inc. New York, New York, USA. 1927

**de Chambaud, J. J. Ménéuret**  
No biographical data available

The name of observer has been given to the physicist who is content to examine the phenomena just as nature presents them to him; he differs from the experimental physicist who combines...and who sees only the result of his own combinations. This latter one never sees nature as it is in fact; he pretends by his labor to render nature more accessible to the senses, to raise the mask which conceals it from our eyes, but often he disfigures it and renders it unintelligible. Nature is always unveiled and bare for him who has eyes – or it is covered only by a slight gauze which the eye and reflection easily pierce – and the pretended mask exists only in the imagination,

usually quite limited, of the manipulator of experiments.

## OBSTACLE

**Enriques, Federigo** 1871–1946  
Italian mathematician

It sometimes happens in Alpine excursions that one who does not know just how far off is the goal, thinks he is about to reach it, while he is mounting the rocky summit of some height facing it. But once scaled, a new valley opens unexpectedly to view. One must descend with care. After a fatiguing walk of several hours he finds himself perhaps no higher than when he started. But the time and labor have not been wasted, since even if the summit seems now more distant, in the enlarged horizon, in reality we have come nearer to our goal by surmounting an obstacle which had concealed it. We must not then lose courage, nor give up in a moment of weakness.

*Problems of Science*  
Chapter I (p. 10)  
The Open Court Publishing Co. Chicago, Illinois, USA. 1914

## OBSTETRICS

**Hosmer, William**  
No biographical data available

The present practice of medicine, especially obstetrics, must be set down not only as having an immoral tendency, but as, in itself, a gross, abusive, and shameless immorality.

English physicist and mathematician

We are to admit no more causes of natural things than such as are both true and sufficient to explain their appearances.

*The Mathematical Principles of Natural Philosophy*

Book Three, Rule 1 (p. 270)

Printed for H.D. Symonds. London, England. 1803

**Oppenheimer, James Robert** 1904–67

American theoretical physicist

We cannot in any sense be both the observers and the actors in any specific instance, or we shall fail properly to be either one or the other; yet we know that our life is built of these two modes, is part free and part inevitable, is part creation and part discipline, is part acceptance and part effort.

*Science and the Common Understanding*

Chapter 6 (p. 88)

Simon &amp; Schuster. New York, New York, USA. 1954

**Stenger, Victor J.** 1935–

American physicist

The use of Occam's razor, along with the related critical, skeptical view toward any speculations about the unknown, is perhaps the most misunderstood aspect of the scientific method. People confuse doubt with denial. Science doesn't deny anything, but it doubts everything not required by the data. Note, however, that doubt does not necessarily mean rejection, just an attitude of disbelief that can be changed when the facts require it.

*Physics and Psychics: The Search for a World Beyond the Senses*

Chapter 1 (p. 26)

Prometheus Books. Buffalo, New York, USA. 1990

**OCEAN****Aeschylus** 525 BCE–426 BCE

Greek playwright

Ye waves

That o'er th' interminable ocean wreath

Your crisped smiles.

*Prometheus Bound*, l. 95

Heritage Press. New York, New York, USA. 1966

## Author Undetermined

The mighty voice of ocean is like the wallowing of a river and the windroar of a forest, sometimes low and sometimes loud, but ever fitful, restless, incessant, and eternal.

*The Visitor; Or, Monthly Instructor*

Boatswain Billings: Or Scenes on the Ocean (p. 167)  
The Religious Tract Society. London, England. 1847

## Ballantyne, Robert Michael 1825–94

Scottish juvenile writer

The Voice of Ocean is constantly discoursing of many interesting and stirring truths and events to those who are disposed to listen.

*The Ocean and Its Wonders*

Preface (p. 1)

T. Nelson & Sons. London, England. 1876

There is a voice in the waters of the great sea. It calls to man continually. Sometimes it thunders in the tempest, when the waves leap high and strong, and the wild winds shriek and roar, as if to force our attention. Sometimes it whispers in the calm, and comes rippling on the shingly beach in a still, small voice, as if to solicit our regard.

*The Ocean and Its Wonders*

Chapter I (p. 13)

T. Nelson & Sons. London, England. 1876

## Beebe, William 1877–1962

American ornithologist

once it has been seen, [the deep ocean] will remain forever the most vivid memory in life, solely because of its cosmic chill and isolation, the eternal and absolute darkness and the indescribable beauty of its inhabitants.

*Half a Mile Down*

Chapter 9 (p. 175)

Durell, Sloan & Pearce. New York, New York, USA. 1951

The eternal one, the one most worthy and which will not pass from mind, the only other place comparable to these marvelous regions, must surely be naked space itself, out far beyond atmosphere, between the stars, where sunlight has no grip upon the dust and rubbish of planetary air, where the blackness of space, the shining planets, comets, suns, and stars must really be closely akin to the world of life as it appears to the eyes of an awed human being, in the open ocean, one half mile down.

*Half Mile Down*

Chapter 11 (p. 225)

Harcourt, Brace & Company. New York, New York, USA. 1934

## Beston, Henry 1888–1968

American writer

The seas are the heart's blood of the earth.

*The Outermost House*

Chapter III (p. 47)

Rinehart & Company. New York, New York, USA. 1928

## Bierce, Ambrose 1842–1914

American newspaperman, wit, and satirist

OCEAN, n. A body of water occupying about two-thirds of a world made for man – who has no gills.

*The Enlarged Devil's Dictionary* (p. 207)

Doubleday. Garden City, New York, USA. 1967

## Bishop Joseph Hall 1574–1656

English bishop and satirist

There is many a rich stone laid up in the bowels of the earth, many a fair pearl in the bosom of the sea, that never was seen nor never shall be.

*The Works of the Right Reverend Father in God, Joseph Hall* (Volume 1)  
Contemplations (p. 115)

Printed by C. Whittingham. London, England. 1808

## Bradbury, Ray 1920–

American writer

“The mysteries of the sea,” said McDunn thoughtfully. “You know, the ocean’s the biggest damned snowflake ever? It rolls and swells a thousand shapes and colors, not two alike. Strange.”

*Dinosaur Tales*

The Foghorn (p. 98)

Bantam Books. Toronto, Ontario, Canada. 1983

## Browning, Robert 1812–89

English poet

The sea heaves up, hangs loaded o’er the land,  
Breaks there, and buries its tumultuous strength.

*The Poems and Plays of Robert Browning*

Luria

Act I

The Modern Library. New York, New York, USA. 1934

## Bryant, William Cullen 1794–1878

American poet

That make the meadows green; and, poured round all,  
Old Ocean’s gray and melancholy waste – Are but the  
solemn decorations all

Of the great tomb of man.

*Poems*

Thanatopsis

D. Appleton. New York, New York, USA. 1874

## Bucke, Charles 1781–1846

English writer

Of all the objects in Nature, none strikes the soul – with so much wonder, awe, delight, and solemnity, as the solemnity, as the OCEAN.

*On the Beauties, Harmonies, and Sublimities of Nature*

Chapter I (p. 13)

Harper & Brothers Publishers. New York, New York, USA. 1841

## Byron, George Gordon, 6th Baron Byron 1788–1824

English Romantic poet and satirist

Roll on, thou deep and dark blue Ocean – roll!  
 Ten thousand fleets sweep over thee in vain;  
 Man marks the earth with ruin – his control  
 Stops with the shore.

*The Complete Poetical Works of Byron*

Childe Harold

canto IV, Stanza 179

Houghton Mifflin Company. Boston, Massachusetts, USA. 1933

Time writes no wrinkle on thine azure brow,  
 Such as Creation's dawn beheld, thou rollest now.

*The Complete Poetical Works of Byron*

Childe Harold

Canto IV, Stanza 182

Houghton Mifflin Company. Boston, Massachusetts, USA. 1933

### **Cable, Richard**

No biographical data available

The sight of the ocean is like the sound of music calling  
 forth the soul from the thoughts of today, from its cage-  
 life to freedom, and an unutterable yearning after what is  
 not – the perfect.

The Lightshipman

*The Living Age*, Volume LXI, Number 2272, January 18, 1888 (p. 108)

### **Carson, Rachel** 1907–64

American marine biologist and author

The continents themselves dissolve and pass to the sea, in  
 grain after grain of eroded land...

*The Sea Around Us*

Part III, Chapter 14 (p. 212)

Oxford University Press, Inc. New York, New York, USA. 1989

Unmarked and trackless though it may seem to us, the  
 surface of the ocean is divided into definite zones, and  
 the pattern of the surface water controls the distribution  
 of its life.

*The Sea Around Us*

Part I, Chapter 2 (p. 20)

Oxford University Press, Inc. New York, New York, USA. 1989

The face of the sea is always changing. Crossed by col-  
 ors, lights, and moving shadows, sparkling in the sun,  
 mysterious in the twilight, its aspects and its moods vary  
 hour by hour.

*The Sea Around Us*

Part I, Chapter 3 (p. 29)

Oxford University Press, Inc. New York, New York, USA. 1989

There is no drop of water in the ocean, not even in  
 the deepest parts of the abyss, that does not know and  
 respond to the mysterious forces that create the tide. No  
 other force that affects the sea is so strong.

*The Sea Around Us*

Part II, Chapter 3 (p. 149)

Oxford University Press, Inc. New York, New York, USA. 1989

The ocean is the earth's greatest storehouse of minerals.

*The Sea Around Us*

Part III, Chapter 2 (p. 185)

Oxford University Press, Inc. New York, New York, USA. 1989

The edge of the sea is a strange and beautiful place. All  
 through the long history of Earth it has been an area of  
 unrest where waves have broken heavily against the land,  
 where the tides have pressed forward over the continents,  
 receded, and then returned. For no two successive days  
 is the shore line precisely the same. Not only do the tides  
 advance and retreat in their eternal rhythms, but the level  
 of the sea itself is never at rest. It rises or falls as the gla-  
 ciers melt or grow, as the floor of the deep ocean basins  
 shift under its increasing load of sediments, or as the  
 earth's crust along the continental margins warps up or  
 down in adjustment to strain and tension. Today a little  
 more land may belong to the sea, tomorrow a little less.  
 Always the edge of the sea remains an elusive and inde-  
 finable boundary.

*The Edge of the Sea*

Chapter I (p. 1)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1955

Every living thing of the ocean, plant and animal alike,  
 returns to the water at the end of its own life span the  
 materials that had been temporarily assembled to form  
 its body. So there descends into the depths a gentle never-  
 ending rain of the disintegrating particles of what once  
 were living creatures of the sunlit surface waters, or of  
 those twilight regions beneath.

Undersea

*Atlantic Monthly*, September, 1937

### **Clarke, Arthur C.** 1917–

English science and science fiction writer

How inappropriate to call this planet Earth when it is  
 clearly Ocean.

In James E. Lovelock

Hands Up for the Gaia Hypothesis

*Nature*, Volume 344, Number 6262, 8 March, 1990 (p. 102)

### **Conrad, Joseph** 1857–1924

Polish-born English novelist

...some of us, regarding the ocean with understanding  
 and affection, have seen it looking old, as if the immemo-  
 rial ages had been stirred up from the undisturbed bottom  
 of ooze. For it is a gale of wind that makes the sea look  
 old.

*The Mirror of the Sea*

Chapter XXII (pp. 70–71)

Doubleday, Page & Co. Garden City, New York, USA. 1924

The ocean has the conscienceless temper of a savage  
 autocrat spoiled by much adulation. He cannot brook the  
 slightest appearance of defiance, and has remained the  
 irreconcilable enemy of ships and men ever since ships  
 and men had the unheard-of audacity to go afloat together  
 in the face of his frown.

*The Mirror of the Sea*

Chapter XXXVI (p. 137)

Doubleday, Page & Co. Garden City, New York, USA. 1924

**Cooper, James Fenimore** 1789–1851  
American writer

...on the whole, it [the ocean] is capricious, rather than malignant.

*Cooper's Novels: The Two Admirals*  
Chapter XVII (p. 304)  
W.A. Townsend & Co. New York, New York, USA. 1861

**Cornwall, Barry (Bryan Waller Procter)** 1787–1874  
English author

The sea! the sea! the open sea!  
The blue, the fresh, the ever free!  
Without a mark, without a bound,  
It runneth the earth's wide regions round;  
It plays with the clouds; it mocks the skies;  
Or like a cradled creature lies.

In Richard Green Parker and J. Madison Watson (eds.)  
*The National Fourth Reader*  
The Sailor's Song (p. 156)  
Barns & Burr. New York, New York, USA. 1864

**Damon, William E.**  
No biographical data available

The ocean! the vast, glorious, boundless blue! How the vision of sunny hours, inspiring breezes, the invigorating scent of the salt air, and the sparkling of bright sea-foam, rises at thought of the great deep that restless, deceptive, yet ever-enchanting siren, which lures us in every tone of the gamut to trust ourselves on its sparkling bosom!

*Ocean Wonders:*  
*Companion for the Seaside*  
Chapter I (p. 1)  
D. Appleton & Co. New York, New York, USA. 1879

**David Reed (Fictional character)**

We've only just begun to learn about the water and its secrets, just as we've only touched on outer space. We don't entirely rule out the possibility that there might be some form of life on another planet. Then why not some entirely different form of life in a world we already know is inhabited by millions of living creatures?

*Creature from the Black Lagoon*  
Film (1954)

**Dubos, René Jules** 1901–82  
French-born American microbiologist and environmentalist

The seas perhaps hold the highest hopes for continued life. Yet, what does man do to the seas? Not only does he grab with greed the creatures of the sea, he turns nature's cradle for life into a receptacle for garbage and filth. This is man whose life blood contains sodium, potassium, and calcium in almost the same proportions as they still exist in the environment of mother sea which encouraged his birth.

Unity Through Diversity (p. 44)  
W.W. Norton & Company, Inc. New York, New York, USA. 1973

**Emerson, Ralph Waldo** 1803–82  
American lecturer, poet, and essayist

Behold the Sea,  
The opaline, the plentiful and strong,  
Yet beautiful as is the rose in June,  
Fresh as the trickling rainbow of July;  
Sea full of food, the nourisher of kinds,  
Purger of earth, and medicine of men;  
Creating a sweet climate by my breath,  
Washing out harms and griefs from memory,  
And, in my mathematic ebb and flow,  
Giving a hint of that which changes not.  
*The Complete Works of Ralph Waldo Emerson* (Volume 9)  
Seashore (p. 242)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

**Forbes, Edward** 1815–54  
English naturalist

Moreover it is becoming the Britons, whether scientific or unscientific, who boast at all fitting occasions of their aptitude to rule the waves, should know something of the population of their saline empire, especially of those parts of it immediately in contact with their terrestrial domain, and the coasts of the Continent to which our UK appertains.

*The Natural History of the European Seas*  
Chapter I (p. 3)  
John van Voorst. London, England. 1859

...beneath the waves there are many dominions yet to be visited, and kingdoms to be discovered; and he who venturously brings up from the abyss enough of their inhabitants to display the physiognomy of the country, will taste that cup of delight, the sweetness of whose draught those only who have made a discovery know.

*The Natural History of the European Seas*  
Chapter I (p. 11)  
John van Voorst. London, England. 1859

**Gould, Hannah Flagg** 1789–1865  
American poet

Alone I walked on the ocean strand,  
A pearly shell was in my hand;  
I stooped, and wrote upon the sand  
My name, the year, the day.  
As onward from the sport I passed,  
One lingering look behind I cast,  
A wave came rolling high and fast,  
And washed my lines away.

### Half Hours

The Great Deep! What a world of sublimity, of countless wealth, of awful power! Let the great deep share man's thought, and it shall inspire his admiration, his wonder, his awe.

*Half Hours in the Deep*  
Chapter I (p. 3)  
Dalby, Isbister & Co. London, England. 1875

Whether seen in noon, lying beneath the summer's cloudless sun, like burnished steel; or seen at night, beneath the pale light of the full moon, like some vast desert crossed by a shining silvery path, along which angels have left footprints of light; seen smooth, or rippled, or, risen into stern, wild tempest, in restless fury it rolls, and leaps, dashes against cliffs and clouds in all its moods the great deep awakens great feelings, feelings which make their subject a humbler, yet wiser and nobler man..

*Half Hours in the Deep*  
Chapter I (p. 3)  
Dalby, Isbister & Co. London, England. 1875

**Henderson, Lawrence** 1878–1942  
American biochemist

The regulatory devices of our modern laboratories have not yet succeeded in rivaling the oceans. Singly, certain conditions, for example, temperature, alkalinity, and concentration, may be more accurately regulated by man, though on a small scale only; but the regulation of all such properties together is not yet possible. The only known improvement upon the ocean is the body of a higher warm-blooded animal. Here, however, the processes of organic evolution have begun with the ocean, and in several respects merely perfected existing arrangements.

*The Fitness of the Environment: An Inquiry into the Biological Significance of the Properties of Matter*  
Chapter V, Section III (p. 186)  
The Macmillan Company. New York, New York, USA. 1913

No philosopher's or poet's fancy, no myth of a primitive people has ever exaggerated the importance, the usefulness, and above all the marvelous beneficence of the ocean for the community of living things.

*The Fitness of the Environment: An Inquiry into the Biological Significance of the Properties of Matter*  
Chapter V, Section III (p. 190)  
The Macmillan Company. New York, New York, USA. 1913

**Hess, Harry**  
No biographical data available

The birth of the oceans is a matter of conjecture, the subsequent history is obscure, and the present structure is

just beginning to be understood. Fascinating speculation on these subjects has been plentiful, but not much of it predating the last decade holds water.

In A.E.J. Engel, Harold L. James, and B.F. Leonard (eds.)

American novelist

...that same image [of Narcissus] we ourselves see in  
all rivers and oceans. It is the image of the ungraspable  
phantom of life: and this is the key to it all.

In *Great Books of the Western World* (Volume 48)

*Moby Dick*

Chapter 1 (pp. 2–3)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Not only is the sea such a foe to man who is an alien to it,  
but it is also a fiend to its own offspring; worse than the  
Persian host who murdered his own guests; sparing not  
the creatures which itself hath spawned. Like a savage  
tigress that tossing in the jungle overlays her own cubs,  
so the sea dashes even the mightiest whales against the  
rocks, and leaves them there side by side with the split  
wrecks of ships. No mercy, no power but its own controls  
it. Panting and snorting like a mad battle steed that has  
lost its rider, the masterless ocean overruns the globe.

In *Great Books of the Western World* (Volume 48)  
*Moby Dick*  
 Chapter 58 (p. 204)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

 Harper & Brothers Publishers. New York, New York, USA. 1874

**Rossetti, Christina Georgina** 1830–94  
 English poet

Why does the sea moan evermore?  
 Shut out from heaven it makes its moan,  
 It frets against the boundary shore;  
 All earth's full rivers cannot fill  
 The sea, that drinking thirsteth still.

In William Michael Rossetti  
*The Poetical Works of Christina Georgina Rossetti*  
 By the Sea  
 Stanza 1  
 Macmillan & Company Ltd. London, England. 1911

**Scheffer, Victor B.**  
 Zoologist

The ocean and its contents do not yield to easy measure-  
 ment; the final data lie beyond our present grasp; an edu-  
 cated guess is now the best that men of science try to  
 make.

*The Year of the Whale*  
 January (p. 105)  
 Charles Scribner's Sons. New York, New York, USA. 1969

**Shelley, Percy Bysshe** 1792–1822  
 English poet

There the sea I found  
 Calm as a cradled child in dreamless slumber bound.

*The Poems of Percy Bysshe Shelley*  
 The Revolt of Islam, Canto I, Stanza 15  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

**Step, Edward** 1855–1931  
 No biographical data available

The sea. is the very fountain and reservoir of the life of  
 this globe. As the heart is to man and his fellow verte-  
 brates, so is the ocean to the world. It is the centre of the

circulatory system; and that system means the life, the health, the sustenance of the body through which it sends its fluids. With the destruction of the heart the human life must cease; and with the annihilation of the sea, could such a thing be possible, all life on the globe must come to an end.

*By the Deep Sea: A Popular Introduction to the Wild Life of the British Shores*  
Chapter I (p. 11)  
Jarrold & Sons. London, England. 1896

**Stoddard, Richard Henry** 1825–1903  
American critic and poet

Thou wert before the Continents, before  
The hollow heavens, which like another sea  
Encircles them and thee, but whence thou wert,  
And when thou wast created, is not known,  
Antiquity was young when thou wast old.

In Anna Ward (ed.)  
*Surf and Wave: The Sea as Sung by the Poets*  
Hymn to the Sea, l. 104  
Thomas Y. Crowell & Company. New York, New York, USA. 1883

**Taylor, Bayard** 1825–78  
American journalist and author

We follow and race  
In shifting chase,  
Over the boundless ocean-space!  
Who hath beheld when the race begun?  
Who shall behold it run?

In Anna Ward (ed.)  
*Surf and Wave: The Sea as Sung by the Poets*  
The Waves  
Thomas Y. Crowell & Company. New York, New York, USA. 1883

**Tennyson, Alfred (Lord)** 1809–92  
English poet

Break, break, break,  
On thy cold gray stones, O sea!  
And I would that my tongue could utter  
The thoughts that arise in me.

*Alfred Tennyson's Poetical Works*  
"Break, Break, Break"  
Oxford University Press, Inc. London, England. 1953

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

The ocean is a wilderness reaching round the globe,  
wilder than a Bengal jungle, and fuller of monsters,  
washing the very wharves of our cities and the gardens  
of our seaside residences.

*Cape Cod*  
Chapter IX (p. 148)  
Princeton University Press. Princeton., New Jersey, USA. 2004

We do not associate the idea of antiquity with the ocean,  
nor wonder how it looked a thousand years ago, as we  
do of the land, for it was equally wild and unfathomable  
always.

*Cape Cod*  
Chapter IX (p. 219)  
Thomas Y. Crowell & Co. New York, New York, USA. 1908

**Verne, Jules** 1828–1905  
French novelist

The great depths of the ocean are entirely unknown to us. Soundings cannot reach them. What passes in those remote depths what beings live, or can live, twelve or fifteen miles beneath the surface of the waters what is the organization of these animals we can scarcely conjecture.

*20,000 Leagues Under the Sea*  
Part I, Chapter II (p. 10)  
G. Munro. New York, New York, USA. 1883

You are going to visit [talking of under the ocean] the  
fairyland of marvels.

Translated by Philip Schuyler Allen  
*20,000 Leagues Under the Sea*  
Chapter X (p. 80)  
Rand McNally & Co. Chicago, Illinois, USA. 1922

**von Goethe, Johann Wolfgang** 1749–1832  
German poet, novelist, playwright, and natural philosopher

The sea is flowing ever,  
The land retains it never.

American writer

I send thee a shell from the ocean-beach;  
But listen thou well, for my shell hath speech.  
Hold to thine ear  
And plain thou'lt hear  
Tales of ships.

*Vagrom Verse*  
With a Nantucket Shell  
Ticknor & Company. Boston, Massachusetts, USA. 1889

**Weisz, Paul B.** 1919–  
German-born American chemical engineer and biomedical researcher

The Pacific. You don't comprehend it by looking at a  
globe, but when you're traveling at four miles a second  
and it still takes you twenty-five minutes to cross it, you  
know it's big.

In Kevin W. Kelley  
*The Home Planet*  
With Plate 64  
Addison-Wesley. Reading, Massachusetts, USA. 1988

**Whitman, Walt** 1819–92  
American poet, journalist, and essayist

To me the sea is a continual miracle,  
The fishes that swim – the rocks – the motion of the

waves – the ships with men in them,  
What stranger miracles are there?

*Complete Poetry and Collected Prose*

Miracles

The Library of America. New York, New York, USA. 1982

**Wordsworth, William** 1770–1850  
English poet

I have seen

A curious child, who dwelt upon a tract  
Of inland ground, applying to his ear  
The convolutions of a smooth-lipped shell;  
To which, in silence hushed, his very soul  
Listened intensely; and his countenance soon  
Brightened with joy; for from within were heard  
Murmurings, whereby the monitor expressed  
Mysterious union with its native sea.

*Poems By William Wordsworth*

Excursions, Book IV

## OCEAN CURRENT

**Heyerdahl, Thor** 1914–2002  
Norwegian ethnographer and adventurer

...the ocean currents circulate with no regard for political borderlines, and that nations can divide the land, but the revolving ocean, indispensable and yet vulnerable, will forever remain a common human heritage.

In Alon Tal

*Speaking of Earth*

If Man is to Survive (p. 40)

Rutgers University Press. New Brunswick, Maine, USA. 2006

**Verne, Jules** 1828–1905  
French novelist

The sea has its large rivers like continents. They are special currents, known by their temperature and colour. The most remarkable is known under the name of the Gulf Stream. Science has found out the direction of five principal currents one in the North Atlantic, a second in the South Atlantic, a third in the North Pacific, a fourth in the South Pacific, and a fifth in the South Indian Ocean.

*Twenty Thousand Leagues Under The Sea*

Part I, Chapter XIV (p. 76)

Ward, Lock & Co., Ltd. London, England. n.d.

## OCEAN OF INEXPLICABILITY

**Huxley, Thomas Henry** 1825–95  
English biologist

The known is finite, the unknown infinite; intellectually we stand on an islet in the midst of an illimitable ocean

of inexplicability.

In Francis Darwin

*The Life and Letters of Charles Darwin* (Volume 1)

Chapter XIV (p. 557)

D. Appleton & Co. New York, New York, USA. 1904

## OCEAN, PHOSPHORENCE OF

**von Humboldt, Alexander** 1769–1859  
German naturalist and explorer

The phosphorescence of the ocean is one of those splendid phenomena of nature which excite our admiration, even when we behold its recurrence every night for months together.

Translated by E. C. Otte and Henry G. Bohn

*Views of Nature: or, Contemplations on the Sublime Phenomena of Creation*

Illustrations & Additions (p. 245)

Henry G. Bohn. London, England. 1850

## OCEANOGRAPHER

### Narrator

Since time began the ocean has withheld its secrets. Man has ventured merely to its threshold. Oceanographers have, with precise instruments, presented us with a framework of facts. Around these facts our imagination reconstructs the eerie, forbidden atmosphere of the deep.

*The Incredible Petrified Forest*

Film (1957)

## OCEANOGRAPHY

**Revelle, Richard**  
No biographical data available

Just as the United Nations is the meeting place for all the nations, the science of the sea is a meeting place for all the sciences.

In Mary Sears

*Oceanography; Invited Lectures Presented at the International Oceanographic Congress Held in New York, 31 August-12 September, 1959*

Preface (p. iii)

American Association for the Advancement of Science. Washington, D.C. 1961

**Spilhaus, Athelstan** 1911–78  
South-African born American geophysicist and oceanographer

The science of oceanography is not a discipline but an adventure wherein any discipline or combination of disciplines may be focused on understanding and using the sea and all that is in it.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1964*

The Future of Oceanography (p. 361)

Government Printing Office. Washington, D.C. 1965

**ODDS****Hans Solo (Fictional character)**

C3PO: Sir, the possibility of successfully navigating an asteroid field is approximately 3,720 to 1.

Hans Solo: Never tell me the odds.

*Star Wars: Episode V – The Empire Strikes Back*  
The film (1980)

**Jeans, Sir James Hopwood** 1877–1946

English physicist and mathematician

Choose a point in space at random and the odds against it being occupied by a star are enormous.

*The Universe Around Us*

Chapter I (p. 102)

The Macmillan Company. New York, New York, USA. 1929

**Stoppard, Tom** 1937–

Czech-born English playwright

Life is a gamble at terrible odds – if it was a bet you wouldn't take it.

*Rosencrantz and Guildenstern Are Dead*

Act Three (p. 115)

Grove Press, Inc. New York, New York, USA. 1967

**ODOR****Bell, Alexander Graham** 1847–1920

American scientist

Find out what an odor is – whether it is an emanation and therefore subject to being weighed, or a vibration and therefore capable of being reflected. Odors are becoming more and more important in the worlds of scientific experiments and in medicine – and the need of more knowledge will bring forth more knowledge, as sure as the sun shines.

In N.E. McIndoo

*Annual Report of the Board of Regents of the Smithsonian Institution*  
(1920)

The Senses of Insects (p. 464)

Government Printing Office. Washington, D.C. 1921

**OFFENSE****Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

The most heinous offense a scientist as a scientist can commit is to declare to be true that which is not so; if a scientist cannot interpret the phenomenon he is studying, it is a binding obligation upon him to make it possible for another to do so.

*The Limits of Science* (p. 6)

Harper & Row Publishers. New York, New York, USA. 1984

**OLD AGE****Foster, Sir Michael** 1836–1907

English physiologist

The eyes of the young look ever forward; they take little heed of the short though ever-lengthening fragment of life which lies behind them; they are wholly bent on that which is to come. The eyes of the aged turn wistfully again and again to the past; as the old glide down the inevitable slope their present becomes a living over again the life which has gone before, and the future takes on the shape of a brief lengthening of the past.

Address by the President of the British Association for the Advancement of Science

*Science*, N.S. Volume 10, Number 249, October 6, 1899 (p. 466)

**OMEGA POINT****Barrow, John D.** 1952–

English theoretical physicist

**Tipler, Frank J.** 1947–

American physicist

If life evolves in all of the many universes in a quantum cosmology, and if life continue to exist in all of these universes, then all of these universes, which include all possible histories among them, will approach the Omega Point. At the instant the Omega Point is reached, life will have gained control of all matter and forces not only in a single universe, but in all universes whose existence is logically possible; life will have spread into all spatial regions in all universes which could locally exist, and will have stored an infinite amount of information, including all bits of knowledge which it is logically possible to know.

*The Anthropic Cosmological Principle*

Chapter 10 (p. 676)

Clarendon Press. Oxford, England. 1986

**OPINION****Adams, George** 1750–95

English instrument maker

Mankind are always ready to adopt or reject what accords with pre-conceived opinions, to make reason subservient to prejudice, and to reject without examination, whatever is discordant with a received system; thus closing the door of science, and excluding themselves from the benefit of light.

*Lectures on Natural and Experimental Philosophy* (Volume 1)

Lecture II (p. 27)

Printed by R. Hindmarsh. London, England. 1794

**Aurelius Antoninus, Marcus** 121–180

Roman emperor

Everything is mere opinion.

In Craufurd Tait Ramage

*Beautiful Thoughts from Greek Authors* (p. 35)

Edward Howell. Liverpool, England. 1864

**Bergman, Torbern Olaf** 1735–84

Swedish chemist and naturalist

An observer swayed by preconceived opinions, may be considered as one who views objects through coloured glasses, so that each object assumes a tinge similar to that of the glasses employed. He who seeks the truth must learn to observe with equal candour those facts which controvert his opinions, and those which favour them.

Quoted in Joseph William Mellor

*A Comprehensive Treatise on Inorganic and Theoretical Chemistry*

(Volume 1)

Chapter I (p. 7)

Longman, Green, &amp; Co. London, England. 1922

**Bernard, Claude** 1813–78

French physiologist

...no man's opinion, formulated in a theory or otherwise, may be deemed to represent the whole truth in the sciences. It is a guide, a light, but not an absolute authority. The revolution which the experimental method has effected in the sciences is this: it has put a scientific criterion in the place of personal authority. The experimental method is characterized by being dependent only on itself, because it includes within itself its criterion – experience.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Part One, Chapter II, Section IV (p. 40)

Henry Schuman, Inc. New York, New York, USA. 1927

**Bourne, William** 1535–82

English mathematician

...for that my opinion doth differ from some of the ancient writers in natural Philosophy, it is possible that it may be utterly dislyked of and condemned to be of no truth.

*The Treasure for Travelers*

The Fyfh Booke, To The Reader (p. 3)

Publisher undetermined

**Browne, Sir Thomas** 1605–82

English author and physician

Where we desire to be informed, 'tis food to contest with men above ourselves; but, to confirm and establish our opinions, 'tis best to argue with judgments below our own, that the frequent spoils and victories over their reasons may settle in ourselves an esteem and confirmed opinion of our own.

In Charles Sayle (ed.)

*The Works of Sir Thomas Browne* (Volume 1)*Religio Medici*

The First Part, Section 6 (p. 12)

John Grant. Edinburgh, Scotland. 1912

**Carlyle, Thomas** 1795–1881

English historian and essayist

A man's honest, earnest opinion is the most precious of all he possesses: let him communicate this if he is to communicate anything.

Chapter X (p. 83)  
Books for Libraries Press, Freeport, New York, USA. 1972

**Laplace, Pierre Simon** 1749–1827  
French mathematician, astronomer, and physicist

In things which are only probable the difference of the data, which each man has in regard to them, is one of the principal causes of the diversity of opinions which prevail in regard to the same objects.

*A Philosophical Essay on Probabilities*  
Chapter II (p. 8)  
John Wiley & Sons. New York, New York, USA. 1902

It is to the influence of the opinion of those whom the multitude judges best informed and to whom it has been accustomed to give its confidence in regard to the most important matters of life that the propagation of those errors [pertaining to errors of truth] is due which in times of ignorance have covered the face of the earth.

*A Philosophical Essay on Probabilities*  
Chapter II (p. 9)  
John Wiley & Sons. New York, New York, USA. 1902

**Lavoisier, Antoine Laurent** 1743–94  
French chemist

There is an objection to the work which I am going to present to the public, which is perhaps better founded, that I have given no account of the opinion of those who have gone before me; that I have stated only my own opinion, without examining that of others. By this I have been prevented from doing that justice to my associates, and more especially to foreign chemists, which I wished to render them. But I beseech the reader to consider, that, if I had filled an elementary work with a multitude of quotations; if I had allowed myself to enter into long dissertations on the history of the science, and the works of those who have studied it, I must have lost sight of the true object I had in view, and produced a work, the reading of which must have been extremely tiresome to beginners. It is not to the history of the science, or of the human mind, that we are to attend in an elementary treatise: Our only aim ought to be ease and perspicuity, and with the utmost care to keep everything out of view which might draw aside the attention of the student; it is a road which we should be continually rendering more smooth, and from which we should endeavor to remove every obstacle which can occasion delay.

Translated by Robert Kerr  
*Elements of Chemistry* (Volume 1) (5th edition)  
Preface (pp. xxxvii–xxxviii)  
Printed for W. Creech. Edinburgh, Scotland. 1802

**Lippmann, Walter** 1889–1974

American journalist and author

True opinions can prevail only if the facts to which they refer are known; if they are not known, false ideas are just as effective as true ones, if not a little more effective.

Order (p. 63)  
Chronicle Books. San Francisco, California, USA. 1997

**Huntington, Edward V.** 1874–1952  
Mathematician

The fundamental importance of the subject of order may be inferred from the fact that all the concepts required in geometry can be expressed in terms of the concept of order alone.

*The Continuum, and Other Types of Serial Order*  
Introduction (p. 2)  
Harvard University Press. Cambridge, Massachusetts, USA. 1917

**Huxley, Thomas Henry** 1825–95  
English biologist

...the man of science knows that here, as everywhere, perfect order is manifested; that there is not a curve of the waves, not a note in the howling chorus, not a rainbow glint on a bubble which is other than a necessary consequence of the ascertained laws of nature; and that with sufficient knowledge of the conditions competent physico-mathematical skill could account for, and indeed predict, everyone of those 'chance' events.

In Francis Darwin (ed.)  
*The Life and Letters of Charles Darwin* (Volume 1)  
Chapter XIV (p. 554)  
D. Appleton & Company. New York, New York, USA. 1896

Harmonious order governing eternally continuous progress – the web and woof of matter and force interweaving by slow degrees, without a broken thread, that veil which lies between us and the Infinite – that universe which alone we know or can know; such is the picture which science draws of the world ...

*Darwiniana*  
The Origin of Species (p. 59)  
D. Appleton & Co. New York, New York, USA. 1894

The object [of the method of investigation] is the discovery of the rational order which pervades the universe; the method consists of observation and experiment (which is observation under artificial conditions) for the determination of the facts of Nature; of inductive and deductive reasoning for the discovery of their mutual relations and connection.

*Method and Results: Essays*  
The Progress of Science (p. 60)  
D. Appleton & Co. New York, New York, USA. 1898

**Kline, Morris** 1908–92

American mathematics professor and writer

Is there a law and order in this universe or is its behavior merely the working of chance and caprice? Will the Earth and other planets continue their motions around the sun or will some unknown body, coming from great distances, rush through our planetary system and alter the course of every planet? Cannot the sun someday explode, as other suns are doing daily, and burn us all to a crisp? Was man deliberately planted on a planet especially prepared for his existence or is he merely an insignificant concomitant of accidental cosmic circumstances?

*Mathematics in Western Culture*

Chapter XXIV (p. 374)

Oxford University Press, Inc. New York, New York, USA. 1953

**Lewis, C. S. (Clive Staples)** 1898–1963

British author, scholar, and popular theologian

To the modern man it seems simply natural that an ordered cosmos should emerge from chaos, that life should come out of the inanimate, reason out of instinct, civilization out of savagery, virtue out of animalism. This idea is supported in his mind by a number of false analogies: the oak coming from the acorn, the man from the spermatozoon, the modern steamship from the primitive coracle. The supplementary truth that every acorn was dropped by an oak, every spermatozoon derived from a man, and the first boat by something so much more complex than itself as a man of genius, is simply ignored. The modern mind accepts as a formula for the universe in general the principle “almost nothing may be expected to turn into almost everything” without noticing that the parts of the universe under our direct observation tell a quite different story.

*Present Concerns: Essays by C.S. Lewis*

Modern Man and His Categories of Thought (p. 63)

Harcourt Brace Jovanovich. New York, New York, USA. 1986

**Lucretius** ca. 99 BCE–55 BCE

Roman poet

For verily not by design did the first-beginnings of things station themselves each in its right place guided by keen intelligence, nor did they bargain sooth to say what motions each should assume, but because many in number and shifting about in many ways throughout the universe they are driven and tormented by blows during infinite time past, after trying motions and unions of every kind at length they fall into arrangements such as those out of which our sum of things has been formed...

In *Great Books of the Western World* (Volume 12)

Man continually engages in attempts to create order, but only at the expense of greater disorder in the surroundings.

*Energetics, Kinetics, and Life: An Ecological Approach* (p. 200)

Wadsworth Publishing Company. Belmont, California, USA. 1971

**Moulton, Forest Ray** 1872–1952

American astronomer

To an astronomer the most remarkable and interesting thing about that part of the physical universe with which he has become acquainted is not its vast extent in space, nor the number and great masses of its stars, nor the violent forces that operate in the stars, nor in the long periods of astronomical time, but that which holds him awestruck is the perfect orderliness of the universe and the majestic succession of the celestial phenomena.

In H.H. Newman (ed.)

*The Nature of the World and of Man*

Astronomy (p. 30)

The University of Chicago Press. Chicago, Illinois, USA. 1927

The orderliness of the universe is the supreme discovery in science; it is that which gives us hope that we shall be able to understand not only the exterior world but also our own bodies and our own mind.

In H.H. Newman (ed.)

*The Nature of the World and of Man*

Astronomy (p. 30)

The University of Chicago Press. Chicago, Illinois, USA. 1927

Now we find ourselves a part of a Universal Order of which we did not dream and whose alphabet we are just beginning to learn. Instead of shrinking it to our measure, we contemplate its infinite orderliness and set no limits to the goal our race may hope to attain.

*Astronomy*

Chapter XVI (p. 533)

The Macmillan Company. New York, New York, USA. 1931

**Oppenheimer, James Robert** 1904–67

American theoretical physicist

We cannot make much progress without a faith that in this bewildering field of human experience, which is so new and so much more complicated than we thought even five years ago, there is a unique and necessary order: not an order that we can tell a priori, not an order that we can see without experience, but an order which means that the parts fit into a whole and that the whole requires the parts.

*The Constitution of Matter* (p. 37)

Oregon State System of Higher Education. Eugene, Oregon, USA. 1956

One may only hope that what is at the moment just a picture of chaos will ultimately reveal again that deep harmony and order which one has always found in the physical world when one has pushed hard, and which is very beautiful indeed.

In Lincoln Barnett

*Writing on Life: Sixteen Close-Ups*

Physicist Oppenheimer (p. 358)

William Sloane Associates, Publishers. New York, New York, USA. 1951

The knowledge which comes to us at such a terrifyingly, inhumanly rapid rate has some order in it. We are allowed to forget a great deal, as well as to learn. The order is never adequate. The mass of understanding things, which cannot be summarized, or wholly ordered, always grows greater; but a great deal does get understood.

The Growth of Science and the Structure of Society

*Daedalus*, Winter, 1958

**Picard, Charles Emile** 1856–1941

French mathematician

We no longer pretend to be able to grasp reality in a physical theory; we see in it rather an analytic or geometric mold useful and fertile for a tentative representation of phenomena, no longer believing that the agreement of a theory with experience demonstrates that the theory expresses the reality of things. Such statements have sometimes seemed discouraging; we ought rather to marvel that, with representations of things more or less distant and discolored, the human spirit has been able to find its way through the chaos of so many phenomena and to derive from scientific knowledge the ideas of beauty and harmony. It is no paradox to say that science puts order, at least tentative order, into nature.

In Lucienne Felix

*The Modern Aspect of Mathematics* (p. 31)

Basic Books, Inc. New York, New York, USA. 1960

**Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

To obtain a result of real value, it is not enough to grind out calculations or to have a machine to put things in order; it is not order alone, it is unexpected order, which is worthwhile. The machine may gnaw on the crude fact; the soul of the fact will always escape it.

Houghton Mifflin Company. New York, New York, USA. 1903

**Reichenbach, Hans** 1891–1953

German philosopher of science

...whereas inorganic nature was seen to be controlled by the laws of cause and effect, organic nature appeared to be governed by the law of purpose and means.

*The Rise of Scientific Philosophy*

Chapter 12 (p. 192)

University of California Press. Berkeley, California, USA. 1951

**Ritchie, Arthur David** 1891–1967

Scottish philosopher and science history writer

But it seems to me equally obvious that the orderliness is not all-pervasive. There are streaks of order to be found among the chaos, and the nature of scientific method is to seek these out and to stick to them when found and to reject or neglect the chaos. It is obvious that we have succeeded in finding some order in nature, but this fact in itself does not prove anything farther.

*Scientific Method: An Inquiry into the Character and Validity of Natural Law*

Chapter VII (p. 200)

Kegan Paul, Trench, Trubner & Co., Ltd. London, England. 1923

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

Dimensions, in geometry, are a development of order. The conception of a limit, which underlies all higher mathematics, is a serial conception. There are parts of mathematics which do not depend upon the notion of order, but they are very few in comparison with the parts in which this notion is involved.

*Introduction to Mathematical Philosophy*

Chapter IV (p. 29)

Dover Publications, Inc. New York, New York, USA. 1993

The notion of continuity depends upon that of order, since continuity is merely a particular type of order.

**Hopkins, Frederick Gowland** 1844–89

English biochemist

A very distinguished organic chemist long since dead, said to me in the late eighties: “The chemistry of the living? That is the chemistry of protoplasm; that is superchemistry; seek, my young friend, for other ambitions.”

In Joseph Needham and Ernest Baldwin (eds.)

*Hopkins & Biochemistry*

Report of the British Association

Some Chemical Aspects of Life

1933 (p. 245)

**Kekulé, Friedrich August** 1829–96

German chemist

We define organic chemistry as the chemistry of carbon compounds. In doing this, we see no opposition between organic and inorganic compounds. What has been known for a long time as organic chemistry and which more usefully may be called the chemistry of carbon compounds, is rather only a special section of pure chemistry which is dealt with separately because the large number and special importance of carbon compounds seems to make a special field of study necessary.... It must be emphasized that organic chemistry

does not deal with the study of the chemical processes in the organs of plants and animals.

*Lehrbuch der Organischen Chemie* (Volume 1) (p. 10)  
Publisher undetermined

**Thompson, Sir D'Arcy Wentworth** 1860–1948  
Scottish zoologist and classical scholar

The mysteries of organic chemistry are great, and the differences between its processes or reactions as they are carried out in the organism and in the laboratory are many; the actions, catalytic and other, which go on in the living cell, are of extraordinary complexity. But the contention that they are different in kind from ordinary chemical operations...would seem to be no longer tenable.

*On Growth and Form* (Volume 2)  
Chapter IX (p. 652)  
At The University Press. Cambridge, England. 1951

**Thudichum, J. L. W.** 1829–1901  
Chemist

Organic chemistry is the child of medicine, and however far it may go on its way, with its most important achievements, it always returns to its parent.

On the Discoveries and Philosophy of Liebig  
*Journal of the Royal Society of Arts*, Volume 24, 1876 (p. 141)

**Ure, Andrew** 1778–1857  
Scottish physician

All of the elementary principles of organic nature may be considered as deriving the peculiar delicacy of their chemical equilibrium, and the consequent facility with which it may be subverted and new modeled, to the multitude of atoms grouped together in a compound. On this view, none of them should be expected to consist of a single atom of each component.

On the Ultimate Analysis of Vegetable and Animal Substances  
*Philosophical Transactions of the Royal Society of London*, Volume 112, 1822 (pp. 468–469)

**Wöhler, Friedrich** 1800–82  
German chemist

Organic chemistry just now is enough to drive one mad. It gives one the impression of a primeval, tropical forest full of the most remarkable things, a monstrous and boundless thicket, with no way of escape, into which one may well dread to enter.

In Edward Franklin Degering  
*An Outline of Organic Nitrogen Compounds*  
Letter to Berzelius, 28 January, 1835 (p. 5)  
University Lithoprinters. Ypsilanti, Michigan, USA. 1945

## ORGANIC FORM

**Harrison, Ross G.** 1870–1959  
American biologist and anatomist

...it is the mystery and beauty of organic form that sets the problem for us.

*The Anatomical Record* (Volume 7)  
Anatomy: Its Scope, Methods and Relations to Other Biological Sciences (p. 405)  
The Wistar Institute of Anatomy and Biology  
Philadelphia, Pennsylvania, USA. 1913

## ORGANIC LIFE

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

...the destinies of organic life may be determined by what are at first sight irrelevant accidents.

*The Nature of the Physical World*  
Chapter VIII (p. 171)  
The University Press. New York, New York, USA. 1929

## ORGANIC STRUCTURE

**Cuvier, Georges** 1769–1832  
French zoologist and statesman

Thus, commencing our investigation by a careful survey of anyone bone by itself, a person who is sufficiently master of the laws of organic structure, may, as it were, reconstruct the whole animal to which that bone had belonged.

*Essay on the Theory of the Earth*  
Section 28 (p. 95)  
Printed by James Ballantyne & Co. Edinburgh, Scotland. 1817

## ORGANISM

### Author Undetermined

Under the most rigorously controlled conditions of pressure, temperature, volume, humidity, and other variables the organism will do as it pleases.

Source undetermined

**Bernard, Claude** 1813–78  
French physiologist

We may, of course strike a balance between what a living organism takes in as nourishment and what it gives out in excretions.... This would be like trying to tell what happens inside a house by watching what goes in by the door and what comes out by the chimney.

*An Introduction to the Study of Experimental Medicine*  
Part Two, Chapter II, Section IX  
The Macmillan Company. New York, New York, USA. 1927

**Evans, Howard Ensign** 1919–2002  
Entomologist

It has been said that for every problem concerning living things there is an organism ideal for its solution. It is probable that there are still undiscovered species living

that hold the answers to problems that face us now or will in the future.

*Pioneer Naturalist: The Discovery and Naming of North American Plants and Animals*

Naturalists, Then and Now (p. 267)

Henry Holt & Company. New York, New York, USA. 1993

**Hess, Walter** 1881–1973

Swiss physiologist

A recognized fact which goes back to the earliest times is that every living organism is not the sum of a multitude of unitary processes, but is, by virtue of interrelationships and of higher and lower levels of control, an unbroken unity.

*Nobel Lectures, Physiology or Medicine 1942–1962*

Nobel lecture for award received in 1949

The Central Control of the Activity of Internal Organs (p. 247)

Elsevier Publishing Company. Amsterdam, Netherlands. 1964

**Jacob, François** 1920–

French biologist

And one of the deepest, one of the most general functions of living organisms is to look ahead, to produce future as Paul Valéry put it.

Time and the Invention of the Future (p. 66)

Pantheon Books. New York, New York, USA. 1982

**Jones, J. S.**

No biographical data available

**Ebert, D.**

No biographical data available

No organism can do everything. Every creature is restricted by constraints of various kinds. Many of these arise from the facts of history and the nature of evolution, both of which can proceed only from where they left off.

In R.J. Berry, T.J. Crawford, and G.M. Hewitt (eds.)

*Genes in Ecology*

Life History and Mechanical Constraints on Reproduction in Genes, Cells and Waterfleas (p. 393)

Blackwell Scientific Publications. Oxford, England. 1992

**Jordan, David Starr** 1851–1931

American scientist and university administrator

We see many kinds of birds and trees and insects and fishes and flowers and blades of grass, and yet when we look closely we find not one blade of grass in the meadow quite like another blade. The green cloak which covers the brown earth is the shield under which millions of organisms, brown or green, carry on their life work; yet not one organism in the world in body or mind is the exact measure of its neighbour. But with all this the real variety in life is far greater than that which appears.

In David Starr Jordan

*Foot-notes to Evolution, a Series of Popular Addresses on the Evolution of Life*

Chapter I (p. 1)

D. Appleton & Co. New York, New York, USA. 1907

The spontaneous generation of organisms has never been seen, nor with our dull senses and clumsy instruments could it ever be seen; for an organism without a history, untouched by heredity, un-selected by struggle, unaffected by environment, a coin fresh from the mint of creation, would be a fragment of pristine simplicity as far beyond our grasp as the molecules of the chemist.

*Foot-notes to Evolution, a Series of Popular Addresses on the Evolution of Life*

Chapter I (p. 5)

D. Appleton & Co. New York, New York, USA. 1907

The simplest organism we know is far more complex than the constitution of the USA.

*Footnotes to Evolution: A Series of Popular Addresses on the Evolution of Life*

Chapter X (pp. 258–259)

D. Appleton & Co. New York, New York, USA. 1898

**Price, P. W.**

No biographical data available

Visually stimulating organisms, the large, the colorful, the active, the aggressive, command our attention, while the secretive and insidious remain largely ignored.

*Evolutionary Biology of Parasites*

Chapter Eight (p. 171)

Princeton University Press. Princeton, New Jersey, USA. 1980

**Savage-Rumbaugh, Sue**

American psychologist

**Lewin, Roger Amos**

Anthropologist

All organisms with complex nervous systems are faced with the moment-by-moment question that is posed by life: What shall I do next?

*Kanzi: The Ape at the Brink of the Human Mind*

Chapter 10 (p. 255)

John Wiley & Sons, Inc. New York, New York, USA. 1994

**Thomson, Sir John Arthur** 1861–1933

Scottish naturalist

The hosts of living organisms are not random creatures, they can be classified in battalions and regiments. Neither are they isolated creatures, for every thread of life is inter-twined with others in a complex web.

*The System of Animate Nature* (Volume 1)

Lecture II (p. 58)

William & Norgate. London, England. 1920

From the physicist's point of view, the living organism resembles, as we have already said, some wonderful kind of engine.

*The Bible of Nature*

Lecture III (p. 100)

Charles Scribner's Sons. New York, New York, USA. 1908

The vital striving and struggling characteristic of the realm of organisms is something apart from and finer than even the music of the spheres.

*The System of Animate Nature: The Gifford Lectures Delivered in the University of St. Andrews in the Years 1915 and 1916* Volume 2  
Lecture XI (p. 358)  
Henry Holt & Co. New York, New York, USA. 1920

**von Goethe, Johann Wolfgang** 1749–1832  
German poet, novelist, playwright, and natural philosopher

Basic characteristics of an individual organism: to divide, to unite, to merge into the universal, to abide in the particular, to transform itself, to define itself, and as living things tend to appear under a thousand conditions, to arise and vanish, to solidify and melt, to freeze and flow, to expand and contract. Since these effects occur together, any or all may occur at the same moment.

In D. Miller (ed.)

*Scientific Studies* (Volume 12)

Chapter VIII (pp. 303–304)

Suhrkamp. New York, New York, USA. 1988

## ORGANIZATION

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

There is no doubt that the scheme of physics as it has stood for the last three-quarters of a century postulates a data at which either the entities of the universe were created in a state of high organization, or pre-existing entities were endowed with that organization, which they have been squandering ever since. Moreover, this organization is admittedly the antithesis of chance. It is something which could not occur fortuitously.

*The Nature of the Physical World*

Chapter IV (pp. 84–85)

The Macmillan Company. New York, New York, USA. 1930

**Eiseley, Loren C.** 1907–77

American anthropologist, educator, and author

Men talk much of matter and energy, of the struggle for existence that molds the shape of life. These things exist, it is true; but more delicate, elusive, quicker than fins in water, is that mysterious principle known as “organization,” which leaves all other mysteries concerned with life stale and insignificant by comparison. For that without organization life does not persist is obvious. Yet this organization itself is not strictly the product of life, nor of selection. Like some dark and passing shadow within matter, it cups out the eyes’ small windows or spaces the notes of a meadow lark’s song in the interior of a mottled egg.

*The Immense Journey*

The Flow of the River (p. 26)

Vintage Books. New York, New York, USA. 1957

**Huxley, Thomas Henry** 1825–95  
English biologist

Not only are all animals existing in the present creation organized to one of these five plans; but paleontology

tends to show that in the myriad of past ages of which the earth’s crust contains the records, no other plan of animal life made its appearance on our planet. A marvelous fact and one which seems to present no small obstacle in the way of the notion of the possibility of fortuitous development of animal life.

In Michael Foster and E. Ray Lankester (eds.)

*Scientific Memoirs of Thomas Huxley* (Volume 1)

On Natural History as Knowledge, Discipline and Power (p. 306)

Publisher undetermined. 1901

**Needham, Joseph** 1900–95

English biochemist and sinologist

Organization and Energy are the two fundamental problems which all science has to solve.

*Time: The Refreshing River*

The Naturalness of the Spiritual World (p. 33)

The Macmillan Company. New York, New York, USA. 1943

...organization is not something fundamentally mystical and unamenable to scientific attack, but rather the basic problem confronting the biologist.... It is for us to investigate the nature of this biological organization, not to abandon it to the metaphysicians because the rules of physics do not seem to apply to it.

*Order and Life*

Chapter I (pp. 7, 17–18)

Yale University Press. New Haven, Connecticut, USA. 1936

**Simpson, George Gaylord** 1902–84

American paleontologist

The point about explanation in biology that I would particularly like to stress is this: to understand organisms one must explain their organization. It is elementary that one must know what is organized and how it is organized, but that does not explain the fact or the nature of the organization itself. Such explanation requires knowledge of how an organism came to be organized and what function the organization serves. Ultimate explanation in biology is therefore necessarily evolutionary.

*This View of Life: The World of an Evolutionist*

Chapter Six (p. 113)

Harcourt, Brace & World, Inc. New York, New York, USA. 1964

**Szent-Györgyi, Albert** 1893–1986

Hungarian-born American biochemist

One of the most basic principles of biology is organization, which means that two things put together in a specific way form a new unit, a system, the properties of which are not additive and cannot be described in terms of the properties of the constituents. As points may be connected to letters, letters to words, words to sentences, etc., so atoms can join to molecules, molecules to organelles, organelles to cells, etc., every level of organization having a new meaning of its own and offering exciting vistas and possibilities.

*Bioenergetics*

Chapter 6 (p. 39)

Academic Press. New York, New York, USA. 1957

**Woodger, Joseph Henry** 1894–1981

English biologist

The failure to take organization seriously is perhaps but another consequence of the rapid development of physics and chemistry as compared to other sciences, and the consequent dazzling effect this had on biological vision.

*Biological Principles: A Critical Study*

Part II, Chapter VI, B, 5 (p. 291)

Kegan Paul, Trench, Trubner &amp; Company Ltd. London, England. 1929

If the concept of organization is of such importance as it appears to be it is something of a scandal that we have no adequate conception of it. The first duty of the biologist would seem to be to try and make clear this important concept. Some biochemists and physiologists...express themselves as though they really believed that if they concocted a mixture with the same chemical composition as what they call "protoplasm" it would proceed to "come to life." This is the kind of nonsense which results from forgetting or being ignorant of organization.

*Biological Principles: A Critical Study*

Part II, Chapter VI, B, 5 (p. 291)

Kegan Paul, Trench, Trubner &amp; Company Ltd. London, England. 1929

**ORGANS****Wallace, Alfred Russel** 1823–1913

English humanist, naturalist, and geographer

...We have also here an acting cause to account for that balance so often observed in nature – a deficiency in one set of organs always being compensated by an increased development of some others – powerful wings accompanying weak feet, or great velocity making up for the absence of defensive weapons; for it has been shown that all varieties in which an unbalanced deficiency occurred could not long continue their existence. The action of this principle is exactly like that of the centrifugal governor of the steam engine, which checks and corrects any irregularities almost before they become evident; and in like manner no unbalanced deficiency in the animal kingdom can ever reach any conspicuous magnitude, because it would make itself felt at the very first step, by rendering existence difficult and extinction almost sure soon to follow.

*Journal of the Proceedings of the Linnean Society, Zoology*, Volume 3, 1858 (pp. 61–62)**ORGASM****Burroughs, William S.** 1914–97

American writer

There is the pleasurable orgasm, like a rising sales graph, and there is the unpleasurable orgasm, slumping ominously like the Dow Jones in 1929. ...

*The Adding Machine*

My Experiences with Wilhelm Reich's Orgone Box (p. 165)

Arcade Publishing. New York, New York, USA. 1991

**ORIGIN****Berlinski, David** 1942–

American mathematician

...the origin is a mathematical point, something that has sucked from the concept of a place its essential property, that of being *here* rather than there, the infinitely extended line itself balanced perfectly on that slim, solitary, and singular spike.

*A Tour of the Calculus*

Chapter 3 (p. 17)

Pantheon Books. New York, New York, USA. 1995

**Dewar, Redcote**

No biographical data available

The preliminary problem in all human speculation has ever been, the origin of existence, and it still frets the natural philosopher; but the solution is partly determined by the definition of the problem, and its accuracy for today depends almost wholly upon the meaning which present intelligence attaches to the term *origin*.

*From Matter to Man: A New Theory of the Universe*

Chapter I (p. 1)

Chapman &amp; Hall, Ltd. London, England. 1898

...as nothing begets nothing, so something must be begotten of something.

*From Matter to Man: A New Theory of the Universe*

Chapter I (p. 1)

Chapman &amp; Hall, Ltd. London, England. 1898

**ORIGIN OF LIFE****Goldanskii, Vitalii** 1923–2001

Soviet physicist and chemist

Two properties of living systems that are unique from the standpoint of physics, namely, self-replication and homochirality, may serve as Ariadne's thread in the labyrinth of hypotheses concerning this [origin-of-life] problem.

In J. and K. Thon van Tran, J. C. Mounolou, J. Schneider, and C. Mckay (eds.)

*Frontiers of Life*

Chirality, Origin of Life, and Evolution

Publisher undetermined

**Oparin, Alexander Ivanovich** 1894–1980

Russian biochemist

...when I began to be interested in the problem of the origin of life, in the early 1920s, the whole topic was in a state of crisis. It appeared as if it was a forbidden subject in the world of science. The problem was generally felt to be insoluble in principle using objective scientific

research methods. It was felt that it belonged more to the sphere of faith than knowledge, and that, for this reason, serious scientists should not waste their time and effort on hopeless attempts to solve the problem.

Jubilee for Heterogenesis Research  
*New Scientist*, Volume 142, 1974

**Sagan, Carl** 1934–96

American astronomer and author

Every human community has somehow or other tried to understand...deep questions of origins. Origin of our group, whatever it is, origin of our species, origin of life, origin of Earth, origin of the universe. I think you have to be made out of wood not to be interested in these questions. And there's no way to understand even the questions, much less the answers, without understanding science.

Speech

National meeting of the American Astronomical Society (January 5, 1993)

**Teilhard de Chardin, Pierre** 1881–1955

French Jesuit, paleontologist, and biologist

To push anything back into the past is equivalent to reducing it to its simplest element. Traced as far as possible in the direction of their origins, the last fibers of the human aggregate are lost to view and are merged in our eyes with the very stuff of the universe.

*The Phenomenon of Man*

Book One, Chapter I (p. 39)

Harper & Brothers. New York, New York, USA. 1959

**Wächtershäuser, Günter**

International patent lawyer

The chemist strives to explain the inanimate world by reference to mechanistic laws. The historian strives to understand the world of human culture by reference to a fabric of plans and purposes.... Nowhere is this encounter in sharper focus than in the problem of the origin of life.

The Origin of Life and Its Methodological Challenge

*Journal of Theoretical Biology*, Volume 187, 1997

**ORIGIN OF SPECIES**

**Gulick, John T.** 1832–1923

American missionary and evolutionist

When a number of closely related varieties and species, occupying adjoining districts of very limited extent, come under observation, the problems connected with the origin of species are liable to be forced upon us.

*Evolution, Racial and Habitudinal: Racial & Habitudinal*

Chapter I (p. 1)

Carnegie Institution of Washington. Washington, D.C. 1905

**ORIGINAL**

**Lee, Gerald Stanley** 1862–1944

Writer

To be original is to discover the commonplace of a thousand years – to face at first the sneer that no one would have thought of it, and at last the indifference because anyone would.

*The Shadow Christ*

Chapter XIX (p. 118)

The Century Co. New York, New York, USA. 1905

**ORIGINALITY**

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

Those theories to which we ascribe originality are not so easily grasped, not so quickly epitomized and systematized. An author tends toward this or that way of thinking; but it is modified by his individuality, indeed, often simply by his presentation, by the peculiarity of the idiom in which he speaks and writes, by the change in times, by various considerations.

In Karl J. Fink

*Goethe's History of Science*

Chapter 9 (p. 115)

Cambridge University Press. Cambridge, England. 1991

Originality provokes originality.

Translated by Otto Wenckstern

*Goethe's Opinions on the World, Mankind, Literature, Science, and Art* (p. 41)

John W. Parker & Son. London, England. 1853

**ORNAMENT**

**Ruskin, John** 1819–1900

English writer, art critic, and social reformer

Ornament cannot be overcharged if it be good, and is always overcharged when it is bad.

*The Seven Lamps of Architecture*

Chapter I (p. 23)

John Wiley & Son. New York, New York, USA. 1865

...as a woman of feeling would not wear false jewels, so would a builder of honor disdain false ornaments.

*The Seven Lamps of Architecture*

Chapter 2 (p. 44)

John Wiley & Son. New York, New York, USA. 1865

No ornaments... are so cold, clumsy, and vulgar, so essentially incapable of a fine line, or shadow, as those of cast iron...

*The Seven Lamps of Architecture*

Chapter 2 (p. 46)

John Wiley & Son. New York, New York, USA. 1865

## ORNITHOLOGIST

### Broderip, William John 1789–1859

English naturalist

The melody of birds finds its way to the heart of everyone; but the cause that prompts the outpourings that make copse, rock, and river, ring again on a fine spring morning is more a matter of doubt with ornithologists than the uninitiated in zoological mysteries might suppose.

*Zoological Recreations*

Part First: Birds (p. 13)

Lea & Blanchard. Philadelphia, Pennsylvania, USA. 1849

### Elliot, Daniel G.

No biographical data available

The ornithologist is not made, but born to fill his role in life as is the poet; and as you cannot construct a naturalist, neither can you destroy that irresistible impulse which compels him to follow his allotted part, and which was implanted into his very nature by the Great Ruler of Events with the first breath he drew.

The Life and Services of John James Aud

*Transactions of the New York Academy of Sciences*, Volume XIII,

November 5, 1893 (p. 54)

### Emerson, Ralph Waldo 1803–82

American lecturer, poet, and essayist

We should go to the ornithologist with a new feeling if he could teach us what the social birds say when they sit in the autumn council, talking together in the trees. The want of sympathy makes his record a dull dictionary. His result is a dead bird. The bird is not in its ounces and inches, but in its relations to nature; and the skin or skeleton you show me is no more a heron than a heap of ashes or a bottle of gases into which his body has been reduced, is Dante or Washington.

*The Conduct of Life* (pp. 281–282)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1904

### John Lambert (Fictional character)

No ornithologist should ever marry. After all you can't watch birds and chase women at the same time.

*The Flying Serpent*

Film (1946)

### Kutchin, Victor 1851–1939

No biographical data available

The difference between a “Bird Lover” and an “Ornithologist” is much the same as between a “Demonstrator of Anatomy” and a “Family Physician,” one gains his facts from death, the dissection of a dead body, the other from life, the study of a living creature.

*What Birds Have Done With Me*

Chapter X (p. 109)

Richard G. Badger. Boston, Massachusetts, USA. 1922

### Lumaden, James

No biographical data available

The name ornithologist is a most comprehensive one. According to the popular use of the word it is applied alike to the scientist who spends his time in studying the anatomical structure of the various orders of birds, and to the old cobbler who prides himself on the colour of his pet canary, the shape of his pigeons, or the tail of his Spanish cock.

*Transactions of the Stirling*

Hints on the Study of Ornithology

1886–87 (p. 13)

### Macgillivray, William 1796–1852

Scottish naturalist and ornithologist

A pompous ornithologist is of all characters one of the most absurd; and the solemnity of scientific pride sits ill upon him who is alternately scaling precipices and wading bogs, chasing the ptarmigan on the weather-beaten summits of the Highland hills, and pursuing the flights of plovers along the sandy shores of our bays and estuaries.

*A History of British Birds, Indigenous and Migratory*

Preface (p. iii)

Printed for Scott, Webster & Geary. London, England. 1837

### Parkhurst, Howard Elmore 1842–1933

American clergyman and reformer

Any ornithologist is very narrow-minded, who, in all his wanderings, finds only birds.

*Song Birds and Water Fowl*

Water Fowl (p. 59)

Charles Scribner's Sons. New York, New York, USA. 1897

### Watkins, Morgan George

One of the most tantalising accidents which can happen to an ornithologist is when a rare bird is eaten by its captor through ignorance of its value.

*In the Country*

British Birds and Bird Lovers (p. 180)

W. Satchell & Co. London, England. 1883

## ORNITHOLOGY

### Audubon, John James 1785–1851

West Indian-born American ornithologist and artist

To render more pleasant the task you have imposed upon yourself, of following an author through the mazes of descriptive ornithology, permit me, kind reader, to relieve the tedium which may be apt now and then to come upon you, by presenting you with occasional descriptions of the scenery and manners of the land which has furnished the objects that engage your attention.

*Ornithological Biography* (Volume 1)

The Ohio (p. 29)

Adam Black. Edinburgh, Scotland. 1831

**Author Undetermined**

...the philosophy of science is just about as useful to scientists as ornithology is to birds.

In S. Weinberg

Newtonianism, Reductionism and the Art of Congressional Testimony  
*Nature*, Volume 330, Number 6147, 3–9 December, 1987 (p. 433)

**Darwin, Charles Robert** 1809–82

English naturalist

I took much pleasure in watching the habits of birds, and even made notes on the subject. In my simplicity I remember wondering why every gentleman did not become an ornithologist.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 1)

Chapter II (p. 32)

D. Appleton & Company. New York, New York, USA. 1896

**Vidal, Gore** 1925–

American essayist, novelist, and social/political commentator

To a man, ornithologists are tall, slender, and bearded so that they can stand motionless for hours, imitating kindly trees, as they watch for birds.

*Armageddon? Essays 1983–1987*

Mongolia (p. 131)

Vintage Books. New York, New York, USA. 1990

**White, Gilbert** 1720–93

English naturalist and cleric

A good ornithologist should be able to distinguish birds by their air [manner] as well as by their colours and shape; on the ground as well as on the wing, and in the bush as well as in the hand.

*The Natural History of Selborne*

Letter XLII

To Dianas Barrington

August 7, 1778

Robert M. McBride & Company. New York, New York, USA. 1925

**OSMOTIC PRESSURE****van't Hoff, Jacobus Henricus** 1852–1911

Dutch physical and organic chemist

In an investigation, whose essential aim was a knowledge of the laws of chemical equilibrium in solutions, it gradually became apparent that there is a deep-seated analogy – indeed, almost an identity – between solutions and gases, so far as their physical relations are concerned; provided that with solutions we deal with the so-called osmotic pressure, where with gases we are concerned with the ordinary elastic pressure.

The Role of Osmotic Pressure in the Analogy between Solutions and Gases

*Zeitschrift für physikalische Chemie*, Volume 1, 1887

**OSTEOPATH****Mencken, H. L. (Henry Louis)** 1880–1956

American journalist and literary critic

Osteopath – One who argues that all human ills are caused by the pressure of hard bone on soft tissue. The proof of his theory is to be found in the heads of those who believe it.

*A Mencken Chrestomathy*

Chapter XXX (p. 625)

Alfred A. Knopf. New York, New York, USA. 1949

**OTHER WORLDS****Abbey, Henry** 1842–1911

Author

When from the vaulted wonder of the sky  
The curtain of the light is drawn aside,  
And I behold the stars in all their wide  
Significance and glorious mystery,  
Assured that those more distant orbs are suns  
Round which innumerable worlds revolve,  
My faith grows strong, my day-born doubts dissolve,  
And death, that dread annulment which life shuns,  
Or fain would shun, becomes to life the way,  
The thoroughfare to greater worlds on high,  
The bridge from star to star. Seek how we may,  
There is no other road across the sky;  
And, looking up, I hear star-voices say:  
“You could not reach us if you did not die.”

*The Poems of Henry Abbey*

Faith's Vista

Kingston. New York, New York, USA. 1895

**Asimov, Isaac** 1920–92

American author and biochemist

Of course there are worlds. Millions of them! Every star you see has worlds, and most of those you don't see.

*Pebbles in the Sky*

Chapter 11 (p. 119)

Doubleday & Co. Garden City, New York, USA. 1950

**Cicero (Marcus Tullius Cicero)** 106 BCE–43 BCE

Roman orator, politician, and philosopher

...you tell us that Democritus says that there are a countless number of worlds, and that there are some which are not only so like one another, but so completely and absolutely equal in every point, that there is no difference whatever between them, and that they are quite innumerable; and so also are men.

Translated by C.D. Yonger

*The Academic Questions, Treatise de Finibus and Tusculan Disputations of M. T. Cicero*

Academic Questions (p. 49)

Henry G. Bohn. London, England. 1853

**Derham, William** 1657–1735  
English clergyman and natural philosopher

...if the reader should have a mind to amuse himself with probable guesses about the furniture of the planets of our solar system, what countries 'tis probable are there, what vegetables are produced, what minerals and metals are afforded, what animals live there, what parts, faculties and endowments they have, with much more to the same purpose, he may find a pleasant entertainment in the great Mr. Christian Huygens' *Cosmotheoros*, and some other authors that have written on the subject.

*Astro-theology: Or, A Demonstration of the Being and Attributes of God* (pp. liv–lv)  
Printed for W. Innys. London, England. 1731

### **Halpern, Paul**

Professor of Mathematics and Physics

...there are four major ways in which researchers are hunting for planets. Technically, these are called astrometry, spectroscopy, interferometry, and photometry. For descriptive purposes, however, I refer to them respectively as the wobble method, the speed-trap technique, the zebra-stripe procedure, and the shadow approach.

