I am not claiming that a scientist, simply because he is a scientist, is any unhappier or needs to be any unhappier than other men are. He does not need to be. It all comes

of a kind of brutal, sweeping, overriding prejudice he has against guessing on anything.

*The Lost Art of Reading*

Book II, Chapter I (p. 103)

G.P. Putnam's Sons. New York, New York, USA. 1907

**Leon, Mark**

No biographical data available

"Read Popper on the philosophy of science," Alan said. "I don't wholly agree with him, but he has a point when he says the scientist's job is to disprove rather than prove theories. Humans are passionate believers. The history of philosophy and religion is a grand testament to our will to believe. Scientists just try to inject a little sanity into the whole business, and that often requires a passion not to believe."

*The Unified Field* (p. 11)

Avon Books. New York, New York, USA. 1996

**Leonard, Jonathan Norton** 1903–75

No biographical data available

[A scientist's] real work is done in the silent hours of thought, the apparently aimless days of puttering around in the laboratory, and the mighty searching through reference books.

Steinmetz, Jove of Science, Part II

*The World's Work*, February, 1929 (p. 140)

**Levi, Primo** 1919–87

Italian writer and chemist

A scientist's life, the author says, is indeed conflictual, formed by battles, defeats, and victories: but the adversary is always and only the unknown, the problem to be solved, the mystery to be clarified. It is never a matter of civil war; even though of different opinions, or of different political leanings, scientists dispute each other, they compete, but they do not battle: they are bound together by a strong alliance, by the common faith "in the validity of Maxwell's or Boltzmann's equations," and by the common acceptance of Darwinism and the molecular structure of DNA.

Translated by Raymond Rosenthal

*The Mirror Maker: Stories and Essays by Primo Levi*

Bacteria Roulette (p. 123)

Shocken Books. New York, New York, USA. 1989

**Levinson-Lessing, F. Y.** 1861–1939

Russian geologist

A scientist lacking imagination can at best become a splendid walking library and source of information – he absorbs, but does not create.

Compiled by V.V. Vorontsov

*Words of the Wise: A Book of Russian Quotations*

Translated by Vic Schneierson

Progress Publishers. Moscow, Russia. 1979

**Lewis, Gilbert Newton** 1875–1946  
American chemist

The average scientist unequipped with the powerful lenses of philosophy, is a nearsighted creature, and cheerfully attacks each difficulty in the hope that it may prove to be the last.

*The Anatomy of Science*

Chapter I (p. 1)

Yale University Press. New Haven, Connecticut, USA. 1926

The scientist is a practical man and his are practical aims. He does not seek the ultimate but the proximate. He does not speak of the last analysis but rather of the next approximation.... On the whole, he is satisfied with his work, for while science may never be wholly right it certainly is never wholly wrong; and it seems to be improving from decade to decade.

*The Anatomy of Science*

Chapter I (pp. 6–7)

Yale University Press. New Haven, Connecticut, USA. 1926

**Lewis, Sinclair** 1885–1951  
American novelist

He had never dined with a duchess, never received a prize, never been interviewed, never produced anything which the public could understand, nor experienced anything since his schoolboy amours which nice people could regard as romantic.

He was, in fact, an authentic scientist.

*Arrowsmith*

Chapter XII, Section I (p. 128)

Harcourt, Brace & World, Inc. New York, New York, USA. 1952

...the scientist is intensely religious – ...he will not accept quarter-truths, because they are an insult to his faith. He wants that everything should be subject to inexorable laws. He is the only real revolutionary, the authentic scientist, because he alone knows how little he knows. He lives in a cold, clear light. Yet he is not cold nor heartless. And he prays for unclouded eyes and freedom from haste, for a quiet and relentless anger against all pretence and all pretentious work and all work left slack and unfinished,...a restlessness whereby he may neither sleep nor accept praise till his observed results equal his calculated results....

*Arrowsmith* (p. 278)

Harcourt, Brace & World, Inc. New York, New York, USA. 1952

To be a scientist – it is not just a different job so that a man should choose between being a scientist and being an explorer or a bond-salesman or a physician or a king or a farmer. It is a tangle of very obscure emotions, like mysticism, or wanting to write poetry; it makes its victim all different from the good natural man.

*Arrowsmith*

Chapter XXVI, Section I (p. 290)

Harcourt, Brace & World, Inc. New York, New York, USA. 1952

The normal man, he does not care much what he does except that he should eat and sleep and make love. But the scientist is intensely religious – he is so religious that he will not accept quarter truths, because they are an insult to his faith.

*Arrowsmith*

Chapter XXVI, Section I (p. 290)

Harcourt, Brace & World, Inc. New York, New York, USA. 1952

[The scientist] hates the preachers who talk their fables, but he is not too kindly to the anthropologists and historians who can only make guesses, yet they have the nerve to call themselves scientists!

*Arrowsmith*

Chapter XXVI, Section I (p. 290)

Harcourt, Brace & World, Inc. New York, New York, USA. 1952

**Lightman, Alan** 1948–  
Physicist, novelist, and essayist

Scientists turn reckless and mutter like gamblers who cannot stop betting.

(Fictional character)

A scientist who cannot prove what he has accomplished, has accomplished nothing.

*Journey to the Center of the Earth*

Film (1959)

**Lodge, Rupert Clendon** 1886–1961  
Canadian philosopher

The scientist is like a child with a toy which he has taken apart. He understands now how it works, but not all the king's horses and all the king's men can put together that unsightly heap of torn flesh and dissected organs which was once a living frog or embryo chicken.

*An Introduction to Modern Logic*

Chapter IV (p. 45)

The Perine Book Co. Minneapolis, Minnesota, USA. 1920

**Lodge, Sir Oliver** 1851–1940  
English physicist

...there arise in every generation, here and there, one or two great souls – men who seem of another age and country, who look upon the bustle and feverish activity and are not infected by it, who watch others achieving prizes of riches and pleasure and are not disturbed, who look on the world and the universe they are born in with quite other eyes. To them it appears not as a bazaar to buy and to sell in; not as a ladder to scramble up (or down) helter-skelter without knowing whither or why; but as a fact – a great and mysterious fact – to be pondered over, studied, and perchance in some small measure understood.

*Pioneers of Science*

Lecture I (p. 6)

Macmillan &amp; Company Ltd. London, England. 1905

**Longfellow, Henry Wadsworth** 1807–82

American poet

As artist or as artisan,  
 Pursuing his own fantasies,  
 Can touch the human heart, or please,  
 Or satisfy our nobler needs,  
 In Nature's footprints, light and fleet,  
 As he who sets his willing feet  
 And follows fearless where she leads.

*The Complete Poetical Works*

The Herrons of Elmwood (p. 333)

Houghton Mifflin &amp; Co. Boston, Massachusetts, USA. 1903

**Lopez-Ibor, Jean**

No biographical data available

The man in the street once expected the scientist to interpret the universe and human life. Now he only asks the scientist to help him live, to diminish his effort and pain. The scientist is becoming more and more the technician and less and less the sage. Science no longer exists – it has been replaced by the sciences and this dispersion of knowledge, this lack of a clear image of what is happening on earth, is one cause of today's human anguish.

In Henry Margenau, David Berganiami and Time-Life editors

*The Scientist* (p. 113)

Time-Life Books. New York, New York, USA. 1971

**Lugosi, Bela** 1882–1956

Hungarian film star

A true scientist is married to his profession.

*Return of the Ape Man*

Film (1944)

**MacMahon, Percy** 1854–1929

English mathematician

The specialist who wishes to accomplish work of the highest excellence must be learned in the resources of science and have constantly in mind its grandeur and meaning.

Opening Address (Section A, Mathematics and Physics) British Association, 1901

*Nature*, September 12, 1901**Martel, Yann** 1963–

Canadian novelist

Scientists are a friendly, atheistic, hard-working, beer-drinking lot whose minds are preoccupied with sex, chess and baseball when they are not preoccupied with science.

*Life of Pi* (p. 5)

Harcourt Inc. Orlando, Florida, USA. 2001

**Maxwell, James Clerk** 1831–79

Scottish physicist

[Scientists'] actions and thoughts, being more free from the influence of passion than those of other men, are all the better materials for the study of the calmer parts of human nature.... [B]y aspiring to noble ends... [scientists] have risen above the region of storms into a clearer atmosphere, where there is no misrepresentation of opinion, nor ambiguity of expression, but where one mind comes into closest contact with another at the point where both approach nearest to the truth.

In C.C. Gillispie (ed.)

*The Edge of Objectivity: An Essay in the History of Scientific Ideas*

Forward (pp. vii, viii)

Princeton University Press. Princeton, New Jersey, USA. 1960

**Mayer, Joseph** 1904–83

American chemist

What does one have to do to be called a scientist? I decided that anyone who spent on science more than 10% of his waking, thinking time for a period of more than a year would be called a scientist, at least for that year.

In "The Way it Was"

*Annual Review of Physical Chemistry*, Volume 33, 1982 (pp. 1–2)**Mayo, Charles Horace** 1865–1939

American physician

The scientist is not content to stop at the obvious.

Problems in Medical Education

*Collected Papers of the Mayo Clinic & Mayo Foundation*, Volume 18, 1926**Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

To be creative, scientists need libraries and laboratories and the company of other scientists; certainly a quiet and untroubled life is a help. A scientist's work is in no way deepened or made more cogent by privation, anxiety, distress, or emotional harassment.

*Advice to a Young Scientist*

Chapter 5 (p. 40)

Basic Books, Inc. New York, New York, USA. 1979

[T]he private lives of scientists may be strangely and even comically mixed up, but not in ways that have any special bearing on the nature and quality of their work. If a scientist were to cut off an ear, no one would interpret such an action as evidence of an unhappy torment of creativity; nor will a scientist be excused any bizarre [action], however extravagant, on the grounds that he is a scientist, however brilliant.

*Advice to a Young Scientist*

Chapter 5 (p. 40)

Basic Books, Inc. New York, New York, USA. 1979

Much of a scientist's pride and sense of accomplishment turns... upon being the first to do something – upon being

the man who did actually speed up or redirect the flow of thought and the growth of understanding.

The most heinous offense a scientist as a scientist can commit is to declare to be true that which is not so; if a scientist cannot interpret the phenomenon he is studying, it is a binding obligation upon him to make it possible for another to do so.

*The Limits of Science*

An Essay on Scians [Science] (p. 6)

Harper & Row, Publishers. New York, New York, USA. 1984

[James] Watson's childlike vision makes them seem like the creatures of a Wonderland, all at a strange contentious noisy tea-party which made room for him because for people like him, at this particular kind of party, there is always room.

Lucky Jim

*New York Review of Books*, 28 March, 1968

...Watson had one towering advantage over all of [his classmates in other disciplines]: in addition to being extremely clever he had something important to be clever about. This is an advantage which scientists enjoy over most other people engaged in intellectual pursuits, and they enjoy it at all levels of capability. To be a first-rate scientist it is not necessary (and certainly not sufficient) to be extremely clever, anyhow in a pyrotechnic sense.

Lucky Jim

*New York Review of Books*, 28 March, 1968

One of the great social revolutions brought about by scientific research has been the democratization of learning. Anyone who combines strong common sense with an ordinary degree of imaginativeness can become a creative scientist, and a happy one besides, in so far as happiness depends upon being able to develop to the limit of one's abilities.

Lucky Jim

*New York Review of Books*, 28 March, 1968

People who criticize scientists for wanting to enjoy the satisfaction of intellectual ownership are confusing possessiveness with pride of possession. Meanness, secretiveness and, sharp practice are as much despised by scientists as by other decent people in the world of ordinary everyday affairs; nor, in my experience, is generosity less common among them, or less highly esteemed.

Lucky Jim

*New York Review of Books*, 28 March, 1968

Before a good scientist tries to persuade others that he is on to something good, he must first convince himself.

*Florey Story* (London Review of Books, 20 December, 1979)

Reprinted in "The Strange Case of the Spotted Mice and Other Classic Essays on Science"

Oxford University Press, Inc. New York, New York, USA. 1996

...scientists tend not to ask themselves questions until they can see the rudiments of an answer in their minds. Embarrassing questions tend to remain unasked or, if asked, to be asked rudely.

*The Future of Man: The BBC Reith Lectures 1959*

Chapter 4 (p. 62)

Methuen & Company Ltd. London, England. 1960

**Mencken, H. L. (Henry Louis)** 1880–1956

American journalist and literary critic

The scientist who yields anything to theology, however slight, is yielding to ignorance and false pretences, and as certainly as if he granted that a horse-hair put into a bottle of water will turn into a snake.

*Minority Report: H.L. Mencken's Notebooks*

No. 45 (p. 33)

Alfred A. Knopf. New York, New York, USA. 1956

**Mendeleev, Dmitry Ivanovich** 1834–1907

Russian chemist

Science exists separately from scientists, it lives autonomously, it is the sum of knowledge worked out by the whole mass of scientists, similar to how the acknowledged political order of a country is worked out by the mass of persons who live in it. Science is authoritative, separate scientists are not. A scientist can only and should only use this authority when he is following science, just as in a well-ordered state the authority of power is used only by the person who observes the law.

In Michael D. Gordin

*A Well-Ordered Thing: Dmitrii Mendeleev and the Shadow of the*

*Periodic Table*

Chapter 4 (p. 103)

Basic Books, Inc. New York, New York, USA. 2004

**Mitchell, Maria** 1818–89

American astronomer and educator

The true scientist must be self-forgetting. He knows that under the best circumstances he is sowing what others must reap – or rather he is striking the mine which others must open up – for human life at longest has not the measure of a single breath in the long life of science.

In Helen Wright

*Sweeper in the Sky*

Chapter 9 (p. 168)

Macmillan & Company. New York, New York, USA. 1949

It is the highest joy of the true scientist...that he can reap no lasting harvest – that whatever he may bring into the storehouse today will be surpassed by the gleaners tomorrow – he studies Nature because he loves her and rejoices to "look through Nature up to Nature's God."

In Helen Wright

*Sweeper in the Sky*

Chapter 9 (p. 168)

Macmillan & Company. New York, New York, USA. 1949

**Montessori, Maria** 1870–1952  
Italian educationist

...what is a scientist?... We give the name scientist to the type of man who has felt experiment to be a means guiding him to search out the deep truth of life, to lift a veil from its fascinating secrets, and who, in this pursuit, has felt arising within him a love for the mysteries of nature, so passionate as to annihilate the thought of himself.

Translated by Anne E. George

*The Montessori Method*

Chapter I (p. 8)

Frederick A. Stokes Company. New York, New York, USA. 1912

The scientist is not the clever manipulator of instrument, he is the worshipper of nature and he bears the external symbols of his passion as does the follower of some religious order.

Translated by Anne E. George

*The Montessori Method*

Chapter I (p. 8)

Frederick A. Stokes Company. New York, New York, USA. 1912

Scientists are like those men of the Bible story who, after Israel had come out of Egypt, were permitted to explore the Land of Promise, and who came back with such a huge cluster of grapes that it took two men to carry it, and the people saw it with amazement.

So have the scientists of today penetrated into the Promised Land of truth, where lies the secret which enables man to scrutinize Nature; and they have come out therefrom, bearing marvelous fruits for all men to see.

Translated by Florence Simmonds

*The Advanced Montessori Method*

Chapter IX (p. 243)

Frederick A. Stokes Co. New York, New York, USA. 1917

**Moser, E. S.**

No biographical data available

No scientist should start out in search of nothing. He must have an object in view, and that object must in a measure be defined.

Immaterial Science

*The Popular Science Monthly*, Volume 44 November, 1893 (p. 86)

**Motz, Lloyd** 1910–2004

American astronomer

**Weaver, Jefferson Hane**

American science author

To the nonscientist, science, particularly in its modern dress and as pursued today, is a glittering intellectual jewel, mysterious, forbidding, and even threatening except to a few chosen ones, the scientists, who appear to be superior beings, endowed with an ability to probe and understand nature far beyond that of the average layman.

*The Concepts of Science: From Newton to Einstein*

Preface (p. vii)

Plenum Press. New York, New York, USA. 1988

**Muppets (Fictional characters)**

German scientist: We are going to perform an electronic cerebractomy.

Doc Hooper: A what?

German Scientist: An electronic cerebractomy! It's something so sensational, you'll have to hold on to your hat.... Look, when a German scientist says hold on to your hat he isn't making casual conversation, he means to hold on to your hat. Hat! Hold!

*The Muppet Movie*

Film (1979)

**National Academy of Sciences (USA)**

Scientists must be fact-seekers, open-minded, and willing to accept changes indicated by the signposts of evidence.

*Science and Creationism – A View from the National Academy of Sciences* (p. 5).

National Academy Press. Washington, D.C. 1984

Chapter IX (pp. 101–102)  
Longmans, Green. New York, New York, USA. 1918

**Piccard, Auguste** 1884–1962  
Swiss physicist, inventor, and explorer

The scientist, whether physicist, chemist or oceanographer; makes investigations then, first out of a taste for research; and if a new region of the earth, of the subsoil, of the atmosphere, or of the oceans opens up before him, if a new phenomenon or a new substance is discovered, he looks forward, thinking of the future. The work has not been done in vain.

Translated by Christina Stead  
*Earth, Sky and Sea*  
Introduction (p. xiii)  
Oxford University Press. New York, New York, USA. 1956

**Planck, Max** 1858–1947  
German physicist

Since the real world, in the absolute sense of the word, is independent of individual personalities, and in fact of all human intelligence, every discovery made by an individual acquires a completely universal significance. This gives the inquirer, wrestling with his problem in quiet seclusion, the assurance that every discovery will win the unhesitating recognition of all experts throughout the entire world, and in this feeling of the importance of his work lies his happiness. It compensates him fully for many a sacrifice which he must make in his daily life.

*Scientific Autobiography and Other Papers*  
The Meaning and Limits of Exact Science, Part III (p. 103)  
Philosophical Library. New York, New York, USA. 1949

A scientist is happy, not in resting on his attainments but in the steady acquisition of fresh knowledge.

Translated by W.H. Johnston  
*The Philosophy of Physics*  
Chapter I (p. 32)  
W.W. Norton & Co. New York, New York, USA. 1936

**Poincaré, Jules Henri** 1854–1912  
French mathematician and theoretical astronomer

The scientist should not waste his time on the achievement of practical goals. He will surely reach such goals, but this must be marginal with respect to his principal

activity. He should never forget that the specific object he is investigating is part of a whole which is infinitely greater than this object; love for this whole and an interest in it should constitute the only motives of the actions of the scientist. Science has marvelous applications, but a science in which applications were the only aim would no longer be science but only a kitchen.

In Stefan Amsterdamski

*Between History and Method*

Chapter V. Crisis of the Modern Ideal (p. 94)

Kluwer Academic Publishers. Dordrecht, Netherlands. 1992

### **Polanyi, Michael** 1891–1976

Hungarian-born English scientist, philosopher, and social scientist

There are differences in rank between scientists, but these are of secondary importance: everyone's position is sovereign. The Republic of Science realizes the ideal of Rousseau, of a community in which each is an equal partner in a General Will. But this identification makes the General Will appear in a new light. It is seen to differ from any other will by the fact that it cannot alter its own purpose. It is shared by the whole community because each member of it shares in a joint task.

*Science, Faith and Society*

Background and Prospect (pp. 16–17)

### **Richards, Theodore William** 1868–1928

American chemist

Every student of Science, even if he cannot start his journey where his predecessors left off, can at least travel their beaten track more quickly than they could while they were clearing the way: and so before his race is run he comes to virgin forest and becomes himself a pioneer. Ungrateful would he be who failed to remember his debt to his predecessors.

*Nobel Lectures, Chemistry 1901–1921*

Atomic Weights

Elsevier Publishing Co. Amsterdam, The Netherlands. 1966

### **Roe, Anne**

No biographical data available

Science is the creation of scientists and every scientific advance bears somehow the mark of the man who made it....The creative scientist, whatever his field, is very deeply involved emotionally and personally in his work, and...he himself is his own most essential tool.

*The Psychology of the Scientist*

*Science*, Volume 134, Number 3477, August 18, 1961 (p. 456)

### **Roszak, Theodore** 1933–

American social critic

...science rests itself not in the world the scientist beholds at any particular point in time, but in his mode of viewing that world. A man is a scientist not because of what he sees, but because of how he sees it.

*The Making of a Counter Culture: Reflections on the Technocratic Society and Its Youthful Opposition*

Chapter VII (p. 213)

Doubleday & Company, Inc., Garden City, New York, USA; 1969

### **Rothman, Milton A.** 1919–2001

American nuclear physicist and science writer

It makes no sense to complain about a lack of imagination in scientists when their failure is simply that they cannot make the world be what it is not, and they cannot make the world do what it cannot do.

*The Science Gap: Dispelling the Myths and Understanding the Reality of Science*

Prometheus Books. Buffalo, New York, USA. 1992

### **Rothman, Tony** 1953–

American cosmologist

The makers of *Revenge of the Nerds* know, as do millions who have seen it, that all scientists when young are undernourished sociophobics who relate best to a computer terminal through coke bottle eyeglasses after midnight in a basement laboratory.

*A Physicist on Madison Avenue*

Chapter 1 (p. 3)

Princeton University Press. Princeton, New Jersey, USA. 1991

### **Rubbia, Carlo** 1934–

Italian physicist

...the best quality of a true scientist is not sheer intelligence of Albert Einstein's approach, it is just persistence and having no fear of doing work which turns out to be useless.

In Lewis Wolpert and Alison Richards

*Passionate Minds*

Asking Nature (p. 196)

Oxford University Press. Oxford, England. 1977

...to be a scientist is not a job nine to five. When you do science you have to do science 24 hours a day.

In Lewis Wolpert and Alison Richards

*Passionate Minds*

Asking Nature (p. 197)

Oxford University Press. Oxford, England. 1977

### **Ruse, Michael** 1940–

English historian and philosopher of science

A scientist should not cheat or falsify data or quote out of context or do any other thing that is intellectually dishonest. Of course, as always, some individuals fail; but science as a whole disapproves of such action. Indeed, when transgressors are detected, they are usually expelled from the community.

Response to the Commentary: Pro Justice

*Science, Technology and Human Values*, Volume 7, Number 41, Fall 1982 (p. 74)

### **Rushton, John Phillippe** 1941–

British/Canadian experimental psychology professor and writer

Research has suggested that scientists differ from non-scientists by exhibiting a high level of curiosity, especially at an early age, and in demonstrating a relatively low level of sociability. Scientists also tend to be shy, lonely, slow in social development, and indifferent to close personal relationships, group activities and politics. Other attributes include skepticism, preoccupation, reliability, and a facility for precise, critical thinking. Generally they are cognitively complex, independent, non-conformist, assertive, and unlikely to suppress thoughts

and impulses; and, like successful entrepreneurs, eminent scientists are also calculated risk-takers.

*Journal of Social and Biological Structure*, Volume 11, 1980 (p. 140)

**Sabin, Albert** 1906–93

American medical researcher

No matter how good you are, you cannot be a scientist unless you learn to live with frustration.

I Only Ask for a Place to Work

*New Scientist*, Volume 57, Number 835, 1 March, 1973 (pp. 491–492)

**Sagan, Carl** 1934–96

American astronomer and author

[Scientists] are capable of self-deception. ...All sorts of socially abhorrent doctrines have at one time or another been supported by scientists, well-known scientists, famous brand-name scientists. And, of course, politicians. And respected religious leaders. Slavery, for instance, or the Nazi brand of racism. Scientists make mistakes, theologians make mistakes, everybody makes mistakes...

*Contact: A Novel* (p. 167)

Simon & Schuster. New York, New York, USA. 1985

Who discovered that CFCs [chlorofluorocarbons] posed a threat to the ozone layer? Was it the principal manufacturer, the DuPont Corporation, exercising corporate responsibility? Was it the Environmental Protection Agency protecting us? Was it the Department of Defense defending us? No, it was two ivory-tower, white-coated university scientists working on something else – Sherwood Rowland and Mario Molina of the University of California, Irvine. Not even an Ivy League university. No one instructed them to look for dangers to the environment. They were pursuing fundamental research. They were scientists following their own interests. Their names should be known to every schoolchild.

*Pale Blue Dot: A Vision of the Human Future in Space*

Chapter 14 (pp. 221–222)

Random House, Inc. New York, New York, USA. 1994

**Sarton, George** 1884–1956

Belgian-born American scholar and writer

Without scientists, without saints, without artists, mankind would soon be reduced to a society of animals. Without saints, it would fall into sin; without artists, into ugliness; without scientists it would stop altogether and degenerate.

*The History of Science and the New Humanism*

Chapter I (p. 64)

H. Holt & Co. New York, New York, USA. 1931

**Schinz, Albert** 1870–1943

American French and philosophical scholar

A scientist is looking for general laws, it is true; but at the same time he wants to solve individual cases or problems;

laws are not science, but only a means to get science; and if a law does not solve a specific problem, the scientist will change the law and not the problem. Thus science, like ethics, aims at the individual case.

*Anti-pragmatism; an Examination Into the Respective Rights of Intellectual Aristocracy and Social Democracy*

Part I, Chapter II (p. 90)

Small, Maynard & Co. Boston, Massachusetts, USA. 1909

**Seifriz, William** 1888–1955

Professor of Botany

It is no matter of chance that the greatest scientists of all time, Copernicus, Newton, Kepler, Linnaeus, Faraday, Darwin, and Maxwell, were men of noble character, modest, straightforward, and full of human sympathy. The great French mathematician, Henri Poincaré, stated that the chief end of life is contemplation, not action.

A New University

*Science*, Volume 120, Number 3107, 16 July, 1954 (pp. 88–89)

**Selye, Hans** 1907–82

Austrian-American endocrinologist

Scientists are probably the most individualistic bunch of people in the world. All of us are and should be essentially different; there would be no purpose in trying to fit us into a common mold.

*From Dream to Discovery: On Being a Scientist*

Introduction

McGraw-Hill Book Company, Inc. New York, New York, USA. 1950

**Sheckley, Robert** 1928–2005

American writer

The scientist, who examines everything, should look at himself. Tentatively I would define him as a discovery-producing animal whose products fall from him as naturally and as thoughtlessly as a hen produces eggs. Like the hen, he is largely indifferent to the use made of his products. Scientists are mostly not in favor of atom bombs, of course, and hens presumably dislike omelets; but both are realists and go along with the conditions they find.

In Damon Knight

*The Observers* (p. 189)

Tor. New York, New York, USA. 1988

**Shelley, Mary Wollstonecraft** 1797–1851

English Romantic writer

The ancient teachers of this science...promised impossibilities, and performed nothing. The modern masters promise very little; they know that metals cannot be transmuted, and that the elixir of life is a chimera. But these philosophers, whose hands seem only made to dabble in dirt, and their eyes to pore over the microscope or crucible, have indeed performed miracles. They penetrate into the recesses of nature, and show how she works in her hiding-places. They ascend into the heavens: they

have discovered how the blood circulates, and the nature of the air we breathe. They have acquired new and almost unlimited powers; they can command the thunders of heaven, mimic the earthquake, and even mock the invisible world with its own shadows.

*Frankenstein: Or, The Modern Prometheus*

Chapter III (p. 64)

George Routledge & Sons. London, England. 1888

The modern masters of chemistry promise very little; they know that metals cannot be transmuted and that the elixir of life is a chimera. But these philosophers, whose hands seem only made to dabble in dirt, and their eyes to pore over the microscope or crucible, have indeed performed miracles. They penetrate into the recesses of nature and show how she works in her hiding places. They ascend into the heavens; they have discovered how the blood circulates, and the nature of the air we breathe. They have acquired new and almost unlimited powers; they can command the thunders of heaven, mime the earthquake, and even mock the invisible world with its own shadows.

*Frankenstein*

Chapter 3 (p. 39)

Running Press. Philadelphia, Pennsylvania, USA. 1990

**Sigurdsson, Haraldur** 1939–

Icelandic volcanologist

The scientist or scholar is the keeper of the flame of knowledge and he or she also advances our knowledge in a chosen field of research, but should also be responsible for linking the present with the past and maintaining a record of the history of knowledge in that field.

*Melting the Earth*

Preface (p. viii)

Oxford University Press, Inc. New York, New York, USA. 1999

**Silver, Brian L.**

Israeli professor of physical chemistry

Scientists come in many colors, of which the green of jealousy and the purple of rage are fashionable shades.

*The Ascent of Science*

Preface (p. xiii)

Solomon Press Book. New York, New York, USA. 1998

**Sinsheimer, Robert L.** 1920–

American molecular biologist

I am a scientist, a member of a most fortunate species. The lives of most people are filled with ephemera. All too soon, much of humanity becomes mired in the tepid tracks of their short lives. But a happy few of us have the privilege to live with and explore the eternal.

*The Strands of a Life: The Science of DNA and the Art of Education*

The University of California Press. Berkeley, California, USA. 1994

**Sir Oliver (Fictional character)**

A scientist who cannot prove what he has accomplished has accomplished nothing.

*Journey to the Center of the Earth*

Film (1959)

**Smith, Homer W.**

Renal physiologist

A scientist is one who, when he does not know the answer, is rigorously disciplined to speak up and say so unashamedly; which is the essential feature by which modern science is distinguished from primitive superstition, which knew all the answers except how to say, “I do not know.”

*From Fish to Philosopher*

Chapter XIII (p. 210)

Little, Brown & Company. Boston, Massachusetts, USA. 1953

**Snow, Charles Percy** 1905–80

English novelist and scientist

I believe the intellectual life of the whole of western society is increasingly being split into two polar groups.... Literary intellectuals at one pole – at the other scientists, and as the most representative, the physical scientists. Between the two a gulf of mutual incomprehension – sometimes (particularly among the young) hostility and dislike, but most of all lack of understanding.

*The Two Cultures: And a Second Look*

Chapter I (p. 3)

At The University Press. Cambridge, England. 1964

**Snowden, James Henry** 1852–1936

Minister

Scientists never make science: they simply find it. Every scientific thought they think has been thought for them in the book of nature and they simply rethink it...

*The World a Spiritual System: An Outline of Metaphysics*

Chapter VIII (p. 135)

The Macmillan Co. New York, New York, USA. 1910

**Spallanzani, Lazzaro** 1729–99

Italian natural philosopher

If I set out to prove something, I am no real scientist – I have to learn to follow where the facts lead me – I have to learn to whip my prejudices.

In R. Coope

*The Quiet Art* (p. 4)

E.S. Livingstone Ltd. Edinburgh, Scotland. 1952

**Standen, Anthony** 1907–?

Anglo-American science writer

When a white-robed scientist, momentarily looking away from his microscope or cyclotron, makes some pronouncement for the general public, he may not be understood but at least he is certain to be believed. Scientists are exalted beings who stand at the very topmost pinnacle of popular prestige, for they have the monopoly of the formula “It has been scientifically proved.”, which appears to rule out all possibility of disagreement. Thus the world is divided into Scientists, who practice the art

of infallibility, and non-scientists, sometimes contemptuously called “laymen”, who are taken in by it.

*Science Is a Sacred Cow*

Chapter I (p. 13)

E.P. Dutton & Company. New York, New York, USA. 1950

...we are having wool pulled over our eyes if we let ourselves be convinced that scientists, taken as a group, are anything special in the way of brains. They are very ordinary professional men, and all they know is their own trade, just like all other professional men.

*Science Is a Sacred Cow*

Chapter I (pp. 23–24)

E.P. Dutton & Company. New York, New York, USA. 1950

...scientists are convinced that they, as scientists, possess a number of very admirable human qualities, such as accuracy, observation, reasoning power, intellectual curiosity, tolerance, and even humility.

*Science Is a Sacred Cow*

Chapter I (pp. 15–16)

Dutton. New York, New York, USA. 1950

Mr. Hilaire Belloc has pointed out that science has changed greatly, and for the worse, since it has become popular. Some hundred years ago, or more, only very unusual, highly original spirits were attracted to science at all; scientific work was therefore carried out by men of exceptional intelligence. Now, scientists are turned out by mass production in our universities, and.... [T]hey are very ordinary professional men, and all they know is their own trade.

*Science Is a Sacred Cow*

Chapter I (pp. 23, 24)

Dutton. New York, New York, USA. 1950

...as advertising always convinces the sponsor even more than the public, the scientists become sold, and remain sold, on the idea that they have the Key to the Absolute, and that nothing will do for Mr. Average Citizen but to stuff himself full of electrons, protons, neutrons, neutrinos, genes, chromosomes, glands, hormones, potassium chloride, high-octane gasoline, ultrasonic vibrations, and the theory of relativity.

*Science Is a Sacred Cow*

Chapter I (p. 26)

Dutton. New York, New York, USA. 1950

The dreadful cocksureness that is characteristic of scientists in bulk is not only quite foreign to the spirit of true science, it is not even justified by a superficial view.

*Science Is a Sacred Cow*

Chapter I (p. 31)

Dutton. New York, New York, USA. 1950

“There’s many a true word spoken in jest”; scientists are abominably solemn; therefore scientists miss many a true word.

*Science Is a Sacred Cow*

Chapter v (p. 140)

Dutton. New York, New York, USA. 1950

**Stuck, Hudson** 1865–1920

Episcopal Archdeacon

A scientist is only a “scientist.” How that name tends continually to depreciate itself as the pursuit of physical science is divorced more and more completely from a knowledge of literature, from a knowledge of the humanities!

*Ten Thousand Miles With a Dog Sled*

Chapter IX (p. 269)

Charles Scribner’s Sons. New York, New York, USA. 1914

Your exclusive “scientist – and such are most of them today – may be competent to deal with circles and triangles, with wheels and levers with cells and glands, with germs and bacilli and microorganisms generally, with magnetos and dynamos, with all the heavenly host if you like, but he has no equipment to deal with man!

*Ten Thousand Miles With a Dog Sled*

Chapter IX (pp. 269–270)

Charles Scribner’s Sons. New York, New York, USA. 1914

**Szent-Györgyi, Albert** 1893–1986

Hungarian-born American biochemist

The real scientist...is ready to bear privations and, if need be, starvation rather than let anyone dictate to him which direction his work must take.

Science Needs Freedom

*World Digest*, Volume 55, 1943

In the great struggle between ignorance, distrust and brutality on one side, knowledge, understanding and peace on the other the scientist must stand fearlessly on the side of the latter, strengthening link between man and man and preaching that the only effective weapon of self-defense is good-will to others.

*Les Prix Nobel. The Nobel Prizes in 1937*

Nobel banquet speech for award received in 1937

Nobel Foundation. Stockholm, Sweden. 1938

Good science is made by good scientists, poor science by poor scientists, and the most brilliant project is worthless in the hands of a poor scientist, while, conversely, a good scientist has a good chance to come up with something valuable whatever he touches, because “*die Welt rundet sich im Tautropfen*” (Goethe), which could be translated by saying that all the great laws of nature are represented in a drop of dew.

Research Grants

*Perspectives in Biology and Medicine*, Volume 18, Number 1, Autumn, 1974 (p. 41)

**Tait, Peter Guthrie** 1831–1901

Scottish physicist and mathematician

The life of a genuine scientific man is, from the common point of view, almost always uneventful. Engrossed with the paramount claims of inquiries raised high above the domain of mere human passions, he is with difficulty tempted to come forward in political discussions, even

when they are of national importance; and he regards with surprise, if not with contempt, the petty municipal squabbles in which local notoriety is so eagerly sought.

In W.J. Miller (ed.)

*Scientific Papers: By W.J. Macquorn Rankine*

Memoir (p. ix)

Charles Griffin & Company. London, England. 1881

To [the scientific man] the discovery of a new law of nature, or even of a new experimental fact, or the invention of a novel mathematical method, no matter who has been the first to reach it, is an event of an order altogether different from, and higher than, those which are so profusely chronicled in the newspapers.

In W.J. Miller (ed.)

*Scientific Papers: By W.J. Macquorn Rankine*

Memoir (p. ix)

Charles Griffin & Company. London, England. 1881

### **Taylor, Alfred Maurice** 1903–76

English optics physicist

The three attributes of commitment, imagination, and tenacity seem to be the distinguishing marks of greatness in a scientist. A scientist must be as utterly committed to the pursuit of truth as the most dedicated of mystics; he must be as pertinacious in his struggle to advance into uncharted country as the most indomitable pioneers; his imagination must be as vivid and ingenious as a poet's or a painter's. Like other men, for success he needs ability and some luck; his imagination may be sterile if he has not a flair for asking the right questions, questions to which nature's reply is intelligible and significant.

*Imagination and the Growth of Science*

Chapter I (p. 5)

Schocken Books. New York, New York, USA. 1970

### **Thomas, Lewis** 1913–93

American physician and biologist

Scientists at work have the look of creatures following genetic instructions; they seem to be under the influence of a deeply placed human instinct. They are, despite their efforts at dignity, rather like young animals engaged in savage play. When they are near to an answer their hair stands on end, they sweat, they are awash in their own adrenaline. To grab the answer, and grab it first, is for them a more powerful drive than feeding or breeding or protecting themselves against the elements.

*The Lives of a Cell: Notes of a Biology Watcher*

Natural Science (p. 101)

The Viking Press. New York, New York, USA. 1974

### **Thorne, Kip S.** 1940–

American theoretical physicist

I do not aspire to a historian's standards of completeness, accuracy, or impartiality.

*Black Holes and Time Warps: Einstein's Outrageous Legacy*

Preface (p. 19)

W.W. Norton & Company, Inc. New York, New York, USA. 1994

### **Timiriacheff, C. A.**

Russian botanist

...the chief object of the scientist is not to describe but to explain and command Nature; his method must not be that of a passive observer, but rather that of an active experimenter; he must engage in strife with Nature, and by the power of his mind extort from her answers to his questions, so that he may master and subordinate her at will, provoke or arrest the phenomena of life, direct or vary them.

Translated by Anna Sheremeteva

*Die Sinne der Pflanzen*

Chapter I (p. 6)

Longmans, Green & Co. London, England. 1912

### **Ting, Samuel C. C.** 1936–

Chinese-American physicist

...scientists must go beyond what is taught in the textbook, and they must think independently. Also, they cannot hesitate to ask questions, even when their view may be unpopular.

In Janet Nomura Morey and Wendy Dunn

*Famous Asian Americans*

Samuel C.C. Ting (p. 143)

### **Tolkien, J. R. R.** 1892–1973

English philologist, writer, and professor

Merry stared at the lines of marching stones: they were worn and black; some were leaning, some were fallen, some were cracked or broken; they looked like rows of old and hungry teeth. He wondered what they could be...

*The Lord of the Rings*

The Return of the King, Book Three (p. 795)

HarperCollins Publishers. 2004

### **Toulmin, Stephen** 1922–

English philosopher

No doubt, a scientist isn't necessarily penalized for being a complex, versatile, eccentric individual with lots of extra-scientific interests. But it certainly doesn't help him a bit.

*Civilization and Science in Conflict or Collaboration*

CIBA Foundation Symposium

Associated Scientific Publishers. Amsterdam, Netherlands. 1972

### **Twain, Mark (Samuel Langhorne Clemens)** 1835–1910

American author and humorist

That is their way, those plagues, those scientists – peg, peg, dig, dig, dig – plod, plod, plod. I wish I could catch a cargo of them for my place; it would be an economy. Yes, for years, you see. They never give up. Patience, hope, faith, perseverance; it is the way of all the breed.

*Europe and Elsewhere*

Sold to Satan

Harper & Brothers. New York, New York, USA. 1923

That is the way of the scientist. He will spend thirty years in building up a mountain range of facts with the intent to prove a certain theory; then he is so happy in his achievement that as a rule he overlooks the main chief fact of all – that his accumulation proves an entirely different thing.

*What Is Man? and Other Essays* (1917 edition)

The Bee Essay (p. 283)

Harper & Brothers. New York, New York, USA. 1917

Scientists have odious manners, except when you prop up their theory; then you can borrow money of them.

*What Is Man? and Other Essays* (1917 edition)

The Bee Essay (p. 283)

Harper & Brothers. New York, New York, USA. 1917

Such is professional jealousy; a scientist will never show any kindness for a theory which he did not start himself. There is no feeling of brotherhood among these people. Indeed, they always resent it when I call them brother. To show how far their ungenerosity can carry them, I will state that I offered to let Prof. H – y publish my great theory as his own discovery; I even begged him to do it; I even proposed to print it myself as his theory. Instead of thanking me, he said that if I tried to fasten that theory on him he would sue me for slander.

*A Tramp Abroad*

Chapter XLIII (p. 321)

Penguin Books. New York, New York, USA. 1997

## University of California, Berkeley

Scientists work better when they're all mixed-up.

Advertisement insert

*Fortune*, April, 1986 (p. 814)

## Varese, Edgar 1883–1965

French American composer

Scientists are the poets of today.

*Artspace*, Volume 9, Fall 1985 (p. 30)

## Vernadskii, Vladimir Ivanovich 1863–1945

Russian mineralogist

Scientists are in fact imaginers and artists; they are not free with their ideas; they can work well and hard only at what their thinking accepts and what their feelings are drawn to. Ideas alternate; impossible and often mad ones appear; they swarm and whirl, fuse and sparkle. Scientists live among these ideas and work for them.

Compiled by V.V. Vorontsov

*Words of the Wise: A Book of Russian Quotations*

Translated by Vic Schneierson

Progress Publishers. Moscow, Russia. 1979

## von Frisch, Karl 1886–1982

Austrian zoologist

No competent scientist *ought* to believe these things on first hearing.

*Bees: Their Vision, Chemical Senses, and Language*

Foreword (p. vii)

Cornell University Press. Ithaca, New York, USA. 1950

## Wald, George 1906–97

American biologist and biochemist

A scientist should be the happiest of men. Not that science isn't serious; but as everyone knows, being serious is one way of being happy...

*Les Prix Nobel. The Nobel Prizes in 1967*

Nobel banquet speech for award received in 1967

Nobel Foundation. Stockholm, Sweden. 1968

A scientist is in a sense a learned small boy. There is something of the scientist in every small boy. Others must outgrow it. Scientists can stay that way all their lives.

*Les Prix Nobel. The Nobel Prizes in 1967*

Nobel banquet speech for award received in 1967

Nobel Foundation. Stockholm, Sweden. 1968

## Walshe, Sir F. M. R.

No biographical data available

It often is the cloistered scientist who knows least about men who is apt to pontificate most loudly and confidently about Man. Beware of him when he assures you that he knows all the answers about us, for too often his is one of those Peter Pans of science that every generation produces: a clever boy who hasn't grown up.

*Canadian Medical Association Journal*, Volume 67, 1962 (p. 395)

## Weil, Simone 1909–43

French philosopher and mystic

On could count on one's fingers the number of scientists throughout the world with a general idea of the history and development of their particular science: there is none who is really competent as regards sciences other than his own. As science forms an indivisible whole, one may say that there are no longer, strictly speaking, scientists, but only drudges doing scientific work.

Translated by Arthur Wills and John Petrie

*Oppression and Liberty*

Prospects (p. 13)

Routledge & Kegan Paul Ltd. London, England. 1958

Science is voiceless; it is the scientists who talk.

*On Science, Necessity, and the Love of God*

Chapter 3 (p. 57)

Oxford University Press. London, England. 1968

## Weinberg, Alvin Martin 1915–2006

American physicist

The traditional working scientists are at the bottom rung – each one knows almost everything about almost nothing; as one progresses toward the top of the ladder, the subject matter becomes more abstract until one finally reaches the philosopher at the top who knows almost nothing about almost everything.

*Reflections on Big Science*

Chapter II (p. 47)

The MIT Press. Cambridge, Massachusetts, USA. 1967

**Weiss, Paul A.** 1898–1989  
Austrian-born American biologist

Just like the painter, who steps periodically back from his canvas to gain perspective, so the laboratory scientist emerges above ground occasionally from the deep shaft of his specialized preoccupation to survey the cohesive, meaningful fabric developing from innumerable component tributary threads, spun underground much like his own. Only by such shuttling back and forth between the worm's eye view of detail and the bird's eye view of the total scenery of science can the scientist gain and retain a sense of perspective and proportions.

*Scientists in Search of Their Conscience*

Conclusion (p. 193)

Springer-Verlag. Berlin, Germany. 1973

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

What there is great about [scientists] is an annoyance to their fellow scientists and a mystery to the general public, and what is not is evident. There is no doubt about what is not great, no race of men have such obvious little-nesses.... And withal the reef of science that these little "scientists" built and are yet building is so wonderful, so portentous, so full of mysterious half-shapen promises for the mighty future of man! They do not seem to realise the things they are doing.

*Seven Famous Novels by H.G. Wells*

*The Food of the Gods*

Chapter I. (p. 533)

Alfred A. Knopf. New York, New York, USA. 1934

No doubt long ago even Mr. Bensington, when...he consecrated his life to the alkaloids and their kindred compounds had some inkling of the vision – more than an inkling. Without some great inspiration, for such glories and positions only as a "scientist" may expect, what young man would have given his life to this work, as young men do? No, they must have seen the glory, they must have had the vision, but so near that it has blinded them, mercifully, so that for the rest of their lives they can hold the light of knowledge in comfort – that we may see.

*Seven Famous Novels by H.G. Wells*

*The Food of the Gods*

Chapter I. (p. 533)

Alfred A. Knopf. New York, New York, USA. 1934

In the middle years of the nineteenth century there first became abundant in this strange world of ours a class of men, men tending for the most part to become elderly, who are called, and who are very properly called, but who dislike extremely to be called "Scientists."

*Seven Science Fiction Novels of H. G. Wells*

*The Food of the Gods*

Book I, Chapter the First (p. 623)

Dover Publications, Inc. New York, New York, USA. 1934

**Weyl, Hermann** 1885–1955  
German mathematician

One of the great differences between the scientist and the impatient philosopher is that the scientist bides his time. We must await the further development of science, perhaps for centuries, perhaps for thousands of years, before we can design a true and detailed picture of the interwoven texture of matter, life and soul. But the old classical determinism of Hobbes and LaPlace need not oppress us any longer.

*The Open World: Three Lectures in the Metaphysical Implications of Science*

Lecture II (p. 55)

Yale University Press. New Haven, Connecticut, USA. 1932

**Whewell, William** 1794–1866  
English philosopher and historian

We need very much a name to describe a cultivator of science in general. I should incline to call him a Scientist. Thus we might say, that as an Artist is a Musician, Painter, or Poet, a Scientist is a Mathematician, Physicist, or Naturalist.

*Novum Organum Renovatum*

Aphorisms Concerning the Language of Science

John W. Parker & Son. London, England. 1858

The terminations *ize* (rather than *ise*), *ism*, and *ist*, are applied to words of all origins: thus we have to *pulverize*, to *colonize*, *Witticism*, *Heathenism*, *Journalist*, *Tobacconist*. Hence we may make such words when they are wanted. As we cannot use *physician* for a cultivator of physics, I have called him a *Physicist*. We need very much a name to describe a cultivator of science in general. I should incline to call him a *Scientist*. Thus we might say, that as an Artist is a Musician, Painter, or Poet, a Scientist is a Mathematician, Physicist, or Naturalist.

*The Philosophy of the Inductive Sciences, Founded Upon Their History* (Volume 2)

Aphorisms, Aphorism XVI (p. 560)

John W. Parker. London, England. 1847

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

Many a scientist has patiently designed experiments for the purpose of substantiating his belief that animal operations are motivated by no purpose...Scientists animated by the purpose of proving that they are purposeless

constitute an interesting subject for study.

*The Function of Reason*

Chapter I (p. 12)

Beacon Press. Boston, Massachusetts, USA. 1929

A few generations ago the clergy, or to speak more accurately, large sections of the clergy were the standing examples of obscurantism. Today their place has been taken by scientists.

*The Function of Reason*

Chapter I (pp. 34–35)

Beacon Press. Boston, Massachusetts, USA. 1929

### **Whitney, Willis Rodney** 1868–1958

American chemical and electrical engineer

We humans want better minds, broader horizons, and greater understanding. Scientists everywhere are at work in their respective fields searching for new truths to improve the process by which our minds, our horizons, our powers, and our outlooks grow.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1924*

The Vacuum – There's Something in It (p. 193)

Government Printing Office. Washington, D.C. 1925

### **Wiener, Norbert** 1894–1964

American mathematician

...the first industrial revolution,...of the “dark satanic mills,” [devalued] the human arm by the competition of machinery.... The modern industrial revolution is similarly bound to devalue the human brain...in its simpler and more routine decisions. Of course, just as the skilled carpenter, the skilled mechanic, the skilled dressmaker have in some degree survived the first industrial revolution, so the skilled scientist and the skilled administrator may survive the second. However,...the average human being of mediocre attainment or less has nothing to sell that is worth anyone's money to buy.

*Cybernetics: Or Control and Communication in the Animal and the Machine*  
Introduction (pp. 27–28)

The MIT Press. Cambridge, Massachusetts, USA. 1961

...the degradation of the position of the scientist as independent worker and thinker to that of a morally irresponsible stooge in a science-factory has proceeded even more rapidly and devastatingly than I had expected.

A Rebellious Scientist after Two Years

*Bulletin of the Atomic Scientists*, Volume 4, Number 11, November 4, 1948 (p. 338)

[A scientist] must live in a world where science is a career, where he has companions with whom to talk, and in contact with whom he may bring out his own self. It may be true that 95% of the really original scientific work is done by less than 5% of the professional scientists, but the greater part of it would not be done at all if the other 95% were not there and did not create a high level of public scientific opinion.

Science, Monkeys, and Mozart

*Saturday Review of Literature*, November 20, 1956

### **Wikström, J. E.**

Former Swedish Minister of Education and Cultural Affairs

...Scientists are like children playing with fire without heeding the disastrous consequences of their games or, even worse, “they are like incendiaries which completely destroy property.”

In Torgny Segerstedt

*Ethics for Science Policy: Proceedings of a Nobel Symposium Held at Södergarn, Sweden, 20–25 August 197*

Opening Remarks (p. xiii)

Pergamon Press. Oxford, England. 1979

### **Wilder, Thornton** 1897–1975

American playwright and novelist

Then there is technology, the excess of scientists who learn how to make things much faster than we can learn what to do with them.

In Plora Lewis

Thornton Wilder at 65 Looks Ahead – And Back

*New York Times Magazine*, 15 April, 1962 (p. 28)

### **Wilf, Alexander**

No biographical data available

A scientist cannot be measured quantitatively by the number of degrees or the accumulation of information. A true scientist should have a measure of courage to correct error and seek truth – no matter how painful. The alternative is more painful. To build error upon error is to drift into dogmas, metaphysics, science fiction, and mythology.

*Origin and Destiny of the Moral Species* (p. 9)

A.S. Barnes. South Brunswick, New Jersey, USA. 1969

### **Wilson, Edward O.** 1929–

American biologist and author

The ideal scientist thinks like a poet and works like a bookkeeper, and I suppose that if gifted with a full quiver, he also writes like a journalist. As a painter stands before canvas or a novelist recycles old emotion with eyes closed, he searches his imagination for subjects as much as for conclusions, for questions as much as for answers.

Scientists, Scholars, Knaves and Fools

*American Scientist*, Volume 86, January–February, 1998 (p. 7)

Scientists, I believe, are divided into two categories: those who do science in order to be a success in life, and those who become a success in life in order to do science.

*Naturalist*

The Forms of Things Unknown (p. 210)

Island Press. Washington, D.C. 1994

Scientists do not discover in order to know, they know in order to discover.

*Biophilia*

The Poetic Species (p. 58)

Harvard University Press. Cambridge, Massachusetts. 1984

Scientists live and die by their ability to depart from the tribe and go out into an unknown terrain and bring back,

like a carcass newly speared, some new discovery or fact or theoretical insight and lay it in front of the tribe; and then they all gather and dance around it. Symposia are held in the National Academy of Sciences and prizes are given [The symposia are] fundamentally no [different] from a Paleolithic camp site celebration.

In Edward Lueders

*Writing Natural History: Dialogues with Authors*

Dialogue One (p. 25)

University of Utah Press. Salt Lake City, Utah, USA. 1989

The scientist is not a very romantic figure. ...[His work] amounts to a sort of puttering: trying to find a good problem, thinking up experiments, mulling over data, arguing in the corridor with colleagues, and making guesses with the aid of coffee and chewed pencils until finally something – usually small – is uncovered. Then comes a flurry of letters and telephone calls, followed by the writing of a short paper in an acceptable jargon. The great majority of scientists are hard-working, pleasant journeymen, not excessively bright, making their way through a congenial occupation.

*Biophilia*

The Poetic Species (p. 59)

Harvard University Press. Cambridge, Massachusetts. 1984

Theoretical scientists, inching away from the safe and known, skirting the point of no return, confront nature with a free invention of the intellect. They strip the discovery down and wire it into place in the form of mathematical models or other abstractions that define the perceived relation exactly. The now-naked idea is scrutinized with as much coldness and outward lack of pity as the naturally warm human heart can muster. They try to put it to use, devising experiments or field observations to test its claims. By the rules of scientific procedure it is then either discarded or temporarily sustained. Either way, the central theory encompassing it grows. If the abstractions survive they generate new knowledge from which further exploratory trips of the mind can be planned. Through the repeated alternation between flights of the imagination and the accretion of hard data, a mutual agreement on the workings of the world is written, in the form of natural law.

*Biophilia*

The Poetic Species (p. 67)

Harvard University Press. Cambridge, Massachusetts. 1984

### **Winterton, Curtis C.**

No biographical data available

Any man is a scientist when he puts two and two together and draws conclusions which are justified by the observed facts, for science uses only refinements of the inductions and deductions practiced in everyday life.

The Method and the Knowledge of Science

*Natural History*, Volume XIX, February, 1919 (p. 155)

### **Wittgenstein, Ludwig Josef Johann** 1889–1951

Austrian-born English philosopher

What a curious attitude scientists have – : “We still don’t know that; but it is knowable and it is only a matter of time before we get to know it!” As if that went without saying.

Translated by Peter Winch

*Culture and Value* (p. 40e)

The University of Chicago Press. Chicago, Illinois, USA. 1980

### **Wolpert, Lewis** 1929–

British embryologist

Both Newton and Darwin were driven by the data and were forced to recognize that they couldn’t explain everything. It may be a characteristic of great scientists to know what to accept and what to leave out.

*The Unnatural Nature of Science*

Chapter 4 (p. 72)

Harvard University Press. Cambridge, Massachusetts, USA. 1992

### **Wood, William Hamilton**

No biographical data available

The basal fact is that the scientist worships *truth*. His search is above everything else for truth. Truth is the very breath he breathes. His findings, his beliefs must therefore be truth. He is the willing, loyal servant of this master before whom he bows down as to one greater than himself.

*The Religion of Science*

Chapter II (p. 20)

The Macmillan Co. New York, New York, USA. 1922

### **Young, John Zachary** 1907–97

English zoologist

One of the characteristics of scientists and their work, curiously enough, is a certain confusion, almost a muddle. This may seem strange if you have come to think of science with a big S as being all clearness and light.

*Doubt and Certainty in Science: A Biologist’s Reflections on the Brain*

First Lecture (p. 1)

Oxford University Press, Inc. Oxford, England. 1960

...in his laboratory he does not spend much of his time thinking about scientific laws at all. He is busy with other things, trying to get some piece of apparatus to work, finding a way of measuring something more exactly.... You may feel that he hardly knows himself what law he is trying to prove. He is continually observing, but his work is a feeling out into the dark, as it were. When pressed to say what he is doing he may present a picture of uncertainty or doubt, even of actual confusion.

*Doubt and Certainty in Science: A Biologist’s Reflections on the Brain*

First Lecture (p. 2)

Oxford University Press, Inc. Oxford, England. 1960

**Zisel, Edgar** 1891–1944

Austrian historian and philosopher of science

The modern scientist looks upon science as a great building erected stone by stone through the work of his predecessors and his contemporary fellow-scientists, a structure that will be continued but never completed by his successors.

The Genesis of the Concept of Scientific Progress

*The Journal of the History of Ideas*, Volume 6 1945 (p. 325)**SCIENTIST, FUNCTION OF****Gould, Benjamin Anthon** 1824–96

American astronomer

The function of the scientist is to attain new truths by conquering them from the limitless realm of the unknown, and whether they be brilliant or otherwise, none is too small or insignificant in aspect to deserve his earnest search or joyful welcome.

*Proceedings of the American Association for the Advancement of Science*

Address (p. 16)

Joseph Lovering. Cambridge, Massachusetts, USA. 1870

**SCINTILLATION****Hardy, Thomas** 1840–1928

English poet and regional novelist

Then, again, the scintillations vary. No star flaps his wings like Sirius when he lies low! He flashes out emeralds and rubies, amethystine flames and sapphirine colours, in a manner quite marvellous to behold, and this is only one star! So, too, do Arcturus, and Capella, and lesser luminaries...

*Two On A Tower*

The life of one who explores the mysteries of the sea, is not more perilous than fascinating.

The Ocean Depths

*Putnam's Monthly*, Volume VII, April, 1856 (p. 386)**Beebe, William** 1877–1962

American ornithologist

When once it has been seen, it will remain forever the most vivid memory in life, solely because of its cosmic chill and isolation, the eternal and absolute darkness and the indescribable beauty of its inhabitants.

*Half Mile Down*

Chapter 9 (p. 175)

Harcourt, Brace &amp; Company. New York, New York, USA. 1934

**Benitez, Sandra**

No biographical data available

In the biting honesty of salt, the sea makes her secrets known to those who care to listen.

*A Place where the Sea Remembers*

Chapter 1 (p. 2)

Touchstone. New York, New York, USA. 1993

**Berger, John** 1926–

English art critic, novelist, painter, and author

The sun is low in the sky and the sea is calm. Like a mirror as they say. Only it is not like a mirror. The waves which are scarcely waves, for they come and go in many different directions and their rising and falling is barely perceptible, are made up of innumerable tiny surfaces at variegating angles to one another – of these surfaces those which reflect the sunlight straight into one's eyes, sparkle with a white light during the instant before their angle, relative to oneself and the sun, shifts and they merge again into the blackish blue of the rest of the sea.

G

Chapter 10 (p. 310)

The Viking Press. New York, New York, USA. 1972

[A]s the sea recedes towards the sun, the number of sparkling surfaces multiplies until the sea indeed looks somewhat like a silver mirror. But...it is not still. Its granular surface is in continual agitation. The further away the ricocheting grains, of which the mass become silver and the visibly distinct minority a dark leaden colour, the greater is their apparent speed. Uninterruptedly receding towards the sun, the transmission of its reflexions becoming ever faster, the sea neither requires nor recognizes any limit. The horizon is the straight bottom edge of a curtain arbitrarily and suddenly lowered on a performance.

G

Chapter 10 (p. 310)

The Viking Press. New York, New York, USA. 1972

**Beston, Henry** 1888–1968  
American writer

Listen to the surf, really lend it to your ears, and you will hear in it a world of sounds: hollow boomings and heavy roarings, great watery tumblings and tramlings, long hissing seethes, sharp, rifle-shot reports, splashes, whispers, the grinding undertone of stones, and sometimes vocal sounds that might be the half-heard talk of people in the sea.

*The Outermost House*

Chapter III (p. 43)

Rinehart & Company. New York, New York, USA. 1928

**Bradley, Jr., John Hodgdon** 1898–1962  
American geologist

Like the turbulent crowd at the rim of an arena, the sea surrounds the lands and awaits the issue of combat. Fretfully the colossus chafes at the margins of battlefields it is eager but impotent to enter.

*Autobiography of Earth*

Chapter VI (p. 168)

Coward-McCann, Inc. New York, New York, USA. 1935

**Broch, Hermann** 1886–1951  
Austrian writer

Those who live by the sea can hardly form a single thought of which the sea would not be part.

*The Spell*

Forward (p. 3)

North Point Press. San Francisco, California, USA. 1989

**Burroughs, John** 1837–1921  
American naturalist and essayist

The sea, as a whole, does not flow to any particular point; it flows to all points, and in all directions; there are currents beneath currents.

*The Heart of Burroughs's Journals*

March 4, 1885 (p. 123)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1928

**Cable, Richard**  
No biographical data available

What a fascination there is in looking at the sea! Even the most vulgar soul is affected by it. On the sea-border we are on the frontier of the infinite.

*The Lightshipman*

*The Living Age*, Volume LXI, Number 2272, January 18, 1888 (p. 108)

**Carson, Rachel** 1907–64  
American marine biologist and author

There we see the parts of the plan fall into place: the water receiving from earth and air the simple materials, storing them up until the gathering energy of the spring sun wakens the sleeping plants to a burst of dynamic activity, hungry swarms of planktonic animals growing and multiplying upon the abundant plants, and them-

selves falling prey to the shoals of fish; all, in the end, to be redissolved into their component substances when the inexorable laws of the sea demand it.

*Undersea*

*Atlantic Monthly*, September, 1937 (p. 29)

The sea has always challenged the minds and imagination of men and even today it remains the last great frontier of Earth.

*The Sea Around Us*

Preface (p. vii)

Oxford University Press, Inc. New York, New York, USA. 1989

It is a curious situation that the sea, from which life first arose should now be threatened by the activities of one form of that life. But the sea, though changed in a sinister way, will continue to exist; the threat is rather to life itself.

*The Sea Around Us*

Preface (p. xiii)

Oxford University Press, Inc. New York, New York, USA. 1989

...all at last return to the sea – to Oceanus, the ocean river, like the ever-flowing stream of time, the beginning and the end.

*The Sea Around Us*

The Encircling Sea (p. 162)

Simon & Schuster. New York, New York, USA. 1958

The edge of the sea is a strange and beautiful place.

*The Edge of the Sea*

The Marginal World (p. 1)

Houghton Mifflin & Co. New York, New York, USA. 1998

**Chopin, Kate** 1851–1904  
American author of short stories and novels

The voice of the sea speaks to the soul. The touch of the sea is sensuous, enfolding the body in its soft, close embrace.

*The Awakening*

Chapter VI (p. 34)

Capricorn Books. New York, New York, USA. 1964

**Conrad, Joseph** 1857–1924  
Polish-born English novelist

For all that has been said of the love that certain natures (on shore) have professed to feel for it, for all the celebrations it has been the object of in prose and song, the sea has never been friendly to man. At most it has been the accomplice of human restlessness ...

*The Mirror of the Sea*

Chapter XXXV (p. 135)

Doubleday, Page & Co. Garden City, New York, USA. 1924

**Cousteau, Jacques-Yves** 1910–77  
French naval officer and ocean explorer

The sea is not a bargain basement.

*The Living Sea*

Chapter Seventeen (p. 313)

Harper & Row, Publishers. New York, New York, USA. 1963

From the vast expanses of its surface waters to its beaches and marshes and tidelands and mangrove swamps, from its many thousands of miles of rocky shores to its deep-est and darkest abyss, the sea produces life in fantastic abundance.

*The Ocean World of Jacques Cousteau: The Adventure of Life*

Chapter I (p. 10)

The World Publishing Company. New York, New York, USA. 1973

The sea is the universal sewer.

House Committee on Science and Astronautics

28 January, 1971

**Cromie, William J.** 1930–

American journalist and writer

In the open ocean one sees no green meadows or fertile prairies. Away from the rim of seaweed around the coasts one is aware of only an endless confusion of seemingly barren waves. Yet there are lush pastures in the open sea.

*The Living World of the Sea*

Chapter 3 (p. 37)

Prentice-Hall, Inc. Englewood Cliffs, New Jersey, USA. 1966

The sea gave birth to life and without its waters no living thing could ever survive on Earth. Now man, rightly or wrongly, is looking to the ocean as his ultimate safety valve, the answer to his problems of food, waste and even space. But the sea has no mind and the sea is not inexhaustible.

*The Living World of the Sea*

Chapter 15 (p. 332)

Prentice-Hall, Inc. Englewood Cliffs, New Jersey, USA. 1966

**Deacon, G. E. R.**

No biographical data available

The sea is different. It is an alien world whose mysteries can be probed only slowly and painstakingly. Hence our knowledge of life in the sea has come late in the records of human history, and we still have a great deal to learn.

*Life in the Sea* (p. 76)

Doubleday & Co., Inc. Garden City, New York, USA. 1962

**Diolé, Philippe** 1908–77

French author and undersea explorer

Between the air and the water a steel blade quivers. What people call the surface is also a ceiling: a mirror from above, watered silk from beneath. Nothing is torn on the way through. Only a few bubbles mark the diver's channel and behind him the frontier soon closes. But once the threshold is crossed, one can turn back slowly and look up: that dazzling screen is the border between two worlds, as clear to one as to the other. Behind the looking glass the sky is made of water.

Translated by Alan Ross

*The Undersea Adventure*

Chapter 1 (pp. 6–7)

Julian Messner, Inc. New York, New York, USA. 1953

**Earle, Sylvia Alice** 1935–

American oceanographer and education advocate

If the sea is sick, we'll feel it. If it dies, we die. Our future and the state of the ocean are one.

*Sea Change*

Introduction (p. xii)

G.P. Putnam's Sons. New York, New York, USA. 1995

**Eiseley, Loren C.** 1907–77

American anthropologist, educator, and author

In the end the sea rejects its offspring. They cannot fight their way home through the surf which casts them repeatedly back upon the shore. The tiny breathing pores of starfish are stuffed with sand. The rising sun shrivels the mucilaginous bodies of the unprotected. The seabeach and its endless war are soundless. Nothing screams but the gulls.

Of all the gods that divide the empire of the earth, Neptune rules over the widest realms. If a giant-hand were to uproot the Andes and cast them into the sea, they would be engulfed in the abyss, and scarcely raise the general level of the waters.

*The Sea and Its Living Wonders* (8th edition)

Chapter I (p. 3)

Longmans, Green & Co. London, England. 1892

**Hazlitt, William Carew** 1834–1913

English bibliographer

I hate to be near the sea, and to hear it roaring and raging like a wild beast in its den. It puts me in mind of the everlasting efforts of the human mind, struggling to be free, and ending just where it began.

*Common Places*

**Heine, Heinrich** 1797–1856

German journalist and essayist

The sea knows all things; for, at night, the stars confide to it the hidden mysteries of heaven.

Translated by Simon Alder Stern

*Scintillations from the Prose Works of Heinrich Heine*

Miscellaneous (p. 170)

Henry Holt & Co. New York, New York, USA. 1873

**Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

The mountains give their lost children berries and water ; the sea mocks their thirst and lets them die.

*The Autocrat of the Breakfast Table*

Chapter XI (p. 262)

J.M. Dent & Co. Boston, Massachusetts, USA. 1907

The mountains have a grand, stupid, lovable tranquility ; the sea has a fascinating, treacherous intelligence.

*The Autocrat of the Breakfast Table*

Chapter XI (p. 262)

J.M. Dent & Co. Boston, Massachusetts, USA. 1907

The sea remembers nothing. It is feline. It licks your feet, – its huge flanks purr very pleasantly for you; but it will crack your bones and eat you, for all that, and wipe the crimsoned foam from its jaws as if nothing had happened.

*The Autocrat of the Breakfast-table*

Chapter XI (p. 262)

J.M. Dent & Co. London, England. 1907

The sea drowns out humanity and time; it has no sympathy with either; for it belongs to eternity, and of that it sings its monotonous song forever and ever.

*The Autocrat of the Breakfast-table*

Chapter XI (p. 262)

J.M. Dent & Co. London, England. 1907

**Houot, Georges** 1913–2000

French underwater explorer

**William, Pierre**

No biographical data available

We are entering on the last stage of man's march toward a knowledge of the surface of the globe. The battle that remains to be fought will be long and hard. Despite the progress of science, the sea remains a hostile element, particularly so at the frontier between the water and the atmosphere.

Translated by Michael Bullock

*2000 Fathoms Down* (p. 182)

E.P. Dutton & Company. New York, New York, USA. 1955

O Sea! Thou saline and undulant aqueous solution of halides, carbonates, phosphates, sulfates, and other soluble inorganic compounds! What mysterious colloids are dispersed within thy slightly alkaline bosom? What silent and unseen reactions vibrate in dynamic equilibrium, constantly destroyed and instantly restored, among thy unnumbered oscillating molecules? What uncounted myriads of restless ions migrate perpetually throughout thy tentatively estimated volume? What unguessed phenomena of catalysis, metathesis, and osmosis transpire in thy secret fluid profundities under excessively increased pressure? What cosmic precipitates descend in countless kilograms upon thy argillaceous, gelatinous, siliceous, diatomaceous, and totally unilluminated bottom? In short, most magnificent reservoir, what is thy flow-chart and complete analysis?

A Chemist Addresses the Ocean

*Industrial and Engineering Chemistry: News Edition*, Volume 8, Number 22, September 20, 1930

**Ledbetter, B. G.**

No biographical data available

The sea often appears tranquil and serene, but its permanent hills and valleys illustrate that in fact it is restless, always in motion, mixing and flowing in ceaseless search for peace.

Sea Level Isn't Level – It's Hilly

*Science Digest*, Volume 68, Number 1, July 1970 (p. 72)

**Lindbergh, Anne Morrow** 1906–2001

American aviator and writer

The sea does not reward those who are too anxious, too greedy, or too anxious. To dig for treasures shows not only impatience and greed, but a lack of faith. Patience, patience, is what the sea teaches. Patience and faith. One should lie empty, open, choiceless as a beach-waiting for a gift from the sea.

*Gift from the Sea*

Part I, The Beach (p. 17)

Pantheon Books, Inc. New York, New York, USA. 1955

**Longfellow, Henry Wadsworth** 1807–82

American poet

Learn the secret of the sea?

Only those who brave its dangers

Comprehend its mystery.

*The Seaside and the Fireside*

The Secret of the Sea

Ticknor, Reed & Fields. Boston, Massachusetts, USA. 1850

...my soul is full of longing for the secrets of the sea.

And the heart of the great ocean

Sends a thrilling pulse through me.

*The Seaside and the Fireside*

The Secret of the Sea

Ticknor, Reed & Fields. Boston, Massachusetts, USA. 1850

**Lowell, James Russell** 1819–91

American poet, critic, and editor

The sea was meant to be looked at from shore, as mountains are from the plain.

*Fireside Travels*

At Sea (p. 155)

Ticknor & Fields. Boston, Massachusetts, USA. 1864

There is nothing so desperately monotonous as the sea, and I no longer wonder at the cruelty of pirates.

*Fireside Travels*

At Sea (p. 157)

Ticknor & Fields. Boston, Massachusetts, USA. 1864

**Lubbock, John, First Baron Avebury** 1834–1919

English banker, politician, biologist, and archaeologist

The Sea is outside time. A thousand, ten thousand, or a million years ago it must have looked just as it does now, and as it will ages hence.

*The Beauties of Nature and the Wonders of the World We Live In*

Chapter IX (p. 340)

Macmillan & Company New York, New York, USA. 1893

**Maury, Matthew Fontaine** 1806–73

American hydrographer and naval officer

The sea...we may safely infer, has its offices and duties to perform ; so, may we infer, have its currents, and so, too, its inhabitants; consequently, he who undertakes to study its phenomena must cease to regard it as a waste of waters. He must look upon it as a part of that exquisite machinery by which the harmonies of nature are preserved, and then he will begin to perceive the developments of order and the evidences of design : viewed in this light, it becomes a vast field for study – a most beautiful and interesting subject for contemplation.

*The Physical Geography of the Sea, and its Meteorology*

Chapter III (p. 61)

Sampson Low, Marston & Co. London, England. 1891

Harmonious in their action, the air and sea are obedient to law and subject to order in all their movements; when we consult them in the performance of their offices, they teach us lessons concerning the wonders of the deep, the mysteries of the sky, the greatness, and the wisdom, and goodness of the Creator.

*The Physical Geography of the Sea*

Chapter III (p. 96)

Harper & Brothers. New York, New York, USA. 1855

Astronomers had measured the volumes and weighed the masses of the most distant planets, and increased thereby the stock of human knowledge. Was it creditable to the age that the depths of the sea should remain in the category of an unsolved problem? ...Indeed, telescopes of huge proportions and of vast space-penetrating powers had been erected here and there by the munificence of individuals, and attempts made with them to gauge the heavens and sound out the regions of space. Could it be more difficult to sound out the sea than to gauge the blue ether and fathom the vault of the sky?

*The Physical Geography of the Sea*

Chapter XI (pp. 201, 202)

Harper & Brothers. New York, New York, USA. 1855

Could the waters of the Atlantic be drawn off so as to expose to view this great sea-gash...it would present a scene most rugged, grand, and imposing. The very ribs of the solid earth, with the foundations of the sea would be brought to light, and we should have presented to us at one view, in the empty cradle of the ocean, "a thousand fearful wrecks," with that dreadful array of dead men's skulls, great anchors, heaps of pearl and inestimable stones, which, in the poet's eye, lie scattered in the bottom of the sea, making it hideous with sights of ugly death.

*The Physical Geography of the Sea*

Chapter XII (p. 208)

Harper & Brothers. New York, New York, USA. 1855

### **Melville, Herman** 1819–91

American novelist

There is, one knows not what sweet mystery about the sea, whose gently awful stirrings seem to speak of some hidden soul beneath.

**Verne, Jules** 1828–1905  
French novelist

Yes; I do love it! The sea is everything. It covers seven-tenths of the terrestrial globe. Its breath is pure and healthy. It is an immense desert, where man is never lonely, for he feels life stirring on all sides. The sea is only the embodiment of a supernatural and wonderful existence....

Translated by Mercier Lewis

*Twenty Thousand Leagues Under the Sea*

Part One, Chapter 10 (p. 58)

Nelson Doubleday, Inc. Garden City, New York, USA. 1900

Nature manifests herself in it by her three kingdoms, mineral, vegetable, and animal. The sea is the vast reservoir of Nature. The globe began with sea, so to speak; and who knows if it will not end with it? In it is supreme tranquility. The sea does not belong to despots. Upon its surface men can still exercise unjust laws, fight, tear one another to pieces, and be carried away with terrestrial horrors. But at thirty feet below its level, their reign ceases, their influence is quenched, and their power disappears.

Translated by Mercier Lewis

*Twenty Thousand Leagues Under the Sea*

Part One, Chapter 10 (p. 58)

Nelson Doubleday, Inc. Garden City, New York, USA. 1900

The sea is everything. It covers seven-tenths of the terrestrial globe. Its breath is healthy and pure. It is a spacious wilderness where man is never alone, for he can feel life throbbing all around him.

Translated by William Butcher

*Twenty Thousand Leagues Under The Sea*

Chapter 10 (p. 68)

Oxford University Press. Oxford, England. 1998

**van Dervoort, J. Wesley**

No biographical data available

We never tire of the sea; it is a laboratory in which delightful processes are continually being wrought out for our admiration and use. Its flora and its fauna, its waves and its tides, its salts and its currents, all afford grand and profitable themes of study and thought.

*The Physical Geography of the Sea, and Its Meteorology*

Chapter XVIII, section 740 (p. 394)

Union Publishing House. New York, New York, USA. 1886

**von Humboldt, Alexander** 1769–1859

German naturalist and explorer

All who possess an ordinary degree of mental activity, and delight to create to themselves an inner world of thought, must be penetrated with the sublime image of the infinite when gazing around them on the vast and boundless sea, when involuntarily the glance is attracted to the distant horizon, where air and water blend together, and the stars continually rise and set before the eyes of the mariner. This contemplation of the eternal play of the elements is clouded, like every human joy, by a touch of sadness and of longing.

Translated by E.C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1) (p. 310)

D. Appleton & Co. New York, New York, USA. 1850

**Walford, Lionel A.**

No biographical data available

The sea is a wilderness. Threadbare though that phrase may have become in poetic literature, it still expresses an overwhelming fact. The sea is a mysterious wilderness, full of secrets. It is inhabited only by wild animals and, with the exception of a few special situations, is uncultivated. Most of what we know about it we have had to learn indirectly with mechanical contrivances designed to probe, feel, sample, fish.

*Living Resources of the Sea: Opportunities for Research and Expansion*

Preface (p. ix)

Ronald Press. New York, New York, USA. 1958

**Young, Louise B.**

Science writer

Throughout the planet's history the sea has carved and molded the character of the land. She has scooped out steep escarpments and deep gorges, impressed the rhythm of her movement on the hard rocky shores of the continents. But still she is ever yielding. Beneath her smiling, enigmatic face there are grave depths where silence and darkness dwell always. Here in these hidden places she watches impassively while the earth tears itself violently apart and makes itself anew. Quietly giving way to make room for the growing landmass, she receives and holds this newborn substance in her soft embrace.

*The Blue Planet*

Chapter 2 (p. 46)

Little, Brown & Company. Boston, Massachusetts, USA. 1983

**SEA SHORE****Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

The sea-shore is a sort of neutral ground, a most advantageous point from which to contemplate this world. It is even a trivial place. The waves forever rolling to the land are too far-travelled and untamable to be familiar.

Creeping along the endless beach amid the sun-squall and the foam, it occurs to us that we, too, are the product of sea-slime.

*Cape Cod* (Volume 2)

The Sea and the Desert (pp. 82–83)

**SEASIDE****Spencer, Herbert** 1820–1903

English social philosopher

Whoever at the seaside has not had a microscope and aquarium, has yet to learn what the highest pleasures of the seaside are.

*Education: Intellectual, Moral, and Physical*

Chapter I (pp. 72–73)

A.L. Fowle. New York, New York, USA. 1860

**Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

Walk in, ladies and gentlemen! The wonderful exhibition of the Seasons is about to commence; four shows under one cover; the best ventilated place of entertainment in this or any other system; the stage lighted by solar, lunar, and astral lamps; an efficient police will preserve order. Gentlemanly ushers will introduce all new-comers to their places. Performance in twelve parts. Overture by the feathered choir; after which the white drop curtain will rise, showing the remarkable succession of natural scenery designed and executed solely for this planet, – real forests, meadows, water, earth, skies, etc. At the conclusion of each series of performances the storm-chorus will be given with the whole strength of the wind-instrument orchestra, and the splendid snow scene will be introduced, illuminated by grand flashes of the Aurora Borealis. Admittance free, refreshments furnished, complete suits of proper costume supplied at the door, to be returned on leaving the exhibition.

*The Writings of Oliver Wendell Holmes*

*Pages from an Old Volume of Life*

Chapter IV (p. 132)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1891

...those who are really awake to the sights and sounds which the procession of the months offers them find endless entertainment and instruction.

*The Writings of Oliver Wendell Holmes*

*Pages from an Old Volume of Life*

Chapter V (p. 133)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1891

## SEASON

## WINTER

**Benson, Edward Frederic** 1867–1940

English author

It was, in fact, a cold, leaden January, a succession of days in which it is wise to give up Nature as a bad job, and use to the full the aids and artifices of civilization.

*The Image in the Sand*

Fourteenth (p. 229)

J.B. Lippincott Co. Philadelphia, Pennsylvania, USA. 1905

**Jefferies, Richard** 1848–87

English nature writer

Winter shows us Matter in its dead form, like the primary rocks, like granite and basalt – clear but cold and frozen crystal.

The Pageant of Summer

*Eclectic Magazine of Foreign Literature, Science, and Art*, Volume

XXXVIII, Number 2, August, 1883 (p. 146)

## DECEMBER

**Sims, George Robert** 1847–1922

English journalist, poet, and novelist

The hedgerows are set with the crystals of winter, And ripe berries hiding from gay-feathered thieves ; The hand of December, the vigorous tinter,

Has browned and encarmined the exquisite leaves.

*The Dragonet and Other Poems*

The Devonshire Lanes, Stanza 2

George Routledge & Sons. London, England. 1903

## JANUARY

**Benson, Edward Frederick** 1813–87

American Congregational preacher and orator

It was, in fact, a cold, leaden January, a succession of days in which it is wise to give up Nature as a bad job, and use to the full the aids and artifices of civilization.

*The Image in the Sand*

Chapter XIII (p. 209)

William Heinemann. London, England. 1905

## FEBRUARY

**Coleridge, Samuel Taylor** 1765–1837

English lyrical poet, critic, and philosopher

This dark, frieze-coated, hoarse, teeth-chattering month.

*The Poetical Works of S. T. Coleridge* (Volume 1)

On Observing a Bloom on the First of February

W. Pickering. London, England. 1835

## SPRING

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

I take infinite pains to know all the phenomena of the spring, for instance, thinking that I have here the entire poem, and then, to my chagrin, I learn that it is but an imperfect copy that I possess and have read, that my ancestors have torn out many of the first leaves and grandest passages, and mutilated it in many places. I should not like to think that some demigod had come before me and picked out some of the best of the stars. I wish to know an entire heaven and an entire earth.

In Harrison Gray Otis Blake (ed.)

*The Writings of Henry David Thoreau*

May 23, 1856 (pp. 217–218)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1893

## MARCH

**Bryant, William Cullen** 1794–1878

American poet

The stormy March is come at last,  
With wind, and cloud, and changing skies,  
I hear the rushing of the blast,  
That through the snowy valley flies.

*Poems of William Cullen Bryant*

March

Thomas Y. Crowell & Co. New York, New York, USA. 1893

## APRIL

**Warren, John Leicester, Third Baron de Tabley** 1835–95

English poet and botanist

Spring sits and shivers at the porch of light : April goes weeping on her road to May.

*Poems Dramatic and Lyrical* (Volume 1)

Ode to Pan (p. 137)

Elkin Mathews & John Lane. London, England. 1843

## MAY

**Ashby-Sterry, Joseph** 1836–1917

English poet

O, May is the month when the madly aesthetical  
Plunge deep into nonsense profoundly poetical !  
They sing and they shout about sunshine and greenery.  
Of beauty and blossom and song-birds and scenery :  
I own that my notion of May is a hazy one,

And don't think its weather is good for the Lazy One :  
To go out of doors I have not the temerity –  
Now May has set in with its usual severity !

*The Lazy Minstrel*

The Merry Month of May, Stanza 1

T. Fisher Unwin. London, England. 1886

## SUMMER

**Jefferies, Richard** 1848–87

English nature writer

Summer shows us Matter changing into life, sap rising  
from the earth through a million tubes, the alchemic  
power of light entering the solid oak; and see! it bursts  
forth in countless leaves. Living things leap in the grass,  
living things drift upon the air, living things are coming  
forth to breathe in every hawthorn bush.

The Pageant of Summer

*Eclectic Magazine of Foreign Literature, Science, and Art,*

Volume XXXVIII, Number 2, August, 1883 (p. 146)

## JUNE

**Higginson, Thomas Wentworth** 1823–1911

American Unitarian minister

God offers us yearly a necklace of twelve pearls; most  
men choose the fairest, label it June, and cast the rest  
aside.

*Out-doors Papers*

April Days (p. 225)

Ticknor & Fields. Boston, Massachusetts, USA. 1863

## JULY

### Apollo 11 crew

Here men from the planet Earth first set foot upon the  
Moon. July 1969 AD. We came in peace for all man-  
kind.

*Plaque mounted on the LM Descent Stage Ladder*

## AUGUST

**Mowbray, J. P.** 1859–1934

American author

After a prolonged hot spell in late August, we usually  
get that transformation scene that has cool reminders in  
it of the golden age. A shower in the afternoon hisses  
and splashes on the hot earth, and then dies out linger-  
ingly in what the farmers call a " drizzle-drozzle." It  
rains well on through the night softly. You can almost  
hear the muskmelons and tomatoes saying thanks. But  
the sun comes up unobscured in the morning, burning in

a fathomless blue that you seldom see anywhere outside  
of the Orient, and calling to mind that tongue-twisting  
line of Baildon's, –

“ Palely blue lucent, one great undulant gem,”

only it is not “palely,” but pronouncedly violet in the  
unflecked gulfs of it. This is the annunciation of Fall.

*A Journey To Nature*

Chapter X (p. 109)

Doubleday Page & Co. New York, New York, USA. 1903

**Morris, William** 1834–95

English textile designer and writer

Rest here awhile, not yet the eve is still,  
The bees are wandering yet, and you may hear  
The barley mowers on the trenched hill, The sheep-bells,  
and the restless changing weir,  
All little sounds made musical and clear  
Beneath the sky that burning August gives...

*The Earthly Paradise: A Poem* (Volumes 1 and 2)

August, Stanza 2

Roberts Brothers. Boston, Massachusetts, USA. 1871

## FALL

**Longfellow, Henry Wadsworth** 1807–82

American poet

Magnificent Autumn ! He comes not like a pilgrim, clad  
in russet weeds. He comes not like a hermit, clad in gray.  
But he comes like a warrior, with the stain of blood upon  
his brazen mail. His crimson scarf is rent. His scarlet  
banner drips with gore. His step is like a flail upon the  
threshing floor.

*The Prose Works of Henry Wadsworth Longfellow* (Volume 1)

Appendix, Autumn (p. 423)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1890

## SEPTEMBER

**Morris, William** 1834–95

English textile designer and writer

It was a bright September afternoon,  
The parched-up beech-trees would be yellowing soon;  
The yellow flowers grown deeper with the sun  
Were letting fall their petals one by one;  
No wind there was, a haze was gathering o'er  
The farthest bound of the faint yellow shore;  
And in the oily waters of the bay  
Scarce moving aught some fisher-cobles lay,  
And all seemed peace...

*The Earthly Paradise: A Poem* (Volumes 1 and 2)

Prologue – The Wanderers

The Wanderer, 1 87–95

Roberts Brothers. Boston, Massachusetts, USA. 1871

## OCTOBER

**Beecher, Henry Ward** 1813–87  
American Congregational preacher and orator

October is the opal month of the year. It is the month of glory, of ripeness. It is the picture-month.

In William Drysdale (ed.)

*Proverbs from Plymouth Pulpit*

Nature (p. 11)

D. Appleton & Co. New York, New York, USA. 1887

## NOVEMBER

**Wright, Mabel Osgood** 1859–1934  
American author

Why has no one written a November rhapsody with plenty of lilt and swing? The poets who are moved at all by this month seem only stirred to lamentation, giving us year end and “melancholy days” remarks, thereby showing that theory is stronger than observation among the rhyming brotherhood, or else that they have chronic indigestion and no gardens to stimulate them.

*The Garden of A Commuter's Wife*

Chapter VII (p. 105)

The Macmillan Co. New York, New York, USA. 1902

**Mowbray, J. P.** 1859–1934  
American author

There are some laggard days in November that have been left behind by the autumnal procession. They are wayward, dilatory, irrelevant days, and come in the rear of the retreating season, like indolent nymphs that, dressed for the nuptials, only arrived for the funeral, and could not abandon their voluptuous moods. They wear their bridal veils, and look at us reminiscently through clouds of mist. These beautiful, dreamy days appear to have been thrown off somewhere like fragments by the revolving August, and they come along like the Leonids, and as softly disappear. We call them the Indian summer.

*A Journey To Nature*

Chapter XXI (p. 256)

Doubleday Page & Co. New York, New York, USA. 1903

## SECRET

**Daly, Reginald Aldworth** 1871–1957  
Canadian-American geologist

And the secret of it all – the secret of the earthquake, the secret of the “temple of fire,” the secret of the ocean basin, the secret of the highland – is in the heart of the earth, forever invisible to human eyes.

*Our Mobile Earth*

Chapter VIII (p. 320)

Charles Scribner's Sons. New York, New York, USA. 1926

**Peirce, Charles Sanders** 1839–1914  
American scientist, logician, and philosopher

...there is some secret here which remains to be discovered.

Illustrations of the Logic of Science

*The Popular Science Monthly*, Volume XIII, June, 1878 (p. 214)

**Verne, Jules** 1828–1905  
French novelist

You have carried your investigations as far as terrestrial science allowed you. But on board my vessel you will have an opportunity of seeing what no man has seen before. Thanks to me, our planet will give up her last secrets.

*Twenty Thousand Leagues Under The Sea*

Part I, Chapter X (p. 55)

Ward, Lock & Co., Ltd. London, England. n.d.

## SEDIMENT

**Geikie, Sir Archibald** 1835–1924  
English geologist

I know no recent observation in physical geography more calculated to impress deeply the imagination than the testimony of this presumably meteoric iron from the most distant abysses of the ocean. To be told that mud gathers on the floor of these abysses at an extremely slow rate conveys but a vague notion of the tardiness of the process. But to learn that it gathers so slowly, that the very star-dust which falls from outer space forms an appreciable part of it, brings home to us, as hardly anything else could do, the idea of undisturbed and excessively slow accumulation.

**Kipling, Rudyard** 1865–1936  
British writer and poet

There is no sound, no echo of sound, in the deserts of the deep,

Or the great grey level plains of ooze where the shell-burred cables creep.

Here is the womb of the world – here on the tie-ribs of earth Words, and the words of men, flicker and flutter and beat.

*Rudyard Kipling's Verse*

The Deep Sea Cables

Hodder & Stroughton. London, England. 1919

## SEED

**Baker, Henry** 1698–1774  
English naturalist

Each seed includes a Plant: that Plant, again,

Has other Seeds, which other Plants contain:  
 Those other Plants have All their Seeds, and Those  
 More Plants again, successively, inclose.  
 Thus ev'ry single Berry that we find,  
 Has, really, in itself whole Forests of its Kind.

The Discovery of a Perfect Plant in Semine  
*Philosophical Transactions of the Royal Society of London*, Number  
 457, 1740 (p. 451)

A ripe seed falling to the earth is in the condition of the  
 ovum of an animal getting loose from its ovary and drop-  
 ping into the uterus, and, to go on with the analogy, the  
 juices of the earth swell and extend the vessels of the  
 seed as the juices of the uterus do those of the ovum,  
 till the seminal leaves unfold and perform the office of  
 a placenta to the infant included plant; which, imbibing  
 suitable and sufficient moisture, gradually extends its  
 parts, fixes its own root, shoots above the ground, and  
 may be said to be born.

The Discovery of a Perfect Plant in Semine  
*Philosophical Transactions of the Royal Society of London*, Number  
 457, 1740 (p. 451)

**de la Mare, Walter** 1873–1956

English poet and novelist

The seeds I sowed –  
 For weeks unseen –  
 Have pushed up pygmy  
 Shoots of green;  
 So frail you'd think  
 The tiniest stone  
 Would never let  
 A Glimpse be shown.

*Rhymes and Verses: Collected Poems for Children*  
 Seeds

H. Holt & Company. New York, New York, USA. 1947

**Muir, John** 1838–1914

American naturalist

The dispersal of Juniper seeds is effected by the plum and  
 cherry plan of living birds at the cost of their board, and  
 thus obtaining the use of a pair of extra good wings.

*Our National Parks*

Chapter IV (p. 121)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

Sequoia seeds have flat wings and glint and glance in  
 their flight like a boy's kite.

*Our National Parks*

Chapter IV (p. 121)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

**President of the 1893 Horticultural Congress**

There is no more deep and subtle mystery than that which  
 conceals plant and shrub and tree in the seemingly simple  
 structure of a seed.

In Washington Atlee Burpee

*Selection in Seed Growing*

The Horticultural Congress (p. 7)

W. Atlee Burpee & Co. Philadelphia, Pennsylvania, USA. 1896

**Ruskin, John** 1819–1900

English writer, art critic, and social reformer

The reason for seeds is that flowers may be; not the  
 reason of flowers that seeds may be.

*The Queen of the Air Being a Study of the Greek Myths of Cloud and Storm*

II, Section 60, Athena in the Earth (p. 67)

Smith, Elder & Company London, England. 1869

**Tabb, John Banister** 1845–1909

American poet

Bearing a life unseen,  
 Thou lingerest between  
 A flower withdrawn,  
 And – what thou ne'er shalt see –  
 A blossom yet to be  
 When thou art gone.

*The Poetry of Father Tabb*

Nature – Miscellaneous, The Seed

Dodd, Mead. New York, New York, USA. 1928

**Thaxter, Celia** 1835–94

American poet

The Genie in the Arabian tale is not half so astonishing  
 [as a seed]. In this tiny casket lie folded roots, stalks,  
 leaves, buds, flowers, seed-vessels, – surpassing color  
 and beautiful form, all that goes to make up a plant which  
 is as gigantic in proportion to the bounds that confine it as  
 the Oak is to the acorn.

*An Island Garden* (p. 3)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1896

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

I have great faith in a seed.... Convince me that you have  
 a seed there, and I am prepared to expect wonders.

*Excursions*

The Succession of Forest Trees (p. 151)

Thomas Y. Crowell Co. New York, New York, USA. 1913

**Wilde, Oscar** 1854–1900

Irish wit, poet, and dramatist

To look at a thing is very different from seeing a thing.

*The Decay of Lying* (p. 19)

Sunflower Company. New York, New York, USA. 1902

**SEEDMAN**

**Allen, C. L.**

No biographical data available

In a country so vast and varied as ours, where the setting  
 sun of the East is the rising sun of the West; where in

the North there is rarely a month without a frost and at the South rarely a month with one; where the soil in one locality is the most productive, in another the reverse, and this same, too, in close proximity – the seedsman has difficulties to contend with that are entirely unknown in any other country.

In Washington Atlee Burpee

*Selection in Seed Growing*

Selection in Its Relation to Seed Growing (p. 26)

W. Atlee Burpee & Co. Philadelphia, Pennsylvania, USA. 1896

## SEISMOGRAPH

**Oldham, Richard Dixon** 1858–1936

English geologist

...the seismograph, recording the unfelt motion of distant earthquakes, enables us to see up to a certain point into the Earth and determine its nature with as great a certainty, as if we could drive a tunnel through it and take samples of the matter passed through.

Geological Society, The Constitution of the Interior of the Earth as Revealed by Earthquakes

*Quarterly Journal*, Volume 62, August, 1906 (p. 456)

## SEISMOGRAPHER

**Karch, Carroll S.**

No biographical data available

Seismographer: Shudder bug.

*Quote, the Weekly Digest*, August 4, 1968 (p. 97)

## SEISMOGRAPHY

**Richter, Charles** 1900–85

American seismologist

Since my first attachment to seismology, I have had the horror of [earthquake] predictions and of predictors. Journalists and the general public rush to any suggestion of earthquake prediction like hogs toward a full trough.

Annals of the New York Academy of Sciences, Ethical and Scientific Issues Posed by Human Uses of Molecular Genetics, Announcements

*Bulletin American Seismological Society*, Volume 67, Number 4, August, 1977 (p. 1246)

**Schrödinger, Erwin** 1887–1961

Austrian theoretical physicist

...there are natural sciences which have obviously no practical bearing at all on the life of the human society: astrophysics, cosmology, and some branches of geophysics. Take, for instance, seismology. We know enough about earthquakes to know that there is very little chance of foretelling them, in the way of warning people to leave their houses, as we warn trawlers to return when a storm is drawing near.

*Science and Humanism: Physics in Our Time*

The Spiritual Bearing of Science on Life (pp. 2–3)

At The University Press. Cambridge, England. 1952

## SEISMOLOGIST

**Lane, Ferdinand C.**

No biographical data available

...like the doctor with his ear to the stethoscope and his finger upon the patient's pulse, the seismologist diagnoses the condition of an ailing planet.

*The Story of Mountains*

Chapter 14 (p. 64)

Doubleday & Co., Inc. Garden City, New York, USA. 1950

## SEISMOLOGY

**Bullen, K. E.**

Seismologist

Seismology has lifted our notions about the interior of our planet from the realm of wild speculation to the stage of scientific measurement and well-reasoned inferences.

The Interior of the Earth

*Scientific American*, Volume 193, Number 3, September, 1955 (p. 56)

## SELECTIVE

**Lewis, C. S. (Clive Staples)** 1898–1963

British author, scholar, and popular theologian

Selectiveness, and with (we must allow) enormous wastage, is her method. Out of an enormous space a very small portion is occupied by matter at all. Of all the stars, perhaps very few, perhaps only one, have planets. Of the planets in our own system probably only one supports organic life. In the transmission of organic life, countless seeds and spermatozoa are emitted: some few are selected for the distinction of fertility. Among the species only one is rational. Within that species only a few attain excellence of beauty, strength, or intelligence.

*Miracles*

The Grand Miracle (p. 121)

Pan Books. London, England. 1947

## SELF

**Pascal, Blaise** 1623–62

French mathematician and physicist

When I consider the small span of my life absorbed in the eternity of all time, or the small part of space which I can touch or see engulfed by the infinite immensity of spaces that I know not and that know me not, I am frightened and astonished to see myself here instead of there...now instead of then.

In Rudy Rucker  
*Infinity and the Mind*  
 Chapter I (p. 2)  
 Princeton University Press. Princeton, New Jersey, USA. 1995

## SELF-AWARENESS

**Nuland, Sherwin B.** 1930–  
 American surgeon and teacher of bioethics and medicine

Self-awareness has never been the strong suit of those who choose to become doctors. When so much fuel is readily available for stoking the fires of ego, there is little inclination to apply it in raising the candlepower of the searching light that might illumine the inner man or woman.

The Uncertain Art: The Whole Law of Medicine  
*The American Scholar*, Volume 67, Number 3, Summer, 1998

## SELF-DELUSION

**Sylvester, James Joseph** 1814–97  
 English mathematician

It is difficult to estimate the lengths to which human self-delusion can be carried.

*The Collected Mathematical Papers of James Joseph Sylvester*  
 (Volume 3)  
 A Lady's Fan on Parallel Motion, and on an Orthogonal Web of Jointed Rods (p. 82)  
 University Press. Cambridge, England. 1904–1912

## SELF-EVIDENT

**von Ebner-Eschenbach, Marie** 1830–1916  
 Austrian novelist

Be the first to say what is self-evident, and you are immortal.

Translated by Annis Lee Wister  
*Aphorisms*  
 Number 1  
 J.B. Lippincott & Co. Philadelphia, Pennsylvania, USA. 1883

## SEMINAR

**Djerassi, Carl** 1929–  
 Austrian-born American organic chemist and educator

Seminar is not yet officially a transitive verb. Still, most graduate students in any large research-oriented university have at times felt themselves more the helpless objects of a seminar than its active participants. Seminar-ed into numbness describes that feeling of oversaturation.

*Cantor's Dilemma 1989*  
 Chapter 14 (p. 122)  
 Penguin Group Inc. New York, New York, USA.

## SENSATION

**Poincaré, Jules Henri** 1854–1912  
 French mathematician and theoretical astronomer

For an aggregate of sensations to have become a remembrance capable of classification in time, it must have ceased to be actual, we must have lost the sense of its infinite complexity, otherwise it would have remained present. It must, so to speak, have crystallized around a center of associations of ideas which will be a sort of label. It is only when they have lost all life that we can classify our memories in time as a botanist arranges dried flowers in his herbarium.

Translated by George Bruce Halsted  
*The Value of Science*  
 Part I, Chapter II (p. 26)  
 The Science Press. New York, New York, USA. 1907

## SENSE

**Bacon, Sir Francis** 1561–1626  
 English lawyer, statesman, and essayist

the information of the sense itself I sift and examine in many ways. For certain it is that the senses deceive; but then at the same time they supply the means of discovering their own errors; only the errors are here, the means of discovery are to seek.

*The Works of Francis Bacon* (Volume 4)  
 Part I, Plan of the Work (p. 26)  
 Longman & Co. London, England. 1858

...the information of the sense itself, sometimes failing, sometimes false; observation, careless, irregular, and led by chance; tradition, vain and fed on rumor; practice, slavishly bent upon its work; experiment, blind, stupid, vague, and prematurely broken off; lastly, natural history trivial and poor; – all these have contributed to supply the understanding with very bad materials for philosophy and the sciences.

*The Works of Francis Bacon* (Volume 4)  
 Part I, Plan of the Work (p. 28)  
 Longman & Co. London, England. 1858

**Gull, Sir William Withey** 1816–90  
 English physician

My world is that part of it to which my sense extends. My eye reaches to the stars; my ears to the thunder in the sky, or to the vibrating vocal chords of the lark which sings there. My nose goes into the petals of the rose by continuity of the perfume which exhales from them; or into the joint which gives out its appetising smell in the roasting. My taste reaches into the textures brought into contact with it as the touch continues on beyond its immediate self in the tension of a cord or the extension of a rod.

In Theodore Dyke Acland  
*A Collection of the Published Writings of William Withey Gull* (Volume 2)  
 Notes and Aphorisms (p. xlvi)  
 The New Sydenham Society. London, England. 1896

**Tyndall, John** 1820–93  
 Irish-born English physicist

...the domain of the senses, in Nature, is almost infinitely small in comparison with the vast region accessible to thought which lies beyond them. From a few observations of a comet, when it comes within the range of his telescope, an astronomer can calculate its path in regions which no telescope can reach: and in like manner, by means of data furnished in the narrow world of the senses, we make ourselves at home in other and wider worlds, which can be traversed by the intellect alone.

*Fragments of Science* (5th edition)  
 On Radiant Heat in Relation to the Colour and Chemical Constitution of Bodies (p. 71)  
 D. Appleton & Co. New York, New York, USA. 1884

**Whewell, William** 1794–1866  
 English philosopher and historian

The Senses place before us the Characters of the Book of Nature; but these convey no knowledge to us, till we have discovered the Alphabet by which they are to be read.

*The Philosophy of the Inductive Sciences: Founded Upon Their History* (Volume 2) (2nd edition)  
 Aphorisms Concerning Ideas (p. 443)  
 John W. Parker. London, England. 1847

## SENSE ORGANS

**Lewis, J. C.**  
 No biographical data available

The continual adjustment, so necessary for life, between internal relations of an organism and the external world would be impossible were it not for the communion of the sense organs. They stand, as it were, midway between the organism and its surroundings, keeping the internal relations aware of and alive to the external happenings and conditions.

*Annual Report of the Board of Regents of the Smithsonian Institution* (1916)  
 Some Considerations on Sight in Birds (p. 337)  
 Government Printing Office. Washington, D.C. 1917

## SENSE PERCEPTION

**Einstein, Albert** 1879–1955  
 German-born physicist

Thinking, alone, can never lead to any knowledge of external objects. Sense perception is the beginning of all research, and the truth of theoretical thought is given exclusively by its relation to the sum total of those experiences.

Physics, Philosophy, and Scientific Progress  
*Physics Today*, Issue 6 June, 2005 (p. 48)

## SENSES

**Einstein, Albert** 1879–1955  
 German-born physicist

We can only see the universe by the impressions of our senses reflecting indirectly the things of reality.

*Cosmic Religion, with Other Opinions and Aphorisms*  
 On Science (p. 101)  
 Covici-Fiede. New York, New York, USA. 1931

**Wilson, George**

The ivory palace of the skull, which is the central abode of the soul, although it dwells in the whole body, opens to the outer world four gateways, by which its influences may enter; and a fifth, whose alleys are innumerable, unfolds its thousand doors on the surface of every limb. These gateways, – which we otherwise name the Organs of the Senses, and call in our mother speech, the Eye, the Ear, the Nose, the Mouth, and the Skin, – are instruments by which we see, and hear, and smell, and taste, and touch: at once loopholes through which the spirit gazes out upon the world, and the world gazes in upon the spirit; porches which the longing unsatisfied soul would often gladly make wider, that beautiful material nature might come into it more fully and freely; and fenced doors, which the sated and dissatisfied spirit would, if it had the power, often shut and bar altogether.

*The Five Gateways of Knowledge* (6th edition) (pp. 7–8)  
 Macmillan & Company Ltd. London, England. 1880

## SENSIBILITY

**Osler, Sir William** 1849–1919  
 Canadian physician and professor of medicine

Keen sensibility is doubtless a virtue of high order, when it does not interfere with steadiness of hand or coolness of nerve; but for the practitioner in his working-day world, a callousness which thinks only of the good to be effected, and goes ahead regardless of smaller considerations, is the preferable quality.

*Aequanimitas: With Other Addresses to Medical Students, Nurses and Practitioners of Medicine*  
 Aequanimitas (p. 5)  
 P. Blackiston's Sons & Co. Philadelphia, Pennsylvania, USA. 1904

## SENTIMENT

**Coleridge, Stephen** 1854–1936  
 English author, barrister, and opponent of vivisection

How often, without challenge, in modern writings and speech, is Science elevated above sentiment!

*The Idolatry of Science*  
 Chapter III (p. 10)  
 John Lane Co. London, England. 1920

**Melville, Herman** 1819–91  
American novelist

After science comes sentiment.

*Mardi, and a Voyage Thither*  
Chapter XXXVIII (p. 109)  
The St. Botolph Society. Boston, Massachusetts, USA. 1923

## SEQUENCE

**Keyser, Cassius Jackson** 1862–1947  
American mathematician

The difference between a sequence that stops somewhere and one that has no end is awful. No one, unless spiritually unborn or dead, can contemplate that gulf without emotions that take hold of the infinite and everlasting.

*The Human Worth of Rigorous Thinking: Essays and Addresses*  
The Walls of the World (pp. 90–91)  
Columbia University Press. New York, New York, USA. 1916

## SERIES

**Abel, Niels Henrik** 1802–29  
Norwegian mathematician

With the exception of the geometric series, there does not exist in all of mathematics a single infinite series whose sum has been determined rigorously.

In Eli Maor  
*To Infinity and Beyond: A Cultural History of the Infinite* (p. 29)  
Birkhäuser. Boston, Massachusetts, USA. 1987

The divergent series are the invention of the devil, and it is a shame to base on them any demonstration whatsoever. By using them, one may draw any conclusion he pleases and that is why these series have produced so many fallacies and so many paradoxes...

In Eli Maor  
*To Infinity and Beyond: A Cultural History of the Infinite* (p. 33)  
Birkhäuser. Boston, Massachusetts, USA. 1987

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

No part of Mathematics suffers more from the triviality of its initial presentation to beginners than the great subject of series...the general ideas are never disclosed and thus the examples, which exemplify nothing, are reduced to silly trivialities.

*An Introduction to Mathematics*  
Chapter XIV (p. 194)  
Henry Holt & Co. New York, New York, USA. 1911

## SERMON

**Gray, Elisha** 1835–1901  
American electrical engineer

Sermons are not always preached from pulpits. They are written in the rocks and on the flowers of the field and the trees of the forest.

*Nature's Miracles; Familiar Talks on Science*  
Chapter I (pp. 3–4)  
Fords, Howard & Hulbert. New York, New York, USA. 1899

## SET THEORY

**Armstrong, David Malet** 1926–  
Australian philosopher

Set theory is peculiarly important...because mathematics can be exhibited as involving nothing but set-theoretical propositions about set-theoretical entities.

*A Combinatorial Theory of Possibility*  
Part I, Chapter 1, Section II (p. 10)  
Cambridge University Press. Cambridge, England. 1989

Philosophers have not found it easy to sort out sets...

*A Combinatorial Theory of Possibility*  
Part II, Chapter 9, Section iv (p. 133)  
Cambridge University Press. Cambridge, England. 1989

**Barwise, Jon** 1942–2000  
American mathematician, philosopher, and logician

**Moss, Lawrence**  
No biographical data available

Set theory has a dual role in mathematics. In pure mathematics, it is the place where questions about infinity are studied. Although this is a fascinating study of permanent interest, it does not account for the importance of set theory in applied areas. There the importance stems from the fact that set theory provides an incredibly versatile toolbox for building mathematical models of various phenomena.

*Vicious Circles: On the Mathematics of Non-Wellfounded Phenomena*  
Chapter 1 (p. 5)  
Center for the Study of Language and Information. Stanford, California, US. 1996

**Byron, George Gordon, 6th Baron Byron** 1788–1824  
English Romantic poet and satirist

For a "mixt company" implies, that, save Yourself and friends, and half a hundred more, Whom you may bow to without looking grave, The rest are but a vulgar set.

*The Complete Poetical Works of Byron*  
Beppo: A Venetian Story  
Houghton Mifflin. Boston, Massachusetts, USA. 1933

**Cleveland, Richard**  
No biographical data available

We can't be assured of a full set,  
Or even a reasonable dull set.

It wouldn't be clear  
That there's any set here,  
Unless we assume there's a null set.

*The Axioms of Set Theory*  
*Mathematics Magazine*, Volume 52, Number 4, September, 1979  
(pp. 256–257)

**Poincaré, Jules Henri** 1854–1912  
French mathematician and theoretical astronomer

Later generations will regard *Mengenlehre* as a disease from which one has recovered.

In Jeremy Gray

Did Poincaré Say “Set Theory Is a Disease”?

*The Mathematical Intelligencer*, Volume 13, Number 1, Winter, 1991 (p. 19)

**Quine, Willard van Orman** 1908–2000  
American logician and philosopher

To say that mathematics in general has been reduced to logic hints at some new firming up of mathematics at its foundations. This is misleading. Set theory is less settled and more conjectural than the classical mathematical superstructure than can be founded upon it.

*Elementary Logic*

Chapter IV, Section 48 (p. 125)

Harper & Row, Publishers. New York, New York, USA. 1965

## SEX

**Heinlein, Robert A.** 1907–88  
American science fiction writer

Sex is a learned art, as much so as ice skating or tight wire walking or fancy diving; it is not instinct. Oh, two animals couple by instinct, but it takes intelligence and patient willingness to turn copulation into a high and lively art.

*Time Enough for Love*

Chapter XII (p. 314)

G.P. Putnam’s Sons. New York, New York, USA. 1973

**Jung, Carl G.** 1875–1961  
Swiss psychiatrist and founder of analytical psychology

Our civilization bothers us less with food tabus than with sexual restrictions. In modern society these have come to play the role of an injured deity that is getting its own back in every sphere of human activity, including psychology, where it would reduce “spirit” to sexual repression.

Translated by R.F.C. Hull

*Flying Saucers: A Modern Myth of Things Seen in the Skies*

Chapter Two (p. 45)

Routledge & Kegan Paul. London, England. 1959

**Stoppard, Tom** 1937–  
Czech-born English playwright

Lending one’s bicycle is a form of safe sex, possibly the safest there is.

*Arcadia*

Act I, Scene Four (p. 51)

Faber & Faber Ltd. London, England. 1993

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

I lose my respect for the man who can make the mystery of sex the subject of a coarse jest, yet, when you speak earnestly and seriously on the subject, is silent.

*The Writings of Henry David Thoreau*

*The Subject of Sex* (pp. 406–407)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1906

**Watts, Alan Wilson** 1915–73  
American philosopher

Perhaps one of the subordinate reasons why sex is a matter for laughter is that there is something ridiculous in “doing” it with set purpose and deliberation...

*Nature, Man, and Woman*

Part II, Chapter 8 (p. 201)

Vintage Books. New York, New York, USA. 1970

## SEXUALITY

**Linnaeus, Carl (von Linné)** 1707–78  
Swedish botanist and explorer

The organs of generation, which in the animal kingdom are by nature generally removed from sight, in the vegetable kingdom are exposed to the eyes of all, and that when their nuptials are celebrated, it is wonderful what delight they afford to the spectator by their most beautiful colors and delicious odors.

*Oeconomia naturae*

*Amoenitates Academicæ*, Volume 2, 1752 (p. 16)

By what mechanisms are the sexuality of the worker naked mole rats suppressed, and how does the queen exert her supremacy? Research at London’s Institute of Zoology by Chris Faulkes and others shows surprisingly that the main mechanism are not pheromonal (chemical) as we might immediately suppose. Mysteriously, it is the queenly presence, her behavior, that keeps the rest so firmly switched off; which one of the British researcher has called the “Thatcher effect.”

*New Scientist*, Volume 131, No 1780, 3 August, 1991 (p. 43)

## SHADOW

**Charlie Chan (Fictional character)**

Alas, mouse cannot cast shadow like elephant.

*The Black Camel*

Film (1931)

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

In the world of physics we watch a shadowgraph performance of familiar life. The shadow of my elbow rests on the shadow-tables as the shadow-ink flows over the shadow-paper...The frank realisation that physical science is concerned with a world of shadows is one of the most significant of recent advances.

*The Nature of the Physical World*

Introduction (pp. xiv, xv)

The Macmillan Company. New York, New York, USA. 1930

**Nemerov, Howard** 1920–91

American poet and novelist

For “nothing in the universe can travel at the speed  
Of light,” they say, forgetful of the shadow’s speed.

*The Collected Poems of Howard Nemerov*

The First Day (p. 345)

The University of Chicago Press. Chicago, Illinois, USA. 1977

**Young, Charles Augustus** 1834–1908

American astronomer

If interplanetary space were slightly dusty, we should  
see, accompanying the earth and moon and each of the  
planets, a long black shadow projecting behind it and  
travelling with it.

*A Text-book of General Astronomy for Colleges and Scientific Schools*

Chapter XI (p. 248)

Ginn &amp; Co. Boston, Massachusetts, USA. 1898

**SHAKEN BABY SYNDROME****Caffey, John** 1895–1978

American physician

Whiplash-shaking is practiced commonly in a wide variety  
of ways, under a wide variety of circumstances, by a  
wide variety of persons, for a wide variety of reasons.

*Amer. J. Dis. Child.*, Volume 124, Number 2, August, 1972 (p. 161)

Hark ye, good parents, to my words true and plain,  
When you are shaking your baby, you could be bruising  
his brain.

So, save the limbs, the brain, even the life of your tot;  
By shaking him never; never and not.

*American Journal of Diseases of Children*, Volume 124, Number 2,  
August, 1972 (p. 169)**SHAPES****Lovecraft, H. P. (Howard Phillips)** 1890–1937

American writer of fantasy, horror, and science fiction

They told him that every figure of space is but the result  
of the intersection by a plane of some corresponding figure  
of one or more dimension – as a square is cut from a  
cube, or a circle from a sphere.

Through the Gates of the Silver Key

*Weird Tales*, Chapter 5, Volume 24, Number 1, July 1934**SHELL****Glaessner, M. F.** 1906–1989

Australian paleontologist and professor of pre-Cambrian life

The naive assumption that shells are acquired because  
they protect soft bodies seems influenced by anthropo-

centric thinking: man uses shields for protection from  
aggressors.

*The Dawn of Animal Life: A Biohistorical Study*

Chapter 4.6 (p. 174)

Cambridge University Press. Cambridge, England. 1984

**Hooke, Robert** 1635–1703

English physicist

I...humbly conceive (tho’ some possibly may think there  
is too much notice taken of such a trivial thing as a rotten  
Shell, yet) that Men do generally too much...pass over  
without regard these Records of Antiquity which Nature  
have left as Monuments and Hieroglyphick Characters of  
preceding Transactions in the like duration or Transac-  
tions of the Body of the Earth, which are infinitely more  
evident and certain tokens than anything of Antiquity  
that can be fetched out of Coins or Medals...since the  
best of those ways may be counterfeited or made by Art  
and Design...

*The Posthumous Works of Robert Hooke*

A Discourse on Earthquakes (p. 411)

S. Smith &amp; B. Walford. London, England. 1705

**Hsi, Chu (Zhu Xi)** 1130–1200

Chinese philosopher

I have seen on high mountains conchs and oyster shells,  
often embedded in the rocks. These rocks in ancient  
times were earth or mud, and the conchs and oysters  
lived in water. Subsequently everything that was at the  
bottom came to be at the top, and what was originally  
soft became solid and hard. One should meditate deeply  
on such matters, for these facts can be verified.

In Joseph Needham

*Science and Civilisation in China* (Volume 3)

Chapter 23 (p. 598ff)

The University Press. Cambridge, England. 1954

**Richardson, George Fleming** 1796–1848

Man of letters, lecturer, and geological curator

How lovely are the shells! how symmetrical – how beau-  
tiful! How vivid their colouring; how elegant their form;  
their convolutions how delicate; their outline how grace-  
ful; their adaptation how skilful; their entire structure  
how perfect!

*Geology for Beginners* (2nd edition)

Conclusion (p. 568)

Longman, Brown, Green &amp; Longmans. London, England. 1843

**Stillingfleet, Benjamin** 1702–71

Naturalist and writer

Each shell, each crawling insect holds a rank Important in  
the plan of Him, who fram’d This scale of beings; holds a  
rank, which lost Would break the chain, and leave behind  
a gap Which nature’s self would rue.

*Literary Life and Select Works of Benjamin Stillingfleet* (Volume 1)

Chapter 3 (p. 46)

J. Nichols &amp; Son. London, England. 1811

**Tennyson, Alfred (Lord)** 1809–92

English poet

See what a lovely shell,  
Small and pure as pearl,  
Lying close to my foot,  
Frail, but a work divine,  
Made so fairly well,  
With delicate spire and whorl,  
How exquisitely minute,  
A miracle of design!

*Alfred Tennyson's Poetical Works*

Maud, Part II, Section II, Stanza I

Oxford University Press, Inc. London, England. 1953

**Warren, John**

No biographical data available

Shells form a link in the great chain of nature, worthy the researches of men of science; and when we consider the wonderful diversity of singular and beautiful forms, which they present to our notice, they cannot fail to invite the attention of the most common observer.

*The Conchologist*

Introduction (p. 3)

Russell, Odiorn &amp; Metcalf. Boston, Massachusetts, USA. 1834

**SHORE****Carson, Rachel** 1907–64

American marine biologist and author

...the shore has a dual nature, changing with the swing of the tides, belonging now to the land, now to the sea. On the ebb tide it knows the harsh extremes of the land world, being exposed to heat and cold, to wind, to rain and drying sun. On the flood side it is a water world, returning briefly to the relative stability of the open sea.

*The Edge of the Sea*

Chapter I (p. 1)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1955

The shore is an ancient world, for as long as there has been an earth and sea there has been this place of meeting of land and water. Yet it is world that keeps alive the sense of continuing creation and of the relentless drive of life. Each time that I enter it, I gain some new awareness of its beauty and its deeper meanings, sensing that intricate fabric of life by which one creature is linked with another, and each with its surroundings.

*The Edge of the Sea*

The Marginal World (p. 2)

Houghton Mifflin &amp; Co. New York, New York, USA. 1998

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

I with my hammer pounding evermore  
The rocky coast, smite Andes into dust,

Strewing by beds and, in another age,  
Rebuild a continent for better men.

*The Complete Works of Ralph Waldo Emerson* (Volume 9)*Seashore* (p. 243)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

 Fragment (p. 424)  
 Wiley & Long. New York, New York, USA. 1836

**Jonson, Ben** 1573?–1637  
 English dramatist and poet

Take heed, sickness, what you do,  
 I shall fear you'll surfeit too.  
 Live not we, as all they stalls,  
 Spittles, pest-house, Hospitals,  
 Scarce will take our present store?

In Robert Bell  
*The Poems of Robert Greene, Christopher Marlowe, and Ben Jonson*  
 The Forest, viii. To Sickness  
 Hurst & Company. New York, New York, USA. ca. 1880

**Johnson, Samuel** 1696–1772  
 English critic, biographer, and essayist

... what can a sick man say, but that he is sick?  
*Boswell's "Life of Samuel Johnson"*  
 August, 1784 (p. 1347)  
 Oxford University Press, Inc. Oxford, England. 1965

**Lamb, Charles** 1775–1834  
 English essayist and critic

If there be a regal solitude, it is a sick-bed. How the  
 patient lords it there; what caprices he acts without con-  
 trol! how kinglike he sways his pillow-tumbling, and  
 tossing, and shifting, and lowering, and thumping, and  
 flattening, and molding it, to the ever-varying requisitions  
 of his throbbing temples.

*Essays of Elia*  
 The Convalescent (p. 329)  
 Henry Altemus. Philadelphia, Pennsylvania, USA. 1893

How sickness enlarges the dimensions of a man's self to  
 himself! he is his own exclusive object. Supreme selfish-  
 ness is inculcated upon him as his only duty.

*Essays of Elia*  
 The Convalescent (p. 330)  
 Henry Altemus. Philadelphia, Pennsylvania, USA. 1893

**Luttrell, Henry** 1765–1851  
English wit and writer

Come, come, for trifles never stick:  
Most servants have a failing;  
Yours, it is true, are sometimes sick,  
But mine are always ale-ing.

In William Davenport Adams

*English Epigrams*

On Ailing and Ale-ing, dclxxiii

G. Routledge. London, England. 1878

**Milton, John** 1608–74  
English poet

...all maladies

Of ghastly Spasm, or racking torture, qualms  
Of heart-sick Agonie, all feverous kinds,  
Convulsions, Epilepsies, fierce Catarrhs,  
Intestine Stone and Ulcer, Colic pangs,  
Dropsies and Astmas, and Joint-racking Rheums.

Part I, Chapter 1 (p. 11)  
Simon & Schuster. New York, New York, USA. 1995

## SIGHT

**Holmes, Oliver Wendell** 1809–94  
American physician, poet, and humorist

I refer to the use of dioptric media which correct the diminished refracting power of the humors of the eye, – in other words, spectacles. I don't use them. All I ask is a large, fair type, a strong daylight or gas-light, and one yard of focal distance, and my eyes are as good as ever.  
*The Autocrat of the Breakfast-Table*  
Chapter VII (p. 173)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1891

**Marsh, George Perkins** 1801–82  
American scholar, author, and statesman

Sight is a faculty; seeing, an art.  
*The Earth as Modified by Human Action: A New Edition of Man and Nature*  
Chapter I (p. 12)  
Scribner, Armstrong & Company. New York, New York, USA. 1874

**Plato** 428 BCE–347 BCE  
Greek philosopher

The sight in my opinion is the source of the greatest benefit to us, for had we never seen the stars, and the sun, and the heaven, none of the words which we have spoken about the universe would ever have been uttered. But now the sight of day and night, and the months and the revolutions of the years, have created number, and have given us a conception of time, and the power of enquiring about the nature of the universe...  
*In Great Books of the Western World (Volume 7)*  
*Timaeus*  
Section 40 (p. 455)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## SILENT

**Mach, Ernst** 1838–1916  
Austrian physicist and philosopher

Every candid person will confess that there are many branches of knowledge about which he had better be silent.  
*Popular Scientific Lectures*  
On Instruction in the Classics and the Sciences (p. 316)  
The Open Court Publishing Co. Chicago, Illinois, USA. 1897

## SYLLOGISM

**Carroll, Lewis (Charles Dodgson)** 1832–98  
English writer and mathematician

But I don't need a Sillygism, you know, to prove that mathematical axiom you mentioned.

*Silvie and Bruno*  
Chapter XVIII (p. 259)  
Macmillan & Co Ltd. London, England. 1890

## SIMPLE

**Verne, Jules** 1828–1903  
French novelist

All things are simple...when you know how to do them.  
*20,000 Leagues Under the Sea*  
Chapter XII (p. 97)  
Rand McNally & Co. Chicago, Illinois, USA. 1922

## SIMPLICITY

**Bailey, Janet**  
No biographical data available

It is an article of faith in physics that the world's bewildering mask of complexity hides an ultimate simplicity.  
*The Good Servant: Making Peace with the Bomb at Los Alamos*  
Chapter 4 (p. 110)  
Simon & Schuster. New York, New York, USA. 1995

**Bell, E. T. (Eric Temple)** 1883–1960  
Scottish-American mathematician and educator

Simplicity may have merits, but credibility is not necessarily one of them.  
*The Handmaiden of the Sciences*  
Chapter 1 (p. 2)  
Williams & Wilkins Co. Baltimore, Maryland, USA. 1937

Our striving after simplicity as the ideal for a picture of the world may after all be evidence of nothing but our simple minds.  
*The Handmaiden of the Sciences*  
Chapter 1 (p. 2)  
Williams & Wilkins Co. Baltimore, Maryland, USA. 1937

**Case, Thomas**  
No biographical data available

...as science proceeds, simplicity becomes a snare.  
Nature is complex.  
*Lectures on the Method of Science*  
Scientific Method as a Mental Operation (p. 8)  
At The Clarendon Press. Oxford, England. 1906

**Chandrasekhar, Subrahmanyan** 1910–95  
Indian-born American astrophysicist

The simple is the seal of the true and beauty is the splendor of truth.  
*Nobel Lectures, Physics 1981–1990*  
Nobel lecture for award received in 1983  
On Stars, Their Evolution and Their Stability (p. 163)  
World Scientific Publishing Company. Singapore. 1993

**Chargaff, Erwin** 1905–2002  
Austrian biochemist

I am not sure whether one can say that man – just as he possesses an almost instinctive sense of symmetry – is governed by an equally elemental desire for simplicity.

*Heraclitean Fire: Sketches from a Life before Nature* (p. 169)  
The Rockefeller University Press. New York, New York, USA. 1978

**Coleridge, Samuel Taylor** 1772–1834  
English lyrical poet, critic, and philosopher

We study the complex in the simple; and only from the intuition of the lower can we safely proceed to the intellection of the higher degrees. The only danger lies in the leaping from low to high, with the neglect of the intervening gradations.

*Hints Towards the Formation of a More Comprehensive Theory of Life Physiology of Life* (p. 41)  
Lea & Blanchard. Philadelphia, Pennsylvania, USA, 1848

**Davies, Paul Charles William** 1946–  
British-born physicist, writer, and broadcaster

Whether mathematical simplicity is God's affair or our, the fact remains that this feature more than any other remains the mainspring of progress in the physical sciences.

*The Edge of Infinity: Where the Universe Came from and How It Will End*  
Chapter 9 (p. 188)  
Simon & Schuster. New York, New York, USA. 1981

**Davy, Sir Humphry** 1778–1829  
English chemist

Complexity almost always belongs to the early epochs of every science; and the grandest results are usually obtained by the most simple means.

*The Collected Works of Sir Humphry Davy* (Volume 4)  
*Elements of Chemical Philosophy*  
Part I, Introduction (p. 14)  
Smith, Elder & Company. London, England. 1839–1840

The more the phenomena of the universe are studied, the more distinct their connection appears, the more simple their causes, the more magnificent their design, and the more wonderful the wisdom and power of their author.

*The Collected Works of Sir Humphry Davy* (Volume 4)  
*Elements of Chemical Philosophy*  
Part I, Introduction (p. 42)  
Smith, Elder & Company. London, England. 1839–1840

Have you ever thought...about whatever man builds, that all of man's industrial efforts, all his calculations and computations, all the nights spent over working draughts and blueprints, invariably culminate in the production of a thing whose sole and guiding principle is the ultimate principle of simplicity?

*Wind, Sand and Stars*  
Chapter 3 (p. 65)  
Reynal & Hitchcock. New York, New York, USA. 1939

In anything at all, perfection is finally attained, not when there is no longer anything to add, but when there is no longer anything to take away.

*Wind, Sand and Stars*  
Chapter 3 (p. 66)  
Reynal & Hitchcock. New York, New York, USA. 1939

**Dawkins, Richard** 1941–  
English biologist

In the beginning was simplicity.

*The Selfish Gene*  
Chapter 2 (p. 12)  
Oxford University Press. Oxford, England. 2006

**du Noüy, Pierre Lecomte** 1883–1947  
French scientist

The complex is not always profound; but the profound is not necessarily simple.

*The Road to Reason*  
Chapter 5 (p. 115)  
Longmans, Green & Company. London, England. 1949

**Einstein, Albert** 1879–1955  
German-born physicist

Control by experiment...is, of course, an essential prerequisite of the validity of any theory. But one can't possibly test everything. That is why I am so interested in your remarks about simplicity. Still, I should never claim that I really understood what is meant by the simplicity of natural laws.

In Werner Heisenberg  
*Physics and Beyond: Encounters and Conversations*  
Chapter 5 (p. 69)  
Harper & Row, Publishers. New York, New York, USA. 1971

In every important advance the physicist finds that the fundamental laws are simplified more and more as experimental research advances. He is astonished to notice how sublime order emerges from what appeared to be chaos. And this cannot be traced back to the workings of his own mind but is due to a quality that is inherent in the world of perception. Leibniz well expressed this quality by calling it a pre-established harmony.

In Max Planck  
*Where Is Science Going?*  
Prologue (p. 11)  
W.W. Norton & Company, Inc. New York, New York, USA. 1932

**Emerson, Ralph Waldo** 1803–82  
American lecturer, poet, and essayist

Nothing is more simple than greatness; indeed, to be simple is to be great.

*Ralph Waldo Emerson: Essays and Lectures*  
Nature: Addresses, and Lectures (p. 100)  
The Library of America. New York, New York, USA. 1983

**Feynman, Richard P.** 1918–88

American theoretical physicist

Perhaps a thing is simple if you can describe it fully in several different ways without immediately knowing that you are describing the same thing.

*Nobel Lectures, Physics 1963–1970*

Nobel lecture for award received in 1965

The Development of the Space-Time View of Quantum Electrodynamics  
Elsevier Publishing Company. Amsterdam, Netherlands. 1972

The answer to all these questions may not be simple. I know there are some scientists who go about preaching that Nature always takes on the simplest solutions. Yet the simplest solution by far would be nothing, that there should be nothing at all in the universe. Nature is far more inventive than that, so I refuse to go along thinking it always has to be simple.

*Feynman Lectures on Gravitation*

Lecture 13 (p. 186)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1995

**Fuller, Thomas** 1608–61

English clergyman and author

Generally nature hangs out a sign of simplicity in the face of a fool.

*The Holy and Profane State*

Book III, Chapter XII, Maxim I

Maxim I (p. 171)

Printed for Thomas Tegg. London, England. 1841

**Gibbs, J. Willard** 1839–1903

American mathematician

One of the principal objects of theoretical research in any department of knowledge is to find the point of view from which the subject appears in its greatest simplicity.  
Rumford Medal Address, January 12, 1881

**Gibran, Kahlil** 1883–1931

Lebanese-American philosophical essayist

The obvious is that which is never seen until someone expresses it simply.

*Sand and Foam: A Book of Aphorisms* (p. 54)

Alfred A. Knopf. New York, New York, USA. 1959

**Goodman, Nelson** 1906–98

American philosopher

All scientific activity amounts to the invention of and the choice among systems of hypotheses. One of the primary considerations guiding this process is that of simplicity. Nothing could be much more mistaken than the traditional idea that we first seek a true system and then, for the sake of elegance alone, seek a simple one.

The Test of Simplicity

*Science*, Volume 128, 1958 (p. 1064)

**Gore, George** 1826–1909

English electrochemist

Simplicity, whether truthful or not, is often attractive to unphilosophical minds, because it requires less intellectual exertion.

*The Art of Scientific Discovery*

Chapter IV (p. 29)

Longmans, Green & Company. London, England. 1878

**Grimaux, L. E.**

No biographical data available

**Gerhardt, C.**

No biographical data available

The chemist must always compare the results of his experiments with those which precede them; for it is by this comparison alone that little by little we arrive at general laws, and consequently at the simplification of science.

In Russell McCormmach (ed.)

*Historical Studies in the Physical Sciences* (Volume 6)

In John Hedley Brooke

Laurent, Gerhardt, and the Philosophy of Chemistry (p. 424)

Princeton University Press. Princeton, New Jersey, USA. 1975

**Haldane, J. S. (John Scott)** 1860–1936

Scottish physiologist

In scientific thought we adopt the simplest theory which will explain all the facts under consideration and enable us to predict new facts of the same kind. The catch in this criterion lies in the word “simplest.” It is really an aesthetic canon such as we find implicit in our criticisms of poetry or painting. The layman finds such a law as  $x/t = k(2x/y^2)$  less simple than “it oozes,” of which it is the mathematical statement. The physicist reverses this judgment.

*On Being the Right Size and Other Essays*

Science and Theology as Art-Forms (pp. 33–34)

Oxford University Press, Inc. Oxford, England. 1985

**Hamerton, Philip Gilbert** 1834–94

English artist and art critic

Simplicity whether truthful or not, is often attractive to unphilosophical minds, because it requires less intellectual exertion.

*The Intellectual Life*

Part I, Chapter IV (p. 29)

Little, Brown & Co. Boston, Massachusetts, USA. 1901

**Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

You may object that by speaking of simplicity and beauty I am introducing aesthetic criteria of truth, and I frankly admit that I am strongly attracted by the simplicity and beauty of the mathematical schemes which nature presents us. You must have felt this too: the almost frightening simplicity and wholeness of the relationships, which nature suddenly spreads out before us...

*Physics and Beyond: Encounters and Conversations*  
Chapter 5 (pp. 68–69)  
Harper & Row, Publishers. New York, New York, USA. 1971

You [to Einstein] must have felt this too: the frightening simplicity and wholeness of the relationships which nature suddenly spreads out before us and for which none of us was in the least prepared.

*Physics and Beyond: Encounters and Conversations*  
Chapter 5 (p. 69)  
Harper & Row, Publishers. New York, New York, USA. 1971

**Hoagland, Mahlon** 1921–  
American biochemist

It is often the scientist's experience that he senses the nearness of truth when such connections are envisioned. A connection is a step toward simplification, unification. Simplicity is indeed often the sign of truth and a criterion of beauty.

*Toward the Habit of Truth: A Life in Science*  
Preface (p. xxiii)

Chapter 10 (p. 204)

Harvard University Press. Cambridge, Massachusetts, USA. 1992

**Smith, George Otis** 1871–1944

American geologist

I am convinced that, at its best, science is simple – that the simplest arrangement of facts that sets forth the truth best deserves the term scientific. So the geology I plead for is that which states facts in plain words – in language understood by the many rather than only by the few. Plain geology needs little defining, and I may state my case best by trying to set forth the reasons why we have strayed so far away from the simple type.

Plain Geology

Birkhäuser. Boston, Massachusetts, USA. 1986

**SIMULTANEITY****Bridgman, Percy Williams** 1882–1961

American physicist

Einstein, in thus analyzing what is involved in making a judgment of simultaneity, and in seizing on the act of the observer as the essence of the situation, is actually

adopting a new point of view as to what the concepts of physics should be, namely, the operational view.

*The Logic of Modern Physics*

Chapter I (p. 8)

The Macmillan Company. New York, New York, USA. 1927

**Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

Simultaneous discovery is utterly commonplace, and it was only the rarity of scientists, not the inherent improbability of the phenomenon, that made it remarkable in the past. Scientists on the same road may be expected to arrive at the same destination, often not far apart.

The Act of Creation

*New Statesman*, 19 June, 1964**SINGULARITY****Arnold, Vladimir Ogorevich** 1937–

Russian mathematician

The mathematical description of the world depends on a delicate interplay between continuity and discontinuous, discrete phenomena. The latter are perceived first. Functions, just like living beings, are characterised by their singularities”, as P. Montel proclaimed. *Singularities, bifurcations* and *catastrophes* are different terms for describing the emergence of discrete structures from smooth, continuous ones.