*The Quest for Alien Planets: Exploring Worlds outside the Solar System* Chapter 1 (p. 16)  
Plenum Trade. New York, New York, USA. 1997

### **Howe, Herbert Alonzo** 1858–1926

American astronomer

When at the dead of night, while nature is hushed in repose, one looks out upon the over-arching sky, inlaid with "patines of bright gold," and, perchance, plying his telescope, is carried in imagination from cluster to cluster, from universe to universe, the thought that there is no intelligent being in those unfathomable depths of space, gives an oppressive sense of the loneliness of man.

*The Habitability of Other Worlds*  
*The Sidereal Messenger*, Volume 4, Number 10, December, 1885 (p. 294)

### **Jackson, Helen Hunt** 1830–85

American writer and poet

Who knows what myriad colonies there are  
Of fairest fields, and rich, undreamed-of gains  
Thick planted in the distant shining plains  
Which we call sky because they lie so far?  
Oh, write of me, not "Died in bitter pains,"  
But "Emigrated to another star!"

*Helen Jackson's Poems*

Emigravit  
Robert Brothers. Boston, Massachusetts, USA. 1888

### **Magnus, Albertus** 1206–1280

Scientist, philosopher, and theologian

Do there exist many worlds, or is there but a single world?  
This is one of the most noble and exalted questions in the study of Nature.

In G. McColley  
*The Seventeenth-Century Doctrine of a Plurality of Worlds*  
*Annals of Science*, Volume 1, Number 4, October 15, 1936 (p. 385)

### **Milne, Edward Arthur** 1896–1950

English astrophysicist and cosmologist

Is it irreverent to suggest that an infinite God could scarcely find the opportunities to enjoy Himself, to exercise His godhead, if a single planet were the sole seat of His activities?

*Modern Cosmology and the Christian Idea of God* (p. 152)  
Clarendon Press. Oxford, England. 1952

### **Oersted, Hans Christian** 1777–1851

Danish physicist and chemist

Dost thou perceive naught but machinery  
In laws which guide the course along heaven's paths?  
Look with a larger view around; behold  
The unity of living thoughts, displayed  
In countless varying forms. The mighty sun  
Is but a twinkling star amidst the space  
Infinite filled with worlds, whose suns, heaven's lamps,  
Shine in our night.... Look

Upon the spangled heav'ns, there to discover  
Thousands of blazing suns, encircled by  
Companions numerous.... A race of beings behold  
Struggling for mental power, knowledge divine.

*The Soul in Nature: With Supplementary Contributions*  
The Balloon  
H.G. Bohn. London, England. 1852

### **Tennyson, Alfred (Lord)** 1809–92

English poet

The Moon's white cities, and the opal width  
Of her small glowing lakes, her silver heights  
Unvisited with dew of vagrant cloud,  
And the unsounded, undescended depth  
Of her black hollows. The clear galaxy  
Shorn of its hoary lustre, wonderful,  
Distinct and vivid with sharp points of light,  
Blaze within blaze, an unimagined depth  
And harmony of planet-girded suns  
And moon-encircled planets, wheel in wheel,  
Arch'd the wan sapphire. Nay – the hum of men,  
Or other things talking in unknown tongues  
And notes of busy life in distant worlds  
Beat like a far wave on my anxious ear.

*Alfred Tennyson's Poetical Works*

Timbuctoo  
Oxford University Press, Inc. London, England. 1953

And the suns of the limitless universe sparkled and shone  
in the sky,  
Flashing with fires as of God, but we knew that their light  
was a lie –

Bright as with deathless hone – but, however they spar-  
kled and shone,  
The dark little worlds running round them were worlds  
of woe like our own.

*Alfred Tennyson's Poetical Works*

Despair, Stanza III

Oxford University Press, Inc. London, England. 1953

**Tyndall, John** 1820–93

Irish-born English physicist

Whether the other fixed stars have similar planetary com-  
panions or not is to us a matter of pure conjecture, which  
may or may not enter into our conception of the universe.  
But, probably, every thoughtful person believes, with  
regard to those distant suns, that there is in space some-  
thing besides our system on which they shine.

*Fragments of Science for Unscientific People: A Series of Detached  
Essays*

Chapter I (p. 11)

D. Appleton & Co. New York, New York, USA. 1871

...every thoughtful person believes, with regard to those  
distant suns, that there is in space something besides our  
system on which they shine.

*Fragments of Science for Unscientific People*

Chapter I (p. 11)

D. Appleton & Co. New York, New York, USA. 1875

**Whitman, Walt** 1819–92

American poet, journalist, and essayist

Let your soul stand cool and composed before a million  
universes.

*Complete Poems and Collected Prose*

Song of Myself

Section 48

The Library of America. New York, New York, USA. 1982

I was thinking this globe enough, till there sprang out so  
noiseless

around me myriads of other globes.

Now, while the great thoughts of space and eternity fill  
me, I will

measure myself by them;

And now, touch'd with the lives of other globes, arrived  
as far

along as those of the earth,

Or waiting to arrive, or pass'd on farther than those of  
the earth,

I henceforth no more ignore them, than I ignore my own  
life,

Or the lives of the earth arrived as far as mine, or waiting  
to arrive.

*Complete Poetry and Collected Prose*

Night on the Prairies

The Library of America. New York, New York, USA. 1982

## OUTER SPACE

**Ballard, Robert D.** 1942–

American oceanographer

At a time when most think of outer space as the final  
frontier, we must remember that a great deal of unfin-  
ished business remains here on earth.

*The Eternal Darkness*

Introduction (p. 3)

Princeton University Press. Princeton, New Jersey, USA. 2002

**Hey, Nigel S.** 1936–

American science writer

Human minds are being pulled into outer space by a thin,  
strong filament of neural energy called wonder. And this,  
to me, is a very good thing. As more of us let our sense  
of wonder expand into the cosmos – so that we compre-  
hend the delicate smallness of our planet in the scheme  
of things – we are gaining a special kind of wisdom.  
My dream is that, with the blessing of good fortune, this  
wisdom will eventually enable us to transcend the dan-  
gerous confusion of civilizations that are maintained by  
coercion and misbelief. All sane persons will compre-  
hend their innate unity with the supernovas of which we  
are made. There will be no need for Utopia, for then we  
will have become meta-humans, siblings to all things that  
exist with and among the planets and the teeming stars.  
And then, perhaps, there will be peace at last.

Why People Need Space

Lecture, National Space Center, October, 2002

**MacLeod, Ken** 1954–

Scottish science fiction writer

Outer space is, fundamentally, familiar. It's only the night  
sky, without the earth beneath your feet.

*The Engines of Light*

Cosmonaut's Keep (p. 1)

Tom Doherty Associates, LLC. New York, New York, USA. 2002

## United Nations Treaty on the Exploration and Use of Space

The exploration and use of outer space, including the  
moon and other celestial bodies, shall be carried out for  
the benefit and in the interests of all countries, irrespec-  
tive of their degree of economic or scientific develop-  
ment, and shall be the province of all mankind.

January 27, 1967

**Webb, Jimmy** 1946–

American music composer

I'll fly a starship, across the universe divine,

And when I reach the other side

I'll find a place to rest my spirit if I can

Perhaps I may become a highwayman again  
 Or I may simply be a single drop of rain  
 But I will remain, and I'll be back again  
 And again, and again, and again.

*Ten Easy Pieces*  
 Highwayman  
 CM Angel. 1996

## OUTLIER

**Green, Celia** 1935–  
 English philosopher and psychologist

The fact that something is far-fetched is no reason why it

should not be true; it cannot be as far-fetched as the fact  
 that something exists.

*The Decline and Fall of Science*  
 Aphorisms (p. 1)  
 Hamilton. London, England. 1976

**Hoyle, Sir Fred** 1915–2001  
 English mathematician and astronomer

I don't see the logic of rejecting data just because they  
 seem incredible.

In D.O. Edge and M.J. Mulkay

 Notes: Chapter 3 (p. 432, fn j)  
 John Wiley & Sons, Inc. New York, New York, USA. 1976

## P

### PAIN

**Bell, Sir Charles** 1774–1842  
Scottish anatomist and surgeon

Pain is the necessary contrast to pleasure; it ushers us into existence or consciousness: it alone is capable of exciting the organs into activity: it is the compassion and the guardian of human life.

*The Hand, Its Mechanism and Vital Endowments as Evincing Design*  
Chapter 7 (p. 211)  
John Murray. London, England. 1852

**Burney, Fanny** 1752–1840  
English novelist and diarist

When the dreadful steel was plunged into the breast – cutting through veins – arteries – flesh – nerves – I needed no more injunctions not to restrain my cries. I began a scream that lasted unintermittingly during the whole time of the incision – & I almost marvel that it rings not in my Ears still! so excruciating was the agony.

In A. Dally  
*Women Under the Knife: A History of Surgery*  
Letter to Esther Burney, 1811  
Hutchinson Radius. London, England. 1991

**Coates, Florence Earle** 1850–1927  
American poet

Ah, me! the Prison House of Pain! –  
what lessons there are bought! –  
Lessons of a sublimer strain  
Than any elsewhere taught.

*Poems* (Volume 2)  
The House of Pain  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1916

**Dickinson, Emily** 1830–86  
American lyric poet

Pain has an element of blank;  
It cannot recollect  
Where it began, or if there were  
A day when it was not.

*The Complete Poems of Emily Dickinson*  
No. 650 (p. 323)  
Little, Brown & Company. Boston, Massachusetts, USA. 1960

**Emerson, Ralph Waldo** 1803–82  
American lecturer, poet, and essayist

He has seen but half the universe who never has been  
shewn the House of Pain.

*The Complete Works of Ralph Waldo Emerson* (Volume 12)  
*Natural History of Intellect*  
The Tragic (p. 405)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

**Hilton, John** 1804–78  
English surgeon

Every pain has its distinct and pregnant signification, if we will but carefully search for it.

*Rest and Pain: A Course of Lectures on the Influence of Mechanical and Physiological Rest In the Treatment of Accidents and Surgical Diseases, and the Diagnostic Value of Pain* (p. 499)  
George Bell & Sons. London, England. 1892

Pain the monitor, and Rest the cure, are starting points for contemplation which should ever be present to the mind of the surgeon in reference to his treatment.

*Rest and Pain: A Course of Lectures on the Influence of Mechanical and Physiological Rest In the Treatment of Accidents and Surgical Diseases, and the Diagnostic Value of Pain* (p. 500)  
George Bell & Sons. London, England. 1892

**Hood, Thomas** 1582–98  
English poet and editor

Of all our pains, since man was curst,  
I mean of body, not the mental,  
To name the worst, among the worst,  
The dental sure is transcendental;  
Some bit of masticating bone,  
That ought to help to clear a shelf:  
But let its proper work alone,  
And only seems to gnaw itself.

*The Complete Poetical Works of Thomas Hood*  
A True Story  
Greenwood Press, Publishers. Westport, Connecticut, USA. 1980

**Johnson, Samuel** 1696–1772  
English critic, biographer, and essayist

...those who do not feel Pain, seldom think that it is felt...

## PALAEONTOLOGY

**Andrews, Roy Chapman** 1884–1960

American explorer and dinosaur hunter

Palaeontology is the Aladdin's lamp of the most deserted and lifeless regions of the earth; it touches the

rocks and there spring forth in orderly succession the monarchs of the past and the ancient river streams and savannahs wherein they flourished. The rocks usually hide their story in the most difficult and inaccessible places.

*On The Trail Of Ancient Man: A Narrative Of The Field Work Of The Central Asiatic Expeditions*

Introduction (p. x)

G. P. Putnam's Sons. 1926

**Burroughs, Edgar Rice** 1875–1950

American writer

He was a pretty good scholar despite his love of fun, and his particular hobby was palaeontology.

*The People That Time Forgot*

Chapter 2 (p. 17)

**Gissing, George** 1857–1903

English novelist

Though a man be well versed in a science such as palaeontology it does not follow that he will view it in its philosophical relations.

*Born in Exile*

Part the Third, III (p. 228)

Adam & Charles Black. London, England. 1893

**Simpson, George Gaylord** 1902–84

American paleontologist

To those who follow that science, nothing is more lively than the study of the dead remains of ancient life. Fascinating in itself, paleontology also impinges on much else that is interesting, important, and useful.

*Life of the Past*

Preface (p. vii)

Yale University Press. New Haven, Connecticut, USA. 1953

**Owen, Richard** 1804–92

English biologist, comparative anatomist, and paleontologist

Paleontology further teaches, that not only the individual, but the species perishes; that as death is balanced by generation, so extinction has been concomitant with the creative power which has produced a succession of species; and furthermore, that, in this succession, there has been "an advance and progress in the main."

*Palaeontology* (2nd edition)

Introduction (p. 3)

Adam & Charles Black. Edinburgh, Scotland. 1861

**Weber, Richard John**

Biologist

**Taylor, William T.**

Consider the sages who pulverize boulders,  
And burrow for elbows and shinbones and shoulders,  
And shovel the loot from a hill or a dale of it,  
And lovingly carry off pail after pail of it.

P Is for Paleontology

*Journal of Geological Education*, Volume 19, Number 4, September, 1971 (p. 192)

**Bradley, Jr., John Hodgdon** 1898–1962

American geologist

The paleontologist watching the rise and fall of races sees, with only actors and setting changed, one drama repeated. Thus like the jaded critic he knows the end before the final curtain. He sees that death is the penalty for life.

*Parade of the Living*

Part III, Chapter XVII (pp. 237–238)

Coward-McCann, Inc. New York, New York, USA. 1930

**Brett-Surman, Michael** 1950–

American paleontologist

Being a paleontologist is like being a coroner except all the witnesses are dead and all the evidence has been left out in the rain for 65 million years.

In Louie Psihoyos

*Hunting Dinosaurs* (p. vii)

Random House, Inc. New York, New York, USA. 1994

**Burroughs, Edgar Rice** 1875–1950

American writer

...about all that remained was an impression of horror that the illustrations of restored prehistoric monsters had made upon me, and a well-defined belief that any man with a pig's shank and a vivid imagination could "restore" most any sort of paleolithic monster he saw fit, and take rank as a first class paleontologist.

*At the Earth's Core*

Chapter IV (p. 67)

University of Nebraska Press. Lincoln, Nebraska, USA. 2000

**Colbert, Edwin H.** 1905–2001

American vertebrate paleontologist

Any paleontologist worth his or her salt takes a great deal of pleasure in thinking of the discoveries he has made in the field and laboratory, but true satisfaction is in the publications that describe and interpret the fossils.

*Digging into the Past: An Autobiography*

Chapter VII (p. 126)

Dembner Books. New York, New York, USA. 1989

**Cousteau, Jacques-Yves** 1910–77

French naval officer and ocean explorer

A paleontologist holds the thread of evolution in his hands by combining the biological and geological evidence in fossils.

*The Ocean World of Jacques Cousteau: The Adventure of Life*

Chapter I (p. 13)

The World Publishing Company. New York, New York, USA. 1973

**Gaudry, Jean-Albert** 1827–1908

French paleontologist

It is the proper function of paleontologists to supply some proofs to the doctrine of evolution; it does not fall to them to explain the process by which the author of the world has produced the modifications. That study of processes is what is called Darwinism.... Assuredly it is a subject quite worthy of the attention of those naturalists that study the causes of the modifications of beings; but it is up to the physiologists, who experiment on living creatures, to teach us how the changes are produced today, and must have been produced formerly.... On this subject a paleontologist can avow his ignorance. All that he can say is that the discovery of vestiges buried in the bowels of the earth teach us that a constant harmony has presided at the transformation of the organic world.

Les Enchaenements

*Revue des Deux Mondes*, 9th Series, Volume 23, 1877 (p. 183)

**Matthew, William Diller** 1871–1930

Canadian-American paleontologist

...evolution is only one aspect of the order of nature, of the relations of cause and effect, of continuity of space and time, which pervade the universe and enable us to comprehend its simplicity of plan, its complexity of detail. The paleontologist, engaged in adding year by

year to the mass of documents which record the history of life, in deciphering their meaning and interpreting their significance, has no more occasion to doubt its continuity and orderly development than the historian has to doubt the continuity and consecutive evolution of human history, or the student of current affairs to doubt that the events of tomorrow.

*Natural History*, Volume 25, Number 2, 1925

**Morris, Simon Conway** 1951–  
English paleontologist

As well as being lumps of patterned stone, fossils are also historical documents. History per se has had a bit of bad press recently.... There is a tension between the documentation of history (famously referred to as “one bloody thing after another”), and the search for universal principles that are ahistoric and possibly timeless. After a period in the doldrums, the bearers of the historical tidings, the paleontologists, are making tentative movements toward the legendary High Table where, just visible through the clouds of incense (and rhetoric), the high priests of evolutionary theory smile benignly.

*The Phylogeny of Life and the Accomplishments of Phylogenetic Biology*

Symposium at the University of Arizona. Tucson, Arizona, USA  
October 11–13, 1996

Early Metazoan Radiations: What the Fossil Record Can and Cannot Tell Us

**Simpson, George Gaylord** 1902–84  
American paleontologist

Not long ago paleontologists felt that a geneticist was a person who shut himself in a room, pulled down the shades, watched small flies disporting themselves in milk bottles, and thought that he was studying nature. A pursuit so removed from the realities of life, they said, had no significance for the true biologist. On the other hand, the geneticists said that paleontology had no further contributions to make to biology, that its only point has been the completed demonstration of the truth of evolution, and that it was a subject too purely descriptive to merit the name “science.” The paleontologist, they believed, is like a man who undertakes to study the principles of the internal combustion engine by standing on a street corner and watching the motor cars whizz by.

*Tempo and Mode in Evolution*

Introduction (p. xv)

Columbia University Press. New York, New York, USA. 1944

**Turney, John**  
No biographical data available

Take a complete, illustrated catalogue of London’s National Gallery. Shred it into tiny pieces and cast them into the wind from the gallery’s steps above Trafalgar Square. Wait a few weeks, then scour the square for

surviving scraps of paper. Now try to reconstruct the history of painting from your haul. If you manage to produce a coherent story – schools, styles, genres, named painters and all – you are probably a paleontologist.

Review of “In Search of Deep Time”

*New Scientist*, 25 March, 2000

## PALEONTOLOGY

**Grassé, Pierre P.** 1895–1985  
French zoologist

Naturalists must remember that the process of evolution is revealed only through fossil forms. A knowledge of paleontology is, therefore, a prerequisite; only paleontology can provide them with the evidence of evolution and reveal its course or mechanisms. Neither the examination of present beings, nor imagination, nor theories can serve as a substitute for paleontological documents. If they ignore them, biologists, the philosophers of nature, indulge in numerous commentaries and can only come up with hypotheses. That is why we constantly have recourse to paleontology, the only true science of evolution. From it we learn how to interpret present occurrences cautiously; it reveals that certain hypotheses considered certainties by their authors are in fact questionable or even illegitimate.

*Evolution of Living Organisms: Evidence for a New Theory of Transformation*

An Introduction to the Study of Evolution (p. 4)

Academic Press. New York, New York, USA. 1977

**Bakker, Robert T.** 1945–  
American paleontologist

Paleontology is a very visual inquiry.... All paleontologists scribble on napkins at coffee breaks, making sketches to explain their thinking.

Brushing Up On Dinosaurs

*Science News*, October 4, 1986

**Crawford, Osbert Guy Stanhope** 1886–1957  
English archaeologist

If archaeology is humanity revealed by its works, paleontology is life revealed by its own remains.

*Man and His Past*

Chapter VI (p. 70)

Oxford University Press, Inc. London, England. 1921

**Dunbar, Carl O.**  
No biographical data available

If they stink, the remains belong to zoology, but if not, to paleontology.

In Alan M. Cvanara

*Sleuthing Fossils: The Art of Investigating Past Life*

Chapter 1 (p. 1)

John Wiley & Sons, Inc. New York, New York, USA. 1990

**Hillery, Herbert**

No biographical data available

There is no end to paleontology, there is no end to geology; and when the morning of the resurrection shall come, some paleontologist will be searching for some previously undiscovered species of extinct beings, and some geologist will be pecking away at the rocks to find some characteristics which have never been before ascertained. There is no end to it.

*Congressional Record*, Volume 23, 1892 (p. 4626)

**Herzen, Aleksandr** 1812–70

Russian political author

The small buds of organic chemistry, geology, paleontology, comparative anatomy have grown in our century into huge branches and borne fruit exceeding our wildest hopes. The world of the past, obedient to the mighty voice of science, has left the tomb to bear witness to the upheavals which accompany the evolution of the surface of the globe; the soil on which we live, this tombstone of the past life, is growing transparent, as it were; the stone vaults have opened, the interior of the rocks could not retain their secrets. Not only do the half-decayed, half-petrified vestiges again assume flesh, paleontology also strives to discover the law of the relation between geologic epochs and their complete flora and fauna. Then everything that ever lived will be resurrected in the human mind, will be saved from the sad fate of utter oblivion, and those whose bones have been completely decayed, whose phenomenal existence has been utterly obliterated, will be restored in the bright sanctuary of science where the temporal finds its repose and is perpetuated.

*Selected Philosophical Works*

Letters on the Study of Nature, Letter One (pp. 99–100)

Foreign Languages Publishing House. Moscow, Russia. 1956

**Howard, Robert West**

No biographical data available

The three volumes of [Lyell's] *Principles of Geology*, published between 1829 and 1833, became the essential textbook of the profession. In its discussion of fossils and the vital role they had played in the development of geology as an exact science, Lyell urged adoption of a Greek-rooted word, meaning "the science of early beings," as the professional name for research of the types of plant and animal fossils embedded in the Earth's layered crust. His suggestion was adopted throughout Europe and the Americas. Thus, three centuries after the curiosities of Leonardo da Vinci, the dawnseekers' science was given the name of paleontology.

*The Dawnseekers: The First History of American Paleontology*

Chapter 9 (p. 126)

Harcourt Brace Jovanovich. New York, New York, USA. 1975

**Huxley, Thomas Henry** 1825–95

English biologist

That application of the sciences of biology and geology, which is commonly known as palæontology, took its origin in the mind of the first person who, finding something like a shell, or a bone, naturally imbedded in gravel or rock, indulged in speculations upon the nature of this thing which he had dug out – this "fossil" – and upon the causes which had brought it into such a position.

*Collected Essays* (Volume 4)

The Rise and Progress of Palæontology (p. 24)

Macmillan & Company Ltd. London, England. 1904

**Kielan-Jaworowska, Zofia** 1925–

Polish paleontologist

No scientist familiar with the intellectual adventure of studying animals from times long past will have any hesitation in affirming that to travel millions of years into the past, which is what paleontological study amounts to, is much more fascinating than the most exotic geographical travel we are able to undertake today. The study of animals that lived on Earth millions of years ago is not merely a study of their anatomy, but first and foremost a study of the course of evolution on earth and of the laws that govern it.

Translated by the Israel Translation Society

*Hunting for Dinosaurs*

Chapter 15 (p. 176)

The MIT Press. Cambridge, Massachusetts, USA. 1969

**Kitts, David B.**

Evolutionist and paleontologist

Despite the bright promise that paleontology provides a means of "seeing" evolution, it has presented some nasty difficulties for evolutionists, the most notorious of which is the presence of "gaps" in the fossil record. Evolution requires intermediate forms between species and paleontology does not provide them...

*Evolution*, Volume 28, September, 1974 (p. 467)

**Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

It may seem that palaeontology is a science of pure speculation or inquisitiveness, and the palaeontologist the most unreal and useless of researchers; a man dedicated to retrospection, plunged living into the past, where he spends his days collecting the debris of dead things.

*The Future of Man*

Chapter IV, Part I, Section 3 (p. 66)

Harper & Row, Publishers. New York, New York, USA. 1964

**Miller, Hugh** 1802–56

Scottish geologist and theologian

Paleontology, or the science of ancient organisms, deals, as its subject, with all the plants and animals of all the

geologic periods. It bears nearly the same sort of relation to the physical history of the past that biography does to the civil and political history of the past.

*The Testimony of the Rocks; of, Geology in Its Bearings on the Two Theologies, Natural and Revealed*

Lecture First (p. 33)

Gould & Lincoln. Boston, Massachusetts, USA. 1857

**Osborn, Henry Fairfield** 1857–1935

American paleontologist and geologist

Paleontology is the zoology of the past.

*The Age of Mammals in Europe, Asia and North America*

Chapter I (p. 1)

The Macmillan Company. New York, New York, USA. 1910

The preservation of extinct animals and plants in the rocks is one of the fortunate accidents of time, but to mistake this position as indicative of affinity [with zoology and botany] is about as logical as it would be to bracket the Protozoa, which are principally aquatic organisms, under hydrology, or the Insecta, because of their aerial life, under meteorology. No, this is emphatically a misconception which is still working harm in some museums and institutions of learning. Paleontology is not geology, it is zoology; it succeeds only so far as it is pursued in the zoological and biological spirit.

The Present Problems of Paleontology

*Popular Science Monthly*, 1905 (p. 226)

**Rudwick, Martin J. S.**

Science historian

As paleontology now prepares for a great leap forward into a computerised age there is perhaps a danger that it may lose sight of its historic origins in the “steam age” of science and before.

*The Meaning of Fossils, Episodes in the History of Paleontology*

Chapter Five, Section XII (p. 266)

Macdonald. London, England. 1972

**Twain, Mark (Samuel Langhorne**

**Clemens)** 1835–1910

American author and humorist

What a noble science is paleontology! And what really startling sagacity its votaries exhibit!

*Collected Tales, Sketches, Speeches & Essays 1852–1890* (Volume 1)

A Brace of Brief Lectures on Science (p. 528)

The Library of America. New York, New York, USA. 1992

**van der Gracht, W. A.** 1873–1943

Dutch petroleum geologist

There are few subjects where there exists greater diversity of opinions regarding practically everything than in paleontology.

In C.G. Simpson

Mammals and the Nature of Continents

Knowledge and Museums (p. 9)

T.H.F. Publications, Inc. Neptune City, New Jersey, USA. 1985

## PANSPERMIA

**Kelvin, Lord William Thomson** 1824–1907

Scottish engineer, mathematician, and physicist

Should the time come when this earth comes into collision with another body, comparable in dimensions to itself...many great and small fragments carrying seeds of living plants and animals would undoubtedly be scattered through space. Hence, and because we all confidently believe that there are at present, and have been from time immemorial, many worlds of life besides our own, we must regard it as probable in the highest degree that there are countless seed-bearing meteoric stones moving about through space. If at the present instance no life existed upon this earth, one such stone falling upon it might, by what we blindly call natural causes, lead to its becoming covered with vegetation.

*Popular Lectures and Addresses* (Volume 2)

Presidential Address to the British Association, Edinburgh, 1871

British Association for the Advancement of Science, Volume 4, Number 262, 1871 (p. 201)

Macmillan & Company Ltd. London, England. 1894

Careful enough scrutiny has in every case up to the present day discovered life as antecedent to life. Dead matter cannot become living matter without coming under the influence of matter previously alive. This seems to be as sure a teaching of science as the law of gravitation.... I am ready to adopt, as an article of scientific faith, true through all space and through all time, that life proceeds from life, and from nothing but life. How, then, did life originate on the Earth?

Sir William Thomson on the Law of Biogenesis and the Law of Gravitation  
*Nature*, September 7, 1871 (p. 368)

### Richter, H. E.

German physician

The infinite space is filled with, or (more correctly) contains, growing, mature, and dying celestial bodies. By mature worlds we understand those which are capable of sustaining organic life. We regard the existence of organic life in the universe as eternal. Life has always been there; it has always propagated itself in the shape of living organisms, from cells and from individuals composed of cells.

Translated by D.H. Borns

Quoted in Svante Arrhenius

*Worlds in the Making*

Chapter VIII (p. 218)

Harper & Brothers Publishers. New York, New York, USA. 1908

### von Helmholtz, Hermann 1821–94

German scientist and philosopher

I cannot object if anyone considers this hypothesis to be in a high, or even in the highest, degree improbable. But to me it seems a perfectly correct scientific procedure, that when all our attempts fail in producing organisms from inanimate matter, we may inquire whether life has ever originated at all or not, and whether its germs have not been transported from one world to another, and have developed themselves wherever they found a favourable soil.

Translated by Edmund Atkinson

*Popular Lectures on Scientific Subjects*

2nd Series

Doubleday & McClure Co. New York, New York, USA. 1849

## PARADIGM

### Barnes, Barry

Sociologist

...paradigms, the core of the culture of science, are transmitted and sustained just as is culture generally: scientists accept them and become committed to them as a result of training and socialization, and the commitment is maintained by a developed system of social control.

In Quentin Skinner (ed.)

*The Return of Grand Theory in the Human Sciences*

Thomas Kuhn (p. 89)

Cambridge University Press. Cambridge, England. 1985

### Kuhn, Thomas S. 1922–96

American historian of science

Normal science does not aim at novelties of fact or theory and, when successful, finds none. New and unsuspected phenomena are, however, repeatedly uncovered by scientific research, and radical new theories have again and again been invented by scientists. History even suggests that the scientific enterprise has developed a uniquely powerful technique for producing surprises of this sort. If this characteristic of science is to be reconciled with what has already been said, then research under a paradigm must be a particularly effective way of inducing a paradigm change. That is what fundamental novelties of fact and theory do. Produced inadvertently by a game played under one set of rules, their assimilation requires the elaboration of another set. After they have become parts of science, the enterprise, at least of those specialists in whose particular field the novelties lie, is never quite the same again.

*The Structure of Scientific Revolutions*

Chapter VI (p. 52)

The University of Chicago Press. Chicago, Illinois, USA. 1970

The operations and measurements that a scientist undertakes in the laboratory are not “the given” of experience but rather “the collected with difficulty.” They are not what the scientist sees – at least not before his research is well advanced and his attention focused.... Science does not deal in all possible laboratory manipulations. Instead, it selects those relevant to the juxtaposition of a paradigm with the immediate experience that that paradigm has partially determined.

*The Structure of Scientific Revolutions*

Chapter X (p. 126)

The University of Chicago Press. Chicago, Illinois, USA. 1970

A paradigm is what members of the scientific community share, and, conversely a scientific community consists of men who share a paradigm.

*The Structure of Scientific Revolutions*

Postscript (p. 176)

The University of Chicago Press. Chicago, Illinois, USA. 1970

## PARADISE

### Abbey, Edward 1927–89

American environmentalist and nature writer

When I write “paradise” I mean not only apple trees and golden women but also scorpions and tarantulas and flies, rattlesnakes and Gila monsters, sandstorms, volcanoes and earthquakes, bacteria and bear, cactus, yucca, bladderweed, ocotillo and mesquite, flash floods and quicksand, and yes – disease and death and the rotting of the flesh.

*Desert Solitaire*

Down the River (p. 190)

Ballantine Books. New York, New York, USA. 1968

**de Morgan, Augustus** 1806–71

English mathematician and logician

If I had before me a fly and an elephant, having never seen more than one such magnitude of either kind; and if the fly were to endeavor to persuade me that he was larger than the elephant, I might possibly be placed in a difficulty. The apparently little creature might use such arguments about the effect of distance, and might appeal to such laws of sight and hearing as I, if unlearned in those things, might be unable wholly to reject. But there were a thousand flies, all buzzing, to appearance, about the great creature and, to a fly, declaring, each one for himself, that he was bigger than the quadruped; and all giving different and frequently contradictory reasons; and each one despising and opposing the reasons of the others – I should feel quite at my ease...[to] say, My little friends, the case of each one of you is destroyed by the rest.

Longmans, Green & Co. London, England. 1918

**Lewis, Gilbert Newton** 1875–1946  
American chemist

A paradox is never very terrifying to the scientist. Faraday wrote to Tyndall, “The more we can enlarge the number of anomalous facts and consequences the better it will be for the subject, for they can only remain anomalies to us while we continue in error.” The scientist recognizes that he is always in the midst of paradoxes and that it is his duty to resolve them. He knows that the science of the future will also have its paradoxes, but believes that every individual paradox can be resolved, that this process of resolution will lead not to greater complexity but to greater simplicity, and that out of discord a more perfect harmony will evolve. This I take to be the universal *credo* of science.

*The Anatomy of Science*  
Chapter I (pp. 8–9)  
Yale University Press. New Haven, Connecticut, USA. 1926

Thoughts on Philosophy, Love and Religion (p. 68)  
Methuen & Co. London, England. 1903

**Rapoport, Anatol** 1911–2007  
Russian-born mathematician and biologist

Paradoxes have played a dramatic part in intellectual history, often foreshadowing revolutionary developments in science, mathematics, and logic. Whenever, in any discipline, we discover a problem that cannot be solved within the conceptual framework that supposedly should apply, we experience an intellectual shock. The shock may compel us to discard the old framework and adopt a new one. It is to this process of intellectual molting that we owe the birth of many of the major ideas in mathematics and science.

Escape from Paradox

Simon & Schuster. New York, New York, USA. 1987

**Schild, Alfred** 1921–77  
Physicist

Consider a pair of twins. Immediately after birth they are separated. One of them, the first one, remains on earth, the second one is put in a rocket ship and flown to Alpha Centauri at a pretty high speed, 99% that of light. Alpha Centauri is the nearest star; it is about four light-years away from us. As soon as the second twin gets to Alpha Centauri, he turns around and flies back to earth at the same high speed. When the two twins meet again, the first one, the one who stayed behind on earth, will be eight years old...he will be able to talk quite well and read a little bit. He may have finished second grade and be about to enter third. The second twin, the one who took the journey, on his return will be approximately one year old.... He will still need diapers, he will be barely able to walk, and he won't be able to talk much.

The Clock Paradox in Relativity Theory  
*The American Mathematical Monthly*, Volume 66, Number 1, January, 1959 (p. 1)

**Schrödinger, Erwin** 1887–1961  
Austrian theoretical physicist

Attention had recently (A. Einstein, B. Podolsky, and N. Rosen, *Phys. Rev.* 47 (1935) 777) been called to the obvious but very disentangling measurement to one system, the representative obtained for the other system is by no means independent of the particular choice of observations which we select for that purpose and which by the way are entirely arbitrary. It is rather discomfoting that the theory should allow a system to be steered or piloted

into one or the other type of state at the experimenter's mercy in spite of his having no access to it.

*Proceedings of the Cambridge Philosophical Society*, Volume 11, 1935 (p. 555)

**Shaw, George Bernard** 1856–1950

Irish comic dramatist and literary critic

Paradoxes are the only truths.

Samuel French, Inc. London, England. 1957

**Shimony, Abner** 1928–

American physicist and philosopher of science

I hope that the rigor and beauty of the argument of EPR [Einstein–Podolsky–Rosen paradox] is apparent. If one does not recognize how good an argument it is – proceeding rigorously from premises which are thoroughly reasonable – then one does not experience an adequate intellectual shock when one finds out that the experimental evidence contradicts their conclusions. This shock should be as great as the one experienced by Frege when he read Russell's theoretical paradox and said, "Alas, arithmetic totters!"

### Elton, Charles S. 1900–91

English biologist

The difference between the methods of a carnivore and a parasite is simply the difference between living upon capital and upon income; between the habits of the beaver, which cuts down a whole tree a hundred years old, and the bark-beetle, which levies a daily toll from the tissues of the tree; between the burglar and the blackmailer.

*Animal Ecology*

Chapter VI (pp. 72–73)

Sidgwick & Jackson, Ltd. London, England. 1927

### Emerson, Ralph Waldo 1803–82

American lecturer, poet, and essayist

...each man, like each plant, has his parasites.

*The Complete Works of Ralph Waldo Emerson* (Volume 6)

*The Conduct of Life*

Chapter I (p. 45)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

We nestle in nature, and draw our living as parasites from her roots and grains ...

*Nature* (p. 12)

Duffield & Co. New York, New York, USA. 1909

### Frost, Robert 1874–1963

American poet

Will the blight end the chestnut?

The farmers rather guess not.

It keeps smoldering at the roots

And sending up new shoots

Till another parasite

Shall come to end the blight.

*Complete Poems of Robert Frost*

Evil Tendencies Cancel

Henry Holt & Company. New York, New York, USA. 1949

### Haldane, John Burdon Sanderson 1892–1964

English biologist

But alas, insect societies are no more perfect than human, and parasites can as easily find a place in an economic system determined by instinct, as in the products of intelligence, enlightened self-interest, or whatever else is at the basis of human economies. Whether the correct form of demand for food in an ant's or termite's nest is a gentle stroking of the donor, an offer of a drop of some sweet secretion, or what not, some unprincipled insect will generally be found to make it. Students of human society will compare these parasites with brewers, burglars, bolsheviks, bankers, bishops or bookmakers according to their tastes.

*Possible Worlds*

Food Control in Insect Societies (p. 67)

Transaction Publishers

New Brunswick, New Jersey, USA. 2000

### Mayr, Ernst 1904–2005

German-born American biologist

Parasitologists have accumulated, during the past decades, an amount of information that is truly formidable. This information is not only valuable for the parasitologist, but is also a potential gold-mine for the evolutionist and general biologist. Yet, much of this information is hidden away in a widely scattered and highly technical literature.

In J. G. Baer (ed.)

*Premier Symposium sur la spécificité parasitaire des parasites des Vertébrés*

Evolutionary Aspects of Host Specificity Among Parasites of Vertebrates

Université de Neuchâtel. Neuchâtel, Switzerland, 1957

**Michelet, Jules** 1798–1874  
French historian

Now call to mind that every creature nourishes other creatures on its surfaces, in the thickness of its solids, in its fluids, and in its blood; that each insect is a little world inhabited by insects; and that these again have parasites of their own.

Translated by W.D.H. Adams

*The Insects*

Chapter I (p. 18)

T. Nelson & Sons. London, England. 1875

### Mr. Spock (Fictional character)

A truly successful parasite is commensal, living in amity with its host, or even giving it positive advantages.... A parasite that regularly and inevitably kills its host cannot survive long, in the evolutionary sense, unless it multiplies with tremendous rapidity.... It is not pro-survival.

*Star Trek II: The Wrath of Khan*

Film (1982)

**Noble, Elmer R.** 1909–2001  
American protozoologist and parasitologist

**Noble, Glenn A.** 1909–?  
American biologist

Parasites as a whole are worthy examples of the inexorable march of evolution into blind alleys.

*Parasitology: The Biology of Animal Parasites* (3rd edition)

Section X, Chapter 25 (p. 572)

Lea & Febiger. Philadelphia, Pennsylvania, USA. 1971

**Shakespeare, William** 1564–1616  
English poet, playwright, and actor

Unbidden guests

Are often welcomest when they are gone.

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**van Beneden, P. J.**  
No biographical data available

In the ancient as well as the new world, more than one animal resembles somewhat the sharper leading the life of a great nobleman; and it is not rare to find, by the side of the humble pickpocket, the audacious brigand of the high road, who lives solely on blood and carnage. A great proportion of these creatures always escape, either by cunning, by audacity, or by superior villainy, from social retribution.

*Animal Parasites and Messmates* (p. xvii)

Henry S. King. London, England. 1876

**Wilson, Andrew** 1852–1912  
No biographical data available

If man is to be regarded as the favoured child of Nature, and if it be held as true that life at large is subservient to his sway and rule, it is no less true that he is liable to suffer severely from the attack of certain of his lower neighbours, and that he is despoiled in various fashions by some of the most insignificant of living beings.

*Leisure-time Studies: Chiefly Biological. A Series of Essays and Lectures*

Some Animal Parasites and Their Development (p. 183)

Chatto & Windus. London, England. 1879

**Wilson, Edward O.** 1929–  
American biologist and author

Leishmaniasis, schistosomiasis, malignant tertian malaria, filariasis, echinococcosis, onchocerciasis, yellow fever, amoebic dysentery, bleeding bot-fly cysts... evolution has devised a hundred ways to macerate livers and turn blood into a parasite's broth.

*Biophilia*

Bernhardsdorp (pp. 12–13)

Harvard University Press. Cambridge, Massachusetts. 1984

**Zimmer, Carl** 1966–  
US science writer

Discovering parasites at work in ecosystems can feel a bit like watching in terror as a bank robbery unfolds and then looking across the street and seeing a movie crew with its cameras and boom mikes.

*Parasite Rex*

Chapter 4 (p. 110)

The Free Press. New York, New York, USA. 2000

## PARK

**Olmsted, Frederick Law, Jr.** 1870–1957  
American landscape architect

The National Parks are set apart primarily in order to preserve to the people for all time the opportunity of peculiar kinds of enjoyment and recreation, not measurable in economic terms and to be obtained only from the remarkable scenery which they contain – scenery of those primeval types which are in most parts of the world rapidly vanishing for all eternity before the increased thoroughness of the economic use of land.

National Parks and Forests: Inherent Values

*Landscape Architecture*, Volume 48 Number 3

## PARTIAL DIFFERENTIAL EQUATION

**Einstein, Albert** 1879–1955  
German-born physicist

...the partial differential equation entered theoretical physics as a handmaid, but has gradually become mistress.

*The World As I See It* (p. 63)

Philosophical Library. New York, New York, USA. 1949

## PARTIAL FRACTIONS

**Webster, Miriam**

No biographical data available

Partial fractions were terrifically unpopular among the calculus students. Problems involving partial fractions take a long time to solve. Most students hate such problems.

*After Math*

Chapter 7 (p. 78)

Zinka Press. Wayne, Pennsylvania, USA. 1997

## PARTICLE

**Davy, Sir Humphry** 1778–1829

English chemist

...the different bodies in nature are composed of particles or minute parts, individually imperceptible to the senses. When the particles are similar, the bodies they constitute are denominated simple, and when they are dissimilar, compound. The chemical phenomena result from the different arrangements of the particles of bodies; and the powers that produce these arrangements are repulsion, or the agency of heat, and attraction.

*Syllabus of a Course of Lectures at the Royal Institution* (p. 2)

Publisher undetermined. London, England. 1802

**Fermi, Enrico** 1901–54

Italian-born American physicist

If I could remember the names of all these particles, I'd be a botanist.

In A. Zee

*Fearful Symmetry*

Chapter 11 (p. 168)

Macmillan Publishing Company. New York, New York, USA. 1986

**Feynman, Richard P.** 1918–88

American theoretical physicist

One of the consequences is that things which we used to consider as waves also behave like particles, and particles behave like waves; in fact everything behaves the same way. There is no distinction between a wave and a particle. So quantum mechanics unifies the idea of the field and its waves, and the particles, all into one.

*Six Easy Pieces: Essentials of Physics Explained by Its Most Brilliant Teacher*

Basic Physics (p. 36)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1995

We seem gradually to be groping toward an understanding of the world of sub-atomic particles, but we really do not know how far we have yet to go in this task.

*Six Easy Pieces: Essentials of Physics Explained by Its Most Brilliant Teacher*

Basic Physics (p. 45)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1995

**Feynman, Richard P.** 1918–88

American theoretical physicist

**Leighton, Robert B.** 1919–97

American physicist

**Sands, Matthew L.** 1919–

American physicist

Quantum mechanics has many aspects. In the first place, the idea that a particle has a definite location and a definite speed is no longer allowed; that is wrong.

*The Feynman Lectures on Physics* (Volume 1)

Chapter 2–3 (pp. 2–6)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1983

**Glashow, Sheldon L.** 1932–

American physicist

Tapestries are made by many artisans working together. The contributions of separate workers cannot be discerned in the complete work, and the loose and false threads have been covered over. So it is in our picture of particle physics.

*Nobel Lectures, Physics 1971–1980*

Nobel lecture for award received in 1979

Towards a Unified Theory – Threads in a Tapestry (p. 494)

World Scientific Publishing Company. Singapore. 1992

**Gleick, James** 1954–

American author, journalist, and essayist

Quantum mechanics taught that a particle was not a particle but a smudge, a traveling cloud of possibilities...

*Genius: The Life and Science of Richard Feynman*

M. I. T. (p. 89)

Pantheon Books. New York, New York, USA. 1992

**Hein, Piet** 1905–96

Danish poet and scientist

Nature, it seems is the popular name for milliards and milliards and milliards of particles playing their infinite game of billiards and billiards and billiards.

*Grooks II*

Atomyriades

Doubleday &amp; Company, Inc. Garden City, New York, USA. 1969

**Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

We cannot longer speak of the behavior of the particle independently of the process of observation. As a final consequence, the natural laws formulated mathematically in quantum theory no longer deal with the elementary particles themselves but with our knowledge of them. Nor is it any longer possible to ask whether or not these particles exist in space and time objectively...

*The Physicist's Conception of Nature*

Chapter I (p. 15)

Greenwood Press, Publishers. Westport, Connecticut, USA. 1958

The mathematically formulated laws of quantum theory show clearly that our ordinary intuitive concepts cannot be unambiguously applied to the smallest particles. All the words or concepts we use to describe ordinary physical objects, such as position, velocity, color, size, and so on, become indefinite and problematic if we try to [apply them to] elementary particles.

*Across the Frontiers*

Chapter IX (p. 114)

Harper & Row, Publishers. New York, New York, USA. 1974

In the light of quantum theory these elementary particles are no longer real in the same sense as objects of daily life, trees or stones, but appear as abstractions derived from the real material of observation in the true sense.

*On Modern Physics*

Philosophical Problems (p. 13)

C.N. Potter. New York, New York, USA. 1961

The conception of the objective reality of the elementary particles has thus evaporated in a curious way, not into the fog of some new, obscure, or not yet understood reality concept, but into the transparent clarity of a mathematics that represents no longer the behavior or the elementary particles but rather our knowledge of this behavior.

The Representation of Nature in Contemporary Physics

*Daedalus*, Volume 87, Number 3, Summer 1958 (p. 100)

How can one divide an elementary particle? Certainly only by using extreme forces and very sharp tools. The only tools available are other elementary particles. Therefore, collisions between particles of extremely high energy would be the only processes by which the particles could be eventually divided.

*Physics and Philosophy: The Revolution in Modern Science* (p. 47)

HarperPerennial. New York, New York, USA. 2007

### **Johnson, George** 1952–

American science writer

In science's great chain of being, the particle physicists place themselves with the angels, looking down from the heavenly spheres on the chemists, biologists, geologists, meteorologists – those who are applying, not discovering, nature's most fundamental laws. Everything, after all, is made from subatomic particles. Once you have a concise theory explaining how they work, the rest should just be filigree.

New Contenders for a Theory of Everything

*The New York Times*, F1, Column 1, Tuesday, December 4, 2001

### **Regnault, Noël** 1702–62

Jesuit mathematician

The Imagination is lost here. Rather than the Minds; for if you divide a Particle into the most inconceivably minute Parts, the Mind will always find therein something that regards the West, and something that regards the East; and what regards the West, is not that which regards the East.

*Philosophical Conversations* (Volume 1)

Conversation I (p. 9)

Printed for W. Innys, C. Davis, and N. Prevost. London, England. 1731

### **Stewart, Ian** 1945–

English mathematician and science writer

### **Cohen, Jack**

Reproductive biologist

They ask wavy questions to decide whether it's a wave, and particle questions to decide whether it's a particle.

*The Collapse of Chaos: Discovering Simplicity in a Complex World*

Chapter 8 (p. 276)

The Viking Press. New York, New York, USA. 1994

### **Weinberg, Steven** 1933–

American nuclear physicist

As a scientist, you're probably not going to get rich. Your friends and relatives probably won't understand what you're doing. And if you work in a field like elementary particle physics, you won't even have the satisfaction of doing something that is immediately useful. But you can get great satisfaction by recognizing that your work in science is a part of history.

Scientist: Four Golden Lessons

*Nature*, Volume 426, 2003 (p. 389)

### **Whitman, Walt** 1819–92

American poet, journalist, and essayist

Oh amazement of things – even the least particle!

*Complete Poems and Collected Prose*

Song at Sunset

The Library of America. New York, New York, USA. 1982

## PARTICLE DUALITY

### **de Broglie, Louis** 1892–1987

French physicist

Thus to describe the properties of matter as well as those of light, waves and corpuscles have to be referred to at one and the same time. The electron can no longer be conceived as a single, small granule of electricity; it must be associated with a wave and this wave is no myth.... And it is on this concept of duality of waves and corpuscles in Nature, expressed in a more or less abstract form, that the whole recent development of theoretical physics has been founded and that all future development of this science will apparently have to be founded.

*Nobel Lectures, Physics 1922–1941*

The Wave Nature of the Electron (p. 13)

Elsevier Publishing Company. Amsterdam, Netherlands. 1964

## PARTICLE PHYSICS

### **Glashow, Sheldon L.** 1932–

American physicist

Tapestries are made by many artisans working together. The contributions of separate workers cannot be discerned in the completed work, and the loose and false threads have been covered over. So it is in our picture of particle physics. Part of the picture is the unification of weak and electromagnetic interactions.... Another part concerns the reasoned evolution of the quark hypothesis from mere whimsy to established dogma. Yet another is the development of quantum chromodynamics into a plausible, powerful, and predictive theory of strong interactions. All is woven together in the tapestry; one part makes little sense without the other.

*Nobel Lectures, Physics 1971–1980*

Towards a Unified Theory – Threads in a Tapestry (p. 495)  
World Scientific Publishing Co. Singapore, Malaysia. 1992

The confusion of the past [in particle physics] is now replaced by a simple and elegant synthesis. [This] standard theory may survive as a part of the ultimate theory, or it may turn out to be fundamentally wrong. In either case, it will have been an important way-station, and the next theory will have to be better.

*Physics 1971–1980*

Towards a Unified Theory – Threads in a Tapestry  
World Scientific Publishing Co. Singapore, Malaysia. 1992

## PARTICLES

**Feynman, Richard P.** 1918–88

American theoretical physicist

Nature seems to keep piling on these particles [having the same properties but heavier masses] as if to drug us.

Harcourt, Brace. New York, New York, USA. 1950

**Palgrave, Francis** 1788–1861  
English historian

We must give it up, that speechless past; whether fact or  
chronology, doctrine or mythology; whether in Europe,  
Asia, Africa, or America; at Thebes or Palenque, on Lycian  
shore or Salisbury Plain: lost is lost, gone is gone forever.

*The History of Normandy and of England* (Volume 1)  
Book I, Chapter III (p. 470)  
John W. Parker & Son. London, England. 1851

**Sir Joseph Whemple (Fictional character)**

We didn't come to Egypt to dig for medals! Much more  
is to be learned from studying bits of broken pottery than  
from all the sensational finds. Our job is to increase the  
sum of human knowledge of the past, not to satisfy our  
own curiosity.

*The Mummy*  
Film (1940)

**Toulmin, Stephen** 1922–  
Anglo-American philosopher

**Goodfield, June**  
Science writer and historian

...no transformation in men's attitude to Nature – in their  
"common sense" – has been more profound than the  
change in perspective brought about by the discovery of  
the past. Rather than take this discovery for granted, it is  
almost preferable to exaggerate its significance.

*The Discovery of Time*  
Introduction (pp. 17–18)  
Harper & Row, Publishers. New York, New York, USA. 1965

**Weigall, Arthur Edward** 1880–1934  
English Egyptologist and author

Man is by nature a creature of the present. It is only by an  
effort that he can consider the future, and it is often quite  
impossible for him to give any heed at all to the past.

*The Glory of the Pharaohs*  
Chapter II (p. 35)  
G.P. Putnam's Sons. New York, New York, USA. 1923

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

[The] restoration of the past is one of the most astonishing  
adventures of the human mind.

The Grisly Folk  
*Storyteller Magazine*, April, 1921

Could anything be more dead, more mute and inexpressive  
to the inexperienced eye than the ochreous fragments of  
bone and the fractured lumps of flint that constitute the  
first traces of something human in the world?

The Grisly Folk  
*Storyteller Magazine*, April, 1921

It is our ignorance of the future and our persuasion that  
that ignorance is absolutely incurable that alone gives the  
past its enormous predominance in our thoughts.

*The Discovery of the Future*  
The Discovery of the Future (p. 22)  
B.W. Huebsch. New York, New York, USA. 1914

...the past is but the beginning of a beginning, and  
that all that is and has been is but the twilight of the  
dawn. It is possible to believe that all that the human  
mind has ever accomplished is but the dream before  
the awakening.

*The Discovery of the Future*  
The Discovery of the Future (p. 60)  
B.W. Huebsch. New York, New York, USA. 1914

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

To make the past live, we must perceive it in detail in  
addition to thinking of it in generalities.

*Essays in Science and Philosophy*  
The Education of an Englishman (p. 29)  
Philosophical Library. New York, New York, USA. 1947

**Whitman, Walt** 1819–92  
American poet, journalist, and essayist

The past, the infinite greatness of the past!

For what is the present, after all, but a growth out of the  
past.

*Complete Poetry and Collected Prose*  
Leaves of Grass  
Passage to India  
The Library of America. New York, New York, USA. 1982

Chapter 1 (p. 1)

John Wiley & Sons, Inc. New York, New York, USA. 1957

**PATENT MEDICINE****Adams, Samuel Hopkins** 1871–1958

American author

With a few honorable exceptions the press of the USA is at the beck and call of the patent medicine. Not only do the newspapers modify news possibly affecting these interests, but they sometimes become their agents.

The Great American Fraud

*Collier's Weekly*, Volume 36, October 7, 1905 (p. 14)

**PATHOLOGIST****Lewis, Sir Thomas** 1881–1945

No biographical data available

If the basis of our working hypothesis is still speculative, if physiological imagination governs it, as pathologists we work upon a foundation guaranteeing no reasonable security.

*The Mechanism and Graphic Registration of the Heart Beat*

Preface (p. viii)

Shaw & Sons. London, England. 1920

**PATHOLOGY****Born-Volber, A. J.**

No biographical data available

The basis of pathology is physiology: that of therapeutics is hygiene.

In Albert Abrams

*Man and His Poisons*

Chapter X (p. 220)

E.B. Treat & Co. New York, New York, USA. 1906

**Latham, Peter Mere** 1789–1875

English physician

...you are never more engaged in studies strictly pathological than when you are busied about the sick in the wards of the hospital ...

*Lectures on Subjects Connected With Clinical Medicine*

Lecture IV (p. 90)

Longman, Rees, Orme, Brown, Green & Longman. London, England. 1836

**Mencken, H. L. (Henry Louis)** 1880–1956

American journalist and literary critic

Pathology would remain a lovely science, even if there were no therapeutics, just as seismology is a lovely science, though no one knows how to stop earthquakes.

*A Mencken Chrestomathy*

Chapter XXX (pp. 625–626)

Alfred A. Knopf. New York, New York, USA. 1949

**Simpson, James Young** 1873–1934

No biographical data available

Few subjects in pathology are more curious, and at the same time more obscure, than the changes which, in the course of ages, have taken place in the diseases incident either to the human race at large, or to particular divisions and communities of it.

In John Stuart

*Archaeological Essays* (Volume 2)

On Leprosy and Leper Hospitals (p. 1)

Edmonston & Douglas. Edinburgh, Scotland 1872

**Virchow, Rudolf Ludwig Karl** 1821–1902

German pathologist and archaeologist

Pathology has been released from the anomalous and isolated position which it has occupied for thousands of years. Through the application of its doctrines not only to diseases of man, but also to those of even the smallest and lowest of animals, and to those of plants, it helps to deepen biological knowledge, and to light up still further that region of the unknown which still envelops the intimate structure of living matter. It is no longer merely applied physiology – it has become physiology itself.

Translated by Lelland J. Rather

*Disease, Life, and Man, Selected Essays*

The Place of Pathology Among the Biological Sciences (p. 169)

Stanford University Press. Stanford, California, USA. 1958

Pathology also has its place in the science of biology, certainly a very honorable one, for to pathology we owe the realization that the contrast between health and disease is not to be sought in a fundamental difference of two kinds of life, nor in an alteration of essence, but only in an alteration of conditions.

Translated by Lelland J. Rather  
*Disease, Life, and Man, Selected Essays*  
 The Place of Pathology Among the Biological Sciences (p. 169)  
 Stanford University Press. Stanford, California, USA. 1958

No biographical data available

Pathology is only the physiology of disease.

*Physiology*  
 Lecture I (p. 15)  
 Chancy R. Murry. Cincinnati, Ohio, USA. 1879

## PATIENCE

### Bürgel, Bruno Hans 1875–1948

German astronomer

Patience is one of the chief virtues an astronomer must possess, and as women generally have more patience than men, they seem destined by Nature for some branches of astronomical science.

Translated by Stella Bloch  
*Astronomy for All*  
 Chapter 3 (p. 30)  
 Cassell & Co., Ltd. London, England. 1911

## PATIENT

### Abernethy, John 1680–1740

Irish Presbyterian minister, theologian, and dissenter

Private patients, if they do not like me, can go elsewhere, but the poor devils in the hospital I am bound to take care of.

*Memoirs of John Abernethy*  
 Chapter V (p. 37)  
 Harper & Brothers. New York, New York, USA. 1853

### Armour, Richard 1906–89

American poet

The perfect patient let us praise:  
 He's never sick on Saturdays,  
 In fact this wondrous, welcome sight  
 Is also never sick at night.  
 In waiting rooms he does not burn  
 But gladly sits and waits his turn,  
 And even, I have heard it said,  
 Beggars others, "Please go on ahead."  
 He takes advice, he does as told,  
 He has a heart of solid gold.  
 He pays his bills, without a fail,  
 In cash, or by the same day's mail.  
 He has but one small fault I'd list:  
 He doesn't (what a shame!) exist.

*The Medical Muse*  
 Ideal Patient  
 McGraw-Hill Book Company, Inc. New York, New York, USA. 1963

### Born-Volber, A. J.

No biographical data available

The patient wishes not only to be cured, but to be treated; his luxury is in the importance of the physician and his remedies.

In Albert Abrams  
*Man and His Poisons*  
 Chapter X (p. 222)  
 E.B. Treat & Co. New York, New York, USA. 1906

### Cushing, Harvey 1869–1939

American neurosurgeon

Every patient, he said, provided two questions – firstly what can be learnt from him and secondly what can be done for him.

In Robert Coope  
*The Quiet Art* (p. 103)  
 E.S. Livingstone Ltd. Edinburgh, Scotland. 1952

### de Madariaga, Salvador 1886–1978

Spanish writer and statesman

There are no diseases, there are only patients.

*Essays with a Purpose*  
 On Medicine (p. 174)  
 Hollis & Carter. London, England. 1954

### Drake, Daniel 1785–1852

American physician

[There is no era in the life of a physician] in which his self-complacency is so exalted, as the time which passes between receiving his diploma with its blue ribbon, and receiving crepe and gloves, to wear at the funeral of his first patient.

*Western Journal of Medicine and Surgery*, New Series, II:355, October, 1844

### Eliot, T. S. (Thomas Stearns) 1888–1965

American-born British poet and playwright

REILLY: Most of my patients begin, Miss Coplestone, by telling me exactly what is the matter with them. And what I am to do about it.

*The Collected Poems and Plays 1909–1950*  
 The Cocktail Party, Act Two (p. 359)  
 Harcourt, Brace & World, Inc. New York, New York, USA. 1952

### Helmuth, William Tod 1833–1902

American physician

She sent for me in haste to come and see,  
 What her condition for a cure might be.  
 Dear me! a patient – what a happy tone,  
 To have a patient and one all my own –  
 To have a patient and myself be feed,  
 Raised expectations very high indeed –  
 I saw a practice growing from the seed.

*Scratches of a Surgeon*  
 My First Patient (p. 61)  
 W.A. Chatterton & Company. Chicago, Illinois, USA. 1879

**Heschel, Abraham J.** 1907–72  
Jewish theologian

The patient must not be defined as a client who contracts a physician for service; he is a human being entrusted to the cure of a physician.

*The Insecurity of Freedom*

The Patient as a Person (p. 31)

Farrar, Straus & Giroux. New York, New York, USA. 1966

**Holmes, Oliver Wendell** 1809–94  
American physician, poet, and humorist

Once in a while you will have a patient of sense, born with the gift of observation, from whom you may learn something.

*Medical Essays*

The Young Practitioner (pp. 382–383)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

What I call a good patient is one who, having found a good physician, sticks to him till he dies.

*Medical Essays*

The Young Practitioner (p. 390)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

If you are making choice of a physician, be sure to get one, if possible, with a cheerful and serene countenance.

*The Professor at the Breakfast Table*

Chapter VI (p. 180)

Ticknor & Fields. Boston, Massachusetts, USA. 1860

**Hubbard, Kin** 1868–1930

American Democratic newspaper editor

Be kind t' th' henn egg. When sickness enters th' home an' th' patient comes thru th' crisis twenty pounds lighter than a straw hat, an' is propped up with pillows in th' bay window t' watch th' speedin', an' loved ones try t' tempt him with round steak, an' pickles an' near beer, he wearily waves 'em away. But with his first returnin' strength he squirms an' turns his listerless eyes toward th' kitchen an' says, in a voice weak an' scarcely audible, "Maw, I believe I could worry down an egg..."

*Abe Martin: Hoss Sense and Nonsense* (p. 53)

The Bobbs-Merrill Company, Indianapolis, Indiana, USA. 1926

American nurse

There are few, if any, "standard" patients.

*Fundamentals of Contemporary Nursing Practice*

Chapter 2 (p. 35)

W.B. Saunders Philadelphia, Pennsylvania, USA. 199p

**Mayo, William J.** 1861–1939

American physician

...the highly scientific development of this mechanistic age had led perhaps to some loss in appreciation of the individuality of the patient and to trusting largely to the laboratories and outside agencies which tended to make the patient not the hub of the wheel, but a spoke.

Edward Martin, M.D., 1859–1938

*Collected Papers of the Mayo Clinic & Mayo Foundation*, Volume 30, 1938

**Morris, Robert Tuttle** 1857–1945

Abdominal surgeon

It is the patient rather than the case which requires treatment.

*Doctors Versus Folks*

Chapter 2

Doubleday, Page & Company, Inc. Garden City, New York, USA. 1915

**Newman, Sir George** 1870–1948

English public health physician

There are four questions which in some form or other every patient asks his doctor: (a) What is the matter with me? This is diagnosis. (b) Can you put me right? This is treatment and prognosis. (c) How did I get it? This is causation. (d) How can I avoid it in future? This is prevention.

Preventive Medicine for the Medical Student

*The Lancet*, Volume 221, November 21, 1931 (p. 113)

**Osler, Sir William** 1849–1919

Canadian physician and professor of medicine

To study the phenomena of disease without books is to sail an uncharted sea, while to study books without patients is not to go to sea at all.

In Harvey Cushing

*The Life of Sir William Osler* (Volume 1)

Chapter IV (p. 67)

Clarendon Press. Oxford, England. 1925

**Parrot, Max**

No biographical data available

It is often been said that the technical aspects of medicine are easy. The difficult part is dealing with the personality of the patient, the so-called psychological or human factor. This takes up a great deal of the time of the practicing physician. It is harder on the doctor's constitution than all of the technical aspects of medicine. It may even cause his or her demise, in the case of a physician with an autonomic nervous system that can't take the heat.

In Irving Oyle

*The New American Medical Show: Discovering the Healing Connection* (p. 25)

Unity Press. Santa Cruz, California, USA. 1979

**Potter, Stephen** 1900–69

*The Plays and Sonnets of William Shakespeare* (Volume 2)

*Macbeth*

Act V, Scene iii, l. 37–39

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## PATTERN

### Burns, Marilyn

No biographical data available

Searching for patterns is a way of thinking that is essential for making generalizations, seeing relationships, and understanding the logic and order of mathematics. Functions evolve from the investigation of patterns and unify the various aspects of mathematics.

*About Teaching Mathematics: A K–8 Resource*

Patterns and Functions (p. 112)

Math Solutions Publications, USA. 1992

**Derry, Gregory N.** 1952–  
American professor of physics

In trying to understand nature, we rarely attempt to grasp completely every possible detail. If we did, we’d be overwhelmed by the mass of inconsequential information. As a result, we would miss the truly interesting patterns and relationships that give us scientific insight.

*What Science Is and How It Works*

Chapter 6 (p. 69)

Princeton University Press, Princeton, New Jersey, USA. 1999

**Feynman, Richard P.** 1918–88  
American theoretical physicist

Stuck on this carousel my little eye can catch one-million-year-old light. A vast pattern – of which I am a

part...What is the pattern or the meaning or the why? It does not do harm to the mystery to know a little more about it.

*The Feynman Lectures in Physics*

Chapter 3 (3–6)

**Gardner, Martin** 1914–

American writer and mathematics games editor

If the cosmos were suddenly frozen, and all movement ceased, a survey of its structure would not reveal a random distribution of parts. Simple geometrical patterns, for example, would be found in profusion – from the spirals of galaxies to the hexagonal shapes of snow crystals. Set the clockwork going, and its parts move rhythmically to laws that often can be expressed by equations of surprising simplicity. And there is no logical or a priori reason why these things should be so.

*Order and Surprise*

Chapter 4 (p. 57)

Prometheus Books, Buffalo, New York, USA. 1983

**Hofstadter, Douglas R.** 1945–

American academic

Yes, I am a relentless quester after the chief patterns of the universe – central organizing principles, clean and powerful ways to categorize what is “out there.”

*Metamagical Themas: Questing for the Essence of Mind and Pattern*

Introduction (p. xxv)

Basic Books, Inc. New York, New York, USA. 1985

**Huxley, Aldous** 1894–1963

English writer and critic

The difference between a piece of stone and an atom is that an atom is highly organised, whereas the stone is not. The atom is a pattern, and the molecule is a pattern, and the crystal is a pattern; but the stone, although it is made up of these patterns, is just a mere confusion. It’s only when life appears that you begin to get organisation on a larger scale. Life takes the atoms and molecules and crystals; but, instead of making a mess of them like the stone, it combines them into new and more elaborate patterns of its own.

*Time Must Have a Stop*

Chapter XIV (p. 145)

The Sun Dial Press, Garden City, New York, USA. 1944

**MacArthur, Robert H.** 1930–72

American ecologist

To do science is to search for repeated patterns, not simply to accumulate facts, and to do the science of geographical ecology is to search for patterns of plants and animal life that can be put on a map.

*Geographical Ecology*

Introduction (p. 1)

Harper & Row, Publishers, New York, New York, USA. 1972

**Maximillian Cohen (Fictional character)**

11:15, restate my assumptions: 1. Mathematics is the language of nature. 2. Everything around us can be represented and understood through numbers. 3. If you graph these numbers, patterns emerge. Therefore: There are patterns everywhere in nature.

*Pi*  
Film (1998)

**Peterson, Ivars**

Mathematics and computer writer and editor

In their search for patterns and logical connections, mathematicians face a vast, mysterious ocean of possibilities. Over the centuries, they have discovered an extensive archipelago of truth and beauty. Much of that accumulated knowledge is passed on to succeeding generations. Even more wonders await future explorers of deep, mathematical waters.

*Islands of Truth: A Mathematical Mystery Cruise*  
Chapter 8 (p. 292)  
W.H. Freeman & Company. New York, New York, USA. 1990

**Rucker, Rudy** 1946–

Science and science fiction author

The world is colors and motion, feelings and thought... and what does math have to do with it? No much, if “math” means being bored in high school, but in truth mathematics is the one universal science. Mathematics is the study of pure pattern, and everything in the cosmos is a kind of pattern.

*Mind Tools*  
Introduction (p. 3)  
Houghton Mifflin & Co. Boston, Massachusetts, USA. 1987

**Stevens, Peter S.**

No biographical data available

It turns out that those patterns and forms are peculiarly restricted, that the immense variety that nature creates emerges from the working and reworking of only a few formal themes. These limitations on nature bring harmony and beauty to the natural world.

*Patterns in Nature*  
Chapter 1 (p. 3)  
Little, Brown & Company. Boston, Massachusetts, USA. 1974

**Stewart, Ian** 1945–

English mathematician

Each of nature’s patterns is a puzzle, nearly always a deep one.

*Nature’s Numbers*  
Chapter 2 (p. 14)  
BasicBooks. New York, New York, USA. 1995

...mathematics is the science of patterns, and nature exploits just about every pattern that there is.

*Nature’s Numbers*  
Chapter 2 (p. 18)  
BasicBooks. New York, New York, USA. 1995

**PAULI EFFECT****Gamow, George** 1904–68

Russian-born American physicist

The *Pauli Effect*, a mysterious phenomenon which is not and probably never will be understood on a purely materialistic basis.

*Thirty Years That Shook Physics* (p. 64)  
Courier Dover Publications. New York, New York, USA. 1985

**PAULI PRINCIPLE****Gamow, George** 1904–68

Russian-born American physicist

We do not know why they have the masses they do; we do not know why they transform into another the way they do; we do not know anything! The one concept that stands like the Rock of Gibraltar in our sea of confusion is the Pauli principle.

The Exclusion Principle  
*Scientific American*, Volume 201, Number 1, July 1959 (p. 86)

**PEACE****Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

There is, though I do not know how there is or why there is, a sense of infinite peace and protection in the glittering hosts of heaven. There it must be, I think, in the vast and eternal laws of matter, and not in the daily cares and sins and troubles of men, that whatever is more than animal within us must find its solace and its hope.

*Seven Science Fiction Novels of H. G. Wells*  
Chapter the Twenty-second (p. 182)  
Dover Publications, Inc. New York, New York, USA. 1934

**PEAK****Pouchet, Félix Archimède** 1800–72

French biologist

...every crumbling peak displays to our view the remains of generations buried by the revolutions of the globe. Their numbers, their size, their unknown forms astonish us; but we cannot doubt, for these inanimate remains, of which the earth has faithfully kept the impress, are so many medallions struck by the Creator and spared by the hand of time, to reveal to us the world’s eventful history

*The Universe*  
The Animal Kingdom, Book I (pp. 6–7)  
Blackie & Son. London, England. 1870

**PEDANTRY**

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

Without a doubt, technical facility is a first requisite for valuable mental activity: we shall fail to appreciate the rhythm of Milton, or the passion of Shelley, so long as we find it necessary to spell the words and are not quite certain of the forms of the individual letters. In this sense there is no royal road to learning. But it is equally an error to confine attention to technical processes, excluding consideration of general ideas. Here lies the road to pedantry.

*An Introduction to Mathematics*

Chapter I (p. 8)

Henry Holt & Co. New York, New York, USA. 1911

**PENDULUM**

**Eco, Umberto** 1932–  
Italian novelist, essayist, and scholar

That was when I saw the Pendulum.

The sphere, hanging from a long wire set into the ceiling of the choir, swayed back and forth with isochronal majesty.

I knew – but anyone could have sensed it in the magic of that serene breathing – that the period was governed by the square root of the length of the wire and by pi, that number which, however irrational to sublunar minds, though a higher rationality binds the circumference and diameter of all possible circles. The time it took the sphere to swing from end to end was determined by an arcane conspiracy between the most timeless of measures: the singularity of the point of suspension, the duality of the plane's dimensions, the triadic beginning of  $\pi$ , the secret quadratic nature of the root, and the unnumbered perfection of the circle itself.

Translated by William Weaver

*Foucault's Pendulum*

Chapter 1 (p. 3)

Harcourt Brace Jovanovich, Publishers. San Diego, California, USA. 1988

**Graham, L. A.**

No biographical data available

Rock-a-bye baby in the tree top,  
As a compound pendulum, you are a flop.  
Your center of percussion is safe and low,  
As one may see when the wind doth blow.  
Your frequency of vibration is pretty small,  
Frankly, I don't think you'll fall at all.

"I did," Gerhard said. "But I don't know anymore. We've passed the confidence limits already. They were about plus or minus two minutes for ninety-nine percent."

*The Terminal Man*

Chapter 6 (p. 157)

Alfred A. Knopf. New York, New York, USA. 1972

**Jeans, Sir James Hopwood** 1877–1946  
English physicist and mathematician

When half a million babies are born in England in a year, we may say that 20% of them are born in London, 2% in Manchester, 1% in Bristol, and so on. But when we think of one baby born in a single minute of time, we cannot say that 20% of it was born in London, 2% in Manchester, and so on. We can only say that there is a 20% probability of its being born in London, a 2% probability of its being born in Manchester, and so on.

*Physics and Philosophy*

Chapter V (p. 136)

Dover Publications, Inc. New York, New York, USA. 1981

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910

American author and humorist

...I do not remember just when, for I was not born then and cared nothing for such things. It was a long journey in those days and must have been a rough and tiresome one. The village contained a hundred people and I increased the population by 1%. It was more than many of the best men in history could have done for a town. It may not be modest in me to refer to this but it is true.

*Mark Twain's Autobiography* (Volume 1)

Chapter Begun in Vienna (pp. 94–95)

Harper & Brothers. New York, New York, USA. 1924

## PERCEPTION

**Adams, Douglas** 1952–2001

English author, comic radio dramatist, and musician

Everything you see or hear or experience in any way at all is specific to you. You create a universe by perceiving it.

*The Ultimate Hitchhiker's Guide to The Galaxy*

Mostly Harmless

Chapter 9 (p. 703)

The Ballantine Book Company. New York, New York, USA. 2002

**Blake, William** 1757–1827

English poet, painter, and engraver

As to that false appearance which appears to the reasoner As of a Globe rolling thro' Voidness, it is a delusion of Ulro.

The Microscope knows not of this nor the Telescope: they alter

The ratio of the Spectator's Organs, but leave Objects untouched.

*The Complete Poetry and Prose of William Blake*

The Building of Time

University of California Press. Berkeley, California, USA. 1982

**Cousins, Norman** 1912–90

American editor and author

As we enlarge our sense of the cosmos, we are enlarging our consciousness. As we extend the reach of the mind, we are learning more about our potentialities. As we move beyond the human habitat, we are gaining perspective on ourselves as custodians of the planet.

*Rendezvous with Infinity*

*Cosmic Search Magazine*, Volume 1, Number 1, January 1, 1979

(pp. 30–31)

**Eiseley, Loren C.** 1907–77

American anthropologist, educator, and author

It has ever been my lot, though formally myself a teacher, to be taught surely by none. There are times when I have thought to read lessons in the sky, or in books, or from the behavior of my fellows, but in the end my perceptions have frequently been inadequate or betrayed.

*The Star Thrower*

The Star Thrower (p. 169)

Times Books. New York, New York, USA. 1978

**Murphy, Michael**

No biographical data available

To a frog with its simple eye, the world is a dim array of grays and blacks. Are we like frogs in our limited sensorium, apprehending just part of the universe we inhabit? Are we as a species now awakening to the reality of multidimensional worlds in which matter undergoes subtle reorganizations in some sort of hyperspace?

*The Future of the Body*

Part I, Chapter 8 (p. 216)

Penguin Putnam, Inc. New York, New York, USA. 1992

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

Physics and perception are like two people on opposite sides of a brook which slowly widens as they walk; at first it is easy to jump across, but imperceptibly it grows more difficult, and at last a vast labor is required to get from one side to the other.

*Analysis of Matter*

Chapter XIV (p. 137)

Dover Publications, Inc., New York, New York, USA, 1954

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

Our problem is, in fact, to fit the world to our perceptions, and not our perceptions to the world.

*The Organization of Thought*

Chapter VIII (p. 228)

Greenwood Press Publishers. Westport, Connecticut, USA. 1974

## PERCUSSION

**Auenbrugger, Leopold** 1722–1809  
Viennese physician

I present the reader with a new sign, which I have discovered for detecting diseases of the chest, This consists in the percussion of the human thorax, whereby according to the character of the particular sounds thence elicited, an opinion is formed of the internal state of that cavity.

*New Invention by Means of Percussing the Human Thorax for Detecting Signs of Obscure Disease of the Interior of the Chest*  
December 31, 1761

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

Even perfection will not bear the tedium of indefinite repetition.

*Atlantic*, September 29, 1979 (p. 244)

## PERIODIC TABLE

**Atkins, Peter William** 1940–  
English physical chemist and writer

The periodic table is arguably the most important concept in chemistry, both in principle and in practice. It is the everyday support for students, it suggests new avenues of research to professionals, and it provides a succinct organization of the whole of chemistry. It is a remarkable demonstration of the fact that the chemical elements are not a random clutter of entities but instead display trends and lie together in families. Anyone who seeks to be familiar with a scientist's-eye view of the world must be aware of the general form of the periodic table, for it is a part of scientific culture.

*The Periodic Kingdom: A Journey into the Land of the Chemical Elements*

Preface (pp. vii–viii)

Basic Books, Inc. New York, New York, USA. 1995

**Bolton, Henry Carrington** 1843–1903  
American chemist, bibliographer, and historian

The periodic law has given to chemistry that prophetic power long regarded as the peculiar dignity of its sister science, astronomy.

In Joseph William Mellor

*Mellor's Modern Inorganic Chemistry*

Chapter 9 (p. 122)

Longmans. London, England. 1967

**Mendeleyev, Dmitry Ivanovich** 1834–1907  
Russian chemist

I shall endeavor to show, as briefly as possible, ...how far the periodic law contributes to enlarge our range of vision. Before the promulgation of this law the chemical elements were mere fragmentary, incidental facts in Nature; there was no special reason to expect the discovery of

new elements, and the new ones which were discovered from time to time appeared to be possessed of quite novel properties. The law of periodicity first enabled us to perceive undiscovered elements at a distance which formerly was inaccessible to chemical vision...

The Periodic Law of the Chemical Elements

*Journal of the Chemical Society*, Volume 55, 1889 (p. 648)

There must be some bond of union between mass and the chemical elements; and as the mass of a substance is ultimately expressed...in the atom, a functional dependence should exist and be discoverable between the individual properties of the elements and their atomic weights. But nothing, from mushrooms to a scientific law, can be discovered without looking and trying. So I began to look about and write down the elements with their atomic weights and typical properties, analogous elements and like atomic weights on separate cards, and this soon convinced me that the properties of elements are in periodic dependence upon their atomic weights.

In Thomas H. Pope (ed.)

Translated by George Kamensky

*The Principles of Chemistry* (Volume 2)

Longmans, Green & Company. London, England. 1905

By ordering the elements according to increasing atomic weight in vertical rows so that the horizontal rows contain analogous elements, still ordered by increasing atomic weight, one obtains the following arrangement, from which a few general conclusions may be derived.

David M. Knight (ed.)

*Classical Scientific Papers – Chemistry, Second Series*

On the Relationship of the Properties of the Elements to Their Atomic Weights (1869)

American Elsevier Publishing Company. New York, New York, USA. 1968

An established system is limited by its order of known or discovered elements. With the periodic and atomic relations now shown to exist between all the atoms and the properties of their elements, we see the possibility not only of noting the absence of some of them but even of determining, and with great assurance and certainty, the properties of these as yet unknown elements; it is possible to predict their atomic weight, density in the free state or in the form of oxides, acidity or basicity, degree of oxidation, and ability to be reduced and to form double salts and to describe the properties of the metalloorganic compounds and chlorides of the given element; it is even possible...to describe the properties of some compounds of these unknown elements in still greater detail. ...[A]t the present time it is not possible to say when one of these bodies...will be discovered, yet the opportunity exists for finally convincing myself and other chemists of the truth of those hypotheses which lie at the base of the system I have drawn up.

A Natural System of the Elements and Its Use in Predicting the Properties of Undiscovered Elements

*Journal of the Russian Chemical Society*, Volume 3, 1871 (p. 25)

“I shall not form any hypothesis, either here nor further on to explain the nature of the periodic law. For first of all, the law itself is too simple; and secondly, this new subject has been too little studied yet, in its diverse parts for us to form any hypothesis.”

In B. Bensaude-Vincent

Mendeléev's Periodic System (part I)

*British Journal for the History of Science*, Volume 19, Number 61, March, 1986 (p. 7)

### **Roscoe, Henry E.** 1833–1915

English chemist

We must then find that these numbers regularly increase by a definite amount, *i.e.*, by the average age of a generation, which will be approximately the same in all the four families. Comparing the ages of the chemists themselves, we shall observe certain differences, but these are small in comparison with the period which has elapsed since the birth of their ancestors. Now each individual in this series of family trees represents a chemical element; and just as each family is distinguished by certain idiosyncrasies, so each group of the elementary bodies thus arranged shows distinct signs of consanguinity.

*Report of the British Association of the Advancement of Science* 1887 (p. 10)

Publisher undetermined

### **Sanderson, R. T.**

No biographical data available

Students may readily be bewildered by the apparently fundamental lack of agreement among various periodic tables, and some may even acquire reasonable doubt as to whether chemists actually know what they are doing.

One More Periodic Table

*Journal of Chemical Education*, Volume 31, 1954 (p. 481)

## PERFECT

### **Sylvester, James Joseph** 1814–97

English mathematician

It often happens that the pursuit of the beautiful and appropriate, or, as it may be otherwise expressed, the endeavor after the perfect, is rewarded with a new insight into the true.

*The Collected Mathematical Papers of James Joseph Sylvester* (Volume 2)

Separation of the Roots of an Algebraical Equation (p. 544)

At the University Press. Cambridge, England. 1902

## PERFECT NUMBER

### **Woodman, William Robert**

No biographical data available

The perfect numbers are like the virtues, few in number.

In G.W. Speth

I love my baby, she makes me oh so blue

She keeps me oh so worried, that I call her U 92

*Atomic Baby*

Sung by Amos Milburn

Capitol CDP 7243, 1950

## PERISH

### **Duke of Argyll (George Douglas**

**Campbell)** 1823–1900

English statesman and writer on science, religion, and politics

There is no existing order no present combination of matter or of force which we cannot conceive coming to an end. But when that end is come, we cannot conceive but that something must remain if it be nothing else than that by which the ending was brought about.

*The Unity of Nature*

Chapter 4 (p. 85)

G.P. Putnam's Sons. New York, New York, USA. 1885

## PERMANENCE

### **Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

Permanence is but a word of degrees.

*Essays*

Circles (p. 282)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1873

There are no fixtures in nature. The universe is fluid and volatile. Permanence is but a word of degrees.

*Essays, Lectures, and Orations*

Circles (p. 157)

William S. Orr & Co. London, England. 1848

### **Jeans, James W.**

... we now know that there is, in principle, no permanence in substance; it is mere bottled energy, and possesses no more inherent permanence than bottled beer ...

*Physics & Philosophy*

Chapter II (p. 41)

The University Press. Cambridge, England. 1943

## PERPETUAL MOTION

**Burroughs, John** 1837–1921

American naturalist and writer

Physics proves to us the impossibility of perpetual motion among visible, tangible bodies, at the same time that it reveals to us a world where perpetual motion is the rule – the world of molecules and atoms.

*The Breath of Life*

Chapter IX (p. 190)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1915

**da Vinci, Leonardo** 1452–1519

Italian High Renaissance painter and inventor

Oh! Mediators of perpetual motion, how many vain projects of similar character you have devised! Go and join the seekers of gold.

Translated by Maurice Baring

*Thoughts on Art and Life*

Thoughts on Science (p. 179)

The Merrymount Press. Boston, Massachusetts, USA. 1906

**Hugo, Victor** 1802–85

French author, lyric poet, and dramatist

Science seeks perpetual motion. She has found it: it is Science herself.

Translated by Melville Best Anderson

*William Shakespeare*

Part Second, Book I, Chapter IV (p. 105)

A.C. McClurg & Co. Chicago, Illinois, USA. 1887

## PERPETUAL MOTION MACHINE

**Boltzmann, Ludwig Edward** 1844–1906

Austrian physicist

Since a given system can never of its own accord go over into another equally probable state but into a more probable one, it is likewise impossible to construct a system of bodies that after traversing various states returns periodically to its original state, that is a perpetual motion machine.

In B.F. McGuinness

*Ludwig Boltzmann: Theoretical Physics and Philosophical Problems,*

The Second Law of Thermodynamics (p. 30)

Springer-Verlag. New York, New York, USA. 1974

## PERSPECTIVE

**Chalmers, Thomas** 1780–1847

Scottish mathematician

...it was the telescope, that, by piercing the obscurity which lies between us and distant worlds, put Infidelity in possession of the argument against which we are now contending. But, about the time of its invention, another instrument was formed, which laid open a scene no less wonderful, and rewarded the inquisitive spirit of man with a discovery, which serves to neutralize the whole of argument. This was the microscope. The one led me to see a system in every star. The other leads me to see a world in every atom. The one taught me, that this mighty globe, with the whole burden of its people and of its countries, is but a grain of sand on the high field of immensity. The other teaches me, that every grain of sand may harbour within it the tribes and the families of a busy population. The one told me of the insignificance of the world I tread upon. The other redeems it from all its insignificance; for it tells me that in the leaves of every forest, and in the flowers of every garden, and in the waters of every rivulet, there are worlds teeming with life, and numberless as are the glories of the firmament.

*The Works of Thomas Chalmers* Volume 7

Discourse III (p. 80)

Robert Carter. New York, New York, USA. 1842

**Gould, Stephen Jay** 1941–2002

American paleontologist and evolutionary biologist

Perspectives that are reversed or orthogonal to traditional modes form my stock in trade. (I have long argued that conceptual locks are far more powerful than factual lacks as barriers to scientific understanding.)

*Eight Little Piggies: Reflections in Natural History*

A Reflective Prologue (pp. 16–17)

W.W. Norton & Co. New York, New York, USA. 1993

**PH.D.****Author undetermined**

Armed with the Open Sesame of the magic Ph.D., what could I not accomplish!

*American Review*, Volume 2, 1924 (p. 525)

A promising Ph.D. candidate was presenting his thesis at his final examination. He proceeded with a derivation and ended up with something like:  $F = -MA$ . He was embarrassed, his supervising professor was embarrassed, and the rest of the committee was embarrassed. The student coughed nervously and said 'I seem to have made a slight error back there somewhere.' One of the mathematicians on the committee replied dryly, 'Either that or an odd number of them!

Source undetermined

**Chargaff, Erwin** 1905–2002

Austrian biochemist

The Ph.D. is essentially a license to start unlearning.

*Voices in the Labyrinth: Nature, Man and Science*

Chapter 1 (p. 2)

The Seabury Press. New York, New York, USA. 1977

**Dyson, Freeman J.** 1923–

American physicist and educator

The average student emerges at the end of the Ph.D. program, already middle-aged, overspecialized, poorly prepared for the world outside, and almost unemployable except in a narrow area of specialization. Large numbers of students for whom the program is inappropriate are trapped in it, because the Ph.D. has become a union card required for entry into the scientific job market.

*From Eros to Gaia*

Chapter 16 (p. 195)

Pantheon Books. New York, New York, USA. 1992

## PH.D. THESIS

**Dobie, Frank J.** 1888–1964

The average Ph.D. Thesis is nothing but a transference of bones from one graveyard to another.

*A Texan in England* (p. 26)

**MacLeish, Archibald** 1892–1982

American poet and Librarian of Congress

It is not for nothing that the scholar invented the Ph.D. thesis as his principal contribution to literary form. The Ph.D. thesis is the perfect image of his world. It is done for the sake of doing work – perfectly conscientious, perfectly laborious, perfectly irresponsible.

*The Irresponsibles: A Declaration* (p. 29)

Duell, Sloan and Pearce. New York, New York, USA. 1940

## PHAGOCYTE

**Shaw, George Bernard** 1856–1950

Irish playwright

There is at bottom only one genuinely scientific treatment for all diseases, and that is to stimulate the phagocytes. Stimulate the phagocytes. Drugs are a delusion.

*The Doctor's Dilemma*

Preface (p. 112)

Penguin Books. Baltimore, Maryland, USA. 1954

## PHAGOCYtic SYSTEM

**Mechnikov, Ilya** 1845–1916

Russian microbiologist

The sum of the very numerous facts established in the archives of science leaves no room to doubt the major part played by the phagocytic system, as the organism's main defence against the danger from infectious agents of all kinds, as well as their poisons.

*Nobel Lectures, Physiology or Medicine 1901–1921*

On the Present State of the Question of Immunity in Infectious Diseases

Elsevier Publishing Co. Amsterdam, The Netherlands. 1967

## PHARMACIST

**Eisenschiml, Otto** 1880–1963

Austrian-American chemist and historian

The surgeon who has performed scores of brilliant operations is less talked about than the one who has inadvertently killed a patient; the pharmacist who has carefully filled prescriptions for a lifetime remains obscure, but will gain publicity by a single oversight.

*The Art of Worldly Wisdom: Three Hundred Precepts for Success Based on the Original Work of Baltasar Gracian*

Part Seven (p. 87)

Duell, Sloan & Pearce. New York, New York, USA. 1947

**Flexner, Abraham** 1866–1959

American educator

The physician thinks, decides, and orders; the pharmacist obeys – obeys, of course, with discretion, intelligence, and skill – yet, in the end, obeys and does not originate. Pharmacy therefore is an arm added to the medical profession, a specially and distinctly higher form of handicraft, not a profession...

Is Social Work a Profession?

*School and Society*, Volume 1, 1915 (p. 905)

## PHARMACY

**Ghalioungui, Paul** 1908–87

Physician

The word pharmakon, whence pharmacy is derived, meant in Greek not only medicament, poison, or magical procedure, but also that which is slain to expiate the crimes of a city, like the scapegoat of Biblical times.... In other words, it meant "what carries off disease."

*Magic and Medical Science in Ancient Egypt*

Chapter II (p. 35)

Barnes and Nobles. New York, New York, USA. 1965

## PHENOMENA

### Campomanes, Pedro Rodriquez, Count de Campomanes 1723–1803

Spanish statesman

Nature, which you [Benjamin Franklin] have profoundly studied, is indebted to you for investigating and explaining phenomena, which wise men had not before been able to understand, and the great American philosopher, at the same time he discovers these phenomena, suggests useful methods for guarding men against their danger.

In Jared Sparks

*The Works of Benjamin Franklin* (Volume 10)

Letter from Count de Campomanes to B. Franklin, 26 July, 1784

Part III (p. 115)

Townsend Mac Coun. Chicago, Illinois, USA. 1882

### Cook, O. F.

No biographical data available

Science is by no means exempt from the very human tendency to place a fictitious value upon rare and exceptional phenomena, and to overlook the significance of familiar facts.

*Annual Report of the Board of Regents of the Smithsonian Institution* (1904)

The Evolutionary Significance of Species (p. 397)

Government Printing Office. Washington, D.C. 1905

### Cornthwaite, Robert

American actor

There are no enemies in science, just phenomena to study.

*The Thing from Another World*

Film (1951)

### du Noüy, Pierre Lecomte 1883–1947

French scientist

When we speak of a phenomenon, we speak only of an event, or of a succession of events, arbitrarily isolated from the universe whose evolution they share. By isolating a fact in order to study it, we give it a beginning and an end, which are artificial and relative. In relation to the evolution of the universe, birth is not a beginning, and death is not an end. There are no more isolated phenomena in nature than there are isolated notes in a melody.

*The Road to Reason*

Chapter 2 (p. 53)

Longmans, Green & Company. London, England. 1949

### Gillette, George Francis

No biographical data available

In all the cosmos, there is naught but straight flying, lumping, caroming, and again straight flying. *Phenomena are but lumps, jumps, and bumps. A mass unit's career is but lumping, bumping, rejumping, rebumping, and finally unlumping.*

*The Rational Non-mystical Cosmos: The Mysticism of Science Exploded* (p. 33)

**Jevons, William Stanley** 1835–82  
English economist and logician

...every strange phenomenon may be a secret spring which, if rightly touched, will open the door to new chambers in the palace of nature.

*The Principles of Science: A Treatise on Logic and Scientific Method*  
Book V, Chapter XXIX (p. 671)  
Macmillan & Company Ltd. London, England. 1887

**Laplace, Pierre Simon** 1749–1827  
French mathematician, astronomer, and physicist

The phenomena of nature are most often enveloped by so many strange circumstances, and so great a number of disturbing causes mix their influence, that it is very difficult to recognize them.

*A Philosophical Essay on Probabilities*  
Chapter IX (p. 73)  
Dover Publications, Inc. New York, New York, USA. 1951

There is no question here of vague causes, which cannot be submitted to analysis, and which the imagination modifies at pleasure to accommodate them to the phenomena.

Translated by J. Pond  
*The System of the World* (Volume 2)  
Book IV (p. 2)  
Printed for Richard Phillips. London, England. 1809

**Lederer, Charles** 1906–76  
American film writer and director

There are no enemies in science, professor. Only phenomena to study.

*The Thing From Another World*  
Film (1951)

**Liebig, Justus** 1803–73  
German organic chemist

Nature speaks to us in a peculiar language, in the language of phenomena; she answers at all times the questions which are put to her; and such questions are experiments.

*Chemistry In Its Application to Agriculture and Physiology*  
Part First, Chapter II (p. 21)  
T.B. Peterson. Philadelphia, Pennsylvania, USA. 1847

**Lodge, Sir Oliver** 1851–1940  
English physicist

The ordinary run of men live among phenomena, of which they know nothing and care less. They see bodies fall to the earth, they hear sounds, they kindle fires, they see the heavens roll above them, but of the causes and inner working of the whole they are ignorant, and with their ignorance they are content.

*Pioneers of Science*  
Lecture I (p. 5)  
Macmillan & Co Ltd. London, England. 1905

**Mellor, Joseph William** 1863–1938  
Chemist

If the evidence of an alleged phenomenon cannot be tested by verification, it is outside the range of science.

*A Comprehensive Treatise on Inorganic and Theoretical Chemistry*  
Chapter I (p. 16)  
Longman, Green & Co. London, England. 1922

**Ramón y Cajal, Santiago** 1852–1934  
Spanish neuropathologist

The intellect is presented with phenomena marching in review before the sensory organs. It can be truly useful and productive only when limiting itself to the modest tasks of observation, description, and comparison, and of classification that is based on analogies and differences.

*Advice for a Young Investigator*  
Chapter 1 (p. 2)  
The MIT Press. Cambridge, Massachusetts, USA. 1999

**Rey, Jean** 1583–1645  
French physician and chemist

Some eminent personages having observed with astonishment that tin and lead increase in weight when they are calcined, have been seized with a praiseworthy desire to enquire into the cause of this phenomenon. It has proved a goodly subject, but the enquiry has been troublesome, and its fruits very small: in so far that after having directed their thoughts to all quarters, they have only been able to adduce reasons so feeble that no man of sound judgment dares trust them for support, or by their aid shelter his mind from all doubt.

*Essays of Jean Rey*  
On an Enquiry into the Cause Wherefore Tin and Lead Increase in Weight on Calcination (p. 5)  
William F. Glay. Edinburgh, Scotland 1895

**Royce, Josiah** 1855–1916  
American philosopher

The control of natural phenomena, which through the sciences, men have attained, grows daily vaster and more detailed, and in its details more assured.

Translated by George Bruce Halsted  
*Science and Hypothesis*  
Introduction (p. xvi)  
The Science Press. New York, New York, USA. 1905

**Ruskin, John** 1819–1900  
English writer, art critic, and social reformer

To science, phenomena are of use only as they lead to facts; and to art facts are of use only as they lead to phenomena.

*The Stones of Venice* (Volume 3)  
Chapter II (p. 39)  
John R. Alden, Publisher. New York, New York, USA. 1885

**Spencer, Herbert** 1820–1903  
English social philosopher

Sad, indeed, is it to see how men occupy themselves with trivialities, and are indifferent to the grandest phenomena...

*Education: Intellectual, Moral, and Physical*  
Chapter I (p. 73)  
A.L. Fowle. New York, New York, USA. 1860

**Tait, Peter Guthrie** 1831–1901  
Scottish physicist and mathematician

From the earliest times man's apprehension of the causes and connections of natural phenomena has been rendered uncertain and imperfect by his wilfully ignoring the great fact that Natural Philosophy is an experimental, and not an intuitive, science.

*Sketch of Thermodynamics* (2nd edition)  
Chapter I (p. 1)  
David Douglas. Edinburgh, Scotland. 1877

**Trousseau, Armand** 1801–67  
French internist

A conception of the nature of tangible objects is acquired by a simple perception of all the phenomena by which objects manifest themselves. This perception demands no intellectual effort; it requires attention and memory, and – as memory may prove treacherous – registration of the observed phenomena.

*Lectures on Clinical Medicine, Delivered at the Hotel-Dieu* (Volume 2)  
Introduction (p. 30)  
Lindsay & Blakiston. Philadelphia, Pennsylvania, USA. 1869

**von Humboldt, Alexander** 1769–1859  
German naturalist and explorer

In considering the study of physical phenomena, not merely in its bearings on the material wants of life, but in its general influence on the intellectual advancement of mankind, we find its noblest and most important result to be a knowledge of the chain of connection by which all natural forces are linked together and made mutually dependent upon each other; and it is the perception of these relations that exalts our views and ennobles our enjoyments. Such a result can, however, only be reaped as the fruit of observation and intellect, combined with the spirit of the age, in which are reflected all the varied phases of thought.

Translated by E.C. Otte  
*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)  
Introduction (p. 23)  
D. Appleton & Co. New York, New York, USA. 1850

**von Liebig, Justus** 1803–73  
German organic chemist

When we obtain a correct knowledge of the link which connects certain associated phenomena, when we have made an acquisition of a new truth relative to causation, it becomes equivalent to a new and additional sense, enabling us to perceive innumerable phenomena which had previously escaped our notice, and which still remain mysterious or altogether invisible to others.

In John Gardner  
*Familiar Letters on Chemistry*  
Second Series  
Letter I (pp. 5–6)  
Taylor & Walton. London, England. 1844

**Wigner, Eugene Paul** 1902–95  
Hungarian-born American physicist

There is no natural phenomenon that is comparable with the sudden and apparently accidentally timed development of science, except perhaps the condensation of a super-saturated gas or the explosion of some unpredictable explosives.

*Proceedings, American Philosophical Society*  
The Limits of Science  
Volume 94, Number 5, 1950 (p. 422)

**Wilson, Edward O.** 1929–  
American biologist and author

...all tangible phenomena, from the birth of stars to the workings of social institutions, are based on material processes that are ultimately reducible, however long and tortuous the sequences, to the laws of physics.

*Consilience: The Unity of Knowledge*  
Chapter 12 (p. 266)  
Alfred A. Knopf. New York, New York, USA. 1998

## PHEROMONE

**Fabre, Jean-Henri** 1823–1915  
French entomologist and author

Coming from every direction and appraised I know not how, here are forty lovers eager to pay their respects to the marriageable bride born that morning.

Translated by Alexander Teixeira de Mattos  
*The Life of the Caterpillar*  
The Great Peacock (p. 249)  
Dodd, Mead & Co. New York, New York, USA. 1918

**Sagan, Carl** 1934–96  
American astronomer and author

**Druryan, Ann** 1949–  
American author

When a honeybee dies it releases a death pheromone, a characteristic odor that signals the survivors to remove it from the hive.... The corpse is promptly pushed and tugged out of the hive. The death pheromone is oleic acid.... What happens if a live bee is dabbed with a drop of oleic acid? Then no matter how strapping and vigorous it might be, it is carried “kicking and screaming” out of the hive.

In Robert L. Solso

*Mind and Brain Sciences in the 21st Century*

What Thin Partitions... (p. 23)

MIT Press. 1999

## PHILOSOPHER

### Author undetermined

In this age the philosopher is no longer a member of some exclusive fraternity jealously guarding the mysteries of science, but the cultivator of his special branch of inductive philosophy for the general use of man, labouring in a spirit of profound humility, and knowing that though he should devote a life to his pursuit he must still be a learner.

Science and Royalty Under Highland Skies

*Bentley's Miscellany*, Volume 46 1859 (p. 609)

**Boutroux, Émile** 1845–1921

French philosopher

The philosopher asks himself whether natural law as assumed by science, wholly coincides with law as really existing in nature; whether science and reality are so alike that science may be regarded as exhausting everything intelligible and true that the real contains.

Translated by Fred Roth Well

*Natural law in Science and Philosophy*

Preface (p. 5)

The Macmillan Co. New York, New York, USA. 1914

**Cicero (Marcus Tullius Cicero)** 106 BCE–43 BCE

Roman orator, politician, and philosopher

Somehow or other no statement is too absurd for some philosophers to make.

Translated by William Armistead Falconer

*Cicero: De Senectute, De Amicitia, De Divinatione*

De Divinatione, II, LVIII (p. 505)

Harvard University Press. Cambridge, Massachusetts, USA. 1938

**Darwin, Charles Robert** 1809–82

English naturalist

Why should the souls [of philosophers] be deeply vexed? The majesty of Fact is on their side, and the elemental forces of Nature are working for them. Not a star comes to the meridian at its calculated time but testifies to the justice of their methods – their beliefs are “one with the falling rain and with the growing corn.”

By doubt they are established, and open inquiry is their bosom friend.

*Collected Essays* (Volume 2)

*Darwiniana*

The Origin of Species (p. 53)

Macmillan & Company Ltd. London, England. 1904

**Dickens, Charles** 1812–70

English novelist

... it has somehow or other happened, from time immemorial, that many of the best and ablest philosophers, who have been perfect lights of science in matters of theory, have been wholly unable to reduce them to practice.

*The Posthumous Papers of the Pickwick Papers*

Chapter XIX (p. 192)

J. van Amringe. New York, New York, USA. 1840

**Enriques, Federigo** 1871–1946

Italian mathematician

No greed for riches has driven philosophers to devote their whole energies to the problems of reality and of knowledge. If they had succeeded in their endeavors, one sole prize might seem to have awaited them; that is, the prize of reconquering, after having passed through philosophic skepticism, that solid and simple faith of men, which is beyond and above all criticism.

*Problems of Science*

Introduction (p. 9)

The Open Court Publishing Co. La Salle, Indiana, USA. 1914

**Faraday, Michael** 1791–1867

English physicist and chemist

The philosopher should be a man willing to listen to every suggestion, but determined to judge for himself. He should not be biased by appearances; have no favorite hypothesis; be of no school; and in doctrine have no master. He should not be a respecter of persons, but of things. Truth should be his primary object. If to these qualities he added industry, he may indeed hope to walk within the veil of the temple of Nature.

*The Life and Letters of Faraday* (Volume 1) (p. 220)

Longmans, Green & Company. London, England. 1870

**Harvey, William** 1578–1657

English physician

True philosophers, who are only eager for truth and knowledge, never regard themselves as already so thoroughly informed, but that they welcome further information from whomsoever and from wheresoever it may come; nor are they so narrow-minded as to imagine any of the arts or sciences transmitted to us by the ancients, in such a state of forwardness or completeness, that nothing is left for the ingenuity and industry of others.

*On the Motion of the Heart and Blood in Animals*

Dedication (p. 6)

George Bell & Sons. London, England. 1889

**Herschel, Sir John Frederick William** 1792–1871  
English astronomer and chemist

...to the natural philosopher there is no natural object unimportant or trifling.

*A Preliminary Discourse on The Study of Natural Philosophy*  
Part I, Chapter I, Section 10 (p. 14)  
Printed for Longman, Rees, Orme, Brown, and Green. London, England. 1831

**Lindley, David** 1956–  
English astrophysicist and author

As philosophers have frequently found, the real world seems to messy, too stubbornly arbitrary, to be found out by the power of thought alone, no matter how fine the guiding sense of aesthetics.

*The End of Physics: The Myth of a Unified Theory*  
Part III, Chapter 8 (p. 231)  
Basic Books, Inc. New York, New York, USA. 1993

**Marryat, Frederick** 1792–1848  
English novelist

A modern philosopher, with his hypothesis, is like a man possessed with a devil in times of yore; and it is not to be cast out by any human means, that I know of.

*The King's Own*  
Chapter XXXV (p. 227)  
George Routledge & Sons. London, England. 1873

**Pouchet, Félix Archimède** 1800–72  
French biologist

Whoever aspires to the title of a philosopher has, in the present day, a double mission to perform – to discover and to popularize; he should labour on the one hand for the advancement, on the other for the diffusion, of science.

*The Universe: Or, The Infinitely Great and the Infinitely Little*  
Preface (p. vi)  
Blackie & Son. London, England. 1870

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

Organic life, we are told, has developed gradually from the protozoon to the philosopher, and this development, we are assured, is indubitably an advance. Unfortunately it is the philosopher, not the protozoon, who gives us this assurance, and we can have no security that the impartial outsider would agree with the philosopher's self-complacent assumption.

*Mysticism and Logic: And Other Essays*  
Chapter VI (p. 106)  
Longmans, Green & Co. London, England. 1919

**Whewell, William** 1794–1866  
English philosopher and historian

The character of the true philosopher is, not that he never conjectures hazardously, but that his conjectures are

clearly conceived, and brought into rigid contact with facts. He sees and compares distinctly the Ideas and the Things; – the relations of his notions to each other and to phenomena.

*The Philosophy of the Inductive Sciences, Founded Upon Their History*  
(2nd edition)  
Book XI, Chapter V (p. 55)  
John W. Parker. London, England. 1867

## PHILOSOPHER'S STONE

**Agassiz, Jean Louis Rodolphe** 1807–73  
Swiss-born American naturalist, geologist, and teacher

The philosopher's stone is no more to be found in the organic than the inorganic world; and we shall seek as vainly to transform the lower animal types into the higher ones by any of our theories, as did the alchemists of old to change the baser metals into gold.

*Methods of Study in Natural History*  
Chapter XVI (p. 319)  
Ticknor & Fields. Boston, Massachusetts, USA. 1863

**Smith, Horace** 1779–1849  
No biographical data available

The true possessor of the philosopher's stone is the miner, whose iron, copper, and tin are always convertible into the more precious metals.

*The Tin Trumpet; Or Heads and Tales, for the Wise and Waggish Alchymist* (p. 28)  
D. Appleton & Co. New York, New York, USA. 1859

## PHILOSOPHIC DOUBT

**Brooks, William Keith** 1848–1908  
American zoologist

The hardest of intellectual virtues is philosophic doubt, and the mental vice to which we are most prone is our tendency to believe that lack of evidence for an opinion is a reason for believing something else.

*The Foundations of Zoology*  
Lecture XI (p. 283)  
The Macmillan Co. New York, New York, USA. 1899

## PHILOSOPHICAL DOCTRINE

**Hollister, John Hamilcar** 1824–1911  
American physician

The popular conception of any philosophical doctrine is necessarily imperfect, and very generally unjust.

*Memories of Eighty Years; Autosketches, Random Notes and Reminiscences*  
Lucretius and the Atomic Theory (p. 177)  
Publisher undetermined  
Chicago, Illinois, USA. 1912

## PHILOSOPHICAL PAPERS

**Rota, Gian-Carlo** 1932–99

Italian-born American mathematician

The snobbish symbol-dropping found nowadays in philosophical papers raises eyebrows among mathematicians, like someone paying his grocery bill with Monopoly money.

*Indiscrete Thoughts*

Chapter VII (p. 93)

Birkhäuser. Boston, Massachusetts, USA. 1997

## PHILOSOPHY

**Alexander, Samuel** 1859–1938

Australian-born British philosopher

The more comprehensive a science becomes the closer it comes to philosophy, so that it may become difficult to say where the science leaves off and philosophy begins.

*Space, Time, and Deity: The Gifford Lectures at Glasgow, 1916–1918*

(Volume 1)

Introduction (p. 2)

Macmillan &amp; Co. Ltd. London, England. 1920

**Astaire, Fred** 1899–1955

American dancer, actor, and singer

I wish I had your confidence...without your viewpoint.

*Holiday Inn*

Film (1942)

**Bacon, Sir Francis** 1561–1626

English lawyer, statesman, and essayist

...natural philosophy, even among those who have attended to it, has scarcely ever possessed, especially in these later times, a disengaged and whole man...but... has been made merely a passage and bridge to something else. And so this great mother of the sciences has with strange indignity been degraded to the offices of a servant; having to attend on the business of medicine or mathematics, and likewise to wash and imbue youthful and unripe wits with a sort of first dye, in order that they may be the fitter to receive another afterwards. Meanwhile let no man look for much progress in the sciences – especially in the practical part of them – unless natural philosophy be carried on and applied to particular sciences, and particular sciences be carried back again to natural philosophy.

*The Works of Francis Bacon* (Volume 4)*The New Organon*, Aphorisms, Book I (pp. 78–79)

Longman &amp; Co. London, England. 1858

**Barthelme, Donald** 1931–89

American author

But I think everyone should have a little philosophy, Thomas said. It helps, a little. It helps. It is good. It is about half as good as music.

*The Dead Father* (p. 76)

Pocket Books. New York, New York, USA. 1975

**Bell, R. P.**

English chemist

The exact verbal definition of qualitative concepts is more often the province of philosophy than of physical science.

*The Proton in Chemistry*

Chapter II (p. 7)

Cornell University Press. Ithaca, New York, USA. 1959

**Bernard, Claude** 1813–78

French physiologist

I can no more accept a philosophy, then, which tries to assign boundaries to science, than a science which claims to suppress philosophic truths that are at present outside its own domain.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Part Three, Chapter III, Section iv (p. 223)

Henry Schuman, Inc. New York, New York, USA. 1927

**Born, Max** 1882–1970

German-born English physicist

A philosophy in which the notions of chance and freedom are fundamental seems to me preferable to the almost inhuman determinism of the previous epoch – but that is no scientific argument.

*Les Prix Nobel. The Nobel Prizes in 1954*

Nobel banquet speech for award received in 1954

Nobel Foundation. Stockholm, Sweden. 1955

**Buchner, Ludwig** 1824–99

German physician and philosopher

...empirical philosophy, wherever it may search for it, is nowhere able to find a trace of a supernatural influence either in time or space.

*Force and Matter*

Chapter VIII (p. 55)

Trübner &amp; Co. London, England. 1864

**Bulwer Lytton, Edward** 1831–91

English statesman and poet

Real philosophy seeks rather to solve than to deny. While we hear, every day, the small pretenders to science talk of the absurdities of Alchemy and the dream of the Philosopher's Stone, a more erudite knowledge is aware that by Alchemists the greatest discoveries in science have been made, and much which still seems abstruse, had we the key to the mystic phraseology they were compelled to adopt, might open the way to yet more noble acquisitions.

*Zanoni*

Book II, Chapter 6 (p. 61)

Chapman &amp; Hall. London, England. 1853

**Burnet, Thomas** 1635–1715

English cleric and scientist

Orators and Philosophers treat Nature after a very different manner...with all her graces and ornaments, and if there be anything which is not capable of that, they dissemble it, or pass it over slightly. But Philosophers view Nature with a more impartial eye, and without favor or prejudice give a just and free account [of] how they find all the parts of the Universe, some more, some less perfect.

*The Sacred Theory of the Earth* (2nd edition)

Book I, Chapter IX (p. 90)

Printed by R. Norton. London, England. 1691

**Carus, Paul** 1852–1919

American philosopher

Science is originally one and undivided and serves the practical purpose of guidance in life. When by a division of labor the several sciences originated, there remained a field which was common to all of them; and this field is the domain of the science of the sciences, i.e., of philosophy.

*Philosophy as a Science: A Synopsis of Writings of Dr. Paul Carus*

Introduction (p. 7)

The Open Court Publishing Co. Chicago, Illinois, USA. 1909

**Clarke, Samuel** 1675–1729

English philosopher

‘Tis of singular use, rightly to understand, and carefully to distinguish from hypotheses or mere suppositions, the true and certain consequences of experimental and mathematical philosophy; which do, with wonderful strength and advantage, to all such as are capable of apprehending them, confirm, establish, and vindicate against all objections, those great and fundamental truths of natural religion, which the wisdom of providence has at the same time universally implanted, in some degree, in the minds of persons even of the meanest capacities, not qualified to examine demonstrative proofs.

In H.G. Alexander

Dedication (p. 6)

Philosophical Library Inc. New York, New York, USA. 1956

**Comte, Auguste** 1798–1857

French philosopher

The study of the external world and of Man is the eternal business of philosophy.

*The Positive Philosophy of Auguste Comte* (Volume 2)

Book V, Chapter I (p. 1)

George Bell & Sons. London, England. 1896

**Davy, Sir Humphry** 1778–1829

English chemist

Philosophy is simple and intelligible. We owe confused systems to men of vague and obscure ideas.

In John Davy

*Memoirs of the Life of Sir Humphry Davy* (Volume 1)

Chapter II (p. 122)

Longman, Rees, Orme, Brown, Green & Longman. London, England. 1836

**Dawson, Sir John William** 1820–99

Canadian geologist and educator

It is a wise and thoughtful philosophy which can distinguish what is fixed and unchangeable from that which is fluctuating and capable of development.

*Some Salient Points in the Science of the Earth*

Chapter XII (p. 342)

Hodder & Stoughton. London, England. 1893

**de Botton, Alain** 1969–

Swiss-born English writer and television producer

Seneca believed...arguments are like eels: however logical, they may slip from the mind’s weak grasp unless fixed there by imagery and style.

*The Consolations of Philosophy* (p. 92)

Vintage Books. New York, New York, USA. 2000

**Dewar, Redcote**

No biographical data available

Nothing in philosophy is truly more pitiable than to witness how great intellects, after breaking loose from their moorings of scientific reason and practical demonstration, plunge under the wing of some unintelligible hypothesis into a tempest of their own verbosity, where, borne aloft on an inflation solely of words, and floundering hopelessly in the bathos of a “peradventure,” they fondly imagine themselves cleaving the empyrean of “pure intelligence.”

*From Matter to Man: A New Theory of the Universe*

Chapter II (p. 14)

Chapman & Hall, Ltd. London, England. 1898

**Dewey, John** 1859–1952

American philosopher and educator

What would happen to philosophy...if it ceased to deal with the problem of reality and knowledge at large?... From this point of view, the problem of philosophy concerns the *interaction* of our judgments about ends to be sought with the knowledge of the means for achieving them.

*Quest for Certainty: A Study of the Relation of Knowledge and Action*

Chapter II (pp. 36–37)

Minton, Balch & Company. New York, New York, USA. 1929

[Philosophy] has tried to combine acceptance of the conclusions of scientific inquiry as to the natural world with the acceptance of doctrines about the nature of mind and knowledge which originated before there was such a thing as systematic experimental inquiry. Between the two there is an inherent incompatibility.

*Quest for Certainty: A Study of the Relation of Knowledge and Action*

Chapter III (p. 49)

Minton, Balch & Company. New York, New York, USA. 1929

**Dickens, Charles** 1812–70

English novelist

Measles, rheumatics, whooping-cough, fevers, agers, and lumbagers is all philosophy together; that’s what it

is. The heavenly bodies is philosophy; and if there's a screw loose in a earthly body, that's philosophy too; or it may be that sometimes there's a little metaphysics in it, but that's not often. Philosophy's the chap for me.

*Nicholas Nickleby*

Chapter LVII (p. 571)

John Serratt & Son. Altrincham, England. 1948

### **Disraeli, Benjamin, First Earl of Beaconsfield** 1804–81

English prime minister, founder of Conservative Party, and novelist

Philosophy becomes poetry, and science imagination, in the enthusiasm of genius.

*Miscellanies of Literature, by the Author of 'Curiosities of Literature'* (p. 426)

G. Routledge. London, England. 1886

### **Donne, John** 1572–1631

English poet and divine

And new Philosophy calls all in doubt,  
The Element of fire is quite put out;  
The sun is lost, and th' earth, and no man's wit  
Can well direct him where to look for it.  
And freely men confess that this world's spent,  
When in the Planets and the Firmament  
They seek so many new, they see that this  
Is crumbled out again to his Atomies.

*An Anatomy of the World*

The First Anniversary, II, 205–212

Presented for presentation to members of the Roxburghe Club. Cambridge, England. 1951

### **Durant, William James** 1885–1981

American historian and essayist

Science gives us knowledge, but only philosophy can give us wisdom.

*The Story of Philosophy*

Introduction (p. 3)

Simon & Schuster. New York, New York, USA. 1953

### **Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

The recent tendencies of science do...take us to an eminence from which we can look down into the deep waters of philosophy; and if I rashly plunge into them, it is not because I have confidence in my powers of swimming, but to try to show that the water is really deep.

*The Nature of the Physical World*

Chapter XIII (p. 276)

The Macmillan Company. New York, New York, USA. 1930

### **Einstein, Albert** 1879–1955

German-born physicist

The Heisenberg–Bohr tranquilizing philosophy – or religion? – is so delicately contrived that, for the time

being, it provides a gentle pillow for the true believer from which he cannot very easily be aroused. So let him lie there.

*Letters on Wave Mechanics*

Letter to Schrödinger, 31 May, 1928 (p. 31)

I have never belonged wholeheartedly to a country, a state, nor to a circle of friends, nor even to my own family. When I was still a rather precocious young man, I already realized most vividly the futility of the hopes and aspirations that most men pursue throughout their lives. Well-being and happiness never appeared to me as an absolute aim. I am even inclined to compare such moral aims to the ambitions of a pig.

In C.P. Snow

*Variety of Men* (p. 77)

Penguin Books, Harmondsworth, U.K. 1969

If philosophy is interpreted as a quest for the most general and comprehensive knowledge, it obviously becomes the mother of all scientific inquiry.

Physics, Philosophy, and Scientific Progress

*Physics Today*, Issue 6 June, 2005 (p. 46)

### **Epictetus** ca. 55–135

Greek philosopher

Behold, the beginning of philosophy is the observation of how men contradict each other, and the search whence cometh this contradiction, and the censure and mistrust of bare opinion. And it is an inquiry into that which seems, whether it rightly seems; and the discovery of a certain rule, even as we have found a balance for weights, and a plumb line for straight and crooked. This is the beginning of philosophy.

Translated by T.W. Rolleston

*The Teaching of Epictetus*

Book I, Chapter I (p. 5)

Walter Scott. London, England. 1888

### **Foster, Hannah W.** 1758–1840

English writer

You ask me, my friend, whether I am in pursuit of truth, or [of] a lady? I answer, both. I hope and trust they are united; and really expect to find truth and the virtues and graces besides in a fair form.

*The Coquette: The History of Eliza Norton (A Novel)* (p. 10)

Oxford University Press. 1986

### **Gundisalvo, Domingo** fl 1140

Spanish philosopher

...Since there is no science which is not some part of philosophy, we should first see, therefore, what philosophy is ...

Translated by Marshall Clagett and Edward Grant

*A Source Book in Medieval Science* (Volume 1)

Classification of the Sciences (pp. 59–60)

Harvard University Press. Cambridge, Massachusetts, USA. 1971

**Hickok, Laurens Perseus** 1798–1888

Longman, Hurst, Reese, Orme & Brown. London, England. 1822

## PHILOSOPHY OF SCIENCE

### American Institute of Biological Science 1963

What is science? Is it a body of factual information? Is it a set of theories? Is it an activity or set of procedures for finding facts and developing theories? Science is really a combination of all three of these.

*Biological Science: Molecules to Man* (p. 3)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1963

**Asimov, Isaac** 1920–92

American author and biochemist

Science is a process. It is a way of thinking, a manner of approaching and of possibly resolving problems, a route

by which one can produce order and sense out of disorganized and chaotic observations. Through it we achieve useful conclusions and results that are compelling and upon which there is a tendency to agree.

*"X" Stands for Unknown*

Introduction (p. 10)

Doubleday & Company, Inc. Garden City, New York, USA. 1984

**Ayala, Francisco J.** 1934–

Spanish-born American biologist

Science is systematic organisation of knowledge about the universe on the basis of explanatory hypotheses which are genuinely testable. Science advances by developing gradually more comprehensive theories; that is, by formulating theories of greater generality which can account for observational statements and hypotheses which appear as *prima facie* unrelated.

*Studies in the Philosophy of Biology: Reduction and Related Problems*

Introduction (p. ix)

Macmillan & Company Ltd. London, England. 1974

**Barrow, John D.** 1952–

English theoretical physicist

The goal of science is to make sense of the diversity of Nature.

*Theories of Everything: The Quest for Ultimate Explanation*

Chapter One (p. 10)

The Clarendon Press. Oxford, England. 1991

**Bauer, Henry H.** 1931–

American chemist

Science is uniquely distinguished from other human practices: it is the only activity in which the constraints of reality have brought to the quest for deep answers an effective consensus across all the variations that in other respects divide the human species.

*Scientific Literacy and the Myth of the Scientific Method*

Chapter 7 (p. 143)

University of Illinois Press. Urbana, Illinois, USA. 1992

**Bernard, Claude** 1813–78

French physiologist

True science teaches us to doubt and, in ignorance, to refrain.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Part Two, Chapter II, Section VIII (p. 55)

Henry Schuman, Inc. New York, New York, USA. 1927

True science suppresses nothing, but goes on searching and is undisturbed in looking straight at things that it does not yet understand.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Part Three, Chapter III, Section iv (p. 223)

Henry Schuman, Inc. New York, New York, USA. 1927

**Bohm, David** 1917–92  
American physicist

**Peat, F. David** 1938–  
English holistic physicist and author

The essential activity of science consists of thought, which arises in creative perception and is expressed through play. This gives rise to a process in which thought unfolds into provisional knowledge which then moves outward into action and returns as fresh perception and knowledge. This process leads to a continuous adoption of knowledge which undergoes constant growth, transformation, and extension. Knowledge is therefore not something rigid and fixed that accumulates indefinitely in a steady way but is a continual process of change. Its growth is closer to that of an organism than a data bank. When serious contradictions in knowledge [are] encountered, it is necessary to return to creative perception and free play, which act to transform existing knowledge. Knowledge apart from this cycle of activity, has no meaning.

*Science, Order, and Creativity*  
Chapter One (p. 56)

Bantam Books. New York, New York, USA. 1987

**Bondi, Sir Hermann** 1919–2005  
English mathematician and cosmologist

Science is driven forward by unexpected and surprising results emerging from new experiments or by the appearance of contradictions between theories previously thought compatible. Solving such problems as they arise is of the essence of our work. Thus science is not something strange and odd but the most human of pursuits.

*The Philosopher of Science*

*Nature*, Volume 358, Number 6385, 30 July, 1992 (p. 363)

**Boulding, Kenneth E.** 1910–93  
English economist and social scientist

Science might also be defined as the process of substituting unimportant questions which can be answered for important questions which cannot.

*Image: Knowledge in Life and Society*  
Chapter XI (p. 154)

The University of Michigan Press. Ann Arbor, Michigan, USA. 1956

**Bushnell, Horace** 1802–76  
American Congregational minister

What is science, anyhow, but the knowledge of species? And if species do not keep their places, but go a masking or really becoming one another, in strange transmutations, what is there to know, and where is the possibility of science? If there is no stability or fixity in species, then, for aught that appears, even science itself may be transmuted into successions of music, and moonshine, and auroral fires. If a single kind is all kinds, then all are one, and since that is the same as none, there is knowledge

no longer. The theory may be true, but it never can be proved, for that reason if no other. And when it is proved, if that must be the fact, we may well enough agree to live without religion.

*Science and Religion*

*Putnam's Magazine*, Volume 1, 1868 (p. 271)

**Bronowski, Jacob** 1908–74  
Polish-born British mathematician and polymath

Science is the creation of concepts and their exploration in the facts. It has no other test of the concept than its empirical truth to fact.

*Science and Human Values*

*The Sense of Human Dignity* (p. 60)

Harper & Row, Publishers. New York, New York, USA. 1965

Science is not a mechanism but a human progress, and not a set of findings but the search for them.

*Science and Human Values*

*The Sense of Human Dignity* (p. 63)

Harper & Row, Publishers. New York, New York, USA. 1965

Science is a great many things...but in the end they all return to this: science is the acceptance of what works and the rejection of what does not. That needs more courage than we might think. It need more courage than we have ever found when we have faced our worldly problems.

*The Common Sense of Science*

Chapter IX, Section 6 (p. 148)

Harvard University Press. Cambridge, Massachusetts, USA. 1953

**Carnap, Rudolf** 1891–1970  
American philosopher

Science is a system of statements based on direct experience, and controlled by experimental verification. Verification in science is not, however, of single statements but of the entire system or a sub-system of such statements.

*The Unity of Science*

*Physics as a Universal Science*, Section 3 (p. 42)

Thommes Press. Bristol, England. 1995

**Burhoe, R. W.**  
Founding editor of *Zygon*

...in the usual sense a science is a discipline possessed of an empirically validated theoretical structure, which can indeed explain or account for and not simply describe, categorize, and correlate, patterns of human experience/behavior.

*The Source of Civilization in the Natural Selection of Coadapted Information in Genes and Culture*

*Zygon*, Volume 11, Number 3, September, 1976 (p. 264)

**Campbell, Norman R.** 1880–1949  
English physicist and philosopher

There are two aspects of science. First, science is a body of useful and practical knowledge and a method of obtaining it. It is science of this form which played so large a part in the destruction of war, and, it is claimed,

should play an equally large part in the beneficent restoration of peace.... In its second form or aspect, science has nothing to do with practical life, and cannot affect it, except in the most indirect manner, for good or for ill. Science of this form is a pure intellectual study.... [I]ts aim is to satisfy the needs of the mind and not those of the body; it appeals to nothing but the disinterested curiosity of mankind.

*What Is Science?*

Chapter I (p. 1)

Dover Publications, New York, New York, USA. 1952

**Cassirer, Ernst** 1874–1945

German philosopher

Are we to be disgusted with science because it has not fulfilled our hopes or redeemed its promises? And are we, for this reason, to announce the “bankruptcy” of science, as is so often and so flippantly done? But this is rash and foolish: for we can hardly blame science just because we have not asked the right questions.

In David Hackett Fischer

*Historian's Fallacies: Toward a Logic of Historical Thought*

Chapter I (p. 3)

Harper & Row, Publishers, New York, New York, USA. 1970

**Chargaff, Erwin** 1905–2002

Austrian biochemist

The sciences have started to swell. Their philosophical basis has never been very strong. Starting as modest probing operations to unravel the works of God in the world, to follow its traces in nature, they were driven gradually to ever more gigantic generalizations. Since the pieces of the giant puzzle never seemed to fit together perfectly, subsets of smaller, more homogeneous puzzles had to be constructed, in each of which the fit was better.

Voices in the Labyrinth

*Perspectives in Biology and Medicine*, VII, Volume 18, Spring, 1975 (p. 323)

In science, there is always one more Gordian knot than there are Alexanders. One could almost say that science, as it is practiced today, is an arrangement through which each Gordian knot, once cut, gives rise to two new knots, and so on. Out of one problem considered as solved, a hundred new ones arise; and this has created the myth of the limitlessness of the natural sciences. Actually, many sciences now look as feeble and emaciated as do mothers who have undergone too many deliveries.

*Heraclitean Fire: Sketches from a Life Before Nature*

Part II

More Foolish and More Wise (p. 116)

Rockefeller University Press, New York, New York, USA. 1978

**Chesterton, G. K. (Gilbert Keith)** 1874–1936

English author

Science finds facts in Nature, but Science is not Nature; because Science has co-ordinated ideas, interpretations

and analyses; and can say of Nature what Nature cannot say for itself.

*The Resurrection of Rome*

Chapter IV (p. 126)

Dodd, Mead & Company, New York, New York, USA. 1930

**Clark, Gordon H.** 1902–85

American philosopher

The theologians who reply to...attacks [on religious faith] are under a disadvantage. When a scientist or a philosopher argues against religion, he does not need to know much about religion; but when a theologian discusses science, he must know quite a lot. The scientist can get by if he understands no more than that Christians believe God to be an incorporeal spirit; but the theologian is called upon to discuss space, time, motion, energy, electrodynamics, the solar system, quantum theory, relativity, and other assorted items. There is something else the theologian must know, and something more important. In addition to a selection of particular pieces of information, such as the details just mentioned, the theologian must have an overall view of science as a whole. He must have a philosophy of science; that is, he must know what science is. Obviously he cannot compare, contrast, or relate religion and science unless he knows them both.... The scientific method is said to be the best, indeed, the only method for solving any problem, so that in every debate it is science, not theology, that has the last word. Since every curious and intelligent person naturally wishes to understand his own times, he must be prepared to give science sustained attention.

*The Philosophy of Science* (pp. 8–9)

Craig Press, Nutley, New Jersey, USA. 1964

**Cohen, Morris Raphael** 1880–1947

American philosopher

The certainty which science aims to bring about is not a psychologic feeling about a given proposition but a logical ground on which its claim to truth can be founded.

*Reason and Nature*

Chapter Three, Section II (A) (p. 84)

The Free Press, Publishers, Glencoe, Illinois, USA. 1931

**Collingwood, Robin George** 1889–1943

English historian and philosopher

The aim of science is to apprehend this purely intelligible world as a thing in itself, an object which is what it is independently of all thinking, and thus antithetical to the sensible world.... The world of thought is the universal, the timeless and spaceless, the absolutely necessary, whereas the world of sense is the contingent, the changing and moving appearance which somehow indicates or symbolizes it.

*Essays in the Philosophy of Art*

Outlines of a Philosophy of Art

Chapter 6, Section 27 (p. 142)

Indiana University Press, Bloomington, Indiana, USA. 1964

Science in general...does not consist in collecting what we already know and arranging it in this or that kind of pattern. It consists in fastening upon something we do not know, and trying to discover it.

*The Idea of History*

Introduction, Section 2 (p. 9)

At The Clarendon Press. Oxford, England. 1967

**Courant, Richard** 1888–1972

German-born American mathematician

**Robbins, Herbert** 1915–2001

American mathematician

A serious threat to the very life of science is implied in the assertion that mathematics is nothing but a system of conclusions drawn from definitions and postulates that must be consistent but otherwise may be created by the free will of the mathematician. If this description were accurate, mathematics could not attract any intelligent person. It would be a game with definitions, rules and syllogisms, without motivation or goal.

*What Is Mathematics?* (p. xvii)

Oxford University Press, Inc. London, England. 1941

The notion that the intellect can create meaningful postulational systems at its whim is a deceptive half-truth. Only under the discipline of responsibility to the organic whole, only guided by intrinsic necessity, can the free mind achieve results of scientific value.

*What Is Mathematics?* (p. xvii)

Oxford University Press, Inc. London, England. 1941

**Davy, Sir Humphry** 1778–1829

English chemist

Natural science is founded on minute critical views of the general order of events taking place upon our globe, corrected, enlarged, or exalted by experiments, in which the agents concerned are placed under new circumstances, and their diversified properties separately examined. The body of natural science, then, consists of facts; is analogy – the relation of resemblance of facts by which its different parts are connected, arranged, and employed, either for popular use, or for new speculative improvements.

In John Davy (ed.)

*The Collected Works of Sir Humphry Davy* (Volume 8)

Introductory Lecture to the Chemistry of Nature (pp. 167–168)

Smith, Elder & Company. London, England. 1839–1840

**Dawson, Sir John William** 1820–99

Canadian geologist and educator

It is of the nature of true science to take nothing on trust or on authority. Every fact must be established by accurate observation, experiment, or calculation. Every law and principle must rest on inductive argument. The apostolic motto, “Prove all things, hold fast that which is good,” is thoroughly scientific. It is true that the mere reader

of popular science must often be content to take that on testimony which he cannot personally verify; but it is desirable that even the most cursory reader should fully comprehend the modes in which facts are ascertained and the reasons on which the conclusions are based.

*The Chain of Life in Geological Time*

Chapter I (p. 1)

Religious Tract Society. London, England. 1888

**de Unamuno, Miguel** 1864–1936

Spanish philosopher and writer

Wisdom is to science what death is to life, or, if you prefer it, wisdom is to death what science is to life.

*Essays and Soliloquies*

Some Arbitrary Reflections Upon Europeanization (p. 55)

Alfred A. Knopf. New York, New York, USA. 1925

**Dennett, Daniel Clement** 1942–

American philosopher

Science does not answer all good questions. Neither does philosophy. But for that very reason the phenomena of consciousness...do not need to be protected from science – or from the sort of demystifying philosophical investigation we are embarking on.... Looking on the bright side, let us remind ourselves of what has happened in the wake of earlier demystifications. We find no diminution of wonder; on the contrary, we find deeper beauties and more dazzling visions of the complexity of the universe than the protectors of mystery ever conceived. The “magic” of earlier visions was, for the most part, a cover-up for frank failures of imagination, a boring dodge enshrined in the concept of a *deus ex machina*.

*Consciousness Explained* (pp. 22, 25)

Little, Brown & Company. Boston, Massachusetts, USA. 1991

...there is no such thing as philosophy-free science; there is only science whose philosophical baggage is taken on board without examination.

*Darwin's Dangerous Idea*

Chapter One, Section 1 (p. 21)

Simon & Schuster. New York, New York, USA. 1995

**Descartes, René** 1596–1650

French philosopher, scientist, and mathematician

Science in its entirety is true and evident cognition. He is no more learned who has doubts on many matters than the man who has never thought of them; may he appear to be less learned if he has formed wrong opinions on any particulars. Hence it were better not to study at all than to occupy one's self with objects of such difficulty, that, owing to our inability to distinguish true from false, we are forced to regard the doubtful as certain; for in those matters any hope of augmenting our knowledge is exceeded by the risk of diminishing it. Thus in accordance with the above maxim we reject all such merely probable knowledge and make it a rule to trust only what is completely known and incapable of being doubted.

In *Great Books of the Western World* (Volume 31)  
*Rules for the Direction of the Mind*  
 Rule II (p. 2)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Einstein, Albert** 1879–1955  
 German-born physicist

The aim of science is...a comprehension, as complete as possible, of the connection between the sense experience in [its] totality, and...the accomplishment of this aim by the use of a minimum of primary concepts and relations.

*Out of My Later Years*  
 Physics and Reality, I (p. 63)  
 Thames & Hudson. London, England. 1950

Science is the attempt to make the chaotic diversity of our sense experience correspond to a logically uniform system of thought.

Considerations Concerning the Fundaments of Theoretical Physics  
*Science*, Volume 91, Number 2369, May 24, 1940 (p. 487)

Although it is true that it is the goal of science to discover rules which permit the association and foretelling of facts, this is not its only aim. It also seeks to reduce the connections discovered to the smallest possible number of mutually independent conceptual elements. It is in this striving after the rational unification of the manifold that it encounters its greatest successes, even though it is precisely this attempt which causes it to run the greatest risk of falling a prey to illusion. But whoever has undergone the intense experience of successful advances made in this domain, is moved by profound reverence for the rationality made manifest in existence.

*Ideas and Opinions*  
 Science and Religion (p. 49)  
 Crown Publishers, Inc. New York, New York, USA. 1954

The belief in the external world independent of the perceiving subject is the basis of all natural science.

Translated by Alan Harris  
*Essays in Science*  
 Clerk Maxwell's Influence on the Evolution of the Idea of Physical Reality (p. 40)  
 Philosophical Library. New York, New York, USA. 1934

The grand aim of all science...is to cover the greatest number of empirical facts by logical deductions from the smallest number of hypotheses or axioms.

In Lincoln Barnett  
 The Meaning of Einstein's New Theory  
*Life*, January 9, 1950 (p. 22)

**Feynman, Richard P.** 1918–88  
 American theoretical physicist

What is the fundamental hypothesis of science, the fundamental philosophy? ...[It is that] the sole test of the validity of any idea is experiment.... We will invent some way to summarize the results of the experiment, and we do not have to be told ahead of time what this way

will look like. If we are told that the same experiment will always produce the same result, that is all very well, but if when we try it, it does not, then it does not. We just have to take what we see, and then formulate all the rest of our ideas in terms of our actual experience.

*Six Easy Pieces: Essentials of Physics Explained by Its Most Brilliant Teacher*  
 Basic Physics (p. 32)  
 Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1995

**Jeans, Sir James Hopwood** 1877–1946  
 English physicist and mathematician

Science came to recognize that its only proper objects of study were the sensations that the objects of the external universe produced on our senses. The dictum *esse est percipi* was adopted whole-heartedly from philosophy – not because scientists had any predilection for an idealist philosophy, but because the assumption that things existed which could not be perceived had led them into a whole morass of inconsistencies and impossibilities. Those who did not adopt it were simply left behind, and the torch of those who did.

The Mathematical Aspect of the Universe  
*Philosophy*, Volume VII, Number 25, January, 1932 (p. 11)

**Joad, Cyril Edwin Mitchinson** 1891–1953  
 English philosopher and broadcasting personality

...the philosophising of the physicists is noticeably inferior to their physics, and eminent men are at the moment engaged in making all the mistakes which the philosophers made for themselves some three hundred years ago and have been engaged in detecting and correcting ever since. In particular it is thought that modern physics lends support to Idealism, and suggests, if it does not actually require, a religious interpretation of the universe.

*Guide to Modern Thought*  
 Chapter I (pp. 15–16)  
 Faber & Faber Ltd. London, England. 1936

**Meredith, Patrick**  
 No biographical data available

Hence a true philosophy of science must be a philosophy of scientists and laboratories as well as one of waves, particles and symbols.

*Instruments of Communication*  
 Chapter 2, Section 5 (p. 40)  
 Pergamon Press. Oxford, England. 1966

**Moreland, J. P.** 1936–  
 American philosopher

For the question What is the proper definition of science? is itself a philosophical question about science that assumes a vantage point above science; it is not a question of science. One may need to reflect on specific episodes in the history of science to answer the question.

But the question and the reflection required to answer it are philosophical in nature, a point not diminished merely because a scientist may try to define science. When she does so, she is doing philosophy.

*Christianity and the Nature of Science: A Philosophical Investigation* (pp. 20–21)  
Baker Book House. Grand Rapids, Michigan, USA. 1989

**Popper, Karl R.** 1902–94

Austrian/British philosopher of science

...I shall certainly admit a system as empirical or scientific only if it is capable of being tested by experience. These considerations suggest that not the verifiability but the falsifiability of a system is to be taken as a criterion of demarcation. In other words: I shall not require of a scientific system that it shall be capable of being singled out, once and for all, in a positive sense: but I shall require that its logical form shall be such that it can be singled out, by means of empirical tests, in a negative sense: it must be possible for an empirical scientific system to be refuted by experience.

*The Logic of Scientific Discovery*  
Part I, Chapter I, Section 6 (p. 40)  
Basic Books, Inc. New York, New York, USA. 1959

We do not know: we can only guess.

*The Logic of Scientific Discovery*  
Part II, Chapter X, Section 85 (p. 278)  
Basic Books, Inc. New York, New York, USA. 1959

**Shapere, Dudley**

No biographical data available

...philosophy of science is immune to the vicissitudes of science – the coming and going of particular theories; for those changes have to do with content of science, whereas the philosopher is concerned with its structure – not with specific theories, but with the meaning of “theory” itself.

*Philosophical Problems of Natural Science*  
Introduction, Section IV (p. 9)  
The Macmillan Company. New York, New York, USA. 1965

**Simpson, George Gaylord** 1902–84

American paleontologist

It is inherent in any acceptable definition of science that statements that cannot be checked by observation are not really about anything...or at the very least, they are not science.

The Nonprevalence of Humanoids  
*Science*, Volume 143, Number 3608, February 21, 1964 (p. 770)

**Spencer, Herbert** 1820–1903

English social philosopher

Every science begins by accumulating observations, and presently generalizes these empirically; but only when it reaches the stage at which its empirical generalizations are included in a rational generalization does it become developed science.

*The Data of Ethics*

Chapter IV, Section 22a (p. 51)  
William & Norgate. London, England. 1907

**Torrance, Thomas F.**

No biographical data available

In natural science we are concerned ultimately, not with convenient arrangements of observational data which can be generalized into universal explanatory form, but with movements of thought, at once theoretical and empirical, which penetrate into the intrinsic structure of the universe in such a way that there becomes disclosed to us its basic design and we find ourselves at grips with reality.... We cannot pursue natural science scientifically without engaging at the same time in meta-scientific operations.

*Divine and Contingent Order* (p. 3)  
Oxford University Press, Inc. Oxford. 1981

**Toulmin, Stephen** 1922–

Anglo-American philosopher

Certainly, every statement in a science should conceivably be capable of being called in question, and of being shown empirically to be unjustified; for only so can the science be saved from dogmatism.

*The Philosophy of Science*  
Harper & Row, Publishers. New York, New York, USA. 1960

**Toynbee, Arnold J.** 1852–83

English historian

[T]here will be differences in the degree of approximation to scientific study, ...determined by the nature of the part or aspect of the Universe under consideration. Study will be most scientific when its object is the physical structure of the Universe.... The object of study that will be the least amenable to scientific treatment is the non-physical facet of human nature. Students in this field had better avoid letting themselves be tempted by the present-day prestige of the word “science” into applying that label to their own work.

*Occasional Paper; The Institute for the Study of Science in Human Affairs*

Science in Human Affairs: An Historian’s View

**van Fraassen, Bas C.** 1941–

Dutch-born philosopher

...certain issues in philosophy of science (having to do with observation and the definition of a theory’s empirical import) had been misconstrued as issues in philosophy of logic and of language. With respect to modality, I hold the exact opposite: important philosophical problems concerning language have been misconstrued as relating to the content of science and the nature of the world. This is not at all new, but is the traditional nominalist line.

*The Scientific Image*  
Chapter 6 (p. 196)  
Clarendon Press. Oxford, England. 1980

To develop an empiricist account of science is to depict it as involving a search for truth only about the empirical world, about what is actual and observable.... It must involve throughout a resolute rejection of the demand for an explanation of the regularities in the observable course of nature, by means of truths concerning a reality beyond what is actual and observable, as a demand which plays no role in the scientific enterprise.

*The Scientific Image*

Chapter 6 (p. 203)

Clarendon Press. Oxford, England. 1990

**Weisskopf, Victor Frederick** 1908–2002

Austrian-American physicist

Science developed only when men refrained from asking general questions such as: What is matter made of? How was the universe created? What is the essence of life? Instead they asked limited questions such as: How does an object fall? How does water flow in a tube? Thus, in place of asking general questions and receiving limited answers, they asked limited questions and found general answers. It remains a great miracle, that this process succeeded, and that the answerable questions became gradually more and more universal.

*The Significance of Science*

*Science*, Volume 176, Number 4031, April 14, 1972 (p. 143)

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

Science is simply setting out on a fishing expedition to see whether it cannot find some procedure which it can call measurement of space and some procedure which it can call the measurement of time, and something which it can call a system of forces, and something which it can call masses....

*The Concept of Nature*

Chapter VI (p. 139)

At The University Press. Cambridge, England. 1920

The aim of science is to seek the simplest explanation of complex facts.... Seek simplicity and distrust it.

*The Concept of Nature*

Chapter VII (p. 163)

At The University Press. Cambridge, England. 1920

**Wright, Chauncey** 1830–75

American philosopher of science

Science asks no questions about the ontological pedigree or a priori character of a theory, but is content to judge it by its performance; and it is thus that a knowledge of nature, having all the certainty which the senses are competent to inspire, has been attained – a knowledge which maintains a strict neutrality toward all philosophical systems and concerns itself not with the genesis or a priori grounds of ideas.

*The Philosophical Writings of Chauncey Wright*

The Philosophy of Herbert Spencer (p. 8)

The Liberal Arts Press. New York, New York, USA. 1958

## PHOTOELECTRIC

**Glashow, Sheldon L.** 1932–

American physicist

Einstein examined the photoelectric effect, which is now so well understood that it is used to open the doors of supermarkets and elevators when you step through a beam of light. In 1905 it was still a mystery.