Translated by G. S. Wassermann

*Catastrophe Theory* (3rd edition)

Preface to the Third Russian Edition (p. ix)

Springer-Verlag. Berlin, Germany. 1992

**Barrow, John D.** 1952–

English theoretical physicist

In recent years cosmologists have begun to discuss the spontaneous creation of the Universe as a problem in physics. Those who do this assume that a future synthesis of quantum theory and relativity which reveals how gravity behaves when matter is enormously compressed will evade the predictions of a real singularity of the type required by the singularity theorems. Although the assumptions of the singularity theorems are not expected to hold near the singularity, we do not know whether to expect a singularity or not as yet. But even in the absence of this singularity to denote the beginning of the Universe, it has been speculated that the application of quantum theory to the whole Universe may allow physical content to be given to the concept of “creation of the Universe out of Nothing.” The goal of this research is to show that the creation of an expanding universe is inevitable. The reason there is something rather than nothing is that “nothing” is unstable.

*The World within The World* (p. 230)

Clarendon Press. Oxford, England. 1988

**Hawking, Stephen William** 1942–  
English theoretical physicist

We showed that if general relativity is correct, any reasonable model of the universe must start with a singularity. This would mean that science could predict that the universe must have had a beginning, but that it could not predict how the universe should begin: For that, one would have to appeal to God.... Now, as a result of the singularity theorems, nearly everyone believes that the universe began with a singularity, at which the laws of physics broke down. However, I now think that although there is a singularity, the laws of physics can still determine how the universe began.

## SITE

**Bagnold, Ralph A.** 1896–1990  
English officer and engineer

There is an unflinching joy in identifying oneself with the actual sites where great things happened long ago. It appeals to a very human trait in all of us.

*Libyan Sands: Travel in a Dead World*  
Chapter III (p. 74)  
Hodder & Stoughton. London, England. 1941

**Woolley, Sir Charles Leonard** 1880–1960  
English archaeologist

If the field archaeologist had his will, every ancient capital would have been overwhelmed by the ashes of a conveniently adjacent volcano. It is with green jealousy that the worker on other sites visits Pompeii and sees the marvellous preservation of its buildings, the houses standing up to the second floor, the frescoes on the walls and all the furniture and household objects still in their places as the owners left them as they fled from the disaster.

*Digging Up the Past*  
Chapter I (p. 19)  
Charles Scribner's Sons. New York, New York, USA. 1931

## SIZE

**Hardy, Thomas** 1840–1928  
English poet and regional novelist

There is a size at which dignity begins; further on there is a size at which grandeur begins; further on there is a size at which solemnity begins; further on, a size at which awfulness begins; further on, a size at which ghastliness begins. That size faintly approaches the size of the stellar universe.

*Two on a Tower*  
Chapter IV (p. 35)  
Harper & Brothers. New York, New York, USA. No date

The vastness of the field of astronomy reduces every terrestrial thing to atomic dimensions.

*Two on a Tower*  
Chapter XXXIV (p. 258)  
Harper & Brothers. New York, New York, USA. No date

**Landrin, Armand**  
No biographical data available

The monstrosity of greatness is a purely relative thing. To the wren the eagle appears colossal. The wren looks upon the hummingbird as an insignificant creature. The rat, compared with that, is larger than the whale compared with man. In size, as in distance, everything is relative.

*The Monsters of the Deep: And Curiosities of Ocean Life*  
Chapter I (p. 12)  
T. Nelson & Sons. London, England. 1875

**Payne, Roger** 1935–  
American biologist and environmentalist

Small things lead frantic lives. When a passing ant sets its foot in a drop of water, the amoebas in that drop experience raging tidal waves, while to the ant the footsteps of a mouse on the roof of its galleries must rattle all the cupboards and shake the pupae off the walls.

*Among Whales*  
Chapter 1 (p. 20)  
Charles Scribner's Sons. New York, New York, USA. 1995

## Scott Cary (Fictional character)

The unbelievably small and the unbelievably vast eventually meet – like the closing of a gigantic circle. I looked up, as if somehow I would grasp the heavens. The universe, worlds beyond number, God's silver tapestry spread across the night. And in that moment, I knew the answer to the riddle of the infinite. I had thought in terms of man's own limited dimension. I had presumed upon nature. That existence begins and ends in man's conception, not nature's. And I felt my body dwindling, melting, becoming nothing. My fears melted away. And in their place came acceptance. All this vast majesty of creation, it had to mean something. And then I meant something, too. Yes, smaller than the smallest. I meant something, too. To God there is no zero. I still exist!

*The Incredible Shrinking Man*  
Film (1957)

**Shapley, Harlow** 1885–1972  
American astronomer

The atomically small leads directly to the size really immense.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1946*  
On the Astronomical Dating of the Earth's Crust (p. 140)  
Government Printing Office. Washington, D.C. 1947

## SKEPTICISM

**Darwin, Charles Robert** 1809–82  
English naturalist

I am not very skeptical – a frame of mind which I believe to be injurious to the progress of science. A good deal of skepticism in a scientific man is advisable to avoid too much loss of time, but I have met with not a few men, who, I feel sure, have often thus been deterred from experiment or observations which would have proved directly or indirectly serviceable.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 1)

Chapter II (p. 83)

D. Appleton & Company. New York, New York, USA. 1896

**Davis, Andrew Jackson**

No biographical data available

Skepticism is...the handmaid of Truth.

*The Present Age and Inner Life* (3rd edition)

A Survey of Human Needs (p. 8)

W. White & Co. Boston, Massachusetts, USA. 1873

**Davy, Sir Humphry** 1778–1829

English chemist

Our knowledge is little indeed: and scepticism in regard to theory is what we ought most rigorously to adhere to.

In John Davy

*Memoirs of the Life of Sir Humphry Davy* (Volume 1)

Chapter II (p. 122)

Longman, Rees, Orme, Brown, Green & Longman. London, England. 1836

**Gould, Stephen Jay** 1941–2002

American paleontologist, evolutionary biologist, and historian of science

Skepticism or debunking often receives the bad rap reserved for activities – like garbage disposal – that absolutely must be done for a safe and sane life, but seem either unglamorous or unworthy of overt celebration. Yet the activity has a noble tradition, from the Greek coinage of “skeptic” (a word meaning “thoughtful”) to Carl Sagan’s...*The Demon-Haunted World*.... Skepticism is the agent of reason against organized irrationalism – and is therefore one of the keys to human social and civic decency.... Skepticism’s bad rap arises from the impression that, however necessary the activity, it can only be regarded as a negative removal of false claims. Not so.... Proper debunking is done in the interest of an alternate model of explanation, not as a nihilistic exercise. The alternate model is rationality itself, tied to moral decency – the most powerful joint instrument for good that our planet has ever known.

In Michael Shermer

*Why People Believe Weird Things: Pseudoscience, Superstition, and Other Confusions of Our Time*

Foreword (pp. ix–xii)

Henry Holt & Company. New York, New York, USA. 2002

**Oppenheimer, James Robert** 1904–67

American theoretical physicist

Science is not skepticism. It is not the practice of science to look for things to doubt.

*The Open Mind*

The Encouragement of Science (p. 114)

Simon & Schuster. New York, New York, USA. 1955

**Raymo, Chet** 1936–

American physicist and science writer

The difference between Skeptics and True Believers is not that Skeptics believe what is sensible and obvious, while True Believers accept what is fanciful and far-fetched. Often, it is the other way around.

*Skeptics and True Believers: The Exhilarating Connection Between Science and Religion*

Chapter Two (p. 27)

Walker & Company. New York, New York, USA. 1998

Skepticism is a critical reluctance to take anything as absolute truth, even one’s own most cherished beliefs. Astonishment is the ability to be dazzled by the commonplace. At first glance these two qualities might seem opposed. The Skeptic is often thought to lack passionate commitment. The easily astonished person is sometimes thought of as gullible. In fact reasoned skepticism does not preclude passionate belief, and astonishment is enhanced by knowledge.

*Skeptics and True Believers: The Exhilarating Connection Between Science and Religion*

Chapter Fourteen (pp. 252–253)

Walker & Company. New York, New York, USA. 1998

**Sagan, Carl** 1934–96

American astronomer and author

...science requires the most vigorous and uncompromising skepticism, because the vast majority of ideas are simply wrong, and the only way to winnow the wheat from the chaff is by critical experiment and analysis.

*The Demon-Haunted World: Science as a Candle in the Dark*

Chapter 17 (p. 305)

Random House, Inc. New York, New York, USA. 1995

Finding the occasional straw of truth awash in a great ocean of confusion and bamboozle requires vigilance, dedication, and courage. But if we don’t practice these tough habits of thought, we cannot hope to solve the truly serious problems that face us – and we risk becoming a nation of suckers, a world of suckers, up for grabs by the next charlatan who saunters along.

*The Fine Art of Baloney Detection*

*Parade*, February 1, 1987

**Schrödinger, Erwin** 1887–1961

Austrian theoretical physicist

Skepticism alone is a cheap and barren affair. Skepticism in a man who has come nearer to the truth than anyone

before, and yet clearly recognizes the narrow limits of his own mental construction, is great and fruitful, and does not reduce but doubles the value of the discoveries.

*Nature and the Greeks*

Chapter II (p. 31)

At The University Press. Cambridge, England. 1954

## SKY

### Astronomy Survey Committee

Nature offers no greater splendor than the starry sky on a clear, dark night. Silent, timeless, jeweled with the constellations of ancient myth and legend, the night sky has inspired wonder throughout the ages.

The heavens declare the glory of God; and the firmament sheweth his handywork.

*Psalms 19:1***Raymo, Chet** 1936–

American physicist and science writer

The night sky possesses an unparalleled power to excite the human imagination. Intimate, yet infinite. Dark, yet full of light. Near, yet unreachably far.

*365 Starry Nights*

Introduction (p. ix)

Prentice-Hall. New York, New York, USA. 1982

The night sky is more like a human being, inexhaustibly complex and finally beyond reach. Knowledge only whets our interest and increases our wonder.

*365 Starry Nights*

Introduction (p. x)

Prentice-Hall. New York, New York, USA. 1982

**Schaefer, Bradley E.**

American professor of physics

The sky is beautiful and vast and harbors many secrets.

Inventory of Cosmic Mysteries

*Sky & Telescope*, Volume 94, Number 4, October, 1994 (p. 68)**Shakespeare, William** 1564–1616

English poet, playwright, and actor

My soul is in the sky.

In *Great Books of the Western World* (Volume 26)*The Plays and Sonnets of William Shakespeare* (Volume 1)*A Midsummer-Night's Dream*

Act V, Scene I

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Shore, Jane** 1947–

American poet

Each night the sky splits open like a melon  
its starry filaments  
the astronomer examines with great intensity.

*Eye Level*

An Astronomer's Journal (p. 31)

The University of Massachusetts Press. Amherst, Massachusetts, USA. 1977

**Smoot, George** 1945–

American astrophysicist

**Davidson, Key**

American science writer

There is something about looking at the night sky that makes a person wonder.

*Wrinkles in Time*

Chapter 1 (p. 1)

William Morrow &amp; Company, Inc. New York, New York, USA. 1993

**Swings, Pol** 1906–63

Belgian astrophysicist

The sky belongs to everyone, with stars to spare for all.

In Henry Margenau and David Bergamini (eds.)

*The Scientist* (p. 116)

Time Inc. New York, New York, USA. 1964

**Thomas, Lewis** 1913–93

American physician and biologist

Taken all in all, the sky is a miraculous achievement. It works, and for what it is designed to accomplish it is as infallible as anything in nature. I doubt whether any of us could think of a way to improve on it, beyond maybe shifting a local cloud from here to there on occasion.

*The Lives of a Cell: Notes of a Biology Watcher*

The World's Biggest Membrane (p. 148)

The Viking Press. New York, New York, USA. 1974

**Twain, Mark (Samuel Langhorne****Clemens)** 1835–1910

American author and humorist

The sky looks ever so deep when you lay down on your back in the moonshine ...

*Huckleberry Finn*

Chapter VII (p. 49)

Harper &amp; Brothers Publishers. New York, New York, USA. 1912

**Tyndall, John** 1820–93

Irish-born English physicist

We live in the sky, not *under* it.

Climbing in Search of the Sky

*The Fortnightly*, Number 37, January 1, 1870 (p. 13)**Uppgren, Arthur**

No biographical data available

A dark sky filled with stars has always been one of our most cherished sights. This wonder need not and must not fade into the baleful orange glare above our cities; let the stars continue to twinkle with the fireflies along country lanes. Those stars come from one shared legacy of all people around the world, and it is by the heavens they define that we all ultimately find our way.

*Night Has a Thousand Eyes: A Naked-Eye Guide to the Sky, Its Science, and Lore*

Afterword (p. 275)

Plenum Trade. New York, New York, USA. 1998

**Whitman, Walt** 1819–92

American poet, journalist, and essayist

Over all the sky – the sky! Far, far out of reach, studded, breaking out, the eternal stars.

*Complete Poetry and Collected Prose*

Bivouac on a Mountain Side

The Library of America. New York, New York, USA. 1982

**SLEEP****Amiel, Henri-Frédéric** 1821–81

Swiss philosopher, poet, and critic

To sleep is to strain and purify our emotions, to deposit the mud of life, to calm the fever of the soul, to return into the bosom of maternal nature, thence to re-issue, healed and strong. Sleep is a sort of innocence and purification. Blessed be He who gave it to the poor sons of men as the sure and faithful companion of life, our daily healer and consoler.

Translated by Humphry Ward

*Amiel's Journal*

20 March, 1853 (p. 39)

Macmillan &amp; Company Ltd. London, England. 1893

**Aristotle** 384 BCE–322 BCE

Greek philosopher

The vigorous are no better than the lazy during one half of life, for all men are alike when asleep.

In *Great Books of the Western World* (Volume 8)*Eudemian Ethics*

Book II Chapter I

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**de Cervantes, Miguel** 1547–1616

Spanish novelist, playwright, and poet

Blessings on him who invented sleep, the mantle that covers all human thoughts, the food that appeases hunger, the drink that quenches thirst, the fire that warms cold, the cold that moderates heat, lastly, the general coin that purchases all things, the balance and weight that equals the shepherd and the king, the simple and the wise.

Translated by Charles Jarvis

*Don Quixote de la Mancha* (Volume 1)

Chapter LXXVIII (p. 424)

Phillips, Sampson &amp; Co. Boston, Massachusetts, USA. 1857

**SLOWER DOWNER****Wheeler, John Archibald** 1911–

American physicist and educator

The reactor...had to contain material to decelerate the neutrons. Fermi, in his straightforward way, called this material a "slower downer". That term got under my skin so much that I was forced to think up a different term. I chose "moderator" and it stuck.

*Geons, Black Holes, and Quantum Foam*

Chapter 2 (p. 40)

W.W. Norton &amp; Co. New York, New York, USA. 2000

**SMOKE****Sherman, Joe**

No biographical data available

Smoke is odd, complex, nasty, marvelous. It's older than bacteria, as modern as smog, as common as fire.

*GASP!*

Chapter 8 (p. 169)

Shoemaker & Hoard. Washington, D.C. 2004

## SNOW FLAKE

**Bentley, W. A.** 1865–1931

American amateur snowflake photographer

**Perkins, G. H.**

No biographical data available

Many have admired snowflakes as they observed their exquisite outlines and varied forms, but few have ever given them careful study or distinguished the crystals of which a flake is usually composed.

A Study of Snow Crystals

*The Popular Science Monthly*, Volume 53, May, 1898 (p. 75)

...illustrations will soon convince one that, great as is the charm of outline, the internal ornamentation of snow crystals is far more wonderful and varied.

A Study of Snow Crystals

*The Popular Science Monthly*, Volume 53, May, 1898 (p. 77)

A careful study of this internal structure not only reveals new and far greater elegance of form than the simple outlines exhibit, but by means of these wonderfully delicate and exquisite figures much may be learned of the history of each crystal, and the changes through which it has passed in its journey through cloudland. Was ever life history written in more dainty hieroglyphics!

A Study of Snow Crystals

*The Popular Science Monthly*, Volume 53, May, 1898 (p. 81)

...anyone who engages in the study of snow crystals will speedily find his task both absorbing and delightful. There is no surer road to fairyland than that which leads to the observation of snow forms.

A Study of Snow Crystals

*The Popular Science Monthly*, Volume 53, May, 1898 (p. 82)

**Chickering, Francis**

No biographical data available

No weary journey need be taken, no expensive machinery employed.... A winter's storm, an open window, a bit of fur or velvet, and a common magnifier, will bring any curious inquirer upon his field of observation with all the necessary apparatus, and he has only to open his eyes to find the grand and beautiful laboratory of nature open to his inspection.

*Cloud Crystals: A Snow-Flake Album*

Introduction (pp. 1–2)

D. Appleton & Co. New York, New York, USA. 1864

**Hart, Helen**

No biographical data available

Said a little snowflake

To a drop of rain,

“My, I am sorry dear, you are so very plain.”

Rain Drop and Snow-Flake

*Nature Magazine*, Volume I, Number 3, March, 1923 (p. 56)

**Macmillan, Hugh** 1833–1903

Minister and naturalist

No rightly constituted mind can behold the wealth of beauty in the snow-flowers without being awed and humbled.

*Two Worlds Are Ours*

Chapter XVII (p. 274)

Macmillan & Company Ltd. London, England. 1880

Lighter than a feather they [snowflakes] fall from the silent sky to the silent earth; more fragile than a foam-bell they melt and disappear before the touch of a finger. And yet these weakest and lightest of all things by their accumulation possess a power which is irresistible, and which is among the most stupendous forces of nature. They can lock up the wheels of labour; they can besiege cities, and shut them out from the rest of the world; they can stop the march of armies, and muffle the landscape into an awful silence.

*Two Worlds Are Ours*

Chapter XVII (p. 276)

Macmillan & Company Ltd. London, England. 1880

**Seligman, G.**

No biographical data available

The instant a [snow]flake has sunk to earth, changes in its structure begin to take place. As we gaze at the whitened woods stilled to silence or look through the tiny window of the alpine hut upon the dazzling snowfields, conveying to us the false message of an inert nature standing still, we are really looking upon a supremely busy laboratory in which, in sum total, vast energy is at work inducing all kinds of physical changes, so that in a short time nothing is left of the original flake of yesterday's blizzard save its whiteness.

*Snow Structure and Ski Fields*

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

Nothing is cheap and coarse, neither dew-drops nor snow-flakes.

*The Journal Of Thoreau* (Volume 2)

January 5, 1856

How full of creative genius is the air in which these are generated! I should hardly admire more if real stars fell and lodged on my coat. Nature is full of genius, full of divinity. Nothing is cheap and coarse, neither dewdrops nor snowflakes.

*The Journal Of Thoreau* (Volume 2)

January 5, 1856 (pp. 87–88)

...commonly the flakes reach us travel-worn and agglomerated, comparatively without order or beauty, far down in their fall, like men in their advanced age.

*The Journal Of Thoreau* (Volume 2)  
January 5, 1856

Nature is full of genius, full of divinity, so that not a snow-flake escapes its fashioning hand.

*The Journal Of Thoreau* (Volume 2)  
January 5, 1856

A divinity must have stirred within them before the crystals did thus shoot and set. Wheels of storm-chariots. The same law that shapes the earth-star shapes the snow-stars. As surely as the petals of a flower are fixed, each of these countless snow-stars comes whirling to earth, pronouncing thus, with emphasis, the number six ...

*The Journal Of Thoreau* (Volume 2)  
January 5, 1856

## SOAP BUBBLE

**Herschel, Sir John Frederick William** 1792–1871  
English astronomer and chemist

The colours which glitter on a soap-bubble are the immediate consequence of a principle the most important from the variety of phenomena it explains, and the most beautiful, from its simplicity and compendious neatness, in the whole science of optics.

*A Preliminary Discourse on the Study of Natural Philosophy*  
Part I, Chapter I (p. 14)  
Longman, Brown, Green & Longmans. London, England. 1845

## SOCIAL BEHAVIOR

**Bridges, Robert Seymour** 1844–1930  
English poet

Even among beasts of prey the bloody wolves, who found

some selfish betterment from their hunting in packs, had thereby learn'd submission to a controlling will, their leader being so far that charioteer of their rage; while pastoral animals, or ever a drover came to pen them for his profit, had in self-defence herded together; and on the wild prairie are seen when threaten'd by attack, congregating their young within their midst for safety, and then scurrying their ranks

to a front line compact to face the dreaded foe. And this parental instinct, tho' it owns cousinship with Breed, was born of Selfhood. A nursing mammal, Since she must feed her suckling a piece of herself, wil self-preserve and shelter it as herself; and oft 'tis hard to wean.

*The Testament of Beauty – A Poem in Four Books*  
Book II  
At The Clarendon Press. Oxford, England. 2007

## SOCIETY

**Huxley, Thomas Henry** 1825–95  
English biologist

...the ethical progress of society depends, not on imitating the cosmic process, still less in running away from it, but in combating it.

*Evolution and Ethics and Other Essays*  
Chapter II (p. 83)  
Macmillan & Co Ltd. London, England. 1894

## SOIL

**Burroughs, John** 1837–1921  
American naturalist and writer

The youth of the earth is in the soil and in the trees and verdure that springs from it...

*Under the Apple-Trees*  
Chapter II (p. 40)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1916

**Emerson, Ralph Waldo** 1803–82  
American lecturer, poet, and essayist

Every plant is a manufacturer of soil.

*The Complete Works of Ralph Waldo Emerson* (Volume 7)  
*Society and Solitude*  
Chapter VI (p. 144)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

**Fuller, Wallace H.** 1915–2006  
American geologist

A thin rind of loose material covering the continents of the earth is all that stands between life and lifelessness.

*Soils of the Desert Southwest*  
A Word from the Author (p. xiii)  
University of Arizona Press. Tucson, Arizona, USA. 1975

Grit and grime, crumbling rock and decaying organic residue-abrading by wind and water – weather into soil – Mother Earth. This soft and yielding earth lives and continually changes under the forces of climate, having formed through the ages as a result of meteorological, geological, and biological action on rock. The soil not only lives, but it continually renews life as well. Animal and plant residues decay into simpler constituents, and nutrient elements again are made available for new life in a perpetual cycle.

*Soils of the Desert Southwest*  
A Word from the Author (p. xiii)  
University of Arizona Press. Tucson, Arizona, USA. 1975

**Goldsmith, Oliver** 1728–74  
Anglo-Irish writer, poet, and physician

*Solo natura subest* – out of the soil comes life; and in the greenness of the earth is man's redemption.

*The Miscellaneous Works of Oliver Goldsmith*

Epilogue (p. 353)

Macmillan & Company Ltd. London, England. 1881

**Hanotaux, Gabriel** 1853–1944

French statesman

The soil speaks to the geologist, the anthropologist, the historian, the sociologist.

*Contemporary France* (Volume 2)

Chapter XII, Section III (p. 656)

Archibald Constable & Co. London, England. 1905

**Molloy, Les**

No biographical data available

...for only rarely have we stood back and celebrated our soils as something beautiful, and perhaps even mysterious. For what other natural body, worldwide in its distribution, has so many interesting secrets to reveal to the patient observer? The great events of long ago – volcanic eruptions, dust storms, floods and Ice Ages – have left their imprints as have the agricultural practices of earlier times.

*Soils in the New Zealand Landscape: The Living Mantle*

Mallison Rendel Publishers Ltd. Wellington, New Zealand. 1988

The soil can...tell us much about our present day environment. It is the home of millions of living things and a recycling factory for so much of the solar and geochemical energy that sustains life. In its form and properties it expresses the combined influences of local climate, shape of the land, and rocks and organisms that are broken down and incorporated into it.

*Soils in the New Zealand Landscape: The Living Mantle*

Mallison Rendel Publishers Ltd. Wellington, New Zealand. 1988

**Simonson, Roy**

American soil scientist

Be it deep or shallow, red or black, sand or clay, the soil is the link between the rock core of the earth and the living things on its surface. It is the foothold for the plants we grow. Therein lies the main reason for our interest in soils.

*USDA Yearbook of Agriculture*, 1957

**Wahnschaffe, Felix** 1851–1914

No biographical data available

The superficial formation of the earth's crust, which serves as the bearer and nourisher of plants, is effected either by the loosening and decomposition of the exposed rocks, or by the transport of coarse and fine materials worn from other rocks, or, finally, by the transformation into humus of decayed vegetable remains piled up in large masses.

*A Guide to the Scientific Examination of Soils*

Chapter I (p. 17)

H.C. Baird. Philadelphia, Pennsylvania, USA. 1891

**SOIL EROSION**

**Leopold, Aldo** 1886–1948

American naturalist

To those who know the speech of hills and rivers, straightening a stream is like shipping vagrants – a very successful method of passing trouble from one place to the next. It solves nothing in any collective sense.

In Susan L. Flader and J. Baird Callicott

*The River of the Mother of God*

Coon Valley: An Adventure in Cooperative Conservation (p. 219)

The University of Wisconsin Press. Madison, Wisconsin, USA. 1991

**SOLAR SYSTEM**

**Author undetermined**

Yesterday, a numerous and highly respectable meeting of gentlemen and ladies interested in the stability of the solar system was held, pursuant to advertisement in the *Vox Stellarum*, True Sun, &c. at the sign of the Great Bear in the North Hemisphere, at One P. M. (sidereal time).

*Bentley's Miscellany* (Volume 2)

Reform of The Solar System (p. 508)

Richard Bentley. London, England. 1837

**Burke, Edmund** 1729–97

English statesman and philosopher

What grander idea can the mind of man form to itself than a prodigious, glorious, and fiery globe, hanging in the midst of an infinite space, and surrounded with bodies of whom our earth is scarcely anything in the comparison!

In James Prior

*A Life of Edmund Burke* (p. 13)

George Bell & Sons. London, England. 1891

**Burroughs, John** 1837–1921

American naturalist and writer

When I look up at the starry heavens at night and reflect upon what it is that I really see there, I am constrained to say, "There is no God." ...I see no lineaments of personality, no human traits, but an energy upon whose currents solar systems are but babbles.

*The Light of the Day: Religious Discussions and Criticisms from the Naturalist's Point of View* (p. 224)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1900

**Carlyle, Thomas** 1795–1881

English historian and essayist

Did not the Boy Alexander weep because he had not two Planets to conquer; or a whole Solar System; or after that, a whole universe?

*Sartor Resartus*

Book II, Chapter VIII (p. 165)

Ginn & Company. Boston, Massachusetts, USA. 1897

**Chawla, Kalpana**

Indian astronaut

When you look at the stars and the galaxy, you feel that you are not just from any particular piece of land but from the solar system.

I'd Love a Moonwalk

*India Today*, January 26, 1998**Clarke, Arthur C.** 1917–

English science and science fiction writer

The Solar System is rather a large place, though whether it will be large enough for so quarrelsome an animal as *Homo sapiens* remains to be seen.

*The Challenge of the Spaceship*

The Challenge of the Spaceship (p. 8)

Harper &amp; Brothers. New York, New York, USA. 1959

The Solar System, comprising the nine known worlds of our Sun and their numerous satellites, is a relatively compact structure, a snug little celestial oasis in an endless desert.

*The Challenge of the Spaceship*

The Planets Are Not Enough (p. 54)

Harper &amp; Brothers. New York, New York, USA. 1959

**Clerke, Agnes Mary** 1842–1907

Irish astronomer

Outside the solar system, the problems which demand a practical solution are all but infinite in number and extent.

*A Popular History of Astronomy During the Nineteenth Century* (3rd edition)

Part II, Chapter 13 (p. 528)

Adam &amp; Charles Black. London, England. 1893

The cardinal truth emerging from these inquiries is that of the extreme isolation of the solar system. A skiff in the midst of a vast unfurrowed ocean is not more utterly alone.

*The System of the Stars* (2nd edition)

Chapter XXII (p. 301)

Adam &amp; Charles Black. London, England. 1905

**Davies, Paul Charles William** 1946–

British-born physicist, writer, and broadcaster

The secret of our success on planet Earth is space. Lots of it. Our solar system is a tiny island of activity in an ocean of emptiness.

*The Last Three Minutes: Conjectures About the Ultimate Fate of the Universe*

Chapter I (p. 4)

Basic Books, Inc. New York, New York, USA. 1994

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

The solar system is not the typical product of development of a star; it is not even a common variety of development; it is a freak.

Man's Place in the Universe

*Harper's Magazine*, October, 1928 (p. 574)**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

The solar system has no anxiety about its reputation...

*Ralph Waldo Emerson: Essays and Lectures**The Conduct of Life*

Worship (p. 1055)

The Library of America. New York, New York, USA. 1983

**Flammarion, Camille** 1842–1925

French astronomer and author

Like a shower of stars the worlds whirl, borne along by the winds of heaven, and are carried down through immensity, suns, earths, satellites, comets, shooting stars, humanities, cradles, graves, atoms of the infinite, seconds of eternity, perpetually transform beings and things.

*Popular Astronomy: A General Description of the Heavens*

American Book Company. New York, New York, USA. 1899

**George, Walter Lionel** 1882–1926

English author

The solar system is like a roulette gone mad, and the earth is the ball. It's been rolling for millions of years; what's going to happen if it stops? What hole will the ball plump into? Thirty-six – A pocketful of money for everybody – or zero? And the eternal banker sweeps up the stakes?

*Blind Alley*

Book III, Chapter XIII (p. 400)

Little, Brown &amp; Co. Boston, Massachusetts, USA. 1921

**Hardy, Thomas** 1840–1928

English poet and regional novelist

...we will get outside the solar system altogether, leave the whole group of sun, primary, and secondary planets quite behind us in our flight, as a bird might leave its bush and sweep into the whole forest.

*Two on a Tower*

Chapter IV (pp. 36–37)

Henry Holt &amp; Co. New York, New York, USA. 1882

**Hey, Nigel S.** 1936–

American science writer

Naturally their [men and women] writings deal with spaceflight, the solar system, and the Cosmos...reveal the profoundly human aspects of this great adventure, from the excitement of solving the problems of spacecraft that are millions of miles distant to the self-examination that occurs when considering whether we might someday send robots, and not people, as our ambassadors to distant star systems. Some of the nobility of the human condition, so often obscured, shines through their words.

*Solar System*

Introduction (p. 8)

Weidenfield &amp; Nicolson. London, England. 2002

Our explorations of the solar system are the first halting steps in a journey that will transform our kind into

a species that knowingly lives among the stars, in mind and possibly in body. Our destiny awaits in the planets and their moons, in this star system and in the galaxy beyond. Without exaggeration this journey is epochal in its significance to the human race.

*Why People Need Space*

Lecture, National Space Centre, October, 2002

**Horowitz, Norman H.** 1915–2005

American geneticist

If the exploration of the solar system in our time bring home to us a realization of the uniqueness of our small planet and thereby increase our resolve to avoid self-destruction, [it] will have contributed more than just science to the human future.

*To Utopia and Back: The Search For Life in the Solar System*

Chapter Eight (p. 146)

W.H. Freeman & Company. San Francisco, California, USA. 1986

**Jastrow, Robert** 1925–

American space scientist

Nearly five billion years ago, in one of the spiral arms of the Milky Way Galaxy, a cloud of gaseous matter formed by accident out of the swirling tendrils of the primal mist. The history of the solar system began in that softly glowing nebulosity, bathed in the black light of nearby stars. If the observer were prescient, he would see in the moving shadows of the cloud the faint outlines of the sun, the earth, and men walking on the earth.

*Until the Sun Dies*

Chapter 6 (p. 54)

W.W. Norton & Co. New York, New York, USA. 1977

**Jeffreys, Sir Harold** 1891–1989

English astronomer and geophysicist

Damn the solar system. Bad light; planets too distant; pestered with comets; feeble contrivance; could make a better one myself.

In John D. Barrow

*The Artful Universe* (p. 34)

Clarendon Press. Oxford, England. 1995

**Lambert, Johann Heinrich** 1728–77

Swiss-German mathematician and astronomer

Nothing is more simple than the plan of the Solar System...

Translated by James Jacque

*The System of the World*

Part I, Chapter I (p. 1)

Printed for Vernor & Hood. London, England. 1800

**Lewis, C. S. (Clive Staples)** 1898–1963

British author, scholar, and popular theologian

If the solar system was brought about by an accidental collision, then the appearance of organic life on this planet was also an accident, and the whole evolution

of Man was an accident too. If so, then all our present thoughts are mere accidents – the accidental by-product of the movement of atoms. And this holds for the thoughts of the materialists and astronomers as well as for anyone else's. But if their thoughts – i.e., of Materialism and Astronomy – are merely accidental by-products, why should we believe them to be true? I see no reason for believing that one accident should be able to give me a correct account of all the other accidents. It's like expecting that the accidental shape taken by the splash when you upset a milk-jug should give you a correct account of how the jug was made and why it was upset.

*God in the Dock: Essays on Theology and Ethics*

Answers to Questions on Christianity (pp. 52–53)

Wm. B. Erdmans

Grand Rapids, Michigan, USA. 1994

**Lowell, Percival** 1855–1916

American astronomer

Now when we think that each of these stars is probably the center of a solar system grander than our own, we cannot seriously take ourselves to be the only minds in it all.

*Mars*

Chapter I (p. 5)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1895

**MacLennan, Hugh** 1907–99

Canadian author and professor of English

We have just reached the outer fringes of the Solar System. Can any sane man possibly argue that we should stop there?

*Scotchman's Return and Other Essays*

Remembrance Day, 2010 A.D. (p. 89)

Charles Scribner's Sons. New York, New York, USA. 1960

**Newcomb, Simon** 1835–1909

Canadian-American astronomer

We have mapped out our solar system with great precision. But how with that great universe of millions of stars in which our solar system is only a speck of star dust, a speck which a traveler through the wilds of space might pass a hundred times without notice? We have learned much about this universe, though our knowledge of it is still dim. We see it as a traveler on a mountain top sees a distant city in a cloud of mist, by a few specks of glimmering light from steeples or roofs.

*Aspects of American Astronomy*, Volume 6, Number 4, November, 1897 (pp. 293–294)

...our solar system is like a little colony, separated from the rest of the universe by an ocean of void space almost immeasurable in extent.

*Side-Lights on Astronomy and Kindred Fields of Popular Science*

Chapter I (p. 1)

Harper & Brothers Publishers. New York, New York, USA. 1906

**Patten, William** 1861–1932  
American biologist

A solar system...has attributes and powers that cannot be defined or measured in terms of its members, or of its ultimate chemical elements, for a solar system is not merely an aggregate, or the algebraic sum of its various elements and qualities.... It is a system, a new type of individuality, with special creative powers of its own.

*The Grand Strategy of Evolution: The Social Philosophy of a Biologist*  
Chapter I (p. 34)  
Richard G. Badger. Boston, Massachusetts, USA. 1920

Out of the nebular pull and thrust, and meteoric collision came the germs of celestial spheres and a measure of celestial order. In the wide womb of the cosmic night commingling, nebular gametes the germ plasma of the sun and her family of planets engendered.

*The Grand Strategy of Evolution: The Social Philosophy of a Biologist*  
Chapter IV (p. 86)  
Richard G. Badger. Boston, Massachusetts, USA. 1920

**Peterson, Ivars**  
Mathematics and computer writer and editor

We can...be thankful that the solar system in which we live has been unreasonably kind throughout the long history of human efforts to understand its dynamics and to extend that knowledge to the rest of the universe. At each step along the way, it has served as a perspicacious teacher, posing questions just difficult enough to prompt new observations and calculations that have led to fresh insights, but not so difficult that any further study becomes mired in a morass of confusing detail.

*Newton's Clock: Chaos in the Solar System*  
Chapter 12 (p. 286)  
W.H. Freeman & Company. New York, New York, USA. 1993

**Pliny (C. Plinius Secundus)** 23–79  
Roman savant and author

Most men are not acquainted with a truth known to the founders of the science from their arduous study of the heavens, that what when they fall to earth are termed thunderbolts are the fires of the three upper planets, particularly those of Jupiter, which is in the middle position – possibly because it voids in this way the charge of excessive moisture from the upper circle (of Saturn) and of excessive heat from the circle below (of Mars); and that this is the origin of the myth that thunderbolts are the javelins hurled by Jupiter. Consequently heavenly fire is spit forth by the planet as crackling charcoal flies from a burning log, bringing prophecies with it. And this is accompanied by a very great disturbance of the air, because moisture collected causes an overflow or because it is disturbed by the birth-pangs so to speak of the planet in travail.

*Natural History* (Volume 1)  
Book II, sec 84  
Harvard University Press. Cambridge, Massachusetts, USA. 1947

**Rice, Harvey** 1800–91  
American lawyer and newspaper publisher

Vast as our solar system truly is, it may still be regarded as but a chandelier suspended in the entrance-hall of Nature's great temple.

*Nature and Culture*  
Chapter 1 (p. 38)  
Lee & Shepard. Boston, Massachusetts, USA. 1875

**Sagan, Carl** 1934–96  
American astronomer and author

The emerging picture of the early Solar System does not resemble a stately progression of events designed to form the Earth. Instead, it looks as if our planet was made, and survived, by mere lucky chance, amid unbelievable violence. Our world does not seem to have been sculpted by a master craftsman. Here, too, there is no hint of a Universe made for us.

*Pale Blue Dot: A Vision of the Human Future in Space*  
Chapter 17 (p. 295)  
Random House, Inc. New York, New York, USA. 1994

**Somerville, Mary** 1780–1872  
English mathematician

Yonder starry sphere  
Of planets and of fix'd, in all her wheels,  
Resembles nearest mazes intricate,  
Eccentric, intervolved, yet regular,  
Then most, when most irregular they seem.

*The Connexion of the Physical Sciences* (9th edition)  
Section III (p. 23)  
John Murray. London, England. 1858

**Taylor, Bert Leston** 1866–1921  
American Poet

How nicely is our solar system spaced!  
How orderly the planet movements are!  
Aloof, sedate, self-centered, sober-paced,  
Each plods its way around the central star.  
Far out, far out upon the soundless sea  
The derelicts of Cosmos rush and roll –

*A Penny Whistle*  
In Status Quo (p. 25)  
Alfred A. Knopf. New York, New York, USA. 1921

**Thomson, Sir John Arthur** 1861–1933  
Scottish naturalist

Vast as is the Solar System, then, it is excessively minute in comparison with the Stellar System, the universe of the Stars, which is on a scale far transcending anything the human mind can apprehend.

*The Outline of Science: A Plain Story Simply Told*  
Introduction (p. 15)  
G.P. Putnam's Sons. New York, New York, USA. 1922

**Tsiolkovsky, Konstantin Eduardovich** 1857–1935  
Russian research scientist

Should man penetrate the solar system, should he learn to comport himself there as the mistress in her home – would the secrets of the world then open for him? Not in the least. Not anymore that inspecting a pebble or shell would reveal to him the secrets of the ocean.

Compiled by V.V. Vorontsov

*Words of The Wise: A Book of Russian Quotations*

Translated by Vic Schneerson

Progress Publishers. Moscow, Russia. 1979

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

Few people without a training in science can realise the huge isolation of the solar system. The sun with its specks of planets, its dust of planetoids, and its impalpable comets, swims in a vacant immensity that almost defeats the imagination.

*Tales of Space and Time*

The Star (p. 38)

Harper & Brothers Publishers. New York, New York, USA. 1900

## SOLID STATE

**Updike, John** 1932–  
American novelist, short story writer, and poet

Textbooks & Heaven only are Ideal;  
Solidity is an imperfect state,  
Within the cracked and dislocated Real  
Nonstoichiometric crystals dominate.  
Stray Atoms sully and precipitate;  
Strange holes, excitons, wander loose; because  
Of Dangling Bonds, a chemical Substrate  
Corrodes and Catalyzes – surface Flaws  
Help Expitazial Growth to fix absorptive claws.

*Midpoint and Other Poems*

The Dance of the Solids

Stanza 9

Fawcett Publications, Inc. Greenwich, Connecticut, USA. 1970

## SOLUBILITY

**Witt, Otto N.** 1853–1915  
German chemist

In the strictly scientific sense of the word insolubility does not exist, and even those substances characterized by the most obstinate resistance to the solvent action of water may properly be designated as extraordinarily difficult of solution, not as insoluble.

In Joseph William Mellor

*Mellor's Modern Inorganic Chemistry*

Chapter 13 (p. 177)

Longmans, Green & Company Ltd. London, England. 1967

## SOLUTION

**Bohr, Niels Henrik David** 1886–1962  
Danish physicist

Every great and deep difficulty bears in itself its own solution. It forces us to change our thinking in order to find it.

In Brian VanDeMark

*Pandora's Keepers*

Chapter 1 (p. 29)

Little, Brown & Company. Boston, Massachusetts, USA. 2003

**Charlie Chan (Fictional character)**

Not always wise to accept simplest solution.

*Charlie Chan at the Circus*

Film (1936)

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

In science we sometimes have convictions as to the right solution of a problem which we cherish but cannot justify; we are influenced by some innate sense of the fitness of things.

*The Nature of the Physical World*

Chapter XV (p. 337)

The Macmillan Company. New York, New York, USA. 1930

**Fabre, Jean-Henri** 1823–1915  
French entomologist and author

I make bold to take the chalk in hand myself, to seize the rudder of our algebraical boat. I comment on the book, interpret it in my own fashion, expound the text, sound the reefs until daylight comes and leads us to the haven of the solution.

Translated by Alexander Teixeira de Mattos

*The Life of the Fly*

Chapter XIII (p. 299)

Dodd, Mead & Co. New York, New York, USA. 1925

**Forbes, Malcolm**

It's so much easier to suggest solutions when you don't know too much about the problem.

*Forbes* (p. 350)

**Gauss, Johann Carl Friedrich** 1777–1855  
German mathematician, physicist, and astronomer

Finally, two days ago, I succeeded, not on account of my painful efforts, but by the grace of God. Like a sudden flash of lightning, the riddle happened to be solved. I myself cannot say, what was the conducting thread, which connected what I previously knew, with what made my success possible.

*Musings of the Masters: An Anthology of Mathematical Reflections* (p. 89)  
Mathematical Association of America. Washington, D.C. 2004

**Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

...the genuine solution of a difficult problem is neither more nor less than a glimpse of the wider context, a glimpse that helps us to clear away other difficulties as well, including many whose existence we do not even suspect.

*Physics and Beyond: Encounters and Conversations*

Chapter 8 (p. 102)

Harper & Row, Publishers. New York, New York, USA. 1971

**Hoffer, Eric** 1902–83

American longshoreman and philosopher

... every solution serves only to sharpen the problem, to show us more clearly what we are up against ...

*Reflections on the Human Condition* (p. 61)

Harper & Row. New York, New York, USA. 1973

**Kosko, Bart** 1960–

American electrical engineer

A solution has a way of bubbling up out of your subconscious if you brood about a problem long enough.

*Fuzzy Thinking*

Chapter 3 (p. 61)

Hyperion. New York, New York, USA. 1993

**Lowell, Percival** 1855–1916

American astronomer

To any real solution, the problem must be attacked analytically with all the rigor possible. Before entering upon such an investigation it is well to state the problem generally, showing the data upon which it rests and the limitations to which it is necessarily subject. For lack of appreciation of these points has led to mistaken ideas of what is or is not possible.

Memoir on A Trans-Neptune Planet

*Memoirs of the Lowell Observatory*, Volume 1, Number 1, 1915 (p. 4)

**MacCready, Paul** 1925–?

American aeronautical engineer

When you do dome up with a solution, you can always explain it logically, even though it's the absurd approach that gave you the solution.

In Kenneth A. Brown

*Inventors at Work*

Paul MacCready (p. 11)

Microsoft Press. Redmond, Washington, USA. 1988

**Mencken, H. L. (Henry Louis)** 1880–1956

American journalist and literary critic

...there is always a well-known solution to every human problem – neat, plausible, and wrong.

*Prejudices: Second Series*

The Divine Afflatus (p. 158)

Alfred A. Knopf. New York, New York, USA. 1922

**Robinson, Julia** 1919–85

American mathematician

I have been told that some people think that I was blind not to see the solution myself when I was so close to it. On the other hand, no one else saw it either. There are lots of things, just lying on the beach as it were, that we don't see until someone else picks one of them up. Then we all see that one.

In D. Albers, G. Alexanderson and C. Reid

*More Mathematical People: Contemporary Conversations* (p. 278)

Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

**Szilard, Leo** 1898–1964

Hungarian-born American nuclear physicist

Once a man has missed the solution to a problem when he passes by, it is less likely he will find it the next time.

In Editors of International Science and Technology

*The Way of the Scientist: Interviews from the World of Science and Technology*

Leo Szilard (p. 28)

Simon & Schuster. New York, New York, USA. 1966

**SOLUTIONS****Boyle, Robert** 1627–91

English natural philosopher and theological writer

But...there are other clusters wherein the particles stick not so close together, but that they may meet with corpuscles of another denomination, which are dispos'd to be more closely united with some of them, then[than] they were among themselves. And in such case, two thus combining corpuscles losing that shape, or size, or motion, or other accident, upon whose account they were endow'd with such a determinate quality or nature, each of them really ceases to be a corpuscle of the same denomination it was before, and from the coalition of these there may emerge a new body, as really one.

*The Sceptical Chymist*

The Second Part (p. 87)

Courier Dover Publications. Mineola, New York, USA. 2003

**SOUL****Pollock, Sir Frederick** 1845–1937

English jurist

A soul eager for new mastery and ever looking forward cares little to dwell upon the past ...

In William Kingdon Clifford

*Lectures and Essays*

Introduction (p. 6)

Macmillan & Co Ltd. London, England. 1901

**Russell, Sir Edward John** 1872–1965

British agriculturalist and writer

Those young people of today, who will be the leaders of thought and of action tomorrow, are faced with the

problem of enduring that, in gaining control over Nature, man does not lose his own soul.

*Science and Modern Life* (p. 101)

Philosophical Library. New York, New York, USA. 1955

## SOUND

**Beston, Henry** 1888–1968

American writer

The three great elemental sounds in nature are the sound of rain, the sound of wind in a primeval wood, and the sound of outer ocean on a beach.

*The Outermost House: A Year of Life on the Great Beach of Cape Cod*  
Chapter III (p. 43)

The Macmillan Co. New York, New York, USA. 2003

**Hooke, Robert** 1635–1703

English physicist

‘Tis not impossible to hear a whisper a furlong’s distance, it having been already done; and perhaps the nature of the thing would not make it more impossible, though that furlong should be ten times multiply’d...for that [air] that is not the only medium, I can assure the Reader, that I have, by the help of a distended wire, propagated the sound to a very considerable distance in an instant, or with as seemingly quick a motion as that of light, at least, incomparably swifter than that, which at the same time was propagated through the Air...

*Micrographia*

Preface

Printed for Jo. Martyn and Ja. Allestry. London, England. 1665

**Pepys, Samuel** 1633–1703

English naval administrator

Discoursed with Mr. Hooke about the nature of sounds, and he did make me understand the nature of musical sounds made by strings, mighty prettily; and told me that having come to a certain number of vibrations proper to make any tone, he is able to tell how many strokes a fly makes with her wings (those flies that hum in their flying) by the note that it answers to in music during their flying. That, I suppose, is a little too much refined; but his discourse in general of sound was mighty fine.

*Diary of Samuel Pepys*

August 8, 1666 (p. 407)

Macmillan & Company Ltd. London, England. 1905

**Strutt, John William (Lord Rayleigh)** 1842–1919

English physicist

The sensation of sound is a thing *sui generis*, not comparable with any of our other sensations. No one can express the relation between a sound and a colour or a smell.

*The Theory of Sound* (Volume 1)

Chapter I (p. 1)

Macmillan & Co Ltd. London, England. 1877

When once we have discovered the physical phenomena which constitute the foundation of sound, our explorations are in great measure transferred to another field lying within the domain of the principles of Mechanics.

*The Theory of Sound* (Volume 1)

Chapter I (p. 1)

Macmillan & Co Ltd. London, England. 1877

## SOUND FROM SPACE

**Cicero (Marcus Tullius Cicero)** 106 BCE–43 BCE

Roman orator, politician, and philosopher

“What is this sound so strong and so sweet that fills my ears?”

“This,” he replied, “is the melody which, at intervals unequal, yet differing in exact proportions, is made by the impulse and motion of the spheres themselves, which, softening shriller by deeper tones, produce a diversity of regular harmonies. Nor can such vast movements be urged on in silence; and by the order of nature the shriller notes sound from one extreme of the universe, the deeper from the other.”

*De Amicitia and Scipio’s Dream*

Scorpio’s Dream, 5 (p. 80)

Little, Brown, & Co. Boston, Massachusetts, USA. 1884

## SPACE

**Adams, Douglas** 1952–2001

English author, comic radio dramatist, and musician

Space...is big, really big...You may think it’s a long way down the street to the chemists’ but that’s just peanuts to space.

*The Ultimate Hitchhiker’s Guide to the Galaxy*

*The Hitchhiker’s Guide to the Galaxy*

Chapter 8 (p. 53)

The Ballantine Book Company. New York, New York, USA. 2002

**Alfven, Hannes** 1908–95

Swedish physicist

Having probes in space was like having a cataract removed.

In Eric J. Lerner

*The Big Bang Never Happened*

Chapter 1 (p. 45)

Random House, Inc. New York, New York, USA. 1991

**Ampère, Jean-Jacques** 1800–64

French philologist

...on a sondé ces régions voilées;

Les bornes du possible ont été reculées !

Un mortel a pu voir; armé d’un oeil géant,

Osciller des lieux aux confins du néant.

Man has plumbed these veiled realms,

The boundaries of the possible have been extended.  
A mortal, armed with the eye of a giant,  
Has been enabled to see gleams of light oscillating on the  
confines of empty space.

*Littérature, Voyages & Poésies*  
Urania (pp. 51–52)  
Didier et Co. Paris, France. 1858

**Archimedes of Syracuse** 287 BCE–212 BCE  
Sicilian mathematician

Any solid lighter than a fluid will, if placed in the fluid,  
be so far immersed that the weight of the solid will be  
equal to the weight of the fluid displaced.

*The Works of Archimedes*  
Book I, Postulate I, Proposition 5 (p. 257)  
At The University Press. Cambridge, England. 1897

**Bailey, Philip James** 1816–1902  
English poet

Unimaginable space,  
As full of suns as is earth's sun of atoms.

*Festus: A Poem*  
Scene IV (p. 61)  
George Routledge & Sons, Ltd. London, England. 1893

**Barnes, Bishop**  
Bishop of San Bernardino

It is fairly certain that our space is finite though  
unbounded. Infinite space is simply a scandal to human  
thought.

In Joseph Silk  
*The Big Bang* (p. 81)  
W.H. Freeman & Company. San Francisco, California, USA. 1980

**Bergaust, Erik** 1925–95  
American writer and journalist

As far as man on Earth is concerned, space begins at the  
high border of the Earth's atmosphere and extends to  
infinity.

*Wernher von Braun*  
Are Flying Saucers Real? (p. 546)  
National Space Institute. Washington, D.C. 1976

**Bergson, Henri** 1859–1941  
French philosopher

For it is scarcely possible to give any other definition of  
space: space is what enables us to distinguish a number of  
identical and simultaneous sensations from one another;  
it is thus a principle of differentiation, and consequently  
it is a reality with no quality.

Translated by F.L. Pogson  
*Time and Free Will: An Essay on the Immediate Data of Consciousness*  
Chapter II (p. 95)  
George Allen & Unwin Ltd. London, England. 1950

**Bradbury, Ray** 1920–  
American writer

Man does not need escape so much as he needs release  
into a new spirit, a transcendent knowledge of himself  
that only Space can give him.

In Ray Bradbury, Arthur C. Clarke, Bruce Murray, Carl Sagan, and  
Walter Sullivan  
*Mars and the Mind of Man*  
Foreword (p. XI)  
Harper & Row, Publishers. New York, New York, USA. 1973

**Bradley, Jr., John Hodgdon** 1898–1962  
American geologist

A sea whose shores no eyes have ever seen, whose depth  
no instrument can fathom, whose waters no scientist  
can analyze – such is the sea of space. Nothing can be  
as empty and cold as the gulf wherein our destinies are  
immersed.

*Parade of the Living*  
Part I, Chapter I (p. 3)  
Coward-McCann, Inc. New York, New York, USA. 1930

Nothing can be as empty and cold as the gulf wherein our  
destinies are immersed.

*Parade of the Living*  
Chapter I (p. 3)  
Coward-McCann. New York, New York, USA. 1930

**Bruno, Giordano** 1548–1600  
Italian philosopher and pantheist

There are countless constellations, suns and planets;  
we see only the suns because they give light; the plan-  
ets remain invisible, for they are small and dark. There  
are also numberless earths circling around their suns, no  
worse and no less than this globe of ours.

*On the Infinite Universe and Worlds*  
Henry Schuman, Inc. New York, New York, USA. 1950

There is a single general space, a single vast immensity  
which we may freely call Void: in it are innumerable  
globes like this on which we live and grow; this space we  
declare to be infinite, since neither reason, convenience,  
sense-perception nor nature assign it a limit.

In Joseph Silk  
*The Big Bang* (p. 81)  
W.H. Freeman & Company. San Francisco, California, USA. 1980

### Captain Kirk (Fictional character)

Space, the final frontier...

Opening lines  
*Star Trek*  
Television series

**Chamberlin, Thomas Chrowder** 1843–1928  
American geologist

Space has commonly been pictured as an unbounded  
receptacle for all that is and all that takes place, and time,  
as the tally sheet of the on-sweep of an active world. Free  
room for the great deployments of the cosmos have been

thought to be offered by unlimited space and ample duration for their evolutions in unrestricted time.

In Charles Lane Poor

*Gravitation Versus Relativity: A Non-technical Explanation of the Fundamental Principles of Gravitational Astronomy and a Critical Examination of the Astronomical Evidence Cited as Proof of the Generalized Theory of Relativity*

A Preliminary Essay (p. viii)

Putnam's Sons. New York, New York, USA. 1922

### **Clarke, Arthur C.** 1917–

English science and science fiction writer

Go out beneath the stars on a clear winter night, and look up at the Milky Way spanning the heavens like a bridge of glowing mist. Up there, ranged one beyond the other to the end of the Universe, suns without number burn in the loneliness of space. Down to the south hang the brilliant, unwinking lanterns of other worlds – the electric blue of Jupiter, the glowing ember of Mars. Across the zenith, a meteor leaves a trail of fading incandescence, and a tiny voyager of space has come to a flaming end.

In Neil McAleer

*Odyssey: The Authorized Biography of Arthur C. Clarke* (p. 34)

Victor Gollancz. London, England. 1993

The sea which beats against the coasts of Earth, which seems so endless and so eternal, is as the drop of water on the slide of a microscope compared with the shoreless sea of space.

*The Challenge of the Spaceship*

Across the Sea of Stars (p. 128)

Harper & Brothers. New York, New York, USA. 1959

In space there are no horizons; the questing eye reaches out forever, in all directions, and finds no fixed point at which to rest.

*The Challenge of the Spaceship*

Which Way Is Up? (p. 143)

Harper & Brothers. New York, New York, USA. 1959

### **Collins, Billy** 1941–

American poet

Here's to the wind blowing against this lighted house and to the vast, windless spaces between the stars.

*The Art of Drowning*

Chapter XXXIII, Cheers

University of Pittsburgh Press. Pittsburgh, Pennsylvania, USA. 1995

### **Davies, Paul Charles William** 1946–

British-born physicist, writer, and broadcaster

For those who think of space as emptiness, the assignment of an adjective, especially one as enigmatic as “curved”, might be regarded as cryptic.

*The Encyclopaedia of Ignorance: Everything You Ever Wanted to Know About the Unknown*

Curved Space (p. 78)

Pergamon Press. Oxford, England. 1977

### **de Quincey, Thomas** 1785–1859

English author

To man is as much reserved the prerogative of perceiving space in its higher extensions, as of geometrically constructing the relations of space.

*The Works of Thomas de Quincey*

System of the Heavens as Revealed by Lord Rosse's Telescope (p. 177)

Adam & Charles Black. Edinburgh, Scotland. 1871

### **Deudney, Daniel**

American political scientist

Space is only 80 miles from every person on earth – far closer than most people are to their own national capitals...

*Space: The High Frontier in Perspective*

Introduction (p. 6)

Worldwatch Institute. Washington, D.C. 1982

### **Drew, Joseph**

No biographical data available

The most sober-thinking man, the most profound philosopher, is bewildered when he tries to grasp, even in thought, the immensity of space; and no writer, however logical his mind, has yet conveyed, by analogy or otherwise, any adequate or satisfactory idea of that infinity of distance through which those brilliant orbs perform their allotted course.

*Our Home in the Stars*

Our Home in the Stars (p. 22)

Elliot Stock. London, England. 1872

### **Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

To put the conclusion rather crudely – space is not a lot of points close together; it is a lot of distances interlocked.

*The Mathematical Theory of Relativity*

Chapter I, Section 1 (p. 10)

At The University Press. Cambridge, England. 1930

When we have taken together the sun and all the naked-eye stars and many hundreds of millions of telescopic stars, we have not reached the end of things; we have explored with one island – and oasis in the desert of space. Other islands lie beyond.

*The Expanding Universe*

Chapter I (p. 3)

At The University Press. Cambridge, England. 1952

### **Empson, William** 1906–84

English literary critic and poet

Space is like earth, rounded, a padded cell;  
Plumb the stars' depth, your lead bumps you behind...

*The Complete Poems of William Empson*

The World's End (p. 13)

University Press of Florida. Gainesville, Florida, USA. 2001

### **Faraday, Michael** 1791–1867

English physicist and chemist

...I do not perceive in any part of space, whether (to use the common phrase) vacant or filled with matter, anything but forces and the lines in which they are exerted.

Notes, 3 (p. 320)  
Simon & Schuster. New York, New York, USA. 1996

**Frost, Robert** 1874–1963  
American poet

Space ails us moderns: we are sick with space.  
Its contemplation makes us out as small  
As a brief epidemic of microbes.

*Complete Poems of Robert Frost*  
The Lesson for Today  
Henry Holt & Company. New York, New York, USA. 1949

**Gauss, Johann Carl Friedrich** 1777–1855  
German mathematician, physicist, and astronomer

We must confess in all humility that, while number is a product of our mind alone, space has a reality beyond the mind whose rules we cannot completely prescribe.

In Charles W. Misner et al.  
*Gravitation*  
Part III, Chapter 8 (p. 195)  
W.H. Freeman & Company. San Francisco, California, USA. 1973

**Giberne, Agnes** 1845–1939  
English writer

...there is no getting to the borders of space. As one telescope after another is made, each one stronger in power and able to reach farther than the last, still more and more stars are seen, and yet more and more behind and beyond, in countless millions.

*Sun, Moon, and Stars*  
Chapter I (p. 5)  
Seeley & Co., Ltd. London, England. 1894

**Gibran, Kahlil** 1883–1931  
Lebanese-American philosophical essayist

Space is not space between the earth and the sun to one who looks down from the windows of the Milky Way.

*Sand and Foam: A Book of Aphorisms* (p. 7)  
Alfred A. Knopf. New York, New York, USA. 1959

**Glenn, Jr., John** 1921–  
American astronaut and politician

In space one has the inescapable impression that here is a virgin area of the universe in which civilized man, for the first time, has the opportunity to learn and grow without the influence of ancient pressures. Like the mind of a child, it is yet untainted with acquired fears, hate, greed, or prejudice.

In Kevin W. Kelley  
*The Home Planet*  
With Plate 136  
Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1988

**Grissom, Virgil I.** 1926–67  
American astronaut

If we die, we want people to accept it. We are in a risky business, and we hope that if anything happens to us it will not delay the program. The conquest of space is worth the risk of life.

In John Andrews Barbour  
*Footprints on the Moon* (p. 125)  
Associated Press. New York, New York, USA. 1969

**Guillemin, Amédée** 1826–93  
French journalist and scientific writer

...in the contemplation of celestial phenomena, the idea of infinite duration impresses itself on the mind with the same irresistible power as the idea of the infinity of space.

*The Heavens: An Illustrated Handbook of Popular Astronomy* (2nd edition)  
The Heavens (p. 6)  
Richard Bentley. London, England. 1567

**Heisenberg, Werner Karl** 1901–76  
German physicist and philosopher

Space is blue and birds fly through it.

In Harald Fritzsch  
Translated by Jean Steinberg  
*The Creation of Matter: The Universe from Beginning to End*  
Chapter 1 (pp. 12–13)  
Basic Books, Inc. New York, New York, USA. 1984

**Herschel, Friedrich Wilhelm**  
**(Sir William)** 1738–1822  
English astronomer

I have looked farther into space than ever human being did before me. I have observed stars of which the light, it can be proved, must take two millions of years to reach this earth!

In James P. Holcombe  
*Literature in Letters, Or, Manners, Art, Criticism, Biography, History, and, and Morals*  
Book Fifth, Chapter XXV (p. 445)  
D. Appleton & Co. New York, New York, USA. 1866

**Hey, Nigel S.** 1936–  
American science writer

People...regardless of their educational, religious, or economic background, are blessed with the ability to

look into the sky and marvel at the greatness of all that is out there. ...It transports us beyond ourselves and our artifacts. It is another way in which we are able to emerge from our self-centered psychological neighborhoods, to explore a multidimensional realm where self is of no particular significance. It is one path among many through which individual people may comprehend the close community of all life and all humanity, and, with the accession of humility, the rightness of compassion and peace.

*Solar System*

Introduction (pp. 7–8)

Weidenfield & Nicolson. London, England. 2002

### **Hubble, Edwin Powell** 1889–1953

American astronomer

The outstanding feature, however, is the possibility that the velocity-distance relation may represent the de Sitter effect, and hence that numerical data may be introduced into discussions of the general curvature of space.

A Relation Between Distance and Radial Velocity Among Extra-Galactic Nebulae

*Proceedings of the National Academy of Science*, Volume 15, 1929 (p. 168)

### **Ivy, Andrew C.**

American physician

Through science we seek to awaken man to his philosophical significance in the setting of the universe. This activity of science has never been more dominant than it is today. For, whereas the men of yesterday were interested in extending their frontiers merely over the face of the earth, we are today extending our frontiers into outer space, thinking not of One World but of many. We are hoping to solve the mysteries of the void.

In John P. Marbarger

*Space Medicine*

Foreword (p. 9)

The University of Illinois Press. Urbana, Illinois, USA. 1951

### **Jammer, Max** 1915–

Israeli physicist and philosopher

Space is as different from position as time is different from motion.

*Concepts of Space: The History of Theories of Space in Physics*

Chapter 3 (p. 58)

Harvard University Press. Cambridge, Massachusetts, USA. 1969

...the problem of space will have to be classed as unfinished business.

*Concepts of Space: The History of Theories of Space in Physics*

Chapter 5 (p. 214)

Harvard University Press. Cambridge, Massachusetts, USA. 1969

### **Jeans, Sir James Hopwood** 1877–1946

English physicist and mathematician

The immensity of space is paralleled by that of time.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1928*

The Wider Aspects of Cosmogony (p. 171)

Government Printing Office. Washington, D.C. 1929

...space, regarded as a receptacle for radiant energy, is a bottomless pit.

Supplement to "Nature"

*Nature*, Volume 122, Number 3079, November 3, 1928 (p. 698)

### **Kant, Immanuel** 1724–1804

German philosopher

Space is not a conception which has been derived from outward experiences. For, in order that certain sensations may relate to something without me (that is, to something which occupies a different part of space from that in which I am); in like manner, in order that I may represent them not merely as without, of, and near to each other, but also in separate places, the representation of space must already exist as a foundation. Consequently, the representation of space cannot be borrowed from the relations of external phenomena through experience; but, on the contrary, this external experience is itself only possible through the said antecedent representation.

In *Great Books of the Western World* (Volume 42)

*Critique of Pure Reason*

First Part, Of Space, Metaphysical Exposition of this Conception, 1  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### **Kennedy, John F.** 1917–63

26th president of the USA

Space offers no problems of sovereignty; by resolution of this Assembly, the members of the United Nations have foresworn any claim to territorial rights in outer space or on celestial bodies, and declared that international law and the United Nations Charter will apply.

Address before the 18th General Assembly of the United Nations

September 20, 1963

We choose to go to the moon. We choose to go to the moon in this decade and do the other things, not because they are easy, but because they are hard, because that goal will serve to organize and measure the best of our energies and skills, because that challenge is one that we are willing to accept, one we are unwilling to postpone, and one which we intend to win, and the others, too.

Address at Rice University

Houston, Texas

September 12, 1962

...the eyes of the world now look into space, to the moon and to the planets beyond, and we have vowed that we shall not see it governed by a hostile flag of conquest, but by a banner of freedom and peace.

Address at Rice University

Houston, Texas

September 12, 1962

The exploration of space will go ahead, whether we join in it or not, and it is one of the great adventures of all

time, and no nation which expects to be the leader of other nations can expect to stay behind in the race for space.

Address at Rice University  
Houston, Texas  
September 12, 1962

...this city of Houston, this State of Texas, this country of the USA was not built by those who waited and rested and wished to look behind them. This country was conquered by those who moved forward – and so will space.

Address at Rice University  
Houston, Texas  
September 12, 1962

### **Keyser, Cassius Jackson** 1862–1947

American mathematician

It will be sufficient to regard space as being what, to the layman and to the student of natural science, it has always seemed to be: a vast region or room roundabout us, an immense exteriority, locus of all suspended and floating objects of outer sense, the whence, where and whither of motion, theater, in a word, of the ageless drama of the physical universe.

*The Human Worth of Rigorous Thinking: Essays and Addresses*  
The Walls of the World (p. 84)  
Columbia University Press. New York, New York, USA. 1916

### **Kidger, Mark**

No biographical data available

No explorer, no nation, has ever become great by retreating in the face of difficulties. If we give up on space now, not only will we be turning our back on the future, but a great many lives will have been sacrificed in vain.

*Astronomical Enigmas*

Afterword (p. 271)

The Johns Hopkins University Press. Baltimore, Maryland, USA. 2005

### **Lardner, Dionysius** 1793–1859

British physicist and astronomer

That the infinitude of space should exist without a purpose, unoccupied by any works of creation, is plainly incompatible with all our notions of the character and attributes of the Author of the universe, whether derived from the voice of revelation or from the light of nature.

*Popular Lectures on Science and Art* (Volume 2)

The Stellar Universe (Second Lecture) (p. 381)

Greeley & McElrath. New York, New York, USA. 1846

### **Leonov, Aleksei** 1934–

Soviet cosmonaut

What struck me most was the silence. It was a great silence, unlike any I have encountered on Earth, so vast and deep that I began to hear my own body: my heart beating, my blood vessels pulsing, even the rustle of my muscles moving over each other seemed audible. There were more stars in the sky than I had expected.

The sky was deep black, yet at the same time bright with sunlight.

*The View from Out There: In Words and Pictures*  
*Life*, Volume 11, Number 13, November, 1988 (p. 197)

### **Lewis, Gilbert Newton** 1875–1946

American chemist

...when we analyze the highly refined concept of space used by mathematicians we find it to be quite similar to the concept of number.

*The Anatomy of Science*

Chapter II (p. 29)

Yale University Press. New Haven, Connecticut, USA. 1926

### **Locke, John** 1632–1704

English philosopher and political theorist

...to measure motion, space is as necessary to be considered as time....[They] are made use of to denote the position of finite: real beings, in respect one to another, in those infinite uniform oceans of duration and space.

*An Essay Concerning Human Understanding* (Volume 1)

Chapter XIV (pp. 116, 124, 250, 261)

At The Clarendon Press. Oxford, England. 1894

### **Lodge, Sir Oliver**

Those who study the stars have impressed upon them the existence of the most immeasurable distances, which yet are swallowed up as nothing in the infinitude of space.

*Pioneers of Science*

Chapter XVIII (p. 397)

Macmillan & Company Ltd. London, England. 1905

### **Macvey, John W.**

No biographical data available

The land lies sleeping under the enveloping mantle of night. Bright stars gleam like jewels from out the velvet darkness of the moonless sky. Beyond these points of celestial beauty, in depths frightening in their sheer immensity, lies realms powdered in stellar glory.

*Whispers from Space*

Chapter 1

Macmillan Publishing Company. New York, New York, USA. 1973

### **Maxwell, James Clerk** 1831–79

Scottish physicist

...the aim of the space-crumplers is to make its curvature uniform everywhere, that is over the whole of space whether that whole is more or less than  $\tilde{N}$ . The direction of the curvature is not related to one of the  $x y z$  more than another or to  $-x -y -z$  so that as far as I understand we are once more on a pathless sea, starless, windless and poleless...

*The Scientific Letters and Papers of James Clerk Maxwell: Volume 2, 1862–1873*

Postcard to Peter Guthrie Tait, 11 November, 1874 (p. 137)

Clarendon Press. Oxford, England. 1988

**Mitchel, Ormsby MacKnight** 1805–62

American astronomer

Beyond the limits of the earth, a multitude of objects present themselves for examination . . .

*The Orbs of Heaven*

Introductory (p. 6)

Office of the National Illustrated Library. London, England. 1851

Worlds and systems, and schemes and clusters and universes, rise in sublime perspective, fading away in the unfathomable regions of space, until even thought itself fails in its efforts to plunge across the gulf by which we are separated from these wonderful objects.

*The Planetary and Stellar Worlds*

Lecture VIII (p. 216)

T. Nelson &amp; Sons. London, England. 1859

**Morehouse, George Wilkinson** 1840–?

American naturalist

I raise my eyes and look outward into space. I see the wilderness of worlds. The one on which I stand seems of immense size. The innumerable multitude beyond fade in the distance.

*The Wilderness of Worlds*

Preface (p. 4)

Peter Eckler, Publisher. New York, New York, USA. 1898

**Murray, Bruce** 1932–

American professor of planetary science and geology

Space . . . is a colorful thread intimately woven into the enormous tapestry of human existence and experience.

In Ray Bradbury, Arthur C. Clarke, Bruce Murray, Carl Sagan, and Walter Sullivan

*Mars and the Mind of Man*

Bruce Murray (p. 47)

Harper &amp; Row, Publishers. New York, New York, USA. 1973

**Newton, Sir Isaac** 1642–1727

English physicist and mathematician

Absolute space, in its own nature, without relation to anything external, remains always similar and immovable.

*Mathematical Principles of Natural Philosophy*

Scholium, II

E.P. Dutton &amp; Company. New York, New York, USA. 1922

**Nichol, John Pringle** 1804–59

Scottish educator, astronomer, and economist

We have gazed awhile upon the gorgeous firmaments of space, and descried not a trace, not a hint, of anything like an end to their number, or a boundary to their un-repeated variety of form.

*The Stellar Universe*

Conclusion (p. 223)

John Johnstone. London, England. 1848

**Pearson, Karl** 1857–1936

English mathematician

The mystery of space, whether it be the finite space of perception or the infinite space of conception, lies in, and not outside, each human consciousness.

*The Grammar of Science* (2nd edition) (p. 159)

Adam &amp; Charles Black. 1900

**Poe, Edgar Allan** 1809–49

American short story writer

Our telescopes and our mathematical investigations assure us on every hand – notwithstanding the cant of the more ignorant of the priesthood – that space, and therefore that bulk, is an important consideration in the eyes of the Almighty.

*The Works of Edgar Allan Poe* Volume 2

The Island of the Fay (p. 102)

Charles Scribner's Sons. New York, New York, USA. 1914

**Pouchet, Félix Archimède** 1800–72

French biologist

Space being infinite, and our minds finite, they can only take in some small portions of it, and' yet, though these are very limited compared to the field of immensity, they are enough to confound the human comprehension.

*The Universe: Or, The Infinitely Great and the Infinitely Little*

Book I, Chapter I (p. 733)

Blackie &amp; Son. London, England. 1892

**Ockels, Wubbo** 1946–

Dutch astronaut and aerospace engineer

Space is so close: It took only eight minutes to get there and twenty to get back.

The View from Out There: In Words and Pictures

*Life*, Volume 11, Number 13, November, 1988 (p. 198)**Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

Space is only a word that we have believed a thing.

*The Foundations of Science*

Author's Preface to Translation (p. 5)

The Science Press. New York, New York, USA. 1913

**Ruskin, John** 1819–1900

English writer, art critic, and social reformer

It is utterly impossible for an edifice altogether of brick to look affected or absurd; it may look rude, it may look vulgar, it may look disgusting, in a wrong place; but it cannot look foolish, for it is incapable of pretension.

*The Poetry of Architecture: Cottage, Villa, Etc.*

The Villa (pp. 166–167)

John Wiley &amp; Sons. New York, New York, USA. 1877

**Schiller, Friedrich** 1759–1805

German poet, philosopher, historian, and dramatist

Tell me no more, I pray, of your suns and nebulous hazes; Think you Nature is vast only to set you a sum? Nothing

in infinite space is so august as your object, But there is nought august, friend, in indefinite space.

*The Poems of Schiller*

To the Astronomers (p. 312)

H. Holt & Co. New York, New York, USA. 1902

### Shaw, James Byrnie

American mathematician

Space is neither an external absolute whose laws we discover, nor is it a purely artificial game with which we amuse ourselves; it is the result of the living act of creation of the intellect.

*Lectures on the Philosophy of Mathematics* (p. 40)

The Open Court Publishing Co. Chicago, Illinois, USA. 1918

### Siegel, Eli 1902–78

American philosopher, poet, critic, and founder of Aesthetic Realism

Space won't keep still, and it won't budge either: so give up trying.

*Damned Welcome*

Aesthetic Realism, Maxims, Part Two, #396 (p. 153)

Definition Press. New York, New York, USA. 1972

### Smith, Logan Pearsall 1865–1946

American author

So gazing up on hot summer nights at the London stars, I cool my thoughts with a vision of the giddy, infinite, meaningless waste of Creation, the blazing Suns, the Planets and frozen Moons, all crashing blindly forever across the void of space.

*Trivia*

Book II, Mental Vice (p. 97)

Doubleday, Page & Company. Garden City, New York, USA. 1917

I think of Space, and the unimportance in its unmeasured vastness, of our toy solar system; I lose myself in speculations of the lapse of Time, reflecting how at the best our human life on this minute and perishing planet is as brief as a dream.

*Trivia*

Book II, Self-Analysis (pp. 121–122)

Doubleday, Page & Company. Garden City, New York, USA. 1917

### Somerville, Mary 1780–1872

English mathematician

...however profoundly we may penetrate the depths of space, there still remain innumerable systems, compared with which those which seem so mighty to us must dwindle into insignificance, or even become invisible; and that not only man, but the globe he inhabits, nay the whole system of which it forms so small a part, might be annihilated, and its extinction be unperceived in the immensity of creation.

*Mechanism of the Heavens*

Preliminary Dissertation (p. vii)

John Murray. London, England. 1831

### Sorensen, Ulrich

No biographical data available

Peaceful uses of Outer Space provide a powerful tool to bring about global cooperation and thus to further progress for the well-being of humanity, protecting our planet's environment and managing its resources. There is a Universe to explore and applications to be developed and utilised for the benefit of all mankind.

Statement to the United Nations, Fourth Committee, October 7, 2002

### Sylvester, James Joseph 1814–97

English mathematician

Space is the *Grand Continuum* from which, as from an inexhaustible reservoir, all the fertilizing ideas of modern analysis are derived; and as Brindley, the engineer, once allowed before a parliamentary committee that, in his opinion, rivers were made to feed navigable canals, I feel almost tempted to say that one principal reason for the existence of space, or at least one principal function which it discharges, is that of feeding mathematical invention.

*The Collected Mathematical Papers of James Joseph Sylvester* (Volume 2)

Presidential Address to the British Association

Exeter British Association Report (1869) (p. 659)

University Press. Cambridge, England. 1904–1912

### Tennyson, Alfred (Lord) 1809–92

English poet

...The clear galaxy  
Shorn of its hoary lustre, wonderful,  
Distinct and vivid with sharp point of light,  
Blaze within blaze, an unimagined depth  
And harmony of planet-girded suns  
And moon – encircled planets, wheel in wheel,  
Arch'd the wan sapphire. Nay, the hum of men.  
Or other things talking in unknown tongues,  
And notes of busy life in distant worlds  
Beat like a far wave on my anxious ear.

*Alfred Tennyson's Poetical Works*

Timbuctoo, l. 105–113

Oxford University Press, Inc. London, England. 1953

### Mulder (Fictional character)

MULDER: Hey, Scully, we send those men up into space to unlock the doors of the universe, and we don't even know what's behind them.

*The X-Files*

Space

Television program

Season 1, 1993

### Thomson, Sir John Arthur 1861–1933

Scottish naturalist

There is grandeur in the spectacle of the star-strewn sky, so apparently crowded, but there are thousands of worlds

unseen for everyone our unaided eyes can image, and yet the astronomers tell us that the emptiness of space is its most striking characteristic.

*The System of Animate Nature* (Volume 1)

Lecture I (p. 30)

William & Norgate. London, England. 1920

**Tsiolkovsky, Konstantin Eduardovich** 1857–1935  
Russian research scientist

Man will not always stay on earth; the pursuit of light and space will lead him to penetrate the bounds of the atmosphere, timidly at first, but in the end to conquer the whole of solar space.

In Herbert Friedman

*The Amazing Universe*

Chapter I (p. 28)

National Geographic Society. Washington DC. 1980

**Tyndall, John** 1820–93  
Irish-born English physicist

We cannot think of space as finite, for wherever in imagination we erect a boundary we are compelled to think of space as existing beyond that boundary. Thus by the incessant dissolution of limits we arrive at a more or less adequate idea of the infinity of space.

*Fragments of Science for Unscientific People*

Chapter I (p. 9)

D. Appleton & Co. New York, New York, USA. 1875

**vas Dias, Robert**

Anglo-American poet and writer

The premise... is that outer space is as much a territory of the mind as it is a physical concept.

*Inside Outer Space: New Poems of the Space Age*

Introduction (p. xxxix)

Anchor Press. Garden City, New York, USA. 1970

**von Bitter Rucker, Rudy** 1946–

American mathematician and science fiction writer

What is the shape of space? Is it flat, or is it bent? Is it nicely laid out, or is it warped and shrunken? Is it finite, or is it infinite? Which of the following does space resemble more: (a) a sheet of paper, (b) an endless desert, (c) a soap bubble, (d) a doughnut, (e) an Escher drawing, (f) an ice cream cone, (g) the branches of a tree, or (h) a human body?

*The Fourth Dimension: Toward a Geometry of Higher Reality*

Chapter 7 (p. 91)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1984

**von Braun, Wernher** 1912–77

German-American rocket science

...the progress of mankind here on Earth is directly linked to the future that man builds for himself in space.

In Erik Bergaust

*Wernher von Braun*

A Horse Named Susie (p. 373)

National Space Institute. Washington, D.C. 1976

Oh, to be in space.... It's so quiet up there.

Reach for the Stars

*Time*, February 17, 1958

There is beauty in space, and it is orderly. There is no weather, and there is regularity. It is predictable.

Reach for the Stars

*Time*, February 17, 1958

...don't tell me that man doesn't belong out there. Man belongs wherever he wants to go – and he'll do plenty well when he gets there.

Reach for the Stars

*Time*, 17 February, 1958

**von Humboldt, Alexander** 1769–1859

German naturalist and explorer

In infinity of space as well as in eternity of time, all things are shrouded in an uncertain and frequently deceptive twilight.

Translated by E.C. Otte

American physicist and educator

**Thorne, Kip S.** 1940–

American theoretical physicist

Space tells matter how to move...and matter tells space how to curve.

In Charles W. Misner et al

*Gravitation*

Part I, Chapter 1 (p. 23)

W.H. Freeman & Company. San Francisco, California, USA. 1973

...in essence, the curvature in space created by the electromagnetic field is the electromagnetic field; and this curvature can in principle be detected by purely geometric measurements.

The Dynamics of Space-Time

*International Science and Technology*, December, 1963 (p. 72)

**Whewell, William** 1794–1866

English philosopher and historian

...space is not an object of which we perceive the properties, but a form of our perception; not a thing which affects our senses, but an idea to which we conform the impressions of sense.

*History of Scientific Ideas: Being the First Part of The Philosophy of the Inductive Sciences* (3rd edition)  
Part I, Book II, Chapter III (p. 96)  
John W. Parker & Son. London, England. 1858

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

All space measurement is from stuff in space to stuff in space.

*The Aims of Education and Other Essays*  
Chapter X (p. 233)  
The Macmillan Company. New York, New York, USA. 1959

**Whitman, Walt** 1819–92  
American poet, journalist, and essayist

Now while the great thoughts of space and eternity fill me I will measure myself by them. And now touch'd with the lives of other globes arrived as far long as those of the earth or waiting to arrive, or pass'd on farther than those of the earth, I henceforth no more ignore them than I ignore my own life.

*Complete Poetry and Collected Prose*  
Night on the Prairies  
The Library of America. New York, New York, USA. 1982

Every cubic inch of space is a miracle.  
*Complete Poetry and Collected Prose*  
Miracles  
The Library of America. New York, New York, USA. 1982

**Winchell, Alexander** 1824–91  
American geologist

In the midst of this universe of seething movements is our home. The mind, uplifted in the effort to contemplate them and grasp their method, grows giddy and impotent. How sublime these activities! To what a numerous and lofty companionship does our little planet belong! Hard it seems to be imprisoned here while the realm of the universe tempts us to its exploration. How can a human soul content itself to roll and whirl through space during its mortal days, and eat and sleep and trifle, like rats in a ship at sea, without wondering where we are and whither we are bound.

*World-Life or Comparative Geology*  
Part I, Chapter II, Section 4.7 (p. 142)  
S.C. Griggs & Company. Chicago, Illinois, USA. 1883

**Zubrin, Robert** 1952–  
Engineer

Like the philosophy of Greece, the paintings of the Renaissance and the music of the Enlightenment, the explosion of knowledge about our solar system and the surrounding universe will be remembered for thousands of years as the defining brilliance of our age. To destroy [the space] program for the sake of bean counting, or perhaps as part of some obscure political maneuver, is not tolerable. It is not just a mistake, it is a crime – an

infamous crime against civilization that is comparable to the burning of the Library of Alexandria.

*Space News*, September 13, 1999

Americans are proud of our space exploration program, and rightly so. It is a statement that we continue to be a nation of explorers and pioneers. But more than that, it is a statement that we are a truly great nation, great not because of our military might...but because we do great things for all humanity and for all time. Killing our space exploration program amounts to nothing less than pulling some of the stars off our flag. This is a desecration we cannot allow.

*Space News*, September 13, 1999

## SPACE AGE

**Clarke, Arthur C.** 1917–  
English science and science fiction writer

Across the gulf of centuries, the blind smile of Homer is turned upon our age. Along the echoing corridors of time, the roar of the rockets merges now with the creak of the wind-taut rigging. For somewhere in the world today, still unconscious of his destiny walks the boy who will be the first Odysseus of the Age of Space...

*The Challenge of the Spaceship*  
Envoi (p. 213)  
Harper & Brothers. New York, New York, USA. 1959

## SPACE AND TIME

**Berlinski, David** 1942–  
American mathematician

Whatever the physicists may say, both space and time, it would seem. Go on and on: the imaginary eye pushed to the very edge of space and time finds nothing to stop it from pushing further, every conceivable limit a seductive invitation to examine the back side of the beyond.

*A Tour of the Calculus*  
Introduction (p. xii)  
Pantheon Books. New York, New York, USA. 1995

**Borel, Félix Edouard Justin Emile** 1871–1956  
French mathematician

Mathematicians call this combination [space and time] a *quadratic form of the differentials of four variables*, but we may call it more briefly, with Minkowski, “the Universe.”

*Space and Time*  
Introduction (pp. 35–36)  
Dover Publications. New York, New York, USA. 1960

**Carlyle, Thomas** 1795–1881  
English historian and essayist

But deepest of all illusory Appearances, for hiding Wonder, as for many other ends, are your two grand

fundamental world-enveloping Appearances, SPACE and TIME.

*Sartor Resartus*

Book III, Chapter VIII (p. 236)

Ginn & Co. Boston, Massachusetts, USA. 1896

## SPACE EXPLORATION

**Armstrong, Neil A.** 1930–

American astronaut

The *Eagle* has landed.

*The Washington Post*, July 21, 1969 (p. 1)

**Arnold, James R.**

No biographical data available

Space is the empty place next to the full place where we live. I believe we will be true to our nature and go there. The Frontier in Space. Will One Be True to Our Nature and Accept the Challenge of the Next Frontier?

*American Scientist*, Volume 68, Number 3, May–June, 1980 (p. 304)

**Asimov, Isaac** 1920–92

American author and biochemist

Throughout the history of humanity, we have been extending our range until it is now planet-wide, covering all parts of the Earth's surface and reaching to the bottom of the ocean, to the top of the atmosphere, and beyond it to the Moon. We will flourish only as long as we continue to extend that range, and although the potential range is not infinite, it is incredibly vast even by present standards. We will eventually extend our range to cover the whole of the solar system, and then we will head outward to the stars.

In James Burke, Jules Bergman and Isaac Asimov

*The Impact of Science on Society*

Our Future in the Cosmos – Space (p. 79)

National Aeronautics and Space Administration. Washington, D.C. 1985

Unless we are willing to settle down into a world that is our prison, we must be ready to move beyond Earth....

*The Impact of Science on Society*

Our Future in the Cosmos – Space (p. 80)

National Aeronautics and Space Administration. Washington, D.C. 1985

**Bernal, John Desmond** 1901–71

Irish-born physicist and X-ray crystallographer

On earth, even if we should use all the solar energy which we receive, we should still be wasting all but one two-billionths of the energy the sun gives out. Consequently, when we have learnt to live on this solar energy and also to emancipate ourselves from the earth's surface, the possibilities of the spread of humanity will be multiplied accordingly.... There will, from desire or necessity, come the idea of building a permanent home for men in space.... At first space navigators, and then scientists

whose observations would be best conducted outside the earth, and then finally those who for any reason were dissatisfied with earthly conditions would come to inhabit these bases and found permanent spatial colonies.

*The World, the Flesh and the Devil: An Enquiry Into the Future of the Three Enemies of the Rational Soul*

Chapter II (pp. 11–12)

Indiana University Press. Bloomington, Indiana, USA. 1969

**Blagonravov, Anatoly A.** 1894–1975

Russian scientist

The exploration of the cosmos – the moon and the planets – is a noble aim. Our generation has the right to be proud of the fact that it has opened the space era of mankind.

In Mose L. Harvey

The Lunar Landing and the US–Soviet Equation

*Bulletin of the Atomic Scientists*, Volume 25, Number 7, September, 1969 (p. 29)

**Bradbury, Ray** 1920–

American writer

Get along to Mars and beyond.

The journey is long, the end uncertain, and there is more dark along the way than light, but you can whistle. Come with me by the wall of the great tombyards of all time which lie a billion years ahead. What shall we whistle as we stroll in our rocket, hoping to make it by the vast darkness where shadows wait to seize and keep us?

Follow me.

I know a tune.

Here...listen.

In Ray Bradbury, Arthur C. Clarke, Bruce Murray, Carl Sagan, and Walter Sullivan

*Mars and the Mind of Man*

Ray Bradbury (p. 143)

Harper & Row, Publishers. New York, New York, USA. 1973

...I would not see our candle blown out in the wind. It is a small thing, this dear gift of life handed us mysteriously out of immensity. I would not have that gift expire. ... What's the use of looking at Mars through a telescope, sitting on panels, writing books, if it isn't to guarantee, not just the survival of mankind, but mankind surviving forever!"

In Ray Bradbury, Arthur C. Clarke, Bruce Murray, Carl Sagan and Walter Sullivan

*Mars and the Mind of Man*

Ray Bradbury (p. 133)

Harper & Row, Publishers. New York, New York, USA. 1973

**Clarke, Arthur C.** 1917–

English science and science fiction writer

There are still some scientists who consider that there is no point in sending men into space, even when it becomes technically possible; machines, they argue, can do all that is necessary. Such an outlook is incredibly shortsighted;

worse than that, it is stupid, for it completely ignores human nature.

Lecture

St Martin's Technical School on Charing Cross Road, October 5, 1946

Though the specific ideals of astronautics are new, the motives and impulses underlying them are old as the race – and in the ultimate analysis, they owe as much to emotion as to reason. Even if we could learn nothing in space that our instruments would not already tell us, we should go there just the same.

Lecture

St Martin's Technical School on Charing Cross Road, October 5, 1946

To find anything comparable with our forthcoming ventures into space, we must go back far beyond Columbus, far beyond Odysseus – far, indeed, beyond the first apeman. We must contemplate the moment, now irrevocably lost in the mists of time, when the ancestor of all of us came crawling out of the sea.

*Profiles of the Future: An Inquiry into the Limits of the Possible*  
Chapter 8 (p. 94)

Harper & Row, Publishers. New York, New York, USA. 1973

This [the sea] is where life began, and where most of this planet's life remains to this day, trapped in a meaningless cycle of birth and death. Only the creatures who dared the hostile, alien land were able to develop intelligence; now that intelligence is about to face a still greater challenge. It may even be that this beautiful Earth of ours is no more than a brief resting-place between the sea of salt where we were born, and the sea of stars on which we must now venture forth.

*Profiles of the Future: An Inquiry into the Limits of the Possible*  
Chapter 8 (p. 94)

Harper & Row, Publishers. New York, New York, USA. 1973

Even if we never reach the stars by our own efforts, in the millions of years that lie ahead it is almost certain that the stars will come to us. Isolationism is neither a practical policy on the national or the cosmic scale. And when the first contact with the outer universe is made, one would like to think that Mankind played an active and not merely a passive role – that we were the discoverers, not the discovered.

*The Exploration of Space*

Chapter 17 (p. 182)

Harper & Brothers. New York, New York, USA. 1951

With the landing of the first spaceship on Mars and Venus, the Childhood of our race was over and history as we know it began...

*The Exploration of Space*

Chapter 18 (p. 195)

Harper & Brothers. New York, New York, USA. 1951

The challenge of the great spaces between the worlds is a stupendous one; but if we fail to meet it, the story of our race is drawing to a close. Humanity will have

turned its back upon the still untrodden heights and will be descending again the long slope that stretches, across a thousand million years of time, down to the shores of the primeval sea.

*Interplanetary Flight: An Introduction to Astronautics*

Chapter 10 (p. 127)

Harper & Row, Publishers. New York, New York, USA. 1960

Long before the Sun's radiation has shown any measurable increase, Man will have explored all the Solar System and, like a cautious bather testing the temperature of the sea, will be making breathless little forays into the abyss that separates him from the stars.

*The Challenge of the Spaceship*

The Challenge of the Spaceship (p. 4)

Harper & Brothers. New York, New York, USA. 1959

Interplanetary travel is now the only form of "conquest and empire" compatible with civilization. Without it, the human mind, compelled to circle forever in its planetary goldfish bowl, must eventually stagnate.

*The Challenge of the Spaceship*

The Challenge of the Spaceship (p. 7)

Harper & Brothers. New York, New York, USA. 1959

...there is no way back into the past; the choice, as Wells once said, is the universe – or nothing. Though men and civilizations may yearn for rest, for the dream of the lotus-eaters, that is a desire that merges imperceptibly into death. The challenge of the great spaces between the worlds is a stupendous one; but if we fail to meet it, the story of our race will be drawing to its close.

*Interplanetary Flight: An Introduction to Astronautics*

Chapter 10 (p. 127)

Harper & Row, Publishers. New York, New York, USA. 1960

...who can guess what strange roads there may yet be on which we may travel to the stars?

*The Promise of Space*

To the Stars (p. 299)

Harper & Row, Publishers. New York, New York, USA. 1968

### **Commoner, Barry** 1917–

American biologist, ecologist, and educator

Explorations of space, like the earlier explorations, are great adventures because they are bold, and they are bold because they are hazardous.

*Science and Survival*

Chapter 4 (p. 56)

The Viking Press. New York, New York, USA. 1966

### **Cousins, Norman** 1912–90

American editor and author

The justification for exploring the cosmos rests not on tangible benefits, but on philosophical grounds and on our instinctive need to evolve.

*Rendezvous with Infinity*

*Cosmic Search Magazine*, Volume 1, Number 1, January 1, 1979 (p. 30)

**Deudney, Daniel**

American political scientist

...for all our looking and probing of the universe, we have yet to find any place as habitable as the remotest, most forbidding parts of this planet. Space exploration has taught us just how rare and precious the earth is.

*Space: The High Frontier in Perspective*  
Toward an Earth-Oriented Space Program (p. 51)  
Worldwatch Institute. 1982

**Dyson, Freeman J.** 1923–

American physicist and educator

When we are a million species spreading through the galaxy, the question “Can man play God and still stay sane?” will lose some of its terrors. We shall be playing God, but only as local deities and not as lords of the universe. There is safety in numbers. Some of us will become insane, and rule over empires as crazy as Doctor Moreau’s island. Some of us will shit on the morning star. There will be conflicts and tragedies. But in the long run, the sane will adapt and survive better than the insane.

*Disturbing the Universe*  
Chapter 21 (pp. 236–237)  
Basic Books, Inc. New York, New York, USA. 1979

Nature’s pruning of the unfit will limit the spread of insanity among species in the galaxy, as it does among individuals on earth. Sanity is, in its essence, nothing more than the ability to live in harmony with nature’s laws.

*Disturbing the Universe*  
Chapter 21 (pp. 236–237)  
Basic Books, Inc. New York, New York, USA. 1979

**Ferris, Timothy** 1944–

American science writer

We who came down from out of the forest seek to grow a forest of knowing among the stars.

*The Mind’s Sky: Human Intelligence in a Cosmic Context*  
It (p. 222)  
Bantam Books. New York, New York, USA. 1992

We don’t know whether human music will mean anything to nonhuman intelligences on other planets. But any creature that comes across Voyager and recognizes the record as an artifact can realize that it was dispatched with no hope of return. That gesture may speak more clearly than music. It says: However primitive we seem, however crude this spacecraft, we knew enough to envision ourselves citizens of the cosmos. ...However small we were, something in us was large enough to want to reach out to discoverers unknown, in times when we shall have perished or changed beyond recognition. ...Whoever and whatever you are, we too once lived in this house of stars, and we thought of you.

*Murmurs of Earth: The Voyager Interstellar Record*  
Voyager’s Music  
Random House, Inc. New York, New York, USA. 1978

**Firsoff, Valdemar Axel** 1910–82

English astronomer and author

Yet if we go into space, let us do so humbly, in the spirit of cosmic piety. We know very little. We are face to face with the great unknown and have no right to assume that we are alone in the Solar System.

*Exploring the Planets*  
Chapter XV (p. 160)  
Sidgwick & Jackson. London, England. 1964

**Gregory, Sir Richard Arman** 1864–1952

British science writer and journalist

Man as a physical being is but a microscopic part of the universe, yet his mind carries him ever upward, and with spirit bold and unconquerable he seeks to reach the summit of Mount Olympus. Infinite space remains to humble his pride in spite of the knowledge he has obtained of the starry heavens; yet he pursues his inquiries into the unknown, and his children’s children will continue to search.

*Discovery; or, The Spirit and Service of Science*  
Chapter I (p. 21)  
Macmillan & Company Ltd. London, England. 1918

**Hale, George Ellery** 1868–1938

American astronomer

Like buried treasures, the outposts of the universe have beckoned to the adventurous from immemorial times. Princes and potentates, political or industrial, equally with men of science, have felt the lure of the uncharted seas of space, and through their provision of instrumental means the sphere of exploration has rapidly widened...

Possibilities of Large Telescopes  
*Harper’s Magazine*, April, 1928 (p. 639)

**Hawking, Stephen William** 1942–

English theoretical physicist

I don’t think the human race will survive the next thousand years, unless we spread into space. There are too many accidents that can befall life on a single planet. But I’m an optimist. We will reach out to the stars.

By Roger Highfield, Science Editor  
Colonies in space may be only hope, says Hawking  
*Telegraph*, Filed: 16/10/2001

**Heinlein, Robert A.** 1907–88

American science fiction writer

But space travel can’t ease the pressure on a planet grown too crowded not even with today’s ships and probably not with any future ships – because stupid people won’t leave the slopes of their home volcano even when it starts to smoke and rumble. What space travel does do is drain off the best brains: those smart enough to see a catastrophe before it happens and with the guts to pay the price – abandon home, wealth,

friends, relatives, everything – and go. That’s a tiny fraction of one percent. But that’s enough.

*Time Enough for Love*

Chapter XIV (p. 413)

G.P. Putnam’s Sons. New York, New York, USA. 1973

**Heppenheimer, T. A.** 1947–

Aviation writer

...if humanity persists and endures, in time we will come face to face with the evolution of our sun. In a few billion years its slow brightening will speed up as it swells into a red giant. Earth will then be uninhabitable, as will the inner regions of the Solar System. Yet there will be other more clement stars to which our descendents may wish to migrate. Certainly a society that has developed space flight and space colonization will have the advantage of never thereafter having to stand hostage to fortune.

*Toward Distant Suns*

Chapter 13 (p. 244)

Stackpole Books. Harrisburg, Pennsylvania, USA. 1979

**Hey, Nigel S.** 1936–

American science writer

Space scientists and engineers serve the intangible needs of humankind, and share common ground with the poet. It is self-deceptive to suppose that society is wholly bound up in supplying life-or-death needs. Humans are thinkers, explorers, wonderers, and dreamers. If we were not, we would not need space exploration; but then we would also lead a listless and uncreative existence.

*How We Will Explore the Outer Planets* (p. 142)

G.P. Putnam’s Sons. New York, New York, USA. 1973

Most of our knowledge of this marvel-filled universe is due to astronomy, telescopes and to robotic spaceflight. It is impossible to think of anything that more exquisitely embodies the technical genius of humankind, in so small a package, as the interplanetary spacecraft.

*Solar System*

Chapter 3 (p. 61)

Weidenfield & Nicolson. London, England. 2002

**Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

Space isn’t remote at all. It’s only an hour’s drive away if your car could go straight upwards.

*Observer*, September 9, 1979

The seemingly insuperable difficulties of deep-space travel suggest an intention to keep us fixed at home in our own solar system, and the physical nature of our part of the Universe, as well as the basic rules of physics and chemistry, have a warning look about them, like barriers designed to isolate intelligent life. This means that for us, unlike the situation for humble microorganisms, deep-space travel is probably a stark impossibility.

*The Intelligent Universe*

Chapter 6 (p. 156)

Holt, Rinehart & Winston. New York, New York, USA. 1983

**Hubble, Edwin Powell** 1889–1953

American astronomer

Thus the explorations of space end on a note of uncertainty. And necessarily so. We are, by definition, in the very center of the observable region. We know our immediate neighborhood rather intimately. With increasing distance, our knowledge fades, and fades rapidly. Eventually, we reach the dim boundary – the utmost limits of our telescopes. There, we measure shadows, and we search among ghostly errors of measurement for landmarks that are scarcely more substantial.

The search will continue. Not until the empirical resources are exhausted, need we pass on to the dreamy realms of speculation.

*The Realm of the Nebulae*

Chapter VIII (p. 202)

Dover Publications, Inc. New York, New York, USA. 1958

The exploration of space has swept outward in successive waves, first, through the system of the planets, then, through the stellar system, and finally, into the realm of the nebulae. Today we study a region of space so vast and so homogeneous that it may well be a fair sample of the universe. At any rate, we are justified in adopting the assumption as a working hypothesis and attempting to infer the nature of the universe from the observed characteristics of the sample.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1942*

The Problem of the Expanding Universe (p. 119)

Government Printing Office. Washington, D.C. 1943

**Johnson, Lyndon B.** 1908–73

36th president of the USA

No national sovereignty rules in outer space. Those who venture there go as envoys of the entire human race. Their quest, therefore, must be for all mankind, and what they find should belong to all mankind.

News Conference

Johnson City, Texas, 29 August, 1965

**Kennedy, John F.** 1917–63

35th president of the USA

We choose to go to the Moon in this decade and do the other things, not because they are easy – but because they are hard!

Speech, Rice University, 12 September, 1962

I believe that this nation should commit itself to achieving the goal, before this decade is out, of landing a man on the Moon and returning him safely to Earth. No single space project in this period will be more impressive to

mankind, or more important in the long-range exploration of space; and none will be so difficult or expensive to accomplish.

Announcement to American Congress  
25 May, 1961

**Kepler, Johannes** 1571–1630  
German astronomer

Provide ship or sails adapted to the heavenly breezes, and there will be some who will not fear even that void.... So, for those who will come shortly to attempt this journey, let us establish the astronomy: Galileo, you of Jupiter, I of the moon.

In John Lear  
*Kepler's Dream*

Introduction and Interpretation, I (p. 3)  
University of California Press. Berkeley, California, USA. 1965

**Lewis, John S.**  
American professor of planetary science

It is in the interests of all the residents of Earth to see exploration continue and to see our realm of competence expand to fill the Solar System. Like our ancient ancestors at the time of their emergence from the sea onto the land, we are challenged by events to master this great new environment, to drink of its knowledge, and to feast on its boundless resources. Let us not squander this golden opportunity.

In John S. Lewis  
*Physics and Chemistry of the Solar System*  
Chapter XII (p. 517)

Academic Press. San Diego, California, USA. 1995

**Lowell, Percival** 1855–1916  
American astronomer

From time immemorial travel and discovery have called with strange insistence to him who, wandering on the world, felt adventure in his veins. The leaving familiar sights and faces to push forth into the unknown has with magnetic force drawn the bold to great endeavor and fired the thought of those who stayed at home.

*Mars and Its Canals*  
Chapter I (p. 3)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1895

**Lucretius** ca. 99 BCE–55 BCE  
Roman poet

...he passed far beyond the flaming walls of the world and traversed throughout in mind and spirit the immeasurable universe...

In *Great Books of the Western World* (Volume 12)  
*The Nature of the Universe*

Book I, 62 (p. 2)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Makarov, Oleg** 1933–2003  
Soviet cosmonaut

You keep returning to the thought that only very thin walls separate you from the deathly cold and incomprehensible emptiness of space, which can extinguish life instantly and piteously.

The View from Out There: In Words and Pictures  
*Life*, Volume 11, Number 13, November, 1988 (p. 198)

**Martin, Charles-Noël** 1923–  
French nuclear physicist

As men travel further and further into space they are bound to meet sights beyond their wildest expectations.

Translated by A.J. Pomerans  
*The Role of Perception in Science*  
Chapter 4 (p. 92)

Hutchinson of London. London, England. 1963

**Moulton, Forest Ray** 1872–1952  
American astronomer

...there is not the slightest possibility of [travel to other worlds]. There is not in sight any source of energy that would...be necessary to get us beyond the gravitative control of the earth; there is not theory that would guide us through interplanetary space to another world even if we could control our departure from the earth; there is no means of carrying the large amount of oxygen, water, and food that would be necessary for such a long journey; and there is no known way of easing our ether ship down onto the surface of another world, if we could get there at low enough speed to avoid destruction.

*Consider the Heavens*

Chapter VII  
Chapter II (p. 107)

Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1935

**Nixon, Richard M.** 1913–94  
37th president of the USA

We must see our space effort, then, not only as an adventure of today but also as an investment in tomorrow. We did not go to the Moon merely for the sport of it. To be sure, those undertakings have provided an exciting adventure for all mankind and we are proud that it was our nation that met this challenge. But the most important thing about man's first footsteps on the Moon is what they promise for the future.

Statement by President Nixon on the Space Program  
Released from the Office of the White House  
Press Secretary, Key Biscayne, Florida, 7 March, 1970

From time immemorial, man has insisted on venturing into the unknown despite his inability to predict precisely the value of any given exploration. He has been willing to take risks, willing to be surprised, willing to adapt to new experiences. Man has come to feel that such quests are worthwhile in and of themselves – for they represent one way in which he expands his vision and expresses the human spirit. A great nation must always be an exploring nation if it wishes to remain great.

Statement by President Nixon on the Space Program  
Released from the Office of the White House  
Press Secretary, Key Biscayne, Florida, 7 March, 1970

As we enter a new decade, we are conscious of the fact that man is also entering a new historic era. For the first time, he has reached beyond his planet; for the rest of time, we will think of ourselves as men from the planet Earth. It is my hope that as we go forward with our space program, we can plan and work in a way which makes us proud both of the planet from which we come and of our ability to travel beyond it.

Statement by President Nixon on the Space Program  
Released from the Office of the White House  
Press Secretary, Key Biscayne, Florida, 7 March, 1970

**Oberth, Hermann** 1894–1989  
German mathematician and physicist

This is the goal:

To make available for life every place where life is possible.

To make inhabitable all worlds as yet uninhabitable, and all life purposeful.

Translated by G.P.H. de Freville  
*Man into Space: New Projects for Rocket and Space Travel*  
Chapter VIII (p. 167)  
Harper & Brothers. New York, New York, USA. 1957

**O'Neill, Gerard K.** 1927–92  
American physicist

Clearly our first task is to use the material wealth of space to solve the urgent problems we now face on Earth: to bring the poverty-stricken segments of the world up to a decent living standard, without recourse to war or punitive action against those already in material comfort; to provide for a maturing civilization the basic energy vital to its survival.

*The High Frontier*  
Bantam Dell Doubleday Publishing Group. New York, New York, USA. 1978

**Purcell, Edward** 1912–97  
American physicist

All this stuff about traveling around the universe... belongs back where it came from, on the cereal box.

In A.G.W. Cameron (ed.)  
*Interstellar Communication; A Collection of Reprints and Original Contributions*  
Radio Astronomy and Communication Through Space (p. 143)  
W.A. Benjamin, Inc. New York, New York, USA. 1963

**Reade, Winwood** 1838–75  
English philosopher and historian

A time will come when science will transform [our bodies] by means which we cannot conjecture.... And then, the earth being small, mankind will migrate into space, and will cross the airless Saharas which separate

planet from planet, and sun from sun. The earth will become a Holy Land which will be visited by pilgrims from all quarters of the universe.

*The Martyrdom of Man*  
Chapter IV (pp. 459, 460)  
E.P. Dutton & Company. New York, New York, 1926

**Roddenberry, Gene** 1921–91  
American television producer and writer

Let me end with an explanation of why I believe the move into space to be a human imperative. It seems to me obvious in too many ways to need listing that we cannot much longer depend upon our planet's relatively fragile ecosystem to handle the realities of the human tomorrow. Unless we turn human growth and energy toward the challenges and promises of space, our only other choice may be the awful risk, currently demonstrable, of stumbling into a cycle of fratricide and regression which could end all chances of our evolving further or of even surviving.

Hailing Frequencies Open!  
*Planetary Report*, Volume 1, April/May, 1981 (p. 3)

**Russen, David**  
No biographical data available

Since Springiness is a cause of forcible motion; and a Spring will, when bended and let loose, extend its self to its length; could a Spring of well-tempered steel be framed, whose basis being fastened to the Earth, and on the other end placed a Frame or Seat, wherein a Man with other necessaries could abide in safety, this Spring being with Cords, Pullies, or other Engines bent, and then let loose by degrees by those who manage the Pullies, the other end...reach the Moon, where the Person who ascended landing, the Spring might again be bent, till the end touching the earth, should discharge the passenger again in safety.

In Noel Deisch  
The Navigation of Space in Early Speculation and in Modern Research  
*Popular Astronomy*, Volume 38, Number 2, February, 1930 (p. 81)

**Sagan, Carl** 1934–96  
American astronomer and author

Since, in the long run, every planetary civilization will be endangered by impacts from space, every surviving civilization is obliged to become spacefaring – not because of exploratory or romantic zeal, but for the most practical reason imaginable: staying alive.... If our long-term survival is at stake, we have a basic responsibility to our species to venture to other worlds.

*Pale Blue Dot: A Vision of the Human Future in Space*  
Chapter 21 (p. 371)  
Random House, Inc. New York, New York, USA. 1994

Centuries hence, when current social and political problems may seem as remote as the problems of the Thirty

Years' War are to us, our age may be remembered chiefly for one fact: It was the time when the inhabitants of the earth first made contact with the vast cosmos in which their small planet is embedded.

The Solar System

*Scientific American*, Volume 233, Number 3, 1975 (p. 30)

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

...perchance, coming generations will not abide the dissolution of the globe, but, availing themselves of future inventions in aerial locomotion, and the navigation of space, the entire race may migrate from the earth, to settle some vacant and more western planet.... It took but little art, a simple application of natural laws, a canoe, a paddle, and a sail of matting, to people the isles of the Pacific, and a little more will people the shining isles of space. Do we not see in the firmament the lights carried along the shore by night, as Columbus did? Let us not despair or mutiny.

*The Maine Woods*

Paradise (to Be) Regained (p. 58)

Houghton Mifflin Company. New York, New York, USA. 1893

**Tipler, Frank J.** 1947–

American physicist

If the human species, or indeed any part of the biosphere, is to continue to survive, it must eventually leave the Earth and colonize space. For the simple fact of the matter is, the planet Earth is doomed.... Let us follow many environmentalists and regard the Earth as Gaia, the mother of all life (which indeed she is). Gaia, like all mothers, is not immortal. She is going to die. But her line of descent might be immortal...Gaia's children might never die out – provided they move into space. The Earth should be regarded as the womb of life – but one cannot remain in the womb forever.

*The Physics of Immortality: Modern Cosmology, God and the Resurrection of the Dead*

Chapter II (pp. 18–19)

Doubleday & Company, Inc. New York, New York, USA. 1994

**van der Riet Wooley, Sir Richard** 1906–1986

British Astronomer Royal

...the whole procedure [of shooting rockets into space]... presents difficulties of so fundamental a nature, that we are forced to dismiss the notion as essentially impracticable, in spite of the author's insistent appeal to put aside prejudice and to recollect the supposed impossibility of heavier-than-air flight before it was actually accomplished.

Rockets in Space

*Nature*, Supplement, March 14, 1936 (p. 442)

It's utter bilge. I don't think anybody will ever put up enough money to do such a thing...What good would it do us? If we spend the same amount of money on prepar-

ing first-class astronomical equipment we would learn much more about the universe...It is all rather rot.

Utter Bilge

*Time*, January 16, 1956 (p. 42)

**Verne, Jules** 1828–1905

French novelist

In spite of the opinions of certain narrow-minded people, who would shut up the human race upon this globe, as within some magic circle which it must never outstep, we shall one day travel to the moon, the planets, and the stars, with the same facility, rapidity, and certainty as we now make the voyage from Liverpool to New York.

*From the Earth to the Moon and Round the Moon*

From Earth to the Moon, Chapter XIX (p. 97)

A.L. Burt Company. New York, New York, USA. 1890

...I repeat that the distance between the earth and her satellite is a mere trifle, and undeserving of serious consideration. I am convinced that before twenty years are over one-half of our earth will have paid a visit to the moon.

*From the Earth to the Moon and Round the Moon*

From Earth to the Moon, Chapter XIX (p. 99)

A.L. Burt Company. New York, New York, USA. 1890

**von Braun, Wernher** 1912–77

German-American rocket scientist

[Space travel] will free man from his remaining chains, the chains of gravity which still tie him to this planet. It will open to him the gates of heaven.

The Jupiter People

*Time*, February 10, 1958 (p. 18)

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

All this world is heavy with the promise of greater things, and a day will come, one day in the unending succession of days, when beings, beings who are now latent in our thoughts and hidden in our loins, shall stand upon this earth as one stands upon a footstool and laugh and reach out their hands amidst the stars.

The Discovery of the Future

*Nature*, Volume 65, Number 1684, February 6, 1902 (pp. 326–331)

**Whipple, Fred L.** 1906–2004

American comet research pioneer

In conquering space, man will take his greatest single step forward in his ever-expanding struggle against the limitations set by nature. The scientist, by knowing more about the universe, may find paths that will lead to still further conquests of nature. And it may be truly said that man will no longer be limited to seeing "as through a glass darkly." The universe will be spread out clearly before him.

In Cornelius Ryan (ed.)

*Across the Space Frontier*

The Heavens Open (p. 143)

The Viking Press. New York, New York, USA. 1952

**Wilkins, Bishop John** 1614–72  
Co-founder of the Royal Society

We see a great ship swims as well as a small cork, and an eagle flies in the air as well as a little gnat.... 'Tis likely enough that there may be means invented of journeying to the moon; and how happy they shall be that are first successful in this attempt.

*A Discourse Concerning a New World and Another Planet*  
Book 1, Chapter 14  
J. Maynard. London, England. 1640

**Wren, Sir Christopher** 1632–1723  
English mathematician and architect

A time would come when Men should be able to stretch out their Eyes...they should see the Planets like our Earth. Inauguration Speech, Gresham College, 1657

## SPACE FLIGHT

**Burroughs, Edgar Rice** 1875–1950  
American writer

I knew that I had ample room in which to wander, since science has calculated the diameter of space to be eighty-four thousand million light years, which, when one reflects that light travels at the rate of one hundred eighty-six thousand miles a second, should satisfy the wanderlust of the most inveterate roamer.

*Pirates of Venus*  
Chapter Two (p. 19)  
University of Nebraska Press. Lincoln, Nebraska, USA. 2001

...man is an artifact designed for space travel. He is not designed to remain in his present biologic state anymore than a tadpole is designed to remain a tadpole.

*The Adding Machine: Selected Essays*  
Civilian Defense (p. 82)  
Seaver Books. New York, New York, USA. 1986

**Clarke, Arthur C.** 1917–  
English science and science fiction writer

It has often been said – and though it is becoming platitudinous it is nonetheless true – that only through space-flight can mankind find a permanent outlet for its aggressive and pioneering instincts. The desire to reach the planets is only an extension of the desire to see what is over the next hill.

*The Exploration of Space*  
Pocket Books. New York, New York, USA. 1979

**Cousins, Norman** 1912–90  
American editor and author

What was most significant about the first lunar voyage was not that men set foot on the moon, but that they set eye on earth.

*Rendezvous with Infinity*  
*Cosmic Search Magazine*, Volume 1, Number 1, January 1, 1979 (p. 31)

**Dyson, Freeman J.** 1923–  
American physicist and educator

There are three reasons,...apart from scientific considerations, mankind needs to travel in space. The first...is garbage disposal; we need to transfer industrial processes into space so that the earth may remain a green and pleasant place for our grandchildren to live in. The second...to escape material impoverishment: the resources of this planet are finite, and we shall not forego forever the abundance of solar energy and minerals and living space that are spread out all around us. The third...our spiritual need for an open frontier.

*Disturbing the Universe*  
Chapter 10 (p. 116)  
Basic Books, Inc. New York, New York, USA. 1979

When will the third romantic age in the history of space-flight begin? The third romantic age will see little model sailboats spreading their wings to the sun in space...

*Disturbing the Universe*  
Chapter 10 (p. 116)  
Basic Books, Inc. New York, New York, USA. 1979

**Feynman, Richard P.** 1918–88  
American theoretical physicist

[Regarding space shuttle concept] It appears that there are enormous differences of opinion as to the probability of a failure with loss of vehicle and of human life. The estimates range from roughly 1 in 100 to 1 in 100,000. The higher figures come from the working engineers, and the very low figures from management.... For a successful technology, reality must take precedence over public relations, for nature cannot be fooled.

*Roger's Commission Report on the Space Shuttle Challenger Accident*  
Personal observations on the reliability of the Shuttle, Appendix

**Haber, Heinz** 1868–1934  
German physical chemist

The conquest of space hinges on man's survival in space. And the crews of rocket ships and space stations, while they can never be completely protected against hazards such as meteors, will probably be safer than pedestrians crossing a busy street at a rush hour.

In Cornelius Ryan (ed.)  
*Across the Space Frontier*  
Can We Survive in Space? (p. 97)  
The Viking Press. New York, New York, USA. 1952

**Jung, Carl G.** 1875–1961  
Swiss psychiatrist and founder of analytical psychology

Space flights are merely an escape, a fleeing away from oneself, because it is easier to go to Mars or to the moon than it is to penetrate one's own being.

In Miguel Serrano  
*C.G. Jung and Hermann Hesse*  
The Farewell (p. 102)  
Schocken Books. New York, New York, USA. 1966

**Kepler, Johannes** 1571–1630  
German astronomer

There will certainly be no lack of human pioneers when we have mastered the art of flight. Who would have thought that navigation across the vast ocean is less dangerous and quieter than in the narrow, threatening gulfs of the Adriatic, or the Baltic, or the British straits? Let us create vessels and sails adjusted to the heavenly ether, and there will be plenty of people unafraid of the empty wastes. In the meantime, we shall prepare, for the brave sky travelers, maps of the celestial bodies – I shall do it for the moon, you, Galileo, for Jupiter.

In Arthur Koestler

*The Watershed – A Biography of Johannes Kepler*

Letter from Kepler to Galileo

April, 1610 (p. 195)

Doubleday & Company, Inc. Garden City. New York, New York, USA. 1960

**Mallove, Eugene F.** 1947–2004  
American physicist

Starflight is not just very hard, it is very, very, very hard.

*Starflight Handbook*

Introduction (p. 5)

John Wiley & Sons, Inc. New York, New York, USA. 1989

**von Braun, Wernher** 1912–77  
German-American rocket scientist

With our present knowledge, we can respond to the challenge of stellar space flight solely with intellectual concepts and purely hypothetical analysis. Hardware solutions are still entirely beyond our reach and far, far away.

Can We Ever Go to the Stars?

*Popular Science*, Volume 183, Number 1, July, 1963 (p. 170)

## SPACE JUNK

### Photo Journalist (Fictional character)

Today, a belated apology to the much maligned Chicken Little. It turns out you were right – the sky is falling. The National Space Administration informs us that Uncle Sam's Com-Sat 4 satellite is in a rapidly decaying orbit. That's their way of saying a ton of angry space trash is heading back home at fifteen thousand miles an hour. What does that make me think of? Makes me think of a triceratops, innocently munching a palm frond when out of the sky, whammo, a meteor sucker punches old mother Earth. Next thing you know, that triceratops, along with a hundred and seventy-five million years of dinosaur evolution, is nothing but history. To that unsung triceratops and all its kin, here's a song for you ...

*Apocalypse Now*

Film (1970)

## SPACE PROGRAM

**Nixon, Richard M.** 1913–94  
37th president of the USA

Over the last decade, the principal goal of our nation's space program has been the Moon. By the end of that decade men from our planet had traveled to the Moon on four occasions and twice they had walked on its surface. With these unforgettable experiences, we have gained a new perspective of ourselves and our world.

Statement on the Space Program

## SPACE SETTLEMENT

**Wolfe, Steven**

No biographical data available

Remember, the space settlement dream was born in you so that you would strive for its fulfillment in this generation, not defer it to the next. It was, and is, a call to you to take some action in this lifetime; and if you are not meant to see it through to completion, than you must at least lay a foundation on which those who will follow can build.

Space Settlement: The Journey Inward

*Ad Astra*, Jan/Feb/Mar 2004

## SPACE SHIP

**de Bergerac, Cyrano** 1619–55  
French dramatist

I had made myself a Machine which I fancied my carry me up as high as I pleased ...

*A Voyage to the Moon*

Chapter IV (p. 38)

Doubleday & McClure Co. New York, New York, USA. 1849

**Dornberger, Walter** 1895–1980  
German artillery officer

Today the space ship was born.

Comment to Werner von Braun upon successful firing of A-4 rocket on October 3, 1942

Reach for the Stars

*Time*, February 17, 1958

## SPACE SHUTTLE

**Fletcher, James C.**

No biographical data available

The space shuttle is much more than just a new vehicle. It is a whole new approach to space.

*Calvin Bullock Forum*, January 20, 1972 (p. 6)

We can no longer be satisfied with occasional or exotic use of space.

We cannot serve the national interest by just dabbling in space. We need the ability to use space routinely and

cheaply and extensively for practical benefits. And for this there is no rival, no substitute for the Shuttle.

*Calvin Bullock Forum*, January 20, 1972 (p. 5)

## SPACE TRAVEL

**Asimov, Isaac** 1920–92

American author and biochemist

Reaching the moon by three-man vessels in one long bound from Earth is like casting a thin thread across space. The main effort, in the coming decades, will be to strengthen this thread; to make it a cord, a cable, and, finally, a broad highway.

*The Beginning and the End*

The Coming Decades in Space

**Bruno, Giordano** 1548–1600

Italian philosopher and pantheist

Henceforth, I spread confident wings to space;

I fear no barrier of crystal or of glass;

I cleave the heavens and soar to the infinite.

And while I rise from my own globe to others

And penetrate ever further through the eternal field,

That which others saw from afar, I leave far behind me.

Translated by Dorothea Waley Singer

Nevertheless, we acknowledge that a few percent of the 200 Earths that Kepler is expected to find may be erroneous, and we urge travellers to confirm their hotel reservations directly before setting out to visit one of them.

Hubble Space Telescope Parallel Observations Supporting the Kepler Mission

*Bulletin of the American Astronomical Society*, Volume 31, 1999 (p. 1077)

**Clarke, Arthur C.** 1917–

English science and science fiction writer

It has often been said – and though it is becoming platitudinous it is none the less true – that only through space-flight can mankind find a permanent outlet for its aggressive and pioneering instincts.

*The Exploration of Space*

Chapter 18 (p. 186)

Harper & Brothers Publishers. New York, New York, USA. 1951

It is not easy to see how the more extreme forms of nationalism can long survive when men have seen the Earth in its true perspective as a single small globe against the stars.

*The Exploration of Space*

Chapter 18 (p. 187)

Harper & Brothers Publishers. New York, New York, USA. 1951

If ships from Earth ever set out to conquer other worlds they may find themselves, at the end of their journeys, in the position of painted war-canoes drawing slowly into New York Harbor.

*The Exploration of Space*

Chapter 18 (p. 192)

Harper & Brothers Publishers. New York, New York, USA. 1951

**de Bergerac, Cyrano** 1619–55

French dramatist

“And why not?” said I instantly to myself. “*Prometheus* heretofore went up to Heaven, and stole fire from thence. Have not I as much Boldness as he? And why should not I, then, expect as favourable a Success?”

*A Voyage to the Moon*

Chapter I (p. 15)

Doubleday & McClure Co. New York, New York, USA. 1849

**Duke of Argyll (George Douglas Campbell)** 1823–1900

English statesman and writer on science, religion, and politics

On the earth and on the sea man has attained the powers of locomotion with which in strength, endurance, and in velocity, no animal movement can compare. But the air is an element on which he cannot travel an ocean which he cannot navigate. The birds of heaven are still his envy,

and on the paths they tread he cannot follow. As yet! for it is not certain that this exclusion is to be perpetual. His failure has resulted quite as much from his ignorance of natural laws as from his inability to meet the conditions which they demand.

*The Reign of Law* (4th American edition)

Chapter 3 (p. 169)

George Routledge & Sons. New York, New York, USA. 1873

...if man is ever destined to navigate the air it will be in machines formed in strict obedience to the mechanical laws which have been employed by the Creator for the same purpose in flying animals.

*The Reign of Law* (4th American edition)

Chapter 3 (p. 170)

George Routledge & Sons. New York, New York, USA. 1873

### Halpern, Paul

Professor of mathematics and physics

Like an infant falcon we sit perched on the lonely rock of Earth, our new-formed wings poised, waiting for the inevitable instant of freedom. Eyeing the incredibly vast expanse around us, a universe of virtually unlimited possibilities, we pine for other roosts, but see none in the haze. We cock our heads as we listen for sounds from afar, but all we hear, day after day, is silence.

*The Quest for Alien Planets: Exploring Worlds outside the Solar System* (p. 267)

Plenum Trade. New York, New York, USA. 1997

### Hubbard, Earl

Artist

Man's earthbound history has ended; universal history has begun. Mankind stands alone in the universe as he once did on this earth.

*The Challenge is Freedom* (p. 17)

Gallery of Modern Art. 1965

### Kennedy, John F. 1917–63

26th president of the USA

Why, therefore, should man's first flight to the moon be a matter of national competition? Why should the USA and the Soviet Union, in preparing for such expeditions, become involved in immense duplications of research, construction, and expenditure? Surely we should explore whether the scientists and astronauts of our two countries – indeed of all the world – cannot work together in the conquest of space, sending someday in this decade to the moon not the representatives of a single nation, but the representatives of all of our countries.

Address before the 18th General Assembly of the United Nations

September 20, 1963

### Kepler, Johannes 1571–1630

German astronomer

There will certainly be no lack of human pioneers when we have mastered the art of flight. Who would

have thought that navigation across the vast ocean is less dangerous and quieter than in the narrow, threatening gulfs of the Adriatic, or the Baltic, or the British straits? Let us create vessels and sails adjusted to the heavenly ether, and there will be plenty of people unafraid of the empty wastes. Night IX  
A.S. Barnes & Co. New York, New York, USA. 1856

## SPACE, CURVATURE OF

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

When a physicist refers to curvature of space he at once falls under suspicion of talking metaphysics.

*The Expanding Universe*  
Chapter II (p. 29)  
Cambridge University Press. Cambridge, England. 1987

## SPACE-TIME

**Barnett, Lincoln Kinnear** 1909–79  
American science writer

...the universe is not a rigid and inimitable edifice where independent matter is housed in independent space and time; it is an amorphous continuum, without any fixed architecture, plastic and variable, constantly subject to change and distortion. Wherever there is matter and motion, the continuum is disturbed. Just as a fish swimming in the sea agitates the water around it, so a star, a comet, or a galaxy distorts the geometry of the space-time through which it moves.

*The Universe and Dr. Einstein*  
Chapter 11 (pp. 81–82)  
William Sloane Associates. New York, New York, USA. 1948

**Bell, E. T. (Eric Temple)** 1883–1960  
Scottish-American mathematician and educator

This [that space-time is a contortion of curvatures] is the sort of advance in mathematicized physics which causes some of the older conservatives to exclaim that mathematics is more confusing than hashish in our attempts to paint coherent pictures of the world. But the confusion is only apparent, and those who have had the time to master a little modern mathematics admit that they have been helped, not hindered, in their vision.

*The Handmaiden of the Sciences*  
Chapter 1 (p. 3)  
Williams & Wilkins Co. Baltimore, Maryland, USA. 1937

**Berlinski, David** 1942–  
American mathematician

Yet everything has a beginning, everything comes to an end, and if the universe actually began in some dense explosion, thus creating time and space, so time and space are themselves destined to disappear, the measure vanishing with the measured, until with another ripple running through the primordial quantum field, something new arises from nothingness once again.

*A Tour of the Calculus*

Chapter 26 (p. 309)

Pantheon Books. New York, New York, USA. 1995

**Bohr, Niels Henrik David** 1886–1962  
Danish physicist

We must, therefore, be prepared to find that further advance into this region will require a still more extensive renunciation of features which we are accustomed to demand of the space time mode of description.

*Atomic Theory and the Description of Nature*

Introductory Survey (p. 14)

Cambridge University Press. Cambridge, England. 1934

**Carlyle, Thomas** 1795–1881  
English historian and essayist

Deepest of all illusory Appearances, for hiding Wonder, as for many other ends, are your two grand fundamental world-enveloping Appearances, Space and Time.

*Sartor Resartus*

Chapter VIII

Ginn & Company. Boston, Massachusetts, USA. 1897

**Clarke, Arthur C.** 1917–  
English science and science fiction writer

Through all the ages, man has fought against two great enemies – time and space. Time he may never wholly conquer, and the sheer immensity of space may also defeat him when he has ventured more than a few light-years from the Sun. Yet on this little Earth, at least, he may one day claim a final victory.

**de Beauregard, Costa**  
No biographical data available

There can no longer be any objective and essential...division of space-time between “events which have already

occurred” and “events which have not yet occurred.”... Relativity is a theory in which everything is “written” and where change is only relative to the perceptual mode of living beings.

In J.T. Fraser

*The Voices of Time: A Cooperative Survey of Man's Views of Time as Expressed by the Sciences and by the Humanities*

Time in Relativity Theory: Arguments for a Philosophy of Being (p. 429)

G. Braziller. New York, New York, USA. 1966

**de Broglie, Louis** 1892–1987  
French physicist

In space-time, everything which for each of us constitutes the past, the present, and the future is given in block, and the entire collection of events, successive for us, which form the existence of a material particle is represented by a line, the world-line of the particle. Each observer, as his time passes, discovers, so to speak, new slices of space-time which appear to him as successive aspects of the material world, though in reality the ensemble of events constituting space-time exist prior to his knowledge of them.

Part One, Chapter One (p. 9)

HarperCollins Publisher, Inc. New York, New York, USA. 1988

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

It [the physical world is a *thing*; not like space, which is a mere negation; nor like time, which is – Heaven knows what!

*The Nature of the Physical World*

Introduction (p. ix)

The Macmillan Company. New York, New York, USA. 1930

**Einstein, Albert** 1879–1955  
German-born physicist

Time and space are modes by which we think and not conditions in which we live.

In Alyesa Forsee

*Albert Einstein, Theoretical Physicist* (p. 81)

The Macmillan Company. New York, New York, USA. 1963

**Ferris, Timothy** 1944–  
American science writer

Newton viewed space and time as separate and absolute. As conceived by Einstein they are united in a flexible continuum that responds to the presence of matter. The stars and planets wrap the spacetime continuum around themselves, in a sense, each sitting in the center of a sort of spacetime whirlpool.

*The Red Limit: The Search for the Edge of the Universe*  
Chapter 3 (p. 71)

William Morrow & Company, Inc. New York, New York, USA. 1977

[Einstein explained] the commerce we call gravity occurs because objects follow the easiest, most efficient course over the undulations of the continuum. Earth in its orbit glides along inside the sun's spacetime vortex like a roulette ball whirling above the wheel, balancing its velocity against its tendency to slide toward the sun. That tendency is equivalent to gravity, but no "force" of gravity is postulated. Light beams also follow the dips and hills of the continuum. They trace trajectories we call "bent," though that is just three-dimensional parochialism talking; they are going just as straight as the shape of spacetime allows.

*The Red Limit: The Search for the Edge of the Universe*  
Chapter 3 (p. 71)

William Morrow & Company, Inc. New York, New York, USA. 1977

**Hawking, Stephen William** 1942–  
English theoretical physicist

The theory of relativity does, however, force us to change fundamentally our ideas of space and time. We must accept that time is not completely separate from and independent of space, but is combined with it to form an object called space-time.

**Hoffmann, Banesh** 1906–86  
Mathematician and educator

What is it that pulls the apple to the ground, bends the circling moon to the earth and makes the planets captive of the sun? ... It is intangible time and space themselves, acting in awesome concert as curved space-time holding sway over all things in the universe.

*Relativity and Its Roots*  
Chapter 6 (pp. 156–157)

W.H. Freeman & Company. New York, New York, USA. 1983

### John Shade (Fictional character)

Space is a swarming of the eyes, and Time a singing in the ears.

In Vladimir Nabokov  
*Ada or Ardor: A Family Chronicle*  
Part Four (p. 542)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1969

**Joubert, Joseph** 1754–1824  
French moralist

There is something divine about the ideas of space and eternity which is wanting in those of pure duration and simple extension.

Translated by H.P. Collins

*Pensées and Letters of Joseph Joubert*  
Chapter XII (p. 90)

Books for Libraries Press. Freeport, New York, USA. 1972

**Lamb, Charles** 1775–1834  
English essayist and critic

Nothing puzzles me more than time and space; and yet nothing troubles me less, as I never think about them.

Quoted by James R. Newman

*The World of Mathematics* (Volume 1)

Letter to Thomas Manning, January 2, 1806 (p. 552)

Simon & Schuster. New York, New York, USA. 1956

**MacLeish, Archibald** 1892–1982  
American poet and Librarian of Congress

Spacetime has no beginning and no end.  
It has no door where anything can enter.  
How break and enter what will only bend?

*Songs for Eve*

Reply to Mr. Wordsworth (p. 39)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1954

**Maeterlinck, Maurice** 1862–1949  
Belgian playwright and poet

To attempt to explain space by time and time by space is to seek to explain the night by darkness and the darkness by the night; it is to revolve hopelessly in the circle of the unknowable.

Translated by Bernard Miall

*The Life of Space*

The Fourth Dimension, XXIX (pp. 96–97)

Dodd, Mead & Company. New York, New York, USA. 1928

Space is the present made visible. Time is space that is on the move and becoming the future or the past. Space is time extended; it is horizontal time; time is space perpendicular, vertical space. Space is time that endures; time is space that flies.

Translated by Bernard Miall

*The Life of Space*

The Fourth Dimension, XXIX (p. 97)

Dodd, Mead & Company. New York, New York, USA. 1928

**Maxwell, James Clerk** 1831–79  
Scottish physicist

March on, symbolic host! with step sublime,  
Up to the flaming bounds of Space and Time!  
There pause, until by Dickenson depicted,  
In two dimensions, we the form may trace  
Of him whose soul, too large for vulgar space,  
In  $n$  dimensions flourished unrestricted.

In Lewis Campbell and William Garnett  
*The Life of James Clerk Maxwell with Selections from his Correspondence and Occasional Writings*  
 To the Committee of the Cayley Portrait Fund (p. 637)  
 Macmillan & Company. London, England. 1882

**Minkowski, Hermann** 1864–1909  
 German mathematician

From this hour on, space as such and time as such shall recede to the shadows and only a kind of union of the two retain significance.

In A.P. French  
*Einstein: A Centenary Volume*  
 Chapter 12 (p. 231)  
 Harvard University Press. Cambridge, Massachusetts, USA. 1979

The views of space and time which I wish to lay before you have sprung from the soil of experimental physics, and therein lies their strength. Henceforth space by itself and time by itself, are doomed to fade away into mere shadows, and only a kind of union of the two will preserve an independent reality.

*Space and Time*  
 80th Assembly of German Natural Scientists and Physicians, September 21, 1908

The objects of our perception invariably include places and times in combination. Nobody has ever noticed a place except at a time, or a time except at a place. But I still respect the dogma that both space and time have independent significance. A point of space at a point of time, that is a system of values  $x, y, z, t$ , I will call a world-point.