*Interactions: A Journey Through the Mind of a Particle Physicist and the Matter of This World*

Chapter 3 (p. 52)

Warner Books. New York, New York, USA. 1988

## PHOTOGRAPHY

**Adams, Robert** 1937–

American photographer

No place is boring, if you've had a good night's sleep and have a pocket full of unexposed film.

*Darkroom and Creative Camera Techniques*, May, 1995

**Bernard, E. E.**

No biographical data available

It would be difficult just here to predict the future of astronomical photography, though one can foresee something of the great results it must accomplish. It will displace some of the visual work, but it is more likely to move along new lines, opening up new fields of research. The older astronomy, so nobly represented by Simon Newcomb and a few others, will be strengthened at every point, and will stand all the more sublime for the help it shall receive from photography.

*The Development of Photography in Astronomy (II)*

*Science*, N.S. Volume VIII, Number 195, September 23, 1898 (p. 395)

## PHOTON

**Brennan, Kevin F.** 1956–2003

American engineer

...photons are like words. One creates as many as are necessary to fulfill a task but one can never use them up ...

*The Physics of Semiconductors: With Applications to Optoelectronic Devices*

Chapter 5 (p. 305)

Cambridge University Press. Cambridge, England. 1999

**Einstein, Albert** 1879–1955

German-born physicist

Every physicist thinks that he knows what a photon is.... I spent my life to find out what a photon is and I still don't know it.

In Eugene Hecht

*Optics*

Chapter 1 (p. 9)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Hobbs, Philip C. D.**

No biographical data available

Photons are like money: A certain number are needed for the job at hand, and they're easier to lose than to gain back.

*Building Electro-Optical Systems: Making It All Work*  
Chapter 1 (p. 34)  
Wiley. New York, New York, USA. 2000

**Jespersen, James**

No biographical data available

**Fitz-Randolph, Jane**

No biographical data available

We can think of the photons as being like a shower of snowballs flying back and forth between the two electrons. And like the opponents in a snowball fight, the electrons retreat from each other under the assault of the photons.

*From Quarks to Quasars: A Tour of the Universe*  
Chapter 11 (p. 125)  
Athenaeum. New York, New York, USA. 1987

**Roberts, Michael**

While I, maybe, precisely seize  
The elusive photon's properties  
In a's and b's, set in bronze-  
bright vectors, grim quaternions.

Notes on q, f, and y  
*The New Statesman*, March 23, 1935

**Rucker, Rudy** 1946–

Science and science fiction author

A photon is a wavy yet solid little package that can zip through empty space without the benefit of any invisible jelly vibrating underfoot.

*The Fourth Dimension: Toward a Geometry of Higher Reality*  
Chapter 6 (p. 73)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1984

**PHOTOSYNTHESIS****Baum, Harold**

No biographical data available

When sunlight bathes the chloroplast, and photons are absorbed

The energy's transduced so fast that food is quickly stored,

Photosynthetic greenery traps light the spectrum through  
Then dark pathway machinery fixes the CO<sub>2</sub>.

*The Biochemists' Handbook*  
Photosynthesis (Tune: Auld Lang Syne)  
van Nostrand. Princeton, New Jersey, USA. 1961

**Pallister, William Hales** 1877–1946

Canadian physician

The sunlight gives the stimulus  
Which makes a plant of you;  
Your chemic process puzzles us,  
We look and see you do  
Your photo-synthesis, and thus  
Grow and divide in two.

*Poems of Science*  
The Nature of Things, *Euglena viridis* (p. 5)  
Playford Press. New York, New York, USA. 1931

**Rabinowitch, Eugene** 1901–73

Russian-born American biophysicist

In photosynthesis we are like travelers in an unknown country around whom the early morning fog slowly begins to rise, vaguely revealing the outlines of the landscape. It will be thrilling to see it in bright daylight!

In A Scientific American Book  
*The Physics and Chemistry of Life*  
Photosynthesis (p. 47)  
Simon & Schuster. New York, New York, USA. 1955

**Rabinowitch, Eugene** 1901–73

Russian-born American biophysicist

Photosynthesis by plants is the process by which matter is brought up from the simplicity and inertness of the inorganic world to the complexity and reactivity that are the essence of life. The process is not only a marvel of synthetic chemical skill, but also a TOUR DE FORCE of power engineering. When plant physiologists and organic chemists study photosynthesis, they are struck most of all by the feat of manufacturing sugar from carbon dioxide and water. When physicists or photochemists contemplate the same phenomenon, they are awed and intrigued by the conversion of stable, chemically inert matter into unstable, energy-rich forms by means of visible light.

Photosynthesis  
*Scientific USA*, August, 1948

**PHYLOGENESIS****Haeckel, Ernst Heinrich Philipp****August** 1834–1919

German biologist and philosopher

Phylogenesis is the mechanical cause of ontogenesis. The connection between them is not of an external or superficial, but of a profound, intrinsic, and causal nature.

*Anthropogenie, oder; Entwicklungsgeschichte des Menschen gemeinverstandliche wissenschaftliche Vortrage uber die Grundzuge der mensch*

W. Engleman, Leipzig, Germany. 1874

## PHYSICAL LAW

**Feynman, Richard P.** 1918–88  
American theoretical physicist

...there is...a rhythm and pattern between the phenomena of nature which is not apparent to the eye, but only to the eye of analysis; and it is these rhythms and patterns which we call Physical Laws.  
*The Character of Physical Law*  
Chapter 1 (p. 13)  
BBC. London, England. 1965

## PHYSICAL SCIENCE

**Bohr, Niels Henrik David** 1886–1962  
Danish physicist

The importance of physical science for the development of general philosophical thinking rests not only on its contributions to our steadily increasing knowledge of that nature of which we ourselves are part, but also on the opportunities which time and again it has offered for examination and refinement of our conceptual tools.  
*Atomic Physics and Human Knowledge*  
Introduction (p. 1)  
John Wiley & Sons. New York, New York, USA. 1958

**Chesterton, G. K. (Gilbert Keith)** 1874–1936  
English author

Physical science is like simple addition: it is either infallible or it is false. To mix science up with philosophy is only to produce a philosophy that has lost all its ideal value and a science that has lost all its practical value.  
*All Things Considered*  
Science and Religion (p. 187)  
John Lane Co. New York, New York, USA. 1910

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

Broadly speaking the task of physical science is to infer knowledge of external objects from a set of signals passing along our nerves. But that rather underrates the difficulty of the problem. The material from which we have to make our inferences is not the signals themselves, but a fanciful story which has been in some way based on them. It is as though we were asked to decode a cipher message and were given, not the cipher itself, but a mis-translation of it made by a clumsy amateur.  
*New Pathways in Science*  
Chapter I (pp. 6–7)  
At the University Press. Cambridge, England. 1935

**Huxley, Thomas Henry** 1825–95  
English biologist

When simple curiosity passes into the love of knowledge as such, and the gratification of the aesthetic sense of the beauty of completeness and accuracy seems more desirable than the easy indolence of ignorance; when the finding out of the causes of things becomes a source of joy, and he is counted happy who is successful in the search, common knowledge of Nature passes into what our forefathers called Natural History, from whence there is but a step to that which used to be termed Natural Philosophy, and now passes by the name of Physical Science.

*The Crayfish*

Chapter I (p. 3)

D. Appleton & Company, New York, New York, USA. 1880

**Jukes, Joseph Beete** 1811–69

English geologist

We might, perhaps, without impropriety, say that all the physical sciences are included under two great heads – namely, Astronomy and Geology; the one comprehending all those sciences which teach us the constitution, the motions, the relative places, and the mutual action of the Astra, or heavenly bodies; while the other singles out for study the one Astrum on which we live – namely, the Earth.

*The Student's Manual of Geology* (3rd edition)

Chapter I (p. 1)

Adam & Charles Black, Edinburgh, Scotland. 1872

**Mach, Ernst** 1838–1916

Austrian physicist and philosopher

Physical science began in the witch's kitchen. It now embraces the organic and inorganic worlds, and with the physiology of articulation and the theory of the senses, has even pushed its researches, at times impertinently, into the province of mental phenomena.

*Popular Scientific Lectures*

Why Has Man Two Eyes? (p. 87)

The Open Court Publishing Company, Chicago, Illinois, USA. 1898

**Poincaré, Lucien Antoine** 1862–1920

French physicist

If we now disentangle ourselves from contingencies, it will be understood that in reality physical science progresses by evolution rather than by revolution. Its march is continuous. The facts which our theories enable us to discover, subsist and are linked together long after these theories have disappeared. Out of the materials of former edifices overthrown, new dwellings are constantly being reconstructed.

*The New Physics and Its Evolution*

Chapter I (p. 6)

Kegan Paul, Trench, Triibner, & Co., Ltd. London, England. 1907

**Thompson, Sir D'Arcy Wentworth** 1860–1948

Scottish zoologist and classical scholar

How far...then mathematics will suffice to describe, and physics to explain, the fabric of the body, no man can foresee. It may be that all the laws of energy, and all the properties of matter, and all the chemistry of all the colloids are as powerless to explain the body as they are impotent to comprehend the soul. For my part, I think it is not so. Of how it is that the soul informs the body, physical science teaches me nothing; and that living matter influences and is influenced by mind is a mystery without

a clue. Consciousness is not explained to my comprehension by all the nerve-paths and neurons of the physiologist; nor do I [explain by] physics how goodness shines in one man's face, and evil betrays itself in another. But of the construction and growth and workings of the body, as of all else that is of the earth earthy, physical science is, in my opinion, our only teacher and guide.

*On Growth and Form* (Volume 1)

Chapter I (p. 13)

At The University Press, Cambridge, England. 1951

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

There can be no true physical science which looks first to mathematics for the provision of a conceptual model. Such a procedure is to repeat the errors of the logicians of the middle ages.

*Principles of Relativity* (p. 39)

Cambridge University Press, Cambridge, England. 1922

## PHYSICAL SCIENCE, STUDY OF

**Huxley, Thomas Henry** 1825–95

English biologist

How often have we not been told that the study of physical science is incompetent to confer culture; that it touches none of the higher problems of life; and, what is worse, that the continual devotion to scientific studies tends to generate a narrow and bigoted belief in the applicability of scientific methods to the search after truth of all kinds. How frequently one has reason to observe that no reply to a troublesome argument tells so well as calling its author a "mere scientific specialist."

*Science and Culture, and Other Essays*

Chapter I (pp. 6–7)

Macmillan & Company Ltd. London, England. 1881

## PHYSICAL UNIVERSE

**Carpenter, William Benjamin** 1813–85

English physiologist and naturalist

In regard to the Physical Universe, then, it might be better to substitute for the phrase "Government by laws," "Government according to laws;" – meaning thereby, the direct exertion of the Divine Will, or operation of the First Cause, in the Forces of Nature, according to certain constant Uniformities, which are simply unchangeable, because – having been originally the expressions of Infinite Wisdom – any change would be for the worse.

*Principles of Mental Physiology*

Book II, Chapter XX (p. 706)

D. Appleton & Co. New York, New York, USA. 1894

**PHYSICIAN**

**Abrams, Albert** 1863–1924  
American physician

Science and heart must be so nicely blended in the truly great physician that neither is operative separately.

*Man and His Poisons*

Chapter X (p. 222)

E.B. Treat & Co. New York, New York, USA. 1906

**Alexander the Great** 356 BCE–323 BCE  
Macedonian emperor

I am dying with the help of too many physicians.  
Attributed

**Allman, David**  
American physician

The dedicated physician is constantly striving for a balance between personal, human values, scientific realities and the inevitabilities of God's will.

Address to National Conference of Christian and Jews

The Brotherhood of Healing, 1 February, 1958

**Arnaldus de Villa Nova** 1235–1313  
Alchemist, astrologer, and physician

...the physician must be learned in diagnosing, careful and accurate in prescribing, circumspect and cautious in answering questions, ambiguous in making prognosis, just in making promises; and he should not promise health because in doing so he would assume a divine function and insult God.

In Henry E. Sigerist (trans.)

AMS Press, Inc. New York, New York, USA. 1973

**Bacon, Sir Francis** 1561–1626  
English lawyer, statesman, and essayist

Physicians are some of them so pleasing and conformable to the humor of the patient, as they press not the true cure

of the disease; and some other are so regular in proceeding according to art for the disease, as they respect not sufficiently the condition of the patient. Take one of a middle temper; or if it may not be found in one man, combine two of either sort; and forget not to call as well the best acquainted with your body, as the best reputed of for his faculty.

*Essays, Advancement of Learning, New Atlantis, and Other Pieces*

The Essays or Counsels, Civil and Moral: I. Of Regiment of Health (p. 94)

Odyssey Press. New York, New York, USA. 1937

The weakness of patients, and sweetness of life, and nature of hope, maketh men depend upon physicians with all their defects.

In *Great Books of the Western World* (Volume 30)

*Advancement of Learning*

Second Book, Chapter X, Section 2 (p. 51)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...it is the office of a physician not only to restore health, but to mitigate pain and dolors; and not only when such mitigation may conduce to recovery, but when it may serve to make a fair and easy passage.

In *Great Books of the Western World* (Volume 30)

*Advancement of Learning*

Second Book, Chapter X, Section 7 (p. 52)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Bailey, Percival**

No biographical data available

The function of the physician is to cure a few, help many, and comfort all.

*Perspectives in Biology and Medicine*, Volume 4, Number 254, 1961

**Baldwin, Joseph G.** 1815–64  
American writer

Nobody knew who or what they were, except as they claimed, or as a surface view of their characters indicated. Instead of taking to the highway and magnanimously calling upon the wayfarer to stand and deliver, or to the fashionable larceny of credit without prospect or design of paying, some unscrupulous horse doctor would set up his sign as "Physician and Surgeon" and draw his lancet on you, or fire at random a box of pills into your bowels, with a vague chance of hitting some disease unknown to him, but with a better prospect of killing the patient, whom or whose administrator he charged some ten dollars a trial for his marksmanship.

How the Times Served the Virginians (p. 89)

Louisiana State University Press. Baton Rouge, Louisiana, USA. 1987

**Bartlett, Elisha** 1804–55  
American physician

The great purpose of this study [medicine] is to make the physician; and the physician is he who, within the limits and conditions of his science and art, prevents, mitigates, and cures disease.

In William E. Stempsey  
*Elisha Bartlett's Philosophy of Medicine* (p. 212)  
 Springer-Verlag, Dordrecht, The Netherlands. 2005

### **Bass, Murray H.**

No biographical data available

The ideal physician should be a combination of three persons – a clergyman, a fireman and a scientist. He must know how to handle and console the patient and his family...he must be ready to answer an “alarm” day and night; he must know the science of medicine...using its present potentialities to the utmost of his ability.

*Clinical Pediatrics*, Volume 3, Number 50, 1964

### **Belleville, Nicholas** 1753–1831

French-born American physician

If you get one good doctor, you get one good thing, but if you get one bad doctor, you get one bad thing. If you have a lawsuit, you get a bad lawyer, you lose your suit – you can appeal; but if you have one bad doctor, and he kills you, then there can be no appeal.

In Stephen Wickes

*History of Medicine in New Jersey*

Part 2 (p. 143)

Martin R. Dennis & Company, Newark, New Jersey, USA. 1879

### **Bernard, Claude** 1813–78

French physiologist

Medical personality is placed above science by physicians themselves; they seek their authority in tradition, in doctrines or in medical tact. This state of affairs is the clearest of proofs that the experimental method has by no means come into its own in medicine.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Part One, Chapter Two, Section IV (p. 43)

Henry Schuman, Inc. New York, New York, USA. 1927

...physicians, in their treatment, often have to take account of the so-called influence of the moral over the physical, and also of any number of family and social considerations which have nothing to do with science. Therefore, an accomplished practising physician should be not only learned in his science, but also upright and endowed with keenness, tact and good sense.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Part Three, Chapter IC, Section III (p. 206)

Henry Schuman, Inc. New York, New York, USA. 1927

### **Blackwell, Elizabeth** 1821–1910

First woman to practice medicine in the USA

The true physician must possess the essential qualities of maternity. The sick are as helpless in his hands as the infant. They depend absolutely upon the insight and judgment, the honesty and hopefulness, of the doctor.

*The Influence of Women in the Profession of Medicine* (p. 11)

G. Bell, Baltimore, Maryland, USA. 1890

### **Bonaparte, Napoleon** 1769–1821

French soldier and emperor of France

In my opinion physicians kill as many people as we generals.

In J. Christopher Herold (ed.)

*The Mind of Napoleon*

Science and the Arts (p. 137)

Columbia University Press, New York, New York, USA. 1955

You are a physician, doctor. You would promise life to a corpse if he could swallow pills...

In J. Christopher Herold (ed.)

Paragraph 1 (p. 3)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1882

**Cassell, Eric J.**

No biographical data available

Physicians should define their diagnostic and therapeutic goals in terms of the everyday life and function of individual patients.... Unfortunately, that ideal is seldom met.... In part the problem arises because physicians are trained from the first days of medical school to disregard the knowledge they bring with them of everyday life and human function as irrelevant to medicine.... Doctors are not trained to include in their decision making the kind of "soft" and often subjective information that is relevant to the everyday life and function of sick persons.

Discussion of Meteorology and Disease (p. 88)

Thorp & Godfrey. Lansing, Michigan, USA. 1888

**Clowes, William** 1540–1604

English physician

When a physician or a surgeon comes to a man that lies sick and is in danger of death, yet by his judgment and skill, promises with God's help to cure him of his griefs and maladies, then the sick patient greatly rejoices and

presently compares him to a god. But afterwards, being somewhat recovered, and perceiving good amendment, he says he is but an angel and not a god. Again, after he begins to walk abroad and to fall to his meat, truly he is then accounted no better than a man. In the end, when he happily comes for his money for the curing of his grievous sickness, he now reports him to be a devil and shuts the door.

*A Sketch of Medicine and Pharmacy and a View of Its Progress by the Massengill Family from the Fifteenth to the Twentieth Century* (p. 28)  
The S.E. Massengill Company. Bristol, Tennessee, USA. 1943

**Heschel, Abraham J.** 1907–72  
Jewish theologian

What manner of man is the doctor? Life abounds in works of achievement, in areas of excellence and beauty, but the physician is a person who has chosen to go to the areas of distress, to pay attention to sickness and affliction, to injury and anguish.

*The Insecurity of Freedom*  
The Patient as a Person (p. 28)  
Farrar, Straus & Giroux. New York, New York, USA. 1966

**Hippocrates** 460 BCE–377 BCE  
Greek physician

It appears to me a most excellent thing for the physician to cultivate Prognosis; for by foreseeing and foretelling, in the presence of the sick, the present, the past, and the future, and explaining the omissions which patients have been guilty of, he will be the more readily believed to be acquainted with the circumstances of the sick; so that men will have confidence to entrust themselves to such a physician.

The Book of Prognostics, 1 (p. 19)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...physicians are many in title but very few in reality.

In *Great Books of the Western World* (Volume 10)  
*Hippocratic Writings*  
The Law, 1 (p. 144)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Hoffmann, Friedrich** 1660–1742  
German physician

The physician is the servant of nature, not her master; the principles of nature and of art are the same and hence the physician must work and act with nature.

*Fundamenta Medicinæ*  
Physiology (p. 5)  
American Elsevier. New York, New York, USA. 1971

The perfect physician must have not only the knowledge of medical art but also prudence and wisdom.

*Fundamenta Medicinæ*  
Physiology, Chapter I, 10 (p. 6)  
American Elsevier. New York, New York, USA. 1971

**Holmes, Oliver Wendell** 1809–94  
American physician, poet, and humorist

A physician who talks about ceremony and gratitude, and services rendered, and the treatment he got, surely forgets himself...

*Medical Essays*  
The Contagious of Puerperal Fever (p. 115)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

But the practising physician's office is to draw the healing waters, and while he gives his time to this labor he can hardly be expected to explore all the sources that spread themselves over the wide domain of science. The traveler who would not drink of the Nile until he had tracked it to its parent lakes would be like to die of thirst; and the medical practitioner who would not use the results of many laborers in other departments without sharing their special toils, would find life far too short and art immeasurably too long.

*Medical Essays*  
Scholastic and Bedside Teaching (p. 274)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

...a physician's business is to avert disease, to heal the sick, to prolong life, and to diminish suffering...

*Medical Essays*  
Scholastic and Bedside Teaching (p. 274)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

A man of very moderate ability may be a good physician if he devotes himself faithfully to the work.

*Medical Essays*  
Scholastic and Bedside Teaching (p. 300)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

The old age of a physician is one of the happiest periods of his life. He is loved and cherished for what he has been, and even in the decline of his faculties there are occasions when his experience is still appealed to, and his trembling hands are looked to with renewing hope and trust... The young man feels uneasy if he is not continually doing something to stir up his patient's internal arrangements. The old man takes things more quietly, and is much more willing to let well enough alone.

*Medical Essays by Oliver Wendell Holmes*  
Address  
Graduating Class of the Bellevue Hospital College, March 2, 1871 (pp. 377, 395)  
Classics of Medicine Library. Birmingham, Alabama, USA. 1987

The face of a physician, like that of a diplomat, should be impenetrable.

*Medical Essays*  
The Young Practitioner (p. 388)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

The life of a physician becomes ignoble when he suffers himself to feed on petty jealousies and sours his temper in perpetual quarrels.

*Medical Essays*  
The Young Practitioner (p. 392)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

The specialist is much like other people engaged in lucrative business. He is apt to magnify his calling, to make much of any symptom which will bring a patient within range of his battery of remedies.

*Over the Teacups*

Chapter VI (p. 129)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1892

### Howells, William Dean 1837–1920

American realist novelist

I do not know how it is that clergymen and physicians keep from telling their wives the secrets confided to them; perhaps they can trust their wives to find them out for themselves whenever they wish.

*The Rise of Silas Lapham*

Chapter XXVII (p. 511)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1912

### Hufeland, Christoph Wilhelm 1762–1836

German physician

The physician must generalize the disease, and individualize the patient.

In Oliver Wendell Holmes

*Medical Essays*

Scholastic and Bedside Teaching (p. 275)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

### Hutchison, Sir Robert Grieve 1871–1960

English radiologist

From inability to let well alone; from too much zeal for the new and contempt for what is old; from putting knowledge before wisdom, science before art, and cleverness before common sense, from treating patients as cases, and from making the cure of the disease more grievous than the endurance of the same, Good Lord, deliver us.

*British Medical Journal*, Volume 1, 1953 (p. 671)

### Jackson, James

No biographical data available

I have often remarked that, though a physician is sometimes blamed very unjustly, it is quite as common for him to get more credit than he is fairly entitled to; so that he has not, on the whole, any right to complain.

*Letters to a Young Physician Just Entering Upon Practice*

Letter II (p. 41)

Phillips, Sampson & Company. Boston, Massachusetts, USA. 1855

### Jekyll, Joseph

No biographical data available

See, one physician, like a sculler, plies,  
The patient lingers and by inches dies.  
But two physicians, like a pair of oars,  
Waft him more swiftly to the Stygian shores.

In Herbert V. Prochnow and Herbert V. Prochnow, Jr.

*A Treasury of Humorous Quotations: For Speakers, Writers, and Home Reference*

#1661 (p. 94)

Harper & Row, Publishers. New York, New York, USA. 1969

### John of Salisbury ca. 1115–80

English author and diplomatist

The common people say, that physicians are the class of people who kill other men in the most polite and courteous manner.

*Polieraticus*

Book II, Chapter 29

Cambridge University Press. Cambridge, England. 1990

### Johnson, Samuel 1696–1772

English critic, biographer, and essayist

A physician in a great city seems to be the mere plaything of fortune; his degree of reputation is for the most part totally casual; they that employ him know not his excellence; they that reject him know not his deficiency.

In William Osler

*Aequanimitas, with Other Addresses to Medical Students, Nurses, and Practitioners of Medicine*

Preceding Chapter VIII (p. 132)

The Blakiston Company. Philadelphia, Pennsylvania, USA. 1932

### Jonsen, Albert

No biographical data available

...the absolute asceticism of the residency recreates, for the young physician, the sacrificial ethic of monastic medicine. That ethic is service: immediate response to the emergency room, to the demands of reports, unmitigated responsibility for correct decisions made promptly and communicated clearly; flagellating denial of sleep, self-indulgence, and frivolity, even to the point of depression and deterioration of personal life, of friendship and love.

Watching the Doctor

*New England Journal of Medicine*, Volume 308, Number 25, June 23, 1983 (p. 1534)

### King, William H.

No biographical data available

The first requisite for a physician is spiritual character and the next requisites are sympathy and a sense of humor.

In R. Kagan (ed.)

*Leaders of Medicine*

Chapter V (p. 52)

The Medico-Historical Press. Boston, Massachusetts, USA. 1941

### La Bruyère, Jean 1645–96

French satiric moralist

As long as men are liable to die and desirous to live, a physician will be made fun of, but he will be well paid.

*The Characters of Jean La Bruyère*

Characters 14.65

George Routledge & Sons, Ltd. London, England. 1929

**Lamb, William** 1779–1848  
British prime minister

English physicians kill you, the French let you die.

In Elizabeth Longford

*Queen Victoria: Born to Succeed*

Chapter 5 (p. 69)

Harper & Row, Publishers. New York, New York, USA. 1964

**Latham, Peter Mere** 1789–1875  
English physician

I am persuaded that when the physician is called upon to perform great things, even to arrest destructive disease, and to save life, his skill in wielding the implements of his art rests mainly upon the right understanding of simple and single indications, and of the remedies which have power to fulfill them.

In William B. Bean

*Aphorisms from Latham* (p. 19)

Prairie Press. Iowa City, Iowa, USA. 1962

There are always two parties of the management of the disease – the physician and the patient.

In William B. Bean

*Aphorisms from Latham* (p. 21)

Prairie Press. Iowa City, Iowa, USA. 1962

But Nature, in all her powers and operations, allows herself to be led, directed, and controlled. And to lead, direct, or control for purposes of good, this is the business of the physician.

In William B. Bean

*Aphorisms from Latham* (p. 24)

Prairie Press. Iowa City, Iowa, USA. 1962

Physicians, who have worthily achieved great reputation, become the refuge of the hopeless, and earn for themselves the misfortune of being expected to cure incurable diseases.

In William B. Bean

*Aphorisms from Latham* (p. 25)

Prairie Press. Iowa City, Iowa, USA. 1962

The best physicians have begun by being the physician of the poor.

In William B. Bean

*Aphorisms from Latham* (p. 25)

Prairie Press. Iowa City, Iowa, USA. 1962

Physicians are in a manner often called upon to be wiser than they possibly can be. Disease or imperfection of a vital organ is a fearfully interesting thing to him who suffers it, and he presses to learn all that is known, and often much more than is known about it.

In William B. Bean

*Aphorisms from Latham* (p. 26)

Prairie Press. Iowa City, Iowa, USA. 1962

The end of all the thought and labour of physicians is to make experiments with men's lives.

In William B. Bean

*Aphorisms from Latham* (p. 91)

Prairie Press. Iowa City, Iowa, USA. 1962

We physicians had need be a self-confronting and a self-reproving race; for we must be ready, without fear or favor, to call in question our own Experience and to judge it justly; to confirm it, to repeal it, to reverse it, to set up the new against the old, and again to reinstate the old and give it preponderance over the new.

In William B. Bean

*Aphorisms from Latham* (pp. 93–94)

Prairie Press. Iowa City, Iowa, USA. 1962

**Longfellow, Henry Wadsworth** 1807–82

American poet

You behold in me

Only a traveling Physician;

One of the few who have a mission

To cure incurable diseases,

Or those that are called so.

*The Works of Henry Wadsworth Longfellow* (Volume 5)

Christus, The Golden Legend, Part I (p. 144)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904–1917

**Ludmerer, Kenneth M.**

Physician

The thinking physician...is the one who in the practice of medicine asks not "What is there to do?" but "should it be done?"

*Learning to Heal: The Development of American Medical Education*

(p. 280)

Basic Books, Inc., Publishers. New York, New York, USA. 1985

**Luther, Martin** 1483–1546

Leader of the Protestant Reformation

Able, cautious, and experienced physicians, are gifts of God. They are the ministers of nature, to whom human life is confided; but a moment's negligence may ruin everything. No physician should take a single step, but in humility and the fear of God; they who are without the fear of God are mere homicides.

Translated by William Hazlitt

*The Table-Talk of Martin Luther*

DCCLXXXIII (p. 317)

H.G. Bohn. London, England. 1857

**MacPhail, Sir Andrew** 1864–1938

Canadian physician

I am well aware that in these days, when a student must be converted into a physiologist, a physicist, a chemist, a biologist, a pharmacologist, and an electrician, there is no time to make a physician of him.

*British Medical Journal*, Volume 1, 1933

**Manning, Phil R.**

American physician

The outstanding advances in information technology are simplifying and encouraging independent, practice-related study, making it easier for physicians to enhance learning in the practice environment.

In Lois Debakery and Phil R. Manning  
*Medicine: Preserving the Passion in the 21st Century* (p. vii)  
Springer-Verlag, Berlin, Germany, 2004

**Massinger, Philip** 1583–1640  
English dramatic poet

I October What art can do, we promise; physic's hand  
As apt is to destroy as to preserve,  
If Heaven make not the med'cine: all this while,  
Our skill hath combat hell with his disease;  
But 'tis so arm'd, and a deep melancholy,  
To be such in part with death, we are in fear  
The grave must mock our labours.

*The Plays of Philip Massinger* (Volume 1)  
*The Virgin-Martyr*, Act IV, Scene I (p. 76)  
G. & W. Nicol. London, England, 1805

**Mather, Cotton** 1663–1728  
American minister and religious writer

Of a Distemper we commonly say, To know the Cause,  
is Half the Cure. But, alas, how little Progress is there  
yet made in that Knowledge! Physicians talk about the  
Causes of Diseases. But their Talk is very Conjectural,  
very Uncertain, very Ambiguous; and often times a mere  
Jargon; and in it, they are full of Contradiction to One  
another.

*The Angel of Bethesda*  
Capsula VII (p. 43)  
American Antiquarian Society and Barre Publishers, Barre, Massachusetts, USA, 1972

**Mayo, Charles Horace** 1865–1939  
American physician

The definition of a specialist as one who “knows more  
and more about less and less” is good and true. Its truth  
makes essential that the specialist, to do efficient work,  
must have some association with others who, taken alto-  
gether, represent the whole of which the specialty is only  
a part.

Surgery's Problems as They Affect the Hospital  
*Modern Hospital*, Volume 51, September, 1938

The true physician will never be satisfied just to pass his  
therapeutic wares over a counter.

Problems in Medical Education  
*Collected Papers of the Mayo Clinic & Mayo Foundation*, Volume 18,  
1926

As a profession [physician] we are probably less acute in  
our general observation than was the practitioner of the  
old school.

In M.H. Mellish  
*Collected Papers of the Mayo Clinic* (Volume 7)  
The Examination, Preparation, and Care of Surgical Patients (p. 859)  
W.B. Saunders Co. Philadelphia, Pennsylvania, USA, 1916

**Mencken, H. L. (Henry Louis)** 1880–1956  
American journalist and literary critic

The true physician does not preach repentance; he offers  
absolution.

*Prejudices: Third Series*  
Chapter XIV, Section 5 (p. 269)  
Alfred A. Knopf, New York, New York, USA, 1922

**Meyer, Adolf** 1866–1950  
American neurologist and psychiatrist

I wonder how soon we shall be far enough along to have  
the physician ask: How much and what, if anything, is  
structural? how much Functional, somatic or metabolic?  
How much constitutional, psychogenic and social?

The “Complaint” as the Center of Genetic-Dynamic and Nosological  
Teaching in Psychiatry  
*New England Journal of Medicine*, August 23, 1928

**Miller, H.**  
No biographical data available

The worst mistakes...must be laid at the door of the  
specialist rather than the general practitioner, who, from  
his intimate contact with sick people in their natural sur-  
roundings, often has a lively understanding of the nerv-  
ous patient, and is able to see him and his problems as  
a whole.

The Recognition of Neurotic Illness  
*Practitioner*, Volume 159, 1947

**Molière (Jean-Baptiste Poquelin)** 1622–1673  
French playwright and actor

What will you do, sir, with four physicians? Is not one  
enough to kill anyone body?

In Logan Clendening  
*Sourcebook of Medical History*  
Love's the Best Doctor  
Act II, Scene I (p. 222)  
General Publishing Company Ltd. Toronto, Ontario, Canada, 1942

**Moore, Merrill**

If the average man is a harp on whom Nature occasion-  
ally plays, the physician is an instrument on whom the  
emotions are played continuously during his waking  
hours and that is not too good for any man.

In Mary Lou McDonough  
*Poet Physician: An Anthology of Medical Poetry Written by Physicians*  
Afterthought (p. 198)  
C.C. Thomas, Springfield, Illinois, USA, 1945

**More, Hannah** 1745–1833  
English religious writer

I used to wonder why people should be so fond of the  
company of their physician, till I recollected that he is the  
only person with whom one dares to talk continually of  
oneself, without interruption, contradiction or censure; I  
suppose that delightful immunity doubles their fees.

In William Roberts

*Memoirs of the Life and Correspondence of Mrs. Hannah Moore*  
(Volume 1)

Letter to Horace Walpole, 27 July, 1789 (p. 317)

Harper & Brothers. New York, New York, USA. 1837

**Nuland, Sherwin B.** 1930–

American surgeon and teacher of bioethics and medicine

The very success of his esoteric therapeutics too often leads the physician to believe he can do what is beyond his doing and save those who, left to their own unhindered judgment, would choose not to be subjected to his saving.

*How We Die: Reflections on Life's Final Chapter* (p. 221)

Alfred A. Knopf. New York, New York, USA. 1994

Just as physicians must constantly admonish one another to seek the most subtle beginnings of disease, they must also forgive themselves when timing or circumstances frustrate their best intentions.

The Uncertain Art: The Whole Law of Medicine

*The American Scholar*, Summer, Volume 67, Number 3, 1998

**Osler, Sir William** 1849–1919

Canadian physician and professor of medicine

It may be well for a physician to have pursuits outside his profession, but it is dangerous to let them become too absorbing.

In Harvey Cushing

*The Life of Sir William Osler* (Volume 1)

Chapter III (p. 67)

Clarendon Press. Oxford, England. 1925

To investigate the causes of death, to examine carefully the condition of organs, after such changes have gone on in them as to render existence impossible and to apply such Knowledge to the prevention and treatment of disease, is one of the highest objects of the Physician...

In Harvey Cushing

*The Life of Sir William Osler* (Volume 1)

Chapter IV (p. 85)

Clarendon Press. Oxford, England. 1925

'Tis no idle challenge which we physicians throw out to the world when we claim that our mission is of the highest and of the noblest kind, not alone in curing disease but in educating the people in the laws of health, and in preventing the spread of plagues and pestilences...

In Harvey Cushing

*The Life of Sir William Osler* (Volume 1)

Chapter XVI (p. 408)

Clarendon Press. Oxford, England. 1925

No class of men needs friction so much as physicians; no class gets less. The daily round of busy practitioners tends to develop an egoism of a most intense kind, to which there is no antidote. The few setbacks are forgotten, the mistakes are often buried, and ten years of successful work tend to make a man touchy, dogmatic, intolerant of correction, and abominably self-centered.

To this mental attitude the medical society is the best corrective, and a man misses a good part of his education who does not get knocked about a bit by his colleagues in discussions and criticisms...

In Harvey Cushing

*The Life of Sir William Osler* (Volume 1)

Chapter VXII (p. 447)

Clarendon Press. Oxford, England. 1925

Few men live lives of more devoted self-sacrifice than the family physician but he may become so completely absorbed in work that leisure is unknown.... There is danger in this treadmill life lest he lose more than health and time and rest – his intellectual independence. More than most men he feels the tragedy of isolation – that inner isolation so well expressed in Matthew Arnold's line – "We mortal millions live alone." Even in populous districts the practice of medicine is a lonely road which winds uphill all the way and a man may easily go astray and never reach the Delectable Mountains unless he early finds those shepherd guides of which Bunyan tells, Knowledge, Experience, Watchful and Sincere. The circumstances of life mould him into a masterful, self-confident, self-centered man, whose worst faults often partake of his best qualities.

In Harvey Cushing

*The Life of Sir William Osler* (Volume 1)

Chapter XXI (p. 588)

Clarendon Press. Oxford, England. 1925

Permanence of residence, good undoubtedly for the pocket, is not always best for wide mental vision in the physician.

*Aequanimitas, with Other Addresses to Medical Students, Nurses, and Practitioners of Medicine*

The Army Surgeon (p. 101)

The Blakiston Company. Philadelphia, Pennsylvania, USA. 1932

Tis no idle challenge which we physicians throw out to the world when we claim that our mission is of the highest and of the noblest kind, not alone in curing disease but in educating the people in the laws of health, and in preventing the spread of plagues and pestilences...

*Aequanimitas: With Other Addresses to Medical Students, Nurses and Practitioners of Medicine*

Chapter VII (p. 125)

P. Blackiston's Sons & Co. Philadelphia, Pennsylvania, USA. 1905

The physician needs a clear head and a kind heart; his work is arduous and complex, requiring the exercise of the very highest faculties of the mind, while constantly appealing to the emotions and finer feelings.

*Aequanimitas: With Other Addresses to Medical Students, Nurses and Practitioners of Medicine*

Chapter VII (pp. 132–133)

P. Blackiston's Sons & Co. Philadelphia, Pennsylvania, USA. 1905

To wrest from nature the secrets which have perplexed philosophers of all ages, to track to their sources the causes of disease, to correlate the vast stores of knowledge, that they may be quickly available for the prevention and cure of disease – these are our ambitions.

*Aequanimitas, with Other Addresses to Medical Students, Nurses, and Practitioners of Medicine*

Chauvinism in Medicine (p. 267)

The Blakiston Company. Philadelphia, Pennsylvania, USA. 1932

To prevent disease, to relieve suffering and to heal the sick – this is our work.

*Aequanimitas, with Other Addresses to Medical Students, Nurses, and Practitioners of Medicine*

Chauvinism in Medicine (p. 267)

The Blakiston Company. Philadelphia, Pennsylvania, USA. 1932

The physician who shows in his face the slightest alteration, expressive of anxiety or fear, has not his medullary centres under the highest control, and is liable to disaster at any moment. I have spoken this to you on many occasions, and have urged you to educate your nerve centres so that not the slightest dilator or contractor influence shall pass to the vessels of your face under any professional trial.

In Christopher Lawrence and Steven Shapin

*Science Incarnate: Historical Embodiments on Natural Knowledge* (p. 171)

The University of Chicago Press. Chicago, Illinois, USA. 1998

A physician

who does not use books and journals, who does not need a library, who does not read one or two of the best weeklies and monthlies, soon sinks to the level of the cross-counter prescriber, and not alone in practice, but in those mercenary feelings and habits which characterize a trade...

In Harvey Cushing

*The Life of Sir William Osler* (Volume 1)

Chapter XVII (p. 448)

Clarendon Press. Oxford, England. 1925

Often the best part of your work will have nothing to do with potions and powders, but with the exercise of an influence of the strong upon the weak, of the righteous upon the wicked, of the wise upon the foolish. To you, as the trusted family counselor, the father will come with his anxiety the mother with her hidden grief, the daughter with her trials, and the son with his follies. Fully one-third of the work you do will be entered in other books than yours. Courage and cheerfulness will not only carry you over the rough places of life, but will enable you to bring comfort and help to the weak-hearted and will console you in the sad hours when, like Uncle Toby, you have "to whistle that you may not weep."

*Aequanimitas: With Other Addresses to Medical Students, Nurses and Practitioners of Medicine*

Chapter XVIII (p. 386)

P. Blackiston's Sons & Co. Philadelphia, Pennsylvania, USA. 1905

**Ovid** 43 BCE–17 AD

Roman poet

'Tis not always in a physician's power to cure the sick...

In Arthur Leslie Wheeler

Ex Ponto, Book I, iii (p. 281)

Harvard University Press. Cambridge, Massachusetts, USA. 1924

**Owen, John** 1616–83

English Puritan divine and theologian

Physicians take Gold, but seldom give:

They Physick give, take none; yet healthy live.

A Diet They prescribe; the Sick must for't

Give Gold; Each other Thus supply-support.

*Latine Epigrams*

Book I, Number 53

Louisiana State University Press. Baton Rouge, Louisiana, USA. 1997

**Paracelsus (Theophrastus Phillippus Aureolus Bombastus von Hohenheim)** 1493–1541

Swiss alchemist and mystic

The book of Nature is that which the physician must read; and to do so he must walk over the leaves.

*Encyclopaedia Britannica* (9th edition) (Volume 18) (p. 234)

**Parkinson, John**

No biographical data available

The common duty required of a physician lies in the recognition and treatment of disease. If he enlarges his study to cover life as affected by disease, and masters the psychology of the individual sick in body, he will widen his usefulness and reach a fuller life himself as a physician.

*Annals of Internal Medicine*

The Patient and the Physician

Address

32nd Annual Session of the American College of Physicians, St Louis, Missouri, April 11, 1951

**Percival, Thomas** 1740–1804

English physician, philosopher, and writer

The relations in which a physician stands to his patients, to his brethren, and to the public, are complicated, and multifarious; involving much knowledge of human nature, and extensive moral duties.

*Medical Ethics*

To E.C. Percival (p. viii)

Printed by S. Russell. Manchester, England. 1803

Hospital physicians and surgeons should minister to the sick, with due impressions of the importance of their office; reflecting that the ease, the health, and the lives of those committed to their charge depend on their skill, attention, and fidelity.

*Medical Ethics*

Chapter I (p. 9)

Printed by S. Russell. Manchester, England. 1803

**Piozzi, Hester Lynch** 1741–1821  
English writer

A physician can sometimes parry the scythe of death, but has no power over the sand in the hourglass.

Letter to Fanny Burney, 12 November, 1781

**Plato** 428 BCE–347 BCE  
Greek philosopher

...no physician, in so far as he is a physician, considers his own good in what he prescribes, but the good of his patient; for the true physician is also a ruler having the human body as a subject, and is not a mere money-maker.

In *Great Books of the Western World* (Volume 7)

*The Republic*

Book I, Section 342 (p. 303)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...the most skillful physicians are those who, from their youth upwards, have combined with the knowledge of their art the greatest experience of disease; they had better not be robust in health, and should have had all manner of diseases in their own persons.

In *Great Books of the Western World* (Volume 7)

*The Republic*

Book 3, Section 408 (p. 337)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...so to in the body the good and healthy elements are to be indulged and the elements of disease are not to be indulged, but discouraged. And this is what the physician has to do, and in this the art of medicine consists: for medicine may be regarded generally as the knowledge of the loves and desires of the body, and how to satisfy them or not; and the best physician is he who is able to separate fair love from foul, or to convert one into the other; and he who knows how to eradicate and how to implant love, whichever is required, and can reconcile the most hostile elements in the constitution and make them loving friends, is a skillful practitioner.

In *Great Books of the Western World* (Volume 7)

*Symposium*

Section 186 (p. 156)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Plutarch** 46–119  
Greek biographer and author

...a skillful physician, who, in a complicated and chronic disease, as he sees occasion, at one while allows his patient the moderate use of such things as please him, at another while gives him keen pains and drugs to work the cure.

In *Great Books of the Western World* (Volume 7)

The Remedy Worse than the Disease

Dodd, Mead & Company. New York, New York, USA. 1924

## Proverb

Where there are three physicians, there are two atheists.

In Oliver Wendell Holmes

*Medical Essays*

The Medical Profession in Massachusetts (p. 364)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

Deceive not thy Physitian, Confessor, nor Lawyer.

In George Herbert

*Outlandish Proverbs*

#105

Printed by T. Maxey for T. Garthwait. London, England. 1651

God heales, and the Physitian hath the thanks.

In George Herbert

*Outlandish Proverbs*

#169

Printed by T. Maxey for T. Garthwait. London, England. 1651

Go not for every grief to the Physitian, nor for every quarrel to the Lawyer, nor for every thirst to the pot.

In George Herbert

*Outlandish Proverbs*

#290

Printed by T. Maxey for T. Garthwait. London, England. 1651

There are more Physitians in health than drunkards.

In George Herbert

*Outlandish Proverbs*

#903

Printed by T. Maxey for T. Garthwait. London, England. 1651

The Physitian owes all to the patient, but the patient owes nothing to him but a little money.

In George Herbert

*Outlandish Proverbs*

#921

Printed by T. Maxey for T. Garthwait. London, England. 1651

A disobedient patient makes an unfeeling physician.

In Robert Christy  
*Proverbs, Maxims and Phrases of All Ages* (p. 255)  
 G.P. Putnam's Sons. New York, New York, USA. 1888

### Proverb, Chinese

The physician can cure the sick, but he cannot cure the dead.

In Robert Christy  
*Proverbs, Maxims and Phrases of All Ages* (p. 259)  
 G.P. Putnam's Sons. New York, New York, USA. 1888

### Proverb, German

When you call a physician call the judge to make your will.

In Robert Christy  
*Proverbs, Maxims and Phrases of All Ages* (p. 259)  
 G.P. Putnam's Sons. New York, New York, USA. 1888

### Proverb, Italian

From your confessor, lawyer and physician,  
 Hide not your case on no condition.

In Sir John Harrington  
*Metamorphosis of Ajax*  
 The Second Section (p. 154)  
 Columbia University Press. New York, New York, USA. 1962

### Proverb, Italian

*Dove non va il sole, va il medico*: Where the sunlight enters not, there goes the physician.

In Robert Means Lawrence  
*Primitive Psycho-Therapy and Quackery*  
 The Blue-Glass Mania (p. 95)  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1910

**Quarles, Francis** 1592–1644  
 English poet

Physicians of all men are most happy; what good success soever they have, the world proclaimeth, and what faults they commit, the earth coverth.

*Hieroglyphikes of the Life of Man*  
 Part iv, Nicocles (p. 17)  
 Printed for M. Fleshor. London, England. 1638

**Rabelais, François** ca. 1490–1553  
 French writer and physician

Happy is the physician, whose coming is desired at the declension of a disease.

In *Great Books of the Western World* (Volume 24)  
*Gargantua and Pantagruel*  
*Pantagruel*  
 Book 3, Chapter 41 (p. 209)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Ray, John** 1627–1705  
 English naturalist

The best physicians are Dr. Diet, Dr. Quiet, and Dr. Merryman.

*A Complete Collection of English Proverbs* (p. 34)  
 Printed for G. Cowie. London, England. 1813

Piss clear, and defy the physician.

*A Complete Collection of English Proverbs* (p. 35)  
 Printed for G. Cowie. London, England. 1813

**Saint Augustine of Hippo** 354–430  
 Theologian and doctor of the Church

...as it happens usually to him that having had experience of a bad physician, is fearful afterwards to trust himself with a good [physician]...

*St. Augustine's Confessions* (Volume 1)  
 Book VI, IV (p. 281)  
 William Heinemann. London, England. 1912

**Scott, Sir Walter** 1771–1832  
 Scottish novelist and poet

...the sick chamber of the patient is the kingdom of the physician.

*The Talisman*  
 Chapter VII (p. 99)  
 Grosset & Dunlap. New York, New York, USA. 1929

The praise of the physician... is the recovery of the patient.

*The Talisman*  
 Chapter VIII (p. 112)  
 Grosset & Dunlap. New York, New York, USA. 1929

...a slight touch of the cynic in manner and habits, gives the physician, to the common eye, an air of authority which greatly tends to enlarge his reputation.

*The Complete Works of Sir Walter Scott* (Volume 5)  
*The Surgeon's Daughter*  
 Chapter I (p. 23)  
 Conner & Cooke. New York, New York, USA. 1833

**Seegal, David**  
 No biographical data available

The young physician today is so generously provided with a kit of diagnostic and therapeutic tools, his attention might be wisely directed to the question of "what not to do" as well as "what to do."

*Journal of Chronic Diseases*, Volume 17, 299, 1964

**Selden, John** 1584–1654  
 English jurist

Preachers say, do as I say, not as I do. But if the physician had the same disease upon him that I have, and he should bid me to do one thing, and he do quite another, could I believe him?

*Table Talk of John Selden*  
 Preaching #13 (p. 145)  
 J.M. Dent. London, England. 1899

**Seneca (Lucius Annaeus Seneca)** 4 BCE–65 AD  
Roman playwright

The physician cannot prescribe by letter...he must feel the pulse.

Translated by Richard M. Gummere  
*Ad Lucilium Epistulae Morales* (Volume 1)  
Epistle xxii, Section 1 (p. 149)  
Harvard University Press. Cambridge, Massachusetts, USA. 1925

**Shakespeare, William** 1564–1616  
English poet, playwright, and actor

Trust not the physician;  
His antidotes are poison, and he slays  
More than you rob.

In *Great Books of the Western World* (Volume 27)  
*The Plays and Sonnets of William Shakespeare* (Volume 2)  
*Timon of Athens*  
Act IV, Scene iii, l. 434–436  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Kill thy physician, and the fee bestow  
Upon thy foul disease.

In *Great Books of the Western World* (Volume 27)  
*The Plays and Sonnets of William Shakespeare* (Volume 2)  
*King Lear*  
Act I, Scene i, l. 164–165  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Sheridan, Richard Brinsley** 1751–1816  
English dramatist and politician

The art of the physician consists, in a great measure, in exciting hope, and other friendly passions and feelings.

*Laconic Manual and Brief Remarker Containing Over a Thousand Subjects Alphabetically and Systematically Arranged* (p. 330)  
Robert Dick. Toronto, Ontario, Canada. 1853

...I had rather follow you to your grave, than see you owe your life to any but a regular bred physician.

*St. Patrick's Day*  
Act II, Scene Justice Hoofe (p. 24)  
Publisher undetermined

**Sissman, Louis Edward** 1928–76  
Poet

The doctors – eleven of them, all told – marshaled their forces for a truly impressive attack on the disease. Everything, I felt was meticulously planned in some War Room in the depths of the hospital: the battery of tests in just such a sequence; the alternative battle plans contingent on the outcome of the tests; the choice of weapons – radiation or chemotherapy – for the mopping-up afterward.

*A Little Night Music: A Tangential Line*  
*The Atlantic*, February, 1972

**Smollett, Tobias George** 1721–71  
Scottish novelist

The character of a physician, therefore, not only presupposes natural sagacity, and acquired erudition, but it also

implies every delicacy of sentiment, every tenderness of nature, and every virtue of humanity.

*The Life and Adventures of Sir Launcelot Greaves*  
Chapter XXIV (p. 192)  
Oxford University Press, Inc. London, England. 1973

**Stanton, Elizabeth Cady** 1815–1902  
American reformer

Besides the obstinacy of the nurse, I had the ignorance of the physicians to contend with.

*Eighty Years and More (1815–1897) Reminiscences of Elizabeth Cady Stanton*  
Motherhood (pp. 118–119)  
T. Fisher Unwin. London, England. 1898

**Stevenson, Robert Louis** 1850–94  
Scottish essayist and poet

There are men and classes of men that stand above the common herd; the soldier, the sailor, and the shepherd not unfrequently; the artist rarely; rarer still, the clergyman; the physician almost as a rule. He is the flower (such as it is) of our civilization; and when that stage of man is done with, and only remembered to be marveled at in history, he will be thought to have shared as little as any in the defects of the period, and most notably exhibited the virtue of the race. Generosity he has, such as is possible to those who practice an art, never to those who drive a trade; discretion, tested by a hundred secrets; tact, tried in a thousand embarrassments; and, what are more important, Herculean cheerfulness and courage. So it is that he brings air and cheer into the sick-room, and often enough, though not so often as he wishes, brings healing.

*Underwoods*  
Preface  
Charles Scribner's Sons. New York, New York, USA. 1887

**Swift, Jonathan** 1667–1745  
Irish-born English writer

Physicians ought not to give their Judgment of Religion, for the same Reason that Butchers are not admitted to be Jurors upon Life and Death.

*Satires and Personal Writings*  
Thoughts on Various Subjects (p. 410)  
Oxford University Press, Inc. New York, New York, USA. 1965

**Taylor, Jeremy** 1613–67  
English clergyman

...to preserve a man alive in the midst of so many chances, and hostilities, is as great a miracle as to create him...

*Holy Living and Holy Dying* (Volume 2)  
Chapter I, Section 1, l. 7–9  
At The Clarendon Press. Oxford, England. 1989

**The Bible (King James Version)**

And Asa in the thirty and ninth year of his reign was diseased in his feet, until his disease was exceeding

great: yet in his disease he sought not to the LORD, but to the physicians.

II Chronicles 16:12–13

Is there no balm in Gilead, is there no physician there?

Jeremiah 8:22

...They that be whole need not a physician, but they that are sick.

Matthew 9:12

Physician, heal thyself...

Luke 4:23

### **Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

Priests and physicians should never look one another in the face. They have no common ground, nor is there any to mediate between them. When the one comes, the other goes. They could not come together without laughter, or a significant silence, for the one's profession is a satire on the other's, and either's success would be the other's failure.

*The Writings of Henry David Thoreau* (Volume 1)

*A Week on the Concord and Merrimac Rivers*

Wednesday (p. 339)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

It is wonderful that the physician should ever die, and that the priest should ever live. Why is it that the priest is never called to consult with the Physician? It is because men believe practically that matter is independent of spirit. But what quackery? It is commonly an attempt to cure the disease of a man by addressing his body alone. There is a need of a physician who shall minister to both soul and body at once, that is to man. Now he falls between two stools.

*The Writings of Henry David Thoreau* (Volume 1)

*A Week on the Concord and Merrimac Rivers*

Wednesday (p. 339)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

### **Trousseau, Armand** 1801–67

French internist

...the physician, worthy of the priesthood to which he has devoted himself, has no right to place on one side his beliefs, even though they be false, that he may experiment upon his patients, and wait with curiosity to see what "expectation" can do for them.

*Lectures on Clinical Medicine, Delivered at the Hotel-Dieu* (Volume 2)

Introduction (p. 16)

Lindsay & Blakiston. Philadelphia, Pennsylvania, USA. 1869

...physics, chemistry, or natural history, which are unquestionably useful in medicine, but no more make the physician than the science of perspective makes the landscape-painter.

*Lectures on Clinical Medicine, Delivered at the Hotel-Dieu* (Volume 2)

Introduction (p. 30)

Lindsay & Blakiston. Philadelphia, Pennsylvania, USA. 1869

Take care not to fancy that you are physicians as soon as you have mastered scientific facts; they only afford to your understanding an opportunity of bringing forth fruit, and of elevating you to the high position as a man of art.

*Lectures on Clinical Medicine, Delivered at the Hotel-Dieu* (Volume 2)

Introduction (p. 41)

Lindsay & Blakiston. Philadelphia, Pennsylvania, USA. 1869

### **Tupper, Kerr Boyce**

No biographical data available

Let a physician believe with all his heart that God meant him to be a physician, only a physician, wholly a physician, always a physician, then will he be a physician indeed, uncorrupted by the love of money, untainted by infection for fame, untimidated by danger.... Have appetite for your life calling, and you will have aptitude for all its duties.

*The Ideal Physician* (p. 37)

Lea Brothers/Philadelphia, Pennsylvania, USA. 1899

### **Virchow, Rudolf Ludwig Karl** 1821–1902

German pathologist and archaeologist

Only those who regard healing as the ultimate goal of their efforts can, therefore, be designated as physicians.

Translated by Lelland J. Rather

*Disease, Life, and Man, Selected Essays*

Standpoints in Scientific Medicine (1847) (p. 26)

Stanford University Press. Stanford, California, USA. 1958

...there are circumstances in which the split between scientific and practical medicine is so great that the learned physician can do nothing, while the practical physician knows nothing. Lord Bacon has said, *scientia est potentia*. Knowledge which is unable to support action is not genuine, and how unsure is activity without understanding! This split between science and practice is rather new; our century and our country have brought it into being.

Translated by Lelland J. Rather

*Disease, Life, and Man*

Standpoints in Scientific Medicine (1847) (p. 27)

Stanford University Press. Stanford, California, USA. 1958

### **Voltaire (François-Marie Arouet)** 1694–1778

French writer

The Devil should not try his tricks on a clever physician. Those familiar with nature are dangerous for the wonder-workers. I advise the Devil always to apply to the faculty of theology – not to the medical faculty.

In Pearch Bailey

Voltaire's Relation to Medicine

*Annals of Medical History*, Volume 1, 1917 (p. 58)

Let nature be your first physician. It is she who made all.

*The Works of Voltaire* (Volume 11)

*Philosophical Dictionary* (Volume 7)

Medicine (p. 169)

The St. Hubert Guild. Akron, Ohio, USA. 1901

But nothing is more estimable than a physician who, having studied nature from his youth, knows the properties of the human body, the diseases which assail it, the remedies which will benefit it, exercises his art with caution, and pays equal attention to the rich and the poor.

*The Works of Voltaire* (Volume 12)

*Philosophical Dictionary* (Volume 8)

Physicians (pp. 199–200)

The St. Hubert Guild. Akron, Ohio, USA. 1901

**von Ebner-Eschenbach, Marie** 1830–1916

Austrian writer

Physicians are hated either on principle or for financial reasons.

Translated by David Scrase and Wolfgang Mieder

*Aphorisms* (p. 50)

Aridne Press. Riverside, California, USA. 1994

**Webster, John** 1580?–1625?

English playwright

Physicians are like kings –  
they brook no contradiction.

*The Duchess of Malfi*

Act V, Scene II, l. 69–70

Chatto & Windus. London, England. 1958

**Wordsworth, William** 1770–1850

English poet

Physician art thou? one, all eyes,  
Philosopher! a fingering slave,  
One that would peep and botanize  
Upon his mother's grave.

*The Complete Poetical Works of William Wordsworth*

A Poet's Epitaph

Crowell. New York, New York, USA. 1888

**Young, Arthur** 1741–1820

English traveler

...there is a great difference between a good physician and a bad one; yet very little between a good one and [no physician] at all.

*Travels in France*

9 September, 1787 (p. 66)

G. Bell. London, England. 19112

## PHYSIC

**Colton, Charles Caleb** 1780–1832

English sportsman and writer

No men despise physic so much as physicians, because no men so thoroughly understand how little it can perform.

*Lacon: Or, Many Things in Few Words*

CCCXXXVIII (p. 160)

Longman, Rees, Orme, Brown & Green. London, England. 1826

**Young, Thomas** 1773–1829

English polymath

In physic, the wisest can do but little, and the ignorant can only do worse than nothing ...

*A Course of Lectures on Natural Philosophy and the Mechanical Arts*

Lecture I (p. 4)

Taylor & Walton. London, England. 1845

## PHYSICIST

Up to the time of the foundation of the Institute of Physics, the physicists had hardly been recognized as a member of one of the professions.

*The Institute of Physics: Objects of the Institute* (p. 5)

**Adams, Douglas** 1952–2001

English author, comic radio dramatist, and musician

Very strange people, physicists...in my experience the ones who aren't actually dead are in some way very ill.

*The Long Dark Tea-Time of the Soul*

Chapter II (p. 140)

Simon & Schuster. New York, New York, USA. 1990

It startled him even more when just after he was awarded the Galactic Institute's Prize for Extreme Cleverness he got lynched by a rampaging mob of respectable physicists who had finally realized that the one thing they really couldn't stand was a smart-ass.

*The Ultimate Hitchhiker's Guide to the Galaxy*

*The Hitchhiker's Guide to the Galaxy*

Chapter 10 (p. 60)

The Ballantine Book Company. New York, New York, USA. 2002

**Adams, Henry Brooks** 1838–1918

American man of letters

Thus results the plain assurance that the future of Thought, and therefore of History, lies in the hands of the physicists, and that the future historian must seek his education in the world of mathematical physics. Nothing can be expected from further study on the old lines.

*The Degradation of the Democratic Dogma*

The Rule of Phase Applied to History (p. 283)

The Macmillan Co. New York, New York, USA. 1919

...the future of Thought and therefore of History lies in the hands of physicists, and therefore the future historian must seek his education in the world of mathematical physics.

*The Degradation of the Democratic Dogma*

The Rule of Phase Applied to History (p. 283)

Peter Smith. New York, New York, USA. 1949

He had the physicist's heinous fault of professing to know nothing between flashes of intense perception.

*The Education of Henry Adams: An Autobiography*

Chapter XXIV (p. 377)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1918

**Alvarez, Luis W.** 1911–88  
American physicist

Most of us who become experimental physicists do so for two reasons; we love the tools of physics because to us they have intrinsic beauty, and we dream of finding new secrets of nature as important and as exciting as those uncovered by our scientific heroes. But we walk a narrow path with pitfalls on either side. If we spend all our time developing equipment, we risk the appellation of “plumber”, and if we merely use the tools developed by others, we risk the censure of our peers for being parasitic.

*Nobel Lectures, Physics 1963–1970*

Recent Developments in Particle Physics (p. 241)  
Elsevier Publishing Co. 1972

**Atiyah, Sir Michael** 1922–  
English mathematician

Physicists are much less worried than mathematicians about lack of rigor. One might propose as an analogy that mathematicians resemble professional linguists who are very concerned with the formal structure of languages. Physicists are like people who are perfectly successful at using language without being unduly concerned about the theory of grammatical structure.

In Jørgen Ellegaard Andersen, Henrik Pedersen and Andrew Swann  
*Geometry and Physics*

Geometry And Physics: Where are We Going? (p. 3)  
Marcel Dekker, Inc. New York, New York, USA. 1997

### Author undetermined

We seek, we study, and we stare  
At particles that weren't quite there.

In H. Arthur Klein

*The World of Measurements*

Song for A High-Energy Physicist (p. 180)  
Simon & Schuster. New York, New York, USA. 1974

Mathematicians are happy in their logic; chemists are happy in their common sense; but physicists are happy because they have neither logic nor common sense.

Quoted in Harold T. Davis

*Philosophy and Modern Science*

Chapter II (p. 26)

Principia Press. Bloomington, Indiana, USA. 1931

### Baker, Adolph

No biographical data available

Physics is engaged neither in the development of time machines nor in the fabrication of bombs. But it is the business of physicists to take flights of fancy which carry them far beyond the boundaries imposed by current technology.

*Modern Physics and Antiphysics*

Chapter 3 (p. 27)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1970

**Balfour, Arthur James** 1848–1930  
English prime minister

The physicist looks for something more than what by any stretch of language can be described as ‘coexistences’ and ‘sequences’ between so-called ‘phenomena.’ He seeks for something deeper than the laws connecting possible objects of experience. His object is physical reality; a reality which may or may not be capable of direct perception; a reality which is in any case independent of it; a reality which constitutes the permanent mechanism

Reflections Suggested by the New Theory of Matter

*Popular Science Monthly*, Volume 65, Number 6 October, 1904 (p. 496)

**Ball, Sir Robert Stawell** 1840–1913  
Irish astronomer

Just as the astronomer staggers our powers of conception by the description of appalling distances and stupendous periods of time, and relies with confidence on the evidence which convinces him of the reality of his statements, so the physicist avails himself of a like potent method of research to study distances so minute and times so brief that the imagination utterly fails to realize them.

*Essays in Astronomy*

Atoms and Sunbeams (p. 12)

D. Appleton & Co. New York, New York, USA. 1900

**Barnett, Lincoln Kinnear** 1909–79  
American science writer

The young physicists are beyond all doubt the noisiest, rowdiest, most active and most intellectually alert group we have here. For them the world changes every week and they are simply delighted by it. A few days ago I asked one of them as they came bursting out of a seminar, “How did it go?” “Wonderful” he said. “Everything we knew about physics last week isn't true!”

*Writing on Life: Sixteen Close-Ups*

Physicist Oppenheimer (p. 378)

William Sloane Associates, Publishers. New York, New York, USA. 1951

### Bergmann, P.

No biographical data available

In many aspects, the theoretical physicist is merely a philosopher in a working suit.

In Jean-Pierre Luminet

*Black Holes* (p. 51)

Cambridge University Press. New York, New York, USA. 1992

**Birkhoff, George David** 1884–1944  
American mathematician

It is to be hoped that in the future more and more theoretical physicists will command a deep knowledge of mathematical principles; and also that mathematicians will no longer limit themselves so exclusively to the aesthetic development of mathematical abstractions.

Mathematical Nature of Physical Theories

*American Scientist*, Volume 31, Number 4, October, 1943 (p. 286)

**Boltzmann, Ludwig Edward** 1844–1906  
Austrian Physicist

$S = k \log w$   
*Carved on Boltzmann's gravestone*

**Bradley, Francis Herbert** 1846–1924  
English philosopher

For Nature to the common man is not the Nature of the physicist; and the physicist himself, outside his science, still habitually views the world as what he must believe it cannot be.

*Appearance and Reality: A Metaphysical Essay*  
Book II, Chapter XXII (p. 262)  
Swan Sonnenschein & Co. New York, New York, USA. 1893

**Brecht, Bertolt** 1898–1956  
German writer

VIRGINIA: Father says theologians have their bells to ring; physicists have their laughter.

Translated by John Willett  
*Life of Galileo*  
Scene 9 (p. 74)  
Arcade Publishing. New York, New York, USA. 1994

**Bridgman, Percy Williams** 1882–1961  
American physicist

[Because of the principle of indeterminacy] the physicist thus finds himself in a world from which the bottom has dropped clean out; as he penetrates deeper and deeper it eludes him and fades away by the highly unsportsmanlike device of just becoming meaningless. No refinement of measurement will avail to carry him beyond the portals of this shadowy domain which he cannot even mention without logical inconsistency. A bound is thus forever set to the curiosity of the physicist. What is more, the mere existence of this bound means that he must give up his most cherished convictions and faith. The world is not a world of reason, understandable by the intellect of man, but as we penetrate ever deeper, the very law of cause and effect, which we had thought to be a formula to which we could force God Himself to subscribe, ceases to have meaning. The world is not intrinsically reasonable or understandable; it acquires these properties in ever-increasing degree as we ascend from the realm of the very little to the realm of everyday things; here we may eventually hope for an understanding sufficiently good for all practical purposes, but no more.

*The New Vision of Science*  
*Harper's Magazine*, Volume 158 (p. 450)

**Brillouin, Léon** 1889–1969  
French physicist

It is impossible to study the properties of a single mathematical trajectory. The physicist knows only bundles of trajectories, corresponding to slightly different initial conditions.

In John D. Barrow  
*The World Within the World* (p. 277)  
Clarendon Press. Oxford, England. 1988

**Burroughs, William S.** 1914–97  
American writer

No atomic physicist has to worry, people will always want to kill other people on a mass scale.

*The Adding Machine: Selected Essays*  
*A Word to the Wise Guy* (p. 29)  
Seaver Books. New York, New York, USA. 1986

**Crick, Francis Harry Compton** 1916–2004  
English biochemist

Physicists are all too apt to look for the wrong sorts of generalizations, to concoct theoretical models that are too neat, too powerful, and too clean. Not surprisingly, these seldom fit well with data. To produce a really good biological theory, one must try to see through the clutter produced by evolution to the basic mechanisms. What seems to physicists to be a hopelessly complicated process may have been what nature found simplest, because nature could build on what was already there.

*What Mad Pursuit?: A Personal View of Scientific Discovery* (p. 139)  
Basic Books, Inc. New York, New York, USA. 1988

**Cvitanovic, Predrag**  
Physicist

Indicative of the depth of mathematics lurking behind physicists' conjectures is that fact that the properties that one would like to establish about the renormalization theory of critical circle maps might turn out to be related to number-theoretic abysses such as the Riemann conjecture....

In C. Itzykson, et al. (eds.)  
*From Number Theory and Physics*  
*Circle Maps: Irrationally Winding*  
Springer-Verlag New York, Inc. New York, New York, USA. 1992

**Darrow, Karl Kelchner** 1891–1982  
American physicist

It [physics] is less known, I suppose, than that of any other major science; and we who practice it scarcely dare avow ourselves as physicists in any group of laymen, for we know too well that if we do we shall be asked first to spell the word and then to define it!

*The Renaissance of Physics*  
Chapter I (p. 2)  
The Macmillan Co. New York, New York, USA. 1936

A century and more ago the older name was universal in English-speaking countries, and men who occupied themselves with mechanics and sound and heat and light were known as "natural philosophers." Would that we still were! it is a long and cumbersome title, but less cacophonous than our present name of *physicists*, with its three or four sibilants in three successive syllables, surely one of the ugliest words in any language.

*The Renaissance of Physics*

Chapter I (p. 3)

The Macmillan Co. New York, New York, USA. 1936

**Davies, Paul Charles William** 1946–  
British-born physicist, writer, and broadcaster

**Brown, Julian R.**

No biographical data available

Physicists, like theologians, are wont to deny that any system is in principle beyond the scope of their subject.

*Superstrings: A Theory of Everything*

Introduction (p. 1)

Cambridge University Press. Cambridge, England. 1988

**Dicke, R. H.**

No biographical data available

It is well known that carbon is required to make physicists.

Dirac's Cosmology and Mach's Principle

*Nature*, Volume 192, Number 4801, November 4, 1961 (p. 440)

**Dirac, Paul Adrien Maurice** 1902–84

English theoretical physicist

Some physicists may be happy to have a set of working rules leading to results in agreement with observation. They may think that this is the goal of physics. But it is not enough. One wants to understand how Nature works.

*Proceedings of the Conference Perturbative Quantum Chromodynamics*, Volume 74, 1981 (pp. 129–130)

**Duhem, Pierre-Maurice-Marie** 1861–1916

French physicist and mathematician

The watchmaker to whom one gives a watch that does not run will take it all apart and will examine each of the pieces until he finds out which one is damaged. The physician to whom one presents a patient cannot dissect him to establish the diagnosis. He has to guess the seat of the illness by examining the effect on the whole body. The physicist resembles a doctor, not a watchmaker.

Quelques reflexions au sujet de la physique experimentale

*Revue des questions scientifiques.*, Volume 36, 1897 (p. 55)

...if the aim of physical theories is to explain experimental laws, theoretical physics is not an autonomous science; it is subordinate to metaphysics.

*The Aim and Structure of Physical Theory*

Part I, Chapter I (p. 10)

Princeton University Press. Princeton, New Jersey, USA. 1954

**Dürrenmatt, Friedrich** 1921–90

Swiss playwright and novelist

Dear Mobius. You have visitors. Now leave your physicist's lair for a moment and come in here.

Translated by James Kirkup

*The Physicists*

Act One (p. 37)

Grove Press, Inc. New York, New York, USA. 1964

It's ludicrous. Here we have hordes of highly paid physicists in gigantic state-supported laboratories working for years and years and years vainly trying to make some progress in the realm of physics, while you do it quite casually at your desk in this madhouse.

Translated by James Kirkup

*The Physicists*

Act Two (p. 75)

Grove Press, Inc. New York, New York, USA. 1964

**Dyson, Freeman J.** 1923–

American physicist and educator

Theoretical physicists are accustomed to living in a world which is removed from tangible objects by two levels of abstraction. From tangible atoms we move by one level of abstraction to invisible fields and particles. A second level of abstraction takes us from fields and particles to the symmetry-groups by which fields and particles are related. The superstring theory takes us beyond symmetry-groups to two further levels of abstraction. The third level of abstraction is the interpretation of symmetry-groups in terms of states in ten-dimensional space-time. The fourth level is the world of the superstrings by whose dynamical behavior the states are defined.