*The Principle of Relativity: A Collection of Original Memoirs on the Special and General Theory of Relativity*  
 Space and Time (p. 76)  
 Dover Publications, Inc. New York, New York, USA. 1952

**Murchie, Guy** 1907–97  
 American biologist

...the key to comprehending space-time is the obvious (to me) fact that space is the relationship between things and other things while time is the relationship between things and themselves.

*The Seven Mysteries of Life: An Exploration of Science and Philosophy*  
 Part Three, Chapter 12 (p. 331)  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1978

**Pope, Alexander** 1688–1744  
 English poet

Ye Gods! annihilate but space and time,  
 And make two lovers happy.

*The Complete Poetical Works*  
 Martinus Scriblerus of The Art of Sinking in Poetry, 11  
 Houghton Mifflin Company. New York, New York, USA. 1903

**Reichenbach, Hans** 1891–1953  
 German philosopher of science

It appears that the solution of the problem of time and space is reserved to philosophers who, like Leibnitz, are mathematicians, or to mathematicians who, like Einstein, are philosophers.

In Paul Arthur Schlipp (ed.)  
*Albert Einstein: Philosopher-Scientist*  
 The Philosophical Significance of the Theory of Relativity, IV (p. 307)  
 The Library of Living Philosophers, Inc. Evanston, Illinois, USA. 1949

**Stenger, Victor J.** 1935–  
 American physicist

Great physicists from Galileo to Einstein have clarified the meanings of space and time for us, not overthrown their basic conceptions nor declared them obsolete.

*Physics and Psychics: The Search for a World Beyond the Senses*  
 Chapter 13 (p. 295)  
 Prometheus Books. Buffalo, New York, USA. 1990

**Synge, John L.** 1897–1995  
 Irish mathematician and physicist

Anyone who studies relativity without understanding how to use simple space-time diagrams is as much inhibited as a student of functions of a complex variable who does not understand the Argand diagram.

*Relativity: The Special Theory* (p. 63)  
 North-Holland Publishing Company. Amsterdam, Netherlands. 1965

**Taylor, Edwin F.**  
 American physicist

**Wheeler, John Archibald** 1911–  
 American physicist and educator

Never make a calculation until you know the answer: Make an estimate before every calculation, try a simple physical argument (symmetry! invariance! conservation!) before every derivation, guess the answer to every puzzle. Courage: no one else needs to know what the guess is. Therefore make it quickly, by instinct. A right guess reinforces this instinct. A wrong guess brings the refreshment of surprise. In either case, life as a spacetime expert, however long, is more fun!

*Spacetime Physics*  
 Chapter 1 (p. 60)  
 W.H. Freeman & Company. San Francisco, California, USA. 1966

**Thorne, Kip S.** 1940–  
 American theoretical physicist

...spacetime is like a piece of wood impregnated with water. ...the wood represents space, the water represents time.... [W]ood and water; space and time...are tightly interwoven, unified. The singularity and the laws of quantum gravity that rule it are like a fire into which the water impregnated wood is thrown. The fire boils the water out of the wood, leaving the wood alone and vulnerable; in the singularity, the laws of quantum gravity destroy

time, leaving space alone and vulnerable. The fire then converts the wood into a froth of flakes and ashes; the laws of quantum gravity then convert space into a random, probabilistic froth.

*Black Holes and Time Warps: Einstein's Outrageous Legacy*

Chapter 13 (p. 477)

W.W. Norton & Company, Inc. New York, New York, USA. 1994

...Space and time, unified as spacetime, do not merely witness great masses struggling to bend the motion of other masses. Like the gods of ancient Greece, spacetime helps guide the battle and itself participates.... The scope and power of this century's new view of gravity and spacetime is seen nowhere more dramatically than in its prediction of the expansion of the universe. To have predicted...against all expectation, a phenomenon so fantastic is the greatest token yet of our power to understand this strange and beautiful universe.

*A Journey into Gravity and Spacetime*

Chapter 1 (p. 2)

Scientific American Library. New York, New York, USA. 1990

**Valéry, Paul** 1871–1945

French poet and critic

Space is an imaginary body, as time is fictive movement. When we say “in space” or “space is filled with” we are positing a body.

In Jackson Mathews (ed.)

*The Collected Works of Paul Valéry* (Volume 14)

*Analects*, CIX (p. 321)

Princeton University Press. Princeton, New Jersey, USA. 1971

## SPATIAL GEOMETRICIAN

**Adams, Douglas** 1952–2001

English author, comic radio dramatist, and musician

I've certainly never come across any irreversible mathematics involving sofas. Could be a new field. Have you spoken to any spatial geometricians?

*Dirk Gently's Holistic Detective Agency*

Chapter 8 (p. 66)

Simon & Schuster. New York, New York, USA. 1987

## SPECIALIST

**Hollister, John Hamilcar** 1824–1911

American physician

Specialists are a necessity and are not to be ruled out, but for the all-round needs of the family the old family doctor will have the last smile. He may disappear for the time, but he will come back again, and when he does he will come to stay.

*Memories of Eighty Years; Autosketches, Random Notes and Reminiscences*

Chapter XII (p. 72)

Publisher undetermined

Chicago, Illinois, USA. 1912

**Loeb, Morris** 1863–1912

Chemist

Loosed from the leash of rhetoric and dogmatism, the pursuers of knowledge have spread in all directions over the field, each so eager on his own particular trail that he has no eye for the discoveries of his neighbor; he forgets, indeed, that there is need of keeping in touch to the right and left, lest important clues be passed unobserved.

In Theodore William Richards

*The Scientific Work of Morris Loeb*

The Fundamental Ideas of Physical Chemistry (p. 3)

Harvard University Press. Cambridge, Massachusetts, USA. 1913

**Witt, Otto N.** 1875–1923

German chemist

Every chemist, to be worthy of the name, should in his own work be a specialist; but there are few amongst us to whom it has been given to produce in their own particular line of research results of deep general interest.

*Evolution in Applied Chemistry*

*Nature*, Volume 81, Number 2071, July 8, 1909 (p. 51)

**Woodward, Robert Simpson** 1849–1924

American physicist and mathematician

There is a tradition, still tacitly sanctioned even by men of science, that there have been epochs when the more eminent minds were able to compass the entire range of knowledge. Amongst the vanishing heroic figures of the past it seems possible, indeed, to discern, here and there, a Galileo, a Huygens, a Descartes, a Leibnitz, a Newton, a Laplace or a Humbolt [sic], each capable, at least, of summing up with great completeness the state of contemporary knowledge. Traditions, however, are generally more or less mythical, and the myth in this case seems to be in flat contradiction with the fact that there never was such an epoch, that the great masters of our distinguished predecessors were, after all, much like the masters of today, simply the leading specialists of their times.

*The Unity of Physical Science*

*Science*, Volume 20, Number 509, September 30, 1904 (p. 417)

## SPECIALIZATION

**Agassiz, Jean Louis Rodolphe** 1807–73

Swiss-born American naturalist, geologist, and teacher

A man cannot be a professor of zoology on one day, and of chemistry on the next, and do good work in both. As in a concert all are musicians – one plays one instrument, and one another, but none all in perfection.

In Charles Frederick Holder

*Louis Agassiz: His Life and Work*

At Penikese (p. 174)

G.P. Putnam's Sons. New York, New York, USA. 1893

You cannot do without one specialty; you must have some base-line to measure the work and attainments of others.

In Charles Frederick Holder  
*Louis Agassiz: His Life and Work*  
At Penikese (p. 174)

G.P. Putnam's Sons. New York, New York, USA. 1893

**Asimov, Isaac** 1920–92  
American author and biochemist

...the orchard of science is a vast globe-encircling monster, without a map, and known to no one man; indeed, to no group of men fewer than the whole international mass of creative scientists. Within it, each observer clings to his own well-known and well-loved clump of trees. If he looks beyond, it is usually with a guilty sigh.

*View from a Height*

Introduction (p. 7)

Avon Books. New York, New York, USA. 1975

**Bell, E. T. (Eric Temple)** 1883–1960  
Scottish-American mathematician and educator

To interrupt one's own researches in order to follow those of another is a scientific pleasure which most experts delegate to their assistants. Consequently, the confusion of tongues increases as the square of the number of talkers, until only ever more select coteries of narrow specialists really understand the refinements of their esoteric vocabularies.

*The Development of Mathematics* (p. 510)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1945

**Burnet, Sir Frank Macfarlane** 1899–1985  
Australian virologist

We may well find that the men who staff the hospitals of next century will include many who are much more mathematicians and biochemists than physicians as we know them today, but there will still be wide range of surgical and other specialists.... I fancy that those men will still need to be able to apply common sense, courage, and compassion in dealing with all the human difficulties that escape the machines.

*Changing Patterns: An Atypical Autobiography* (pp. 251–252)  
William Heineman. London, England. 1968

**Einstein, Albert** 1879–1955  
German-born physicist

Specialization in almost all branches of human endeavor has, to be sure, resulted in unprecedented achievements—however, at the expense of narrowing the individual's field of vision. Thus it is hard nowadays to find anyone able to repair, properly, a garment, a piece of furniture, let alone a watch.

Physics, Philosophy, and Scientific Progress

*Physics Today*, Volume 58 Issue 6 June, 2005 (p. 46)

**Groen, Janny**  
No biographical data available

**Smit, Eefke**  
No biographical data available

Scientific information is essential, not only for the scientist. The politician, the entrepreneur and the public at large need to know about it too. The people in business find that neither the mass media nor the specialized scientific press are providing the information needed. General information is no longer enough, specialist information is only digestible for the learned. Who will bridge the gap?

*The Discipline of Curiosity: Science in the World*

Introduction (p. 4)

Elsevier Science. Amsterdam, Netherlands. 1990

**Heinlein, Robert A.** 1907–88  
American science fiction writer

A human being should be able to change a diaper, plan an invasion, butcher a hog, conn a ship, design a building, write a sonnet, balance accounts, build a wall, set a bone, comfort the dying, take orders, give orders, cooperate, act alone, solve equations, analyze new problems, pitch manure, program a computer, cook a tasty meal, fight efficiently, die gallantly.

Specialization is for insects.

*Time Enough for Love*

Intermission (pp. 265–266)

G.P. Putnam's Sons. New York, New York, USA. 1973

**Lerner, Eric J.** 1947–  
American popular science book

The combination of growing specialization and the peer-review system have fractured science into isolated domains, each with a built-in tendency toward theoretical orthodoxy and a hostility to other disciplines.

*The Big Bang Never Happened*

Part Two, Chapter 8 (pp. 374–375)

Time Books. New York, New York, USA. 1991

**Morrow, Prince Albert** 1846–1913  
American dermatologist and sociologist

The genius of modern medical literature is clearly in the direction of division of labor and associated effort.

*A System of Genito-Urinary Diseases, Syphilology, and Dermatology*

Preface

D. Appleton & Company. New York, New York, USA. 1893–4

**Ortega y Gasset, José** 1883–1955  
Spanish philosopher

For the purpose of innumerable investigations it is possible to divide science into small sections, to enclose oneself in one of these, and to leave out of consideration all the rest. The solidity and exactitude of the methods allow...this temporary but...disarticulation of knowledge. The work...done under [such] methods [is] as with a machine, and in order to obtain quite abundant results

it is not even necessary to have rigorous notions of their meaning and foundations.

*The Revolt of the Masses*

Chapter 12 (p. 111)

W.W. Norton & Company, Inc. New York, New York, USA. 1960

[The division of science into specialties means] the majority of scientists help the general advance of science while shut up in the narrow cell of their laboratory, like the bee in the cell of its hive, or the turnspit in its wheel.

*The Revolt of the Masses*

Chapter 12 (p. 111)

W.W. Norton & Company, Inc. New York, New York, USA. 1960

**Osler, Sir William** 1849–1919

Canadian physician and professor of medicine

The extraordinary development of modern science may be her undoing. Specialism, now a necessity, has fragmented the specialties themselves in a way that makes the outlook hazardous. The workers lose all sense of proportion in a maze of minutiae.

*The Old Humanities and the New Science*

Chapter III (p. 49)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1920

**Peattie, Donald Culross** 1898–1964

American botanist, naturalist, and author

It is my contention that specialization should be left to those who are not mentally gifted at generalization.

*An Almanac for Moderns*

September Twenty-First (p. 199)

G.P. Putnam's Sons. New York, New York, USA. 1935

**Stevens, Rosemary** 1935–

No biographical data available

In the whole process of reassessment...of the medical profession...has come the recognition of medicine as an interdependent, not independent, profession and as one consisting of a complex of specialties rather than one general discipline.

*American Medicine and the Public Interest* (p. 413)

Yale University Press. New Haven, Connecticut, USA. 1971

**Thomson, Sir John Arthur** 1861–1933

Scottish naturalist

Too great specialization leads to pedantry; too little of it to superficiality.

*Introduction to Science*

Chapter IV (p. 82)

Henry Holt & Co. New York, New York, USA. 1911

**Vesalius, Andreas** 1514–64

Flemish physician and anatomist

Great harm is caused by too wide a separation of the disciplines which work toward the perfection of each individual art, and much more by the meticulous distribution of the practices of this art to different workers.

*The Fabric of the Human Body*

Preface

1543

**Weiner, Jonathan** 1953–

American fiction and non-fiction writer

Specialization has gotten out of hand. There are more branches in the tree of knowledge than there are in the tree of life. A petrologist studies rocks; a pedologist studies soils. The first one sieves the soil and throws away the rocks. The second one picks up the rocks and brushes off the soil. Out in the field, they bump into each other only like Laurel and Hardy, by accident, when they are both backing up.

*The Next One Hundred Years: Shaping the Fate of Our Living Earth*

Chapter 10 (pp. 198–199)

Bantam Books. New York, New York, USA. 1990

## SPECIALTY

**Agassiz, Jean Louis Rodolphe** 1807–73

Swiss-born American naturalist, geologist, and teacher

You cannot do without one specialty. You must have some base-line to measure the work and attainments of others. For a general view of the subject, study the history of the sciences. Broad knowledge of all Nature has been the possession of no naturalist.

Quoted in David Starr Jordan

*Science Sketches*

Quoted in David Starr Jordan (p. 146)

A.C. McClurg & Co. Chicago, Illinois, USA. 1896

## SPECIES

**Bessey, Charles E.** 1845–1915

American botanist

Nature produces individuals and nothing more

The Taxonomic Aspect of the Species Question

*The American Naturalist*, Volume 42, Number 496, April, 1908 (p. 218)

**Blumenbach, Johann Friedrich** 1752–1840

German naturalist and anthropologist

What is species? We say that animals belong to one and the same species if they agree so well in form and constitution that those things in which they differ may have arisen from degeneration.... Now we come to the real difficulty, which is to set forth the characters by which in the natural world we may distinguish mere varieties from genuine species.

*The Anthropological Treatises of Johann Friedrich Blumenbach*

Section II (p. 188)

Longman, Green, Longman, Roberts & Green. London, England. 1865

**Colinvaux, Paul**

No biographical data available

Every species has its niche, its place in the grand scheme of things.

*Why Big Fierce Animals are Rare: An Ecologist's Perspective*

Chapter Two (p. 11)

Princeton University Press. Princeton, New Jersey, USA. 1978

**Cook, O. F.**

No biographical data available

A species is a species, not through the workings of any hidden cause of evolution, but because the component individuals breed together, and thus remain in interconnected coherent whole.

*Annual Report of the Board of Regents of the Smithsonian Institution (1904)*

The Evolutionary Significance of Species (p. 398)  
Government Printing Office. Washington, D.C. 1905

**Cuvier, Georges** 1769–1832

French zoologist and statesman

The immutability of species is a necessary condition of the existence of scientific natural history.

Quoted in Ernst Heinrich Philipp August Haeckel  
*The History of Creation, Or, The Development of the Earth and Its Inhabitants by the Action of Natural Causes* (Volume 1) (4th edition) (p. 52)

D. Appleton & Co. New York, New York, USA. 1892

All those individual animals and plants belong to one species which can be proved to be either descended from one another, or from common ancestors, or which are as similar to these as the latter are among themselves.

Quoted in Ernst Heinrich Philipp August Haeckel  
*The History of Creation, Or, The Development of the Earth and Its Inhabitants by the Action of Natural Causes* (Volume 1) (4th edition) (pp. 52–53)

D. Appleton & Co. New York, New York, USA. 1892

**Darwin, Charles Robert** 1809–82

English naturalist

Unless we suppose the same species to have been created in two different countries, we ought not to expect any closer similarity between the organic beings on the opposite sides of the Andes than on shores separated by a broad strait of the sea.

In Francis Darwin (ed.)  
*The Life and Letters of Charles Darwin* (Volume 1)  
Chapter X (p. 365)

D. Appleton & Company, New York, New York, USA. 1896

It is really laughable to see what different ideas are prominent in various naturalists' minds, when they speak of "species:" in some, resemblance seems to go for nothing, and Creation the reigning idea – in some, descent is the key, – in some, sterility an unailing test, with others it is not worth a farthing. It comes, I believe, from trying to define the undefinable.

In Francis Darwin (ed.)  
*The Life and Letters of Charles Darwin* (Volume 1)  
Letter to J.D. Hooker, December 24, 1856 (p. 446)  
D. Appleton & Company, New York, New York, USA. 1896

...I look at the term species as one arbitrarily given, for the sake of convenience, to a set of individuals closely resembling each other...

In *Great Books of the Western World* (Volume 49)  
*The Origin of Species by Means of Natural Selection*  
Chapter II (p. 29)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Widely ranging species, abounding in individuals, which have already triumphed over many competitors in their own widely extended homes will have the best chance of seizing on new places, when they spread into new countries.

In *Great Books of the Western World* (Volume 49)  
*The Origin of Species by Means of Natural Selection*  
Chapter XII (p. 182)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**de Vries, Hugo** 1848–1935

Dutch botanist

Among the many advantages which have lent such a prominent significance to the theory of descent in the investigation of living nature, the shattering of the old conception of species occupies an important place. Formerly every species was regarded as a unit and the totality of its specific attributes as an indivisible concept. Even the latest theories on heredity accept this concept as one that does not require any further analysis.

Translated by C. Stuart Gager  
*Intracellular Pangenesis: Including a Paper on Fertilization and Hybridization*  
Chapter I (p. 11)  
The Open Court Publishing Co. Chicago, Illinois, USA. 1910

**Falk, Donald**

American ecologist and biologist

We consider species to be like a brick in the foundation of a building. You can probably lose one or two or a dozen bricks and still have a standing house. But by the time you've lost 20% of species, you're going to destabilize the entire structure. That's the way ecosystems work.

*Christian Science Monitor*, 26 May, 1989

**Forbes, Edward** 1815–54

English naturalist

...every true species presents in its individuals, certain features, specific characters, which distinguish it from every other species; as if the Creator had set an exclusive mark or seal on each type.

*The Natural History of the European Seas*  
Chapter I (p. 8)  
John van Voorst. London, England. 1859

**Ford, Henry Jones** 1851–1925

American political scientist, journalist, and university professor

Animals belonging to the same species are like-minded, just as they are like-headed, like-bellied, like-limbed.

The Claims of Sociology Examined  
*The American Journal of Sociology*, Volume 15, Number 2, September, 1909 (p. 254)

**Gregory, Sir Richard Arman** 1864–1952  
British science writer and journalist

When scientific work is instituted solely with the object of securing commercial gain, its correlative selfishness; when it is confined to the path of narrow specialisation, it leads to arrogance; and when its purpose is materialistic domination, without regard for the spiritual needs of humanity, it is a social danger and may become an excuse for learned barbarity.

*Discovery: Or the Spirit and Service of Science*

Preface (pp. v–vi)

Macmillan & Company Ltd. London, England. 1918

**Lamarck, Jean-Baptiste Pierre Antoine** 1744–1829  
French biologist

It is not a futile purpose to decide definitely what we mean by the so-called species among living bodies, and to enquire if it is true that species are of absolute constancy, as old as nature, and have all existed from the beginning just as we see them today; or if, as a result of changes in their environment, albeit extremely slow, they have not in course of time changed their characters and shape.

Translated by Hugh Elliot

*Zoological Philosophy: An Exposition with Regard to the Natural History of Animals*

Chapter III (p. 35)

The University of Chicago Press. Chicago, Illinois, USA. 1984

What a swarm of mollusk shells are furnished by every country and every sea, eluding our means of distinction and draining our resources.

Translated by Hugh Elliot

*Zoological Philosophy: An Exposition With Regard to the Natural History of Animals*

Chapter III (p. 38)

The University of Chicago Press. Chicago, Illinois, USA. 1984

The idea of bringing together under the name of species a collection of like individuals, which perpetuate themselves unchanged by reproduction and are as old as nature, involved the assumption that the individuals of one species could not unite in reproductive acts with individuals of another species.

Unfortunately, observation has proved and continues every day to prove that this assumption is unwarranted; for the hybrids so common among plants, and the copulations so often noticed between animals of very different species, disclose the fact that the boundaries between these alleged constant species are not so impassable as had been imagined.

Translated by Hugh Elliot

*Zoological Philosophy: An Exposition With Regard to the Natural History of Animals*

Chapter III (p. 39)

The University of Chicago Press. Chicago, Illinois, USA. 1984

**Leakey, Richard Erskine** 1944–  
Kenyan paleoanthropologist and politician

As a species, we are blessed with a curiosity about the world of nature and our place in it. We want to know – *need* to know – how we came to be as we are, and what our future is.

*The Origin of Humankind*

Preface (p. xv)

Basic Books, Inc. New York, New York, USA. 1994

**Locke, John** 1632–1704

English philosopher and political theorist

...the boundaries of the species, whereby men sort them, are made by men.

In *Great Books of the Western World* (Volume 35)

*An Essay Concerning Human Understanding*

Book III, Chapter VI, Section 37 (p. 279)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Lyell, Sir Charles** 1797–1875

English geologist

...species are abstractions, not realities – are like genera. Individuals are the only realities. Nature neither makes nor breaks molds – all is plastic, unfixed, transitional, progressive, or retrograde. There is only one great resource to fall back upon, a reliance that all is for the best, trust in God, a belief that truth is the highest aim, that if it destroys some idols it is better that they should disappear, that the intelligent ruler of the universe has given us this great volume as a privilege, that its interpretation is elevating.

In Leonard G. Wilson (ed.)

*Sir Charles Lyell's Scientific Journals on the Species Question*

Journal II, July 10, 1856 (p. 121)

Yale University Press. New Haven, Connecticut, USA. 1970

...amidst the vicissitudes of the earth's surface, species cannot be immortal, but must perish, one after the other, like the individuals which compose them.

*Principles of Geology* (Volume II)

Chapter X (p. 87)

James Kay, Jun. & Brother. Philadelphia, Pennsylvania, USA. 1837

**Mayr, Ernst** 1904–2005

German-born American biologist

We had an international conference in Rome in 1981 on the mechanisms of speciation. It was attended by many of the leading botanists, zoologists, paleontologists, geneticists, cytologists and biologists. The one thing on which they all agreed was that we still have no idea what happens genetically during speciation. That's a damning statement, but it's the truth.

*OMNI Magazine*, February, 1983 (p. 78)

It may not be exaggeration if I say that there are probably as many species concepts as there are thinking systematists and students of speciation.

*Systematics and the Origin of Species*  
Chapter V (p. 115)  
Harvard University Press. Cambridge, Massachusetts, USA. 1942

### **Veil, Anna Murray**

No biographical data available

Species to me are like islands; sub-species are like peninsulas. A peninsula may be vastly more important and more distinct than the little island off the shores; but nevertheless it remains a peninsula, and the island, however small, is an island.

Studies in the Asclepiadaceae

*Bulletin of the Torrey Botanical Club*, Volume 31, Number 9, September, 1904 (p. 467)

### **Wallace, Alfred Russel** 1823–1913

English humanist, naturalist, and geographer

The rule...I have endeavored to adopt [in determining what is a species and what is a species variety] is, that when the difference between two forms inhabiting separate areas seems quite constant, when it can be defined in words, and when it is not confined to a single peculiarity only, I have considered such forms to be species. When... the individuals of each locality vary among themselves, so as to cause the distinctions between the two forms to become inconsiderable and indefinite, or where the differences, though constant, are confined to one particular only, such as size, tint, or a single point of difference in marking or in outline, I class one of the forms as a variety of the other.

On the Phenomena of Variation and Geographical Distribution as Illustrated by the Papilionidae of the Malayan Region  
*Transactions of the Linnean Society of London*, Volume 25, 1865 (p. 4)

Species are merely those strongly marked races or local forms which, when in contact, do not intermix, and when inhabiting distinct areas are generally regarded to have had a separate origin, and to be incapable of producing a fertile hybrid offspring.

On the Phenomena of Variation and Geographical Distribution as Illustrated by the Papilionidae of the Malayan Region  
*Transactions of the Linnean Society of London*, Volume 25, 1865 (p. 12)

[A]s the test of hybridity cannot be applied [to species identification] in one case in ten thousand, and even if it could be applied, would prove nothing, since it is founded on an assumption of the very question to be decided – and as the test of origin is in every case inapplicable – and as, further, the test of non-intermixture is useless, except in those rare cases where the most closely allied species are found inhabiting the same area, it will be evident that we have no means whatever of distinguishing so-called “true species” from the several modes of variation here pointed out, and into which they so often pass by an insensible gradation.

On the Phenomena of Variation and Geographical Distribution as Illustrated by the Papilionidae of the Malayan Region  
*Transactions of the Linnean Society of London*, Volume 25, 1865 (p. 12)

...The essential character of a species in biology is that it is a group of living organisms, separated from all other such groups by a set of distinctive characters, having relations to the environment not identical with those of any other group of organisms, and having the power of continuously reproducing its like. Genera are merely assemblages of a number of these species which have a closer resemblance to each other in certain important and often prominent characters than they have to any other species...  
*Fortnightly Review*, Volume 57, New Series, 1895 (p. 441)

### **Wilson, Edward O.** 1929–

American biologist and author

Every species lives a life unique to itself, and every species dies a different way.

*The Diversity of Life*

Chapter Eleven (p. 215)

Harvard University Press. Cambridge, Massachusetts, USA. 1992

### **Wilson, John** 1785–1854

Scottish writer

...to an entomological collector the rarity of a species enhances its value, to a fly-fisher, on the other hand, the frequent occurrence of a species, and its being widely dispersed, or found upon all waters, constitute the strongest reasons for preferring it...

*The Recreations of Christopher North*

Preface (p. ix)

D. Appleton & Co. New York, New York, USA. 1870

## SPECIES DIVERSITY

**Wilson, Edward O.** 1929–  
American biologist and author

The worst thing that can happen – will happen [in the 1980s] – is not energy depletion, economic collapse, limited nuclear war, or conquered by a totalitarian government. As terrible as these catastrophes would be for us, they can be repaired within a few generations. The one process ongoing in the 1980s that will take millions of years to correct is the loss of genetic and species diversity by the destruction of natural habitats. This is the folly our descendents are least likely to forgive us.

*Harvard Magazine*, January-February, 1980

## SPECIFIC GRAVITY

**Herschel, Sir John Frederick William** 1792–1871  
English astronomer and chemist

...the mean specific gravity of this our planet is, in all human probability, quite as well determined as that of an ordinary hand specimen in a mineralogical cabinet, – a marvelous result, which should teach us to despair of nothing which lies within the compass of number, weight, and measure.

*Journal of a Tour in Unsettled Parts of North America in 1796 & 1797*  
Francis Baily (p. 39)  
Baily Brothers. London, England. 1856

## SPECIFICATION

**Alger, John R. M.**  
American design engineer

**Hays, Carl V.**  
No biographical data available

Once a problem is recognized clearly and all the parties concerned have agreed on its nature, the development of detailed specifications becomes vital.

*Creative Synthesis in Design* (p. 15)  
Prentice-Hall. Englewood Cliffs, New Jersey, USA. 1964

A good engineer is adroit in negotiating changes in specifications or trade-offs...

*Creative Synthesis in Design* (p. 16)  
Prentice-Hall. Englewood Cliffs, New Jersey, USA. 1964

**Hoover, Herbert** 1874–1964  
31st president of the USA

Specifications are the formulated, definite, and complete statements of what the buyer requires of the seller.

*National Directory of Commodity Specifications*  
M 65, Forward (p. 1)

**Matthews, J. A.**

No biographical data available

Good sense is highly desirable in writing specifications and is even more necessary in interpreting them. If they only contained the minimum number of requirements to define the character of material wanted...the matter would be greatly simplified. Rarely do they cover the only material suited to the purpose intended, and more rarely do they cover the best material for the purpose intended. Once written, they become as the laws of the Medes and Persians, which alter not. They acquire a sort of sanctity, like the Ten Commandments or the Constitution before the adoption of the Eighteenth Amendment. Present Tendencies in Engineering Materials

*Mechanical Engineering*, Volume 48, Number 8, August, 1926 (p. 792)

**von Goethe, Johann Wolfgang** 1749–1832  
German poet, novelist, playwright, and natural philosopher

Nature, in her process of specification, seems to get, so to speak, into a *cul de sac*, where she cannot advance, and whence she will not recede.

In John Stuart Blackie  
*The Wisdom of Goethe*  
Nature – Natural History (p. 186)  
William Blackwood & Sons. Edinburgh, Scotland. 1883

## SPECTRA

**Kirchoff, Gustav Robert** 1824–87  
German physicist

**Bunsen, Robert** 1811–99  
German chemist

It is known that several substances have the property of producing certain bright lines when brought into the flame. A method of qualitative analysis can be based on these lines, whereby the field of chemical reactions is greatly widened and hitherto inaccessible problems are solved. We limit ourselves here to developing the method for alkali and earth-alkali metals and demonstrating its value. By some examples.

*Chemical Analysis by Observation of Spectra*  
*Annalen der Physik und der Chemie*, Volume 110, 1860 (p. 161)

## SPECTROSCOPE

**Clerke, Agnes Mary** 1842–1907  
Irish astronomer

Custom can never blunt the wonder with which we must regard the achievement of compelling rays emanating from a source devoid of sensible magnitude through immeasurable distances, to reveal, by its distinctive qualities, the composition of that source.

*A Popular History of Astronomy During the Nineteenth Century*  
Part II, Chapter XII (p. 372)  
A. & C. Black. London, England. 1908

**Crookes, Sir William** 1832–1919

English chemist and physicist

The spectroscope reveals that the elementary components of the stars and the earth are pretty much the same.

In Frederick Houk Law

*Science in Literature*

The Romance of the Diamonds (p. 111)

Harper &amp; Brothers. New York, New York, USA. 1929

**Draper, John William** 1811–82

American scientist, philosopher, and historian

And now, while we have accomplished only a most imperfect examination of objects that we find on earth, see how, on a sudden, through the vista that has been opened by the spectroscope, what a prospect lies beyond us in the heavens! I often look at the bright yellow ray emitted from the chromosphere of the sun, by that unknown element, Helium, as the astronomers have ventured to call it. It seems trembling with excitement to tell its story, and how many unseen companions it has. And if this be the case with the sun, what shall we say of the magnificent hosts of the stars? May not everyone of them have special elements of its own? Is not each a chemical laboratory in itself?

Presidential Address

American Chemical Society, November 16, 1876

**Huggins, Sir William** 1824–1910

English astronomer

One important object of this original spectroscopic investigation of the light of the stars and other celestial bodies, namely to discover whether the same chemical elements as those of our earth are present throughout the universe, was most satisfactorily settled in the affirmative; a common chemistry, it was shown, exists throughout the universe.

*The Scientific Papers of Sir William Huggins*

Spectra of the Fixed Stars (p. 49)

W. Wesley &amp; Son. London, England. 1909

I looked into the spectroscope. No spectrum such as I expected! A single bright line only!...The riddle of the nebulae was solved. The answer, which had come to us in the light itself, read: Not an aggregation of stars, but a luminous gas. Stars after the order of our own sun, and of the brighter stars, would give a different spectrum; the light of this nebula had clearly been emitted by a luminous gas.

*The Scientific Papers of Sir William Huggins*

Historical Statement (p. 106)

W. Wesley &amp; Son. London, England. 1909

On the evening of August 29, 1864, I directed the telescope for the first time to a planetary nebula in Draco. I looked into the spectroscope. No spectrum such as I expected! A single bright line only! At first I suspected

some displacement of the prism, and that I was looking at a reflection of the illuminated slit from one of its faces. This thought was scarcely more than momentary; then the true interpretation flashed upon me. The light of the nebula was monochromatic; and so, unlike any other light I had as yet subjected to prismatic examination, could not be extended out to form a complete spectrum.

*An Introduction to the Study of Spectrum Analysis*

Chapter VII (p. 84)

Longmans, Green &amp; Co. London, England. 1904

**Keeler, James E.** 1847–1900

American astrophysicist

It was only after the discovery was made, that the light which reveals to us the existence of the heavenly bodies also bears the secret of their constitution and physical condition, that the basis for a real science was obtained. The spectroscope placed new and hitherto undreamed of powers in the hands of men. It is to the astrophysicist what the graduated circle and the telescope are to the astronomer.

The Importance of Astrophysical Research and Their Relation of Astrophysics to Other Physical Sciences

*The Astrophysical Journal*, Volume 6, Number 4, November, 1897

(p. 273)

It [the spectroscope] is to the astrophysicist what the graduated circle and the telescope are to the astronomer.

The Importance of Astrophysical Research and the Relation of Astrophysics to Other Physical Sciences

*The Astrophysical Journal*, Volume 6, Number 4, November, 1897

(p. 273)

**Maxwell, James Clerk** 1831–79

Scottish physicist

The vast interplanetary and interstellar regions will no longer be regarded as waste places in the universe, which the Creator has not seen fit to fill with the symbols of the manifold order of His kingdom. We shall find them to be already full of this wonderful medium; so full, that no human power can remove it from the smallest portion of space, or produce the slightest flaw in its infinite continuity. It extends unbroken, from star to star; and when a molecule of hydrogen vibrates in the dog-star, the medium receives the impulses of these vibrations; and after carrying them in its immense bosom for three years, delivers them in due course, regular order, and full tale into the spectroscope...

In W.D. Niven (ed.)

*The Scientific Papers of James Clerk Maxwell* (Volume 2)

Action at a Distance (p. 322)

At The University Press. Cambridge, England. 1890

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

It had occurred towards midnight of the 12th; and the spectroscope, to which he had at once resorted, indicated

a mass of flaming gas, chiefly hydrogen, moving with an enormous velocity towards this earth.

*The War of the Worlds*

Book One, Chapter I (p. 15)

Bernhard Tauchnitz. Leipzig, Germany. 1898

## SPECTROSCOPIC

**Clerke, Agnes Mary** 1842–1907

Irish astronomer

...spectroscopic coincidences admit of no compromise. Either they are absolute, or they are worthless.

*A Popular History of Astronomy During the Nineteenth Century* (3rd edition)

Part II, Chapter XII (p. 455)

Adam & Charles Black. London, England. 1893

## SPECTROSCOPIC ANALYSIS

**Herschel, Friedrich Wilhelm**

**(Sir William)** 1738–1822

English astronomer

May not the chemical properties of the prismatic colours be as different as those which relate to light and heat? Adequate methods for an investigation of them may easily be found; and we cannot too minutely enter into an analysis of light, which is the most subtle of all the active principles that are concerned in the mechanism of the operations of nature.

Investigation of the Powers the Prismatic Colours to Heat and Illuminate Objects

*Philosophical Transactions of the Royal Society of London*,

Volume 90, 1800 (pp. 270–271)

## SPECTROSCOPY

**Huggins, Sir William** 1824–1910

English astronomer

In no science, perhaps, does the sober statement of the results which have been achieved appeal so strongly to the imagination, and make so evident the almost boundless powers of the mind of man. By means of its light alone to analyse the chemical nature of a far distant body; to be able to reason about its present state in relation to the past and future; to measure within an English mile or less per second the otherwise invisible motion which it may have towards or from us; to do more, to make even that which is darkness to our eyes light, and from vibrations which our organs of sight are powerless to perceive to evolve a revelation in which we see mirrored some of the stages through which the stars may pass in their slow evolutionary progress – surely the record of such achievements, however poor the form of words in which they may be described, is worthy to be regarded as the scientific epic of the present century.

*Report of the Sixty-first Meeting of the British Association for the Advancement of Science*

Address by William Huggins (p. 4)

John Murray. London, England. 1892

This news was to me like the coming upon a spring of water in a dry and thirsty land. Here at last presented itself the very order of work for which in an indefinite way I was looking – namely, to extend his novel methods of research upon the sun to the other heavenly bodies.

In W.W. Campbell

Sir William Huggins (p. 308)

US Government Printing Office. Washington, D.C. 1911

## SPECTRUM

**Thomson, James** 1700–48

Scottish poet

First the flaming red

Sprang vivid forth; the tawny orange next,

And next delicious yellow; by whose side

Fell the kind beams of all-refreshing green.

Then the pure blue that swells autumnal skies, Ethereal play'd; and then, of sadder hue

Emerged the deeper indigo (as when

The heavy-skirted evening droops with frost), While the

last gleamings of refracted light

Died in the fainting violet away.

*Poetical Works of James Thomson*

A Poem Sacred to the Memory of Sir Isaac Newton

Reeves & Turner. London, England. 1895

## SPECTRUM ANALYSIS

**Bunsen, Robert W.** 1811–1899

German chemist

At the moment I am occupied by an investigation with Kirchhoff which does not allow us to sleep. Kirchhoff has made a totally unexpected discovery, inasmuch as he has found out the cause for the dark lines in the solar spectrum and can produce these lines artificially intensified both in the solar spectrum...

In Henry Enfield Roscoe

*The Life & Experiences of Sir Henry Enfield Roscoe*

Chapter IV (p. 81)

Macmillan & Co Ltd. London, England. 1906

**de la Rue, Warren** 1815–89

English astronomer and inventor

...if we were to go to the sun, and to bring away some portions of it and analyze them in our laboratories, we could not examine them more accurately than we can by this new mode of spectrum analysis....

*Chemical News*, Volume 4, 1861 (p. 130)

**Lockyer, Joseph Norman** 1836–1920

English astronomer and physicist

...we believe that each molecular vibration disturbs the ether; that spectra are thus begotten' each wavelength of light resulting from a molecular tremor of corresponding wavelength. The molecule is, in fact, the sender, the ether the wire, and the eye the receiving instrument, in this new telegraphy.

*Studies in Spectrum Analysis*

Chapter IV (pp. 118–119)

D. Appleton &amp; Company. New York, New York, USA. 1878

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

Spectrum analysis of the black powder points unmistakably to the presence of an unknown element with a brilliant group of three lines in the green, and it is possible that it combines with argon to form a compound which acts at once with deadly effect upon some constituent in the blood.

*The War of the Worlds*

Book Two, Chapter X (p. 283)

Bernhard Tauchnitz. Leipzig, Germany. 1898

**White, H. E.**

No biographical data available

That photographs are an extremely important feature of any book on atomic spectra may be emphasized by pointing out that, of all the theories and knowledge concerning atoms, the spectrum lines will remain the same for all time.

*Introduction to Atomic Spectra* (p. vii)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1934

 Beginner Books Inc. New York, New York, USA. 1988

**Eddington, Sir Arthur Stanley** 1882–1944  
 English astronomer, physicist, and mathematician

If we are not content with the dull accumulation of experimental facts, if we make any deductions or generalizations, if we seek for any theory to guide us, some degree of speculation cannot be avoided. Some will prefer to take the interpretation which seems to be most immediately indicated and at once adopted as an hypothesis; others will rather seek to explore and classify the widest possibilities which are not definitely inconsistent with the facts. Either choice has its dangers: the first may be too narrow a view and lead progress into a cul-de-sac; the second may be so broad that it is useless as a guide and diverge indefinitely from experimental knowledge.

The Internal Constitution of the Stars  
*Observatory*, Volume 43, 1920 (p. 356)

**Gruenberg, Benjamin C.**  
 No biographical data available

We all know that there can be no true science that does not rest solidly upon facts. But the thought must often occur to many of us that there is some danger, especially among the younger scientists, that we may become obsessed with an exaggerated sense of the value of facts as such. Is there not too much emphasis laid by many professors in charge of research students on the mere accumulation of observational, statistical or experimental facts, with too little attention to that side of science which concerns itself with those analytical and synthetic processes that convert facts into valuable ideas? It seems to me that this latter kind of work needs at the present time at least as much encouragement as the other. Of course, there is the possibility for "thinking" to degenerate into profitless speculation; but we are certainly as much in need of the results of thinking about the facts already accumulated as we are of more facts.

Facts Vs. The Advancement of Science

Chemical Essays

What Is an Element? (p. 149)

Archibald Constable & Company Ltd. London, England. 1908

Chemistry and physics are experimental sciences; and those who are engaged in attempting to enlarge the boundaries of science by experiment are generally unwilling to publish speculations; for they have learned, by long experience, that it is unsafe to anticipate events.

*Essays Biographical and Chemical*

Chemical Essays

Radium and Its Products (p. 179)

Archibald Constable & Company Ltd. London, England. 1908

I am leaving the regions of fact, which are difficult to penetrate, but which bring in their train rich rewards, and entering the regions of speculation, where many roads lie open, but where a few lead to a definite goal.

*Nobel Lectures, Chemistry 1901–1921*

The Rare Gases of the Atmosphere

Elsevier Publishing Co. Amsterdam, The Netherlands. 1966

**Romanes, George John** 1848–94

English psychologist

The spirit of speculation is the same as the spirit of science, namely...a desire to know the causes of things.

*Darwin and After Darwin* (4th edition)

Chapter I (p. 6)

The Open Court Publishing Co. Chicago, Illinois, USA. 1910

**Ross, Sir Ronald** 1857–1932

Scottish physician

We must not accept any speculations merely because they now appear pleasant, flattering, or ennobling to us. We must be content to creep upwards step by step, planting each foot on the firmest finding of the moment, using the compass and such other instruments as we have, observing without either despair or contempt the clouds and precipices above and beneath us. Especially our duty at present is to better our present foothold; to investigate; to comprehend the forces of nature; to set our State rationally in order; to stamp down disease in body, mind, and government; to lighten the monstrous misery of our fellows, not by windy dogmas, but by calm science.

Quoted in Richard Arman Gregory

*Discovery, Or, The Spirit and Service of Science*

Chapter VIII (p. 233)

Macmillan & Co Ltd. London, England. 1916

**Sylvester, James Joseph** 1814–97

English mathematician

Let him [the author] be permitted also in all humility to add...that in consequence of the large arrears of algebraical and arithmetical speculations waiting in his mind their turn to be called into outward existence, he is driven to the alternative of leaving the fruits of his meditations to perish (as has been the fate of too many foregone theories, the stillborn progeny of his brain, now forever resolved back again into the primordial

matter of thought), or venturing to produce from time to time such imperfect sketches as the present, calculated to evoke the mental cooperation of his readers, in whom the algebraical instinct has been to some extent developed, rather than to satisfy the strict demands of rigorously systematic exposition.

*The Collected Mathematical Papers of James Joseph Sylvester*

(Volume 2)

63 (p. 337)

At The University Press. Cambridge, England. 1908

## Twain, Mark (Samuel Langhorne

**Clemens)** 1835–1910

American author and humorist

Spectrum analysis enabled the astronomer to tell when a star was advancing head on, and when it was going the other way. This was regarded as very precious. Why the astronomer wanted to know, is not stated; nor what he could sell out for, when he did know. An astronomer's notions about preciousness were loose. They were not much regarded by practical men, and seldom excited a broker.

*Mark Twain's Fables of Man*

The Secret History of Eddypus

University of California Press. Berkeley, California, USA. 1972

## von Goethe, Johann Wolfgang

1749–1832

German poet, novelist, playwright, and natural philosopher

Man must always in some sense cling to the belief that the unknowable is knowable, otherwise speculation would cease.

In John Stuart Blackie

*The Wisdom of Goethe*

Philosophy, Metaphysics, Logic, Truth and Science (p. 152)

William Blackwood & Sons. Edinburgh, Scotland. 1883

## Whewell, William

1794–1866

English philosopher and historian

The mind cannot but claim a right to speculate concerning all its own acts and creations; yet, when it exercises this right upon its common practical notions, we find that it runs into barren abstractions and ever-recurring cycles of subtlety. Such Notions are like waters naturally stagnant; however much we urge and agitate them, they only revolve in stationary whirlpools.

*History of the Inductive Sciences from the Earliest to the Present Time*

(3rd edition)

Introduction (pp. 13–14)

John W. Parker & Son. London, England. 1857

## Whyte, A. Gowans

Scottish writer

The Golden Age of speculation was the Stone Age of knowledge.

The Triumph of Physics

*The Rationalist Annual*, 1931 (p. 28)

## Woodford, F. Peter

American editor

Of course speculation is in order in a Discussion, but it must be reasonable, firmly founded on observation, and subject to test, if it is to get past a responsible editorial board.

*Scientific Writing for Graduate Students* (p. 29)

Council of Biology Editors. Bethesda, Maryland, USA. 1986

## SPHERE

### Marquis, Don

1878–1937

American newspaperman, poet, and playwright

...we approached a mood of wonder as to the shape of the universe itself. We decided that it is spherical. We do not know how we know it is spherical; but we defy you to say over and over to yourself, rapidly and steadily for thirty minutes, that the universe is spherical, and then think of it as being any other shape. That is our dogma: The Universe Is Spherical; we shall be at no pains to impose it upon you; we merely point out to you how you may impose it upon yourself, if you wish ...

*Prefaces*

Preface to a Book of Patterns (p. 139)

D. Appleton & Co. New York, New York, USA. 1919

## SPHINX

### Loti, Pierre

1850–1923

French author

Is that a hill of sand that rises yonder? One can scarcely tell, for it has as it were no shape, no outline; rather it seems like a great rosy cloud, or some huge, trembling billow, which once perhaps raised itself there, forthwith to become motionless forever.... And from out this kind of mummified wave a colossal human effigy emerges, rose-coloured too, a nameless, elusive rose; emerges, and stares with fixed eyes and smiles. It is so huge it seems unreal, as if it were a reflection cast by some mirror hidden in the moon...

Translated by W. P. Baines

*Egypt*

Chapter 1 (p. 3)

Duffield & Co. New York, New York, USA. 1910

## SPIDER WEB

### Cook, Eliza

1818–89

English author

...the bright slime that cunning reptiles spread To catch their prey ...

*The Poetical Works of Eliza Cook*

Silence – A Fragment

Frederick Warne & Co. London, England. 1870

**Fabre, Jean-Henri** 1823–1915  
French entomologist and author

To appoint one's self...an inspector of Spiders' webs, for many years in succession and for long seasons, means joining a not overcrowded profession, I admit. Heaven knows, it does not enable one to put money by! No matter: the meditative mind returns from that school fully satisfied.

Translated by Alexander Teixeira de Mattos  
*The Life of the Spider*  
Chapter IX (p. 232)  
Dodd Mead & Co. New York, New York, USA. 1917

The spider's web is a glorious mathematical problem.

Translated by Alexander Teixeira de Mattos  
*The Life of the Fly*  
Chapter XII (p. 276)  
Dodd, Mead & Co. New York, New York, USA. 1925

**Oehlenschläger, Adam Gottlob** 1779–1850  
Danish poet

Look upon my web so fine, See how threads with threads entwine; If the evening wind alone Thus within the dark-est place Breathe upon it, all is gone.

In William Chambers and Robert Chambers  
*Chambers's Miscellany of Useful and Entertaining Tracts*  
The Spider's Web (p. 17)  
William & Robert Chambers. Edinburgh, Scotland. 1847

## SPIN

**Goudsmit, Samuel A.** 1902–78  
Dutch-born American physicist

It was a little over fifty years ago that George Uhlenbeck and I introduced the concept of spin. It is therefore not surprising that most young physicists do not know that spin had to be introduced. They think that it was revealed in Genesis or perhaps postulated by Sir Isaac Newton, which most young physicists consider to be about simultaneous.

In Anthony French and Edwin Taylor  
*An Introduction to Quantum Physics* (p. 424)  
W.W. Norton & Company, Inc. New York, New York, USA. 1978

## SPIRAL

**Fabre, Jean-Henri** 1823–1915  
French entomologist and author

The logarithmic spiral of the mollusc is as old as the centuries. It proceeds from the Sovran Geometry Which rules the world, attentive alike to the Wasp's cell and to the Snail's spiral.

Translated by Alexander Teixeira de Mattos  
*The Mason-Wasps*  
Insect Geometry (p. 237)  
Dodd, Mead & Co. New York, New York, USA. 1919

**Payne-Gaposchkin, Cecilia** 1900–79  
British-American astronomer

Wherever we look in nature we can see spiral forms: the uncurling fern, the snail, the nautilus shell, the hurricane, the stirred cup of coffee, the water that swirls out of a washbowl. Perhaps we should not be surprised to see spirals in the great star systems whirling in space.

Why Do Galaxies Have a Spiral Form  
*Scientific American*, Volume 189, Number 3, September, 1953 (p. 89)

## SPIRAL ARMS

**van de Hulst, H. C.** 1918–2000  
Dutch astronomer

The discovery of spiral arms and – later – of molecular clouds in our Galaxy, combined with a rapidly growing understanding of the birth and decay process of stars, changed interstellar space from a stationary “medium” into an “environment” with great variations in space and time.

In A. Bonetti, J.M. Greenberg and S. Aiello (eds.)  
*Evolution in Interstellar Dust and Related Topics* (p. 5)  
North-Holland Publishing Company. Amsterdam, Netherlands. 1989

## SPIRIT

**Buchner, Ludwig** 1824–99  
German physician and philosopher

A spirit independent of nature cannot exist; for never has an unprejudiced mind, cultivated by science, perceived its manifestations.

*Force and Matter*  
Chapter VI (p. 36)  
Trübner & Co. London, England. 1864

## SPITS

**Schwartz, Maurice L.**  
American geologist

As industrial, residential, and recreational pressures are intensified in the coastal zone our knowledge of the processes operating there must keep ahead, or at least abreast, of man's intrusion. Spits and bars in populated areas throughout the world are becoming encroached upon by some form of human exploitation. Too often after the fact, when the morphology of the structure continues its relentless change, does the populace become aware of what is then called an emergency condition. Suddenly, countermeasures are taken to remedy what was inevitable to begin with.

In Maurice L. Schwartz  
*Spits and Bars*  
Introduction (p. 1)  
Dowden, Hutchinson & Ross, Inc. Stroudsburg, Pennsylvania, USA. 1972

**SPONTANEOUS GENERATION****Urey, Harold Clayton** 1893–1981

American chemist

The common assumption is that the earth and its atmosphere have always been as they are now, but if this is assumed it is necessary to account for the present highly oxidized conditions by some processes taking place early in the earth's history. Briefly, the highly oxidized condition is rare in the cosmos.

On the Early Chemical History of the Earth and the Origin of Life  
*Proceedings of the National Academy of Science USA*, Volume 38, 1952

**SQUARE ROOT****Berlinski, David** 1942–

American mathematician

The square root of 2 is like the Yeti or the Loch Ness monster, the snows of yesterday, the dusky ghost of the dusty window – it is not there, it cannot be found, it is not a part of the furniture of this or any other world.

*A Tour of the Calculus*

Chapter 5 (p. 34)

Pantheon Books. New York, New York, USA. 1995

**SQUARE THE CIRCLE****Aristophanes** 448 BCE–380 BCE

Greek playwright

Met. These are – “Instruments”

An atmospherical geometrical scale.

First, you must understand, that the atmosphere

Is form'd, – in a manner, – altogether, – partly, In the fashion of a furnace, or a funnel; I take this circular arc, with the moveable arm,

And so, by shifting it round, till it coincides At the angle – you understand me?

Pei. Not in the least.

Met. (with animation) I obtain a true division, with the quadrature

Of the equilateral circle.

Translated by J.H. Frere

*The Birds of Aristophanes* (p. 45)

At The University Press. Cambridge, England. 1883

**de Morgan, Augustus** 1806–71

English mathematician and logician

Madmen reason rightly upon wrong premises: Mr. Smith [a circle squarer] reasons wrongly upon no premises at all.

*A Budget of Paradoxes* (p. 319)

Longmans, Green &amp; Co. London, England. 1872

**London, Jack** 1876–1916

American author

I know that at the time I was confident, I had discovered the formula for squaring the circle; but I resolutely deferred the working of it out until after the examinations. Then I would show them.

*John Barleycorn*

Chapter XXII (p. 188)

Mills &amp; Boon. London, England. 1914

**STABILITY****Author undetermined**

Stability is only good if you aren't heading straight into the ground.

Source undetermined

**STALK****Ruskin, John** 1819–1900

English writer, art critic, and social reformer

I perceive, farther, that this disorderly flower [violet] is lifted on a lanky, awkward, springless, and yet stiff flower-stalk; which is not round, as a flower-stalk ought to be, but obstinately square, and fluted, with projecting edges, like a pillar run thin out of an iron-foundry for a cheap railway station.

*Proserpina: Studies of Wayside Flowers* (Volume 2)

Part VII, Chapter I (p. 16)

George Allen. London, England. 1882

**STAMP COLLECTING****Alvarez, Luis Walter** 1911–88

American experimental physicist

Paleontologists...they're really not very good scientists. They're more like stamp collectors.

*New York Times*, 19 January, 1988**Birch, Arthur J.** 1915–1995

Australian chemist

I have never been emotionally attracted by exactitude of detail, but rather by the broad sweep of ideas collected around philosophically defined examples that can be tested experimentally. I have never been a scientific “stamp collector”, although it takes all types to make the world and I have greatly benefited by the “collections” of others...

*To See the Obvious*

Why Chemistry? (pp. 13–14)

American Chemical Society. Washington, D.C. 1995

**Rutherford, Ernest** 1871–1937

English physicist

All science is either physics or stamp collecting.

In J.B. Birks  
*Rutherford at Manchester*  
 Memories of Rutherford (p. 108)  
 W.A. Benjamin Inc. New York, New York, USA. 1963

**Simpson, George Gaylord** 1902–84  
 American paleontologist

Biology starts with biochemistry and goes on to neuro-physiology and genetics. All else is stamp-collecting.  
*This View of Life: The World of an Evolutionist*  
 Chapter Six (p. 108)  
 Harcourt, Brace & World, Inc. New York, New York, USA. 1964

## STANDARD

**Woll, Matthew** 1880–1956  
 Luxembourg-born American photo engraver

I know very well that in a great many circles the man who does not enter with a neatly arranged plan, with a set of doctrines, with a rounded and sonorous formula, and with assurance about everything, is set down as something of an old fogey, perhaps reactionary, certainly not one of the elect who are “doing things” and providing guidance for the race. I must assume the risk. I have no formula. [But I shall resist] those who have the formula for so many things and who seek so avidly to force it down the throats of everyone else.

Standardization  
*Annals of the American Academy of Political and Social Science*, Volume 137, May, 1928 (p. 47)

## STAR

**Acton, Loren** 1936–  
 American astronaut and solar physicist

When you look out the other way toward the stars you realize it’s an awful long way to the next watering hole.  
 In Kevin W. Kelley  
*The Home Planet*  
 With Plate 84  
 Addison-Wesley, Reading, Massachusetts, USA. 1988

**Adams, George** 1750–95  
 English instrument maker

New stars offer to the mind a phenomenon more surprising, and less explicable, than almost any other in the science of astronomy.  
*Lectures on Natural and Experimental Philosophy* (Volume 4)  
 Chapter XLIV (p. 213)  
 Printed by R. Hindmarsh. London, England. 1794

**Aiken, Conrad** 1889–1973  
 American poet, short story writer, and novelist

Ice is the silent language of the peak; and fire is the silent language of the star.

*Collected Poems*  
 Sonnet 10  
 Oxford University Press, Inc. New York, New York, USA. 1970

**Alighieri, Dante** 1265–1321  
 Italian poet and writer

...and thence we issued forth again to see the stars.  
 In *Great Books of the Western World* (Volume 21)  
*The Divine Comedy of Dante Alighieri*  
 Hell, Canto XXXIV, l. 138–139  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Andreas, Brian** 1956–  
 American artist, sculpture, and storyteller

We lay there & looked up at the night sky & she told me about stars called blue squares & red swirls & I told her I’d never heard of them. Of course not, she said, the really important stuff they never tell you. You have to imagine it on your own.  
*Blue Squares*

**Aratus** 271 BCE–213 BCE  
 Greek statesman

In his fell jaw  
 Flames a star above all others with searing beams  
 Fiercely burning, called by mortals Sirius.  
 In Garrett P. Serviss  
*Astronomy with the Naked Eye*  
 Chapter III (p. 42)  
 Harper & Brothers New York, New York, USA. 1908

**Aristotle** 384 BCE–322 BCE  
 Greek philosopher

We may object that we have been of the stars as mere bodies, and as units with a serial order indeed but entirely inanimate; but should rather conceive them as enjoying life and action.  
 In *Great Books of the Western World* (Volume 8)  
*On the Heavens*  
 Book I, Chapter 12 (p. 383)  
 Encyclopaedia Britannica, Inc. Chicago, Illinois, USA. 1952

## Author undetermined

The innumerable, stars like luminous bugs, crawled up the dome of night, but the moon, like a gorgeous shining beetle, had crept with a good deal of briskness out of sight.  
 The Symbol of Darkness  
*The Knickerbocker*, Volume 34, Number 3, September, 1849 (p. 217)

**Aurelius Antoninus, Marcus** 121–180  
 Roman emperor

The Pythagoreans bid us in the morning look to the heavens that we may be reminded of those bodies which continually do the same thing and in the same manner perform their work, and also be reminded of their purity and nudity. For there is no veil over a star.

In *Great Books of the Western World* (Volume 12)  
*The Meditations of Marcus Aurelius*  
 Book XI, # 27 (p. 306)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Look around at the courses of the stars, as if thou wert going along with them; and constantly consider the changes of the elements into one another; for such thoughts purge away the filth of the terrene life.

In *Great Books of the Western World* (Volume 12)  
*The Meditations of Marcus Aurelius*  
 Book VII, #47 (p. 282)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Bailey, Philip James** 1816–1902  
 English poet

...the stars  
 As dewdrops countless on the aetherial fields  
 Of the skies...

*Festus: A Poem*  
 Scene I (p. 32)  
 George Routledge & Sons, Ltd. London, England. 1893

Surely the stars are images of love.  
*Festus: A Poem*  
 Scene XXXI (p. 510)  
 George Routledge & Sons, Ltd. London, England. 1893

 June (p. 46)  
 Simon & Schuster. New York, New York, USA. 1946

**Brecht, Bertolt** 1898–1956  
 German writer

SAGREDO [reluctant to go to the telescope]: I feel something not all that remote from fear, Galileo.  
 GALILEO: I'm about to show you one of the shining milkwhite clouds in the Milky Way. Tell me what it's made up of.  
 SAGREDO: Those are stars, innumerable stars.  
 Translated by John Willett  
*Life of Galileo*  
 Scene 3 (p. 26)  
 Arcade Publishing. New York, New York, USA. 1994

**Brewster, David** 1781–1868  
 English physicist

It is no ways probable that the Almighty, who always acts with infinite wisdom, and does nothing in vain, should create so many glorious suns, fit for so many important purposes, and place them at such distances from one another, without proper objects near enough to be benefited by their influences. Whoever imagines they were created only to give a faint glimmering light to the inhabitants of this globe, must have a very superficial knowledge of astronomy, and a mean opinion of the Divine wisdom: since, by an infinitely less exertion of creating power, the Deity would have given our earth much more light by one single additional moon.

*Ferguson's Astronomy, Explained upon Sir Isaac Newton's Principles*  
 (Volume 1)  
 Chapter I (p. 3)  
 Printed for the author. London, England. 1756

**Brood, William J.**  
 No biographical data available

A telescope in the void recently found cosmic “maternity wards” where clouds of interstellar gas and dust appear to be in various stages of giving birth to stars.  
 “Golden Age” of Astronomy Peers to the Edge of the Universe  
*New York Times*, C1, May 8, 1984

**Brown, Fredric** 1906–72  
American writer of science fiction and mystery

Overhead and in the far distance are the lights in the sky that are stars. The stars they tell us we can never reach because they are too far away. They lie; we'll get there. If rockets won't take us, something will.

*The Lights in the Sky Are Stars* (p. 20)

**Browne, J. Stark**  
No biographical data available

The stillness of the heavens is, however, apparent only, for commotion of the fiercest kind is raging on all sides. Stars are suns, and the suns are spheres of fire blazing with fury indescribable; scenes of activity so tremendous that no vehemence of tempest or tornado on earth can give the slightest idea of their fearfulness.

The Number and Distances of the Stars  
*The Rationalist Annual*, 1931 (p. 61)

**Browning, Robert** 1812–89  
English poet

All that I know  
of a certain star,  
Is, it can throw,  
(Like the angled spar)

Now a dart of red,  
Now a dart of blue.

*The Poems and Plays of Robert Browning*  
Dramatic Lyrics, My Star  
The Modern Library. New York, New York, USA. 1934

**Bryant, William Cullen** 1794–1878  
American poet

The sad and solemn night  
Hath yet her multitude of cheerful fires;  
The glorious host of light  
Walk the dark hemisphere till she retires;  
All through her silent watches, gliding slow,  
Her constellations come and climb the heavens and go.

In Parke Godwin (ed.)  
*Poems*  
Hymn to the North Star  
D. Appleton & Company. New York, New York, USA. 1874

**Meredith, Owen (Edward Robert Bulwer-Lytton, First Earl Lytton)** 1831–91  
English statesman and poet

When stars are in the quiet skies,  
Then most I pine for thee;  
Bend on me then thy tender eyes,  
As stars look on the sea.

*The Works of Edward Bulwer-Lytton* (Volume 6)  
Night and Love (p. 59)  
Peter Fenelon Collier. New York, New York, USA. 1892

**Bunting, Basil** 1900–85  
English modernist poet

Furthest, fairest thing, stars, free of our humbug,  
each his own, the longer known, the more alone,  
wrapt in emphatic fire roaring out to a black flue...  
Then is Now. The star you steer by is gone.

*Collected Poems*  
Briggflats, V (p. 58)  
Oxford University Press, Inc. London, England. 1978

**Burke, Edmund** 1729–97  
English statesman and philosopher

The starry heaven, though it occurs so very frequently to our view, never fails to excite an idea of grandeur. This cannot be owing to the stars themselves, separately considered. The number is certainly the cause. The apparent disorder augments the grandeur, for the appearance of care is highly contrary to our idea of magnificence. Besides, the stars lie in such apparent confusion, as makes it impossible on ordinary occasions to reckon them. This gives them the advantage of a

Scottish poet

...the sentinel stars set their watch in the sky.

*The Complete Poetical Works*  
The Soldier's Dream  
Chadwyck-Healey. Cambridge, England. 1992

**Carlyle, Thomas** 1795–1881  
English historian and essayist

Canopus shining-down over the desert, with its blue diamond brightness (that wild, blue, spirit-like brightness far brighter than we ever witness here), would pierce into the heart of the wild Ishmaelitish man, whom it was guiding through the solitary waste there.

*On Heroes and Hero Worship*  
Lecture I (p. 13)  
John B. Alden, Publisher. New York, New York, USA. 1887

...when I gazed into these Stars, have they not looked down on me as if with pity, from their serene spaces; like Eyes glistening with heavenly tears over the little lot of man! Thousands of human generations, all as noisy as our own, have been swallowed up of Time, and there remains no wreck of them anymore; and Arcturus and Orion and Sirius and the Pleiades are still shining in their courses, clear and young, as when the Shepherd first noted them in the plain of Shinar.

*Sartor Resartus*  
Book II, Chapter VIII (p. 165)  
Ginn & Company. Boston, Massachusetts, USA. 1897

...when I gazed into these Stars, have they not looked down on me as if with pity, from their serene spaces; like Eyes glistening with heavenly tears over the little lot of man! Thousands of human generations, all as noisy as our own, have been swallowed up of Time, and there remains no wreck of them anymore; and Arcturus and Orion and Sirius and the Pleiades are still shining in their courses, clear and young, as when the Shepherd first noted them in the plain of Shinar.

*Sartor Resartus* (Volume 12)  
Book II, Chapter VIII (p. 138)  
Peter Fenelon Collier, Publisher. New York, New York, USA. 1897

The chambers of the East are opened in every land, and the sun comes forth to sow the earth with orient pearl. Night, the ancient mother, follows him with her diadem of stars; and Arcturus and Orion call me into the Infinitudes of space as they called the Druid priest or the shepherd of Chaldea. Bright creatures! how they gleam like spirits through the shadows of innumerable ages from their thrones in the boundless depths of heaven.

In James Anthony Froude  
*Thomas Carlyle* (Volume 1)  
Chapter XVII (p. 244)  
Charles Scribner's Sons. New York, New York, USA. 1882

**Cernan, Eugene** 1934–  
American astronaut

I know the stars are my home. I learned about them, needed them for survival in terms of navigation. I know where I am when I look up at the sky. I know where I am when I look up at the Moon; it's not just some abstract romantic idea, it's something very real to me. See, I've expanded my home.

The View from Out There: In Words and Pictures

...we are the scatterlings of Africa

On a journey to the stars...

*Scatterlings of Africa*

From the CD *Scatterlings of Africa*

**Clerke, Agnes Mary** 1842–1907  
Irish astronomer

That a science of stellar chemistry should not only have become possible, but should already have made material advances, is assuredly one of the most amazing features in the swift progress of knowledge our age has witnessed. Custom can never blunt the wonder with which we must regard the achievement of compelling rays emanating from a source devoid of sensible magnitude through immeasurable distance, to reveal, by its peculiarities, the composition of that source.

*A Popular History of Astronomy During the Nineteenth Century* (3rd edition)

Chapter XII (p. 450)

Adam & Charles Black. London, England. 1893

When all the stars blaze out on a clear, moonless night, it seems as if it would be impossible to count them...

A. Constable & Company. London, England. 1913

**de Saint-Exupéry, Antoine** 1900–44

French aviator and writer

All men have the stars...but they are not the same things for different people. For some, who are travelers, the stars are guides. For others they are no more than little lights in the sky. For others, who are scholars, they are problems. For my businessman they were wealth. But all these stars are silent. You – you alone – will have the stars as no one else has them...

Translated by Katherine Woods

*The Little Prince*

Chapter XXVI (p. 85)

Harcourt, Brace & Company. New York, New York, USA. 1943

**de Tabley, Lord** 1835–95

English literary scholar and botanist

The May-fly lives an hour,  
The star a million years;  
But as a summer flower,  
Or as a maiden's fears,  
They pass, and heaven is bare  
As tho' they never were.

*The Collected Poems of Lord de Tabley*

Hymn to Astarte

Chapman and Hall. London, England. 1903

**Dee, John** 1527–1609

English mathematician and occultist

The stars and celestial powers are like seals whose characters are imprinted differently by reason of differences in the elemental matter.

*John Dee on Astronomy*

XXVI (p. 135)

University of California Press. Berkeley, California, USA. 1978

**Dick, Thomas** 1600–80

Scottish theologian and philosopher

Come forth, O man! yon azure round survey,  
And view those lamps which yield eternal day.  
Bring forth thy glasses; clear thy wondering eyes;  
Millions beyond the former millions rise;  
Look further; – millions more blaze from yonder skies.

*The Works of Thomas Dick, LL.D.*

The Solar System, Volume 10, Chapter VIII (p. 197)

**Dickinson, Emily** 1830–86

American lyric poet

“Arcturus” is his other name –  
I'd rather call him “star.”

It's very mean of Science

To go and interfere!

*The Complete Poems of Emily Dickinson*

No. 70 (p. 36)

Little, Brown & Company. Boston, Massachusetts, USA. 1960

**Disraeli, Benjamin, First Earl**

**of Beaconsfield** 1804–81

English prime minister, founder of Conservative Party, and novelist

It shows you exactly how a star is formed; nothing can be so pretty! A cluster of vapor, the cream of the milky way, a sort of celestial cheese, churned into light...

*Tancred*

Book I, Chapter IX

H. Colburn. London, England. 1847

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

Are you conscious of the restful influence which the stars exert? To me they are the most soothing things in Nature. I am proud to say that I don't know the name of one of them. The glamour and romance would pass away from them if they were all classified and ticketed in one's brain. But when a man is hot and flurried, and full of his own little ruffled dignities and infinitesimal misfortunes, then a star bath is the finest thing in the world.

*The Stark Munro Letters*

Letter VIII (p. 170)

D. Appleton & Company. New York, New York, USA. 1895

Sidney A. Witherbee. Detroit, Michigan, USA. 1898

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

We are bits of stellar matter that got cold by accident, bits of a star gone wrong.

*New York Times Magazine*, October 9, 1932

...with this brief glance at the scenery that we pass we shall plunge into the deep interior [of a star] – where the eye cannot penetrate, but where it is yet possible by scientific reasoning to learn a great deal about the conditions.

*Stars and Atoms*

Lecture I (p. 11)

Yale University Press. London, England. 1927

Our object in diving into the interior [of a star] is not merely to admire a fantastic world with conditions transcending ordinary experience; it is to get at the inner mechanism which makes stars behave as they do. If we are to understand the surface manifestations, if we are to understand why “one star differeth from another star in glory,” we must go below to the engine-room – to trace the beginning of the stream of heat and energy which pours out through the surface.

*Stars and Atoms*

Lecture I (p. 20)

Yale University Press. London, England. 1927

We can now form some sort of a picture of the inside of a star – a hurly burly of atoms, electrons and ether-waves. Disheveled atoms tear along at a hundred miles a second, their normal array of electrons being torn from them in the scrimmage. The lost electrons are speeding a hundred times faster to find new resting places...

*Stars and Atoms*

Lecture I (p. 26)

Yale University Press. London, England. 1927

I am aware that many critics consider the conditions in the stars not sufficiently extreme...the stars are not hot enough. The critics lay themselves open to an obvious retort: we tell them to go and find a hotter place.

*Stars and Atoms*

Lecture III (p. 102)

Yale University Press. London, England. 1927

...it is reasonable to hope that in a not too distant future we shall be competent to understand so simple a thing as a star.

*The Internal Constitution of the Stars*

Chapter XIII (p. 393)

At The University Press. Cambridge, England. 1930

The star has to go on radiating and radiating and contracting and contracting until, I suppose, it gets down to a few km. radius, when gravity becomes strong enough to hold in the radiation, and the star can at last find peace.... I think there should be a law of Nature to prevent a star from behaving in this absurd way!

January 11 meeting of the Royal Astronomical Society

*The Observatory*; Volume 58, Number 729, February, 1935 (p. 38)

**Eliot, George (Mary Ann Evans Cross)** 1819–80  
English novelist

The stars are golden fruit upon a tree

All out of reach.

*The Spanish Gypsy*

Book II

Blackwood and Sons. Edinburgh, Scotland. 1868

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

The stars awaken a certain reverence, because though always present, they are inaccessible...

*The Complete Works of Ralph Waldo Emerson* (Volume 1)

*Nature: Addresses and Lectures*

Chapter I (p. 7)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

But every night comes out the envoys of beauty, and light the universe with their admonishing smile.

*Ralph Waldo Emerson: Essays and Lectures*

*Nature: Addresses, and Lectures*

Nature (p. 9)

The Library of America. New York, New York, USA. 1983

If a man would be alone, let him look at the stars. The rays that come from those heavenly worlds, will separate between him and what he touches. One might think the atmosphere was made transparent with this design, to give man, in the heavenly bodies, the perpetual presence of the sublime. Seen in the streets of cities, how great they are!

*Ralph Waldo Emerson: Essays and Lectures*

*Nature: Addresses and Lectures*

Nature (p. 9)

The Library of America. New York, New York, USA. 1983

If the stars should appear one night in a thousand years, how would men believe and adore and preserve for many generations the remembrance of the city of God which had been shown.

*Ralph Waldo Emerson: Essays and Lectures*

*Nature: Addresses, and Lectures*

Nature (p. 9)

The Library of America. New York, New York, USA. 1983

The stars awaken a certain reverence, because though always present, they are always inaccessible...

American poet

They cannot scare me with their empty spaces  
Between stars – on stars where no human race is.  
*Complete Poems of Robert Frost*  
Desert Places  
Henry Holt & Company. New York, New York, USA. 1949

I could be worse employed  
Than as a watcher of the void,  
Whose part should be to tell  
What star if any fell.  
Suppose some seed-pearl sun  
Should be the only one;  
Yet still I must report  
Some cluster one star short.  
I should justly hesitate  
To frighten church or state  
By announcing a star down  
From, say, the Cross or Crown.  
To make sure what star I missed  
I should have to check on my list  
Every star in sight.  
It might take me all night.

*Complete Poems of Robert Frost*  
On Making Certain Anything Has Happened  
Henry Holt & Company. New York, New York, USA. 1949

**Gamow, George** 1904–68  
Russian-born American physicist

Twinkle, twinkle, quasi-star  
Biggest puzzle from afar  
How unlike the other ones  
Brighter than a billion suns  
Twinkle, twinkle, quasi-star  
How I wonder what you are.

In Louis Berman  
*Exploring the Cosmos*  
Chapter 14 (p. 311)  
Little, Brown & Company. Boston, Massachusetts, USA. 1973

Whereas all humans have approximately the same life expectancy, the life expectancy of stars varies as much as from that of a butterfly to that of an elephant.

*A Star Called the Sun* (p. 145)  
The Viking Press. New York, New York, USA. 1964

*Nature*, Volume 76, Number 1970, August 1, 1907 (p. 326)

**Goddard, Robert H.** 1882–1945  
American physicist

There can be no thought of finishing, for “aiming at the stars,” both literally and figuratively, is a problem to occupy generations, so that no matter how much progress one makes, there is always the thrill of just beginning.

In Eugene Mallove and Gregory Matloff  
*The Starflight Handbook*  
Letter to H.G. Wells, April 20, 1932 (p. 1)  
John Wiley & Sons, Inc. New York, New York, USA. 1989

**Goodenough, Ursula** 1943–  
American biologist

I lie on my back under the stars and the unseen galaxies and I let their enormity wash over me. I assimilate the vastness of the distances, the impermanence, the fact of it all. I go all the way out and then I go all the way down, to the fact of photons without mass and gauge bosons that become massless at high temperatures. I take in the abstractions about forces and symmetries and they caress me, like Gregorian chants because the words are so haunting.

*The Sacred Depths of Nature*  
Chapter I. Reflections (pp. 12–13)  
Oxford University Press, Inc. New York, New York, USA. 1998

**Greenstein, George** 1940–  
American astronomer

Overhead, the stars are strewn across a darkness, a blackness so profound that for a moment, for the barest flicker of an instant, I can almost sense their inconceivable distance. In a sudden; exalting burst of vertigo I fancy what it would be like to fly, to fall up and into that ocean.

*The Symbiotic Universe*  
Prologue (p. 29)  
William Morrow & Company, Inc. New York, New York, USA. 1988

**Gronidal, Florence Armstrong**  
American astronomer and photographer

...if all the wondrous phenomena of visible stars could be seen on but one of the nights of our long ride about the sun, the civilized world would spend its last cent on glasses and sit up until dawn to feast its eyes on the sublimity of the spectacle.

*The Music of the Spheres: A Nature Lover's Astronomy*  
Chapter II (p. 16)  
The Macmillan Company. New York, New York, USA. 1926

If all the diamonds in the world were melted into one huge magical jewel, its sparkling brilliance would pale beside Sirius, the diamond of the heavens.

*The Music of the Spheres: A Nature Lover's Astronomy*  
Chapter VIII (p. 159)  
The Macmillan Company. New York, New York, USA. 1926

**Guilleimin, Amédée** 1826–93

French journalist and scientific writer

What are those brilliant points – those innumerable stars, which, never dim, shine out unceasingly from the dark profound? Are they sown broadcast – orderless, with no other bond save that which perspective lends to them? Or, if not immovable, as we have so long imagined if not golden nails fixed to a crystal vault, whither are they bound?

*The Heavens: An Illustrated Handbook of Popular Astronomy*

(2nd edition)

The Heavens (p. 1)

Richard Bentley. London, England. 1868

Nothing is more fitted to elevate the mind towards the infinite than the thoughtful contemplation of the starry vault in the silent calm of night. A thousand fires sparkle in all parts of the sombre azure of the sky. Varied in colour and brilliancy, some shine with a vivid light, perpetually changing and twinkling; others, again, with a more constant one – more tranquil and soft; while very many only send us their rays intermittently, as if they could scarce pierce the profundity of space.

In Norman Lockyer and Richard Anthony Proctor

*The Heavens: An Illustrated Handbook of Popular Astronomy*

The Heavens (p. 2)

Richard Bentley &amp; Son. London, England. 1878

**Guiterman, Arthur** 1871–1943

Austrian-American poet

While poets feign that, passing earthly bars,  
We Fireflies shall someday shine as Stars,  
Our scientists, more plausibly surmise  
That Stars are underdeveloped Fireflies.

*Gaily the Troubadour*

My Firefly Stars (p. 187)

E.P. Dutton &amp; Company, Inc. New York, New York, USA. 1936

When the bat's on the wing and the bird's in the tree,  
Comes the starlighter, whom none may see.

First in the West where the low hills are,

He touches his wand to the Evening Star.

Then swiftly he runs on his rounds on high,

Till he's lit every lamp in the dark blue sky.

*Gaily the Troubadour*

The Starlighter (p. 190)

**Herschel, Friedrich Wilhelm**

**(Sir William)** 1738–1822

English astronomer

We may strongly suspect that there is not, in strictness of speaking, one fixed star in the heavens, and reasons which I shall adduce will render this so obvious that there can hardly remain a doubt of the general motion of all the starry systems, and, consequently, of the solar one among the rest.

On the Proper Motion of the Sun and Solar System

*Philosophical Transactions of the Royal Society of London,*

Volume 73, 1783 (p. 248)

“We ought perhaps,” says [Sir John Frederick William] Herschel, “to look upon certain clusters of stars, and the destruction of a star now and then in some thousands of ages, as the very means by which the whole is preserved and renewed. These clusters may be the laboratories of the universe, wherein the most salutary remedies for the decay of the whole are prepared.”

*Philosophical Transactions of the Royal Society of London,* 1785 (p. 217)

That stars are suns can hardly admit of a doubt. The sun turns on its axis; so do variable stars; most probably all stars. Stars have spots like the sun; in some stars we know these spots to be changeable.

On the Nature and Contraction of the Sun and Fixed Stars

*Philosophical Transactions of the Royal Society of London,*

Volume 85, 1795 (p. 68)

I resolved to examine every star in the heavens with the utmost attention, and a very high power, that I might collect such materials for this research as would enable me to fix my observations on those that would best answer my end. The subject has already proved so extensive, and still promises so rich a harvest to those who are inclined to be diligent in the pursuit, that I cannot help inviting every lover of astronomy to join with me in observations that must inevitably lead to new discoveries.

In Edward Crossley & Joseph Gledhill

*A Handbook of Double Stars*

Part I, Part I, Chapter I (p. 3)

Macmillan & Co Ltd. London, England. 1879

English astronomer and chemist

The stars are the land-marks of the universe...

*Essays from the Edinburgh and Quarterly Reviews with Addresses and Other Pieces*

An Address

April 11, 1827 (p. 469)

Longman, Brown, Green, Longmans & Roberts. London, England. 1857

If it were not perhaps too hazardous to pursue a former surmise of a renewal in what I figuratively called the Laboratories of the universe, the stars forming these extraordinary nebulae, by some decay or waste of nature, being no longer fit for their former purposes, and having their projectile forces, if any such they had, retarded in each other's atmosphere, may rush at last together, and either in succession, or by one general tremendous shock, unite into a new body. Perhaps the extraordinary and sudden blaze of a new star in Casiopeia's chair, in 1572, might possibly be of such a nature.

On the Construction of the Heavens

*Philosophical Transactions of the Royal Society of London,*

Volume 75, 1785

**Hilliard, George Stillman** 1808–79  
American politician

The stars are the poetry of heaven, but do they become its prose to the instructed eye, which sees in them, not points of gold upon a ground of blue, but worlds of beauty peopling the infinite depths of space?

*The Relation of the Poet to His Age*

Discourse (p. 38)

Charles C. Little & James Brown. Boston, Massachusetts, USA. 1843

**Hodgson, Ralph** 1871–1962  
English poet

I stood and stared, the sky was lit,  
The sky was stars all over it,  
I stood, I knew not why,  
Without a wish, without a will,  
I stood upon that silent hill  
And stared into the sky until  
My eyes were blind with stars and still  
I stared into the sky.

**Hovey, Richard** 1864–1900  
American composer, poet, and artist

The dawn is lonely for the sun,  
And chill and drear;

The one lone star is pale and wan,  
As one in fear.

*Along the Trail: A Book of Verse*

Chanson de Rosemonde

Small, Maynard & Company. Boston, Massachusetts, 1898

**Howe, Herbert Alonzo** 1858–1926  
American astronomer

The starry spheres which roll and shine, uncounted millions, in the infinite depths of space call us away from the common things of earth, and bid us plume our spirits for the loftiest flights.

*A Study of the Sky*

Chapter I (p. 15)

Charles Scribner's Sons. New York, New York, USA. 1901

...when the clangor and roar of the world's traffic have died away, and the last glint of the retiring sun has vanished from the mountain top; when the soft shades of the evening twilight gradually melt into the darkness of the night, and the blessed shadow of the earth steals over the abodes of men, bringing rest and refreshment of mind, then come forth the troops of radiant orbs, filling the sky with their splendid array, and giving to the mind of the beholder a portion of their own eternal calm.

*A Study of the Sky*

Chapter I (p. 15)

Charles Scribner's Sons. New York, New York, USA. 1901

**Hoyle, Sir Fred** 1915–2001  
English mathematician and astronomer

The stars are best seen as a spectacle, not from everyday surroundings where trees and buildings, to say nothing of street lighting, distract the attention too much, but from a steep mountainside on a clear night, or from a ship at sea. Then the vault of heaven appears incredibly large and seems to be covered by an uncountable number of fiery points of light.

*The Nature of the Universe*

Chapter 3 (p. 51)

The University Press. Cambridge. 1933

It is unlikely that stars die without a spectacular protest.

Caught in the seine  
Of the trawler, Night.

Stars  
*Nature Magazine*, May, 1958 (p. 260)

**Jastrow, Robert** 1925–  
American space scientist

The stars seem immutable, but they are not. They are  
born, evolve and die like living organisms.

*Red Giants and White Dwarfs*  
Chapter 4 (p. 50)  
Harper & Row. New York, New York, USA. 1969

**Jeans, Sir James Hopwood** 1877–1946  
English physicist and mathematician

The ages of the stars are not the same thing as the age of  
the universe, nor even are they necessarily comparable  
with that age. The star may be likened to icebergs coming  
down from the North and melting as they drift into tropical  
waters. We can estimate the age of the icebergs within  
our vision, but we cannot say for how long the stream of  
icebergs has been drifting down from the pole to equator  
nor for how long new icebergs will continue to form and  
come down to replace those that pass southward to their  
doom.

*Annual Report of the Board of Regents of the Smithsonian Institution*,  
1926  
The New Outlook in Cosmogony (p. 159)  
Government Printing Office. Washington, D.C. 1928

Any small bit of the sky does not look very different from  
what it would if bright and faint stars had been sprinkled  
out of a celestial pepper pot.

*The Universe Around Us*  
Chapter I (p. 37)  
The Macmillan Company. New York, New York, USA. 1929

Empty Waterloo Station of everything except six specks  
of dust and it is still far more crowded with dust than  
space is with stars.

*The Universe Around Us*  
Chapter I (p. 84)  
The Macmillan Company. New York, New York, USA. 1929

**Jefferies, Richard** 1848–87  
English naturalist and author

The first appearance of a star is very beautiful; the actual  
moment of first contact, as it were, of the ray with the  
eye is always a surprise, however often you may have  
enjoyed it, and notwithstanding that you are aware it  
will happen. Where there was only the indefinite violet  
before, the most intense gaze into which could discover  
nothing, suddenly, as if at that moment born, the point  
of light arrives. So glorious is the night that not all London,  
with its glare and smoke, can smother the sky; in  
the midst of the gas, and the roar, and the driving crowd,  
look up from the pavement, and there, straight above, are  
the calm stars.

*Nature near London*  
Magpie Fields (p. 179)  
Chatto & Windus. London, England. 1883

Above the clear sky was full of stars, and among them  
the beautiful planet Jupiter shone serene. The sky was  
of a lovely night blue; it was an hour to think, to dream,  
to revere, to love – a time when, if ever it will, the soul  
reigns, and the coarse rude acts of day are forgotten in  
the aspirations of the inmost mind. The night was calm –  
still; it was in no haste to do anything – it had nothing it  
needed to do. To be is enough for the stars.

*The Dewy Morn*  
Chapter XX (p. 141)  
Macmillan & Company Ltd. London, England. 1900

**Jeffers, Robinson** 1887–1962  
American poet

Antares reddens  
The great one, the ancient torch, a lord among lost children,  
The earth's orbit doubled would not girdle his greatness,  
one fire  
Globed, out of grasp of the mind enormous; but to you  
O Night  
What? Not a spark?...

In Tim Hunt (ed.)  
*The Collected Poetry of Robinson Jeffers* (Volume 1)  
Night (p. 115)  
Stanford University Press. Stanford, California. USA. 1988

We know the stars, hotter and more fatal than earth; we  
 have learned lately the fire-wheel galaxies,  
 Infinite in number or all but infinite, among which our  
 great sun's galaxy's  
 Flight is as a gnat's, one grain of sand in the Sahara: it is  
 necessary to stretch our minds  
 To these dimensions...

In Tim Hunt (ed.)

*The Collected Poetry of Robinson Jeffers* (Volume 4)

Not Solid Earth (p. 538)

Stanford University Press. Stanford, California. USA. 1988

**Joyce, James** 1882–1941

Irish expatriate writer and poet

...of the parallax or parallactic drift of so called fixed  
 stars, in reality ever moving wanderers from immeasurably  
 remote eons to infinitely remote futures in comparison  
 with which the years threescore and ten, of allotted  
 life formed a parenthesis of infinitesimal brevity.

*Ulysses* (p. 683)

Random House, Inc. New York, New York, USA. 1946

**Kapteyn, Jacobus Cornelius** 1851–1922

Dutch astronomer

Undoubtedly one of the greatest difficulties, if not the  
 greatest of all, in the way of obtaining an understanding  
 of the real distribution of stars in space, lies in our uncer-  
 tainty about the amount of loss suffered by the light of  
 the stars on its way to the observer.

On the Absorption of Light in Space

*The Astrophysical Journal*, Volume XXIX, Number 1, January, 1909

(p. 46)

**Keats, John** 1795–1821

English Romantic lyric poet

Bright star, would I were steadfast as thou art –  
 Not in lone splendor hung aloft the night  
 And watching, with eternal lids apart,  
 Like Nature's patient, sleepless Eremite,  
 The moving waters at their priest-like task  
 Of pure abluion round earth's human shores.

*The Complete Poetical Works and Letters of John Keats*

Bright Star

Houghton Mifflin Company. Boston, Massachusetts, USA. 1890

**Keill, John** 1671–1721

Scottish mathematician and natural philosopher

The fixed stars appear to be of different bignesses, not  
 because they really are so, but because they are not all  
 equally distant from us; those that are nearest will excel  
 in Luster and Bigness; the more remote stars will give a  
 fainter Light, and appear smaller to the Eye.

*An Introduction to the True Astronomy*

Lecture VI (p. 47)

Printed for Bernard Lintot. London, England. 1721

**Krutch, Joseph Wood** 1893–1970

American naturalist, conservationist, and writer

The stars are little twinkling rogues who light us home  
 sometimes when we are drunk but care for neither you  
 nor me nor any man.

*The Twelve Seasons*

June (p. 46)

W. Sloane Associates. New York, New York, USA. 1949

**Lambert, Johann Heinrich** 1728–77

Swiss-German mathematician and astronomer

While we raise our eyes to the firmament, we see the  
 whole of the stars attached, as it were, to the same  
 vaulted surface; this, however, is an optical illusion; they  
 are, in reality, at very different distances from us, as well  
 as from the Sun, which is the fixed star of our system.

Translated by James Jacque

*Kosmologischen Brief*

**Lee, Nathaniel** 1653?–92

English dramatist

The stars, heav'n sentry, wink and seem to die.

*Theodosius*

Printed for Tho. Chapman. London, England. 1692

**Levy, David H.** 1948–

Canadian astronomer and science writer

Our fondness for the stars has touched our souls. We all  
 share the feeling of discovery, whether the object we  
 have found is new to all or new only to us. The thrill  
 penetrates our being, as we try to describe...how we have  
 been changed by the universe sharing a secret with us.

*David Levy's Guide to the Night Sky*

A Miscellany (p. 322)

Cambridge University Press. Cambridge, England. 2000

...observing is an activity that can rapidly become your  
 outlet to relax, your means to commune with the uni-  
 verse, and a vital key to knowing yourself...a voyage on  
 a magic carpet that takes you to other places and other  
 times. Even a casual look at the stars gives you a share  
 in the company of timelessness that they represent. Look  
 through your telescope thoughtfully...for it is more than  
 starlight that the mirror will reflect. Through the vastness  
 of space and time will return also a part of yourself.

*The Royal Astronomical Society of Canada*

The Joy of Gazing, 1982, Montreal Centre

**Longfellow, Henry Wadsworth** 1807–82

American poet

Silently one by one, in the infinite meadows of heaven  
 Blossomed the lovely stars, the forget-me-nots of the angels.

**Poe, Edgar Allan** 1809–49  
American short story writer

Were the succession of stars endless, then the background of the sky would present us a uniform luminosity, like that displayed by the galaxy – since there could be absolutely no point, in all that background, at which would not exist a star. The only mode, therefore, in which, under such a state of affairs, we could comprehend the voids which our telescopes find in innumerable directions, would be by supposing the distance of the invisible background so immense that no ray from it has yet been able to reach us at all.  
*Eureka*  
Line 12 (p. 100)  
Geo. P. Putnam. New York, New York, USA. 1848

Look down into the abysmal distances! – attempt to force the gaze down the multitudinous vistas of the stars, as we sweep slowly through them thus – and thus – and thus! Even the spiritual vision, is it not all points arrested by the continuous golden walls of the universe? – the walls of the myriads of the shining bodies that mere number has appeared to blend into unity?  
In H. Beaver (ed.)  
*The Science Fiction of Edgar Allan Poe*  
*The Power of Words* (p. 171)  
Penguin Books. Hammondsworth, England. 1976

**Poincaré, Jules Henri** 1854–1912  
French mathematician and theoretical astronomer

The stars send us not only that visible and gross light which strikes our bodily eyes, but from them also comes to us a light far more subtle, which illuminates our minds...  
*The Foundations of Science*  
*The Value of Science*  
Part II, Chapter VI (p. 290)  
The Science Press. New York, New York, USA. 1921

The stars are majestic laboratories, gigantic crucibles, such as no chemist could dream.

*The Foundations of Science*

*The Value of Science*, Astronomy (p. 295)

The Science Press. New York, New York, USA. 1913

**Pope, Alexander** 1688–1744

English poet

The Dog-star rages!

*The Complete Poetical Works*

Epistle to Dr. Arbuthnot

Houghton Mifflin Company. New York, New York, USA. 1903

**Proctor, Mary** 1862–1957

American popularizer of astronomy

Countless stars pass across the rich regions of the galaxy. Stars of all orders of brightness, from those resembling the leading glories of the firmament, to tiny points of light only captured by momentary twinklings seen in the far distance.

The Silver River of Heaven

*The Chautauquan*, Volume 21, Number 4, July, 1895 (p. 459)

**Ptolemy** 85–165

Greek astronomer

I know that I am mortal and ephemeral. But when I search for the close-knit encompassing convolutions of the stars, my feet no longer touch the earth, but in the presence of Zeus himself I take my fill of ambrosia which the gods produce.

In Johannes Kepler

*Mysterium Cosmographicum*

Title page

**Raymo, Chet** 1936–

American physicist and science writer

We are not ruled by stars; we and the stars are one.

*The Virgin and the Mousetrap: Essays in Search of the Soul of Science*

Chapter 21 (p. 196)

The Viking Press. New York, New York, USA. 1991

I weigh out nebulas. I dam up the Milky Way and use it to grind my grain. I put up summer stars like vegetables in jars for my delectation in winter. I have winter stars folded in boxes in the attic for cloudy summer nights.

Night Brought to Numbers

*Sky & Telescope*, Volume 71, Number 6, June, 1966 (p. 555)

**Rhodes, Cecil** 1853–1902

British-born South African businessman, mining magnate, and politician

The world is nearly all parceled out, and what there is left of it is being divided up, conquered and colonized. To think of these stars that you see overhead at night, these vast worlds which we can never reach. I would annex the planets if I could; I often think of that. It makes me sad to see them so clear and yet so far.

*The Last Will and Testament of Cecil John Rhodes: With Elucidatory Notes to Which Are Added Some Chapters Describing the Political and Religious Ideas of the Testator*

Part III (p. 190)

“Review of Reviewers” Office. London, England. 1902

**Rilke, Ranier Maria** 1875–1926

Czech-born German language poet and novelist

...between stars, what distances...

*Sonnets to Orpheus*

Second Part, XX

University of California Press. Berkeley, California, USA. 1977

**Russell, Peter** 1921–2003

British poet and editor

...The fixed stars

Are moving really, and the whole Galaxy turning Round and round on its own axis agitatedly...

*All for the Wolves*

Elegiac

Black Swan Books. Redding Ridge, Connecticut, USA. 1971

**Sagan, Carl** 1934–96

American astronomer and science writer

It will not be we who reach Alpha Centauri and the other nearby stars. It will be a species very much like us, but with more of our strengths and fewer of our weaknesses, a species returned to circumstances more like those for which it was originally evolved, more confident, farseeing, capable, and prudent – the sorts of beings we would want to represent us in a Universe that, for all we know, is filled with species much older, much more powerful, and very different.

*Pale Blue Dot: A Vision of the Human Future in Space*

Chapter 19 (p. 329)

Random House, Inc. New York, New York, USA. 1994

If we long to believe that the stars rise and set for us, that we are the reason there is a Universe, does science do us a disservice by deflating our conceits?

*The Demon-Haunted World: Science as a Candle in the Dark*

Chapter 1 (p. 12)

Random House, Inc. New York, New York, USA. 1995

**Sagan, Carl** 1934–96

American astronomer and science writer

**Druyan, Ann** 1949–

American author and television producer

Nothing lives forever, in Heaven as it is on Earth. Even the stars grow old, decay, and die. They die, and they are born. There was once a time before the Sun and Earth existed, a time before there was day or night, long, long before there was anyone to record the Beginning for those who might come after.

*Shadows of Forgotten Ancestors: A Search for Who We Are*

Chapter 1 (p. 11)

Random House, Inc. New York, New York, USA. 1992

**Seares, Frederick H.** 1873–1964  
American astronomer

Counting stars is not unlike counting people or sheep or pebbles on the seashore. The astronomer's difficulties are not in the counting, but rather in knowing when the counting must start and stop.

*Annual Report of the Board of Regents of the Smithsonian Institution (1929)*

Counting the Stars and Some Conclusions (p. 183)  
Government Printing Office, Washington, D.C. 1930

**Seneca (Lucius Annaeus Seneca)** 4 BCE–65 AD  
Roman playwright

As long as the ordinary course of heaven runs on, custom robs it of its real size. Such is our constitution that objects of daily occurrence pass us unnoticed even when most worthy of our admiration. On the other hand, the sight even of trifling things is attractive if their appearance is unusual. So this concourse of stars, which paints with beauty the spacious firmament on high, gathers no concourse of the nation. But when there is any change in the wonted order, then all eyes are turned to the sky.

*Physical Science in the Time of Nero, Being a Translation of the Quaestiones Naturales of Seneca*

Book VII, Chapter I (p. 271)  
Macmillan & Company Ltd. London, England. 1910

*Non est ad astra mollis e terris via.*

There is no easy way to the stars from the earth.

*Hercules Furens*

Act II, 437  
Cornell University Press. Ithaca, New York, USA. 1987

**Service, Robert William** 1874–1958  
Canadian poet and novelist

The waves have a story to tell me,  
As I lie on the lonely beach;  
Chanting aloft in the pine-tops,  
The wind has a lesson to teach;  
The stars sing an anthem of glory  
I cannot put into speech.

*Collected Poems of Robert Service*

The Three Voices  
Dodd, Mead & Company New York, New York, USA. 1961

**Serviss, Garrett Putman** 1851–1921  
American science fiction writer

The stars are the true landmarks which are never changed.

*Astronomy with the Naked Eye*

Chapter I (p. 1)  
Harper & Brothers. New York, New York, USA. 1908

It was the friendly stars that first led men round the globe. As long as those well-known sentinels shone, tranquil and steadfast overhead, they had courage to go on and on. If the stars had deserted, even Columbus would have lost heart.

*Astronomy with the Naked Eye*

Chapter I (p. 1)  
Harper & Brothers. New York, New York, USA. 1908

Regarded in their broader relations and constraints, the stars as a whole possess a marvelous harmony of effect. It is the true music of the spheres, for who shall say that the universally felt influence of the star-bedight heavens does not arise from our instinctive, but as yet uneducated, perception of a concord which is not of "sweet sounds," but of light and color, whose range of vibrations in the ether infinitely exceeds that of sonant oscillations in the atmosphere?

*Astronomy with the Naked Eye*

Chapter I (p. 13)  
Harper & Brothers. New York, New York, USA. 1908

As long as men have eyes to see and minds to think, it needs but a word, a hint, a glance, to turn them with rapt and ever increasing attention to the wonders overhead.

*Astronomy with the Naked Eye*

Chapter I (p. 15)  
Harper & Brothers. New York, New York, USA. 1908

**Shakespeare, William** 1564–1616  
English poet, playwright, and actor

Look, th' unfolding star calls up the shepherd.

In *Great Books of the Western World* (Volume 27)

*The Plays and Sonnets of William Shakespeare* (Volume 2)

*Measure for Measure*

Act IV, Scene iii, l. 218  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

But I am constant as the northern star,  
Of whose true-fix'd and resting quality  
There is no fellow in the firmament.  
The skies are painted with unnumber'd sparks,  
They are all fire and everyone doth shine;  
But there's but one in all doth hold his place.

In *Great Books of the Western World* (Volume 26)

*The Plays and Sonnets of William Shakespeare* (Volume 1)

*Julius Caesar*

Act III, Scene i, l. 60–65  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Sherrod, P. Clay**  
American astronomer and educator

Above us, the sparkling stars of the night skies stretch out like thousands of diamonds suspended on the curtain of space. Unfolding through the beauty and the mysteries of this seemingly endless expanse are patterns and answers familiar to those willing to study them...

There is an affinity for the eternity of space experienced by all mankind, a kind of motherhood in the stars to those who study space.

*A Complete Manual of Amateur Astronomy*

Preface (p. xii)  
Prentice-Hall, Inc., Englewood Cliffs, New Jersey, USA. 1981

**Smith, Logan Pearsall** 1865–1946

American author

“But what are they really? What do they say they are?”  
the young lady asked me. We were looking up at the  
Stars.

*Trivia*Book I, *The Starry Heaven* (p. 51)

Doubleday, Page &amp; Company. Garden City, New York, USA. 1917

**Smythe, Daniel** 1908–81

American poet

The years of sky are now galactic,  
So deep that we have little trace.  
Our spectrographs, cool and emphatic,  
Betray the depths of stars and space.  
What do we seek on dizzying borders  
Or groups of systems we have classified?  
We cannot search in these huge orders  
And find the answers they have passed.

*Strange Horizons**Nature Magazine*, February, 1958 (p. 101)**Spenser, Edmund** 1552–99

English poet

He that strives to touch the stars  
Oft stumbles at a straw.

*The Complete Poetical Works of Edmund Spenser*

The Shepherdess Calendar

Houghton Mifflin Company. Boston, Massachusetts, USA. 1908

**Stapledon, Olaf** 1886–1950

English author

Very soon the heavens presented an extraordinary appearance, for all the stars directly behind me were now deep red, while those directly ahead were violet. Rubies lay behind me, amethysts ahead of me. Surrounding the ruby constellations there spread an area of topaz stars, and round the amethyst constellations an area of sapphires.

*Last and First Men, and Star Maker*

Chapter II (p. 262)

Dover Publications, Inc. New York, New York, USA. 1968

Great are the stars, and man is of no account of them.

*Last and First Men*

Chapter XVI (p. 303)

Jeremy P. Tarcher, Inc. Los Angeles, California, USA. 1988

**Steele, Joel Dorman** 1836–86

American educator

Those far-off lights [stars] seem full of meaning to us, could we but read their message; they become real and sentient, and, like the soft eyes in pictures, look lovingly and inquiringly upon us. We come into communion with another life, and the soul asserts its immortality more strongly than ever before. We are humbled as we gaze upon the infinity of suns, and strive to comprehend their

enormous distances, and their magnificent retinue of worlds. The powers of the mind are aroused, and eager questionings crowd upon us.

*The Story of the Stars: New Descriptive Astronomy*

Introductory Remarks (pp. 1–2)

American Book Co. Chicago, Illinois, USA. 1884

**Stetson, Harlan True** 1885–1964

American astronomer and physicist

The stars came out like street lamps lighted by the angels,  
to guide and guard man’s ways by night.

*Man and the Stars*

Chapter I (p. 6)

McGraw-Hill Book Co., Inc. New York, New York, USA. 1930

**de Morgan, Augustus** 1806–71

English mathematician and logician

Imagine a person with a gift of ridicule, and knowledge enough, trying his hand on the junction of the assertions which he will find in various books of algebra. First, that a negative quantity has no logarithm; secondly, that a negative quantity has no square root; thirdly, that the first non-existent is to the second as the circumference of a circle to its diameter.

*A Budget of Paradoxes*

Satirical Criticism (pp. 193–194)

Longmans, Green &amp; Co, London, England. 1872

**Tagore, Rabindranath** 1861–1941

Indian poet and philosopher

Kind Nature has held before our eyes the smoked glass of the night and of the distance. And what do we see through it? We see that the world of stars is still. For we see these stars in their relation to each other, and they appear to us like chains of diamonds hanging on the neck of some god of silence. But Astronomy like a curious child plucks out an individual star from that chain and then we find it rolling about.

*Personality*

The World of Personality (p. 59)

The Macmillan Company. New York, New York, USA. 1917

**Taylor, Ann** 1782–1866

English poet and children’s author

Twinkle, twinkle, little star!  
How I wonder what you are.  
Up above the world so high,  
Like a diamond in the sky...

*Rhymes for the Nursery*

The Star

Printed and sold by Peter B. Gleason &amp; Company. Hartford, Connecticut, USA. 1813

**Taylor, Bayard** 1825–78

American journalist and author

Each separate star  
Seems nothing, but a myriad scattered stars

Break up the night, and make it beautiful.

*Lars: A Pastoral of Norway*

Book III, Conclusion

James R. Osgood & Company. Boston, Massachusetts, USA. 1873

**Teasdale, Sara** 1884–1933

American writer and poet

Stars over snow,  
And in the west a planet  
Swinging below a star –  
Look for a lovely thing and you will find it  
It is not far – It will never be far.

*The Collected Poems of Sara Teasdale*

Night (p. 197)

Collier Books. New York, New York, USA. 1966

**Tennyson, Alfred (Lord)** 1809–92

English poet

“The stars,” she whispers, “blindly run:  
A web is wov’n across the sky;  
From our waste places comes a cry,  
And murmurs from the dying sun.”

*Alfred Tennyson’s Poetical Works*

In Memoriam A.H.H., Section III, Stanza II

Oxford University Press, Inc. London, England. 1953

Many a night I saw the Pleiades, rising  
thro’ the mellow shade,  
Glitter like a swarm of fireflies, tangled in  
a silver braid.

*Alfred Tennyson’s Poetical Works*

Locksley Hall, Stanza 5

Oxford University Press, Inc. London, England. 1953

...the fiery Sirius alters hue  
And bickers into red and emerald.

The Mistress of Vision, Stanza XXII

Boni & Liveright, Inc. New York, New York, USA. 1923

**Thomson, James** 1700–48

Scottish poet

But who can count the stars of Heaven?

*Seasons*

Winter, l. 528

Printed by John Mycall. Newburyport, Massachusetts, USA. 1790

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

Truly the stars were given for a consolation to man.

*The Writings of Henry David Thoreau* (Volume 9)

*A Walk to Wachusett* (p. 178)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

The stars are the apexes of what wonderful triangles!  
What distant and different beings in the various man-  
sions of the universe are contemplating the same one at  
the same moment!

*The Writings of Henry David Thoreau* (Volume 2)

*Walden*

Chapter I (p. 19)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

When I consider how, after sunset, the stars come out  
gradually in troops from behind the hills and woods,  
I confess that I could not have contrived a more curious  
and inspiring night.

*Journal* (Volume 1)

July 26, 1840 (p. 158)

Princeton University Press. Princeton, New Jersey, USA. 1981

When I look at the stars, nothing which the astrono-  
mers have said attaches to them, they are so simple and  
remote.

In Bradford Torrey and Francis H. Allen (eds.)

*The Journal of Henry D. Thoreau* (Volume 7)

September 29, 1854, The Red of the Young Oak (p. 60)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1949

**Thorne, Kip S.** 1940–

American theoretical physicist

A star is only a glowing pause in the inescapable contraction  
of a gas cloud to an uncertain, sometimes fantastic end.

The Death of a Star

*The Physics Teacher*, Volume 9, Number 6, June, 1971 (p. 326)

**Travers, Pamela Lyndon** 1899–1996

Australian-born English writer

[Jane] was watching Mrs. Corry splashing the glue on the  
sky and Mary Poppins sticking on the star...

“What I want to know,” said Jane, “is this: Are the stars gold paper or is the gold paper stars?”

There was no reply to her question and she did not expect one. She knew that only someone very much wiser than Michael could give her the right answer.

*Mary Poppins* (Revised edition)

Chapter 8 (p. 128)

Harcourt, Inc. San Diego, California, USA. 1981

**Trevelyan, George Macaulay** 1876–1962

English historian

The stars out there rule the sky more than in England, big and lustrous with the honour of having shone upon the ancients and been named by them.

*Clio, A Muse, and Other Essays*

Walking

Longmans, Green & Company London, England. 1930

**Twain, Mark (Samuel Langhorne**

**Clemens)** 1835–1910

American author and humorist

There are too many stars in some places and not enough in others, but that can be remedied presently, no doubt.

*Eve's Diary*

Sunday (p. 7)

Harper & Brothers. New York, New York, USA. 1906

Stars are good, too. I wish I could get some to put in my hair. But I suppose I never can.

*Eve's Diary*

Saturday (p. 11)

Harper & Brothers. New York, New York, USA. 1906

There's another trouble about theories: there's always a hole in them somewheres, sure, if you look close enough. It's just so with this one of Jim's. Look what billions and billions of stars there is. How does it come that there was just exactly enough star-stuff, and none left over? How does it come there ain't no sand-pile up there?

*The Complete Works of Mark Twain* (Volume 14)

*Tom Sawyer Abroad* (pp. 78–79)

Harper & Brothers Publishers. New York, New York, USA. 1899

The stars ain't so close together as they look to be.

*Collected Tales, Sketches, Speeches, & Essays 1891–1910*

Extract from Captain Stormfield's Visit to Heaven (pp. 829–830)

The Library of America. New York, New York, USA. 1992

It's lovely to live on a raft. We had the sky, up there, all speckled with stars, and we used to lay on our backs and look up at them, and discuss about whether they was made, or only just happened – Jim he allowed they was made, but I allowed they happened; I judged it would have took too long to make so many. Jim said the moon could have a laid them; well, that looked kind of reasonable, so I didn't say nothing against it because I've seen a frog lay most as many, so of course it could be done. We used to watch the stars that fell, too, and see them streak

down. Jim allowed they'd got spoiled and was hove out of the nest.

*The Adventures of Huckleberry Finn*

Chapter XIX (pp. 153–154)

Grosset & Dunlap Publishers. New York, New York, USA. 1948

We had the sky up there all speckled with stars, and we used to lay on our backs and look up at them, and discuss about whether they was made or only just happened. Jim he allowed they was made, but I allowed they happened; I judged it would have took too long to *make* so many. Jim said the moon could a *laid* them; well that looked kind of reasonable, so I didn't say nothing against it, because I've seen a frog lay most as many, so of course it could be done. We used to watch the stars that fell, too, and see them streak down. Jim allowed they'd got spoiled and was hove out of the nest.

*The Adventures of Tom Sawyer*

Chapter XIX (pp. 158–159)

Harper & Brothers Publishers. New York, New York, USA. 1904

**Updike, John** 1932–

American novelist, short story writer, and poet

Welcome, welcome, little star

I'm delighted that you are

Up in Heaven's vast extent,

No bigger than a continent.

*Telephone Poles and Other Poems*

White Dwarf (p. 10)

Alfred A. Knopf. New York, New York, USA. 1969

When, on those anvils at the center of stars,  
and those even more furious anvils  
of the exploding supernovae,  
the heavy elements were beaten together  
to the atomic number 94...

*Facing Nature*

Ode to Crystallization

Alfred A. Knopf. New York, New York, USA. 1985

**van de Hulst, H. C.**

No biographical data available

For those wishing to dream away into the universe the stars are lights on little islands in an infinite sea.

“Empty” Space

*Scientific American*, Volume 193, Number 5, November, 1955 (p. 73)

**van Gogh, Vincent Willem** 1853–90

Dutch painter

One night I went for a walk by the sea along the empty shore. It was not gay, but neither was it sad – it was – beautiful. The deep blue sky was flecked with clouds of a blue deeper than the fundamental blue of intense cobalt, and others of a clearer blue, like the blue whiteness of the Milky Way. In the blue depth the stars were sparkling, greenish, yellow, white, rose, brighter, flashing, more like jewels, than they do at home – even in Paris.

*The Complete Letters of Vincent van Gogh with Reproductions of All the Drawings in the Correspondence* (Volume 2)  
Letter 499 (p. 589)  
New York Graphic Society. Greenwich, Connecticut, USA. 1958

To express hope by some star, the eagerness of a soul by a sunset.

*The Complete Letters of Vincent van Gogh with Reproductions of All the Drawings in the Correspondence* (Volume 3)  
Letter 531 (p. 26)  
New York Graphic Society. Greenwich, Connecticut, USA. 1958

That does not prevent me from having a terrible need of – shall I say the word? – of religion. Then I go out and paint the stars...

*The Complete Letters of Vincent van Gogh with Reproductions of All the Drawings in the Correspondence* (Volume 3)  
Letter 543 (p. 16)  
New York Graphic Society. Greenwich, Connecticut, USA. 1958

Stars, you are unfortunate, I pity you,  
Beautiful as you are, shining in your glory...

*Night Thoughts*  
Printed by R. Nobels for R. Edwards. London, England. 1797

**Vaughan, Henry** 1621–95  
English metaphysical poet

The Jewel of the Just,  
Shining nowhere but in the dark;  
What mysteries do lie beyond thy dust,  
Could man outlook that mark!

*Poetry and Selected Prose*  
Accession Hymn  
Oxford University Press, Inc. London, England. 1963

**Warren, Henry White** 1831–1912  
American Methodist Episcopal bishop and author

One never can be alone if he is familiarly acquainted with the stars.

*Recreations in Astronomy*  
Chapter X (p. 197)  
Harper & Brothers Publishers. New York, New York, USA. 1895

We are charmed with the variegated flowers of our gardens of earth, but he who makes the fields blush with flowers under the warm kisses of the sun has planted his wider gardens of space with colored stars.

*Recreations in Astronomy*  
Chapter X (p. 215)  
Harper & Brothers Publishers. New York, New York, USA. 1895

**Weil, Simone** 1909–43  
French philosopher and mystic

The stars, those marvelous, brilliant, inaccessible objects, at least as remote as the horizon, which we can neither change nor touch, and which in their turn, touch only our eyes, are what is furthest away from us and closest to us.

*On Science, Necessity, and the Love of God*  
Classified Science and After (p. 40)  
Oxford University Press, Inc. London, England. 1968

**Weinberg, Steven** 1933–  
American nuclear physicist

A look at the night sky gives a powerful impression of a changeless universe. True, clouds drift across the moon, the sky rotates around the polar star, and over longer times the moon itself waxes and wanes and the moon and planets move against the background of stars. But we know that these are merely local phenomena caused by motions within our solar system. Beyond the planets, the stars seem motionless.

*The First Three Minutes: A Modern View of the Origin of the Universe*  
Chapter II (p. 11)  
Basic Books, Inc. New York, New York, USA. 1993

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

Looking at these stars suddenly dwarfed my own troubles and all the gravities of terrestrial life. I thought of their unfathomable distance, and the slow inevitable drift of their movements out of the unknown past into the unknown future.

In Robert M. Hutchins and Mortimer J. Adler (eds.)  
*The Great Ideas Today, 1971*  
*The Time Machine*  
Chapter Seven (p. 484)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1971

Those who have only seen the starry sky from the earth cannot imagine its appearance when the vague half-luminous veil of our air has been withdrawn. The stars we see on earth are the mere scattered survivors that penetrate our misty atmosphere.

*The First Men in the Moon*  
Chapter V (pp. 61–62)  
George Newnes, Ltd. London, England. 1901

All this world is heavy with the promise of greater things, and a day will come, one day in the unending succession of days, when beings, beings who are now latent in our thoughts and hidden in our loins, shall stand upon this earth as one stands upon a footstool, and shall laugh and reach out their hands amid the stars.

*The Discovery of the Future*  
The Discovery of the Future (pp. 60–61)  
B.W. Huebsch. New York, New York, USA. 1914

**Whitman, Walt** 1819–92  
American poet, journalist, and essayist

I believe a leaf of grass is no less than the journey-work of the stars.

*Complete Poems and Collected Prose*  
Song of Myself  
Section 31  
The Library of America. New York, New York, USA. 1982

I was thinking the day most splendid till I saw what the not-day exhibited;  
I was thinking of this globe enough till there

sprang out so noiseless around me myriads of other globes.

*Complete Poetry and Collected Prose*

Night on the Prairies

The Library of America. New York, New York, USA. 1982

**Wilcox, Ella Wheeler** 1850–1919

American poet and journalist

Since Sirius crossed the Milky Way  
Full sixty thousand years have gone,  
Yet hour by hour and day by day  
This tireless star speeds on and on.

In Garrett P. Serviss

*Astronomy with the Naked Eye*

Chapter III (p. 43)

Harper & Brothers New York, New York, USA. 1908

**Wilde, Oscar** 1854–1900

Irish wit, poet, and dramatist

LORD DARLINGTON: We are all in the gutter, but some of us are looking at the stars.

*The Works of Oscar Wilde* (Volume 5)

*Lady Windermere's Fan*

Act Three

Lamb Publishing Company. New York, New York, USA. 1909

**Williams, Sarah** 1837–68

American poet

I have loved the stars too fondly to be fearful of the night.

*The Best Loved Poems of the American People*

The Old Astronomer to His Pupil

Garden City publishing Company. Garden City, New York USA. 1936

**Wordsworth, William** 1770–1850

English poet

The stars are mansions built by Nature's hand,  
And, haply, there the spirits of the blest  
Dwell clothed in radiance, their immortal vest...

*The Complete Poetical Works of William Wordsworth*

Miscellaneous Sonnets, XXV

Crowell. New York, New York, USA. 1888

Look for the stars, you'll say that there are none;

Look up a second time, and, one by one,  
You mark them twinkling out with silvery light,  
And wonder how they could elude the sight!

*The Complete Poetical Works of William Wordsworth*

Calm Is the Fragrant Air

Crowell. New York, New York, USA. 1888

**Yeats, William Butler** 1865–1939

Irish poet and playwright

Under the passing stars, foam of the sky  
Live on this lonely face.

*The Collected Poems of W.B. Yeats*

The Rose of the World (p. 36)

The Macmillan Company. New York, New York, USA. 1956

**Young, Edward** 1683–1765

English poet and dramatist

How distant some of these nocturnal Suns?  
So distant (says the Sage) 'twere not absurd  
To doubt, if Beams, set out at Nature's Birth,  
Are yet arriv'd at this so foreign World...

*Night Thoughts*

Night IX, l. 1226–1229

Printed by R. Nobels for R. Edwards. London, England. 1797

**Zubrin, Robert** 1952–

American aerospace engineer and author

Today the stars beckon again, but this time not to new continents, but new solar systems.

*Entering Space: Creating a Spacefaring Civilization*

Chapter 12 (p. 283)

Penguin Putnam Inc. New York, New York, USA. 1999

## STARDUST

**Calder, Nigel** 1931–

English writer

In a sense human flesh is made of stardust.

*The Key to the Universe*

Chapter 2 (p. 32)

Penguin Books. Middlesex, England. 1978

## STARGAZER

**Ferris, Timothy** 1944–

American science writer

Stargazers, like musicians, typically learn on inferior instruments...

*Seeing in the Dark*

Chapter I (p. 9)

Simon & Schuster. New York, New York, USA. 2002

## STARLIGHT

**Hale, George Ellery** 1868–1938

American astronomer

Starlight is falling on every square mile of the earth's surface, and the best we can do at present is to gather up and concentrate the rays that strike an area 100 inches in diameter.

The Possibilities of Large Telescopes

*Harper's Weekly*, April, 1928 (p. 640)

**Huggins, Sir William** 1824–1910

English astronomer

Within this unraveled starlight exists a strange cryptography. Some of the rays may be blotted out, others may be enhanced in brilliancy. Their differences, countless in variety, form a code of signals, in which is conveyed to

us, when once we have made out the cipher in which it is written, information of the chemical nature of the celestial gases.... It was the discovery of this code of signals, and of its interpretation, which made possible the rise of the new astronomy.

In D.R. Danielson

*The Book of the Cosmos: Imaging the Universe from Heraclitus to Hawking*

Chapter 52 (p. 319)

Perseus Publishing, Cambridge, Massachusetts, USA. 2000

**Stein, Gertrude** 1874–1946

American writer

Star-light, what is star-light, star-light is a little light that is not always mentioned with the sun, it is mentioned with the moon and the sun, it is mixed up with the rest of the time.

*Three Lives & Tender Buttons*

Rooms (p. 295)

Penguin Putnam, Inc. New York, New York, USA. 2003

## STARS

### Author undetermined

The meek shall inherit the Earth, the rest of us will go to the stars.

Source undetermined

**Ball, Philip** 1962–

English science writer

The stars are more than mere fireballs – they are engines of creation, and out of their fiery hearts come the elements needed to make the worlds.

*Life's Matrix*

The First Flood (p. 10)

Farrar, Straus & Giroux. New York, New York, USA. 1999

**Bradley Jr., John Hodgdon** 1898–1962

American geologist

Star worlds, like fish in schools, drift through the void, star worlds as large as our sun and many time larger, in schools of hundreds of millions. Unlike a school of fish, whose direction may be changed by the whim of the leader...the stars in their galaxy move with the majesty of perfect orderliness.

*Parade of the Living*

Chapter I (p. 3)

Coward-McCann. New York, New York, USA. 1930

**Bürgel, Bruno Hans** 1875–1948

German astronomer

We stand in solemn silence and gaze at the eternal lights overhead. They appear in stately measure, one after the other – first the large bright ones, and then the smaller... the starry robe of the goddess of the skies is spread out

wide above us, sparkling as though millions of diamonds had been lavishly scattered all over it.

Translated by Stella Bloch

*Astronomy for All*

Chapter I (p. 1)

Cassell & Co., Ltd. London, England. 1911

**Carlyle, Thomas** 1795–1881

English historian and essayist

Stars, have they not looked-down...like Eyes glistening with heavenly tears over the little lot of man! Thousands 'of human generations, all as noisy as our own, have been swallowed-up of Time, and there remains no wreck of them anymore; and Arcturus and Orion and Sirius and the Pleiades are still shining in their courses, clear and 'young, as when the Shepherd first noted them in-the plain of Shinar.

In Archibald MacMechan

*Sartor Resartus* (p. 165)

Ginn & Co. Boston 1897

**Dickens, Charles** 1812–70

English novelist

She raised her eyes to the bright stars, looking down so mildly from the wide worlds of air, and, gazing on them, found new stars burst upon her view, and more beyond, and more beyond again, until the whole great expanse sparkled with shining spheres, rising higher and higher in immeasurable space, eternal in their numbers as in their changeless and incorruptible existence.

*The Old Curiosity Shop*

Chapter XLII (p. 125)

D. Appleton & Co. New York, New York, USA. 1868

**Kippax, John Robert**

No biographical data available

The process of...evolution of matter is...continuously going on, suns and star systems are ever being evolved...

*The Call of the Stars*

Book I, Chapter I (p. 15)

G.P. Putnam's Sons. New York, New York, USA. 1914

**Newcomb, Simon** 1835–1909

Canadian-American astronomer

...in the motions of the stars we are brought face to face with eternity and infinity, covered by no veil whatever.

In Richard Anthony Proctor

*The Skies and the Earth*

Problems of Astronomy (p. 44)

Doubleday, Page & Co. New York, New York, USA. 1902

**Raleigh, Sir Walter** 1552–1618

Renaissance English courtier and poet

...it was well said of Plotinus, that the stars were significant, but not efficient...

*The Works of Sir Walter Raleigh* (Volume 2)

Book I, Chapter I (p. 33)

At The University Press. Oxford, England. 1829

**Rodd, Thomas**

I love to rove amidst the starry height,  
 To leave the little scenes of Earth behind,  
 And let Imagination wing her flight  
 On eagle pinions swifter than the wind.  
 I love the planets in their course to trace;  
 To mark the comets speeding to the Sun,  
 Then launch into immeasurable space,  
 Where, lost to human sight, remote they run.  
 I love to view the Moon, when high she rides  
 Amidst the heav'ns, in borrowed lustre bright,  
 To fathom how she rules the subject tides,  
 And how she borrows from the Sun her light.  
 O! these are the wonders of th' Almighty hand,  
 Whose wisdom first the circling orbits planned.

*Sonnets, Amatory, Descriptive and Religious: Odes, Songs and Ballads*

Love of Night

Printed by the author

London, England. 1814

**Thomson, James** 1700–48

Scottish poet

...but who can count the stars of heaven ...

*Seasons*

Winter

Chiswick. London, England. 1822

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

Looking at these stars suddenly dwarfed my own troubles and all the gravities of terrestrial life. I thought of their unfathomable distance, and the slow inevitable drift of their movements out of the unknown past into the unknown future.

*Seven Science Fiction Novels of H. G. Wells*

*The Time Machine*

Chapter 6 (p. 51)

Dover Publications, Inc. New York, New York, USA. 1934

**STARS, COLLISION OF****Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

In the vast expanse of the heavens the traffic is so thin that a star may reasonably count on travelling for the whole of its long life without serious risk of collision. The risk is negligible for any individual star; but ten thousand million stars in our own system and more in the systems beyond afford a wide playground for chance.

*Science and the Unseen World*

Lecture I (p. 15)

The Macmillan Co. New York, New York, USA. 1929

**STATIONARY****von Humboldt, Alexander** 1769–1859

German naturalist and explorer

Nothing is stationary in space. Even the fixed stars move ...

Translated by E.C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 3)

Special Results of OBSERVATION IN THE DOMAIN OF COSMICAL PHENOMENA (p. 26)

Harper & Brothers Publishers. New York, New York, USA. 1851

**STATISTICAL****Born, Max** 1882–1970

German-born English physicist

There is no doubt that the formalism of quantum mechanics and its statistical interpretation are extremely successful in ordering and predicting physical experiences. But can our desire of understanding, our wish to explain things, be satisfied by a theory which is frankly and shamelessly statistical and indeterministic? Can we be content with accepting chance, not cause, as the supreme law of the physical world?

*Natural Philosophy of Cause and Chance*

Chapter IX (p. 101)

Clarendon Press. Oxford, England. 1949

**STATISTICAL ANALYSIS****Hooper, Wynnard**

No biographical data available

It may be said that in the case of Statistical Analysis the instrument employed is easily handled, and that it cannot correctly be said to require scientific knowledge in those who use it. I am not myself of this opinion, and I should think it strange if such an idea found acceptance within these walls. It is true that much good statistical work has been done by men who have made no study of the method by which they were working. But this only shows that able men may do much while their knowledge is imperfect.

On the Method of Statistical Analysis

*Journal of the Statistical Society of London*, Volume 44 March, 1881 (p. 47)

**Moroney, Michael Joseph** 1918–90

English statistician

A statistical analysis, properly conducted, is a delicate dissection of uncertainties, a surgery of suppositions.

*Facts from Figures* (p. 3)

Penguin Books Ltd. Harmondsworth, England. 1951

## STATISTICAL INFERENCE

### Bartholomew, D. J.

Statistician

Statistical inference is thus the process of finding the simplest model (or theory) capable of accounting for our data and then of estimating its parameters. In practice, simplicity is usually judged by the number of adjustable parameters which a model contains.... This philosophy implies the null hypothesis has a favoured status resulting from its greater simplicity.

Hypothesis Testing when the Sample Size is Treated as a Random Variable

*Journal of the Royal Statistical Society*, Volume 29, Number 1, 1967 (p. 81)

## STATISTICAL MECHANICS

### Goodstein, David L.

1939–  
US physicist and educator

Ludwig Boltzmann, who spent much of his life studying statistical mechanics, died in 1906, by his own hand. Paul Ehrenfest, carrying on the work, died similarly in 1933. Now it is our turn to study statistical mechanics. Perhaps it will be wise to approach the subject cautiously.

*States of Matter*

Chapter One (p. 1)

Dover Publications. Mineola, New York, USA. 1985

## STATISTICAL METHOD

### Thomson, Sir John Arthur

1861–1933  
Scottish naturalist

Complex as are the inborn variations of plants and animals, they can be treated by the same statistical methods as are used in recording the simple phenomena observed when dice are thrown ten thousand times.

*Introduction to Science*

Chapter II (p. 52)

Henry Holt & Co. New York, New York, USA. 1911

## STATISTICAL PROBLEM

### Galton, Sir Francis

1822–1911  
English anthropologist, explorer, and statistician

It is always well to retain a clear geometric view of the facts when we are dealing with statistical problems, which abound with dangerous pitfalls, easily overlooked by the unwary, while they are cantering gaily along upon their arithmetic.

*Natural Inheritance*

Chapter V (pp. 66–67)

Macmillan & Company Ltd. London, England. 1889

## STATISTICAL TEST

### Anscombe, Francis John

1918–2001  
English-born American statistician

Rejection rules are not significance tests.

Rejection of Outliers

*Technometrics*, Volume 2, 1960 (p. 126)

### Chatfield, Christopher

British statistician

The result is that non-statisticians tend to place undue reliance on single “cookbook” techniques, and it has for example become impossible to get results published in some medical, psychological and biological journals without reporting significance values even if of doubtful validity. It is sad that students may actually be more confused and less numerate at the end of a “service course” than they were at the beginning, and more likely to overlook a descriptive approach in favor of some inferential method which may be inappropriate or incorrectly executed.

The Initial Examination of Data

*Journal of the Royal Statistical Society*, Series A, Volume 148, 1985

### Clark, C. A.

No biographical data available

The null hypothesis of no difference has been judged to be no longer a sound or fruitful basis for statistical investigation.... Significance tests do not provide the information that scientists need, and, furthermore, they are not the most effective method for analyzing and summarizing data.

Hypothesis Testing in Relation to Statistical Methodology

*Review of Educational Research*, Volume 33, 1963

### Cochran, William G.

1909–80  
Scottish-born American statistician

### Cox, Gertrude M.

1900–78  
American statistician

A useful property of a test of significance is that it exerts a sobering influence on the type of experimenter who jumps to conclusions on scanty data, and who might otherwise try to make everyone excited about some sensational treatment effect that can well be ascribed to the ordinary variation in his experiment.

*Experimental Designs* (2nd edition)

Chapter 1 (p. 5)

John Wiley & Sons, Inc. New York, New York, USA. 1992

### Cohen, Jacob

1923–  
American behavioral psychologist and statistical analyst

After four decades of severe criticism, the ritual of null hypothesis significance testing – mechanical dichotomous decisions around a sacred .05 criterion – still persist. This article reviews the problems with this practice.... What’s

wrong with [null hypothesis significance testing]? Well, among many other things, it does not tell us what we want to know, and we so much want to know what we want to know that, out of desperation, we nevertheless believe that it does!

The Earth Is Round ( $p < .05$ )

*American Psychologist*, Volume 49, December, 1994 (p. 997)

A little thought reveals a fact widely understood among statisticians: The null hypothesis, taken literally (and that's the only way you can take it in formal hypothesis testing), is always false in the real world.... If it is false, even to a tiny degree, it must be the case that a large enough sample will produce a significant result and lead to its rejection. So if the null hypothesis is always false, what's the big deal about rejecting it?

Things I Have Learned (So Far)

*American Psychologist*, December, 1990 (p. 1308)

### **Cox, Sir David Roxbee** 1924–

English statistician

It has been widely felt, probably for thirty years and more, that significance tests are overemphasized and often misused and that more emphasis should be put on estimation and prediction. While such a shift of emphasis does seem to be occurring, for example in medical statistics, the continued very extensive use of significance tests is on the one hand alarming and on the other evidence that they are aimed, even if imperfectly, at some widely felt need.

Some General Aspects of the Theory of Statistics

*International Statistical Review*, Volume 54, 1986

### **Deming, William Edwards** 1900–93

American statistician, educator, and consultant

Under the usual teaching, the trusting student, to pass the course must forsake all the scientific sense that he has accumulated so far, and learn the book, mistakes and all.

On Probability as Basis for Action

*American Statistician*, Volume 29, Number 4, November 1975

Pencil and paper for construction of distributions, scatter diagrams, and run-charts to compare small groups and to detect trends are more efficient methods of estimation than statistical inference that depends on variances and standard errors, as the simple techniques preserve the information in the original data.

On Probability as Basis for Action

*American Statistician*, Volume 29, Number 4, November 1975

### **Devons, Ely** 1913–67

English economist

I cannot oscillate a time series or properly analyze a variance...

*Essays in Economics*

Chapter 6 (p. 105)

Greenwood Press, Publishers, Westport, Connecticut, USA. 1961

### **Fisher, Sir Ronald Aylmer** 1890–1962

English statistician and geneticist

There is no more pressing need in connection with the examination of experimental results than to test whether a given body of data is or is not in agreement with any suggested hypothesis.

*Statistical Methods for Research Workers*

Chapter VIII (p. 256)

Oliver & Boyd. Edinburgh, Scotland. 1938

### **Lewis, Sir Thomas** 1881–1945

No biographical data available

When we ponder upon the bedside tests, general and special, now in vogue, and ask ourselves how many of these have filtered through the sieve of rigidly controlled experiment, when we ask how many when filtering comes to them as come it must, will show a casting in so fine a mould that nets, though strictly meshed, will not entangle them; then do we probe the foundation upon which an art, aspiring to the place of science, rests.

*The Mechanism and Graphic Registration of the Heart Beat*

Preface (p. vi)

Shaw & Sons. London, England. 1920

### **McCloskey, D. N.**

Economist

### **Ziliak, S. T.**

No biographical data available

The low and falling cost of calculation, together with a widespread though unarticulated realization that after all the significance test is not crucial to scientific questions, has meant that statistical significance has been valued at its cost. Essentially no one believes a finding of statistical significance or insignificance. This is bad for the temper of the field. My statistical significance is a "finding"; yours is an ornamented prejudice.

The Standard Error of Regressions

*Journal of Economic Literature*, Volume 34, 1996

### **Morrison, D. E.**

No biographical data available

### **Henkel, R. E.**

No biographical data available

What do we do without the tests, then? What we do without the tests has always in some measure been done in behavioral science and needs only to be done more and better: the application of imagination, common sense, and informed judgment, and the appropriate remaining research methods to achieve the scope, form, process, and purpose of scientific inference.

*The Significance Test Controversy – A Reader*

Significance Tests in Behavioral Research: Skeptical Conclusions and Beyond

Aldine Publishing Company. Chicago, Illinois, USA. 1970

**Parkhurst, D. F.**

No biographical data available

Failing to reject a null hypothesis is distinctly different from proving a null hypothesis; the difference in these interpretations is not merely a semantic point. Rather, the two interpretations can lead to quite different biological conclusions.

Interpreting Failure to Reject a Null Hypothesis

*Bulletin of the Ecological Society of America*, Volume 66, 1985

**Rozeboom, W. W.**

No biographical data available

The statistical folkways of a more primitive past continue to dominate the local scene.

The Fallacy of the Null-Hypothesis Significance Test

*Psychological Bulletin*, Volume 57, 1960

**Salsburg, David S.**

No biographical data available

Most readers of this journal will recognize the limited value of hypothesis testing in the science of statistics. I am not sure that they all realize the extent to which it has become the primary tool in the religion of Statistics. Since the practitioners of that faith seem unable to cure their own folly, it is time we priests of the faith brought them around to realizing that there are more appropriate ways to get useful answers.

The Religion of Statistics as Practiced in Medical Journals

*American Statistician*, Volume 39, 1985

**Schmidt, Frank L.**

American industrial and organizational psychology researcher

I believe that...false beliefs are a major cause of the addiction of researchers to significance tests. Many researchers believe that statistical significance testing confers important benefits that are in fact completely imaginary.

Statistical Significance Testing and Cumulative Knowledge in Psychology: Implications for Training of Researchers

*Psychological Methods*, Volume 1, Number 2, 1996

If the null hypothesis is not rejected, [Sir Ronald] Fisher's position was that nothing could be concluded. But researchers find it hard to go to all the trouble of conducting a study only to conclude that nothing can be concluded.