*Infinite in All Directions*

Part One, Chapter Two (p. 18)

Harper Collins Publisher, Inc. New York, New York, USA. 1988

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

To the pure geometer the radius of curvature is an incidental characteristic – like the grin of the Cheshire cat. To the physicist it is an indispensable characteristic. It would be going too far to say that to the physicist the cat is merely incidental to the grin. Physics is concerned with interrelatedness such as the interrelatedness of cats and grins. In this case the “cat without a grin” and the “grin without a cat” are equally set aside as purely mathematical phantasies.

*The Expanding Universe*

Chapter IV, Section III (pp. 103–104)

The University Press. Cambridge. 1933

Wheresoever the carcass is, there will the eagles be gathered together, and where the symbols of the mathematical physicists flock, there presumably is some prey for them to settle on, which the plain man at least will prefer to call by a name suggestive of something more than passive emptiness.

*New Pathways in Science*

Chapter II, Section IV (p. 39)

The Macmillan Company. New York, New York, USA. 1935

Life would be stunted and narrow if we could feel no significance in the world around us beyond that which can be weighed and measured with the tools of the physicist or described by the metrical symbols of the mathematician.

In Arthur Beiser

*The World of Physics*

Introduction

Simon & Schuster. New York, New York, USA. 1987

### **Einstein, Albert** 1879–1955

German-born physicist

The supreme task of the physicist is to arrive at those universal elementary laws from which the cosmos can be built up by pure deduction.

*The World As I See It* (p. 22)

Philosophical Library. New York, New York, USA. 1949

Dear Schrödinger: You are the only contemporary physicist, besides Laue, who sees that one cannot get around the assumption of reality – if only one is honest. Most of them simply do not see what sort of risky game they are playing with reality – reality as something independent of what is experimentally established.

In A.P. French and P.J. Kennedy (eds.)

*Niels Bohr: A Centenary Volume*

Letter, Albert Einstein to Erwin Schrödinger, December 22, 1950

(p. 143)

Harvard University Press. Cambridge, Massachusetts, USA. 1985

How wretchedly inadequate is the theoretical physicist as he stands before Nature – and before his students!

In Helen Dukas and Banesh Hoffman

*Albert Einstein: The Human Side: New Glimpses from His Archives*

Letter dated 15 March, 1922 (p. 24)

Princeton University Press. Princeton, New Jersey, USA. 1979

If you want to find out anything from the theoretical physicists about the methods they use, I advise you to stick closely to one principle: Don't listen to their words, fix your attention on their deeds.

*Ideas and Opinions*

On the Method of Theoretical Physics (p. 270)

Crown Publishers, Inc. New York, New York, USA. 1954

...the supreme task of the physicist is the discovery of the most general elementary laws from which the world-picture can be deduced logically.

In Max Planck

*Where Is Science Going?*

Prologue (p. 10)

W.W. Norton & Company, Inc. New York, New York, USA. 1932

### **Feynman, Richard P.** 1918–88

American theoretical physicist

A professor of theoretical physics always has to be told what to look for. He just uses his knowledge to explain the observations of the experimenters!"

*What Do You Care What Other People Think?*

The Cold Facts (p. 140)

W.W. Norton & Company, Inc. New York, New York, USA. 1988

The limited imagination of physicists: When we see a new phenomenon we try to fit it into the framework we already have.... It's not because Nature is really similar;

it's because the physicists have only been able to think of the same damn thing, over and over again.

*QED: The Strange Theory of Light and Matter*

Chapter 4 (p. 149)

Princeton University Press. Princeton, New Jersey, USA. 1985

Physicists sometimes feel so superior and smart that other people would like to catch them out once on something. I will give you something to get them on. They should be utterly ashamed of the way they take energy and measure it in a host of different ways, with different names. It is absurd that energy can be measured in calories, in ergs, in electron volts, in foot pound, in B.T.U.s, in horsepower hours, in kilowatt hours – all measuring exactly the same thing.... For those who want some proof that physicists are human, the proof is in the idiocy of all the different units which they use for measuring energy.

*The Character of Physical Law*

Chapter 3 (p. 74)

BBC. London, England. 1965

### **Foster, G. Cary**

No biographical data available

...from the very outset of his investigations the physicist has to rely constantly on the aid of the mathematician, for even in the simplest cases, the direct results of his measuring operations are entirely without meaning until they have been submitted to more or less of mathematical discussion. And when in this way some interpretation of the experimental results has been arrived at, and it has been proved that two or more physical quantities stand in a definite relation to each other, the mathematician is very often able to infer, from the existence of this relation, that the quantities in question also fulfill some other relation, that was previously unsuspected. Thus when Coulomb, combining the functions of...from the very outset of his investigations the physicist has to rely constantly on the aid of the mathematician, for even in the simplest cases, the direct results of his measuring operations are entirely without meaning until they have been submitted to more or less of mathematical experimentalist and mathematician, had discovered the law of the force exerted between two particles of electricity, it became a purely mathematical problem, not requiring any further experiment, to ascertain how electricity is distributed upon a charged conductor, and this problem has been solved by mathematicians in several cases.

Presidential Address British Association for the Advancement of Science, Section A

*Nature*, Volume 16, May to October, 1877 (pp. 312–313)

### **Franklin, W. S.**

No biographical data available

Conversation with a physicist is, however, very like looking into the mechanism of a Mergenthaler type-casting machine, with the machine out of sight; a thing

which is feasible enough among designers and builders, but scarcely a satisfactory basis for the flow of thought when one party in the conversation happens to be unfamiliar with and perhaps not interested in the mechanism in question.

*Proceedings of the American Association for the Advancement of Science (Fifty-second meeting)*  
Address by W. S. Franklin (p. 366)  
Published by the permanent secretary  
1903

**Gamow, George** 1904–68  
Russian-born American physicist

Now, Physicists, take warning,  
Observe this sober test...  
When new fleas are a-borning  
Make sure they're fully dressed!

*Thirty Years That Shook Physics*  
First Part (p. 193)  
Doubleday & Company, Inc. Garden City, New York, USA. 1966

**Gassendi, Pierre** 1592–1655  
French logician and philosopher

A physicist is like a hunter of nature, who just as a hunter does not pursue a wild animal sluggishly like an onlooker, but hunts with keen senses and tracks it down zealously...; likewise a physicist obtains the idea of the nature of things, or truth, not by considering it superficially and lazily, but by investigating it with many different kinds of experiments and observations.... Even though its nature keeps slipping away in many ways, he perseveres and seeks it in his search.

Quoted in Lisa T. Sarasohn  
*Gassendi's Ethics: Freedom in a Mechanistic Universe*  
Chapter 2 (p. 38)  
Cornell University Press. Ithaca, New York, USA. 1996

**Gibbs, J. Willard** 1839–1903  
American mathematician

A mathematician may say anything he pleases, but a physicist must be at least partially sane.

In R.B. Lindsay  
On the Relation of Mathematics and Physics  
*The Scientific Monthly*, December, 1944 (p. 456)

**Glaser, Donald A.** 1926–  
American physicist

In their exploration of the submicroscopic world of atomic nuclei, physicists are like men groping in a dark cave with a flashlight that goes on for only an instant and each time lights only a tiny corner of the cave.

The Bubble Chamber  
*Scientific American*, Volume 192, Number 2, February, 1955 (p. 46)

**Green, Celia** 1935–  
English philosopher and psychologist

If you say to a theoretical physicist that something is inconceivable, he will reply: "It only appears

inconceivable because you are naively trying to conceive it. Stop thinking and all will be well."

*The Decline and Fall of Science*  
Aphorisms (pp. 2–3)  
Hamilton. London, England. 1976

**Greene, Brian** 1963–  
American physicist

Physicists are more like avant-garde composers, willing to bend traditional rules.... Mathematicians are more like classical composers..."

*The Elegant Universe*  
Chapter 11 (p. 271)  
W.W. Norton & Company, Inc. New York, New York, USA. 2003

**Gribbin, John**  
English science writer and astronomer

**Rees, Martin John** 1942–  
15th Astronomer Royal of England

...the fate of the Universe, like its present appearance, was imprinted right at the beginning, in the hot, dense fireball era. And to understand that era, and the nature of the relics it could have left behind, we enter the realm of the particle physicist.

*Cosmic Coincidences: Dark Matter, Mankind, and Anthropic Cosmology*  
Part One, Chapter Three (p. 99)  
Bantam Books. New York, New York, USA. 1989

**Hanson, Norwood Russell** 1924–67  
American philosopher of science

Physicists do not start from hypotheses; they start from data. By the time a law has been fixed into an H-D [hypothetico-deductive] system, really original physical thinking is over.

*Patterns of Discovery*  
Chapter IV (p. 70)  
At The University Press. Cambridge, England. 1958

**Hartshorne, Charles** 1897–2000  
American philosopher

More and more, physicists dare to say that all nature is in some sense life-like, that there is no absolutely new principle of life that comes in at some point in cosmic evolution.

*Omnipotence and Other Theological Mistakes*  
Chapter 2 (p. 62)  
State University of New York Press. Albany, New York, USA. 1984

**Heisenberg, Werner Karl** 1901–76  
German physicist and philosopher

Some physicists would prefer to come back to the idea of an objective real world whose smallest parts exist objectively in the same sense as stones or trees exist independently of whether we observe them. That, however, is impossible.

*Physics and Philosophy: The Revolution in Modern Science*  
July, 1992  
Harper & Row, Publishers. New York, New York, USA. 1958

The physicist may be satisfied when he has the mathematical scheme and knows how to use it for the interpretation of the experiments. But he has to speak about his results also to non-physicists who will not be satisfied unless some explanation is given in plain language. Even for the physicist the description in plain language will be the criterion of the degree of understanding that has been reached.

*Physics and Philosophy: The Revolution in Modern Science*  
Chapter X (p. 168)  
Harper & Row, Publishers. New York, New York, USA. 1958

**Hoffmann, Banesh** 1906–86  
Mathematician and educator

They could but make the best of it, and went around with woebegone faces sadly complaining that on Mondays, Wednesdays and Fridays they must look on light as a wave; on Tuesdays, Thursdays and Saturdays, as a particle. On Sundays they simply prayed.

*The Strange Story of the Quantum*  
Chapter IV (p. 42)  
Dover Publications, Inc. New York, New York, USA. 1959

**Hoyle, Sir Fred** 1915–2001  
English mathematician and astronomer

The physicist is mainly interested in the detailed structure of the threads in our tapestry. He is less interested in the broad pattern on the tapestry itself. The broadest pattern of all, on the scale of stars and galaxies, is the business of the astronomer.

*Ten Faces of the Universe*  
The Astrophysicist's Universe (p. 55)  
W.H. Freeman & Company. San Francisco, California, USA. 1977

**James, Henry** 1843–1916  
American-born English author and literary critic

You know we great physicists never make an experiment without an 'assistant' – a humble individual who burns his fingers and stains his clothes in the cause of science, but whose interest in the problem is only indirect.

*Confidence*  
Chapter II (p. 22)  
Houghton, Osgood & Co. Boston, Massachusetts, USA. 1880

**Jeans, Sir James Hopwood** 1877–1946  
English physicist and mathematician

The physicist who can discard his human spectacles, and can see clearly in the strange new light which then assails his eyes, finds himself living in an unfamiliar world, which even his immediate predecessors would probably fail to recognize.

*The New Background of Science*  
Chapter I (pp. 5–6)  
The University of Michigan Press. Ann Arbor, Michigan, USA. 1959

Physicists who are trying to understand nature may work in many different fields and by many different methods; one may dig, one may sow, one may reap.

But the final harvest will always be a sheaf of mathematical formulae. These will never describe nature itself, but only our observations on nature. Our studies can never put us into contact with reality; we can never penetrate beyond the impressions that reality implants in our minds.

*Physics and Philosophy*  
Chapter I (p. 15)  
Dover Publications. New York, New York, USA. 1981

**Johnson, George** 1952–  
American science writer

Trying to capture the physicists' precise mathematical description of the quantum world with our crude words and mental images is like playing Chopin with a boxing glove on one hand and a catcher's mitt on the other.

On Skinning Schrödinger's Cat  
*The New York Times*, Section 4, Sunday, 2 June, 1996 (p. 16)

**Joyce, James** 1882–1941  
Irish-born author

As a physicist he had learned that of the 70 years of complete human life at least 2/7, viz. 20 years are passed in sleep.

*Ulysses* (p. 704)  
Random House, Inc. New York, New York, USA. 1946

**Krauss, Lawrence M.** 1954–  
American theoretical physicist

For the most part, physicists follow the same guidelines that have helped keep Hollywood movie producers rich: If it works, exploit it. If it still works, copy it.

*Fear of Physics: A Guide for the Perplexed*  
Chapter 1 (p. 4)  
Basic Books, Inc. New York, New York, USA. 1993

**Krutch, Joseph Wood** 1893–1970  
American naturalist, conservationist, and writer

Electronic calculators can solve problems which the man who made them cannot solve; but no government-subsidized commission of engineers and physicists could create a worm...

*The Twelve Seasons*  
March (p. 184)  
W. Sloane Associates. New York, New York, USA. 1949

**Kuhn, Thomas S.** 1922–96  
American historian of science

Looking at a contour map, the student sees lines on paper, the cartographer a picture of a terrain. Looking at a bubble-chamber photograph, the student sees confused and broken lines, the physicist a record of familiar sub-nuclear events. Only after a number of such transformations of vision does the student become an inhabitant of the scientist's world.

*The Structure of Scientific Revolutions*  
Chapter X (p. 111)  
The University of Chicago Press. Chicago, Illinois, USA. 1970

**Kusch, Polykarp** 1911–93  
German-American physicist

Our early predecessors observed Nature as she displayed herself to them. As knowledge of the world increased, however, it was not sufficient to observe only the most apparent aspects of Nature to discover her more subtle properties; rather, it was necessary to interrogate Nature and often to compel Nature, by various devices, to yield an answer as to her functioning. It is precisely the role of the experimental physicist to arrange devices and procedures that will compel Nature to make a quantitative statement of her properties and behavior.

The Magnetic Moment of the Electron (p. 298)

Elsevier Publishing Company. Amsterdam, Netherlands. 1964

**Ladenburg, Rudolf** 1882–1952  
German physicist

There are two kinds of physicists in Berlin: on the one hand was Einstein, and on the other all the rest.

In A.P. French

*Einstein: A Centenary Volume*

Chapter 4 (p. 125)

Harvard University Press. Cambridge, Massachusetts, USA. 1979

**Lederman, Leon** 1922–  
American high-energy physicist

Today we have two groups of physicists both with the common aim of understanding the universe but with a large difference in cultural outlook, skills, and work habits. Theorists tend to come in late to work, attend grueling symposiums on Greek islands or Swiss mountaintops, take real vacations, and are at home to take out the garbage much more frequently. They tend to worry about insomnia.... Experimenters don't come in late – they never went home. During an intense period of lab work, the outside world vanishes and the obsession is total. Sleep is when you can curl up on the accelerator floor for an hour.

*The God Particle: If the Universe Is the Answer, What Is the Question?*

Chapter 1 (p. 14)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1993

**Lichtenberg, Georg Christoph** 1742–99  
German physicist and satirical writer

The myths of the physicists.

*Lichtenberg: Aphorisms & Letters*

Aphorisms (p. 57)

Jonathan Cape. London, England. 1969

**Lindley, David** 1956–  
English astrophysicist and author

Physicists, however, are scavengers of mathematics; they take what they need, adapt it to their purposes, and discard the rest.

*The End of Physics: The Myth of a Unified Theory*

Prologue (p. 5)

Basic Books. New York, New York, USA. 1993

Theoretical physicists of today are in the grip of a collective mathematical zaniness, inventing twenty-six-

dimensional spaces and filling them with strings out of obfuscatory glee. Their use of language is as esoteric and baffling as that of the literary deconstructionist: each speaks in a private gobbledygook understandable only to those similarly initiated. It is easy to imagine that both are lost in a world of pointless tabulation.

*The End of Physics: The Myth of a Unified Theory*

Prologue: The Lure of Numbers (p. 19)

Basic Books, Inc. New York, New York, USA. 1993

But by tradition the physicist, having found one level of order in nature, invariably wants to know, like the archaeologist digging down into the remains of Troy, whether there is another, more primitive layer underneath.

*The End of Physics: The Myth of a Unified Theory*

Part I, Chapter 3 (p. 98)

Basic Books, Inc. New York, New York, USA. 1993

**Lodge, Sir Oliver** 1851–1940  
English physicist

But, notwithstanding any temptation to idolatry, a physicist is bound in the long run to return to his right mind; he must cease to be influenced unduly by superficial appearances, impracticable measurements, geometrical devices, and weirdly ingenious modes of expression; and remember that his real aim and object is absolute truth, however difficult of attainment that may be, that his function is to discover rather than to create, and that beneath and above and around all Appearances there exists a universe of full-bodied, concrete, absolute, reality.

Geometrisation of Physics, and Its Supposed Bias on the Michelson–Morley Experiment

*Nature*, Volume 106, Number 2677, February 17, 1921 (p. 800)

**Lützen, Jesper**

No biographical data available

The philosopher is like an engraver who enjoys a beautifully printed bill, the physicist is like the merchant who does not care about the quality of the bill.

*Mechanistic Images in Geometric Form*

Chapter 8 (p. 100)

Oxford University Press. New York, New York, USA. 2005

**Mach, Ernst** 1838–1916  
Austrian physicist and philosopher

Not every physicist is an epistemologist, and not everyone must or can be one. Special investigation claims a whole man, so also does the theory of knowledge.

Translated by Phillip E.B. Jourdain

*History and Root of the Principle of the Conservation of Energy*

Author's Preface (p. 12)

The Open Court Publishing Co. Chicago, Illinois, USA. 1911

We can see that the physicists are on the surest road to becoming a church, and are already appropriating all the customary means to this end. To this I simply answer: If belief in the reality of atoms is so essential to you [Max Planck] I hereby abandon the physicist manner of thought, I will be no regular physicist. I will renounce all scientific recognition; in short the communion of the faithful I will decline with best thanks. For dearer to me is freedom of thought.

Mach and his Work

*Monist*, Volume 21 1911 (p. 33)

### Malin, Shimon

Theoretical physicist

...physicists are like ordinary people. If they can't resolve a contradiction, and the contradiction is not pressing, they just disregard it and give their attention to those aspects of the theory (or theories) that are pleasantly consistent.

*Nature Loves to Hide: Quantum Physics and Reality, a Western Perspective*

Chapter 8 (p. 90)

Oxford University Press. New York, New York, USA. 2001

### Malpass, Brian

No biographical data available

... while one physicist in isolation can talk to a lay person, admittedly with difficulty, two physicists can only converse with each other in close proximity to a blackboard, on which they feverishly scrawl cabalistic symbols.

*Physics Today*, Volume 38, Number 4, April, 1985 (p. 41)

### Michelson, Albert Abraham

1852–1931

German-American physicist

If a poet could at the same time be a physicist, he might convey to others the pleasure, the satisfaction, almost the reverence, which the subject inspires. The aesthetic side of the subject is, I confess, by no means the least attractive to me. Especially is its fascination felt in the branch which deals with light...

*Light Waves and Their Uses*

Lecture I (p. 1)

The University of Chicago Press. Chicago, Illinois, USA. 1903

### Milne, Edward Arthur

1896–1950

English astrophysicist and cosmologist

The mathematical physicist does not dictate to the world what it must be like. But he is guided by mathematical form to make suggestions to the experimenter. His peculiar role then ends. The experimenter decides.

*The Aims of Mathematical Physics* (p. 9)

Clarendon Press. London, England. 1929

### National Research Council (US)

All physicists, whatever the nature of their professional activity, should encourage those members of the physics profession with talent for such activity to devote a significant fraction of the time and resources available to them to introduce as many of their fellow citizens as possible – children and adults alike – to the pleasures and satisfaction that come from greater understanding of natural phenomena through application of the concepts and laws, as well as the style and approaches, of physics.

*Physics in Perspective* (Volume 1)

Chapter 2 (p. 25)

National Academy of Sciences

Washington, D.C. 1972

### Nietzsche, Friedrich Wilhelm

1844–1900

German philosopher

We must be physicists in order...to be creative since so far codes of values and ideals have been constructed in ignorance of physics or even in contradiction to physics.

*The Gay Science*

Aphorism 335

Cambridge University Press. Cambridge, England. 2001

### Oppenheimer, James Robert

1904–67

American theoretical physicist

In some sort of crude sense which no vulgarity, no humor, no overstatement can quite extinguish, the physicists have known sin, and this is a knowledge which they cannot lose.

Expiation

*Time*, Volume 51, Number 8, 23 February, 1948 (p. 94)

**Pagels, Heinz R.** 1939–88

American physicist and science writer

I once heard a story that physicists when they die go to a heavenly academy where their purpose is to lay down the laws of nature. But there is a rule they must obey: Any new law they make cannot contradict ones already discovered and verified by their colleagues back on earth. The legend says that Pauli, one of the sharpest critics of physics, is there now setting intellectual traps and doing physics tricks to foul our best efforts.

*The Cosmic Code: Quantum Physics as the Language of Nature*  
Part III, Chapter 1 (p. 339)  
Simon & Schuster. New York, New York, USA. 1982

**Petroski, Henry** 1942–

Civil engineer

Embedded in a matrix of mistakes  
And slips of sighs, his next equation lies  
About its symmetry. Among the lines  
Of exercise and bold heuristic thrusts  
Of algebra and calculus, it takes  
His magic mirror mind to recognize  
A juxtaposition that unifies  
His theory of another universe.  
Extracting the law from the accidents,  
He calls it Theorem and proceeds to prove  
It logically follows from stronger laws.  
He makes some definitions and extends  
The theorem more and more and marvels at the rules  
His universe follows, effect from cause.

The Mathematical Physicist  
*Southern Humanities Review*, Volume 8, Number 2, 1972 (p. 184)

**Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

Nothing but facts are of importance. John Lackland passed by here. Here is something that is admirable. Here is a reality for which I would give all the theories in the world.” That is the language of the historian. The physicist would say rather: “John Lackland passed by here; that makes no difference to me, for he never will pass this way again.”

*The Foundations of Science*  
*Science and Hypothesis*, Part IV  
Chapter IX (p. 128)  
The Science Press. New York, New York, USA. 1913

The physicist cannot demand of the analyst a revelation of new truth; the analyst can at best aid the physicist in the presentation of truth.

The Relations of Analysis and Mathematical Physics  
*Bulletin of the American Mathematical Society*, Volume IV, Number 6,  
March, 1898 (p. 248)

**Poynting, John Henry** 1852–1914

English physicist

The range of the physicist’s study consists in the visible motions and other sensible changes of matter. The experiences with which he deals are the impressions on his senses, and his aim is to describe in the shortest possible way how his various senses have been, will be, or would be affected.

*Report of the Sixty-ninth Meeting British Association for the Advancement of Science*  
The President’s Address (p. 615)  
John Murray. London, England. 1900

To take an old but never worn-out metaphor, the physicist is examining the garment of Nature, learning of how many, or rather of how few, different kinds of thread it is woven, finding how each separate thread enters into the pattern, and seeking from the pattern woven in the past to know the pattern yet to come.

Address to the British Association  
*Chemical News and Journal of Industrial Science*, Volume 80, Number 2079, September 29, 1899 (p. 155)

**Rabi, Isidor Isaac** 1898–1988

Austrian-born American physicist

I think physicists are the Peter Pans of the human race. They never grow up, and they keep their curiosity.

In Jeremy Bernstein  
*Experiencing Science*  
Part 1. Two Faces of Physics. Chapter 2. Rabi: The Modern Age (p. 102)  
Basic Books, Inc. New York, New York, USA. 1978

**Rees, Martin John** 1942–

15th Astronomer Royal of England

The physicist is like someone who’s watching people playing chess and, after watching a few games, he may have worked out what the moves in the game are. But understanding the rules is just a trivial preliminary on the long route from being a novice to being a grand master. So even if we understand all the laws of physics, then exploring their consequences in the everyday world where complex structures can exist is a far more daunting task, and that’s an inexhaustible one I’m sure.

In Lewis Wolpert and Alison Richards  
*A Passion for Science*  
Chapter 3 (p. 37)  
Oxford University Press, Inc. Oxford, England. 1988

**Robinson, Howard A.**

No biographical data available

Because physicists are a small group, they often suffer in many ways from psychoses similar to those found in political minorities. In an effort to keep their own individuality they feel it necessary to resist pressure from the outside and the result is...that a group of physicists tend to behave like an amoebae.

The Challenge of Industrial Physics  
*Physics Today*, June, 1948 (p. 7)

**Rogers, Eric**

No biographical data available

The physicist who does not enjoy watching a dime and a quarter drop together has no heart.

*Astronomy for the Inquiring Mind*

Preliminary Introduction (p. 4)

Princeton University Press. Princeton, New Jersey, USA. 1982

**Rorty, Richard** 1931–

American philosopher

Here is one way to look at physics: the physicists are men looking for new interpretations of the Book of Nature. After each pedestrian period of normal science, they dream up a new model, a new picture, a new vocabulary, and then they announce that the true meaning of the Book has been discovered. But, of course, it never is, anymore than the true meaning of Coriolanus or the Dunciad or the Phenomenology of the Spirit or the Philosophical Investigations. What makes them physicists is that their writings are commentaries on the writings of earlier interpreters of Nature, not that they all are somehow “talking about the same thing”...

Philosophy as a Kind of Writing

*New Literary History*, Volume 10, Number 1, Autumn, 1978 (p. 141)

**Rowland, Henry Augustus** 1848–1901

American physicist

In a country where the doctrine of the equal rights of man has been distorted to mean the equality of man in other respects, we form a small and unique body of men, a new variety of the human race, as one of our greatest scientists calls it, whose views of what constitutes the greatest achievement in life are very different from those around us. In this respect we form an aristocracy, not of wealth, not of pedigree, but of intellect and of ideals, holding him in the highest respect who adds the – most to our knowledge or who strives after it as the highest good.

*The Physical Papers of Henry Augustus Rowland*

The Highest Aims of the Physicist (p. 668)

The Johns Hopkins Press. Baltimore, Maryland, USA. 1902

The aims of the physicist...are in part purely intellectual: he strives to understand the universe on account of the intellectual pleasure derived from the pursuit, but he is upheld in it by the knowledge that the study of nature's secrets is the ordained method by which the greatest good and happiness shall finally come to the human race.

*The Physical Papers of Henry Augustus Rowland*

The Highest Aims of the Physicist (p. 678)

The Johns Hopkins Press. Baltimore, Maryland, USA. 1902

**Ruelle, David** 1935–

Belgian-French mathematical physicist

What is the origin of the urge, the fascination that drives physicists, mathematicians, and presumably other scientists as well? Psychoanalysis suggests that it is sexual curiosity. You start by asking where little babies come

from, one thing leads to another, and you find yourself preparing nitroglycerine or solving differential equations. This explanation is somewhat irritating, and therefore probably basically correct.

*Chance and Chaos*

Chapter 26 (p. 164)

Princeton University Press. Princeton, New Jersey, USA. 1991

**Russell, Henry Norris** 1877–1957

American astronomer

If a first-rate physicist, well versed in all the knowledge acquired in the laboratory during the last quarter century on the structure and properties of the atom, should have lived his life on a planet so enshrouded by clouds that neither he nor others had ever glimpsed the starry heavens, yet if he had the imagination to conceive that immense quantities of matter might lie beyond the clouds, he would be able to picture the heavens much as they are, tell the probable maximum masses of the stars, their minimum distances, the range of their diameters and temperatures, the differences of their spectra, and in short to duplicate by prediction, not only in general features but in many of the finest details the actual appearance of the universe forever hidden from him.

Quoted in C.G. Abbot

*Annual Report of the Board of Regents of the Smithsonian Institution, 1922*

The Architecture of Atoms and a Universe Built of Atoms (p. 157)

Government Printing Office. Washington, D.C. 1924

**Sagan, Carl** 1934–96

American astronomer and author

Physicists had to invent words and phrases for concepts far removed from everyday experience. It was their fashion to avoid pure neologisms and instead to evoke, even if feebly, some analogous commonplace. The alternative was to name discoveries and equations after one another. This they did also. But if you didn't know it was physics they were talking, you might very well worry about them.

*Contact: A Novel*

Chapter 19 (p. 331)

Simon & Schuster. New York, New York, USA. 1985

**Singer, Kurt** 1886–1962

German philosopher

...the true mathematician and physicist know very well that the realms of the small and the great often obey quite different rules.

*Mirror, Sword and Jewel: A Study of Japanese Characteristics*

Chapter 5 (p. 75)

Croom Helm. London, England. 1973

**Standen, Anthony**

Anglo-American science writer

Physicists, being in no way different from the rest of the population, have short memories for what is inconvenient.

*Science Is a Sacred Cow*

Chapter III (p. 68)

E.P. Dutton. New York, New York, USA. 1950

... although in theory physicists realize that their conclusions are...not certainly true, this...does not really sink into their consciousness. Nearly all the time...they...act as if Science were indisputably True, and what's more, as if only science were true.... Any information obtained otherwise than by the scientific method, although it may be true, the scientists will call "unscientific," using this word as a smear word, by bringing in the connotation from its original [Greek] meaning, to imply that the information is false, or at any rate slightly phony.

*Science Is a Sacred Cow*

Chapter VII (pp. 176–177)

E.P. Dutton. New York, New York, USA. 1950

**Strutt, John William (Lord Rayleigh)** 1842–1919  
English physicist

The different habits of mind of the two schools of physicists sometimes lead them to the adoption of antagonistic views on doubtful and difficult questions. The tendency of the purely experimental school is to rely almost exclusively upon direct evidence, even when it is obviously imperfect, and to disregard arguments which they stigmatize as theoretical. The tendency of the mathematician is to over-rate the solidity of his theoretical structures, and to forget the narrowness of the experimental foundation upon which many of them rest.

*Life of John William Strutt: Third Baron Rayleigh* (p. 132)

University of Wisconsin Press. Madison, Wisconsin, USA. 1968

**Thompson, Sir D'Arcy Wentworth** 1860–1948  
Scottish zoologist and classical scholar

To seek not for end but for antecedents is the way of the physicist, who finds "causes" in what he has learned to recognise as fundamental properties, or inseparable concomitants, or unchanging laws, of matter and of energy.

*On Growth and Form*

Introductory (p. 6)

At the University Press. Cambridge, England. 1945

**Thomson, Sir Joseph John** 1856–1940  
English physicist

There is a school of mathematical physicists which objects to the introduction of ideas which do not relate to things which can actually be observed and measured.... I hold that if the introduction of a quantity promotes clearness of thought, then even if at the moment we have no means of determining it with precision, its introduction is not only legitimate but desirable. The immeasurable of today may be the measurable of tomorrow.

In John D. Barrow

*The World Within the World* (p. 97)

Clarendon Press. Oxford, England. 1988

**Tyndall, John** 1820–93

Irish-born English physicist

I have...tried to show [how physicists] pass from the world of the senses to a world where vision becomes spiritual, where principles are [formed], and from which the explorer emerges with [concepts] to be approved or rejected as they coincide] with sensible things.

*Heat A Mode of Motion* (6th edition)

Preface (p. viii)

D. Appleton & Co. New York, New York, USA. 1915

**Toulmin, Stephen** 1922–

Anglo-American philosopher

Natural historians...look for regularities of given forms, but physicists seek the form of given regularities.

*The Philosophy of Science: An Introduction*

Chapter II, Section 2.8 (p. 53)

Harper & Row, Publishers. New York, New York, USA. 1960

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

...cement, patch-up, and glue together, as witchdoctors do, the Newtonian doctrine, so that it could, as an embalmed corpse, preside in the style of ancient Egyptians, at the drinking bouts of physicists.

In S.L. Jaki

Goethe and the Physicists

*American Journal of Physics*, Volume 37 (p. 198)

**von Helmholtz, Robert**

No biographical data available

Speaking generally, the greatest physicist nowadays will be he who is endowed equally with the gifts of observation and with logical precision of thinking, and has mastered experiment as well as mathematics.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1889*

A Memoir of Gustav Robert Kirchhoff (p. 528)

Government Printing Office. Washington, D.C. 1889

**Wald, George** 1906–97

American biologist and biochemist

It would be a poor thing to be an atom in a universe without physicists, and physicists are made of atoms. A physicist is an atom's way of knowing about atoms.

*The Fitness of the Environment: An Inquiry into the Biological Significance of the Properties of Matter*

Foreword

Beacon Press. Boston, Massachusetts, USA. 1958

**Watson, William Heriot**

Physicist

The physicist, how-ever, is not in the happy position of the bricklayer in that no one takes the trouble to assert the importance of bricklaying for philosophy or of philosophy for bricklaying, whereas at the present time the

interest of philosophers in physics and of physicists in philosophy is greater than at any time in the last two hundred years.

*On Understanding Physics*  
The University Press. 1938

**Weisskopf, Victor Frederick** 1908–2002  
Austrian-American physicist

There are three kinds of physicists, as we know, namely the machine builders, the experimental physicists, and the theoretical physicists. If we compare those three classes, we find that the machine builders are the most important ones, because if they were not there, we could not get to this small-scale region. If we compare this with the discovery of America, then, I would say, the machine builders correspond to the captains and ship builders who really developed the techniques at that time. The experimentalists were those fellows on the ships that sailed to the other side of the world and then jumped upon the new islands and just wrote down what they saw. The theoretical physicists are those fellows who stayed back in Madrid and told Columbus that he was going to land in India.

In Heinz R. Pagels  
*The Cosmic Code: Quantum Physics as the Language of Nature*  
Part II, Chapter 1 (p. 198)  
Simon & Schuster. New York, New York, USA. 1982

Self-confidence is an important ingredient that makes for a successful physicist.

In L.M. Brown and L. Hoddeson  
*The Birth of Particle Physics*  
Growing Up with Field Theory: The Development of Quantum Electrodynamics (p. 75)  
Cambridge University Press. Cambridge, England. 1983

American physicist and educator

The physicist does not have the habit of giving up something unless he gets something better in return.

In Cecil M. DeWitt and John A. Wheeler  
*Battelle Recontres: 1967 Lectures in Mathematics and Physics* (p. 261)  
W.A. Benjamin, Inc. New York, New York, USA. 1968

**White, Stephen**  
No biographical data available

[Physicists] are, as a general rule, highbrows. They think and talk in long, Latin words, and when they write anything down they usually include at least one partial differential and three Greek letters.

A Newsman Looks at Physicists  
*Physics Today*, Volume 1, Number 1, May, 1948 (p. 15)

**Wiener, Norbert** 1894–1964  
American mathematician

Experience has pretty well convinced the working physicist that any idea of nature which is not only difficult to

interpret but which actively resists interpretation has not been justified as far as his past work is concerned, and therefore, to be an effective scientist, he must be naive, and even deliberately naive, in making the assumption that he is dealing with an honest God, and must ask his questions of the world as an honest man.

*The Human Use of Human Beings*  
Chapter XI (p. 189)  
Da Capo Press. New York, New York, USA. 1988

**Ziman, John M.** 1925–2005  
English physicist

...theoretical physicists are like pure mathematicians, in that they are often interested in the hypothetical behaviour of entirely imaginary objects, such as parallel universes, or particles traveling faster than light, whose actual existence is not being seriously proposed at all.

*Real Science: What it Is, and what it Means*  
Chapter 10 (p. 315)  
Cambridge University Press. Cambridge, England. 2000

**Zolynas, Al** 1945–  
American poet

And so, the closer he looks at things, the farther away they seem. At dinner, after a hard day at the universe, he finds himself slipping through his food. His own hands wave at him from beyond a mountain of peas. Stars and planets dance with molecules on his fingertips. After a hard day with the universe, he tumbles through himself, flies through the dream galaxies of his own heart. In the very presence of his family he feels he is descending through an infinite series of Chinese boxes.

*The New Physics: Poems*

Wesleyan University Press. Middletown, Connecticut, USA. 1979

## PHYSICIST'S BILL OF RIGHTS

### Author undetermined

#### THE PHYSICIST'S BILL OF RIGHTS

We hold these postulates to be intuitively obvious, that all physicists are born equal, to a first approximation, and are endowed by their creator with certain discrete privileges, among them a mean rest life, n degrees of freedom, and the following rights which are invariant under all linear transformations:

1. To approximate all problems to ideal cases.
2. To use order of magnitude calculations whenever deemed necessary (i.e., whenever one can get away with it).
3. To use the rigorous method of 'squinting' for solving problems more complex than the addition of positive real integers.
4. To dismiss all functions which diverge as 'nasty' and 'unphysical.'

5. To invoke the uncertainty principle when confronted by confused mathematicians, chemists, engineers, psychologists, dramatists, and other lower scientists.
6. When pressed by non-physicists for an explanation of (4) to mumble in a sneering tone of voice something about physically naive mathematicians.
7. To equate two sides of an equation which are dimensionally inconsistent, with a suitable comment to the effect of, 'Well, we are interested in the order of magnitude anyway.'
8. To the extensive use of 'bastard notations' where conventional mathematics will not work.
9. To invent fictitious forces to delude the general public.
10. To justify shaky reasoning on the basis that it gives the right answer.
11. To cleverly choose convenient initial conditions, using the principle of general triviality.
12. To use plausible arguments in place of proofs, and thenceforth refer to these arguments as proofs.
13. To take on faith any principle which seems right but cannot be proved.

## PHYSICS

### Achard, Franz Karl 1753–1821

German chemist and experimental physicist

Everyone now agrees that a physics lacking all connection with mathematics...would only be an historical amusement, fitter for entertaining the idle than for occupying the mind of a philosopher.

In J.L. Heilbron

*Electricity in the 17th and 18th Centuries: A Study of Early Modern Physics* (p. 74)

University of California Press. Berkeley, California, USA. 1979

### Adair, Robert K.

American physicist

Physics is narrow, precise, and simple in a manner such that history, sociology, psychology, or the study of literature are broad, hazy, and difficult.

*The Great Design: Particles, Fields, and Creation*

Chapter I (p. 5)

Oxford University Press. Oxford, England. 1989

### Adams, Douglas 1952–2001

English author, comic radio dramatist, and musician

And as they drifted up their minds sang with the ecstatic knowledge that either what they were doing was completely and utterly and totally impossible or that physics had a lot of catching up to do.

*So Long, and Thanks for All the Fish*

Chapter 26 (p. 140)

Harmony Books. New York, New York, USA. 1984

### Alvarez, Luis Walter 1911–88

American experimental physicist

There is no democracy in physics. We can't say that some second rate guy has as much right to opinion as Fermi.

In Daniel S. Greenberg

*The Politics of Pure Science*

Book One, Chapter II (p. 42)

New American Library. New York, New York, USA. 1967

The world of mathematics and theoretical physics is hierarchical. That was my first exposure to it. There's a limit beyond which one cannot progress. The differences between the limiting abilities of those on successively higher steps of the pyramid are enormous. I have not seen described anywhere the shock a talented man experiences when he finds, late in his academic life, that there are others enormously more talented than he. I have personally seen more tears shed by grown men and women over this discovery than I would have believed possible. Most of those men and women shift to fields where they can compete on more equal terms.

*Alvarez: Adventures of a Physicist*

Chapter One (p. 20)

Basic Books, Inc. New York, New York, USA. 1987

### Author undetermined

Introductory physics courses are taught at three levels: physics with calculus, physics without calculus, and physics without physics.

Source undetermined

The Euclidean foundation of geometry is to the Gaussian foundation of geometry as the Newton particle concept of physics is to the Faraday–Maxwell concept of physics.

In Howard W. Eves

*Mathematical Circles* (Volume 2)

*Mathematical Circles Squared*

73 (p. 56)

The Mathematical Association of America, Inc. 2003

If you think, you experience time.

If you feel, you experience energy.

If you intuit, you experience wavelength

If you sense, you experience space.

In Fred Alan Wolf

*Star Wave: Mind Consciousness of Quantum Physics* (p. 16)

Macmillan Publishing Company. New York, New York, USA. 1984

### Bacon, Sir Francis 1561–1626

English lawyer, statesman, and essayist

We have no sound notions either in logic or physics; substance, quality, action, passion, and existence are not clear notions; much less weight, levity, density, tenuity, moisture, dryness, generation, corruption, attraction, repulsion, element, matter, form, and the like. They are all fantastical and ill-defined.

In *Great Books of the Western World* (Volume 30)

*Novum Organum*

First Book, Aphorism 15 (p. 108)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Physic...is situate in a middle term or distance between natural history and metaphysic. For natural history describeth the variety of things; physic the causes, but variable or respective causes; and metaphysic the fixed and constant causes.

In *Great Books of the Western World* (Volume 30)*Advancement of Learning*

Second Book, Chapter VII, Section 4 (p. 43)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...physics inquires into the efficient and the matter, and metaphysics into the form and the end. Physics, therefore, is vague and unstable as to causes, and treats movable bodies as its subjects, without discovering a constancy of causes in different subjects.

*Advancement of Learning: and Novum Organum**On the Dignity and Advancement of Learning*

Book I, Chapter IV (p. 84)

The Colonial Press. New York, New York, USA. 1900

**Ball, Walter William Rouse** 1850–1925

English mathematician

The advance in our knowledge of physics is largely due to the application to it of mathematics, and every year it becomes more difficult for an experimenter to make any mark in the subject unless he is also a mathematician.

*A Short Account of the History of Mathematics* (p. 503)

Macmillan &amp; Company Ltd. London, England. 1908

**Barker, George Frederick** 1835–1910

American scientist

...physics may be defined as that department of science whose province it is to investigate all those phenomena of nature which depend, either upon the transference of energy from one portion of matter to another, or upon its transformation into any of the forms which it is capable of assuming. In a word, physics may be regarded as the science of energy, precisely as chemistry may be regarded as the science of matter.

*Physics: Advanced Course* (4th edition)

Part First, Introduction (p. 6)

Henry Holt &amp; Co. New York, New York, USA. 1893

...physics regards matter solely as the vehicle of energy.... In a word, physics may be regarded as the science of energy, precisely as chemistry may be regarded as the science of matter.

*Physics: Advanced Course* (2nd edition)

Chapter I (p. 6)

Henry Holt &amp; Company. New York, New York, USA. 1892

Scottish-American mathematician and educator

Daniel Bernoulli has been called the father of mathematical physics.

In James R. Newman (ed.)

*The World of Mathematics* (Volume 2)

Kinetic Theory of Gases (p. 774)

Simon &amp; Schuster. New York, New York, USA. 1956

**Bergson, Henri** 1859–1941

French philosopher

...physics is but logic spoiled.

Translated by Arthur Mitchell

*Creative Evolution*

Chapter IV (p. 320)

The Modern Library. New York, New York, USA. 1944

**Berry, Sir Michael Victor** 1941–

English mathematical physicist

...in one of those unexpected connections that make theoretical physics so delightful, the quantum chorology of spectra turns out to be deeply connected to the arithmetic of prime numbers, through the celebrated zeros of the Riemann zeta function: the zeros mimic quantum energy levels of a classically chaotic system. The connection is not only deep but also tantalizing, since its basis is still obscure – though it has been fruitful for both mathematics and physics.

In R.J. Russell, P. Clayton, K. Wegter-McNelly, and J. Polkinghorne (eds.)

*Quantum Mechanics: Scientific Perspectives on Divine Action*

Chaos and the Semiclassical Limit of Quantum Mechanics (Is the Moon There When Somebody Looks?)

University of Notre Dame Press. Notre Dame, Indiana, USA. 2002

**Birkhoff, George David** 1884–1944

American mathematician

It will probably be the new mathematical discoveries suggested through physics that will always be the most important, for from the beginning Nature has led the way and established the pattern which mathematics, the language of Nature, must follow.

The Mathematical Nature of Physical Theories

*American Scientist*, Volume 31, Number 4, October, 1943 (p. 310)**Blackett, Lord Patrick Maynard****Stuart** 1897–1974

English physicist

Thus was born the vast modern subject of nuclear physics, which now gives such fertile research problems to so many of the world's physicists and, incidentally, such headaches to so many of the world's statesmen.

In J.B. Birks

*Rutherford at Manchester*

Memories of Rutherford (p. 104)

W.A. Benjamin. New York, New York, USA. 1962

**Bohr, Niels Henrik David** 1886–1962

Danish physicist

My starting point was rather the stability of matter, a pure miracle when considered from the standpoint of classical physics. By “stability” I mean that the same substances always have the same properties...

In Werner Heisenberg

*Physics and Beyond: Encounters and Conversations*

Chapter 3 (p. 39)

Harper &amp; Row, Publishers. New York, New York, USA. 1971

It is wrong to think that the task of physics is to find out how nature is. Physics concerns what we can say about nature.

In N. Herbert

*Quantum Reality: Beyond the New Physics*

Chapter 3 (p. 45)

Anchor Press/Doubleday. Garden City, New York, USA. 1985

In physics...our problem consists in the co-ordination of our experience of the external world...

*Atomic Theory and the Description of Nature*

Introductory Survey (p. 1)

Cambridge University Press. Cambridge, England. 1934

...the new situation in physics is that we are both onlookers and actors in the great drama of existence.

*Atomic Theory and the Description of Nature*

Chapter IV (p. 119)

Cambridge University Press. Cambridge, England. 1934

**Born, Max** 1882–1970

German-born English physicist

It is natural that a man should consider the work of his hands or his brain to be useful and important. Therefore nobody will object to an ardent experimentalist boasting of his measurements and rather looking down on the “paper and ink” physics of his theoretical friend, who on his part is proud of his lofty ideas and despises the dirty fingers of the other.

*Experiment and Theory in Physics* (p. 1)

Cambridge University Press. Cambridge, England. 1944

The problem of physics is how the actual phenomena, as observed with the help of our sense organs aided by instruments, can be reduced to simple notions which are suited for precise measurement and used of the formulation of quantitative laws.

*Experiment and Theory in Physics* (pp. 8–9)

Cambridge University Press. Cambridge, England. 1944

Hope is a word one is unlikely to find in the literature of physics.

*My Life and My Views*

Chapter Six (p. 190)

Charles Scribner's Sons. New York, New York, USA. 1968

**Boyle, Robert** 1627–91

English natural philosopher and theological writer

I confess, that after I began...to discern how useful mathematicks may be made to physicks, I have often wished that I had employed the speculative part of geometry, and the cultivation of the specious Algebra I had been taught very young, a good part of that time and industry, that I had spent about surveying and fortification (of which I remember I once wrote an entire treatise) and other parts of practick mathematicks.

*The Work of the Honourable Robert Boyles* (Volume 4)

The Usefulness of Mathematicks to Natural Philosophy, Volume 3 (p. 426)

Printed for A. Millar. London, England. 1744

**Bragg, Sir William Henry** 1862–1942

English physicist

On Mondays, Wednesdays, and Fridays we teach the wave theory and on Tuesdays, Thursdays, and Saturdays the corpuscular theory.

Electrons and Ether Waves, 23rd Robert Boyle Lecture

*Scientific Monthly*, Volume 4, Issue 2, 1922 (p. 11)**Brennan, Richard P.**

Science writer

Physics can be expected to continue because it is, by its nature, open-ended and exploratory and because, at its heart, science is simply people asking questions.

*Heisenberg Probably Slept Here*

Epilogue (p. 249)

John Wiley &amp; Sons, Inc. New York, New York, USA. 1997

**Bronowski, Jacob** 1908–74

Polish-born English mathematician and polymath

Physics is not events but observations. Relativity is the understanding of the world not as events but as relations.

*The Ascent of Man*

The Majestic Clockwork (p. 254)

Little, Brown &amp; Co. Boston, Massachusetts, USA. 1973

Physics becomes in those years the greatest collective work of art of the twentieth century.

*The Ascent of Man*

Chapter 10 (p. 328)

Little, Brown &amp; Company. Boston, Massachusetts, USA. 1973

One aim of the physical sciences has been to give an exact picture of the material world. One achievement of physics in the twentieth century has been to prove that that aim is unattainable.

*The Ascent of Man*

Chapter 11 (p. 353)

Little, Brown &amp; Company. Boston, Massachusetts, USA. 1973

**Burbridge, Geoffrey**

American astronomer

We live in an era when it seems legitimate to try everything conceivable within the known laws of physics, particularly in the absence of data.

Focal Point

**Butterfield, Herbert** 1900–79

English historian and philosopher of history

...it [Aristotelian physics] outshines everything since the rise of Christianity and reduces the Renaissance and Reformation to the rank of mere episodes, mere internal displacements, within the system of medieval Christendom...

*The Origins of Modern Science: 1300–1800*

Introduction (pp. vii–viii)

The Macmillan Co. New York, New York, USA. 1957

**Carmichael, Robert Daniel** 1879–1967

American mathematician

Those who look on physics from the outside not infrequently have the feeling that it has forgotten some of its philosophical foundations. Even among its own workers the condition of the science has not entirely escaped notice.

*The Theory of Relativity* (2nd edition)

Chapter I

John Wiley & Sons. New York, New York, USA. 1920

**Carnap, Rudolf** 1891–1970

American philosopher

Physics originally began as a descriptive macrophysics, containing an enormous number of empirical laws with no apparent connections. In the beginning of a science, scientists may be very proud to have discovered hundreds of laws. But, as the laws proliferate, they become unhappy with this state of affairs; they begin to search for underlying principles.

*An Introduction to the Philosophy of Science* (p. 244)

Clarendon Press. Oxford, England. 1988

...the facts and objects of the various branches of Science are fundamentally the same kind. For all branches are part of the unified Science, of Physics.

*The Unity of Science*

Unified Science in Physical Language, Section 7 (p. 101)

Thommes Press. Bristol, England. 1995

**Cartwright, Nancy** 1943–

Philosopher of physics

...the fundamental laws of physics do not describe true facts about reality. Rendered as descriptions of facts, they are false; amended to be true, they lose their explanatory force.

*How the Laws of Physics Lie*

Essay 3 (p. 54)

Clarendon Press. Oxford, England. 1983

Although philosophers generally believe in laws and deny causes, explanatory practice in physics is just the reverse.

*How the Laws of Physics Lie*

Essay 4 (p. 86)

Clarendon Press. Oxford, England. 1983

**CERN Courier**

The main goal of physics is to describe a maximum of phenomena with a minimum of variables.

In John N Shive and Robert L. Weber

In *Similarities in Physics*

Chapter 16 (p. 213)

John Wiley & Sons, Inc. New York, New York, USA. 1982

**Compton, Karl Taylor** 1887–1954

American educator and physicist

In the last fifty years physics has exerted a more powerful beneficial influence on the intellectual, economic and social life of the world than has been exerted in a comparable time by any other agency in history. Its influence has far exceeded that of wars, political alignment or social theories.

*Science (supplement)*, Volume 84, Number 10, 1936

**Comte, Auguste** 1798–1857

French philosopher

The domain of physics is no proper field for mathematical pastimes. The best security would be in giving a geometrical training to physicists, who need not then have recourse to mathematicians, whose tendency is to despise experimental science.

*The Positive Philosophy of Auguste Comte*

Book III, Chapter I (p. 220)

John Chapman. London, England. 1853

...the education of physicists must be more complicated than that of astronomers.

*The Positive Philosophy of Auguste Comte*

Book III, Chapter I (p. 222)

John Chapman. London, England. 1853

**Condon, Edward Uhler** 1902–74

American physicist

I take it to be the object of physics so to organize past experience and so to direct the acquisition of new experience that ultimately it will be possible to predict the outcome of any proposed experiment which is capable of being carried out – and to make the prediction in less time than it would have taken actually to carry out the proposed experiment. When this shall have been done I will say that man has a complete understanding of his physical environment. Others may ask more; with this I am satisfied.

The Philosophical Concepts of Modern Physics, Mathematical Models in Modern Physics

*Journal of the Franklin Institute*, Volume 225, Number 3, March, 1938 (p. 257)

“All is fair in love and war” and, I might add, in theoretical physics.

*Selected Popular Writings of E.U. Condon*

Mathematical Models in Modern Physics (p. 96)

Springer-Verlag. New York, New York, USA. 1991

If physics is too difficult for the physicists, the nonphysicist may wonder whether he should try at all to grasp its complexities and ambiguities.

In James R. Newmann  
*What is Science?*  
 Physics (p. 102)  
 Simon & Schuster. New York, New York, USA. 1955

### Crease, Robert P.

Science historian

### Mann, Charles C.

American journalist and science writer

On August 2, 1932, Anderson obtained a stunningly clear photograph that shocked both men. Despite Millikan's protestations, a particle had indeed shot up like a Roman candle from the floor of the chamber, slipped through the plate, and fallen off to the left. From the size of the track, the degree of the curvature, and the amount of momentum lost, the particle's mass was obviously near to that of an electron. But the track curved the wrong way. The particle was positive. Neither electron, proton, or neutron, the track came from something that had never been discovered before. It was, in fact, a "hole," although Anderson did not realize it for a while.... Anderson called the new particle a "positive electron"; positron was the name that stuck. Positrons were the new type of matter – antimatter – Dirac had been forced to predict by his theory. (The equation, he said later, had been smarter than he was.)

 Uncertainty and Complementarity (p. 78)  
 Little, Brown & Company. Boston, Massachusetts, USA. 1991

### Crew, Henry

Physicist

Physics is not a series of disconnected subjects, including Mechanics, Sound, Light, Heat, and Electricity. It is, on the contrary, a body of well-organized truth, forming one great whole; illustrating, as do few other subjects, what Dickens called "the universal dove-tailedness of things."

*Elements of Physics: For Use in High Schools*

From the Preface to the First Edition (p. v)

The Macmillan Co. New York, New York, USA. 1909

...physics, in too many of our schools, ranks as a most difficult subject. But dealing, as it does, with the familiar phenomena of daily life, and requiring, as it does, only a small fraction of the algebraic knowledge which the average student has already acquired, the author is inclined to believe that the difficulty lies chiefly in the presentation.

*Elements of Physics: For Use in High Schools*

From the Preface to the First Edition (p. v)

The Macmillan Co. New York, New York, USA. 1909

### Cropper, William N.

No biographical data available

Physics builds from observations. No physical theory can succeed if it is not confirmed by observations, and a theory strongly supported by observations cannot be denied.

*Great Physicists*  
 I, Mechanics (p. 3)  
 Oxford University Press, Inc. New York, New York, USA. 2001

### Darrow, Karl Kelchner 1891–1982

American physicist

...it does not take an idea so long to become "classical" in physics as it does in the arts.

Some Contemporary Advances in Physics V

*Bell System Technical Journal*, Electrical Solids, Volume 3, 1924  
 (p. 621)

### Davies, Paul Charles William 1946–

British-born physicist, writer, and broadcaster

Physics is the most pretentious of all the sciences, for it purports to address all of physical reality. The physicist may confess ignorance about a particular system – a snowflake, a living organism, a weather pattern – but he will never concede that it lies outside the domain of physics in principle. The physicist believes that the laws of physics, plus knowledge of the relevant boundary conditions, are sufficient to explain, in principle, every phenomenon in the universe. Thus the entire universe, from the smallest fragment of matter to the largest assemblage of galaxies, becomes the physicist's domain – vast natural laboratory for the interplay of lawful forces.

In P.C.W. Davies (ed.)

*The New Physics*

The New Physics: A Synthesis (p. 1)

Cambridge University Press. Cambridge, England. 1989

It is clear that for nature to produce a cosmos even remotely resembling our own, many apparently unconnected branches of physics have to cooperate to a remarkable degree.

*The Accidental Universe* (p. 111)

Cambridge University Press. Cambridge, England. 1984

It is no exaggeration to say that quantum mechanics had dominated twentieth-century physics and is far and away the most successful scientific theory in existence. It is indispensable for understanding subatomic particles, atoms and nuclei, molecules and chemical bonding, the structure of solids, superconductors and superfluids, the electrical and thermal conductivity of metals and semiconductors, the structure of stars, and much else. It has practical applications ranging from the laser to the microchip. All this from a theory that at first sight – and second sight – looks absolutely crazy! Neils Bohr, one of the founders of quantum mechanics, once remarked that anybody who is not shocked by the theory hasn't understood it.

In Richard P. Feynman

*Six Easy Pieces: Essentials of Physics Explained by Its Most Brilliant Teacher*

Introduction (pp. xv, xvi)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1995

**Davies, Paul Charles William** 1946–  
British-born physicist, writer, and broadcaster

**Brown, Julian R.**

No biographical data available

No science is more pretentious than physics, for the physicist lays claim to the whole universe as his subject matter.

*Superstrings: A Theory of Everything*

Introduction (p. 1)

Cambridge University Press, Cambridge, England. 1988

**de Morgan, Augustus** 1806–71

English mathematician and logician

Among the mere talkers, so far as mathematics are concerned, are to be ranked three out of four of those who apply mathematics to physics, who, wanting a tool only, are very impatient of everything which is not of direct aid to the actual methods which are in their hands.

In Robert Graves

*Life of Sir William Rowan Hamilton* (Volume 3) (p. 348)

Hodges, Figgis & Company. Dublin, Ireland. 1882–89

**Descartes, René** 1596–1650

French philosopher, scientist, and mathematician

I accept no principles of physics which are not also accepted in mathematics...

*Principles of Philosophy*

Part III, 4

Reidel. Dordrecht, Netherlands. 1983

I should consider that I know nothing about physics if I were able to explain only how things might be, and were unable to demonstrate that they could not be otherwise. For, having reduced physics to mathematics, the demonstration is now possible, and I think that I can do it within the small compass of my knowledge.

In A.C. Crombie

Descartes

*Scientific American*, Volume 201, Number 4, October, 1959 (p. 160)

**Deutsch, David** 1953

Physicist

Anything that seems incomprehensible is regarded by science merely as evidence that there is something we have not yet understood, be it a conjuring trick, advanced technology or a new law of physics.

*The Fabric of Reality*

Chapter 6 (p. 138)

Penguin Books Ltd. London, England. 1998

**Dilorenzo, Kirk**

No biographical data available

Physics is the interrelationship of everything.

*The Physics Teacher*, Volume 14, Number 5, May, 1976 (p. 315)

**Dingle, Herbert** 1890–1978

English astrophysicist

Modern physics is, indeed, not unlike a ship, drawing nearer to a goal not yet in sight, but so tossed about by the buffeting of experiment and working hypothesis that the passenger scarcely knows whether he is progressing or drifting.

*Through Science to Philosophy*

Prologue (p. 15)

The Clarendon Press, Oxford, England. 1937

**Dirac, Paul Adrien Maurice** 1902–84

English theoretical physicist

Only questions about the results of experiments have a real significance and it is only such questions that theoretical physics has to consider.

*The Principles of Quantum Mechanics* (2nd edition)

Chapter I, Section 2 (p. 5)

At The Clarendon Press, Oxford, England. 1935

The present stage of physical theory is merely a steppingstone towards the better stages that we will have in the future. One can be quite sure that there will be better stages simply because of the difficulties that occur in the physics of today.

The Evolution of the Physicist's Picture of Nature

*Scientific American*, Volume 208, Number 5, May, 1963 (p. 48)

The new theories, if one looks apart from their mathematical setting, are built up from physical concepts which cannot be explained in terms of things previously known to the student, which cannot even be explained adequately in words at all. Like the fundamental concepts (e.g., proximity, identity) which everyone must learn on his arrival into the world, the newer concepts of physics can be mastered only by long familiarity with their properties and uses.

*The Principles of Quantum Mechanics* (2nd edition)

From the Preface to the First Edition (p. vi)

At The Clarendon Press, Oxford, England. 1935

A good deal of my research work in physics has consisted in not setting out to solve some particular problem but simply examining mathematical quantities of a kind that physicists use and trying to fit them together in an interesting way, regardless of any application that the work may have. It is simply a search for pretty mathematics. It may turn out later that the work does have an application. Then one has good luck.

*International Journal of Theoretical Physics*, Volume 21, 603 (1982)

**Duff, Michael**

English string theorist

Physics tend to be dictated by fad and fashion. There are the gurus who dictate the direction in which new ideas grow.

Parallel Universes  
BBC broadcast February 14, 2002

**Duhem, Pierre-Maurice-Marie** 1861–1916  
French physicist and mathematician

The development of physics incites a continual struggle between “nature that does not tire of providing” and reason that does not wish “to tire of conceiving.”

*The Aim and Structure of Physical Theory*  
Part I, Chapter II (p. 23)  
Princeton University Press. Princeton, New Jersey, USA. 1954

The laws of physics are therefore provisional in that the symbols they relate too simple to represent reality completely.

*The Aim and Structure of Physical Theory*  
Part II, Chapter V (p. 176)  
Princeton University Press. Princeton, New Jersey, USA. 1954

...physics makes progress because experiment constantly causes new disagreements to break out between laws and facts, and because physicists constantly touch up and modify laws in order that they may more faithfully represent the facts.

*The Aim and Structure of Physical Theory*  
Part II, Chapter V (p. 177)  
Princeton University Press. Princeton, New Jersey, USA. 1954

A “Crucial Experiment” is Impossible in Physics.

*The Aim and Structure of Physical Theory*  
Part II, Chapter VI (p. 188)  
Princeton University Press. Princeton, New Jersey, USA. 1954

Physics is not a machine one can take apart; one cannot try each piece in isolation and wait, to adjust it, until its solidity has been minutely checked. Physical science is a system that must be taken as a whole. It is an organism no part of which can be made to function without the remotest parts coming into play, some more, some less, but all in some degree.

*Essays in the History and Philosophy of Science* (p. 284)  
Hackett Publishing Company. Indianapolis, Indiana, USA. 1996

**Dyson, Freeman J.** 1923–  
American physicist and educator

Physics is littered with the corpses of dead unified field theories.

In John D. Barrow  
*The World Within the World* (p. 184)  
Clarendon Press. Oxford, England. 1988

I am acutely aware of the fact that the marriage between mathematics and physics, which was so enormously fruitful in past centuries, has recently ended in divorce.

Missed Opportunities  
*Bulletin of the American Mathematical Society*, Volume 78, 1972

...we have seen particle physics emerge as the playground of group theory.

In Joseph A. Gallian

*Contemporary Abstract Algebra*  
Chapter 3 (p. 55)  
D.C. Heath and Company. Lexington, Massachusetts, USA. 1994

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

In the world of physics we watch a shadowgraph performance of familiar life. The shadow of my elbow rests on the shadow table as the shadow ink flows over the shadow paper.... The frank realisation that physical science is concerned with a world of shadows is one of the most significant of recent advances.

*The Nature of the Physical World*  
Introduction (p. xi)  
The Macmillan Company. New York, New York, USA. 1930

The external world of physics has become a world of shadows.

*The Nature of the Physical World*  
Introduction (p. xvi)  
The Macmillan Company. New York, New York, USA. 1930

Distance and duration are the most fundamental terms in physics; velocity, acceleration, force, energy, and so on, all depend on them; and we can scarcely make any statement in physics without direct or indirect reference to them.

In Ronald W. Clark  
*Einstein: The Life and Times*  
Part Two, Chapter 4 (p. 93)  
The World Publishing Company. New York, New York, USA. 1971

I have not suggested that religion and free will can be deduced from modern physics...

*New Pathways in Science*  
Chapter XIII, Section VI (p. 306)  
The Macmillan Company. New York, New York, USA. 1935

I am afraid the knockabout comedy of modern atomic physics is not very tender towards our aesthetic ideals. The stately drama of stellar evolution turns out to be more like the hair-breadth escapades in the films. The music of the spheres has a painful suggestion of – jazz.

*Stars and Atoms*  
Lecture I (p. 27)  
Yale University Press. London, England. 1927

It is impossible to trap modern physics into predicting anything with perfect determinism because it deals with probabilities from the outset.

 German-born physicist

Reality is the real business of physics.  
 In Nick Herbert  
*Quantum Reality: Beyond the New Physics*  
 Chapter 1 (p. 4)  
 Anchor Press. Garden City, New York, USA. 1985

Today we know that no approach which is founded on classical mechanics and electrodynamics can yield a useful radiation formula.  
 In B.L. van der Waerden  
*Sources of Quantum Mechanics*  
 On the Quantum Theory of Radiation (p. 63)  
 Dover Publications. New York, New York, USA. 1968

What would physics look like without gravitation?  
 In Jean-Pierre Luminet  
*Black Holes* (p. 114)  
 Cambridge University Press. New York, New York, USA. 1992

In speaking here of “comprehensibility,” the expression is used in its most modest sense. It implies: the production of some sort of order among sense impressions, this order being produced by the creation of general concepts, relations between these concepts and sense experience. It is in this sense that the world of our sense experiences is comprehensible. The fact that it is comprehensible is a miracle.  
 In *Out of My Later Years*  
 Physics and Reality, Section 1  
 Thames & Hudson. London, England. 1950

Physics too deals with mathematical concepts; however, these concepts attain physical content only by the clear determination of their relation to the objects of experience.  
 In *Out of My Later Years*  
 The Theory of Relativity (p. 41)  
 Thames & Hudson. London, England. 1950

Physics constitutes a logical system of thought which is in a state of evolution, whose basis cannot be distilled, as it were, from experience by an inductive method, but can only be arrived at by free invention.  
 In *Out of My Later Years*  
 Physics and Reality, Summary  
 Thames & Hudson. London, England. 1950

Physics is the attempt at the conceptual construction of a model of the real world and its lawful structure.  
 In Gerald Holton  
*Thematic Origins of Scientific Thought: Kepler to Einstein*  
 Letter of November 28, 1930 to M. Schlick (p. 243)  
 Harvard University Press. Cambridge, Massachusetts, USA. 1973

That this insecure and contradictory foundation was sufficient to enable a man of Bohr’s unique instinct and sensitivity to discover the principal laws of the spectral lines and of the electron shell of the atoms, together with their significance for chemistry appeared to me as a miracle – and appears to me a miracle even today.  
 Translated by Paul Arthur Schlipp  
*Albert Einstein: Autobiographical Notes* (p. 43)  
 Open Court. La Salle, Illinois, USA. 1979

Experience, of course, remains the sole criterion for the serviceability of mathematical constructions for physics, but the truly creative principle resides in mathematics.  
 In Philipp Frank  
*Modern Science and Its Philosophy*  
 Chapter 16 (p. 297)  
 Harvard University Press, Cambridge, England. 1952

But in physics I soon learned to scent out the paths that led to the depths, and to disregard everything else, all the many things that clutter up the mind, and divert it from the essential. The hitch in this was, of course, the fact that one had to cram all this stuff into one’s mind for the examination, whether one liked it or not.  
 In Robert H. March  
*Physics for Poets*  
 Chapter 9 (p. 101)  
 McGraw-Hill Book Company, Inc. New York, New York, USA. 1996

I still lose my temper dutifully about physics. But I no longer flap my wings – I only ruffle my feathers. The majority of fools remain invincible.  
 In Sachi Sri Kantha  
*An Einstein Dictionary* (p. 96)  
 Greenwood Press, Publishers. Westport, Connecticut, USA. 1996

I have become an evil renegade who does not wish physics to be used on probabilities.  
 In Sachi Sri Kantha  
*An Einstein Dictionary* (p. 96)  
 Greenwood Press, Publishers. Westport, Connecticut, USA. 1996

In the matter of physics, the first lesson should contain nothing but what is experimental and interesting to see. A pretty experiment is in itself often more valuable than twenty formulae extracted from our minds; it is particularly important that a young mind that has yet to find its way about in the world of phenomena should be spared from formulae altogether. In [this mind] physics they play exactly the same weird and fearful part as the figures of dates in Universal History.  
 In A.P. French  
*Einstein: A Centenary Volume*  
 Chapter 11 (p. 220)  
 Harvard University Press. Cambridge, Massachusetts, USA. 1979

If the basis of theoretical physics cannot be an inference from experience, but must be free invention, have we any right to hope that we shall find the correct way? Still more – does this correct approach exist at all, save in our imagination? To this I answer with complete assurance, that in my opinion there is the correct path; moreover, that it is in our power to find it.

In Philipp Frank

Einstein's Philosophy of Science

*Review of Modern Physics*, Volume 21, Number 3, July 1949 (p. 354)

...the development of physics has shown that at any given moment, out of all conceivable constructions, a single one has always proved itself decidedly superior to all the rest. Nobody who has really gone deeply into the matter will deny that in practice the world of phenomena uniquely determines the theoretical system, in spite of the fact that there is no logical bridge between phenomena and their theoretical principles; this is what Leibnitz described so happily as a "pre-established harmony."

*Ideas and Opinions*

Principles of Research (p. 224)

Crown Publishers, Inc. New York, New York, USA. 1954

There are so many unsolved problems in physics. There is so much that we do not know; our theories are from adequate.

Bouncing a ball, flying a kite, blowing up a balloon – to a child it's play; to a scientist it's physics.

What's Physics?

*The Physics Teacher*, Volume 14, Number 5, May, 1976 (p. 315)

### **Feynman, Richard P.** 1918–88

American theoretical physicist

In order for physics to be useful to other sciences in a theoretical way, other than in the invention of instruments, the science in question must supply to the physicist a description of the object in a physicist's language.

*Six Easy Pieces: Essentials of Physics Explained by Its Most Brilliant Teacher*

The Relation of Physics to Other Sciences (p. 64)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1995

What do we mean by "understanding something?" We can imagine that this complicated array of moving things which constitutes "the world" is something like a great chess game being played by the gods, and we are observers of the game. We do not know what the rules of the game are: all we are allowed to do is to watch the playing. Of course, if we watch long enough we may eventually catch on to a few of the rules. The rules of the game are what we mean by fundamental physics. Even if we knew every rule, however, we might not be able to understand why a particular move is made in the game, merely because it is too complicated...

In P.C.W. Davies and J. Brown

*The Feynman Lectures on Physics* (Volume 1)

Chapter 2-1 (p. 2-1)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1983

The electron does anything it likes. It goes in any direction at any speed, forward or backward in time, however it likes...

In James Gleick

*Genius: The Life and Science of Richard Feynman*

Cornell (p. 250)

Pantheon Books. New York, New York, USA. 1992

The fact that I beat a drum has nothing to do with the fact that I do theoretical physics. Theoretical physics is a human endeavor, one of the higher developments of human beings – and this perpetual desire to prove that people who do it are human by showing that they do other things that a few other humans do (like playing bongo drums) is insulting to me. I'm human enough to tell you to go to hell.

In James Gleick

*Genius: The Life and Science of Richard Feynman*  
Caltec (p. 364)  
Pantheon Books. New York, New York, USA. 1992

Physics is to mathematics what sex is to masturbation.

In Lawrence M. Krauss  
*Fear of Physics: A Guide for the Perplexed*  
Chapter 2 (p. 27)  
Basic Books, Inc. New York, New York, USA. 1993

...the behavior of things on a small scale is so fantastic, so wonderfully and marvelously different than anything on a large scale! You can say, "Electrons behave like waves" – no, they don't, exactly; "they act like particles" – no, they don't exactly; "they act like a kind of fog around the nucleus" – no, they don't, exactly. Well, if you would like to get a clear, sharp picture of an atom, so that you can tell correctly how it's going to behave – have a good image of reality, in other words – I don't know how to do it, because that image has to be mathematical. Strange!

I don't know how it is that we can write mathematical expressions and calculate what the thing is going to do without actually being able to picture it. It would be something like having a computer where you put some numbers in, and the computer can do the arithmetic to figure out what time a car will arrive at different destinations but it cannot picture the car.