Statistical Significance Testing and Cumulative Knowledge in Psychology: Implications for Training of Researchers

*Psychological Methods*, Volume 1, Number 2, 1996

**Yates, Frances** 1899–1981

English historian

The most commonly occurring weakness in the application of Fisherian methods is, I think, undue emphasis on tests of significance, and failure to recognize that in many

types of experimental work, estimates of the treatment effects, together with estimates of the error to which they are subject, are the quantities of primary interest.

Sir Ronald Fisher and the Design of Experiments

*Biometrics*, Volume 20, 1964

**STATISTICAL TABLE****Melville, Herman** 1819–91

American novelist

Most statistical tables are parchingly dry in the reading; not so in the present case, however, where the reader is flooded with whole pipes, barrels, quarts, and gills of good gin and good cheer.

*Moby Dick*

Chapter CI (p. 419)

L.C. Page & Co. Boston, Massachusetts, USA. 1892

**STATISTICIAN****Bailey, W. B.** 1873–?

No biographical data available

**Cummings, John**

No biographical data available

While, therefore, tabulation is a final process, the formulation of the scheme of tabulation should be the initial process, preceding even the formulation of the schedule, which should be determined by the character of the tables to be produced. Failure to observe this fundamental principle in statistical practice, perhaps more than any other characteristic, distinguishes the work of the amateur from that of the expert, the work of the untrained social investigator from that of the experienced scientific statistician.

*Statistics* (p. 26)

A.C. McClurg & Company. Chicago, Illinois, USA. 1917

**Balchin, Nigel** 1908–70

English novelist

He divided people into statisticians, people who knew about statistics, and people who didn't. He liked the middle group best. He didn't like the real statisticians much because they argued with him, and he thought people who didn't know any statistics were just animal life.

*The Small Back Room* (p. 137)

Collins. London, England. 1943

**Belloc, Hilaire** 1870–1953

French-born poet and historian

The statistician was let loose.

*The Silence of the Sea*

On Statistics (p. 172)

Sheed & Ward. New York, New York, USA. 1940

**Bellow, Saul** 1915–  
American novelist

An utterly steady, reliable woman, responsible to the point of grimness. Daisy was a statistician for the Gallup Poll.

*Herzog* (p. 221)

The Viking Press, New York, New York, USA. 1964

**Blodgett, James H.**  
American statistician

The individual statistician must scan closely the authority on which he rests, and guard his statements with all the cautionary words which imperfect knowledge requires, or some mere child will point out the errors in his statements and his conclusions and set people wondering of what value the rest of his work may be.

Obstacles to Accurate Statistics

*Journal of the American Statistical Association*, New Series Number 41, March, 1898 (p. 19)

**Bowley, Arthur Lyon** 1869–1957  
English statistician and economist

Perhaps statisticians themselves have not always fully recognized the limitations of their work.

*Elements of Statistics*

Part I, Chapter I (p. 13)

P.S. King & Son Ltd. London, England. 1937

The statistician's contribution to a sociological problem is only one of objective measurement, and this is frequently among the less important of the data; it is as necessary, however, to its solution as accurate measurements are for the construction of a building.

*Elements of Statistics*

Chapter I (p. 13)

P.S. King & Son. London, England. 1901

**Braddon, Mary Elizabeth** 1835–1915  
English novelist

It is the habit of many to sneer at statisticians, because a foolish man once said that you could prove anything from statistics; but statistics are like circumstantial evidence, which cannot err in itself, though false deductions

Our Criminals

*Belgravia*, Volume VII, Third Series, October, 1875 (p. 484)

**Chernoff, H.** 1923–  
American mathematician and statistician

**Moses, L. E.** 1921–  
American statistician and social scientist

Years ago a statistician might have claimed that statistics deals with the processing of data...today's statistician will be more likely to say that statistics is concerned with decision making in the face of uncertainty.

*Elementary Decision Theory*

Introduction (p. 1)

John Wiley & Sons, Inc. New York, New York, USA. 1959

**Deming, William Edwards** 1900–93  
American statistician, educator, and consultant

The statistician accepts in any engagement certain responsibilities and obligations to his client and to the people that he works with. In the first place, he is the architect of a survey or experiment. It is his business to fit the various skills together to make them effective. It is important that he clarify the various responsibilities at the outset of the study.

*Sample Design in Business Research* (p. 10)

John Wiley & Sons, Inc. New York, New York, USA. 1960

The minute a statistician steps into the position of the executive who must make decisions and defend them, the statistician ceases to be a statistician.

*Sample Design in Business Research* (p. 13)

John Wiley & Sons, Inc. New York, New York, USA. 1960

The only useful function of a statistician is to make predictions, and thus to provide a basis for action.

In W.A. Wallis

The Statistical Research Group

*Journal of the American Statistical Association*, 1942–1945, Volume 75, Number 370, June, 1980 (p. 321)

It should be emphasized that the statistician is not necessarily abler at handling data than his colleagues trained in economics, sociology, engineering, physics, business, etc. However, because of the high transferability of the statistician's mathematical techniques, and because he acquires a broad knowledge in many fields, he is frequently adept at discovering and measuring errors in data and determining the source of the errors. He avoids drawing wrong conclusions from data whether the data be good or bad.

On the Classification of Statisticians

*The American Statistician*, Volume 2, Number 2, April, 1948 (p. 16)

A statistician's responsibility is not confined to plans: he must also seek assurance of cooperation in field and office, and maintain constant touch with the work, also with the interpretation of the results.

*Some Theory of Sampling* (p. 8)

John Wiley & Sons, Inc. New York, New York, USA. 1950

**Finney, D. J.**  
English biometric statistician

Too often, in many fields of science, the statistician is regarded as someone who comes on stage after data have been collected, performs standard calculations, delivers a verdict "Significant" or "Not Significant", and then departs. The Questioning Statistician

*Statistics in Medicine*, Volume 1, 1982 (p. 5)

**Fisher, Sir Ronald Aylmer** 1890–1962  
English statistician and geneticist

We have the duty of formulating, of summarizing, and of communicating our conclusions, in intelligible form, in

recognition of the right of other free minds to utilize them in making their own decisions.

B, Statistical methods and scientific induction

*Journal of the Royal Statistical Society*, Volume 17, 1955

The statistician cannot evade the responsibility for understanding the process he applies or recommends.

*The Design of Experiments*

Introduction (p. 1)

Hafner Publishing Company. New York, New York, USA. 1971

The statistician cannot excuse himself from the duty of getting his head clear on the principles of scientific inference, but equally no other thinking man can avoid a like obligation.

*The Design of Experiments*

Introduction (p. 2)

Hafner Publishing Company. New York, New York, USA. 1971

### **Fleiss, Joseph L.**

American statistician

There was a statistician from Needham,  
Who was so bright, his clients would heed him.  
Yet his embarrassed confession  
Was that, in linear regression,  
He'd never subtract an extra degree of freedom.

Letters to the Editor

*The American Statistician*, Volume 21, Number 4, October, 1967 (p. 49)

There was a statistician from Knossus,  
Who had a nonnormal neurosis.  
With techniques of newness, He'd measure the skewness,  
And also the data's kurtosis.

Letters to the Editor

*The American Statistician*, Volume 21, Number 4, October, 1967 (p. 49)

There was a biometrician named Mabel,  
Who'd never look at populations unstable.  
Using intricate relations,  
She'd find life expectations,  
From the lx's of the life table.

Letters to the Editor

*The American Statistician*, Volume 21, Number 4, October, 1967 (p. 49)

### **Forster, E. M. (Edward Morgan)** 1879–1970

English novelist

We are not concerned with the very poor. They are unthinkable, and only to be appreciated by the statistician or the poet.

*Howards End*

Chapter VI (p. 45)

Vintage Books. New York, New York, USA. 1954

### **Good, I. J.** 1916–

English statistician and cryptographer

The mathematician, the statistician, and the philosopher do different things with a theory of probability. The mathematician develops its formal consequences, the

statistician applies the work of the mathematician and the philosopher describes in general terms what this application consists in. The mathematician develops symbolic tools without worrying overmuch what the tools are for; the statistician uses them; the philosopher talks about them. Each does his job better if he knows something about the work of the other two.

Kinds of Probability

*Science*, Volume 129, Number 3347, February 20, 1959 (p. 443)

### **Goschen, Georg Joachim** 1752–1828

Publisher and printer

The statistician, or more properly speaking the administrator of statistics, is like a showman who is exhibiting certain figures.

The Increase of Moderate Incomes

*Journal of the Royal Statistical Society*, Volume L, Part IV December, 1887 (p. 590)

### **Hart, Anna**

Medical statistician

Statisticians are like apples, bananas and healthcare studies – some are better than others.

*Making Sense of Statistics in Healthcare*

Chapter Nine (p. 131)

Radcliff Medical Press, Ltd. Abingdon, England. 2001

### **Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

There are three classes of lookers-on at the show of Nature who may be distinguished from each other. The first set includes the patient statisticians who addict themselves to particular series of facts, such as those relating to temperature, to the course of storms, and other specific objects of study. They give us infinite unreadable tables, out of which are extracted certain average results, which we are all willing to make use of.

*Pages from an Old Volume of Life: A Collection of Essays*

The Seasons (p. 133)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1883

### **Hooke, Robert** 1635–1703

English physicist

It is commonly believed that anyone who tabulates numbers is a statistician. This is like believing that anyone who owns a scalpel is a surgeon.

*How to Tell the Liars from the Statisticians*

Chapter 1 (p. 1)

Marcel-Dekker, Inc. New York, New York, USA. 1983

### **Hopkins, Harry**

No biographical data available

Increasingly, we find ourselves caught up in the new contemporary dualism; there is the muddling-on, verbalizing, impressionistic, human old world down there, and there is that Other, Finer, Rational World to which the

better statisticians have already been called. Communications between the two can be tenuous.

*The Numbers Game: The Bland Totalitarianism*

Chapter 6 (p. 134)

Little, Brown & Company. Boston, Massachusetts, USA. 1973

### **Kerridge, D. F.**

No biographical data available

It is not primarily the responsibility of a statistician to make decisions for other people – not in general at any rate.... It is for someone else to say what decisions should be made with [inferential]...information. In other words, ideally, it is the statisticians job to inform not to decide.

Discussion on Paper by Dr. Marshall and Professor Olkin

*Journal of the Royal Statistical Society*, Series B, Volume 30, 1968 (p. 440)

### **Kirkman, Marshall Monroe** 1842–1921

American authority on railways

The statistician comes after the harvest. He succeeds the crops. His life is passed in the stubble, amidst limp, frost-bitten vines. It is his office to recount the rich man's exploits on the outskirts of the crowd. He is an oracle and delver in details. His sky is dull and leaden. All seasons are alike to him. The traits he has in common with the worldlings of life are his weaknesses. These, however, are mere infinitesimal specks, so to speak.

*The Science of Railways*

Chapter II (p. 16)

The World Railway Publishing Co. New York, New York, USA. 1899

We search in vain for any mention of the statistician in our directories. Strange omission! Where shall we look for him, what cover lift; what mask pluck off? He lives under a *nom de plume*. His titles are as multitudinous as the stars, and his costumes as shifting as the clouds.

*The Science of Railways*

Chapter II (p. 16)

The World Railway Publishing Co. New York, New York, USA. 1899

Like most men devoted to an idea, the statistician lacks imagination. He knows that the universe is made up of infinitesimal molecules. He is, therefore, infinitesimal. He distrusts things that cannot be demonstrated; the emanations of genius alarm him; man's restlessness fills him with forebodings. He discovers sinister meanings therein. Happily he is not superstitious; the creaking of the trees, the sighing of the wind, the flying clouds, foretell to him only practical things.

*The Science of Railways*

Chapter II (p. 17)

The World Railway Publishing Co. New York, New York, USA. 1899

Man's ambition finds its reflection in the statistician's work. While the former has absorbed all that has gone before, the statistician recounts the facts of history, often in secret, attributing their potency to his own agency. Vain conceit!

*The Science of Railways*

Chapter II (p. 20)

The World Railway Publishing Co. New York, New York, USA. 1899

The itch of inquiry is ever vehement in him [the statistician], and he attaches himself to new questions as buoys made to float him into paradise.

*The Science of Railways*

Chapter II (p. 20)

The World Railway Publishing Co. New York, New York, USA. 1899

### **Kruskal, William** 1919–2005

American mathematician and statistician

An occupational hazard to which we statisticians are exposed occurs in the context of a social occasion, perhaps a dinner party. I am, let us say, seated next to a charming lady whom I have just met, and, as an initial conversational ice-breaking, she turns to me with a winning smile and says: "Now tell me what is it you do?" We must tell the truth, of course, so I reply that I am a statistician. That usually ruins a fine conversation, for in 8.6 cases out of 10 the lady's smile disappears, she turns to my rival on her other side, and I attack the fried chicken in lonely, misunderstood dignity.

Statistics, Moliere, and Henry Adams

*American Scientist Magazine*, Volume 55, 1967 (p. 416)

### **Marquis, Don** 1878–1937

American newspaperman, poet, and playwright

Statisticians deal with precious, intangible stuff, with the flecks and atomies of faery – and how few of them dare rise to the full possibilities of their medium!

*Prefaces*

Preface to a Book of Statistics (p. 188)

D. Appleton & Co. New York, New York, USA. 1919

### **Miksch, W. F.** 1861–1927

No biographical data available

A couple of government statisticians recently threw dust on the wedding ring business by coming right out with the fact that for every male there are 1.03 females. It's about time they stop shoving the American taxpayer behind decimal points.

The Average Statistician

*Collier's*, Volume 125, June 17, 1950 (p. 10)

### **Mitchell, Wesley C.** 1874–1948

American economist

A statistician is usually either right or wrong...

Statistics and Government

*Journal of the American Statistical Association*, Volume 16, Number 125, March, 1919 (p. 236)

### **Moroney, Michael Joseph** 1918–90

English statistician

There is more than a germ of truth in the suggestion that, in all society where statisticians thrive, liberty and individuality are likely to be emasculated.

*Facts from Figures*

Statistics Undesirable (p. 1)

Penguin Books Ltd., Harmondsworth, England. 1951

The statistician's job is to draw general conclusions from fragmentary data. Too often the data supplied to him for analysis are not only fragmentary but positively incoherent, so that he can do next to nothing with them. Even the most kindly statistician swears heartily under his breath whenever this happens.

*Facts from Figures*

What Happens When We Take a Sample (p. 120)

Penguin Books Ltd., Harmondsworth, England. 1951

**Pearson, Karl** 1857–1936

English mathematician

The statistician dealing with heredity is like the physicist dealing with the atom, he can say little or nothing of the individual, his knowledge is of the group containing great numbers.

*The Grammar of Science* (2nd edition)

Chapter XI (pp. 457–458)

Adam &amp; Charles Black. London, England. 1900

**Sarton, George** 1884–1956

Belgian-born American scholar and writer

I like to think of the constant presence in any sound Republic of two guardian angels: the Statistician and the Historian of Science. The former keeps his finger on the pulse of Humanity...

*Sarton on the History of Science*

Quetelet (p. 241)

Harvard University Press. Cambridge, Massachusetts, USA. 1962

**Seaton, G. L.**

No biographical data available

...as the job of finding the truth and explaining it continues to become more complex and more difficult, management again casts a doubtful eye at the statistician, for a different reason. Management's big question is no longer "What can the statistician do for us that we can't do just as well ourselves?"; the question now is, "Do our statisticians have the tools and the capacity and the experience and the persistence and the breadth of vision to seek the truth and to know it when they have found it?"

## The Statistician and Modern Management

*The American Statistician*, Volume 2, Number 6, December, 1948 (p. 10)**Snedecor, G. W.**

Statistician

The characteristic which distinguishes the present-day professional statistician, is his interest and skill in the measurement of the fallibility of conclusions.

## On a Unique Feature of Statistics

Presidential Address to the American Statistical Association, December, 1948

*Journal of the American Statistical Association*, Volume 44, Number 245, March, 1949**Stamp, Josiah** 1880–1941

English economist and financier

Most of you would as soon be told that you are cross-eyed or knock-kneed as that you are destined to be a statistician...

*Some Economic Factors in Modern Life*

Chapter VIII (p. 253)

P.S. King &amp; Son Ltd. London, England. 1929

I sometimes think that statisticians do not deserve quite all the hard things that are said about them. They are supposed to be cold, unemotional, bloodless and steely-eyed. But, as a matter of fact, we are all statisticians nowadays. We are either forming opinions on other people's statistics, whether we like it or not, or we are providing the raw material of statistics.

*Some Economic Factors in Modern Life*

Chapter VIII (p. 253)

P.S. King &amp; Son Ltd. London, England. 1929

**Thurber, James** 1894–1961

American writer and cartoonist

Though statisticians in our time have never kept the score, Man wants a great deal here below and Women even more.

*Further Fables of Our Times*

The Godfather and His Godchild

Simon &amp; Schuster. New York, New York, USA. 1956

**Tukey, John W.** 1915–2000

American statistician

Predictions, prophecies, and perhaps even guidance – those who suggested this title to me must have hoped for such – even though occasional indulgences in such actions by statisticians has undoubtedly contributed to the characterization of a statistician as a man who draws straight lines from insufficient data to foregone conclusions!

## Where Do We Go From Here?

*Journal of the American Statistical Association*, Volume 55, Number 289, March, 1960 (p. 80)

The most important maxim for data analysis to heed, and one which many statisticians seem to have shunned is this: "Far better an approximate answer to the right question, which is often vague, than an exact answer to the wrong question, which can always be made precise." Data analysis must progress by approximate answers, at best, since its knowledge of what the problem really is will at best be approximate.

## The Future of Data Analysis

*Annals of Mathematical Statistics*, Volume 33, Number 1, March, 1962 (pp. 13–14)

(The experimental statistician dare not shrink from the war cry of the analyst "Only a fool would use it, but it's better than we used to use!")

## Unsolved Problems of Experimental Statistics

*Journal of the American Statistical Association*, Volume 49, Number 268, December, 1954 (p. 718)

**Wang, Chamont** 1949–  
American statistician

Flip a coin 100 times. Assume that 99 heads are obtained. If you ask a statistician, the response is likely to be: “It is a biased coin.” But if you ask a probabilist, he may say: “Wooow, what a rare event.”

*Sense and Nonsense of Statistical Inference: Controversy, Misuse, and Subtlety*

Chapter 6 (p. 154)

Marcel-Dekker, Inc. New York, New York, USA. 1993

**Webster, Miriam (Amy Babich)**

No biographical data available

Collecting data – any data – is one of the simple pleasures of the statistician.

*After Math*

Chapter 8 (p. 86)

Zinka Press. Wayne, Pennsylvania, USA. 1997

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

Behind the adventurer, the speculator, comes that scavenger of adventurers, the statistician.

*The Work, Wealth and Happiness of Mankind*

Chapter Nine, Part 10 (p. 390)

Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1931

...the movement of the last hundred years is all in favor of the statistician.

*The Work, Wealth and Happiness of Mankind*

Chapter Nine, Part 10 (p. 391)

Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1931

**Wigner, Eugene Paul** 1902–95

Hungarian-born American physicist

There is a story about two friends, who were classmates in high school, talking about their jobs. One of them became a statistician and was working on population trends. He showed a reprint to his former classmate. The reprint started, as usual with the Gaussian distribution and the statistician explained to his former classmate the meaning of the symbols for the actual population, for the average population, and so on. His classmate was a bit incredulous and was not quite sure whether the statistician was pulling his leg

*The Unreasonable Effectiveness of Mathematics in the Natural Sciences Communications on Pure and Applied Mathematics*, Volume 13, Number 1, February, 1960 (p. 1)

**Yule, G. U.** 1871–1951

Scottish statistician

Since the statistician can seldom or never make experiments for himself, he has to accept the data of daily experiences, and discuss as best he can the relations of a whole group of changes...

*On the Theory of Correlation*

*Journal of the Royal Statistical Society*, Volume LX, December, 1897 (p. 812)

## STATISTICS

**Adams, Henry Brooks** 1838–1918

American man of letters

History has never regarded itself as a science of statistics. It was the Science of Vital Energy in relation with time; and of late this radiating center of life has been steadily tending, – together with every form of physical and mechanical energy, – toward mathematical expression.

*A Letter to American Teachers of History*

Chapter I (p. 115)

Press of J.H. Furst Company. Washington, D.C. 1910

### Advertisement

...and you thought “impressive” statistics were 36–24–36. *The American Statistician*, Volume 33, Number 4, November 1979 (p. 248)

**Alexander, Carter**

No biographical data available

...giving a school man only a little, or very superficial, knowledge of statistics is like putting a razor in the hands of a baby.

*School Statistics and Publicity*

Chapter Three (p. 91)

Silver, Burdett & Co. Boston, Massachusetts, USA. 1919

**Allen, Roy George Douglas** 1906–83

English economist and mathematician

A knowledge of statistical methods is not only essential for those who present statistical arguments it is also needed by those on the receiving end.

*Statistics for Economists*

Chapter I (p. 9)

Hutchinson’s University Library. London, England. 1951

**Angell, Roger** 1920–

American fiction writer and essayist

Statistics are the food of love.

*Late Innings: A Baseball Companion*

Chapter 1 (p. 9)

Simon & Schuster. New York, New York, USA. 1982

### Author undetermined

Statistics are like sausages. It all depends on the old woman who makes them.

*Is Insanity Increasing?*

*Medical Record*, Volume 32, August 14, 1897 (p. 235)

Statistics are, like pigs and children, all very well – in their place.

*Wealthy Desolation*

*London Society*, Volume XIV, July, 1868 (p. 502)

To be utilized, statistics must be classified and the relation which the classes bear to each other must be carefully and correctly studied. It is not a simple matter to use these accumulated facts so that correct and

valuable conclusions may be drawn from them. Their true interpretation in all their significance can only be rendered by those who are skilled and experienced in their application. Novices in their use often develop very remarkable errors and fallacies, and malicious persons may designedly vise them for the special purpose of misrepresentation and deceit.

*Twenty-Second Annual Report of the State Board of Health of Indiana* (p. 98)  
1904

...statistics cannot err, but they may be mere skeletons of facts, which require to be vivified by being brought in contact with other facts, when their real importance will be seen.

Our Criminals

*Belgravia*, Volume VII, Third Series, October, 1875

**Baines, J. A.**

No biographical data available

Once again, but not I hope, too often, or for the last time, do I dip into the well of Mr. Courtney’s sagacity:—  
“We may quote to one another with a chuckle the words of the Wise Statesman, lies, damned lies and statistics, still there are some easy figures which the simplest must understand but the astutest cannot wriggle out of.”

Parliamentary Representation in England Illustrated by the Elections of 1892 and 1895

*Journal of the Royal Statistical Society*, Volume 59, 1896 (p. 87)

**Balchin, Nigel** 1908–70

English novelist

Organic chemist!” said Tilley expressively. “Probably knows no statistics whatever.”

*The Small Back Room* (p. 136)

Collins. London, England. 1943

**Bailey, W. B.** 1873–?

No biographical data available

**Cummings, John**

No biographical data available

Statistical tables are essentially specific in their meaning, and they require data that are uniformly specific in the same kind and degree.

*Statistics* (p. 33)

McClurg. Chicago, Illinois, USA. 1917

**Barrett-Browning, Elizabeth** 1806–61

English poet

There’s too much abstract willing, purposing,  
In this poor world. We talk by aggregates,  
And think by systems and being used to face  
Our evils in statistics, are inclined  
To cap them with unreal remedies  
Drawn out in haste on the other side.

*The Complete Poetical Works of Elizabeth Barrett Browning*

Aurora Leigh, Eighth Book, l. 800

Houghton Mifflin Company. Boston, Massachusetts, USA. 1900

**Bartlett, Maurice Stevenson** 1910–2002

English statistician

[Statistics] is concerned with things we can count. In so far as things, persons, are unique or ill-defined, statistics are meaningless and statisticians silenced; in so far as things are similar and definite – so many workers over 25, so many nuts and bolts made during December – they can be counted and new statistical facts are born.

*Essays on Probability and Statistics*

Some Remarks on the Theory of Statistics (p. 11)

Methuen & Company Ltd. London, England. 1962

**Baudrillard, Jean** 1929–

French cultural theorist

Like dreams, statistics are a form of wish fulfillment.

Translated by Chris Turner

*Cool Memories*

October, 1983 (p. 147)

Verso. London, England. 1990

**Bell, E. T. (Eric Temple)** 1883–1960

Scottish-American mathematician and educator

The statistical method is social mathematics par excellence.

*The Development of Mathematics* (p. 582)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1945

Mankind in the mass is more despotically governed by the laws of chance than it ever was by the decrees of any tyrant. If our shambling race is ever to get anything but suicidal destruction out of science, it may be a necessary first step that half a dozen human beings in every hundred thousand understand the mass-reactions of creatures who, as individuals, occasionally show that they can stand erect and walk like men. To grasp and analyze mass-reactions, whether of atoms or of human beings, a mastery of the modern statistical method is essential.

*The Development of Mathematics* (p. 582)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1945

**Belloc, Hilaire** 1870–1953

French-born poet and historian

It has long been recognized by public men of all kinds... that statistics come under the head of lying, and that no lie is so false or inconclusive as that which is based on statistics.

*The Silence of the Sea*

On Statistics (p. 170)

Sheed & Ward. New York, New York, USA. 1940

Before the curse of statistics fell upon mankind we lived a happy, innocent life, full of merriment and go, and informed by fairly good judgment.

*The Silence of the Sea*

On Statistics (p. 171)

Sheed & Ward. New York, New York, USA. 1940

Statistics are the triumph of the quantitative method, and the quantitative method is the victory of sterility and death.

*The Silence of the Sea*

On Statistics (p. 173)

Sheed & Ward. New York, New York, USA. 1940

### **Berger, J. O.**

March, 1898 (p. 1)

### **Boorstin, Daniel J.** 1914–2004

American historian

...statistics have tended to make facts into norms.

*The Decline of Radicalism*

Chapter I (p. 18)

Random House, Inc. New York, New York, USA. 1969

...statistics, which first secured prestige here by a supposedly impartial utterance of stark fact, have enlarged their dominion over the American consciousness by becoming the most powerful statement of the "ought" – displacers of moral imperatives, personal ideals, and unfulfilled objectives.

*The Decline of Radicalism*

Chapter I (p. 19)

Random House, Inc. New York, New York, USA. 1969

### **Bowley, Arthur Lyon** 1869–1957

English statistician and economist

Great numbers are not counted correctly to a unit, they are estimated; and we might perhaps point to this as a division between arithmetic and statistics, that whereas arithmetic attains exactness, statistics deals with estimates, sometimes very accurate, and very often sufficiently so for their purpose, but never mathematically exact.

*Elements of Statistics*

Part I, Chapter I (p. 3)

P.S. King & Son Ltd. London, England. 1937

A knowledge of statistics is like a knowledge of foreign languages or of algebra; it may prove of use at any time under any circumstances.

*Elements of Statistics*

Part I, Chapter I (p. 4)

P.S. King & Son Ltd. London, England. 1937

A statistical estimate may be good or bad, accurate or the reverse; but in almost all cases it is likely to be

more accurate than a casual observer's impression, and the nature of things can only be disproved by statistical methods.

*Elements of Statistics*

Part I, Chapter I (p. 9)

P.S. King & Son Ltd. London, England. 1937

Some of the common ways of producing a false statistical argument are to quote figures without their context, omitting the cautions as to their incompleteness, or to apply them to a group of phenomena quite different to that to which they in reality relate; to take these estimates referring to only part of a group as complete; to enumerate the events favorable to an argument, omitting the other side; and to argue hastily from effect to cause, this last error being the one most often fathered on to statistics. For all these elementary mistakes in logic, statistics is held responsible.

*Elements of Statistics*

Part I, Chapter I (pp. 12–13)

P.S. King & Son Ltd. London, England. 1937

The most important function of statistics is to produce evidence showing the relation of one group of phenomena to another; for the information obtained is presumably intended as a guide for action, the guidance is generally needed to show what actions are likely to produce certain desired effects, and this is best investigated by finding how such effects have been produced in the past.

*Elements of Statistics*

Chapter II (p. 20)

P.S. King & Son. London, England. 1901

Very many definitions have been given of the word statistics, and each author who has written on the subject has assigned new limits to the field which should be included in its scope.

*Elements of Statistics* (4th edition)

P.S. King & Son. London, England. 1920

**Bowman, Scotty** 1933–

Canadian Hockey Coach

**Bowley, Arthur Lyon** 1869–1957

English statistician and economist

Statistics are for losers.

A Lot More Where They Come From

*Sports Illustrated*, April 2, 1973

**Bowman, W. E.** 1912–1985

English amateur hill hiker and satirist

The various estimates of the height of the true summit vary considerably, but by taking an average of these figures it is possible to say confidently that the summit of Rum Doodle is 40,000 1/2 feet above sea level.

*The Ascent of Rum Doodle*

Chapter 3 (pp. 32–33)

The Vanguard Press. New York, New York, USA. 1956

**Buchner, Ludwig** 1824–99

German physician and philosopher

The science of statistics, which has only been turned to proper account in modern times, has the great honor of having proved the existence of definite rules in a number of phenomena, which had hitherto been looked upon as merely accidental or as owing their origin to an arbitrary power.

*Force and Matter*

Free Will (p. 367)

Truth Seeker. New York, New York, USA. 1950

**Burgess, Robert W.** 1887–1969

American statistician

The fundamental gospel of statistics is to push back the domain of ignorance, prejudice, rule-of-thumb, arbitrary or premature decisions, tradition, and dogmatism and to increase the domain in which decisions are made and principles are formulated on the basis of analyzed quantitative facts.

The Whole Duty of the Statistical Forecaster

*Journal of the American Statistical Association*, Volume 32, Number

200, December, 1937 (p. 636)

**Burnan, Tom**

No biographical data available

No matter how much reverence is paid to anything purporting to be “statistics,” the term has no meaning unless the source, relevance, and truth are all checked.

*The Dictionary of Misinformation*

Statistics, Use, Misuse, and Abuse Of (p. 271)

Ballantine Books. New York, New York, USA. 1975

...the worship of statistics has had the particularly unfortunate result of making the job of the plain, outright liar that much easier.

*The Dictionary of Misinformation*

Statistics, Use, Misuse, and Abuse Of (p. 274)

Ballantine Books. New York, New York, USA. 1975

**Carlyle, Thomas** 1795–1881

English historian and essayist

Statistics is a science which ought to be honorable, the basis of many most important sciences; but it is not to be carried on by steam, this science, anymore than others are; a wise head is requisite for carrying it on.

*English and Other Critical Essays*

Chartism (p. 170)

J.M. Dent & sons Ltd. London, England. 1950

Statistics is a science which ought to be honourable, the basis of many most important sciences; but it is not to be carried on by steam, this science, anymore than others are; a wise hand is requisite for carrying it on. Conclusive facts are inseparable from unconvulsive except by a head that already understands and knows.

*Critical and Miscellaneous Essays*

Chartism, II

D. Appleton &amp; Company. New York, New York, USA. 1860

Statistics, one may hope, will improve gradually, and become good for something. Meanwhile, it is to be feared the crabbed satirist was partly right, as things go.

*English and Other Critical Essays*

Chartism, Chapter II (p. 171)

J.M. Dent &amp; sons Ltd. London, England. 1950

**Carolsfeld, Joachim**

No biographical data available

Management of fisheries in the absence of reliable statistics is like minding a store with no record of sales and no inventory.

*Migratory Fishes of South America*

Chapter 1 (p. 13)

International Development Research Centre

2003

**Carroll, Lewis (Charles Dodgson)** 1832–98

English writer and mathematician

“And on the dead level our pace is – ?” the younger suggested; for he was weak in statistics, and left all such details to his aged companion.

*The Complete Works of Lewis Carroll**A Tangled Tale*

Knot 1 (p. 983)

The Modern Library. New York, New York, USA. 1936

**Chatfield, Christopher**

British statistician

Thus statistics should generally be taught more as a practical subject with analyses of real data. Of course some theory and an appropriate range of statistical tools need to be learnt, but students should be taught that Statistics is much more than a collection of standard prescriptions.

The Initial Examination of Data

*Journal of the Royal Statistical Society*, Series A, Volume 148, 1985**Cogswell, Theodore R.** 1918–87

American science fiction author

Statistics show that you have nothing to worry about.

In Harry Harrison

*Astounding: John W. Campbell Memorial Anthology*

Probability Zero (p. 329)

Random House, Inc. New York, New York, USA. 1973

**Cohen, Jacob** 1923–

American behavioral psychologist and statistical analyst

I have learned repeatedly, however, that the typical behavioral scientist approaches applied statistics with considerable uncertainty (if not actual nervousness), and

requires a verbal-intuitive exposition, rich in redundancy and with many concrete illustrations.

*Statistical Power Analysis for the Behavioral Sciences*

Preface to the Original Edition (p. xx)

Lawrence Erlbaum Associates, Publishers. Hillsdale, New Jersey, USA. 1988

Since statistical significance is so earnestly sought and devoutly wished for by behavioral scientists, one would think that the a priori probability of its accomplishment would be routinely determined and well understood. Quite surprisingly, this is not the case.

*Statistical Power Analysis for the Behavioral Sciences*

Chapter 1 (p. 1)

Lawrence Erlbaum Associates. Hillsdale, New Jersey, USA. 1988

**Cox, Sir David Roxbee** 1924–

English statistician

**Hinkley, D. V.** 1924–

English statistician

Statistical methods of analysis are intended to aid the interpretation of data that are subject to appreciable haphazard variability.

*Theoretical Statistics* (p. 1)

Introduction (p. 1)

Chapman &amp; Hall. London, England. 1974

**Crichton, Michael** 1942–

American novelist

Conversation and statistics. Really boring.

*Rising Sun*

Second Day (p. 254)

Ballantine Books. New York, New York, USA. 1993

**Cutter, C. A.**

No biographical data available

Statistics are like the notices that we post: few persons read them, still fewer heed them; but we are obliged to post them lest we be asked, Why did you not tell me? So we must have statistics, I suppose. There are persons who, like children, must pull up their plants to see if they are growing. And they want to know such details, – how many bakers and how many candlestick makers use the library, what percentage of fiction and what percentage of theology is used, on what day in the year the most books were taken out and on what the fewest. Yes, it is all interesting; looks as if it ought to be useful; is sometimes needed as a defence against the attacks of the unfriendly; but one would like to know how often any practical measure is the result of the figures so laboriously got together.

*Annual Conference Proceedings of the American Library Association*

Common Sense in Libraries (p. 2)

Library Bureau. Boston, Massachusetts, USA. 1889

**Darwin, Charles Robert** 1809–82  
English naturalist

One has, however, no business to feel so much surprise of one's ignorance, when one knows how impossible it is without statistics to conjecture the duration of life and percentage of deaths to births in mankind.

In Francis Darwin (ed.)  
*The Life and Letters of Charles Darwin* (Volume 1)  
C. Darwin to L. Jenyns, [1845?] (p. 394)  
D. Appleton & Company. New York, New York, USA. 1896

**Davies, John Tasman** 1924–?  
Chemist

Operational research is the application of methods of the research scientist to various rather complex practical operations.... A paucity of numerical data with which to work is a usual characteristic of the operations to which operational research is applied.

*The Scientific Approach*  
Chapter 7 (p. 86)  
Academic Press. London, England. 1965

**Davis, Joseph S.**  
No biographical data available

Statistics are proverbially dry – forgive me if I say they are far better dry than “wet” – but to give them optimum moisture content is simply a matter of mastering fundamentals that no one should hold in contempt.

Statistics and Social Engineering  
*Journal of the American Statistical Association*, Volume 32, Number 197, March, 1937 (p. 6)

**Dawkins, Richard** 1941–  
British ethologist, evolutionary biologist, and popular science writer

The essence of life is statistical improbability on a colossal scale.

*The Blind Watchmaker*  
Chapter 11 (p. 317)  
W.W. Norton & Company, Inc. New York, New York, USA. 1986

**de Bow, James Dunwoody Brownson** 1820–67  
American statistician and editor

Statistics are far from being the barren array of figures ingeniously combined into columns and tables, which many persons are apt to suppose them. They constitute rather the ledger of the Nation, in which, like the merchant in his books, the citizen can read at one view, all the results of a year or period of years, as compared with other periods, and deduce the profit or the loss which has been made in morals, education, wealth or power.

*Statistical View of the United States*  
Introductory Remarks (p. 9)  
Washington, D.C. 1854

**de Jonnes, Moreau**  
No biographical data available

Statistics are like the hieroglyphics of ancient Egypt, where the lessons of history, the precepts of wisdom, and the secrets of the future were concealed in mysterious characters.

*Elements de Statistique* (p. 5)

**de Leeuw, A. L.**  
No biographical data available

The method used by the scientist to find probable exact truth is what he calls “the method of least squares.”

*Rambling Through Science*  
Gambling (p. 88)  
Whittlesey House. London, England. 1932

**de Madariaga, Salvador** 1886–1978  
Spanish writer and statesman

Statistics only work well when they dwell on large numbers of absolutely free motions, or what has been described as “perfect disorder.” If an element of deliberate direction, of conscious “order”, meddles with their utter “innocence”, the facts in question cease to follow statistical laws.

*Essays with a Purpose*  
Freedom and Science (p. 50)  
Hollis & Carter. London, England. 1954

**Deming, William Edwards** 1900–93  
American statistician, educator, and consultant

You need not be a mathematical statistician to do good statistical work, but you will need the guidance of a first class mathematical statistician.

Some Principles of the Shewhart Method of Quality Control  
*Mechanical Engineering*, Volume 66, March, 1944

A good engineer, or a good economist, or a good chemist, already has a good start, because the statistical method is only good science brought up to date by the recognition that all laws are subject to the variations which occur in nature.

Some Principles of the Shewhart Method of Quality Control  
*Mechanical Engineering*, Volume 66, March, 1944

Your study of statistical methods will not displace any other knowledge that you have; rather, it will extend your knowledge of engineering, chemistry, or economics, and make it more useful.

Some Principles of the Shewhart Method of Quality Control  
*Mechanical Engineering*, Volume 66, March, 1944

Statistical research is particularly necessary in the government service because of the high level of quality and economy that the public has the right to expect in government statistics.

*Some Theory of Sampling* (p. viii)  
John Wiley & Sons, Inc. New York, New York, USA. 1950

The statistical method is more than an array of techniques. The statistical method is a Mode of Thought; it is

**Sharpened Thinking; it is Power.**

Paper presented at meeting of the International Statistical Institute, September, 1953

Unfortunately and inadvertently, intellectual gulfs have grown up between writers in statistics, least squares, and curve fitting. Each of the three groups has gone its own way, rediscovering developments long since discovered by the others, or – what is worse – not rediscovering them.

*Statistical Adjustment of Data* (p. iv)

John Wiley & Sons, Inc. New York, New York, USA. 1938

**Devons, Ely** 1913–67

English economist

The experience of falling in love could be adequately described in terms of statistics. A record of heart beats per minute, the stammering and hesitation in speech, the number of calories consumed per day, the heightening of poetic vision, measured by the number of lines of poetry written to the beloved – I won't go on; no doubt you can think of further measures.

*Essays in Economics*

Chapter 6 (p. 105)

Greenwood Press, Publishers, Westport, Connecticut, USA. 1961

The two most important characteristics of the language of statistics are first, that it describes things in quantitative terms, and second, that it gives this description an air of accuracy and precision.

*Essays in Economics*

Chapter 6 (p. 106)

Greenwood Press, Publishers, Westport, Connecticut, USA. 1961

There are those who are so impressed by the notion that “quantification” is the only form of scientific knowledge, that they see no danger in the distorted, misleading, or simply ineffective picture that a statistical description of events may give. To such people the statistical picture is always to be preferred as the most meaningful and objective. It is indeed because this view is so widespread, that an argument stated in statistical terms has such a powerful influence in policy decision, and induces everyone to try to impress their case on public attention by peppering it with statistics.

*Essays in Economics*

Chapter 6 (p. 106)

Greenwood Press, Publishers, Westport, Connecticut, USA. 1961

How to use a language which by its very nature implies objectivity, precision and accuracy, in such a way that the subjective element of judgment, imprecision and inaccuracy are fully taken into account? It is because this task is so difficult and so rarely achieved that statistics are frequently referred to as “the hard facts”, and yet we talk of three kinds of lies – “lies, damn lies, and statistics.”

*Essays in Economics*

Chapter 6 (p. 111)

Greenwood Press, Publishers, Westport, Connecticut, USA. 1961

...“statistics are only for the statistician”, and even then, I might add, only for the good statistician.

*Essays in Economics*

Chapter 6 (p. 118)

Greenwood Press, Publishers, Westport, Connecticut, USA. 1961

This exaggerated influence of statistics resulting from willingness, indeed eagerness, to be impressed by the “hard facts” provided by the “figures”, may play an important role in decision-making.

*Essays in Economics*

Chapter 7 (p. 134)

Greenwood Press, Publishers, Westport, Connecticut, USA. 1961

Statistical magic, like its primitive counterpart, is a mystery to the public; and like primitive magic it can never be proved wrong.... The oracle is never wrong; a mistake merely reinforces the belief in magic.

*Essays in Economics*

Chapter 7 (p. 135)

Greenwood Press, Publishers, Westport, Connecticut, USA. 1961

**Dewey, John** 1859–1952

American philosopher and educator

Factual science may collect statistics, and make charts. But its predictions are, as has been well said, but past history reversed.

*Art as Experience*

Chapter XIV (p. 346)

Milton, Balch and Company. New York, New York, USA. 1934

**Dickens, Charles** 1812–70

English novelist

Mr. Gradgrind sat writing in the room with the deadly statistical clock, proving something no doubt – probably, in the main, that the Good Samaritan was a bad economist.

*Hard Times*

Book the Second, Chapter XII (p. 192)

J.M. Dent & Sons Ltd. London, England. 1966

**Edgeworth, Francis Ysidro** 1845–1926

Irish economist and statistician

...Statistics reigns and revels in the very heart of Physics.

On the Use of the Theory of Probabilities in Statistics Relating to Society

*Journal of the Royal Statistical Society*, January, 1913 (p. 167)

**Edwards, A. W. F.** 1935–

English statistician, geneticist, and evolution biologist

There comes a time in the life of a scientist when he must convince himself either that his subject is so robust from a statistical point of view that the finer points of statistical inference he adopts are irrelevant or that the precise mode of inference he adopts is satisfactory.

*Likelihood* (p. xi)

Cambridge University Press. Cambridge, England. 1972

**Efron, Bradley** 1938–  
American statistician

**Tibshirani, Robert J.**

No biographical data available

Statistics is a subject of amazingly many users and surprisingly few effective practioners.

*An Introduction to the Bootstrap*

Preface (p. xiv)

Chapman & Hall. New York, New York, USA. 1993

Statistics is the science of learning from experiences, especially experiences that arrive a little bit at a time.

*An Introduction to the Bootstrap*

Chapter 1 (p. 1)

Chapman & Hall. New York, New York, USA. 1993

**Einstein, Albert** 1879–1955  
German-born physicist

**Infeld, Leopold** 1898–1968

Polish physicist

By applying the statistical method we cannot foretell the behavior of an individual in a crowd. We can only foretell the chance, the probability, that it will behave in some particular manner.

*The Evolution of Physics*

Probability Waves (p. 284)

Simon & Schuster. New York, New York, USA. 1961

**Eisenhart, Churchill** 1913–94

American statistician

The primary function of a statistical consultant in a research organization is to furnish advice and guidance in the collection and use of numerical data to provide quantitative foundations for decisions.

The Role of a Statistical Consultant in a Research Organization

*The American Statistician*, Volume 2, Number 2, April, 1948 (p. 6)

**Ellis, Havelock** 1859–1939

English sexuality researcher

...the methods of statistics are so variable and uncertain, so apt to be influenced by circumstances, that it is never possible to be sure that one is operating with figures of equal weight.

*The Dance of Life*

Chapter VII, I (p. 286)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1923

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

One more fagot of these adamantine bandages is the new science of Statistics. It is a rule that the most casual and extraordinary events, if the basis of population is broad enough, become matter of fixed calculation.

*The Conduct of Life*

Fate (p. 17)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1904

**Farr, William** 1807–83

English statistician

You complain that your report would be dry. The dryer the better. Statistics should be the driest of all reading.

Nightingale on Quetelet

*Journal of the Royal Statistical Society*, Series A, 1981 (p. 144)

**Ferguson, Kitty**

Science writer

Compared with the adventure of discovering them, the statistics themselves often seem terribly dry.

*Measuring the Universe: Our Historic Quest to Chart the Horizons of Space and Time*

Prologue (p. 3)

Walker & Company. New York, New York, USA. 1999

**Fienberg, Stephen E.** 1942–

American statistician

Although advice on how and when to draw graphs is available, we have no theory of statistical graphics...

Graphical Methods in Statistics

*The American Statistician*, Volume 13, Number 4, November, 1979

(p. 165)

**Fisher, Sir Ronald Aylmer** 1890–1962

English statistician and geneticist

This rather tumultuous overflow of statistical techniques from the quiet backwaters of theoretical methodology... into the working part of going concerns of the largest size, suggest that hidden causes have been at work...preparing men's minds, and shaping the institutions through which they work...

The Expansion of Statistics

*American Scientist Magazine*, Volume 42, Number 2, April, 1954

(p. 277)

Statistical procedure and experimental design are only two different aspects of the same whole, and that whole is the logical requirements of the complete process of adding to natural knowledge by experimentation.

*The Design of Experiments*

Introduction (p. 3)

Hafner Publishing Company. New York, New York, USA. 1971

In the original sense of the word, "statistics" was the science of Statecraft: to the political arithmetician of the eighteenth century, its function was to be the eyes and ears of the central government.

Presidential Address, First Indian Statistical Conference

*Sankhya*, 1938, Volume 4, 1938 (p. 14)

**Fitzgerald, F. Scott** 1896–1940

American novelist and short story writer

I was counting the waves," replied Amory gravely, "I'm going in for statistics."

*This Side of Paradise* (p. 213)

Ann Arbor Media Group, LLC. Ann Arbor, Michigan, USA. 2006

No biographical data available

We are all victims of statistics.

*Elementary Applied Statistics*

Section A (p. 1)

John Wiley & Sons, Inc. New York, New York, USA. 1965

**Gallup, George** 1901–84

American journalist and statistician

I could prove God statistically.

*OMNI Magazine*, Volume 2, Issue 2, November, 1979 (p. 42)

**Galton, Sir Francis** 1822–1911

English anthropologist, explorer, and statistician

The object of statistical science is to discover methods of condensing information concerning large groups of allied facts into brief and compendious expressions suitable for discussion. The possibility of doing this is based on the constancy and continuity with which objects of the same species are found to vary.

*Inquiries into Human Faculty and Its Development*

Statistical Methods (p. 33)

AMS Press. New York, New York, USA. 1973

**Gann, Ernest K.** 1910–91

Author, sailor, fisherman, film producer, and airline captain

No, Mother dear, I do not hop into bed with every man I meet, despite your nasty little secret thoughts, but I do very much enjoy a more than occasional roll in the hay, which, if I have my statistics right, is a good deal more often than the average wife enjoys.

*Brain 2000* (pp. 27–28)

Doubleday & Company, Inc. New York, New York, USA. 1980

**Gissing, George** 1857–1903

English novelist

...bits of jokes, bits of statistics, bits of foolery.

*New Grub Street*

The Sunny Way (p. 492)

The Modern Library. New York, New York, USA. 1926

**Green, Celia** 1935–

English philosopher and psychologist

When people talk about “the sanctity of the individual” they mean “the sanctity of the statistical norm.”

*The Decline and Fall of Science*

Aphorisms (p. 4)

Hamilton. London, England. 1976

**Greenwood, M.**

No biographical data available

Sometimes a David felled a Goliath of a statistical difficulty with a smooth stone. It might take a mathematician to prove how truly the stone was aimed.

Discussion, to the paper “Some Aspects of the Teaching of Statistics”

*Journal of the Royal Statistical Society*, Volume 102, 1939 (p. 522)

**Gregory, John** 1724–73

Scottish physician and philosopher

The advancement of the sciences...requires only an attention to probabilities...a quick discernment where the greatest probability lies, and habits, of acting in consequence of this with facility and vigor.

*Lectures on the Duties and Qualifications of a Physician* (p. 164)

W. Strahan. London, England. 1772

**Habera, Audrey**

Statistician

**Runyon, Richard P.**

Statistician

When we can't prove our point through the use of sound reasoning, we fall back upon statistical “mumbo jumbo” to confuse and demoralize our opponents.

*General Statistics*

Chapter 1 (p. 3)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA.

1973

Statistics is the refuge of the uninformed.

*General Statistics*

Chapter 1 (p. 3)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1973

Statistics is “hocus-pocus” with numbers.

*General Statistics*

Chapter 1 (p. 3)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA.

1973

**Hailey, Arthur** 1920–2004

English/Canadian author

Legal proceedings are like statistics. If you manipulate them, you can prove anything.

*Airport*

Part 3, Chapter 11 (p. 385)

Doubleday & Company, Inc. Garden City, New York, USA. 1968

**Hancock, William Keith** 1808–?

Australian author

Oratory is dying; a calculating age has stabbed it to the heart with innumerable dagger-thrusts of statistics.

*Australia* (p. 146)

E. Benn Ltd. London, England. 1945

**Hand, D. J.**

No biographical data available

Statistics has been likened to a telescope. The latter enables one to see further and to make clear objects which were diminished or obscured by distance. The former enables one to discern structure and relationships which were distorted by other factors or obscured by random variation.

The Role of Statistics in Psychiatry

*Psychological Medicine*, Volume 15, 1985 (p. 471)

**Hawkins, Francis Bisset** 1796–1894  
No biographical data available

Statistics has become the key to several sciences...and there is reason to believe, that a careful cultivation of it, would materially assist the completion of a philosophy of medicine.... Medical statistics affords the most convincing proofs of the efficacy of medicine.

*Elements of Medical Statistics* (pp. 2–3)  
Longman. London, England. 1829

**Hayford, F. Leslie**  
No biographical data available

In the everyday use of statistics in business, complicated statistical methods rarely are necessary and always are to be avoided if possible. Simplicity of treatment and presentation is a requisite in the making of statistics useful in executive control.

Some Uses of Statistics in Executive Control  
*Journal of the American Statistical Association*, Volume 31, Number 193, March, 1936 (p. 36)

...neither statistics nor the statistician can ordinarily give the executive the final answer to his problems.

Some Uses of Statistics in Executive Control  
*Journal of the American Statistical Association*, Volume 31, Number 193, March, 1936 (p. 36)

**Heinlein, Robert A.** 1907–88  
American science fiction writer

Oh, the hell with! – it did not change the statistical outcome.

*Time Enough for Love*  
Chapter VI (p. 208)  
G.P. Putnam's Sons. New York, New York, USA. 1973

**Henderson, Charles Richmond** 1861–1941  
American educator

Imported statistics are like charged mineral water left in an open vessel; for the sparkle and zest are volatile.

*The Making of America* (Volume 10)  
Charity, – Theory and Practice (p. 16)  
The Making of America Co. Chicago, Illinois, USA. 1906

**Hinsdale, Burke Aaron** 1837–1900  
American educator

The legislator without statistics is like the mariner at sea without the compass. Nothing can safely be committed to his guidance.

*The Republican Text-book for the Campaign of 1880*  
Chapter VI (p. 36)  
D. Appleton & Co. New York, New York, USA. 1880

**Hoel, P. G.**  
Statistician

Statistical methods are essentially methods for dealing with data that have been obtained by repetitive operations.

*Introduction to Mathematical Statistics*  
Chapter 1 (p. 1)  
John Wiley & Sons, Inc. New York, New York, USA. 1954

**Hogben, Lancelot** 1895–1975  
English zoologist

Acceptability of a statistically significant result of an experiment on animal behavior in contradistinction to a result which the investigator can repeat before a critical audience naturally promotes a high output of publication. Hence, the argument that the techniques work has a tempting appeal to young biologists.

*Statistical Theory: The Relationship of Probability, Credibility and Error* (p. 27)  
George Allen & Unwin Ltd. London, England. 1957

The word statistics has at least six different meanings in current use, four in the context of statistical theory alone.

*Science in Authority*  
The Present Crisis in Statistical Theory (pp. 94–95)  
Unwin University Books. London, England, USA. 1963

**Holmes, Jr., Oliver Wendell** 1841–1935  
American jurist

For the rational study of the law the black-letter man may be the man of the present, but the man of the future is the man of statistics and the master of economics.

Path of the Law  
*The Harvard Law Review*, Volume 10, 1897

**Hooke, Robert** 1635–1703  
English physicist

Don't waste time arguing about the merits or demerits of something if you can gather some statistics that will answer the question realistically.

In J.M. Tanur  
*Statistics: A Guide to the Unknown*  
Statistics, Sports, and Some Other Things (p. 195)  
Wadsworth & Brooks. Pacific Grove, California, USA. 1989

Do remember that your experiment is merely a hodge-podge of statistics, consisting of those cases that you happen to remember. Because these are necessarily small in number and because your memory may be biased toward one result or another, your experience may be far less dependable than a good set of statistics.

In J.M. Tanur  
*Statistics: A Guide to the Unknown*  
Statistics, Sports, and Some Other Things (p. 195)  
Wadsworth & Brooks. Pacific Grove, California, USA. 1989

**Hopkins, Harry**  
No biographical data available

Confidence in the omniscience of statistical reasoning grows by what it feeds on.

*The Numbers Game: The Bland Totalitarianism*  
Chapter 6 (p. 132)  
Little, Brown & Company. Boston, Massachusetts, USA. 1973

And when, in pursuit of the black cat of definitive truth, more refined techniques of statistical analysis, factor analysis, and so forth, are developed, the researcher is more and more distanced from the subject of his pursuit, and the real human world in which it exists. He raises as by a sort of mathematical levitation, into that other, finer sphere, where black cats are clawless, mewless and abstract...

*The Numbers Game: The Bland Totalitarianism*

Chapter 7 (p. 141)

Little, Brown & Company. Boston, Massachusetts, USA. 1973

You can't argue with statistics; generally you can't even get at them.

*The Numbers Game: The Bland Totalitarianism*

Chapter 11 (p. 232)

Little, Brown & Company. Boston, Massachusetts, USA. 1973

**Horace (Quintus Horatius Flaccus)** 65 BCE–8 BCE  
Roman philosopher and dramatic critic

As they put it in Greek, we simply don't COUNT. We consume.

*The Satires and Epistles of Horace*

Epistle I, to Lollius Maximus

**Hotelling, Harold** 1895–1973  
American mathematical economist

Research in statistical theory and technique is necessarily mathematical, scholarly, and abstract in character, requiring some degree of leisure and detachment, and access to a good mathematical and statistical library.

*Memorandum to the Governor of India*

24 February, 1940

The purely random sample is the only kind that can be examined with entire confidence by means of statistical theory, but there is one thing wrong with it. It is so difficult and expensive to obtain for many uses that sheer cost eliminates it.

*How to Lie with Statistics*

Chapter 1 (p. 21)

W.W. Norton & Company, Inc. New York, New York, USA. 1954

**Huff, Darrell** 1913–2001  
American writer

The secret language of statistics, so appealing in a fact-minded culture, is employed to sensationalize, inflate, confuse, and oversimplify.

*How to Lie with Statistics*

Introduction (p. 8)

W.W. Norton & Company, Inc. New York, New York, USA. 1954

A well-wrapped statistic is better than Hitler's "big lie"; it misleads, yet it cannot be pinned on you.

*How to Lie with Statistics*

Introduction (p. 9)

W.W. Norton & Company, Inc. New York, New York, USA. 1954

**Hughes, Rupert** 1872–1956  
American historian and novelist

You can prove anything by statistics, if you can only choose your statistics and stop when you want to. But statistics are like automobiles. Sometimes if you hitch yourself up with a statistic, you meet the fate of the farmer who put his fool head in the yoke with a skittish steer.

*The Love Affairs of Great Musicians* (Volume 2)

Chapter VII (p. 257)

L.C. Page & Co. Boston, Massachusetts, USA. 1904

**Jahoda, Marie** 1907–2001  
Austrian social psychologist

**Deutsch, Morton** 1920–  
American social psychologist

The use of available statistical records requires, first, that the social scientist be familiar with the better known sources of such data and that he display some ingenuity in discovering less obvious material.

*Research Methods in Social Relations*

Basic Process, Part I (p. 232)

Dryden Press. New York, New York, USA. 1951

**Johnny Farrell (Fictional character)**

Statistics show that there are more women in the world than anything else. Except insects.

*Gilda*

Film (1946)

**Johnson, Alvin S.**  
No biographical data available

To submit subtle questions of economic theory to the arbitrament of statistics is like submitting abstruse philosophical questions to a popular vote.

Book Reviews

*The South Atlantic Quarterly*, Volume 8, Number 4, October, 1909 (p. 383)

**Johnson, Lyndon B.** 1908–73  
36th president of the USA

The economy was never stronger in your lifetime. But statistics must not be sedatives. Economic power is important only as it is put to human use.

Speech

United Automobile Worker's Convention, Atlantic City, N.J., 23 March, 1964

**Johnson, Palmer O.** 1891–?  
No biographical data available

There was a time when statistics as a tool in experimentation was almost completely ignored by the experimenter; in fact, it was regarded [as] "introducing unnecessary confusion into otherwise plain issues."

Modern Statistical Science and its Function in Educational and Psychological Research  
*The Scientific Monthly*, June 1951 (p. 385)

**Jones, Franklin P.**

No biographical data available

Sarah Bascomb was well aware that she didn't live in the same world with her husband, and that made it rather nice, she thought. It would have been exceedingly boring if they both talked of nothing but expectancy tables and statistical probabilities, or the PTA and young Chuck's music lessons.

*The Non-Statistical Man* (p. 10)  
 Belmont Books, New York, New York, USA. 1964

[S]tatistics had to be invented...because people were so unstable and irrational, taken one at a time.

*The Non-Statistical Man* (p. 15)  
 Belmont Books, New York, New York, USA. 1964

In statistics, you look for the common factor in order to lump otherwise dissimilar items in a single category.

*The Non-Statistical Man* (p. 17)  
 Belmont Books, New York, New York, USA. 1964

Statistical laws enable the insurance company to function, and make a profit for its shareholders. But what does statistics do for the policyholder? Not one damn thing!

*The Non-Statistical Man* (p. 32)  
 Belmont Books, New York, New York, USA. 1964

P.S. King & Son Ltd. London, England. 1926

**Maxwell, James Clerk** 1831–79

Scottish physicist

...molecular science teaches us that our experiments can never give us anything more than statistical information, and that no law deduced from them can pretend to absolute precision. But when we pass from the contemplations of our experiment to that of the molecules themselves, we leave the world of chance and change, and enter a region where everything is certain and immutable.

In W.D. Niven (ed.)

*The Scientific Papers of James Clerk Maxwell* (Volume 2)

Molecules (p. 374)

At The University Press. Cambridge, England. 1890

**Meitzen, August** 1822–1910

German geographer

No statistical judgment deals with the unit, but strictly and only with the aggregate. The variable elements of persons and things otherwise typical, that are enumerated, are always counted in a specific aggregate and under certain specific circumstances. The qualities of the objects themselves, so far as they are not typical, or the subject of the investigation, are completely unknown.

History, Theory and Techniques of Statistics

*American Academy of Political and Social Sciences*, May, 1898 (p. 168)

No matter what the statistical problem may be, it must proceed according to a plan. It is always a specific question which may be answered in several more or less accurate ways. The end in view and the reasoning which can be drawn upon will indicate in which manner and within which limits the answer is to be given. According to the choice made, it may be very simple or very complicated.

But under all circumstances a definite plan providing for all the detail is an absolute prerequisite.

History, Theory and Techniques of Statistics

*American Academy of Political and Social Sciences*, May, 1898 (p. 168)

**Melville, Herman** 1819–91

American novelist

The skeleton dimensions I shall now proceed to set down are copied verbatim from my right arm, where I had them tattooed; as in my wild wanderings at that period, there was no other secure way of preserving such valuable statistics.

*Moby Dick*

Chapter CII (p. 424)

L.C. Page & Co. Boston, Massachusetts, USA. 1892

**Meyers, Jr., G. J.**

No biographical data available

Statistical methods serve as land marks which point to further improvement beyond that deemed obtainable by experienced manufacturing men. Hence, after all obvious correctives have been exhausted and all normal logic indicates no further gain is to be made, statistical methods still point toward a reasonable chance for yet further gains; thereby giving the man who is doing trouble shooting sufficient courage of his convictions to cause him to continue to the ultimate gain, in spite of expressed opinion on all sides that no such gain exists.

In the name of a cautious, statistical Christ.

*In Bohemia*

In Bohemia

A statistical analysis, properly conducted, is a delicate dissection of uncertainties, a surgery of suppositions.

*Facts from Figures*

Statistics Undesirable (p. 3)

Penguin Books Ltd. Harmondsworth, England. 1951

Historically, Statistics is no more than State Arithmetic, a system of computation by which differences between individuals are eliminated by the taking of an average. It has been used – indeed, still is used – to enable rulers to know just how far they may safely go in picking the pockets of their subjects.

*Facts from Figures*

Statistics Undesirable (p. 1)

Penguin Books Ltd. Harmondsworth, England. 1951

If you are young, then I say: Learn something about statistics as soon as you can. Don't dismiss it through igno-

rance or because it calls for thought.... If you are older and already crowned with the laurels of success, see to it that those under your wing who look to you for advice are encouraged to look into this subject. In this way you will show that your arteries are not yet hardened, and you will be able to reap the benefits without doing overmuch work yourself. Whoever you are, if your work calls for the interpretation of data, you may be able to do without statistics, but you won't do as well.

*Facts from Figures*

Statistics Desirable (p. 463)

Penguin Books Ltd., Harmondsworth, England. 1951

**Mr. Gregory (Fictional character)**

Well, statistics prove that you're far safer in a modern plane than in a bathtub.

*Charlie Chan at Treasure Island*

Commentary on an Ingenious Army Captain and on a Generous and

Many-sided Man (p. 1416)

Simon & Schuster. New York, New York, USA. 1956

**O. Henry (William Sydney Porter)** 1862–10

American short story writer and journalist

His mathematics carried with it a momentary qualm and a lesson. The thought had not occurred to him that the thought could possibly occur to me not to ride at his side on that red road to revenge and justice. It was the higher calculus. I was booked for the trail. I began to eat more beans.

*Tales of O. Henry*

A Technical Error (p. 1059)

Doubleday & Company, Inc. Garden City, New York, USA. 1953

"What you've got," says Idaho, "is statistics, the lowest grade of information that exists. They poison your mind..."

*Tales of O. Henry*

The Handbook of Hymen (p. 113)

Doubleday & Company, Inc. Garden City, New York, USA. 1969

**Orwell, George (Eric Arthur Blair)** 1903–50

English novelist and essayist

Statistics were just as much a fantasy in their original version as in their rectified version. A great deal of the time you were expected to make them up out of your head. For example, the Ministry of Plenty's forecast had estimated the output of boots for the quarter at a hundred and forty-five millions pairs. The actual output was given

as sixty-two millions. Winston, however, in rewriting the forecast, marked the figure down to fifty-seven millions, so as to allow for the usual claim that the quota had been overfilled. In any case, sixty-two millions was no nearer the truth than fifty-seven millions, or a hundred and forty-five millions. Very likely no boots had been produced at all. Likelier still, nobody knew how many had been produced, much less cared.

*Nineteen Eighty-Four*

Part One, Chapter IV (pp. 41–42)

Buccaneer Books. Cutchogue, New York, USA. 1949

The fabulous statistics continued to pour out of the tele-screen. As compared with last year there was more food, more clothes, more houses, more furniture, more cooking pots, more fuel, more ships, more helicopters, more books, more babies – more of everything except disease, crime, and insanity.

*Nineteen Eighty-Four*

Part One, Chapter V (p. 59)

Buccaneer Books. Cutchogue, New York, USA. 1949

**Paulos, John Allen** 1945–

American mathematician

It’s been estimated that, because of the exponential growth of the world’s population, between 10 and 20% of all the human beings who have ever lived are alive now. If this is so, does this mean that there isn’t enough statistical evidence to conclusively reject the hypothesis of immortality?

*Innumeracy*

5 Statistics, Trade-offs, and Society (p. 99)

No biographical data available

...it is a function of statistical method to emphasize that precise conclusions cannot be drawn from inadequate data.

*Biometrika Tables for Statisticians* (Volume 1) (p. 83)

**Pearson, Karl** 1857–1936

English mathematician

There is much value in the idea of the ultimate laws being statistical laws, though why the fluctuations should be attributed to a Lucretian “Chance”, I cannot say. It is not an exactly dignified conception of the Deity to suppose him occupied solely with first moments and neglecting second and higher moments!

*The History of Statistics in the 17th and 18th Centuries Against the Changing Background of Intellectual, Scientific, and Religious Thought* (p. 160)

[Florence Nightingale’s] statistics were more than a study, they were indeed her religion. For her Quete-

let was the hero as scientist, and the presentation copy of his *Physique Sociale* is annotated by her on every page. Florence Nightingale believed – and in all the actions of her life acted upon the belief – that the administrator could only be successful if he were guided by statistical knowledge. The legislator – to say nothing of the politician – too often failed for want of this knowledge.

*Life, Letters and Labours of Francis Galton* (Volume 2) (p. 57)

At The University Press. Cambridge, England. 1914–30

[Florence Nightingale]...held that the universe – including human communities – were evolving in accordance with a divine plan; that it was man’s business to endeavor to understand this plan and guide his actions in sympathy with it. But to understand God’s thoughts, she held we must study statistics, for these are the measure of His purpose. Thus, the study of statistics was for her a religious duty.

*Life, Letters and Labours of Francis Galton* (Volume 2) (p. 57)

At The University Press. Cambridge, England. 1914–30

**Perrin, Jean** 1870–1945

French physicist

It is thus that statistics reveals more and more the inconsistency and the irregularity of much social phenomena, when in lieu of applying it to a great nation altogether, one descends to a province, a town, a village.

In Mary Jo Nye

*Molecular Reality: A Perspective on the Scientific Work of Jean Perrin* (p. 25)

MacDonald. London, England. 1972

**Playfair, William** 1759–1823

English publicist

No study is less alluring or more dry and tedious than statistics, unless the mind and imagination are set to, or that the person studying is particularly interested in, the subject; which last can seldom be the case with young men in any rank of life.

*The Statistical Breviary* (p. 16)

J. Wallis. London, England. 1801

Statistical knowledge, though in some degree searched after in the most early ages of the world, has not till within these last 50 years become a regular object of study.

*The Statistical Breviary*

J. Wallis. London, England. 1801

**Price, Derek John de Solla** 1922–83

English science historian and information scientist

His passion was to count everything and reduce it to statistics.

*Little Science, Big Science*

Chapter 2 (p. 33)

Columbia University Press. New York, New York, USA. 1963

**Proschan, Frank**

American statistician

Pronouncing each word with great deliberateness, Rep. Resent asked, "Are you now, or have you ever been, a member of the American Statistical Association?"

...

Looking Rep. Resent straight in the eye, Minnie defiantly replied, "I refuse to answer on the grounds that it might incriminate me."

Investigation of Latin Squares

*Industrial Quality Control*, Volume 11, Number 1, July, 1954 (p. 31)**Puckett, Andrew**

British crime novelist

They were in monthly columns. I added them and then compared the two tables. Well, there was a difference, and a difference on the right side, more blood packs had been separated in the Centre than plasma packs had arrived in CPPL, but it wasn't as large as I would have thought. I stared at the figures for a moment, then I worked out a statistical error rate on them. The difference between them was not significant; it could be explained by random error. Statistics don't lie, not in the right hands.

*Bloodstains* (p. 79)

Doubleday &amp; Company, Inc. Garden City, New York, USA. 1987

For the first five months they were virtually identical, but for the past four, they showed an increasing difference! With shaking fingers, I worked out a Standard Deviation on the sets of totals. There was no doubt: the difference[s] between the Centre's and CPPL's totals were significant. Statistics don't lie...

*Bloodstains* (p. 80)

Doubleday &amp; Company, Inc. Garden City, New York, USA. 1987

**Puzo, Mario** 1920–99

American novelist and screenwriter

"You got a ninety percent chance," he said.

Osno said quickly, "How do you get that figure?" He always did that whenever somebody pulled a statistic on him. He hated statisticians.

History is for him continuous statistics, statistics stationary history.

In August Meitzen  
*History, Theory, and Technique of Statistics* (p. 37)  
 American Academy of Political Science. Philadelphia, Pennsylvania, USA. 1891

**Segal, Erich** 1937–

American novelist

“How are you, Mrs. Coleman?”  
 “Not too bad. How’s yer statistics?”

*Man, Woman and Child*  
 Chapter 1 (p. 8)  
 Harper & Row, Publishers. New York, New York, USA. 1980

He turned over on his side and picked up the American Journal of Statistics. Better than a sleeping pill. He idly leafed through a particularly unoriginal piece on stochastic processes, and thought, Christ, I’ve said this stuff a million times. And then he realized that he himself was the author.

*Man, Woman and Child*  
 Chapter 5 (p. 42)  
 Harper & Row, Publishers. New York, New York, USA. 1980

The emergency room was a madhouse. The stormy holiday roads had yielded more than the statistical expectation of traffic accidents.

*Man, Woman and Child*  
 Chapter 26 (p. 191)  
 Harper & Row, Publishers. New York, New York, USA. 1980

“I mean, here you are a professor of statistics.”  
 “So?”

“So you have one lousy affair in your whole life. For a few lousy days. And you get a kid as evidence. Christ, what are the odds of that happening to anybody?”

“Oh,” said Bob bitterly, “about a billion to one.”

*Man, Woman and Child*  
 Chapter 13 (p. 109)  
 Harper & Row, Publishers. New York, New York, USA. 1980

“I am Professor Beckworth,” he pronounced in a kind of soprano-baritone. “Would you like to ask me some statistics, sir?”

“Yes,” replied Bob. “What are the chances of this damn rain stopping today, Professor?”

“Mmm,” said Jean-Claude, pondering earnestly, “You’ll have to see me tomorrow about that.”

*Man, Woman and Child* (p. 178)  
 Harper & Row, Publishers. New York, New York, USA. 1980

**Shapiro, Karl Jay** 1913–2000

American poet

We ask for no statistics of the killed,  
 For nothing political impinges on  
 This single Casualty, or all those gone,  
 Missing or healing, sinking or dispersed,  
 Hundreds of thousands counted, millions lost.

*Collected Poems 1940–1978*  
 Elegy for a Dead Soldier  
 Stanza V (p. 90)  
 Random House, Inc. New York, New York, USA. 1978

**Shaw, George Bernard** 1856–1950

Irish comic dramatist and literary critic

Even trained statisticians often fail to appreciate the extent to which statistics are vitiated by the unrecorded assumptions of their interpreters.

*The Doctor’s Dilemma*  
 Preface on Doctors  
 Statistical Illusions (p. lxii)  
 Brentano’s. New York, New York, USA. 1920

**Smith, Reginald H.** 1889–1966

American lawyer and social activist

Lawyers like words and dislike statistics.  
 A Sequel: The Bar Is Not Overcrowded  
*American Bar Association Journal*, Volume 45, September, 1959 (p. 945)

**Spengler, Oswald** 1880–1936

German philosopher

Statistics belong, like chronology, to the domain of the organic, to fluctuating Life, to Destiny and Incident, and not to the world of laws and timeless causality.

*The Decline of the West*  
 Chapter X (p. 218)  
 Alfred A. Knopf. New York, New York, USA. 1962

**Stalin, Joseph** 1879–1953

Soviet Russian political leader and general secretary of Communist Party

A single death is a tragedy, a million deaths is a statistic.

Quoted by Anne Fremantle

Unwritten Pages at the End of the Diary

*The New York Times Book Review*, September 28, 1958 (p. 3)

**Stamaty, Mark Alan**

American cartoonist and children's book writer

I propose that infinitely refutable statistics be declared the official language of politics.

Washington

*Time*, September 25, 1995 (p. 21)

**Stamp, Josiah** 1880–1941

English economist and financier

You cannot escape the statistical method, so you may as well make friend with it. You think it is cold and inhuman and impersonal, but, as a matter of fact, it is fuller of red blood and human nature than half the descriptive literature in the world.

*Some Economic Factors in Modern Life*

Chapter VIII (p. 256)

P.S. King & Son Ltd. London, England. 1929

**Stekel, Wilhelm** 1868–1940

Austrian psychoanalyst

Statistics is the art of lying by means of figures.

*Marriage at the Crossroads*

Chapter II (p. 20)

W. Godwin, Inc. New York, New York, USA. 1931

**Sterne, Laurence** 1713–68

English novelist and humorist

It was demonstrated however very satisfactorily, that such a ponderous mass of heterogeneous matter could not be congested and conglomerated to the nose, whilst the infant was *in Utero*, without destroying the statistical balance of the foetus, and throwing it plump upon its head nine months before the time.

*The Life and Opinions of Tristram Shandy, Gentleman, and A Sentimental Journey Through France and Italy* (Volume 1)

Book IV (p. 228)

Macmillan & Company Ltd. London, England. 1900

**Steuart, John Alexander** 1861–1932

No biographical data available

Statistics are like an anatomical statement of the number of bones in a skeleton: you have the information, but the living organism remains vague. It is hard to conjure living reality out of dry bones.

*Wine on the Lees*

Chapter VII (p. 258)

Dodd, Mead & Co. New York, New York, USA. 1899

**Stevenson, Robert Louis** 1850–94

Scottish essayist and poet

Here he comes, big with statistics...

*The Complete Poems of Robert Louis Stevenson*

Troubled and sharp about fac's, LXVI

Charles Scribner's Sons. New York, New York, USA. 1923

**Stigler, Stephen M.** 1941–

American historian and statistician

...elementary statistics texts tell us that the method of least squares was first discovered about 1805. Whether it had one or two or more discoverers can be argued; still the method dates from no later than 1805. We also read that Sir Francis Galton discovered regression about 1885, in studies of heredity. Already we have a puzzle – a modern course in regression analysis is concerned almost entirely with the method of least squares and its variations. How could the core of such a course date from both 1805 and 1885? Is there more than one way a sum of squared deviations can be made small?

*The History of Statistics*

Introduction (p. 2)

Harvard University Press. Cambridge, Massachusetts, USA. 1986

**Stout, Rex** 1886–1975

American writer

There are two kinds of statistics, the kind you look up and the kind you make up.

*Death of a Doxy* (p. 90)

Bantam Book. New York, New York, USA. 1967

Statistics show that seventy-four percent of wives open letters, with or without a teakettle.

*Death of a Doxy* (p. 120)

Bantam Book. New York, New York, USA. 1967

**Strunsky, Simeon** 1879–1948

American essayist

Statistics are the heart of democracy.

*Topics of The Times*, November 30, 1944

**Tchekhov, Anton** 1860–1904

Russian writer

Everything is quiet, peaceful and against it all is only the silent protest of statistics...

*Tchekhov's Plays and Stories*

*Gooseberries*

J.M. Dent & Sons Limited. London, England. 1958

**The Editors**

To some people, statistics is “quartered pies, cute little battleships and tapering rows of sturdy soldiers in diversified uniforms.” To others, it is columns and columns of numerical facts. Many regard it as a branch of economics.

The beginning student of the subject considers it to be largely mathematics.

Statistics, the Physical Sciences and Engineering  
*The American Statistician*, Volume 11, Number 4, August, 1948

**Thoreau, Henry David** 1817–62  
 American essayist, poet, and practical philosopher

But lo! men have become the tools of their tools.

*The Writings of Henry David Thoreau* (Volume 2)  
*Walden*  
 Chapter I (p. 61)  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

**Thorn, John** 1947–  
 Sports historian

While he is racing to the hole, the shortstop is figuring: Based on the speed of the runners and how hard the ball is hit, he probably has no chance of a double play; he may have a little chance of a play at second; and he almost certainly has no play at first. He throws to third because the distance from the hole to the bag is short, his calculation of the various probabilities led him to conclude that this was his “percentage play.” Now not so much as a glimmer of any number entered the shortstop’s head in this time, yet he was thinking statistically.

*The Hidden Game of Baseball: A Revolutionary Approach to Baseball and Its Statistics* (p. 5)  
 Doubleday & Company Inc. Garden City, New York, USA. 1984

**Thurstone, Louis Leon** 1887–1955  
 American psychologist and psychometrician

Factor analysis is useful especially in those domains where basic and fruitful concepts are essentially lacking and where crucial experiments have been difficult to conceive.... They enable us to make only the crudest first map of a new domain. But if we have scientific intuition and sufficient ingenuity, the rough factorial map of a new domain will enable us to proceed beyond the factorial stage to the more direct form of psychological exploration in the laboratory.

Current Issues in Factor Analysis  
*Psychological Bulletin*, Volume 37, April, 1940 (p. 189)

It is not wise for a statistician who knows factor analysis to attempt problems in a science which he has not himself mastered.

Current Issues in Factor Analysis  
*Psychological Bulletin*, Volume 37, April, 1940 (p. 235)

**Tiffany, Louis McLane**  
 Physician

Statistics are like a generous and large-hearted Irishman, – anybody’s friend.

Surgical Diseases  
*Annual of the Universal Medical Sciences*, Volume III, 1890 (p. O-6)

**Tobnet, George B.**  
 No biographical data available

Statistics are like stones taken from the quarry and piled by the roadside. The contentious may use thorn as missile to hurl at an adversary, or the mischievous to break windows, but the honest laborer will employ them only for the purpose for which they are intended, to pave the difficult road which leads toward the truth.

The Army Canteen  
*Journal of the American Medical Association*, Volume LVIII, Number 3, January 20, 1912 (p. 214)

**Tolstoy, Leo** 1828–1910  
 Russian writer

The actions of men are subject to general immutable laws expressed in statistics.

*Great Books of the Western World* Volume 51

 Second Epilogue, Chapter VIII (p. 689)  
 Encyclopedia Britannica, Inc. Chicago, Illinois, USA. 1952

**Trollope, Anthony** 1815–82  
 English novelist

We have no statistics to tell us whether there be any such disproportion in class where men do not die early from overwork.

*The Eustace Diamond* (Volume 1)  
 Chapter XXIV (p. 223)  
 Oxford University Press, Inc. London, England. 1973

As one of the legislators of the country I am prepared to state that statistics are always false.

*The Eustace Diamond* (Volume 1)  
 Chapter XXIV (p. 223)  
 Oxford University Press, Inc. London, England. 1973

**Tukey, John W.** 1915–2000  
 American statistician

A sort of question that is inevitable is: “someone taught my students exploratory, and now (boo hoo) they want me to tell them how to assess significance or confidence for all these unusual functions of the data. (Oh, what can we do?)” To this there is an easy answer: TEACH them the JACKKNIFE.

*The American Statistician*, Volume 34, Number 1, February, 1980 (p. 25)

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910  
 American author and humorist

Personally, I never care for fiction or story-books. What I like to read about are facts and statistics of any kind.

In Rudyard Kipling  
*From Sea to Sea*  
 An Interview with Mark Twain  
 Macmillan & Company Ltd. London, England. 1900

Sometimes, half a dozen figures will reveal, as with a lighting-flash, the importance of a subject which ten thousand labored words with the same purpose in view, had left at last but dim and uncertain.

*Life on the Mississippi*

Chapter XXVIII (p. 241)

Harper & Row, Publishers. New York, New York, USA. 1951

July 4. Statistics show that we lose more fools on this day than in all the other days of the year put together.

*Pudd'nhead Wilson*

Chapter XVII (p. 164)

Harper & Brothers Publishers. New York, New York, USA. 1904

I was deducing from the above that I have been slowing down steadily in these thirty-six years, but I perceive that my statistics have a defect: 3,000 words in the spring of 1868, when I was working seven or eight or nine hours at a sitting, has little or no advantage over the sitting of today, covering half the time and producing half the output. Figures often beguile me, particularly when I have the arranging of them myself; in which case the remark attributed to Disraeli would often apply with justice and force:

“There are three kinds of lies: lies, damned lies, and statistics.”

In Albert Bigelow Paine (ed.)

*Mark Twain's Autobiography* (Volume 1)

Chapters Added in Florence (p. 246)

Harper & Brothers Publishers. New York, New York, USA. 1924

## US Department of State

...statistics are like common sense – there are some circumstances in which they are no good.

*Commercial Relations of the United States With Foreign Countries*

(Volume 2)

UK (p. 797)

Government Printing Office. Washington, D.C. 1902

**van der Post, Laurens** 1906–96

Afrikaner author

Thinking has its place...but, only when one is confronted with known facts and statistics. When you're in the unknown and the dark...you surrender your thinking in trust to the feelings that come to you out of the bush.

*A Far-Off Place*

Chapter 9 (p. 183)

The Hogarth Press. London, England. 1974

**von Mises, Richard** 1883–1953

Austrian-born American mathematician

The problems of statistical physics are of the greatest in our time, since they lead to a revolutionary change in our whole conception of the universe.

*Probability, Statistics, and Truth*

Sixth Lecture (p. 219)

Dover Publications, Inc. New York, New York, USA. 1981

**Walcott, Derek** 1930–

West Indian dramatist and poet

Statistics justify and scholars seize

The salients of colonial policy.

*Collected Poems*

A Far Cry from Africa, I. 7–8

Farrar, Straus & Giroux. New York, New York, USA. 1986

**Walker, Marshall John**

American physicist

Statistics provides a quantitative example of the scientific process usually described qualitatively by saying that scientists observe nature, study the measurements, postulate models to predict new measurements, and validate the model by the success of prediction.

*The Nature of Scientific Thought*

Chapter IV (p. 46)

Prentice-Hall, Inc., Englewood Cliffs, New Jersey, USA. 1963

Mathematical statistics provides an exceptionally clear example of the relationship between mathematics and the external world. The external world provides the experimentally measured distribution curve; mathematics provides the equation (the mathematical model) that corresponds to the empirical curve. The statistician may be guided by a thought experiment in finding the corresponding equation.

*The Nature of Scientific Thought*

Chapter IV (p. 50)

Prentice-Hall, Inc., Englewood Cliffs, New Jersey, USA. 1963

**Wang, Chamont** 1949–

American statistician

Statistics has been called a science. It is said to connect its facts by a chain of causation: if it did so, it would be a science, though even then not a distinct and separate science. But the observations of astronomy may be called the science of astronomy as properly as statistics may be denominated a science. No mere record and arrangement of facts can constitute a science.

Transactions of the Statistical Society of London, Art II

*Westminster Review*, Volume I, Part I, 1838 (p. 69)

But statistics is not a science, and cannot be one. Studied as the statistical council have decreed statistics shall be studied, no department of human knowledge ever could become a science – a collection of theories – because they have put their veto on theorizing. But statistics is not even a department of human knowledge; it is merely a form of knowledge – a mode of arranging and stating facts which belong to various sciences.

Transactions of the Statistical Society of London, Art II

*Westminster Review*, Volume I, Part I, 1838 (p. 70)

As a matter of fact, the whole notion of “statistical inference” often is more of a plague and less of a blessing to research workers.

**Wodehouse, Sir Pelham Grenville** 1881–1975

English writer

He gave her some chocolates to eat in the Tube. He entertained her with amazing statistics, culled from the weekly paper which he bought on Tuesdays. He was, in short, the perfect lover.

*The Man Upstairs and Other Stories*

When Doctors Disagree (p. 55)

Arc Manor. 2008

**Yates, Frances** 1899–1981

English historian

It is very easy to devise different tests which, on the average, have similar properties, ...they behave satisfactorily when the null hypothesis is true and have approximately the same power of detecting departures from that hypothesis. Two such tests may, however, give very different results when applied to a given set of data. The situation leads to a good deal of contention amongst statisticians and much discredit of the science of statistics. The appalling position can easily arise in which one can get any answer one wants if only one goes around to a large enough number of statisticians.

Discussion on the Paper by Dr. Box and Dr. Andersen

*Journal of the Royal Statistical Society*, Series B, Volume 17, 1955 (p. 31)

**STATISTICS AND MEDICINE****Bernard, Claude** 1813–78

French physiologist

[S]tatistics...are given a great role in medicine, and they therefore raise a medical question which we should examine here. The first requirement in using statistics is that the facts treated shall be reduced to comparable units. Now this is very often not the case in medicine. Everyone familiar with hospitals knows what errors may mark the definitions on which statistics are based. The names of diseases are very often given are haphazard, either because the diagnosis is obscure, or because the cause of death is carelessly recorded by a student who has not seen the patient, or by an employee unfamiliar with medicine. For this reason pathological statistics can be valid only when compiled from data collected by the statistician himself.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Part Two, Chapter II, Section ix (p. 136)

Henry Schuman, Inc. New York, New York, USA. 1927

...the goal of scientific physicians...is to reduce the indeterminate. Statistics therefore apply only to cases in which the cause of the facts observed is still indeterminate.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Part Two, Chapter II, Section IX (p. 139)

Henry Schuman, Inc. New York, New York, USA. 1927

When a physician is called to a patient, he should decide on the diagnosis, then the prognosis, and then the treatment... Physicians must know the evolution of the disease, its duration and gravity in order to predict its course and outcome. Here statistics intervene to guide physicians, by teaching them the proportion of mortal cases; and if observation has also shown that the successful and unsuccessful cases can be recognized by certain signs, then the prognosis is more certain.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Part Three, Chapter IV, Section III (p. 213)

Henry Schuman, Inc. New York, New York, USA. 1927

**Blane, Gilbert Sir** 1749–1834

Scottish physician

There is...a great difficulty attending all practical inquiries in medicine; for in order to ascertain truth, in a manner that is satisfactory to a mind habituated to chaste investigation, there must be a series of patient and attentive observations upon a great number of cases, and the different trials must be varied, weighed, and compared, in order to form a proper estimate of the real efficacy of different remedies and modes of treatment.

*Observations on the Diseases Incident to Seamen* (p. ix)

Joseph Cooper. London, England. 1785

**Fenger, Carl Emil** 1814–84

Danish physician and politician

The use of the numerical method in medicine is not essentially new. From the time of Hippocrates to our day any doctor would say that this symptom is rare in a particular disease, but that one common; that this cause is more common than that one; that this treatment cures more patients than that one. All these expressions rare, common, more, etc. are indeterminate numerical expressions and presuppose a count, be it methodical or not.

Om den numeriske metode

*Ugeskr Laeger*, Volume 1, 1839

**Salsburg, David S.**

No biographical data available

After 17 years of interacting with physicians, I have come to realize that many of them are adherents of a religion they call Statistics. Statistics refers to the seeking out and interpretation of p values. Like any good religion, it involves vague mysteries capable of contradictory and irrational interpretation. It has a priesthood and a class of mendicant friars. And it provides Salvation: Proper invocation of the religious dogmas of Statistics will result in publication in prestigious journals.

The Religion of Statistics as Practiced in Medical Journals

### **Huebner, Grover G.**

No biographical data available

To the average layman a table of statistics is like a juggler’s wand, the result depending wholly upon the skill and desire of the particular juggler.

Teaching of Statistics  
*Publications of the American Statistical Association*, Volume XI,  
 Number 86, June, 1909 (p. 518)

## STEAM

**Emerson, Ralph Waldo** 1803–82  
 American lecturer, poet, and essayist

Steam is no stronger now than it was a hundred years ago; but is put to better use.

*The Conduct of Life*  
 Wealth (p. 86)  
 Houghton Mifflin Co. Boston, Massachusetts, USA. 1904

## STEAM ENGINE

**Lardner, Dionysius** 1793–1859  
 British physicist and astronomer

That the history of the invention of a piece of mechanism [the steam engine], and the description of its structure, operation, and uses, should be capable of being rendered a subject-matter destined not alone for the instruction of engineers or machinists, but for the information and amusement of the public in general, is a statement which at no very remote period would have been deemed extravagant and incredible.

*Popular Lectures on Science and Art* (Volume 2)  
 The Steam Engine (First Lecture) (p. 399)  
 Greeley & McElrath. New York, New York, USA. 1846

## STEEP-SPECTRUM SOURCES

**Spangler, S. R.**  
 No biographical data available

**Cook, D. B.**  
 No biographical data available

Steep-spectrum sources, on the other hand, are usually inferred to have linear sizes of the order of kiloparsecs, and it is very difficult to see how such objects could show significant variations on astronomically relevant time-scales such as the duration of a graduate student stipend or the tenure trial period of a faculty member.

VLA Observations of Ssteep-spectrum, Variable Radio Sources  
*Astronomical Journal*, Volume 85 June, 1980 (p. 559)

## STELLAR EVOLUTION

**Tennyson, Alfred (Lord)** 1809–92  
 English poet

This world was once a fluid haze of light, Till toward the centre set the starry tides, And eddied into suns, that wheeling cast The planets: then the monster, then the man;

*The Works of Alfred Lord Tennyson, Poet Laureate*  
 The Princess: A Medley (p. 170)  
 The Macmillan Co. New York, New York, USA. 1898

I saw the flaring atom-streams And torrents of her myriad universe, Ruining along the illimitable inane, Fly on to clash together again, and make Another and another frame of things Forever:

*The Works of Alfred Lord Tennyson, Poet Laureate*  
 Lucretius (p. 157)  
 The Macmillan Co. New York, New York, USA. 1898

## STETHOSCOPE

**Byford, W. H.** 1817–90  
 No biographical data available

The flexible stethoscope is a very handy instrument to relieve us from a fatiguing and not very delicate posture.

Advantages of the Prone Position in Examining the Foetal Circulation as a Diagnostic Sign of Pregnancy  
*Chicago Medical Journal*, Volume 15, 1858

**Laennec, René-Théophile-Hyacinthe** 1781–1826  
 French physician

I had not imagined it would be necessary to give a name to such a simple device, but others thought differently. If one wants to give it a name, the most suitable would be “stethoscope.”

*Traité de l'Auscultation Médiate* (Volume 1) (p. 11)  
 J.A. Brosson & J.S. Chaude. Paris, France. 1819

**Stokes W.**  
 No biographical data available

The stethoscope is an instrument, not, as some represent it, the bagatelle of a day, the brain-born fancy of some speculative enthusiast, the use of which, like the universal medicine of animal magnetism, will be soon forgotten, or remembered only to be ridiculed. It is one of those rich and splendid gifts which Science now and then bestows upon her most favored votaries, which, while they extended our views and open to us wide and fruitful fields of inquiry, confer in the meantime the richest benefits and blessings on mankind.

*An Introduction to the Use of the Stethoscope*  
 Machlachlan & Stewart. Edinburgh, Scotland. 1825

## STIOCHIOMETRY

**Boyle, Robert** 1627–91  
 English natural philosopher and theological writer

And that which I would have you peculiarly consider on this occasion is, that not only in chymical anatomies there is a separation made of the elementary ingredients, but that some mixt bodies afford a very much greater quantity of this or that element or principle than of another, as we see that turpentine and amber yield much more oyl and sulphur than they do water...

*The Sceptical Chymist*  
 The Second Part (p. 83)  
 J.M. Dent & Son. London, England. 1911

## STONE

### Howell, James

No biographical data available

I then spied a great stone, and sitting a while upon it, I fell to weigh in my thoughts that that stone was in a happier condition in some respects, than either those sensitive creatures or vegetables I saw before; in regard that that stone, which propagates by assimilation, as the philosophers say, needed neither grass nor hay, or any aliment for restoration of nature, nor water to refresh its roots, or the heat of the sun to attract the moisture upwards to increase growth, as the other did.

In Precept

*Precept and Example*

Letter to Sir S.C. (p. 91)

Taylor & Hessey. London, England. 1825

### Linnaeus, Carl (von Linné) 1707–78

Swedish botanist and explorer

My mind reels when, on this height, I look down on the long ages that have flowed by like waves in the sound and have left traces of the ancient world, traces so nearly obscured that they can only whisper now that everything else has been silenced.

In A.G. Nathorst

*Annual Report of the Board of Regents of the Smithsonian Institution, 1908*

Carl von Linné as a Geologist (p. 738)

Government Printing Office. Washington, D.C. 1909

### Parkinson, Cornelia

No biographical data available

Was it a flash of divine insight, or the slower process of observation and deduction, that led human beings to perceive [an] esoteric quality in stones? They saw beauty in the sunrise; but the sun became blinding by midday. There was color in leaves and flowers, until they withered. Water sparkled, but it could not be worn for long. Of all the natural wonders of the earth, only the stones endured. They must indeed be magical; and those who possess magical things can sometimes put to work the magic in them.

*Gem Magic: The Wonder of Your Birthstone*

Ballentine Books. New York, New York, USA. 1988

### Ruskin, John 1819–1900

English writer, art critic, and social reformer

Then are no natural object out of which more can be thus learned than out of stones. They seem to have been created especially to reward a patient observer.

*Modern Painters*

Part V, Chapter XVIII (p. 303)

John Wiley & Sons. New York, New York, USA. 1890

...do but give it [stone] some reverence and watchfulness, and there is bread of thought in it, more than in any

other lowly feature of all the landscape.

*Modern Painters*

Part V, Chapter XVIII (p. 304)

John Wiley & Sons. New York, New York, USA. 1890

...a stone, when it is examined, will be found a mountain in miniature. The fineness of Nature's work is so great, that, into a single block, a foot or two in diameter, she can compress as many changes of form and structure, on a small scale, as she needs for her mountains on a large one; and, taking moss for forests, and grains of crystal for crags, the surface of a stone, in by far the plurality of instances, is more interesting than the surface of an ordinary hill; more fantastic in form and incomparably richer in color...

*Modern Painters*

Part V, Chapter XVIII (p. 304)

John Wiley & Sons. New York, New York, USA. 1890

## STONEHENGE

### James, Henry 1843–1916

American-born English author and literary critic

It [Stonehenge] stands as lonely in history as it does on the great plain, whose many-tinted green waves, as they roll away from it, seem to symbolize the ebb of the long centuries which have left it so prodigiously unexplained. You may put a hundred questions to these rough-hewn giants as they bend in grim contemplation of their fallen companions; but your curiosity falls dead in the vast sunny stillness that enshrouds them, and the strange monument, with all its unspoken memories, becomes simply a heart-stirring picture in a land of pictures.

*Foreign Parts*

Swiss Notes (p. 52)

Bernhard Tauchnitz. Leipzig, Germany. 1883

## STRATIGRAPHY

### Brown, Hugh Auchincloss 1878–1975

Electrical engineer

Each single layer of earth

Tells a story that's all its own;

The sands of the ancient beaches

Have changed into strata of stone.

*Cataclysms of the Earth*

The Earth Is a Great Stone Book (p. 275)

Twayne Publishers. New York, New York, USA. 1967

### Chandler, Mary

No biographical data available

The shatter'd Rocks and Strata seem to say,

"Nature is old, and tends to her Decay":

Yet, lovely in Decay and green in Age,

Her Beauty lasts to her latest Stage.

In Robert Arnold Aubin  
*Topographical Poetry in XVIII Century England*  
 Chapter IV (p. 164)  
 The Modern Language Association of America. New York, New York,  
 USA. 1936

### Savage, D. E.

American paleontologist

The fossil-mammal worker accepts that many mammals, marine or nonmarine, contributed fossils which are admirable tools for paleontologic stratigraphy and geochronology, and especially for age-magnitude correlations from continent to continent.

In E. Kauffman and J.E. Hazel (eds.)  
*Concepts and Methods of Biostratigraphy*  
 Aspects of Vertebrate Paleontological Stratigraphy and Geochronology  
 Dowden, Hutchinson & Ross. Stroudsburg, Pennsylvania, USA. 1977

### Shaw, Alan B.

No biographical data available

Preoccupation with the unattainable is a stultifying approach to any problem. Practical paleontology cannot be concerned with any of the fossils we cannot find. Geologically, we can only be interested in finding the total stratigraphic range through which a species is preserved. While the life and death of millions of unrepresented individuals is of theoretical interest, we cannot gain practically useful information from them.

*Time in Stratigraphy*  
 Chapter 17 (p. 103)  
 McGraw-Hill Book Company. New York, New York, USA. 1964

## STRAIN

### Commonwealth v. Sturtivant (1875)

A. "If the force of a stream of fluid, whatever it may be, and especially blood, be from below upward, the heaviest portion of the drop will stop at the further end of the stain; if from above downward, it will stop below." Defendant's counsel. "That is pure opinion as to a matter of mechanics, not chemistry. Any butcher is just as good an expert on that as this witness."

In John Henry Wigmore  
*Select Cases on the Law of Evidence* (2nd edition) (p. 236)  
 Little, Brown & Co. Boston, Massachusetts, USA. 1913

## STRATA

### Chamberlin, Thomas Chrowder 1843–1928

American geologist

### Salisbury, Rollin D. 1858–1928

American geologist

The strata of the earth reveal its history with great fidelity for long periods previous to the present, but earlier than

that the record becomes indistinct, and if we attempt to follow it back to the beginning, the indistinctness merges into extreme obscurity.

*Geology* (Volume 2) (2nd edition)  
 Chapter I (p. 1)  
 Henry Holt & Co. New York, New York, USA. 1907

### Lyell, Sir Charles 1797–1875

English geologist

...when we see thousands of full-grown shells dispersed everywhere throughout a long series of strata, we cannot doubt that time was required for the multiplication of successive generations; and the evidence of slow accumulation is rendered more striking from the proofs, so often discovered, of fossil bodies having lain for a time on the floor of the ocean after death, before they were imbedded in sediment.

*Elements of Geology* (Volume 1)  
 Chapter III (p. 47)  
 Hilliard, Gray, & Co. Boston, Massachusetts, USA. 1841

### Miller, Hugh 1802–56

Scottish geologist and theologian

We may turn over these wonderful leaves one after one, like the leaves of a herbarium, and find the pictorial records of a former creation in every page ...

*The Old Red Sandstone*  
 Chapter I (p. 10)  
 John B. Alden, Publisher. New York, New York, USA. 1892

### Playfair, John 1748–1819

Scottish geologist, physicist, and mathematician

It is well known that, on removing the loose earth which forms the immediate surface of the land, we come to the solid rock, of which a great proportion is found to be regularly disposed in strata, or beds of determinate thickness, inclined at different angles to the horizon, but separated from one another by equidistant superficies, that often maintain their parallelism to a great extent.

*The Works of John Playfair* (Volume 1)  
 Section 1, I (p. 22)  
 Printed for Archibald Constable & Co. Edinburgh, Scotland. 1822

### Saint Magnus Albertus 1193–1280

German scholar and theologian

We may observe in some of the abrupt grounds we meet with, sections of great masses of strata, where it is as easy to read the history of the sea, as it is to read the history of Man in the archives of any nation.

Translated by D. Wyckoff  
*On Minerals*  
 Book I, tract I, chapter 4  
 1264

**STRATEGY**

**Weil, André** 1906–98  
French mathematician

...strategy means the art of recognizing the main problems, attacking them at their weak points, setting up future lines of advance. Mathematical strategy is concerned with long-range objectives; it requires a deep understanding of broad trends and of the evolution of ideas over long periods.

In Raymond George Ayoub

*Musings of the Masters: An Anthology of Mathematical Reflections*  
History of Mathematics (p. 205)

Mathematical Association of America. Washington, D.C. 2004

**STRATIFIED**

**Davis, William Morris** 1850–1934  
American geographer, geologist, and teacher

The columnar sections of stratified rocks, for example, so useful in the understanding of historical geology, are like the edgewise view of a closed book. The book must be opened, the leaves must be turned over one by one, the pages of these early records must be read, like so many gazetteers of ancient times. Never mind if some pages are worn and others are missing: those that can still be deciphered assure us that the past was generally like the present, and warrant the generalization that geology is like nothing so much as a whole series of geographies.

*Congress of Arts and Science: Universal Exposition, St. Louis, 1904*  
Volume 4

The Relations of the Earth-Sciences in View of Their Progress in the Nineteenth Century (p. 497)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1906

**STREAM**

**Muir, John** 1838–1914  
American naturalist

...silvery branches interlacing on a thousand mountains, singing their way home to the sea...

*Our National Parks*

Chapter VIII (p. 241)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

...ungovernable energy, rushing down smooth inclines in wide foamy sheets fold over fold, springing up here and there in magnificent whirls, scattering crisp clashing spray for the sunbeams to iris, bursting with hoarse reverberating roar through ragged gorges and boulder dams, booming in falls, gliding, glancing with cooler soothing, murmuring...

*Our National Parks*

Chapter VIII (p. 242)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

**STREPTOMYCIN**

**Waksman, Selman A.** 1888–1973  
Ukrainian-born American biochemist

The highest scientific award and honor presented to me the day before yesterday gives me the opportunity to summarize briefly the discovery and utilization of streptomycin for disease control, notably in the treatment of tuberculosis, the “Great White Plague” of man.

*Nobel Lectures, Physiology or Medicine 1942–1962*

Nobel lecture for award received in 1952

Streptomycin: Background, Isolation, Properties, and Utilization (p. 370)

Elsevier Publishing Company. Amsterdam, Netherlands. 1964

**STRING THEORY**

**Amati, Danielle**  
Italian physicist

String theory is twenty-first century physics that fell accidentally into the twentieth century.

*Attributed*

**Ferris, Timothy** 1944–  
American science writer

The odd thing about string theory was very odd indeed. It required that the universe have at least ten dimensions. As we live in a universe of only four dimensions, the theory postulated that the other dimensions...had collapsed into structures so tiny that we do not notice them.

*Coming of Age in the Milky Way*

Chapter 16 (p. 331)

William Morrow & Company, Inc. New York, New York, USA. 1988

**Kaku, Michio** 1947–  
Japanese-American theoretical physicist

For more than ten years, my theory was in limbo. Then, finally, in the late 1980s, physicists at Princeton said, ‘There’s nothing wrong with this theory. It’s the only one that works, and we have to open our minds to hyperspace.’ We weren’t destined to discover this theory for another 100 years because it’s so bizarre, so different from everything we’d been doing. We didn’t use the normal sequence of discoveries to get to it.

In Nina L. Diamond

*Voices of Truth*

Part Three, Chapter Eleven (p. 326)

Lotus Press. Twin Lakes, Wisconsin, USA. 2000

[The discovery of string theory is like] wandering around the desert and then stumbling on a tiny pebble. But when we examine it carefully, we find that it is the tip of a gigantic pyramid.

Quote in Keay Davidson

‘Theory of Everything’ Tying Researchers Up in Knots

*San Francisco Chronicle*, March 14, 2005

**Ovrut, Burt**

Physicist

It has been thought since physics began that matter was made up of particles. We had changed that point of view now. We now think that matter is made up of little strings.

Parallel Universes

BBC broadcast February 14, 2002

**Witten, Edward** 1951–

American theoretical physicist

To appreciate string theory, one must understand what it is that is being generalized.

Physical Law and the Quest for Mathematical Understanding

*Bulletin of the American Mathematical Society*, Volume 40, Number 1, October 2, 2002 (p 24).**STRUCTURE****Agassiz, Jean Louis Rodolphe** 1807–73

Swiss-born American naturalist, geologist, and teacher

It is much more important for a naturalist to understand the structure of a few animals than to command the whole field of scientific nomenclature.

In Burt G. Wilder

Louis Agassiz, Teacher

*The Harvard Graduate's Magazine*, June, 1907**Clark, R. B.** 1923–

Zoologist

It is an indispensable principle that structure must be considered in relation to function; in isolation it is meaningless.

*Dynamics in Metazoan Evolution: The Origin of the Coelom and Segments*

Conclusion (p. 260)

Clarendon Press, Oxford, England, 1964

**Spencer, Herbert** 1829–1903

English social philosopher

Where there are no distinctions of structure there are no distinctions of function.

*The Principles of Biology* (Volume 1)

Part I, Chapter II (p. 200)

D. Appleton &amp; Co. New York, New York, USA, 1910

**STUBBORN****Robinson, Julia** 1919–85

American mathematician

I would say that my stubbornness has been to a great extent responsible for whatever success I have had in mathematics. But then it is a common trait among mathematicians.

In D. Albers, G. Alexanderson and C. Reid

*More Mathematical People: Contemporary Conversations* (p. 265)

Harcourt Brace Jovanovich, Boston, Massachusetts, USA, 1990

**STUDENT****Bronowski, Jacob** 1908–74

Polish-born British mathematician and polymath

It is important that students bring a certain ragamuffin, barefoot, irreverence to their studies; they are not here to worship what is known, but to question it.

*The Ascent of Man*

Knowledge or Certainty (p. 360)

Little, Brown &amp; Co. Boston, Massachusetts, USA, 1973

**de Morgan, Augustus** 1806–71

English mathematician and logician

The number of mathematical students, increased as it has been of late years, would be much augmented if those who hold the highest rank in science would condescend to give more effective assistance in clearing the elements of the difficulties which they present.

*On the Study and Difficulties of Mathematics*

Author's Preface (p. vii)

The Open Court Publishing Co. Chicago, Illinois, USA, 1898

**Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

As the light of the untried world to the infant, so is the dawning of the light resting over the unexplored realms of science to the student.

*The Writings of Oliver Wendell Holmes* (Volume 9)*Medical Essays: 1842–1882*

Chapter IV (p. 209)

Houghton Mifflin &amp; Co. Boston, Massachusetts, USA, 1911

In the name of the Faculty I welcome you, Gentlemen of the Medical Class, new-born babes of science, or lustier nurslings, to this morning of your medical life, and to the arms and the bosom of this ancient University.

*The Writings of Oliver Wendell Holmes* (Volume 9)*Medical Essays: 1842–1882*

Chapter IV (p. 209)

Houghton Mifflin &amp; Co. Boston, Massachusetts, USA, 1911

**Jackman, Wilbur Samuel** 1855–1907

American educator

He comes to the teacher with his eyes filled with a thousand pictures, but they are ignored, and he is robbed of them one by one until at last the beauty of this world fades from his sight and it is changed to a vale of tears.

*Nature Study for the Common Schools* (2nd edition)

Chapter II (p. 10)

Henry Holt &amp; Co. New York, New York, USA, 1894

In the beginning of science instruction and to the end, the fact must be recognized that the child stands at the

center of the universe, and from first to last is touched by everything in it.

*Nature Study for the Common Schools* (2nd edition)

Chapter II (p. 10)

Henry Holt & Co. New York, New York, USA. 1894

**Kingsley, Charles** 1819–75

English clergyman and author

I found him in a room lined with cabinets of curiosities, and hung all over with strange horns, bones, and slabs of fossils. But I was not allowed much time to look about me; for he commenced at once on the subject of my studies, by asking me whether I was willing to prepare myself for the university by entering on the study of mathematics?

*Alton Locke*

Chapter XV (p. 130)

Macmillan & Co Ltd. London, England. 1862

**Kleiner, Israel** 1948–

Ukrainian-born author

Can we not at least have a better appreciation of students' difficulties...having witnessed mathematicians of the first rank make mistakes, "prove" erroneous theorems, and often come to the right conclusions for insufficient or invalid reasons?

Thinking the Unthinkable: The Story of Complex Numbers (with a Moral)

*Mathematics Teacher*, October, 1988

**Osler, Sir William** 1849–1919

Canadian physician and professor of medicine

Learn to love the freedom of the student life, only too quickly to pass away; the absence of the coarser cares of after days, the joy in comradeship, the delight in new work, the happiness in knowing that you are making progress. Once only can you enjoy these pleasures.

*Aequanimitas, with Other Addresses to Medical Students, Nurses, and Practitioners of Medicine*

The Master-Word in Medicine (p. 362)

The Blakiston Company. Philadelphia, Pennsylvania, USA. 1932

**Shah, Idries** 1924–96

Persian author and teacher in the Sufi tradition

You will know the real student because he seeks whatever there is to be found.

*Thinkers of the East*

Shakir Amali (p. 108)

Jonathan Cape. London, England. 1971

**Slosson, Edwin E.** 1865–1919

Chemist and author

...professors give too many lectures and the students listen to too many. Or pretend to; really they do not listen, however attentive and orderly they may be. The bell rings and a troop of tired-looking boys, followed perhaps by a

larger number of meek-eyed girls, file into the classroom, sit down, remove the expressions from their faces, open their notebooks on the broad chair arms, and receive. It is about as inspiring an audience as a roomful of phonographs holding up their brass trumpets.

Great American Universities – XV

*The Independent*, Volume LXVIII, Number 3196, March 3, 1910 (p. 463)

The secret is that they [students] have, without knowing anything about physiological psychology, devised an automatic cut-off which goes into operation as they open their notebooks and short-circuits the train of thought from the ear directly to the hand, without its having to pass thru the pineal gland or wherever the soul may be at the time residing and holding court.

Great American Universities – XV

*The Independent*, Volume LXVIII, Number 3196, March 3, 1910 (p. 463)

**Tyndall, John** 1820–93

Irish-born English physicist

When the student of physical science has to investigate the character of any natural force, his first care must be to purify it from the mixture of other forces, and thus study its simple action.

*Fragments of Science for Unscientific People*

Chapter XIV (p. 383)

D. Appleton & Co. New York, New York, USA. 1875

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

It is a misfortune to pass at once from observation to conclusion, and to regard both as of equal value; but it befalls many a student.

Translated by Thomas Bailey Saunders

*The Maxims and Reflections of Goethe*

517 (p. 183)

The Macmillan Co. New York, New York, USA. 1906

**von Helmholtz, Hermann** 1821–94

German scientist and philosopher

Each individual student must be content to find his reward in rejoicing over new discoveries, as over new victories of mind over reluctant matter, or in enjoying the aesthetic beauty of a well-ordered field of knowledge, where the connection and filiation of every detail is clear to the mind, and where all denotes the presence of a ruling intellect; he must rest satisfied with the consciousness that he too has contributed something to the increasing fund of knowledge on which the dominion of man over all the forces hostile to intelligence reposes.

Translated by E. Atkinson

*Popular Lectures on Scientific Subjects*

First Series

On the Relation of Natural Science to General Science (p. 29)

D. Appleton & Co. New York, New York, USA. 1897

**Winchell, Alexander** 1824–91  
American geologist

The student may plod ever so diligently and ever so intelligently through the details of a science; he is apt to gain only vague impressions and floating ideas, unless enabled to take a comprehensive survey of the field, with the details all left in the background, and the great outlines and prominent landmarks all brought saliently into proper relations to each other.

*Sketches of Creation*

Preface (p. v)

Harper & Brothers Publishers. New York, New York, USA. 1870

## STUDENT, MEDICAL

**Brinton, William**  
English physician

...as the progress of physical science adds, day by day and year by year, to that large mass of information which the practitioner of Medicine has to acquire, it becomes more and more important for the student, either to extend his period of education, or at any rate so to arrange his studies, and to economize his time, as to compensate for these increasing requirements. Above all, he must be increasingly jealous and watchful, lest, in grasping at accomplishments, he lose essentials.

Introductory Lecture

*The London Lancet*, Volume 2, Number 6, December, 1857 (p. 434)

## STUDIES

**Bacon, Sir Francis** 1561–1626  
English lawyer, statesman, and essayist

Crafty men condemn studies, simple men admire them, and wise men use them, for they teach not their own use; but that is a wisdom without them, and above them, won by observation.

*Bacon's Essays*

Of Studies (p. 472)

Lea & Shepard Publishers. Boston, Massachusetts, USA. 1875

To spend too much time in studies, is sloth; to use them too much for ornament, is affectation; to make judgment wholly by their rules, is the humor of a scholar; they perfect nature, and are perfected by experience...

*Bacon's Essays*

Of Studies (p. 472)

Lea & Shepard Publishers. Boston, Massachusetts, USA. 1875

Studies serve for delight, for ornament, and for ability.

In James Spedding, Robert Leslie Ellis, Douglas and Denon Heath

*The Works of Francis Bacon* (Volume 6)

Of Studies (p. 497)

Longman & Co. London, England. 1858

## STUDY

**Agassiz, Jean Louis Rodolphe** 1807–73  
Swiss-born American naturalist, geologist, and teacher

Lay aside all conceit. Learn to read the book of nature for yourself. Those who have succeeded best have followed for years some slim thread which has once in a while broadened out and disclosed some treasure worth a life-long search.

In David Stair Jordan

*Popular Science Monthly*, Volume 40, 1891/92

**Bacon, Sir Francis** 1561–1626  
English lawyer, statesman, and essayist

Studies serve for delight, for ornament, and for ability.

In C.W. Eliot (ed.)

*The Harvard Classics*, Volume 3

Of Studies

P.F. Collier & Son. New York, New York, USA. 1909–10

To spend too much time in studies, is sloth: to use them too much for ornament, is affectation; to make judgment wholly by their rules, is the humor of a scholar; they perfect nature, and are perfected by experience: for natural abilities are like natural plants, that need pruning by study; and studies themselves do give forth directions too much at large, except they be bounded in by experience. Crafty men condemn studies, simple men admire them, and wise men use them; for they teach not their own use; but that is a wisdom, without them and above them, won by observation.

*Essays*

Of Studies (p. 178)

John B. Alden, Publisher. New York, New York, USA. 1885

**Cooke, Josiah Parsons** 1827–94  
American chemist

To study the natural sciences merely as a collection of interesting facts which it is well for every educated man to know, seldom serves a useful purpose. The young mind becomes wearied with the details, and soon forgets what it has never more than half acquired.

*Scientific Culture: And Other Essays* (2nd edition)

Scientific Culture (p. 41)

D. Appleton & Co. New York, New York, USA. 1855

**da Vinci, Leonardo** 1452–1519  
Italian High Renaissance painter and inventor

Just as eating contrary to the inclination is injurious to the health, so study without desire spoils the memory, and it retains nothing that it takes in.

In Edward McCurdy

*Leonardo da Vinci's Note-books*

Book I: Life (p. 52)

Duckworth & Co. London, England. 1906

**Dalton, John** 1766–1844  
English chemist and physicist

If I have succeeded better than many who surround me, it has been chiefly, nay, I may say, almost solely from unwearied assiduity. It is not so much from any superior genius that one man possesses over another, but more from attention to study, and perseverance in the objects before them, that some men rise to greater eminence than others.

In John Price Millington  
*John Dalton*  
Introduction (p. 4)  
J.M. Dent & Co. London, England. 1906

**Daly, Reginald Aldworth** 1871–1957  
Canadian-American geologist

Our study deals with numbers, quantities, measurements, for these form the essence of the truth of nature.

*Our Mobile Earth*  
Chapter I (p. 5)  
Charles Scribner's Sons. New York, New York, USA. 1926

**Einstein, Albert** 1879–1955  
German-born physicist

Never regard your study as a duty, but as the enviable opportunity to learn to know the liberating influence of beauty in the realm of the spirit for your own personal joy and to the profit of the community to which your later work belongs.

In Helen Dukas and Banesh Hoffman  
*Albert Einstein: The Human Side: New Glimpses from His Archives*  
(p. 96)  
Princeton University Press. Princeton, New Jersey, USA. 1979

**London, Jack** 1876–1916  
American author

For five weeks I crammed, until simultaneous quadratic equations and chemical formulas fairly oozed from my ears.

*John Barleycorn*  
Chapter XXII (p. 210)  
The Century Co. New York, New York, USA. 1913

**Lubbock, John, First Baron Avebury** 1834–1919  
English banker, politician, biologist, and archaeologist

There is no species of animal or plant which would not well repay, I will not say merely the study of a day, but even the devotion of a lifetime.

*The Beauties of Nature and the Wonders of the World We Live In*  
Chapter II (p. 41)  
Macmillan & Company Ltd. London, England. 1903

**Miller, Hugh** 1802–56  
Scottish geologist and theologian

Do not seek happiness in what is misnamed pleasure; seek it rather in what is termed study.

*The Old Red Sandstone*  
Chapter I (p. 1)  
John B. Alden, Publisher. New York, New York, USA. 1892

**Platt, John R.**  
No biographical data available

We praise the “lifetime of study,” but in dozens of cases, in every field, what was needed was not a lifetime but rather a few short months or weeks of analytical inductive inference. In any new area we should try, like Roentgen, to see how fast we can pass from the general survey to analytical inductive inference. We should try, like Pasteur, to see whether we can reach strong inferences that encyclopedism could not discern.

Strong Inference  
*Science*, Volume 146, Number 3641, 16 October, 1964 (p. 251)

**Rowland, Henry Augustus** 1848–1901  
American physicist

The whole universe is before us to study. The greatest labor of the greatest minds has only given us a few pearls; and yet the limitless ocean, with its hidden depths filled with diamonds and precious stones, is before us. The problem of the universe is yet unsolved, and the mystery involved in one single atom yet eludes us. The field of research only opens wider and wider as we advance, and our minds are lost in wonder and astonishment at the grandeur and beauty unfolded before us.

*The Physical Papers of Henry Augustus Rowland*  
A Plea for Pure Science (p. 613)  
Johns Hopkins Press. Baltimore, Maryland, USA. 1902

**Skinner, Burrhus Frederic** 1904–90  
American psychologist

When you run into something interesting, drop everything else and study it.

*Cumulative Record*  
A Case History in Scientific Method (p. 81)  
Appleton-Century-Crofts, Inc. New York, New York, USA. 1959

**Tsiolkovsky, Konstantin Eduardovich** 1857–1935  
Russian research scientist

To place one's feet on the soil of asteroids, to lift a stone from the moon with your hand, to construct moving stations in ether space, to organize inhabited rings around Earth, moon and sun, to observe Mars at the distance of several tens of miles, to descend to its satellites or even to its own surface – what could be more insane! However, only at such a time when reactive devices are applied, will a great new era begin in astronomy: the era of more intensive study of the heavens.

In M.K. Tikhonravov (ed.)  
*Works on Rocket Technology*  
The Investigation of Universal Space by Means of Reactive Devices  
(p. 95)  
Publisher undetermined

**von Goethe, Johann Wolfgang** 1749–1832  
German poet, novelist, playwright, and natural philosopher

The universe is a harmonious whole, each creature is but a note, a shade of a great harmony, which man must study in its entirety and greatness, lest each detail should remain a dead letter.

Letter to C.L. Knebel, November 17, 1784

## STUDY HABIT

**Newton, Sir Isaac** 1642–1727  
English physicist and mathematician

I keep...the subject constantly before me, and wait till the first dawns open slowly, by little and little, into a full and clear light.

Quoted in John Watkins

*Characteristic Anecdotes of Men of Learning and Genius*

Sir Isaac Newton (p. 415)

J. Cundee. London, England. 1808

## STUPIDITY

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

I am an Evolutionist, not a Multiplicationist. It seems rather stupid to keep doing the same thing over and over again.

*The Nature of the Physical World*

Chapter IV (p. 86)

The Macmillan Company. New York, New York, USA. 1930

**Einstein, Albert** 1879–1955  
German-American physicist

Everyone has to sacrifice at the altar of stupidity from time to time, to please the Deity and the human race.

In Max Born

*The Born–Einstein Letters: Correspondence Between Albert Einstein and Max and Hedwig Born from 1916 to 1955*

Letter 219 September, 1920 (p. 35)

Walker & Company. New York, New York, USA. 1971

**Levi, Primo** 1919–87  
Italian writer and chemist

To accuse another of having weak kidneys, lungs, or heart, is not a crime; on the contrary, saying he has a weak brain is a crime. To be considered stupid and to be told so is more painful than being called gluttonous, mendacious, violent, lascivious, lazy, cowardly: every weakness, every vice, has found its defenders, its rhetoric, its ennoblement and exaltation, but stupidity hasn't.

*Other People's Trades*

The Irritable Chess-Players

Summit Books. New York, New York, USA. 1989

## STYLE

**Fabre, Jean-Henri** 1823–1915  
French entomologist and author

Others have reproached me with my style.... They fear lest a page that is read without fatigue should not always be the expression of the truth. Were I to take their word for it, we are profound only on condition of being obscure.

Translated by Alexander Teixeira de Mattos and Bernard Miall

*The Wonders of Instinct*

Chapter I (p. 5)

The Century Co. New York, New York, USA. 1918

## SUBMARINE

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

I must confess that my imagination, in spite even of spurring, refuses to see any sort of submarine doing anything but suffocate its crew and founder at sea.

*Anticipations of the Reaction of Mechanical and Scientific Progress*

*Upon Human Life and Thought*

War in the Twentieth Century (p. 217)

Harper & Brothers Publishers. New York, New York, USA. 1901

## SUBSTANCE

**Jeans, Sir James Hopwood** 1877–1946  
English physicist and mathematician

...we now know that there is, in principle, no permanence in substance; it is mere bottled energy, and possesses no more inherent permanence than bottled beer...

*Physics and Philosophy*

Chapter II (p. 41)

Dover Publications, Inc. New York, New York, USA. 1981

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

Our conception of substance is only vivid so long as we do not face it. It begins to fade when we analyse it. We may dismiss many of its supposed attributes which are evidently projections of our sense-impressions outwards into the external world.

*The Nature of the Physical World*

Chapter XIII (p. 273)

The University Press. New York, New York, USA. 1929

## SUBSTANTIVE TERM

**Owen, Richard** 1804–92  
English biologist, comparative anatomist, and paleontologist

A single substantive term is a better instrument of thought than a paraphrase.

*On the Anatomy of Vertebrates* (Volume I)

Preface (p. xiv)

Longmans, Green & Co. London, England. 1866

**SUBTERRANEAN****Clarke, John**

No biographical data available

Beneath the earth likewise there are laws of nature, less familiar to us, but no less fixed. Be assured that there exists below everything that you see above. There, too, there are antres vast, immense recesses, and vacant spaces, with mountains overhanging on either hand. There are yawning gulfs stretching down into the abyss, which have buried in their depths their mighty ruins. These retreats are filled with air, for nowhere is there a vacuum in nature; through their ample spaces stretch marshes over which darkness ever broods. Animals also are produced in them, but they are slow-paced and shapeless; the air that conceived them is dark and clammy, the waters are torpid through inaction.

*Physical Science in the Time of Nero, Being a Translation of the Quaestiones Naturales of Seneca*

Book III, Chapter XVI (pp. 128–129)

Macmillan & Company Ltd. London, England. 1910

**Cloos, Hans** 1885–1951

German geologist

A subterranean landscape is the ramified labyrinth of crevices and caves, of pores and seams, through which the trolls and earth-sprites climb up and down.

*Conversations with the Earth*

Chapter IV (p. 48)

Alfred A. Knopf. New York, New York, USA. 1953

**Deetz, James** 1930–2000

American archaeologist

Archaeology by its formal etymology, is the study of the old; and the old, more often than not, is buried. As a result, archaeologists have traditionally been concerned with the subterranean world. Like Lewis Carroll's Alice, they are confronted with the curious underground world, and attempt to understand and explain it.

In James Deetz (ed.)

*Man's Imprint from the Past: Readings in the Methods of Archaeology*

Chapter 1 (p. 4)

Little, Brown & Company. Boston, Massachusetts, USA. 1971

**SUMMER EQUINOX****Pliny (C. Plinius Secundus)** 23–79

Roman savant and author

...in the Town of Syene (which is above Alexandria fifty Stadia), at Noon, in the midst of Summer, there is no Shadow: and that for Experiment thereof, a Well that was sunk in the Ground was lighted to the Bottom; whereby it appeareth that the Sun at that Time is directly over that Place.

*Pliny's Natural History. In Thirty-seven Books*

Book II, Chapter LXXIII (p. 116)

Printed for the Club by G. Barclay. London, England. 1847–1849

**Bourdillon, Francis William** 1852–1921  
English poet and translator

The night has a thousand eyes,  
And the day but one;  
Yet the light of the bright world dies,  
With the dying Sun.

*Among the Flowers, and Other Poems*

The Night Has a Thousand Eyes  
Marcus Ward & Company. London, England. 1878

**Boyle, Robert** 1627–91  
English natural philosopher and theological writer

As the other planets, so also our earth, is not only enlightened, warmed, cherished, and made fruitful by the power, virtue, and influence of the sun, but it hath, moreover, its proper, magnetical, planetary force awakened, fermented, excited, and agitated, which it sends back with the reflected Light of that luminary.

*The Philosophical Works of the Honorable Robert Boyle* (Volume 3)  
(2nd edition)

A New Use of Astronomy (pp. 35–36)  
Printed by T.W. London, England. 1738

**Bradley, Jr., John Hodgdon** 1898–1962  
American geologist

Since a time so remote that imagination falters in the attempt to conceive it, the sun has mothered her brood of planets.

*Autobiography of Earth*

Chapter V (p. 133)  
Coward-McCann, Inc. New York, New York, USA. 1935

**Cook, J. Gordon** 1916–  
No biographical data available

The darkness of night is dissolving in light that flows steadily across the sky. Over the eastern horizon a curved shoulder of fire appears; our sun has arrived, bringing with it another day of glorious light.

*We Live by the Sun*

Chapter 2 (p. 18)  
The Dial Press. New York, New York, USA. 1957

**Core, Thomas H.**  
Astronomer

Our knowledge of the sun has of late years greatly increased; of old our luminary did two things for us like a benevolent parent he smiled upon us, while at the same time he kept us in leading strings.

*Essays and Addresses*

Lecture IV (p. 59)  
Macmillan & Co Ltd. London, England. 1874

...by gazing anxiously and often into the face of our great luminary, we have come to recognise certain delicate changes of expression and meaning, so that we may be said to have taken our first lesson in Solar Physiognomy.

*Essays and Addresses*

Lecture IV (p. 60)  
Macmillan & Co Ltd. London, England. 1874

**Copernicus, Nicolaus** 1473–1543  
Polish astronomer

Since the newness of the hypotheses of this work – which sets the earth in motion and puts an immovable sun at the centre of the universe – has already received a great deal of publicity, I have no doubt that certain of the savants have taken grave offense and think it wrong to raise any disturbance among liberal disciplines which have had the right set-up for a long time now.

In *Great Books of the Western World* (Volume 16)

*On the Revolutions of the Heavenly Spheres*

Introduction, to the Reader Concerning the Hypothesis of this Work (p. 505)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

In the center of all rests the sun. For who would place this lamp of a very beautiful temple in another or better place than this wherefrom it can illuminate everything at the same time? As a matter of fact, not unhappily do some call it the lantern; others, the mind and still others, the pilot of the world. Trismegistus calls it a “visible god”; Sophocles’ Electra, “that which gazes upon all things.” And so the sun, as if resting on a kingly throne, governs the family of stars which wheel around.

In *Great Books of the Western World* (Volume 16)

*On the Revolutions of the Heavenly Spheres*

Book One, Chapter 10 (pp. 526–528)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Absalom and Achitophel  
Part I, l. 268  
The Riverside Press. Cambridge, Massachusetts, USA. 1949

**Ehrlich, Gretel** 1946–  
American travel writer, novelist, and essayist

We forget that our sun is only a star destined to someday burn out. The time scale of its transience so far exceeds our human one that our unconditional dependence on its life-giving properties feels oddly like an indiscretion we'd rather forget.

*The Solace of Open Spaces*  
To Live in Two Worlds (p. 105)  
Penguin Books. New York, New York, USA. 1986

**Eudoxus of Cnidus** ca. 400 BCE–ca. 350 BCE  
Greek astronomer, mathematician, and physician

Willingly would I burn to death like Phaeton, were this the price for reaching the sun and learning its shape, its size, and its substance.

In Carl B. Boyer  
*A History of Mathematics* (p. 91)  
John Wiley & Sons, Inc. New York, New York, USA. 1968

**Falconer, William** 1744–1824  
Poet

High in his chariot glow'd the lamp of day.

*The Shipwreck*  
Canto I, III, l. 3

**Flammarion, Camille** 1842–1925  
French astronomer and author

The sun is but a star; he will meet with the fate of his sisters; suns, like worlds, are born to die, and in eternity their long career will have endured but 'the space of a morning.'

Translated by J. Ellard Gore  
*Popular Astronomy: A General Description of the Heavens*  
Book I, Chapter VII (pp. 79–80)  
Chatto & Windus. London, England. 1894

Dazzling source of light and heat, of motion, life, and beauty, the inimitable sun has in all ages received the earnest and grateful homage of mortals. The ignorant admire it because they feel the effects of its power and its value; the savant appreciates it because he has learned its unique importance in the system of the world; the artist salutes it because he sees in its splendor the virtual cause of all harmonies.

*Popular Astronomy: A General Description of the Heavens*  
Book III, Chapter I (p. 207)  
Chatto & Windus. London, England. 1894

If the comparison were not offensive to the sun-god, we might say that he [the Sun] is like the spider at the centre of his web. In the net of his attraction the worlds are sustained. Relatively to his magnitude and might, the planets are but toys turning round him.

Translated by John Ellard Gore  
*Popular Astronomy: A General Description of the Heavens*  
Book III, Chapter I (p. 208)  
Chatto & Windus. London, England. 1907

**Galilei, Galileo** 1564–1642  
Italian physicist and astronomer

The doctrine of the movement of the earth and the fixity of the sun is condemned on the ground that the Scriptures speak in many places of the sun moving and the earth standing still. The Scriptures not being capable of lying or erring, it followeth that the position of those is erroneous and heretical who maintain that the sun is fixed and the earth in motion.

*The Authority of Scripture in Philosophical Controversies*  
Section I  
The Defenders of Fallacy

**Gilbert, Sir William Schwenck** 1836–1911  
English playwright and poet

**Sullivan, Arthur** 1842–1900  
English composer

The Sun, whose rays  
Are all ablaze

With ever-living glory,  
Does not deny  
His majesty –  
He scorns to tell a story!

*The Complete Plays of Gilbert and Sullivan*  
*The Mikado*

Act II (p. 322)

W.W. Norton & Company, Inc. New York, New York, USA. 1976

**Heraclitus** 540 BCE–480 BCE  
Greek philosopher

The sun...is new each day.

In G.S Kirk and J.E. Raven

*The Pre-Socratic Philosophers: A Critical History with a Selection of Texts*

Fragment 228 (p. 202)

At The University Press. Cambridge, England. 1963

**Herschel, Friedrich Wilhelm**  
**(Sir William)** 1738–1822  
English astronomer

The sun is the celestial body which should first attract our notice, not only on its own account but since the fixed stars are, by the strictest analogy, similar bodies.

On the Nature and Construction of the Sun and Fixed Stars  
*Philosophical Transactions of the Royal Society of London*,  
Volume 85, 1795 (p. 46)

I should not wonder if [considering what we know] we were induced to think that nothing remained to be added; and yet we are still very ignorant in regard to the internal construction of the sun.

On the Nature and Contraction of the Sun and Fixed Stars  
*Philosophical Transactions of the Royal Society of London*,  
Volume 85, 1795 (p. 47)

The sun itself has been called a globe of fire, though perhaps metaphorically.

On the Nature and Contraction of the Sun and Fixed Stars  
*Philosophical Transactions of the Royal Society of London*,  
Volume 85, 1795 (p. 48)

This way of considering the sun removes the great dissimilarity between its condition and that of the other great bodies of the system. The sun then appears to be nothing else than a very eminent, large, and lucid planet ‘...most probably also inhabited by beings whose organs are adapted to the peculiar circumstances of that vast globe.

On the Nature and Contraction of the Sun and Fixed Stars  
*Philosophical Transactions of the Royal Society of London*,  
Volume 85, 1795 (p. 63)

The influence of this eminent body [the sun], on the globe we inhabit, is so great, and so widely diffused, that it becomes almost a duty for us to study the operations which are carried on upon the solar surface.

Observations tending to investigate the Nature of the Sun, in order to find the Causes or Symptoms of its variable Emission of Light and Heat  
*Philosophical Transactions of the Royal Society of London*, 1801 (p. 265)

**Herschel, Sir John Frederick William** 1792–1871  
English astronomer and chemist

Giant Size and Giant Strength are ugly qualities without beneficence. But the sun is the almoner of the Almighty, the delegated dispenser to us of light and warmth, as well as the centre of attraction; and as such the immediate source of all our comforts, and indeed of the very possibility of our existence on earth.

*Familiar Lectures on Scientific Subjects*

Lecture II (p. 62)

George Routledge & Sons. New York, New York, USA. 1871

The great mystery, however, is to conceive how so enormous a conflagration [as the sun] can be kept up. Every discovery in chemical science here leaves us completely at a loss, or rather, seems to remove farther the prospect of probable explanation.

*Astronomy*

Chapter V (p. 212)

Longman, Rees, Orme, Brown, Green & Longman. London, England. 1893

**Kelvin, Lord William Thomson** 1824–1907  
Scottish engineer, mathematician, and physicist

Now, if the sun is not created a miraculous body, to shine on and give out heat forever, we must suppose it to be a body subject to the laws of matter (I do not say there may not be laws which we have not discovered) but, at all events, not violating any laws we have discovered or believe we have discovered. We should deal with the sun as we should with any large mass of molten iron, or silicon, or sodium.

*On Geological Time* (p. 18)

Address

Geological Society of Glasgow

February 27, 1868

It seems, therefore, on the whole most probable that the sun has not illuminated the earth for 100,000,000 years, and almost certain that he has not done so for 500,000,000 years. As for the future, we may say, with equal certainty, that inhabitants of the earth cannot continue to enjoy the light and heat essential to their life for many million years longer unless sources now unknown to us are prepared in the great storehouse of creation.

The Age of the Sun's Heat

*Macmillan's Magazine*, March 5, 1862 (p. 293)

**Langley, Samuel Pierpoint** 1834–1906  
American astronomer and aviation pioneer

...the fields glitter with snow-crystals in the winter noon, and the eye is dazzled with a reflection of the splendor which the sun pours so fully into every nook that by it alone we appear to see everything.

The New Astronomy

*The Century Illustrated Monthly Magazine*, Volume 28, New Series,  
Volume 6 (p. 922)

As the thought of man is widened with the process of the suns, let us hope that we shall one day know more.

The New Astronomy

*The Century Illustrated Monthly Magazine*, Volume 28, New Series, Volume 6 (p. 936)

**Ledger, Edmund** 1841–1913

English astronomer

Discovery has followed upon discovery, and victory upon victory, as astronomers have stormed one outlying fortress after another of the Sun's hidden secrets ...