In Christopher Sykes (ed.)

The task of asking nonliving matter to speak and the responsibility for interpreting its reply is that of physics.

*Time: The Familiar Stranger*  
From the Diaries of a Timesmith (p. 358)  
The University of Massachusetts Press. Amherst, Massachusetts, USA. 1987

**Gamow, George** 1904–68  
Russian-born American physicist

I remember that once, walking with him to the institute, I mentioned Pascal Jordan's idea of how a star can be created from nothing, since at the point zero its negative gravitational mass defect is numerically equal to its positive rest mass. Einstein stopped in his tracks, and, since we were crossing a street, several cars had to stop to avoid running us down.

*My World Line: An Informal Autobiography*  
Afterword (p. 150)  
The Viking Press. New York, New York, USA. 1979

**Gardner, Martin** 1914–  
American writer and mathematics games editor

In physics and chemistry, like all other branches of science, there is never a sharp line separating pseudo-scientific speculation from the theories of competent men.

*Fads and Fallacies in the Name of Science*  
Chapter 7 (p. 80)  
Dover Publications, Inc., New York, New York, USA; 1957

**Gay-Lussac, Joseph Louis** 1778–1850  
French chemist and physicist

In the study of physics, we see what are called individual facts but which are by no means isolated and which are

not independent of each other; on the contrary they are related to each other by laws which the physicist devotes all his attention to discovering. It is this which is a measure of the true progress of the science.

In Maurice Crosland

*Gay-Lussac: Scientist and Bourgeois*

Chapter 3 (p. 70)

Cambridge University Press. Cambridge, England. 1978

### Geordi (Fictional character)

Suddenly it's like the laws of physics went right out the window.

*Star Trek: The Next Generation*

True Q

Television program

Season 6, 1992

### Goepfert-Mayer, Maria 1906–72

German-American physicist

Mathematics began to seem too much like puzzle solving. Physics is puzzle solving, too, but of puzzles created by nature, not by the mind of man.

In J. Dash

*A Life of One's Own*

Maria Goepfert-Mayer (p. 252)

Harper & Row, Publishers. New York, New York, USA. 1973

### Greene, Brian 1963–

American physicist

...because observations are all we have, we take them seriously. We choose hard data and the framework of mathematics as our guides, not unrestrained imagination or unrelenting skepticism, and seek the simplest yet most wide-reaching theories capable of explaining and predicting the outcome of today's and future experiments.

*The Fabric of the Cosmos*

Preface (p. ix)

Alfred A. Knopf. New York, New York, USA. 2004

Space and time capture the imagination like no other scientific subject. For good reason. They form the arena of reality, the very fabric of the cosmos.

*The Fabric of the Cosmos*

Preface (p. ix)

Alfred A. Knopf. New York, New York, USA. 2004

To open our eyes to the true nature of the universe has always been one of physics' primary purposes.

*The Fabric of the Cosmos*

Chapter 1 (p. 12)

Alfred A. Knopf. New York, New York, USA. 2004

The arrow of time, through the defining role it plays in everyday life and its intimate link with the origin of the universe, lies at a singular threshold between the reality we experience and the more refined reality cutting-edge science seeks to uncover.

*The Fabric of the Cosmos*

Chapter 1 (p. 20)

Alfred A. Knopf. New York, New York, USA. 2004

Physicists generally do not spend their working days contemplating flowers in a state of cosmic awe and reverie. Instead, we devote much of our time to grappling with complex mathematical equations scrawled across well-scored chalkboards. Progress can be slow. Promising ideas, more often than not, lead nowhere. That's the nature of scientific research.

*The Fabric of the Cosmos*

Chapter 1 (p. 21)

Alfred A. Knopf. New York, New York, USA. 2004

It took the brashness of a Newton to plant the flag of modern scientific inquiry and never turn back.

*The Fabric of the Cosmos*

Chapter 1 (p. 22)

Alfred A. Knopf. New York, New York, USA. 2004

Nature does weird things. It lives on the edge. But it is careful to bob and weave from the fatal punch of logical paradox.

*The Fabric of the Cosmos*

Chapter 7 (p. 185)

Alfred A. Knopf. New York, New York, USA. 2004

Physicists spend a large part of their lives in a state of confusion. It's an occupational hazard. To excel in physics is to embrace doubt while walking the road to clarity.

*The Fabric of the Cosmos*

Chapter 16 (p. 470)

Alfred A. Knopf. New York, New York, USA. 2004

Black holes have the universe's most inscrutable poker faces.

*The Fabric of the Cosmos*

Chapter 16 (p. 477)

Alfred A. Knopf. New York, New York, USA. 2004

### Gross, David J. 1941–

American particle physicist

Progress in physics depends on the ability to separate the analysis of a physical phenomenon into two parts. First, there are the initial conditions that are arbitrary, complicated, and unpredictable. Then there are the laws of nature that summarize the regularities that are independent of the initial conditions.

*The Role of Symmetry in Fundamental Physics*

*Proceedings of the National Academy of Science USA*, Volume 93, Number 25, December 10, 1996

### Hanson, Norwood Russell 1924–67

American philosopher of science

Physics is not applied mathematics. It is a natural science in which mathematics can be applied.

*Patterns of Discovery*

Chapter IV (p. 72)

At The University Press. Cambridge, England. 1958

**Hasselberg, K. B.**

No biographical data available

...as for physics, it has developed remarkably as a precision science, in such a way that we can justifiably claim that the majority of all the greatest discoveries in physics are very largely based on the high degree of accuracy which can now be obtained in measurements made during the study of physical phenomena.... [Accuracy of measurement] is the very root, the essential condition, of our penetration deeper into the laws of physics – our only way to new discoveries.

*Nobel Lectures, Physics 1901–1921*

Presentation Speech to Michelson 1907 Nobel Award (p. 159)  
Elsevier Publishing Company. Amsterdam, Netherlands. 1967

**Heidegger, Martin** 1889–1976

German philosopher

Modern physics is not experimental physics because it applies apparatus to the questioning of nature. Rather the reverse is true. Because physics, indeed already as pure theory, sets nature up to exhibit itself as a coherence of forces calculable in advance, it therefore orders its experiments precisely for the purpose of asking whether and how nature reports itself when set up in this way.

*The Question Concerning Technology and Other Essays*

Part I. The Question Concerning Technology (p. 21)  
Harper & Row, Publishers. New York, New York, USA. 1977

**Heinlein, Robert A.** 1907–88

American science fiction writer

Physics doesn't have to have any use. It just is.

*Time for the Stars* (p. 138)

Charles Scribner's Sons. New York, New York, USA. 1956

**Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

When I was a boy, my grandfather, who was a handi-craftsman and knew how to do practical things, once met me when I put a cover on a wooden box.... He saw that I took the cover and I took a nail and I tried to hammer this one nail down to the bottom. "Oh", he said, "that is quite wrong what you do there, nobody can do it that way and it is a scandal to look at." I did not know what the scandal was, but then he said, "I will show you how you could do it." He took the cover and he took one nail, put it just a little bit through the cover into the box, and then the next nail a little bit, the third nail a little bit, and so on until all the nails were there. Only when everything was clear, when one could see, that all the nails would fit, then he would start to put the nails really into the box. So, I think this is a good description of how one should proceed in theoretical physics.

In International Centre for Theoretical Physics

*From a Life of Physics. Evening Lectures at the International Centre For Theoretical Physics*

Theory, Criticism and a Philosophy, My General Philosophy (p. 46)

Questions and answers, observations and determinations, are no longer directed at a general, metaphysical and theological understanding, but are delimited with modesty.... This modesty was largely lost during the nineteenth century. Physical knowledge was considered to make assertions about nature as a whole. Physicists wished to turn philosophers.... Today physics is undergoing a basic change, the most characteristic trait of which is a return to its original self-limitation.

*The Physicist's Conception of Nature*

Chapter 4 (p. 105)

Greenwood Press, Publishers. Westport, Connecticut, USA. 1958

Like all the other natural sciences, Physics advances by two distinct roads. On the one hand it operates empirically, and thus is enabled to discover and analyse a growing number of phenomena – in this instance, of physical facts; on the other hand it also operates by theory, which allows it to collect and assemble the known facts in one consistent system, and to predict new ones from the guidance of experimental research.

*The Physicist's Conception of Nature*

Chapter 6 (p. 158)

Greenwood Press, Publishers. Westport, Connecticut, USA. 1958

I remember discussions with Bohr which went through many hours till very late at night and ended almost in despair, and when at the end of the discussion I went alone for a walk in the neighboring park I repeated to myself again and again the question: "Can nature possibly be as absurd as it seemed to us in these atomic experiments?"

*Physics and Philosophy: The Revolution in Modern Science*

Chapter II (p. 42)

Harper & Row, Publishers. New York, New York, USA. 1958

**Henderson, Charles Hanford** 1861–1941

American educator

**Woodhull, John Francis**

American physical science teacher

We live in a world bristling with physical phenomena that arouse our interest and compel our inquiry. The study of physics is merely a search for answers to our questions. We are limited on all sides by physical laws. We need to understand them so that we may not undertake physical impossibilities. If we are ignorant of physics we are liable to make unreasonable demands and make ourselves and others unhappy by not knowing when to yield to the inevitable. The reign of natural law is absolute, and when we learn obedience to it, much of the friction and distress of life disappears.

*Elements of Physics*

Chapter I (p. 5)

D. Appleton & Co. New York, New York, USA. 1909

**Heyl, Paul R.**

American Scientist

Physics is a state of mind.

In R.B. Lindsay  
The Broad Point of View in Physics  
*The Scientific Monthly*, February, 1932 (p. 115)

**Hilbert, David** 1862–1943  
German mathematician

Physics...is much too hard for physicists.

Springer-Verlag, New York, New York, USA. 1986

**Hoyle, Sir Fred** 1915–2001  
English mathematician and astronomer

**Hoyle, Geoffrey** 1942–  
English science fiction writer

“In physics,” he said, “we plan. We plan months ahead, years ahead.... You astronomers don’t plan, you rush around like a chicken without a head. Observe and observe and observe and all shall be revealed unto you.”  
*The Inferno* (p. 87)  
Harper & Row, Publishers, New York, New York, USA. 1973

**Huebner, Jay S.**  
No biographical data available

Physics is what a group of people who call themselves physicists do.  
What’s Physics?  
*The Physics Teacher*, Volume 14, Number 5, May, 1976 (p. 315)

**Huxley, Thomas Henry** 1825–95  
English biologist

...nothing can be more incorrect than the assumption one sometimes meets with, that physics has one method, chemistry another, and biology a third.  
*Collected Essays* (Volume 1)  
*Method and Result*  
The Progress of Science (p. 60)  
Macmillan & Company Ltd. London, England. 1904

**Icke, Vincent** 1946–  
No biographical data available

Physics is not difficult; it’s just weird.... Physics is weird because intuition is false. To understand what an electron’s world is like, you’ve got to be an electron, or jolly nearly. Intuition is forged in the hellish fires of the everyday world, which makes it so eminently useful in our daily struggle for survival. For anything else, it is hopeless.  
*The Force of Symmetry*  
Preface (p. xiii)  
Cambridge University Press, Cambridge, England. 1995

Fiction writers worry about first as well as last sentences, but I don’t have to do that: in the book of physics, there never is a final sentence.

*The Force of Symmetry*  
Chapter 14 (p. 294)  
Cambridge University Press, Cambridge, England. 1995

**Jeans, Sir James Hopwood** 1877–1946  
English physicist and mathematician

Kronecker is quoted as saying that in arithmetic God made the integers and man made the rest; in the same spirit we may perhaps say that in physics God made the mathematics and man made the rest.  
*Physics and Philosophy*  
Chapter I (p. 16)  
Dover Publications, Inc. New York, New York, USA. 1981

...physics tries to discover the pattern of events which controls the phenomena we observe. But we can never know what this pattern means or how it originates; and even if some superior intelligence were to tell us, we should find the explanation unintelligible.  
*Physics and Philosophy*  
Chapter I (p. 16)  
Dover Publications, Inc. New York, New York, USA. 1981

The classical physics seemed to bolt and bar the door leading to any sort of freedom of the will; the new physics hardly does this; it almost seems to suggest that the door may be unlocked – if only we could find the handle. The old physics showed us a universe which looked more like a prison than a dwelling place. The new physics shows us a universe which looks as though it might conceivably form a suitable dwelling place for free men, and not a mere shelter for brutes – a home in which it may at least be possible for us to mould events to our desires and live lives of endeavor and achievement.  
*Physics and Philosophy*  
Chapter VII (p. 216)  
Dover Publications, Inc. New York, New York, USA. 1981

Yet we may reflect that physics and philosophy are at most a few thousand years old, but probably have lives of thousands of millions of years stretching away in front of them. They are only just beginning to get under way, and we are still, in Newton’s words, like children playing with pebbles on the sea-shore, while the great ocean of truth rolls, unexplored, beyond our reach. It can hardly be a matter for surprise that our race has not succeeded in solving any large part of its most difficult problems in the first millionth part of its existence. Perhaps life would be a duller affair if it had, for to many it is not knowledge but the quest for knowledge that gives the greater interest to thought – to travel hopefully is better than to arrive.  
*Physics and Philosophy*  
Chapter VII (p. 217)  
The University Press, Cambridge, England. 1943

...the tendency of modern physics is to resolve the whole material universe into waves, and nothing but waves. These waves are of two kinds: bottled-up waves, which

we call matter, and unbottled waves, which we call radiation or light.

*The Mysterious Universe*

Chapter III (p. 77)

The Macmillan Company. New York, New York, USA. 1932

### Joan (Fictional character)

“Physics is hard”? That’s like the intellectual version of “you’re not fat”.

*Joan of Arcadia*

Film (2003)

### Jones, John D. S.

Physics has always provided mathematicians with problems. Physicists are pragmatic people, whose primary interest is in the physical significance of theories rather than in their rigorous justification. This provides mathematicians with one of their additional sources of good problems. It also creates a little tension: the narrow-minded mathematician dismisses the physicist as sloppy, whereas the narrow-minded physicist complains of mathematicians quibbling over details with no physical significance. Others recognize that the disciplines have different, but compatible objectives and that each has much to learn from the other.

Topology, *Mysteries of Four Dimensions*

*Nature*, Volume 332, Number 6164, July 4, 1988 (p. 488)

### Karshenboim, Savely G.

The way physics explains Nature is to speak in terms of the consequences of a few very basic equations.

*Astrophysics, Clocks and Fundamental Constants*

An Introduction to Varying Fundamental Concepts (p. 1)

Springer-Verlag. Berlin, Germany. 2004

### Koyré, Alexandre 1892–1964

Russian-born French philosopher

Good physics is made a priori. Theory precedes fact. Experience is useless because, before any experience, we are already in possession of the knowledge we are seeking for. Fundamental laws of motion (and of rest), laws that determine the spatio-temporal behavior of material bodies, are laws of a mathematical nature. Of the same nature as those which govern relations and laws of figures and numbers. We find and discover them not in Nature, but in ourselves, in our mind, in our memory, as Plato long ago has taught us.

Galileo and the Scientific Revolution of the Seventeenth Century

*The Philosophical Review*, Volume 52, Number 3, July 1943 (p. 347)

### Larrabee, Eric 1922–90

Historian

Some people think that physics was invented by Sir Francis Bacon, who was hit by an apple when he was sitting under a tree one day writing Shakespeare.

*Humor from Harper’s*

Easy Road to Culture, Sort Of (p. 89)

Harper. New York, New York, USA. 1961

### Lerner, Eric J. 1947–

American popular science book

My conflict with conventional physics started when I was an undergraduate at Columbia in the mid-sixties. Physics itself interested me, learning why things happen as they do – mathematics was merely a tool to understand and test the underlying physical concepts. That was not the way physics was taught; instead, mathematical techniques were emphasized. This is almost exclusively what students are still tested on, and obviously study the most.

*The Big Bang Never Happened*

Part One, Chapter 6 (p. 242)

Time Books. New York, New York, USA. 1991

### Lewis, C. S. (Clive Staples) 1898–1963

British author, scholar, and popular theologian

Without a parable modern physics speaks not to the multitudes.

In John D. Barrow

*The World Within the World* (p. 238)

Clarendon Press. Oxford, England. 1988

### Lewis, Edwin Herbert 1866–1938

American rhetorician, novelist, and poet

To Marvin the advance of physics and chemistry was the most exciting thing on earth. The researchers were watching each other, checking each other, helping each other, bound to tell the exact truth no matter where it led. The two sciences were steadily becoming one science, and the great advance continued day by day as if one infinite reluctant mind were slowly revealing itself.

*White Lightning*

Chapter 56 (p. 242)

Covici-McGee. Chicago, Illinois, USA. 1933

### Lewis, Exum Percival

No biographical data available

All the natural phenomena which appeal to our senses are part of the subject-matter of Physics. This is true not only of the simpler processes of inorganic life, but, to a greater or less extent, of all the phenomena of organic life, such as the rise of sap, the circulation of the blood,

and muscular movements. Physics is, therefore, the foundation of all the sciences.

*Notes on the Properties of Matter and Heat*  
Introductory (p. 1)  
Percival Lewis. Berkeley, California, USA. 1903

### Liebson, Morris

No biographical data available

“What will I learn here?” you might query.  
You’ll learn some math and Einstein’s Theory.

Ask Teacher for an illustration.  
He’ll explain, “It’s time dilation.  
Length gets less. Mass gets more.  
Time decreases. That’s the law.  
When things go so very, very fast.  
Classical physics is of the past,  
And to find what’s really true,  
We must seek the physics new.  
Learning this is lots of fun  
In our course called Physics 1.

Physics Inspires the Muses  
*The Physics Teacher*, Volume 16, Number 9, December, 1978 (p. 636)

### Lindley, David 1956–

English astrophysicist and author

Physics may be complex, mathematical, and arcane, but it is not capricious. The inventors of strings and twenty-six dimensional spaces did not think up these things at random, simply to give themselves a new set of toys. There is a line of rational thinking that leads from the billiard-ball atoms of classical physics to the intangible mathematical entities of today. Physics is complicated because the world is complicated.

*The End of Physics: The Myth of a Unified Theory*  
Prologue (p. 19)  
Basic Books, Inc. New York, New York, USA. 1993

If particle physics is a mess, it is because that is the way the world appears to work.

*The End of Physics: The Myth of a Unified Theory*  
Part I, Chapter 4 (p. 124)  
Basic Books, Inc. New York, New York, USA. 1993

### Lodge, Sir Oliver 1851–1940

English physicist

When a thing behaves as if it were alive, physics loses interest in it and hands it over to another section; for it is incompetent to deal with motions attributable to spontaneity and free will.

Contributions to a British Association Discussion on the Evolution of the Universe  
*Nature*, Supplement, October, 24, 1931 (p. 722)

### Mach, Ernst 1838–1916

Austrian physicist and philosopher

Physics is experience, arranged in economical order.  
In John N Shive and Robert L. Weber

*Similarities in Physics*

Preface (p. xi)  
John Wiley & Sons, Inc. New York, New York, USA. 1982

I only seek to adopt in physics a point of view that need not be changed the moment our glance is carried over into the domain of another science; for ultimately, all must form one whole.

Translated by C.M. Williams  
*Analysis of Sensations and the Relation of the Physical to the Psychical*  
Chapter 1 (p. 30, fn 1)  
Dover Publications, Inc. New York, New York, USA. 1959

Physics shares with mathematics the advantages of succinct description and of brief, compendious definition, which precludes confusion, even in ideas where, with no apparent burdening of the brain, hosts of others are contained.

Translated by Thomas J. McCormack  
*Popular Scientific Lectures* (2nd edition)  
The Economical Nature of Physical Inquiry (p. 197)  
The Open Court Publishing Co. Chicago, Illinois, USA. 1897

### Maimonides, Moses 1135–1204

Spanish-born philosopher, jurist, and physician

...he who wishes to attain to human perfection, must therefore first study Logic, next the various branches of Mathematics in their proper order, then Physics, and lastly Metaphysics.

*The Guide for the Perplexed*  
Part I, Chapter XXXIV  
E.P. Dutton & Company. New York, New York, USA. 1904

### Maritain, Jacques 1882–1973

French philosopher

Few spectacles are as beautiful and moving for the mind as that of physics thus advancing toward its destiny like a huge throbbing ship.

Translated by Gerald B. Phelan

No. 62 (p. 52)  
Alfred A. Knopf. New York, New York, USA. 1956

### Mephisto

Can no one laugh?  
Will no one drink?  
I'll teach you Physics in a wink....

*BLEGDAMSVEJ FAUST*  
Part First, Copenhagen Spring Conference, 1932

Beware alone of Reason and of Science,  
 Man's highest powers, unholy in alliance.  
 You let yourself, through dazzling witchcraft, yield  
 To all temptations of the Quantum field.  
 Listen! As now the obstacles abate,  
 You'll know the fair Neutrino for your fate!

*BLEDGAMSVEJ FAUST*

Part First, Copenhagen Spring Conference, 1932

**Millikan, Robert Andrews** 1868–1953

American physicist

Physics has opened the eyes of mankind so that it can now see in a very new truth new worlds – a marvelous world of electrons, already quite well explored, which underlies our former world of atoms and molecules, a world of quanta, not yet well understood, which lies perhaps behind the ether.

*Science and Life*

Chapter IV (p. 67)

The Pilgrim Press. Boston, Massachusetts, USA. 1924

**Milne, Edward Arthur** 1896–1950

English astrophysicist and cosmologist

Strictly speaking, physics has no philosophy. It has method.

*Annual Report of the Board of Regents of the Smithsonian Institution* (1933)

Some Points in the Philosophy of Physics: Time: Evolution, and Creation (p. 219)

Government Printing Office. Washington, D.C. 1934

**Mohapatra, Rabindra**

Theoretical physicist

Most people who haven't been trained in physics probably think of what physicists do as a question of incredibly complicated calculations, but that's not really the essence of it. The essence of it is that physics is about concepts, wanting to understand the concepts, the principles by which the world works.

In Michio Kaku

*Hyperspace: A Scientific Odyssey Through Parallel Universes, Time Warps, and the 10th Dimension*

Chapter 7 (p. 152)

Oxford University Press, Inc. New York, New York, USA. 1995

If you want to do serious physics, sometime you just have to learn it.

As reported by Ernest Barreto, student

Quantum field theory class. 1994

**More, Louis Trenchard**

American educator

It is a more or less simple thing to discover and follow the main current of thought in a science like physics, which must develop logically or not at all, after the confusion of strife has passed away and only the permanent additions to our knowledge remain.

*The Limitations of Science*

Chapter II (p. 32)

Henry Holt & Co. New York, New York, USA. 1915

Physics, to be something more than an intellectual puzzle for the specialist, should enlarge our power over the external world and increase our use of natural resources.

*The Limitations of Science*

Chapter II (p. 36)

Henry Holt & Co. New York, New York, USA. 1915

**Morgan, Thomas Hunt** 1866–1945

American zoologist and geneticist

Physics has progressed because, in the first place, she accepted the uniformity of nature; because, in the next place, she early discovered the value of exact measurements; because, in the third place, she concentrated her attention on the regularities that underlie the complexities of phenomena as they appear to us; and lastly, and not the least significant, because she emphasized the importance of the experimental method of research. An ideal or crucial experiment is a study of an event, controlled so as to give a definite and measurable answer to a question – an answer in terms of specific theoretical ideas, or better still an answer in terms of better understood relations.

*The Relation of Biology to Physics*

*Science*, Volume 65, Number 1679, March 4, 1927 (p. 217)

**Morrow, James** 1947–

American author

Her eyes sprang fully opened, and she beheld Howard's rickety bookshelves. P-h-y-s-i-c-s. A coil of radiant energy shot from the word, flooding into her skull like a sunbeam passing through glass. She closed her eyes. Her dendrites danced. Her synapses sparkled.

*Only Begotten Daughter* (p. 90)

Harcourt Incorporated. Orlando, Florida, USA. 1990

**National Research Council (US)**

Science is knowing, and the most lasting and universal things that man knows about nature make up physics.

*Physics in Perspective* (Volume 1)

Chapter 2 (p. 14)

National Academy of Sciences. Washington, D.C. 1972

Let there be no misunderstanding. Even with the most judicious use of existing resources, this nation cannot continue as a leading contributor to world physics without support greater than is now available. This objective faces the hard facts of changing national goals.

*Physics in Perspective* (Volume 1)

Chapter 2 (p. 15)

National Academy of Sciences. Washington, D.C. 1972

Science is knowing. What man knows about inanimate nature is physics, or, rather, the most lasting and universal things that he knows make up physics.

*Physics in Perspective* (Volume 1)

Chapter 3 (p. 55)

National Academy of Sciences. Washington, D.C. 1972

What has been learned in physics stays learned.

*Physics in Perspective* (Volume 1)

Chapter 3 (p. 61)  
National Academy of Sciences. Washington, D.C. 1972

**Newton, Sir Isaac** 1642–1727  
English physicist and mathematician

I do not define time, space, place, and motion, as being well known to all. Only I must observe, that the common people conceived those quantities under no other notions but from the relation they bear to sensible objects.... Absolute space, in its own nature, without relation to anything external remains always similar and immovable.

In *Great Books of the Western World* (Volume 34)  
*Mathematical Principles of Natural Philosophy*  
Definitions, Scholium (p. 8)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

It is indeed a matter of great difficulty to discover, and effectually to distinguish, the true motions of particular bodies from the apparent; because the parts of that immovable space, in which those motions are performed, do by no means come under the observation of our senses.

In *Great Books of the Western World* (Volume 34)  
*Mathematical Principles of Natural Philosophy*  
Definitions, Scholium (p. 12)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Nietzsche, Friedrich Wilhelm** 1844–1900  
German philosopher

We...want to become...human beings who are new, unique, incomparable, who give themselves laws, who create themselves. To that end we must become the best learners and discoverers of everything that is lawful and necessary in the world: we must become physicists in order to be able to be creators in this sense – while hitherto all valuations and ideals have been based on ignorance of physics or were constructed so as to contradict it. Therefore: long live physics! And even more so that which compels us to turn to physics – our honesty!

**Oman, John** 1860–1939  
English Presbyterian theologian

Beauty...is the goal of physics as it seeks to construe the order of the universe...

*The Natural and the Supernatural*  
Value and Validity (p. 211)  
The Macmillan Company. New York, New York, USA. 1931

**Oppenheimer, James Robert** 1904–67  
American theoretical physicist

Time and experience have clarified, refined and enriched our understanding of these notions. Physics has changed since then. It will change even more. But what we have learned so far, we have learned well. If it is radical and unfamiliar and a lesson that we are not likely to forget, we think that the future will be only more radical and not less, only more strange and not more familiar, and that it will have its own new insights for the inquiring human spirit.

In Lucienne Felix  
*The Modern Aspect of Mathematics* (p. 31)  
Basic Books, Inc. New York, New York, USA. 1960

The only thing that we can say about the properties of the ultimate particles is that we know nothing whatever about them.

In Cecilia Payne-Gaposchkin  
*Introduction to Astronomy*  
Chapter XIII, Section 5 (p. 339)  
Prentice-Hall, Inc. Englewood Cliffs, New Jersey, USA. 1954

As you undoubtedly know, theoretical physics – what with the haunting ghosts of neutrinos, the Copenhagen conviction, against all evidence, that cosmic rays are protons, Born's absolutely unquantizable field theory, the divergence difficulties with the positron, and the utter impossibility of making a rigorous calculation of anything at all – is in a hell of a way.

In Alice Smith and Charles Weiner

Challenging Particle Physics as Path to Truth

*The New York Times*, F5, Columns 2 and 3, Tuesday, December 4, 2001

**Planck, Max** 1858–1947

German physicist

In endeavoring to claim your attention for a short time, I would remark that our science, Physics, cannot attain its object by direct means, but only gradually along numerous and devious paths, and that therefore a wide scope is provided for the individuality of the worker. One works at one branch, another at another, so that the physical universe with which we are all concerned appears in different lights to different workers.

Translated by R. Jones and D.H. Williams

*A Survey of Physics: A Collection of Lectures and Essays*

The Unity of the Physical Universe (p. 1)

Methuen & Company Ltd. London, England. 1925

The chief law of physics, the pinnacle of the whole system is, in my opinion, the principle of least action.

Translated by R. Jones and D.H. Williams

*A Survey of Physics: A Collection of Lectures and Essays*

The Place of Modern Physics in the Mechanical View of Nature (p. 41)

Since Galileo's time, physics has achieved its greatest success by rejecting all teleological methods.

Translated by R. Jones and D.H. Williams

*A Survey of Physics: A Collection of Lectures and Essays*

The Principle of Least Action (p. 73)

Methuen & Company Ltd. London, England. 1925

...the second law of thermodynamics appears solely as a law of probability, entropy as a measure of the probability, and the increase of entropy is equivalent to a statement that more probable events follow less probable ones.

Translated by R. Jones and D.H. Williams

*A Survey of Physics: A Collection of Lectures and Essays*

The Relation Between Physical Theories (p. 86)

Methuen & Company Ltd. London, England. 1925

Physics is an exact Science and hence depends upon measurement, while all measurement itself requires sense-perception. Consequently all the ideas employed in Physics are derived from the world of sense-perception.

*The Universe in the Light of Modern Physics*

Section 1 (p. 7)

Unwin Brothers Ltd. London, England. 1937

Physics would occupy an exceptional position among all the other sciences if it did not recognize the rule that the most far-reaching and valuable results of investigation can only be obtained by following a road leading to a goal which is theoretically unobtainable. This goal is the apprehension of true reality.

*The Universe in the Light of Modern Physics*

Section 1 (p. 15)

Unwin Brothers Ltd. London, England. 1937

Modern Physics impresses us particularly with the truth of the old doctrine which teaches that there are realities existing apart from our sense-perceptions, and that there are problems and conflicts where these realities are of greater value for us than the richest treasures of the world of experience.

*The Universe in the Light of Modern Physics* (p. 107)

George Allen & Unwin Ltd. London, England. 1931

**Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

The science of physics does not only give us [mathematicians] an opportunity to solve problems, but helps us to discover the means of solving them, and it does this in two ways: it leads us to anticipate the solution and suggests suitable lines of argument.

*The Foundations of Science*

*The Value of Science*

The Science Press. New York, New York, USA. 1913

**Quine, Willard van Orman** 1908–2000

American logician and philosopher

Physics investigates the essential nature of the world, and biology describes a local bump. Psychology, human psychology, describes a bump on the bump.

*Theories and Things*

Chapter 10 (p. 93)

Harvard University Press. Cambridge, Massachusetts, USA. 1981

**Rabi, Isidor Isaac** 1898–1988

Austrian-born American physicist

I think physics is infinite. You don't have to try to exhaust it in your generation, or in your lifetime.

In Jeremy Bernstein

*Experiencing Science*

Part 1. Two Faces of Physics Chapter 2 Rabi: The Modern Age (p. 56)

Basic Books, Inc. New York, New York, USA. 1978

I think that physics should be the central study in all schools. I don't mean physics as it is usually taught – very badly, as a bunch of tricks – but, rather, an appreciation of what it means, and a feeling for it. I don't want to turn everybody into a scientist, but everybody has to be enough of a scientist to see the world in the light of science – to be able to see the world as something that is tremendously important beyond himself, to be able to appreciate the human spirit that could discover these things, that could make instruments to inquire and advance into its own nature. I rate this so highly [because] with this education people would find something above their religious affiliations, and find a basic unity in the spirit of man.

In Jeremy Bernstein

*Experiencing Science*

Part 1. Two Faces of Physics. Chapter 2. Rabi: The Modern Age (p. 126)

Basic Books, Inc. New York, New York, USA. 1978

**Raman, Chandrasekhar Venkata** 1888–1970

Indian physicist

The purpose of scientific study and research is to obtain an ever deeper understanding of the workings of nature. To the physicist falls the task of discovering the ultimate units or entities that constitute the material universe and of ascertaining the principles which govern their behavior.

*The New Physics: Talks on Aspects of Science*

Chapter II (p. 9)

Philosophical Library, New York. 1951

**Reichenbach, Hans** 1891–1953

German philosopher of science

If one knows physics for a distance only, if he hears merely strange names and mathematical formulae in it, he will, indeed, come to believe that it is an affair of the learned alone – ingeniously and wisely constructed, but without significance for men of other interests and problems.

*Atoms and Cosmos*

Chapter 19 (p. 293)

The Macmillan Company. New York, New York 1933

**Richardson, Owen Willans** 1879–1959

English physicist

The trouble with Physics at the present time is that there are so many workers making discoveries so fast, and important discoveries too, that it is difficult for anyone worker to keep a balanced view of the state of the subject.

*Lex Prix Nobel. The Nobel Prizes in 1928*

The most brilliant discoveries in theoretical physics are not discoveries of new laws, but of terms in which the law can be discovered.

*Newton and the Origin of Colours*

Chapter I (p. 6)

G. Bell &amp; Sons Ltd. London, England. 1934

**Röntgen, Wilhelm Conrad** 1845–1923

German physicist

To my view there are two methods of research, the apparatus and the calculation. Whoever prefers the first method is an experimenter; otherwise, he is a mathematical physicist. Both of them set up theories and hypotheses...

In Otto Glasser

*Dr. W.C. Röntgen*

Chapter II (p. 24)

Charles C. Thomas, Publisher. Springfield, Illinois, USA. 1945

Physics is a science which must be proved with honest effort. One can, perhaps, present a subject in such a manner that an audience of laymen may be convinced erroneously that it has understood the lecture. This, however, means a furthering a superficial knowledge, which is worse and more dangerous than none at all.

In Otto Glasser

*Dr. W.C. Röntgen*

Chapter VIII (p. 119)

Charles C. Thomas, Publisher. Springfield, Illinois, USA. 1945

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

Physics must be interpreted in a way which tends toward idealism, and perception in a way which tends toward materialism.

*The Analysis of Matter*

Chapter I (p. 7)

Harcourt, Brace &amp; Company, Inc. New York, New York, USA. 1927

It is obvious that a man who can see, knows things that a blind man cannot know; but a blind man can know the whole of physics.

*The Analysis of Matter*

Chapter XXXVII (p. 389)

Harcourt, Brace &amp; Company, Inc. New York, New York, USA. 1927

The aim of physics, consciously or unconsciously, has always been to discover what we may call the causal skeleton of the world.

*The Analysis of Matter*

Chapter XXXVII (p. 391)

Harcourt, Brace & Company, Inc. New York, New York, USA. 1927

Naive realism leads to physics, and physics, if true, shows that naive realism is false. Therefore naive realism, if true, is false; therefore it is false.

In John D. Barrow

*The World Within the World* (p. 144)

Clarendon Press. Oxford, England. 1988

Physics is mathematical not because we know so much about the physical world, but because we know so little: it is only its mathematical properties that we can discover.

In John D. Barrow

*The World Within the World* (p. 278)

Clarendon Press. Oxford, England. 1988

Broadly speaking, traditional physics has collapsed into two portions, truisms and geography.

*The ABC of Relativity*

Chapter XV

George Allen & Unwin Ltd. London, England. 1958

I come now to the statistical part of physics, which is concerned with the study of large aggregates. Large aggregates behave almost exactly as they were supposed to do before quantum theory was invented, so that in regard to them the older physics is very nearly right. There is, however, one supremely important law which is only statistical; this is the second law of thermodynamics. It states, roughly speaking, that the world is growing continuously more disorderly.

*Scientific Metaphysics*

The Scientific Outlook (p. 92)

George Allen & Unwin Ltd. London, England. 1931

Physics, it is plain, tells us something about some of the constituents of the actual world; what these constituents are may be doubtful, but it is they that are to be called physical, whatever their nature may prove to be.

*Mysticism and Logic: And Other Essays*

German philosopher

Physics has ascended to summits hitherto visible only to philosophers, whose gaze has, however, not always been free from metaphysical haziness.

Translated by Henry L. Brose

*Space and Time in Contemporary Physics*

Chapter I (p. 1)

Oxford University Press. New York, New York, USA. 1920

**Schrödinger, Erwin** 1887–1961

Austrian theoretical physicist

Schrödinger: “Surely you realize the whole idea of quantum jumps is bound to end in nonsense...if the jump is sudden, Einstein’s idea of light quanta will admittedly lead us to the right wave number, but then we must ask ourselves how precisely the electron behaves during the jump. Why does it not emit a continuous spectrum, as electromagnetic theory demands? And what law governs its motion during the jump? In other words, the whole idea of quantum jumps is sheer fantasy.”

Niels Bohr: “What you say is absolutely correct. But it does not prove that there are no quantum jumps. It only proves that we cannot describe them, that the representational concepts with which we describe events in daily life and experiments in classical physics are inadequate when it comes to describing quantum jumps.

In Werner Heisenberg

*Physics and Beyond: Encounters and Conversations*

Chapter 6 (pp. 73–74)

Harper & Row, Publishers. New York, New York, USA. 1971

Research in physics has shown beyond the shadow of a doubt that in the overwhelming majority of phenomena whose regularity and invariability have led to the formulation of the postulate of causality, the common element underlying the consistency observed is chance.

*What Is Natural Law*

[To Captain Kirk on innumerable occasions] But I cannot change the laws of physics, Captain!

*Star Trek*

Television program

**Smith, Henry John Stephen** 1826–83

Irish mathematician

So intimate is the union between mathematics and physics that probably by far the larger part of the accessions

to our mathematical knowledge have been obtained by the efforts of mathematicians to solve the problems set to them by experiment, and to create “for each successive class of phenomena, a new calculus or a new geometry, as the case might be, which might prove not wholly inadequate to the subtlety of nature.” Sometimes, indeed, the mathematician has been before the physicists, and it has happened that when some great and new question has occurred to the experimentalist or the observer, he has found in the armory of the mathematician the weapons which he has needed ready made to his hand. But, much oftener, the questions proposed by the physicist have transcended the utmost powers of the mathematics of the time, and a fresh mathematical creation has been needed to supply the logical instrument requisite to interpret the new enigma.

Presidential Address British Association for the Advancement of Science *Nature*, Section A, Volume 8, Number 204, September 25, 1873 (p. 450)

### **Snow, Charles Percy** 1905–80

English novelist and scientist

He then gave me an explanation which I could not understand, although I had heard plenty of the jargon of nuclear physics from him and Luke. “Fission.” “Neutrons.” “Chain reaction.” I could not follow. But I could gather that at last the sources of nuclear energy were in principle open to be set loose; and that it might be possible to make an explosive such as no one had realistically imagined.

*The New Men* (p. 11)

Charles Scribner’s Sons. New York, New York, USA. 1955

I now believe that if I had asked an even simpler question – such as, What do you mean by mass, or acceleration, which is the scientific equivalent of saying, Can you read? – not more than one in ten of the highly educated would have felt that I was speaking the same language. So the great edifice of modern physics goes up, and the majority of the cleverest people in the western world have about as much insight into it as their neolithic ancestors would have had.

*The Two Cultures: And a Second Look*

Chapter I (p. 15)

At The University Press. Cambridge, England. 1964

### **Sobel, Michael I.**

A friend of mine once said that the trouble with being an architect is that everyone is an architect; everyone knows what’s good and what’s bad. I seem to remember the same story told by an economist. In physics we don’t have that problem.

*Light*

Preface (p. ix)

The University of Chicago Press. Chicago, Illinois, USA. 1987

### **Stallo, John Bernhard** 1823–1900

German-American academic, jurist, philosopher, and ambassador

The science of physics, in addition to the general laws of dynamics and their application to the interaction of solid, liquid, and gaseous bodies, embraces the theory of those agents which were formerly designated as imponderables – light, heat, electricity, magnetism., etc.; and all these are now treated as forms of motion, as different manifestations of the same fundamental energy...

*The Concepts and Theories of Modern Physics*

Chapter II (p. 27)

D. Appleton & Company. New York, New York, USA. 1885

### **Standen, Anthony**

Anglo-American science writer

Physics is not about the real world, it is about “abstractions” from the real world, and this is what makes it so scientific.

*Science Is a Sacred Cow*

Chapter III (p. 61)

E.P. Dutton. New York, New York, USA. 1950

Physics is NOT a body of indisputable and immutable Truth; it is a body of well-supported probable opinion only....

*Science Is a Sacred Cow*

Chapter III (p. 68)

E.P. Dutton. New York, New York, USA. 1950

...the extraordinary degree of dullness that pervades the laboratory periods of physics courses...[is] so acute that for many people it is the bitterest experience of their education.

*Science Is a Sacred Cow*

Chapter III (p. 83)

E.P. Dutton. New York, New York, USA. 1950

...physics can never prove things the way things are proved in mathematics, by eliminating *all* of the alternative possibilities. It is not possible to say what the alternative possibilities are....

*Science Is a Sacred Cow*

Chapter III (p. 88)

E.P. Dutton. New York, New York, USA. 1950

It is *true* that physics gives a wonderful training in precise, logical thinking-about physics. It really does depend upon accurate reproducible experiments, and upon framing hypotheses with the greatest possible freedom from dogmatic prejudice. And if these were the really important things in life, physics would be an essential study for everybody.

*Science Is a Sacred Cow*

Chapter III (pp. 90–91)

E.P. Dutton. New York, New York, USA. 1950

### **Sullivan, John William Navin** 1886–1937

Irish mathematician

The present tendency of physics is toward describing the universe in terms of mathematical relations between unimaginable entities.

*The Bases of Modern Science* (p. 226)

Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1929

**Teilhard de Chardin, Pierre** 1881–1955  
French Jesuit, paleontologist, and biologist

The time has come to realise that an interpretation of the universe – even a positive one – remains unsatisfying unless it covers the interior as well as the exterior of things; mind as well as matter. The true physics is that which will, one day, achieve the inclusion of man in his wholeness in a coherent picture of the world.

## Trowbridge, John

American physicist

Mathematical problems in physics have their place in teaching; but physics should not be made a means of teaching mathematics.

*The New Physics*

Preface (p. ix)

D. Appleton & Co. New York, New York, USA. 1884

**Truesdell, Clifford** 1919–2000

American mathematician, natural philosopher, and historian of mathematics

Pedantry and sectarianism aside, the aim of theoretical physics is to construct mathematical models such as to enable us, from the use of knowledge gathered in a few observations, to predict by logical processes the outcomes in many other circumstances. Any logically sound theory satisfying this condition is a good theory, whether or not it be derived from “ultimate” or “fundamental” truth. It is as ridiculous to deride continuum physics because it is not obtained from nuclear physics as it would be to reproach it with lack of foundation in the Bible.

In Clifford Truesdell and Walter Noll

*The Non-Linear Field Theories of Mechanics* (2nd edition) (pp. 2–3)

Springer-Verlag. Berlin, Germany. 1992

**Tyndall, John** 1820–93  
Irish-born English physicist

The ultimate problem of physics is to reduce matter by analysis to its lowest condition of divisibility, and force to its simplest manifestations, and then by synthesis to construct from these elements the world as it stands.

*Fragments of Science for Unscientific People*

Chapter V (p. 100)

D. Appleton & Co. New York, New York, USA. 1875

The term Physics, as made use of in the present Lecture, refers to that portion of natural science which lies midway between astronomy and chemistry. The former, indeed, is Physics applied to ‘masses of enormous weight,’ while the latter is Physics applied to atoms and molecules.

*Fragments of Science: A Series of Detached Essays, Addresses, and*

*Reviews* (Volume 1)

Chapter XI (p. 282)

D. Appleton & Co. New York, New York, USA. 1896

...I claim for the study of Physics the recognition that it answers to an impulse implanted by nature in the human constitution, and he who would oppose such study must be prepared to exhibit the credentials which authorize him to contravene Nature’s manifest designs.

In Royal Institute of Great Britain

*Lectures on Education: Delivered at the Royal Institute of Great Britain*

On the Importance of the Study of Physics (p. 179)

John W. Parker & Son. London, England. 1854

**Ulam, Stanislaw** 1909–84

Polish-born mathematician

I should add here for the benefit of the reader who is not a professional physicist that the last thirty years or so have been a period of kaleidoscopically changing explanations of the increasingly strange world of elementary particles and of fields of force. A number of extremely talented theorists vie with each other in learned and clever attempts to explain and order the constant flow of experimental results which, or so it seems to me, almost perversely cast doubts about the just completed theoretical formulations.

*Adventures of a Mathematician*

*Symposium on the Foundations of Modern Physics: 50 Years of the Einstein–Podolsky–Rosen Gedankenexperiment*

Quantum Theory and Space-Time (p. 237)

**Weinberg, Steven** 1933–

American nuclear physicist

Our job in physics is to see things simply, to understand a great many complicated phenomena, in terms of a few simple principles.

In Robert K. Adair

*The Great Design* (p. 325)

Oxford University Press, Inc. New York, New York, USA. 1987

I think that is one of the great things about physics, that it is sufficiently precise that it makes predictions which can

be disproved by observation, and which occasionally are. And, when you have that experience, you know that there is something out there that is not all just coming out of your closed society of fellow physicists. It's, I think, one of the things that I love so much about physics, the dialogue with nature; and this dialogue is not one in which nature always agrees with the physicists.

*Does Physics Describe Reality?*

The Challenge of the Universe

From *Hypermind* CD-ROM

Physics is not a finished logical system. Rather, at any moment it spans a great confusion of ideas, some that survive like folk epics from the heroic periods of the past, and others that arise like utopian novels from our dim premonitions of a future grand synthesis.

*Gravitation and Cosmology: Principles and Applications of the General Theory of Relativity*

Part I, Chapter I (p. 3)

John Wiley & Sons, Inc. New York, New York, USA. 1972

**Weisskopf, Victor Frederick** 1908–2002

Austrian-American physicist

**Rosenbaum, E. P.**

No biographical data available

Modern physics is frequently accused of deserting the real world for abstract mathematics. Instead of attempting to explain nature in terms of what we can see and feel, the impeachment runs, theoretical physicists offer only an arid set of equations whose physical meaning they will not even think about, let alone interpret to the vulgar.

A Model of the Nucleus

*Scientific American*, Volume 193, Number 6, December, 1955 (p. 84)

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

The science of physics is even more tantalizing than it was half a century ago, and, above the level of an elementary introduction, optics, acoustics and the rest, even less teachable. The more brilliant investigators rocket off into mathematical pyrotechnics and return to common speech with statements that are, according to the legitimate meanings of words, nonsensical.

*Experiment in Autobiography*

Chapter 5, Section 2 (p. 176)

The Macmillan Company. New York, New York, USA. 1934

**Wheeler, John Archibald** 1911–

American physicist and educator

No point is more central than this, that empty space is not empty. It is the seat of the most violent physics.

In Heinz R. Pagels

*The Cosmic Code: Quantum Physics as the Language of Nature*

Part II, Chapter 8 (p. 274)

Simon & Schuster. New York, New York, USA. 1982

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

Physics refers to ether, electrons, molecules, intrinsically incapable of direct observation.

*The Principle of Relativity with Application to Physical Science* (p. 62)  
The University Press. Cambridge, England. 1922

...in the present-day reconstruction of physics, fragments of the Newtonian concepts are stubbornly retained. The result is to reduce modern physics to a sort of mystic chant over an unintelligible universe.

*Modes of Thought*

Chapter III, Lecture VII (p. 185)

The Macmillan Company. New York, New York, USA. 1938

**Whyte, A. Gowans**

Scottish writer

The progress of human thought is through metaphysics to physics.

The Triumph of Physics

*The Rationalist Annual*, 1931 (p. 28)

**Wiener, Norbert** 1894–1964

American mathematician

Physics – or so it is generally supposed – takes no account of purpose...

*God and Golem, Inc.: A Comment on Certain Points Where Cybernetics Impinges on Religion*

Chapter I (p. 5)

The MIT Press. Cambridge, Massachusetts, USA. 1964

**Wigner, Eugene Paul** 1902–95

Hungarian-born American physicist

Physics does not endeavor to explain nature. In fact, the great success of physics is due to the restriction of its objectives: it endeavors to explain the regularities in the behavior of objects. The renunciation of the broader aim, and the specification of the domain for which an explanation can be sought, now appears to us as an obvious necessity. In fact, the specification of the explainable may have been the greatest discovery of physics so far.

*Nobel Lectures, Physics 1963–1970*

Nobel lecture for award received in 1963

Events, Laws of Nature, and Invariance Principles (p. 2)

Elsevier Publishing Company. Amsterdam, Netherlands. 1972

We have ceased to expect from physics an explanation of all events, even of the gross structure of the universe, and we aim only at the discovery of the laws of nature, that is the regularities, of the events.

*Nobel Lectures, Physics 1963–1970*

Nobel lecture for award received in 1963

Events, Laws of Nature, and Invariance Principles (p. 9)

Elsevier Publishing Company. Amsterdam, Netherlands. 1972

**Wilczek, Frank** 1951–

American theoretical physicist

In physics, you don't have to go around making trouble for yourself – nature does it for you.

*Longing for the Harmonies*

How Asymptotic Freedom Discovered Me (p. 208)

W.W. Norton & Company, Inc. New York, New York, USA. 1988

In physics, your solution should convince a reasonable person. In math, you have to convince a person who's trying to make trouble. Ultimately, in physics, you're hoping to convince Nature. And I've found Nature to be pretty reasonable.

*Fantastic Realities: 49 Mind Journeys and a Trip to Stockholm*

Nobel blog (p. 516)

World Scientific Publishing Co. Hackensack, New Jersey, USA. 2006

**Woodhull, John Francis**

American physical science teacher

The first purpose of a beginning course in physics, whether in grammar school, high school, or college, should be to make nature and her ways seem natural.

*The Teaching of Science*

Chapter VI (p. 83)

The Macmillan Co. New York, New York, USA. 1918

**Ziman, John M.** 1925–2005

English physicist

The most astonishing achievements of science, intellectually and practically, have been in physics, which many people take to be the ideal type of scientific knowledge. In fact, physics is a very special type of science, in which the subject matter is deliberately chosen so as to be amenable to quantitative analysis.

*Reliable Knowledge*

Chapter 1 (p. 9)

Cambridge University Press. Cambridge, England. 1978

Physics defines itself as the science devoted to discovering, developing and refining those aspects of reality that are amenable to mathematical analysis.

*Reliable Knowledge*

Chapter 2 (p. 28)

Cambridge University Press. Cambridge, England. 1978

In the education of a physicist, we recount the bold voyages of great explorers – Newton and Einstein, Faraday and Bohr – in search of new laws of nature. They found and charted the continents on which we have built our cities of the mind and of art. Does anyone really suppose that similar vast and fertile territories are still waiting to be discovered and colonized? The unaccustomed rules that govern black holes and quasars in the cosmic deeps affect our lives no more than the icy crags of the Himalayas or the conjunctions of the planets.

*Physics Bulletin*, Volume 25, 1974 (p. 280)

Think of physics simply as the “fundamental” science and it is oversubscribed almost to bankruptcy. But define it as the science whose aim is to describe natural phenomena in the most mathematical or numerical language, and you will understand its past and have confidence in its future. The task of the modern physicist is to determine the mathematically comprehensible characteristics

of the natural world and of human artifacts...  
*Physics Bulletin*, Volume 25, 1974 (p. 280)

### Zukav, Gary

American spiritual teacher

Unfortunately, when most people think of “physics”, they think of chalkboards covered with undecipherable symbols of an unknown mathematics. The fact is that physics is not mathematics. Physics, in essence, is simple wonder at the way things are and a divine (some call it compulsive) interest in how that is so. Mathematics is the tool of physics. Stripped of mathematics, physics becomes pure enchantment.

*The Dancing Wu Li Masters: An Overview of the New Physics*

Part One

Wu Li?

Chapter I (p. 31)

William Morrow. New York, New York, USA. 1979

## PHYSICS AND PHILOSOPHY

### Kosso, Peter

No biographical data available

Physics and philosophy sections are usually at opposite ends of the bookstore. While physics presides over the hard sciences, philosophy is somewhere beyond even the softer sciences, past psychology and to the left, against the wall with those tenuous, speculative topics like the occult and spiritualism. This is an unfortunate floor-plan because it gives a misleading impression of the relation between physics and philosophy.

*Appearance and Reality: An Introduction to the Philosophy of Physics*

Chapter 1 (p. 7)

Oxford University Press. Oxford, England. 1998

### Planck, Max 1858–1947

German physicist

Physic, it may be urged, is solely concerned with the objects and events of inanimate nature, while a general philosophy, if it is to be at all satisfactory, must embrace the whole of physical and intellectual life and must deal with questions of the soul, including the highest problems of ethics.

Translated by W.H. Johnston

*The Philosophy of Physics*

Chapter I (p. 9)

W.W. Norton & Co. New York, New York, USA. 1936

## PHYSICS, LAWS OF

### Harker, Alfred 1859–1939

English petrologist

...the laws of physics and chemistry must be the same in a crucible as in the larger laboratory of Nature ...

*The Natural History of Igneous Rocks*

Chapter XII (p. 282)

The Macmillan Co. New York, New York, USA. 1909

### London, Jack 1876–1916

American author

It obeyed no known laws of physics, and overthrew the hoary axiom that like things performed to like things produce like results.

*John Barleycorn*

Chapter XXIII (pp. 221–222)

The Century Co. New York, New York, USA. 1913

### Thompson, Sir D’Arcy Wentworth 1860–1948

Scottish zoologist and classical scholar

Cell and tissue, shell and bone, leaf and flower, are so many portions of matter, and it is in obedience to the laws of physics that their particles have been moved, molded and conformed.

*On Growth and Form*

Introductory (p. 10)

At the University Press. Cambridge, England. 1945

## PHYSICS, PROBLEMS OF

### Feynman, Richard P. 1918–88

American theoretical physicist

When the problems in physics become difficult we may often look to the mathematician who may already have studied such things and have prepared a line of reasoning for us to follow. On the other hand they may not have, in which case we have to invent our own line of reasoning, which we then pass back to the mathematician.

*The Character of Physical Law*

Chapter 1 (p. 39)

BBC. London, England. 1965

## PHYSICS, STUDENT OF

### Lewis, Exum Percival

No biographical data available

The student of Physics cannot...hope to find out why things happen; he can only expect to find out how they happen and to formulate this experience in general descriptions or laws.

*Notes on the Properties of Matter and Heat*

Introductory (p. 2)

Percival Lewis. Berkeley, California, USA. 1903

## PHYSICS, THEORETICAL

### Dirac, Paul Adrien Maurice 1902–84

English theoretical physicist

...mathematics is the tool specially suited for dealing with abstract concepts of any kind, and there is no limit to its power in this field [theoretical physics]. For this reason a book on the new physics, if not purely descriptive of experimental results, must be essentially mathematical.

In George D. Birkhoff  
*Science for a New World*  
 Mathematics, Quantity and Order (p. 296)  
 Harper & Brothers Publishers. New York, New York, USA. 1934

...the only object of theoretical physics is to calculate results that can be compared with experiment, and it is quite unnecessary that any satisfying description of the whole course of the phenomenon should be given.

In George D. Birkhoff  
*Science for a New World*  
 Mathematics, Quantity and Order (p. 296)  
 Harper & Brothers Publishers. New York, New York, USA. 1934

## PHYSIOGNOMY

**Miller, Hugh** 1802–56  
 Scottish geologist and theologian

Physiognomy is no idle or doubtful science in connection with geology. The physiognomy of a country indicates almost invariably its geological character.

*The Old Red Sandstone*  
 Chapter XI (p. 201)  
 J.M. Dent & Sons Ltd. London, England. 1922

## PHYSIOLOGIST

**Bernard, Claude** 1813–78  
 French physiologist

...physiologists should not be afraid to act somewhat at random, so as to try – permit me the common expression – fishing in troubled waters. This amounts to saying that, in the midst of the functional disturbances which they produce, they may hope to see some unexpected phenomena emerge which may give direction to their research.

Translated by Henry Copley Greene  
*An Introduction to the Study of Experimental Medicine* (pp. 20–21)  
 Henry Schuman, Inc. New York, New York, USA. 1927

A physiologist is not a man of fashion, he is a man of science, absorbed by the scientific idea which he pursues: he no longer hears the cry of animals, he no longer sees the blood that flows, he sees only his idea and perceives only organisms concealing problems which he intends to solve.

*An Introduction to the Study of Experimental Medicine*  
 Part Two, Chapter II (p. 103)  
 Henry Schuman, Inc. New York, New York, USA. 1949

**Collingwood, Robin George** 1889–1943  
 English historian and philosopher

A physiologist...can certainly offer a definition of life; but this will only be an interim report on the progress of physiology to date. For him, as for the beginner, it is the nature of physiology that is relatively certain; it is the nature of life that is relatively vague.

*The New Leviathan: Or Man, Society, Civilization and Barbarism*  
 Part I, Chapter I. Aphorism 1.47 (p. 3)  
 At The Clarendon Press. Oxford, England. 1942

**Mayo, Charles Horace** 1865–1939  
 American physician

Disease at times creates experiments that physiology completely fails to duplicate, and the wise physiologist can obtain clues to the resolution of many problems by studying the sick.

La funcion del higado en relacion con la cirugia  
*Annals de Circulation*, Volume 2, April, 1930

**Pirenne, M. H.**  
 No biographical data available

The soul, the mind, consciousness, thought, sensation, being nonmaterial, are not observable in physiological investigation like, say, nerve excitation or muscle contraction. Physiology gives no direct experimental evidence for them. Yet like all men, physiologists no doubt believe they have minds. Hence a dilemma.

*British Journal for the Philosophy of Science*, Volume 1, 1950/1951

**Thoreau, Henry David** 1817–62  
 American essayist, poet, and practical philosopher

The physiologist says it [ripening of fruit] is “due to an increased absorption of oxygen – That is the scientific account of the matter – only a reassertion of the fact. But I am more interested in the rosy cheek than I am to know what particular diet the maiden fed on.

*Excursions*  
 Autumnal Tints (p. 206)

## PHYSIOLOGY

**Bernard, Claude** 1813–78  
 French physiologist

General physiology is the basic biological science toward which all others converge.

Translated by Henry C. Greene  
*An Introduction to the Study of Experimental Medicine*  
 Chapter III  
 Henry Schuman, Inc. New York, New York, USA. 1927

**Cuvier, Georges** 1769–1832  
 French zoologist and statesman

All parts of a living body are interrelated; they can act only in so far as they act together; trying to separate one from the whole means transferring it to the realm of dead substances; it means entirely changing its essence.

Henry C. Greene  
 In Claude Bernard  
*An Introduction to the Study of Experimental Medicine*  
 III (p. 267)  
 Henry Schuman, Inc. New York, New York, USA. 1927

**Flexner, Abraham** 1866–1959  
American educator

Physiology is, in a sense, the central discipline of the medical school. It is the business of the physician to restore normal functioning: normal functioning is thus his starting-point in thought, his goal in action.

*Medical Education in the United States and Canada*

Chapter IV (p. 63)

The Carnegie Foundation. New York, New York, USA. 1910

**Gee, Samuel** 1839–1911  
Physician

Physiology owes more to medicine than medicine to physiology. Nature in disease performs vivisections for us. The greater and better part of what we know concerning the functions of the many organs of the body is derived from pathological observation and not from physiological experiment.

*Medical Lectures and Aphorisms* (p. 227)

Smith, Elder. London, England. 1902

**Holmes, Oliver Wendell** 1809–94  
American physician, poet, and humorist

Anatomy studies the organism in space. Physiology studies it also in time.

*The Writings of Oliver Wendell Holmes* (Volume 9)

*Medical Essays: 1842–1882*

Chapter IV (p. 232)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1911

**Huxley, Thomas Henry** 1825–95  
English biologist

There is no side of the human mind which physiological study leaves uncultivated. Connected by innumerable ties with abstract science, Physiology is yet in the most intimate relation with humanity, and by teaching us that law and order, and a definite scheme of development, regulate even the strangest and wildest manifestations of individual life, she prepares the student to look for a goal even amidst the erratic wanderings of mankind, and to believe that history offers something more than an entertaining chaos – a journal of a toilsome, tragi-comic march nowhither.

*Collected Essays* (Volume 33)

*Science and Education*

On the Educational Value of the Natural History of Science (p. 59)

Macmillan & Company Ltd. London, England. 1904

A thorough study of Human Physiology is, in itself, an education broader and more comprehensive than much that passes under that name. There is no side of the intellect which it does not call into play, no region of human knowledge into which either its roots, or its branches, do not extend; like the Atlantic between the Old and the New Worlds, its waves wash the shores of the two worlds of matter and of mind; its tributary streams flow from both; through its waters, as yet unfurrowed by the keel

of any Columbus, lies the road, if such there be, from the one to the other; far away from that North-west Passage of mere speculation, in which so many brave souls have been hopelessly frozen up.

*Collected Essays* (Volume 33)

*Science and Education*

Universities: Actual and Ideal (p. 220)

Macmillan & Company Ltd. London, England. 1904

**Pavlov, Ivan Petrovich** 1849–1936  
Russian physiologist

It is perfectly clear that the horizon of medical observation of life is immeasurably wider than the sphere of vital phenomena which the physiologists have before their eyes in their laboratories. Hence the permanent incongruity between that which medicine knows, sees and empirically applies, and that which physiology can reproduce and explain.

*Experimental Psychology and Other Essays*

Concerning Trophic Innervation (p. 74)

Philosophical Library. New York, New York, USA. 1957

The outer limit of physiological knowledge, its goal, is to express this infinitely complex interrelationship of the organism with the surrounding world in the form of an exact scientific formula.

In Daniel P. Todes

*Pavlov's Physiology Factory: Experiment, Interpretation, Laboratory Enterprise*

Chapter 5 (p. 153)

The Johns Hopkins University Press. Baltimore, Maryland, USA. 2002

**Starling, Ernest Henry** 1866–1927  
English physiologist

In physiology, as in all other sciences, no discovery is useless, no curiosity misplaced or too ambitious, and we may be certain that every advance achieved in the quest of pure knowledge will sooner or later play the part in the service of man.

*The Linacre Lecture on the Law of the Heart* (p. 147)

Publisher undetermined

**Richards, Herbert Maul** 1871–1928  
No biographical data available

It is in the field of physiology more than anywhere else, perhaps, that the worker must humble himself before the immensity of the problems before him; that he must realize how fragmentary is the most advanced knowledge of this subject.

*Lectures on Science, Philosophy and Art, 1907–1908*

Botany (pp. 15–16)

The Columbia University Press. New York, New York, USA. 1908

**Whitman, Walt** 1819–92  
American poet, journalist, and essayist

Of physiology from top to toe I sing ...

*Leaves of Grass*

One's-Self I Sing

Doubleday, Page & Co. Garden City, New York, USA. 1919

**Whittaker, James Thomas**

No biographical data available

It is physiology which distinguished regular medicine from charlatanry.

*Physiology*

Lecture I (p. 15)

Chancy R. Murry. Cincinnati, Ohio, USA. 1879

**PI****Beckmann, Petr** 1924–93

Physicist

The digits beyond the first few decimal places are of no practical or scientific value. Four decimal places are sufficient for the design of the finest engines; ten decimals are sufficient to obtain the circumference of the earth to within a fraction of an inch if the earth were a smooth sphere...

*A History of Pi*

Chapter 10 (p. 100)

St. Martin's Press. New York, New York, USA. 1974

**Chudnovsky, David**

Mathematician

Maybe in the eyes of God pi looks perfect.

In Richard Preston

*The Mountains of Pi*

*The New Yorker* March 2, 1992

**de Morgan, Augustus** 1806–71

English mathematician and logician

...mysterious 3.14159...comes in at every door and window, and down every chimney.

*A Budget of Paradoxes*

Cyclometry (p. 393)

Longmans, Green. London, England. 1872

**Duffin, R. J.**

No biographical data available

God created the world and the integers, all in seven days. He then ordered two of his biotechnicians, James and Francis, to construct a genetic code for the fractional numbers. Moreover, they were to give special prominence to His favorite number, pi.

The Patron Saint of Mathematics

*The Mathematical Intelligencer*, Volume 15, Number 1, 1993 (p. 52)

**Graham, L. A.**

No biographical data available

Fiddle de dum, fiddle de dee,  
A ring round the moon is pi times D;  
But if a hole you want repaired,  
You use the formula pi r<sup>2</sup>.

*Ingenious Mathematical Problems and Methods*

Mathematical Nursery Rhyme Number 1

Dover Publications, Inc. New York, New York, USA. 1959

Little Jack Horner sat in a corner,

Trying to evaluate pi.

He disdained rule of thumb,

Found an infinite sum,

And exclaimed "It's REAL, nary an I."

*Ingenious Mathematical Problems and Methods*

Mathematical Nursery Rhyme Number 9

Dover Publications, Inc. New York, New York, USA. 1959

**Glaisher, James Whitbread Lee** 1848–1928

English mathematician

The value of [pi] has engaged the attention of many mathematicians and calculators from the time of Archimedes to the present day, and has been computed from so many different formulae, that a complete account of its calculation would almost amount to a history of mathematics.

In William Dunham

*The Genius of Euler: Reflections on His Life and Work*

On the History of Euler's Constant (p. 147)

The Mathematical Association of America. Washington, D.C. 2007

**Kac, Mark** 1914–84

Polish mathematician

Steinhaus, with his predilection for metaphors, used to quote a Polish proverb, "*Fortunny kolem sie toczy*" (Luck runs in circles), to explain why pi, so intimately connected with circles, keeps cropping up in probability theory and statistics, the two disciplines which deal with randomness and luck.

*Enigmas of Chance: An Autobiography*

The Search for the Meaning of Independence (p. 55)

Harper & Row, Publishers. New York, New York, USA. 1985

**Morgan, Robert**

No biographical data available

The secret relationship of line and circle, progress and return, is always known, transcendental and yet a commonplace. And though the connection is written it cannot be written out in full, never perfect, but is exact and constant, is eternal and everyday as orbits of electrons, chemical rings, noted here in one brief sign as gateway to completed turns and the distance inside circles, both compact and infinite.

*Poetry*

Pv. clxi, Number 4 (January, 1993) (p. 204)

**Newcomb, Simon** 1835–1909

Canadian-American astronomer

Ten decimals are sufficient to give the circumference of the earth to a fraction of an inch, and thirty decimals would give the circumference of the whole visible universe to a quantity imperceptible with the most powerful microscope.

Quoted in Herbert Edwin Hawkes, William Arthur Luby and Frank Charles Touton

*Plane Geometry* (p. 273)

Ginn & Co. Boston, Massachusetts, USA. 1920

### Preston, Richard

No biographical data available

The digits of pi march to infinity in a predestined yet unfathomable code: they do not repeat periodically, seeming to pop up by blind chance, lacking any perceivable order, rule, reason, or design – “random” integers, ad infinitum.

The Mountains of Pi

*The New Yorker*, March 2, 1992

...pi is not the solution to any equation built from a less than infinite series of whole numbers. If equations are trains threading the landscape of numbers, then no train stops at pi.

The Mountains of Pi

*The New Yorker*, March 2, 1992

## PILL

### Crichton-Browne, Sir James 1840–1938

English physician

If you want fame and fortune, invent a pill.

*The Doctor's After Thoughts* (p. 14)

E. Benn Ltd. London, England. 1932

### Fuller, Thomas 1608–61

English clergyman and author

If the pills were pleasant, they would not want gilding.

*Gnomologia: Adages and Proverbs, Wise Sentences, and Witty Sayings. Ancient and Modern, Foreign and British*

No. 2711

Printed for Thomas and Joseph Allman. London, England. 1816

### Herrick, Robert 1591–1674

English poet

When his potion and his pill

His, or none, or little skill

Meet for nothing, but to kill;

Sweet Spirit comfort me!!

In J. Max Patrick (ed.)

*The Complete Poetry of Robert Herrick*

His Litanie, to the Holy Spirit (p. 132)

W.W. Norton & Company, Inc. New York, New York, USA. 1968

### Jerrold, Douglas William 1803–57

English playwright, journalist, and humorist

A pill that the present moment is daily bread to thousands.

*The Catspaw: A Comedy in Five Acts*

Act I, Scene I

Published at the Punch Office. London, England. 1850

### Molière (Jean-Baptiste Poquelin) 1622–1673

French playwright and actor

My lord Jupiter knows how to gild the pill.

*Amphitryon*

Act III, Scene X, I. 24

Harcourt, Brace & Company. New York, New York, USA. 1995

### Ray, John 1627–1705

English naturalist

Apothecaries would not give pills in sugar unless they were bitter.

*A Complete Collection of English Proverbs* (p. 2)

Printed for G. Cowie. London, England. 1813

### Shakespeare, William 1564–1616

English poet, playwright, and actor

When I was sick, you gave me bitter pills.

In *Great Books of the Western World* (Volume 26)

*The Plays and Sonnets of William Shakespeare* (Volume 1)

*The Two Gentlemen of Verona*

Act II, Scene iv, I. 149

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### Stumpf, LaNore

No biographical data available

How is it that a little pill

Without a pair of eyes to see

Can travel down, and round and round

And figure out what's wrong with me?

Needed: Remote Control

*American Journal of Nursing*, April, 1969 (p. 902)

## PION

### Marshak, Robert E. 1916–92

American physicist

The cement that holds the universe together is the force of gravity. The glue holding the atom together is electro-magnetic attraction. But the glue that holds the nucleus of the atom together is a mystery that defies all our experience and knowledge of the physical world. It is a force so unlike any we know that we can hardly find words to describe it. We do have a clue, however, to which we can give a name. It is the pi meson, or pion.

Pions

*Scientific American*, Volume 196, Number 1, 1957 (p. 840)

## PIONEER

**de La Beche, Henry Thomas** 1796–1855  
English geologist

The work of pioneers is certainly laborious, and little suits minds which desire to advance rapidly and grasp all at once ...

*Sections & Views, Illustrative of Geological Phaenomena*  
Preface (p. vi)  
Treuttel & Wurtz. London, England. 1830

**Eliot, Charles William** 1834–1926  
American academic

The pioneers of science, like the pioneers in exploration and colonization, must find their way through pathless regions.

Address by President Charles W. Eliot  
*Science*, N.S. Volume 24, Number 601, July 6, 1906 (p. 15)

## PIPETTE

**Delbrück, Max** 1906–81  
German-born American biologist

...the pipette is my clarinet ...  
A Physicist's Renewed Look at Biology –  
Twenty Years Later

## PLAGIARISM

**Brewster, George**  
No biographical data available

No bold, independent and vigorous thinker – none but a mere intellectual parrot – would stoop to such servile imitation of others, when before him lies, spread out in endless perspective, a vast, unexplored, immeasurable wilderness of knowledge, which would give scope for ages upon ages, yea for eternity itself, to the untamed energies of the most powerful intellect that men or angels ever saw.

*A New Philosophy of Matter, Showing the Identity of All the Imponderables* (3rd edition)  
Chapter I  
Edward H. Fletcher. New York, New York, USA. 1858

**Colton, Charles Caleb** 1780–1832  
English sportsman and writer

If we steal thoughts from the moderns, it will be cried down as plagiarism; if from the ancients, it will be cried up as erudition.

*Lacon: or, Many Things in Few Words*  
Plagiarism (p. 232)  
William Tegg. London, England. 1866

**Lowell, James Russell** 1819–91  
American poet, critic, essayist, editor, and diplomat

...borrowed garments never keep one warm. A curse goes with them, as with Harry Gill's blankets. Nor can one get smuggled goods safely into kingdom-come. How lank and pitiful does one of these gentry look, after posterity's customs-officers have had the plucking of him!  
*Conversations on Some of the Old Poets* (3rd edition)  
Chaucer, Second Conversation (p. 65)  
David McKay, Publisher. Philadelphia, Pennsylvania, USA 1893

**Macaulay, Thomas Babington** 1800–50  
English historian and writer

There is a very pretty Eastern tale, of which the fate of plagiarists often reminds us. The slave of a magician saw his master wave his wand, and heard him give orders to the spirits who arose at the summons. He accordingly stole the wand, and waved it himself in the air; but he had not observed that his master used the left hand for that purpose. The spirits thus irregularly summoned, tore him to pieces, instead of obeying his orders.  
*Critical and Miscellaneous Essays* (Volume V)  
Mr. Robert Montgomery's Poems (p. 300)  
Carey & Hart. Philadelphia, Pennsylvania, USA. 1844

## PLAGIARIST

**Colton, Charles Caleb** 1780–1832  
English sportsman and writer

I have somewhere seen it observed, that we should make the same use of a book that the bee does of a flower: she steals sweets from it, but does not injure it; and those sweets she herself improves and concocts into honey. But most plagiarists, like the drone, have neither taste to select, nor industry to acquire, nor skill to improve, but impudently pilfer the honey ready prepared from the hive.  
*Lacon: or, Many Things in Few Words*  
Plagiarism (p. 232)  
William Tegg. London, England. 1866

## PLAINLY APPEARS

**Bowditch, Nanthaniel** 1773–1838  
American mathematician and astronomer

I never came across one of Laplace's "Thus it plainly appears" without feeling sure that I have hours of hard work before me to fill up the chasm and find out and show how it plainly appears.  
In Florian Cajori  
*The Teaching and History of Mathematics in the United States*  
Chapter III (p. 104)  
Government Printing Office. Washington, D.C. 1890

**PLAN****Charlie Chan (Fictional character)**

Best laid plans of mice and men sometimes go a little bit haywire.

*The Trap*  
Film (1946)

**PLANCK'S CONSTANT****Bohr, Niels Henrik David** 1886–1962

Danish physicist

...it seems necessary to introduce in the laws in question a quantity foreign to classical electrodynamics, i.e., Planck's constant, or as it is often called, the elementary quantum of action.

On the Constitution of Atoms and Molecules  
*Philosophical Magazine*, Volume 26, 1913 (p. 2)

**PLANET****Ackerman, Diane** 1948–

American writer

At night I lie awake  
In the ruthless Unspoken,  
knowing that planets  
come to life, bloom, and die away,  
like day-lilies  
opening one after another  
in every nook and cranny  
of the Universe...

*The Planets: A Cosmic Pastoral* (p. 138)  
William Morrow and Co. New York, New York, USA. 1977

**Author undetermined**

The discovery of a new planet in a new way, by first finding where a planet ought to be, has given a fresh impulse to the enthusiasm of astronomers. All are looking to see if the motions of heavenly bodies in some other direction does not indicate that there are more weights in the scale on that side than have yet been seen.

*Scientific American*, Volume 2, Issue 26, March 20, 1847 (p. 203)

A new planet, it is said, has lately been discovered. This is not correct. The planet is as "old as the hills."

*Scientific American*, Volume 2, Issue 9, November 21, 1846 (p. 68)

**Ball, Sir Robert Stawell** 1840–1913

Irish astronomer

The planets are all members of the great family dependent on the sun. Venus and the earth may be considered the pair of twins, alike in size and weight. Mercury and Mars are the babies of the system. The big brothers are Jupiter and Saturn.

*Star-land; Being Talks with Young People about the wonders of the Heavens*

Lecture III (pp. 134–135)

Ginn & Co. Boston, Massachusetts, USA. 1900

**Banks, Sir Joseph** 1743–1820

English explorer and naturalist

Some of our astronomers here incline to the opinion that it is a planet and not a comet; if you are of that opinion it should forthwith be provided with a name [or] our nimble neighbors, the French, will certainly save us the trouble of Baptizing it.

In Constance A. Lubbock

*The Herschel Chronicle* (p. 95)

The Macmillan Company. New York, New York, USA. 1933

**Bentley, Richard** 1662–1742

English critic and philologist

...the smallest planets are situated nearest the sun and each other; whereas Jupiter and Saturn, that are vastly greater than the rest, and have many satellites about them, are wisely removed to the extreme regions of the system, and placed at an immense distance one from the other.

 Book I, Chapter II (p. 12)  
 Chatto & Windus. London, England. 1894

...our planet is only a province of the Infinite Heavens, so our actual existence is only a stage in Eternal Life.

Translated by Frances Alice Welby  
*Astronomy for Amateurs*  
 Chapter XII (p. 340)  
 D. Appleton. New York, New York, USA. 1915

**Hammond, Allen Lee**  
 No biographical data available

With the beginning of direct exploration of the solar system, planetary science has revived to become not only respectable but one of the active, forefront areas of research. How active can be gauged by the assessment, widely agreed on, that the rate of new discoveries and the rate of obsolescence of old ideas have never been so rapid as at present. Investigators are now confronted with such an overwhelming array of new observations and theories that what amounts to a revolution in understanding the solar system is in progress.

Exploring the Solar System(s): An Emerging New Perspective  
*Science*, Volume 186, Number 4165, 22 November, 1974 (p. 720)

**Herschel, Friedrich Wilhelm**  
**(Sir William)** 1738–1822  
 English astronomer

It has generally been supposed that it was a lucky accident that brought this new star to my view; this is an evident mistake. In the regular manner I examined every star of the heavens, not only of that magnitude but many far inferior, it was that night its turn to be discovered.

In Constance A. Lubbock  
*The Herschel Chronicle* (pp. 78–79)  
 The Macmillan Company. New York, New York, USA. 1933

The planets, which appear only as stars somewhat brighter than the rest, are to him [student who enters upon a scientific pursuit] spacious, elaborate, and habitable worlds; several of them much greater and far more curiously furnished than the earth he inhabits, as there are also others less so; and the stars themselves, properly so called, which to ordinary apprehension present only lucid sparks or brilliant atoms, are to him suns of various and transcendent glory – effulgent centres of life and light to myriads of unseen worlds.

*Outlines of Astronomy: By Sir John F. W. Herschel*  
 Introduction (pp. 22–23)  
 American Home Library Co. New York, New York, USA. 1902

**Hey, Nigel S.** 1936–  
 American science writer

I used to wonder, why bother? The other planets and moons are too inhospitable for us ever to visit, let alone colonize. But this is shallow thinking. Our destiny is in space. We will always want to explore new frontiers, even when separated physically by great gulfs of space and time. The need is in our genes. And who knows what wonders we may find out there.

*Solar System*  
 Introduction (p. 8)  
 Weidenfield & Nicolson. London, England. 2002

Each of us is part of an endless drama that started billions of years ago, when a gargantuan cloud of cosmic gas and dust began to collect within the firmament. Then our galaxy, the Milky Way, came to be, and, within it, our solar system. The Sun is the great nucleus of this little cell, radiating incredible amounts of energy to its daughter planets, furnishing all the ingredients of life and all the analogues of life that manifest themselves as simple movement and change.

*Solar System*  
 Chapter 1 (p. 11)  
 Weidenfield & Nicolson. London, England. 2002

**Homer** fl. 750 BCE  
 Greek poet

The thick tresses of gold with which Vulcan had crested the helmet floated round it, and as the evening star that shines brighter than all others through the stillness of night, even such was the gleam of the spear which Achilles poised in his right hand, fraught with the death of noble Hector.

 English poet

... whose faculties can comprehend  
 The wondrous architecture of the world,  
 And measure every wand'ring planet's course...

*Tamburlaine the Great*  
 Scene VIII  
 Odyssey Press. Indianapolis, Indiana, USA. 1974

Mephistopheles: As are the elements, such are the spheres,

Mutually folded in each other's orb,  
 And, Faustus,

All jointly move upon one axletree,  
 Whose terminine is termed the world's wide pole:

Nor are the names of Saturn, Mars, or Jupiter Feigned,  
 but are erring stars.

In F. J. Cox  
*The Tragical History of Doctor Faustus* (p. 42)  
 Francis Griffiths. 1907

**Martin, Martha Evans**  
 No biographical data available

For far off and truly mysterious as the planets are, it still is with them as with most other objects in nature: a very little knowledge of their aspects and their ways begets a sense about them that makes the most casual observation of them interesting and, as far as it goes, intelligent.

*The Ways of the Planets*  
 Chapter I (pp. 2–3)  
 Harper & Brothers Publishers. New York, New York, USA. 1912

If the bare facts, simply and plainly told, and the view of the planets themselves as they wander through their courses in the sky, do not awaken one's understanding and imagination, no amount of poetry or romance that other people have built up around the planets will arouse anything more than a factitious interest in them.

*The Ways of the Planets*  
 Chapter I (p. 7)  
 Harper & Brothers Publishers. New York, New York, USA. 1912

The planets are members of our own family, bone of our bone and flesh of our flesh, living comparatively near to us, within the domain of our common source of life, the sun.

*The Ways of the Planets*

Chapter II (p. 11)

Harper & Brothers Publishers. New York, New York, USA. 1912

The great variety of beauty that the planets present to us is sufficient to keep us always interested in them, when once we have acquired an acquaintance with them.

*The Ways of the Planets*

Chapter XVIII (p. 258)

Harper & Brothers Publishers. New York, New York, USA. 1912

### **Miller, Hugh** 1802–56

Scottish geologist and theologian

The planet which we inhabit is but one vessel in the midst of a fleet sailing on through the vast ocean of space, under convoy of the sun.

*Geology Versus Astronomy: Or the Conditions and the Periods; Being a View of the Modifying Effects of Geologic Discovery on the Old Astronomic Inferences Respecting the Plurality of Inhabited Worlds*

Chapter II (p. 14)

Glasgow, Scotland. 1857

### **Molière (Jean-Baptiste Poquelin)** 1622–1673

French playwright and actor

We had a narrow escape, Madame, While asleep;  
A neighboring planet did pass us close by,  
Cutting a swathe right through our whirlpool;  
Had its path led to a collision with mother earth,  
She would have shattered in pieces like glass.

*Les Femmes Savantes*

Act IV, Scene iii

Oxford University Press. Oxford, England. 1974

A planet is, by definition, an unruly object.

*The Neptune File*

Chapter 2 (p. 19)

Walker & Company. New York, New York, USA. 2000

### **Swedenborg, Emanuel** 1688–1772

Swedish scientist, theosophist, and mystic

[There are] many earths, inhabited by man...thousands, yea, ten thousands of earths, all full of inhabitants...not only in this solar system, but also beyond it, in the starry heaven.

*The Earths in Our Solar System, Which Are Called Planets, and Earths in the Starry Heavens*

New Church Board of Publication. New York, New York, USA. 1876

### **Tagore, Rabindranath** 1861–1941

Indian poet and philosopher

Through millions and millions of years,  
The stars shine,  
Fiery whirlpools revolve and rise  
In the dark ever-moving current of time.  
In this current  
The earth is a bubble of mud...

Translated by Indu Dutt

*Our Universe* (p. 43)

Jaico Publishing House. Bombay, India. 1969

**Teilhard de Chardin, Pierre** 1881–1955

French Jesuit, paleontologist, and biologist

Despite their vastness and splendor the stars cannot carry the evolution of matter much beyond the atomic series: it is only on the very humble planets, on them alone, that the mysterious ascent of the world into the sphere of higher complexity has a chance to take place. However inconsiderable they may be in the history of sidereal bodies, however accidental their coming into existence, the planets are finally nothing less than the key-points of the Universe. It is through them that the axis of life now passes; it is upon them that the energies of an Evolution principally concerned with the building of large molecules is now concentrated.

*The Future of Man*

Chapter VI, Part I, Section I (p. 114)

Harper & Row, Publishers. New York, New York, USA. 1964

**Tennyson, Alfred (Lord)** 1809–92

English poet

This world was once a fluid haze of light,  
Till toward the centre set the starry tides,  
And eddied into suns, that wheeling cast  
The planets.

The Princess, Part Second, l. 101–103

Oxford University Press, Inc. London, England. 1953

**Tombaugh, Clyde** 1906–97

American astronomer

Behold the heavens and the great vastness thereof, for a planet could be anywhere therein.  
Thou shalt dedicate thy whole being to the search project with infinite patience and perseverance.  
Thou shalt set no other work before thee, for the search shall keep thee busy enough.  
Thou shalt take the plates [photographs] at opposition time lest thou be deceived by asteroids near their stationary positions.  
Thou shalt duplicate the plates of a pair at the same hour angle lest refraction distortions overtake thee.  
Thou shalt give adequate overlap of adjacent plate regions lest the planet play hide and seek with thee.  
Thou must not become ill at the dark of the moon lest thou fall behind the opposition point.  
Thou shalt have no dates except at full moon when long-exposure plates cannot be taken at the telescope.

Many false planets shall appear before thee, hundreds of them, and thou shalt check everyone with a third plate.

In David H. Levy

*Clyde Tombaugh: Discoverer of Planet Pluto*

Chapter 12, Ten Special Commandments for a Would-Be Planet Hunter (p. 180)

University of Arizona Press. Tucson, Arizona, USA. 1991

**Voltaire (François-Marie Arouet)** 1694–1778

French writer

It would be very singular that all Nature, all the planets, should obey eternal laws, and there should be a little animal, five feet high who, in contempt of these laws, could act as he pleased, solely according to his caprice.

In John D. Barrow

*The World Within the World* (p. 55)

Clarendon Press. Oxford, England. 1988

## MERCURY

**Ackerman, Diane** 1948–

American writer

A prowling holocaust keeling low in the sky heads westward for another milk run. The Sun never sets on the Mercurian empire: it only idles on each horizon and lurches back, broiling the same arc across the sky.

## VENUS

**Ball, Sir Robert Stawell** 1840–1913

Irish astronomer

The lover of nature turns to admire the sunset, as every lover of nature will. In the golden glory of the west a beauteous gem is seen to glitter; it is the evening star – the planet Venus.... All the heavenly host – even Sirius

and Jupiter – must pale before the splendid lustre of Venus, the unrivalled queen of the firmament.

*The Story of the Heavens*

Venus (p. 140)

Cassell & Company Ltd. London, England. 1885

**Blackmore, Sir Richard** 1650–1729

English physician and writer

Venus the next, whose lovely Beams adorn  
As well the Dewy Eve, as opening Morn,  
Does her fair Orb in beauteous Order turn.

*The Poetical Works of Sir R. Blackmore: Containing Creation: A Philosophical Poem, in Seven Books*

Book II, l. 515–517

Printed for C. Cooke. London, England. 1797

**Hunter, Robert** 1941–

American lyricist and poet

Counting stars by candlelight, all are dim but one is bright;

The spiral light of Venus, rising first and shining best,

Oh, from the northwest corner, of a brand new crescent moon,

crickets and cicadas sing, a rare and different tune...

*Terrapin Station*

Terrapin Station

Arista Records. 1977

**Tennyson, Alfred (Lord)** 1809–92

English poet

For a breeze of morning moves,  
And the planet of love is on high,  
Beginning to faint in the light that she loves  
On a bed of daffodil sky,  
To faint in the light of the sun she loves,  
To faint in his light, and to die.

*Alfred Tennyson's Poetical Works*

Maude, Part I, Section XXII, Stanza II

Oxford University Press, Inc. London, England. 1953

**Twain, Mark (Samuel Langhorne**

**Clemens)** 1835–1910

American author and humorist

An occultation of Venus is not half so difficult as an eclipse of the Sun, but because it comes seldom the world thinks it's a grand thing.

*Collected Tales, Sketches, Speeches, & Essays 1891–1910*

More Maxims of Mark (p. 945)

The Library of America. New York, New York, USA. 1992

## EARTH

**Abbey, Edward** 1927–89

American environmentalist and nature writer

We know so very little about this strange planet we live on, this haunted world where all answers lead only to more mystery.

The Crooked Word

*Audubon Magazine*, Volume 77, Number 6, 1975 (p. 24)

We are obliged, therefore, to spread the news, painful and bitter though it may be for some to hear, that all living things on earth are kindred.

*Desert Solitaire*

The Serpents of Paradise (p. 24)

Ballantine Books. New York, New York, USA. 1968

I am not an atheist but an earthiest. Be true to the earth.

*Desert Solitaire*

Down the River (p. 208)

Ballantine Books. New York, New York, USA. 1968

Yes. Feet on earth. Knock on wood. Touch stone. Good luck to all.

*Desert Solitaire*

Bedrock and Paradox (p. 301)

Ballantine Books. New York, New York, USA. 1968

The earth is not a mechanism but an organism, a being with its own life and its own reasons, where the support and sustenance of the human animal is incidental.

*The Journey Home: Some Words in Defense of the American West*

Chapter 21 (p. 225)

E.P. Dutton. New York, New York, USA. 1977

The world is what it is, no less and no more, and therein lies its entire and sufficient meaning.

*A Voice Crying in the Wilderness: Notes from a Secret Journal*

Chapter 9 (p. 89)

St. Martin's Press. New York, New York, USA. 1989

**Ackerman, Diane** 1948–

American writer

Long ago, Earth bunched its granite to form the continents, ground molar Alps and Himalayas, rammed Africa and Italy into Europe, gnashing its teeth, till mountain ranges buckled and churned, and oceans (salty once rivers bled flavor from the seasoned earth) gouged their kelpy graves. And the rest is history...

*The Planets: A Cosmic Pastoral*

Earth, III (p. 36)

William Morrow & Company, Inc. New York, New York, USA. 1976

**Agassiz, Jean Louis Rodolphe** 1807–73

Swiss-born American naturalist, geologist, and teacher

...there was a time when our earth was in a state of igneous fusion, when no ocean bathed it and no atmosphere surrounded it, when no wind blew over it and no rain fell upon it, but an intense heat held all its materials in solution. In those days the rocks which are now the very bones and sinews of our mother Earth – her granites,

her porphyries, her basalts, her syenites – were melted into a liquid mass.

*Geological Structures*

Chapter 1 (p. 2)

Ticknor & Fields. Boston, Massachusetts, USA. 1866

**Airy, Sir George Biddell** 1801–92

English mathematician and astronomer, Astronomer Royal from 1835 to 1881

Since Astronomy first assumed the form of a Science, the inquiry into the Figure and dimensions of the Earth has always excited the interest of Philosophers. It can hardly be doubted that in the mind of a reflecting man there would always be a desire to know the nature of the Planet upon which he existed; but without Science of an exalted order, it would be impossible for him to gratify his curiosity.

*Encyclopaedia Metropolitana*, Volume 5, 1845

**Arendt, Hannah** 1906–75

Political philosopher

The earth is the very quintessence of the human condition...

*The Human Condition*

Prologue (p. 2)

The University of Chicago Press. Chicago, Illinois, USA. 1958

**Aristotle** 384 BCE–322 BCE

Greek philosopher

There is much change, I mean, in the stars which are overhead, and the stars seen are different, as one moves northward or southward. Indeed there are some stars seen in Egypt and in the neighborhood of Cyprus which are not seen in the northerly regions; and stars, which in the north are never beyond range of observation, in those regions rise and set. All of which goes to show not only that the earth is circular in shape, but also that it is a sphere of no great size: for otherwise the effect of so slight a change of place would not be so quickly apparent.

*On the Heavens*

Book II, Chapter 14

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Ball, Philip** 1962–

English science writer

What is so special about the Earth, then, is not that it is a world of water, but that the water is marine blue – we have oceans, not just glassy sheets of bright ice. Perhaps, soon after the solar system was formed, blue worlds were commonplace, until one by one they turned pearly or ruddy, or became shrouded in bright acid. And then there we were, a lone blue dot, waiting for life to begin.

*Life's Matrix: A Biography of Water*

Part One, Chapter 4 (p. 111)

Farrar, Straus & Giroux. New York, New York, USA. 2000

**Barrell, Joseph** 1869–1919

American geologist

The scheme of the Universe is more profound and the unknown is a little nearer than it was recently thought to be. But such has been the progress of knowledge since man, in the days before the advent of science naively regarded the earth, his home, as firmament, created a few thousand years previously especially for his benefit.

In J.H.F. Umbgrove

*The Pulse of the Earth*

Chapter 1 (p. 2)

Martinus Nijhoff. The Hague, Netherlands. 1947

**Bellamy, David** 1933–

Botanist, author, and broadcaster

The earth has a mass of 5.97 x 10<sup>24</sup> kilograms... a big number and one that really matters because that is all the matter we have got.

*Forces of Life: The Botanic Man*

Chapter 2 (p. 24)

Crown Publishers. New York, New York, USA. 1979

**Beston, Henry** 1888–1968

American writer

Touch the earth, love the earth, honour the earth, her plains, her valleys, her hills, and her seas; rest your spirit in her solitary places.

*The Outermost House*

Chapter X (p. 222)

Rinehart & Company. New York, New York, USA. 1928

**Borland, Hal** 1900–78

American writer

I am not quite sure what the earth's business is, but I know it is not the nurturing of *Homo sapiens*, or any one species of animal or plant.

*Borland Country*

Foreword (p. 7)

J.B. Lippincott Company. Philadelphia, Pennsylvania, USA. 1971

**Bradley, Jr., John Hodgdon** 1898–1962

American geologist

The earth, however, never forgets. While men are sleeping she is awake, silently strengthening the cords of her influence. When men make boast of their conquests she is not concerned, for she knows that the limits of human attainment are the limits she chooses to set. When they strut through the kingdom they think they have conquered, she tightens the strings that hold them to her hand.

*Autobiography of Earth*

Chapter XII (p. 331)

Coward-McCann, Inc. New York, New York, USA. 1935

The Earth is a selfish mother who would keep her children forever at her breast.

*Autobiography of Earth*  
Chapter XII (p. 331)  
Coward-McCann, Inc. New York, New York, USA. 1935

**Broad, William** 1951–  
Science writer

**Wade, Nicholas**  
British-born scientific writer

The ultimate gatekeeper of science is neither peer reviews, nor referees, nor replication, nor the universalism implicit in all three mechanisms. It is time. In the end, bad theories don't work, fraudulent ideas don't explain the world so well as true ideas do. The ideal mechanisms by which science should work are applied to a large extent in retrospect .... Time and the invisible boot that kicks out all useless science are the true gatekeepers of science. But these inexorable mechanisms take years, sometimes more than a millennium, to operate. During the interval, fraud may flourish, particularly if it can find shelter under the mantle of immunity that scientific elitism confers.

*Betrayers of the Truth* (p. 106)  
Simon & Schuster. New York, New York, USA. 1982

**Buckland, William** 1784–1856  
English geologist and palaeontologist

The earth, from her deep foundations, unites with the celestial orbs that roll through boundless space ...

The Existence of God  
*The Church of England Magazine*, Volume 2, Number 48, April 22, 1837 (p. 256)

**Burnet, Thomas** 1635–1715  
English cleric and scientist

We must therefore be impartial where the Truth requires it, and describe the Earth as it is really in itself; and though it be handsome and regular enough to the eye in certain parts of it, single tracts and single Regions; yet if we consider the whole surface of it, or the whole Exterior Region, 'tis as a broken and confus'd heap of bodies, plac'd in no order to one another, nor with any correspondency or regularity of parts: And such a body as the Moon appears to us, when 'tis look'd upon with a good Glass, rude and ragged; as it is also represented in the modern Maps of the Moon; such a thing would the Earth appear if it was seen from the Moon. They are both in my judgment the image or picture of a great Ruine, and have the true aspect of a World lying in its rubbish.

*The Sacred Theory of the Earth* (2nd edition)  
Book I, Chapter IX (p. 91)  
Printed by R. Norton. London. 1691

**Burroughs, William S.** 1914–97  
American writer

After one look at this planet any visitor from outer space would say 'I WANT TO SEE THE MANAGER.'

Women: A Biological Mistake (p. 124)  
Seaver Books. New York, New York, USA. 1986

**Byron, George Gordon, 6th Baron Byron** 1788–1824  
English Romantic poet and satirist

He saw with his own eyes the moon was round,  
Was also certain that the earth was square.  
Because he had journey'd fifty miles, and found  
No sign that it was circular anywhere.

*The Complete Poetical Works of Byron*  
Don Juan  
Canto V  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1933

**Chamberlain, Rollin T.**  
American geologist

Just as the written life of some famous man properly commences with a portrayal of his family antecedents, so any real history of the earth should begin with the activities of the sun and the origin of its present family of planets.

In H.H. Newman (ed.)  
*The Nature of the World and of Man*  
The Origin and Early Stages of the Earth (p. 31)  
The University of Chicago Press. Chicago, Illinois, USA. 1927

**Chief Seattle** ca. 1784–1866  
Chief of the Duwamish, Suquamish, and allied Indian tribes

You must teach your children that the ground beneath their feet is the ashes of your grandfathers. So that they will respect the land, tell your children that the earth is rich with the lives of our kin. Teach your children what we have taught our children, that the earth is our mother. Whatever befalls the earth befalls the sons of the earth. If men spit upon the ground, they spit upon themselves.

*Catch the Whisper of the Wind: Collected Stories and Proverbs from Native Americans*  
Attributed to Chief Seattle (p. 41)  
Health Communications, Inc. Deerfield Beach, Florida, USA. 1995

**Cloos, Hans** 1885–1951  
German geologist

Earth: beautiful, round, colorful planet. You carry us safely through the emptiness and deadness of space. Graciously you cover the black abyss with air and water. You turn as towards the sun, that we may be warm and content, that we may wander, with open eyes, through your meadows, and look upon your splendor. And then you turn us away from the too fiercely burning sun, that we may rest in the coolness of the night from life's heat and the struggle of the day.

*Conversation with the Earth*  
Prologue (p. 3)  
Alfred A. Knopf. New York, New York, USA. 1953

For a billion years the patient earth amassed documents and inscribed them with signs and pictures which lay unnoticed and unused. Today, at last, they are waking up, because man has come to rouse them. Stones have begun to speak, because an ear is there to hear them. Layers become history and, released from the enchanted sleep of eternity, life's motley, never-ending dance rises out of the black depths of the past into the light of the present.

*Conversation with the Earth*

Prologue (p. 4)

Routledge & Kegan Paul. London, England. 1954

The earth is large and old enough to teach modesty; and yet it is small enough to be comprehended and to be learned from, as our understanding of it increases.

*Conversation with the Earth*

Prologue (p. 8)

Alfred A. Knopf. New York, New York, USA. 1953

The earth gives us more knowledge of ourselves than all the books, because it resists us.

*Conversations with the Earth*

Chapter VII (p. 99)

Alfred A. Knopf. New York, New York, USA. 1953

**Coleridge, Samuel Taylor** 1772–1834

English lyrical poet, critic, and philosopher

Earth! Thou mother of numberless children, the nurse and the mother,

Sister thou of the stars, and beloved by the Sun, the rejoicer!

Guardian and friend of the moon, O Earth, whom the comets forget not,

Yea, in the measureless distance wheel round and again they behold thee!

*The Complete Poetical Works of Samuel Taylor Coleridge* (Volume 1)

Hymn to the Earth (p. 328)

The Clarendon Press. Oxford, England. 1912

**Coman, Dale Rex** 1906–

American research physician and wildlife writer

The planet Earth is a doomed ship being blown to inevitable disaster by the winds of universal dynamics, a miniscule sacrifice to the attainment of that inscrutable destiny held secret by the galaxies as they rush through the long darkness of space.

*The Endless Adventure*

Once There Was a Planet (p. 181)

Henry Regnery Company. Chicago, Illinois, USA. 1972

I peer into the endlessness of space. The lights from a host of suns leap across the millions of miles of darkness to reach this spinning bit of star stuff we call Earth. This outcropping of rock has unknowingly endureth the passage of millennia. The footpads of extinct species have pattered over it. An Indian in moccasins once stood upon it. Forests have appeared, disappeared and reappeared around it. It has been washed by floods, buried in ice and baked

by the sun. Here it will lie through the ages yet to come, silently awaiting the next phase of a planet's destiny.

*The Endless Adventure*

Once There Was a Planet (p. 185)

Henry Regnery Company. Chicago, Illinois, USA. 1972

**da Vinci, Leonardo** 1452–1519

Italian High Renaissance painter and inventor

[We] may say that the earth has a spirit of growth; that its flesh is the soil, its bones are the successive strata of the rocks which form the mountains, its muscles are the tufa stone, its blood the springs of its waters. The lake of blood that lies about the heart is the ocean; its breathing is by the increase and decrease of the blood in its pulses, and even so in the earth is the flow and ebb of the sea. And the heat of the spirit of the world is the fire which is spread throughout the earth; and the dwelling-place of its creative spirit is in the fires, which in diverse parts of the earth are breathed out in baths and sulphur mines, and in volcanoes...

*Leonardo da Vinci's Note Books* (pp. 130–131)

Duckworth & Company. London, England. 1906

**Daly, Reginald Aldworth** 1871–1957

Canadian-American geologist

The metaphysician has found that the real is the invisible. This is eminently true of the earth. The real earth is not its visible skin, but the visible skin plus the much bulkier hidden stuff within.

*Our Mobile Earth*

Chapter III (p. 125)

Charles Scribner's Sons. New York, New York, USA. 1926

**Davis, William Morris** 1850–1934

American geographer, geologist, and teacher

The earth has been explored and measured as never before. The lands have been mapped, the oceans have been charted, by original observers. The air has been followed in its circuits, great and small. The structure of the earth's crust has been patiently traced out. Thus "Go and see" came to be our watchwords one hundred years ago. As long as we, like Antaeus of old, can return to the earth for new stores of the strength that we find in facts, we need not fear being strangled by any voluminous Hercules of theory.

*Congress of Arts and Science: Universal Exposition, St. Louis, 1904*

(Volume 4)

The Relations of the Earth-Sciences in View of Their Progress in the Nineteenth Century (p. 488)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1906

**de Coulevain, Pierre** 1853–1927

French writer

You must educate your mind to consider that the Universe and the Sun were not created for the Earth, but the Earth for the Universe and the Sun.

*The Heart of Life*

Chapter III (p. 133)

E.P. Dutton & Company, Inc. New York, New York, USA. 1912

**de Quincey, Thomas** 1785–1859

English author

Our mother Tellus, beyond all doubt, is a lovely little thing. At any rate, therefore, she cannot be superannuated. I am satisfied that she is very much admired throughout the Solar System: and in clear seasons, when she is seen to advantage, with her bonny wee pet of a Moon tripping round her like a lamb, I should be glad to see the planet that could fancy herself entitled to sneeze at our Earth.

*The Works of Thomas de Quincey*

System of the Heavens as Revealed by Lord Rosse's Telescope (p. 168)

Adam & Charles Black. Edinburgh, Scotland. 1871

Let the earth have lived any number of years that you suggest, still that tells us nothing about the period of life, the stage, which she may be supposed to have reached. Is she a child, in fact, or is she an adult? And if an adult, and that you gave a ball to the Solar System, is she that kind of person that you would introduce to a waltzing partner, some fiery young gentleman like Mars; or would you rather suggest to her the sort of partnership which takes place at a whist-table?

*The Works of Thomas de Quincey*

System of the Heavens as Revealed by Lord Rosse's Telescope (p. 169)

Adam & Charles Black. Edinburgh, Scotland. 1871

**de Saint-Exupéry, Antoine** 1900–44

French aviator and writer

“What place would you advise me to visit now?” he asked.

“The planet Earth,” replied the geographer. “It has a good reputation . . .”

Translated by Katherine Woods

*The Little Prince*

Chapter Fifteen (p. 55)

Harcourt, Brace & Co. New York, New York, USA. 1943

To give you an idea of the size of the Earth, I will tell you that before the invention of electricity it was necessary to maintain, over the whole of the six continents, a veritable army of 462,511 lamplighters for the street lamps.

Translated by Katherine Woods

*The Little Prince*

Chapter Fifteen (p. 56)

Harcourt, Brace & Co. New York, New York, USA. 1943

**Dubos, René Jules** 1901–82

French-born American microbiologist and environmentalist

The incredible beauty of the earth as seen from space results largely from the fact that our planet is covered with living things. What gives vibrant colors and exciting variety to the surface of the earth is the fact that it is literally a living organism.

*Federal Highway Act of 1970 and Miscellaneous Bills*

United States Congress. Senate. 1970

The spaceship Earth is the cage within and against which man has developed in his evolutionary past and continues to develop his biological and mental characteristics. As the terrestrial environment deteriorates so does humaneness and the quality of human life.

*Reason Awake*

Chapter 5 (pp. 191–192)

Columbia University Press. New York, New York, USA. 1970

**Dunlap, Ellen L.**

No biographical data available

The building of the earth was dramatic beyond our imagination. The shaping of the continents and the ocean depths required titanic convulsions. The Supreme One did not shout the Earth into instant being anymore than an architect would order the instant erection of a skyscraper. The ground work must be laid, and, little by little, the job progresses. It required several billions of years to make the Earth what it is today, and the job is not yet done.

From Aunt Nellie's Notebook

*Nature Magazine*, January, 1958 (p. 17)

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

My subject [astronomy] disperses the galaxies, but it unites the Earth.

In Arthur Beer (ed.)

*Vistas in Astronomy* (Volume 2)

Meeting of the International Astronomical Union, Cambridge, Massachusetts, USA., September, 1932 (p. i)

**Ehrenreich, Barbara** 1941–

American social critic and essayist

Some of us still get all weepy when we think about the Gaia Hypothesis, the idea that earth is a big furry goddess-creature who resembles everybody's mom in that she knows what's best for us. But if you look at the historical record – Krakatoa, Mt. Vesuvius, Hurricane Charley, poison ivy, and so forth down the ages – you have to ask yourself: Whose side is she on, anyway?

*The Worst Years of Our Lives*

The Great Syringe Tide (p. 55)

Pantheon Books. New York, New York, USA. 1981

**Einstein, Albert** 1879–1955

German-born physicist

There has been an earth for a little more than a billion years. As for the question of the end of it I advise: Wait and see.

In Eli Maor

*To Infinity and Beyond: A Cultural History of the Infinite* (p. 182)

Birkhäuser. Boston, Massachusetts, USA. 1987

**Ficino, Marsilio** 1433–1499

Early Italian humanist philosopher

We see the Earth give birth, thanks to varieties of seeds, to a multitude of trees and animals, nourish them, and

make them grow; we see her cause even stones to grow as her teeth, vegetable life as hairs, as long as they remain connected to their roots, while if they are removed or unearthed they cease growing. Could we say that the breast of this female lacks life, she who spontaneously gives birth and nourishes so many offspring, who sustains herself and whose back carries teeth and hair?

*Theologica plantonica* (Volume 1) (p. 144)  
Harvard University Press. Cambridge, Massachusetts, USA. 1917

### **Flammarion, Camille** 1842–1925

French astronomer and writer

The earth appears to us as an immense plain, chequered with a thousand varieties of aspects and reliefs – verdant hills, flowery valleys, mountains more or less elevated, winding rivers in the plains, lakes of fresh water, vast oceans, countries of infinite variety.

Translated by J. Ellard Gore  
*Popular Astronomy: A General Description of the Heavens*  
Book I, Chapter I (p. 4)  
Chatto & Windus. London, England. 1894

When men know something of the earth, and understand the modest position of our planet in infinity; when they appreciate better the grandeur and the beauty of nature, they will be fools no longer, as coarse on the one hand as credulous on the other; but they will live in peace, in the fertile study of Truth, in the contemplation of the Beautiful, in the practice of Good, in the progressive development of the reason, and in the noble exercise of the higher facilities of intelligence.

Translated by J. Ellard Gore  
*Popular Astronomy: A General Description of the Heavens*  
Book I, Chapter I (p. 11)  
Chatto & Windus. London, England. 1894

As changeable as the iridescent bubble which the breath of a child blows by the aid of a simple drop of soapy water, and allows to fly away through the air in the rays of the cheerful sun, the terrestrial globe floats in space – the veritable sport of cosmical forces which carry it whirling through the vast heavens.

Translated by J. Ellard Gore  
*Popular Astronomy: A General Description of the Heavens*  
Book I, Chapter IV (p. 38)  
Chatto & Windus. London, England. 1894

The study of the earth teaches us to understand the sky, and in the microscopical atom we inhabit the vibrations of the infinite are revealed.

Translated by J. Ellard Gore  
*Popular Astronomy: A General Description of the Heavens*  
Book I, Chapter V (p. 52)  
Chatto & Windus. London, England. 1894

...our Earth is an orb of the Heavens ...

Translated by Frances Alice Welby  
*Astronomy for Amateurs*  
Introduction (p. 17)  
D. Appleton & Co. New York, New York, USA. 1915

...we saw the Earth hanging in space, like a globe isolated on all sides, and surrounded at vast distances by a multitude of stars.

Translated by Frances Alice Welby  
*Astronomy for Amateurs*  
Chapter II (p. 28)  
D. Appleton & Co. New York, New York, USA. 1915

### **Galilei, Galileo** 1564–1642

Italian physicist and astronomer

For my part, I consider the earth very noble and admirable precisely because of the diverse alterations, changes, generations, etc., that occur in it incessantly. If, not being subject to any change, it were a vast desert of sand or a mountain of jasper, or if at the time of the flood the waters which covered it had frozen, and it had remained an enormous globe of ice where nothing was ever born or ever altered or changed, I should deem it a useless lump in the universe, devoid of any activity and, in a word, superfluous and essentially nonexistent.

**Hillel, Daniel**

No biographical data available

We have all come out of the earth, and are its children. The earth has always nurtured us, despite our scornful abuse, and we can no longer continue to behave as its ungrateful offspring. It is time for us, as *Homo sapiens curans*, to nurture the earth in return.

*Out of the Earth: Civilization and the Life of the Soil*

Chapter 30 (p. 283)

The Free Press. New York, New York, USA. 1991

**Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

Once a photograph of the Earth, taken from the outside, is available once the sheer isolation of the Earth becomes plain a new idea as powerful as any in history will be let loose.

*The New Face of Science*

Epilogue (p. 129)

The World Publishing Co. New York, New York, USA. 1971

**Humphrey, Hubert H.** 1911–78

38th vice-president of the USA

As we begin to comprehend that the earth itself is a kind of manned spaceship hurtling through the infinity of space – it will seem increasingly absurd that we have not better organized the life of the human family.

Speech, 26 September, 1966

**Hutton, James** 1726–97

Scottish geologist, chemist, and naturalist

When we trace the parts of which this terrestrial system is composed, and when we view the general connection of those several parts, the whole presents a machine of a peculiar construction by which it is adapted to a certain end. We perceive a fabric, erected in wisdom, to obtain a purpose worthy of the power that is apparent in the production of it.

*The Theory of the Earth* (Volume 1)

Part I, Chapter I, Section I (p. 3)

Messrs. Cadwell, Junior, and Davies. London, England. 1795

This globe of the earth is a habitable world; and on its fitness for this purpose, our sense of wisdom in its formation must depend.

*The Theory of the Earth* (Volume 1)

Part I, Chapter I, Section I (p. 4)

Messrs. Cadwell, Junior, and Davies. London, England. 1795

**Huygens, Christiaan** 1629–95  
Dutch mathematician, astronomer, and physicist

...how vast those Orbs must be, and how inconsiderable this Earth, the Theatre upon which all our mighty Designs, all our Navigations, and all our Wars are transacted, is when compared to them. A very fit Consideration, and matter of Reflection, for those Kings and Princes who sacrifice the Lives of so many People, only to flatter their Ambition in being Masters of some pitiful corner of this small Spot.

*The Celestial Worlds Discover'd, or, Conjectures Concerning the Planetary Worlds, Their Inhabitants and Productions*  
Book the Second. The Immense Distance Between the Sun and the Planets Illustrated (pp. 141–142)  
Printed for T. Childe. London, England. 1698

**Irwin, James** 1930–91  
American astronaut

The Earth reminded us of a Christmas tree ornament hanging in the blackness of space. As we got farther and farther away it diminished in size. Finally it shrank to the size of a marble, the most beautiful marble you can imagine. That beautiful, warm, living object looked so fragile, so delicate, that if you touched it with a finger it would crumble and fall apart. Seeing this has to change a man, has to make a man appreciate the creation of God and the love of God.

In Kevin W. Kelley  
*The Home Planet*  
With Plate 38  
Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1988

**Jastrow, Robert** 1925–  
American space scientist

When the earth came into existence, it was a naked body of rock without air or water; but a subtle transformation taking place in the depths of the planet would soon change that.... The earth was ready; it waited for life.

*Until the Sun Dies*  
Light from the Darkness (p. 55)

**J Jeans, Sir James Hopwood** 1877–1946  
English physicist and mathematician

Standing on our microscopic fragment of a grain of sand, we attempt to discover the nature and purpose of the universe which surrounds our home in space and time.

*The Mysterious Universe*  
Chapter I (p. 3)  
The Macmillan Company. New York, New York, USA. 1932

So long as the earth was believed to be the center of the universe the question of life on the other worlds could hardly arise; there are no other worlds in the astronomical sense, although a heaven above and a hell beneath might form adjuncts to this world.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1942*  
s There Life on the Other Worlds (p. 145)  
Government Printing Office. Washington, D.C. 1943

**Jefferies, Richard** 1848–87  
English naturalist and author

If we had never before looked upon the earth, but suddenly came to it man or woman grown, set down in the midst of a summer mead, would it not seem to us a radiant vision? The hues, the shapes, the song and life of birds, above all the sunlight, the breath of heaven, resting on it; the mind would be filled with its glory, unable to grasp it, hardly believing that such things could be mere matter and no more. Like a dream of some spirit-land it would appear, scarce fit to be touched lest it should fall to pieces, too beautiful to be long watched lest it should fade away.

*The Open Air*  
Wildflowers (p. 31)  
Chatto & Windus. London, England. 1908

**Jeffers, Robinson** 1887–1962  
American poet

It is only a little planet  
But how beautiful it is.

*The Beginning and the End and Other Poems*  
How Beautiful It Is (p. 29)  
Random House, Inc. New York, New York, USA. 1963

**Johnson, Lyndon B.** 1908–73  
36th president of the USA

Think of our world as it looks from that rocket that's heading toward Mars. It is like a child's globe, hanging in space, the continents stuck to its side like colored maps. We are all fellow passengers on a dot of earth. And each of us, in the span of time, has really only a moment among our companions.

Inaugural Address, January 20, 1965

**Kahn, Fritz** 1888–1958  
German-born American writer and conceptual medical illustrator

This is the universe: infinity. Space without beginning, without end, dark, empty, cold. Through the silent darkness of this space more gleaming spheres, separated from each other by inconceivable distances. Around them again inconceivably far away, like bits of dust lost in immensity, circle smaller dark spheres, receiving light and life from their "mother suns." One of these little spheres in the light of one of the countless suns in endless space, is our earth. This is man's home in the universe.

*Design of the Universe*  
Chapter One (p. 2)  
Crown Publishers. New York, New York, USA. 1954

**Kelvin, Lord William Thomson** 1824–1907  
Scottish engineer, mathematician, and physicist

All these reckonings of the history of underground heat, the details of which I am sure you do not wish me to put before you at present, are founded on the very sure

assumption that the material of our present solid earth all round its surface was at one time a white-hot liquid.

The Age of the Earth As An Abode Fitted for Life  
*Science*, New Series, Volume 9, Number 229, May 19, 1898 (p. 672)

Considering the almost certain truth that the earth was built up of meteorites falling together, we may follow in imagination the whole process of shrinking from gaseous nebula to liquid lava and metals, and solidification of liquid from central regions outward.

The Age of the Earth as An Abode Fitted for Life  
*Science*, New Series, Volume 9, Number 229, May 19, 1898 (p. 706)

**Kett, Henry** 1761–1825  
English college teacher and writer

The terraneous globe presents a most glorious and most sublime prospect, equally worthy of the capacity of man to contemplate, and beautiful to his eye to behold.

*Elements of General Knowledge* (Volume 2)  
Chapter IV (p. 89)  
Printed by E. Bronson. Philadelphia, Pennsylvania, USA. 1805

**Kingsley, Charles** 1819–75  
English clergyman and author

Gradually the sunken land begins to rise again, and falls perhaps again, and rises again after that, more and more gently each time, till as it were the panting earth, worn out with the fierce passions of her fiery youth, has sobbed herself to sleep once more, and this new world of man is made.

*New Miscellanies*  
Thoughts in a Gravel-Pit (p. 315)  
Ticknor & Fields. Boston, Massachusetts, USA. 1860

*The Romance of Modern Astronomy*

Chapter I (p. 25)  
J.B. Lippincott Co. Philadelphia, Pennsylvania, USA. 1911

**Mantell, Gideon Algernon** 1780–1852  
English obstetrician, geologist, and paleontologist

Our beautiful planet is indeed worthy of our study; it was once our cradle it will soon be our grave, between the dawn and the night of life, it is the scene of our busy action, and from it we shall rise to another state of being.

*The Wonders of Geology; or, A Familiar Exposition of Geological Phenomena*  
Introduction (p. 6)  
G.H. Bohn. London, England.

**Marvin, Ursula**  
American geologist

In learning about the earth – a most fundamental preoccupation of man – geologists are limited to direct examination of its outermost surface and that of its nearest neighbor, the moon. All knowledge of the deep interior of our planet and of the nature of other planets in the solar system is gathered by remote sensing devices. Characteristically, the signals from these devices are interpreted differently by different scientists and every new advance tends to raise new problems, leaving us acutely aware of the limitations of our knowledge.

*Continental Drift: Evolution of a Concept*  
Postscript (p. 207)  
Smithsonian Institution Press. Washington, D.C. 1973

**Masson, David**

*World-Life or Comparative Geology*  
Chapter III (p. 338)  
S.C. Griggs & Company. Chicago, Illinois, USA. 1883

**Momaday, N. Scott** 1934–  
Native American writer

Once in his life a man ought to concentrate his mind upon the remembered earth, I believe. He ought to give himself up to a particular landscape in his experience, to look at it from as many angles as he can, to wonder about it, to dwell upon it. He ought to imagine that he touches it with his hands at every season and listens to the sounds that are made upon it. He ought to imagine the creatures there and all the faintest motions of the wind. He ought to recollect the glare of noon and all the colors of the dawn and dusk.

### Montague, C. E.

No biographical data available

The earth with no history to it – what it would be if it had all been made only last night and were not a worn ancient face, seamed, stained, and engraved with endless cross-hatching of documentary wrinkles, its mountains the ruins of more wondrous height now all but erased.

In A.C. Seward

*Plant Life Through the Ages: A Geological and Botanical Retrospect*  
Chapter 1 (p. 1)

Hafner Publishing Company. New York, New York, USA. 1959

### Morton, Oliver

Science and technology editor

If the space age has opened new ways of seeing mere matter, though, it has also fostered a strange return to something reminiscent of the pre-Copernican universe. The life that Lowell and his like expected elsewhere has not appeared, and so the Earth has become unique again. The now-iconic image of a blue-white planet floating in space, or hanging over the deadly deserts of the moon, reinforces the Earth's isolation and specialness. And it is this exceptionalism that drives the current scientific thirst for finding life elsewhere, for finding a cosmic mainstream of animation, even civilization, in which the Earth can take its place. It is both wonderful and unsettling to live on a planet that is unique.

*An Almanac for Moderns*

April Sixth (p. 19)

G.P. Putnam's Sons. New York, New York, USA. 1935

The geologist's picture of the younger stages of this our agreeable planet home resembles the Apocalyptic doom for the world that I once heard predicted to innocents in a Presbyterian Sunday School. For the geologist sees flaming jets of incandescent gas, bolts and flashes that, condensing as they cooled, became a swarm of planetesimals, fragments comparable to great meteoric masses of stone and metal. These, by all the rules of orthodox astronomy, must rush together whenever their orbits came too close.

*Flowering Earth*

### Pouchet, Félix Archimède 1800–72

French biologist

The earth is only an immense cemetery where each generation acquires life at the expense of the debris of that which has just expired; the particles of our corpses form new materials for the beings which will follow us.

*The Universe*

Geology, Book I, Chapter I (p. 590)

Blackie & Son. London, England. 1870

**Pupin, Michael**

Physicist

Our terrestrial globe is a celestial casting, and he who like myself learned the language of the foundry in his early youth will ask the human question: What is the mission of this celestial casting, this old celestial wanderer through the mighty stream of chaotic solar radiation? Is it only to receive its final tempering from the solar furnace which gave it its birth, and to smooth out its jagged surface by the erosive action of the waters which solar radiation carries in ceaseless succession of cycles from the oceans to the higher continental elevations? The answer to this human question is obvious; it is this: The highest mission of this celestial casting, which we call affectionately “our mother earth,” is to provide a congenial home for a new universe, “the universe of organic life.”

*The New Reformation: From Physical to Spiritual Realities*  
Chapter VII, Section IV (pp. 235–236)  
Charles Scribner’s Sons. New York, New York, USA. 1928

**Rice, Harvey** 1800–91

American lawyer and newspaper publisher

The earth in her physical aspects seems like a veritable thing of life, possessed of flesh, blood, and bones – her flesh, the soil; her blood, the rivers and the seas; her bones, the rock-ribbed mountains; her nostrils, the volcanoes; her breath, the winds; her eyelids, the skies; her tears, the dew-drops; her song, the melody of birds; her smile, the flowers; and her raiment, the sunbeams. It is the delight of her life to provide for her household, and at the same time dance to the “music of the spheres.”

*Nature and Culture*  
Chapter I (p. 26)  
Lee & Shepard. Boston, Massachusetts, USA. 1875

Chapter I (p. 1)  
The New York Home Library. New York, New York, USA. 1943

**Ruskin, John** 1819–1900

English writer, art critic, and social reformer

The earth in its depths must remain dead and cold, incapable except of slow crystalline change; but at its

surface, which human beings look upon and deal with, it ministers to them through a veil of strange intermediate being; which breathes, but has no voice; moves, but cannot leave its appointed place; passes through life without consciousness, to death without bitterness; wears the beauty of youth, without its passion; and declines to the weakness of age, without its regret.

*Modern Painters* (Volume 5)  
Part VI, Chapter 1 (p. 2)  
John Wiley & Sons. New York, New York, USA. 1879

**Sagan, Carl** 1934–96

American astronomer and author

The size and age of the Cosmos are beyond ordinary human understanding. Lost somewhere between immensity and eternity is our tiny planetary home.

*Cosmos*  
Chapter I (p. 1)  
Random House, Inc. New York, New York, USA. 1980

There are some hundred billion (10<sup>11</sup>) galaxies, each with, on the average a hundred billion stars. In all the galaxies, there are perhaps as many planets as stars, 10<sup>11</sup> × 10<sup>11</sup> = 10<sup>22</sup>, ten billion trillion. In the face of such overpowering numbers, what is the likelihood that only one ordinary star, the Sun, is accompanied by an inhabited planet? Why should we, tucked away in some forgotten corner of the Cosmos, be so fortunate? To me, it seems far more likely that the universe is brimming over with life. But we humans do not yet know. We are just beginning our explorations. The only planet we are sure is inhabited is a tiny speck of rock and metal, shining feebly by reflected sunlight, and at this distance utterly lost.

*Cosmos*  
Chapter I (pp. 5, 7)  
Random House, Inc. New York, New York, USA. 1980

Our planet is a lonely speck in the great enveloping cosmic dark. In our obscurity, in all this vastness, there is no hint that help will come from elsewhere to save us from ourselves.

*Pale Blue Dot: A Vision of the Human Future In Space*  
Chapter 1 (p. 9)  
Random House, Inc. New York, New York, USA. 1994

If we are to understand the Earth, we must have a comprehensive knowledge of the other planets.

The Solar System

Chapter VI, Part I, Section I (p. 114)

Harper & Row, Publishers. New York, New York, USA. 1964

**Tennyson, Alfred (Lord)** 1809–92  
English poet

Many an aeon moulded earth before her highest, man,  
was born,  
Many an aeon too may pass when earth is manless and  
forlorn,

Earth so huge and yet so bounded – pools of salt and  
plots of land – Shallow skin of green and azure – chains  
of mountains, grains of sand!

*Alfred Tennyson's Poetical Works*

Locksley Hall, Sixty Years After, Stanza 103

Oxford University Press, Inc. London, England. 1953

And the homeless planet at length will be wheeled thro  
the silence of Space,  
Motherless evermore of an ever-vanishing race,  
When the worm shall have writhed its last and its last  
brother-worm will have fled  
From the dead fossil skull that is left in the rocks of an  
earth that is dead.

*The Works of Alfred Lord Tennyson, Poet Laureate*

Despair (p. 535)

The Macmillan Co. New York, New York, USA. 1898

**Thomas, Lewis** 1913–93  
American physician and biologist

I have been trying to think of the earth as a kind of organism, but it is no go. I cannot think of it this way. It is too

big, too complex, with too many working parts lacking visible connections. The other night, driving through a hilly, wooded part of southern New England, I wondered about this. If not like an organism, what is it like, what is it most like? Then, satisfactorily for that moment, it came to me: it is most like a single cell.

*The Lives of a Cell: Notes of a Biology Watcher*

The Lives of a Cell (p. 5)

The Viking Press. New York, New York, USA. 1974

Viewed from the distance of the moon, the astonishing thing about the earth, catching the breath, is that it is alive. The photographs show the dry, pounded surface of the moon in the foreground, dry as an old bone. Aloft, floating free beneath the moist, gleaming, membrane of bright blue sky, is the rising earth, the only exuberant thing in this part of the cosmos.

*The Lives of a Cell: Notes of a Biology Watcher*

The World's Biggest Membrane (p. 145)

The Viking Press. New York, New York, USA. 1974

The word for earth, at the beginning of the Indo-European language thousands of years ago (no one knows for sure how long ago) was *dhghem*. From this word, meaning simply earth, came our word humus, the handiwork of soil bacteria. Also, to teach us the lesson, [came the words] humble, human, and humane. There is the outline of a philological parable here.

In Lynn Margulis and Dorion Sagan

*Microcosmos*

Foreword (p. 12)

Summit Books. New York, New York, USA. 1986

The overwhelming astonishment, the queerest structure we know about so far in the whole universe, the greatest of all cosmological scientific puzzles, confounding all our efforts to comprehend it, is the earth.

*The War of the Worlds*

Chapter the Tenth (p. 452)

Dover Publications, Inc. New York, New York, USA. 1934

### **Whipple, Fred L.** 1906–2004

Pioneer in comet research

Our Earth seems so large, so substantial, and so much with us that we tend to forget the minor position it occupies in the solar family of planets. Only by a small margin is it the largest of the other terrestrial planets. True, it does possess a moderately thick atmosphere that overlies a thin patchy layer of water and it does have a noble

satellite, about 1/4 its diameter. These qualifications of the Earth, however, are hardly sufficient to bolster our cosmic egotism. But, small as is the Earth astronomically, it is our best-known planet and therefore deserves and has received careful study.

*Earth, Moon and Planets*

The Earth (p. 60)

Grosset & Dunlap, Publishers. New York, New York, USA. 1958

### **Whitman, Walt** 1819–92

American poet, journalist, and essayist

The earth never tires;  
The earth is rude, silent,  
incomprehensible at first –  
Nature is rude and incomprehensible at first –  
Be not discouraged – keep on – there are divine things  
well envelop'd;  
I swear to you there are divine things more beautiful than  
words can tell.

*Complete Poetry and Collected Prose*

Song of the Open Road

The Library of America. New York, New York, USA. 1982

In this broad earth of ours,  
Amid the measureless grossness and the slag,  
Enclosed and safe within its central heart  
Nestles the seed perfection.

*Complete Poetry and Collected Prose*

Song of the Universal

The Library of America. New York, New York, USA. 1982

### **Winchell, Alexander** 1824–91

American geologist

The stability of the solid earth is instability itself.

*Walks and Talks in the Geological Field*

Part I, Chapter XVIII (p. 102)

Chautauqua Press. New York, New York, USA. 1890

### **Young, Louise B.**

Science writer

Time flows on...the planet continues to spin on its path  
through the unknown reaches of space. We cannot guess  
its destination or its destiny. The beautiful blue bubble of  
matter holds many wonders still unrealized and a mysteri-  
ous future waiting to unfold.

*The Blue Planet*

Chapter 14 (p. 266)

Little, Brown & Company. Boston, Massachusetts, USA. 1983

## **MARS**

### **Barnard, Edward Emerson** 1857–1923

American astronomer

To save my soul I can't believe in the canals as Schiaparelli draws them.... I verily believe...that the canals as

depicted by Schiaparelli are a fallacy and that they will  
be so proved before many oppositions are past.

*NASA Serial Publication*

Letter to Simon Newcomb, September 11, 1894 (p. 6)

Scientific and Information Technical Office, NASA, Washington, D.C.  
1962

### **de Fontenelle, Bernard le Bovier** 1657–1757

French author

Mars, who affords nothing curious that I know of; his day  
is rather more than half an hour longer than ours, but his  
year is twice as long, wanting about a month and near a  
half. He is about four times less than the earth, and the  
sun seems not altogether so large and so bright to him, as  
it appears to us. But let us leave Mars, he is not worthy  
our stay...

*Conversations on the Plurality of Worlds*

The Fourth Evening (pp. 118–119)

Printed for Peter Wilson. Dublin, Ireland. 1761

**Galilei, Galileo** 1564–1642  
Italian physicist and astronomer

I dare not affirm that I am able to observe the phases of Mars; nonetheless, if I am not mistaken, I believe I have seen that it is not perfectly round.

Letter to Benedetto Castelli, December 30, 1610  
Source undetermined

**Eberhart, Jonathan**  
Journalist, singer, and poet

Ten thousand times a hundred thousand dusty years ago,  
Where now extends the Plain of Gold,  
Did once my rivers flow;  
It stroked the stones and spoke in tongues and splashed  
against my face,  
Till ages rolled,  
The sun shone cold  
On this unholy place.  
Lament for a Red Planet  
Jonathan Ebert. 1980

**Herschel, Friedrich Wilhelm**  
(**Sir William**) 1738–1822  
English astronomer

The spots on Mars are of a different nature. Their constant and determined shape, as well as remarkable color, show them to be permanent, and fastened to the body of the planet.

Astronomical Observations on the Rotation of the Planets Round their Axes made with a View to determine whether the Earth's Diurnal Motion is perfectly Equable  
*Philosophical Transactions of the Royal Society of London*,  
Volume 71, 1781 (p. 119)

From other phenomena it appears, however, that this planet is not without a considerable atmosphere; for besides the permanent spots on its surface I have often noticed changes in both bright and dark belts, and these alterations we can hardly ascribe to any other cause than the variable disposition of clouds and vapors floating in the atmosphere of that planet.

On the Remarkable Appearances at the polar regions of the Planet Mars  
*Philosophical Transactions of the Royal Society of London*,  
Volume 74, 1784 (p. 273)

**Huygens, Christiaan** 1629–95  
Dutch mathematician, astronomer, and physicist

I am apt to believe that the Land in Mars is of a blacker Colour than that of Jupiter or the Moon, which is the reason of his appearing of a Copper Colour, and his reflecting a weaker Light than is proportionable to his distance from the Sun.... His Light and Heat is twice, and sometimes three times less than ours, to which I suppose the Constitution of his Inhabitants is answerable.

*The Celestial Worlds Discover'd, or, Conjectures Concerning the Planetary Worlds, Their Inhabitants and Productions*  
Section 11, Book 2 (p. 111)  
Printed for T. Childe. London, England. 1698

**Kepler, Johannes** 1571–1630  
German astronomer

...[the] motions [of Mars] provide the only possible access to the hidden secrets of astronomy, without which we would remain forever ignorant of those secrets.

*New Astronomy*  
Part II, 7 (p. 185)  
At The University Press. Cambridge, England. 1992

**Kuiper, Gerard P.** 1905–73  
Dutch-born American astronomer

The hypothesis of plant life...appears still the most satisfactory explanation of the various kinds of dark markings and their complex seasonal and secular changes.

In Steven J. Dick  
*Life on Other Worlds: The 20th Century Extraterrestrial Life Debate*  
Chapter 2 (p. 25)  
Cambridge University Press. Cambridge, England. 1998

**Leovy, Conway B.**  
No biographical data available

Unlike the moon, whose story appears essentially to have ended one or two billion years ago, Mars is still evolving and changing. On Mars, as on the earth, the most pervasive agent of change is the planet's atmosphere, itself the product of the sorting of the planet's initial constituents that began soon after it condensed from the primordial cloud of dust and gas that gave rise to the solar system 4.6 billion years ago.

The Atmosphere of Mars  
*Scientific American*, Volume 237, Number 1, July 1977 (p. 34)

**Longfellow, Henry Wadsworth** 1807–82  
American poet

There is no light in earth or heaven  
But the cold light of stars;  
And the first watch of night is given  
To the red planet Mars.

*The Poetical Works of Henry Wadsworth Longfellow*  
The Light of Stars, Stanza 2  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1883

**Lowell, Percival** 1855–1916  
American astronomer

To account for these phenomena, the explanation that at once suggests itself is, that a direct transference of water takes place over the face of the planet, and that the canals are so many waterways.

*Mars*  
Canals (p. 164)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1895

The struggle for existence in their planet's decrepitude and decay would tend to evolve intelligence to cope with circumstances growing momentarily more and more adverse. But, furthermore, the solidarity that the conditions prescribe would conduce to a breadth of

understanding sufficient to utilize it. Intercommunication over the whole globe is made not only possible, but obligatory. This would lead to the easier spreading over it of some dominant creature – especially were this being of an advanced order of intellect – able to rise above its bodily limitations to amelioration of the conditions through the exercise of the mind.

*Mars as the Abode of Life*

Part I, Chapter IV (p. 143)

The Macmillan Company. New York, New York, USA. 1908

Thus, not only do the observations we have scanned lead to the conclusion that Mars at this moment is inhabited, but they land us at the further one that these denizens are of an order whose acquaintance was worth the making. Whether we ever shall come to converse with them in anymore instant way is a question upon which science at present has no data to provide. More important to us is the fact that they exist, made all the more interesting by their precedence of us in the path of evolution.

*Mars as the Abode of Life*

Part I, Chapter VI (p. 215)

The Macmillan Company. New York, New York, USA. 1908

There are celestial sights more dazzling, spectacles that inspire more awe, but to the thoughtful observer who is privileged to see them well, there is nothing in the sky so profoundly impressive as the canals of Mars.

*Mars as the Abode of Life*

Part II, Notes (p. 228)

The Macmillan Company. New York, New York, USA. 1908

### **Malin, Michael**

The Mars we are trying to explore does not exist

In William Sheehan and Stephen James O'Meara

*Mars: The Lure of the Red Planet*

Prometheus Books. Buffalo, New York, USA. 2001

### **Morton, Oliver**

Science and technology editor

Yet if the Earth is a single isolated planet, the human world is less constrained. The breakdown of the equation between planets and worlds works both ways. If there can now be planets that are not worlds, then there can be worlds that spread beyond planets – and ours is doing so. Our spacecraft and our imaginations are expanding our world. This projection of our world beyond the Earth is for the most part a very tenuous sort of affair. It is mostly a matter of imagery and fantasy. Mars, though, might make it real – which is why Mars matters.

*Mapping Mars: Science, Imagination and the Birth of a World*

A Point of Warlike Light (p. 14)

Fourth Estate. London, England. 2002

Mars is not an independent world, held together by the memories and meanings of its own inhabitants. But nor

is it no world at all. More than any other planet we have seen, Mars is like the Earth. It is not very like the Earth. Its gravity is weak, its atmosphere thin, its surface sealess, its soil poisonous, its sunlight deadly in its levels of ultraviolet, its climate beyond frigid. It would kill you in an instant. But it is earthlike enough that it is possible to imagine some of us going there and experiencing this new part of our human world in the way we've always experienced the old part-from the inside. The fact that humans could feasibly become Martians is the strongest of the links between Mars and Earth.

*Mapping Mars: Science, Imagination and the Birth of a World*

A Point of Warlike Light (p. 14)

Fourth Estate. London, England. 2002

### **Murray, Bruce** 1932–

American planetologist

The Mars we had found was just a big moon with a thin atmosphere and no life. There were no Martians, no canals, no water, no plants, no surface characteristics that even faintly resembled Earth's.

*Journey into Space: The First Three Decades of Space Exploration*

Chapter 1 (p. 43)

W.W. Norton & Company, Inc. New York, New York, USA. 1989

Extending out from the chaotic terrain...are some extraordinary channels, which are also found in a number of other localities on the planet. It is hard to look at these channels without considering the possibility that they were cut by flowing water.

Mars from Mariner 9

*Scientific American*, Volume 228, Number 1, January, 1973 (p. 58)

### **Newcomb, Simon** 1835–1909

Canadian-American astronomer

Life not totally unlike that on the earth may therefore exist upon this planet [Mars] for anything that we know to the contrary.

*Side-Lights on Astronomy and Kindred Fields of Popular Science*

Chapter VII (p. 131)

Harper & Brothers Publishers. New York, New York, USA. 1906

### **Oberg, James E.**

American engineer

It's possible that metals, and even diamonds, will be found on Mars. Such mining, however, is unlikely. It would be more feasible to use Mars as a home base for a richly profitable Asteroid-mining operation. But there are other scientific and practical reasons for a manned expedition. Science is not idle curiosity; it's the search to understand the operating rules of the planet, solar system, and universe. The rolling hills, steam vents, dry riverbeds, and polar caps on Mars contain unique records of the relatively recent past.

Racing the Soviets to Mars

*CONTINUUM*, Volume 7, Number 6, March, 1986

**Schiaparelli, G. V.** 1835–1910

Italian astronomer

What strange confusion! What can all this mean? Evidently the planet has some fixed geographical details, similar to those of the Earth.... Comes a certain moment, all this disappears to be replaced by grotesque poly-gonations and germinations which, evidently, attach themselves to represent apparently the previous state, but it is a gross mask, and I say almost ridiculous.

 Dover Publications, Inc. New York, New York, USA. 1926

## SATURN

### Herschel, Friedrich Wilhelm

**(Sir William)** 1738–1822  
 English astronomer

There is not perhaps another object in the heavens that presents us with such a variety of extraordinary phenomena as the planet Saturn: a magnificent globe, encompassed by a stupendous double ring: attended by seven satellites: ornamented with equatorial belts: compressed at the poles: turning upon its axis: mutually eclipsing its ring and satellites, and eclipsed by them: the most distant of the rings also turning upon its axis, and the same taking place with the farthest of the satellites: all the parts of the system of Saturn occasionally reflecting light to each other: the rings and moons illuminating the nights of the Saturnian: the globe and satellites enlightening the dark parts of the rings: and the planet and rings throwing back the sun's beams upon the moons, when they are deprived of them at the time of their conjunctions.

*Philosophical Transactions of the Royal Society of London*  
 Observations on the Singular Figure of the Planet Saturn (p. 272)  
 Printed by W. Bulmer & Co. London, England. 1805

### Huygens, Christiaan

1629–95  
 Dutch mathematician, astronomer, and physicist

*Annulo cingitur, tenui, plano, nusquam cohaerente, ad eclipticam inclinato*

[It is surrounded by a thin flat ring, inclined to the ecliptic, and nowhere touches the body of the planet]

*De Saturni luna observatio nova*  
 The Hague, Netherlands. 1656

### Keill, John

1671–1721  
 Scottish mathematician and natural philosopher

...Saturn has an Ornament peculiar to himself, for he is dignified with a Ring which surrounds his middle, and does no where touch his Body; but by an exact Libration and Equiponderancy of all its Parts, sustains itself like an Arch, and being thus suspended by Geometry, it is kept from falling upon his Body.

*An Introduction to the True Astronomy*  
 Lecture III (p. 25)  
 Printed for Bernard Lintot. London, England. 1721

### Melville, Herman

1819–91  
 American novelist

Seat thyself sultanically among the moons of Saturn.

In *Great Books of the Western World* (Volume 48)  
*Moby Dick*  
 Chapter 107 (p. 343)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### Pallister, William Hales

1877–1946  
 Canadian physician

The planet Saturn, to the naked eye  
 Appears an oval star; in seeking why  
 The telescope shows us a startling sight  
 Which seems some lovely vision on a night  
 Of dreams. A giant, wide, sunlit, tilted ring,  
 More strange than any other heavenly thing.

*Poems of Science*  
 Other Worlds and Ours, Saturn (p. 205)  
 Playford Press. New York, New York, USA. 1931

### Pliny (C. Plinius Secundus)

23–79  
 Roman savant and author

The Planet which they call Saturn is the highest, and therefore seemeth to be least: also he performeth his Revolution in the greatest Circle of all: and it is certain, that in thirty Years' Space he returneth again to the Point of his first Place.

*Pliny's Natural History. In Thirty-seven Books*  
 Chapter VI (p. 40)  
 Printed for the Club by G. Barclay. London, England. 1847–1849

### Thayer, John H.

If you want to see a picture painted as only the hand of God can paint it, go with me to Saturn...

Saturn. The Wonder of the Worlds  
*Popular Astronomy*, Volume 37, Number 263, March, 1919 (p. 175)

### Whipple, Fred L.

1906–2004  
 Pioneer in comet research

Among the innumerable celestial objects that may be seen through a telescope, the most beautiful of all is perhaps the planet Saturn. When viewed in the evening twilight while the sky is still bright, the yellow gold ball and its unbelievable rings shimmer in a brilliant blue medium, more like a rare work of art than a natural phenomenon.

*Earth, Moon and Planets*  
 Chapter 11 (p. 174)

## URANUS

### Author undetermined

It has generally been supposed that it was a lucky accident that brought this star [Uranus] to his view; but this is an evident mistake. In the regular manner in which he examined every star in the heavens, not only of that magnitude, but many far inferior, it was that night its turn to be discovered.

Some Account of the Life and the Writings of William Herschel  
*The Edinburgh Magazine*, February, 1785 (p. 121)

### Banks, Sir Joseph

1743–1820  
 English naturalist

... who can say but your new Star [Uranus], which exceeds Saturn so much in its distance from the Sun, may exceed

him as much in magnificence of attendance? Who knows what new rings, new satellites, or what other nameless and numberless phenomena remain behind, waiting to reward future industry and improvement?

In Charles Richard Weld (ed.)

*A History of the Royal Society, With Memoirs of the Presidents*  
(Volume 2)

Chapter V (p. 149)

John W. Parker. London, England. 1848

### **de Morgan, Augustus** 1806–71

English mathematician and logician

This name [Uranus] is appropriate, inasmuch as Uranus is the father of Saturn, in mythology, as Saturn is of Jupiter, and Jupiter of Mars; but what will be done if a new planet should be discovered still more distant than Uranus?

In Charles Richard Weld (ed.)

*A History of the Royal Society, With Memoirs of the Presidents*  
(Volume 2)

Attributed (pp. 147–148)

John W. Parker. London, England. 1848

### **Herschel, Friedrich Wilhelm**

**(Sir William)** 1738–1822

English astronomer

In the fabulous ages of ancient times the appellations of Mercury, Venus, Mars, Jupiter, and Saturn were given to the planets as being the names of their principal heroes and divinities. In the present more philosophical era, it would hardly be allowable to have recourse to the same method, and call on Juno, Pallas, Apollo, or Minerva for a name to our new heavenly body.... I cannot but wish to take this opportunity of expressing my sense of gratitude, by giving the name Georgium Sidus, to a star [Uranus], which (with respect to us) first began to shine under His auspicious reign.