*The Sun, Its Planets and their Satellites*

Lecture I (p. 2)

Edward Stanford. London, England. 1882

**Lockyer, Joseph Norman** 1836–1920

English astronomer and physicist

Slowly, but very surely, by means of quiet sap, but little of which meets the eye, we are effecting an entrance into the treasure-house wherein are kept the secrets of the sun.

What is the Sun Made of?

*The Nineteenth Century*, Volume 4, July, 1878 (p. 75)

**Longfellow, Henry Wadsworth** 1807–82

American poet

Down sank the great red sun, and in golden glimmering vapours

Veiled the light of his face, like the Prophet descending from Sinai.

*The Poetical Works of Henry Wadsworth Longfellow*

Evangeline, Part I, Section 4

Houghton Mifflin Company. Boston, Massachusetts, USA. 1883

**Macpherson, James** 1736–1796

Scottish poet

Whence are thy beams, O sun! thy everlasting light! Thou comest forth in thy awful beauty; the stars hide themselves in the sky; the moon, cold and pale, sinks in the western wave; but thou thyself movest alone.

*The Poems of Ossian*

Carthon (p. 233)

Printed by Dewick & Clarke. London, England. 1806

**Mann, Thomas** 1875–1955

German-born American novelist

“He does seem rather weird,” was Hans Castorp's view. “Some of the things he said were very queer: it sounded as if he meant to say that the sun revolves round the earth.”

*The Magic Mountain*

Chapter VI

Of City of God, and Deliverance by Evil (p. 407)

Alfred A. Knopf. New York, New York, USA. 1966

**Mayer, Robert**

No biographical data available

The Sun...is an inexhaustible source of physical force – that continuously wound-up spring which sustains in motion the mechanism of all the activities on Earth.

In L.I. Ponomarev

*The Quantum Dice* (p. 228)

Institute of Physics Publishing. Bristol, England. 1993

**Melville, Herman** 1819–91

American novelist

Life or death, weal or woe, the sun stays not his course. Oh: over battlefield and bower; over tower, and town, he speeds, – peers in at births, and death-beds; lights up cathedral, mosque, and pagan shrine; – laughing over all; – a very Democritus in the sky; and in one brief day sees more than any pilgrim in a century's round.

*Typee, Omoo, Mardi*

*Mardi*

Chapter 184 (p. 1277)

The Library of America. New York, New York, USA. 1982

**Moulton, Forest Ray** 1872–1952

American astronomer

If the sun were created expressly to light and heat the earth, what a waste of energy!

In H.H. Newman (ed.)

*The Nature of the World and of Man*

Astronomy (p. 17)

The University of Chicago Press. Chicago, Illinois, USA. 1927

**Muir, John** 1838–1914

American naturalist

The sun, looking down on the tranquil landscape, seems conscious of the presence of every living thing on which he is pouring his blessings, while they in turn, with perhaps the exception of man, seem conscious of the presence of the sun as a benevolent father and stand hushed and waiting.

*Steep Trails*

Chapter XVII (p. 226)

Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

**Newcomb, Simon** 1835–1909

Canadian-born American astronomer

...it is remarkable that modern science has shown us more mysteries in the sun than it has explained; so that we find ourselves farther than before from a satisfactory explanation of solar phenomena.

*Popular Astronomy* (6th edition)

Part III, Chapter II (p. 257)

Harper & Brothers Publishers. New York, New York, USA. 1893

**Parker, E. N.** 1927–

No biographical data available

The riddles the sun presents are signposts to new horizons.

The Sun

*Scientific American*, Volume 233, Number 3, September, 1975 (p. 50)

**Pascal, Blaise** 1623–62  
French mathematician and physicist

Let man then contemplate the whole of nature in her full and grand majesty, and turn his vision from the low objects which surround him. Let him gaze on that brilliant light, set like an eternal lamp to illumine the universe.

In *Great Books of the Western World* (Volume 33)  
*Pensées*  
Section II, 72  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Plato** 428 BCE–347 BCE  
Greek philosopher

That there might be some visible measure of their relative swiftness and slowness as they proceeded in their eight courses, God lighted a fire, which we now call the sun, in the second from the earth of these orbits...

In *Great Books of the Western World* (Volume 7)  
*Timæus*  
Section 39 (p. 451)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Proctor, Mary** 1862–1957  
American popularizer of astronomy

The music of the spheres that are swayed and held in bondage by our own sun, is echoed by that of ten million moving suns, singing their solemn chant – the grandest of epics – the Poem of the Universe, as they wing their flight through infinite space.

The Silver River of Heaven  
*The Chautauquan*, Volume 21, Number 4, July, 1895 (p. 459)

**Proctor, Richard Anthony** 1837–88  
English astronomer

All the wonderful processes taking place within and around the globe of our own sun have their analogues in that distant orb. Let it be remembered also that our sun himself presents an aspect which in no sense suggests his real condition. If we would picture him as he actually is, we must consider the uproar and tumult which prevail where, to our ordinary perceptions, all seems at perfect rest. The least movement on that glowing photosphere represents the action of forces so tremendous that they would be competent to destroy in an instant this earth on which we live. The most hideous turmoil, outvying a million-fold the roar of the hurricane or the crash of the thunderbolt, must prevail forever in every part of the solar atmosphere.

*Light Science for Leisure Hours* Second series (3rd edition)  
Movements in the Star-depths (p. 31)  
Longmans, Green & Co. London, England. 1889

...if there is any object which men can properly take as an emblem of the power and goodness of Almighty God, it is the sun.

It has always been easier to record and describe solar events than to provide theoretical explanations for them. The Circulation of the Sun's Atmosphere  
*Scientific American*, Volume 218, Number 1, January 1968 (p. 100)

**Stoppard, Tom** 1937–  
 Czech-born English playwright

Meeting a friend in a corridor, Wittgenstein said: "Tell me, why do people always say it was natural for men to assume that the sun went round the earth, rather than that the earth was rotating?" His friend said, "Well, obviously, because it looks as if the sun is going round the earth." To which the philosopher replied, "Well, what would it have looked like if it had looked as if the earth was rotating?"

*Jumpers*  
 Act Two (p. 65)  
 Grove Press, Inc. New York, New York, USA. 1972

**Swedenborg, Emanuel** 1688–1772  
 Swedish scientist, philosopher, and Christian mystic

...it is perceived that the sun of the world, with all its essence, which is heat and light, flows into every tree, and into every shrub and flower, and into every stone, mean as well as precious; and that every object takes its portion from this common influx, and that the sun does not divide its light and heat, and dispense a part to this and a part to that. It is similar with the sun of heaven, from which the Divine love proceeds as heat, and the Divine wisdom as light; these two flow into human minds, as the heat and light of the sun of the world into bodies, and vivify them according to the quality of the minds, each of which takes from the common influx as much as is necessary.

*The True Christian Religion*  
 Concerning Faith, 364 (p. 257)  
 J.B. Lippincott & Co. Philadelphia, Pennsylvania, USA. 1875

**Swift, Jonathan** 1667–1745  
 Irish-born English writer

These people [Laputians] are under continual disquietudes, never enjoying a minute's peace of mind; and their disturbances proceed from causes which very little affect the rest of mortals. Their apprehension arises from several changes they dread in the celestial bodies. For instance...that the sun, daily spending its rays without any nutriment to supply them, will at last be wholly consumed and annihilated; which must be attended with the destruction of this earth, and all the planets that receive their light from it.

In *Great Books of the Western World* (Volume 36)  
*Gulliver's Travels*  
 Part III, Chapter II (p. 98)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

 English poet

There sinks the nebulous star we call the sun.  
*Alfred Tennyson's Poetical Works*  
 The Princess, Part IV, l. 19  
 Oxford University Press, Inc. London, England. 1953

**Thoreau, Henry David** 1817–62  
 American essayist, poet, and practical philosopher

It is true, I never assisted the sun materially in his rising; but doubt not, it was of the last importance only to be present at it.

*The Writings of Henry David Thoreau* (Volume 2)  
*Walden*  
 Chapter I (p. 30)  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

**Updike, John** 1932–  
 American novelist, short story writer, and poet

The zeros stared back, everyone a wound leaking the word "poison." "That's the weight of the Sun," Caldwell said.

*The Centaur*  
 Chapter I (p. 37)  
 Alfred A. Knopf. New York, New York, USA. 1995

**Warder, George Woodward** 1848–1907  
 American attorney

I hold that the suns are not hot, nor burning gaseous spheres, but are the self-luminous perfected worlds of the universe and the future abode of man. I claim that man is the product of planetary forces, and the planets are the hatcheries of human souls, and the suns the places of their development and growth to perfection.

*The Cities of the Sun*  
 Chapter I (p. 11)  
 G.W. Dillingham Co, Publishers. New York, New York, USA. 1901

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

...the sun, red and very large, halted motionless upon the horizon, a vast dome glowing with a dull heat, and now and then suffering a momentary extinction...[it] grew larger and duller in the westward sky, and the life of the old earth ebbed away. At last, more than thirty million years hence, the huge red-hot dome of the sun had come to obscure nearly a tenth part of the darkling heavens.

In Robert M. Hutchins and Mortimer J. Adler (eds.)

*The Great Ideas Today* 1971

*The Time Machine*, Chapter 11

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1971

It is usual to assume that the sun will go on cooling steadily in the future. But people...forget that the planets must ultimately fall back one by one into the parent body. As these catastrophes occur, the sun will blaze with renewed energy.

*Seven Science Fiction Novels of H. G. Wells*

*The Time Machine*

Chapter 5 (p. 38)

Dover Publications, Inc. New York, New York, USA. 1934

**Whitman, Walt** 1819–92

American poet, journalist, and essayist

Give me a splendid silent sun, with all his beams full-dazzling.

*Complete Poetry and Collected Prose*

Give Me a Splendid Sun

The Library of America. New York, New York, USA. 1982

**Xenophanes** ca. 575 BCE–ca. 478 BCE

Greek philosopher

The sun comes into being each day from little pieces of fire that are collected...

In G.S Kirk and J.E. Raven

*The Pre-Socratic Philosophers: A Critical History with a Selection of Texts*

Fragment 178 (p. 172)

At The University Press. Cambridge, England. 1963

## SUN LIGHT

**Hale, George Ellery** 1868–1938

American astronomer

No archaeologist, whether Young or Champollion deciphering the Rosetta Stone, or Rawlinson copying the cuneiform inscription on the cliff of Behistun, was ever faced by a more fascinating problem than that which confronts the solar physicist engaged in the interpretation of the hieroglyphic lines of sun-spot spectra.

*The New Heavens*

Chapter III (p. 64)

Charles Scribner's Sons. New York, New York, USA. 1922

**Herschel, Friedrich Wilhelm (Sir William)** 1738–1822

English astronomer

The light of the sun itself has been supposed invisible and not to be perceived except by reflection, though the proofs seem to me to amount to no more than saying that we cannot see when rays of light do not enter the eye. But it is time now to profit by the observations we are in possession of.

On the Nature and Contraction of the Sun and Fixed Stars

*Philosophical Transactions of the Royal Society of London*,

Volume 85, 1795 (p. 48)

**Herschel, Sir John Frederick William** 1792–1871

English astronomer and chemist

The sun's rays are the ultimate source of almost every motion which takes place on the surface of the earth. By its heat are produced all winds.... By their vivifying action vegetables are elaborated from inorganic matter, and become, in their turn, the support of animals and of man, and the sources of those great deposits of dynamical efficiency which are laid up for human use in our coal strata.

*Outlines of Astronomy*

Chapter VI (p. 211)

Blanchard & Lea. Philadelphia, Pennsylvania, USA. 1853

## SUNSPOT

**Birrell, Augustine** 1850–1933

English author and politician

The sun is not all spots.

*Obiter Dicta* Second Series

John Milton

Elliot Stock. London, England. 1884

**Galilei, Galileo** 1564–1642

Italian physicist and astronomer

Neither the satellites of Jupiter nor any other stars are spots or shadows, nor are the sunspots stars. It is indeed true that I am quibbling over names, while I know that anyone may impose them to suit himself. So long as a man does not think that by names he can confer inherent and essential properties on things, it would make little difference whether he calls these "stars."

Translated by Stillman Drake

*Discoveries and Opinions of Galileo*

Letters on Sunspots, Third Letter on Sunspots, From Galileo Galilei to

Mark Welser (p. 139)

Doubleday & Company, Inc. New York, New York, USA. 1957

**Harris, John** 1667?–1719

No biographical data available

Spots! Said she, What, are there Spots in the Sun, which sometimes appear there, and sometimes not; for God's sake what are those Spots?

*Astronomical Dialogues Between a Gentleman and a Lady* (p. 74)  
Printed by T. Wood for Benj. Cowse. London, England. 1719

The spots have been supposed to be solid bodies, the smoke of volcanoes, the scum floating on an ocean of fluid matter, clouds, opaque masses, and to be many other things.

On the Nature and Contraction of the Sun and Fixed Stars  
*Philosophical Transactions of the Royal Society of London*, Volume 85  
1795 (p. 47)

**Horrocks, Jeremiah** 1618–41  
English astronomer

Hail! then, ye eyes that penetrate the inmost recesses of the heavens, and gazing upon the bosom of the sun with your sight-assisting tube, have dared to point out the spots on that eternal luminary !

In R. A. Proctor  
Past and Coming Transits of Venus  
*The Cornhill Magazine*, Volume 31, January 1875 (p. 93)

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910  
American author and humorist

Come, cheer up, old man; there's no use in losing your grip and going back to this child's play merely because this big sunspot is drifting across your shiny new disk.

*Pudd'n'head Wilson*  
Chapter XX (p. 182)  
Harper & Brothers Publishers. New York, New York, USA. 1922

**Zirin, Harold**  
Astrophysicist

Just like the green fields and virgin forests, the granules, the sunspots, the elegant prominences reflect the pure beauty of nature. They offer aesthetic pleasure, as well as scientific challenge, to those who study them.

*Astrophysics of the Sun*  
Preface (p. ix)  
Cambridge University Press. Cambridge, England. 1988

## SUNRISE

**Thackeray, William Makepeace** 1811–63  
English writer

And lo! in a flash of crimson splendour, with blazing scarlet clouds running before his chariot, and heralding his majestic approach, God's sun rises upon the world ...

*The Kickleburys on the Rhine*  
The Sea of Rocks and the Giant's Pillar (p. 114)  
Printed for Charles Jugel. Frankfurt, Germany. 1851

## SUNSET

**Wilde, Oscar** 1854–1900  
Irish wit, poet, and dramatist

The sky was as a shield that caught the stain  
Of blood and battle from the dying sun ...

In Robert Ross (ed.)  
*Complete Works of Oscar Wilde*  
*Ravenna*  
The Wymann-Fogg Co. Boston, Massachusetts, USA. 1909

## SUPERCONDUCTOR

“Don't you see?” said the Professor. “It's a superconductor.”

“But that's incredible!” Dr. Fenster said. “At room temperature?”

“So it appears. There's no other explanation.”

“A superconductor?” Danny put in. “What's that?”

*Danny Dunn and the Swamp Monster*  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1971

## SUPERNATURAL

**Gray, Asa** 1810–88  
American botanist

...I do not approve either the divinity or the science of those who are prompt to invoke the supernatural to cover our ignorance of natural causes ...

*Natural Science and Religion, 2 Lectures*  
Lecture 2 (p. 100)  
Charles Scribner's Sons. New York, New York, USA. 1880

**Jordan, David Starr** 1851–1931  
American scientist and university administrator

The creation of man or the growth of a state is as natural as the formation of an apple or the growth of a snow-bank. All are alike supernatural, for they all rest on the huge unseen solidity of the universe, the imperishability of matter, the conservation of energy, and the immanence of law.

*Evolution and Animal Life*  
Chapter I (p. 9)  
D. Appleton & Co. New York, New York, USA. 1907

## SUPERNOVA

**Crowley, Abraham** 1618–67  
English poet

So when by various Turns of the Celestial Dance,  
In many thousand years,  
A Star, so long unknown, appears,  
Though Heaven itself more beauteous by it grow,  
It troubles and alarms the World below,  
Does to the Wise a Star, to Fools a Meteor show.

In Thomas Sprat  
*The History of the Royal-Society of London for Improving of Natural Knowledge*  
To the Royal Society  
Printed for A. Millar. London, England. 1756–1757

**Schaaf, Fred**

...a star gone to seed – a star spectacularly sowing space with heavy elements and the promise of new stars, worlds, life, and eyes.

*The Starry Room: Naked Eye Astronomy in the Intimate Universe*  
Chapter 11 (p. 194)  
John Wiley & Sons, Inc. New York, New York, USA. 1988

**Wosley, Stan**

No biographical data available

**Weaver, Tom**

No biographical data available

The collapse and explosion of a massive star is one of nature's grandest spectacles. For sheer power nothing can match it. During the supernova's first 10 seconds... it radiates as much energy from a central region 20 miles across as all the other stars and galaxies in the rest of the visible universe combined.... It is a feat that stretches even the well-stretched minds of astronomers.

The Great Supernova of 1987  
*Scientific American*, Volume 261, Number 2, August, 1989 (p. 32)

**SUPERPOSITION****Laurance, John**

No biographical data available

It is the uniformity of superposition, the invariable order of succession, sometimes disturbed but never inverted, on which Geology depends as a practical science ...

*Geology in 1835* (p. 13)  
Simpkin, Marshall, & Co. London, England. 1835

**SUPERSTITION****Gell-Mann, Murray** 1929–

American physicist

Unscientific approaches to the construction of models of the world around us have characterized much of human thinking since the time immemorial, and they are still widespread. Take, for example, the version of sympathetic magic based on the idea that similar things must be connected. It seems natural to many people around the world that, when in need of rain, they should perform a ceremony in which water is procured and poured on the ground.

*The Quark and the Jaguar: Adventures In the Simple and the Complex*  
(p. 89)  
W.H. Freeman & Company. New York, New York, USA. 1994

**Bridgman, Percy Williams** 1882–1961

American physicist

Freedom from superstition is the result of the conviction that the world is not governed by caprice, but that it is a

world of order and can be understood by man if he will only try hard enough and be clever enough.

*Reflections of a Physicist*  
Chapter 10 (p. 167)  
Philosophical Library. New York, New York, USA. 1955

**Bürgel, Bruno Hans** 1875–1948

German astronomer

Superstition that extraordinarily rank weed, has struck strong roots in the very depths of human nature. Man, so little able after all to control the course of events and his own destiny, is again and again forced to recognise that he is but a toy in the hand of something so vast, so incomprehensible and so unknowable that it cannot be conceived or included as a unit in life's formula.

Translated by Stella Bloch  
*Astronomy for All*  
Chapter VIII (p. 76)  
Cassell & Co., Ltd. London, England. 1911

**de Gubernatis, Angelo**

No biographical data available

Nothing clings more to the earth, nothing is more vegetative, than a superstition.

*Zoological Mythology; or, The Legends of Animals* (Volume 1)  
Preface (p. xi)  
Trübner & Co. London, England. 1872

**Froude, James Anthony** 1818–94

English historian and biographer

The superstition of science scoffs at the superstition of faith.

*Short Studies on Great Subjects* (Volume 1)  
The Lives of the Saints (p. 575)  
Longmans, Green & Co. London, England. 1873

**Laplace, Pierre Simon** 1749–1827

French mathematician, astronomer, and physicist

...the beauty of the universe and the order of celestial things force us to recognize some superior nature which ought to be remarked and admired by the human race. But as far as it is proper to propagate religion, which is joined to the knowledge of nature, so far it is necessary to work toward the extirpation of superstition, for it torments one, importunes one, and pursues one continually and in all places.

*A Philosophical Essays on Probabilities*  
Chapter XVI (p. 174)  
Dover Publications, Inc. New York, New York, USA. 1951

**Marsh, Othniel Charles** 1831–99

American paleontologist

In a superstitious age, when every natural event is referred to a supernatural cause, science cannot live; and often as the sacred fire may be kindled by courageous

farseeing souls, will it be quenched by the dense mist of ignorance around it.

History and Methods of Palaeontological Discoveries  
*Nature*, Volume 20, September 18, 1879 (p. 498)

**van Sloan, Edward** 1882–1964  
American actor

Superstition? Who can define the boundary line between the superstition of yesterday and the scientific fact of tomorrow?

*Dracula's Daughter*  
Film (1936)

**Mellor, Joseph William** 1863–1938  
Chemist

The mists of superstition are always dissipated as positive knowledge extends into wider and wider fields.

*A Comprehensive Treatise on Inorganic and Theoretical Chemistry*  
(Volume I)  
Chapter I (p. 2)  
Longman, Green & Co. London, England. 1922

## SUPERSTRING

**Dyson, Freeman J.** 1923–  
American physicist and educator

Superstrings and butterflies are examples illustrating two different aspects of the universe and two different notions of beauty. Superstrings come at the beginning and butterflies at the end because they are extreme examples. Butterflies are at the extreme of concreteness, superstrings at the extreme of abstraction. They mark the extreme limits of the territory over which science claims jurisdiction. Both are, in their different ways, beautiful. Both are, from a scientific point of view, poorly understood. Scientifically speaking, a butterfly is at least as mysterious as a superstring....

*Infinite in All Directions*

Part One, Chapter Two (p. 14)  
HarperCollins Publisher, Inc. New York, New York, USA. 1988

**Ginsparg, Paul**  
American physicist

**Glashow, Sheldon** 1932–  
American physicist

Contemplation of superstrings may evolve into an activity as remote from conventional particle physics as particle physics is from chemistry, to be conducted at schools of divinity by future equivalents of medieval theologians. For the first time since the Dark Ages, we can see how our noble search may end, with faith replacing science once again.

Desperately Seeking Superstrings?  
*Physics Today*, May, 1986

In lieu of the traditional confrontation between theory and experiment, superstring theorists pursue an inner harmony where elegance, uniqueness and beauty define truth. The theory depends for its existence upon magical coincidences, miraculous cancellations and relations among seemingly unrelated (and possibly undiscovered) fields of mathematics.

Desperately Seeking Superstrings?  
*Physics Today*, May, 1986 (p. 7)

## SUPPOSITION

**Stoney, George Johnstone** 1826–1911  
Irish physicist

A theory is a supposition which we hope to be true, a hypothesis is a supposition which we expect to be useful; fictions belong to the realm of art; if made to intrude elsewhere, they become either make believes or mistakes.

In Sir William Ramsay  
*Essays Biographical and Chemical*  
*Chemical Essays*  
Radium and Its Products (p. 179)  
Archibald Constable & Company Ltd. London, England. 1908

## SURFACE TENSION

**Roth, V. Louise**  
American zoologist

You may have inner tranquility, but you can't escape surface tension.

In Steven Vogel  
*Life's Devices: The Physical World of Animal and Plants*  
Chapter 5 (p. 82)  
Princeton University Press. Princeton, New Jersey, USA. 1988

## SURGEON

### Author undetermined

A good surgeon must have an eagle's eye, a lion's heart, and a lady's hand.

In John Timbs  
*Doctors and Patients, or, Anecdotes of the Medical World and Curiosities of Medicine* (Volume 2) (p. 155)  
Richard Bentley & Son. London, England. 1873

A Probe in the hands of a dirty or rough surgeon is like a loaded pistol in the paw of a monkey.

Items of Interest  
*Medical Review*, Volume XXV, Number 7, July, 1892 (p. 133)

**Aylett, Robert** 1583–1655?  
Religious poet

For Mercy doth like skillful Surgeon deal,  
That hath for ev'ry sore a remedy:  
If gentle drawing plaisters cannot heal

The wound, because it festreth inwardly,  
 He sharper corrasives must then apply,  
 And as he oft cuts off some member dead,  
 Or rotten, lest the rest should putrifie,  
 So Mercy wicked Members off doth shred,  
 Lest they should noysome prove to body and the head.  
*Peace with Her Foure Gardners*  
 The Brides Ornaments, Meditation III, l. 307–315

Who is the man in sterile white  
 Delving deep at the point of light,  
 With nurses, trained, at left and right?  
*Poet Physician: An Anthology of Medical Poetry Written by Physicians*  
 The Surgeon (p. 136)  
 C.C. Thomas. Springfield, Illinois, USA. 1945

### Carnochan, John Murray 1817–87

American surgeon

While respect for life will dictate to the surgeon the greatest prudence – will counsel him to attempt no operation which he would not be willing to perform on his own child – it will also teach him, that if the extremes of boldness are to be shunned, pusillanimity is not the necessary alternative.

*Contributions to Operative Surgery and Surgical Pathology*  
 Preface  
 Lindsay & Blakiston. Philadelphia, Pennsylvania, USA. 1857

### Celsus, Aulus Cornelius fl. 14 AD

Roman medical writer

A surgeon ought to be young, or at any rate, not very old; his hand should be firm and steady, and never shake; he should be able to use his left hand with as much dexterity as his right; his eye-sight should be acute and clear; his mind intrepid, and so far subject to pity as to make him desirous of the recovery of his patient, but not so far as to suffer himself to be moved by his cries; he should neither hurry the operation more than the case requires, nor cut less than is necessary, but do everything just as if the other's screams made no impression upon him.

In Samuel Evans Massengill  
*A Sketch of Medicine and Pharmacy and a View of Its Progress by the Massengill Family from the Fifteenth to the Twentieth Century* (p. 30)  
 The S.E. Massengill Company. Bristol, Tennessee, USA. 1943

### Crichton-Browne, Sir James 1840–1938

English physician

“Oh, sir, we made a terrible mistake in the case of that man yesterday! We amputated the wrong leg!”

“Ah well,” the surgeon replied, complacently, “it’s of no consequence, for I have just been looking at the other leg, and it’s going to get better.”

*The Doctor’s After Thoughts* (p. 15)  
 E. Benn Ltd. London, England. 1932

Every great surgeon, it used to be said, shakes, swears or sweats when he operates.

*The Doctor Remembers*  
 Bret Harte (p. 170)  
 Duckworth & Company. London, England. 1938

### Croll, Oswald 1560–1609

German chemist and physician

...it is necessary that every Surgeon should be a Physitian, and every Physitian a Chyrugion, that there may be a sound Bridegroom for a sound Bride...

Surgeon: Fee lancer.

*Quote, the Weekly Digest*, June 9, 1968 (p. 457)

### da Costa, J. Chalmers 1863–1933

American physician

A vain surgeon is like a milking stool; of no use except when sat upon.

*The Trials and Triumphs of the Surgeon* (p. 17)  
 Dorrance & Company. Philadelphia, Pennsylvania, USA. 1944

A surgeon is like a postage stamp. He is useless when stuck on himself.

*The Trials and Triumphs of the Surgeon* (p. 17)  
 Dorrance & Company. Philadelphia, Pennsylvania, USA. 1944

### Davies, Robertson 1913–95

Canadian novelist

A man mentioned casually to me this afternoon that his brother was in a hospital, having his appendix removed. This operation is now undertaken without qualm; surgeons regard it as a pastime, something to keep the hands busy, like knitting or eating salted nuts.

*The Table Talk of Samuel Marchbanks* (p. 176)  
 Clarke, Irwin. Toronto, Ontario, Canada. 1949

### de Balzac, Honoré 1799–1850

French novelist

The glory of a surgeon is like that of an actor: they live only so long as they are alive, and their talent leaves no trace when they are gone. Actors and Surgeons, like great singers too, like the executants who by their performance increase the power of music tenfold, are all the heroes of a moment.

*The Works of Honoré de Balzac*  
*The Atheist’s Mass* (p. 379)  
 Avil Publishing Co. Philadelphia, Pennsylvania, USA. 1901

### de Chauliac, Guy

No biographical data available

The surgeon should be learned, skilled, ingenious, and of good morals. Be bold in things that are sure, cautious in

dangers; avoid evil cures and practices; be gracious to the sick, obliging to his colleagues, wise in his predictions. Be chaste, sober, pitiful, and merciful; not covetous nor extortionate of money, but let the recompense be moderate, according to the work, the means of the sick, the character of the issue or event, and its dignity.

In Samuel Evans Massengill

*A Sketch of Medicine and Pharmacy and a View of Its Progress by the Massengill Family from the Fifteenth to the Twentieth Century* (p. 262)  
The S. E. Massengill Company. Bristol, Tennessee, USA. 1943

**de Mondeville, Henri** 1260–1320

French pioneer surgeon

The surgeon should be fairly audacious [yet] he should operate with prudence and sagacity; he should never commence perilous operations unless he has provided everything in order to avoid danger; ...he should not sing his own praises; he should not cover his colleagues with blame; he should not cause envy among them; he should work always with the idea of acquiring a reputation of probity; he should be reassuring to his patients by kind words and acquiesce to their requests when nothing harmful will result from them as to their cure.

In C.G. Cumston

Henry de Mondeville, the Man and His Writings, with Translations of Several Chapters of His Works  
*Buffalo Medical Journal*, Volume 42, 1903

A Surgeon ought to be fairly bold. He ought not to quarrel before the laity, and although he should operate wisely and prudently, he should never undertake any dangerous operation unless he is sure that it is the only way to avoid a greater danger. His limbs, and especially his hands, should be well shaped with long, delicate and supple fingers which must not be tremulous.

In John Arderne

*Treatise of Fistula in Ano* (p. xx)

**Dickens, Charles** 1812–70

English novelist

What! don't you know what a Sawbones is, Sir? inquired Mr. Weller. I thought everybody know'd as a Sawbones was a Surgeon.

*The Posthumous Papers of the Pickwick Club*

Chapter XXX (p. 348)

Dodd, Mead & Company. New York, New York, USA. 1944

**Dickinson, Emily** 1830–86

American lyric poet

Surgeons must be very careful  
When they take the knife!  
Underneath their fine incisions  
Stirs the Culprit, – Life!

*The Complete Poems of Emily Dickinson*

No. 108 (p. 52)

Little, Brown & Company. Boston, Massachusetts, USA. 1960

**Dimmick, Edgar L.**

No biographical data available

The public views his *status regas*,  
In the profession he's "The Eagle."  
With super-supple fingers slim  
(Pus, blood, and guts don't bother him),  
Up to his elbows, filled with glee,  
With snick and slice sadistically,  
Into a jar, up on a shelf  
He puts a fragment of yourself.  
For him no diagnostic doubt –  
He'll operate, and so find out.

The In-Side of Two

*Journal of the American Medical Association*, Volume 199, Number 6,  
1967 (p. 274)

**Dunlap, William** 1766–1839

American dramatist and theatrical manager

There is hardly on the face of the earth a less enviable situation than that of an Army Surgeon after a battle...

*Recollection of the American War, 1812–1814*

Chapter III (p. 54)

Historical Publishing Company. Toronto, Ontario, Canada. 1906

**Eliot, T. S. (Thomas Stearns)** 1888–1965

American expatriate poet and playwright

The wounded surgeon plies the steel  
That questions the distempered part;  
Beneath the bleeding hands we feel  
The sharp compassion of the healer's art  
Resolving the enigma of the fever chart.

*The Collected Poems and Plays 1909–1950*

East Coker, Part IV (p. 127)

Harcourt, Brace & World, Inc. New York, New York, USA. 1952

**Findley, Thomas**

Physician

The surgeon...is a man of action. He lives in an exhilarating world of knives, blood, and groans. His tempo is of necessity rapid. He is inclined to look at his less kinetic colleague with an air of puzzled condescension but may, in a relaxed moment, admit that the medical man is occasionally able to assist uncomfortable dowagers in the selection of a cathartic.

The Obligations of an Internist to a General Surgeon

*Surgery*, Volume 16, 1944 (p. 557)

**Gilbertus, Anglicus**

No biographical data available

Why in God's name is there such a great difference between a physician and a surgeon?

Surgery

*Time*, May 3, 1963 (p. 44)

**Gogarty, Oliver St. John** 1878–1957  
Irish author

Let Surgeon MacCardle confirm you in Hope.  
A jockey fell off and his neck it was broke.  
He lifted him up like a fine, honest man;  
And he said “He is dead; but I’ll do all I can.”

*The Collected Poems of Oliver St. John Gogarty*  
The Three (p. 109)  
Constable. London, England. 1951

**Gross, S. D.** 1805–84  
American emeritus professor of surgery

It is impossible for any man to be a great surgeon if he is destitute...of the finer feelings of our nature.... I do not think that it is possible for a criminal to feel much worse the night before his execution than a surgeon when he knows that upon his skill and attention must depend the fate of a valuable citizen, husband, father, mother or child. Surgery under such circumstances is a terrible task master, feeding like a vulture upon a man’s vitals.

*Autobiography of Samuel D. Gross, MD.* (p. 172)  
George Barrie. Philadelphia, Pennsylvania, USA. 1887

**Hazlitt, William Carew** 1834–1913  
English bibliographer

An ignorant drunken Surgeon that kil’d all men that came under his hands, boasted himself a better man than the Parson; for, said he, your Cure maintains but yourself, but my Cures maintaine all the Sextons in the Towne.

*Shakespeare Jest Books* (Volume 3)

English dramatic poet

WELL.: Thou wert my surgeon; you must tell no tales;  
Those days are done.

I will pay you in private.  
*A New Way to Pay Old Debts*  
Act IV, Scene II (p. 123)

**Ogilvie, Sir Heneage** 1887–1971  
English physician

A surgeon conducting a difficult case is like the skipper of an ocean-going racing yacht. He knows the port he must make, but he cannot foresee the course of the journey.

*A Surgeon’s Life*  
*The Lancet*, Volume 255, July 3, 1948 (p. 1)

**Paretsky, Sara** 1947–  
American author

Heart surgeons do not have the world’s smallest egos: when you ask them to name the world’s three leading practitioners, they never can remember the names of the other two.

In Marilyn Wallace (ed.)  
*Sisters in Crime* (Volume 1)  
 The Case of the Pietro Andromache II (p. 116)  
 Berkley Books. New York, New York, USA. 1989

### Ross, J. F. W.

American physician

The surgeon is, like the actor, set for a part either in the comedy or tragedy of life. Some seem set in tragedy so frequently that they should give up surgery and try medicine. Others seem eternally set for comedy without any intermixture of the tragedy. These men conceal the truth and mislead their audiences.

Personal Experience With Pus Tubes  
*The American Practitioner and News*, Volume VII, 1894 (p. 245)

### Selzer, Richard 1928–

American physician and essayist

In the operating room the patient must be anaesthetized in order that he or she feel no pain. The surgeon too must be anaesthetized, insulated against the emotional heat of the event so that he can perform this act of laying open the body of a fellow human being, which, take away the purpose for which it is being done, is no more than an act of assault and battery. A barbaric act. So the surgeon dons a carapace which keeps him from feeling. It is what gives many surgeons the appearance of insensitivity.

Speech  
 Humanities Symposium, Dalhousie University, 1991

### Shadwell, Thomas 1642?–92

English dramatist and poet

Oh this Surgeon! this damn'd Surgeon, will this Villainous Quack never come to me? Oh this Plaster on my Neck! It gnaws more than Aqua-Fortis: this abominable Rascle has mistaken sure, and given me the same Cautstick he appli'd to my Shins, when they were open'd last.

*The Complete Works of Thomas Shadwell* (Volume 1)  
*The Humorists*, The First Act (p. 193)  
 The Fortune Press. London, England. 1927

### Twain, Mark (Samuel Langhorne

Clemens) 1835–1910

American author and humorist

It is a gratification to me to know that I am ignorant of art, and ignorant also of surgery. Because people who understand art find nothing in pictures but blemishes, and surgeons and anatomists see no beautiful women in all their lives, but only a ghastly stack of bones with Latin names to them, and a network of nerves and muscles and tissues.

*Mark Twain's Travels with Mr. Brown*  
 Academy of Design (p. 238)  
 Alfred A. Knopf. New York, New York, USA. 1946

## SURGERY

### Clendening, Logan 1884–1945

No biographical data available

Surgery does the ideal thing – it separates the patient from his disease.

*Modern Methods of Treatment*  
 Part I, Chapter I (p. 17)  
 The C.V. Mosby Company. St. Louis, Missouri, USA. 1924

### Dennis, F. S.

No biographical data available

There is no science that calls for greater fearlessness, courage, and nerve than that of surgery, none that demands more of self-reliance, principle, independence and the determination in the man. These were the characteristics which were chiefly conspicuous in the early settlers of this country. And it is these old-time Puritan qualities, which descending to them in succeeding generations, have passed into surgeons of America, giving them boldness in their art, and enabling them to win that success in surgery, which now commands the admiration of the civilized world.

Address  
 The History and Development of Surgery during the Past Century,  
 International Congress of Arts and Sciences  
 St. Louis, Missouri, September, 1904

### Fenger, Carl Emil 1814–84

Danish physician and politician

We must naturally ask ourselves: Does suffering humanity gain anything by this operation? or, in other words, Does the operation enable us to save, or only to prolong, life, and is it worthwhile for patients having uterine cancer to undergo this severe operation?

The Total Extirpation of the Uterus Through the Vagina  
*American Journal of Medical Science*, Volume 83, January, 1883 (p. 45)

### Giles, Roscoe C.

No biographical data available

It cannot be too often emphasized, however, that the post-operative treatment is as essential as the operation, and the surgeon is as much responsible for the post-operative treatment as for the operation.

Rickets, the Surgical Treatment of the Chronic Deformities of, with Emphasis on Bow-Legs and Knock-Knees  
*Journal of the National Medical Association*, Volume 14, 1922

### Helmuth, William Tod 1833–1902

American physician

There is not one man in a hundred outside of the medical profession, and scarcely one man in ten in it, who understands and appreciates the marvels of modern surgery.

*Scratches of a Surgeon*  
 Some of the Wonders of Modern Surgery (p. 42)  
 W.A. Chatterton & Company. Chicago, Illinois, USA. 1879

**Hippocrates** 460 BCE–377 BCE  
Greek physician

The prime object of the physician in the whole art of medicine should be to cure that which is diseased; and if this can be accomplished in various ways, the least troublesome should be selected; for this is more becoming a good man, and one well skilled in the art, who does not covet popular coin of base alloy.

In *Great Books of the Western World* (Volume 10)  
*Hippocratic Writings*

On the Articulations, 78 (p. 119)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

The things relating to surgery, are – the patient; the operator; the assistants; the instruments; the light, where and how; how many things, and how; where the body, and the instruments; the time; the manner; the place.

Roman poet

But that which is incurable must be cut away with the knife, lest the untainted part also draw infection.

Translated by Frank Justus Miller

*Metamorphoses* (Volume 1)

Book I, l. 190–191 (p. 15)

William Heinemann. London, England. 1916

**Selzer, Richard** 1928–  
American physician and essayist

One enters the body in surgery, as in love, as though one were an exile returning at last to his hearth, daring uncharted darkness in order to reach home.

*Mortal Lessons*

The Surgeon as Priest (p. 25)

Simon & Schuster. New York, New York, USA. 1976

...surgery is the red flower that blooms among the leaves and thorns that are the rest of Medicine.

*Letters to a Young Doctor*

Letter II (p. 510)

Simon & Schuster, Inc. New York, New York, USA. 1982

**Shaw, George Bernard** 1856–1950  
Irish comic dramatist and literary critic

We do not go to the operating table as we go to the theatre, to the picture gallery, to the concert room, to be entertained and delighted; we go to be tormented and

maimed, lest a worse thing should befall us.... The experts on whose assurance we face this horror and suffer this mutilation should have no interests but our own to think of; should judge our cases scientifically; and should feel about them kindly.

*The Doctor's Dilemma*

Preface on Doctors

Psychology of Self Respect in Surgeons (p. xxii)

Brentano's. New York, New York, USA. 1920

The notion that therapeutics or hygiene or surgery is any more or less scientific than making or cleaning boots is entertained only by people to whom a man of science is still a magician who can cure diseases, transmute metals, and enable us to live forever.

*The Doctor's Dilemma*

Preface on Doctors

The Technical Problem (p. lxxxii)

Brentano's. New York, New York, USA. 1920

**Sigerist, Henry E.** 1891–1957

German-born medical historian

Ignorance is more immediately fatal in surgery than in medicine, or rather, mistakes are more easily apparent to the layman.

*A History of Medicine* (Volume 2)

Chapter III, Section 1 (p. 203)

Oxford University Press, Inc. New York, New York, USA. 1961

**Yeo, R.**

No biographical data available

The work was in a moment done.

If possible, without a groan:

So swift thy hand, I could not feel

The progress of the cutting steel....

For quicker e'en than sense, or thought,

The latent ill view was brought;

And I beheld with ravish'd eyes,

The cause of all my agonies.

And above all the race of men,

I'll bless my GOD for Cheselden.

The Grateful Patient

*Gentlemen's Magazine*, Volume 2, 1732 (p. 769)

## SURPRISE

**Faraday, Michael** 1791–1867

English physicist and chemist

Let us now consider, for a little while, how wonderfully we stand upon this world. Here it is we are born, bred, and live, and yet we view these things with an almost entire absence of wonder to ourselves respecting the way in which all this happens. So small, indeed, is our wonder, that we are never taken by surprise.

*Institution*

Lecture 1 (p. 14)

George Routledge & Sons. New York, USA. 1874

**Kearton, Richard** 1862–1928

English naturalist

Among the greatest delights of natural history are its surprises.

*Wild Nature's Ways*

Chapter 2 (p. 53)

Cassell & Co., Ltd. London, England. 1903

**Planck, Max** 1858–1947

German physicist

...compared with immeasurably rich, ever young Nature, advanced as man may be in scientific knowledge and insight, he must forever remain the wondering child and must constantly be prepared for new surprises.

*Scientific Autobiography and Other Papers*

The Meaning and Limits of Exact Science, Part IV (p. 117)

Philosophical Library. New York, New York, USA. 1949

**Thomas, Lewis** 1913–93

American physician and biologist

The safest and most prudent of bets to lay money on is surprise. There is a very high probability that whatever astonishes us in biology today will turn out to be useable, and useful, tomorrow.

*The Medusa and the Snail: More Notes of a Biology Watcher*

Medical Lessons from History (p. 172)

The Viking Press. New York, New York, USA. 1979

**Watson, Sir William** 1858–1935

English author of lyrical and political verse

Strange the world about me lies,

Never yet familiar grown – Still disturbs me with surprise,

Haunts me like a face half known.

*The Poems of William Watson*

World Stangeness

The Macmillan Company. New York, New York, USA. 1893

## SURVEY

**Deming, William Edwards** 1900–93

American statistician, educator, and consultant

A perfect survey is a myth.

*Some Theory of Sampling* (p. 24)

John Wiley & Sons, Inc. New York, New York, USA. 1950

A questionnaire is never perfect: some are simply better than others.

*Some Theory of Sampling* (p. 31)

John Wiley & Sons, Inc. New York, New York, USA. 1950

The only excuse for taking a survey is to enable a rational decision to be made on some problem that has arisen and

on which decision, right or wrong, will be made.

*Some Theory of Sampling* (p. 545)

John Wiley & Sons, Inc. New York, New York, USA. 1950

### Deutscher, I.

No biographical data available

...neither the interviewer nor the instrument should act in any way upon the situation. The question, ideally, should be so put and so worded as to be unaffected by contextual contaminations. The interviewer must be an inert agent who exerts no influence or response by tone, expression, stance, or statement. The question must be unloaded in that it does not hint in any way that one response is more desirable or more correct than any other response. It must be placed in the sequence of the instrument in such a way that the subject's response is not affected by previous queries or by his own previous responses.

In S.Z. Nagi and R.G. Corwin

*The Social Contexts of Research*

Public and Private Opinions: Social Situations and Multiple Realities

(p. 325)

John Wiley & Sons, Inc. New York, New York, USA. 1972

### Fisher, Sir Ronald Aylmer 1890–1962

English statistician and geneticist

No aphorism is more frequently repeated with field trial, than that we must ask Nature few questions or, ideally, one question at a time. The writer is convinced that this view is wholly mistaken. Nature, he suggests, will best respond to a logical and carefully thought out questionnaire; indeed, if we ask her a single question, she will often refuse to answer until some other topic has been discussed.

*Journal of the Ministry of Agriculture of Great Britain*, Volume 33

(p. 511)

### Heinlein, Robert A. 1907–88

American science fiction writer

But what is the purpose of your survey? he asked.

“Does it need a purpose? I tell you, I just made it up.”

“But your numbers are too few to be significant. You can't fair a curve with so little data. Besides, your conditions are uncontrolled. Your results don't mean anything.”

*Beyond this Horizon*

Chapter One (p. 2)

Gregg Press. Boston, Massachusetts, USA. 1981

### Norton, John K.

No biographical data available

The time of busy people is sometimes wasted by time-consuming questionnaires dealing with inconsequential topics, worded so as to lead to worthless replies, and circulated by untrained and inexperienced individuals, lacking in facilities for summarizing and disseminating any worthwhile information which they may obtain.

In Douglas R. Berdie and John F. Anderson

*Questionnaires: Design and Use* (p. ix)

The Scarecrow Press, Inc. Metuchen, New Jersey, USA. 1974

### Oppenheim, Abraham Naftali 1924–

No biographical data available

A questionnaire is not just a list of questions or a form to be filled out. It is essentially a scientific instrument for measurement and for collection of particular kinds of data. Like all such instruments, it has to be specifically designed according to particular specifications and with specific aims in mind, and the data it yields are subject to error. We cannot judge a questionnaire as good or bad, efficient or inefficient, unless we know what job it was meant to do. This means that we have to think not merely about the wording of particular questions, but first and foremost, about the design of the investigation as a whole.

*Questionnaire Design and Attitude Measurement*

Chapter 1 (pp. 2–3)

Basic Books, Inc. New York, New York, USA. 1966

### Perelman, Sidney Joseph 1904–79

American comic writer

There is nothing like a good, painstaking survey full of decimal points and guarded generalizations to put a glaze like a Sung vase on your eyeballs.

*Keep it Crisp*

Sleepy-Time Extra (p. 173)

Random House, Inc. New York, New York, USA. 1946

### Strong, Lydia

No biographical data available

Your sales last year just paralleled the sales of rum cokes in Rio de Janeiro, as modified by the sum of the last digits of all new telephone numbers in Toronto. So, why bother with surveys of your own market? Just send away for the data from Canada and Brazil.

Sales Forecasting: Problems and Prospects

*Management Review*, September, 1956 (p. 803)

## SURVEYOR

### Everett, Edward 1794–1865

Whig Party politician

The pen of inspiration, ranging all nature and life for imagery to set forth the Creator's power and wisdom, finds them best symbolized in the skill of the surveyor.

*Inauguration of Washington University at Saint Louis, Missouri. April 23, 1857*  
Mr. Everett's Inaugural Address on Academic Education (p. 91)  
Little, Brown & Co. Boston, Massachusetts, USA. 1857

## SURVIVAL

### Anderson, Clifford N.

No biographical data available

Nature's pattern is one of promiscuous and bountiful production of innumerable forms. Then, instead of making it easy to survive, Nature makes it difficult. Life is a struggle. The species that survive are those that can cope with the environment.

*The Fertile Crescent* (p. 11)  
Sylvester Press. Fort Lauderdale, Florida, USA. 1972

### Arnold, Sir Edwin 1832–1904

English poet

How lizard fed on ant, and snake on him,  
And kite on both; and how the fish-hawk robbed  
The fish-tiger of that which it had seized;  
The shrike chasing the bulbul, which did chase  
The jeweled butterflies; till everywhere  
Each slew a slayer and in turn was slain,  
Life living upon death.

*Edwin Arnold's Poetical Works* (Volume 1)  
The Light of Asia, Book the First (p. 21)  
Roberts Brothers. Boston, Massachusetts, USA. 1889

### Darwin, Charles Robert 1809–82

English naturalist

What a trifling difference must often determine which shall survive, and which shall perish.

In Francis Darwin (ed.)  
*The Life and Letters of Charles Darwin* (Volume 1)  
Darwin to Asa Gray, September 5, 1857 (p. 480)  
D. Appleton & Company. New York, New York, USA. 1896

I should premise that I use this term [Struggle for Existence] in a large and metaphorical sense including dependence of one being on another, and including (which is more important) not only the life of the individual, but success in leaving progeny....

In *Great Books of the Western World* (Volume 49)  
*The Origin of Species by Means of Natural Selection*  
Chapter III (p. 33)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### Fort, Charles 1874–1932

American writer

The fittest survive. What is meant by the fittest? Not the strongest; not the cleverest. Weakness and stupidity everywhere survive. There is no way of determining fitness except in that a thing does survive. "Fitness," then, is only another name for "survival."

*The Book of the Damned*  
Chapter III (p. 26)  
Boni & Liveright. New York, New York, USA. 1919

### Sagan, Carl 1934–96

American astronomer and science writer

If we have a profound respect for other human beings as co-equal recipients of this precious patrimony of 4.5 billion years of evolution, why should the identification not apply also to all the other organisms on Earth which are equally the product of 4.5 billion years of evolution? We care for a small fraction of the organisms on Earth – dogs, cats, and cows, for example – because they are useful or because they flatter us. But spiders and salamanders, salmon and sunflowers are equally our brothers and sisters.

*The Cosmic Connection: An Extraterrestrial Perspective*  
Chapter 1 (p. 7)  
Dell Publishing, Inc. New York, New York, USA. 1975

### Thomson, Sir John Arthur 1861–1933

Scottish naturalist

The shore is almost noisy with the conjugation of the verb to eat in its many tenses.

*The Outline of Science* (Volume 1)  
Chapter III (p. 117)  
G.P. Putnam's Sons. New York, New York, USA. 1937

### Walker, Marshall John

American physicist

The survival technique of the tyrannosaurus was ferocity; it is extinct. The survival technique of the dodo was passive resistance; it is extinct. The survival technique of man is science...

*The Nature of Scientific Thought*  
Chapter XV (p. 179)  
Prentice-Hall, Inc., Englewood Cliffs, New Jersey, USA. 1963

## SURVIVAL OF THE FITTEST

### Standen, Anthony

Anglo-American science writer

"Survival of the fittest" led to the concept of "nature red in tooth and claw" and this is not sufficiently wishy-washy for modern scientists.

*Science Is a Sacred Cow*  
Chapter IV (p. 107)  
E.P. Dutton. New York, New York, USA. 1950

### Sonneberg, Walter

No biographical data available

The "Survival of the Fittest" means the survival of the survivor.

*Social Eccentricities*  
Social Eccentricities (p. 37)  
Broadway Publishing Co. New York, New York, USA. 1906

**SWAMP**

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

Surely one may as profitably be soaked in the juices of a swamp for one day as pick his way dry-shod over sand.

*A Week on the Concord and Merrimack Rivers*

Thursday (p. 139)

James S. Osgood & Co. Boston, Massachusetts, USA. 1873

**SWELLS**

**Burroughs, John** 1837–1921  
American naturalist and essayist

The swells that beat upon the ocean are not the result of a local agitation of the water; the pulse of the earth is in them; the pull of the sun and the moon is in them. They are more cosmic than terrestrial.

*The Heart of Burroughs's Journals*

January, 1920 (p. 328)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1928

**SYMBIOTICISM**

**Wallin, Ivan E.** 1883–1969  
American anatomist

Their universal presence in the cell, coupled with the known properties of bacteria, appear to indicate that mitochondria represent the end adjustment of a fundamental biologic process. The establishment of intimate microsymbiotic complexes has been designated “symbioticism” by the author....

*Symbioticism and the Origin of Species*

Chapter I (p. 8)

Williams & Wilkins Company. Baltimore, Maryland, USA. 1927

Symbioticism, then is proposed as the fundamental factor or the cardinal principle involved in the origin of species.

*Symbioticism and the Origin of Species*

Chapter I (p. 8)

Williams & Wilkins Company. Baltimore, Maryland, USA. 1927

**SYMBIOSIS**

**de Bary, Anton** 1831–88  
German scientist and physician

Parasitism, mutualism, lichenism, etc., are each special cases of that one general association for which the term symbiosis is proposed as the collective name.

*Vortrag auf der Versammlung der Naturforscher und Ärzte zu Cassel*

Die Erscheinung der Symbiose (p. 21)

Publisher undetermined

**Merezhkovskii, Konstantine** 1855–1921  
Russian biologist

Above all, a plant, an oak for example, is an animal. An enormous animal in which live parasites or rather symbionts, an infinite multitude of small microscopic green organisms, of the species of unicellular “algae,” cyanophyceae.

In Jan Sapp

*Evolution by Association: A History of Symbiosis*

Chapter 4 (p. 47)

Oxford University Press, Inc. New York, New York, USA. 1994

**Pound, Roscoe** 1870–1964  
American jurist

Ethically, there is nothing in the phenomena of symbiosis to justify the sentimentalism they have excited in certain writings. Practically, in some instances, symbiosis seems to result in mutual advantage. In all cases it results advantageously to one of the parties, and we can never be sure that the other would not have been nearly as well off, if left to itself.

*Symbiosis and Mutualism*

*The American Naturalist*, Volume 27, Number 318, June, 1893 (p. 520)

**Sapp, Jan**

No biographical data available

We have located studies of symbiosis peering through the cracks and creeping across the boundaries which separated ecology from evolution, plants from animals, health from disease, nurture from nature, and the individual from the community. In doing so, we have uncovered layers of oppositions, doctrines and disciplines, and diverse phenomena that have led to disparate interpretations of symbiosis, its scope and significance. In summarizing them here, we see that this history is not a matter of peeling off obstacles to come closer to some hidden core of naked truth. Symbiosis is as much like an onion today as it was a century ago.

*Evolution by Association: A History of Symbiosis*

Concluding Remarks (p. 205)

Oxford University Press, Inc. New York, New York, USA. 1994

**SYMBIOTE**

**Portier, Paul** 1866–1922  
French biologist

All Living beings, all animals from Amoeba to Man, all plants from Cryptogams to Dicotyledons are constituted by an association, the “*emboîtement*” of two different beings.

Each living cell contains in its protoplasm formations which histologists designate by the name of “mitochondria.” These organelles are, for me, nothing other than symbiotic bacteria, which I call “symbiotes.”

*Les Symbiotes* (p. vii)

Masson. Paris, France. 1918

**SYMBOL****Author undetermined**

There were the warlike Symbols, who had borne the royal flag through many perilous campaigns; tall people of fight, lordly with plumes and armor. There were the mysterious Surds, the princely Polynomials, and the uneasy Radicals, who were suspected of Red Republicanism ...

The Symbol of Darkness

*The Knickerbocker*, Volume 34, Number 3, September, 1849 (p. 214)

**Bell, E. T. (Eric Temple)** 1883–1960

Scottish-American mathematician and educator

If a lunatic scribbles a jumble of mathematical symbols it does not follow that the writing means anything merely because to the inexperienced eye it is indistinguishable from higher mathematics.

*Men of Mathematics* (p. 232)

Simon & Schuster. New York, New York, USA. 1986

**Bers, Lipman** 1914–93

Mathematician

What is the strength of mathematics? What makes mathematics possible? It is symbolic reasoning. It is like “canned thought.” You have understood something once. You encode it, and then you go on using it without each time having to think about it. Now there may be people who are totally unable to follow symbolic reasoning – just as I am unable to carry a tune (and yet I do say to myself that I enjoy music). So you must try to explain mathematics without using any symbols. But this may be impossible. Without symbolic reasoning you cannot make a mathematical argument.

In D. Albers, G. Alexanderson and C. Reid

*More Mathematical People: Contemporary Conversations*

Lipman Bers (p. 16)

Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

**Boole, George** 1815–64

English mathematician

The most accomplished in the use of symbols must sometimes throw aside his abstractions and resort to homelier methods for trial and verification – not doubting, in so doing, the truth which lies at the bottom of his symbolism, but distrusting his own powers.

*A Treatise on Differential Equations* (4th edition)

Preface (p. vii)

Macmillan & Co Ltd. London, England. 1877

**Brodie, Sir Benjamin Collins** 1817–80

English chemist

A symbol, however, should be something more than a convenient and compendious expression of facts. It is, in the strictest sense, an instrument for the discovery of

facts, and is of value mainly with reference to this end, by its adaptation to which it is to be judged.

The Calculus of Chemical Observations

*Philosophical Transactions of the Royal Society of London*, Volume 156, 1866 (p. 857)

**Buchanan, Scott** 1895–1968

American educator and philosopher

Symbols, formulae and proofs have another hypnotic effect. Because they are not immediately understood, they, like certain jokes, are suspected of holding in some sort of magic embrace the secret of the universe, or at least some of its more hidden parts.

*Poetry and Mathematics*

Chapter 1 (p. 37)

The University of Chicago Press. Chicago, Illinois, USA. 1975

Each symbol used in mathematics, whether it be a diagram, a numeral, a letter, a sign, or a conventional hieroglyph, may be understood as a vehicle which someone has used on a journey of discovery.

*Poetry and Mathematics*

Chapter 2 (p. 47)

The University of Chicago Press. Chicago, Illinois, USA. 1975

**Butler, James Newton**

No biographical data available

**Bobrow, Daniel Gureasko**

No biographical data available

“When I use a symbol, it means just what I choose it to mean – neither more nor less.”

“The question is, whether you can make symbols mean so many different things?”

“The question is, which is to be master – that’s all.”

*The Calculus of Chemistry*

Chapter 2 (p. 7)

W.A. Benjamin, Inc. New York, New York, USA. 1965

**Chester, Marvin** 1930–

American physicist

Meaning does not reside in the mathematical symbols. It resides in the cloud of thought enveloping these symbols. It is conveyed in words; these assign meaning to the symbols.

*Primer of Quantum Mechanics*

Chapter 1 (p. 2)

Dover Publications. New York, New York, USA. 2003

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

The symbol A is not the counterpart of anything in familiar life. To the child the letter A would seem horribly abstract; so we give him a familiar conception along with it.

*The Nature of the Physical World*

Introduction (p. xiv)

The Macmillan Company. New York, New York, USA. 1930

Science aims at constructing a world which shall be symbolic of the world of commonplace experience. It is not at all necessary that every individual symbol that is used should represent something in common experience or even something explicable in terms of common experience. The man in the street is always making this demand for concrete explanation of the things referred to in science; but of necessity he must be disappointed.

*The Nature of the Physical World*

Introduction (p. xv)

Ann Arbor Paperbacks. Ann Arbor, Michigan, USA. 1958

the mind is not content to leave scientific Truth in a dry husk of mathematical symbols, and demands that it shall be alloyed with familiar images. The mathematician, who handles  $x$  so lightly, may fairly be asked to state, not indeed the inscrutable meaning of  $x$  in nature, but the meaning which  $x$  conveys to *him*.

*Space, Time and Gravitation*

Preface (p. vi)

At The University Press. Cambridge, England. 1921

**Flammarion, Camille** 1842–1925

French astronomer and writer

The study of Astronomy is not, as many suppose, the sacrifice of oneself in a cerebral torture that obliterates all the beauty, the fascination, and the grandeur of the pageant of Nature. Figures, and naught but figures, would not be entertaining, even to those most desirous of instruction. Let the reader take courage! We do not propose that he shall decipher the hieroglyphics of algebra and geometry. Perish the thought! For the rest, figures are but the scaffolding, the method, and do not exist in Nature.

Translated by Frances Alice Welby

*Astronomy for Amateurs*

Introduction (p. 14)

D. Appleton & Co. New York, New York, USA. 1915

**Glaisher, James Whitbread Lee** 1848–1928

English mathematician

The mathematician requires tact and good taste at every step of his work, and he has to learn to trust to his own instinct to distinguish between what is really worthy of his efforts and what is not; he must take care not to be the slave of his symbols, but always to have before his mind the realities which they merely serve to express.

*Report of the Sixtieth Meeting of the British Association for the Advancement of Science*

Presidential address (p. 725)

John Murray. London, England. 1891

**Goldstein, Herbert** 1922–2005

American Physicist and author

It has been remarked in a jocular vein that if H stands for the Hamiltonian, K must stand for the Kamiltonian!

*Classical Mechanics* (2nd edition)

Classical Transformations (p. 380)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1980

**Hertz, Heinrich** 1857–94

German physicist

Experience is the collecting of what is similar in different particular perceptions.

Translated by D.E. Jones and J.T. Walley

*The Principles of Mechanics Presented in a New Form*

Introduction (p. 1)

Macmillan & Co. London, England. 1899

**Hilbert, David** 1862–1943

German mathematician

Arithmetical symbols are written diagrams and geometrical figures are graphic formulas.

Mathematical Problems

*Bulletin of the American Mathematical Society*, Volume 8, July 1902

(p. 443)

In the beginning there was the symbol.

In Walter R. Fuchs

*Mathematics for the Modern Mind*

Chapter 7, Section 7. 1 (p. 164)

The Macmillan Company. New York, New York, USA. 1967

**Huxley, Aldous** 1894–1963

English writer and critic

...some of the greatest advances in mathematics have been due to the invention of symbols, which it afterwards became necessary to explain; from the minus sign proceeded the whole theory of negative quantities.

*Jesting Pilate*

India and Burma (p. 108)

Chatto & Windus. London, England. 1926

**Jefferies, Richard** 1848–87

English naturalist and author

In the mind all things are written in pictures – there is no alphabetical combination of letters and words; all things are pictures and symbols.

*The Open Air*

Wild Flowers

Chatto & Windus. London, England. 1908

**Jung, Carl G.** 1875–1961

Swiss psychiatrist and founder of analytical psychology

Thus a word or an image is symbolic when it implies something more than its obvious and immediate meaning. It has a wider “unconscious” aspect that is never precisely defined or fully explained. . . . As the mind explores the symbols it is led to ideas that lie beyond the grasp of reason.

*Man and His Symbols*

Part I. The Importance of Dreams (p. 20)

Doubleday & Company, Inc. Garden City, New York, USA. 1964

The Sign is always less than the concept it represents, while a symbol always stands for something more than its obvious and immediate meaning. Symbols, moreover, are natural and spontaneous products.

*Man and His Symbols*

Part I. The Analysis of Dreams (p. 55)  
Doubleday & Company, Inc. Garden City, New York, USA. 1964

**Mach, Ernst** 1838–1916

Austrian physicist and philosopher

The use of the signs of algebra and analysis, which are merely symbols of operations to be performed, is due to the observation that we can materially disburden the mind in this way and spare its powers for more important and more difficult duties, by imposing all mechanical operations upon the hand.

Translated by Thomas J. McCormack

*Popular Scientific Lectures* (2nd edition)

On the Economical Nature of Physical Inquiry (p. 196)

The Open Court Publishing Co. Chicago, Illinois, USA. 1897

**Nicholas of Cusa** 1401–64

German philosopher, mathematician, and physician

If we approach the Divine through symbols, then it is most suitable that we use mathematical symbols, these have an indestructible certainty.

In Stanley Gudder

*A Mathematical Journey* (p. 349)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1976

**Pearson, Karl** 1857–1936

English mathematician

...the mathematician carried along on his flood of symbols, dealing apparently with purely formal truths, may still reach results of endless importance for our description of the physical universe.

*The Grammar of Science*

Chapter XII (p. 505)

Adam & Charles Black. London, England. 1900

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

...if we wish to learn the whole of Arithmetic, Algebra, the Calculus, and indeed all that is usually called pure mathematics (except Geometry), we must start with a dictionary of three words. One symbol stands for *zero*, another for *number*, and a third for *next after*.

*Mysticism and Logic: And Other Essays*

Chapter V (p. 78)

Longmans, Green & Co. London, England. 1919

**Tillyard, E. M. W.** 1889–1962

English classical scholar

**Lewis, C. S. (Clive Staples)** 1898–1963

English author

Two kinds of symbol must surely be distinguished. The algebraic symbol comes naked into the world of mathematics and is clothed with value by its masters. A poetic symbol – like the Rose, for Love, in Guillaume de Lorris – comes trailing clouds of glory from the real world,

clouds whose shape and colour largely determine and explain its poetic use. In an equation, x and y will do as well as a and b; but the Romance of the Rose could not, without loss, be re-written as the Romance of the Onion, and if a man did not see why, we could only send him back to the real world to study roses, onions, and love, all of them still untouched by poetry, still raw.

*The Personal Heresy: A Controversy*

Chapter V (p. 97)

Oxford University Press, Inc. London, England. 1939

**Truesdell, Clifford** 1919–2000

American mathematician, mathematics historian, and natural philosopher

There is nothing that can be said by mathematical symbols and relations which cannot also be said by words. The converse, however, is false. Much that can be and is said by words cannot successfully be put into equations, because it is nonsense.

*Six Lectures on Modern Natural Philosophy*

III, Thermodynamics of Visco-Elasticity (p. 35)

Springer-Verlag. Berlin, West Germany. 1966

**von Neumann, Johann** 1903–57

Hungarian-American mathematician

We must regard classical mathematics as a combinatorial game played with symbols ...

In Paul Benacerraf and Hillary Putnam

*Philosophy of Mathematics: Selected Readings* (2nd edition)

The Formalist Foundations of Mathematics (p. 62)

Cambridge University Press. Cambridge, England. 1983

**Westaway, Frederic William**

No biographical data available

...once a science lesson arrives at the stage of symbols, it may cease to be Science altogether; once a “law” is established, the subsequent work is likely to take the form of mere Algebra.

*Scientific Method: Its Philosophical Basis and Its Modes of Application*

Chapter I (p. 4)

Blackie & Son. London, England. 1924

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

Mathematics is often considered a difficult and mysterious science, because of the numerous symbols which it employs. Of course, nothing is more incomprehensible than a symbolism which we do not understand. Also a symbolism, which we only partially understand and are unaccustomed to use is difficult to follow. In exactly the same way the technical terms of any profession or trade are incomprehensible to those who have never been trained to use them. But this is not because they are difficult in themselves. On the contrary they have invariably been introduced to make things easy.

*An Introduction to Mathematics*

Chapter 5 (p. 40)

Oxford University Press, Inc. New York, New York, USA. 1958

...in mathematics, granted that we are giving any serious attention to mathematical ideas, the symbolism is invariably an immense simplification.

*An Introduction to Mathematics*

Chapter 5 (p. 40)

Oxford University Press, Inc. New York, New York, USA. 1958

There is an old epigram which assigns the empire of the sea to the English, of the land to the French, and of the clouds to the Germans. Surely it was from the clouds that the Germans fetched + and – ; the ideas which these symbols have generated are much too important to the welfare of humanity to have come from the sea or from the land.

*An Introduction to Mathematics*

Chapter 6 (p. 60)

Oxford University Press, Inc. New York, New York, USA. 1958

**Young, Jacob William Albert** 1865–1948

American mathematician

The training which mathematics gives in working with symbols is an excellent preparation for other sciences... the world's work requires constant mastery of symbols.

*The Teaching of Mathematics in the Elementary and the Secondary School*

Chapter II (p. 42)

Longmans, Green & Co. New York, New York, USA. 1907

## SYMBOLIC LOGIC

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

Symbolic Logic has been disowned by many logicians on the plea that its interest is mathematical, and by many mathematicians on the plea that its interest is logical.

*Universal Algebra*

Preface (p. 6)

Cambridge University Press. Cambridge, England. 1898

## SYMBOLS

**Carrel, Alexis** 1873–1944

French surgeon and biologist

They [astronomy, mechanics and physics] search for reality beyond the realm of common thought up to unutterable abstractions consisting only of equations of symbols.

*Man, The Unknown*

Chapter I (p. 1)

Harper & Brothers Publishers. New York, New York, USA. 1935

## SYMMETRY

**Aristotle** 384 BCE–322 BCE

Greek philosopher

A rose which varies from the ideal of straightness to a hook or snub may still be of good shape and agreeable to the eye.

*Politics*

**Carroll, Lewis (Charles Dodgson)** 1832–98

English writer and mathematician

Perhaps Looking-glass milk isn't good to drink...

*The Complete Works of Lewis Carroll*

*Through the Looking-Glass*

Chapter I (p. 147)

The Modern Library. New York, New York, USA. 1936

You boil it in saw dust: you salt it in glue:

You condense it with locust and tape:

Still keeping one principle object in view –

To preserve its symmetrical shape.

*The Complete Works of Lewis Carroll*

*The Hunting of the Snark*

Fit the Fifth (p. 772)

The Modern Library. New York, New York, USA. 1936

**Chesterton, G. K. (Gilbert Keith)** 1874–1936

English author

Suppose some mathematical creature from the moon were to reckon up the human body; he would at once see that the essential thing about it was that it was duplicate. A man is two men, he on the right exactly resembling him on the left. Having noted that there was an arm on the right and one on the left, a leg on the right and one on the left, he might go further and still find on each side the

same number of fingers, the same number of toes, twin eyes, twin ears, twin nostrils, and even twin lobes of the brain. At last he would take it as a law; and then, where he found a heart on one side, would deduce that there was another heart on the other. And just then, where he most felt he was right, he would be wrong.

*Orthodoxy*

Chapter VI (p. 149)

John Lane Company. New York, New York, USA. 1918

**Descartes, René** 1596–1650

French philosopher, scientist, and mathematician

Anyone who, upon looking down at his bare feet, doesn't laugh, has either no sense of symmetry or no sense of humor.

American science writer

...let us pause to slake our thirst one last time at symmetry's bubbling spring.

*Coming of Age in the Milky Way*

Chapter 20 (p. 385)

William Morrow & Company, Inc. New York, New York, USA. 1988

**Frankland, A.**

No biographical data available

When the formulae of inorganic compounds are considered even a superficial observer is struck with the general symmetry of their construction; the compounds of nitrogen, phosphorous, antimony and arsenic especially exhibit the tendency of these elements to form compounds containing three or five equivalents of other elements, and it is in these proportions that their affinities are best satisfied.

*Philosophical Transactions of the Royal Society of London*, Volume 67, 1852 (p. 417)

**Gross, David J.** 1941–

American particle physicist

As we explore physics at higher and higher energy, revealing its structure at shorter and shorter distances, we discover more and more symmetry.

The Role of Symmetry in Fundamental Physics

*Proceedings of the National Academy of Sciences of the United States of America*, Volume 23, Number 95, December 10, 1996 (p. 14256)

**Herbert, George** 1593–1633

English clergyman and metaphysical poet

My body is all symmetry,  
Full of proportions, one limb to another,  
And all to all the world besides:  
Each part may call the farthest, brother:

For head with foot hath private smity,  
And both with moon and tides.

*The Works of George Herbert*

*The Temple, Man*

Thomas Y. Crowell & Company. Birmingham, England. No date

**Joyce, James** 1882–1941

Irish expatriate writer and poet

ZOE: Come and I'll peel off.

BLOOM: (Feeling his occiput dubiously with the unparalleled embarrassment of a harassed peddler gauging the symmetry of her peeled pears.) Somebody would be dreadfully jealous if she knew.

*Ulysses* (p. 490)

Random House, Inc. New York, New York, USA. 1946

**Kaku, Michio** 1947–

Japanese-American theoretical physicist

**Thompson, Jennifer Trainer**

American author

...nature, at the fundamental level, does not just prefer symmetry in a physical theory; nature demands it.

*Beyond Einstein: The Cosmic Quest for the Theory of the Universe*

Chapter 6 (p. 108)

Bantam Books. Toronto, Ontario, Canada. 1987

**Mackay, Charles** 1814–89

English poet and journalist

Truth...and if mine eyes

Can bear its blaze, and trace its symmetries,

Measure its distance, and its advent wait,

I am no prophet – I but calculate.

*The Poetical Works of Charles Mackay*

The Prospects of the Future

G. Routledge & Sons. London, England. 1857

**Mao Zedong** 1893–1976

Chinese political and military leader and Communist Party chairman

Tell me why should symmetry be of importance?

In T.D. Lee

*Symmetries, Asymmetries, and the World of Particles*

30 May, 1974 (p. xi)

Washington University Press. Seattle, Washington, USA, and London, England. 1988

**Maxwell, James Clerk** 1831–79

Scottish physicist

The mathematician has, above all things, an eye for symmetry ...

*Report for the Fortieth Meeting of the British Association for the Advancement of Science*

Mathematics and Physics (p. 1)

John Murray. London, England. 1871

**National Research Council (USA)**

Not only physicists but everyone who has studied quantum mechanics knows that all known particles, without

exception, fall into one or the other of just two classes, called fermions and bosons, which differ from one another profoundly on a certain question of symmetry. The difference is as fundamental as any difference could be. Although usually expressed somewhat abstractly, the distinction is less recondite than some theological distinctions over which men have quarreled fiercely.

*Physics in Perspective* (Volume 1)

Chapter 3 (p. 64)

National Academy of Sciences

Washington, D.C. 1972

**Newman, James Roy** 1907–66

Mathematician and mathematical historian

Symmetry establishes a ridiculous and wonderful cousinship between objects, phenomena, and theories outwardly unrelated: terrestrial magnetism, women's veils, polarized light, natural selection, the theory of groups, invariants and transformations, the work habits of bees in the hive, the structure of space, vase designs, quantum physics, scarabs, flower petals, X-ray interference patterns, cell division in sea urchins, equilibrium positions in crystals, Romanesque cathedrals, snowflakes, music, the theory of relativity.

*The World of Mathematics* (Volume 1)

Commentary On Symmetry (p. 670)

Simon & Schuster. New York, New York, USA. 1956

**Pascal, Blaise** 1623–62

French mathematician and physicist

Those who make antitheses by forcing words are like those who make false windows for symmetry.

In *Great Books of the Western World* (Volume 33)

*Pensées*

Section I, 27

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Symmetry is what we see at a glance...

In *Great Books of the Western World* (Volume 33)

*Pensées*

Section I, 28

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Valéry, Paul** 1871–1945

French poet and critic

The universe is built on a plan the profound symmetry of which is somehow present in the inner structure of our intellect.

In Jefferson Hane Weaver

*The World of Physics* (Volume 2)

O.2 (p. 521)

Simon & Schuster. New York, New York, USA. 1987

**Warner, Sylvia Townsend** 1893–1978

English novelist and poet

An umbrella, Lueli, when in use resembles the – the shell that would be formed by rotating an arc of curve about its

axis of symmetry, attached to a cylinder of small radius whose axis is the same as the axis of symmetry of the generating curve of the shell. When not in use it is properly an elongated cone, but it is more usually helicoidal in form.

Lueli made no answer. He lay down again, this time face downward.

*Mr. Fortune's Maggot*

Mr. Fortune's Maggot (p. 115)

New York Review of Books. New York, New York, USA. 1927

**Weyl, Hermann** 1885–1955

German mathematician

Symmetry, as wide or as narrow as you may define its meaning, is one idea by which man through the ages has tried to comprehend and create order, beauty, and perfection.

*Symmetry*

Bilateral Symmetry (p. 5)

Princeton University Press. Princeton, New Jersey, USA. 1960

As far as I can see, all a priori statements in physics have their origin in symmetry.

*Symmetry*

Crystals. The General Mathematical Idea of Symmetry (p. 126)

Princeton University Press. Princeton, New Jersey, USA. 1952

Symmetry is a vast subject, significant in art and nature. Mathematics lies at its root, and it would be hard to find a better one on which to demonstrate the working of the mathematical intellect.

*Symmetry*

Crystals: The General Mathematical Idea of Symmetry (p. 145)

Princeton University Press. Princeton, New Jersey, USA. 1960

**Wickham, Anna (Edith Alice Mary**

**Harper)** 1884–1947

English poet

God, Thou great symmetry,

Who put a biting lust in me

From whence my sorrows spring

For all the frittered days

That I have spent in shapeless ways

Give me one perfect thing.

*The Contemplative Quarry, and The Man with a Hammer*

Envoi

Harcourt Brace. New York, USA. 1921

**Yang, Chen Ning** 1922–

Chinese-born American theoretical physicist

Nature seems to take advantage of the simple mathematical representations of the symmetry laws. When one pauses to consider the elegance and the beautiful perfection of the mathematical reasoning involved and contrast it with the complex and far-reaching physical consequences, a deep sense of respect for the power of the symmetry laws never fails to develop.

*Nobel Lectures, Physics 1942–1962*

Nobel lecture for award received in 1957

The Law of Parity Conservation and Other Symmetry Laws of Physics (p. 394)

Elsevier Publishing Company, Amsterdam, Netherlands. 1964

### Zee, Anthony

Chinese-American physicist and author

Pick your favorite group: write down the Yang-Mills theory with your groups as its local symmetry group; assign quark fields, lepton fields, and Higgs fields to suitable representations; let the symmetry be broken spontaneously. Now watch to see what the symmetry breaks down to. ...that, essentially, is all there is to it. Anyone can play. To win, one merely has to hit on the choice used by the Greatest Player of all time. The prize? Fame and glory, plus a trip to Stockholm.

*Fearful Symmetry*

Chapter 14 (pp. 253–254)

Macmillan Publishing Company, New York, New York, USA. 1986

## SYMPATHY

### Author undetermined

A want of sympathy on the part of the nurse is like a perpetual cold bath to a patient.

In Edward Everett Hale

*Modern Achievement*

Blunders in the Sick-Room (p. 419)

New York, New York, USA. 1902

## SYMPTOM

### Harc, Hobart Amory 1862–1931

American physician

A clear understanding by the physician of the value of the symptoms of disease which he sees and of those described by the patient is of vital importance for the purpose of diagnosis and treatment, and one of the advantages of older physicians over their younger brethren is the ability which they have gained through long training to grasp the essential details of a case almost at their first glance at the patient.

*Practical Diagnosis*

Introduction (p. 17)

Lea Brothers & Company, Philadelphia, Pennsylvania, USA. 1902

### Latham, Peter Mere 1789–1875

English physician

It is by symptoms, and by symptoms only, that we can learn the existence, and seat, and nature, of diseases in the living body, or can direct and methodize their treatment.

In William B. Bean

*Aphorisms from Latham* (p. 59)

Prairie Press, Iowa City, Iowa, USA. 1962

There is nothing that we call the symptom of a disease, which does not contain within itself much more than a mere sign. Heat, pain, redness, swelling, are called the signs of inflammation; but nature does not intend by them barely to intimate that inflammation exists; they are essentially connected with the processes she is carrying on.

*Lectures on Subjects Connected With Clinical Medicine*

Lecture VI (p. 143)

Longman, Rees, Orme, Brown, Green & Longman, London, England. 1836

## SYNTHESES

### Borel, Félix Edouard Justin Emile 1871–1956

French mathematician

It is the only worthy aim of human activity is the conquest of truth, we can hope to come near this inaccessible goal only by means of constantly widening syntheses.

*Space and Time*

Introduction (p. 33)

Dover Publications, New York, New York, USA. 1960

## SYNTHESIS

### Bernard, Claude 1813–78

French physiologist

It is generally agreed that synthesis reunites what analysis has divided, and that synthesis therefore verifies analysis, of which it is merely the counterproof or necessary complement.

Translated by Henry Copley Green

*An Introduction to the Study of Experimental Medicine*

Part Two, Chapter 4 (p. 90)

Henry Schuman, Inc. New York, New York, USA. 1949

### Berthelot, Marcellin (or Marcellin) Pierre

Eugène 1827–1907

French chemist and politician

The domain in which chemical synthesis exercises its creative power is vaster than that of nature herself.

In Philip Ball

*Designing the Molecular World: Chemistry at the Frontier* (p. 13)

Princeton University Press, Princeton, New Jersey, USA. 1994

### Cousin, Victor 1792–1867

French educational leader and philosopher

On the one hand, synthesis without analysis, gives a false science; on the other hand, analysis without synthesis, gives an incomplete science.

Translated by O.W. Wight

*Course of the History of Modern Philosophy* (Volume 1) (p. 325)

D. Appleton & Co. New York, New York, USA. 1852

### Dalton, John 1766–1844

English chemist and physicist

Chemical analysis and synthesis go no farther than the separation of particles one from another, and their reunion.

No new creation or destruction of matter is within the reach of chemical agency. We might as well attempt to introduce a new planet into the solar system, or to annihilate one already in existence, as to create or destroy a particle of hydrogen.

*A New System of Chemical Philosophy* (Volume 1)  
Part I, Chapter III (p. 212)  
R. Bickerstaff. London, England. 1810

**Mayr, Ernst** 1904–2005  
German-born American biologist

What is still lacking is a critical analysis of the writings of the architects of the synthesis.

*The Growth of Biological Thought: Diversity, Evolution, Inheritance*  
Chapter 12 (p. 568)  
Harvard University Press. Cambridge, Massachusetts, USA. 1982

We didn't sit down together and forge a synthesis. We all knew each other's writings; all spoke with each other. We all had the same goal, which was simply to understand fully the evolutionary process.... By combining our knowledge, we managed to straighten out all the conflicts and disagreements so that finally a united picture of evolution emerged.

In Pamela Weintraub (ed.)  
*The Omni Interviews*  
Darwin Flights (p. 47)  
Ticknor & Fields. New York, New York, USA. 1984

The term "evolutionary synthesis" was introduced by Julian Huxley in *Evolution: The Modern Synthesis* to designate the general acceptance of two conclusions: gradual evolution can be explained in terms of small genetic changes ("mutations") and recombination, and the ordering of this variation by natural selection; and the observed evolutionary phenomena, particularly macro-evolutionary processes and speciation, can be explained in a manner that is consistent with the known genetic mechanisms.

*The Evolutionary Synthesis*  
Prologue: Some Thoughts on the History of Evolutionary Synthesis (p. 1)  
Harvard University Press. Cambridge, Massachusetts, USA. 1980

**Seebach, D.**  
No biographical data available

No matter what the narrow goal of any particular project, whether the work involved is groundbreaking or of a more routine nature, synthesis and analysis are crucial to every chemist's activities.

*Organic Synthesis – Where Now?*  
*Angewandete Chemie International Edition in English*, Volume 29, 1990  
(p. 1321)

**Stryker, Melancthon Woolsey** 1851–1929  
American minister

Analysis is like turning a stocking inside out to mend it; synthesis is like turning it back to wear it.

*Hamilton, Lincoln & Other Addresses*  
Creeds (p. 158)  
William T. Smith & Co. Utica, New York, USA. 1896

**Vivilov, N. I.**  
No biographical data available

We are now entering an epoch of differential ecological, physiological and genetic classification. It is an immense work. The ocean of knowledge is practically untouched by biologists. It requires the joint labors of many different specialists – physiologists, cytologists, geneticists, systematists, and biochemists. It requires international spirit, the cooperative work of investigators throughout the whole world...it will bring us logically to the next step: integration and synthesis.

In Julian Huxley  
*The New Systematics*  
The New Systematics of Cultivated Plants (p. 565)  
University Press. Oxford, England. 1940

**von Goethe, Johann Wolfgang** 1749–1832  
German poet, novelist, playwright, and natural philosopher

"Affinities begin really to interest only when they bring about separations."

"What...is that miserable word, which unhappily we hear so often now-a-days – in the world; is that to be found in nature's lessons too?"

"Most certainly," answered Edward; "the title with which chemists were supposed to be most honorably distinguished was, artists of separation."

"It is not so anymore," replied Charlotte; "and it is well that it is not. It is a higher art, and it is a higher merit, to unite. An artist of union is what we should welcome in every province of the universe."

*Elective Affinities*  
Chapter IV (p. 38)  
Frederick Unger Publishing Company. New York, New York, USA. 1962

**Woodward, Robert Burns** 1917–79  
American chemist

The structure known, but not yet accessible by synthesis, is to the chemist what the unclimbed mountain, the uncharted sea, the untilled field, the unreachd planet, are to other men.... The unique challenge which chemical synthesis provides for the creative imagination and the skilled hands ensures that it will endure as long as men write books, paint pictures, and fashion things which are beautiful, or practical, or both.

In William H. Brock  
*The Norton History of Chemistry*  
Chapter 16 (p. 633)  
W.S. Norton & Company, Inc. New York, New York, USA. 1993

[S]ynthetic objectives are seldom if ever taken by chance, nor will the most painstaking, or inspired, purely

observational activities suffice. Synthesis must always be carried out by plan, and the synthetic frontier can be defined only in terms of the degree to which realistic planning is possible, utilizing all of the intellectual and physical tools available. It can scarcely be gainsaid that the successful outcome of a synthesis of more than thirty stages provides a test of unparalleled rigor of the predictive capacity of the science, and of the degree of its understanding of its portion of the environment.

In A.R. Todd (ed.)

*Perspectives in Organic Chemistry*

Synthesis (p. 155)

Interscience, Inc. New York, New York, USA. 1956

## SYSTEM

### Coates, Robert M.

No biographical data available

He has so clearly laid open and set before our eyes the most beautiful frame of the System of the World, that if King Alphonse were now alive he would not complain for want of the graces of simplicity or of harmony in it.

In Robert H. March

*Physics for Poets*

Preface to the Principia (p. 35)

McGraw-Hill, Inc. New York, New York, USA. 1996

### Cobb, Cathy

Chemist

In physical science, there is always the danger of falling in love with the system rather than the nature that inspired it.

*Magick, Mayhem, and Mavericks*

Part I, Introduction (p. 28)

Prometheus Books. Amherst, New York, USA. 2002

### de Morgan, Augustus 1806–71

English mathematician and logician

In every age of the world there has been an established system, which has been opposed from time to time by isolated and dissentient reformers. The established system has sometimes fallen, slowly and gradually: it has either been upset by the rising influence of some one man, or it has been sapped by gradual change of opinion in the many.

*A Budget of Paradoxes* (Volume 1) (2nd edition)

Introductory (p. 1)

The Open Court Publishing Co. Chicago, Illinois, USA. 1915

### Jantsch, Erich 1929–80

Austrian astrophysicist

...a system now appears as a set of coherent, evolving, interactive processes which temporarily manifest in globally stable structures that have nothing to do with the equilibrium and the solidity of technological structures.

Caterpillar and butterfly, for example, are two temporarily stabilized structures in the coherent evolution of one and the same system.

*The Self-organizing Universe* (p. 6)

Pergamon Press. Oxford, England. 1980

### Lavoisier, Antoine Laurent 1743–94

French chemist

Systems in physical science...are no more than appropriate instruments to aid the weakness of our organs: they are, properly speaking, approximate methods which put us on the path to the solution of the problem; these are the hypotheses which, successively modified, corrected, and changed in proportion as they are found false, should lead us infallibly one day, by a process of exclusion, to the knowledge of the true laws of nature.

*Mémoires de l'Académie Royale des Sciences 1777*

Memoir on Combustion in General (p. 592)

Facts, observations, experiments – these are the materials of a great edifice, but in assembling them we must combine them into classes, distinguish which belongs to which order and to which part of the whole each pertains.

*Mémoires de l'Académie Royale des Sciences 1777*

Memoir on Combustion in General (p. 592)

As dangerous as is the desire to systematize in the physical sciences, it is, nevertheless, to be feared that in storing without order a great multiplicity of experiments we obscure the science rather than clarify it, render it difficult of access to those desirous of entering upon it, and finally, obtain at the price of long and tiresome work only disorder and confusion.

*Mémoires de l'Académie Royale des Sciences 1777*

Memoir on Combustion in General (p. 592)

### Lincoln, Almira H. 1793–1884

Botanist

System is necessary in every science. It not only assists in the acquisition of knowledge, but enables us to retain what is thus acquired; and, by the laws of association, to call forth at will what is treasured up in the storehouse of the mind.

*Familiar Lectures on Botany, Practical, Elementary and Physiological*

Introduction (p. 10)

F.J. Huntington & Co. New York, New York, USA. 1853

### Peacock, Thomas Love 1785–1866

English writer

All philosophers who find  
Some favorite system to their mind,  
In every point to make it fit  
Will force all nature to submit.

*Headlong Hall* (p. 44)

J.M. Dent & Company London, England. No date

**Thomas, Lewis** 1913–93

American physician and biologist

You cannot meddle with one part of a complex system from the outside without the almost certain risk of setting off disastrous events that you hadn't counted on in other, remote parts.

*The Medusa and the Snail: More Notes of a Biology Watcher*

On Meddling (p. 110)

The Viking Press. New York, New York, USA. 1979

**Thompson, William Robin** 1887–1972

Canadian entomologist

The good systematist develops what the medieval philosophers called a habitus, which is more than a habit and is better designated by its other name of *secunda natura*. Perhaps, like a tennis player or a musician, he works best when he does not get too introspective about what he is doing.

The Philosophical Foundation of Systematics

*Canadian Entomology*, Volume 84, 1952 (p. 5)

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

Natural system – a contradiction in terms. Nature has no system; she has, she is life and its progress from an unknown center toward an unknowable goal. Scientific research is therefore endless, whether one proceed analytically into minutiae or follow the trail as a whole, in all its breadth and height.

*Goethe's Botanical Writings*

Problems (p. 116)

University of Hawaii Press. Honolulu, Hawaii, USA. 1952

**SYSTEMATICS****Darwin, Charles Robert** 1809–82

English naturalist

Systematize and study affinities.

*The Autobiography of Charles Darwin, 1809–1882: With Original Omissions Restored*

Appendix, Quotations (p. 160)

Harcourt, Brace. New York, New York, USA. 1959

**de Queiroz, K.**

Phylogeneticist

**Donoghue, M. J.**

Phylogeneticist

If the goal of systematics is to depict relationships accurately, then any tradition that interferes with this goal should be abandoned.

Phylogenetic Systematics of Nelson's Version of Cladistics

*Cladistics*, Volume 4, Number 4, December, 1988 (p. 332)

**Elton, Charles S.** 1900–91

English biologist

The extent to which progress in ecology depends upon accurate identification and upon the existence of sound systematic groundwork for all groups of animals, cannot be too much impressed upon the beginner in ecology. This is the essential basis of the whole thing; without it the ecologist is helpless, and the whole of his work may be rendered useless.

*Animal Ecology*

Chapter XI (p. 165)

Sidgwick & Jackson, Ltd. London, England. 1927

**Hennig, W.**

No biographical data available

In order to be able to judge correctly the position of systematics in the field of biology and the role that it is called upon to play in the solution of the basic problems of this science, one must first make clear that there is a systematics not only in biology, but that it is rather an integrating part of any science whatever. It is surprising and peculiar to see to what degree the original significance of this concept has been forgotten in biology in the course of the fundamentally inadmissible but now general limitation of the concept of systematics to a particular subdivision of the science as a whole.

In George Gaylord Simpson

*Principles of Animal Taxonomy*

Systematics, Taxonomy, Classification, Nomenclature (p. 6)

Columbia University Press. New York, New York, USA. 1961

**Hutton, James** 1726–97

Scottish geologist, chemist, and naturalist

...the system of this earth has either been intentionally made imperfect, or has not been the work of infinite power and wisdom.

*The Theory of the Earth* (Volume 1)

Part I, Chapter I, Section I (p. 17)

Messrs Cadwell, Junior, and Davies. London, England. 1795

**Mayr, Ernst** 1904–2005

German-born American biologist

The amount of diversity in the living world is staggering. About 1 million species of animals and half a million species of plants have already been described, and estimates on the number of still undescribed species range from 3 to 10 million.... It would therefore be impossible to deal with this enormous diversity if it were not ordered and classified. Systematic zoology endeavors to order the rich diversity of the animal world and to develop methods and principles to make this task possible.

*Principles of Systematic Zoology*

Chapter 1 (p. 1)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1969

The systematist who studies the factors of evolution wants to find out how species originate, how they are related, and what this relationship means. He studies species not only as they are, but also their origin and changes.

He tries to find his answers by observing the variability of natural populations under different external conditions and he attempts to find out which factors promote and which inhibit evolution. He is helped in this endeavor by his knowledge of the habits and the ecology of the studied species.

*Systematics and the Origin of Species*

Chapter I (p. 11)

Harvard University Press. Cambridge, Massachusetts, USA. 1942

**Simpson, George Gaylord** 1902–84

American paleontologist

Systematics is the scientific study of the kinds and diversity of organisms and of any and all relationships among them.

*Principles of Animal Taxonomy*

Systematics, Taxonomy, Classification, Nomenclature (p. 7)

Columbia University Press. New York, New York, USA. 1961

## SYSTEMATIST

**Darwin, Charles Galton** 1809–82

English naturalist

Systematic work would be easy were it not for this confounded variation, which, however, is pleasant to me as a speculatist, though odious to me as a systematist.

*The Life and Letters of Charles Darwin* (Volume 1)

Darwin to J.D. Hooker (pp. 397–398)

D. Appleton & Co. New York, New York, USA. 1904

## T

### TABLE

**Carlyle, Thomas** 1795–1881  
English historian and essayist

Tables are like cobwebs, like the sieve of the Danaides; beautifully reticulated, orderly to look upon, but which will hold no conclusion. Tables are abstractions.... There are innumerable circumstances; and one circumstance left out may be the vital one on which all turned.... Conclusive facts are inseparable from inconclusive except by a head that already understands and knows.

*English and Other Critical Essays*

Chartism, Chapter II (p. 170)

J.M. Dent & Sons Ltd. London, England. 1950

**Devons, Ely** 1913–67  
English economist

The way statistics are presented, their arrangement in a particular way in tables, the juxtaposition of sets of figures, in itself reflects the judgment of the author about what is significant and what is trivial in the situation which the statistics portray.

*Essays in Economics*

Chapter 6 (p. 109)

Greenwood Press, Publishers. Westport, Connecticut, USA. 1961

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

I will give you a “celestial multiplication table”. We start with a star as the unit most familiar to us, a globe comparable to the sun. Then –

A hundred thousand million Stars make one Galaxy;

A hundred thousand million Galaxies make one Universe.

*The Expanding Universe*

Chapter I (p. 4)

Cambridge University Press. Cambridge, England. 1920

**Fisher, Sir Ronald Aylmer** 1890–1962  
English statistician and geneticist

[Referring to] ...witty comments made by A.L. Bowley]

(a) The terms used in the headings and margins of the table are all employed in a technical sense, known only to the officers who compiled it, and which they are unable for official reasons to divulge. (b) The sub-divisions of the table and the region to which it refers have been changed since the last return was published. (c) Before tabulation the data have been subjected to numerous adjustments, allowances and other corrections, of a kind to vitiate any tests of significance which the reader may be tempted to apply to them.

Presidential Address, First Indian Statistical Conference, 1938  
*Sankhya*, Volume 4, 1938 (p. 15)

**Playfair, William** 1759–1823  
English publicist

Information that is imperfectly acquired, is generally as imperfectly retained; and a man who has carefully investigated a printed table, finds, when done, that he has only a very faint and partial idea of what he has read; and that like a figure imprinted on sand, is soon totally erased and defaced.

*The Commercial and Political Atlas* (p. 3)

Printed for J. Debrett. London, England. 1786

English philosopher and historian

The hidden fountain of our unbidden thoughts is for us a mystery; and we have, in our consciousness, no standard by which we can measure our own talents ...

*History of the Inductive Sciences from the Earliest to the Present Time* (3rd edition)

Book VII, Chapter II (p. 140)

John W. Parker & Son. London, England. 1857

**TANGIBLE****Tyndall, John** 1820–93

Irish-born English physicist

One of the most important functions of physical science, considered as a discipline of the mind, is to enable us by means of the tangible processes of Nature to apprehend the intangible.

*Fragments of Science for Unscientific People*

Chapter IX (p. 213)

D. Appleton & Co. New York, New York, USA. 1875

**TARDIGRADE****Shiple, Arthur Everett** 1861–1927

Zoologist

Some species look like dear little sucking-pigs in plate armour.

*Hunting Under the Microscope* (p. 16)

The Macmillan Company. New York, New York, USA. 1928

...they are so plump that you feel inclined to pat them, only they are too small.

*Hunting Under the Microscope* (p. 17)

The Macmillan Company. New York, New York, USA. 1928

**TAXONOMIST****Moss, W. W.**

No biographical data available

Taxonomists have always had the reputation of being difficult. Intransigence may be rooted in the necessity

of defending prolonged self-immersion in a taxon that others find a total bore; it is frustrating to have one's work greeted with a yawn.

In J. Felsenstein (ed.)

*Numerical Taxonomy*

Taxa, Taxonomists, and Taxonomy (p. 73)

Springer-Verlag. New York, New York, USA. 1983

Numerical taxonomists have proved to be just as prickly as conventional taxonomists, possibly more so because some of the brightest people in systematics are involved in the current taxonomic battles. The political maneuvering and character assassination that characterize certain taxonomists today may not be atypical for science; they certainly provide a fine example of its seamier side. If Feyerabend is correct, it may even be a requirement of human nature that scientific progress occur in this manner.

In J. Felsenstein (ed.)

*Numerical Taxonomy*

Taxa, Taxonomists, and Taxonomy (p. 73)

Springer-Verlag. New York, New York, USA. 1983

**TAXONOMY****Abbott, Donald Putnam** 1920–86

American marine biologist and professor

You'll be tempted to grouse about the instability of taxonomy: but stability occurs only where people stop thinking and stop working.

In Galen Howard Hilgard (ed.)

*Observing Marine Invertebrates: Drawings from the Laboratory*

Author's Preface (p. xvi)

Stanford University Press. Stanford, California, USA. 1987

**Blackwelder, R. E.**

No biographical data available

Much has been written in recent decades about subspecies and their use in taxonomy. There are strong feelings that they are usable, useful and desirable. There are also strong feelings that they are not really relevant to taxonomy and are an unnecessary encumbrance to classification and nomenclature.

*Taxonomy: A Text and Reference Book* (p. 171)

John Wiley & Sons, Inc. New York, New York, USA. 1967

**Brew, John O.** 1906–88

American archaeologist

...classificatory systems are merely tools, tools of analysis, manufactured and employed by students, just as shovels, trowels and whisk brooms are tools of excavation.

Papers of the Peabody Museum of American Archaeology and Ethnology

*The Archaeology of Alkali Ridge, Southeastern Utah*

The Use and Abuse of Taxonomy, Volume 21 (p. 46)

Peabody Museum. Cambridge, Massachusetts, USA. 1946

**Burt, B. L.**

No biographical data available

Numerical taxonomy uses statistical methods to form groups whereas traditional taxonomy only uses them to discriminate more precisely between groups already perceived. If it becomes increasingly apparent that there is a fundamental divergence here, let us remember Whitehead's dictum, that a clash of doctrines is not a disaster – it is an opportunity.

Andanson and Modern Taxonomy

*Edinburgh Royal Botanic Gardens. Notes*, Volume 26, 1966

**Cain, A. J.**

Taxonomist

It is not extraordinary that young taxonomists are trained like performing monkeys, almost wholly by imitation, and that in only the rarest cases are they given any instruction in taxonomic theory.

In George Gaylord Simpson

*Principles of Animal Taxonomy*

Preface (p. vii)

Columbia University Press. New York, New York, USA. 1961

**Constance, L.**

No biographical data available

Plant taxonomy has not outlived its usefulness: it is just getting under way on an attractively infinite task.

Plant Taxonomy in an Age of Experiment

*American Journal of Botany*, Volume 44, Number 1, January, 1957 (p. 92)

**Gould, Stephen Jay** 1941–2002

American paleontologist and evolutionary biologist

Parochial taxonomies are a curse of intellectual life.

*Time's Arrow, Time's Cycle: Myth and Metaphor in the Discovery of Geological Time*

Chapter 1 (p. 3)

Harvard University Press. Cambridge, Massachusetts, USA. 1987

Taxonomy (the science of classification) is often undervalued as a glorified form of filing – with each species in its folder, like a stamp in its prescribed place in an album; but taxonomy is a fundamental and dynamic science, dedicated to exploring the causes of relationships and similarities among organisms. Classifications are theories about the basis of natural order, not dull catalogues compiled only to avoid chaos.

*Wonderful Life: The Burgess Shale and the Nature of History*

Chapter III (p. 98)

W.W. Norton & Company, Inc. New York, New York, USA. 1989

**Heywood, V. H.** 1947–

No biographical data available

In these days when Molecular Biology is beginning to be seen as a restricted science, narrowing our vision by concentrating on the basic uniformity of organisms at the macromolecular level, the need for taxonomists to draw

attention to the enormous diversity and variation of this earth's biota becomes more and more pressing.

In Tod. F. Stuessy

*Plant Taxonomy: The Systematic Evaluation of Comparative Data*

Plant Taxonomy (p. xvii)

Columbia University Press. New York, New York, USA. 1990

**Jeffrey, C.** 1866–1952

Canadian-American botanist

The bringing to light of overlooked names in the old literature is perhaps nearing completion...it is hoped that this will lead to name-changes for nomenclature reasons becoming ever fewer and fewer until eventually they cease to trouble us. Unfortunately, the same cannot be said of name-changes that become necessary for taxonomic reasons. These arise from taxonomic research itself and are inevitable accompaniments of our systems of classifications.

*Biological Nomenclature* (3rd edition) (p. 31)

Edward Arnold. London, England. 1989

**Kevan, D. Keith McE.** 1920–1991

British ethnoentomologist

Bad taxonomy, of which there has been plenty, persists. Unlike bad chemistry or bad physiology, of which there has probably been equally as much, it cannot be ignored; it must be undone and redone. Poor taxonomy is not only an ill unto itself; it is contagious, often with a very long incubation period.... One assumes that when [experimental biologists] state that they used 5 ml ethanol, they were not using 6 ml of methanol; and yet, if the experimental animal is wrongly identified, what are the grounds for such an assumption?

The Place of Classical Taxonomy in Modern Systematic Entomology

*Canadian Entomology*, Volume 105, 1973 (p. 1212)

**Rollins, R. C.** 1911–1998

No biographical data available

In other words, the field of taxonomy in a way epitomizes the work of all other branches of biology centered on the organism itself, and brings the varied factual information from them to bear on the problems of interrelationship, classification and evolution. Thus taxonomy, as has been aptly remarked, is at once the alpha and omega of biology.

Taxonomy of the Higher Plants

*American Journal of Botany*, Volume 44, Number 1, January, 1957 (p. 188)

**Simpson, George Gaylord** 1902–84

American paleontologist

Taxonomy is a science, but its application to classification involves a great deal of human contrivance and ingenuity, in short, of art. In this art there is leeway for personal taste, even foibles, but there are also canons that help to make some classifications better, more meaningful, more useful than others.

*Principles of Animal Taxonomy*

From Taxonomy to Classification (p. 107)  
Columbia University Press. New York, New York, USA. 1961

**Stace, C.** 1938–  
English botanist and author

The species is the lowest rank which it is essential to recognize for general taxonomic purposes. It is not, however, the lowest rank which it is desirable and useful to recognize.

*Plant Taxonomy and Biosystematics* (2nd edition) (p. 192)  
Edward Arnold Publishers Ltd. London, England. 1989

**Stuessy, Tod F.** 1943–  
No biographical data available

We as taxonomists celebrate diversity. We celebrate the wildness of the planet. We celebrate the numerous human attempts to understand this wilderness, and we mourn its loss through human miscalculation. We sense the aesthetic of life and much of our efforts are aimed at reflecting this composition. Above all we celebrate the challenges of being alive and dealing with the living world. There is no greater responsibility, privilege, nor satisfaction.

*Plant Taxonomy: The Systematic Evaluation of Comparative Data*  
Epilogue (p. 406)  
Columbia University Press. New York, New York, USA. 1990

The rise beyond the generic level in classification is to enter a world of much greater uncertainty.... Taxa at higher levels will be well-defined or ill-defined depending on the group in question.

*Plant Taxonomy: The Systematic Evaluation of Comparative Data* (p. 207)  
Columbia University Press. New York, New York, USA. 1990

**Wald, George** 1906–97  
American biologist and biochemist

The most important thing about a name, after all, is that it remain attached to the thing it designates. One wishes that once a name had come into common use for an organism, it could be stabilized for the use of busy persons who want nothing but that each animal have a name.

In E.S. Guzman Barron (ed.)  
*Modern Trends in Physiology and Biochemistry*  
Biochemical Evolution (fn p. 339)  
Academic Press, Inc. New York, New York, USA. 1952

**TEACH**

**Agassiz, Jean Louis Rodolphe** 1807–73  
Swiss-born American naturalist, geologist, and teacher

Never try to teach what you do not yourself know and know well.

Quoted in David Starr Jordan  
*Science Sketches*

Quoted in David Starr Jordan (p. 145)  
A.C. McClurg & Co. Chicago, Illinois, USA. 1896

**Austen, Jane** 1775–1817  
English novelist

We all love to instruct, though we can teach only what is not worth knowing.

*Pride and Prejudice*  
Chapter LIV (p. 353)  
Charles Scribner's Sons. New York, New York, USA. 1918

**Carlyle, Thomas** 1795–1881  
English historian and essayist

Teaching school is but another word for sure and not very slow destruction ...

In Moncure Daniel Conway

Chapter VII (p. 150)

American Home Library Co. New York, New York, USA. 1902

### **Mangus, Philip**

No biographical data available

...the aim of teaching [mathematics] should be rather to strengthen his [the student's] faculties, and to supply a method of reasoning applicable to other subjects, than to furnish him with an instrument for solving practical problems.

In Professor Perry

*Discussion on the Teaching of Mathematics* (p. 84)

Macmillan & Co Ltd. London, England. 1902

### **Mitchel, Ormsby MacKnight** 1805–62

American astronomer

...I shall endeavor to shun all attempt at critical scientific demonstration, which could only be intelligible to the professed student of astronomy, I shall on the other hand fearlessly attempt such an exposition of the processes and trains of reasoning by which great truths have been elicited, as to show to every intelligent mind that the problem

is not impossible; by simplicity of language, by familiar illustrations, to fling light enough upon these mysterious propositions; – to show a pathway, though it be dim and rugged, still a pathway, which, if pursued, shall certainly lead to a full and perfect solution.

*The Orbs of Heaven, or, The Planetary and Stellar Worlds*

Lecture I (p. 4)

Office of the National Illustrated Library. London, England. 1851

### **von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

First let a man teach himself, and then he will be taught by others.

Translated by Thomas Bailey Saunders

*The Maxims and Reflections of Goethe*

519 (p. 184)

The Macmillan Co. New York, New York, USA. 1906

### **Whately, Richard** 1787–1863

English theologian

To teach one who has no curiosity to learn, is to sow a field without ploughing it.

In Elizabeth Jane Whatley

*Miscellaneous Remains from the Commonplace Book of Richard Whately, D.D.*

Apothegm 66 (p. 7)

Longman, Green, Longman, Roberts & Green. London, England. 1865

## **TEACHER**

### **Adams, Henry Brooks** 1838–1918

American man of letters

A teacher affects eternity; he can never tell, where his influence stops.

*The Education of Henry Adams: An Autobiography*

Chapter XX (p. 300)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1918

### **Alexander, Burton F.**

American mathematics teacher

The responsibility of developing and improving the general and technical vocabularies that are associated with elementary mathematics lies in the hand of the subject teacher.

Language Development in Mathematics Through Vocabularies

*The Mathematics Teacher*, Volume 40, Number 8, December, 1947 (p. 389)

### **Author undetermined**

Our teacher was a good man, and taught us all he knew. But his attainments were not great. As to astronomy, he never had an idea but that the earth was as flat as the plate on which he ate his breakfast; and as to mathematics, the difference between the numerator and denominator of a vulgar fraction, was a mystery of science altogether beyond his depth.

Education in the Backwoods

*American Annals of Education*, May, 1838 (p. 215)

**Bailey, Liberty Hyde** 1858–1954

American horticulturist and botanist

A good teacher is better than all the laboratories and apparatus.

*Botany: An Elementary Text for Schools* (4th edition)

Paragraphs for the Teacher (p. viii)

The Macmillan Co. New York, New York, USA. 1901

The teacher who thinks first of his subject teaches science; he who thinks first of his pupil teaches nature-study.

*Botany: An Elementary Text for Schools* (4th edition)

Paragraphs for the Teacher (p. ix)

The Macmillan Co. New York, New York, USA. 1901

**Branford, Victor**

No biographical data available

The American “School-ma’rm” balances the American Viking, and the world trembles in the hope and expectation that someday she may succeed in taming and domesticating him. In no other way, probably, can his disforestings and devastations be effectually stopped, and his destructive energies converted to more constructive ideals.

*Science and Citizenship*

Section VIII (pp. 19–20)

George Allen. London, England. 1906

**Chargaff, Erwin** 1905–2002

Austrian biochemist

A good teacher can only have dissident pupils.

*Heraclitean Fire: Sketches from a Life before Nature* (p. 7)

The Rockefeller University Press. New York, New York, USA. 1978

**Gies, William J.** 1872–1956

US biochemist and dentist

...teachers are simply your guides. You yourselves must do the travelling.

Research in Dentistry

*Journal of Dental Research*, Volume 3, Number 3, September, 1921 (p. xcvi)

**Hall, Granville Stanley** 1844–1924

American psychologist and educator

...the teacher should...forage widely and incessantly, and bring everything within reach in his field to [his class]... [T]he lecture method [should be] made the most of, being conversational and designed to provoke reaction.... He should teach every topic broadly and comprehensively, and instead of disparaging mere information, it should ooze from his every pore.

*Adolescence: Its Psychology and Its Relations to Physiology, Anthropology, Sociology, Sex, Crime, Religion and Education* (Volume 2)

Chapter XVI (p. 532)

D. Appleton & Co. New York, New York, USA. 1907

**Huxley, Thomas Henry** 1825–95

English biologist

...the teacher should always recollect that his business is to feed, and not to cram the intellect.

*Lay Sermons, Addresses and Reviews*

Chapter VI (p. 111)

D. Appleton & Co. New York, New York, USA. 1903

...the great business of the scientific teacher is, to imprint the fundamental, irrefragable facts of his science, not only by words upon the mind, but by sensible impressions upon the eye, and ear, and touch of the student, in so complete a manner, that every term used, or law enunciated, should afterwards call up vivid images of the particular structural, or other, facts which furnished the demonstration of the law, or the illustration of the term.

*Lay Sermons, Addresses and Reviews*

Chapter VI (p. 112)

D. Appleton & Co. New York, New York, USA. 1903

**Mitchell, Maria** 1818–89

American astronomer and educator

It is not exactly my way, but I do think, as a general rule, that teachers talk too much! A book is a very good institution! To read a book, to think it over, and to write out notes is a useful exercise; a book which will not repay some hard thought is not worth publishing. The fashion of lecturing is becoming a rage; the teacher shows herself off, and she does not try enough to develop her pupils.

In Phebe Mitchell Kendall

*Maria Mitchell: Life, Letters, and Journals*

Chapter IX (p. 180)

Lea & Shepard Publishers. Boston, Massachusetts, USA. 1896

When you aid a teacher, you improve the education of your children. It is a wonder that teachers work as well as they do. I never look at a group of them without using, mentally, the expression, ‘The noble army of martyrs’!

In Phebe Mitchell Kendall

*Maria Mitchell: Life, Letters, and Journals*

Chapter IX (p. 184)

Lea & Shepard Publishers. Boston, Massachusetts, USA. 1896

**Nunn, T. F.**

No biographical data available

It is not sufficient that the teacher should have a competent knowledge of the subject which he professes...he must (in addition) have considered his science from the point of view at which it appears as a human acquisition.

In Lloyd William Taylor

*Physics: The Pioneer Science* (Volume 1)

Chapter 8 (p. 111)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1941

**Oppenheimer, James Robert** 1904–67

American theoretical physicist

The true responsibility of a scientist...is to the integrity and vigor of his science. And because most scientists, like all men of learning, tend in part also to be teachers, they have a responsibility for the communication of the truths they have found.

*The Open Mind*

Physics in the Contemporary World (p. 91)

Simon & Schuster. New York, New York, USA. 1955

**Pearson, Karl** 1857–1936

English mathematician

The true aim of the teacher must be to impart an appreciation of method and not a knowledge of facts.

*The Grammar of Science* (2nd edition)

Introductory (p. 7)

Adam & Charles Black. London, England. 1900

**Rota, Gian-Carlo** 1932–99

Italian-born American mathematician

A good teacher does not teach facts, he or she teaches enthusiasm, open-mindedness and values. ...

*Indiscrete Thoughts*

Chapter XX (p. 207)

Birkhäuser. Boston, Massachusetts, USA. 1997

**Standen, Anthony**

Anglo-American science writer

There are science teachers who actually claim that they teach "a healthy skepticism." They do not. They teach a profound gullibility, and their dupes, trained not to think for themselves, will swallow any egregious rot, provided it is dressed up with long words and an affectation of objectivity to make it sound scientific.

*Science Is a Sacred Cow*

Chapter VII (p. 189)

E.P. Dutton. New York, New York, USA. 1950

**Tyndall, John** 1820–93

Irish-born English physicist

...after the discoverer comes the teacher, whose function it is so to exalt and modify the experiments of his predecessor as to render them fit for public presentation.

*Six Lectures on Light Delivered in America in 1872–1873* (3rd edition)

American educator

What difference does it make how often we lower and raise the bucket into the well if the bucket has no bottom?

*Maxims for a Modern Man*

484

T. Yoseloff. New York, New York, USA. 1965

**Faraday, Michael** 1791–1867

English physicist and chemist

A lecturer should appear easy and collected, undaunted and unconcerned, his thoughts about him and his mind clear for the contemplation and description of his subject. His action should be slow, easy and natural consisting principally in changes of posture of the body, in order to avoid the air of stiffness or sameness that would otherwise be unavoidable.

In J.M. Thomas

*Michael Faraday – and the Royal Institution*

Chapter 3 (p. 18)

Adam Hilger. Bristol, England. 1991

The most prominent requisite to a lecturer, though perhaps not really the most important, is a good delivery; for though to all true philosophers science and nature will have charms innumerable in every dress, yet I am sorry to say that the generality of mankind cannot accompany us one short hour unless the path is strewn with flowers.

In J.M. Thomas

*Michael Faraday – and the Royal Institution*

Chapter 5 (p. 97)

Adam Hilger. Bristol, England. 1991

...a truly popular lecture cannot teach, and a lecture that truly teaches cannot be popular.

In J.M. Thomas

*Michael Faraday – and the Royal Institution*

Chapter 8 (p. 192)

Adam Hilger. Bristol, England. 1991

**Feyerabend, Paul K.** 1924–94

Austrian-born American philosopher of science

A good teacher will not just make people accept a form of life, he will also provide them with means of seeing it in perspective and perhaps of even rejecting it.

In Gerard Radnitzky and Gunnar Andersson

*The Structure and Development of Science*

Dialogue on Method (p. 86)

D. Reidel Publishing Company. Dordrecht, Germany. 1979

**Feynman, Richard P.** 1918–88

American theoretical physicist

What I am going to tell you about is what we teach our physics students in the third or fourth year of graduate school.... It is my task to convince you not to turn away because you don't understand it. You see my physics students don't understand it.... That is because I don't understand it. Nobody does.

*QED: The Strange Theory of Light and Matter*

Chapter 1 (p. 9)

Princeton University Press. Princeton, New Jersey, USA. 1985

**Gauss, Johann Carl Friedrich** 1777–1855

German mathematician, physicist, and astronomer

I am giving this winter two courses of lectures to three students, of which one is only moderately prepared, the other less than moderately, and the third lacks both preparation and ability. Such are the onera of a mathematical profession.

**Osborn, E. S.** 1897–?

No biographical data available

Science teaching has long concerned itself chiefly with the mastery of laws, facts, and principles to the neglect

of certain of the less tangible, but non the less desirable outcomes, such as attitude of mind.

*Modern Methods and Materials for Teaching Science*

Chapter 2 (p. 15)

The Macmillan Company. New York, New York, USA. 1940

**Herbert, George** 1593–1633

English metaphysical poet

Teach me, my God and King,

In all things thee to see,

And what I do in anything,

To do it as for thee...

*The Elixir*

**Hutchison, Sir Robert Grieve** 1871–1960

English radiologist

Those of us who have the duty of training the raising generation of doctors...must not inseminate the virgin minds of the young with the tares of our own fads. It is for this reason that it is easily possible for teaching to be top "up to date." It is always well, before handing the cup of knowledge to the young, to wait until the froth has settled.

*British Medical Journal*, Volume 1, 1925 (p. 995)

**Huxley, Aldous** 1894–1963

English writer and critic

Ram it in, ram it in!

Children's heads are hollow.

Ram it in, ram it in!

Still there's more to follow.

*Proper Studies*

Education (p. 111)

Chatto & Windus. London, England. 1957

**Huxley, Thomas Henry** 1825–95

English biologist

Therefore, the great business of the scientific teacher is, to imprint the fundamental, irrefragable facts of his science, not only by words upon the mind, but by sensible impressions upon the eye, and ear, and touch of the student, in so complete a manner, that every term used, or law enunciated, should afterwards call up vivid images of the particular structural, or other, facts which furnished the demonstration of the law, or the illustration of the term.

*Lay Sermons, Addresses and Reviews*

On the Study of Zoology (p. 112)

New York, New York, USA. 1872

**Jaffe, Bernard** 1896–1968

Freelance science writer

An effective way to teach the methods of science is to show how our great scientists reached their goals and how their minds worked in the process.

*Journal of Chemical Education*, Volume 15, 1938 (p. 383)

**Milne, A. A. (Alan Alexander)** 1882–1956

English poet, children's writer, and playwright

He learns.

He becomes educated... He instigates knowledge.

*The Complete Tales and Poems of Winnie-the-Pooh*

*The House at Pooh Corner* (p. 254)

Dutton Children's Books. New York, New York, USA. 2001

**Moroney, Michael Joseph** 1918–90

English statistician

Statistics is not the easiest subject to teach, and there are those to whom anything savoring of mathematics is regarded as forever anathema.

*Facts from Figures*

Statistics Desirable (p. 458)

Penguin Books Ltd., Harmondsworth, England. 1951

**Noble, D. F.**

No biographical data available

You will please keep in mind that this is a college and not a technical school. The students who come here are not to be trained as chemists, or geologists or physicists. They are to be taught the great fundamental truths of all sciences. The object aimed at is culture, not practical knowledge.

In George E. Peterson

*The New England College in the Age of the University* (pp. 4–7)

Amherst College Press. Amherst, Massachusetts, USA. 1964

**Olds, Edwin G.**

No biographical data available

It is hard to understand why he failed to appreciate the pedagogical value of designing an experiment to illustrate a point of theory, predicting the result, running the experiment, and then taking the consequences if it turned out wrong.

Teaching Statistical Quality Control for Town and Gown

*Journal of the American Statistical Association*, Volume 44, 1949

(pp. 223–224)

**Regnault, Noël** 1702–62

Jesuit mathematician

Will you discover to me...those Secrets which Nature has imparted to you?

*Philosophical Conversations* (Volume 1)

Conversation XII (p. 154)

Printed for W. Innys, C. Davis, and N. Prevost. London, England. 1731

**Rohrlich, Fritz**

No biographical data available

Come, join me on an adventure of the mind. The going will be a little demanding at times but there will be rich rewards. The new vistas are spectacular. Come with me, I am an experienced guide!

*From Paradox to Reality: Our Basic Concepts of the Physical World*

Preface (p. vii)

Cambridge University Press. Cambridge, England. 1987

**Romanoff, Alexis Lawrence** 1892–1980

Russian soldier and scientist

True teaching is a grave profession – Demands most thoughtful, wise discretion.

*Encyclopedia of Thoughts*

Couplets

Ithaca Heritage Books. Ithaca, New York, USA. 1975

**Schufle, J. A.**

No biographical data available

The teaching of chemistry has for too long been a process in which facts are transmitted from the notebook of the professor into the notebook of the student without going through the heads of either.

The Use of Case Histories in the Teaching of History of Science

*The Texas Journal of Science*, Volume 21, Number 1, October, 1969

(p. 101)

**Stoppard, Tom** 1937–

Czech-born English playwright

THOMASINA: If you do not teach me the true meaning of things, who will?

SEPTIMUS: Ah. Yes, I am ashamed. Carnal embrace is sexual congress, with the insertion of the male genital organ into the female genital organ for purposes of procreation and pleasure. Fermat's last theorem, by contrast, asserts that when  $x$ ,  $y$ , and  $z$  are whole numbers each raised to power of  $n$ , the sum of the first two can never equal the third when  $n$  is greater than 2. (Pause.)

THOMASINA: Eurghhhh!

SEPTIMUS: Nevertheless, that is the theorem.

THOMASINA: It is disgusting and incomprehensible. Now when I am grown to practice it myself I shall never do so without thinking of you.

*Arcadia*

Act I, Scene One (p. 3)

Faber &amp; Faber Ltd. London, England. 1993

**Sylvester, James Joseph** 1814–97

English mathematician

...the two functions of teaching and working in science should never be divorced.

*The Collected Mathematical Papers of James Joseph Sylvester* (Volume 3)

An Inquiry into Newton's Rule for the Discovery of Imaginary

Roots (p. 75)

University Press. Cambridge, England. 1904–1912

May the time never come when the two offices of teaching and researching shall be sundered in this University [Johns Hopkins]! So long as man remains a gregarious and sociable being, he cannot cut himself off from the gratification of the instinct of imparting what he is learning, of propagating through others the ideas and impressions seething in his own brain, without stunting

and atrophying his moral nature and drying up the surest sources of his future intellectual replenishment.

*The Collected Mathematical Papers of James Joseph Sylvester* (Volume 3)

Proof of the Fundamental Theorem of Invariants (1878) (p. 77)

University Press. Cambridge, England. 1904–1912

**Truesdell, Clifford** 1919–2000

American mathematician, natural philosopher, historian of mathematics

Formerly, the beginner was taught to crawl through the underbrush, never lifting his eyes to the trees; today he is often made to focus on the curvature of the universe, missing even the earth.

*Six Lectures on Modern Natural Philosophy*

Lecture I (p. 22)

Springer-Verlag. New York, New York, USA. 1966

**Tukey, John W.** 1915–2000

American statistician

Teaching data analysis is not easy, and the time allowed is always far from sufficient.

The Future of Data Analysis

*Annals of Mathematical Statistics*, Volume 33, Number 1, March, 1962

(p. 11)

**Weinberg, Alvin Martin** 1915–

American physicist

Very typically a field that was once fashionable eventually ceases to command the interest of the scientists in that field and becomes the concerns of scientists in another field. Nuclear chemistry is a good example of this trend: it began as nuclear physics, was taken over by the chemists, and now, insofar as nuclear properties of radionuclide are important for technology, parts of nuclear chemistry are being taken over by engineers. This tendency for fashions in science to come and go greatly complicates the teaching of science. For, as science proliferates, the discrepancy tends to widen between the older, consolidated body of scientific knowledge and the parts of science that excite the active researcher.

*Reflections on Big Science*

Chapter II (p. 46)

The MIT Press. Cambridge, Massachusetts, USA. 1967

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

No man can be a good teacher when his subject becomes inexplicable.

*Experiment in Autobiography*

Chapter 5, Section 2 (p. 176)

The Macmillan Company. New York, New York, USA. 1934

**Wilde, Oscar** 1854–1900

Irish wit, poet, and dramatist

Education is an admirable thing, but it is well to remember from time to time that nothing that is worth knowing can be taught.

*Epigrams: Phrases and Philosophies for the Use of the Young*  
 Sebastian Melmoth  
 A.R. Keller. London, England. 1907

**Wright, Charles R. A.**

No biographical data available

...in teaching the science of chemistry it is preferable, first, to enumerate the facts in language independent of any hypothesis, and then to enunciate the various hypotheses that have been and are held, showing how far each is in accordance or contradiction with the observed facts; rather than to mix up from the outset one particular hypothesis with the facts, so as finally to impress on the mind the manifestly erroneous conclusion that the facts have no evidence apart from the hypothesis that more or less clearly explains them.

Atoms

*The Athenaeum*, Number 2398, 11 October, 1873 (p. 468)

**TECHNICAL TERM**

**Smith, George Otis** 1871–1944

American geologist

Technical terms have their places, and I am on record as admitting that exact scientific statement needs special terms, words that best keep their razor edge when used only for hairsplitting distinctions. This limited use of a highly specialized terminology is wholly defensible, for it would be folly to throw away tools so well-fitted for special purposes, just as it is unwise to put them to everyday uses with everyday people. Transubstantiation, transpiration, and transgression are technical words that are useful enough to the professional theologian, biologist, and geologist, but they are code words that must be decoded before others can understand them.

Paper presented to the Society of Economic Geologists at the Amherst Meeting  
 December 28, 1921

**TECHNOLOGY**

**Abbey, Edward** 1927–89

American environmentalist and nature writer

High technology has done us one great service: It has retaught us the delight of performing simple and primordial tasks – chopping wood, building a fire, drawing water from a spring...

*A Voice Crying in the Wilderness: Notes from a Secret Journal*  
 Chapter 10 (p. 92)  
 St. Martin's Press. New York, New York, USA. 1989

**Adler, Alfred** 1870–1937

Austrian psychiatrist

The confusion of science with technology is understandable. Certainly the two often appear to be aspects of a

single larger process, as when science proposes new laws of physics, which inspire the development of a technology for their exploration, which in turn exposes inaccuracies in the laws and forces science to seek a more profound level of theory. But in fact their divergence is great. It is in the divergence of engagement from fulfillment, of means from ends....

*Atlantic Monthly*, Volume 279, Number 2, February, 1997 (p. 16)

If truth is a path, then science explores it, and the brief stops along the way are where technologies begin (they build towns and pave a highway). Technology is results, science is process; though the two fuse and separate and then fuse once more, as ends and means must, their opposition is profound.

*Atlantic Monthly*, Volume 279, Number 2, February, 1997 (p. 16)

**Allen, Charles M.**

American academic

If the human race wants to go to hell in a basket, technology can help it get there by jet. It won't change the desire or the direction, but it can greatly speed the passage.

Speech

Wake Forest University, Winston-Salem, North Carolina, April 25, 1967

**Ashby, Sir Eric** 1904–82

British botanist and educator

The habit of apprehending a technology in its completeness: this is the essence of technological humanism, and this is what we should expect education in the higher technology to achieve. I believe it could be achieved by making specialists' studies the core around which are grouped liberal studies which are relevant to these specialist studies. But they must be relevant; the path to culture should be through a man's specialism, not by-passing it.

*Technology and the Academics: An Essay on Universities and the Scientific Revolution*  
 Chapter 4 (p. 84)  
 St. Martin's Press. New York, New York, USA. 1959

A student who can weave his technology into the fabric of society can claim to have a liberal education; a student who cannot weave his technology into the fabric of society cannot claim even to be a good technologist.

*Technology and the Academics: An Essay on Universities and the Scientific Revolution*  
 Chapter 4 (p. 85)  
 St. Martin's Press. New York, New York, USA. 1959

**Association of American Colleges**

...we have become a people unable to comprehend the technology we invent...

*Integrity in the College Curriculum*, February, 1985 (p. 2)

**Ballard, James Graham** 1930–

English writer

Science and technology multiply around us. To an increasing extent they dictate the languages in which we speak and think. Either we use those languages, or we remain mute.

*Crash*

Introduction (p. 7)

Flamingo. London, England. 1993

**Barzun, Jacques** 1907–

French-born American educator, historian, and author

...something pervasive that makes the difference, not between civilized man and the savage, not between man and the animals, but between man and the robot, grows numb, ossifies and falls away like black mortified flesh when techne assails the senses and science dominates the mind.

In Theodosius Dobzhansky

*The Biology of Ultimate Concern*

Chapter 5 (p. 103)

The New American Library, Inc. New York, New York, USA. 1967

**Beer, Stafford** 1926–2002

English theorist academic and consultant

If it works, it's out of date.

*Brain of the Firm: A Development in Management Cybernetics*

Dedication (p. v)

Herder & Herder. New York, New York, USA. 1972

**Bronowski, Jacob** 1908–74

Polish-born British mathematician and polymath

Every civilization has been grounded on technology: what makes ours unique is that for the first time we believe that every man is entitled to all its benefits.

Technology and Culture in Evolution

*The American Scholar*, Volume 41, Number 2, Spring 1972 (p. 207)

**Bunge, Mario** 1919–

Argentine philosopher and physicist

...whereas science elicits changes in order to know, technology knows in order to elicit changes.

In G. Bugliarello and D. B. Doner (eds.)

*The History and Philosophy of Technology*

Chapter 15 (p. 264)

University of Illinois Press. Urbana, Illinois, USA. 1979

**Byrom, Gletcher L.**

No biographical data available

Technology is like having a spouse who helps you with the problems that you wouldn't have had if you hadn't gotten married in the first place.

Technology Is...and Where It's Taking Us

*Science Digest*, Volume 83, Number 2, February, 1978 (p. 25)

**Clarke, Arthur C.** 1917–

English science and science fiction writer

Any sufficiently advanced technology is indistinguishable from magic.

*The Lost Worlds of 2001*

Chapter 34 (p. 189)

New American Library. New York, New York, USA. 1972

...we know now that comet and asteroid impacts have changed history, and soon we will have the technology to avert that disaster. ...[T]he dinosaurs became extinct because they didn't have a space program.

Interview

*Discover Magazine*, July 1999

**Clinton, William Jefferson** 1946–

42nd president of the USA

Technology is almost magical, and ambition for a better life is now universal.

Inaugural Speech

**Commoner, Barry** 1917–

American biologist, ecologist, and educator

Despite the dazzling successes of modern technology and the unprecedented power of modern military systems, they suffer from a common and catastrophic fault. While providing us with a bountiful supply of food, with great industrial plants, with high-speed transportation, and with military weapons of unprecedented power, they threaten our very survival.

*Science and Survival*

Chapter 7 (p. 126)

The Viking Press. New York, New York, USA. 1966

**de Bono, Edward** 1933–

Maltese psychologist and writer

Those who assert that technology has done more harm than good are thinking of a romantic dream world in which a select elite lived a short life of ease and intellectual sophistication surrounded by a population living an even shorter life of poverty, starvation and disease.

*Technology Today*, 1971

**de Saint-Exupéry, Antoine** 1900–44

French aviator and writer

...the machine does not isolate man from the great problems of nature but plunges him more deeply into them.

*Wind, Sand, and Stars*

Chapter 3 (p. 67)

Reynal & Hitchcock. New York, New York, USA. 1939

**DeSimone, Daniel V.**

No biographical data available

**Cross, Hardy** 1885–1959

American engineer

Technological invention and innovation are the business of engineering. They are embodied in engineering change.

*Education for Innovation*

Introduction (p. 4)

Pergamon Press. New York, New York, USA. 1968

**Drexler, K. Eric** 1955–

American nanotechnology engineer and researcher, and futurist

The promise of technology lures us onward, and the pressure of competition makes stopping virtually impossible. As the technology race quickens, new developments sweep toward us faster, and a fatal mistake grows more likely. We need to strike a better balance between our foresight and our rate of advance. We cannot do much to slow the growth of our technology, but we can speed growth of foresight. And with better foresight, we will have a better chance to steer the technology race in safe directions.

*Engines of Creation*

Finding the Facts (p. 203)

Anchor Press/Doubleday. Garden City, New York, USA. 1986

**Dubos, René Jules** 1901–82

French-born American microbiologist and environmentalist

The idealistic and the demonic forces in nationalism are as powerful today as they were in the past but their expressions are changing, because human history is moving from its hallowed parochial traditions to the era of global technology.... The one credo of technology which has been accepted practically all over the world is that nature is to be regarded as a source of raw materials to be exploited for human ends rather than as an entity to be appreciated for its own value.

*A God Within*

Chapter 10 A Demon Within (p. 204)

Charles Scribner's Sons. New York, New York, USA. 1972

**Dyson, Freeman J.** 1923–

American physicist and educator

If we had a reliable way to label our toys good and bad, it would be easy to regulate technology wisely. But we can rarely see far enough ahead to know which road leads to damnation. Whoever concerns himself with big technology, either to push it forward or to stop it, is gambling in human lives.

*Disturbing the Universe*

Chapter 1 (p. 7)

Basic Books, Inc. New York, New York, USA. 1979

**Editorial**

Technology, when misused, poisons air, soil, water and lives. But a world without technology would be prey to something worse: the impersonal ruthlessness of the natural order, in which the health of a species depends on relentless sacrifice of the weak.

*New York Times*, 29 August, 1986

**Embree, Alice** 1945–

American peace and women's rights activist

America's technology has turned in upon itself; its corporate form makes it the servant of profits, not the servant of human needs.

In Robin Morgan

*Sisterhood Is Powerful: An Anthology of Writings from the Women's Liberation Movement*

Media Images 1 (p. 211)

Random House, Inc. New York, New York, USA. 1970

**Feynman, Richard P.** 1918–88

American theoretical physicist

For a successful technology, reality must take precedence over public relations, for Nature cannot be fooled.

*What Do You Care What Other People Think?*

Appendix F (p. 237)

W.W. Norton & Company, Inc. New York, New York, USA. 1988

**Frisch, Max** 1911–

Novelist, playwright and diarist

We live technologically, with man as the master of nature, man as the engineer, and let anyone who raises his voice against it stop using bridges not built by nature.... No electric light bulbs, no engines, no atomic energy, no calculating machines, no anesthetics – back to the jungle.

Translated by Michael Bullock

*Homo Faber: A Report* (p. 103)

Harcourt Brace Jovanovich. San Diego, California, USA. 1959

Technology is the knack of so arranging the world that we don't have to experience it.

In Rollo May

*The Cry for Myth*

Chapter Three (p. 57)

W.W. Norton & Company, Inc. New York, New York, USA. 1991

**Gäbor, Dennis** 1900–79

Hungarian-English physicist

The most important and urgent problems of the technology of today are no longer the satisfactions of the primary needs or of archetypal wishes, but the reparation of the evils and damages by technology of yesterday.

*Innovations: Scientific, Technological and Social*

Introduction (p. 9)

Oxford University Press, Inc. Oxford, England. 1970

**Galbraith, John Kenneth** 1908–2006

Canadian-American economist

The imperatives of technology and organization, not the images of ideology, are what determine the shape of economics.

*The New Industrial State*

Chapter I, Section 3 (p. 7)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1967

It is a commonplace of modern technology that there is a high measure of certainty that problems have solutions before there is knowledge of how they are to be solved.

*The New Industrial State*

Chapter II, Section 4 (p. 19)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1967

**Gore, Al** 1948–

45th vice-president of the United States and environmentalist

Mistakes in our dealings with Mother Nature can now have much larger unintended consequences, because many of our new technologies confer upon us new power without automatically giving us new wisdom.

*An Inconvenient Truth: The Planetary Emergency of Global Warming and What We Can Do About It* (p. 247)  
Rodale. New York, New York, USA. 2006

### **Greene, Charles H.**

No biographical data available

It does no harm to be reminded occasionally that modern technologies still contain large elements of empiricism.

Glass  
*Scientific American*, Volume 204, Number 1, January, 1961 (p. 92)

### **Hanham, H. J.**

German philosopher

...the essence of technology...is nothing technological.

*Basic Writings*  
The Question Concerning Technology (p. 285)  
Harper & Row. New York, New York, USA. 1977

### **Hoffer, Eric** 1902–83

American longshoreman and philosopher

Where there is the necessary technical skill to move mountains, there is no need for the faith that moves mountains.

*The Passionate State of Mind, and Other Aphorisms*  
No. 12  
Harper & Brothers. New York, New York, USA. 1955

### **Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

Science is unique to human activities in that it possesses vast areas of certain knowledge. The collective opinion of scientists in these areas about any problem covered by them will almost always be correct. It is unlikely that much in these areas will be changed in the future, even in a thousand years. And because technology rests almost exclusively on these areas the products of technology work as they are intended to do.

*The Origin of the Universe and the Origin of Religion* (p. 17)  
Moyer Bell. Wakefield, Rhode Island, USA. 1993

### **Huxley, Aldous** 1894–1963

English writer and critic

Advances in technology do not abolish the institution of war; they merely modify its manifestations.

*Science, Liberty and Peace*

Chapter II (p. 47)

William Morrow & Company, Inc. New York, New York, USA. 1967

### **Jones, Barry**

No biographical data available

The reality is that many of the changes in science and technology are complex because of the complexity of them.

Sayings of the Week  
*Sydney Morning Herald*, 12 July 1986

### **Kaysen, Carl** 1920–

American economist

...the advance of technology, like the growth of population and industry, has also been proceeding exponentially. Limits to Growth

*Foreign Affairs*, Volume 50, Number 4, July 1972 (p. 664)

### **Krutch, Joseph Wood** 1893–1970

American naturalist, conservationist, and writer

Technology made large populations possible; large populations now make technology indispensable.

*Human Nature and the Human Condition*  
Chapter VIII (p. 145)  
Random House, Inc. New York, New York, USA. 1959

### **Lerner, Max** 1902–92

American educator and author

...a world technology means either a world government or world suicide.

The Imagination of H.G. Wells (p. 17)  
Simon & Schuster. New York, New York, USA. 1949

### **Lilienthal, David E.** 1899–1981

American businessman and Tennessee Valley Authority administrator

The machine that frees man's back of drudgery does not thereby make his spirit free. Technology has made us more productive, but it does not necessarily enrich our lives. Engineers can build us great dams, but only great people make a valley great. There is no technology of goodness. Men must make themselves spiritually free.

*TVA: Democracy on the March* (p. 218)  
Harper & Brothers. New York, New York, USA. 1944

### **Lovins, Amory B.** 1947–

American physicist and industry consultant

Any demanding high technology tends to develop influential and dedicated constituencies of those who link its commercial success with both the public welfare and their own. Such sincerely held beliefs, peer pressures, and the harsh demands that the work itself places on time and energy all tend to discourage such people from acquiring a similarly thorough knowledge of alternative policies and the need to discuss them.

Energy Strategy  
*Foreign Affairs*, Volume 55, Number 1, October, 1976 (p. 93)

**Meadows, Donella H.** 1941–2001  
American scientist, sustainability advocate, and writer

**Meadows, Dennis L.**  
American professor of systems science

Technology can relieve the symptoms of a problem without affecting the underlying causes. Faith in technology as the ultimate solution to all problems can thus divert our attention from the most fundamental problem – the problem of growth in a finite system – and prevent us from taking effective action to solve it.

*The Limits to Growth: The 30 Year Update*  
Chapter IV (p. 154)  
Chelsea Green Publishing, White River Junction, Vermont, USA. 2004

**Oppenheimer, James Robert** 1904–67  
American theoretical physicist

The open society, the unrestricted access to knowledge, the unplanned and uninhibited association of men for its furtherance – these are what may make a vast, complex, ever growing, ever changing, ever more specialized and expert technological world, nevertheless a world of human community.

*Science and the Common Understanding*  
Chapter 6 (p. 95)  
Simon & Schuster, New York, New York, USA. 1953

In fact, most people – when they speak of Science as a good thing – have in mind such Technology as has altered the condition of their life.

*The Sacred Beetle and Other Great Essays in Science*  
Physics in the Contemporary World (p. 194)  
Prometheus Books, Buffalo, New York, USA. 1984

## Organisation for Economic Co-Operation and Development

Science and technology...have a number of distinguishing characteristics [that] cause special problems or complications. One...is ubiquity: they are everywhere. They are at the forefront of social change. They not only serve as agents of change, but provide the tools for analysing social change. They pose, therefore, special challenges to any society seeking to shape its own future and not just to react to change or to the sometimes undesired effects of change.

*Technology on Trial: Public Participation in Decision-Making Related to Science and Technology*  
Chapter I, Section B (p. 16)  
Organization for Economic Co-operation and Development, Paris, France. 1979

**Orwell, George (Eric Arthur Blair)** 1903–50  
English novelist and essayist

...men are only as good as their technical development allows them to be.

*Critical Essays*  
Charles Dickens, I (p. 40)  
Secker & Warburg, London, England. 1946

**Panofsky, Wolfgang** 1919–2007  
German-born American particle physicist

...the definition of conventional technology is that it worked once.

In Gary Taubes  
*Nobel Dreams*  
Chapter 4 (p. 51)  
Random House, Inc. New York, New York, USA. 1986

**Perry, Ralph Barton** 1876–1957  
American realist philosopher

The greatest of all modern ideas, in its originality, in its widespread adoption, and in its far-reaching importance, is...the idea that man can make his way through all the difficulties and dangers that beset him, by means of applied science or technology.

*The Present Conflict of Ideals*  
Chapter V (p. 58)  
Longmans, Green & Co. New York, New York, USA. 1918

**Pirsig, Robert M.** 1928–  
American writer

The way to solve the conflict between human values and technological needs is not to run away from technology, that's impossible. The way to resolve the conflict is to break down the barriers of dualistic thought that prevent a real understanding of what technology is – not an exploitation of nature, but the fusion of nature and the human spirit into a new kind of creation that transcends both.

*Zen and the Art of Motorcycle Maintenance: An Inquiry into Values*  
Part III, Chapter 25 (p. 291)  
William Morrow & Company, Inc. New York, New York, USA. 1974

**Pope Pius XII** 1876–1958  
Bishop of Rome

The Church welcomes technological progress and receives it with love, for it is an indubitable fact that technological progress comes from God and, therefore, can and must lead to Him.

Christmas message, 1953

**Primack, Joel**  
Astronomer

**von Hippel, Frank**  
Nuclear physicist

It has been remarked that all technology is a Faustian bargain: one obtains conveniences and sometimes luxuries, but in exchange one gets increased potential for catastrophes.

Nuclear Reactor Safety  
*Bulletin of the Atomic Scientists*, Volume XXX, Number 8, October, 1974 (p. 5)

**Reich, Charles A.**  
No biographical data available

Technology and production can be great benefactors of man, but they are mindless instruments, and if undirected they careen along with a momentum of their own. In our country, they pulverize everything in their path: the landscape, the natural environment, history and tradition, the amenities and civilities, the privacy and spaciousness of life, beauty, and the fragile, slow-growing social structures which bind us together.

*The Greening of America*

Chapter 1 (pp. 5–6)

Bantam Books. New York, New York, USA. 1971

**Rickover, Hyman G.** 1900–86

American naval nuclear engineer

...technology can have no legitimacy unless it inflicts no harm.

A Humanistic Technology

*Mechanical Engineering*, November, 1982 (p. 45)

**Sagan, Carl** 1934–96

American astronomer and science writer

Many visionary leaders have imagined a time when the allegiance of an individual human being is not to his particular nation-state, religion, race, or economic group, but to mankind as a whole; when the benefit to a human being of another sex, race, religion, or political persuasion ten thousand miles away is as precious to us as to our neighbor or our brother. The trend is in this direction, but is agonizingly slow. There is a serious question whether such a global self-identification of mankind can be achieved before we destroy ourselves with the technological forces our intelligence has unleashed.

*The Cosmic Connection: An Extraterrestrial Perspective*

Chapter 1 (p. 6)

Dell Publishing, Inc. New York, New York, USA. 1975

The so-called generation gap is a consequence of the rate of social and technological change.

Even within a human lifetime, the change is so great that many people are alienated from their own society. Margaret Mead had described older people as involuntary immigrants from the past to the present.

*The Cosmic Connection: An Extraterrestrial Perspective*

Chapter 5 (p. 36)

Dell Publishing, Inc. New York, New York, USA. 1975

We live in a society exquisitely dependent on science and technology, in which hardly anyone knows anything about science and technology.

Why We Need to Understand Science

*Parade magazine*, September 10, 1989

**Schumacher, Ernst Friedrich** 1911–77

German-born British economist

...the system of nature, of which man is a part, tends to be self-balancing, self-adjusting, self-cleansing. Not so with technology.... The technology of mass production is

inherently violent, ecologically damaging, self-defeating in terms of non-renewable resources, and stultifying for the human person.

*Small Is Beautiful*

Part II, Chapter V (p. 145)

Harper & Row, Publishers. New York, New York, USA. 1973

**Snow, Charles Percy** 1905–80

English novelist and scientist

Technology...is a queer thing. It brings you great gifts with one hand, and it stabs you in the back with the other.

*New York Times*, 15 March, 1971

**Sophocles** 496 BCE–406 BCE

Greek playwright

Wonders are many, and none is more wonderful than man; the power that crosses the white sea, driven by the stormy south-wind, making a path under surges that threaten to engulf him...turning the soil with the offspring of horses, as the ploughs go to and fro from year to year.... And speech, and windswift thought, and all the moods that mould a state, hath he taught himself; and how to flee the arrows of the frost, when 'tis hard lodging under the clear sky, and the arrows of the rushing rain; yea, he hath resource for all....

In *Great Books of the Western World* (Volume 5)

*The Plays of Sophocles*

*Antigone*, l. 333–340, 349–354

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Soulé, Michael E.**

American conservation biologist

Since we have no choice but to be swept along by this vast technological surge, we might as well learn to surf.

In David Western and Mary C. Pearl

*Conservation for the Twenty-First Century*

*Conservation Biology in the Twenty-First Century: Summary and Outlook* (p. 303)

Oxford University Press. New York, New York, USA. 1989

**Stevenson, Adlai E.** 1900–65

American political leader and diplomat

Technology, while adding daily to our physical ease, throws daily another loop of fine wire around our souls. It contributes hugely to our mobility, which we must not confuse with freedom. The extensions of our senses, which we find so fascinating, are not adding to the discrimination of our minds, since we need increasingly to take the reading of a needle on a dial to discover whether we think something is good or bad, or right or wrong.

My Faith in Democratic Capitalism

*Fortune Magazine*, October, 1955 (p. 156)

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

Our inventions are wont to be pretty toys, which distract our attention from serious things. They are but improved means to an unimproved end.

*The Writings of Henry David Thoreau* (Volume 2)  
Walden

Chapter 1 (p. 84)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

**Toffler, Alvin** 1928–

American writer and futurist

...[a] great, growling engine of change – technology.

*Future Shock*

Chapter 2 (p. 25)

Random House, Inc. New York, New York, USA. 1979

...technology feeds on itself. Technology makes more technology possible...

*Future Shock*

Chapter 2 (p. 27)

Random House, Inc. New York, New York, USA. 1979

If technology...is to be regarded as a great engine, a mighty accelerator, then knowledge must be regarded as its fuel. And we thus come to the crux of the accelerative process in society, for the engine is being fed a richer and richer fuel every day.

*Future Shock*

Chapter 2 (pp. 29–30)

Random House, Inc. New York, New York, USA. 1979

**Wilkins, Maurice** 1916–2004

New Zealand-born English molecular biologist

Science, with technology, is the only way we have to avoid starvation, disease, and premature death. The misapplication of science and technology is due to the fact that the politics are wrong. Now my own view is that the politics are indeed wrong; but politics and science are so closely interrelated that they can hardly be separated.

In Horace Freeland Judson

*The Eighth Day of Creation: Makers of the Revolution in Biology*

DNA, You Know, Is Midas' Gold (p. 97)

Simon & Schuster. New York, New York, USA. 1979

## TECTONICS

### Author undetermined

I believe in Plate Tectonics Almighty, Unifier of the Earth Sciences, and explanation of all things geological and geophysical; and in our Xavier le Pichon, revealer of relative motion, deduced from spreading rates about all ridges; Hypothesis of Hypothesis, Theory of Theory, Very Fact of Very Fact; deduced not assumed; Continents being of one unit with the Oceans, from which all plates spread; Which when they encounter another plate and are subducted, go down in Benioff Zones, and are resorbed into the Asthenosphere, and are made Mantle; and cause earthquake foci also under Island Arcs; They soften and

can flow; and at the Ridges Magma rises again according to Vine and Matthews; and ascends into the Crust, and maketh symmetrical magnetic anomalies; and the sea floor shall spread again, with continents, to make both mountains and faults, Whose evolution shall have no end.

And I believe in Continental Drift, the Controller of the evolution of Life, Which proceedeth from Plate Tectonics and Sea-Floor Spreading; Which with Plate Tectonics and Sea-Floor Spreading together is worshipped and glorified; Which was spake of by Wegner; And I believe in one Seismic and Volcansitic pattern; I acknowledge one Cause for the deformation of rocks; and I patiently look for the eruption of new Ridges and the subduction of the Plates to come. Amen.

Source undetermined

## TEKTITES

**Faul, Henry** 1920–81

Czech-American geochronologist

To anyone who has worked with them, tektites are probably the most frustrating stones ever found on Earth.

Tektites are Terrestrial

*Science*, Volume 152, Number 3727, 3 June, 1966 (p. 1341)

## TELEOLOGY

**Ayala, Francisco J.** 1934–

Spanish-American biologist and philosopher

Biological evolution can however be explained without recourse to a Creator or a planning agent external to the organisms themselves. The evidence of the fossil record is against any directing force, external or immanent, leading the evolutionary process toward specified goals. Teleology in the stated sense is, then, appropriately rejected in biology as a category of explanation.

Biology as an Autonomous Science

*American Scientist*, Volume 56, Number 3, Autumn 1968 (p. 213)

**Butler, Samuel** 1612–80

English novelist, essayist, and critic

Of all the questions now engaging the attention of those whose destiny has commanded them to take more or less exercise of mind, I know of none more interesting than that which deals with what is called teleology – that is to say, with design or purpose, as evidenced by the different parts of animals and plants.

*Evolution, Old and New*

Chapter 1 (p. 1)

Hardwicke & Bogue. London, England. 1879

**Huxley, Thomas Henry** 1825–95

English biologist

Nevertheless it is necessary to remember that there is a wider Teleology, which is not touched by the doctrine of Evolution, but is actually based upon the fundamental proposition of Evolution. That proposition is, that the whole world, living and not living, is the result of the mutual interaction, according to definite laws, of the forces possessed by the molecules of which the primitive nebulosity of the universe was composed. If this be true, it is no less certain that the existing world lay, potentially, in the cosmic vapour; and that a sufficient intelligence could, from a knowledge of the properties of the molecules of that vapour, have predicted, say the state of the Fauna of Britain in 1869, with as much certainty as one can say what will happen to the vapour of the breath in a cold winter's day.

*Critiques and Addresses* (pp. 272–273)

**Reichenbach, Hans** 1891–1953

German philosopher of science

Teleology is analogism, is pseudo explanation; it belongs in speculative philosophy, but has no place in scientific philosophy.

*The Rise of Scientific Philosophy*

Chapter 12 (p. 195)

University of California Press. Berkeley, California, USA. 1951

**von Brücke, Ernst** 1819–92

German-born physicist and physiologist

Teleology is a lady without whom no biologist can live. Yet he is ashamed to show himself with her in public.

In W.I.B. Beveridge

*The Art of Scientific Investigation*

Chapter Five (p. 61)

W.W. Norton & Company, Inc. New York, New York, USA. 1957

## TELESCOPE

### Author undetermined

He [man] cannot but feel a sense of pleasure, and even of power, when the telescope reveals to his gaze not only the worlds that constitute his own so-called Solar System, but the suns that light up the borders of the Universe, system upon system, sun upon sun, covering the unbounded area almost as thickly as the daisies cover a meadow in spring.

*The Story of The Herschels: A Family of Astronomers*

Chapter I

T. Nelson & Sons. London, England. 1889

In the old Telescope's tube we sit,  
And the shades of the past around us flit;  
His requiem sing we, with shout and with din,  
While the old year goes out, and the new one comes in.  
*Chorus of youths and virgins.* Merrily, merrily, let us all sing,

And make the old Telescope rattle and ring.

In Charles Richard Weld (ed.)

*A History of the Royal Society, With Memoirs of the Presidents* Volume 2

The Herschelian Telescope Song (p. 195)

John Parker. London, England. 1848

**Bierce, Ambrose** 1842–1914

American newspaperman, wit, and satirist

Telescope (n): A device having a relation to the eye similar to that of a telephone to the ear, enabling distant objects to plague us with a multitude of needless details.

*The Devil's Dictionary*

Doubleday & Company, Inc. Garden City, New York, USA. 1967

**Brecht, Bertolt** 1898–1956

German writer

LUDOVICO: ...look at that queer tube thing they're selling in Amsterdam. I gave it a good looking-over. A green leather casing and a couple of lenses, one this way [he indicates a concave lens].... One of them's supposed to magnify and the other reduces. Anyone in his right mind would expect them to cancel out. They don't. The thing makes everything appear five times the size. That's science for you.

Translated by John Willett

*Life of Galileo*

Scene 1 (pp. 12–13)

Arcade Publishing. New York, New York, USA. 1994

**Butler, Samuel** 1612–80

English novelist, essayist, and critic

And now the lofty telescope, the scale  
By which they venture Heav'n itself t' assail,  
Was raised, and planted full against the Moon...

*The Poetical Works of Samuel Butler* (Volume 2)

Elephant in the Moon

Bell & Daldy. London, England. 1835

**Carpenter, William Benjamin** 1813–85

English physiologist and naturalist

...in the *telescope*, by which our power of sight is so wonderfully augmented, that we are enabled, when gazing through it into the unfathomable depths of space, to take cognizance of world beyond world and system beyond system, whose remoteness cannot be expressed by any form of words that shall convey a distinct idea to the mind, and to bring the members of our own group within such visual proximity to ourselves, that we can scrutinize their appearance nearly as well as if they had actually been brought a thousand times nearer to us.

*The Microscope and Its Revelations*

Introduction (pp. 1–2)

John Churchill. London, England. 1866

**Carroll, Lewis (Charles Dodgson)** 1832–98

English writer and mathematician

All this time the Guard was looking at her, first through a telescope, then through a microscope, and then through an opera-glass.

*The Complete Works of Lewis Carroll*

*Through the Looking-Glass*

Chapter III (pp. 169–170)

The Modern Library. New York, New York, USA. 1936

### **Cedering, Siv** 1939–

Swedish-American poet, painter, and sculptor

I have helped him polish the mirrors and lenses of our new telescope. It is the largest in existence. Can you imagine the thrill of turning it to some new corner of the heavens to see something never before seen from the earth?

*Science 84*

Letter from Caroline Herschel (1750–1840)

### **Clerke, Agnes Mary** 1842–1907

Irish astronomer

...access to the nebular heavens can be gained only by making the very most of the little light they send us.

*The System of the Stars* (2nd edition)

Chapter 1 (p. 11)

Adam & Charles Black. London, England. 1905

### **Copeland, Leland S.** 1886–?

American poet and writer

Then outward turn an optic tube  
From some high, lonely hill,  
That we may glance at cosmic nooks  
And marvels rich, until  
The morning glow conceals those realms  
Where precious things distill,  
Far-forth beyond the utmost reach  
Of human hope and will.

All Night with the Stars

*Sky & Telescope*, November, 1949

Many of us find that to leave bright room and cozy chair for the dark world outside is contrary to nature, like a moth flying from the light. As a bather plunges into cold water, so the sky hunter must immerse himself in darkness before he will find it comfortable in the night.... So rich is this nocturnal wonderland that even for smallest telescopes numerous objects await observation. A larger lens or mirror is not an assured benefit. Devotion and patience are as important as light grasp.

All Night with the Stars

*Sky & Telescope*, November, 1949

### **de Grasse Tyson, Neil** 1958–

American astrophysicist and writer

The most famous telescope in modern times is, of course, the Hubble, known to the public primarily through the beautiful, full-color, high-resolution images it has produced of objects in the universe. The problem here is that after viewing such exhibits, you wax poetic about the

beauty of the universe yet are no closer than before to understanding how it all works....

Over the Rainbow

*Natural History*, Volume 110, Number 7, September, 2001 (p. 34)

While much good science has come from the Hubble telescope (including the most reliable measure to date for the expansion rate of the universe), you would never know from media accounts that the foundation of our cosmic knowledge continues to flow primarily from the analysis of spectra and not from looking at pretty pictures.

Over the Rainbow

*Natural History*, Volume 110, Number 7, September, 2001 (p. 34)

### **Dressler, Alan**

American astronomer

To look into space is to look back into time, and telescopes are time machines we can ride nearly all the way back to creation itself.

Observing Galaxies Through Time

*Sky and Telescope*, Volume 82, Number 2, August, 1991 (p. 126)

### **Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

The sight of a planet through a telescope is worth all the course on astronomy...

*Ralph Waldo Emerson: Essays and Lectures*

*Essays: Second Series*

New England Reformers (p. 594)

The Library of America. New York, New York, USA. 1983

### **Everett, Edward** 1794–1865

American statesman, educator, and orator

The telescope may be likened to a wondrous cyclopean eye, endued with superhuman power, by which the astronomer extends the reach of his vision to the further heavens, and surveys galaxies and universes compared with which the solar system is but an atom floating in the air.

The Uses of Astronomy, An Oration Delivered at Albany, New York, 28 July 1856 (p. 22)

Ross & Tousey. New York, New York, USA. 1856

### **Faulharer, C.**

No biographical data available

The three principal instruments for the study of the heavenly bodies are the telescope, the spectroscope, and the photographic camera; and since the latter are made useful only as they are attached to the former, it is the telescope which we must still regard as the key to unlock the doors of the universe.

*Annual Report of the Board of Regents of the Smithsonian Institution* (1904)

Construction of Large Telescope Lenses (p. 163)

Government Printing Office. Washington, D.C. 1905

### **Ferris, Timothy** 1944–

American science writer

Telescopes are like musical instruments, in that you get out of them what you put into them.

*Seeing in the Dark*

Appendix A (p. 299)

Simon & Schuster. New York, New York, USA. 2002

**Frost, Robert** 1874–1963

American poet

Man acts more like the poor bear in a cage  
That all day fights a nervous inward rage...  
The toenail click at the shuffle of his feet,  
The telescope at one end of his beat,  
And at the other end the microscope,  
Two instruments of nearly equal hope...

*Complete Poems of Robert Frost*

The Bear

Henry Holt & Company. New York, New York, USA. 1949

He burned his house down for the fire insurance  
And spent the proceeds on a telescope  
To satisfy a lifelong curiosity  
About our place among the infinities.

*Complete Poems of Robert Frost*

The Star Splitter

Henry Holt & Company. New York, New York, USA. 1949

**Galilei, Galileo** 1564–1642

Italian physicist and astronomer

O telescope, instrument of much knowledge, more precious than any scepter! Is not he who holds thee in his hand made king and lord of the works of God?

In William H. Jefferys and R. Robert Robbins

*Discovering Astronomy* (p. 174)

John Wiley & Sons, Inc. New York, New York, USA. 1995

All which facts were discovered and observed a few days ago by the help of a telescope devised by me, through God's grace first enlightening my mind.

Translated by Edward Stafford Carlos

Russian-born American physicist

My telescope  
Has dashed your hope;  
Your tenets are refuted.  
Let me be terse:  
Our universe  
Grows daily more diluted!

*Mr. Tompkins in Paperback*

Chapter 6 (p. 63)

At The University Press. Cambridge, England. 1965

**Hankins, Arthur Preston** 1880–1932

No biographical data available

Midnight – with Cole of Spyglass Mountain seated high up on his ladder, his far-seeing blue-gray eye glued to the powerful five-hundred-diameter eye-piece of his telescope. Unnoticeably the refractor followed the planet in its endless flight. The driving clock purred softly, the only sound on Spyglass Mountain – cold and still and fraught with uncanny tensivity.

*Cole of Spyglass Mountain* (p. 302)

Dodd, Mead & Company. New York, New York, USA. 1923

**Hastings, C. S.**

No biographical data available

Let us therefore congratulate the possessors of this noble instrument, wish them God speed in their search after knowledge, while we remind them that although no astronomer can ever make another discovery that will rival that made by the insignificant tube first directed toward the heavens by the Paduan philosopher, yet no mind can weigh the importance of any truth, however trivial in appearance, which may be added to that store which we call "science."

*Annual Report of the Board of Regents of the Smithsonian Institution, 1893*

The History of the Telescope (p. 109)

Government Printing Office. Washington, D.C. 1894

**Herschel, Friedrich Wilhelm**

**(Sir William)** 1738–1822

English astronomer

In the old Telescope's tube we sit,  
And the shades of the past around us flit...

*Herschel at the Cape*

Introduction (p. xix)

University of Texas Press. Austin, Texas, USA. 1969

I will make such telescopes and see such things!

In Grant Allen

*Biographies of Working Men*

Chapter IV (p. 108)

Society for Promoting Christian Knowledge. London, England. 1884

Although my single endeavors should not succeed in a work which seems to require the joint effort of every astronomer, yet so much we may venture to hope that by applying ourselves with all our powers to the improvement of telescopes, which I look upon as yet in their infant state, and turning them with assiduity to the study of the heavens, we shall in time obtain some faint knowledge of, and perhaps be able partly to delineate, the interior construction of the universe.

Account of Some Observations Tending to Investigate the Construction of the Heavens

*Philosophical Transactions of the Royal Society of London,*

Volume 74, 1784 (p. 449)

The power of penetrating into space by telescopes is very different from magnifying power, and ought to be considered separately.

On the Power of Penetrating into Space by Telescopes  
*Philosophical Transactions of the Royal Society of London*,  
 Volume 90, 1800 (p. 49)

...when an object is once discovered by a superior power,  
 an inferior one will suffice to see if afterwards.

Quoted in book review  
*Nature*, February 1, 1883 (p. 310)

### Hogan, James

No biographical data available

Today, everybody remembers Galileo. How many can  
 name the bishops and professors who refused to look  
 through his telescope?

*Mind Matters: Exploring the World of Artificial Intelligence*, (p. 11)  
 Del Ray/Ballantine Books. New York, New York, USA. 1957

### Holmes, Oliver Wendell 1809–94

American physician, poet, and humorist

I was riding on the outside of a stage-coach from London  
 to Windsor, when all at once a picture familiar to me from  
 my New England village childhood came upon me like  
 a reminiscence rather than a revelation. It was a mighty  
 bewilderment of slanted masts and spars and ladders and  
 ropes, from the midst of which a vast tube, looking as if it  
 might be a piece of ordnance such as the revolted angels  
 battered the walls of Heaven with, according to Milton,  
 lifted its muzzle defiantly towards the sky.

*The Poet at the Breakfast-Table*

Chapter VIII (p. 219)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1895

I love all sights of earth and skies,  
 From flowers that grow to stars that shine;  
 The comet and the penny show,  
 All curious things above, below...  
 But most I love the tube that spies  
 The orbs celestial in their march;  
 That shows the comet as it whisks  
 Its tail across the planet's disk,  
 Or wheels so close against the sun  
 We tremble at the thought of risks  
 Our little spinning ball may run.

*The Complete Poetical Works of Oliver Wendell Holmes*

The Flaneur

Houghton Mifflin Company. Boston, Massachusetts, USA. 1899

### Howe, Herbert Alonzo 1858–1926

American astronomer

Ingenuous and powerful instruments have been devised,  
 which reveal wonders otherwise unimagined, and the end  
 is not yet. Each new telescopic giant is expected to win  
 fresh laurels in old fields of endeavor, or to make discov-  
 eries which shall link its name forever with the stars.

*A Study of the Sky*

Chapter I (p. 16)

Charles Scribner's Sons. New York, New York, USA. 1901

### Hubble, Edwin Powell 1889–1953

American astronomer

The exploration of space is an achievement of great  
 telescopes.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1938*  
 The Nature of the Nebulae (p. 137)

Government Printing Office. Washington, D.C. 1939

### Kepler, Johannes 1571–1630

German astronomer

What now, dear reader, shall we make out of our tele-  
 scope? Shall we make a Mercury's magic-wand to cross  
 the liquid ether with, and like Lucian lead a colony to the  
 uninhabited evening star, allured by the sweetness of the  
 place? Or shall we make it a Cupid's arrow which, enter-  
 ing by our eyes, has pierced our inmost mind, and fired  
 us with love of Venus?...  
*Dioptrice*

Preface (p. 86)

O telescope, instrument of much knowledge, more pre-  
 cious than any scepter! Is not he who holds thee in his  
 hand made king and lord of the works of God?

*Dioptrice*

Preface (p. 103)

### Kitchiner, William 1775–1827

English doctor/optician and telescope inventor

Immense telescopes are only about as useful as the enor-  
 mous spectacles which are suspended over the doors of  
 opticians!

In William Sheehan

*Planets and Perception: Telescopic Views and Interpretations*,  
 1609–1909

Chapter 9 (p. 113)

The University of Arizona Press. Tucson, Arizona, USA. 1988

When a Telescope is pointed at a Star, the least Defect in  
 the figure, or adjustment of the metals in a Reflector, or of  
 the object-glass in an Achromatic, immediately stares in  
 your Eye, – the Star not appearing round, but surrounded  
 by false lights, radiating points, and little flitting lumi-  
 nous accompaniments.

They make their appearance in a Periwig, – instead of  
 presenting themselves clean shaved, – or like round Sil-  
 ver Spangles on a bit of Black Cloth.

*The Economy of the Eyes*

Chapter VI (p. 97)

Printed by J. Moyes. London, England. 1825

If I was an Optician, – I think that I would almost as  
 willingly – *Waltz blindfold and barefoot among 9 Red*  
*hot Ploughshares laid at unequal distances from each*  
*other*, – as have All my Telescopes tried by that truly  
 troublesome test a Fixed Star.

*The Economy of the Eyes* Part II

Chapter XVII (p. 153)

Printed for Hurst, Robinson & Co. London, England. 1824

**Lardner, Dionysius** 1793–1859

British physicist and astronomer

What will a telescope do for us in regard to the examination of the heavenly bodies, or indeed of any distant object? It will accomplish this, and nothing more: it will place us at a less distance from the object to which we direct our view; it will enable us to approach it within a certain limit of distance, and to behold it as we should do without a telescope at the lesser distances.

*Popular Lectures on Science and Art*

The Plurality of Worlds (p. 51)

Henry W. Law. New York, New York, USA. 1856

**Longair, Malcolm** 1941–

Scottish astronomer

‘Twas brillig and the slithy toves  
Brought plans of telescopes fair to see.  
The Jabberwock, he clapped his hands  
And said, “That’s just for me.”

*Alice and the Space Telescope*

Chapter 2 (p. 7)

The John Hopkins University Press, Baltimore, Maryland, USA. 1989

English astrophysicist

Astronomy has marched forward with the growth in size of its telescopes.

Radio Stars

*Scientific American*, Volume 188, Number 1, January, 1953 (p. 21)**Maunder, Edward Walter** 1851–1928

English astronomer

We have no right to assume, and yet we do habitually assume, that our telescopes reveal to us the ultimate structure of the planet.

The Canals of Mars

*Knowledge*, Number 1, 1894 (p. 251)**Milton, John** 1608–74

English poet

...a spot like which perhaps  
Astronomer in the Sun’s lucent Orbe  
Through his glaz’d Optic Tube yet never saw.

In *Great Books of the Western World* (Volume 32)*Paradise Lost*

Book III, l. 588–590

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Mitchel, Ormsby MacKnight** 1805–62

American astronomer

With the potent aid of this magic instrument [telescope], the astronomer no longer is bound hopelessly to his native earth; without indeed quitting in person its surface, his eyes gifted with superhuman power, ranges the illimitable fields of space. He visits the moon, and finds a world with its lofty mountains and spreading valleys.

*The Planetary and Stellar Worlds: A Popular Exposition of the Great Discoveries and Theories of Modern Astronomy*

Lecture I (p. 30)

Baker &amp; Scribner. New York, New York, USA. 1848

**Mitchell, Maria** 1818–89

American astronomer and educator

The tube of Newton’s first telescope...was made from the cover of an old book—a little glass at one end of the tube and a large brain at the other...

In Helen Wright

*Sweeper in the Sky*

Chapter 9 (p. 168)

Macmillan &amp; Company. New York, New York, USA. 1949

Size is not so important as people generally suppose. Nicety and accuracy are what is needed in all scientific work; startling effects by large telescopes and high powers are too suggestive of sensational advertisement.

In Phebe Mitchell Kendall

*Maria Mitchell: Life, Letters, and Journals*

Chapter IX (p. 178)

Lea &amp; Shepard Publishers. Boston, Massachusetts, USA. 1896

**Molyneux, William** 1656–98

Irish astronomer

‘Tis manifest by Experiments, that the ordinary Power of Man’s Eye extends no farther than perceiving what subtends an Angle of about a Minute, or something less. But when an Eye is armed with a Telescope, it may discern an Angle less than a Second.

*Dioptrica Nova* (p. 243)

Printed for Benjamin Tooke

London, England. 1692

**Morehouse, George Wilkinson** 1840–?

American naturalist

I run to the telescope; my vision is extended a thousand fold; millions more [of stars] come into view, and in the thousand times more distant circle of vision fade gradually until in the outer limits only glimpses can be caught of faint points of light.

*The Wilderness of Worlds*

Preface (p. 4)

Peter Eckler, Publisher. New York, New York, USA. 1898

As far as the telescope can penetrate space, matter exists. Every improvement in the instrument enables us to see clearer the stars already discovered, and brings to the eye faint glimpses of swarms still farther removed.

*The Wilderness of Worlds*

Chapter III (p. 19)

Peter Eckler, Publisher. New York, New York, USA. 1898

**Moulton, Forest Ray** 1872–1952

American astronomer

The eye of the fabled Cyclops was not even prophetic of the great telescope at Mt. Wilson, the pupil of whose eye, so to speak, is 100 inches in diameter.

In H.H. Newman (ed.)

*The Nature of the World and of Man*

Astronomy (p. 1)

The University of Chicago Press. Chicago, Illinois, USA. 1927

### Mullaney, James

American astronomy writer, lecturer, and consultant

The telescope in particular need to be regarded as not just another gadget or material possession but a wonderful, magical gift to humankind – a window on creation, a time machine, a spaceship of the mind that enables us to roam the universe in a way that is surely the next best thing to being out there.

Focal Point

*Sky & Telescope*, March, 1990 (p. 244)

### Narrator

There are more stars in the heavens than there are human beings on Earth. Through telescopes men of science constantly search the infinitesimal corners of our solar system seeking new discoveries, hoping to better understand the laws of the Universe.

*When Worlds Collide*

Film (1951)

### Newton, Sir Isaac 1642–1727

English physicist and mathematician

If the theory of making telescopes could at length be fully brought into practice, yet there would be certain bounds beyond which telescopes could not perform. For the air through which we look upon the stars is in a perpetual tremor; as may be seen by the tremulous motion of shadows cast from high towers, and by the twinkling of the fixed stars.... The only remedy is a most serene and quiet air, such as may perhaps be found on the tops of the highest mountains above the gossamer clouds.

In *Great Books of the Western World* (Volume 34)

*Optics*

Book 1, Part 1, Proposition viii, problem 2 (p. 423)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...they (telescopes) cannot be so formed as to take away that confusion of Rays which arises from the Tremors of the Atmosphere. The only Remedy is a most serene and quiet Air, such as may perhaps be found on the tops of the highest Mountains above the grosser Clouds.

*Opticks* (4th edition)

Book I (p. 98)

Printed for William Innys. London, England. 1730

### Noyes, Alfred 1880–1958

English poet

My periwig's askew, my ruffle stained  
With grease from my new telescope!

*The Torch Bearers: Watchers of the Sky*

William Herschel Conducts (p. 231)

Frederick A. Stokes Company. New York, New York, USA. 1922

### Oswalt, Terry D.

...the viable mix of telescope sizes in astronomy is like that of operating a truck fleet. One must have trucks of all sizes, so as to efficiently match the size of the truck to the need.

*The Future of Small Telescopes in the New Millennium*

Chapter 17 (p. 191)

Kluwer Academic Publishers. Dordrecht, Germany. 2003

### Panek, Richard

No biographical data available

The relationship between the telescope and our understanding of the dimensions of the universe is in many ways the story of modernity. It's the story of how the development of one piece of technology has changed the way we see ourselves and of how the way we see ourselves has changed this piece of technology, each set of changes reinforcing the other over the course of centuries until, in time, we've been able to look back and say with some certainty that the pivotal division between the world we inhabit today and the world of our ancestors was the invention of this instrument.

*Seeing and Believing: How the Telescope Opened Our Eyes and Minds to the Heavens*

Prologue (p. 4)

The Viking Press. New York, New York, USA. 1998

### Peltier, Leslie C. 1900–80

American comet hunter

Old telescopes never die, they are just laid away.

*Starlight Nights*

Chapter 28 (p. 232)

Harper & Row, Publishers. New York, New York, USA. 1965

### Rowan-Robinson, Michael 1942–

English astronomer, astrophysicist, and professor

Once it was the navigators crossing the oceans to find new continents and new creatures, the globe opening up before their eyes, and at the same time the unknown areas, white on the map, shrinking.

Now it is the astronomers' telescopes penetrating the void to find new worlds, voyages of discoveries made with giant metal eyes, seeing light we cannot see.

*Our Universe: An Armchair Guide*

Cosmic Landscape

After Preface

W.H. Freeman & Company. New York, New York, USA. 1990

### Ryder-Smith, Roland

No biographical data available

All night he watches roving worlds go by  
Through tempered glass, his window on the sky  
Feels in his own beat

Of some far mightier heart, and hears  
The mystic concert of the spheres.

Astronomer

*The Scientific Monthly*, Volume 67, Number 4, October, 1948 (p. 253)

**Theil, Rudolph** 1894–1967

No biographical data available

Like snow-flakes, the stars float out of the visual field of large instruments; a mere quiver of the telescope tube can make stars leap away like so many grasshoppers.

*And There Was Light: The Discovery of the Universe*

Triumph of Precision (p. 277)

Alfred A. Knopf. New York, New York, USA. 1967

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

Man's eye is the true star-finder, the comet-seeker. No superior telescope to this has been invented.

W.W. Norton & Company, Inc. New York, New York, USA. 1985

**TEMPORAL**

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

The things which are temporal arise by their participation in the things which are eternal.

*Process and Reality*  
Fact and Form (p. 40)

**TENSOR**

**Bell, E. T. (Eric Temple)** 1883–1960  
Scottish-American mathematician and educator

...the tensor calculus that cost Einstein an effort to master is now a regular part of an undergraduate course in the better technical schools. The subject has been so thoroughly emulsified that even an eighteen-year-old can swallow it without regurgitating. But this does not prove that wither his brain or his stomach is stronger than Einstein's was.

*Mathematics: Queen and Servant of Science*  
A Metrical Universe (p. 211)  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1951

**Benford, Gregory** 1941–  
American physicist and science fiction novelist

There was a blithe certainty that came from first comprehending the full Einstein field equations, arabesques of Greek letters clinging tenuously to the page, a gossamer web. They seemed insubstantial when you first saw them, a string of squiggles. Yet to follow the delicate tensors as they contracted, as the superscripts paired with subscripts, collapsing mathematically into concrete classical entities – potential; mass; forces vectoring in a curved geometry – that was a sublime experience. The iron fist of the real, inside the velvet glove of airy mathematics.

*Timescape*  
Chapter 15 (pp. 175–176)  
Simon & Schuster. New York, New York, USA. 1980

**Bester, Alfred** 1913–87  
American science fiction writer

Tensor, said the Tensor  
Tensor, said the Tensor  
Tension, apprehension,  
And dissension have begun.

*The Demolished Man*  
Chapter iii (p. 48)  
Shasta Publishers. Chicago, Illinois, USA. 1953

**Einstein, Albert** 1879–1955  
German-born physicist

...the energy tensor can be regarded only as a provisional means of representing matter. In reality, matter consists of electrically charged particles...

*The Meaning of Relativity* (p. 82)  
Princeton University Press. Princeton, New Jersey, USA. 1945

...in the case of the equations of gravitation it is the four-dimensionality and the symmetric tensor as expression for the structure of space that, together with the invariance with respect to the continuous transformation group, determine the equations all but completely.

Translated by Paul Arthur Schlipp  
*Albert Einstein: Autobiographical Notes* (p. 85)  
The Open Court Publishing Company. La Salle, Illinois, USA. 1979

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

We want to express physical laws in such a way that it shall be obvious when we are expressing the same law by reference to two different systems of co-ordinates, so that we shall not be misled into supposing we have different laws when we have one law in different words. This is accomplished by the method of tensors.

*The ABC of Relativity*  
Chapter XII (p. 110)  
George Allen & Unwin Ltd. London, England. 1958

**van Dine, S. S.** 1888–1939  
American art critic and author

The tensor is known to all advanced Mathematicians. It is one of the technical expressions used in non-Euclidean geometry; and though it was discovered by Riemann in connection with a concrete problem in physics, it has now become of widespread importance in the mathematics of relativity. It's highly scientific in the abstract sense, and can have no direct bearing on Sprigg's murder.

*The Bishop Murder Case*  
Chapter 9  
Charles Scribner's Sons. New York, New York, USA. 1929

**Weyl, Hermann** 1885–1955  
German mathematician

The conception of tensors is possible owing to the circumstance that the transition from one co-ordinate system to another expresses itself as a linear transformation in the differentials. One here uses the exceedingly fruitful mathematical device of making a problem "linear" by reverting to infinitely small quantities.

Translated by Henry L. Brose  
*Space – Time – Matter*  
Chapter II, Section 13 (p. 104)  
Dover Publications, Inc. New York, New York, USA. 1922

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

The idea that physicists would in future have to study the theory of tensors created real panic amongst them following the first announcement that Einstein's predictions had been verified.

In Jean-Pierre Luminet  
*Black Holes* (p. 47)  
Cambridge University Press. New York, New York, USA. 1992

## TERMINOLOGY

**Holmes, Oliver Wendell** 1809–94  
American physician, poet, and humorist

The last thing an old teacher wants is, as you know full well, a new set of terms for a familiar set of objects. It is hard instructing ancient canine individuals in new devices. It is hard teaching old professors new tricks.

Letter to Dr. Wilder, May 30, 1881

*Proceedings of the American Philosophical Society Held at Philadelphia*, Volume XIX, July 15, 1881 (p. 530)

**Whewell, William** 1794–1866  
English philosopher and historian

Terminology must be conventional, precise, constant; copious in words, and minute in distinctions, according to the needs of the science. The student must understand the terms, directly according to the convention, not through the medium of explanation or comparison.

*The Philosophy of the Inductive Sciences: Founded Upon Their History* (Volume 2) (2nd edition)

Aphorisms Concerning Ideas (p. 460)

John W. Parker. London, England. 1847

## TERMS

**Owen, Richard** 1804–92  
English biologist, comparative anatomist and paleontologist

Terms are the tools of the teacher; and only an inferior hand persists in toiling with a clumsy instrument when a better one lies within his reach.

*On the Anatomy of Vertebrates* (Volume I)

Preface (p. xiii)

Longmans, Green & Co. London, England. 1866

## TERRA INCOGNITA

**Steenstrup, Johannes Japetus Smith**

No biographical data available

I believe that I have given only the first rough outlines of a province of a great *terra incognita* which lies unexplored before us, and the exploration of which promises a return such as we can at present scarcely appreciate.

*On the Alternation of Generations*

Preface (p. 8)

Printed for the Ray Society. London, England. 1845

## TERRESTRIAL

**Dick, Thomas** 1600–80  
Scottish theologian and philosopher

Compared with the splendour, the amplitude, the august motions, and the ideas of infinity which the celestial vault presents, the most resplendent terrestrial scenes sink into

inanity, and appear unworthy of being set in competition with the glories of the sky.

*Celestial Scenery: Or, The Wonders of the Planetary System Displayed*

Introduction (p. 13)

Harper & Brothers Publishers. New York, New York, USA. 1838

## TEST

**Eliot, George (Mary Ann Evans Cross)** 1819–80  
English novelist

Whereas Fever had obscure conditions, and gave him that delightful labour of the imagination which is not mere arbitrariness, but the exercise of disciplined power – combining and constructing with the clearest eye for probabilities and the fullest obedience to knowledge; and then, in yet more energetic alliance with impartial Nature, standing aloof to invent tests by which to try its own work.

*Middlemarch: A Study of Provincial Life* (Volume 1)

Book II (p. 249)

Thomas Nelson & Sons. New York, New York, USA. 1906

## TESTING

**Colton, Charles Caleb** 1780–1832  
English sportsman and writer

Examinations are formidable, even to the best prepared, for the greatest fool may ask more than the wisest man can answer.

*Lacon; or Many Things in a Few Words* (p. 170)

William Gowans. New York, New York, USA. 1849

Phrases and Philosophies

A.R. Keller. London, England. 1907

**TEXTBOOK****Collie, John Norman** 1859–1942

English chemist

At the present time it is not altogether easy to say on what lines a text-book of Organic Chemistry should be written. To state in the preface that the Author “hopes it will supply a long-felt want” is not always an injudicious method of announcing the Author’s belief in the readers of text-books. For if the “long-felt want” of the public is to have a restatement of all the old facts once more, with nothing new, no critical faculty shown, and an obvious lack of evidence that the book can be used to broaden our outlook on other sciences as well as chemistry, then no doubt the desire of the public for the time being is satisfied.

In Alfred Walter Stewart

*Recent Advances in Organic Chemistry*

Introduction (p. xiii)

Longmans, Green &amp; Co. London, England. 1908

The text-book is rare that stimulates its reader to ask, Why is this so? or, How does this connect with what has been read elsewhere?

In Alfred Walter Stewart

*Recent Advances in Organic Chemistry*

Introduction (p. xiv)

Longmans, Green &amp; Co. London, England. 1908

**Lewis, Exum Percival**

No biographical data available

The student must bear constantly in mind that the matter in a textbook is not Physics. The direct object of his study is nature as we find it in everyday life, supplemented by the laboratory. Everyone of us began his study of Physics before he could read. The text-book is a guide to the use of this material, just as a catalogue is a guide through an art gallery; each is almost indispensable on account of its classification of details, its historical information, and its discussion and criticisms; but neither can take the place of the original subject matter.

*Notes on the Properties of Matter and Heat*

Introductory (p. 4)

Berkeley, California, USA. 1903

**THEOLOGY****Keyser, Cassius Jackson** 1862–1947

American mathematician

...in the mathematical doctrine of Invariance, the realm wherein are sought and found configurations and types of being that, amid the swirl and stress of countless hosts of transformations, remain immutable, and the spirit dwells in contemplation of the serene and eternal reign of the subtle law of Form, it is there that Theology may find, if she will, the clearest conceptions, the noblest symbols,

the most inspiring intimations, the most illuminating illustrations, and the surest guarantees of the object of her teaching and her quest, an Eternal Being, unchanging in the midst of the universal flux.

*The Human Worth of Rigorous Thinking: Essays and Addresses*

Chapter XV (p. 312)

Columbia University Press. New York, New York, USA. 1916

**THEOREM****Atiyah, Sir Michael** 1922–

English mathematician

A theorem is never arrived at in the way that logical thought would lead you to believe or that posterity thinks. It is usually much more accidental, some chance discovery in answer to some kind of question. Eventually you can rationalize it and say that this is how it fits. Discoveries never happen as neatly as that. You can rewrite history and make it look much more logical, but actually it happens quite differently.

24th of May, 2004 prior to the Abel prize celebrations

Interview with Michael Atiyah and Isadore Singer

Martin Raussen and Christian Skau are the interviewers

**Fabre, Jean-Henri** 1823–1915

French entomologist and author

How many properties were there of which the compass knew nothing, how many cunning laws lay contained in embryo within an equation, the mysterious nut which must be artistically cracked to extract the rich kernel, the theorem!

Translated by Alexander Teixeira de Mattos

*The Life of the Fly*

Chapter XIII (p. 303)

Dodd, Mead &amp; Co. New York, New York, USA. 1925

**Feynman, Richard P.** 1918–88

American theoretical physicist

We decided that “trivial” means “proved.” So we joked with the mathematicians: “We have a new theorem – that mathematicians can prove only trivial theorems, because every theorem that’s proved is trivial.”

*Surely You’re Joking, Mr. Feynman!: Adventures of a Curious Character*

A Map of a Cat? (p. 70)

W.W. Norton &amp; Company, Inc. New York, New York, USA. 1985

**Hamming, Wesley Richard** 1915–98

American mathematician

Some people believe that a theorem is proved when a logically correct proof is given; but some people believe a theorem is proved only when the student sees why it is inevitably true. The author tends to belong to this second school of thought.

*Coding and Information Theory* (p. 155)

Prentice-Hall, Inc. Englewood Cliffs, New Jersey, USA. 1980

**Hofstadter, Douglas R.** 1945–  
American academic

All the limitative Theorems of metamathematics and the theory of computation suggest that once the ability to represent your own structure has reached a certain critical point, that is the kiss of death: it guarantees that you can never represent yourself totally. Gödel's Incompleteness Theorem, Church's Undecidability Theorem, Turing's Halting Theorem, Tarski's Truth Theorem – all have the flavor of some ancient fairy tale which warns you that "To seek self-knowledge is to embark on a journey which...will always be incomplete, cannot be charted on any map, will never halt, cannot be described."

*Gödel, Escher, Bach: An Eternal Golden Braid*

Part II, Chapter XX (p. 697)

Basic Books, Inc. New York, New York, USA. 1979

**Howe, Roger** 1945–  
American mathematician

Everybody knows that mathematics is about Miracles, only mathematicians have a name for them: Theorems.

MAA address, Baltimore, January 9, 1998

**Huxley, Aldous** 1894–1963  
English writer and critic

Too much theorizing, as we all know, is fatal to the soul...

*Tomorrow and Tomorrow and Tomorrow and Other Essays*

The Education of an Amphibian (p. 7)

Harper & Brothers. New York, New York, USA. 1956

**Papert, Seymour** 1928–  
South African mathematician

For what is important when we give children a theorem to use is not that they should memorize it. What matters most is that by growing up with a few very powerful theorems one comes to appreciate how certain ideas can be used as tools to think with over a lifetime. One learns to enjoy and to respect the power of powerful ideas. One learns that the most powerful idea of all is the idea of powerful ideas.

*Mindstorms: Children, Computers and Powerful Ideas*

Chapter 3 (p. 76)

Basic Books, Inc. New York, New York, USA. 1980

**Planck, Max** 1858–1947  
German physicist

...Leibniz's theorem...sets forth fundamentally that of all the worlds that may be created, the actual world is that which contains, besides the unavoidable evil, the maximum good.

Translated by R. Jones and D.H. Williams

*A Survey of Physics: A Collection of Lectures and Essays*

The Principle of Least Action (p. 71)

Methuen & Company Ltd. London, England. 1925

**Poincaré, Jules Henri** 1854–1912  
French mathematician and theoretical astronomer

I beg your pardon; I am about to use some technical expressions, but they need not frighten you for you are not obliged to understand them. I shall say, for example, that I have found the demonstration of such a theorem under such circumstances. This theorem will have a barbarous name unfamiliar to many, but that is unimportant; what is of interest for the psychologist is not the theorem but the circumstances...

*The Foundations of Science*

*Science and Method*. Book I

Chapter III (p. 387)

The Science Press. New York, New York, USA. 1913

**Sylvester, James Joseph** 1814–97  
English mathematician

No mathematician now-a-days sets any store on the discovery of isolated theorems, except as affording hints of an unsuspected new sphere of thought, like meteorites detached from some undiscovered planetary orb of speculation.

*The Collected Mathematical Papers of James Joseph Sylvester* (Volume 2)

Notes to the Exeter Association Address (p. 717)

University Press. Cambridge, England. 1904–1912

**Truesdell, Clifford** 1919–2000  
American mathematician, natural philosopher, historian of mathematics

**Noll, Walter**  
Mathematician

Pedantry and sectarianism aside, the aim of theoretical physics is to construct mathematical models such as to enable us, from the use of knowledge gathered in a few observations, to predict by logical processes the outcomes in many other circumstances. Any logically sound theory satisfying this condition is a good theory, whether or not it be derived from "ultimate" or "fundamental" truth. It is as ridiculous to deride continuum physics because it is not obtained from nuclear physics as it would be to reproach it with lack of foundation in the Bible.

*The Non-Linear Field Theories of Mechanics* (2nd edition)

Introduction, Section 2 (p. 4)

Springer-Verlag, Berlin, Germany. 1992

**Veblen, Oswald** 1880–1960  
American mathematician

The abstract mathematical theory has an independent, if lonely existence of its own. But when a sufficient number of its terms are given physical definitions it becomes a part of a vital organism concerning itself at every instant with matters full of human significance. Every theorem can be given the form "if you do so and so, such and such will happen."

Remarks on the Foundation of Geometry  
*Bulletin of the American Mathematical Association*, Volume 31, 1925  
 (p. 135)

## FOURIER

**Kelvin, Lord William Thomson** 1824–1907  
 Scottish engineer, mathematician, and physicist

Fourier's Theorem is not only one of the most beautiful results of modern analysis, but it may be said to furnish an indispensable instrument in the treatment of nearly every recalcitrant question in modern physics.

In E.T. Bell  
*Men of Mathematics* (p. 183)  
 Simon & Schuster. New York, New York, USA. 1937

## THEORIST

**Boltzmann, Ludwig Edward** 1844–1906  
 Austrian physicist

A friend of mine has defined the practical man as one who understands nothing of theory and the theoretician as an enthusiast who understands nothing at all.

*Theoretical Physics and Philosophical Problems. Selected Writings*  
 On the Significance of Theories (p. 33)  
 Reidel Publishing Company. Boston, Massachusetts, USA. 1974

**Cardozo, Benjamin N.** 1870–1938  
 American jurist

The theorist has a hard time to make his way in an ungrateful world. He is supposed to be indifferent to realities; yet his life is spent in the exposure of realities, which, till illuminated by his searchlight, were hidden and unknown.

*The Growth of the Law*  
 Chapter II (p. 21)  
 Yale University Press. New Haven, Connecticut, USA. 1924

**Crick, Francis Harry Compton** 1916–2004  
 English biochemist

[I]t is virtually impossible for a theorist, by thought alone, to arrive at the correct solution to a set of biological problems.... The best a theorist can hope to do is to point an experimentalist in the right direction....

*What Mad Pursuit: A Personal View of Scientific Discovery*  
 Chapter 10 (pp. 109–110)  
 Basic Books, Inc. New York, New York, USA. 1988

Theorists almost always become too fond of their own ideas, often simply by living with them too long. It is difficult to believe that one's cherished theory, which really works rather nicely in some respects, may be completely false.

*What Mad Pursuit: A Personal View of Scientific Discovery*  
 Chapter 13 (p. 141)  
 Basic Books, Inc. New York, New York, USA. 1988

Theorists will often complain that experimentalists ignore their work. Let a theorist produce just one theory of the type sketched above (i.e., one that makes non-obvious verified predictions) and the world will jump to the conclusion (not always true) that he has a special insight into difficult problems.

*What Mad Pursuit: A Personal View of Scientific Discovery*  
 Chapter 13 (p. 142)  
 Basic Books, Inc. New York, New York, USA. 1988

**Einstein, Albert** 1879–1955  
 German-born physicist

...every true theorist is a kind of tamed metaphysicist, no matter how pure a "positivist" he may fancy himself.

On the Generalized Theory of Gravitation  
*Scientific American*, Volume 182, Number 4, April, 1950 (p. 13)

**Lederman, Leon** 1922–  
 American high-energy physicist

The sequence of theorist, experimenter, and discovery has occasionally been compared to the sequence of farmer, pig, truffle. The farmer leads the pig to an area where there might be truffles. The pig searches diligently for the truffles. Finally, he locates one, and just as he is about to devour it, the farmer snatches it away.

*The God Particle: If the Universe Is the Answer, What Is the Question?*  
 Chapter 1 (p. 16)  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1993

**Marshall, Alfred** 1842–1924  
 English economist

...the most reckless and treacherous of all theorists is he who professes to let facts and figures speak for themselves.

In A.C. Pigou (ed.)  
*Memorials of Alfred Marshall*  
 Chapter VI (p. 168)  
 Macmillan & Company Ltd. London, England. 1925

**Spencer-Brown, George** 1923–  
 English mathematician and polymath

A theorem is no more proved by logic and computation than a sonnet is written by grammar and rhetoric, or than a sonata is composed by harmony and counterpoint, or a picture painted by balance and perspective. ...[T]hese forms are, in the final analysis, parasitic on – they have no existence apart from – the creativity of the work itself. Thus the relation of logic to mathematics is seen to be that of an applied science to its pure ground, and all applied science is seen as drawing sustenance from a process of creation with which it can combine to give structure, but which it cannot appropriate.

*Laws of Form*  
 Chapter 12 (p. 102)  
 George Allen & Unwin Ltd. London, England. 1969

**Truesdell, Clifford** 1919–2000

American mathematician, natural philosopher, historian of mathematics

**Noll, Walter**

Mathematician

The task of the theorist is to bring order into the chaos of the phenomena of nature, to invent a language by which a class of these phenomena can be described efficiently and simply.

*The Non-Linear Field Theories of Mechanics* (2nd edition)

Introduction, Section 2 (p. 4)

Berlin: Springer-Verlag, 1992

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

Most disgusting are pedantic observers and crotchety theorists; their experiments are petty and complicated, their hypotheses abstract and startling. Such minds luxuriate in terms and obstruct the progress of science, for it is absolutely necessary that sounder men should repeat their experiments and throw some light on the chaos they make. But since there are not many who can do this, affairs are allowed to take their own course, and the results at which such crotchety theorists arrive, are, to a certain extent, valued. And this is not, indeed, a very great crime.

Translated by Otto Wenckstern

*Goethe's Opinions on the World, Mankind, Literature, Science, and Art* (p. 67)

John W. Parker & Son, London, England, 1853

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

A successful theorist should be excessively interested in immediate events, otherwise he is not at all likely to formulate correctly anything about them.

*The Organization of Thought*

*Science*, Volume 44, Number 1134, September 29, 1916 (p. 410)

**THEORY****Adam, George**

No biographical data available

A theory recorded without development work is as the squatting of land whose value increases through extraneous efforts.

*The Solar System: An Astronomical Unit Addenda*

Introduction (p. 10)

John W. Newbegin, Publisher, San Francisco, California, USA, 1911

**Adams, Douglas** 1952–2001

English author, comic radio dramatist, and musician

There is a theory which states that if ever anyone discovers exactly what the Universe is for and why it is

here, it will instantly disappear and be replaced by something even more bizarre and inexplicable.

There is another which states that this has already happened.

*The Ultimate Hitchhiker's Guide to the Galaxy*

*The Restaurant at the End of the Universe*

Chapter 1 (p. 148)

Ballantine Books, New York, New York, USA, 2002

**Asimov, Isaac** 1920–92

American writer and biochemist

Theories are not so much wrong as incomplete.

*The Relativity of Wrong*

The Relativity of Wrong (p. 222)

Doubleday & Company, Inc, New York, New York, USA, 1988

Once we learn to expect theories to collapse and to be supplanted by more useful generalizations, the collapsing theory becomes not the gray remnant of a broken today, but the herald of a new and brighter tomorrow.

In Timothy Ferris (ed.)

*The World Treasury of Physics, Astronomy, and Mathematics*

The Nature of Science (p. 783)

Little, Brown & Company, Boston, Massachusetts, USA, 1991

Scientific theories have a tendency to fit the intellectual fashions of the time.

*Asimov on Chemistry*

The Weighting Game (p. 3)

Anchor Press/Doubleday, Garden City, New York, USA, 1974

No matter how many times a theory meets its tests successfully, there can be no certainty that it will not be overthrown by the next observation.

This, then, is a cornerstone of modern natural philosophy. It makes no claim of attaining ultimate truth. In fact, the phrase "ultimate truth" becomes meaningless, because there is no way in which enough observations can be made to make truth certain and, therefore, "ultimate".

*Asimov's New Guide to Science*

Chapter I (p. 13)

Basic Books, Inc, New York, New York, USA, 1984

**Author undetermined**

There are those who make a great framework which is their theory, and into which they fit the facts; and there are those whose theory is like a map of the things, which are placed thereby more within the grasp of our immediate handling. For things are real and existing, and we wander among them and look; and the true spirit of Science recognizes the greatness of things as compared with our views of them, which views are fleeting, and moulded variously according to our vantage-ground.

The Teaching of Science (Second Part)

*The American Educational Monthly*, Volume VII, April, 1870 (p. 140)

**Ayer, Alfred Jules** 1910–89  
English philosopher

There never comes a point where a theory can be said to be true. The most that one can claim for any theory is that it has shared the successes of all its rivals and that it has passed at least one test which they have failed.

*Philosophy in the Twentieth Century*  
Chapter IV (p. 133)  
Random House, Inc. New York, New York, USA. 1982

**Balfour, Arthur James** 1848–1930  
English prime minister

The interdependence of theory and practice cannot be ignored without inflicting injury on both; and he is but a poor friend to either who undervalues their mutual cooperation.

Reflections Suggested by the New Theory of Matter  
*Popular Science Monthly*, Volume 65, Number 6, October, 1904 (p. 495)

**Beadle, George Wells** 1903–89  
American geneticist

It's hard to make a good theory; a theory has to be reasonable, but a fact doesn't.

Quoted in Norman H. Horowitz  
*Biographical Memoirs*  
George Wells Beadle (p. 39)  
National Academies Press. Washington, D.C. 1990

**Berkeley, Edmund C.** 1909–88  
American computer theoretician

The World is more complicated than most of our theories make it out to be.

Right Answers – A Short Guide for Obtaining Them  
*Computers and Automation*, Volume 18, Number 10, September, 1969 (p. 20)

**Bernard, Claude** 1813–78  
French physiologist

A theory is merely a scientific idea controlled by experiment.

Translated by Henry Copley Greene  
*An Introduction to the Study of Experimental Medicine*  
Part One, Chapter I, Section vi (p. 26)  
Henry Schuman, Inc. New York, New York, USA. 1927

**Bernstein, Jeremy** 1929–  
American physicist, educator, and writer

I would insist that any proposal for a radically new theory in physics or in any other science, contain a clear explanation of why the precedent science worked. What new domain of experience is being explored by the new science, and how does it meld with the old?

*Cranks, Quarks, and the Cosmos: Writings on Science*  
Chapter 1 (p. 18)  
Basic Books, Inc. New York, New York, USA. 1993

**Berzelius, Jöns Jacob** 1779–1848  
Swedish chemist

All our theory is but a means of consistently conceptualizing the inward processes of phenomena, and it is pre-summable and adequate when all scientifically known facts can be deduced from it.

In Edward O. Wilson  
*The Diversity of Life*  
Chapter One (p. 8)  
W.W. Norton & Company, Inc. New York, New York, USA. 1992

This mode of conceptualization [theorizing] can...well be false and...is so frequently. Even though, at a certain period in the development of science, it may match the purpose just as well as a true theory. Experience is augmented, facts appear which do not agree with it, and one is forced to go in search of a new mode of conceptualization within which these facts can also be accommodated; and in this manner, no doubt, modes of conceptualization will be altered from age to age, as experience is broadened, and the complete truth may ever be attained.

In Edward O. Wilson  
*The Diversity of Life*  
Chapter One (pp. 8–9)  
W.W. Norton & Company, Inc. New York, New York, USA. 1992

**Bethe, Hans** 1906–2005  
American physicist

Scientific theories are not overthrown; they are expanded, refined, and generalized.

In Victor F. Weisskopf  
*Physics in the Twentieth Century: Selected Essays*  
Forward (p. x)  
The MIT Press. Cambridge, Massachusetts, USA. 1972

**Bigelow, S. Lawrence** 1870–1947  
American physical chemistry professor

Our laws summarize our knowledge, our theories summarize our beliefs.... Laws codify established facts, they are history; theories contain the possibilities of the future. Theories may be considered as knowledge in the state of flux.

*Theoretical and Physical Chemistry*  
Section I, Chapter II (pp. 15–16)  
The Century Company. New York, New York, USA. 1917

**Black, Alexander**  
No biographical data available

Theories are like swords. People sometimes trip over them.

*The Seventh Angel*  
Part V, Chapter VIII (p. 285)  
Harper & Brothers Publishers. New York, New York, USA. 1921

**Bohr, Niels Henrik David** 1886–1962  
Danish physicist

...your theory is crazy. The question which divides us is whether it is crazy enough to have a chance of being correct.

In Martin Gardner  
*The Ambidextrous Universe* (p. 280)

**Bondi, Sir Hermann** 1919–2005  
English mathematician and cosmologist

No theory, however attractive, merits scientific consideration unless it sticks out its neck sufficiently to be disproved by experiment or observation.

In Robert M. Hutchins and Mortimer J. Adler (eds.)

*The Great Ideas Today* 1966

Astronomy and the Physical Sciences (p. 263)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1966

To the nonscientist it must seem strange that, while the history of science appears to be a brilliant success story, from a logical point of view the stress is always on disproof and hence on the failure rather than on the confirmation of theories.

In James R. Newmann

*What is Science?*

Astronomy and Cosmology (p. 84)

Simon & Schuster. New York, New York, USA. 1955

**Born, Max** 1882–1970  
German-born English physicist

The human mind is conservative, and the scientist makes no exception from this rule. He will accept a new theory only if it stands the trial of many experimental tests.

*Les Prix Nobel. The Nobel Prizes in 1954*

Nobel banquet speech for award received in 1954

Nobel Foundation. Stockholm, Sweden. 1955

A theory, to be of any real use to us, must satisfy two tests. In the first place, it must not make use of any ideas which are not confirmed by experiment. Special assumptions must not be dragged in merely to meet some particular difficulty. In the second place, the theory must not only explain all the facts known already, but must also enable us to foresee other facts which were not known before and can be tested by further experiment.

*The Restless Universe*

Chapter I (pp. 5–6)

Dover Publications, Inc. New York, New York, USA. 1951

**Bradbury, Ray** 1920–  
American writer

Theories are invigorating and tonic. Give me an ounce of fact and I will produce you a ton of theory by tea this afternoon.

In Ray Bradbury, Arthur C. Clarke, Bruce Murray, Carl Sagan, and Walter Sullivan

*Mars and the Mind of Man*

Foreword (p. x)

Harper & Row, Publishers. New York, New York, USA. 1973

**Bradley, Jr., John Hodgdon** 1898–1962  
American geologist

But alas for theories that germinate in the minds of men! They wilt in the bright light of advancing knowledge.

*Parade of the Living*

Part I, Chapter I (pp. 6–7)

Coward-McCann, Inc. New York, New York, USA. 1930

**Bridgman, Percy Williams** 1882–1961  
American physicist

Every new theory as it arises believes in the flush of youth that it has the long-sought goal; it sees no limits to its applicability, and believes that at long last it is the fortunate to achieve the “right” answer.

*The Nature of Physical Theory*

Chapter X (p. 136)

Princeton University Press. Princeton, New Jersey, USA. 1936

**British Association for the Advancement of Science**

Great physical theories with their trains of practical consequences, are pre-eminently national objects, whether for glory or utility.

In John Frederick William Herschel

*Essays from the Edinburgh and Quarterly Reviews with Addresses and Other Pieces*

Meeting, Newcastle, 1838 (p. 109)

Longman, Brown, Green, Longmans & Roberts. London, England. 1857

**Browne, Rupert**

No biographical data available

Theories are like men, they may be crushed by scorn or ridicule; yet if they decline to be crushed they will end by being listened to, and by gaining followers.

*Club Cameos*

Finance (p. 201)

Sampson, Low, Marston, Searle & Rivington. London, England. 1879

**Buckland, Francis Trevelyan** 1826–80

English surgeon, zoologist, popular author and natural historian

Your theory is most excellent, and I shall endeavor to collect facts for you with a view to its elucidation.

In Karl Pearson

*The Life, Letters, and Labours of Francis Galton* (Volume 2) (p. 87)

At The University Press. Cambridge, England. No date

**Burgess, William Harvey**

Theory is like the color of the chameleon, never twice alike, and the men who pretend to know most about it are the most deceived.

*Chronic Disease* (p. 123)

Avondale. Chattanooga, Tennessee, USA. 1907

**Burroughs, Edgar Rice** 1875–1950

American writer

...even theories must have foundations.

*Pirates of Venus*

Chapter Four (p. 44)

University of Nebraska Press. Lincoln, Nebraska, USA. 2001

**Campbell, Norman R.** 1880–1949

English physicist and philosopher

To those who have not the power to think, theory will always be dangerous.

*Physics: The Elements*

Chapter VI (p. 121)

At The University Press. Cambridge, England. 1920

Space and time are the conceptions of theory, not of laws. They are neither necessary nor useful in the statement of the results of any experiment.

Theory and Experiment in Relativity

*Nature*, Volume 106, Number 2677, February 17, 1921 (p. 804)

**Cantor, Georg** 1845–1918

German mathematician

My theory stands as firm as a rock; every arrow directed against it will return quickly to its archer. How do I know this? Because I have studied it from all sides for many years; because I have examined all objections which have ever been made against the infinite numbers; and above all because I have followed its roots, so to speak, to the first infallible cause of all created things.

In Joseph Dauben

*Georg Cantor: His Mathematics and Philosophy of the Infinite*

Chapter 12 (p. 298)

Princeton University Press. Princeton, New Jersey, USA. 1990

**Cassirer, Ernst** 1874–1945

German philosopher

Each theory becomes a Procrustean bed in which the empirical facts are stretched to fit a preconceived pattern.

*An Essay on Man: An Introduction to a Philosophy of Human Culture* (p. 21)

Yale University Press. New Haven, Connecticut, USA. 1944

**Chamberlin, Thomas Chrowder** 1843–1928

American geologist

The moment one has offered an original explanation for a phenomenon which seems satisfactory, that moment affection for his intellectual child springs into existence, and as the explanation grows into a definite theory his parental affections cluster about his offspring and it grows more and more dear to him.... There springs up also unwittingly a pressing of the theory to make it fit the facts and a pressing of the facts to make them fit the theory...

*Journal of Geology*, Volume 5, 1897 (p. 837)

The mind lingers with pleasure upon the facts that fall happily into the embrace of the theory, and feels a natural coldness toward those that seem refractory....

The Method of Multiple Working Hypotheses

*Science*, Volume 148, Number 3671, 7 May, 1965 (p. 755)

**Charlie Chan (Fictional character)**

Theory like mist on eyeglasses. Obscure facts.

*Charlie Chan in Egypt*

Film (1935)

Wilkie Ballou: Your theory's full of holes. It won't hold water! Charlie Chan: Sponge is full of holes. Sponge holds water.

*The Black Camel*

Film (1931)

**Charcot, Jean-Martin** 1825–93

French neurologist

Theory is good, but it doesn't prevent things from existing.

*The Complete Psychological Works of Sigmund Freud* (Volume 3)

Charcot (p. 13)

The Hogarth Press. London, England. 1962

**Chesterton, G. K. (Gilbert Keith)** 1874–1936

English author

A man warmly concerned with any large theories has always a relish for applying them to any triviality.

*The Wisdom of Father Brown*

The Absence of Mr. Glass (p. 16)

Dodd, Mead & Company. New York, New York, USA. 1927

**Clerke, Agnes Mary** 1842–1907

Irish astronomer

Theory...demands a practical test. All its data are derived from observation; and their insecurity becomes less tolerable as it advances nearer to perfection.

*A Popular History of Astronomy During the Nineteenth Century* (3rd edition)

Introduction (p. 3)

Adam & Charles Black. London, England. 1893

**Crichton, Michael** 1942–

American novelist

Most areas of intellectual life have discovered the virtues of speculation, and have embraced them wildly. In academia, speculation is usually dignified as theory.

Why Speculate

Talk, International Leadership Forum, La Jolla, California, April 26, 2002

**Clarke, Arthur C.** 1917–

English science and science fiction writer

"I'd be glad to settle without the theory," remarked Kimball, "if I could even understand what this thing is – or what it's supposed to do."

*The Lost Worlds of 2001*

Chapter 31 (p. 179)

New American Library. New York, New York, USA. 1972

**Collie, John Norman** 1859–1942

English chemist

...in every science which is at all progressive there must arise from time to time conflicts between the older generation of workers and the leaders of the new; for, to those who have grown up along with it, a theory generally becomes invested with a sort of sanctity which is quite out of keeping with its true make-shift character. The longer a theory stands the harder does it become to shake it, and the greater is the tendency of the science to become stereotyped.

In W.A. Stewart

*Recent Advances in Organic Chemistry*

Preface

Longman, Green, & Co. New York, New York, USA. 1909

...if a theory suffices to explain facts discovered after its promulgation, knowledge may be increased; but there is no true progress unless our general outlook is altered. Thus in science we have an alternation of two courses: in the first the aim is the accumulation of facts and yet more facts; while the second is directed towards classifying these facts in the most convenient manner. At irregular intervals some facts are discovered which cannot be fitted into the accepted scheme of arrangement and in order to make room for them the scheme has to be altered and recast into some new form.

In W.A. Stewart

*Recent Advances in Organic Chemistry*

Preface

Longman, Green, & Co. New York, New York, USA. 1909

**Colton, Charles Caleb** 1780–1832

English sportsman and writer

Theory is worth little, unless it can explain its own phenomena, and it must effect this with out contradicting itself; therefore, the facts are sometimes assimilated to the theory, rather than the theory to the facts.

*Lacon; or Many Things in a Few Words* (p. 77)

William Gowans. New York, New York, USA. 1849

Professors in every branch of the sciences prefer their own theories to truth: the reason is, that their theories are private property, but truth is common stock.

*Lacon; or Many Things in a Few Words* (p. 189)

William Gowans. New York, New York, USA. 1849

**Cooper, Leon** 1930–

American physicist

A theory is a well-defined structure that we hope is in correspondence with what we observe. It's an architecture, a cathedral.

In George Johnson

*In the Palaces of Memory: How We Build the Worlds Inside Our Heads*

The Memory Machine (pp. 114–115)

Alfred A. Knopf. New York, New York, USA. 1991

**Couderc, Paul**

No biographical data available

The only conceptions that succumb are those that pretend to fix the image of a profound reality: true relations among things survive, united to the true new relations in the burgeoning theory. Let us then rejoice at the massacre of old theories because this is the criterion of progress. There is, I think, no ground for fear that nature will undernourish the seekers. Nothing should diminish our enthusiasm for the experimental victories, decisive and definitive, of the past thirty years.

In Lucienne Felix

*The Modern Aspect of Mathematics* (p. 31)

Basic Books, Inc. New York, New York, USA. 1960

**Couper, Archibald Scott** 1831–92

Scottish scientist

The end of chemistry is its theory. The guide in chemical research is a theory. It is therefore of the greatest importance to ascertain whether the theories at present adopted by chemists are adequate to the explanation of chemical phenomena, or are at least based upon the true principles which ought to regulate scientific research.

*The London, Edinburgh and Dublin Philosophical Magazine and Journal of Science*, Volume 16, Number 4, 1858

**Crease, Robert P.**

American science historian

**Mann, Charles C.**

American journalist and science writer

[P.A.M.] Dirac said often he was beset by fears when he came up with his new theory.... [H]e soon discovered that his fear was justified. Quantum electrodynamics was indeed a great step forward, but it came at a great price. Dirac had set down the beginnings of the modern theory of electromagnetism – the first solid piece of the standard model – but he had also unwittingly let loose an onslaught of conceptual demons that would change our views of space and matter.

In T. Ferris (ed.)

*World Treasury of Physics, Astronomy, and Mathematics*

Uncertainty and Complementarity (p. 69)

Little, Brown & Company. Boston, Massachusetts, USA. 1991

**Crick, Francis Harry Compton** 1916–2004

English biochemist

...a theory will always command more attention if it is supported by unexpected evidence, particularly evidence of a different kind.

*What Mad Pursuit: A Personal View of Scientific Discovery*

Chapter 10 (p. 115)

Basic Books, Inc. New York, New York, USA. 1988

**Cromer, Alan** 1935–

American physicist and educator

The word theory, as used in the natural sciences, doesn't mean an idea tentatively held for purposes of argument – that we call a hypothesis. Rather, a theory is a set of logically consistent abstract principles that explain a body of concrete facts. It is the logical connections among the principles and the facts that characterize a theory as truth. No one element of a theory...can be changed without creating a logical contradiction that invalidates the entire system. Thus, although it may not be possible to substantiate directly a particular principle in the theory, the principle is validated by the consistency of the entire logical structure.

*Uncommon Sense: The Heretical Nature of Science*

Chapter 7 (p. 137)

Oxford University Press, Inc. New York, New York, USA. 1993

**Croll, James** 1821–90

Scottish scientist

I prefer to use the term “theory,” with the above understood qualification, viz. a theory in its hypothetical stage.

*Stellar Evolution and Its Relations to Geological Time*

Part I (p. 1)

D. Appleton & Co. New York, New York, USA. 1889

### **Cromie, William J.**

No biographical data available

Theories are the right arm of science and present a carefully thought-out picture of what the scientists think happened. The other arm of science is observation, wherein scientists devise experiments and collect data to prove, or disprove, a theory.

*Exploring the Secrets of the Sea*

Chapter I (p. 5)

Prentice-Hall, Inc. Englewood Cliffs, New Jersey, USA. 1962

Introduction (p. 1)

Duckworth & Company. London, England. 1995

### **Darwin, Charles Robert** 1809–82

English naturalist

...for without the making of theories I am convinced there would be no observation.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 2)

C. Darwin to C. Lyell, June 1st [1860] (p. 108)

D. Appleton & Company. New York, New York, USA. 1896

Let theory guide your observations, but till your reputation is well established, be sparing in publishing theory. It makes persons doubt your observations.

In Francis Darwin (ed.)

*More Letters of Charles Darwin* (Volume 2)

Letter 646, Darwin to Scott, June 6, 1863 (p. 323)

D. Appleton & Company. New York, New York, USA. 1903

In October 1838, that is, fifteen months after I had begun my systematic inquiry, I happened to read for amusement Malthus on Population, and being well prepared to appreciate the struggle for existence which everywhere goes on from long-continued observation of the habits of animals and plants, it at once struck me that under these circumstances favorable variations would tend to be preserved, and unfavorable ones to be destroyed. The results of this would be the formation of a new species. Here, then I had at last got a theory by which to work.

*Autobiography*

### **Darwin, Sir George Howard** 1845–1912

English astronomer and mathematician

A theory is, then, a necessity for the advance of science, and we may regard it as the branch of a living tree, of which facts are the nourishment.

Address to British Association, Section A

*Nature*, Volume 34, Number 879, September 2, 1886 (p. 420)

**Davies, John Tasman** 1924–  
Chemist

Theories are generalizations and unifications, and as such they cannot logically follow only from our experiences of a few particular events. Indeed we often generalize from a single event, just as a dog does who, having once seen a cat in a certain driveway, looks eagerly around whenever he passes that place in future. Evidently this latter activity is equivalent to testing the theory...that “there is always a cat in that driveway.”

*The Scientific Approach*

Chapter 1 (p. 11)

Academic Press. London, England. 1965

...a theory arises from a leap of the imagination...

*The Scientific Approach*

Chapter 1 (p. 11)

Academic Press. London, England. 1965

**Davies, Paul Charles William** 1946–  
British-born physicist, writer, and broadcaster

The basis of this theory is that in nature there is an inherent uncertainty or unpredictability that manifests itself only on an atomic scale. For example, the position of a subatomic particle such as an electron may not be a well-defined concept at all; it should be envisaged as jiggling around in a random sort of a way. Energy, too, becomes a slightly nebulous concept, subject to capricious and unpredictable changes.

*The Edge of Infinity: Where the Universe Came from and How It Will End*

Chapter 4 (p. 90)

Simon & Schuster. New York, New York, USA. 1981

**Davis, Philip J.** 1923–  
American mathematician

**Hersh, Reuben** 1927–  
American mathematician

If the number of theorems is larger than one can possibly survey, who can be trusted to judge what is “important?” One cannot have survival of the fittest if there is no interaction.

*The Mathematical Experience*

Ulam’s Dilemma (p. 21)

Birkhäuser. Boston, Massachusetts, USA. 1981

**Davy, Sir Humphry** 1778–1829  
English chemist

Theories ought to be made for time, and be considered capable of improvement.

*The Collected Works of Sir Humphry Davy* (Volume 1)

*Memories of the Life of Sir Humphry Davy*

Chapter II (p. 70)

London, England. 1839–1840

**de Fermat, Pierre** 1601–65  
French mathematician

We have found a beautiful and most general proposition, namely, that every integer is either a square, or the sum of two, three or at most four squares. This theorem depends on some of the most recondite mysteries of number, and is not possible to present its proof on the margin of this page.

In Tobias Dantzig

*Number: The Language of Science* (4th edition) (p. 269)

The Macmillan Company. New York, New York, USA. 1954

I have found a very great number of exceedingly beautiful theorems.

In E.T. Bell

*Men of Mathematics* (p. 56)

Simon & Schuster. New York, New York, USA. 1937

**de Grasse Tyson, Neil** 1958–  
American astrophysicist and writer

Scientific evidence in support of a theory sometimes takes you places where your senses have never been. Twentieth-century science has largely been built upon data collected with all manner of tools that enable us to see the universe in decidedly uncommon ways. As a consequence, while we have always required that a theory make mathematical sense, we no longer require that a theory make common sense. We simply demand that it be consistent with the results of observations and experiments....

In Defense of the Big Bang

*Natural History*, Volume 105, Number 12, December, 1996 (p. 76)

A well-constructed theory must explain some of what is not understood, predict previously unknown phenomena, and, to be successful, have its predictions consistently confirmed. Furthermore, skeptics should not hesitate to question every possible assumption, no matter how basic.

In Defense of the Big Bang

*Natural History*, Volume 105, Number 12, December, 1996 (p. 76)

**de La Beche, Henry Thomas** 1796–1855  
English geologist

Theories, no doubt, are useful to a certain extent, for they promote inquiry; and, in the present day, a few facts, at least, must be brought forward to support them. Among the facts so produced, there is always a probability of finding some that are new. The scarcity of the facts known too often gives the theorist a false security, and he hastens to conclusions upon the most meagre data, without reflecting that a small addition to his present very limited stock of knowledge may completely overset his speculations.

*Sections & Views, Illustrative of Geological Phaenomena*

Preface (p. iii)

Treuttel & Wurtz. London, England. 1830

**Dingle, Herbert** 1890–1978  
English astrophysicist

Success in scientific theory is won, not by rigid adherence to the rules of logic, but by bold speculation which dares even to break those rules if by that means new regions of interest may be opened up.

*Through Science to Philosophy*

Part II, Chapter XV (p. 346)

At The Clarendon Press. Oxford, England. 1937

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

I don't mean to deny that the evidence is in some ways very strong in favor of your theory, I only wish to point out that there are other theories possible.

In William S. Baring-Gould (ed.)

*The Annotated Sherlock Holmes* (Volume 2)

*Adventures of the Norwood Builder* (p. 421)

Wings Books. New York, New York, USA. 1967

One forms provisional theories and waits for time or fuller knowledge to explode them. A bad habit, Mr. Ferguson, but human nature is weak.

In William S. Baring-Gould (ed.)

*The Annotated Sherlock Holmes* (Volume 2)

*The Adventure of the Sussex Vampire* (pp. 467–468)

Wings Books. New York, New York, USA. 1967

**Duhem, Pierre-Maurice-Marie** 1861–1916

French physicist and mathematician

...if the aim of physical theories is to explain experimental laws, theoretical physics is not an autonomous science; it is subordinate to metaphysics.

Translated by Philip P. Wiener

*The Aim and Structure of Physical Theory*

Chapter I (p. 10)

Princeton University Press. Princeton, New Jersey, USA. 1954

A physical theory is not an explanation. It is a system of mathematical propositions, deduced from a small number of principles, which aim...to represent as simply, as completely, and as exactly as possible a group of experimental laws.

*The Aim and Structure of Physical Theory*

Part I, Chapter II (p. 19)

Princeton University Press. Princeton, New Jersey, USA. 1954

The sole purpose of physical theory is to provide a representation and classification of experimental laws; the only test permitting us to judge a physical theory and pronounce it good or bad is the comparison between the consequences of this theory and the experimental laws it has to represent and classify.

*The Aim and Structure of Physical Theory*

Part II, Chapter VI (p. 180)

Princeton University Press. Princeton, New Jersey, USA. 1954

Unlike the reduction to absurdity employed by geometers, experimental contradiction does not have the power to transform a physical hypothesis into an indisputable truth; in order to confer this power on it, it would be

necessary to enumerate completely the various hypotheses which may cover a determinate group of phenomena; but the physicist is never sure he has exhausted all the imaginable assumptions. The truth of a physical theory is not decided by heads or tails.

*The Aim and Structure of Physical Theory*

Part II, Chapter VI (p. 190)

Princeton University Press. Princeton, New Jersey, USA. 1954

When several taps of the beak break the shell of an egg from which the chick escapes, a child may imagine that this rigid and immobile mass, similar to the white shells he picks up on the edge of a stream, had suddenly taken life and produced the bird who runs away with a chirp; but just where his childish imagination sees a sudden creation, the naturalist recognizes the last stage of a long development; he thinks back to the first fusion of two microscopic nuclei in order to review next the series of divisions, differentiations, and reabsorptions which, cell by cell, have built up the body of the chick. The ordinary layman judges the birth of [scientific] theories as the child the appearance of the chick.

*The Aim and Structure of Physical Theory*

Part II, Chapter VII (p. 221)

Princeton University Press. Princeton, New Jersey, USA. 1954

Contemplation of a set of experimental laws does not, therefore, suffice to suggest to the physicist what hypotheses he should choose in order to give a theoretical representation of these laws; it is also necessary that the thoughts habitual with those among whom he lives and the tendencies impressed on his own mind by his previous studies come and guide him, and restrict the excessively great latitude left to this day a merely empirical form until circumstances prepare the genius of a physicist to conceive the hypothesis which will organize them into a theory!

*The Aim and Structure of Physical Theory*

Part II, Chapter VII (p. 255)

Princeton University Press. Princeton, New Jersey, USA. 1954

**Dumas, Jean Baptiste-Andre** 1800–84

French biochemist

Theories are like crutches; to prove that they are good, we must make use of them and walk.

In M. cap.

*The Chemist*

Robert Boyle, a Biographical Study

Volume IV 1857 (p. 327)

**Duschl, Richard Alan** 1951–

American science education professor and researcher

In order to say we have developed a knowledge of science, we must be able to say we have an understanding of the function, structure, and generation of scientific theories.

*Restructuring Science Education: The Importance of Theories and Their*

*Development*

Chapter 6 (p. 96)

Teachers College Press. New York, New York, USA. 1990

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

...a reasoned theory is preferable to blind extrapolation.

*The Expanding Universe*

Chapter I, Section IV (p. 18)

The University Press. Cambridge. 1933

There was just one place where the theory did not seem to work properly, and that was – infinity. I think Einstein showed his greatness in the simple and drastic way in which he disposed of difficulties at infinity. He abolished infinity. He slightly altered his equations so as to make space at great distances bend round until it closed up. So that, if in Einstein's space you kept going right on in one direction, you do not get to infinity; you find yourself back at your starting-point again. Since there was no longer any infinity, there could be no difficulties at infinity. Q. E. D.

*The Expanding Universe*

Chapter I, Section V (pp. 21–22)

The University Press. Cambridge. 1933

The relativity theory of physics reduces everything to relations; that is to say, it is structure, not material, which counts. The structure cannot be built up without material; but the nature of the material is of no importance.

*Space, Time and Gravitation: An Outline of the General Relativity Theory*

Chapter XII (p. 197)

At The University Press. Cambridge, England. 1953

We have found a strange footprint on the shores of the unknown. We have devised profound theories, one after another to account for its origin. At last, we have succeeded in reconstructing the creature that made the footprint. And lo! It is our own.

*Space, Time and Gravitation: An Outline of the General Relativity Theory*

Chapter XII (p. 201)

At The University Press. Cambridge, England. 1921

It is quite commonly said that scientific theories about the world are neither true nor false but merely convenient or inconvenient.

*The Nature of the Physical World*

Chapter XIII (p. 285)

The University Press. New York, New York, USA. 1929

Scientific theories have blundered in the past; they blunder no doubt today; yet we cannot doubt that along with the error there come gleams of a truth for which the human mind is impelled to strive.

*Science and the Unseen World*

Lecture II (p. 22)

The Macmillan Co. New York, New York, USA. 1929

**Einstein, Albert** 1879–1955

German-born physicist

These fundamental concepts and postulates, which cannot be further reduced logically, form the essential part of a theory, which reason cannot touch. It is the grand object of all theory to make these irreducible elements as simple and as few in number as possible, without having to renounce the adequate representation of any empirical content whatever.

Translated by Alan Harris

*Essays in Science*

On the Method of Theoretical Physics (p. 15)

Philosophical Library. New York, New York, USA. 1934

No fairer destiny could be allotted to any physical theory, than that it should of itself point out the way to the introduction of a more comprehensive theory, in which it lives on as a limiting case.

Translated by Robert W. Lawson

*Relativity: The Special and General Theory*

Part II, Chapter 22 (pp. 98–99)

Pi Press. New York, New York, USA. 2005

Theories are evolved and are expressed in short compass as statements of a large number of individual observations in the form of empirical laws, from which the general laws can be ascertained by comparison. Regarded in this way, the development of a science bears some resemblance to the compilation of a classified catalogue. It is, as it were, a purely empirical enterprise.

Translated by Robert W. Lawson

*Relativity: The Special and General Theory*

Appendix III, The Experimental Confirmation of the General Theory of Relativity

Pi Press. New York, New York, USA. 2005

Of the general theory of relativity you will be convinced, once you have studied it. Therefore I am not going to defend it with a single word.

In Paul Arthur Schlipp (ed.)

*Albert Einstein: Philosopher-Scientist*

Letter to A. Sommerfeld, 8 February, 1916 (p. 101)

The Library of Living Philosophers, Inc. Evanston, Illinois, USA. 1949

Physical theory has two ardent desires, to gather up as far as possible all pertinent phenomena and their connections, and to help us not only to know how Nature is and how her transactions are carried through, but also to reach as far as possible the perhaps utopian and seemingly arrogant aim of knowing why Nature is thus and not otherwise. Here lies the highest satisfaction of a scientific person.

In G. Holton

*Thematic Origins of Scientific Thought*

Chapter 8 (p. 242)

Harvard University Press. Cambridge, Massachusetts, USA. 1973

The scientific theorist is not to be envied. For Nature, or more precisely experiment, is an inexorable and not very friendly judge of his work. It never says "Yes" to a theory. In the most favorable cases it says "Maybe," and in the great majority of cases simply "No." If an experiment

agrees with a theory it means for the latter “Maybe,” and if it does not agree it means “No.” Probably every theory will someday experience its “No” – most theories [do], soon after conception.

In Helen Dukas and Banesh Hoffman

*Albert Einstein: The Human Side: New Glimpses from His Archives*

Note dated 11 November, 1922 (p. 18)

Princeton University Press. Princeton, New Jersey, USA. 1979

For the creation of a theory the mere collection of recorded phenomena never suffices – there must always be added a free invention of the human mind that attacks the heart of the matter. And: the physicist must not be content with the purely phenomenological considerations that pertain to the phenomenon. Indeed, he should press on to the speculative method, which looks for the underlying pattern.

In Helen Dukas and Banesh Hoffman

*Albert Einstein: The Human Side: New Glimpses from His Archives*

Lecture at the Berlin Planetarium, 4 October, 1931 (pp. 29–30)

Princeton University Press. Princeton, New Jersey, USA. 1979

If my theory of relativity is proven successful, Germany will claim me as a German and France will declare that I am a citizen of the world. Should my theory prove untrue, France will say that I am a German, and Germany will declare that I am a Jew.

*The Great Quotations*

Address at the Sorbonne (p. 226)

New York Times, 16 February, 1930

A theory is the more impressive the greater the simplicity of its premises, the more different kinds of things it relates, and the more extended its area of applicability.

Translated by Paul Arthur Schlipp

*Albert Einstein: Autobiographical Notes* (p. 31)

Open Court. La Salle, Illinois, USA. 1979

I have learned something else from the theory of gravitation: no collection of empirical facts however comprehensive can ever lead to the setting up of such complicated equations. A theory can be tested by experience, but there is no way from experience to the construction of a theory. Equations of such complexity as are the equations of the gravitational field can be found only through the discovery of a logically simple mathematical condition that determines the equations completely or almost completely. Once one has obtained those sufficiently strong formal conditions, one requires only little knowledge of facts for the construction of the theory...

Translated by Paul Arthur Schlipp

*Albert Einstein: Autobiographical Notes* (p. 31)

Open Court. La Salle, Illinois, USA. 1979

**Einstein, Albert** 1879–1955

German-born physicist

**Infeld, Leopold** 1898–1968

Polish physicist

There are no eternal theories in science. It always happens that some of the facts predicted by a theory are disproved by experiment. Every theory has its period of gradual development and triumph, after which it may experience a rapid decline.

*The Evolution of Physics*

The Two Electric Fluids (p. 77)

Simon & Schuster. New York, New York, USA. 1961

Creating a new theory is not like destroying an old barn and erecting a skyscraper in its place. It is rather like climbing a mountain, gaining new and wider views, discovering unexpected connections between our starting point and its rich environment. But the point from which we started out still exists and can be seen, although it appears smaller and forms a tiny part of our broad view gained by the mastery of the obstacles on our adventurous way up.

*The Evolution of Physics*

The Mechanical Scaffold (pp. 158–159)

Simon & Schuster. New York, New York, USA. 1961

...only theories that profess to be founded on facts, that can be refuted by facts.

*Modern Science and the Illusions of Professor Bergson*

Preface (p. 2)

Longmans, Green & Co. New York, New York, USA. 1912

**Faraday, Michael** 1791–1867

English physicist and chemist

The world little knows how many of the thoughts and theories which have passed through the mind of a scientific investigator have been crushed in silence and secrecy; that in the most successful instances not a tenth of the suggestions, the hopes, the wishes, the preliminary conclusions have been realized.

In W.I.B. Beveridge

*The Art of Scientific Investigation*

Chapter Five (p. 58)

W.W. Norton & Company, Inc. New York, New York, USA. 1957

**Feynman, Richard P.** 1918–88  
American theoretical physicist

This is the key of modern science and...the beginning of the true understanding of Nature – this idea to look at the thing, to record the details, and to hope that in the information thus obtained might lie a clue to one or another theoretical interpretation.

*The Character of Physical Law*  
Chapter 1 (p. 15)  
BBC. London, England. 1965

Another thing I must point out is that you cannot prove a vague theory wrong. If the guess that you make is poorly expressed and rather vague, and the method that you use for figuring out the consequences is a little vague – you are not sure, and you say, “I think everything’s right because it’s all due to so and so,...and I can sort of explain how this works”...then you see that this theory is good, because it cannot be proved wrong! Also if the process of computing the consequences is indefinite, then with a little skill any experimental results can be made to look like the expected consequences.

*The Character of Physical Law*  
Chapter 7 (pp. 158–159)  
BBC. London, England. 1965

If someone were to propose that the planets go around the sun because all planet matter has a kind of tendency for movement, a kind of motility, let us call it an “oomph,” this theory could explain a number of other phenomena as well. So this is a good theory, is it not? It is nowhere near as good as the proposition that the planets move around the sun under the influence of a central force which varies exactly inversely as the square of the distance from the center. The second theory is better because it is so specific; it is so obviously unlikely to be the result of chance. It is so definite that the barest error in the movement can show that it is wrong; but the planets could wobble all over the place, and, according to the first theory, you could say, “Well, that is the funny behavior of the oomph.”

*The Meaning of It All: Thoughts of a Citizen Scientist*  
Chapter I (pp. 19–20)  
Perseus Books. Reading, Massachusetts, USA. 1998

People are always asking for the latest developments in the unification of this theory with that theory, and they don’t give us a chance to tell them anything about what we know pretty well. They always want to know the things we don’t know.

*QED: The Strange Theory Of Light And Matter* (p. 3)

**Fischer, Martin H.** 1879–1962  
German-American physician

Don’t confuse hypothesis and theory. The former is a possible explanation; the latter, the correct one. The establishment of theory is the very purpose of science.

In Howard Fabing and Ray Marr  
*Fischerisms*  
C.C. Thomas. Springfield, Illinois, USA. 1944

**Fresnel, Augustin-Jean** 1788–1827  
French physicist

The assistance to be derived from a good theory is not to be confined to the calculation of the forces when the laws of the phenomena are known. There are certain laws so complicated and so singular, that observation alone, aided by analogy, could never lead to their discovery. To divine these enigmas we must be guided by theoretical ideas founded on a true hypothesis. The theory of luminous vibrations presents this character, and these precious advantages; for to it we owe the discovery of optical laws the most complicated and most difficult to divine.

In Richard Taylor  
*Scientific Memoirs* (Volume 5)  
Memoir on Double Refraction (p. 241)  
London, England. 1837–1853

**Frost, Robert** 1874–1963  
American poet

A theory if you hold it hard enough  
And long enough gets rated as a creed....

### **Gould, Stephen Jay** 1941–2002

American paleontologist and evolutionary biologist

As the new Darwinian orthodoxy swept through Europe, its most brilliant opponent, the aging embryologist Karl

Ernst von Baer, remarked with bitter irony that every triumphant theory passes through three stages: first it is dismissed as untrue; then it is rejected as contrary to religion; finally, it is accepted as dogma and each scientist claims that he had long appreciated its truth.

*Ever Since Darwin: Reflections in Natural History*

Chapter 20. The Validation of Continental Drift (pp. 161–162)

W.W. Norton & Company, Inc. New York, New York, USA. 1977

I would say usually, theories act as straitjackets to channel observations toward their support, and to forestall data that might refute them. Such theories cannot be rejected from within, for we will not conceptualize the disapproving observations.

*Dinosaur in a Haystack: Reflections in Natural History*

Part Three, Chapter 12 (p. 151)

Random House, Inc. New York, New York, USA. 1995

All great theories are expansive, and all notions so rich in scope and implication are underpinned by visions about the nature of things. You may call these visions “philosophy,” or “metaphor,” or “organizing principle,” but one thing they are surely not – they are not simple inductions from observed facts of the natural world.

*Time’s Arrow, Time’s Cycle: Myth and Metaphor in the Discovery of Geological Time*

Chapter 1 (p. 9)

Harvard University Press. Cambridge, Massachusetts, USA. 1987

### **Gratzer, Walter Bruno** 1932–

English science writer

It is also of course difficult to renounce a cherished theory, the product of costly intellectual and emotional investment, and to accept the cost to ambition, reputation and pride of a humiliating retraction. As the economist J. K. Galbraith put it, “faced with the choice between changing one’s mind and proving that there is no need to do so, almost everyone gets busy with the proof.” And so a fatuous optimism triumphs over the caution that must guide all scientists through most of their working lives.

*The Undergrowth of Science: Delusion, Self-Deception and Human Frailty*

Chapter 3 (p. 81)

Oxford University Press, Inc. Oxford, England. 2000

### **Gray, Elisha** 1835–1901

American electrical engineer

A man who is all theory is like “a rudderless ship on a shoreless sea.” All he really knows is that he is afloat, and if he lands at all it is likely to be in an insane asylum.

*Nature’s Miracles; Familiar Talks on Science*

Introduction (p. vii)

Fords, Howard & Hulbert. New York, New York, USA. 1899

### **Greene, Brian** 1963–

American theoretical physicist

One measure of the depth of a physical theory is the extent to which it poses serious challenges to aspects of our worldview that had previously seemed immutable

*The Elegant Universe: Superstrings, Hidden Dimensions, and the Quest for the Ultimate Theory*

Chapter 15 (p. 386)

Random House, Inc. New York, New York, USA. 2000

**Gribbin, John** 1946–

British science writer and astronomer

Good theories are the ones that get those predictions right; the best theories enable us to “get right” the calculation of how the Universe came into being and then exploded into its present form. But that doesn’t mean that they convey ultimate truth, or that there “really are” little hard particles rattling around against each other inside the atom. Such truth as there is in any of this work lies in the mathematics; the particle concept is simply a crutch ordinary mortals can use to help them towards an understanding of the mathematical laws.

*The Search of Superstrings, Symmetry, and the Theory of Everything* (pp. 51–52)

Little, Brown & Company. Boston, Massachusetts, USA. 1998

**Grove, William Robert** 1811–96

Judge and physical scientist

The theory consequent upon new facts, whether it be a co-ordination of them with known ones, or the more difficult and dangerous attempt at remodelling the public ideas, is generally enunciated by the discoverers themselves of the facts, or by those to whose authority the world at that period defers; others are not bold enough, or if they be so, are unheeded.

*The Correlation of Physical Forces*

Chapter I (p. 2)

Samuel Highly. London, England. 1850

**Haeckel, Ernst Heinrich Philipp August** 1834–1919

German biologist and philosopher

The value which every scientific theory possesses is measured by the number and importance of the objects which can be explained by it, as well as by the simplicity and universality of the causes which are employed in it as grounds of explanation.

Translated by Edwin Ray Lankester

*The History of Creation, Or, The Development of the Earth and Its Inhabitants by the Action of Natural Causes* (Volume 1) (4th edition)

Chapter II (p. 25)

D. Appleton & Co. New York, New York, USA. 1892

**Haldane, John Burdon Sanderson** 1892–1964

English biologist

“The results so far obtained are consistent with the view that...” has taken the place of “Thus saith the Lord...” as an introduction to a new theory.

*Possible Worlds and Other Papers*

Chapter XXX (p. 223)

Harper & Brothers. New York, New York, USA. 1928

**Hamilton, Edith** 1868–1963

German-born classicist and educator

Theories that go counter to the facts of human nature are foredoomed.

*The Roman Way*

Comedy’s Mirror

W.W. Norton & Company, Inc. New York, New York, USA. 1932

**Hawking, Stephen William** 1942–

English theoretical physicist

...a good theory is characterized by the fact that it makes a number of predictions that could in principle be disproved or falsified by observation.

*A Brief History of Time: The Updated and Expanded Edition*

Chapter 1 (p. 10)

Bantam Books. Toronto, Ontario, Canada. 1988

**Heaviside, Oliver** 1850–1925

English electrical engineer, mathematician, and physicist

Theory always tends to become more abstract as it emerges successfully from the chaos of facts by processes of differentiation and elimination, whereby the essentials and their connections become recognized, while minor effects are seen to be secondary or unessential, and are ignored temporarily, to be explained by additional means.

In J.W. Mellor

*Higher Mathematics for Students of Chemistry and Physics* (p. 370)

Dover Publications. New York, New York, USA. 1955

Let them [facts] be digested into theory, however, and brought into mutual harmony, and it is another matter.

Theory is the essence of facts. Without theory scientific knowledge would be only worthy of the madhouse.

*Electromagnetic Theory* (Volume 1)

Chapter I (p. 12)

D. van Nostrand Co. New York, New York, USA. 1893

**Heinlein, Robert A.** 1907–88

American science fiction writer

Permit me to say, speaking from experience, all theories are empty.

*Time Enough for Love*

Chapter XIII (p. 390)

G.P. Putnam’s Sons. New York, New York, USA. 1973

Modern theory did not arise from revolutionary ideas which have been, so to speak, introduced into the exact sciences from without. On the contrary, they have forced their way into research which was attempting consistently to carry out the program of classical physics – they arise out of its very nature.

In Heinz R. Pagels

*The Cosmic Code: Quantum Physics as the Language of Nature*

Part I, Chapter 3 (p. 67)

Simon & Schuster. New York, New York, USA. 1982

**Heitler, W.** 1904–1981

German theoretical physicist

It is usually the fate of good physical theory that after its initial success, difficulties or limitations of its applicability

become apparent. Eventually it is superseded by a better theory in which some of the difficulties are removed or which has a wider field of application, as the case may be.

*The Quantum Theory of Radiation*

Introduction (p. xi)

At The Clarendon Press. Oxford, England. 1954

**Herschel, Sir John Frederick William** 1792–1871

English astronomer and chemist

A philosophical theory does not shoot up like the tall and spiry pine in graceful and unencumbered natural growth, but, like a column built by men, ascends amid extraneous apparatus and shapeless masses of materials...

*Essays from the Edinburgh and Quarterly Reviews with Addresses and Other Pieces*

Terrestrial Magnetism (p. 67)

Longman, Brown, Green, Longmans & Roberts. London, England. 1857

**Hilton, James** 1900–1954

English-born novelist

And I believe that the Binomial Theorem and a Bach Fugue are, in the long run, more important than all the battles of history.

*This Week Magazine*, 1937

**Holt, Michael**

No biographical data available

Nobody knows why, but [the only] scientific theories that really work are the mathematical ones.

*Mathematics in Art*

Chapter 2 (p. 33)

Studio Vista. London, England. 1971

**Horton, Robin**

British anthropologist and philosopher

To say of the traditional African thinker that he is interested in supernatural rather than natural causes makes little more sense...than to say of the physicist that he is interested in nuclear rather than natural causes. In fact, both are making the same use of theory to transcend the limited vision of natural causes provided by common sense.

African Traditional Thought and Western Science

*Africa*, Volume 37, Number 1, 1967 (p. 57)

**Howes, Oscar** 1830–90

American educator

...the fewer the facts, the more numerous the theories.

The Origin of Language

*The Christian Review*, Volume 28 July 1863 (p. 384)

**Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

It is true that we must not accept a theory on the basis of emotional preference but it is not an emotional preference to attempt to establish a theory that would place us

in a position to obtain a complete understanding of the Universe. The stakes are high, and win or lose, are worth playing for.

*Frontiers of Astronomy*

Epilogue (pp. 354–355)

Harper & Row, Publishers. New York, New York, USA. 1955

**Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

**Hoyle, Geoffrey** 1942–

English science fiction writer

Be suspicious of a theory if more and more hypotheses are needed to support it as new facts become available, or as new considerations are brought to bear.

*Evolution from Space* (p. 135)

Simon & Schuster. New York, New York, USA. 1982

**Hubble, Edwin Powell** 1889–1953

American astronomer

Many theories are formulated but relatively few endure the tests. The survivors, in general, must be occasionally revised to conform with the growing body of knowledge. The ability to theorize is highly personal; it involves art, imagination, logic, and something more. An outstanding genius may invent a successful new type of theory; first-rate men may follow the lead and develop other theories on the same pattern; less competent minds are embarrassed by the custom of testing predictions.

*The Realm of the Nebulae*

Introduction (p. 5)

Dover Publications, Inc. New York, New York, USA. 1958

No theory is sacred. When a theory fails to meet the test of verified predictions, it is modified to include the larger field, or, vary rarely, it may be abandoned completely.

*The Nature of Science and Other Lectures*

Part I, Experiment and Experience (p. 41)

The Huntington Library. San Marino, California, USA. 1954

**Huggins, Sir William** 1824–1910

English astronomer

A theory which sweeps the astronomical horizon of so many mysteries must not only arouse our profound interest, but claim the respectful consideration of men of science.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1902*

Stellar Evolution in the Light of Recent Research (p. 192)

Government Printing Office. Washington, D.C. 1903

**Hutton, James** 1726–97

Scottish geologist, chemist, and naturalist

But when, in framing a theory of the earth, a geologist shall indulge his fancy in framing, without evidence, that which had preceded the present order of things, he then either misleads himself, or writes a fable for the amusement of his reader.

*The Theory of the Earth* (Volume 1)  
Part I, Chapter III (pp. 280–281)  
Messrs. Cadwell, Junior & Davies. London, England. 1795

A theory which is founded on a new principle, a theory which has to make its way in the public mind by overturning the opinions commonly received by philosophising men, and one which has nothing to recommend it but the truth of its principles, and the view of wisdom or design to which it leads, neither of which may perhaps be perceived by the generality of people, such a theory, I say, must meet with the strongest opposition from the prejudices of the learned, and from the superstition of those who judge not for themselves in forming their notions, but look up to men of science for authority.

*Theory of the Earth: With Proofs and Illustrations* (Volume 1)  
Chapter II (p. 201)  
H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

A theory founded on truth, and formed according to the proper rules of science, can ever suffer from a strict examination, by which it would be but the more and more confirmed.

*Theory of the Earth: With Proofs and Illustrations* (Volume 1)  
Chapter II (p. 203)  
H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

So far as a theory is formed in the generalization of natural appearances, that theory must be just, although it may not be perfect, as having comprehended every appearance; that is to say, a theory is not perfect until it be founded upon every natural appearance; in which case, those appearances will be explained by the theory.

*Theory of the Earth: With Proofs and Illustrations* (Volume 1)  
Chapter III (p. 300)  
H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

**Huxley, Thomas Henry** 1825–95  
English biologist

The struggle for existence holds as much in the intellectual as in the physical world. A theory is a species of thinking, and its right to exist is coextensive with its power of resisting extinction by its rivals.

*Collected Essays* (Volume 2)  
*Darwiniana*  
The Coming of Age of “The Origin of Species” (p. 229)  
Macmillan & Company Ltd. London, England. 1904

A theory is a species of thinking, and its right to exist is coextensive with its power of resisting extinction by its rivals.

*Darwiniana*  
Essay VII (p. 229)  
D. Appleton & Co. New York, New York, USA. 1896

**Jacoby, Harold** 1865–1932  
American astronomer

A theory starts life an intellectual pigmy, may develop, if it have the vitality, into a veritable intellectual colossus, and, after it has run its course, may leave behind its

offspring. It is not a cause of reproach but rather of congratulation that the scientific theory of today may be discarded tomorrow, for no theory will be abandoned until a better one has been brought forward to take its place, one which can explain the facts in a way more satisfying to the human mind.

In Columbia University  
*Lectures on Science, Philosophy and Art, 1907–1908*  
Astronomy (p. 29)  
The Columbia University Press. New York, New York, USA. 1909

**James, William** 1842–1910  
American philosopher and psychologist

Theories thus become instruments, not answers to enigmas, in which we can rest. We don’t lie back upon them, we move forward, and, on occasion, make nature over again by their aid.

*Pragmatism: A New Name for Some Old Ways of Thinking*  
Lecture II (p. 53)  
Longmans, Green & Company London, England. 1914

...the classic stages of a theory’s career. First, you know, a new theory is attacked as absurd; then it is admitted to be true, but obvious and insignificant; finally it is seen to be so important that its adversaries claim that they themselves discovered it.

*Pragmatism: A New Name for Some Old Ways of Thinking*  
Lecture VI (p. 198)  
Longmans, Green & Company London, England. 1914

The history of science is strewn with wrecks and ruins of theory – essences and principles, fluids and forces – once fondly clung to, but found to hang together with no facts of sense. And experimental phenomena solicit our belief in vain until such time as we chance to conceive them as of kinds already admitted to exist. What science means by ‘verification’ is no more than this, that no object of conception shall be believed which sooner or later has not some permanent and vivid object of sensations for its *term*.

*The Principles of Psychology* (Volume 2)  
Chapter XXI (p. 301)  
Henry Holt & Co. New York, New York, USA. 1890

**Jastrow, Joseph** 1863–1944  
Polish-born psychologist

Theories without facts or based on uncritically selected facts are vain, and facts without theoretical interpretation, blind.

In Joseph Jastrow (ed.)  
*The Story of Human Error*  
Introduction (p. 33)  
D. Appleton-Century Company, Inc. New York, New York, USA. 1936

**Jevons, William Stanley** 1835–82  
English economist and logician

The fertile discoverer...chooses between many theories, and is never wedded to anyone, unless impartial and repeated comparison has convinced him of its validity.

*The Principles of Science: A Treatise on Logic and Scientific Method*  
Chapter XXVI (p. 587)  
Macmillan & Co Ltd. London, England. 1887

**Joos, Georg** 1894–1959  
German physicist

While it is true that theory often sets difficult, if not impossible tasks for the experiment, it does, on the other hand, often lighten the work of the experimenter by disclosing cogent relationships which make possible the indirect determination of inaccessible quantities and thus render difficult measurements unnecessary.

*Theoretical Physics*  
Introduction (p. 1)  
Blackie & Son Ltd. London, England. 1968

**Kasner, Edward** 1878–1955  
American mathematician

Today the mathematician admits the existence and the necessity of many theories, many geometries, each appealing to certain interests, each to be developed by the most appropriate methods; and he realizes that, no matter how large his conceptions and how powerful his methods, they will be replaced before long by others larger and more powerful.

The Present Problems of Geometry  
*Bulletin of the American Mathematical Society*, Volume XI, Number 6, March, 1905 (p. 283)

**Kelvin, Lord William Thomson** 1824–1907  
Scottish engineer, mathematician, and physicist

A scientific theory is a tool and not a creed.

In Richard Willstätter  
*From My Life: The Memoirs of Richard Willstätter*  
Chapter 12 (p. 388)  
W.A. Benjamin. New York, New York, USA. 1965

**Keyser, Cassius Jackson** 1862–1947  
American mathematician

For scientific theories are, each and all of them, and they will continue to be, built upon and about notions which, however sublimated, are nevertheless derived from common sense.

*Mathematics* (pp. 5–6)  
Columbia University Press. New York, New York, USA. 1907

**Kitaigorodski, Aleksandr Isaakovich** 1914–  
No biographical data available

A first-rate theory predicts; a second-rate theory forbids and a third-rate theory explains after the event.

Lecture, ICU, Amsterdam, August, 1975

**Koestler, Arthur** 1905–83  
Hungarian-born English writer

The history of cosmic theories...may without exaggeration be called a history of collective obsessions and controlled schizophrenias.

*The Sleepwalkers*  
Preface (p. 15)  
The Macmillan Company. New York, New York, USA. 1966

**Kosso, Peter**  
No biographical data available

Nature acts as *if* our theories about it are true, but that does not mean that nature is as these theories say.

*Appearance and Reality: An Introduction to the Philosophy of Physics*  
Chapter 2 (p. 26)  
Oxford University Press. Oxford, England. 1998

**Kuhn, Thomas S.** 1922–96  
American historian of science

The scientist must...be concerned to understand the world and to extend the precision and scope with which it has been ordered. That commitment must, in turn, lead them to scrutinize, either for themselves or through colleagues, some aspect of nature in great empirical detail. And, if that scrutiny displays pockets of apparent disorder, then these must challenge the scientist to a new refinement of their observational techniques or to a further articulation of their theories.

*The Structure of Scientific Revolutions*  
Chapter IV (p. 42)  
The University of Chicago Press. Chicago, Illinois, USA. 1970

...no theory ever solves all the puzzles with which it is confronted at a given time; nor are the solutions already achieved often perfect.

*The Structure of Scientific Revolutions*  
Chapter XII (p. 146)  
The University of Chicago Press. Chicago, Illinois, USA. 1970

One often hears that successive theories grow ever closer to, or approximate more and more closely to, the truth. Apparently generalizations like that refer not to the puzzle-solutions and the concrete predictions derived from a theory but rather to its ontology, to the match, that is, between the entities with which the theory populates nature and what is “really there.”

*The Structure of Scientific Revolutions*  
Postscript–1969 (p. 206)  
The University of Chicago Press. Chicago, Illinois, USA. 1970

**Lakatos, Imre** 1922–74  
Hungarian-born philosopher

No theory forbids some state of affairs specifiable in advance; it is not that we propose a theory and Nature may shout No. Rather, we propose a maze of theories, and Nature may shout INCONSISTENT.

Criticism and the Methodology of Scientific Research Programmes  
*Proceedings of the Aristotelian Society*, Volume 69, 1968–1969 (p. 162)

Scientists want to make their theories respectable, deserving of the title “science”, that is genuine knowledge. Now the most relevant knowledge in the seventeenth century, when science was born, concerned God, the Devil, Heaven and Hell. If one got one’s conjectures

about matters of divinity wrong, the consequences of one's mistake was eternal damnation.

*The Methodology of Scientific Research Programmes* (p. 2)  
Cambridge University Press. Cambridge, England. 1978

### **Laszlo, E.**

No biographical data available

Ours is a complex world. But human knowledge is finite and circumscribed. "Nature does not come as clean as you can think it," warned Alfred North Whitehead, and went on to propound an extremely clean and elegant cosmology. Since theories, like window panes, are clear only when they are clean, and the world does not come as cleanly as all that, we must know where we perform a clean-up operation.

*The Systems View of the World: The Natural Philosophy of the New Developments in the Sciences*

Chapter 1, Section 2 (p. 13)

George Braziller. New York, New York, USA. 1972

Scientific theories, while simpler than reality, must nevertheless reflect its essential structure. Science then must beware of rejecting the structure for the sake of simplicity; that would be to throw out the baby with the bath water.

*The Systems View of the World: The Natural Philosophy of the New Developments in the Sciences*

Chapter 1, Section 2 (p. 13)

George Braziller. New York, New York, USA. 1972

### **Lauden, Larry** 1945–

American philosopher of science

...the rationale for accepting or rejecting any theory is thus fundamentally based on the idea of problem-solving progress. If one research tradition has solved more important problems than its rivals, then accepting that tradition is rational precisely to the degree that we are aiming to "progress," i.e., to maximize the scope of solved problems. In other words, the choice of one tradition over its rivals is a progressive (and thus a rational) choice precisely to the extent that the chosen tradition is a better problem solver than its rivals.

*Progress and Its Problems: Toward a Theory of Scientific Growth*

Chapter Three (p. 109)

University of California Press. Berkeley, California, USA. 1977

### **Lederman, Leon** 1922–

American high-energy physicist

...a comment on the word "theory," which lends itself to popular misconceptions. "That's your theory" is a popular sneer. Or "That's only a theory." Our fault for sloppy use. The quantum theory and the Newtonian theory are well-established, well-verified components of our world view. They are not in doubt. It's a matter of derivation. Once upon a time it was Newton's (as yet unverified) "theory." Then it was verified, but the name stuck. "Newton's theory" it will always be. On the other hand,

superstrings and GUTs are speculative efforts to extend current understanding, building on what we know.

*The God Particle: If the Universe Is the Answer, What Is the Question?*  
Chapter 9 (p. 389)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1993

The better theories are verifiable. Once upon a time that was the sine qua non of any theory. Nowadays, addressing events at the Big Bang, we face, perhaps for the first time, a situation in which a theory may never be experimentally tested.

*The God Particle: If the Universe Is the Answer, What Is the Question?*  
Chapter 9 (p. 389)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1993

### **Lewontin, Richard C.** 1929–

American evolutionary geneticist and philosopher of science

Theory generally should not be an attempt to say how the world is. Rather, it is an attempt to construct the logical relations that arise from various assumptions about the world.

In E. Mayr and W.B. Provine (eds.)

*The Evolutionary Synthesis*

Part One, Chapter 1

Theoretical Population Genetics in the Evolutionary Synthesis (p. 65)

Harvard University Press. Cambridge, Massachusetts, USA. 1980

It is not always appreciated that the problem of theory building is a constant interaction between constructing laws and finding an appropriate set of descriptive state variables such that laws can be constructed.

*The Genetic Basis of Evolutionary Change*

Chapter 1 (p. 8)

Columbia University Press. New York, New York, USA. 1974

...we cannot go out and describe the world in any old way we please and then sit back and demand that an explanatory and predictive theory be built on that description.

*The Genetic Basis of Evolutionary Change*

Chapter 1 (p. 8)

Columbia University Press. New York, New York, USA. 1974

### **Libes, Antoine** 1752–1832

French physicist

Let us add a word in favor of theories, which certain physicists still dare to present as invincible obstacles to the discovery of truth. It is incontestable that experience and observation ought to serve as the basis of our physical knowledge. But without the help of theory the most well-certified experiments, the most numerous observations will be only isolated facts in the hands of the physicist, isolated facts which cannot serve for the advancement of physics. The man of genius must seize upon these scattered links and bring them together skillfully to form a continuous chain. This continuity constitutes the theory, which alone can give us a glimpse of the relations which bind the facts to one another and of their dependence on the causes which have produced them.

In Russell McCormach (ed.)  
*Historical Studies in the Physical Sciences* (Volume 4)

*Evolution by Association: A History of Symbiosis*

Chapter 4 (p. 56)

Oxford University Press, Inc. New York, New York, USA. 1994

**Millikan, Robert Andrews** 1868–1953

American physicist

Almost every new theory is built like a great mediaeval cathedral, through the addition by many builders of many different elements, one adding a little here and another a

little there so that to the eye of a distant observer in the clouds the whole structure seems to move forward in a practically continuous way.

The Significance of Radium

*Science (New Series)*, Volume 54, Number 1383, July 1, 1921 (p. 2)

**Neumann, John von** 1903–57

Hungarian-American mathematician

It must be emphasized that it is not a question of accepting the correct theory and rejecting the false one. It is a matter of accepting that theory which shows greater formal adaptability for a correct extension. This is a formalistic esthetic criterion, with a highly opportunistic flavor.

*Collected Works (Volume 6)*

Method in the Physical Sciences (p. 498)

Pergamon Press. New York, New York, USA. 1961–1963

**Newell, A.**

No biographical data available

Working with theories is not like skeet shooting, where theories are lofted up and bang, they are shot down with a falsification bullet, and that's the end of that theory. Theories are more like graduate students – once admitted you try hard to avoid flunking them out, it being much better for them and for the world if they can become long-term contributors to society.

*Unified Theories of Cognition*

Introduction (p. 14)

Harvard University Press. Cambridge, Massachusetts, USA. 1990

**Nietzsche, Friedrich Wilhelm** 1844–1900

German philosopher

It is certainly not the least charm of a theory that it is refutable...

*Beyond Good and Evil*

Chapter I, 18 (pp. 18–19)

The Modern Library. New York, New York, USA. 1917

**Nizer, Louis** 1902–94

English-born American lawyer

The argument seemed sound enough, but when a theory collides with a fact, the result is a tragedy.

*My Life in Court* (p. 433)

Doubleday & Company, Inc. New York, New York, USA. 1961

**Nordmann, Charles**

Astronomer

A theory is either true or false, whether the nose of its author has the aquiline contour of the nose of the children of Sem, or the flattened shape of that of the children of Cham, or the straightness of that of the children of Japhet.

Translated by Joseph McCabe

*Einstein And The Universe: A Popular Exposition of The Famous Theory*

Chapter I (p. 3)

Henry Holt & Co. New York, New York, USA. 1922

**Novalis (Friederich von Hardenberg)** 1772–1801  
German poet

Theories are like fishing: it is only by casting into unknown waters that you may catch something.

In Jean-Pierre Luminet

*Black Holes* (p. 1)

Cambridge University Press. New York, New York, USA. 1992

**Oman, John** 1860–1939  
English Presbyterian theologian

To refuse to consider any possibility is merely the old habit of making theory the measure of reality.

*The Natural and the Supernatural*

Chapter XV (p. 269)

The Macmillan Company. New York, New York, USA. 1931

**Oppenheimer, James Robert** 1904–67  
American theoretical physicist

The theory of our modern technical [era] shows that nothing is as practical as theory.

*Reflex*, July 1977

**Pagels, Heinz R.** 1939–88  
American physicist and science writer

A theory can't be right if it can't also be wrong.

*The Dreams of Reason*

Chapter 8 (p. 174)

Simon & Schuster. New York, New York, USA. 1988

**Papoulis, Athanasios** 1921–2002  
Greek-American engineer and applied mathematician

Scientific theories deal with concepts, never with reality. All theoretical results are derived from certain axioms by deductive logic. In physical sciences the theories are so formulated as to correspond in some useful sense to the real world, whatever that may mean. However, this correspondence is approximate, and the physical justification of all theoretical conclusions is based on some form of inductive reasoning.

*Probability, Random Variables, and Stochastic Processes*

Chapter 1 (p. 3)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1965

**Parkhurst, C. K.**  
No biographical data available

A theory is like a new vessel, upon which we prefer not to take passage until it has made its trial trip.

Work as an Educating Power

*The Magazine of American History with Notes and Queries*, Volume 13, Number 4, April, 1885 (p. 355)

**Parsons, Talcott** 1902–79  
American sociologist

Theory not only formulates what we know but also tells us what we want to know, that is, the questions to which an answer is needed.

*The Structure of Social Action*

Part I, Chapter I (p. 9)

The Free Press. Glencoe, Illinois, USA. 1949

**Pasteur, Louis** 1822–95  
French chemist

Without theory, practice is but routine born of habit. Theory alone can bring forth and develop the spirit of invention.

In René Dubos

*Louis Pasteur: Free Lance of Science*

Chapter I (p. 11)

Little, Brown & Company. Boston, Massachusetts, USA. 1950

The characteristic of a true theory is its fruitfulness.

In Emile Duclaux

*Pasteur: The History of a Mind*

Aphorisms and Ideals of Pasteur (p. 343)

W.B. Saunders Co. Philadelphia, Pennsylvania, USA. 1920

**Petit, Jean-Pierre** 1937–  
French astrophysicist

Sir, please believe me, it's the first time this has ever happened. Have another try, don't get upset. You know our Theorems are GUARANTEED.

*Euclid Rules OK?* (p. 11)

John Murray Ltd. London, England. 1982

**Playfair, John** 1748–1819  
Scottish geologist, physicist, and mathematician

A theory is never more unfairly dealt with, than when those parts are separated which were meant to support one another, and each left to stand or fall by itself.

*Illustrations of the Huttonian Theory of the Earth*

Section 303 (p. 340)

Dover Publications, Inc. New York, New York, USA. 1964

The want of theory, then, does not secure the candor of an observer, and it may very much diminish his skill. The discipline that seems best calculated to promote both is a thorough knowledge of the methods of inductive investigation; an acquaintance with the history of physical discovery; and the careful study of those sciences in which the rules of philosophizing have been most successfully applied.

*Illustrations of the Huttonian Theory of the Earth*

Note XXVI, 459 (p. 528)

Dover Publications, Inc. New York, New York, USA. 1964

**Poincaré, Jules Henri** 1854–1912  
French mathematician and theoretical astronomer

It is not sufficient for a theory to affirm no false relations; it must not hide true relations.

*The Foundations of Science*

*Science and Hypothesis*, Part IV

Chapter X (p. 145)

The Science Press. New York, New York, USA. 1913

At the first blush it seems to us that theories last only a day and that ruins upon ruins accumulate.... But if we

look more closely, we see that what thus succumb are the theories properly so called, those which pretend to teach us what things are. But there is in them something which usually survives. If one of them taught us a true relation, this relation is definitively acquired, and it will be found again under a new disguise in the other theories which will successively come to reign in place of the old.

*The Foundations of Science*

*The Value of Science, Science and Reality* (p. 351)

The Science Press. New York, New York, USA. 1913

Scientific theories are like empires, they are not certain of the morrow.

The New Mechanics

*The Monist*, Volume XXIII, Number 3, July, 1913 (p. 385)

**Popper, Karl R.** 1902–94

Austrian/British philosopher of science

Never let yourself be goaded into taking seriously problems about words and their meanings. What must be taken seriously are questions of fact, and assertions about facts: theories and hypotheses; the problems they solve; and the problems they raise.

*Unended Quest: An Intellectual Autobiography*

Chapter 7 (p. 19)

Open Court Publishing Company. La Salle, Illinois, USA. 1976

As with our children, so with our theories, and ultimately with all the work we do: our products become largely independent of their makers. We may gain more knowledge from our children or from our theories than we ever imparted to them.

*Unended Quest: An Intellectual Autobiography*

Chapter 40 (p. 196)

Open Court Publishing Company. La Salle, Illinois, USA. 1976

...scientific theories, if they are not falsified, forever remain hypotheses or conjectures.

*Unended Quest: An Intellectual Autobiography*

Chapter 16 (p. 79)

Open Court Publishing Company. La Salle, Illinois, USA. 1976

The initial stage, the act of conceiving or inventing a theory, seems to me neither to call for logical analysis nor to be susceptible of it. The question how it happens that a new idea occurs to a man – whether it is a musical theme, or a dramatic conflict, or a scientific theory – may be of great interest to empirical psychology; but it is irrelevant to the logical analysis of scientific knowledge.

*The Logic of Scientific Discovery*

Part I, Chapter I, Section 2 (p. 31)

Basic Books, Inc. New York, New York, USA. 1959

Theories are nets cast to catch what we call “the world”: to rationalize, to explain, and to master it. We endeavor to make the mesh ever finer and finer.

*The Logic of Scientific Discovery*

Part II, Chapter III (p. 59)

Basic Books, Inc. New York, New York, USA. 1959

Scientific theories are not the digest of observations, but they are inventions – conjectures boldly put forward for trial, to be eliminated if they clashed with observations; with observations which were rarely accidental, but as a rule undertaken with the definite intention of testing a theory by obtaining, if possible, a decisive refutation.

*Conjectures and Refutations: The Growth of Scientific Knowledge*

Chapter I, Section IV (p. 46)

Harper & Row, Publishers. New York, New York, USA. 1963

...our critical examinations of our theories lead us to attempts to test and to overthrow them; and these lead us further to experiments and observations of a kind which nobody would ever have dreamed of without the stimulus and guidance both of our theories and of our criticisms of them. For indeed, the most interesting experiments and observations were carefully designed in order to test our theories, especially our new theories.

*Conjectures and Refutations: The Growth of Scientific Knowledge*

Chapter 10, Section I (pp. 215–216)

Harper & Row, Publishers. New York, New York, USA. 1963

We have no reason to regard the new theory as better than the old theory – to believe that it is nearer to the truth – until we have derived from the new theory new predictions which were unobtainable from the old theory (the phases of Venus...) and until we have found that these new predictions were successful.

*Conjectures and Refutations: The Growth of Scientific Knowledge*

Chapter 10 (p. 246)

Harper & Row, Publishers. New York, New York, USA. 1963

...a high probability cannot be one of the aims of science. For the scientist is most interested in theories with a high content. He does not care for highly probable trivialities but for bold and severely testable (and severely tested) hypotheses. If (as Carnap tells us) a high degree of confirmation is one of the things we aim at in science, then degree of confirmation cannot be identified with probability. ...if high probability were an aim of science, then scientists should say as little as possible, and preferably utter tautologies only. But their aim is to “advance” science, that is to add to its content. Yet this means lowering its probability. And in view of the high content of universal laws, it is [not] surprising to find that their probability is zero...

*Conjectures and Refutations: The Growth of Scientific Knowledge*

Chapter 11, Section VI (p. 286)

Harper & Row, Publishers. New York, New York, USA. 1963

The dogmatic attitude of sticking to a theory as long as possible is of considerable significance. Without it we could never find out what is in a theory – we should give the theory up before we had real opportunity of finding out its strength; and in consequence no theory would ever be able to play its role of bringing order into the world, of preparing us for future events, of drawing our attention to events we should otherwise never observe.

*Conjectures and Refutations: The Growth of Scientific Knowledge*  
Chapter 15, fn 1 (p. 312)  
Harper & Row, Publishers. New York, New York, USA. 1963

Every “good” scientific theory is one which forbids certain things to happen; the more a theory forbids, the better it is.

In C.A. Mace (ed.)  
*British Philosophy in the Mid-Century*  
Philosophy of Science: A Personal Report I (p. 159)  
George Allen & Unwin Ltd. London, England. 1957

**Pratchett, Terry** 1948–  
English author

...theories, diverse as they are, have two things in common. They explain the observed facts, and they are completely and utterly wrong.

*The Light Fantastic* (p. 165)  
Colin Smythe. Gerrards Cross, England. 1986

**Preston, Thomas** 1860–1900  
Irish scientist

Without a theory all our knowledge of nature would be reduced to a mere inventory of the results of observation. Every scientific theory must be regarded as an effort of the human mind to grasp the truth, and as long as it is consistent with the facts, it forms a chain by which they are linked together and woven into harmony.

*The Theory of Heat* (2nd edition)  
Preface to the First Edition (p. vi)  
Macmillan & Co Ltd. London, England. 1904

**Priestley, J. B.**

American geophysicist and paleontologist

[A] new theory is guilty until proven innocent, and the pre-existing theory is innocent until proven guilty.... Continental drift was guilty until proven innocent.

*The Nemesis Affair: A Story of the Death of the Dinosaurs and the Ways of Science*  
Chapter 12 (pp. 195, 205)  
W.W. Norton & Company, Inc. New York, New York, USA. 1986

**Reiser, Anton** 1628–86  
German Lutherischer theologian

Our experience and observations alone never lead to finalities. Theory, however, creates reliable roads over which we may pursue our journeys through the world of observations.

In Bernard Jaffe  
*New World of Chemistry*  
Chapter 11 (p. 133)  
Silver, Burdett & Company. New York, New York, USA. 1935

**Richards, Dickinson W.** 1895–1973  
American physician and physiologist

The problems are the ones that we have always known. The little gods are still with us, under different names. There is conformity: of technique, leading to repetition; of language, encouraging if not imposing conformity of thought. There is popularity: it is so easy to ride along on an already surging tide; to plant more seed in an already well-ploughed field; so hard to drive a new furrow into stony ground. There is laxness: the disregard of small errors, of deviations, of the unexpected response; the easy worship of the smooth curve. There is also fear: the fear of speculation; the overprotective fear of being wrong. We are forgetful of the curious and wayward dialectic of science, whereby a well-constructed theory even if it is wrong, can bring a signal advance.

*Transactions of the Association of American Physicians*, Volume 75, 1962 (p. 1)

**Richards, Herbert Maule** 1871–1928  
No biographical data available

A theory which starts life an intellectual pigmy, may develop, if it have the vitality, into a veritable intellectual colossus, and, after it has run its course, may leave behind its offspring.