In James Sime

*William Herschel and His Work*

Chapter V, Letter to Sir Joseph Banks (p. 74)

Charles Scribner's Sons. New York, New York, USA. 1900

We see it [the probable new planet] as Columbus saw America from the shores of Spain. Its movements have been felt trembling along the far-reaching line of our analysis with a certainty hardly inferior to that of ocular demonstration.

Quoted in Richard Arman Gregory

*Discovery, Or, The Spirit and Service of Science*

Chapter VII (p. 175)

Macmillan & Co Ltd. London, England. 1916

On Tuesday, March 13 [1781], between 10 and 11 in the evening, while I was examining the small stars in the neighborhood of *H Geminorum*, I perceived one that appeared visibly larger than the rest. Being struck with its uncommon magnitude, I compared it to *H Geminorum* and the small star in the quartile between *Auriga* and

*Gemini*, and finding it so much larger than either of them, suspected it to be a comet.

Account of a Comet

*Philosophical Transactions of the Royal Society of London*,  
Volume LXXI (p. 154)

## NEPTUNE

### **Clerke, Agnes Mary** 1842–1907

Irish astronomer

Forever invisible to the unaided eye of man, a sister-globe to our earth was shown to circulate, in frozen exile, at 30 times its distance from the sun. Nay, the possibility was made apparent that the limits of our system were not even thus reached, but that yet profounder abysses of space might shelter obedient, though little favoured members of the solar family, by future astronomers to be recognized through the sympathetic thrillings of Neptune, even as Neptune himself was recognized through the tell-tale deviations of Uranus.

*A Popular History of Astronomy During the Nineteenth Century*

Part I, Chapter IV (p. 82)

A. & C. Black. London, England. 1908

### **Fort, Charles** 1874–1932

American writer

...in 1846, everyone who knew a sine from a cosine was out sining and cosining for a planet beyond Uranus. Two of them guessed right.

*The Book of the Damned*

Chapter X (p. 133)

Boni & Liveright. New York, New York, USA. 1919

## DWARF: PLUTO

### **Author undetermined**

In a little cluster of orbs which scampers across the side-real abyss under the name of the solar system there are, let it be known, nine instead of a mere eight, worlds. The presence of a ninth planet in the retinue of the Sun, long suspected, was definitely announced here today.

Associated Press dispatch

*New York Times*, March 14, 1930

### **Hoyt, William Graves** 1921–

American journalist and author

The planet was named Pluto, of course, the first two letters of the name as well as its planetary symbol of the superimposed letters “P” and “L” standing for the initials of Percival Lowell’s name.

*Lowell and Mars*

Chapter 14 (p. 280)

University of Arizona Press. Tucson, Arizona, USA. 1976

## PLANET, EXTRASOLAR

**van de Kamp** (1901–63)

The orbital analysis leads, therefore, to a perturbing mass of only 1.6 times the mass of Jupiter. We shall interpret this result as a companion of Barnard's star, which therefore appears to be a planet.

Astronomic Study of Barnard's Star from Plates Taken with the 24-inch Sproul Refractor  
*The Astronomical Journal*, Volume 68, Number 7, September, 1963 (p. 521)

## PLANETARY SYSTEM

**Bradford II, Gershom**

No biographical data available

The planetary system is like the horse race at a county fair; the pole horse has the advantage, but the varying speeds of the contestants soon place them at various parts of the track.

*The Whys and Wherefores of Navigation*  
Chapter II (pp. 6–7)

## PLANETS, NATURAL HISTORY OF

**Huxley, Thomas Henry** 1825–95

English biologist

Until human life is longer and the duties of the present press less heavily, I do not think that wise men will occupy themselves with Jovian, or Martian, natural history ...

*Collected Essays*  
Prologue (p. 40)  
D. Appleton & Co. New York, New York, USA. 1900

## PLANKTON

**Hyerdahl, Thor** 1914–2002

Norwegian ethnographer and adventurer

Some looked like fringed, fluttering spooks cut out of celophane paper, while others resembled red-beaked birds with hard shells instead of feathers. There was no end to Nature's extravagant inventions in the plankton world.

Translated by F.H. Lyon  
*Kon-Tiki*  
Chapter 5 (p. 139)  
Rand McNally & Company. Chicago, Illinois, USA. 1950

## PLANT

**Allen, Grant** 1848–99

Canadian-born writer

...everyone of these English plants and weeds has a long and eventful story of its own. In the days before the

illuminating doctrine of evolution had been preached, all we could say about them was that they possessed such and such a shape, and size, and colour: and if we had been asked why they were not rounder or bigger or bluer than they actually are, we could have given no sufficient reason, except that they were made so.

*Flowers and Their Pedigrees*

Introductory (p. 2)

Longmans, Green & Co. London, England. 1883

...every plant and every animal has a long history of its own, and that this history leads us on through a wonderful series of continuous metamorphoses compared with which Daphne's or Arethusa's were mere single episodes.

*Flowers and Their Pedigrees*

Chapter I (p. 11)

Longmans, Green & Co. London, England. 1883

**Aubrey II (Fictional plant)**

I'm just a mean green mother from outer space and I'm bad!

Little Shop of Horrors (1986)

**Bailey, William Whitman** 1843–1914

American botanist

Beginners almost always collect their plants too young; they have a nervous fear that they will not last.

*The Botanical Collector's Handbook*

Naturalists' Handy Series, Number 3 (p. 29)

Publisher undetermined. Salem, Massachusetts, USA. 1881

No division of the vegetable kingdom has attracted more deserved attention than that of the sea-weeds or sea-mosses. Throughout the world they have found their earnest students and devoted admirers. It is not alone for their intrinsic beauty that they are loved. Their collection involves the visiting of romantic cliffs – of shores strewn with the ocean's debris, of caves, and hollows, and even of the deep sea itself. The pursuit is always fascinating, and sometimes even perilous. A spice of danger does not deter the heroic algologist. Like "one who gathers sapphire, fearful trade!" he hangs suspended from crags, or ventures at low tide upon the slippery rocks over which the spray is dashing. There need not, however, be danger in the study. Many ladies have been successful gatherers of sea-weeds, and in the albums of many a watering-place belle may be seen choice specimens, self-collected. The plants need not be studied at all, if one prefers the simple collection and preservation, but it is always pleasanter to know something of the habits, uses, and even names of the objects which one treasures.

*The Botanical Collector's Handbook*

Naturalists' Handy Series, Number 3 (pp. 46–47)

Publisher undetermined. Salem, Massachusetts, USA. 1881

Plants should not be personified or endowed outright with motives; but figures of speech and parables may often be employed to teach a lesson or to drive home a point.

*Botany: An Elementary Text for Schools* (4th edition)  
Paragraphs for the Teacher (p. xi)  
The Macmillan Co. New York, New York, USA. 1901

**Beecher, Henry Ward** 1813–87  
American Congregational preacher and orator

If a plant be uncouth, it has no attractions to us simply because it has been brought from the ends of the earth and is a “great rarity;” if it has beauty, it is none the less, but a great deal more attractive to us, because it is common.

*Star Papers*

Experiences of Nature, I (p. 95)

J.B. Ford & Co. New York, New York, USA. 1873

**Biddle, Anthony Joseph Drexel** 1896–1961  
American publisher, journalist, and miscellaneous writer

We value a plant according to the delicacy and number of flowers it produces. And what joy flowers give! We remember them long after they are withered and dead.

*The Flowers of Life* (p. 311)

Drexel Biddle Publisher. Philadelphia, Pennsylvania, USA. 1897

**Borland, Hal** 1900–78  
American writer

There are no idealists in the plant world and no compassion. The rose and the morning glory know mercy. Bindweed, the morning glory, will quickly choke its competitors to death, and the fencerow rose will just as quietly crowd out any other plant that tried to share its roothold. Idealism and mercy are human terms and human concepts.

*Book of Days*

22 July 1976 (pp. 188–189)

Alfred A. Knopf. New York, New York, USA. 1976

**Burroughs, John** 1837–1921  
American naturalist and writer

I know of nothing in vegetable nature that seems so really to be born as the ferns. They emerge from the ground rolled up, with a rudimentary and “touch-me-not” look, and appear to need a maternal tongue to lick them into shape. The sun plays the wet-nurse to them, and very soon they are out of that uncanny covering in which they come swathed and take their places with other green things.

*Signs and Seasons*

A Spring Relish (p. 193)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1886

**Clute, Willard N.**  
American botanist

One of the redeeming features of rubbish heaps, ballast grounds and waste lands is that they furnish a lurking place for numerous wanderers and outcasts of the vegetable kingdom.

A Plant Immigrant

*The American Botanist*, Volume 1, Number 2, August, 1901 (p. 18)

**de Vilmorin, Henri L.**

No biographical data available

It is a well-established fact that the life-work of plants is to make the mineral wealth of the earth fitted for the use of animals and of man.

In Washington Atlee Burpee

*Selection in Seed Growing*

Pedigree or Grade Races in Horticulture (p. 10)

W. Atlee Burpee & Co. Philadelphia, Pennsylvania, USA. 1896

**Dewar, Redcote**

No biographical data available

With the exception of specialists, few average men of intelligence know more about plants than a kitchen garden reveals and until they are led to read up the subject have no notion of the wonderful world of plant life in the planet and unconscious that they have even incipient rivals in intelligence and attainments among the vegetables.

*From Matter to Man: A New Theory of the Universe*

Chapter XI (pp. 131–132)

Chapman & Hall, Ltd. London, England. 1898

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

To every plant there are two powers; one shoots down as rootlet, and one upward as tree.

*The Complete Works of Ralph Waldo Emerson* (Volume 8)

*Letters and Social Aims*

Chapter I (p. 71)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

The root of the plant is not unsightly to science...

*The Complete Works of Ralph Waldo Emerson* (Volume 2)

*Essays: First Series*

Chapter VI (p. 196)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

Plants are the young of the world, vessels of health and vigor; but they grope ever upwards towards consciousness; the trees are imperfect men, and seem to bemoan their imprisonment, rooted in the ground.

*Ralph Waldo Emerson: Essays and Lectures*

*Essays: Second Series*

Nature (p. 547)

The Library of America. New York, New York, USA. 1983

**Gatty, M. S.** 1809–73

English writer

It was once prettily said by a lady who cultivated flowers, that she had “buried many a care in her garden”; and the sea-weed collector can often say the same of his garden – at the shore; as many a loving disciple could testify, who, having taken up the pursuit originally as a resource against weariness, or a light possible occupation during hours of sickness, has ended by an enthusiastic love, which throws a charm over every sea-place on

the coast, however dull and ugly to the world in general; makes every day spent there too short, and every visit too quickly ended. Only let there be sea, and plenty of low, dark rocks stretching out, peninsular-like, into it; and only let the dinner-hour be fixed for high-water time – and the loving disciple asks no more of fate.

*British Sea-Weeds: Drawn from Professor Harvey's Phycologia Britannica* (Volume 1)

Introduction (p. vii)

Bell & Daldy. London, England. 1872

**Ganong, William Francis** 1864–1941

Canadian botanist, historian, and cartographer

The evidence seems to show beyond question that our present species of plants have descended by gradual evolution from simpler and fewer species which formerly existed, and which in turn were evolved from still simpler and fewer kinds – back, it is possible, to a single kind which throve in remotest antiquity.

*A Textbook of Botany for Colleges*

Chapter II (p. 10)

The Macmillan Co. New York, New York, USA. 1921

**Gerard, John** 1545–1612

English botanist

Among the manifold creatures of God (right Honorable, and my singular good Lord) that have all in all ages diversely entertained many excellent wits, and drawne them to the contemplation of the divine wisdom, none have provoked mens' studies more, or satisfied their desires so much as Plants have done, and that upon Just and worthy causes: For if delight may provoke mens' labor, what greater delight is there than to behold the earth appareled with plants, as with a robe of embroidered worke, set with Orient pearles, and garnished with great diversitie of rare and costly jewels?

*The Herball or Generall Historie of Plantes*

The Epistle Dedicatorie

Bonham and I. Norton. London, England. 1597

Although my paines have not been spent (Courteous Reader) in the gracious discoverie of golden mines, nor in the tracing after silver veines, whereby my native country might be enriched with such merchandise as it hath most in request and admiration; yet hath my labour (I trust) been otherwise profitably employed, in descrying of such a harmlesse treasure of herbes, trees, and plants, as the earth frankly without violence offereth unto our most necessarie uses.

*The Herball or Generall Historie of Plantes*

To the Courteous and Well-Willing Reader

Bonham and I. Norton. London, England. 1597

**Gleason, Henry Allan** 1882–1975

American botanist

Every species of plant is a law unto itself.

The Individualistic Concepts of the Plant Association

*Bulletin of the Torrey Botanical Club*, Volume 53, 1926 (p. 26)

**Haldane, John Burdon Sanderson** 1892–1964

English biologist

The simplest plants, such as the green algae growing in stagnant water or on the bark of trees, are mere round cells. The higher plants increase their surface by putting out leaves and roots. Comparative anatomy is largely the story of the struggle to increase surface in proportion to volume.

On Being the Right Size (p. 954)

Simon & Schuster. New York, New York, USA. 1956

**Hemans, Felicia D.** 1793–1835

English poet

Oh! Call us not *weeds*, but flowers of the sea,  
For lovely, and gay, and bright-tinted are we!  
Our Blush is as deep as the rose of thy bowers,  
Then call us not *weeds*, we are Ocean's gay flowers.  
Not nursed like the plants of the summer parterre  
Whose gales are but sighs of an evening air  
Our exquisite, fragile and delicate forms,  
Are the prey of the Ocean, when vexed with his storms.

*The Poetical Works of Mrs. Felicia Hemans*

Ocean Flowers and Their teachings

Crosby, Nichols, Lee & Company. Boston, Massachusetts, USA. 1860

**Hutton, James** 1726–97

Scottish geologist, chemist, and naturalist

Let us, therefore, open the book of Nature, and read in her records, if there had been a world bearing plants, at the time when this present world was forming at the bottom of the sea.

*Theory of the Earth: With Proofs and Illustrations* (Volume 1)

Chapter I, Section IV (pp. 177–178)

H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

Scarce a plant perhaps that has not its peculiar animal which feeds upon its various productions; scarce an animal that has not its peculiar tribe of plants on which the economy of its life, its pleasure, or its prosperity must depend.

*Theory of the Earth: With Proofs and Illustrations* (Volume 2)

Chapter VI (p. 185)

H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

**Huxley, Thomas Henry** 1825–95

English biologist

Not only does every animal live at the expense of some other animal or plant, but the very plants are at war. The ground is full of seeds that cannot rise into seedlings; the seedlings rob one another of air, light and water, the strongest robber winning the day, and extinguishing his competitors.... The individuals of a species are like the crew of a foundered ship, and none but good swimmers have a chance of reaching the land.

The Macmillan Co. New York, New York, USA. 1906

**Nuttall, Thomas** 1786–1859

English botanist

To acquire a knowledge of the vegetable world, so pleasing to all observers, it may not perhaps be amiss to anticipate the dry detail of technical phrases, which has but too often deterred, at the very portal of Flora's temple, the enquirer into the nature and character of this beautiful and useful tribe of beings, and begin, at once, by examining plants as we naturally find them, in the manner our predecessors must have done, from whom we have received their history.

*An Introduction to Systematic and Physiological Botany*

Part I, Chapter I (p. 1)

Hillard & Brown. Cambridge, England. 1830

**Osborn, Henry Stafford** 1857–1935

American paleontologist and geologist

Every little flower is a word in the wide-spread language of flowers, every fruit a sentence, every sprig of moss and blade of grass a conjunction or particle, a little word, which helps to add interest to the whole; and the history of each, in its efforts for life, forms a volume in the large

library of flowers and plants scattered from the equator even to the ice-bound regions of the farthest North.

*Plants of the Holy Land*

The Voices of Flowers (pp. 11–12)

J.B. Lippincott & Co. Philadelphia, Pennsylvania, USA. 1861

**Peattie, Donald Culross** 1898–1964

American botanist, naturalist, and author

It is a strange thing, and a wondrous one, that no one can tell you what a plant is. And when you meet with that which is indefinable, then indeed are you in the presence of something great.

*Flowering Earth*

Chapter 4 (p. 38)

G.P. Putnam's Sons. New York, New York, USA. 1939

The Green Kingdom lacks for definition not because, like justice or beauty, it is an ideal concept, nor yet because it is incorporeal like divinity, or too primal for synonyms, like the physicist's energy. For two reasons plants cannot be characterized in a sentence—first, because it seems impossible to separate primitive plants from primitive animals, and again because of the oneness of life.

*Flowering Earth*

Chapter 4 (p. 38)

G.P. Putnam's Sons. New York, New York, USA. 1939

[A plant] is a strange thing, and a wondrous one, that no one can tell you what a plant is. And when you meet with that which is indefinable, then indeed are you in the presence of something great.

*Flowering Earth*

Chapter 4 (p. 38)

G.P. Putnam's Sons. New York, New York, USA. 1939

Weighted in their armor of cellulose, the higher land plants, it is true, have taken up fixed stations in life. So they have rather surrendered to the animal kingdom the proverbially broadening effects of travel. But they have not lost the power of motion. Like a dancing girl who expresses dance without stirring her feet, they too gesticulate.

*Flowering Earth*

Chapter 4 (p. 41)

G.P. Putnam's Sons. New York, New York, USA. 1939

All this unambitious rooted living, this having no head to lose, no heart either to beat or stop, this sex without passion, this flowering, is plant growth. As it came first, the Green Kingdom, so it will last longest. As it is simpler than we are, so is it stronger. Moss covers our ruins, grass our battlefields. The flag of life is forever carried forward, peacefully, by our unsundering allies.

*Flowering Earth*

Chapter 4 (p. 50)

G.P. Putnam's Sons. New York, New York, USA. 1939

As plantsmen we are interested in the moment when the first plant began. For there was raised the flag of life.

*Flowering Earth*

Chapter 6 (p. 61)

G.P. Putnam's Sons. New York, New York, USA. 1939

**Phelps, Almira Hart Lincoln** 1793–1884

American educator and writer

...the vegetable world offers a boundless field of inquiry, which may be explored with the most pure and delightful emotions. Here the Almighty seems to manifest himself to us, with less of that dazzling sublimity which it is almost painful to behold in His more magnificent creations; and it would seem, that accommodating the vegetable world to our capacities of observation, He had especially designed it for our investigation and amusement, as well as our sustenance and comfort.

*Familiar Lectures on Botany, Practical, Elementary and Physiological* (5th edition)

Lecture I (p. 15)

F.J. Huntington & Co. New York, New York, USA. 1837

**Phillips, Henry** 1779–1840

English banker

It would be a difficult question to decide, whether the study of the natural history of Plants be more agreeable to the mind, or beneficial to the body. The importance of this pursuit must be deeply felt by the reflecting mind; indeed it has advantages over every other science. The study of Natural History, and particularly of Botany, calms the mind, and quiets the passions; whereas Historical research produces unpleasant reflections, and in tracing the fate of kingdoms or individuals our feelings are often as much distressed as our minds are amused.

*History of Cultivated Vegetables* (Volume 1) (2nd edition)

Introduction (p. 1)

Henry Colburn & Co. London, England. 1822

**Runge, Friedlieb Ferdinand**

German chemist

A plant is a great chemist: it distinguishes and separates substances more definitely and accurately than man can, with all his skill, his intelligence, and his appliances ...

Sage-brush is a very fair fuel, but as a vegetable it is a distinguished failure. Nothing can abide the taste of it but the jackass and his illegitimate child the mule.

*Roughing It* (Volume 1)

Chapter III (p. 32)

Harper &amp; Brothers Publishers. New York, New York, USA. 1899

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

We will see the entire plant world, for example, as a vast sea which is as necessary to the existence of individual

insects as the oceans and rivers are to the existence of individual fish, and we will observe that an enormous number of living creatures are born and nourished in this ocean of plants. Ultimately we will see the whole world of animals as a great element in which one species is created, or at least sustained, by and through another. We will no longer think of connections and relationships in terms of purpose or intention. This is the only road to progress in understanding how nature expresses itself from all quarters and in all directions as it goes about its work of creation.

In D. Miller (ed.)

*Scientific Studies* (Volume 12)

Chapter II (p. 55)

Suhrkamp. New York, New York, USA. 1988

The Primal Plant is going to be the strangest creature in the world, which Nature herself must envy me. With this model and the key to it, it will be possible to go on forever inventing plants and know that their existence is logical; that is to say, if they do not actually exist, they could, for they are not the shadowy phantoms of a vain imagination, but possess an inner necessity and truth. The same law will be applicable to all other living organisms.

Translated by W.H. Auden and Elizabeth Mayer

*Italian Journey*

Letter to Herder

May 17, 1787 (p. 305)

Pantheon Books. New York, New York, USA. 1962

Anyone who pays a little attention to the growth of plants will readily observe that certain of their external members are sometimes transformed so that they assume – either wholly or in some lesser degree – the form of the members nearest in the series.

Thus, for example, the usual process by which a single flower becomes double, is that, instead of filaments and anthers, petals are developed; these either show a complete resemblance in form and color to the other leaves of the corolla, or they still carry some visible traces of the origin.

If we note that it is in this way possible for the plant to take a step backwards and thus to reverse the order of growth, we shall obtain so much the more insight into Nature's regular procedure; and we shall make the acquaintance of the laws of transmutation, according to which she produces one part from another, and sets before us the most varied forms through modification of a single organ.

An Attempt to Interpret the Metamorphosis of Plants, Introduction

Section 1 and Section 3

*Chronica Botanica*, Volume 10, Number 2, Summer, 1946 (p. 91)**von Humboldt, Alexander** 1769–1859

German naturalist and explorer

Even the child longs to pass the hills or the seas which enclose his narrow home; yet, when his eager steps have borne him beyond those limits, he pines, like the plant, for his native soil; and it is by this touching and beautiful

attribute of man – this longing for that which is unknown, and this fond remembrance of that which is lost – that he is spared from an exclusive attachment to the present.

Chapter V, Pudd'nhead Wilson's Calendar  
Harper & Brothers. New York, New York, USA. 1899

## CRUCIFIXION THORN

**van Dyke, John Charles** 1856–1932

American art historian and critic

The crucifixion thorn is a bush or tree somewhat like the palo verde, except that it has no leaf. It is a thorn and little else. Each small twig runs out and ends in a sharp spike of which the branch is but the supporting shaft. It bears in August a small yellow flower but this grows out of the side of the spike. In fact the whole shrub seems created for no other purpose than the glorification of the thorn as a thorn.

*The Desert*  
Chapter VIII (p. 140)  
Charles Scribner's Sons. New York, New York, USA. 1930

## CUCUMBER

**Johnson, Samuel** 1696–1772

English critic, biographer, and essayist

...it has been a common saying of physicians in England, that a cucumber should be well sliced, and dressed with pepper and vinegar, and then thrown out, as good for nothing.

In James Boswell  
*Life of Johnson*  
5 October, 1773

## FERN

**Burroughs, John** 1837–1921

American naturalist and essayist

I know of nothing in vegetable nature that seems so really to be born as the ferns. They emerge from the ground rolled up, with a rudimentary and "touch-me-not" look, and appear to need a maternal tongue to lick them into shape. The sun plays the wet-nurse to them, and very soon they are out of that uncanny covering in which they come swathed, and take their places with other green things.

**Anderson, Hans Christian** 1805–75

Danish author and poet

What the botanist tells us after a number of imperfect lectures, the flower proclaimed in a minute.

*Anderson's Fairy Tales*  
The Shoe of Fortune (p. 98)  
John Hogg. London, England. 1883

### Author unknown

The pistol of a flower is its only protection against insects.

Source undetermined

**Barrett-Browning, Elizabeth** 1806–61

English poet

...those tall flowering-reeds which stand  
In Arno, like a sheaf of scepters left  
But some remote dynasty of dead gods  
To suck the stream for ages and get green.

*The Complete Poetical Works of Elizabeth Barrett Browning*

Aurora Leigh, Book VII, l. 937–940

Houghton Mifflin Company. Boston, Massachusetts, USA. 1900

**Beecher, Henry Ward** 1813–87

American Congregational preacher and orator

Flowers are the sweetest things God ever made and forgot to put a soul into.

*Life Thoughts* (p. 234)

Phillips, Sampson &amp; Co. Boston, Massachusetts, USA. 1858

Happy is the man that loves flowers! Happy, even if it be a love adulterated with vanity and strife. For human passions nestle in flower-lovers too.

*Star Papers*

A Discourse of Flowers (p. 93)

J.B. Ford &amp; Co. New York, New York, USA. 1873

He who only does not appreciate floral beauty is to be pitied like any other man who is born imperfect.

*Star Papers*

A Discourse on Flowers (p. 94)

Books for Libraries Press. Freeport, New York, USA. 1972

...flowers are weeds where they grow wildly and abundantly; and somewhere our rarest flowers are somebody's commonest.

*Star Papers*

Experiences of Nature, I (pp. 94–95)

J.B. Ford &amp; Co. New York, New York, USA. 1873

A very common flower adds generosity to beauty. It gives joy to the poor, the rude, and to the multitudes who could have no flowers were nature to charge a price for her blossoms. Is a cloud less beautiful, or a sea, or a mountain, because often seen, or seen by millions?

*Star Papers*

Experiences of Nature, I (p. 95)

J.B. Ford &amp; Co. New York, New York, USA. 1873

As for marigolds, poppies, hollyhocks, and valorous sunflowers, we shall never have a garden without them, both for their own sake, and for the sake of old-fashioned folks, who used to love them.

*Star Papers*

A Discourse of Flowers (p. 95)

J.B. Ford &amp; Co. New York, New York, USA. 1873

Flowers have an expression of countenance as much as men or animals. Some seem to smile; some have a sad expression; some are pensive and diffident; others again are plain, honest and upright, like the broad-faced sunflower and the hollyhock.

*Star Papers*

A Discourse on Flowers (p. 100)

Books for Libraries Press. Freeport, New York, USA. 1972

**Blake, William** 1757–1827

English poet, painter, and engraver

To create a little flower is the labor of ages.

*The Complete Poetry and Prose of William Blake*

The Marriage of Heaven and Hell, l. 56

University of California Press. Berkeley, California, USA. 1982

**Bloom, James Harvey**

No biographical data available

What wonder, then, that flower and fruit have played a not ignoble part in the civilization of the world, and have helped to soften many a rugged nature and have brought precious solace to many a broken heart!

*Shakespeare's Garden*

Introduction (p. 1)

Methuen &amp; Co. London, England. 1903

**Borlase, William** 1696–1772

Cornish antiquary

...the flowers and ground together make so pretty a piece of tapestry, that one might be surprised to find such colouring and workmanship hid, as it were industriously, under a rock; but the works of Nature are every where well finished, and cannot be otherwise than exact and beautiful in their degree...

*British Tunicata*, Volume 3, 1911

Printed for the Ray Society

**Bryant, William Cullen** 1794–1878

American poet

That delicate forest flower,  
With scented breath and look so like a smile,  
Seems, as it issues from the shapeless mould,  
An emanation of the indwelling Life,  
A visible token of the upholding Love,  
That are the soul of this great universe.

*Poems*

A Forest Hymn

D. Appleton. New York, New York, USA. 1874

Where are the flowers, the fair young flowers,  
That lately sprang and stood  
In brighter light and softer airs, a beauteous sisterhood?

*Poems*

The Death of the Flowers

D. Appleton. New York, New York, USA. 1874

Loveliest of lovely things are they,  
On earth, that soonest pass away.  
The rose that lives its little hour  
Is prized beyond the sculptured flower.

*Poems*

A Scene on the Banks of the Hudson

D. Appleton. New York, New York, USA. 1874

The little wind-flower, whose just opened eye  
Is blue as the spring heaven it gazes at.

*Poems*

A Winter Piece

D. Appleton. New York, New York, USA. 1874

**Child, Lydia M.** 1802–80  
American author and abolitionist

Flowers have spoken to me more than I can tell in written words. They are the hieroglyphics of angels, loved by all men for the beauty of the character, though few can decipher even fragments of their meaning.

*Letters from New York*

Letter XXVI, September 1, 1842

C.S. Francis & Company. New York, New York, USA. 1845

**Cranch, Christopher Pearse** 1813–92  
Unitarian minister, poet, and author

Majestic flower! How purely beautiful  
Thou art, as rising from thy bower of green,  
Those dark and glossy leaves so thick and full,  
Thou standest like a high-born forest queen  
Among thy maidens clustering round so fair...  
I breathe the perfume, delicate and strong,  
That comes like incense from thy petal-bower;  
My fancy roams those southern woods along,  
Beneath that glorious tree, where deep among  
The unsunned leaves thy large white flowers-cups hung!

*Collected Poems of Christopher Pearse Cranch*

Poem to the Magnolia Grandiflora

Scholars' Facsimiles & Reprints. Gainesville, Florida, USA. 1971

**de Saint-Exupéry, Antoine** 1900–44  
French aviator and writer

Flowers are weak creatures. They are naïve. They reassure themselves as best they can. They believe that their thorns are terrible weapons...

Translated by Katherine Woods

*The Little Prince*

Chapter VII (p. 26)

Harcourt, Brace & Company. New York, New York, USA. 1943

**Dickens, Charles** 1812–70  
English novelist

The rich, sweet smell of the hayricks rose to his chamber window; the hundred perfumes of the little flower-garden beneath scented the air around; the deep-green meadows shone in the morning dew that glistened on every leaf as it trembled in the gentle air; and the birds sang as if every sparkling drop were a fountain of inspiration to them.

*The Posthumous Papers of the Pickwick Club*

Chapter VII (p. 72)

Dodd, Mead & Company. New York, New York, USA. 1944

**Feynman, Richard P.** 1918–88  
American theoretical physicist

There are all kinds of interesting questions that come from a knowledge of science, which only adds to the excitement and mystery and awe of a flower.

*What Do You Care What Other People Think*

W.W. Norton & Co. New York, New York, USA. 1998

**Goodale, Dora Read** 1866–1953  
American poet

Now about the rugged places  
And along the ruined way,  
Light and free in sudden graces  
Comes the careless trend of May, –  
Born of tempest, wrought in power,  
Stirred by sudden hope and fear,  
You may find a mystic flower  
In the spring-time of the year!  
*All Round the Year: Verses from Sky Farm*  
Trillium  
G.P. Putnam's Sons. New York, New York, USA. 1881

Whence is yonder flower so strangely bright?  
Would the sunset's last reflected shine  
Flame so red from that dead flush of light?  
Dark with passion is its lifted line,  
Hot, alive, amid the falling night.  
*All Round the Year: Verses from Sky Farm*  
Cardinal Flower  
G.P. Putnam's Sons. New York, New York, USA. 1881

**Holland, Josiah Gilbert** 1819–81  
American novelist and poet

There are crowds who trample a flower into the dust,  
without once thinking that they have one of the sweetest  
thoughts of God under their heels.

*Gold-foil, Hammered From Popular Proverbs*

Chapter III (p. 32)

Charles Scribner's Sons. New York, New York, USA. 1881

**Holmes, Oliver Wendell** 1809–94  
American physician, poet, and humorist

The Amen! of Nature is always a flower.

*The Autocrat of the Breakfast-table*

Chapter X (p. 225)

J.M. Dent & Co. Boston, Massachusetts, USA. 1907

**Huxley, Thomas Henry** 1825–95  
English biologist

Flowers are the primers of the morphologist; those who run may read in them uniformity of type amidst endless diversity, singleness of plan with complex multiplicity of detail. As a musician might say, every natural group of flowering plants is a sort of visible fugue, wandering about a central theme which is never forsaken, however it may momentarily, cease to be apparent.

In Michael Foster and E. Ray Lankester

*The Scientific Memoirs of Thomas Henry Huxley* (Volume 4)

Chapter XXXVIII (p. 666)

Macmillan & Co Ltd. London, England. 1902

**Jefferies, Richard** 1848–87  
English naturalist and author

The first conscious thought about wild flowers was to find out their names – the first conscious pleasure – and then I began to see so many that I had not previously noticed. Once you wish to identify them there is nothing escapes, down to the little white chickweed of the path and the moss of the wall.

*The Open Air*

Wild Flowers (pp. 36–37)

Chatto &amp; Windus. London, England. 1885

**Meredith, George** 1828–1909

English novelist and poet

Well, the flowers of the field are frail things. Pluck one, and you have in your hand the frailest of things. But reach through the charm of colour and the tale of its beneficence in frailty to the poetry of the flower, and secret of the myriad stars will fail to tell you more than does that poetry of your little flower.

*The Amazing Marriage* (Volume 2)

Chapter XIII (p. 152)

Bernhard Tauchnitz. Leipzig, Germany. 1897

**Millay, Edna St. Vincent** 1892–1950

American poet

I will be the gladdest thing  
Under the sun!  
I will touch a hundred flowers  
And not pick one.

*Collected Poems*

Afternoon on a Hill (p. 33)

Harper &amp; Row, Publishers. New York, New York, USA. 1950

**Milton, John** 1608–74

English poet

Into the blissful field, through Groves of Myrrhe,  
And flouring Odours, Cassia, Nard, and Blame;  
A Wilderness of Sweets ...

In *Great Books of the Western World* (Volume 32)*Paradise Lost*

Book V, l. 294–7

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Mirbeau, Octave** 1848–1917

French journalist, art critic, pamphleteer, and novelist

...flowers do not indulge in sentiment. They indulge in passion, nothing but passion. They make love all the time.

Translated by Alvah C. Bessie

*The Torture Garden*

C. Kendall. New York, New York, USA. 1931

**Muir, John** 1838–1914

American naturalist

For all the way up the long red slate slopes, that in the distance seemed barren, you find little garden beds and tufts of dwarf phlox, ivesia, and blue arctic daisies that go straight to your heart, blessed fellow mountaineers kept safe and warm by a thousand miracles.

*Our National Parks*

Chapter III (p. 94)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

...Nature, like an enthusiastic gardener, could not resist the temptation to plant flowers everywhere.

*Our National Parks*

Chapter V (p. 141)

Houghton Mifflin &amp; Co. Boston, Massachusetts, USA. 1901

Around your camp fire the flowers seem to be looking eagerly at the light, and the crystals shine unweariedly, making fine company as you lie at rest in the very heart of the vast, serene, majestic night.

*Our National Parks*

Chapter V (p. 163)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

Flowers are born every hour.

In Linnie Marsh Wolfe (ed.)

*John of the Mountains*

Chapter II, Section 1, April 9 (p. 48)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1938

**Murdoch, Iris** 1919–99

English writer

People from a planet without flowers would think we must be mad with joy the whole time to have such things about us.

*A Fairly Honourable Defeat*

Part I, Chapter Fifteen (p. 170)

Penguin Books. New York, New York, USA. 2001

**Novalis (Friederich von Hardenberg)** 1772–1801

German poet

Flowers exactly correspond to children...like children they are found lowest down, nearest the earth ...

*Main Currents in Nineteenth, Century Literature*

Chapter XII (p. 196)

The Macmillan Co. New York, New York, USA. 1906

**Osborn, Henry Stafford** 1857–1935

American paleontologist and geologist

There are voices that are eloquent though they utter no sounds. There are beautiful faces that speak of innocence and love with looks which affect our hearts more rapidly through our eyes than could words however skillfully presented. And on the faces of little flowers how plainly can we read thoughts of beauty, of modesty, and of design, which the longest description would fail to picture to our minds as faithfully as does one short vision!

*Plants of the Holy Land*

The Voices of Flowers (p. 11)

J.B. Lippincott &amp; Co. Philadelphia, Pennsylvania, USA. 1861

**President of the 1893 Horticultural Congress**

The loveliest symbols of thought and aspiration of sentiment and affection are flowers.

In Washington Atlee Burpee

*Selection in Seed Growing*

The Horticultural Congress (p. 7)

W. Atlee Burpee &amp; Co. Philadelphia, Pennsylvania, USA. 1896

**Rossetti, Christina Georgina** 1830–94

English poet

Flowers preach to us if we will hear.

*The Complete Poems of Christina Rossetti* (Volume 1)

Consider the Lilies of the Field (p. 76)

Louisiana State University Press. Baton Rouge, Louisiana, USA. 1979

**Ruskin, John** 1819–1900

English writer, art critic, and social reformer

Flowers seem intended for the solace of ordinary humanity. Children love them; quiet, tender, contented, ordinary people love them as they grow; luxurious and disorderly people rejoice in them gathered. They are the cottager's treasure; and in the crowded town, mark, as with a little broken fragment of rainbow, the windows of the workers in whose heart rests the covenant of peace.

*Modern Painters* (Volume 5)

Chapter X (p.101)

George Allen

London, England. 1906

But in the meantime, I must again solemnly warn my girl-readers against all study of floral genesis and digestion. How far flowers invite, or require, flies to interfere in their family affairs – which of them are carnivorous – and what forms of pestilence or infection are most favourable to some vegetable and animal growths – let them leave the people to settle who like, as Toinette says of the Doctor in the 'Malade Imaginaire' – "y mettre le nez."

*Proserpina: Studies of Wayside Flowers* (Volume 2)

Part VII, Chapter I (p. 40)

George Allen. London, England. 1882

We must never lose hold of the principle that every flower is meant to be seen by human creatures with human eyes, as by spiders with spider eyes.

*Proserpina: Studies of Wayside Flowers* (Volume 2)

Book IX, Chapter V (p. 123)

George Allen. London, England. 1882

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

There is a Thorn – it looks so old,  
In truth, you'd find it hard to say  
How it could ever have been young,  
It looks so old and gray.

*The Complete Poetical Works of William Wordsworth*

The Thorn, Stanza I

Crowell. New York, New York, USA. 1888

**Tennyson, Alfred (Lord)** 1809–92

English poet

Flower in the crannied wall,  
I pluck you out of the crannies,  
Hold you here, root and all, in my hand,  
Little flower – but if I could understand  
What you are, root and all, and all in all,  
I should know what God and man is.

*The Works of Tennyson*

The Voice and the Peak

The Macmillan Co. New York, New York, USA. 1913

**Titcomb, Timothy** 1819–81

American writer and editor

There are crowds who trample a flower into the 'dust',  
without once thinking that they have one of the sweetest  
thoughts of God under their heel.

*Gold-foil*

17th Chapter III (p. 42)

Charles Scribner's Sons. New York, New York, USA. 1863

**von Frisch, Karl** 1886–1982

Austrian zoologist

One can see that the colors of the flowers have been developed as an adaptation to the color sense of their visitors. It is evident that they are not designed for the human eye. But this should not prevent us from delighting in their beauty.

*Bees: Their Vision, Chemical Senses, and Language*

The Color Sense of Bees (p. 13)

Cornell University Press. Ithaca, New York, USA. 1950

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

Flowers are the beautiful hieroglyphics of Nature, with which she indicates how much she loves us.

In John Stuart Blackie

*The Wisdom of Goethe*

Nature – Natural History (p. 182)

William Blackwood & Sons. Edinburgh, Scotland. 1883

**Wilcox, Ella Wheeler** 1850–1919

American poet and journalist

A weed is but an unloved flower!

*New Thought Pastels*

The Weed

E. Towne. Holyoke, Maine, USA. 1906

**Williams, Carol**

No biographical data available

Usually, children spend more time in the garden than anybody else. It is where they learn about the world, because they can be in it unsupervised, yet protected. Some gardeners will remember from their own earliest recollections that no one sees the garden as vividly, or cares about it as passionately, as the child who grows up in it.

*Bringing a Garden to Life*

Bantam Books. New York, New York, USA. 1998

**Wordsworth, William** 1770–1850

English poet

I wandered lonely as a cloud  
That floats on high o'er vales and hills,  
When all at once I saw a crowd,  
A host, of golden daffodils...

*The Complete Poetical Works of William Wordsworth*

I Wandered Lonely as a Cloud

Crowell. New York, New York, USA. 1888

For oft, when on my couch I lie  
 In vacant or in pensive mood,  
 They flash upon that inward eye,  
 Which is the bliss of solitude,  
 And then my heart with pleasure fills,  
 And dances with the Daffodils.

*The Complete Poetical Works of William Wordsworth*  
 I Wandered Lonely as a Cloud  
 Crowell. New York, New York, USA. 1888

Nor will I then thy modest grace forget,  
 Chaste Snowdrops, venturous harbinger of Spring,  
 And pensive monitor of fleeting years!

*The Complete Poetical Works of William Wordsworth*  
 To a Snow-Drop  
 Crowell. New York, New York, USA. 1888

## AMARANTH

**Barrett-Browning, Elizabeth** 1806–61  
 English poet

Nosegays! Leave them for the waking;  
 Throw them earthward where they grew;  
 Dim are such beside the breaking  
 Amaranths he looks unto  
 Folded eyes see brighter colors that the open ever do.

*The Complete Poetical Works of Elizabeth Barrett Browning*  
 A Child Asleep  
 Stanza II  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1900

**Milton, John** 1608–74  
 English poet

Bid *Amaranthus* all his beauty shed,  
 And Daffodillies fill their cup with tears,  
 To strew the laureate hearse where Lycid lies.

*Annotated Poems of English Authors*  
 Lycidas I. 149–151  
 Longmans, Green & Co. London, England. 1877

Immortal Amarant, a Flour which once  
 In Paradise, fast by the Tree of Life,  
 Began to bloom, but soon for man's offence,  
 To Heav'n remov'd, where first it grew, there grows,  
 And flours aloft shading the Fount of Life.

*In Great Books of the Western World* (Volume 32)  
*Paradise Lost*  
 Book III, l. 353–357  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Moore, Thomas** 1779–1852  
 Irish poet

Amaranths, such as crown the maids  
 That wander through Zamara's shades...

*The Poetical Works of Thomas Moore*  
 Lalla Rookh  
 A&W Galigani. Paris, France. 1829

## AMARYLLIS

**Tennyson, Alfred (Lord)** 1809–92  
 English poet

Where, here and there, on sandy beaches  
 A milky-bell'd amaryllis blew.

*The Complete Poetical Works of Tennyson*  
 The Daisy, Stanza 4  
 Houghton Mifflin Co. Boston, Massachusetts, USA. 1898

## AMERICAN VELVET PLANT

**Beecher, Henry Ward** 1813–87  
 American Congregational preacher and orator

...we lose no fondness for eminent and accomplished flowers, we are conscious of a growing respect for the floral democratic throng. There is, for instance, the mullein, of but little beauty in each floweret, but a brave plant, growing cheerfully and heartily out of abandoned soils, ruffling its root about with broad-palmed, generous, velvet leaves, and erecting therefrom a towering spire that always inclines us to stop for a kindly look. This fine plant is left, by most people, like a decayed old gentleman, to a good-natured pity. But in other countries it is a "flower", and called the "American velvet plant."

*Star Papers*  
 Experiences of Nature, I (pp. 95–96)  
 J.B. Ford & Co. New York, New York, USA. 1873

## ANEMONE

**Bryant, William Cullen** 1794–1878  
 American poet

Within the woods,  
 Whose young and half transparent leaves scare cast  
 A shade gray circles of anemones  
 Danced on their stalks ...

*Poems*  
 The Old Man's Counsel  
 D. Appleton & Company. New York, New York, USA. 1874

**Goodale, Elaine** 1863–1953  
 American poet

Thy subtle charm is strangely given,  
 My fancy will not let thee be, –  
 Then poise not thus 'twixt earth and heaven,  
 O white anemone!

*All Round the Year*  
 Anemone, Stanza 6

**Moore, Thomas** 1779–1852  
 Irish poet

Anemones and Seas of Gold,  
 And new-blown lilies of the river,

And those sweet flow'rets that unfold  
Their buds on Camadera's quiver ...

*The Poetical Works of Thomas Moore*

Lalla Rookh

Light of the Harem (p. 258)

Lee & Shepard. Boston, Massachusetts, USA. 1873

## APHIS

**Browning, Robert** 1812–89

English poet

There's the palm-aphis, minute miracle.  
As wondrous every whit as thou or I.

*Ferishtah's Fancies*

A Bean Stripe: Also Apple-eating (p. 115)

Smith, Elder & Co. London, England. 1884

## AQUILEGIA

**Taylor, Bayard** 1825–78

American journalist and author

The aquilegia sprinkled on the rocks  
A scarlet rain; the yellow violets  
Sat in the chariot of its leaves; the phlox  
Held spikes of purple flame in meadows wet,  
And all the streams with vernal-scented reed  
Were fringed, and streaky bells of miskodeed.

*The Poetical Works of Bayard Taylor*

Mon-Da-Min, Stanza 17

Houghton, Osgood & Co, Boston, Massachusetts, USA. 1880

## ASPHODEL

**Barrett-Browning, Elizabeth** 1806–61

English poet

With her ankles sunken in asphodel  
She wept for the roses of the earth which fell ...

*The Complete Poetical Works of Elizabeth Barrett Browning*

Calls of the Heart, Stanza IV

Houghton Mifflin Company. Boston, Massachusetts, USA. 1900

**Pope, Alexander** 1688–1744

English poet

By the streams that ever flow,  
By the fragrant winds that blow  
O'er the Elysian flow'rs;  
By those happy souls who dwell  
In yellow mead of asphodel.

*Alexander Pope's Collected Poems*

Ode to St Celia's Day, Stanza V, l. 71–75

## ASTER

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

Chide me not, laborious band,  
For the idle flowers I brought;

Every aster in my hand

Goes home loaded with a thought.

*The Complete Works of Ralph Waldo Emerson* (Volume 9)

*The Apology* (p. 119)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

**Whitman, Sarah Helen** 1803–78

American poet, writer, and critic

And still the aster greets us as we pass  
With her faint smile, – among the withered grass  
Beside the way, lingering as loath of heart,  
Like me, from these sweet solitudes to part.

*Hours of Life and Other Poems*

A Day of the Indian Summer

George H. Whitney. Providence, Rhode Island, USA. 1853

## AZALEA

**Goodale, Dora Read** 1866–1953

American poet

O far away in yonder leafy copse  
The wandering thrush has flown,  
And close along the wooded steep  
We know an influence passing deep,  
The Summer light, The Summer tone,  
The rare azalea makes her own, –  
And we are not alone.

*All Round the Year: Verses from Sky Farm*

Wild Azaleas

G.P. Putnam's Sons. New York, New York, USA. 1881

## BARBERRIES

**Aldrich Thomas Bailey** 1836–1907

American writer and editor

In scarlet clusters o'er the grey stone-wall  
The barberries lean in thin autumnal air:  
Just when the fields and garden-plots are bare,  
And ere the green leaf takes the tint of fall,  
They come to make the eye a festival!  
Along the road, for miles, their torches flare.

*The Poems of Thomas Bailey Aldrich*

Sonnets

Barberries

Houghton, Mifflin & Co. Boston, Massachusetts, USA. 1882

## BASIL

**Moore, Thomas** 1779–1852

Irish poet

The basil tuft, that waves  
Its fragrant blossom over graves ...

*The Poetical Works of Thomas Moore*

Lalla Rookh  
 Light of the Harem (p. 259)  
 Lee & Shepard. Boston, Massachusetts, USA. 1873

## BEAN

**Ingelow, Jean** 1820–97  
 English poet and novelist

I know the scent of bean-fields.  
*Poems*  
 Gladys and Her Island  
 Longmans, Green, Reader & Dyer. London, England. 1867

## BLOODROOT

**Bryant, William Cullen** 1794–1878  
 American poet

Of Sanguinaria, from whose brittle stem  
 The red drops fell like blood.  
*Poems*  
 The Fountain  
 D. Appleton & Company. New York, New York, USA. 1874

**Goodale, Elaine** 1863–1953  
 American poet

O bloodroot! in thy tingling veins  
 The sap of life runs cold and clear;  
 I break thy shining stem, and fear  
 No conscious guilt, no lasting stains.  
*All Round the Year: Verses from Sky Farm*  
 Bloodroot  
 G.P. Putnam's Sons. New York, New York, USA. 1881

## BORAGE

**MacDonald, George** 1824–1905  
 Scottish novelist and poet

The flaming rose gloomed swarthy red;  
 The borage gleams more blue;  
 Dim starred with white flowers, a flowering bed  
 Glimmer the rich dusk through.  
*The Poetical Works of George MacDonald*  
 Songs of the Summer Night, Part III  
 Chatto & Windus. London, England. 1893

## BRAMBLE

**Chaucer, Geoffrey** 1343–1400  
 English poet

Full many a maiden, bright in bower  
 Did long for him for paramour  
 When they were best asleep;  
 But chaste he was, no lecher sure,

And sweet as is the bramble-flower  
 That beareth a rich red hepe.  
*In Great Books of the Western World* (Volume 22)  
*The Canterbury Tales*  
 Sir Thopas (p. 397)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Elliott, Ebenezer** 1781–1849  
 English poet

Thy fruit full well the schoolboy knows,  
 Wild Brambles of the brake!  
 So put thou forth thy small white rose;  
 I love it for his sake.  
*The Poetical Works of Ebenezer Elliott*  
 To the Bramble Flower  
 William Tait. Edinburgh, Scotland. 1840

## BUTTERCUP

**Barrett-Browning, Elizabeth** 1806–61  
 English poet

He likes the poor things of the world the best,  
 I would not, therefore, if I could be rich.  
 It pleases him to stoop for buttercups..  
*The complete Poetical Works of Elizabeth Barrett Browning*  
 Aurora Leigh  
 Book IV, l. 210–212  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1900

**Hardy, Thomas** 1840–1928  
 English poet and regional novelist

As they crept along, stooping low to discern the plant, a  
 soft yellow gleam was reflected from the buttercups into  
 their shaded faces, giving them an elfish, moonlit aspect,  
 though the sun was pouring upon their backs in all the  
 strength of noon.  
*Tess of the d'Urbervilles: A Pure Woman*  
 Chapter XXII (p. 178)  
 Harper & Brothers, Publishers. New York, New York, USA. 1920

**Holmes, Oliver Wendell** 1809–94  
 American physician, poet, and humorist

Yellow japanned buttercups and star-disked dandelions –  
 just as we see them lying in the grass, like sparks that  
 have leaped from the kindling sun of summer.  
*The Professor at the Breakfast-Table*  
 Chapter X  
 Houghton Mifflin Co. Boston, Massachusetts, USA. 1916

**Mulock, Dinah Maria (Mrs. Craik)** 1826–87  
 English author

The buttercups across the field  
 Made sunshine rifts of splendor ...  
*Mulock's Poems: New and Old*  
 A Silly Song  
 Hurst & Co. New York, New York, USA. 1883

**CAMOMILE**

**Shakespeare, William** 1564–1616  
English poet, playwright, and actor

...the camomile, the more it is trodden on the faster it grows...

In *Great Books of the Western World* (Volume 26)  
*The Plays and Sonnets of William Shakespeare* (Volume 1)  
*The First Part of King Henry the Fourth*  
Act II, Scene iv, l. 438–439  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**CARDINAL-FLOWER**

**Goodale, Dora Read** 1866–1953  
American poet

Whence is yonder flower so strangely bright?  
Would the sunset's last reflected shine  
Flame so red from that dead flush of light?  
Dark with passion is its lifted line,  
Hot, alive, amid the falling night.

*All Round the Year: Verses from Sky Farm*  
Cardinal Flower  
G.P. Putnam's Sons. New York, New York, USA. 1881

**CARNATION**

**Milton, John** 1608–74  
English poet

Each Flour of slender stalk, whose head though gay  
Carnation, Purple, Azure, or specked with Gold hung  
drooping unsustained.

In *Great Books of the Western World* (Volume 32)  
*Paradise Lost*  
Book IX, l.429  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Shakespeare, William** 1564–1616  
English poet, playwright, and actor

The fairest flowers o' the season  
Are our carnations and streak'd gillyvors,  
Which some call nature's bastards.

In *Great Books of the Western World* (Volume 27)  
*The Plays and Sonnets of William Shakespeare* (Volume 2)  
*The Winter's Tale*  
Act IV, Scene iii, l. 81–83  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**CASSIA**

**Ingelow, Jean** 1820–97  
English poet and novelist

While cassias bloom in the zone of calms.

*Poems*  
Sand Martins  
Longmans, Green, Reader & Dyer. London, England. 1867

**CATALPA**

**Bryant, William Cullen** 1794–1878  
American poet

... the Catalpa's blossoms flew,  
Light blossoms, dropping on the grass like snow.

*Poems*  
The Winds, Stanza I  
D. Appleton & Company. New York, New York, USA. 1874

**CELANDINE**

**Wordsworth, William** 1770–1850  
English poet

Long as there's a sun that sets,  
Primroses will have their glory;  
Long as there are violets,  
They will have a place in a story:  
There's a flower that shall be mine,  
'Tis the little Celandine.

*The Complete Poetical Works of William Wordsworth*  
To the Small Celandine, Stanza I  
Crowell. New York, New York, USA. 1888

**CHAMPAC**

**Moore, Thomas** 1779–1852  
Irish poet

The maid of India, blessed again to hold  
In her full lap the Champac's leaves of gold

*The Poetical Works of Thomas Moore*  
Lalla Rookh  
The Veiled Prophet of Khorassan  
Lee & Shepard. Boston, Massachusetts, USA. 1873

**CHRYSANTHEMUM**

**Wilde, Oscar** 1854–1900  
Irish wit, poet, and dramatist

Chrysanthemums from gilded argosy  
Unload their gaudy scentless merchandise.

*Poems*  
Humanitad, Stanza 11  
George Munro's Sons. New York, New York, USA. 1896

**CLEMATIS**

**Goodale, Dora Read** 1866–1953  
American poet

Where the woodland streamlets flow,  
Gushing down a rocky bed,  
Where the tasseled alders grow,  
Lightly meeting overhead,  
When the fullest August days  
Give richness that they know,

Then the wild clematis comes,  
With her wealth of tangled blooms,  
Reaching up and drooping low.

*All Round the Year: Verses from Sky Farm*

Wild Clematis

G.P. Putnam's Sons. New York, New York, USA. 1881

## COLUMBINE

**Bryant, William Cullen** 1794–1878

American poet

Or columbines, in purple dressed,  
Nod o'er the ground-bird's hidden nest.

*Poems*

To the Fringed Gentian, Stanza II

D. Appleton & Company. New York, New York, USA. 1874

**Ingelow, Jean** 1820–97

English poet and novelist

Columbine, open your folded wrapper,  
Where two twin turtle-doves dwell!  
O cuckoopint toll me the purple clapper  
That hangs in your clear green bell!

*Songs of Seven*

Seven Times One

Roberts Brothers. Boston, Massachusetts, USA. 1866

**Rusby, Henry Hurd** 1855–1940

American physician

Sweet flower of the golden horn,  
Thy beauty passeth praise!  
But why should spring thy gold adorn  
Most meet for summer days?

Source undetermined

To the Golden Columbine

## COMPASS-FLOWER

**Longfellow, Henry Wadsworth** 1807–82

American poet

Look at this vigorous plant that lifts its head from the meadow,  
See how its leaves are turned to the north, as true as the magnet;  
This is the compass-flower, that the finger of God has planted.

*The Complete Writings of Henry Wadsworth Longfellow* (Volume 2)

Evangeline

Part II, Stanza IV, l. 140

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904–1917

## COWSLIP

**Hood, Thomas** 1799–1845

English poet and editor

The cowslip is a country wench.

*The Complete Poetical Works of Thomas Hood*

Flowers, Stanza I

Greenwood Press, Publishers. Westport, Connecticut, USA. 1980

## DAFFODIL

**Tennyson, Alfred (Lord)** 1809–92

English poet

When the face of night is fair on the dewy downs,  
And the shining daffodil dies ...

*The Complete Poetical Works of Tennyson*

Maud

Part III, Stanza 1

Houghton Mifflin Co. Boston, Massachusetts, USA. 1898

**Wordsworth, William** 1770–1850

English poet

I wandered lonely as a cloud  
That floats on high o'er vales and hills,  
When all at once I saw a crowd,  
A host, of golden daffodils...

*The Complete Poetical Works of William Wordsworth*

I Wandered Lonely as a Cloud

Crowell. New York, New York, USA. 1888

For oft, when on my couch I lie  
In vacant or in pensive mood,  
They flash upon that inward eye,  
Which is the bliss of solitude,  
And then my heart with pleasure fills,  
And dances with the Daffodils.

*The Complete Poetical Works of William Wordsworth*

I Wandered Lonely as a Cloud

Crowell. New York, New York, USA. 1888

## DAHLIA

**Elliott, Ebenezer** 1781–1849

English poet

The Vicar's house is smother'd in its roses,  
His garden glows with dahlias large and new.

*The Poetical Works of Ebenezer Elliott*

The Vicarage

William Tait. Edinburgh, Scotland. 1840

## DAISY

**Muir, John** 1838–1914

American naturalist

...the lovely arctic daisy with many blessed companions;  
charming plants, gentle mountaineers, Nature's darlings,  
which seem always the finer the higher and stormier their homes.

*Our National Parks*

Chapter V (p. 149)  
Houghton Mifflin Company, Boston, Massachusetts, USA. 1901

### Runge, Friedlieb Ferdinand

German chemist

The little Daisy, which has painted its 'wee crimson-tipped flowers,' puts the chemist and scientific man to shame, for it has produced its leaf and stem and flowers, and has dyed these with their bright colors from materials which he can never change with all his art.

In Celia Thaxter  
*An Island Garden*  
Chapter Five (p. 88)  
Houghton Mifflin Co. Boston, Massachusetts, USA. 1896

### DANDELION

#### Beecher, Henry Ward 1813–87

American Congregational preacher and orator

You cannot forget, if you would, those golden kisses all over the cheeks of the meadow, queerly called dandelions.

*Star Papers*  
A Discourse of Flowers (p. 97)  
J.B. Ford & Co. New York, New York, USA. 1873

### FLOWER-DE-LUCE

#### Longfellow, Henry Wadsworth 1807–82

American poet

O flower-de-luce, bloom on, and let the river  
Linger to kiss thy feet!  
O flower of song, bloom on, and make forever  
The world more fair and sweet.

*The Complete Writings of Henry Wadsworth Longfellow* (Volume 33)  
Flower-de-luce  
Stanza 8  
Houghton Mifflin Company, Boston, Massachusetts, USA. 1904–1917

### DODDER

#### Davis, Sarah E.

Poet

In the roadside thicket hiding,  
Sing, robin, sing!  
See the yellow dodder, gliding,  
Ring, Bluebells, ring!  
Like a living skein inlacing.  
Coiling, climbing, turning, chasing,  
Through the fragrant sweet-fern facing –  
Laugh, O murmuring Spring.

In Minnie Curtis Wait and Merton Channing Leonard (eds.)  
*Among the Flowers and Trees with the Poets*  
Dodder  
Lee & Shepard, Boston, Massachusetts, USA. 1901

### FLAG

#### Shelley, Percy Bysshe 1792–1822

English poet

And nearer to the river's trembling edge  
There grew broad flag-flowers, purple  
Pricked with white;  
And starry river buds among the sedge;  
And floating water-lilies broad and bright.

*Shelley: Selected Poetry, Prose and Letters*  
The Question, Stanza IV  
Nonesuch Press, London, England. 1951

### FORGET-ME-NOT

#### Coleridge, Samuel Taylor 1772–1834

English lyrical poet, critic, and philosopher

The blue and bright-eyed floweret of the brook,  
Hope's gentle gem, the sweet Forget-me-not!

*The Complete Poetical Works of Samuel Taylor Coleridge* (Volume 1)  
Windsor Forest, l. 25–26  
Houghton Mifflin Company, New York, New York, USA. 1903

### FOXGLOVE

#### Ingelow, Jean 1820–97

English poet and novelist

An empty sky, a world of heather,  
Purple of foxglove, yellow of broom;  
We two among them wading together,  
Shaking out honey, treading perfume.

*Poems*  
Divided, Stanza I  
Longmans, Green, Reader & Dyer, London, England. 1867

### FURZE

#### Goldsmith, Oliver 1728–74

Anglo-Irish writer, poet, and physician

With blossom'd furze unprofitably gay.

*Poetical Works*  
The Deserted Village, l. 194  
William Pickering, London, England. 1839

### GENTIAN

#### Bryant, William Cullen 1794–1878

American poet

And the blue gentian-flower, that, in the breeze,  
Nods lonely, of her beauteous race the last.

*Poems*  
November  
D. Appleton & Company, New York, New York, USA. 1874

**GILLYFLOUR**

**Shakespeare, William** 1564–1616  
English poet, playwright, and actor

The fairest flowers o' the season  
Are our carnations and the streak'd gillyvors,  
Which some call nature's bastards.

*The Winter's Tale*

Act IV, scene iii, l. 81–83

**GORSE**

**Ingelow, Jean** 1820–97  
English poet and novelist

But I have seen  
The gay gorse bushes in their flowering time.

*Poems*

Gladys and Her Island

Longmans, Green, Reader & Dyer. London, England. 1867

**HAREBELL**

**Shakespeare, William** 1564–1616  
English poet, playwright, and actor

Thou shalt not lack  
The flower that's like thy face, pale primrose not  
The azured harebell, like thy veins ...

*Cymbeline*

Act IV, scene ii, l. 220–222

**HEATH**

**Pope, Alexander** 1688–1744  
English poet

E'en wild heath displays her purple dyes,  
And 'midst the desert fruitful fields arise.

*The Complete Poetical Works*

Windsor Forest, l. 25–26

Houghton Mifflin Company. New York, New York, USA. 1903

**HELIOTROPE**

**Stedman, Edmund Clarence** 1833–1908  
American poet, critic, and essayist

O sweetest of all the flowrets  
That bloom where angels tread!  
But never such marvelous odor  
From heliotrope was shed ...

*The Poetical Works of Edmund Clarence Stedman*

Heliotrope, Stanza 2

Houghton, Mifflin & Co. Boston, Massachusetts, USA. 1888

**HEPATICA**

**Goodale, Dora Read** 1866–1953  
American poet

All the woodland path is broken  
By warm tints along the way,  
And the low and sunny slope  
Is alive with sudden hope  
When there comes the silent token  
Of an April Day, –  
Blue hepatica

*All Round the Year: Verses from Sky Farm*

Hepatica

G.P. Putnam's Sons. New York, New York, USA. 1881

**HOLLYHOCK**

**Ingelow, Jean** 1820–97  
English poet and novelist

... and Queen hollyhocks,  
With butterflies for crowns ...

*Poems*

Honors, Part I, Stanza 5

Longmans, Green, Reader & Dyer. London, England. 1867

**HONEYSUCKLE**

**Landon, Letitia Elizabeth** 1802–38  
English poet and novelist

... and scarce a beech  
Was there with a honeysuckle link'd  
Around, with its red tendrils and pink flowers ...

*The Poetical Works of Miss Landon* (Volume 1)

The Oak

E.L. Cary & H. L. Hart. Philadelphia, Pennsylvania, USA. 1838

**Tennyson, Alfred (Lord)** 1809–92  
English poet

The honeysuckle round the porch has woven its wavy  
bowers ...

*The Complete Poetical Works of Tennyson*

The May Queen, Stanza 8

Houghton Mifflin Co. Boston, Massachusetts, USA. 1898

**HYACINTH**

**Montgomery, James** 1771–1854  
Scottish poet and journalist

Here Hyacinths of heavenly blue  
Shook their rich tresses to the morn.

*Poetical Works of James Montgomery* (Volume 2)

The Adventures of a Star  
Printed for Longman, Rees, Orme, Brown, Green & Longman. London,  
England. 1836

**Shelley, Percy Bysshe** 1792–1822  
English poet

And the hyacinth purple, and white, and blue,  
Which flung from its bells a sweet peal anew  
Of music so delicate, soft and intense,  
It was felt like an odour within the sense.  
In A.S.B. Glover (ed.)  
*Shelley: Selected Poetry, Prose and Letters*  
The Sensitive Plant, Part I, Stanza 7  
Nonesuch Press. London, England. 1951

## FLOWER: IVY

**Bailey, Philip James** 1816–1902  
English poet

For ivy climbs the crumbling hall  
To decorate decay.  
*Festus: a Poem*  
Party and Entertainment (p. 272)  
George Routledge & Sons, Ltd. London, England. 1893

**Cook, Eliza** 1818–89  
English author

The citron or spicy grove for me would never yield  
A perfume half so grateful as the lilies of the field.  
*The Poetical Works of Eliza Cook*  
England, Stanza 2  
Frederick Warne & Co. London, England. 1870

## JASMINE

**Bryant, William Cullen** 1794–1878  
American poet

And at my silent window-sill  
The jessamine peeps in.  
*Poems*  
The Hunter's Serenade  
D. Appleton & Company. New York, New York, USA. 1874

## LILY

**Aldrich Thomas Bailey** 1836–1907  
American writer and editor

I like not lady-slippers,  
Not yet the sweet-pea blossoms,  
Nor yet the flaky roses,  
Red or white as snow;  
I like the chaliced lilies,  
The heavy Eastern lilies,  
The gorgeous tiger-lilies,

That in our garden grow.  
*The Poems of Thomas Bailey Aldrich*  
Tiger Lilies, Stanza I  
Houghton, Mifflin & Co. Boston, Massachusetts, USA. 1882

## LILY-OF-THE-VALLEY

**Croly, George** 1780–1860  
Irish poet, novelist, and divine

White bud, that in meek beauty so dost lean  
Thy cloistered cheek as pale as moonlight snow,  
Thou seem'st beneath thy huge, high leaf of green,  
An Eremite beneath his mountain's brow.  
*The Poetical Works of the Rev. George Croly* (Volume 1)  
The Lily of the Valley  
Henry Colburn & Richard Bentley. London, England. 1830

## LOTUS

**Heine, Heinrich** 1797–1856  
German poet

The lotus flower is troubled  
At the sun's resplendent light;  
With sunken head and sadly  
She dreamily waits for the night.  
*Book of Songs*  
Lyrical Interlude, Number 10 (p. 52)  
The Roycrofters. East Aurora, New York, USA. 1903

## LOVE LIES BLEEDING

**Swinburne, Algernon Charles** 1837–1909  
English poet

Love lies bleeding in the bed whereover  
Roses lean with smiling mouths or pleading;  
Earth lies laughing where the sun's dart clove her:  
Love lies bleeding  
*The Collected Poetical Works of Algernon Charles Swinburne*  
Love Lies Bleeding  
W. Heinemann. 1919

## MAGNOLIA GRANDIFLORA

**Cranch, Christopher Pearse** 1813–92  
Unitarian minister, poet, and author

Majestic flower! How purely beautiful  
Thou art, as rising from thy bower of green,  
Those dark and glossy leaves so thick and full,  
Thou standest like a high-born forest queen  
Among thy maidens clustering round so fair ...  
I breathe the perfume, delicate and strong,  
That comes like incense from thy petal-bower;  
My fancy roams those southern woods along,

Beneath that glorious tree, where deep among  
The unsunned leaves thy large white flower-cups hung!

*Poems*

Poem to the Magnolia Grandiflora

Carey & Hart. Philadelphia, Pennsylvania, USA. 1844

## MARIGOLD

**Keats, John** 1795–1821

English Romantic lyric poet

Open afresh your round of starry folds,  
Ye ardent marigolds!

Dry up the moisture from your golden lips.

*The Complete Poetical Works and Letters of John Keats*

I Stood Tiptoe Upon a Little Hill, l. 47–49

Houghton Mifflin Company. Boston, Massachusetts, USA. 1890

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

The marigold...goes to bed wi' the sun,  
And with him rising weeping.

In *Great Books of the Western World* (Volume 27)

*The Plays and Sonnets of William Shakespeare* (Volume 2)

*The Winter's Tale*

Act IV, Scene iv, l. 104–105

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## MARSH MARIGOLD

**Swinburne, Algernon Charles** 1837–1909

English poet

A little marsh-plant, yellow green  
And pricked at lip with a tender red,  
Tread close, and wither way you tread,  
Some faint black water jets between  
Least you should bruise the curious head.

*The Collected Poetical Works of Algernon Charles Swinburne*

The Sundew

W. Heinemann. 1919

## MEADOW RUE

**Goodale, Elaine** 1863–1953

American poet

When emerald slopes are drowned in song,  
When weary grows the unclouded blue,  
When warm winds sink in billow bloom,  
And flood you with a faint perfume,  
One moment leaves the rapturous throng  
To seek the haunts of meadow rue!

*All Round the Year: Verses from Sky Farm*

Meadow Rue, Stanza 4

G.P. Putnam's Sons. New York, New York, USA. 1881

## MIMOSA

**Shelley, Percy Bysshe** 1792–1822

English poet

A Sensitive Plant in a garden grew,  
And the young winds fed it with silver dew,  
And it opened its fan-like leaves to the light,  
And clothed them beneath the kisses of night.

*The Complete Poetical Works of Percy Bysshe Shelley*

The Sensitive Plant, Part I, Stanza 1

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

## MOCCASIN FLOWER

**Goodale, Elaine** 1863–1953

American poet

With careless joy we thread the woodland ways  
And reach her broad domain.

Thro' sense of strength and beauty, free as air.

We feel our savage kin, –

And thus along with conscious meaning wear

The Indian moccasin!

*In Berkshire with the Wild Flowers*

Moccasin Flower

G.P. Putnam's Sons. New York, New York, USA. 1879

## MORNING-GLORY

**Jackson, Helen Hunt** 1830–85

American writer and poet

Wondrous interlacement!

Holding fast to threads by green and silky rings,

With the dawn it spreads its white and purple wings;

Generous in its bloom, and sheltering while it clings,

Sturdy morning-glory.

*Bits of Talk, in Verse and Prose, for Young Folks,*

Morning Glory

Roberts Brothers. Boston, Massachusetts, USA. 1876

**Lowell, Maria White** 1821–53

Poet

The morning-glory's blossoming will soon be coming  
round;

We see their rows of heart-shaped leaves upspringing  
from the ground.

*The Poems of Maria Lowell*

The Morning-Glory, Stanza 6

The Riverside Press. Cambridge, England. 1907

**MYRTLE**

**Montgomery, James** 1771–1854  
Scottish poet and journalist

Dark-green and gemm'd with flowers of snow,  
With close uncrowded branches spread  
Not proudly high, nor meanly low,  
A graceful myrtle rear'd its head.

*Poetical Works of James Montgomery* (Volume 2)

The Myrtle

Printed for Longman, Rees, Orme, Brown, Green & Longman. London, England. 1836

**NARCISSI**

**Plath, Sylvia** 1932–63  
American poet and novelist

... the terrible wind tries his breathing.  
The narcissi look up like children, quickly and whitely.

*Collected Poems*

Mong the Narcissi

Faber & Faber Ltd. London, England. 1981

**ORCHID**

**Taylor, Bayard** 1825–78  
American journalist and author

Around the pillars of the palm-tree bower  
The orchids cling, in rose and purple spheres;  
Shield-broad the lily floats; the aloe flower  
Foredates its hundred years.

*The Poetical Works of Bayard Taylor*

Canopus, Stanza 11

Houghton, Osgood. Boston, Massachusetts, USA. 1880

**PAINTED CUP**

**Bryant, William Cullen** 1794–1878  
American poet

Scarlet tufts  
Are glowing in the green, like flakes of fire;  
The wanderers of the prairie know them well,  
And call that brilliant flower the Painted Cup.

*Poems*

The Painted Cup

D. Appleton & Company. New York, New York, USA. 1874

**OX-EYE DAISY**