Botany  
*Torreyia*, Volume 8, Number 5, May, 1908 (p. 99)

**Richet, Charles** 1850–1935  
French physiologist

I often recall to my students the history of Don Quixote, who, having constructed a helmet of cardboard and wood, wished to prove its solidity. Alas, the poor helmet flew to bits when his own good sword struck it. Then the knight, no whit discouraged, made a new and stronger helmet. He raised his sword.

Aphorisms 2410

Ithaca Heritage Books. Ithaca, New York, USA. 1975

**Rota, Gian-Carlo** 1932–99

Italian-born American mathematician

**Pringsheim, Alfred** 1850–1941

German mathematician

Theorems are not to mathematics what successful courses are to a meal. The nutritional analogy is misleading.

In Philip J. Davis and Reuben Hersh

*The Mathematical Experience*

Introduction (pp. xviii–xix)

Birkhäuser. Boston, Massachusetts, USA. 1981

**Rothman, Tony** 1953–

American cosmologist

**Sudarshan, George** 1931–

Indian physicist

The everyday usage of “theory” is for an idea whose outcome is as yet undetermined, a conjecture, or for an idea contrary to evidence. But scientists use the word in exactly the opposite sense. [In science] “theory”...refers only to a collection of hypotheses and predictions that is amenable to experimental test, preferably one that has been successfully tested. It has everything to do with the facts.

*Doubt and Certainty: The Celebrated Academy: Debates on Science,*

*Mysticism, Reality, in General on the Knowable and Unknowable*

First Debate (p. 2)

Perseus Books. Reading, Massachusetts. USA. 1998

It is not difficult to calculate that if one inflated the world to keep up with the current rate of population growth, then after 2598 years the earth would be expanding at the speed of light. The growth of science is proceeding even faster. Several years ago, in physics at least, we crossed the point at which the expected lifetime of a theory became less than the lead time for publication in the average scientific journal. Consequently, most theories are born dead on arrival and journals have become useless, except as historical documents.

*A Physicist on Madison Avenue*

Chapter 8 (p. 118)

Princeton University Press. Princeton, New Jersey, USA. 1991

A theory is accepted only when the last of its opponents dies off. The Copernican Revolution was a great shift in mankind’s thinking, but did not take place overnight.

*Instant Physics: From Aristotle to Einstein, and Beyond*

Chapter 1 (p. 15)

Ballantine Books. New York, New York, USA. 1995

Chapter 4 (p. 27)

HarperPaperback. New York, New York, USA. 1995

**Schegel, Richard**

No biographical data available

We must accept, I think, that there is an inherent limitation in the structure of science that prevents a scientific theory from ever giving us an adequate total explanation of the universe. Always, there is a base in nature (or, correspondingly, a set of assumptions in theory) which cannot be explained by reference to some yet more fundamental property. This feature of science has been commented on by many writers in the philosophy of science; and, certainly the limitation is a point of difference between science and those religious or metaphysical

systems in which there is an attempt to present a doctrine that gives answers for all ultimate questions.

*Completeness in Science*

Chapter 14, Section 2 (p. 252)

Appleton-Century-Crofts. New York, New York, USA. 1967

**Schiller, Ferdinand Canning Scott** 1864–1937

English philosopher

It is the business of theories to forecast “facts”, and of facts to form points of departure for theories, which again, when verified by the new facts to which they have successfully led, will extend the borders of knowledge.

In Charles Singer (ed.)

It is noteworthy that the etymological root of the word theatre is the same as that of the word theory, namely a view. A theory offers us a better view.

*Journal of the Washington Academy of Sciences*, Volume 36, 1946

(p. 286)

**Shaw, George Bernard** 1856–1950

Irish comic dramatist and literary critic

The weakness of the man who, when his theory works out into a flagrant contradiction of the facts, concludes “so much the worse for the facts: let them be altered,” instead of “so much the worse for my theory.”

A Degenerate’s View of Nordau

*Liberty*, July 27, 1895

**Silver, Brian L.**

Israeli professor of physical chemistry

Some see the fragility of scientific theory as an indication of a basic inability of science to explain the universe. But scientific change is almost always accompanied by an increase in our ability to rationalize and predict the course of nature. Newton could explain far more than Aristotle, Einstein far more than Newton. Science frequently stumbles, but it gets up and carries on. The road is long.

*The Ascent of Science*

Preface (p. xiii)

Solomon Press Book. New York, New York, USA. 1998

Facts may be regarded as indisputable; theories are not.

*The Ascent of Science*

Part I, Chapter 2 (p. 19)

Solomon Press Book. New York, New York, USA. 1998

**Skolimowski, Henryk** 1930–

Polish philosopher

Theories, like old soldiers, fade away rather than being killed on the scientific battlefield.

In A.J. Ayala (ed.)

*Studies in the Philosophy of Biology: Reduction and Related Problems*

Problems of Rationality in Biology (p. 217)

Macmillan & Company Ltd. London, England. 1974

**Slater, John C.** 1900–76

American physicist and theoretical chemist

A theoretical physicist in these days asks just one thing of his theories: if he uses them to calculate the outcome of an experiment, the theoretical prediction must agree, within limits, with the result of the experiment. He does not ordinarily argue about philosophical implications of his theory. Almost his only recent contribution to philosophy has been the operational idea, which is essentially only a different way of phrasing the statement I have just made, that the one and only thing to be done with a theory is to predict the outcome of an experiment. As a physicist, I find myself very well satisfied with this attitude.

*Electrodynamics of Ponderable Bodies*

*Journal of the Franklin Institute*, Volume 225, Number 3, March, 1938

(pp. 277–287)

Questions about a theory which do not affect its ability to predict experimental results correctly seem to me quibbles about words, rather than anything more substantial, and I am quite content to leave such questions to those who derive some satisfaction from them.

*Electrodynamics of Ponderable Bodies*

*Journal of the Franklin Institute*, Volume 225, Number 3, March, 1938

(pp. 277–287)

**Slosson, Edwin E.** 1865–1929

American chemist and journalist

The scientist does not abandon a theory because it has inconsistencies any more than he divorces his wife because she has inconsistencies.

Scientific Versus Legal Laws (p. 106)  
Harcourt, Brace & Company. New York, New York, USA. 1920

**Soddy, Frederick** 1877–1956  
English chemist

It is wonderful how accommodating a true theory is to new truth, apparently of a diametrically opposite character, and this not in any sense of mere ingenuity of explanation, but in a manner that arrests the investigator, and is his sign that he is on safe ground.

*The Interpretation of Radium and the Structure of the Atom*  
Chapter I (p. 6)  
J. Murray. London, England. 1909

**Stenger, Victor J.** 1935–  
American physicist

The fact that a theory may eventually test wrong does not detract from its original merit as a worthy try. On the other hand, if an idea is poorly formulated, often because the terms used are not clearly defined, then how can we even test it? ... We cannot determine that gibberish is anything but gibberish.

*Physics and Psychics: The Search for a World Beyond the Senses*  
Chapter 3 (p. 58)  
Prometheus Books. Buffalo, New York, USA. 1990

**Stevenson, Robert Louis** 1850–94  
Scottish essayist and poet

It is better to emit a scream in the shape of a theory than to be entirely insensible to the jars and incongruities of life and take everything as it comes in a forlorn stupidity.

*Virginibus Puerisque and Familiar Studies of Men and Books*  
Crabbed Age and Youth (p. 42)  
J.M. Dent & Sons Ltd. London, England. No date

**Stewart, Alfred Walter** 1880–1947  
British chemist

...in every science which is at all progressive there must arise from time to time conflicts between the older generation of workers and the leaders of the new; for, to those who have grown up along with it, a theory generally becomes invested with a sort of sanctity which is quite out of keeping with its true make-shift character. The longer a theory stands the harder does it become to shake it, and the greater is the tendency of the science to become stereotyped.

*Recent Advances in Organic Chemistry*  
Chapter I (p. 1)  
Longmans, Green & Co. London, England. 1908

**Stillman, J. D. B.**  
American physician

...your theory is like an Irishman's wheelbarrow loaded with dirt: it is supported on one wheel – the rest you carry.

Concerning the Late Earthquake  
*The Overland Monthly*, Volume 1 November, 1868 (p. 495)

**Sussmann, Hector** 1946–  
Argentinean-American mathematician

A mark of a good theory is that it proves even the most trivial results.

Gelfand Workshop  
Rutgers University, February 11, 2002

**Swann, William Francis Gray** 1884–1962  
English physicist

In speaking of theories being discarded and superseded by others, we must not think of the discarded ones as useless. The situation is not one where we are to think of a certain theory as right and all the other wrong. In a sense, different theories are like different languages for describing the same phenomena. The English language may be more suitable – more powerful for the purposes of the science of chemistry than the French language. It may have a greater richness of word content; but to say that one is right and the other wrong is utter nonsense.

*Annual Report of the Board of Regents of the Smithsonian Institution* (1928)  
Three Centuries of Natural Philosophy (pp. 246–247)  
Government Printing Office. Washington, D.C. 1929

**Swanwick, Michael** 1950–  
American science fiction author

...once the data is in, the theory has to follow along meekly.

Ginungagap (p. 302)  
Frog. Ltd. Berkeley, California, USA. 2001

**Synge, John L.** 1897–1995  
Irish mathematician and physicist

A well built theory has three merits: (i) it has an aesthetic appeal, (ii) it is comparatively easy to understand, and (iii), if its postulates are clearly stated, it may be taken out of its original physical context and applied in another.

*The Hamiltonian Method and Its Application to Water Waves*  
*Proceedings of the Irish Academy*, Volume 63, Section A, Number 1, May, 1962 (p. 1)

**Teall, Sir J. J. Harris** 1849–1924  
British geologist

It is only when a theory has proved its usefulness as a coordinator of fact that it becomes worthy of the dignity of publication. It may be true or false, most likely the latter; but if it coordinates more facts than any other it is at any rate useful and may be conveniently retained until replaced by a better.

*Annual Report of the Board of Regents of the Smithsonian Institution*, 1902  
The Evolution of Petrological Ideas (p. 289)  
Government Printing Office. Washington, D.C. 1903

**Thomson, Sir Joseph John** 1856–1940  
English physicist

If his [Einstein's] theory is right, it makes us take an entirely new view of gravitation. If it is sustained that Einstein's reasoning holds good – and it has sustained two very severe tests in connection with the perihelion of Mercury and the present eclipse – then it is the result of one of the highest achievements of human thought. The weak point in the theory is the great difficulty in expressing it. It would seem that no one can understand the new law of gravitation without a thorough knowledge of the theory of invariants and of the calculus of variations.

In Edwin Emery Slosson  
*Easy Lessons in Einstein*  
Easy Lessons in Einstein (p. 3)  
Harcourt, Brace & Howe. New York, New York, USA. 1920

**Tilden, Sir William Augustus** 1842–1926  
English chemist

A good theory is one which almost always leads to further discovery, but no theory, however justifiable, can be regarded as final.

*Introduction to the Study of Chemical Philosophy*  
10th Introduction (pp. 3–4)  
Longmans, Green & Co. London, England. 1901

**Tolstoy, Leo** 1828–1910  
Russian writer

Pfuehl was one of those theorists who so love their theory that they forget its aim, – its application to practice; out of love for the theory he despised all practice, and did not want to hear a word about it. He really took delight in a failure, because such a failure, due to departures in practice from the theory, only proved to him the justice of his theory.

Translated by Leo Wiener  
*The Complete Works of Count Tolstoy* (Volume 3)  
*War and Peace* (Volume 2)  
Part 9, Chapter X (pp. 64–65)  
Colonial Press. New York, New York, USA. 1904

**Toulmin, Stephen** 1922–  
English philosopher

It is part of the art of the sciences, which has to be picked up in the course of the scientist's training, to recognize the situations in which any particular theory or principle can be applied to, and when it will cease to hold.

*The Philosophy of Science: An Introduction*  
Chapter III (pp. 92–93)  
Harper & Row, Publishers. New York, New York, USA. 1960

**Turner, Michael S.**  
American astrophysicist

If all you have are observations, that's botany. If all you have is theory, that's philosophy.  
In John Hogan

Universal Truths  
*Scientific American*, Volume 264, Number 4, October, 1990 (p. 117)

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910  
American author and humorist

...the trouble about arguments is, they ain't nothing but theories, after all, and theories don't prove nothing, they only give you a place to rest on, a spell, when you are tuckered out butting around and around trying to find out something there ain't no way to find out.... There's another trouble about theories: there's always a hole in them somewheres, sure, if you look close enough.

Tom Sawyer Abroad  
Chapter IX (p. 70)  
Harper & Brothers. New York, New York, USA. 1902

**Tyndall, John** 1820–93  
Irish-born English physicist

Scientific theories sometimes float like rumours in the air before they receive complete expression.

*Fragments of Science* (Volume 2)  
Chapter XIV (p. 338)  
D. Appleton & Co. New York, New York, USA. 1915

A favorite theory – the desire to establish or avoid a certain result – can so warp the mind as to destroy its power of estimating facts.

*Fragments of Science for Unscientific People*  
Chapter III (p. 54)  
D. Appleton & Co. New York, New York, USA. 1875

**van Fraassen, Bas C. -** 1941  
Dutch-born philosopher

Science aims to give us, in its theories, a literally true story of what the world is like; and acceptance of a scientific theory involves the belief that it is true.

*The Scientific Image*  
Chapter 2, section 1. 1 (p. 8)  
Clarendon Press. Oxford, England. 1990

...the success of current scientific theories is no miracle. It is not even surprising to the scientific (Darwinist) mind. For any scientific theory is born into a life of fierce competition, a jungle red in tooth and claw. Only the successful theories survive – the ones which in fact latched on to the actual regularities in nature.

*The Scientific Image*  
Chapter 2, Section 7 (p. 40)  
Clarendon Press. Oxford, England. 1980

**von Goethe, Johann Wolfgang** 1749–1832  
German poet, novelist, playwright and natural philosopher

No phenomenon can be explained in and of itself; only many comprehended together, methodically arranged, in the end yield something that could be regarded as theory.

In Karl J. Fink  
*Goethe's History of Science*  
 Chapter 2 (p. 26)  
 Cambridge University Press. Cambridge, England. 1991

Dear friend, all theory is grey  
 And green the golden tree of life.

In *Great Books of the Western World* (Volume 47)  
*Faust*  
 The First Part  
 Faust's Study (2), I. 2038–2039  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Theory is of no use in itself; but only in so far as it helps us to believe in the coherency of phenomena.

In John Stuart Blackie  
*The Wisdom of Goethe*  
 Philosophy, Metaphysics, Logic, Truth and Science (p. 162)  
 William Blackwood & Sons. Edinburgh, Scotland. 1883

An old foundation is worthy of all respect, but it must not take from us the right to build afresh wherever we will.

Translated by Thomas Bailey Saunders  
*The Maxims and Reflections of Goethe*  
 536 (p. 188)  
 The Macmillan Co. New York, New York, USA. 1906

Theories are usually the over-hasty efforts of an impatient understanding that would gladly be rid of phenomena, and so puts in their place pictures, notions, nay, often mere words.

Translated by Thomas Bailey Saunders  
*The Maxims and Reflections of Goethe*  
 520 (p. 184)  
 The Macmillan Co. New York, New York, USA. 1906

The supreme achievement would be to see that stating a fact is starting a theory.

Translated by Thomas Bailey Saunders  
*The Maxims and Reflections of Goethe*  
 #557 (p. 194)  
 The Macmillan Co. New York, New York, USA. 1906

**von Liebig, Justus** 1803–73  
 German organic chemist

Every theory which urges men to labour and research, which excites acuteness and sustains perseverance, is a gain to science; for it is labour and research which lead to discoveries.

In John Blyth  
*Familiar Letters on Chemistry* (4th edition)  
 Letter III (p. 53)  
 Walton & Maberly. London, England. 1859

**Waddington, Conrad Hal** 1905–75  
 British biologist and paleontologist

A scientific theory cannot remain a mere structure within the world of logic, but must have implications for action and that in two different ways. In the first place, it must involve the consequence that if you do so and so, such and such results will follow. That is to say it must give,

or at least offer the possibility of controlling the process; and secondly – and this is a point not so often mentioned by those who discuss the nature of scientific theories – its value is quite dependent on its power of suggesting the next step in scientific advance.

*The Nature of Life*  
 Chapter I (pp. 11–12)  
 Harper & Row, Publishers. New York, New York, USA. 1960

**Weinberg, Steven** 1933–  
 American nuclear physicist

This is often the way it is in physics – our mistake is not that we take our theories too seriously, but that we do not take them seriously enough.

*The First Three Minutes*  
 Chapter VI (p. 131)  
 Basic Books, Inc. New York, New York, USA. 1988

Our theories are very esoteric – necessarily so, because we are forced to develop these theories using a language, the language of mathematics, that has not become part of the general equipment of the educated public. Physicists generally do not like the fact that our theories are so esoteric. On the other hand, I have occasionally heard artists talk proudly about their work being accessible only to a band of cognoscenti and justify this attitude by quoting the example of physical theories like general relativity that also can be understood only by initiates. Artists like physicists may not always be able to make themselves understood by the general public, but esotericism for its own sake is just silly.

*Dreams of a Final Theory: The Scientist's Search for the Ultimate Laws of Nature*  
 Chapter VI (p. 150)  
 Pantheon Books. New York, New York, USA. 1992

**Weiss, John**

...to come very near a true theory and to grasp its precise application are two very different things.

*The Organization of Thought*

Chapter VI (p. 127)

Greenwood Press Publishers. Westport, Connecticut, USA. 1974

### **Wilson, Edward O.** 1929–

American biologist and author

Nothing in science – nothing in life, for that matter, makes sense without theory. It is our nature to put all knowledge into context in order to tell a story, and to re-create the world by this means. ...We are enchanted by the beauty of the natural world. Our eye is caught by the dazzling visual patterns of polar star trails, for example, and the choreography of chromosomes in dividing root tip cells of plant. Both disclose processes that are also vital to our lives. In unprocessed form, however, without theoretical frameworks of heliocentric astronomy and Mendelian heredity, they are no more than beautiful patterns of light.

*The Creation*

Chapter 2 (p. 23)

W.H. Freeman. San Francisco, California, USA. 1981

**Barnett, Lincoln Kinnear** 1909–79

American science writer

Although it is true that the amount of matter in the universe is perpetually changing, the change appears to be mainly in one direction – toward dissolution. The sun is slowly but surely burning out, the stars are dying embers, and everywhere the cosmos heart is turning to cold; matter is dissolving into radiation, and energy is being dissipated into empty space. “The universe is thus progressing toward an ultimate ‘heat death’ or, as it is technically defined, a condition of maximum entropy” [quoting Einstein].... And there is no way of avoiding this destiny.

[T]he fateful principle known as the Second Law of Thermodynamics, which stands today as the principal pillar of classical physics left intact by the march of science, proclaims that the fundamental processes of nature are irreversible. Nature moves only one way.

*The Universe and Dr. Einstein*

Chapter 7 (p. 387)

W.A. Benjamin. New York, New York, USA. 1969

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

The law of entropy always increases – the Second Law of Thermodynamics – holds, I think, the supreme position among the laws of Nature. If someone points out to you that your pet theory of the universe is in disagreement with Maxwell's equation – then so much the worse for Maxwell's equations. If it is found to be contradicted by observation – well, these experimentalists do bungle things sometimes. But if your theory is found to be against the Second Law of Thermodynamics I can give you no hope; there is nothing for it but to collapse in deepest humiliation.

*The Nature of the Physical World*

Chapter IV (p. 74)

The Macmillan Company. New York, New York, USA. 1930

**Epstein, P. S.** 1883–1966

German-born physicist

Thermodynamics deals with systems which, in addition to mechanical and electromagnetic parameters, are described by a specifically thermal one, namely, the temperature or some equivalent of it. Thermodynamics is essentially a science about the conditions of equilibrium

of systems and about the processes which can go on in states little different from the state of equilibrium.

*Textbook of Thermodynamics*

Chapter I (p. 2)

John Wiley & Sons, Inc. New York, New York, USA. 1937

**Feynman, Richard P.** 1918–88

American theoretical physicist

**Leighton, Robert B.** 1919–97

American physicist

**Sands, Matthew L.** 1919–

American physicist

In doing a problem involving a given mass of some substance, the condition of the substance at any moment can be described by telling what its temperature is and what its volume is. If we know the temperature and volume of a substance, and that the pressure is some function of the temperature and volume, then we know the internal energy. One could say, “I do not want to do it that way. Tell me the temperature and the pressure and I will tell you the volume. I can think of the volume as a function of temperature and pressure, and so on.” That is why thermodynamics is hard, because everyone uses a different approach. If we could only sit down once and decide on our variables, and stick to them, it would be fairly easy.

*The Feynman Lectures on Physics* (Volume 1)

Chapter 44–5 (p. 44–9)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1983

**Hoffmann, Roald** 1937–

Polish-born American chemist

My second law, your second law, ordains that local order, structure in space and time, be crafted in ever-so-losing contention with proximal disorder in this neat but getting messier universe.

*The Metamict State*

The Devil Teaches Thermodynamics (p. 3)

University of Central Florida Press. Orlando, Florida, USA. 1987

*Transactions of the Royal Society of Edinburgh*, March, 1851

**Lewis, Gilbert Newton** 1875–1946

American chemist

**Randall, Merle** 1888–1950

American chemist

The fascination of a growing science lies in the work of the pioneers at the very borderland of the unknown, but to reach this frontier one must pass over well traveled roads; of these one of the safest and surest is the broad highway of thermodynamics.

Revised by Kenneth S. Pitzer and Leo Brewer

*Thermodynamics* (p. x)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1961

The second law of thermodynamics not only is a principle of wide reaching scope and application, but also is one which has never failed to satisfy the severest test of experiment. The numerous quantitative relations derived from this law have been subjected to more and more accurate experimental investigation without the detection of the slightest inaccuracy.

*Thermodynamics* (p. 87)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1961

**Maxwell, James Clerk** 1831–79

Scottish physicist

I do not think...that the perfect identity which we observe between different portions [of molecules] of the same kind of matter can be explained on the statistical principle of the stability of the averages of large numbers of quantities each of which may differ from the mean. For if of the molecules of some substance such as hydrogen, some were of slightly greater mass than others, we have the means of producing a separation between molecules of different masses, and in this way we should be able to produce two kinds of hydrogen, one of which would be somewhat denser than the other. As this cannot be done, we must admit that the equality which we assert to exist between the molecules of hydrogen applies to each individual molecule, and not merely to the average of groups of millions of molecules.

**Ross, John** 1920–

American physical chemist

I have written that there are no known violations of the second law of thermodynamics (*Chemical and Engineering News*, July 27, 1980). Unfortunately I have been intentionally misinterpreted by creationists who say that this quote proves that evolution is impossible. This is nonsense: evolution is in no way a violation of the second law.

Letter to Carl Gaither  
19 June, 2007

**Seifert, H. S.** 1911–77

American aeronautics and astronautics scientist

The first and second laws of thermodynamics are of course known to us as well as the Ten Commandments, and probably obeyed more consistently.

Can We Decrease Our Entropy?  
*American Scientist*, Summer, June, 1961 (p. 124A)

**Sommerfeld, Arnold** 1868–1951

German physicist

The science of thermodynamics introduces a new concept, that of temperature.

*Thermodynamics and Statistical Mechanics, Lectures on Theoretical Physics* (Volume 1)  
Translated by J. Kestin (p. 1)  
Academic Press. New York, New York, USA. 1956

**Stenger, Victor J.** 1935–

American physicist

Scientists speak of the Law of Inertia or the Second Law of Thermodynamics as if some great legislature in the sky once met and set down rules to govern the universe.

*Not by Design*  
Chapter 1 (p. 14)  
Prometheus Books. Buffalo, New York, USA. 1988

**Truesdell, Clifford** 1919–2000

American mathematician, natural philosopher, historian of mathematics

Every physicist knows exactly what the first and the second law mean, but...no two physicists agree about them.

In Mario Bunge (ed.)  
*Delaware Seminar in the Foundations of Physics*  
Foundations of Continuum Mechanics (p. 37)

...thermodynamics is the kingdom of deltas.

*The Tragicomical History of Thermodynamics*  
Chapter 1 (p. 1)  
Springer-Verlag. New York, New York, USA. 1980

## SECOND LAW

**Klein, Joseph Frederic** 1849–1918

Engineer

The outcome of the whole study of irreversibility results in the briefly stated law: "There exists in Nature a quantity which clianges always in the same sense in all natural processes."

This boldly asserts the essential one-sidedness of Nature. The proposition stated in this general form may be correct or incorrect; but whichever it may be it will remain so independently of human experimental skill.

*Physical Significance of Entropy Or of the Second Law* (p. 37)  
D. van Nostrand Co. New York, New York, USA. 1910

**Planck, Max** 1858–1947

German physicist

The gist of the second law [of thermodynamics] has nothing to do with experiment; the law asserts briefly that

*there exists in nature a quantity which changes always in the same sense in all natural processes.* The proposition stated in this general form may be correct or incorrect; but whichever it may be, it will remain so, irrespective of whether thinking and measuring beings exist on the earth or not, and whether or not, assuming they do exist, they are able to measure the details of physical or chemical processes more accurately by one, two, or a hundred decimal places than we can. The limitations of the law, if any, must lie in the same province as its essential idea, in the observed Nature, and not in the Observer. That man's experience is called upon in the deduction of the law is of no consequence; for that is, in fact, our only way of arriving at a knowledge of natural law. But the law once discovered must receive recognition of its independence, at least in so far as Natural Law can be said to exist independent of Mind. Should anyone deny this, he would have to deny the possibility of natural science.

Translated by Alexander Ogg

*Treatise on Thermodynamics*

Part III, Chapter II (p. 106)

Longmans, Green & Co. London, England. 1926

## THERMOMETER

**Fahrenheit, Daniel Gabriel** 1686–1736

German physicist

It then came into my mind what that most careful observer of natural phenomena had written about the correction of the barometer; for he had observed that the height of the column of mercury in the barometer was a little (though sensibly enough) altered by the varying temperature of the mercury. From this I gathered that a thermometer might perhaps be constructed with mercury, which would not be so hard to construct, and by the use of which it might be possible to carry out the experiment which I so greatly desired to try.

Experimenta Circa Gradum Caloris Liqueorum Nonnullorum Ebullitionum Instituta

*Philosophical Transactions of the Royal Society of London*, Volume 33, Number 1, 1724

## THING

**Browning, Robert** 1812–89

English poet

We find that great things are made of little things ...

Canadian physician and professor of medicine

A great university has a dual function, to teach and to think.

*Aequanimitas: With Other Addresses to Medical Students, Nurses and Practitioners of Medicine*

Chapter VII (p. 126)

P. Blackiston's Sons & Co. Philadelphia, Pennsylvania, USA. 1905

## THINK TANK

**Chargaff, Erwin** 1905–2002

Austrian biochemist

When the so-called think tanks began to replace the thought processes of human beings, I called them the aseptic tanks.

*Heraclitean Fire: Sketches from a Life before Nature*

White Blood, Red Snow (p. 5)

Rockerfeller University Press. New York, New York, USA. 1978

## THINKING

**Asimov, Isaac** 1920–92

American author and biochemist

Many adults, whether consciously or unconsciously, find it beneath their adult dignity to do anything as childish as read a book, think a thought, or get an idea. Adults are rarely embarrassed at having forgotten what little algebra or geography they once learned.

*The Roving Mind*

His Own Particular Drummer

Prometheus Books. Buffalo, New York, New York, USA. 1983

**Burroughs, John** 1837–1921

American naturalist and essayist

Thinking is like catching pigeons with a net. You may pull your rope never so quick sometimes and catch nothing but a feather.

*The Heart of Burroughs's Journals*

May 15, 1857 (p. 9)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1928

**Crick, Francis Harry Compton** 1916–2004

English biochemist

Some scientists work so hard there is no time left for serious thinking.

*What Mad Pursuit: A Personal View of Scientific Discovery*

Basic Books, Inc. New York, New York, USA. 1988

**Cromer, Alan** 1935–

American physicist and educator

Scientific thinking, which is analytic and objective, goes against the grain of traditional human thinking, which is associative and subjective.

*Uncommon Sense: The Heretical Nature of Science*

Chapter 1 (pp. 1–2)

Oxford University Press, Inc. New York, New York, USA. 1993

**Dewey, John** 1859–1952

American philosopher and educator

The first distinguishing characteristic of thinking is facing the facts – inquiry, minute and extensive scrutinizing, observation.

*Reconstruction in Philosophy*

Chapter VI (p. 140)

Beacon Press. Boston, Massachusetts, USA. 1920

Intelligent thinking means an increment of freedom in action – an emancipation from chance and fatality. “Thought” represents the suggestion of a way of response that is different from that which would have been followed if intelligent observation had not effected an inference as to the future.

*Reconstruction in Philosophy*

Chapter VI (p. 144)

Beacon Press. Boston, Massachusetts, USA. 1920

**Edison, Thomas** 1847–1931

American inventor

I am going to have a sign put up all over my plant, reading “There is no expedient to which a man will not resort to avoid the real labor of thinking.”

In Dogbert D. Runes (ed.)

*The Diary and Sundry Observations of Thomas Alva Edison*

Chapter XXIX (p. 167)

Philosophical Library. New York, New York, USA. 1948

**Einstein, Albert** 1879–1955

German-born physicist

Thinking for its own sake, as in music! When I have no special problem to occupy my mind, I love to reconstruct

proofs of mathematical and physical theorems that have long been known to me. There is no goal in this, merely an opportunity to indulge in the pleasant occupation of thinking.

In Helen Dukas and Banesh Hoffman

*Albert Einstein: The Human Side: New Glimpses from His Archives*

Letter from Spring 1918 (p. 17)

Princeton University Press. Princeton, New Jersey, USA. 1979

American naturalist

We cannot see without thinking; we cannot think without seeing.

*Dance of the Continents*

Epilogue (p. 232)

J.P. Tarcher. Los Angeles, California, USA. 1983

### **Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

...one extreme is the idea of an objective world, pursuing its regular course in space and time, independently of any kind of observing subject; this has been the guiding image from modern science. At the other extreme is the idea of a subject, mystically experiencing the unity of the world and no longer confronted by an object or by any objective world; this has been the guiding image of Asian mysticism. Our thinking moves somewhere in the middle, between these two limiting conceptions; we should maintain the tension resulting from these opposites.

*Across the Frontiers*

Chapter XVI (p. 227)

Harper & Row, Publishers. New York, New York, USA. 1974

### **Keyser, Cassius Jackson** 1862–1947

American mathematician

...most of the thinking done in the world in a given day, whether done by men in the street or by farmers or factory-hands or administrators or historians or physicians or lawyers or jurists or statesmen or philosophers or men of letters or students of natural science or even mathematicians (when not strictly employed in their own subject), comes far short of the demands and standards of rigorous thinking.

Fourth Debates (p. 74)

Perseus Books. Reading, Massachusetts, USA. 1998

### **Sagan, Carl** 1934–96

American astronomer and science writer

The scientific way of thinking is at once imaginative and disciplined. This is central to its success. Science invites us to let the facts in, even when they don't conform to our preconceptions. It counsels us to carry alternative hypotheses in our heads and see which best fit the facts. It urges on us a delicate balance between no-holds-barred openness to new ideas, however heretical, and the most rigorous skeptical scrutiny of everything – new ideas and established wisdom. This kind of thinking is also an essential tool for a democracy in an age of change.

*The Demon-Haunted World: Science as a Candle in the Dark*

Chapter 2 (p. 27)

Random House, Inc. New York, New York, USA. 1995

The Decay of Lying (p. 5)

Brentano's. New York, New York, USA. 1905

## THOUGHT

### **Baldwin, J. Mark**

**American philosopher and psychologist** 1861–1934

We do not scatter our thoughts as widely as possible in order to increase the chances of getting a true one; on the contrary, we call the man who produces the most thought-variations a "scatter-brain," and expect nothing inventive from him... we succeed in thinking well by thinking hard; we get the valuable thought-variations by concentrating attention upon the body of related [data] which we already have; we discover new relations among the data of experience by running over and over the links and couplings of the appreciative systems with which our minds are already filled.

**Douglas, A. Vibert** 1894–1988

Canadian astronomer

Guided by some of the great thinkers of today, our thoughts have traversed aeons of time, contemplating some of the changes taking place with majestic deliberation throughout the vastness of space. "Time rolls his ceaseless course." A million million years suffice for the birth of a star and its early development; a few hundred thousand years will tell the tale of the life of mankind upon this planet; and as for man, an individual man, the years of his life are three score years and ten, and yet such is the power of a great mind that, despite the brevity of its allotted span, it can wrestle with the problems of nature and learn something at least of the immensities of space and time.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1925*

Time and Space (p. 155)

Government Printing Office. Washington, D.C. 1926

**Editor**

Thought must stand on scientific ground and follow a scientific line; if it is diverted it must be at angles which accord with the logic of nature.

Simon & Schuster. New York, New York, USA. 1936

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

Look sharply after your thoughts. They come unlooked for, like a new bird seen on your trees, and, if you turn to your usual task, disappear; and you shall never find that perception again; never, I say – but perhaps years, ages, and I know not what events and worlds may lie between you and its return!

*Journals of Ralph Waldo Emerson 1864–1876*

October, 1872 (p. 365)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

The crystal sphere of thought is as concentric as the geological structure of the globe. As our soils and rocks lie in strata, concentric strata, so do all men's thinkings run laterally, never vertically.

*Ralph Waldo Emerson: Essays and Lectures*

The Method of Nature (p. 117)

The Library of America. New York, New York, USA. 1983

In every work of genius we recognize our own rejected thoughts; they come back to us with a certain alienated majesty.

*Essays: First Series*

Essay II (p. 48)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1885

Thought dissolves the material universe by carrying the mind up into a sphere where all is plastic.

*The Conduct of Life*

Fate (p. 28)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1904

A man should learn to detect and watch that gleam of light which flashes across his mind from within, more than the lustre of the firmament of bards and sages. Yet he dismisses without notice his thought, because it is his. In every work of genius we recognise our own rejected thoughts: they come back to us with a certain alienated majesty.

*Essays, Lectures, and Orations*

Self-Reliance (p. 23)

William S. Orr & Co. London, England. 1848

**Everett, Charles Carroll** 1829–1900

American theologian

It is the nature of thought to manifest itself. It is not lifeless like the stone; it is germinant. It cannot be repressed or hidden. Not merely does it develop itself according to the laws of its own nature, that is, as thought; like the sprouting seed, it shows itself above the soil in which it springs. Words and acts are its inevitable expression. Thought runs through all the framework of our outward life, as the nerves run through the body, forming a separate system, yet giving life to all.

Miscellaneous (p. 170)

Henry Holt & Co. New York, New York, USA. 1873

**Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

...when new groups of phenomena compel changes in the pattern of thought...even the most eminent of physicists find immense difficulties. For the demand for change in the thought pattern may engender the feeling that the ground is to be pulled from under one's feet.... I believe that the difficulties at this point can hardly be overestimated. Once one has experienced the desperation with which clever and conciliatory men of science react to the demand for a change in the thought pattern, one can only be amazed that such revolutions in science have actually been possible at all.

In Robert M. Augros & George N. Stanciu

**Keyser, Cassius Jackson** 1862–1947  
American mathematician

Transcending the flux of the sensuous universe, there exists a stable world of pure thought, a divinely ordered world of ideas, accessible to man, free from the mad dance of time, infinite and eternal.

*The Human Worth of Rigorous Thinking: Essays and Addresses*  
The Human Significance of Mathematics (p. 58)  
Columbia University Press. New York, New York, USA. 1916

To think right – that is no characteristic striving of a class of men. It is a common aspiration. Only, the stuff of thought is mostly intractable, formless, like some milky way waiting to be analysed into distinct star-forms of definite ideas. All thought aspires towards the character and condition of mathematics.

*The Human Worth of Rigorous Thinking: Essays and Addresses*  
Chapter VI (p. 134)  
Columbia University Press. New York, New York, USA. 1916

...the stuff of thought is mostly intractable, formless, like some milky way waiting to be analysed into distinct star-forms of definite ideas.

*The Human Worth of Rigorous Thinking: Essays and Addresses*  
The Universe and Beyond (p. 134)  
Columbia University Press. New York, New York, USA. 1916

**Lewis, Alonzo Norton**  
No biographical data available

Thought begets thought A fact, on the other hand, has not the power of propagating itself. Thought is like grain, or seed, capable of reproducing its kind a hundred-fold. Facts are like flour – the intellectual grain has been ground down and bolted all ready for immediate consumption; and yet, by this very process, rendered incapable of propagating itself.

The Teacher's Work  
*Connecticut Common School Journal*, N.S. Volume IX, Number 11,  
November, 1862 (p. 331)

**Lowell, Abbott Lawrence** 1856–1943  
American educator

Man cannot set a limit to his thought... Man cannot conceive of a boundary to space, or a time that began

and will end because he cannot fetter the processes of his own mind... [H]e was made for infinite conceptions of which he is to partake.... Only at infinity can the vision be finished and the end complete.

*Fact and Visions*  
June 19, 1927 (p. 134, 135)  
Harvard University Press. Cambridge, Massachusetts, USA. 1944

**Ludmerer, Kenneth M.** 1947–  
American physician and professor of medicine and history

Critical thinking, in short, offers the way to keep science and technology in harness.

*Learning to Heal: The Development of American Medical Education*  
Chapter 14 (p. 280)  
Basic Books, Inc. New York, New York, USA. 1985

**Mach, Ernst** 1838–1916  
Austrian physicist and philosopher

...everyone who has felt the pangs of sleepless nights spent in thought, at first fruitless, but in the end successful. No thought in such struggles was thought in vain; each one, even the most insignificant, nay, even the erroneous thought, that which apparently was the least productive, served to prepare the way for those that afterwards bore fruit. And as in the thought of the individual naught is in vain, so, also, it is in that of humanity.

*Popular Scientific Lectures* (2nd edition)  
The Velocity of Light (p. 65)  
The Open Court Publishing Co. Chicago, Illinois, USA. 1897

**Martin, Charles-Noël** 1923–  
French physicist

It is always extremely difficult to express thoughts. Words and phrases are so many fretters by which our spirit is bound. Words are mere symbols of reality, and the written word is not more than a one-dimensional flow across the two-dimensional page of a three-dimensional book.

Translated by A.J. Pomerans  
*The Role of Perception in Science*  
Chapter 1 (p. 15)  
Hutchinson of London. London, England. 1963

**Maxwell, James Clerk** 1831–79  
Scottish physicist

...who will lead...into that still more hidden and dimmer region where Thought weds Fact, where the mental operation of the mathematician and the physical action of the molecules are seen in their true relation? Does not the way to it pass through the very den of the metaphysician, strewn with the remains of former explorers, and abhorred by every man of science?

*Report for the Fortieth Meeting of the British Association for the Advancement of Science*  
Mathematics and Physics (p. 2)  
John Murray. London, England. 1871

**McCormick, Leander Hamilton** 1859–1934  
American author, inventor and scientist

The manner in which thought flits from subject to subject is suggestive of the humming bird passing from flower to flower, ever active, ever moving, and ceaselessly busy.

*Characterology*

Chapter XXVI (p. 594)

Rand McNally & Co. Chicago, Illinois, USA. 1920

There is a thought which connects every human being with the infinite.

*Characterology*

Chapter XXVI (p. 597)

Rand McNally & Co. Chicago, Illinois, USA. 1920

**Medawar, Sir Peter Brian** 1915–87  
Brazilian-born English zoologist

Nowadays we all give too much thought to the material blessings or evils that science has brought with it, and too little to its power to liberate us from the confinements of ignorance and superstition.

*The Art of the Soluble* (p. 15)

Harper & Row Publishers. New York, New York, USA. 1967

**Merz, John Theodore** 1840–1922  
German-born British chemist, historian, and, industrialist

Thought, and thought alone, be it as a principle the only of action or as the medium of after-contemplation, is principle, capable of arranging and connecting, of combining what is isolated, of moving that which is stagnant, of propelling that which is stationary. Take away thought, and monotony becomes the order,

Whatever helps to lift man's thoughts above the little-nesses of life and time is a distinct gain to the human race, altogether irrespective of the uses to which, in course of time, it may be applied.

*William Herschel and His Work*

Chapter VIII (p. 128)

T.&T. Clark. Edinburgh, Scotland. 1900

**Tyndall, John** 1820–93

Irish-born English physicist

The profoundest minds know best that Nature's ways are not at all times their ways, and that the brightest flashes in the world of thought are incomplete until they have been proved to have their counterparts in the world of fact.

*Fragments of Science for Unscientific People*

Chapter VI (p. 111)

D. Appleton & Co. New York, New York, USA. 1871

**Valéry, Paul** 1871–1945

French poet and critic

Thought is bisexual; it both inseminates and conceives itself.

Translated by Stuart Gilbert

*The Collected Works of Paul Valéry* (Volume 14)

*Analects*

Literature (p. 95)

Princeton University Press. Princeton, New Jersey, USA. 1979

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

Much confusion in science, and in everything else, arises from this, that men who have no capacity for thought will presume to theorise, because they cannot see that mere stores of *knowledge*, however vast, in themselves give no capacity for *thinking*.

In John Stuart Blackie

*The Wisdom of Goethe*

Philosophy, Metaphysics, Logic, Truth and Science (p. 159)

William Blackwood & Sons. Edinburgh, Scotland. 1883

All truly wise thoughts have been thought already thousands of times; but to make them truly ours, we must think them over again honestly, till they take firm root in our personal experience.

In John Stuart Blackie

*The Wisdom of Goethe*

Philosophy, Metaphysics, Logic, Truth and Science (p. 171)

William Blackwood & Sons. Edinburgh, Scotland. 1883

**Weil, Simone** 1909–43

French philosopher and mystic

Our science is like a store filled with the most subtle intellectual devices for solving the most complex problems, and yet we are almost incapable of applying the elementary principles of rational thought.

In George Andrew Panichas (ed.)

*The Simone Weil Reader*

The Power of Words (p. 271)

**Whewell, William** 1794–1866

English philosopher and historian

At every step, [man] must try the value of the advances he has made in thought, by applying his thoughts to things. The Explication of Conceptions must be carried on with a perpetual reference to the Colligation of Facts.

*The Philosophy of the Inductive Sciences, Founded Upon Their History*

(Volume 2)

Book XIII, Chapter IV (p. 379)

John W. Parker. London, England. 1847

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

...the first man who noticed the analogy between a group of seven fishes and a group of seven days made a notable advance in the history of thought.

*Science and the Modern World*

Chapter II (p. 30)

The Macmillan Company. New York, New York, USA. 1929

The history of thought is largely concerned with the records of clear-headed men insisting that they at least have discovered some clear, adequately expressed, indubitable truths. If clear-headed men throughout the ages would only agree with each other, we might cease to be puzzled. Alas, that is a comfort that is denied to us.

*Essays in Science and Philosophy*

Harvard: The Future (p. 211)

Philosophical Library. New York, New York, USA. 1947

**Wittgenstein, Ludwig Josef Johann** 1889–1951

Austrian-born English philosopher

Thoughts rise to the surface slowly, like bubbles. (Sometimes it's as though you could see a thought, an idea, as an indistinct point far away on the horizon; and then it often approaches with astonishing swiftness.)

Translated by Peter Winch

*Culture and Value* (p. 63e)

The University of Chicago Press. Chicago, Illinois, USA. 1980

## THOUGHT, DEVELOPMENT OF

**Rodwell, George Farrer** 1843–1905

No biographical data available

Step by step we cross great eras in the development of thought; there is no sudden gigantic stride; a theory proceeds by slow evolution until it dominates or is destroyed.

Theory of Phlogiston

*Philosophical Magazine*, Volume XXXV, January, 1868 (pp. 28–29)

## THOUGHT-ELEMENT

**Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

There should be no need to emphasize, in this century of radio sets and electronic devices, that many dreams may be assemblages of thought-elements that convey no information whatsoever: that they may be just noise.

*The Art of the Soluble* (pp. 87–88)

Harper & Row Publishers. New York, New York, USA. 1967

## THOUGHTS

### Editor

If we wish to know the history of our own thoughts we trace them back in our minds, and if we wish to know how the world learned to think we must look to the ages which preceded the building of our ideas.... There is a richness in these early thoughts because they have a tint of the eastern sun which never fades, and we shall admire their brightness whilst time lasts, or until that day when the poet comes who shall exhaust in his writings the delight which children have in the fields and the sunshine.

Accuracy

*Chemical News and Journal of Industrial Science*, Volume XIX, Number 574, January 1, 1869 (p. 1)

## THOUGHTS, LIMITS OF

**Langer, Susanne Katherina Knauth** 1895–1985

American philosopher

The limits of thought are not so much set from outside, by the fullness or poverty of experiences that meet the mind, as from within, by the power of conception, the wealth of formulative notions with which the mind meets experiences.

*Philosophy in a New Key: A Study in the Symbolism of Reason, Rite, and Art*

Chapter 1 (p. 8)

Harvard University Press. Cambridge, Massachusetts, USA. 1942

## THRILL

**Margenau, Henry** 1901–97

American physicist

...the greatest thrill for a scientist comes not when he has demonstrated a conjecture to be valid but when a departure from expectations convinces him that an accepted theory is wrong.

*The Nature of Physical Reality: A Philosophy of Modern Physics*

Chapter 2 (p. 19)

McGraw-Hill Book Co., Inc. New York, New York, USA. 1950

## THUNDERBOLT

**Lewis, Edwin Herbert** 1866–1938

American rhetorician, novelist, and poet

The thunderbolts were imprisoned in crucible crystal-line ore,

And locked in the laughing ocean, and shut in the shining shore,

And lulled in the light of evening, and hushed in gentle grain

And unimpered lilies imperiled with quiet rain.

*White Lightning*

Cover page

Covici-McGee. Chicago, Illinois, USA. 1923

## TIDAL BORE

**Adam, John A.**

No biographical data

What is a bore? The answer will vary depending on whether one is at a cocktail party...or the Bay of Fundy in Nova Scotia.

*Mathematics in Nature: Modeling Patterns in the Natural World*

Chapter Nine (p. 194)

## TIDE

**Bolland, Richard**

No biographical data available

The great Master of Philosophy drowned himself because he could not apprehend the Cause of Tydes; but his Example cannot be so prevalent with all, as to put a Period to other Mens Inquiries into the Subject.

*A Draught of the Streights of Gibraltar*

Publisher undetermined. 1732

**Coman, Dale Rex** 1906–

American research physician and wildlife writer

It does not take long to realize that, instead of clocks, the tides beat out the measure of the marsh and shore, and that all you see, plant and animal, must adapt to the periodic changes of water level.

*The Endless Adventure*

The Sand Dunes and Salt Marshes in November (p. 62)

Henry Regnery Company. Chicago, Illinois, USA. 1972

**Defant, Albert** 1884–1974

Austrian meteorologist and oceanographer

The tides are the heartbeat of the ocean, a pulse that can be felt all over the world.

*Ebb and Flow: The Tides of Earth, Air, and Water*

Chapter 1 (p. 9)

The University of Michigan Press. Ann Arbor, Michigan, USA. 1958

**Dickens, Charles** 1812–70

English novelist

Time and tide will wait for no man saith the adage. But all men have to wait for time and tide.

*The Life and Adventures of Martin Chuzzlewit* (Volume 1)  
Chapter X (p. 169)  
Bernhard Tauchnitz. Leipzig, Germany. 1844

### Harrington, Thomas

No biographical data available

The benefit which God designed for man by the Tides in giving a perpetual motion to the Waters was to prevent their corrupting, and thereby breeding any infection that might arise from too long a stagnation of them.

*Science Improved; or the Theory of the Universe*  
Section III (p. 18)  
Printed for the Author. London, England. 1774

### Kelvin, Lord William Thomson 1824–1907

Scottish engineer, mathematician, and physicist

The subject on which I have to speak this evening is the tides, and at the outset I feel in a curiously difficult position. If I were asked to tell what I mean by the Tides I should feel it exceedingly difficult to answer the question. The tides have something to do with motion of the sea. Rise and fall of the sea is sometimes called a tide; but I see, in the Admiralty Chart of the Firth of Clyde, the whole space between Ailsa Craig and the Ayrshire coast marked “very little tide here.” Now, we find there a good ten feet rise and fall, and yet we are authoritatively told there is very little tide. The truth is, the word “tide” as used by sailors at sea means horizontal motion of the water; but when used by landmen or sailors in port, it means vertical motion of the water.

Lecture

The British Association at the Southampton Meeting, Friday, August 25, 1882

### Tennyson, Alfred (Lord) 1809–92

English poet

A still salt pool, locked in with bars of sand,  
Left on the shore; that hears all night  
The plunging seas draw backward from the land  
Their moon-led waters white.

*The Works of Tennyson*

The Palace of Art

The Macmillan Co. New York, New York, USA. 1913

### Wallis, John

No biographical data available

The sea’s ebbing and flowing has so great a connexion with the moon’s motion, that all philosophers have attributed much of its cause to the moon, which either by some occult quality, or particular influence which it has on moist bodies, or by some magnetic virtue, drawing the water towards it, which should therefore make the water highest where the moon is vertical, or by its gravity and pressure downwards upon the terraqueous globe, which should make it lowest, where the moon is vertical, or by whatever other means, has so great an influence on, or

at least connexion with, the sea’s flux and reflux, that it would seem very unreasonable to separate the consideration of the moon’s motion from that of the sea ...

In Richard Phillips

*Readings in Natural Philosophy; Or, A Popular Display of the Wonders of Nature*

Flux and Reflux of the Sea (p. 8)

Printed for Horatio Phillips. London, England. 1828

### Young, Charles Augustus 1834–1908

American astronomer

...the statical theory [of tides] becomes utterly unsatisfactory in regard to what actually takes place, and it is necessary to depend almost entirely upon the results of observation, using the theory merely as a guide in the discussion of the observations.

*A Text-book of General Astronomy for Colleges and Scientific Schools*

Chapter XXII (p. 307)

Ginn & Co. Boston, Massachusetts, USA. 1898

## TIME

### Adams, George 1750–95

English instrument maker

Nothing can be more shocking to reason than eternal time; infinite divisibility is not less absurd.

*Lectures on Natural and Experimental Philosophy* (Volume 3)

Chapter XXIV (p. 12)

Printed by R. Hindmarsh. London, England. 1794

### Alexander, Samuel 1859–1938

Australian-born British philosopher

Time is the mind of Space, and Space the body of Time.

*Space, Time, and Deity: The Gifford Lectures at Glasgow, 1916–1918*

Volume 2

Chapter II (p. 38)

Macmillan & Co. Ltd. London, England. 1920

### Aristotle 384 BCE–322 BCE

Greek philosopher

...time is “number of movement in respect to the before and after”, and is continuous since it is an attribute of what is continuous.

In *Great Books of the Western World* (Volume 8)

*Physics*

Book IV, Chapter 11 (p. 300)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### Aurelius Antoninus, Marcus 121–180

Roman emperor

Time is like a river made up of the events which happen, and a violent stream; for as soon as a thing has been seen, it is carried away, and another comes in its place, and this will be carried away too.

In *Great Books of the Western World* (Volume 12)

*The Meditations of Marcus Aurelius*

Book IV, #43 (p. 267)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Babbage, Charles** 1792–1871  
English mathematician

Time and change are great, only with reference to the faculties of the beings which note them. The insect of an hour, fluttering, during its transient existence, in an atmosphere of perfume, would attribute unchanging duration to the beautiful flowers of the cistus, whose petals cover the dewy grass but a few hours after it has received the lifeless body of the gnat.

*The Ninth Bridgewater Treatise* (2nd edition)  
Chapter VII (pp. 87–88)  
London, England. 1838

**Bacon, Sir Francis** 1561–1626  
English lawyer, statesman, and essayist

...time is the greatest innovator...

In Fred Allison Howe (ed.)  
*The Essays or Counsels*  
Civil and Moral, XXIV, Of Innovations (p. 75)

...time, which is the author of authors, be not deprived of his due, which is, further and further to discover truth.

In *Great Books of the Western World* (Volume 30)  
*Advancement of Learning*  
First Book, Chapter IV, Section 12  
Section IV, 12 (p. 15)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Barnett, Lincoln Kinnear** 1909–79  
American science writer

Time itself will come to an end. For entropy points the direction of time. Entropy is the measure of randomness. When all system and order in the universe have vanished, when randomness is at its maximum, and entropy cannot be increased, when there is no longer any sequence of cause and effect, in short when the universe has run down, there will be no direction to time – there will be no time.

*The Universe and Dr. Einstein*  
Chapter 14 (p. 100)  
William Sloane Associates. New York, New York, USA. 1948

**Barrow, Isaac** 1630–77  
English clergyman and mathematician

Because Mathematicians frequently make use of Time, they ought to have a distinct idea of the meaning of that Word, otherwise they are Quacks...

In Paul Davies  
*About Time: Einstein's Unfinished Revolution*  
Header (p. 183)  
Simon & Schuster. New York, New York, USA. 1995

**Bergson, Henri** 1859–1941  
French philosopher

Wherever anything lives, there is, open somewhere, a register in which time is being inscribed.

Translated by Arthur Mitchell

*Creative Evolution*  
Chapter I (p. 17)  
The Modern Library. New York, New York, USA. 1944

Time is an invention or it is nothing at all. But of time-invention physics can take no account.... Modern physics...rests altogether on a substitution of time-length for time-invention.

Translated by Arthur Mitchell  
*Creative Evolution*  
Chapter IV (p. 361)  
The Modern Library. New York, New York, USA. 1944

**Blake, William** 1757–1827  
English poet, painter, and engraver

I see the Past, Present, and Future existing all at once before me.

*The Complete Poetry and Prose of William Blake*  
Jerusalem, l. 15  
University of California Press. Berkeley, California, USA. 1982

**Bohm, David** 1917–92  
American physicist

Eternity can be affected by what happens in time.

Quoted by Renée Weber  
*Dialogues with Scientists and Sages: The Search for Unity* (p. 91)  
Routledge & Kegan Paul. London, England. 1986

But the puzzle is, what happened before time began?

Quoted by Renée Weber  
*Dialogues with Scientists and Sages: The Search for Unity* (p. 199)  
Routledge & Kegan Paul. London, England. 1986

**Bondi, Sir Hermann** 1919–2005  
English mathematician and cosmologist

Time must never be thought of as pre-existing in any sense; it is a manufactured quantity.

In Paul Davies  
*About Time: Einstein's Unfinished Revolution*  
Header (p. 21)  
Simon & Schuster. New York, New York, USA. 1995

**Borges, Jorge Luis** 1899–1986  
Argentine writer

Our destiny...is not frightful because it is unreal; it is frightful because it is irreversible and ironbound. Time is the substance of which I am made. Time is a river which sweeps me along, but I am the river; it is a tiger which mangles me, but I am the tiger; it is a fire which consumes me, but I am the fire. The world, unfortunately, is real; I unfortunately, am Borges.

Translated by Anthony Kerrigan, Alastair Reid and others  
*A Personal Anthology*  
A New Refutation of Time (p. 64)  
Grove Press. New York, New York, USA. 1967

...he believed in an infinite series of times, a growing, dizzying web of divergent, convergent, and parallel times. That fabric of times that approach one another,

fork, are snipped off, or are simply unknown for centuries, contains all possibilities. In most of those times, we do not exist; in some, you exist but I do not; in others, I do and you do not; in others still, we both do. In this one, which the favouring hand of chance has dealt me, you have come to my home; in another, when you come through my garden you find me dead; in another, I say these same words, but I am an error, a ghost.

In Donald A. Yates & James E. Irby (eds.)

*Labyrinths: Short Stories & Other Writings*

The Garden of Forking Paths (p. 28)

A New Direction Book. New York, New York, USA. 1964

### **Borland, Hal** 1900–78

American writer

Forget that second-ticking clock.

Time is the seed

Waiting to fly from the milkweed pod.

Time is the speed

Of a dragonfly.

Time is the rabbit's desperate scut.

Time's dimensions are hidden in rocks,

In wind and rain, but never in clocks.

*Borland Country*

Foreword (p. 5)

J.B. Lippincott Company. Philadelphia, Pennsylvania, USA. 1971

### **Bradbury, Ray** 1920–

American writer

There was a smell of Time in the air tonight. He smiled and turned the fancy in his mind. There was a thought. What did Time smell like? Like dust and clocks and people. And if you wondered what Time sounded like it sounded like water running in a dark cave and voices crying and dirt dropping down upon hollow box lids, and rain. And, going further, what it looked like a silent film in an ancient theater, one hundred billion faces falling like those New Year balloons, down and down into nothing. That was how Time smelled and looked and sounded. And tonight...tonight you could almost touch Time.

*The Martian Chronicles*

### **Bridgman, Percy Williams** 1882–1961

American physicist

But in no case is there any question of time flowing backward, and in fact the concept of backward flow of time seems absolutely meaningless.... If it were found that the entropy of the universe were decreasing, would one say that time was flowing backward, or would one say that it was a law of nature that entropy decreases with time?

*Reflections of a Physicist*

Chapter 8 (p. 165)

Philosophical Library. New York, New York, USA. 1950

It seems to me that in any operational view of the meaning of natural concepts the notion of time must be used as

a primitive concept, which cannot be analysed but must be accepted, so that it is meaningless to speak of a reversal of the direction of time.

*Reflections of a Physicist*

Chapter 8 (p. 165)

Philosophical Library. New York, New York, USA. 1950

### **Brillouin, Léon** 1889–1969

French physicist

...one of the most important features about time is its irreversibility. Time flows on and never comes back. When the physicist is confronted with this fact he is greatly disturbed. All the laws of physics in their elementary forms are reversible.

In Walter Buckley and Anatol Rapaport (eds.)

### **Carlyle, Thomas** 1795–1881

English historian and essayist

That great mystery of Time, were there no other; the illimitable, silent, never-resting thing called Time, rolling, rushing on, swift, silent, like an all-embracing ocean-tide, on which we and all the Universe swim like exhalations, like apparitions which are, and then are not....

*On Heroes and Hero Worship*

Lecture I (p. 12)

John B. Alden, Publisher. New York, New York, USA. 1887

...no hammer in the Horologe of Time peals through the universe when there is a change from Era to Era. Men understand not what is among their hands...

*Critical and Miscellaneous*

Death and Goethe (p. 343)

Phillips, Samson & Co. Boston, Massachusetts, USA. 1855

### **Carroll, Lewis (Charles Dodgson)** 1832–98

English writer and mathematician

Alice sighed wearily. "I think you might do something better with the time," she said, "than wasting it in asking riddles with no answers."

"If you knew Time as well as I do," said the Hatter, "you wouldn't talk about wasting *it*. It's *him*." "I don't know what you mean," said Alice.

"Of course you don't!" the Hatter said, tossing his head contemptuously. "I dare say you never even spoke to Time!"

"Perhaps not," Alice cautiously replied: "but I know I have

to beat time when I learn music.”

“Ah! That accounts for it,” said the Hatter. “He won’t stand beating. Now, if you only kept on good terms with him, he’d do almost anything you liked with the clock. For instance, suppose it were nine o’clock in the morning, just time to begin lessons: you’d only have to whisper a hint to Time, and round goes the clock in a twinkling! Half-past one, time for dinner!”

“I only wish it was,” the March Hare said to itself in a whisper.)

“That would be grand, certainly,” said Alice thoughtfully: “but then – I shouldn’t be hungry for it, you know.”

“Not at first, perhaps,” said the Hatter: “but you could keep it to half-past one as long as you liked.”

*Alice’s adventures in Wonderland*

A Mad Tea-party (p. 101)

Macmillan & Co Ltd. London, England. 1869

### Charlie Chan (Fictional character)

Time and analysis will tell.

*Charlie Chan in Reno*

Film (1939)

### Chaucer, Geoffrey 1343–1400

English poet

The tyme, that may not sojourne  
But goth, and never may retourne,  
As water that down runneth ay,  
But never drope retourne may;  
Ther may no-thing as tyme endure,  
Metal, nor erthely creature;  
For alle thing it fret, and shal:  
The tyme eek, that chaungeth al,  
And all doth waxe and fostred be,  
And alle thing destroyeth he.

*The Poetical Works of Geoffrey Chaucer* (Volume 4)

The Romaunt of the Rose

William Pickering. London, England. 1843

### Christianson, Gale E.

No biographical data available

Historical time is a tricky thing; it flows at an ever accelerating speed, like a river approaching a great waterfall. We must soon learn to cope with the awesome power given to us by the heirs of Copernicus or our species, and all others on the planet, are doomed to a painful and purposeless extinction. Were this to happen, only the stars would remain; and what are the stars, after all, without the eyes of man to gaze upon them or the human mind to contemplate the vastness of their wonders?

*This Wild Abyss: The Story of the Men Who Made Modern Astronomy*

Chapter 9 (p. 434)

The Free Press. New York, New York, USA. 1978

### Clemence, G. M.

No biographical data available

The measurement of time is essentially a process of counting.

Time and Its Measurement

*American Scientist*, Volume 40, Number 2, April, 1952 (p. 261)

### Cleugh, Mary F.

Psychologist

It cannot be too often emphasized that physics is concerned with the measurement of time, rather than with the essentially metaphysical question as to its nature.... We must not believe that physical theories can ultimately solve the metaphysical problems that time raises.

*Time and Its Importance in Modern Thought*

Chapter II (p. 51)

Methuen & Company Ltd. London, England. 1937

### Corben, Herbert Charles 1914–

Physicist

Time! It has been measured and mismeasured, used wisely and wasted; it has enslaved some and enriched others, and, except for those effects that are described by the theory of relativity, it has resisted all attempts to advance or delay it.

*The Struggle to Understand*

Chapter I (p. 17)

Prometheus Books. Buffalo, New York, USA. 1991

### Cummings, Ray 1887–1957

American science fiction writer

This same Space; the spread of this lawn...what would it be in another hundred years? Or a thousand? This little Space, from the Beginning to the End so crowded with events and only Time to hold them apart.

*The Shadow Girl*

Gerald G. Swan. London, England. 1946

“Time,” said George, “why I can give you a definition of time. It’s what keeps everything from happening at once.”

*The Man Who Mastered Time*

Chapter I (p. 1)

A.L. Burt Company. New York, New York, USA. 1929

### da Vinci, Leonardo 1452–1519

Italian High Renaissance painter and inventor

In rivers, the water that you touch is the last of what has passed and the first of that which comes: so with time present.

In Edward McCurdy

*Leonardo da Vinci’s Note-books*

Book I: Life (p. 51)

Duckworth & Co. London, England. 1906

O Time, thou that consumest all things! O envious age, thou destroyest all things and devourest all things with the hard teeth of the years, little by little, in slow death!

In Edward McCurdy

*Leonardo da Vinci's Note-books*

Book I: Life (p. 52)

Duckworth & Co. London, England. 1906

**Davies, Paul Charles William** 1946–

British-born physicist, writer, and broadcaster

Relativity physics has shifted the moving present out from the superstructure of the universe, into the minds of human beings, where it belongs.

*The Physics of Time Asymmetry* (p. 2)

University of California Press. Berkeley, California, USA. 1976

Until we have a firm understanding of the flow of time, or incontrovertible evidence that it is indeed an illusion, then we will not know who we are, or what part we are playing in the great cosmic drama.

*About Time: Einstein's Unfinished Revolution*

Chapter 13 (p. 278)

Simon & Schuster. 1996

**Davis, Philip J.** 1923–

American mathematician

**Hersh, Reuben** 1927–

American mathematician

Time, that mysterious something, that flow, that relation, that mediator, that arena for event, envelops us and confounds us all.

*Descartes' Dream: The World According to Mathematics*

Chapter IV

Of Time and Mathematics (p. 189)

Harcourt Brace Jovanovich. San Diego, California, USA. 1986

...we still cannot say what time is; we cannot agree whether there is one time or many times, cannot even agree whether time is an essential ingredient of the universe or whether it is the grand illusion of the human intellect.

*Descartes' Dream: The World According to Mathematics*

Chapter IV

Of Time and Mathematics (p. 189)

Harcourt Brace Jovanovich. San Diego, California, USA. 1986

**Dewey, John** 1859–1952

American philosopher and educator

Time and memory are true artists; they remold reality nearer to the heart's desire.

*Reconstruction in Philosophy*

Chapter V (p. 104)

Beacon Press. Boston, Massachusetts, USA. 1920

**Davy, Sir Humphry** 1778–1829

English chemist

Time...which purifies, and as it were sanctifies the mind, destroys and brings into utter decay the body; and, even in nature, its influence seems always degrading. She is represented by the poets as eternal in her youth, but amongst these ruins she appears to me eternal in her age,

and here no traces of renovation appear in the ancient of days.

*Consolations in Travel: Or, The Last Days of a Philosopher*

Dialogue the First (p. 25)

Cassell & Co., Ltd. London, England. 1889

**Dickens, Charles** 1812–70

English novelist

To speak of Time – the venerable figure not incommoded with drapery, with forelock, scythe, and hour glass (the sands forever running), with wings, and foot forever poised upon the march. *Tempus fugit*. I will be bold at once and dissent from the wise old saw. Time does not fly. He has no wings, no poised foot, no power of locomotion. Time is, and was, and will be, the same – unchanged, unchangeable, immutable.

Time and the Hour

*Household Words*, Volume 5, Number 144, December 25, 1852 (p. 357)

Don't make of time an ogre, pitilessly devouring his children as the Virgil and Homer men would make you believe he does. Take him as he is; calm, tranquil, unmoved by the course of centuries, and ages, and years. Take him as a decent, sober citizen, sleeping calmly in his well-worn nightcap, while the sun (the real mover, the real essence of mobility) is forever getting up with many a yawn and shrug before he rises, or going to bed with many a sigh of lassitude and weariness.

Time and the Hour

*Household Words*, Volume 5, Number 144, December 25, 1852 (p. 357)

Take Time as a midge slung high and dry, and steady as a rock over a boiling, bubbling, crashing, Niagara of a waterfall beneath. Perfectly inert and stationary is this old myth. He does not measure us. He wants us not. He never interferes with us. We want him; we measure him; we interfere with him.

Time and the Hour

*Household Words*, Volume 5, Number 144, December 25, 1852 (p. 357)

**Dillard, Annie** 1945–

American poet, essayist, novelist, and writing teacher

Time is the continuous loop, the snakeskin with scales endlessly overlapping without beginning or end, or time is an ascending spiral if you will, like a child's toy Slinky.

*Pilgrim at Tinker Creek*

Chapter 5 (p. 76)

Harper's Magazine Press. New York, New York, USA. 1974

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

Whatever may be time *de jure*, the Astronomer Royal's time is time *de facto*. His time permeates every corner of physics.

*The Nature of the Physical World*

Chapter III (p. 36)

The Macmillan Company. New York, New York, USA. 1930

It is inconceivable that we are the heirs of an infinite time of preparation; it is not less inconceivable that there was once a moment with no moment preceding it.

*The Nature of the Physical World*

Chapter IV (p. 83)

Ann Arbor Paperbacks. Ann Arbor, Michigan, USA. 1958

In any attempt to bridge the domains of experience belonging to the spiritual and physical sides of our nature, time occupies the key position.

*The Nature of the Physical World*

Chapter V (p. 91)

The Macmillan Company. New York, New York, USA. 1930

The great thing about time is that it goes on.

In Paul Davies

*About Time: Einstein's Unfinished Revolution*

Header (p. 25)

Simon & Schuster. New York, New York, USA. 1995

The philosopher discusses the significance of time; the astronomer measures time. The astronomer goes confidently about his business and does not think of asking the philosopher what exactly is this thing he is supposed to be measuring; nor does the philosopher always stop to consider whether time in his speculations is identical with the time which the world humbly accepts from the astronomer. In these circumstances it is not surprising that some confusion should have arisen.

The Relativity of Time

*Nature*, Volume CVI, Number 2677, February 17, 1921 (p. 802)

Our minds are immediately aware of a "flight of time" without the intervention of external senses.

*The Mathematical Theory of Relativity*

Chapter I (p. 24)

At the University Press. Cambridge, England. 1923

**Einstein, Albert** 1879–1955

German-born physicist

Till now it was believed that time and space existed by themselves, even if there was nothing – no Sun, no Earth, no stars – while now we know that time and space are not the vessel for the Universe, but could not exist at all if there were no contents, namely, no Sun, no Earth, and other celestial bodies.

*New York Times*, April 4, 1921

The distinction between past, present and future is only an illusion, even if a stubborn one.

In Paul Davies

*About Time: Einstein's Unfinished Revolution*

Header (p. 70)

Simon & Schuster. New York, New York, USA. 1995

Michele [Besso] has left this strange world just before me. This is of no importance. For us convinced physicists the distinction between past, present and future is an illusion, although a persistent one.

In Eric J. Lerner

*The Big Bang Never Happened*

Chapter 7 (p. 283)

Random House, Inc. New York, New York, USA. 1991

**Eliot, George (Mary Ann Evans Cross)** 1819–80  
English novelist

Men can do nothing without the make-believe of a beginning. Even Science, the strict measurer, is obliged to start with a make-believe unit, and must fix on a point in the stars' unceasing journey when his sidereal clock shall pretend that time is Nought. His less accurate grandmother Poetry has always been understood to start in the middle; but on reflection it appears that her proceeding is not very different from his; since Science, too, reckons backward as well as forward, divides his unit into billions, and with his clock-finger at Nought really sets off in medias res. No retrospect will take us to the true beginning; and whether our prologue be in heaven or on earth, it is but a fraction of that all-presupposing fact with which our story sets out.

*Daniel Deronda*

Book I, Chapter I (p. 5)

A.L. Burt Company. New York, New York, USA. 18??

**Eliot, T. S. (Thomas Stearns)** 1888–1965  
American expatriate poet and playwright

Time present and time past

Are both perhaps present in time future,

And time future contained in time past.

*The Collected Poems and Plays 1909–1950*

Burnt Norton (p. 117)

Harcourt, Brace & World, Inc. New York, New York, USA. 1952

**Ford, John** 1586–1640  
English poet and dramatist

He hath shook hands with time...

*The Dramatic Works of John Ford* (Volume 1)

*The Broken Heart*

John Murray. London, England. 1831

**Fraser, Julius Thomas**  
No biographical data available

The resulting dichotomy between time felt and time understood is a hallmark of scientific-industrial civilization, a sort of collective schizophrenia.

In Eric J. Lerner

*The Big Bang Never Happened*

Chapter 7 (p. 283)

Random House, Inc. New York, New York, USA. 1991

**Froude, James Anthony** 1818–94  
English historian and biographer

Time has no relation to Being, conceived mathematically; it would be absurd to speak of circles or triangles as any older today than they were at the beginning of the world.

*Short Studies on Great Subjects* (Volume 1)  
Spinoza (p. 359)  
Longmans, Green & Company. London, England. 1879

### **Gale, Richard M.**

No biographical data available

...“time” is indefinable...due to the fact that temporal notions are implicitly involved in all of the basic concepts by means of which we think and talk about the world.

*The Language of Time*  
Part One, Chapter I (p. 5)  
Humanities Press. New York, New York, USA. 1968

### **Galton, Sir Francis** 1822–1911

English anthropologist, explorer, and statistician

It is difficult to withstand a suspicion that the three dimensions of space and the fourth dimension of time may be four independent variables of a system that is neither space nor time, but something else wholly unconceived by us. Our present enigma as to how a First Cause could itself have been brought into existence – how the tortoise of the fable, that bears the elephant that bears the world, is itself supported, – may be wholly due to our necessary mistranslation of the four or more variables of the universe, limited by inherent conditions, into the three unlimited variables of Space and the one of Time.

*Inquiries into Human Faculty and Its Development*  
The Observed Order of Events (p. 196)  
AMS Press. New York, New York, USA. 1973

### **Gardner, Earl Stanley** 1889–1970

American author

Time is really nothing but a huge circle. You divide a circle of three hundred and sixty degrees into twenty-four hours, and you get fifteen degrees of arc that is the equivalent of each hour.

*The Case of the Buried Clock* (p. 82)  
Grosset & Dunlap. New York, New York, USA. 1943

### **Haughton, Samuel** 1821–97

Irish scientific writer

The infinite time of the geologists is in the past; and most of their speculations regarding this subject seem to imply the absolute infinity of time, as if the human imagination was unable to grasp the period of time requisite for the formation of a few inches of sand or feet of mud, and its subsequent consolidation into rock.

*Manual of Geology*  
Lecture IV (p. 80)  
Longmans, Green, Reader, and Dyer. London, England. 1866

### **Hawking, Stephen William** 1942–

English theoretical physicist

Imaginary time is another direction of time, one that is at right angles to ordinary, real time. We could get away from this one-dimensional, linelike behavior of time....

Ordinary time would be a derived concept we invent for psychological reasons. We invent ordinary time so that we can describe the universe as a succession of events in time, rather than as a static picture, like a surface map of the earth.... Time is just like another direction in space.  
*Playboy*, Interview, April, 1990

### **Heraclitus** ca. 540 BCE–ca. 475 BCE

Greek philosopher

Time is like a river flowing endlessly through the universe.

In Franzo H. Crawford  
*Introduction to the Science of Physics*  
Chapter 10 (p. 160)  
Harcourt, Brace & World, Inc. New York, New York, USA. 1968

### **Høeg, Peter** 1957–

Danish author

Time refuses to be simplified or reduced. You cannot say that it is only found in the mind or only in the universe, that it runs only in one direction, or in everyone imaginable. That it exists only in biological substructure, or is only a social convention. It is all of these things.

*Borderliners*  
Chapter Seven (p. 259)  
Farrar, Straus & Giroux. New York, New York, USA. 1994

### **Housman, A. E. (Alfred Edward)** 1859–1936

English poet, scholar, and satirist

Three minutes' thought would suffice to find this out; but thought is irksome and three minutes is a long time.

*Selected Prose*  
Chapter II, Section 3 (p. 56)  
At The University Press. Cambridge, England. 1961

### **Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

If there is one thing we can be sure enough of in physics it is that all time exists with equal reality.

*October the First Is Too Late*  
Chapter Six (p. 75)  
Harper & Row, Publishers. New York, New York, USA. 1966

### **Hubble, Edwin Powell** 1889–1953

American astronomer

Past time is finite, future time is infinite.

*The Observational Approach to Cosmology* (p. 62)  
The Clarendon Press. Oxford, England. 1937

### **Hurley, Patrick M.** 1912–2000

British geophysicist

How majestic are those broad reaches of time! Looking into an abyss, one senses the gigantic form of the void only in comparison to one's own minute stature. It is almost incomprehensible that only a few billion years ago our galaxy was born in a gigantic bomb-flash of

nuclear energy. What an inspiring picture of the process of creation! But awesome and inspiring as it is to contemplate this mighty spectacle, the true reward is not to be found in whether our calculations are correct, give or take a few million years; it lies in the discoveries, in the advancement of human knowledge and philosophy that are the inevitable products of scientific search for law in nature.

*How Old Is the Earth?*

Chapter VI (p. 152)

Greenwood Press, Publishers. Westport, Connecticut, USA. 1959

**Hutton, James** 1726–97

Scottish geologist, chemist, and naturalist

Time, which measures everything in our idea, and is often deficient to our schemes, is to nature endless and as nothing; it cannot limit that by which alone it had existence; and, as the natural course of time, which to us seems infinite, cannot be bounded by any operation that may have an end, the progress of things upon this globe, that is, the course of nature, cannot be limited by time, which must proceed in a continual succession.

*Theory of the Earth: With Proofs and Illustrations*

Chapter I, Section I (p. 15)

*Transactions of the Royal Society of Edinburgh*

The Theory of the Earth

Volume 1 1788

Though the continuance of time may do much in those operations which are extremely slow, where no change, to our observation, had appeared to take place, yet, where it is not in the nature of things to produce the change in question, the unlimited course of time would be no more effectual, than the moment by which we measure events in our observations.

*Theory of the Earth: With Proofs and Illustrations* (Volume 1)

Chapter I, Section II (p. 43)

H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

**Huxley, Thomas Henry** 1825–95

English biologist

Biology takes her time from geology. The only reason we have for believing in the slow rate of the change in living forms is the fact that they persist through a series of deposits which, geology informs us, have taken a long while to make. If the geological clock is wrong, all the naturalist will have to do is to modify his notions of the rapidity of change accordingly.

*Quarterly Journal of the Geological Society London*, Volume 25 (p. xxxviii)

**Jammer, Max** 1915–

Israeli physicist and philosopher

Time in general is to duration as place is to expansion.

*An Essay Concerning Human Understanding* (Volume 1)

Chapter XIV (p. 261)

At The Clarendon Press. Oxford, England. 1894

**Jeans, Sir James Hopwood** 1877–1946

English physicist and mathematician

...time figures as the mortar which binds the bricks of matter together...

*The Mysterious Universe*

Chapter V (p. 144)

The Macmillan Company. New York, New York, USA. 1932

...time leaves its mark, its wrinkles and its grey hairs, on the stars, so that we can guess their ages tolerable well, and the evidence is all in favor of stellar lives, not of thousands of millions, but of millions of millions, of years.

*The Universe Around Us*

Chapter I (p. 78)

The Macmillan Company. New York, New York, USA. 1929

**Kant, Immanuel** 1724–1804

German philosopher

Time is not an empirical conception. For neither coexistence nor succession would be perceived by us, if the representation of time did not exist as a foundation a priori. Without this presupposition we could not represent to ourselves that things exist together at one and the same time, or at different times, that is, contemporaneously, or in succession.

In *Great Books of the Western World* (Volume 42)

*Critique of Pure Reason*

First Part, Of Time, Metaphysical Exposition of this Conception, 5

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Krauss, Lawrence M.** 1954–

American theoretical physicist

The possibilities of space travel beckon us every time we gaze up at the stars, yet we seem to be permanent captives in the present. The question that motivates not only dramatic license but a surprising amount of modern theoretical physics research can be simply put: Are we or are we not prisoners on a cosmic temporal freight train that cannot jump the tracks?

*The Physics of Star Trek*

Chapter Two (p. 13)

HarperPerennial. New York, New York, USA. 1995

**Lamarck, Jean-Baptiste Pierre Antoine** 1744–1829

French biologist

Time is insignificant and never a difficulty for Nature. It is always at her disposal and represents an unlimited power with which she accomplishes her greatest and smallest tasks.

Translated by Albert V. Carozzi

*Hydrogeology*

Chapter 3 (p. 61)

University of Illinois Press. Urbana, Illinois, USA. 1964

Oh, how very ancient the earth is!

Translated by Albert V. Carozzi

*Hydrogeology*

Chapter 3 (p. 75)

University of Illinois Press. Urbana, Illinois, USA. 1964

**Lapworth, Charles** 1842–1920

English geologist

Far be it from me to suggest that geologists should be reckless in their drafts upon the bank of Time; but nothing whatever is gained, and very much is lost, by persistent niggardliness in this direction.

*Proceedings of the Geological Society of London*, Volume 59, 1903 (p. lxxii)

The concept of the vastness of space has been familiar to mankind for untold ages, and has grown and expanded with the growth of the race. The concept of the immensity of time has entered so little into the intellectual development of mankind as a whole, and in its grander aspects so recently, that the race is as yet incapable of adequately grasping it.

The Relations of Geology

*Scottish Geographical Magazine*, Volume XIX, Number 8, August, 1902 (p. 396)**Lightman, Alan** 1948–

American physicist, novelist, and essayist

There is a place where time stands still...illuminated by only the most feeble red light, for light is diminished to almost nothing at the center of time, its vibrations slowed to echoes in vast canyons, its intensity reduced to the faint glow of fireflies.

*Einstein's Dreams*

14 May, 1905 (p. 70, 72–73)

Pantheon Books. New York, New York, USA. 1993

**Lodge, Sir Oliver** 1851–1940

English physicist

Our fundamental standard of time is the period of the earth's rotation – the length of the day. The earth is our one standard clock: all time is expressed in terms of it, and if it began to go wrong, or if it did not go with perfect uniformity, it would seem a most difficult thing to discover its error, and a most puzzling piece of knowledge to utilize when found.

*Pioneers of Science*

Lecture XVIII (p. 384)

Macmillan &amp; Co Ltd. London, England. 1905

**Lyell, Sir Charles** 1797–1875

English geologist

Such views of the immensity of past time, like those unfolded by the Newtonian philosophy in regard to space, were too vast to awaken ideas of sublimity unmingled with a painful sense of our incapacity to conceive a plan of such infinite extent. Worlds are seen beyond worlds immeasurably distant from each other, and beyond them all innumerable other systems are faintly traced on the confines of the visible universe.

*Principles of Geology* (Volume 1)

Chapter IV (p. 63)

John Murray. London, England. 1830

...until we habituate ourselves to contemplate the possibility of an indefinite lapse of time having been comprised within each of the modern periods of earth's history, we shall be in danger of forming most erroneous and partial views of geology.

*Principles of Geology* (Volume 3)

Chapter VIII (p. 97)

John Murray. London, England. 1830

In vain do we aspire to assign limits to the works of creation in space, whether we examine the starry heavens, or that world of minute animalcules which is revealed to us by the microscope. We are prepared, therefore, to find that in time also the confines of the universe lie beyond the reach of mortal ken.

*Principles of Geology* (Volume 3)

Concluding Remarks (p. 384)

John Murray. London, England. 1830

**Mann, Thomas** 1875–1955

German-born American novelist

Time has no division to mark its passage, there is never a thunder-storm or blare of trumpets to announce the beginning of a new month or year. Even when a new century begins it is only we mortals who ring bells and fire off pistols.

*The Magic Mountain*

Part I, Chapter 1 (p. 23)

W.H. Freeman & Company. San Francisco, California, USA. 1973

**Morehouse, George Wilkinson** 1840–?  
American naturalist

Space is infinite, and time is eternal. There could have been no beginning, and there can never be an end. Today is as much a day of beginning, or of ending, as any other day that may be selected in the past or future.

*The Wilderness of Worlds*

Chapter II (p. 15)

Peter Eckler, Publisher. New York, New York, USA. 1898

**Morris, Richard** 1939–2003  
American physicist and science writer

Though science has not yet probed all the depths of the subject of time, it at least knows what we should be asking about the subject. Knowing what to ask is often the most significant step on the road to understanding.

*Time's Arrow: Scientific Attitudes Toward Time*

Chapter 12 (p. 218)

Simon & Schuster. New York, New York, USA. 1985

**Nabokov, Vladimir Vladimirovich** 1899–1977  
Russian-born American novelist

Pure Time, Perceptual Time, Tangible Time, Time free of content, context, and running commentary – this is my time and theme. All the rest is numerical symbol or some aspect of Space. The texture of Space is not that of Time, and the piebald four-dimensional sport bred by relativists is a quadruped with one leg replaced by the ghost of a leg. My time is also Motionless Time (we shall presently dispose of “flowing” time, water-clock time, water-closet time).

*Ada or Ardor: A Family Chronicle*

Part Four (p. 539)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1969

**Newton, Sir Isaac** 1642–1727  
English physicist and mathematician

Absolute, true, and mathematical time, of itself, and from its own nature, flows equably without relation to anything external.

*Mathematical Principles of Natural Philosophy*

Definitions, Scholium I

E.P. Dutton & Company. New York, New York, USA. 1922

**Nietzsche, Friedrich Wilhelm** 1844–1900  
German philosopher

This all took a long time or a short time. For, properly speaking, for such things there is *no* time on earth.

Translated by Alexander Tille

*Thus Spake Zarathustra*

The Sign (p. 477)

The Macmillan Co. New York, New York, USA. 1896

**Penrose, Roger** 1931–  
English mathematical physicist

...our present picture of physical reality, particularly in relation to the nature of time, is due for a grand shake-up – even greater, perhaps, than that which has already been provided by present-day relativity and quantum mechanics.

*The Emperor's New Mind: Concerning Computers, Minds, and the Laws of Physics*

Chapter 8 (p. 371)

Oxford University Press, Inc. Oxford, England. 1989

**Palgrave, Francis** 1788–1861  
English historian

Few similes possess such truth as that most trite one – *the Stream of Time* – or rather the simile is the abstract idea of Time, presented to our sensuous perceptions, in the only form intelligible to the human mind.

*The History of Normandy and of England* (Volume 1)

Chapter I (p. 1)

John W. Parker & Son. London, England. 1851

The events appearing to us consecutive, are essentially consentaneous: indistinct and transient disclosures of the decree, foredoomed before all Time, and not to be fulfilled until Time shall pass away: dim glimpses of the changeless sky, caught between the vaporous margins of the driving clouds.

*The History of Normandy and of England* (Volume 1)

Chapter I (p. 2)

John W. Parker & Son. London, England. 1851

**Pirsig, Robert M.** 1928–  
American writer

The past cannot remember the past. The future can't generate the future. The cutting edge of this instant right here and now is always nothing less than the totality of everything there is.

*Zen and the Art of Motorcycle Maintenance: An Inquiry into Values*

Part III, Chapter 24 (p. 283)

William Morrow & Company, Inc. New York, New York, USA. 1974

**Plato** 428 BCE–347 BCE  
Greek philosopher

...The creator...sought to make the universe eternal, so far as might be. Now the nature of the ideal being was everlasting, but to bestow this attribute in its fullness upon a creature was impossible. Wherefore he resolved to have a moving image of eternity, and when he set in order the heaven, he made this image eternal but moving according to number, while eternity itself rests in unity, and this image we call time.

In *Great Books of the Western World* (Volume 7)

*Timaeus*

Section 37 (p. 450)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Time, then, and the heaven came into being at the same instant in order that, having been created together, if ever there was to be a dissolution of them, they might be dissolved together.

In *Great Books of the Western World* (Volume 7)

*Timaeus*

Section 38 (p. 451)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### **Playfair, John** 1748–1819

Scottish geologist, physicist, and mathematician

The mind seemed to grow giddy by looking so far into the abyss of time.

Biographical Account of the Late James Hutton, F.R.S.

*Transactions of the Royal Society of Edinburgh*, Volume V, Part III, 1805 (p. 73)

### **Plotinus** ca. 205–270

Egyptian-Roman philosopher

Time at first – in reality before that “first” was produced by desire of succession – Time lay, though not yet as Time, in the Authentic Existent together with the Cosmos itself; the Cosmos also was merged in the Authentic and motionless within it.

In *Great Books of the Western World* (Volume 17)

*The Six Enneads*

Third Ennead VII. 11 (p. 126)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

The origin of Time, clearly, is to be traced to the first stir of the Soul’s tendency towards the production of the sensible Universe with the consecutive act ensuing. This is how “Time” – as we read – “came into Being simultaneously with” this All: the Soul begot at once the Universe and Time; in that activity of the Soul this Universe sprang into being; the activity is Time, the Universe is the content of Time.

In *Great Books of the Western World* (Volume 17)

*The Six Enneads*

Third Ennead VII. 11 (p. 127)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### **Poinsot, Louis** 1777–1859

French mathematician and physicist

If anyone asked me to define time, I should reply: “Do you know what it is that you speak of?” If he said “Yes,” I should answer, “Very well, let us talk about it.” If he said “No,” I should answer, “Very well, let us talk about something else.”

In William Maddock Bayliss

*Principles of General Physiology* (3rd edition)

Preface (p. xvii)

Longmans, Green & Company. London, England. 1920

### **Prigogine, Ilya** 1917–2003

Russian-born Belgian physical chemist

The irreversibility [of time] is the mechanism that brings order out of chaos.

In Eric J. Lerner

*The Big Bang Never Happened*

Chapter 7 (p. 283)

Random House, Inc. New York, New York, USA. 1991

Time is creation. The future is just not there.

In Eric J. Lerner

*The Big Bang Never Happened*

Chapter 7 (p. 321)

Random House, Inc. New York, New York, USA. 1991

### **Putnam, H.**

No biographical data available

I do not believe that there are any longer any philosophical problems about Time; there is only the physical problem of determining the exact physical geometry of the four-dimensional continuum that we inhabit.

Time and Physical Geometry

*Journal of Philosophy*, Volume 64, April, 1967

### **Reichenbach, Hans** 1891–1953

German philosopher of science

There is no other way to solve the problem of time than the way through physics.... If time is objective the physicist must have discovered the fact. If there is Becoming, the physicist must know it.... If there is a solution to the philosophical problem of time, it is written down in the equations of mathematical physics.

*The Direction of Time* (p. 16)

University of California Press. Berkeley, California, USA. 1956

### **Ruskin, John** 1819–1900

English writer, art critic, and social reformer

Indolence watches the tooth of Time with careless eye and nerveless hand.

*The Poetry of Architecture: Cottage, Villa, Etc.*

The Cottage (p. 28)

John Wiley & Sons. New York, New York, USA. 1877

### **Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

...to realise the unimportance of time is the gate of wisdom.

*Our Knowledge of the External World*

Lecture VI (p. 167)  
Houghton Mifflin Company, Boston, Massachusetts, USA. 1891

It is poetic imagination, not science, which presents Time as despotic lord of the world, with all the irresponsible frivolity of a child.

*Mysticism and Logic: And Other Essays*  
Chapter I (p. 3)  
Longmans, Green & Co. London, England. 1919

...there is some sense – easier to feel than to state – in which time is an unimportant and superficial characteristic of reality. Past and future must be acknowledged to be as real as the present, and a certain emancipation from slavery to time is essential to philosophic thought.

*Mysticism and Logic and Other Essays*  
Chapter I, Section III (p. 21)  
Longmans, Green & Company London, England. 1925

### **Saint Augustine of Hippo** 354–430

Theologian and doctor of the Church

Time is like a river made up of events which happen, and its current is strong; no sooner does anything appear than it is swept away.

In Paul Davies  
*Other Worlds: A Portrait of Nature in Rebellion, Space, Superspace, and the Quantum Universe*  
Chapter 10 (p. 186)  
Simon & Schuster, New York, New York, USA. 1980

...all time past to be driven away by time to come; and all time to come, to follow upon the past; and that all both past and to come, is made up, and flows out of that which is always present? Who now shall so hold fast this heart of man, that it may stand, and see, how that eternity ever still standing, gives the word of command to the times past or to come, itself being neither past nor to come?

*St. Augustine's Confessions* (Volume 2)  
Book XI, XI (p. 233)  
William Heinemann, London, England. 1912

For what is time? Who is able easily and briefly to explain that? Who is so much as in thought to comprehend it, so as to express himself concerning it? And yet what in our usual discourse do we more familiarly and knowingly make mention of than time? And surely we understand it well enough, when we speak of it: we understand it also, when in speaking with another we hear it named.

*St. Augustine's Confessions* (Volume 2)  
Book XI, XIV (p. 237, 239)  
William Heinemann, London, England. 1912

What is time then? If nobody asks me, I know: but if I were desirous to explain it to one that should ask me, plainly I know not.

*St. Augustine's Confessions* (Volume 2)  
Book XI, XIV (p. 237, 239)  
William Heinemann, London, England. 1912

...if nothing were coming, there should be no time to come: and if nothing were, there should now be no present time. These two times therefore, past and to come, in what sort are they, seeing the past is now no longer, and that to come is not yet? As for the present, should it always be present and never pass into times past, verily it should not be time but eternity.

*St. Augustine's Confessions* (Volume 2)  
Book XI, XIV (p. 239)  
William Heinemann, London, England. 1912

Clear now it is and plain, that neither things to come, nor things past, are. Nor do we properly say, there be three times, past, present, and to come; but perchance it might be properly said, there be three times: a present time of past things; a present time of present things; and a present time of future things.... The present time of past things is our memory; the present time of present things is our sight; the present time of future things our expectation.

*St. Augustine's Confessions* (Volume 2)  
Book XI, XX (p. 253)  
William Heinemann, London, England. 1912

### **Santayana, George (Jorge Agustín Nicolás Ruiz de Santillana)** 1863–1952

Spanish-born American philosopher

The essence of nowness runs like a fire along the fuse of time.

*Realms of Being*  
Chapter IX (p. 491)  
Cooper-Square Publishers, Inc. New York, New York, USA. 1972

### **Schiller, Friedrich** 1759–1805

German poet, philosopher, historian, and dramatist

Time irrevocably flies, towards changeless eternity...

*The Poems of Schiller*  
The Unchangeable (p. 305)  
H. Holt & Co. New York, New York, USA. 1902

### **Shakespeare, William** 1564–1616

English poet, playwright, and actor

Unless hours were cups of sack, and minutes capons, and clocks the tongues of bawds, and dials the signs of leaping-houses, and the blessed sun himself a fair hot wench in flame-colour'd taffeta, I see no reason why thou shouldst be so superfluous to demand the time of the day.

In *Great Books of the Western World* (Volume 26)  
*The Plays and Sonnets of William Shakespeare* (Volume 1)  
*The First Part of King Henry the Fourth*  
Act I, Scene ii, l. 7–10  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

There are many events in the womb of time which will be delivered.

In *Great Books of the Western World* (Volume 27)  
*The Plays and Sonnets of William Shakespeare* (Volume 2)

*Othello, The Moor of Venice*

Act I, Scene iii, l. 376

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

What seekest thou else

In the dark backward and abysm of time?

In *Great Books of the Western World* (Volume 27)

*The Plays and Sonnets of William Shakespeare* (Volume 2)

*The Tempest*

Act VI, Scene ii, l. 50

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Silesius, Angelus** 1624–77

German poet

Do not compute eternity

as light-year after year

One step across

that line called Time

Eternity is here.

*The Book of Angelus Silesius*

Of Time and Eternity (p. 42)

Alfred A. Knopf. New York, New York, USA. 1976

**Stevenson, Robert Louis** 1850–94

Scottish essayist and poet

She is settling fast? said the First Lieutenant as he returned from shaving.

“Fast, Mr. Spoker?” asked the Captain. “The expression is a strange one, for Time (if you will think of it) is only relative.”

*Fables*

The Sinking Ship

Charles Scribner’s Sons. New York, New York, USA. 1923

**Suess, Eduard** 1831–1914

Austrian geologist

The astronomer, in order to render conceivable the immensity of celestial space, points to the parallelism of the stellar rays or to the white clouds of the Milky Way. There is no such means of comparison by which we can illustrate directly the great length of cosmic periods, and we do not even possess a unit with which such periods might be measured. The distance in space of many stars from the earth has been determined; for the distance in time of the latest strand-line on Capri or the last shell-bed on Tromsø, we cannot suggest an estimate even in approximate figures.

*The Face of the Earth* (Volume 2)

Part III, Chapter XIV (p. 556)

At The Clarendon Press. Oxford, England. 1906

We hold the organic remains of the remote past in our hand and consider their physical structure, but we know not what interval of time separates their epoch from our own; they are like those celestial bodies without parallax, which inform us of their physical constitution by their spectrum, but furnish no clue to their distance. As Rama looks out

upon the Ocean, its limits mingling and uniting with heaven on the horizon, and as he ponders whether a path might not be built into the Immeasurable, so we look over the Ocean of time, but nowhere do we see signs of a shore.

*The Face of the Earth* (Volume 2)

Part III, Chapter XIV (p. 556)

At The Clarendon Press. Oxford, England. 1906

**Swinburne, Algernon Charles** 1837–1909

English poet

Before the beginning of years

There came to the making of man

Time, with a gift of tears ...

*The Poems of Algernon Charles Swinburne* (Volume 4)

Atlanta in Calydon (p. 258)

Chatto & Windus. London, England. 1905

**Swinburne, Richard** 1943–

English philosopher

It would be an error to suppose that if the universe is infinitely old, and each state of the universe at each instant of time has a complete explanation which is a scientific explanation in terms of a previous state of the universe and natural laws (and so God is not invoked), that the existence of the universe throughout infinite time has a complete explanation, or even a full explanation. It has not. It has neither. It is totally inexplicable.

*The Existence of God*

Chapter 7 (p. 122)

At the Clarendon Press. Oxford, England. 1979

**Schwinger, Julian** 1918–94

American theoretical physicist

Time appears in quantum mechanics as a continuous parameter which represents an abstraction of the dynamical role of the measurement apparatus.

*Nobel Lectures, Physics 1963–1970*

Relativistic Quantum Field Theory (p. 142)

Elsevier Publishing Co. Amsterdam, The Netherlands. 1972

## The X-Files

SCULLY: No, wait a minute. You’re saying that, that time disappeared. Time can’t just disappear, it’s, it’s, it’s a universal invariant!

MULDER: Not in this zip code.

**Weil, Simone** 1909–43  
French philosopher and mystic

Time is an image of eternity, but it is also a substitute for eternity.

*Gravity and Grace*

Renunciation of Time (p. 18)

Routledge & Kegan Paul. London, England. 1952

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

“Can an instantaneous cube exist?”

“Don't follow you,” said Filby.

“Can a cube that does not last for any time at all, have a real existence?”

Filby became pensive. “Clearly,” the Time Traveler proceeded, “any real body must have extension in four directions: it must have Length, Breadth, Thickness, and – Duration.... There are really four dimensions, three which we call the three planes of Space and a fourth, Time. There is, however, a tendency to draw an unreal distinction between the former three dimensions and the latter, because it happens that our consciousness moves intermittently in one direction along the latter from the beginning to the end of our lives.”

In Robert M. Hutchins and Mortimer J. Adler (eds.)

*The Great Ideas Today* 1971

*The Time Machine*, Chapter 1

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1971

There is no difference between Time and any of the three dimensions of Space except that our consciousness moves along it.

*Seven Science Fiction Novels of H. G. Wells*

*The Time Machine*

Chapter 1 (p. 4)

Dover Publications, Inc. New York, New York, USA. 1934

**Wheeler, John Archibald** 1911–  
American theoretical physicist and educator

Should we be prepared to see someday a new structure for the foundations of physics that does away with time?

In Paul Davies

*About Time: Einstein's Unfinished Revolution*

Header (p. 178)

Simon & Schuster. New York, New York, USA. 1995

Time is nature's way to keep everything from happening at once.

In Paul Davies

*About Time: Einstein's Unfinished Revolution*

Header (p. 236)

Simon & Schuster. New York, New York, USA. 1995

Time ends. That is the lesson of the “big bang.” It is also the lesson of the black hole.

The Lesson of the Black Hole

*Proceedings of the American Philosophical Society*, Volume 125, 25

Of all the obstacles to a thoroughly penetrating account of existence, none looms up more dismayingly than “time.” Explain time? Not without explaining existence. Explain existence? Not without explaining time. To uncover the deep and hidden connection between time and existence,

to close on itself our quartet of questions, is a task for the future.

Hermann Weyl and the Unity of Knowledge  
*American Scientist*, Volume 74, July–August, 1986 (p. 374)

**White, Henry Kirke** 1785–1806  
English poet

...it is fearful then  
To steer the mind in deadly solitude  
Up the vague stream of probability  
To wind the mighty secrets of the past  
And turn the key of time.

*Poetical Works*

Time

Bell & Daldy. London, England. 1870

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

Apart from time there is no meaning for purpose, hope, fear, energy. If there be no historic process, then everything is what it is, namely, a mere fact. Life and motion are lost.

*Modes of Thought*

Chapter II, Lecture Five (p. 139)

The Macmillan Company. New York, New York, USA. 1938

Time and space express the universe as including the essence of transition and the success of achievement. The transition is real, and the achievement is real. The difficulty is for language to express one of them without explaining away the other.

*Modes of Thought*

Chapter II, Lecture Five (pp. 139–140)

The Macmillan Company. New York, New York, USA. 1938

It is impossible to meditate on time and the mystery of the creative process of nature without an overwhelming emotion at the limitations of human intelligence.

*The Concept of Nature*

Chapter III (p. 73)

At The University Press. Cambridge, England. 1920

**Whitrow, G. J.** 1912–2000  
English mathematician, cosmologist, and science historian

The basic objection to attempts to deduce the unidirectional nature of time from concepts such as entropy is that they are attempts to reduce a more fundamental concept to a less fundamental one.

*The Natural Philosophy of Time* (2nd edition)

Chapter 7 (p. 338)

Clarendon Press. Oxford, England. 1980

...the history of natural philosophy is characterized by the interplay of two rival philosophies of time – one aiming at its “elimination” and the other based on the belief that it is fundamental and irreducible.

*The Natural Philosophy of Time* (2nd edition)

Chapter 7 (p. 370)

Clarendon Press. Oxford, England. 1980

**Wittgenstein, Ludwig Josef Johann** 1889–1951  
Austrian-born English philosopher

What Eddington says about “the direction of time” and the law of entropy comes to this: time would change its direction if men should start walking backwards one day. Of course you can call it that if you like; but then you should be clear in your mind that you have said no more than that people have changed the direction they walk in.

Translated by Peter Winch

*Culture and Value* (p. 18e)

*The Complete Poetical Works of William Wordsworth*

Ecclesiastical Sonnets, XXXIV

Thomas Y. Crowell Co. New York, New York, USA. 1894

**Yeats, William Butler** 1865–1939  
Irish poet and playwright

Time drops in decay,

Like a candle burnt out.

*The Collected Poems of W.B. Yeats*

The Moods (p. 54)

The Macmillan Company. New York, New York, USA. 1956

**Zebrowski, George** 1945–  
Polish-American science fiction writer

Time is a relationship that we have with the rest of the universe; or more accurately, we are one of the clocks, measuring one kind of time. Animals and aliens may measure it differently. We may even be able to change our way of marking time one day, and open up new realms of experience, in which a day today will be a million years.  
*OMNI Magazine*, 1994

## TIME AND SPACE

**Amiel, Henri-Frédéric** 1821–81  
Swiss philosopher, poet, and critic

Time and space are fragments of the Infinite for the use of finite creatures.

Translated by Mrs. Humphry Ward

*Amiel's Journal*

November 16, 1864 (p. 101)

Macmillan & Company Ltd. London, England. 1921

**Poincaré, Jules Henri** 1854–1912  
French mathematician and theoretical astronomer

...time and space.... It is not nature which imposes them upon us, it is we who impose them upon nature because we find them convenient.

Translated by George Bruce Halsted  
*The Value of Science*  
 Introduction (p. 13)  
 The Science Press. New York, New York, USA. 1907

## TIME TRAVEL

**Allen, Elizabeth Akers** 1832–1911  
 Journalist and poet

Backward, turn backward, O Time, in your flight.  
 Make me a child again just for to-night.  
*Rock Me to Sleep, Mother*  
 Rock Me to Sleep, Mother (p. 11)  
 Estes & Lauriat. Boston, Massachusetts, USA. 1883

**Bester, Alfred** 1913–87  
 American science fiction writer

“We’re like millions of strands of spaghetti in the same pot. No time traveler can ever meet another time traveler in the past or the future. Each of us must travel up or down his own strand alone.”  
 “But we’re meeting each other now.”  
 “We’re no longer time travelers, Henry. We’ve become the spaghetti sauce.”  
*Starlight: The Great Short Fiction of Alfred Bester*  
 The Man Who Murdered Mohammed (p. 100)  
 Doubleday & Company, Inc. Garden City, New York, USA. 1976

**Clarke, Arthur C.** 1917–  
 English science and science fiction writer

The most convincing argument against time travel is the remarkable scarcity of time travelers. However unpleasant our age may appear to the future, surely one would expect scholars and students to visit us, if such a thing were possible at all. Though they might try to disguise themselves, accidents would be bound to happen – just as they would if we went back to Imperial Rome with cameras and tape-recorders concealed under our nylon togas.  
*Profiles of the Future: An Inquiry into the Limits of the Possible*  
 Chapter 11 (p. 132)  
 Harper & Row, Publishers. New York, New York, USA. 1973

**Kaku, Michio** 1947–  
 Japanese-American theoretical physicist

...imagine the chaos that would arise if time machines were as common as automobiles, with tens of millions of them commercially available. Havoc would soon break loose, tearing at the fabric of our universe. Millions of people would go back in time to meddle with their own past and the past of others, rewriting history in the process.... It would be impossible to take a simple census to see how many people there were at any given time.  
*Hyperspace : A Scientific Odyssey Through Parallel Universes, Time Warps, and the 10th Dimension*  
 Chapter 11 (p. 234)  
 Oxford University Press, Inc. New York, New York, USA. 1995

**Krauss, Lawrence M.** 1954–  
 American theoretical physicist

While everyone of us is a time traveler, the cosmic pathos that elevates human history to the level of tragedy arises precisely because we seem doomed to travel in only one direction – into the future.  
*The Physics of Star Trek*  
 Chapter Two (p. 13)  
 Harp Perennial Publishers. New York, New York, USA. 1995

**Schickel, Richard**  
 American film critic

Time travel is the thinking person’s UFO, an improbability that nevertheless resonates with mysterious and sometimes marvelous possibilities.  
 Review  
 Back to the Future, Part II  
*Time*, December 4, 1989

**Wells, H. G. (Herbert George)** 1866–1946  
 English novelist, historian, and sociologist

Man...can go up against gravitation in a balloon, and why should he not hope that ultimately he may be able to stop or accelerate his drift along the Time-Dimension, or even turn about and travel the other way.  
*The Great Ideas Today* 1971  
*The Time Machine*  
 Chapter One (p. 451)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1971

I’m afraid I cannot convey the peculiar sensations of time traveling. They are excessively unpleasant.  
 In Robert M. Hutchins and Mortimer J. Adler (eds.)  
*The Great Ideas Today* 1971  
*The Time Machine*  
 Chapter Three (p. 458)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1971

## TOMB

**Carter, Howard** 1874–1939  
 English archaeologist and Egyptologist

**Mace, Arthur Cruttenden** 1874–1928  
 Egyptologist

...as my eyes grew accustomed to the light, details of the room within emerged slowly from the mist, strange animals, statues, and gold – everywhere the glint of gold. For the moment – an eternity it must have seemed to the others standing by – I was struck dumb with amazement, and when Lord Carnarvon, unable to stand the suspense any longer, inquired anxiously, “Can you see anything?” it was all I could do to get out the words, “Yes, wonderful things.”  
*The Discovery of the Tomb of Tutankhamen*  
 Chapter V (p. 35)  
 Sphere Books. London, England. 1972

**Lawrence, D. H. (David Herbert)** 1885–1930  
English writer

Why, oh why, wasn't the tomb left intact as it was found, where it was found? The garden of the Florence museum is vastly instructive, if you want object-lessons about the Etruscans. But who wants object lessons about vanished races? What one wants is a contact. The Etruscans are not a theory or a thesis. If they are anything, they are an *experience*.

*D.H. Lawrence and Italy*

*Etruscan Places*

Volterra, Chapter V (p. 114)

Penguin Classics. New York, New York, USA. 1997

## TOOL

**Beecher, Henry Ward** 1813–87  
American Congregational preacher and orator

A tool is but the extension of a man's hand, and a machine is but a complex tool. He that invents a machine augments the power of a man and the well-being of mankind.

In Lenox R. Lohr

*Centennial of Engineering: History and Proceedings of Symposia: 1852–1952*

Historical Background (p. 340)

Centennial of Engineering. Chicago, Illinois. 1952

**Bergson, Henri** 1859–1941  
French philosopher

Science has equipped man in less than fifty years with more tools than he had made during the thousands of years he had lived on earth. Each new machine being for man a new organ – an artificial organ – his body became suddenly and prodigiously increased in size, without his soul being at the same time able to dilate to the dimensions of his body.

In Lenox R. Lohr

*Centennial of Engineering: History and Proceedings of Symposia: 1852–1952*

Historical Background (p. 343)

Centennial of Engineering. Chicago, Illinois. 1952

**Carlyle, Thomas** 1795–1881  
English historian and essayist

Man is a Tool-using Animal. Weak in himself, and of small stature, he stands on a basis, at most for the flattest-soled, of some half square foot, insecurely enough; Has to straddle out his legs, lest the very wind supplant him. Feeblest of bipeds! Three quintals are a crushing load for him; the steer of the meadow tosses him aloft like a waste rag. Nevertheless he can use Tools: with these the granite mountain melts into light dust before him, seas are his smooth highway, winds and fire his unwearying steeds. Nowhere do you find him without Tools; without Tools he is nothing, with Tools he is all.

*Sartor Resartus*

Book I, Chapter V (pp. 35–36)  
Ginn & Company. Boston, Massachusetts, USA. 1897

## TOOTHACHE

**Burns, Robert** 1759–96  
English author

My curse upon your venom'd stang,  
That shoots my tortur'd gooms alang,  
An' thro' my lug gies monie a twang  
Wi' gnawing vengeance,  
Tearing my nerves wi' bitter pang,  
Like racking engines!

*The Poems and Songs of Robert Burns* (Volume 2)

Address to the Toothache, Stanza I

Clarendon Press. Oxford, England. 1968

**Busch, Wilhelm** 1832–1908  
German cartoonist, painter, and poet

A toothache, not to be perverse,  
Is an unmitigated curse...

*German Satirical Writings*

The Poet Thwarted (p. 161)

Continuum. New York, New York, USA. 1984

**Carroll, Lewis (Charles Dodgson)** 1832–98  
English writer and mathematician

“Do I look very pale?” said Tweedledum, coming up to have his helmet tied on. (He called it a helmet, though it certainly looked much more like a saucepan.)

“Well – yes – a little”, Alice replied gently.

“I'm very brave generally”, he went on in a low voice: “only today I happen to have a headache.”

“And I've got a toothache!” said Tweedledee, who had overheard the remark. I'm far worse than you!”

*The Complete Works of Lewis Carroll*

*Through the Looking-Glass*

Chapter IV (p. 193)

The Modern Library. New York, New York, USA. 1936

**Collins, John** 1742–1808  
No biographical data available

Maria one Morning was smitten full sore,  
With the Tooth-ache's unmerciful Pang;  
And she vow'd, if she liv'd to the Age of Five-score,  
That she still should remember the Fang.

*Scripscrapologia*

Excuse for Oblivion, l. 1–4

Published by the author. Birmingham, England. 1804

**Fuller, Thomas** 1608–61  
English clergyman and author

The tongue is ever turning to the aching tooth.

*Gnomologia: Adages and Proverbs, Wise Sentences, and Witty Sayings.*

*Ancient and Modern, Foreign and British*

No. 4796

Printed for Thomas & Joseph Allman. London, England. 1816

**Gilbert, Sir William Schwenck** 1836–1911  
English playwright and poet

**Sullivan, Arthur** 1842–1900  
English composer

Roll on, thou ball, roll on!  
Through pathless realms of Space  
Roll on!  
What though I'm in a sorry case?  
What though I cannot meet my bills?  
What though I suffer toothache's ills?  
What though I swallow countless pills?

In Helen and Lewis Melville  
*An Anthology of Humorous Verse*  
To the Terrestrial Globe  
Dodd, Mead & Company New York, New York, USA. 1924

**Heath-Stubbs, John** 1918–2006  
English critic, anthologist, translator, and poet

Venerable Mother Toothache  
Climb down from the white battlements,  
Stop twisting in your yellow fingers  
The fourfold rope of nerves.

*Collected Poems 1943–1987*  
A Charm Against the Toothache (p. 312)  
Carcaret Press Ltd. Manchester, England. 1988

Welsh poet, orator and priest

Music helps not the toothache.  
*The Works of George Herbert in Prose and Verse*  
Jacula Prudentum (p. 459)  
John Wurtele Lovell. New York, New York, USA. 1881

**Hood, Thomas** 1582–98  
English poet and editor

One tooth he had with many fangs,  
That shot at once as man pangs,  
It had an universal sting;  
One tough of that ecstatic stump  
Could jerk his limbs, and make him jump,  
Just like a puppet on a string.

*The Complete Poetical Works of Thomas Hood*  
A True Story  
Greenwood Press, Publishers. Westport, Connecticut, USA. 1980

**James, Henry** 1843–1916  
American novelist

He might have been a fine young man with a bad tooth-  
ache; with the first even of his life. What ailed him above  
all, she felt, was that trouble was new to him...

*The Spoils of Poynton*  
Chapter 8 (p. 102)  
New Directions Houghton Mifflin Company. Norfolk, Connecticut,  
USA, 1924

**Josselyn, John** 1630–75  
English gentleman

...for the Toothache I have found the following medicine  
very available, Brimstone and Gunpowder compounded  
with butter; rub the mandible with it, the outside being  
first warm'd.

*Two Voyages to New-England*  
The Second Voyage (pp. 128–129)

**Mather, Cotton** 1663–1728  
American minister and religious writer

O Man, Since the Hardest and Strongest Things thou hast  
about thee, are so fast Consuming; Do not imagine that  
that rest of thy Body will remain Long Unconsumed, or  
that any Bones of thy Body shall not soon Moulder into  
Dust.

*The Angel of Bethesda*  
Capsula XI (p. 63)  
American Antiquarian Society and Barre Publishers. Barre, Massachu-  
setts, USA. 1972

a Thigh-bone of a Toad, applied unto an aking Tooth,  
rarely fails of easing the Pain.

Scottish writer

“Not a bird my dear Roxton – not a bird?”

“A beast?”

“No; a reptile – a dinosaur. Nothing else could have left  
such a track.”

*The Lost World*

Chapter X (p. 168)

The Colonial Press, Clinton, Massachusetts, USA. 1959

**Melville, Herman** 1819–91

American novelist

That turnpike earth! – that common highway all over  
dented with the marks of...heels and hoofs.

In *Great Books of the Western World* (Volume 48)*Moby Dick*

Chapter 13 (p. 44)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Mills, Enos A.** 1870–1922

Naturalist, writer and nature guide

The tracks and records in the snow which I read in  
passing made something of a daily newspaper for me.  
They told much of the news of the wilds.

In William H. Carr

*The Stir of Nature*

Chapter Three (p. 37)

Oxford University Press, Inc. New York, New York, USA. 1930

**TRACKING****Milne, A. A. (Alan Alexander)** 1882–1956

English poet, children's writer, and playwright

“Hallo” said Piglet, “What are you doing?”

“Tracking something” said Winnie-the Pooh very mys-  
teriously.

“Tracking what?” said Piglet, coming closer.

“That’s just what I ask myself. I ask myself, What?”

*The Complete Tales & Poems of Winnie-the-Pooh**Winnie-the-Pooh*, Winnie-the-Pooh, Pooh and Piglet Go Hunting and

Nearly Catch a Woozle (p. 34)

Dutton Children's Books. New York, New York, USA. 2001

**TRADITION****Huxley, Thomas Henry** 1825–95

English biologist

Ancient traditions, when tested by the severe processes  
of modern investigation, commonly enough fade away  
into mere dreams: but it is singular how often the dream  
turns out to have been a half-waking one, presaging a  
reality.

*Evidence as to Man's Place in Nature*

Chapter I (p. 9)

D. Appleton &amp; Company. New York, New York, USA. 1873

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

It would have been good, if Bacon had not poured the  
child out with the bath water, if he had seen the value of  
existing tradition and had advanced this point of view,  
if he would have known how to value and to make use  
of existing experiences, rather than in his style to refer  
to that which is indeterminable and infinite. He knew of  
Gilbert's work on magnetism, for example, but seemed  
to have no idea of the monumental worth which already  
existed in this discovery.

In Karl J. Fink

*Goethe's History of Science*

Chapter 6 (p. 75)

Cambridge University Press. Cambridge, England. 1991

**TRANSCENDENTAL****Heaviside, Oliver** 1850–1925

English electrical engineer, mathematician, and physicist

In general, the mathematics required is more or less of the character sometimes termed transcendental. This is a grandiloquent word, suggestive of something beyond human capacity to find out; a word to frighten timid people into believing that it is all speculation, and therefore unsound.

*Electromagnetic Theory* (Volume 1)

Chapter I (p. 1)

D. van Nostrand Co. New York, New York, USA. 1893

## TRANSISTOR

**Landauer, Rolf** 1927–99

German-American physicist

An ordinary transistor circuit is like a door.... You slam it open, you slam it shut. You don't have to have a delicate regard for the amount of force you use when you push it one way or the other. These quantum systems are not like that. Quantum computers don't use just an open door or a shut door. Both the open door and the shut door are present simultaneously. The problems all relate to the fact that the process is not perfect. It doesn't do exactly what you want it to do.

In Tim Folger

The Best Computer in All Possible Worlds

*Discover Magazine*, October, 1995

## TRANSIT OF VENUS

**Halley, Edmond** 1656–1742

English astronomer and mathematician

I could wish...that many observations of this famous phenomenon [transit of Venus] might be taken by different persons at separate places, both that we might arrive at a greater degree of certainty by their agreement, and also lest any single observer should be deprived by the intervention of clouds, of a sight which I know not whether any man living in this or the next age will ever see again, and on which depends the certain and adequate solution of a problem the most noble, and at any other times not to be attained to. I recommend it therefore again and again, to those curious astronomers who, when I am dead, will have an opportunity of observing these things, that they would remember this my admonition, and diligently apply themselves with all their might in making this observation; and I earnestly wish them all imaginable success; in the first place that they may not by the unseasonable obscurity of a cloudy sky, be deprived of this most desirable sight, and then, that having ascertained with more exactness the magnitudes of the planetary orbits, it may redound to their immortal fame and glory.

In R. A. Proctor

Past and Coming Transits of Venus

*The Cornhill Magazine*, Volume 31, January, 1875 (p. 96)

**Harkness, William** 1837–1903

Astronomer

We are now on the eve of the second transit of a pair, after which there will be no other till the twenty-first century of our era has dawned upon the earth, and the June flowers are blooming in 2004. When the last transit season occurred the intellectual world was awakening from the slumber of ages, and that wondrous scientific activity which led to our present advanced knowledge was just beginning. What will be the state of science when the next transit season arrives God only knows. Not even our children's children will live to take part in the astronomy of that day.

On the Transit of Venus

*Nature* Volume XXVII, November 30, 1882 (p. 114)

**Horrocks, Jeremiah** 1618–41

English astronomer

I then beheld a most agreeable spectacle – the object of my sanguine wishes – a spot of unusual magnitude, and of a perfectly circular shape, which had already fully entered upon the sun's disc on the left, so that the limbs of the sun and Venus perfectly coincided. Not doubting that this was really the shadow of the planet, I immediately applied myself sedulously to observe it.

In R. A. Proctor

Past and Coming Transits of Venus

*The Cornhill Magazine*, Volume 31, January, 1875 (p. 94)

...he [William Crabtree] at once began to observe, and was gratified by beholding the pleasing spectacle of Venus upon the sun's disc. Rapt in contemplation, he stood for some time motionless, scarcely trusting his own senses, through excess of joy; for we astronomers have, as it were, a womanish disposition, and are overjoyed with trifles, and such small matters as scarcely make an impression upon others; a susceptibility which those who will may deride with impunity, even in my own presence; and if it gratify them I too will join in the merriment.

In R. A. Proctor

Past and Coming Transits of Venus

*The Cornhill Magazine*, Volume 31, January, 1875 (pp. 94–95)

But America! Venus! what riches dost thou squander on unworthy regions which attempt to repay such favours with gold, the paltry product of their mines. Let these barbarians keep their precious metals to themselves, the incentives to evil which we are content to do without. These rude people would indeed ask from us too much should they deprive us of all those celestial riches [transit of Venus], the use of which they are not able to comprehend

In Arundell Blount Whatton

*Memoir of the Life and Labors of the Rev. Jeremiah Horrox*

Chapter III (p. 134)

Wertheim, MacIntosh & Hunt. London, England. 1859

Come then, ye renowned astronomers of our own times!  
Behold here a noble reward, – Venus promises Urania,  
fairer than any Helen, to him who shall happily win her.

In Arundell Blount Whatton

*Memoir of the Life and Labors of the Rev. Jeremiah Horrox*

Chapter X (p. 164)

Wertheim, MacIntosh & Hunt. London, England. 1859

**Paine, Thomas** 1737–1809

Anglo-American political theorist and writer

I have one plain answer to give, which is, that man knows how to calculate an eclipse, and also how to calculate to a minute of time when the planet Venus, in making her revolutions around the sun will come in a straight line between our earth and the sun.... As, therefore, man could not be able to do these things if he did not understand the solar system, and the manner in which the revolutions of the several planets or worlds are performed, the fact of calculating an eclipse, or a transit of Venus, is a proof in point that the knowledge exists; and as to a few thousand, or even a few million miles, more or less, it makes scarcely any sensible difference in such immense distances.

*Age of Reason* Part I

Part First (p. 55)

Peter Eckler New York, New York, USA. 1892

**Proctor, Richard Anthony** 1837–88

English astronomer

I think the astronomers of the first years of the twenty first century, looking back over the long transit-less period which will then have passed, will understand the anxiety of astronomers in our own time to utilize to the full whatever opportunities the coming transits may afford...; and I venture to hope...they will not be disposed to judge over harshly what some in our own day may have regarded as an excess of zeal.

*Transits of Venus, a Popular Account* (p. 231)

Longmans, Green & Company. London, England. 1882

American humorist and critic

## TRANSLUCENT

**Thomson, Sir John Arthur** 1861–1933

Scottish naturalist

When we work long at a thing and come to know it up and down, in and out, through and through, it becomes in quite a remarkable way translucent.

*Introduction to Science*

Chapter I (p. 27)

Henry Holt & Co. New York, New York, USA. 1911

## TRANSMUTATION

**Fermi, Enrico** 1901–54

Italian-born American physicist

Although the problem of transmuting chemical elements into each other is much older than a satisfactory definition of the very concept of chemical element, it is well known that the first and most important step towards its solution was made only nineteen years ago by the late Lord Rutherford, who started the method of the nuclear bombardments.

Nobel Lecture (physics) December 12, 1938

Artificial Radioactivity Produced by Neutron Bombardment, (p. 414)

## TRANSPARENT

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

I shall never forget that dawn, and the strange horror of seeing that my hands had become as clouded glass, and watching them grow clearer and thinner as the day went by, until at last I could see the sickly disorder of my room through them, though I closed my transparent eyelids. My limbs became glassy, the bones and arteries faded, vanished, and the little white nerves went last.

*The Invisible Man*

Chapter XX (pp. 181–182)

Harper & Brothers Publishers. New York, New York, USA. 1897

## TREATMENT

**Bigelow, Jacob** 1787–1879

American Physician

...we [physicians] should not allow him [the patient] to be tormented with useless and annoying applications, in a disease of settled destiny. It should be remembered that all cases are susceptible of errors of commission, as well as of omission, and that by an excessive application of the means of art, we may frustrate the intentions of nature, when they are salutary, or embitter the approach of death when it is inevitable.

*Nature in Disease, Illustrated in Various Discourses and Essays*

On Self-limited Diseases (p. 35)

Ticknor & Fields. Boston, Massachusetts, USA. 1854

**Lewis, Sir Thomas** 1881–1945

No biographical data available

A method which depends for its success upon a supposedly unusual sensitiveness of touch or of hearing, is a method whose clinical scope is admittedly limited, whose scope in science is almost negligible.

*The Mechanism and Graphic Registration of the Heart Beat*

Preface (p. vi)

Shaw & Sons. London, England. 1920

**Mayo, Charles Horace** 1865–1939

American physician

Long ago I learned from my father to put old people to bed only for as short a time as was absolutely necessary,

for they like a foundered horse, if they got down it was difficult for them to get up, and their strength ebbed away very rapidly while in bed.

In Fredrick A. Willis

*Aphorisms of Dr. Charles Horace Mayo (1865–1939) and Dr. William James Mayo (1861–1939)* (p. 7)

Mayo Foundation. Rochester, Minnesota, USA. 1990

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

In science the treatment is nothing, and all the effect lies in the discovery.

*Conversations of Goethe With Eckermann and Soret*

Tues., Dec. 30 (p. 47)

George Bell & Sons. London, England. 1883

## TREATMENT, MEDICAL

**Born-Volber, A. J.**

No biographical data available

The first step in treatment is to change the conditions which produced the disease.

In Albert Abrams

*Man and His Poisons*

Chapter X (p. 220)

E.B. Treat & Co. New York, New York, USA. 1906

## TREE OF LIFE

**Mason, Frances**

No biographical data available

Evolution does not move in a straight course, symbolized by the links in a chain; the tree is the symbol of nature's plan of creation. The trunk represents the main course of life through the ages; the branches are the great groups of plants and animals that have appeared during the growth of the tree; the plants and animals now living are the green twigs at the tips of the branches. In the evolution of forms there are no offshoots leading from one branch to another; the branches start from below and diverge as they grow, each branch maintaining its own course.

In Frances Mason

*Creation by Evolution*

Frontispiece (p. ii)

The Macmillan Company. New York, New York, USA. 1928

## TREE RINGS

**Burroughs, John** 1837–1921

American naturalist and writer

An old tree, unlike an old person, as long as it lives at all, always has a young streak, or rather ring, in it. It wears a girdle of perpetual youth.

*Studies in Nature and Literature*

Bird Life in an Old Apple Tree (p. 38)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1908

**Douglas, Andrew Ellicott** 1867–1962

American astronomer

By translating the story told by tree rings, we have pushed back the horizons of history in the United States for nearly eight centuries before Columbus reached the shores of the New World...

The Secret of the Southwest Solved by Talkative Tree Rings

*National Geographic*, Volume 56, Number 6, 1929 (p. 737)

**Leopold, Aldo** 1886–1948

American naturalist

We sensed that these two piles of sawdust were something more than wood: that they were the integrated transect of a century; that our saw was biting its way, stroke by stroke, decade by decade, into the chronology of a lifetime, written in concentric annual rings of oak.

*A Sand County Almanac, with Essays on Conservation from Round River*

Part I, February (p. 10)

Sierra Club. San Francisco, California, USA. 1970

## TRIAL AND ERROR

**Born, Max** 1882–1970

German-born English physicist

...I believe that there is no philosophical highroad in science, with epistemological signposts. No, we are in a jungle and find our way by trial and error, building our road behind us as we proceed. We do not find signposts at crossroads, but our own scouts erect them, to help the rest.

*Experiment and Theory in Physics* (p. 44)

Cambridge University Press. Cambridge, England. 1944

## TRIANGLE

**Abbott, Edwin A.** 1838–1926

English schoolmaster and theologian

The birth of a True Equilateral Triangle from Isosceles parents is the subject of rejoicing in our country for many furlongs round. After a strict examination conducted by the Sanitary and Social Board, the infant, if certified as Regular, is with solemn ceremonial admitted into the class of Equilaterals.

*Flatland: A Romance of Many Dimensions*

Part I, Section 3 (p. 21)

Little, Brown & Co. Boston, Massachusetts, USA. 1899

**Beckett, Samuel** 1906–89

Irish playwright

...do not despair. Remember there is no triangle, however obtuse, but the circumference of some circle passes through its wretched vertices.

*The Collected Works of Samuel Beckett  
Murphy*  
Chapter 10 (p. 213)  
Grover Press, Inc., New York, New York, USA. 1970

**Buchanan, Scott** 1895–1968  
American educator and philosopher

The triangle is an obsession to geometers and the rest of the world may be grateful to the geometer for cultivating such a neurosis.

*Poetry and Mathematics*  
Chapter II (p. 56)  
The University of Chicago Press. Cambridge, England. 1975

**Crelle, August** 1780–1856  
German civil engineer and mathematician

It is indeed wonderful that so simple a figure as the triangle is so inexhaustible in properties. How many as yet unknown properties of other figures may there not be?"  
*Sammlung mathematischer Aufsätze und Bemerkungen* (Volume 1) (p. 176)  
Maurer, Berlin, Germany. 1821

## TRIGONOMETRY

**Chesterton, G. K. (Gilbert Keith)** 1874–1936  
English author

A straight liner is straight  
And a square mile is flat:  
But you learn in trigonometrics a trick worth two of that.

*The Collected Poems of G.K. Chesterton*  
Songs of Education, V, The Higher Mathematics (p. 97)

**de Morgan, Augustus** 1806–71  
English mathematician and logician

Trigonometry contains *the science of continually undulating magnitude*: meaning magnitude which becomes alternately greater and less, without any termination to succession of increase and decrease.

*Trigonometry and Double Algebra*  
Book I, Chapter I (p. 1)  
Printed for Taylor, Walton & Mayberly. London, England. 1849

**Doyle, Sir Arthur Conan** 1859–1930  
Scottish writer

When my old tutor used to give me an exercise in trigonometry, it always took the shape of measuring heights.

*Memoirs of Sherlock Holmes*  
Adventure V, The Musgrave Ritual (p. 106)  
Harper & Brothers Publishers. New York, New York, USA. 1903

**Howell, Scott** 1959–  
American conservative political consultant

As long as schools continue to teach trigonometry and algebra, there will always be a moment of silence, and indeed prayer, in our public schools.

On why he sees no need to formalize a moment of silence in Utah schools

**Philips, J. D.**  
No biographical data available

The notion that anyone other than a scientist will ever use even the most elementary trigonometry or algebra is laughable. Imagine the absurdity of being in a car or on a plane when suddenly the need arises to solve a quadratic equation or to graph a trigonometric function. But this is precisely the scenario that the traditional defense has coerced us into accepting as realistic. Clearly this is absurd. And so is our complicity.

Mathematics as an Aesthetic Discipline  
*Humanistic Mathematics Network Journal*, Number 12, October, 1995

**Tait, Peter Guthrie** 1831–1901  
Scottish physicist and mathematician

Perhaps to the student there is no part of elementary mathematics so repulsive as is spherical trigonometry.

*Scientific Papers* (Volume 2)  
Quaternions (p. 453)  
At the University Press. Cambridge, England. 1900

## TRILOBITE

**Agassiz, Jean Louis Rodolphe** 1807–73  
Swiss-born American naturalist, geologist, and teacher

The eye of the Trilobite tells us that the sun shone on the old beach where he lived; for there is nothing in nature without a purpose; and when so complicated an organ was made to receive the light, there must have been light to enter it.

*Geological Sketches*  
Chapter II (pp. 31–32)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1886

**Conrad, Timothy** 1803–77  
American geologist and malacologist

The race of man shall perish, but the eyes  
Of trilobites eternal be in stone,  
And seem to stare about in mild surprise  
At changes greater than they have yet known.

*A Geological Vision and Other Poems*  
Murphy & Bechtel. Trenton, New Jersey, USA. 1871

**Darwin, Charles Robert** 1809–82  
English naturalist

For instance, I cannot doubt that all the Silurian trilobites have descended from some one crustacean, which must have lived long before the Silurian age, and which probably differed greatly from any known animal.

*On the Origin of Species*  
Chapter IX (p. 275)  
Grant Richards. London, England. 1902

**Howell, G. K.**

No biographical data available

Thou man of hammer and the disreputable trilobite I have some what to say unto thee. The hammer is an honest instrument that advertises what it does when it smashes – but for the trilobite ah what shall I say? I say that an animal that used 20 000 eyes must have been essentially a sneak! – not the one to meet a foe squarely but one that would be peeking around in all directions out of some if its headlights to be ready to run at the first sign of an adversary.

In Ellis L. Yochelson

*Charles Doolittle Walcott, Paleontologist*

Letter to Walcott, October 31, 1879 (p. 118)

The Kent State University Press. Kent, Ohio, USA. 1998

And then you never know how to class [a trilobite] – he wasn't a mollusk or a fish, and he wasn't a bird nor again an honest square reptile like the gay alligator. And he wasn't an Englishman – well perhaps you don't have Pinafore out among the Utes and the prairie dogs.

In Ellis L. Yochelson

*Charles Doolittle Walcott, Paleontologist*

Letter to Walcott, October 31, 1879 (p. 118)

The Kent State University Press. Kent, Ohio, USA. 1998

**Levi-Setti, Riccardo**

No biographical data available

Trilobites tell me of ancient marine shores teeming with budding life, when silence was only broken by the wind, the breaking of the waves, or by the thunder of storms and volcanoes. The struggle for survival already had its toll in the seas, but only natural laws and events determined the fate of evolving life forms. No footprints were to be found on those shores, as life had not yet conquered land. Genocide had not been invented as yet, and the threat to life on Earth resided only with the comets and asteroids.

*Trilobites*

Preface (p. vii)

The University of Chicago Press. Chicago, Illinois, USA. 1993

All fossils are, in a way, time capsules that can transport our imagination to unseen shores, lost in the sea of eons that preceded us. The time of trilobites is unimaginably far away, and yet, with relatively little effort, we can dig out these messengers of our past and hold them in our hand. And, if we learn the language, we can read the message.

*Trilobites*

Preface (p. vii)

The University of Chicago Press. Chicago, Illinois, USA. 1993

**Newman, Joseph S.** 1892–1960

American poet

A million years ago, or six...perhaps as much as seven, When rhizopods were spewing forth the chalky cliffs of Devon,

Upon a cool and mossy rock, beneath a bed of sedum,  
A trilobite named Annie lived in trilobitish freedom.

*Poems for Penguins and Other Lyrical Lapses*

The Trilobite

Greenburg. New York, New York, USA. 1941

**TROGLODYTE****Burroughs, John** 1837–1921

American naturalist and essayist

...there is enough of the troglodyte in most persons to make them love the rocks and the caves and ledges that the air and the rains have carved out of them.

*The Writings of John Burroughs* (Volume 19)

Chapter II (p. 40)

Houghton, Mifflin. Boston, Massachusetts, USA. 1916

**TROPICAL****Darwin, Charles Galton** 1809–82

English naturalist

Epithet after epithet was found too weak to convey to those who have not visited the intertropical regions, the sensation of delight which the mind experiences.... The land is one great wild, untidy, luxuriant hothouse, made by Nature for herself ...

*The Voyage of the Beagle*

Chapter XXI (p. 523)

P.F. Collier & Son. New York, New York, USA. 1909

**TROPICS****Wallace, Alfred Russel** 1820–1913

English humanist, naturalist, and geographer

The luxuriance and beauty of Tropical Nature is a well-worn theme, and there is little new to say about it. The traveler and the naturalist have combined to praise, and not unfrequently to exaggerate the charms of tropical life – its heat and light, its superb vegetable forms, its brilliant tints of flower and bird and insect.

*Tropical Nature, and Other Essays*

Preface (p. vii)

Macmillan & Company Ltd. London, England. 1878

**TRUTH****Abbey, Edward** 1927–89

American environmentalist and nature writer

...I am sometimes forced to the conclusion that the whole truth is not always represented in certain of the orthodox attitudes. The intuitions of a lover are not always to be trusted; but neither are those of the loveless.

In Joseph Wood Krutch  
*The Great Chain of Life*  
 Prologue (p. xi)  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1957

**Adams, George** 1750–95  
 English instrument maker

You should, therefore, set out in the search of truth as of a stranger, not in search of arguments to support as of a stranger, not in search of arguments to support your own opinions, and endeavor to maintain your mind in a state of equilibrium, an indifference for everything but known and well attested truth, totally regardless of the place from whence it comes, or that to which it tends...

*Lectures on Natural and Experimental Philosophy* (Volume 1)  
 Lecture II (p. 28)  
 Printed by R. Hindmarsh. London, England. 1794

Truth, though destined to be the guide of man, is not bestowed with an unconditional profusion; but is hidden in darkness, and involved in difficulties; intended, like all the other gifts of heaven, to be fought and cultivated by all the different powers and exertions of human reason.

*Lectures on Natural and Experimental Philosophy* (Volume 1)  
 Lecture II (p. 62)  
 Printed by R. Hindmarsh. London, England. 1794

**Amiel, Henri-Frédéric** 1821–81  
 Swiss philosopher, poet, and critic

...it is truth alone – scientific, established, proved, and rational truth – which is capable of satisfying nowadays the awakened minds of all classes. We may still say perhaps, ‘faith governs the world,’ – but the faith of the present is no longer in revelation or in the priest – it is in reason and in science.

Translated by Humphry Ward  
*Amiel's Journal: The Journal Intime of Henri-Frédéric Amiel* (Volume 2)  
 15th November, 1876 (pp. 212–213)  
 McGraw-Hill Book Co., Inc. New York, New York, USA. 1894

**Angier, Natalie** 1958–  
 Writer and science journalist

...if there is any lesson I have learned in my years of following science, it is that nothing is as it seems. Instead, things are as they seem plus the details you are just beginning to notice. New truths rarely overturn old ones, they simply add nuanced brushstrokes to the portrait.

*The Beauty of the Beastly: New Views on the Nature of Life*  
 Introduction (p. xiii)  
 Houghton Mifflin & Co. Boston, Massachusetts, USA. 1995

**Arbuthnot, John** 1667–1735  
 Scottish mathematician and physician

Truth is the same thing to Understanding, as Music to the Ear, and Beauty to the Eye.

*An Essay on the Usefulness of Mathematical Learning* (3rd edition) (p. 5)  
 Printed for J. Barrett  
 London, England. 1745

**Aristotle** 384 BCE–322 BCE  
 Greek philosopher

The investigation of the truth is in one way hard, in another easy. An indication of this is found in the fact that no one is able to attain the truth adequately, while, on the other hand, we do not collectively fail, but everyone says something true about the nature of things, and while individually we contribute little or nothing to the truth, by the union of all a considerable amount is amassed. Therefore, since the truth seems to be like the proverbial door, which no one can fail to hit, in this respect it must be easy, but the fact that we can have a whole truth and not the particular part we aim at shows the difficulty of it.

In *Great Books of the Western World* (Volume 8)  
*Metaphysics*  
 Book II, Chapter I (p. 511)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Aronowitz, Stanley** 1933–  
 American sociologist, labor/union advocate, and writer

The power of science consists, in the first place, in its conflation of knowledge and truth. Devising a method of proving the validity of propositions about objects taken as external to the knower has become identical with what we mean by truth.

*Science as Power: Discourse and Ideology in Modern Society*  
 Preface (p. vii)  
 University of Minnesota Press. Minneapolis, Minnesota, USA. 1988

**Avedon, Richard** 1923–2004  
 American photographer

The moment an emotion or fact is transformed into a photograph it is no longer fact but an opinion. There is no such thing as inaccuracy in a photograph. All photographs are accurate. None of them is the truth.

*The Chronicle of Higher Education*, July 10, 1991, (p. B2)

**Bacon, Sir Francis** 1561–1626  
 English lawyer, statesman, and essayist

The human understanding resembles not a dry light, but admits a tincture of the will and passions, which generate their own system accordingly; for man always believes more readily that which he prefers.

In *Great Books of the Western World* (Volume 30)  
*Novum Organum*  
 First Book, Aphorism 49 (p. 111)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

For myself, I found that I was fitted for nothing so well as for the study of Truth; as having a mind nimble and versatile enough to catch the resemblances of things (which is the chief point), and at the same time steady enough to fix and distinguish their subtler differences; as being gifted by nature with desire to seek, patience to doubt, fondness to meditate, slowness to assert, readiness to

reconsider, carefulness to dispose and set in order; and as being a man that neither affects what is new nor admires what is old, and that hates every kind of imposture. So I thought my nature had a kind of familiarity and relationship with Truth.

In James Spedding

*The Letters and the Life of Francis Bacon Including All His Occasional Works*

Chapter III, Section 3 (p. 85)

Longmans, Green, Reader & Dyer. London, England. 1868

There are and can exist but two ways of investigating and discovering truth. The one hurries on rapidly from the senses and particulars to the most general axioms; and from them as principles and their supposed indisputable truth derives and discovers the intermediate axioms. This is the way now in use. The other constructs its axioms from the senses and particulars, by ascending continually and gradually, till it finally arrives at the most general axioms, which is the true but unattempted way.

*Great Books of the Western World* (Volume 30)

*Novum Organum*

First Book (p. 108)

Encyclopaedia Britannica, Inc. Chicago, Illinois, USA. 1952

### **Balfour, Arthur James** 1848–1930

British prime minister

It is not by mere accumulation of material, nor even by a plant-like development, that our beliefs grow less inadequate to the truths which they strive to represent. Rather we are like one who is perpetually engaged in altering some ancient dwelling in order to satisfy new-born needs. The ground-plan of it is being perpetually modified. We build here; we pull down there. One part is kept in repair, another part is suffered to decay. And even those portions of the structure which may in themselves appear quite unchanged, stand in such new relations to the rest, and are put to such different uses, that they would scarce be recognized by their original designer.

*The Foundations of Belief*

Appendix, Section I (p. 350)

Longmans, Green & Company. London, England. 1912

### **Barfield, Owen** 1898–1997

British philosopher, critic, and anthroposophist

It was not simply a new theory of the nature of the celestial movements that was feared, but a new theory of the nature of theory; namely, that, if a hypothesis saves all the appearances, it is identical with truth.

*Saving the Appearances: A Study in Idolatry*

Chapter VII (pp. 50–51)

Faber & Faber Ltd. London, England. 1957

### **Beaumont, William** 1785–1853

American army surgeon

Truth, like beauty, when “unadorned, is adorned the most”; and in prosecuting these experiments and inquiries, I believe I have been guided by its light.

In William Osler

*Aequanimitas, with Other Addresses to Medical Students, Nurses, and Practitioners of Medicine*

The Army Surgeon (p. 113)

The Blakiston Company. Philadelphia, Pennsylvania, USA. 1932

### **Becker, Ernest** 1925–74

Canadian anthropologist

The man of knowledge in our time is bowed under a burden he never imagined he would ever have: the overproduction of truth that cannot be consumed. For centuries man lived in the belief that truth was slim and elusive and that once he found it the troubles of mankind would be over. And here we are in the closing of the 20th century, choking on truth.

*The Denial of Death*

Preface (p. x)

The Free Press. New York, New York, USA. 1973

### **Bernard, Claude** 1813–78

French physiologist

It seems, indeed, a necessary weakness of our mind to be able to reach truth only across a multitude of errors and obstacles.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Part Three, Chapter I, Section ii (p. 170)

Henry Schuman, Inc. New York, New York, USA. 1927

Men of science, then, do not seek for the pleasure of seeking; they seek the truth to possess it, and they possess it already within the limits in the present state of the sciences. But men of science must not halt on the road; they must climb ever higher and strive toward perfection; they must always seek, as long as they see anything to be found.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Part Three, Chapter III, Section iv (p. 222)

Henry Schuman, Inc. New York, New York, USA. 1927

### **Blake, William** 1757–1827

English poet, painter, and engraver

God forbid that Truth should be Confined to Mathematical Demonstration. He who does not know Truth at sight is unworthy of Her Notice.

In Edwin John Ellis

*The Real Blake: A Portrait Biography*

Chapter XXXII (p. 393)

Chatto & Windus. London, England. 1907

### **Bohm, David** 1917–92

American physicist

The notion of absolute truth is...is shown to be in poor correspondence with the actual development of science.... [S]cientific truths are better regarded as relationships holding in some limited domain...

*The Special Theory of Relativity*

Preface (p. x)

Routledge. London, England. 1996

Danish physicist

Truth lies in the abyss.

In Gerald Holton

*Scientific Optimism and Societal Concerns*

A Note of the Psychology of Scientists (p. 83)

Publisher undetermined

The opposite of a correct statement is a false statement.  
But the opposite of a profound truth may well be another  
profound truth.

In Werner Heisenberg

*Physics and Beyond: Encounters and Conversations*

Chapter 8 (p. 102)

Harper & Row, Publishers. New York, New York, USA. 1971

**Borel, Félix Edouard Justin Emile** 1871–1956  
French mathematician

...the search for truth is the most noble aim of science,  
and there are no degrees between truth and error; the  
insignificance and smallness of a phenomenon will per-  
haps diminish its practical interest, but not its scientific  
value.

*Space and Time*

Introduction (p. 14)

Dover Publications. New York, New York, USA. 1960

**Born, Max** 1882–1970  
German-born English physicist

Truth is what the scientist aims at. He finds nothing at  
rest, nothing enduring, in the universe. Not everything is  
knowable, still less is predictable. But the mind of man is  
capable of grasping and understanding at least a part of  
Creation; amid the flight of phenomena stands the immu-  
table pole of law.

*The Restless Universe*

Chapter V (p. 278)

Dover Publications, Inc. New York, New York, USA. 1951

My optimistic enthusiasm about the disinterested search  
for truth has been severely shaken....

*The Restless Universe*

Postscript (p. 279)

Dover Publications, Inc. New York, New York, USA. 1951

**Brewster, David** 1781–1868  
Scottish scientist, inventor and writer

Truth, however, like all moral powers, can neither be  
checked nor extinguished. When compressed, it but reacts  
the more. It crushes where it cannot expand, – it burns  
where it is not allowed to shine. Human when originally  
divulged, it becomes divine when finally established. At  
first, the breath of a sage – at last it is the edict of a god.

*More Worlds Than One: The Creed of the Philosopher and the Hope of  
the Christian*

Chapter III (pp. 47–48)

Chatto & Windus. London, England. 1876

**Bronowski, Jacob** 1908–74  
Polish-born British mathematician and polymath

Truth in science is like Everest, an ordering of the facts.

*Science and Human Values*

The Sense of Human Dignity (p. 52)

Harper & Row, Publishers. New York, New York, USA. 1965

We cannot define truth in science until we move from  
fact to law. And within the body of laws in turn, what  
impresses us as truth is the orderly coherence of the  
pieces. They fit together like the characters of a great  
novel, or like the words of a poem. Indeed, we should  
keep that last analogy by us always, for science is a  
language, and like a language it defines its parts by the  
way they make up a meaning. Every word in a sentence  
has some uncertainty of definition, and yet the sentence  
defines its own meaning and that of its words conclu-  
sively. It is the internal unity and coherence of science  
which gives it truth, and which makes it a better system  
of prediction than any less orderly language.

*The Common Sense of Science*

Chapter VIII, Section 5 (p. 131)

Harvard University Press. Cambridge, Massachusetts, USA. 1953

**Brown, John** 1810–82  
Scottish physician and author

You may come to the chest of knowledge. It is shut, it  
is bolted, but...you have the key; put it in steadily and  
home. But what is the key? It is the love of truth; neither  
more or less; no other key opens it; no false one, however  
cunning can pick that lock; no assault of hammer, how-  
ever stout, can force it open; but with its own key, a little  
child may open it; often does open it.

In Sir Richard Arman Gregory

*Discovery; or, The Spirit and Service of Science*

Chapter II (p. 28)

Macmillan & Company Ltd. London, England. 1918

**Buchner, Ludwig** 1824–99  
German physician and philosopher

If these pages may venture to claim any merit or char-  
acteristic, it is that of representing a determination not  
to shrink with dismal horror from the simple if unavoid-  
able consequences of an unprejudiced contemplation of  
nature from the standpoint of empirical philosophy, but  
to admit the truth regardless of what may follow. We can-  
not make things different from what they *are*, and noth-  
ing seems to us more preposterous than the attempts of  
some distinguished naturalists at introducing *orthodoxy*  
into natural science. We do not pretend to bring forward  
anything absolutely new or anything that had never been  
heard of before. Similar views and views cognate to ours  
have been taught in *all* ages, and some of them were laid  
down by the oldest Greek and Indian Philosophers, but  
their groundwork, which is necessarily empirical, could

only be supplied by the progress of natural science in the present century.

*Force and Matter: Or, Principles of the Natural Order of the Universe*

Preface to the First Edition (pp. xix-xx)

Asher & Co. London, England. 1884

**Burroughs, John** 1837–1921

American naturalist and essayist

Ask what is the truth in mathematics, and the answer is easy: two and two make four; a straight line is the shortest distance between two points; the angles of a triangle are equal to two right angles, etc. Ask what is the truth in science, and the answer comes as promptly, though here the field is as yet only fairly entered upon;...the truth is whatever you can convince yourself is true.

*The Writings of John Burroughs* (Volume 17)

Chapter X (p. 167)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1904

**Burroughs, William S.** 1914–97

American writer

...truth is used to vitalize a statement rather than devitalize it. Truth implies more than a simple statement of fact. "I don't have any whisky," may be a fact but it is not a truth.

*The Adding Machine*

On Coincidence

Arcade Publishing. New York, New York, USA. 1991

**Bush, Vannevar** 1890–1974

American electrical engineer and physicist

It is a great truth of science that every ending is a beginning, that each question answered leads to new problems to solve, that each opportunity grasped and utilized engenders fresh and greater opportunities.

In Helen Wright

*Palomar: The World's Largest Telescope*

Dedication of the Hale Telescope (p. 183)

The Macmillan Company. New York, New York, USA. 1952

**Calvin, Melvin** 1911–97

American biochemist

The true student will seek evidence to establish fact rather than confirm his own concept of truth, for truth exists whether it is discovered or not.

*Chemical Evolution*

Chapter 11 (p. 252)

Oregon State System of Higher Education. Eugene, Oregon, USA. 1961

**Carmichael, Robert Daniel** 1879–1967

American mathematician

He who discovers a fact or makes known a new law or adds a novel beauty to truth in any way makes everyone of us his debtor. How beautiful upon the highway are the feet of him who comes bringing in his hands the gift of a new truth to mankind.

*The Logic of Discovery*

Chapter IX (p. 273)

The Open Court Publishing. Chicago, Illinois, USA. 1930

**Carroll, Lewis (Charles Dodgson)** 1832–98

English writer and mathematician

Most other Sciences [but not mathematics] are in a state of constant flux – the precious truths of one generation being smiled at as paradoxes by the second generation, and contemptuously swept away as childish nonsense by the third.

*Curiosa Mathematica* Part I (3rd edition)

Introduction (p. xv)

Macmillan & Co Ltd. London, England. 1890

**Chandler, Raymond Thornton** 1888–1959

American novelist

There are two kinds of truth: the truth that lights the way and the truth that warms the heart. The first of these is science, and the second is art.... With art science would be as useless as a pair of high forceps in the hands of a plumber. Without science art would become a crude mess of folklore and emotional quackery.

*The Notebooks of Raymond Chandler*

Great Thought (p. 7)

Ecco Press. New York, New York, USA. 1976

**Chargaff, Erwin** 1905–2002

Austrian biochemist

...I prefer the search for the truth to its possession.

*Serious Questions*

Knowledge Industry (p. 111)

Birkhäuser. Boston, Massachusetts, USA. 1986

**Charlie Chan (Fictional character)**

Truth, like football, receive many kicks before reaching goal.

*Charlie Chan at the Olympics*

Film (1937)

**Clarke, Arthur C.** 1917–

English science and science fiction writer

Faiths come and go, but Truth abides. Out there among the stars lie such truths as we may understand, whether we learn them by our own efforts, or from the strange teachers who are waiting for us along the infinite road on which our feet are now irrevocably set.

*The Challenge of the Spaceship*

Of Space and the Spirit (p. 212)

Harper & Brothers. New York, New York, USA. 1959

**Cole, William** 1530–1600

English man of letters

Whoever attempts to erect a building, should take care that the foundation be securely laid; so also in our inquiries after truth, all our proceedings should be founded upon just and incontrovertible grounds.

*Philosophical Remarks on the Theory of Comets, a Dissertation on the Nature and Properties of Light*

Introduction (p. xi)

B.J. Holdsworth. London, England. 1823

**Compton, Arthur H.** 1892–1962

American physicist

The truths that science teaches are of common interest the world over. The language of science is universal, and is a powerful force in bringing the peoples of the world closer together. We are all acquainted with the sharp divisions which religions draw between men. In science there are no such divisions: all peoples worship at the shrine of truth.

*Les Prix Nobel. The Nobel Prizes in 1927*

Nobel banquet speech for award received in 1927

Nobel Foundation. Stockholm, Sweden. 1928

**Cornforth, John W.** 1917–2004

English organic chemist

In a world where it is so easy to neglect, deny, corrupt and suppress the truth, the scientist may find his discipline severe. For him, truth is so seldom the sudden light that shows new order and beauty; more often, truth is the uncharted rock that sinks his ship in the dark.

In Wilhelm Odelberg

*Les Prix Nobel en 1975*

John Cornforth's speech at the Nobel Banquet, December 10, 1975

Nobel Foundation

Stockholm, Sweden. 1976

**D'Alembert, Jean Le Rond** 1717–83

French mathematician

Geometrical truths are in a way asymptotes to physical truths, that is to say, the latter approach the former indefinitely near without ever reaching them exactly.

In Alphonse Rebière

*Mathématiques et Mathématiciens: Pensées et Curiosités* (p. 10)

**Darwin, Charles Robert** 1809–82

English naturalist

The truth will not penetrate a preoccupied mind.

In Francis Darwin (ed.)

*More Letters of Charles Darwin* (Volume 1)

Letter 222, Darwin to Hooker, July 28, 1868 (p. 305)

D. Appleton & Company. New York, New York, USA. 1903

**Davy, Sir Humphry** 1778–1829

English chemist

To explain nature and the laws instituted by the Author of nature and to apply the phenomena presented in the external world to useful purposes are the great ends of physical investigation, and these ends can only be obtained by the exertion of all the faculties of the mind. And the imagination, the memory, and the reason are

perhaps equally essential to the development of great and important truths.

Lecture Four (p. 58)

The University of Wisconsin Press. Madison, Wisconsin, USA. 1980

**de Fontenelle, Bernard le Bovier** 1657–1757

French author

Truth enters so naturally into the mind, that when we learn anything for the first time, it appears as if we only remembered the thing learned, or exerted the faculty of our memory.

*Conversations on the Plurality of Worlds*

The Second Evening (p. 70)

Printed for Peter Wilson. Dublin, Ireland. 1761

**Descartes, René** 1596–1650

French philosopher, scientist, and mathematician

...in order to seek truth, it is necessary once in the course of our life, to doubt, as far as possible, of all things.

As we were at one time children, and as we formed various judgments regarding the objects presented to our senses, when as yet we had not the entire use of our reason, numerous prejudices stand in the way of our arriving at the knowledge of truth; and of these it seems impossible for us to rid ourselves, unless we undertake, once in our lifetime, to doubt of all those things in which we may discover even the smallest suspicion of uncertainty.

Translated by John Veitch

*The Principles of Philosophy*

Section I

Publisher undetermined

...we must believe that all the sciences are so interconnected, that it is much easier to study them all together than to isolate one from all the others. If, therefore, anyone wishes to search out the truth of things in serious earnest, he ought not to select one special science; for all the sciences are cojoined with each other and interdependent....

In *Great Books of the Western World* (Volume 31)

*Rules for the Direction of the Mind*

Rule 1 (p. 1)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Dewey, John** 1859–1952

American philosopher and educator

There is but one sure road of access to truth – the road of cooperative inquiry operating by means of observation, experiment, record, and controlled reflection.

*Common Faith*

Chapter II (p. 32)

Yale University Press. New Haven, Connecticut, USA. 1934

**Drake, Daniel** 1785–1852  
American physician

The love of pleasure and the love of science may coexist, but cannot be indulged at the same time; though in fact they are seldom united. A student should draw his pleasures from the discovery of truth, and find his amusements in the beauties and wonders of nature. He should seek for recreation not debauchery

*Physician to the West* (p. 298)

University Press of Kentucky. Lexington, Kentucky, USA. 1970

**Dumas, Jean Baptiste-Andre** 1800–84  
French biochemist

Truth is so beautiful that it deserves every effort a man can bestow to attain it; it is so fruitful that it carries along with it its own recompense. By keeping the end in view, without occupying ourselves with particulars, we find the ordinary details of prosperity and riches fall into their proper places.

In Faraday Lectures

*Lectures Delivered Before the Chemical Society*

The First Faraday Lecture (p. 3)

The Chemical Society. London, England. 1928

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

An addition to knowledge is won at the expense of an addition to ignorance. It is hard to empty the well of Truth with a leaky bucket.

*The Nature of the Physical World*

Chapter X (p. 229)

The Macmillan Company. New York, New York, USA. 1930

Accidental truth of a conclusion is no compensation for erroneous deduction.

*Space, Time and Gravitation: An Outline of the General Relativity Theory*

Chapter I (p. 29)

At The University Press. Cambridge, England. 1921

We seek the truth; but if some voice told us that a few years more would see the end of our journey, that the clouds of uncertainty would be dispersed, and that we should perceive the whole truth about the physical universe, the tidings would be by no means joyful. In science as in religion the truth shines ahead as a beacon showing us the path; we do not ask to attain it; it is better far that we be permitted to seek.

*Science and the Unseen World*

Lecture II (p. 23)

The Macmillan Co. New York, New York, USA. 1929

**Einstein, Albert** 1879–1955  
German-born physicist

Truth is what stands the test of experience.

In Philipp Frank

*Relativity – A Richer Truth*

The Laws of Science and the Laws of Ethics (p. 10)

Jonathan Cape. London, England. 1951

The search for truth is more precious than its possession.  
*The American Mathematical Monthly*, Volume 100, Number 3, March, 1993 (p. 254)

As for the search for truth, I know from my own painful searching, with its many blind alleys, how hard it is to take a reliable step, be it ever so small, towards the understanding of that which is truly significant.

In Helen Dukas and Banesh Hoffman

*Albert Einstein: The Human Side: New Glimpses from His Archives*

Letter dated 13 February, 1934 (p. 18)

Princeton University Press. Princeton, New Jersey, USA. 1979

It is the most beautiful reward for one who has striven his whole life to grasp some little bit of truth if he sees that other men have real understanding of and pleasure with his work.

In Helen Dukas and Banesh Hoffman

*Albert Einstein: The Human Side: New Glimpses from His Archives*

Letter dated 9 December, 1952 (p. 29)

Princeton University Press. Princeton, New Jersey, USA. 1979

I want to know how God created this world. I am not interested in this or that phenomenon, in the spectrum of this or that element. I want to know His thoughts, the rest are details.

In Ronald W. Clark

*Einstein: The Life and Times*

Part One, Chapter 1 (p. 19)

The World Publishing Company. New York, New York, USA. 1971

But the years of searching in the dark for a truth that one feels, but cannot express; the intense desire and the alternations of confidence and misgiving, until one breaks through to clarity and understanding, are only known to him who has himself experienced them.

In Ronald W. Clark

*Einstein: The Life and Times*

Part Five, Chapter 21 (p. 590)

The World Publishing Company. New York, New York, USA. 1971

**Eliot, George (Mary Ann Evans Cross)** 1819–80  
English novelist

Approximate truth is the only truth attainable, but at least one must strive for that, and not wade off into arbitrary falsehood.

*The George Eliot Letters* (Volume 4) (p. 43)

Yale University Press. New Haven, Connecticut, USA. 1954–1978

**Errera, Leo** 1858–1905  
Belgian botanist

Truth is on a curve whose asymptote our spirit follows eternally.

In J.A. Thomson

Chapter V (p. 125)

Williams & Norgate Ltd. London, England. 1916

**Esquivel, Laura** 1951?–  
Mexican novelist

Anything could be true or false, depending on whether one believed it.

*Like Water for Chocolate*

July (p. 127)

Doubleday & Company, Inc. New York, New York, USA. 1989

**Everett, Edward** 1794–1865  
American statesman, educator, and orator

In the pure mathematics we contemplate absolute truths, which existed in the Divine Mind before the morning stars sang together, and which will continue to exist there, when the last of their radiant host shall have fallen from heaven.

In E.T. Bell

*Mathematics: Queen and Servant of Science*

Mathematical Truth (p. 21)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1951

There are truths and groups of truths, which seem to bind all creation, – the flower of the field, the stars of the sky, and the marvellous frame of man in bonds of strange analogy, – of which it lifts the soul from earth to heaven to catch a glimpse, as of a golden thread woven in the great loom of Providence through the mystic tissue of the Universe.

*Inauguration of Washington University at Saint Louis, Missouri. April 23, 1857*

An Address (p. 76)

Little, Brown & Co. Boston, Massachusetts, USA. 1857

**Fabre, Jean-Henri** 1823–1915  
French entomologist and author

Amid the ruins that surround me, one strip of wall remains standing, immovable upon its solid base: my passion for scientific truth.

Translated by Alexander Teixeira de Mattos

*The Life of the Fly*

Chapter I (p. 12)

Dodd, Mead & Co. New York, New York, USA. 1925

... what rouses my enthusiasm is the process that sets the truth before us. We start from a brilliantly lighted spot and gradually get deeper and deeper in the darkness, which, in its turn, becomes self-illuminated by kindling new lights for a higher ascent. This progressive march of the known toward the unknown, this conscientious lantern lighting what follows by the rays of what comes before: that was my real business.

Translated by Alexander Teixeira de Mattos

*The Life of the Fly*

Chapter XII (p. 288)

Dodd, Mead & Co. New York, New York, USA. 1925

**Feynman, Richard P.** 1918–88  
American theoretical physicist

We've learned from experience that the truth will come out. Other experimenters will repeat your experiment and

find out whether you were wrong or right. Nature's phenomena will agree or they'll disagree with your theory. And, although you may gain some temporary fame and excitement, you will not gain a good reputation as a scientist if you haven't tried to be very careful in this kind of work. And it's this type of integrity, this kind of care not to fool yourself, that is missing to a large extent in much of the research in cargo cult science.

*Surely You're Joking, Mr. Feynman!: Adventures of a Curious Character* (Caltech commencement address, 1974) *Cargo Cult Science* (p. 342)  
W.W. Norton & Company, Inc. New York, New York, USA. 1985

It is possible to know when you are right way ahead of checking all the consequences. You can recognize truth by its beauty and simplicity.

*The Character of Physical Law*

Chapter 7 (p. 171)

BBC. London, England. 1965

...there is nothing more exciting than the truth, the pay dirt of the scientist, discovered by his painstaking efforts.

*The Meaning of It All*

Chapter I (pp. 12–13)

Perseus Books. Reading, Massachusetts, USA. 1998

**Forbes, David** 1809–68  
Scottish physicist

However long truth may remain dormant, it must eventually assert itself in science as in all other matters ...

*The Depths of the Sea*

*Nature*, Volume 1, November 25, 1869 (p. 101)

**Forbes, Edward** 1815–54  
English naturalist

The highest aim of man is the discovery of the Truth; the search after Truth is his noblest occupation. It is more; it is his duty. Every step onwards we take in science and learning, tells us how nearly all sciences are connected. There is a deep philosophy in that connection yet undeveloped; a philosophy of the utmost moment to man: let us seek it out.

In George Wilson and Archibald Geikie

*Memoir of Edward Forbes* (p. 195)

Macmillan & Co Ltd. London, England. 1861

**Foster, Sir Michael** 1836–1907  
English physiologist

...the truthfulness of Nature is not wholly the same as that which man sometimes calls truthfulness. It is far more imperious, far more exacting. Man, unscientific man, is often content with 'the near!' and 'the almost.' Nature never is.

Address by the President of the British Association for the Advancement of Science

*Science*, N.S. Volume X, Number 249, October 6, 1899 (p. 476)

...the seeker after truth must himself be truthful, truthful with the truthfulness of Nature. For the truthfulness of Nature is not wholly the same as that which man sometimes calls truthfulness. It is far more imperious, far more

exacting. Man, unscientific man, is often content with 'the nearly 'and' the almost.' Nature never is.

*Report of the Sixty-ninth Meeting of the British Association for the Advancement of Science*

President's Address (p. 16)

John Murray. London, England. 1900

### **Fourcroy, Antoine-François** 1755–1809

French chemist

The general truths in any science are continually multiplied, as its perfection advances, and its means of investigation are improved. Such has been the fortune of chemistry.

Translated by R. Heron

*Elements of Chemistry and Natural History* (Volume 1)

Advertisement (p. 1)

Printed for G. Mudie & Son. Edinburgh, Scotland. 1796

### **Frederick the Great** 1712–86

German king

The greatest and noblest pleasure which men can have in this world is to discover new truths; and the next is to shake off old prejudices.

In Lloyd William Taylor

*Physics: The Pioneer Science* (Volume 2)

Chapter 47 (p. 729)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1941

### **Galilei, Galileo** 1564–1642

Italian physicist and astronomer

Two truths cannot contradict one another.

Translated by Stillman Drake

*Discoveries and Opinions of Galileo*

Letter to Madame Christina of Lorraine (p. 186)

Doubleday & Company, Inc. New York, New York, USA. 1957

### **Galilei, Vincenzo** 1520–1591

Father of Galileo Galilei

It appears to me that they who in proof of any assertion rely simply on the weight of authority, without adducing any argument in support of it, act very absurdly. I, on the contrary, wish to be allowed freely to question and freely to answer you without any sort of adulation, as well becomes those who are in search of truth.

In John Joseph Fahie

*Galileo*

Chapter I (p. 3)

John Murray. London, England. 1903

### **Gauss, Johann Carl Friedrich** 1777–1855

German mathematician, physicist, and astronomer

In the Theory of Numbers it happens rather frequently that, by some unexpected luck, the most elegant new truths spring up by induction.

In G. Polya

*Induction and Analogy in Mathematics* (Volume 1)

Chapter IV (p. 59)

Princeton University Press. Princeton, New Jersey, USA. 1954

### **Gore, George** 1826–1909

English electrochemist

The deepest truths require still deeper truths to explain them.

*The Art of Scientific Discovery*

Chapter III (p. 26)

Longmans, Green & Company. London, England. 1878

We cannot intelligently love that which we cannot form an idea of, nor discover that which we cannot discriminate when it is present; and if we cannot discriminate truth, we cannot intelligently love it, nor can we discover it.

*The Art of Scientific Discovery*

Part II, Chapter 24 (p. 290)

Longmans, Green & Co. London, England. 1878

Any man who wishes to discover new truth must be content usually to confine his search to one subject at a time. The selection of a good subject of examination is a difficult problem; the difficulty usually arises not from scarcity of subjects, but from the impracticability of determining which is the most suitable one. An investigator cannot, to any great degree, pick and choose discoveries, but must, to a large extent, be content to accept those he can find.

*The Art of Scientific Discovery*

Part IV, Chapter XXXVIII (p. 372)

Longmans, Green & Co. London, England. 1878

### **Gould, Stephen Jay** 1941–2002

American paleontologist and evolutionary biologist

I am a strong advocate of the general argument that "truth" as preached by scientists often turns out to be no more than prejudice inspired by prevailing social and political beliefs. I have devoted several columns to this theme because I believe that it helps to 'demystify' the practice of science by showing its similarity to all creative activity.

In Laurie R. Godfrey

*Scientists Confront Creationism*

Darwin's Untimely Burial – Again!

W.W. Norton & Co. New York, New York, USA. 1984

### **Gray, George W.**

American free lance science writer

No truth is sacrosanct. No belief is too generally accepted, too well established by experiment, to escape the challenge of doubt. And no doubt is too radical to receive a hearing if it is seriously proposed.

*The Riddle of Our Reddening Skies*

*Harper's Monthly Magazine*, July 1937 (p. 169)

### **Gregory, Sir Richard Arman** 1864–1952

British science writer and journalist

In the pursuit of truth the man of science spends his days; and for the defense of truth he is prepared to stand against the world.

*Discovery; or, The Spirit and Service of Science*  
Chapter II (p. 24)  
Macmillan & Company Ltd. London, England. 1918

A truthful mind is necessary for the discovery of truth in Nature.

*Discovery; or, The Spirit and Service of Science*  
Chapter II (p. 25)  
Macmillan & Company Ltd. London, England. 1918

The grand, and indeed only, character of truth is its capability of enduring the test of human experience, and coming unchanged out of every possible form of fair discussion.

*Discovery, Or, The Spirit and Service of Science*  
Chapter VII (p. 166)  
Macmillan & Co Ltd. London, England. 1916

**Haeckel, Ernst Heinrich Philipp August** 1834–1919  
German biologist and philosopher

Without prejudice and without fear, philosophy would tear the mantle from “the veiled statue of Sais,” and attain a full vision of the truth.

*The Wonders of Life: A Popular Study of Biological Philosophy*  
Chapter I (p. 1)  
Harper & Brothers Publishers. New York, New York, USA. 1905

**Hall, Asaph** 1829–1907  
American astronomer

When men are striving for the discovery of truth in its various manifestations, they learn that it is by correcting the mistakes of preceding investigators that progress is made, and they have charity for criticism. Hence persecution for difference of opinion becomes an absurdity. The labors of scientific men are forming a great body of doctrine that can be appealed to with confidence in all countries. Such labors bring people together, and tend to break down national barriers and restrictions. The scientific creed is constantly growing and expanding, and we have no fears, but rejoice at its growth. We need no consistory of bishops, nor synod of ministers, to tell us what to believe. Everything is open to investigation and criticism.

*Proceedings of the American Association for the Advancement of Science*  
The Science of Astronomy  
1903 (p. 322)

**Halmos, Paul R.** 1916–2006  
Hungarian-born American mathematician

The joy of suddenly learning a former secret and the joy of suddenly discovering a hitherto unknown truth are the same to me – both have the flash of enlightenment, the almost incredibly enhanced vision, and the ecstasy and euphoria of released tension.

*I Want to Be a Mathematician*  
Chapter 1 (p. 3)  
Springer-Verlag. New York, New York, USA. 1985

**Hamerton, Philip Gilbert** 1834–94  
English artist and art critic

The deepest truths require still deeper truths to explain them.

Part I, Chapter III (p. 26)  
Little, Brown & Co. Boston, Massachusetts, USA. 1901

**Heaviside, Oliver** 1850–1925  
English electrical engineer, mathematician, and physicist

We do not dwell in the Palace of Truth. But, as was mentioned to me not long since, “There is a time coming when all things shall be found out.” I am not so sanguine myself, believing that the well in which Truth is said to reside is really a bottomless pit.

*Electromagnetic Theory*  
Chapter I, Volume 1 (p. 1)  
“The Electrician” printing & publishing company. London, England. 1894–1912

**Heinlein, Robert A.** 1907–88  
American science fiction writer

The hardest part about gaining any new idea is sweeping out the false idea occupying that niche. As long as that niche is occupied, evidence and proof and logical demonstration get nowhere. But once the niche is emptied of the wrong idea that has been filling it – once you can honestly say, “I don’t know,” then it becomes possible to get at the truth.

*The Cat Who Walks Through Walls: A Comedy of Manners*  
Chapter XVIII (p. 230)  
G.P. Putnam’s Sons. New York, New York, USA. 1985

**Herschel, Sir John Frederick William** 1792–1871  
English astronomer and chemist

It is only when we are wandering and lost in the mazes of particulars, or entangled in fruitless attempts to work our way downwards in the thorny paths of applications, to which our reasoning powers are incompetent, that nature appears complicated: – the moment we contemplate it as it is, and attain a position from which we can take a commanding view, though but of a small part of its plan, we never fail to recognise that sublime simplicity on which the mind rests satisfied that it has attained the truth.

*The Cabinet of Natural Philosophy*  
Part III, Chapter VI, Section 393 (pp. 360–361)  
Longman, Rees, Orme, Brown & Green. London, England. 1831

**Holbach, Paul Henri Thiry** 1723–89  
French philosopher

Let us then discover it [truth] to mortals – let us exhibit its charms – let us shed its effulgence over the darkened road; it is the only mode by which man can become disgusted with that disgraceful superstition which leads him into error, and which but too often usurps his homage by treacherously covering itself with the mask of truth – its

lustre can wound none but those enemies to the human race whose power is bottomed solely on the ignorance, on the darkness in which they have in almost every climate contrived to involve the mind of man.

Translated by H.D. Robinson

*The System of Nature, Or, Laws of the Moral and Physical World* (Volume 1)

Author's Preface (p. 3)

J.P. Mendum. Boston, Massachusetts, USA. 1889

Truth is invariable – it is requisite to man – it can never harm him – his very necessities, sooner or later, make him sensible of this; oblige him to acknowledge it.

Translated by H.D. Robinson

*The System of Nature, Or, Laws of the Moral and Physical World* (Volume 1)

Author's Preface (p. 3)

J.P. Mendum. Boston, Massachusetts, USA. 1889

### **Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

Every probability – and most of our common, working beliefs are probabilities – is provided with buffers at both ends, which break the force of opposite opinions clashing against it; but scientific certainty has no spring in it, no courtesy, no possibility of yielding. All this must react on the minds which handle these forms of truth.

*The Autocrat of the Breakfast-Table*

Chapter III (p. 56)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1891

### **Huxley, Aldous** 1894–1963

English writer and critic

Science is the only way we have of shoving truth down the reluctant throat.

*Literature and Science*

Chapter 27 (p. 79)

Harper & Row, Publishers. New York, New York, USA. 1963

### **Huxley, Thomas Henry** 1825–95

English biologist

Ecclesiasticism in science is only unfaithfulness to truth.

*Collected Essays* (Volume 2)

*Darwiniana*

Mr. Darwin's Critics (p. 149)

Macmillan & Company Ltd. London, England. 1904

The scientific spirit is of more value than its products, and irrationally held truths may be more harmful than reasoned errors.

*Collected Essays* (Volume 2)

**Levy, Hyman** 1889–1975  
British mathematician and social activist

Truth is a dangerous word to incorporate within the vocabulary of science. It drags with it, in its train, ideas of permanence and immutability that are foreign to the spirit of a study that is essentially an historically changing movement, and that relies so much on practical examination within restricted circumstances....

*The Universe of Science*  
Chapter V (p. 206)  
The Century Company. New York, New York, USA. 1933

Truth is an absolute notion that science, which is not concerned with any such permanency, had better leave alone.

*The Universe of Science*

Chapter V (p. 207)

The Century Company. New York, New York, USA. 1933

**Lewis, Gilbert Newton** 1875–1946

American chemist

The theory that there is an ultimate truth, although very generally held by mankind, does not seem useful to science except in the sense of a horizon toward which we may proceed, rather than a point which may be reached.

*The Anatomy of Science*

Chapter I (p. 7)

Yale University Press. New Haven, Connecticut, USA. 1926

**Libby, Walter** 1867–1955

American science historian

The untrained mind, reliant on so-called facts and distrustful of mere theory, inclines to think of truth as fixed rather than progressive, static rather than dynamic. It longs for certainty and repose, and has little patience for any authority that does not claim absolute infallibility.

*An Introduction to the History of Science*

Chapter XVIII (p. 245)

Houghton Mifflin & Co. New York, New York, USA. 1917

**Locke, John** 1632–1704

English philosopher and political theorist

...truth, like gold, is not the less so for being newly brought out of the mine. It is trial and examination must give it price, and not any antique fashion: and though it be not yet current by the public stamp, yet it may, for all that, be as old as nature, and is certainly not the less genuine.

*An Essay Concerning Human Understanding*

Dedication (p. iii)

Printed for Thomas Tegg. London, England. 1841

Truth scarcely ever yet carried it by vote any where at its first appearance; new opinions are always suspected, and usually opposed, without any other reason, but because they are not already common.

*An Essay Concerning Human Understanding*

Dedication (p. iii)

Printed for Thomas Tegg. London, England. 1841

**Lodge, Sir Oliver** 1851–1940

English physicist

The direct aim of Science is Truth, and the temptation of its devotees is to concentrate too narrowly on this one aim and lose sight of the wealth of existence which gives all the meaning and value to bare fact, thus gaining but a purblind view of the universe, in spite of a large accumulation of knowledge which is accurate as far as it goes, but so incomplete as regards the totality of things as to be liable to mislead.

In J. Arthur Thomson

*The Outline of Science* (Volume 4)

Chapter XXIV (p. 1077)

G.P. Putnam's Sons. New York, New York, USA. 1937

**Mach, Ernst** 1838–1916

Austrian physicist and philosopher

Truth suffers herself to be won. She flirts at times disgracefully. Above all, she is determined to be merited, and has naught but contempt for the man who will win her too quickly.

*Popular Scientific Lectures*

On the Causes of Harmony (p. 45)

The Open Court Publishing Company. Chicago, Illinois, USA. 1898

The inquirer seeks the truth. I do not know if the truth seeks the inquirer. But were that so, then the history of science would vividly remind us of that classical rendezvous, so often immortalized by painters and poets. A high garden wall. At the right a youth, at the left a maiden. The youth sighs, the maiden sighs! Both wait. Neither dreams how near the other is.

*Popular Scientific Lectures*

On the Causes of Harmony (p. 45)

The Open Court Publishing Company. Chicago, Illinois, USA. 1898

Only when Truth is in exceptionally good spirits does she bestow upon her wooer a glance of encouragement. For, thinks Truth, if I do not do something, in the end the fellow will not seek me at all.

*Popular Scientific Lectures*

On the Causes of Harmony (pp. 45–46)

The Open Court Publishing Company. Chicago, Illinois, USA. 1898

**Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

The truth is not in nature waiting to declare itself, and we cannot know a priori which observations are relevant and which are not; every discovery, every enlargement of the understanding begins as an imaginative preconception of what the truth might be. This imaginative preconception – a “hypothesis” – arises by a process as easy or as difficult to understand as any other creative act of mind; it is a brainwave, an inspired guess, the product of a blaze of insight. It comes, anyway, from within and cannot be arrived at by the exercise of any known calculus of discovery.

*Advice to a Young Scientist*

Chapter 11 (p. 84)

Basic Books, Inc. New York, New York, USA. 1979

**Millikan, Robert Andrews** 1868–1953

American physicist

...in science, truth once discovered always remains truth.

*Science and the New Civilization*

Chapter III (p. 76)

Charles Scribner's Sons. New York, New York, USA. 1930

**Morehouse, George Wilkinson** 1840–?  
American naturalist

The more difficult and important the question, the broader, freer, and more careful and thorough should be our study. The honest seeker after the truth gives all sides a hearing, and welcomes every addition to his mental equipment.

*The Wilderness of Worlds*

Preface (p. 3)

Peter Eckler, Publisher. New York, New York, USA. 1898

Truth courts light; but error shuns and deprecates impartial inquiry. The more difficult and important the question, the broader, freer, and more careful and thorough should be our study. The honest seeker after the truth gives all sides a hearing, and welcomes every addition to his mental equipment.

*The Wilderness of Worlds*

Preface (p. 7)

Peter Eckler, Publisher. New York, New York, USA. 1898

...some men, who, actuated by the love of truth for its own sake, are forever prospecting along the borders of the unknown.

*The Wilderness of Worlds*

Chapter I (p. 11)

Peter Eckler, Publisher. New York, New York, USA. 1898

**Moulton, Forest Ray** 1872–1952  
American astronomer

Many a chemist, physicist, biologist, psychologist, and historian, as well as monk, has had as his first and only love The Truth, and as it his greatest reward the approval of his own conscience.

In H.H. Newman (ed.)

*The Nature of the World and of Man*

Astronomy (p. 2)

The University of Chicago Press. Chicago, Illinois, USA. 1927

Science does not bow down before precedent nor custom nor dogma; it exalts the truth and honestly seeks it.

In H.H. Newman (ed.)

*The Nature of the World and of Man*

Astronomy (p. 4)

The University of Chicago Press. Chicago, Illinois, USA. 1927

**Newton, Sir Isaac** 1642–1727  
English physicist and mathematician

Truth is the offspring of silence and unbroken meditation.

Attributed to Newton

Source unknown

I do not know what I may appear to the world, but to myself I seem to have been only like a boy playing on the sea-shore, and diverting myself in now and then finding a smoother pebble or a prettier shell than ordinary, whilst the great ocean of truth lay all undiscovered before me.

In David Brewster

*Memoirs of the Life, Writings and Discoveries of Sir Isaac Newton*

(Volume 2)

Chapter 27 (p. 407)

Hamilton, Adams & Company. London, England. 1855

**Nietzsche, Friedrich Wilhelm** 1844–1900  
German philosopher

It is good to express a thing twice right at the outset and so to give it a right foot and also a left foot. Truth can surely stand on one leg, but with two, it will be able to walk and get around.

*The Wanderer and His Shadow*

Aphorism 13

1880

**Orlans, Harold** 1912–  
American education researcher

A profession which seeks the truth must consider whether silence about motives and restraint in expression serve, on balance, to enhance or suppress it.

Neutrality and Advocacy in Policy Research

*Policy Sciences*, Volume 6, 1975

**Osler, Sir William** 1849–1919  
Canadian physician and professor of medicine

A distressing feature in the life which you are about to enter, a feature which will press hardly upon the finer spirits among you and ruffle their equanimity, is the uncertainty which pertains not alone to our science and art, but to the very hopes and fears which make us men. In seeking absolute truth we aim at the unattainable, and must be content with finding broken portions.

*Aequanimitas: With Other Addresses to Medical Students, Nurses and Practitioners of Medicine*

Chapter I (p. 7)

P. Blackiston's Sons & Co. Philadelphia, Pennsylvania, USA. 1905

Truth has been well called the daughter of Time, and even in anatomy, which is a science in a state of fact, the point of view changes with successive generations.

*Aequanimitas, with Other Addresses to Medical Students, Nurses, and Practitioners of Medicine*

The Leaven of Science (p. 84)

The Blakiston Company. Philadelphia, Pennsylvania, USA. 1932

The truth is the best you can get with your best endeavor, the best that the best men accept – with this you must learn to be satisfied, retaining at the same time with due humility an earnest desire for an ever larger portion.

*Selected Writings of Sir William Osler*

Chapter 11 (p. 172)

Oress. London, England. 1951

**Ostwald, Carl Wilhelm Wolfgang** 1853–1932  
Latvian-born German chemist

No matter where an unprejudiced search after truth may lead an investigator; if his work is that of an honest scientist it must and will finally turn out to be for the benefit of mankind.

Translated by Thomas Seltzer

*Individuality and Immortality*

Individuality and Immortality (p. 3)

Houghton, Mifflin & Co. Boston, Massachusetts, USA. 1906

**Pagels, Heinz R.** 1939–88  
American physicist and science writer

The only touchstone for empirical truth is experiment and observation.

*Perfect Symmetry: The Search for the Beginning of Time*  
Part Four, Chapter 1 (p. 355)  
Simon & Schuster. New York, New York, USA. 1985

**Pascal, Blaise** 1623–62  
French mathematician and physicist

We may have three main objects in the study of truth: first, to find it when we are seeking it; second, to demonstrate it after we have found it; third, to distinguish it from error by examining it.

In *Great Books of the Western World* (Volume 33)  
*Scientific Treatises*  
On Geometrical Demonstration (p. 430)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Pasteur, Louis** 1822–95  
French chemist

Truth, Sir, is a great coquette. She will not be won by too much passion. Indifference is often more successful with her. She escapes when apparently caught, but she yields readily if patiently waited for. She reveals herself when one is about to abandon the hope of possessing her; but she is inexorable when one affirms her, that is when loves her with too much fervor.

In Rene Dubos  
*Louis Pasteur: Free Lance of Science*  
Chapter XIV (p. 389)  
Little, Brown & Company. Boston, Massachusetts, USA. 1950

If I have sometimes disturbed the peace of our Academic meetings by somewhat too lively discussions, it is because I have passionately defended the truth.

In Percy Frankland  
*Pasteur*  
Chapter XVI (p. 216)  
Cassell & Co., Ltd. London, England. 1901

**Peirce, Charles Sanders** 1839–1914  
American scientist, logician, and philosopher

...truths, on the average, have a greater tendency to get believed than falsities have. Were it otherwise, considering that there are myriads of false hypotheses to account for any given phenomenon, against one sole true one (or if you will have it so, against every true one), the first step towards genuine knowledge must have been next door to a miracle.

*The Collected Works of Charles Sanders Peirce* (Volume 5)  
*Pragmatism and Pragmaticism* (p. 431)

**Penrose, Roger** 1931–  
English mathematical physicist

Scientists do not invent truth – they discover it.  
In John Horgan

Quantum Consciousness  
*Scientific American*, Volume 261, Number 5, November, 1989 (p. 32)

**Phillips, J.**  
No biographical data available

Ours is no coasting voyage by the sunny shores of some well-havened bay; we steer across the undiscovered oceans of truth, with compasses in need of correction, under the canopy of cloud and darkness which involves the origin of things.

Presidential address  
*Quarterly Journal of the Geological Society*, Volume 15, 1859 (p. lxi)

**Pirsig, Robert M.** 1928–  
American writer

It was a puzzling thing. The truth knocks on the door and you say, “Go away, I’m looking for the truth,” and so it goes away. Puzzling.

*Zen and the Art of Motorcycle Maintenance: An Autobiography* (p. 5)  
Bantam Books. New York, New York, USA. 1984

**Planck, Max** 1858–1947  
German physicist

Conscientiousness and truth are as necessary in research in pure science as in practical life.

*A Survey of Physical Theory*  
Dynamical Laws and Statistical Laws  
Methuen & Company Ltd. London, England. 1925

If we seek a foundation for the edifice of exact science which is capable of withstanding every criticism, we must first of all tone down our demands considerably. We must not expect to succeed at a stroke, by one single lucky idea, in hitting on an axiom of universal validity, to permit us to develop, with exact methods, a complete scientific structure. We must be satisfied initially to discover some form of truth which no skepticism can attack. In other words, we must set our sights not on what we would like to know, but first on what we do not know with certainty.

*Scientific Autobiography and Other Papers*  
The Meaning and Limits of Exact Science, Part I (p. 84)  
Philosophical Library. New York, New York, USA. 1949

...“to believe” means “to recognize as a truth,” and the knowledge of nature, continually advancing on incontestably safe tracks, has made it utterly impossible for a person possessing some training in natural science to recognize as founded on truth the many reports of extraordinary occurrences contradicting the laws of nature, of miracles which are still commonly regarded as essential supports and confirmations of religious doctrines, and which formerly used to be accepted as facts pure and simple, without doubt or criticism.

*Scientific Autobiography and Other Papers*  
Religion and Natural Science, Part I (p. 154)  
Philosophical Library. New York, New York, USA. 1949

It is not the possession of truth, but the success which attends the seeking after it, that enriches the seeker and brings happiness to him.

In H.A. Ross

*Elihu Root Lectures of Carnegie Institution of Washington on the Influence of Science and Research on Current Thought*  
The Nature of Progress in Science (p. 14)  
Washington, D.C. 1945

...the whole strenuous intellectual work of an industrious research worker would appear, after all, in vain and hopeless, if he were not occasionally through some striking facts to find that he had, at the end of his all criss-cross journeys, at last accomplished at least one step which was conclusively nearer the truth.

*Nobel Lectures, Physics 1901–1921*

Nobel lecture for award received in 1918 (p. 407)

Elsevier Publishing Company. Amsterdam, Netherlands. 1967

### **Poe, Edgar Allan** 1809–49

American short story writer

Truth is not always in a well. In fact, as regards the more important knowledge, I do believe that she is invariably superficial. The depth lies in the valleys where we seek her, and not upon the mountain-tops where she is found.

*Complete Tales and Poems of Edgar Allan Poe*

The Murders in the Rue Morgue (p. 153)

The Modern Library. New York, New York, USA. 1965

### **Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

The scientist is accustomed to conquer truth only by degrees; for him all certainty should be bought by long hesitations, by perpetually feeling his way. He suspects what comes too easily, and accepts it only after submitting it to numerous and diverse proofs.

In James Byrnie Shaw

Henri Poincaré as an Investigator

*The Popular Science Monthly*, Volume 82, Number 3, March, 1913 (p. 211)

The search for truth should be the goal of our activities; it is the sole end worthy of them. Doubtless we should first bend our efforts to assuage human suffering, but why? Not to suffer is a negative ideal more surely attained by the annihilation of the world. If we wish more and more to free man from material cares, it is that he may be able to employ the liberty obtained in the study and contemplation of truth.

Translated by George Bruce Halsted

*The Value of Science*

Introduction (p. 11)

The Science Press. New York, New York, USA. 1907

...sometimes truth frightens us. And in fact we know that it is sometimes deceptive, that it is a phantom never showing itself for a moment except to ceaselessly flee, that it must be pursued further and ever further without ever being attained.

Translated by George Bruce Halsted

*The Value of Science*

Introduction (p. 11)

The Science Press. New York, New York, USA. 1907

...truth should not be feared, for it alone is beautiful.

*The Value of Science*

Introduction (p. 11)

The Science Press. New York, New York, USA. 1907

...we know that it [truth] is sometimes deceptive, that it is a phantom never showing itself for a moment except to ceaselessly flee, that it must be pursued further find ever further without ever being attained.

*The Value of Science*

*Popular Science Monthly*, Volume 69, Number 3, September, 1906 (p. 193)

### **Priestley, Joseph** 1733–1804

English theologian and scientist

When I...compare my last discoveries relating to the constitution of the atmosphere with the first, I see the closest and easiest connexion in the world between them, so as to wonder that I should not have been led immediately from the one to the other. That this was not the case, I attribute to the force of prejudice, which unknown to ourselves, biases not only our judgments, properly so called, but even the perception of our senses: for we may take a maxim so strongly for granted, that the plainest evidence of sense will not entirely change, and often hardly modify, our persuasions; and the more ingenious a man is, the more effectually he is entangled in his errors; ...his ingenuity only helping him to deceive himself, by evading the force of truth.

In F.W. Gibbs

*Joseph Priestley: Adventurer in Science and Champion of Truth*

Chapter 9 (p. 119)

Thomas Nelson & Sons Ltd. London, England. 1965

### **Ramón y Cajal, Santiago** 1852–1934

Spanish neuropathologist

Such supreme joy and satisfaction makes all other pleasures appear as pale sensations and compensates the scientist for the hard, constant, analytical work, like child-birth labor involved in achieving a new truth.

In E.H. Craigie and W.C. Gibson

*The World of Ramón y Cajal With Selections from His Nonscientific Writings* (p. 191)

Charles C. Thomas. La Salle, Indiana, USA. 1968

### **Reichenbach, Hans** 1891–1953

German philosopher of science

He who searches for truth must not appease his urge by giving himself up to the narcotic of belief.

In Ruth Renya

*The Philosophy of Matter in the Atomic Era: A New Approach to the Philosophy of Science* (p. 16)

Asia Publishing House. Bombay, India. 1962

**Renan, Ernest** 1823–92  
French philosopher and Orientalist

Science has no enemies save those who consider truth as useless and making no difference, and those who granting to truth its priceless value profess to get at it by other roads than those of criticism and rational investigation.

*The Future of Science*

Chapter IV (p. 68)

Roberts Brothers. Boston, Massachusetts, USA. 1893

The simplest schoolboy is now familiar with truths for which Archimedes would have sacrificed his life.

In L.I. Ponomarev

*The Quantum Dice* (p. 34)

Institute of Physics Publishing. Bristol, England. 1993

**Rey, Jean** 1583–1645  
French physician and chemist

Behold now this truth, whose brilliance strikes the eye, which I have drawn from the deepest dungeons of obscurity. This it is to which the path has been hitherto inaccessible. This it is which has distressed with toil so many learned men, who, wishing to know it, have striven to clear the difficulties which held it encircled. Cardan, Scaliger, Fachsius, Cxsalpinus, Libavius, have curiously sought it, but never perceived it. Others may be on its quest, but vainly if they fail to follow the road which I first of all have made clear and royal: all others being but thorny footpaths and inextricable byways which lead never to the goal. The labour has been mine; may the profit be to the reader, and to God alone the glory.

*Essays of Jean Rey, Doctor of Medicine*

Conclusion (p. 54)

William F. Clay. Edinburgh, Scotland. 1895

**Richet, Charles** 1850–1935  
French physiologist

Truth, the goddess, the sovereign, the all-powerful, who will freeze with terror those who jeer at her!

Translated by Sir Oliver Lodge

*The Natural History of a Savant*

Chapter II (p. 25)

J.M. Dent & Sons Ltd. London, England. 1927

...if you would discover a new truth, do not seek to know what use will be made of it.

*The Natural History of a Savant*

Chapter XII (p. 133)

J.M. Dent & Sons Ltd. London, England. 1927

Russian soldier and scientist

Science speaks the language of universal truth.

*Encyclopedia of Thoughts*

Aphorisms 961

Ithaca Heritage Books. Ithaca, New York, USA. 1975

**Rousseau, Jean-Jacques** 1712–78  
Swiss-French philosopher

I only know that truth is in the things, and not in my mind which judges of them, and that the less there is of mine in the judgment I form, the surer I am of attaining the truth...

*Emilius* (Volume 2)

The Third Book (p. 21)

Printed for John Nourse and Paul Vaillant. London, England. 1763

**Rowland, Henry Augustus** 1848–1901  
American physicist

The ordinary crude mind has only two compartments, one for truth and one for error; indeed the contents of the two compartments are sadly mixed in most cases: the ideal scientific mind, however, has an infinite number. Each theory or law is in its proper compartment indicating the probability of its truth. As a new fact arrives the scientist changes it from one compartment to another so as, if possible, to always keep it in its proper relation to truth and error.

*The Physical Papers of Henry Augustus Rowland*

The Highest Aims of the Physicist (p. 676)

The Johns Hopkins Press. Baltimore, Maryland, USA. 1902

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

When a man tells you that he knows the exact truth about anything, you are safe in inferring that he is an inexact man.

*The Scientific Outlook*

Characteristics of Scientific Method (p. 65)

George Allen & Unwin Ltd. London, England. 1931

Science thus encourages abandonment of the search for absolute truth, and the substitution of what may be called “technical” truth, which belongs to any theory that can be successfully employed in inventions or in predicting the future. “Technical” truth is a matter of degree: a theory from which more successful inventions and predictions spring is truer than one which gives rise to fewer.

*Religion and Science*

Grounds of Conflict (p. 15)

Henry Holt & Company. New York, New York, USA. 1935

**Sagan, Carl** 1934–96  
American astronomer and science writer

The truth may be puzzling. It may take some work to grapple with. It may be counterintuitive. It may contradict deeply held prejudices. It may not be consonant with what we desperately want to be true. But our preferences do not determine what’s true.

Wonder and Skepticism

*Skeptical Inquirer*, Volume 19, Issue 1, January-February, 1995

We have a method, and that method helps us to reach not absolute truth, only asymptotic approaches to the truth – never there, just closer and closer, always finding vast new oceans of undiscovered possibilities.

Wonder and Skepticism

*Skeptical Inquirer*, Volume 19, Issue 1, January–February, 1995

### Sattler, R.

No biographical data available

Modern philosophy of science has gone far beyond the naive belief that science reveals the truth. Even if it could, we would have no means of proving it. Certainty seems unattainable. All scientific statements remain open to doubt... We cannot reach the absolute at least as far as science is concerned; we have to content ourselves with the relative.

*Biophilosophy*

Chapter 1 (p. 41)

Springer-Verlag, Berlin, Germany. 1986

### Sendivogius, Michael 1566–1636

Polish alchemist and inventor

There is abundance of knowledge, yet but little Truth known. The generality of our knowledge is as Castles in the Air, or groundless Fancies.

Film (1944)

**Vaihinger, Hans** 1852–1933

German philosopher

We have repeatedly insisted...that the boundary between truth and error is not a rigid one, and we were able ultimately to demonstrate that what we generally call truth, namely a conceptual world coinciding with the external world, is merely the most expedient error.

*The Philosophy of "As If"*

Part I, Chapter XXIV (p. 108)

Harcourt, Brace & Company, Inc. New York, New York, USA. 1925

**van Leeuwenhoek, Antony** 1632–1723

Dutch biology researcher and microscope developer

As I aim at nothing but Truth, and so far as in me lieth, to point out Mistakes that may have crept into certain

Matters; I hope that in so doing those I chance to censure will not take it ill: and if they would expose any Errors in my own Discoveries, I'd esteem it an Encouragement toward the Attaining of a nicer Accuracy.

*Antony van Leeuwenhoek and His "Little Animals"*

Envoy: Leeuwenhoek's Place in Protozoology and Bacteriology (p. 387)

John Bale, Sons & Danielsson Ltd. London, England. 1932

**van Dyke, John Charles** 1856–1932

American art historian and critic

...reality is one thing, the appearance quite another thing; but why are not both of them truthful?

*The Desert*

Chapter VII (p. 109)

Charles Scribner's Sons. New York, New York, USA. 1930

**von Ebner-Eschenbach, Marie** 1830–1916

Austrian novelist

The simplest and most familiar truth seems new and wonderful the instant we ourselves experience it for the first time.

Translated by Annis Lee Wister

*Aphorisms*

Number 18

J.B. Lippincott & Co. Philadelphia, Pennsylvania, USA. 1883

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

To a new truth there is nothing more hurtful than an old error.

Translated by Thomas Bailey Saunders

*The Maxims and Reflections of Goethe*

#549 (p. 192)

The Macmillan Co. New York, New York, USA. 1906

**von Hoffman, A. W.**

No biographical data available

Whenever one of your chemical friends, full of enthusiasm, exhibits and explains to you his newly-discovered compound, you will not cool his noble ardour by asking him that most terrible of all questions, "What is its use? Will your compound bleach or dye? Will it shave? May it be used as a substitute for leather?" Let him quietly go on with his work. The dye, the leather, will make their appearance in due time. Let him, I repeat, perform his task. Let him indulge in the pursuit of truth – of truth pure and simple – of truth not for the sake of Mauve – let him pursue truth for the sake of truth.

Quoted in Richard Arman Gregory

*Discovery, Or, The Spirit and Service of Science*

Chapter IX (p. 251)

Macmillan & Co Ltd. London, England. 1916

**von Liebig, Justus** 1803–73

German organic chemist

There is only one path to the truth, crossed by a thousand crooked paths, at each of which credulity stands to point the way. Truth has its rights, which cannot be infringed

with impunity: it has its signs, by which every unprejudiced man recognises it.

*Familiar Letters on Chemistry*

Letter XXIV (p. 320)

Walton & Maberly. London, England. 1859

**Wallace, Alfred Russel** 1823–1913

English humanist, naturalist, and geographer

Truth is born into this world only with pangs and tribulations, and every fresh truth is received unwillingly. To expect the world to receive a new truth, or even an old truth, without challenging it, is to look for one of those miracles which do not occur.

In an interview/obituary by W.B. Northrop

*The Outlook* (New York), Volume 105, 1913 (p. 622)

**Wegener, Alfred** 1880–1930

German climatologist and geophysicist

Scientists still do not appear to understand sufficiently that all earth sciences must contribute evidence toward unveiling the state of our planet in earlier times, and that the truth of the matter can only be reached by combing all this evidence. . . . It is only by combing the information furnished by all the earth sciences that we can hope to determine “truth” here, that is to say, to find the picture that sets out all the known facts in the best arrangement and that therefore has the highest degree of probability.

Translated by John Biram

*The Origin of Continents and Oceans* (4th edition)

Foreword (p. vii)

Dover Publications, Inc. New York, New York, USA. 1966

JACK: ... That, my dear Algy, is the whole truth, pure and simple.

ALGERNON – The truth is rarely pure and never simple.

*The Importance of Being Earnest*

Act I (p. 13 )

Walter H. Baker Company. Boston, Massachusetts, USA. 19—

It is a terrible thing for a man to find out suddenly that all his life he has been speaking nothing but the truth.

In John D. Barrow

*The World Within the World* (p. 260)

Clarendon Press. Oxford, England. 1988

**Wilder, Burt Green** 1841–1925

American zoologist, neurologist, and composer

Life is too short to spend in digging for Truth with a long-handled shovel when a trowel will serve the purpose; nor is it becoming that any nation, however wise and great, should ask all the rest to take their intellectual food with chop-sticks of its peculiar pattern.

A Partial Revision of Anatomical Nomenclature

*Science*, March 29, 1881 (p. 124)**Wilkins, Bishop John** 1614–72

Co-founder of the Royal Society

That the strangeness of this opinion is no sufficient reason why it should be rejected, because other certain truths have been formerly esteemed ridiculous, and great absurdities entertained by common consent.

*The Discovery of a World in the Moone* (p. 1)

Printed by E. Griffin. England. 1638

**Wilson, Edward O.** 1929–

American biologist and author

...if history and science have taught us anything, it is that passion and desire are not the same as truth. The human mind evolved to believe in the gods. It did not evolve to believe in biology. Acceptance of the supernatural conveyed a great advantage throughout prehistory, when the brain was evolving. Thus it is in sharp contrast to biology, which was developed as a product of the modern age and is not underwritten by genetic algorithms. The uncomfortable truth is that the two beliefs are not factually compatible. As a result those who hunger for both

intellectual and religious truth will never acquire both in full measure.

*Consilience: The Unity of Knowledge*

Chapter 11 (p. 262)

Alfred A. Knopf. New York, New York, USA. 1998

**Wright, Chauncey** 1830–75

American philosopher of science

We receive the truths of science by compulsion. Nothing but ignorance is able to resist them.

In Edward H. Madden (ed.)

*The Philosophical Writings of Chauncey Wright*

The Philosophy of Herbert Spencer (p. 23)

The Liberal Arts Press. New York, New York, USA. 1958

Truth is eternal, of course, but whether there are some truths which are not facts or some facts which are not truths may be left to the logicians, and other former inhabitants of the fanes of science, discredited dwellers in the temples of truth.

The Evanesence of Facts

*The Popular Science Monthly The Popular Science Monthly*, Volume 86, Number 2, 1915 (p. 182)**Yates, James A.**

## TWILIGHT

### **Flammarion, Camille** 1842–1925

French astronomer and writer

What greater delight can be conceived, on a fine spring evening, at the hour when the crescent moon is shining in the West amid the last glimmer of twilight, than the contemplation of that grand and silent spectacle of the stars stepping forth in sequence in the vast Heavens? All sounds of life die out upon the earth, the last notes of the sleepy birds have sunk away, the Angelus of the church hard by has rung the close of day. But if life is arrested around us, we may seek it in the Heavens. These incandescing orbs are so many points of interrogation suspended above our heads in the inaccessible depths of space.... Gradually they multiply.

Translated by Frances Alice Welby

*Astronomy for Amateurs*

Introduction (p. 1)

D. Appleton & Co. New York, New York, USA. 1915

## TYOPOLOGY

### **Bordes, Francois** 1919–81

French scientist, geologist, and archaeologist

One has to see a great number of implements, classify them, see them again several times, before one acquires a “typological eye.”

On Old and New Concepts of Typology

*Current Anthropology*, Volume 13, Number 1 (p. 141)

### **Brögger, A. W.**

No biographical data available

The proud edifice of chronology built on a foundation of typology is a dangerous mirage.

*Kulturgeschichte des Norwegischen Altertums* (p. 14)

### **Hawksworth, D. L.**

No biographical data available

The Purpose of typification is to fix permanently the application of names of all ranks governed by the Code so as to preclude the possibility of the same name being used in different senses; i.e., for different plants.

*Mycologist's Handbook: An Introduction to the Principles of Taxonomy and Nomenclature in the Fungi and Lichens* (p. 127)

Commonwealth Mycological Institute. Kew, England. 1974

### **Krieger, A.**

In speaking of “types” did the author follow any philosophy of typology, or – as is so common – did he merely devise still another “typology” for his own convenience.

Epistemology and Archaeological Theory, Comment on Lowther

*Current Anthropology*, Volume 3, 1963 (p. 506)

### **Malmer, Mats P.**

No biographical data available

Archaeology is directed at the general, it aims to depict the important features of existence for groups of people in prehistoric times. It is clear, therefore, that typology is the central method in archaeology: the study of types and their associations. This central archaeological concept is the type. If typology were not the central and unifying factor, all other methods and subsidiary sciences would fall hopelessly apart, and archaeology as a science would cease to exist.... There can be no typology without types, no archaeology without typology.

*Acta Archaeologica Lundensis*

*Jungneolithische Studien*, Number 2 (pp. 880–881)

### **Reed, T. D.**

No biographical data available

Towards the end of the last century those strange new gods Typology and Chronology, Athanasian in their

relationship, arose and the archaeologists bowed down and worshipped them.... The younger archaeologist of today is a sad, wise, disillusioned, and almost human being.

## U

### UFO

#### **Bramley, William**

American author

An in-depth study of the UFO phenomenon reveals that it does not offer a happy little romp through the titillating unknown. The UFO appears more and more to be one of the grimmest realities ever confronted by the human race.

*The Gods of Eden*

Avon Books. New York, New York, USA. 1989

#### **Fort, Charles** 1874–1932

American writer

Unknown, luminous things, or beings, have often been seen, sometimes close to this earth, and sometimes high in the sky. It may be that some of them were living things that occasionally come from somewhere else in our existence, but that others were lights on vessels of explorers, or voyagers, from somewhere else.

*Lo!*

Chapter 10 (p. 123)

Claude Kendall. New York, New York, USA. 1931

#### **Sagan, Carl** 1934–96

American astronomer and science writer

UFOs: The reliable cases are uninteresting and the interesting cases are unreliable.

*Other Worlds* (p. 114)

Bantam Books. New York, New York, USA. 1975

After I give lectures – on almost any subject – I am often asked, “Do you believe in UFOs?.” I’m always struck by how the question is phrased, the suggestion that this is a matter of belief and not evidence. I’m almost never asked, “How good is the evidence that UFOs are alien spaceships?”

*The Demon-Haunted World: Science as a Candle in the Dark*

Chapter 3 (p. 82)

Random House, Inc. New York, New York, USA. 1995

### FLYING SAUCERS

#### **Feynman, Richard P.** 1918–88

American theoretical physicist

“Listen, I mean that from my knowledge of the world that I see around me, I think that it is much more likely that the reports of flying saucers are the results of the known irrational characteristics of terrestrial intelligence than of the unknown rational efforts of extra-terrestrial intelligence.” It is just more likely, that is all. It is a good guess. And we always try to guess the most likely explanation,

keeping in the back of the mind the fact that if it does not work we must discuss the other possibilities.

*The Character of Physical Law*

Chapter 7 (p. 166)

BBC. London, England. 1965

### UNATTAINABLE

#### **Hamerton, Philip Gilbert** 1834–94

English artist and art critic

It is useless to search for that which cannot exist.

*The Intellectual Life*

Part I, Chapter II (p. 15)

Little, Brown & Co. Boston, Massachusetts, USA. 1901

### UNCERTAIN

#### **Whately, Richard** 1787–1863

English theologian

Nothing can be in itself uncertain; it is we that are uncertain.

In Elizabeth Jane Whatley

American physicist and science writer

Space looks empty only because this great creation and destruction of all the quanta takes place over such short times and distances.

*The Cosmic Code: Quantum Physics as the Language of Nature*

Part II, Chapter 8 (p. 274)

Simon & Schuster. New York, New York, USA. 1982

**Professor Hubert J. Farnsworth**  
(Fictional character)

Announcer [on loudspeaker]: And it's a dead heat! They're checking the electron microscope. And the winner is... [A man holds up a "3" in a window.]...number 3, in a quantum finish.

Farnsworth: No fair! You changed the outcome by measuring it.

*Futurama*

Luck of the Fryrish

Aired 11 March, 2001

**Vincenti, Walter G.** 1917–

American aeronautical engineer

In the end, decreasing uncertainty in the growth of knowledge in a technology comes, I suggest, mainly from the increase in scope and precision (that is, the decrease in unsureness) in the vicarious means of selection. Just as expanding scope tends, as we saw, to widen the field that can be overtly searched, so also the increase in both scope and precision sharpens the ability to weed out variations

that won't work in the real environment. Blindness in the variations may by the same token even increase – engineers have freedom to be increasingly blind in their trial variations as their means of vicarious selection become more reliable. One sees engineers today, for example, using computer models to explore a much wider field of possibilities than they were able to select from just a decade ago.

*What Engineers Know and How They Know It: Analytical Studies from Aeronautical History*

Chapter 8 (p. 250)

The Johns Hopkins University Press. Baltimore, Maryland, USA. 1990

**Ziman, John M.** 1925–

British physicist

Many philosophers have now sadly come to the conclusion that there is no ultimate procedure which will wring the last drops of uncertainty from what scientists call their knowledge.

*Public Knowledge: An Essay Concerning the Social Dimension of Science*

Chapter 1 (p. 5)

Cambridge University Press. Cambridge, England. 1968

## UNCERTAINTY PRINCIPLE

**Stoppard, Tom** 1937–

Czech-born English playwright

An electron can be here or there at the same moment. You can choose. It can go from here to there without going in between; it can pass through two doors at the same time, or from one door to another by a path which is there for all to see until someone looks, and then the act of looking has made it take a different path.

[An electron's] movements cannot be anticipated because it has no reasons. It defeats surveillance because when you know what it's doing you can't be certain where it is, and when you know where it is you can't be certain what it's doing: Heisenberg's uncertainty principle; and this is not because you're not looking carefully enough, it is because there is no such thing as an electron with a definite position and a definite momentum; you fix one, you lose the other, and it's all done without tricks, it's the real world, it is awake.

*Tom Stoppard: Plays*

Hapgood, Act I, Scene 5 (p. 544)

Faber & Faber. London, England. 1999

## UNCHANGING

**Chown, Marcus**

English writer

Like shipwrecked mariners clinging to the rocks in a wild sea, to make sense of the world we search desperately for things that are unchanging.

*The Quantum Zoo*

Chapter 7 (p. 102)

Joseph Henry Press. Washington, D.C. 2006

## UNDERSTAND

**Adams, Douglas** 1952–2001

English author, comic radio dramatist, and musician

“...we are calling him an example of a Spontaneous Para-Causal Meteorological Phenomenon.” “Can you tell us what that means?” “I’m not altogether sure. Let’s be straight here. If we find something we can’t understand we like to call it something you can’t understand, or indeed pronounce.

*So Long, and Thanks for All the Fish*

Chapter 33 (p. 170)

Harmony Books. New York, New York, USA. 1984

**Adams, John** 1735–1826

26th president of the USA

It has been long, very long, a settled opinion in my mind, that there is now, never will be, and never was but one being who can understand the universe.

Chapter XII (p. 285)

Dodd, Mead & Co. New York, New York, USA. 1925

**Feynman, Richard P.** 1918–88

American theoretical physicist

Trying to understand the way nature works involves a most terrible test of human reasoning ability. It involves subtle trickery, beautiful tightropes of logic on which one has to walk in order not to make a mistake in predicting what will happen.

*The Meaning of It All*

Chapter I (p. 15)

Addison-Wesley. Reading, Massachusetts, USA. 1998

**Flammarion, Camille** 1842–1925

French astronomer and writer

Attempt to understand it! As well might the ant attempt to drink the ocean!

Translated by J. Ellard Gore

*Popular Astronomy: A General Description of the Heavens*

Book III, Chapter III (p. 247)

Chatto &amp; Windus. London, England. 1894

I have ears only for hearing you...and intelligence only for trying to understand you. Speak, then, fearlessly and directly, and design to describe the impressions, unknown to me...

Translated by S.R. Crocker

*Stories of Infinity*

First Story (p. 6)

Robert Brothers. Boston, Massachusetts, USA. 1873

**Hooke, Robert** 1635–1703

English physician

...nothing is so well understood or apprehended, as when it is represented under some sensible Form...

In Harry Woolf (ed.)

*The Posthumous Works of Robert Hooke*

Lectures of Light, Section VII (p. 141)

Johnson Reprint Corporation. New York, New York, USA. 1969

**L'Engle, Madeleine** 1918–2007

American writer

... just because we don't understand doesn't mean that the explanation doesn't exist.

*A Wrinkle in Time*

Chapter 3 (p. 46)

Dell Publishing Co. New York, New York, USA. 1962

**Lodge, Sir Oliver** 1851–1940

English physicist

To suppose that we know and understand the universe, to suppose that we have grasped its main outlines, that we realise pretty completely not only what is in it, but the still more stupendous problem of what is not and cannot be in it...

*Man and the Universe*

Section III, Chapter IX (p. 198)

Methuen &amp; Co. London, England. 1908

**Mivart, St. George Jackson** 1827–1900

English biologist

To know anything whatever, is to know that it is distinct from something else.

*The Groundwork of Science; A Study of Epistemology*

Chapter II (p. 18)

G.P. Putnam's Sons. New York, New York, USA. 1898

**National Research Council (U.S.)**

To understand how things work is to see how, within environmental constraints and the limitations of wisdom, better to accommodate nature to man and man to nature.

*Physics in Perspective* (Volume 1)

Chapter 2 (p. 14)

National Academy of Sciences. Washington, D.C. 1972

It can be a gigantic step from an understanding of the parts to an understanding of the whole.

*Physics in Perspective* (Volume 1)

Chapter 3 (p. 60)

National Academy of Sciences. Washington, D.C. 1972

**Neumann, John von** 1903–57

Hungarian-American mathematician

A discussion of the nature of any intellectual effort is difficult *per se* – at any rate, more difficult than the mere exercise of that particular intellectual effort. It is harder to understand the mechanism of an airplane, and the theories of the forces which lift and which propel it, than merely to ride in it, to be elevated and transported by it or even to steer it. It is exceptional that one should be able to acquire the understanding of a process without having previously acquired a deep familiarity with running it, with using it, before one has assimilated it in an instinctive and empirical way.

In Raymond George Ayoub

*Musings of the Masters: An Anthology of Mathematical Reflections*

The Mathematician (p. 172)

Mathematical Association of America. Washington, D.C. 2004

**Oppenheimer, James Robert** 1904–67

American theoretical physicist

We ourselves, and with each other by our converse, can create, not an architecture of global scope, but an immense, intricate network of intimacy, illumination, and understanding.

The Growth of Science and the Structure of Society

*Daedalus*, Winter, 1958**Sagan, Carl** 1934–96

American astronomer and author

We go about our daily lives understanding almost nothing of the world. We give little thought to the machinery that generates the sunlight that makes life possible, to the gravity that glues us to an Earth that would otherwise send us spinning off into space, or to the atoms of which we are made and on whose stability we fundamentally depend. Except for children (who don't know enough not to ask the important questions), few of us spend much time wondering why nature is the way it is; where the cosmos came from, or whether it was always here; if time

will one day flow backward and effects precede causes; or whether there are ultimate limits to what humans can know.

In Stephen Hawking  
*A Brief History of Time*  
Introduction (p. ix)  
Bantam Books. New York, New York, USA. 1990

**Tyndall, John** 1820–93  
Irish-born English physicist

Man never has been and he never will be satisfied with the operations and products of the understanding alone; hence physical science cannot cover all the demands of his nature.

*Fragments of Science: A Series of Detached Essays, Addresses, and Reviews* (Volume 2)  
Chapter 9 (p. 141)  
D. Appleton & Co. New York, New York, USA. 1896

**Valéry, Paul** 1871–1945  
French poet and critic

A very dangerous state of mind: thinking one understands.  
Translated by Stuart Gilbert

Austrian novelist

They understand but little who understand only what can be explained.

Translated by Annis Lee Wister  
*Aphorisms*  
Number 3  
J.B. Lippincott & Co. Philadelphia, Pennsylvania, USA. 1883

**von Goethe, Johann Wolfgang** 1749–1832  
German poet, novelist, playwright, and natural philosopher

I have often been told, on the occasion of the publication of some important scientific work, that ‘whatever there is true in it is not new, and what is new is not true.’ This means in plain language: ‘we understand what we know, but that which we ought to know, we do not understand.’

Translated by Otto Wenckstern  
*Goethe’s Opinions on the World, Mankind, Literature, Science, and Art*  
(p. 34)  
John W. Parker & Son. London, England. 1853

Whatever you cannot understand, you cannot possess.  
*Goethe’s Opinions on the World, Mankind, Literature, Science, and Art*  
(p. 113)  
John W. Parker & Son. London, England. 1853

To understand that the sky is everywhere blue, we need not go round the world.

In John Stuart Blackie  
*The Wisdom of Goethe*

Philosophy, Metaphysics, Logic, Truth and Science (p. 153)  
William Blackwood & Sons. Edinburgh, Scotland. 1883

**von Helmholtz, Hermann** 1821–94  
German scientist and philosopher

...every educated man who tries to understand the forces at work in the world in which he is living...must have some interest in that peculiar kind of mental labour, which works and acts in the sciences in question.

In Harvard Classics  
*Scientific Papers* (Volume 30)  
*On the Conservation of Force* (p. 181)  
P.F. Collier & Son. New York, New York, USA. 1910

**Westfall, Richard S.** 1924–96  
American academic, biographer, and historian of science

Enthusiasm is not necessarily equivalent to understanding.

In Harry Woolf (ed.)  
*The Posthumous Works of Robert Hooke*  
Introduction (p. ix)  
Johnson Reprint Corporation. New York, New York, USA. 1969

**Zinsser, Hans** 1878–1940  
US bacteriologist

...it is dangerous when a great man is too easily half-understood.

*Rats, Lice and History*  
Chapter 1 (p. 4)  
Little, Brown & Company. Boston, Massachusetts, USA. 1965

## UNDERSTANDING

**Arnott, Neil** 1788–1874  
Scottish physician

...no man can understand a subject of which he does not carry a distinct outline in his mind...

*Elements of Physics, or, Natural Philosophy, General and Medical Synopsis* (p. 4)  
Printed for Thomas & George Underwood. London, England. 1827

**Atiyah, Sir Michael** 1922–  
English mathematician

...it is hard to communicate understanding because that is something you get by living with a problem for a long time. You study it, perhaps for years, you get the feel of it and it is in your bones. You can’t convey that to anybody else. Having studied the problem for five years you may be able to present it in such a way that it would take somebody else less time to get to that point than it took you, but if they haven’t struggled with the problem and seen all the pitfalls, then they haven’t really understood it.

An Interview with Michael Atiya  
*The Mathematical Intelligencer*, Volume 6, Number 1, 1984 (p. 17)

### Author undetermined

The rabbi spoke three times. The first talk was brilliant; clear and simple. I understood every word. The second was even better; deep and subtle. I didn't understand much, but the rabbi understood all of it. The third was by far the finest; a great and unforgettable experience. I understood nothing, and the rabbi himself didn't understand much either.

In Aage Petersen  
The Philosophy of Niels Bohr  
*Bulletin of the Atomic Scientists*, Volume 19, Number 7, September, 1963 (p. 8)

I understand the material. I just can't do the problems.  
*The Physics Teacher*, Volume 6, Number 9, December, 1968

**Bach, Richard** 1936–  
American writer

Don't believe what your eyes are telling you. All they show is limitation. Look with your understanding, find out what you already know, and you'll see the way...  
*Jonathan Livingston Seagull*  
Part III (p. 92)  
The Macmillan Co. New York, New York, USA. 1970

**Bacon, Sir Francis** 1561–1626  
English lawyer, statesman, and essayist

The eye of the understanding is like the eye of the sense: for as you may see great objects through small crannies or levels; so you may see great axioms of nature through small and contemptible instances.  
*The Works of Francis Bacon* (Volume 1)  
*Sylva Sylvarum*  
Century I, 91 (p. 278)  
Printed for C. & J. Rivington. London, England. 1826

...it is the peculiar and perpetual error of the human understanding to be more moved and excited by affirmatives than negatives, whereas it ought duly and regularly to be impartial; nay, in establishing any true axiom the negative instance is the most powerful.  
*Advancement of Learning and Novum Organum*  
*Novum Organum*  
#46 (p. 321)  
Colonial Press. New York, New York, USA. 1899

The human understanding is like a false mirror, which, receiving rays irregularly, distorts and discolors the nature of things by mingling its own nature with it.  
*In Great Books of the Western World* (Volume 30)  
*Novum Organum*  
First Book, Aphorism 48 (p. 110)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Barbour, Julian** 1937–  
English physicist

...the higher we climb, the more comprehensive the view. Each new vantage point yields a better understanding

of the interconnection of things. What is more, gradual accumulation of understanding is punctuated by sudden and startling enlargements of the horizon, as when we reach the brow of a hill and see things never conceived of in the ascent. Once we have found our bearings in the new landscape, our path to the most recently attained summit is laid bare and takes its honourable place in the new world.

*The End of Time: The Next Revolution in Physics*  
Part 1, Chapter 1 (p. 13)  
Weidenfield & Nicolson. London, England. 1999

**Becker, Carl Lotus** 1873–1945  
American historian

We really haven't time to stand amazed, either at the starry firmament above or the Freudian complexes within us. The multiplicity of things to manipulate and make use of so fully engage our attention that we have neither the leisure nor the inclination to seek a rational explanation of the force that makes them function so efficiently.  
*The Heavenly City of the Eighteenth Century Philosophers*  
Chapter I (pp. 23–24)  
Yale University Press. New Haven, Connecticut, USA. 1932

**Bergaust, Erik**  
No biographical data available

Someday in the very, very distant future earthlings may learn to understand the universe...  
*Wernher von Braun*  
Are Flying Saucers Real? (p. 547)  
National Space Institute. Washington, D.C. 1976

**Bergman, Torbern Olaf** 1735–84  
Swedish chemist and naturalist

A scientist strives to understand the work of Nature. But with our insufficient talents as scientists, we do not hit upon the truth all at once. We must content ourselves with tracking it down, enveloped in considerable darkness, which leads us to make new mistakes and errors. By diligent examination, we may at length little by little peel off the thickest layers, but we seldom get the core quite free, so that finally we have to be satisfied with a little incomplete knowledge.  
In J.A. Schuffe  
*Chymia*  
Torbern Bergman, Earth Scientist (Volume 12), 1967  
Lecture to the Royal Swedish Academy of Science  
May 23, 1764 (p. 78)  
University of Pennsylvania Press. Philadelphia, Pennsylvania, USA. 1948–1967

**Berkeley, George** 1685–1753  
Irish prelate and metaphysical philosopher

PHILONOUS: I am not for imposing any sense on your words: you are at liberty to explain them as you please. Only, I beseech you, make me understand something by them.

*Three Dialogues Between Hylas and Philonous*

First Dialogue (p. 40)

The Bobbs-Merrill Company, Inc. Indianapolis, Indiana, USA. 1954

**Bush, Vannevar** 1890–1974

American electrical engineer and physicist

The enthusiasm, the exuberance, that properly accompanies the great achievements of science, the thrill of at last beginning to understand nature and the universe about us, in all their awesome magnificence, continues to lead many men all over the world, especially young men, on to this new materialism.

*Science Is Not Enough*

Chapter II (pp. 19–20)

William Morrow &amp; Company, Inc. New York, New York, USA. 1967

**Chu, Steven** 1948–

American physicist

You want to try to put something that you learn in your own language, so that it's no longer something that's merely memorized but something you transfer from your head to your gut – you simplify it and put it in your own language to the point where it seems almost obvious and intuitive. It's only when you understand your science in this very obvious, intuitive way that you have a chance of thinking of something new.

Interview

*American Scientist*, Volume 86, January–February, 1998 (p. 25)**Cole, K. C.** 1946–

American science writer

...the need to go to the moon or smash atoms is on a par with the need to have natural history museums: Science provides a handle on who we are and how we fit into the scheme of things. Understanding our place in the sun requires an understanding of the sun's place in the solar system, the cycles of the sky, the nature of the elements, and the improbabilities of life. If what we learn leaves us a little stunned by our limitations and potentials, so be it. Science gives us a sense of scale and a sense of limits, an appreciation for perspective and a tolerance for ambiguity.

*First You Build a Cloud and Other Reflections on Physics as a Way of Life*

Introduction (p. 11)

Harcourt Brace &amp; Co. Orlando, Florida, USA. 1999

**Conrad, Joseph** 1857–1924

Polish-born English novelist

Things and men have always a certain sense, a certain side by which they must be got hold of if one wants to obtain a solid grasp and a perfect command.

*Under Western Eyes*

Section 10 (p. 304)

Harper &amp; Brothers Publishers. New York, New York, USA. 1911

**Cortázar, Julio** 1914–84

Argentinean novelist and short story writer

It had been some time since Gregorovius had given up the illusion of understanding things, but at any rate, he still wanted misunderstanding to have some sort of order, some reason about them.

Translated by Gregory Rabassa

*Hopscotch*

Chapter 31 (p. 179)

Pantheon Books. New York, New York, USA. 1966

**Dahlberg, Edward** 1900–77

American novelist and essayist

It takes a long time to understand nothing.

*Reasons of the Heart*

On Wisdom and Folly

Horizon Press, Inc. New York, New York, USA. 1965

**Davy, Sir Humphry** 1778–1829

English chemist

To me there never has been a higher source of honour or distinction than that connected with advances in science. I have not possessed enough of the eagle in my character to make a direct flight to the loftiest altitudes in the social world, and I certainly never endeavored to reach those heights by using the creeping powers of the reptile who, in ascending, generally chooses the dirtiest path, because it is the easiest.

*Consolations in Travel: Or, The Last Days of a Philosopher*

Dialogue the Fifth (p. 157)

Cassell &amp; Co., Ltd. London, England. 1889

**de Quincey, Thomas** 1785–1859

English author

He trembles at the abyss into which his bodily eyes look down, or look up; not knowing that abyss to be, but by an instinct written in his prophetic heart feeling it to be, boding it to be, fearing it to be, and sometimes hoping it to be, the mirror to a mightier abyss that will one day be expanded in himself.

*The Works of Thomas de Quincey*

System of the Heavens as Revealed by Lord Rosse's Telescope (p. 176)

Adam &amp; Charles Black. Edinburgh, Scotland. 1871

**Eco, Umberto** 1932–

Italian novelist, essayist, and scholar

ADSO: “But how does it happen,” I said with admiration, “that you were able to solve the mystery of the library looking at it from the outside, and you were unable to solve it when you were inside?”

WILLIAM OF BASKERVILLE: “Thus God knows the world, because He conceived it in His mind, as if from the outside, before it was created, and we do not know its rule, because we live inside it, having found it already made.”

Translated by William Weaver

*The Name of the Rose*

Vespers (p. 218)

Harcourt Brace Jovonovich. San Diego, California, USA. 1983

**Einstein, Albert** 1879–1955  
German-born physicist

The hardest thing to understand is why we understand anything at all.

In Morton Wagman

*Cognitive Science and Concepts of Mind* (p. 103)  
Praeger. New York, New York, USA. 1991

**Einstein, Albert** 1879–1955  
German-born physicist

**Infeld, Leopold** 1898–1968  
Polish physicist

The scientist reading the book of nature... must find the solution for himself, for he cannot, as impatient readers of other stories often do, turn to the end of the book. In our case the reader is also the investigator, seeking to explain, at least in part, the relation of events to their rich context. To obtain even a partial solution the scientist must collect the unordered facts available and make them coherent and understandable by creative thought.

*The Evolution of Physics*

The Great Mystery (pp. 4–5)

Simon & Schuster. New York, New York, USA. 1961

With the help of physical theories we try to find our way through the maze of observed facts, to order and understand the world of our sense impressions.

*The Evolution of Physics*

Physics and Reality (p. 296)

Simon & Schuster. New York, New York, USA. 1961

**Ferguson, Marilyn** 1938–  
American writer

Real progress in understanding nature is rarely incremental. All important advances are sudden intuitions, new principles, new ways of seeing. We have not fully recognized this process of leaping ahead, however, in part because textbooks tend to tame revolutions, whether cultural or scientific. They describe the advances as if they had been logical in their day, not at all shocking.

*The Aquarian Conspiracy: Personal and Social Transformation in the 1980s*

Chapter 1 (p. 28)

J.P. Tarcher, Inc. Los Angeles, California, USA. 1980

**Ferris, Timothy** 1944–  
American science writer

We might eventually obtain some sort of bedrock understanding of cosmic structure, but we will never understand the universe in detail; it is just too big and varied for that. If we possessed an atlas of our galaxy that devoted but a single page to each star system in the Milky Way (so that the sun and all its planets were crammed in on one page), that atlas would run to more than ten

million volumes of ten thousand pages each. It would take a library the size of Harvard's to house the atlas, and merely to flip through it, at the rate of a page per second, would require over ten thousand years.

*Coming of Age in the Milky Way*

Chapter 20 (p. 383)

William Morrow & Company, Inc. New York, New York, USA. 1988

**Feynman, Richard P.** 1918–88  
American theoretical physicist

What I cannot create I do not understand.

In James Gleick

*Genius: The Life and Science of Richard Feynman*

Epilogue (p. 437)

Pantheon Books. New York, New York, USA. 1992

I would like to be rather more special, and I would like to be understood in an honest way rather than in a vague way.

*The Character of Physical Law*

Chapter 1 (p. 13)

BBC. London, England. 1965

One does not, by knowing all the physical laws as we know them today, immediately obtain an understanding of anything much.

*The Character of Physical Law*

Chapter 5 (p. 122)

BBC. London, England. 1965

**Galilei, Galileo** 1564–1642  
Italian physicist and astronomer

We proceed in step-by-step discussion from inference to inference, whereas He conceives through mere intuition. Thus in order to gain insight into some of the properties of the circle, of which it possesses infinitely many, we begin with one of the simplest; we take it for a definition and proceed from it by means of inference to a second property, from this to a third, and hence a fourth, and so on. The divine intellect, on the other hand, grasps the essence of a circle *senza temporaneo discorso* and thus apprehends the infinite array of the properties.

*Opere* (VII)

Dialogo (p. 129)

SAGREDO: My brain already reels. My mind, like a cloud momentarily illuminated by a lightning-flash, is for an instant filled with an unusual light, which now beckons to me and which now suddenly mingles and obscures strange, crude ideas.

In *Great Books of the Western World* (Volume 28)

*Dialogues Concerning the Two New Sciences*

First Day (p. 132)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

The vain presumption of understanding everything can have no other basis than never understanding anything. For anyone who had experienced just once the perfect understanding of one single thing, and had truly tasted

how knowledge is accomplished, would recognize that infinity of other truths of which he understands nothing.

Translated by Stillman Drake

*The Two Chief World Systems*

First Day (p. 101)

University of California Press. Berkeley, California, USA. 1953

### **Hawking, Stephen William** 1942–

English theoretical physicist

...there may be no ultimate theory, and even if there is, we may not find it. But it is surely better to strive for a complete understanding than to despair of the human mind.

*Black Holes and Baby Universes and Other Essays*

Preface (p. ix)

Bantam Books. New York, New York, USA. 1993

### **Hazlitt, William Carew** 1834–1913

English bibliographer

...in what we really understand, we reason but little.

*The Collected Works of William Hazlitt*

*On the Conduct of Life* (p. 430)

McClure, Phillips & Company. New York, New York, USA. 1904

### **Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

Even for a physicist the description in plain language will be a criterion of the degree of understanding that has been reached.

*Physics and Philosophy: The Revolution in Modern Science*

Chapter X (p. 168)

Harper & Row, Publishers. New York, New York, USA. 1958

Whenever we proceed from the known into the unknown we may hope to understand, but we may have to learn at the same time a new meaning of the word “understanding.”

*Physics and Philosophy: The Revolution in Modern Science*

Chapter XI (p. 201)

Harper & Row, Publishers. New York, New York, USA. 1962

The exact sciences also start from the assumption that in the end it will always be possible to understand nature, even in every new field of experience, but that we may make no a priori assumptions about the meaning of the word understand.

In Heinrich O. Proskauer

*The Rediscovery of Color: Goethe Versus Newton Today*

Preface (p. ix)

Anthroposophic Press. Spring Valley, New York, USA. 1986

...as facts and knowledge accumulate, the claim of the scientist to an understanding of the world in a certain sense diminishes.

*Wandlungen in der Grundlagen der Naturwissenschaft*

Zur Geschichte der physikalischen NaturerklSrung (p. 28)

### **Hoffman, Roald** 1937–

Polish-born applied theoretical chemist and writer

In principle one could go ahead and calculate each molecule.... [H]owever...even if the results were in excellent agreement with experiment, the resultant predictability would not necessarily imply understanding. True understanding implies a knowledge of the various physical factors, the mix of different physical mechanisms, that go into making an observable.

*Interaction of Orbitals Through Space and Through Bonds*

*Accounts of Chemical Research*, Volume 4, Number 1, 1971 (p. 1)

### **Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

A moment's insight is sometimes worth a life's experience.

*The Professor at the Breakfast-Table*

Chapter X (p. 301)

Ticknor & Fields. Boston, Massachusetts, USA. 1860

### **Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

The man who voyages strange seas must of necessity be a little unsure of himself. It is the man with the flashy air of knowing everything, who is always on the ball, always with it, that we should beware of.

*Of Men and Galaxies*

Motives and Aims of the Scientist (pp. 24–25)

University of Washington Press. Seattle, Washington, USA. 1964

American writer of science fiction and fantasy

If the human creatures will not understand Relativity, very well; but they must understand Relatedness.

*The Wind's Twelve Quarters*

Direction of the Road (p. 223)

Harper & Rowe, Publishers, New York, New York, USA; 1975

**Lec, Stanislaw** 1909–66  
Polish poet and aphorist

Some like to understand what they believe in. Others like to believe in what they understand.

*Unkempt Thoughts* (p. 159)

St. Martin's Press. New York, New York, USA. 1962

**Locke, John** 1632–1704  
English philosopher and political theorist

... understanding, like the eye, judging of objects only by its own sight, cannot but be pleased with what it discovers, having less regret for what has escaped it, because it is unknown.

*An Essay Concerning Human Understanding*

Epistle to the Reader (p. v)

Printed for Thomas Tegg. London, England. 1841

**Pascal, Blaise** 1623–62  
French mathematician and physicist

We naturally believe ourselves far more capable of reaching the centre of things than of embracing their circumference. The visible extent of the world visibly exceeds us, but as we exceed little things, we think ourselves more capable of knowing them.

*Thoughts*

Section II (p. 28)

P.F. Collier & Son. New York, New York, USA. 1910

**Oppenheimer, Frank** 1912–85  
American physicist

Understanding is a lot like sex. It's got a practical purpose, but that's not why people do it normally.

In K.C. Cole

*The Universe and the Teacup: The Mathematics of Truth and Beauty*

Chapter 1 (p. 5)

Harcourt Brace & Company. New York, New York, USA. 1998

**Ortega y Gasset, José** 1883–1955  
Spanish philosopher

To be surprised, to wonder, is to begin to understand.

*The Revolt of the Masses*

Chapter I (p. 12)

W.W. Norton & Company, Inc. New York, New York, USA. 1960

**Osler, Sir William** 1849–1919  
Canadian physician and professor of medicine

To understand the old writers one must see as they saw. Feel as they felt, believe as they believed – and this is hard, indeed impossible! We may get near them by asking the Spirit of the Age in which they lived to enter in and dwell with us, but it does not always come.... Each generation has its own problems to face, look at truth from a special focus, and does not see quite the same outlines as any other.

*The Evolution of Medicine*

Chapter VI (p. 218)

Yale University Press. New Haven, Connecticut, USA. 1922

**Pagels, Heinz R.** 1939–88  
American physicist and science writer

The attempt to understand the origin of the universe is the greatest challenge confronting the physical sciences. Armed with the new concepts, scientists are rising to meet that challenge, although they know that success may be far away. Yet when the origin of the universe is

understood, it will open a new vision that is beautiful, wonderful and filled with the mystery of existence. It will be our intellectual gift to our progeny and our tribute to the scientific heroes who began this great adventure of the human mind, never to see it completed.

*Perfect Symmetry: The Search for the Beginning of Time*  
Part One, Chapter 7 (p. 156)  
Simon & Schuster. New York, New York, USA. 1985

**Palade, George E.** 1912–2008  
Russian-born American cell biologist

For a scientist, it is a unique experience to live through a period in which his field of endeavor comes to bloom – to be witness to those rare moments when the dawn of understanding finally descends upon what appeared to be confusion only a while ago – to listen to the sound of darkness crumbling.

*Les Prix Nobel. The Nobel Prizes in 1974*  
Nobel banquet speech for award received in 1974  
Nobel Foundation. Stockholm, Sweden. 1975

**Polanyi, Michael** 1891–1976  
Hungarian-born English scientist, philosopher, and social scientist

We have a solid tangible object before us.... But we do not know what it is. Then let a team of physicists and chemists inspect the object. Let them be equipped with all the physics and chemistry ever to be known, but let their technological outlook be that of the stone age. Or, if we cannot disregard the practical incompatibility of these two assumptions, let us agree that in their investigations they shall not refer to any operational principles. They will describe the clock precisely in every particular, and in addition, they will predict all its possible future configurations. Yet they will never be able to tell us that it is a clock. The complete knowledge of a machine as an object tells us nothing about it as a machine.

*Personal Knowledge*  
Chapter 11, Section 2 (p. 330)  
Harper & Row, Publishers. New York, New York, USA. 1962

**Popper, Karl R.** 1902–94  
Austrian/British philosopher of science

...the activity of understanding is, essentially, the same as that of all problem solving.

*Objective Knowledge: An Evolutionary Approach*  
Chapter 4 (p. 166)  
Clarendon Press. Oxford, England. 1972

...only a man who understands science (that is scientific problems) can understand its history.... [O]nly a man who has some real understanding of its history (the history of its problem situations) can understand science.

*Objective Knowledge: An Evolutionary Approach*  
On the Theory of the Objective Mind (p. 185)  
Oxford University Press, Inc. Oxford, England. 1979

Bohr...thought of understanding in terms of pictures and models – in terms of a kind of visualization. This was

too narrow, I felt; and in time I developed an entirely different view. According to this view what matters is the understanding not of pictures but of the logical force of a theory: its explanatory power, its relation to the relevant problems and to other theories.

*Unended Quest: An Intellectual Autobiography*  
Chapter 18 (p. 93)  
Open Court Publishing Company. La Salle, Illinois, USA. 1976

**Rabi, Isidor Isaac** 1898–1988  
Austrian-born American physicist

Scientific understanding...is an essential step to our finding a home for ourselves in the universe. Through understanding the universe, we become at home in it. In a certain sense we have made this universe out of human concepts and human discoveries. It ceases to be a lonely place, because we can to some extent actually navigate in it.

In A.A. Warner, Dean Morse, and T.E. Cooney (eds.)  
*The Environment of Change*  
The Revolution in Science (p. 49)  
Columbia University Press. New York, New York, USA. 1969

**Ramsay, Sir William** 1852–1916  
English chemist

I trust we have not wearied you in giving some account of our attempts to see the invisible, touch the intangible, and weigh the imponderable.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1912*  
Measurements of Infinitesimal Quantities of Substances (p. 229)  
Government Printing Office. Washington, D.C. 1913

**Recorde, Robert** 1510?–58  
English mathematician and writer

I see in the heaven marvelous motions; and in the reste of the worlde straunge transmutations, and therefore desire muche to know what the worlde is, and what are the principall partes of it, and also how all these strange sightes doo come.

*The Castle of Knowledge*  
The First Treatise (p. 3)  
Imprinted by R. Wolfe. London, England. 1556

**Sagan, Carl** 1934–96  
American astronomer and science writer

We go about our daily lives understanding almost nothing of the world. We give little thought to the machinery that generates the sunlight that makes life possible, to the gravity that glues us to an Earth that would otherwise send us spinning off into space, or to the atoms of which we are made and on whose stability we fundamentally depend. Except for children (who don't know enough not to ask the important questions), few of us spend much time wondering why nature is the way it is; where the cosmos came from, or whether it was always here; if time will one day flow backward and effects precede causes;

or whether there are ultimate limits to what humans can know.

In Stephen W. Hawking

*A Brief History of Time: From the Big Bang to Black Holes*

Introduction (p. ix)

Bantam Books. Toronto, Ontario, Canada. 1988

If you know something only qualitatively, you know it no more than vaguely. If you know it quantitatively – grasping some numerical measure that distinguishes it from an infinite number of other possibilities – you are beginning to know it deeply.

*Billions & Billions: Thoughts on Life and Death at the Brink of the Millennium*

Chapter 2 (p. 21)

Random House, Inc. New York, New York, USA. 1997

**Sarton, George** 1884–1956

Belgian-born American scholar and writer

Next to nature there is nothing more wonderful than man's gradual understanding of it.

*The History of Science and the New Humanism*

Chapter I (p. 44)

H. Holt & Co. New York, New York, USA. 1931

**Stewart, Ian** 1945–

English mathematician and science writer

A person who insists on understanding every tiny step before going on to the next is liable to concentrate so much on looking at his feet that he fails to realize he is walking in the wrong direction.

*Concepts of Modern Mathematics*

Chapter 20 (p. 286)

Dover Publications, Inc. New York, New York, USA. 1995

**Swift, Jonathan** 1667–1745

Irish-born English writer

...where I am not understood, it shall be concluded, that something very useful and profound is couched underneath...

*Gulliver's Travels, the Tale of a Tub, Battle of the Books, Etc.*

*Tale of a Tub*, the Preface (p. 403)

Oxford University Press, Inc. London, England. 1929

**Teller, Edward** 1908–2003

Hungarian-born American nuclear physicist

What is called understanding is often no more than a state where one has become familiar with what one does not understand.

*Better a Shield than a Sword: Perspectives in Defense and Technology*

Chapter 30 (p. 218)

The Free Press. New York, New York, USA. 1987

**Walker, Kenneth** 1882–1966

Physician

It may be said that all understanding of the universe comes from the combined action of two faculties in us,

the power to register impressions and the capacity to reason and reflect on them.

*Meaning and Purpose*

Chapter II (p. 18)

Jonathan Cape. London, England. 1944

**Welch, Lew** 1926–71?

American Beat poet

Step out onto the Planet. Draw a circle a hundred feet round. Inside the circle are 300 things nobody understands, and maybe nobody's ever really seen. How many can you find?

*Hermit Poems*

Step Out Onto the Planet

Four Seasons Foundation. San Francisco, California, USA. 1965

**Wittgenstein, Ludwig Josef Johann** 1889–1951

Austrian-born English philosopher

Telling someone something he does not understand is pointless, even if you add that he will not be able to understand it.

Translated by Peter Winch

*Culture and Value* (p. 7e)

The University of Chicago Press. Chicago, Illinois, USA. 1980

**Woodbridge, Frederick James Eugene** 1867–1940

American philosopher

We understand a thing when we have discovered what it can do in relation to other things. In different relations it acts differently, but in every case with a definiteness in accord with its property. Its operation in specific cases is a specific operation which nonetheless illustrates its proper action.

*Nature and Mind: Selected Essays of Frederick J.E. Woodbridge* (p. 257)

Columbia University Press. New York, New York, USA. 1937

**Wiggins, Grant P.**

No biographical data available

Understanding is something different than technical prowess; understanding emerges when we are required to reflect upon achievement, to verify or criticize – thus to rethink and relearn – what we know.... Understanding involves questioning ... the assumptions upon which prior learning is based.

*Assessing Student Performance: Exploring the Purpose and Limits of Testing*

Chapter 2 (p. 38)

Jossey-Bass, Inc. San Francisco, California, USA. 1993

## UNDERSTOOD

**Brewster, George**

No biographical data available

Aim to be understood instead of displaying ostentation...

*A New Philosophy of Matter, Showing the Identity of All the Imponderables* (3rd edition)  
Chapter 1 (p. 21)  
Edward H. Fletcher. New York, New York, USA. 1858

## UNEXPECTED

**Heraclitus** 540 BCE–480 BCE  
Greek philosopher

If one does not expect the unexpected one will not find it out, since it is not to be searched out, and difficult to compass.

In G.S. Kirk and J.E. Raven  
*The Pre-Socratic Philosophers: A Critical History with a Selection of Texts*  
Fragment 213 (p. 195)  
At the University Press. Cambridge, England. 1963

**Raymo, Chet** 1936–  
American physicist and science writer

Delight in the unexpected is part of the lifeblood of science. Almost alone among belief systems, science welcomes the disturbingly new.

*The Virgin and the Mousetrap: Essays in Search of the Soul of Science*  
Chapter 15 (p. 138)  
The Viking Press. New York, New York, USA. 1991

**Selye, Hans** 1907–82  
Austrian endocrinologist

...“peripheral vision”: the ability not only to look straight at what you want to see, but also to watch continually, through the corner of your eye, for the unexpected. I believe this to be one of the greatest gifts a scientist can have. Usually we concentrate so much upon what we intend to examine that other things cannot reach our consciousness, even if they are far more important. This is particularly true of things so different from the commonplace that they seem improbable. Yet, only the improbable is really worthy of attention! If the unexpected is nevertheless found to be true, the observation usually represents a great step forward.

*From Dream to Discovery: On Being a Scientist*  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1950

## UNFATHOMABLE

**von Goethe, Johann Wolfgang** 1749–1832  
German poet, novelist, playwright, and natural philosopher

The further knowledge advances, the nearer we come to the unfathomable: the more we know how to use our knowledge, the better we see that the unfathomable is of no practical use.

Translated by Thomas Bailey Saunders  
*The Maxims and Reflections of Goethe*  
#576 (p. 200)  
The Macmillan Co. New York, New York, USA. 1906

## UNIFIED FIELD THEORY

**Davies, Paul Charles William** 1946–  
British-born physicist, writer, and broadcaster

Ranged against GUTs, however, is the fact that there is no unique theory, and the unification scale is so remote there is no prospect whatever that it will become accessible to direct experimentation. How, then, are we to discriminate between rival theories? If the GUTs describe a world so small and so energetic that we can never observe it, has not physics degenerated to pure philosophy? Are we not in the same position as Democritus and the other Greek philosophers who mused endlessly about the shapes and properties of atoms without any hope of ever observing them?

*Superforce: The Search for a Grand Unified Theory of Nature*  
Chapter 8 (p. 135)  
Simon & Schuster. New York, New York, USA. 1984

**Hawking, Stephen William** 1942–  
English theoretical physicist

The discovery of a complete unified theory, therefore, may not aid the survival of our species. It may not even affect our life-style. But ever since the dawn of civilization, people have not been content to see events as unconnected and inexplicable. They have craved an understanding of the underlying order in the world. Today we still yearn to know why we are here and where we came from. Humanity’s deepest desire for knowledge is justification enough for our continuing quest. And our goal is nothing less than a complete description of the universe we live in.

*A Brief History of Time: From The Big Bang to Black Holes*  
Chapter 2 (p. 13)  
Bantam Books. Toronto, Ontario, Canada. 1988

**Kaku, Michio** 1947–  
Japanese-American theoretical physicist

**Thompson, Jennifer**  
American author

To a physicist, finally discovering the unified field theory is like being a child left in the middle of a toy store. Far from the end, it is only a beginning.

*Beyond Einstein: The Cosmic Quest for the Theory of the Universe*  
Chapter 11 (p. 204)  
Bantam Books. Toronto, Ontario, Canada. 1987

## UNIFORM

**Stanley, Ferdinando (Lord Derby)** 1559–94  
English literary patron

When you find uniformity, or something which closely approximates to uniformity, it is impossible not to be impressed with the permanence and steadiness of the laws which regulate our existence.

In Albert Leffingwell  
*Illegitimacy, and The Influence of Seasons Upon Conduct*  
 Appendix II (p. 146)  
 Swan Sonnenschein & Co. London, England. 1892

## UNIFORMITARIANISM

**Gould, Stephen Jay** 1941–2002  
 American paleontologist and evolutionary biologist

Is uniformitarianism necessary?  
 Is Uniformitarianism Necessary?  
*Journal of Science*, Volume 263, 1965 (p. 223)

**Huxley, Thomas Henry** 1825–95  
 English biologist

Uniformitarianism, on the other hand, has with equal justice [to Catastrophism] insisted upon a practically unlimited bank of time, ready to discount any quantity of hypothetical paper. It has kept before our eyes the power of the infinitely little, time being granted, and has compelled us to exhaust known causes, before flying to the unknown.

*Lay Sermons, Addresses and Reviews*  
 Chapter XI (p. 242)  
 Macmillan & Co Ltd. London, England. 1874

**Lapworth, Charles** 1842–1920  
 English geologist

Uniformity and Evolution are one.  
*Report of the British Association for the Advancement of Science (1892)*  
 Presidential Address to the Geology Section (p. 707)

**Russell, Bertrand Arthur William** 1872–1970  
 English philosopher, logician, and social reformer

...what is surprising in physics is not the existence of general laws, but their extreme simplicity. It is not the uniformity of nature that should surprise us, for, by sufficient analytic ingenuity any conceivable course of nature might be shown to exhibit uniformity. What should surprise us is the fact that the uniformity is simple enough for us to be able to discover it. But it is just this characteristic of simplicity which it would be fallacious to generalize, for it is obvious that simplicity has been a part of cause of their discovery, and can, therefore, give no ground for the supposition that other undiscovered laws are equally simple.

*Scientific Method in Philosophy*  
 Section I (p. 8)  
 At The Clarendon Press. Oxford, England. 1914

## UNIFORMITY

**Russell, Bertrand Arthur William** 1872–1970  
 English philosopher, logician, and social reformer

It is not the uniformity of nature that should surprise us, for, by sufficient analytic ingenuity, any conceivable

course of nature might be shown to exhibit uniformity. What should surprise us is the fact that the uniformity is simple enough for us to be able to discover it.

*Mysticism and Logic: And Other Essays*  
 Chapter VI (p. 102)  
 Longmans, Green & Co. London, England. 1919

**Wren, Sir Christopher** 1632–1723  
 English designer, astronomer, and geometer

Views contrary to beauty are deformity, or a defect of uniformity: and plainness, which is the excess of uniformity: variety makes the mean.

In Society for the Diffusion of Useful Knowledge  
*Lives of Eminent Persons*  
 Sir Christopher Wren (p. 30)  
 Baldwin & Cradock. London, England. 1833

## UNIQUENESS

**Doyle, Sir Arthur Conan** 1859–1930  
 Scottish writer

As a rule, when I have heard some slight indication of the course of events, I am able to guide myself by the thousands of other similar cases which occur to my memory. In the present instance I am forced to admit that the facts are, to the best of my belief, unique.

In William S. Baring-Gould (ed.)  
*The Annotated Sherlock Holmes* (Volume 1)  
*The Red-Headed League* (p. 419)  
 Wings Books. New York, New York, USA. 1967

**Simon, Herbert Alexander** 1916–2001  
 American social scientist

The definition of man's uniqueness has always formed the kernel of his cosmological and ethical systems. With Copernicus and Galileo, he ceased to be the species located at the centre of the universe, attended by sun and stars. With Darwin, he ceased to be the species created and specially endowed by God with soul and reason. With Freud he ceased to be the species whose behavior was – potentially – governable by rational mind. As we begin to produce mechanisms that think and learn, he has ceased to be the species uniquely capable of complex, intelligent manipulation of his environment.

What Computers Mean for Man and Society  
*Science*, Volume 195, Number 4283, March 18, 1977 (p. 190)

## UNITS

**Lodge, Sir Oliver** 1851–1940  
 English physicist

Changing the units does not affect the velocity of light. Whether you say light travels at 186,000 miles a second or whether you say it is so many inches an hour makes no difference to the velocity. An algebraic symbol ought

to represent the thing itself, not a mere number of units. Altering the numerical specifications – which is what you do by altering units – means no difference to the thing itself.

Royal Astronomical Society

*Monthly Notices*, Volume 80, 1919 (p. 107)

## UNITY

### Gray, Jeremy

English mathematician

Mathematicians often speak of the unity of their subject, whether to praise it or lament its passing.

*Linear Differential Equations and Group Theory from Riemann to Poincare* (2nd edition)

Introduction to the First Edition (p. xv)

Birkhäuser. Boston, Massachusetts, USA. 1985

...the unity of mathematics...is often invoked in a rather imprecise way...

*Linear Differential Equations and Group Theory from Riemann to Poincare* (2nd edition)

Introduction to the First Edition (p. xix)

Birkhäuser. Boston, Massachusetts, USA. 1985

## UNIVERSAL LAWS

### National Research Council (U.S.)

Some aspects of nature are neither universal nor permanent – the shape of Cape Cod or even a spiral arm of a galaxy. But the forces that created both Cape Cod and the spiral arm of stars and dust obey universal laws. Discovering that has enabled man to understand more of what goes on in his universe.

*Physics in Perspective* (Volume 1)

Chapter 3 (p. 55)

National Academy of Sciences. Washington, D.C. 1972

## UNIVERSE

### Adams, Douglas 1952–2001

English author, comic radio dramatist, and musician

For a long period of time there was much speculation and controversy about where the so-called “missing matter” of the Universe had got to. All over the Galaxy the science departments of all the major universities were acquiring more and elaborate equipment to probe and search the hearts of distant galaxies, and then the very center and the very edges of the whole Universe, but when eventually it was tracked down it turned out in fact to be all the stuff which the equipment had been packed in.

*The Ultimate Hitchhiker’s Guide to the Galaxy*

*Mostly Harmless*

Chapter 17 (p. 756)

Ballantine Books. New York, New York, USA. 2002

The Universe, as has been observed before, is an unsettlingly big place, a fact which for the sake of a quiet life most people tend to ignore.

*The Ultimate Hitchhiker’s Guide to the Galaxy*

*The Restaurant at the End of the Universe*

Chapter 10 (p. 194)

Ballantine Books. New York, New York, USA. 2002

If the Universe came to an end every time there was some uncertainty about what happened in it, it would never have got beyond the first picosecond. And many of course don’t. It’s like the human body, you see. A few cuts and bruises here and there don’t hurt it. Not even major surgery if it’s done properly. Paradoxes are just the scar tissue. Time and space heal themselves up around them and people remember a version of events which makes as much sense as they require it to make.

*Dirk Gently’s Holistic Detective Agency*

Chapter 32 (p. 283)

Simon & Schuster. New York, New York, USA. 1988

### Alfven, Hannes 1908–95

Swedish physicist

I have never thought that you can get the extremely clumpy, heterogeneous universe we have today from a smooth and homogenous one dominated by gravitation.

In Eric J. Lerner

*The Big Bang Never Happened*

Chapter 1 (p. 42)

Random House, Inc. New York, New York, USA. 1991

### Amaldi, Ginestra Giovane

Italian physicist

Our imagination has roamed far and wide through distant reaches of the Universe. Understandably, we may have become dazed by the immense dimensions of space and the enormous sizes of some of its occupants.

*Our World and the Universe Around Us* (Volume 1)

First Steps into Space (p. 124)

Abradale Press. New York, New York, USA. 1966

### Apfel, Necia H. 1930–

American astronomer

### Hynek, J. Allen 1910–86

American astronomer

It is hard for us today to assimilate all the new ideas that are being suggested in response to the new information we have. We must remember that our picture of the universe is based not only on our scientific knowledge but also on our culture and our philosophy. What new discoveries lie ahead no one can say. There may well be civilizations in other parts of our galaxy or in other galaxies that have already accomplished much of what lies ahead for mankind. Others may just be beginning. The universe clearly presents an unending challenge.

*Architecture of the Universe*

Chapter 21 (p. 453)  
The Benjamin/Cummings Publishing Company, Inc. Menlo Park,  
California, USA. 1979

**Asimov, Isaac** 1920–92  
American author and biochemist

However glorious and vast the unimaginable depths of  
the universe, we cannot remain lost in its glories forever.

*Asimov's New Guide to Science*

Chapter 3 (p. 95)

Basic Books, Inc. New York, New York, USA. 1984

**Atkins, Peter William** 1940–  
English physical chemist and writer

My aim is to argue that the universe can come into exist-  
ence without intervention, and that there is no need to  
invoke the idea of a Supreme Being in one of its numer-  
ous manifestations.

*The Creation*

Preface

W.H. Freeman. San Francisco, California, USA. 1981

**Aurelius Antoninus, Marcus** 121–180  
Roman emperor

Either it is a well-arranged universe or a chaos huddled  
together, but still a universe. But can a certain order sub-  
sist in thee, and disorder in the All?

In *Great Books of the Western World* (Volume 12)

*The Meditations of Marcus Aurelius*

Book IV, #27 (p. 266)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### Author undetermined

On scientific grounds our most passionate appeal to the  
universe is like trying to make a dumb animal speak.

The Reconstruction of Belief

*The Living Age*, Volume ccxlv, Number 3179, June 10, 1905 (p. 655)

**Bacon, Leonard** 1887–1954  
American poet and critic

Eddington's universe goes phut.

Richard Tolman's can open and shut.

Eddington's bursts without grace or tact,

But Tolman's swells and perhaps may contract.

*Rhyme and Punishment*

Richard Tolman's Universe

Farrar & Rinehart, Inc. New York, New York, USA. 1936

**Bacon, Sir Francis** 1561–1626  
English lawyer, statesman, and essayist

For the fabric of this universe is like a labyrinth to the  
contemplative mind, where doubtful paths, deceitful imi-  
tations of things and their signs, winding and intricate  
folds and knots of nature everywhere present themselves,  
and a way must constantly be made through the forests  
of experience and particular natures, with the aid of the

uncertain light of the senses, shining and disappearing  
by fits.

In Basil Montague

*The Works of Francis Bacon* (Volume 3)

*The Great Instauration*, Preface (p. 336)

Parry & McMillan. Philadelphia, Pennsylvania, USA. 1859

**Bagehot, Walter** 1826–77  
English journalist

Taken as a whole, the universe is absurd. There seems an  
unalterable contradiction between the human mind and  
its employments.

*Literary Studies* (Volume 1) (p. 36)

J.M. Dent & Sons Limited. London, England. 1951

We are startled to find a universe we did not expect.

*Literary Studies* (Volume 2) (p. 403)

J.M. Dent & Sons Limited. London, England. 1951

**Banks, Sir Joseph** 1743–1820  
English naturalist

...the treasures of the heavens are well known to be inex-  
haustible...

In Charles Richard Weld (ed.)

*A History of the Royal Society, With Memoirs of the Presidents*

Volume 2

Chapter V (p. 149)

John W. Parker. London, England. 1848

**Barbellion, Wilhelm Nero Pilate** 1889–1919  
English author

This great bully of a universe overwhelms me. The stars  
make me cower. I am intimidated by the immensity sur-  
rounding my own littleness.

*The Journal of a Disappointed Man*

March 2, 1917 (p. 283)

George H. Doran Company. New York, New York, USA. 1919

**Barth, John** 1930–  
American writer

All the scientists hope to do is describe the universe math-  
ematically, predict it, and maybe control it. The philoso-  
pher, by contrast, seems unbecomingly ambitious: He  
wants to understand the universe; to get behind phenom-  
ena and operation and solve the logically prior riddles of  
being, knowledge, and value. But the artist, and in particu-  
lar the novelist, in his essence wishes neither to explain  
nor to control nor to understand the universe. He wants  
to make one of his own, and may even aspire to make it  
more orderly, meaningful, beautiful, and interesting than  
the one God turned out. What's more, in the opinion of  
many readers of literature, he sometimes succeeds.

*The Friday Book: Essays and Other Nonfiction*

How to Make a Universe (p. 17)

G.P. Putnam's Sons. New York, New York, USA. 1984

**Bergson, Henri** 1859–1941  
French philosopher

The universe is not made, but is being made continually.  
It is growing, perhaps indefinitely....

Translated by Arthur Mitchell

*Creative Evolution*

Chapter III (p. 255)

The Modern Library. New York, New York, USA. 1944

**Bloch, Arthur** 1948–

American humorist

The universe is simmering down, like a giant stew left to cook for four billion years. Sooner or later we won't be able to tell the carrots from the onions.

In John D. Barrow

*The World Within the World* (p. 221)

Clarendon Press. Oxford, England. 1988

**Blount, Sir Thomas Pope** 1649–97

English author

Whoever surveys the curious fabric of the universe can never imagine, that so noble a structure should be fram'd for no other use, than barely for mankind to live and breathe in. It was certainly the design of the great Architect, that his creatures should afford not only necessaries and accommodations to our animal part, but also instructions to our intellectual.

*A Natural History*

Preface

Printed for R. Bentley. London, England. 1693

**Borel, Félix Edouard Justin Emile** 1871–1956

French mathematician

It may seem rash indeed to draw conclusions valid for the whole universe from what we can see from the small corner to which we are confined. Who knows that the whole visible universe is not like a drop of water at the surface of the earth? Inhabitants of that drop of water, as small relative to it as we are relative to the Milky Way, could not possibly imagine that beside the drop of water there might be a piece of iron or a living tissue, in which the properties of matter are entirely different.

*Space and Time*

Note IV (p. 227)

Dover Publications. New York, New York, USA. 1960

**Born, Max** 1882–1970

German-born English physicist

We have sought for firm ground and found none. The deeper we penetrate, the more restless becomes the universe; all is rushing about and vibrating in a wild dance.

*The Restless Universe*

Chapter V (p. 277)

Dover Publications, Inc. New York, New York, USA. 1951

**Bove, Ben**

No biographical data available

The universe lies before us. What we know about it today is merely the steppingstone to a greater, deeper understanding.

*The Milky Way Galaxy*

Chapter 10 (p. 201)

Holt, Rinehart & Winston. New York, New York, USA. 1961

**Bradley, Jr., John Hodgdon** 1898–1962

American geologist

...man is the only animal who can face with a thought, a dream, and a smile the mystery and the madness and the terrible beauty of the universe.

*Autobiography of Earth*

Chapter XII, Section III (p. 347)

Coward-McCann, Inc. New York, New York, USA. 1935

**Browne, J. Stark**

English comedian

I am very interested in the Universe – I am specializing in the Universe and all that surrounds it.

*Beyond the Fringe*  
Disc 2, Sitting on the Bench  
EMI International. 1996

**Copernicus, Nicolaus** 1473–1543  
Polish astronomer

But they say that beyond the heavens there isn’t anybody or place or void or anything at all; and accordingly it is not possible for the heavens to move outward: in that case it is rather surprising that something can be held together by nothing. But if the heavens were infinite and were finite only with respect to a hollow space inside, then it will be said with more truth that there is nothing of heaven, since anything which occupied any space would be in them, but the heavens will remain immobile. For movement is the most powerful reason wherewith they try to conclude that the universe is finite.

In *Great Books of the Western World* (Volume 16)

*On the Revolutions of the Heavenly Spheres*

Encyclopedia Britannica, Inc. Chicago, Illinois, USA. 1952

**Crane, Stephen** 1871–1900  
American writer

A man said to the universe:

“Sir I exist!”

“However,” replied the universe,

“The fact has not created in me

A sense of obligation.”

*The Collected Poems of Stephen Crane*

War Is Kind (p. 101)

Alfred A. Knopf. New York, New York, USA. 1965

**Croswell, Ken**

American astronomer and author

Is it mere coincidence that the universe happens to possess just those properties which allow part of it to be alive? Some people say yes; it was simply good luck that the universe was born with the particular characteristics that it has. Others say no; our universe is only one of many universes.... Still others, of a more spiritual persuasion, see the universe's remarkable offspring as a sign that an intelligent creator wrote a tremendous symphony whose melodies the stars, galaxies, and planets now play with beauty and precision.... Whatever the case, and vast and complex though the universe is, its most astonishing features are two of the simplest: it exists, and so do we.

*Planet Quest: The Epic Discovery of Alien Solar Systems*

Chapter 12 (p. 247)

Oxford University Press, Inc. Oxford, England. 1997

**Crowley, Aleister** 1875–1947

British occultist and writer

It sometimes strikes me that the whole of science is a piece of impudence; that nature can afford to ignore our impertinent interference. If our monkey mischief should ever reach the point of blowing up the earth by decomposing an atom, and even annihilated the sun himself, I cannot really suppose that the universe would turn a hair.

*The Confessions of Aleister Crowley: An Autohagiography*

Part One, Chapter 14 (p. 128)

Arkana. London, England. 1989

I have never grown out of the infantile belief that the universe was made for me to suck.

Part X, Chapter 44 (p. 1218)

W.H. Freeman & Company. San Francisco, California, USA. 1973

**Dampier, Sir William Cecil** 1867–1952

English scientific writer

Confronted with the mystery of the Universe, we are driven to ask if the model our minds have framed at all corresponds with the reality; if, indeed, there be any reality behind the image.

*The Recent Development of Physical Science*

Chapter I (p. 12)

P. Blackiston's Sons & Co. Philadelphia, Pennsylvania, USA. 1904

**Dantzig, Tobias** 1884–1956

Russian mathematician

...has the universe an existence *per se* or does it exist only in the mind of man? To the man of science, the acceptance of the one hypothesis or the other is not at all a question of “to be or not to be”; for from the standpoint of logic either hypothesis is tenable, and from the standpoint of experience neither is demonstrable. So the choice will forever remain a matter of expediency and convenience. The man of science will act *as if* this world were an absolute whole controlled by laws independent of his own thoughts or acts; but whenever he discovers a law of striking simplicity or one of sweeping universality or one which points to a perfect harmony in the cosmos, he will be wise to wonder what rôle his mind has played in the discovery, and whether the beautiful image he sees in the pool of eternity reveals the nature of this eternity, or is but a reflection of his own mind.

*Number, the Language of Science*

Chapter Eleven (p. 233)

The Macmillan Co. New York, New York, USA. 1954

**Darling, David** 1953–

British astronomer and science writer

In giving birth to us, the universe has performed its most astonishing creative act. Out of a hot, dense melee of subatomic particles...it has fashioned intelligence and consciousness.... Somehow the anarchy of genesis has given way to exquisite, intricate order, so that now there are portions of the universe that can reflect upon themselves....

*Equations of Eternity: Speculations on Consciousness, Meaning, and the Mathematical Rules that Orchestrate the Cosmos*

Introduction (p. xiii)

**Davies, Paul Charles William** 1946–

British-born physicist, writer, and broadcaster

Mathematics and beauty are the foundation stones of the universe. No one who has studied the forces of nature can doubt that the world about us is a manifestation of something very, very clever indeed.

*The Forces of Nature* (2nd edition)  
Conclusion (p. 167)  
Cambridge University Press. Cambridge, England. 1983

If there is a purpose to the universe, and it achieves that purpose, then the universe must end, for its continued existence would be gratuitous and pointless. Conversely, if the universe endures forever, it is hard to imagine that there is any ultimate purpose to the universe at all. So cosmic death may be the price that has to be paid for cosmic success. Perhaps the most that we can hope for is that the purpose of the universe becomes known to our descendants before the end of the last three minutes.

*The Last Three Minutes: Conjectures about the Ultimate Fate of the Universe*

Chapter 11 (p. 155)  
Basic Books, Inc. New York, New York, USA. 1994

Dutch mathematician, physicist, and astronomer

Our conception of the structure of the Universe bears all the marks of a transitory structure. Our theories are decidedly in a state of continuous and just now very rapid evolution.

In J.H.F. Umbgrove  
*The Pulse of the Earth*  
Chapter I (p. 1)  
Martinus Nijhoff. The Hague, Netherlands. 1947

After all, the universe is an hypothesis, like the atom, and must be allowed the freedom to have properties and to do things which would be contradictory and impossible for a fine material structure.... The conclusions derived about the expanding universe depend on the assumed homogeneity and isotropy – i.e., on the hypothesis that the observed finite material density and expansion of our neighbourhood are not local phenomena, but properties of the “universe”. It is not inconceivable that this hypothesis may at some future stage of the development of science have to be given up, or modified, or at least differently interpreted.

*The Unity of Nature*

Chapter I (p. 1)

G.P. Putnam's Sons. New York, New York, USA. 1885

**Dyson, Freeman J.** 1923–

American physicist and educator

As a working hypothesis to explain the riddle of our existence, I propose that our universe is the most interesting of all possible universes, and our fate as human beings is to make it so.

*Infinite in All Directions*

Preface (p. vii)

Harper Collins Publisher, Inc. New York, New York, USA. 1988

I have found a universe growing without limit in richness and complexity, a universe of life surviving forever and making itself known to its neighbors across unimaginable gulfs of space and time. Whether the details of my calculations turn out to be correct or not, there are good scientific reasons for taking seriously the possibility that life and intelligence can succeed in molding this universe of ours to their own purposes.

*Infinite in All Directions*

Part One, Chapter Six (p. 117)

Harper Collins Publisher, Inc. New York, New York, USA. 1988

The hypothesis is that the universe is constructed according to a principle of maximum diversity. The principle of maximum diversity operates both at the physical and at the mental level. It says that the laws of nature and the initial conditions are such as to make the universe as interesting as possible. As a result, life is possible but not too easy. Always when things are dull, something new turns up to challenge us and to stop us from settling into a rut. Examples of things which make life difficult are all around us: comet impacts, ice ages, weapons, plagues, nuclear fission, computers, sex, sin and death. Not all challenges can be overcome, and so we have tragedy. Maximum diversity often leads to maximum stress. In the end we survive, but only by the skin of our teeth.

*Infinite in All Directions*

Part Two, Chapter Seventeen (p. 298)

Harper Collins Publisher, Inc. New York, New York, USA. 1988

As we look out into the Universe and identify the many accidents of physics and astronomy that have worked together to our benefit, it almost seems as if the Universe must in some sense have known that we were coming.

In John D. Barrow and Frank J. Tipler

*The Anthropic Cosmological Principle*

Chapter 5.5 (p. 318)

Clarendon Press. Oxford, England. 1986

I do not feel like an alien in this universe. The more I examine the universe and study the details of its architecture, the more evidence I find that the universe in some sense must have known that we were coming.

*Disturbing the Universe*

Chapter 23 (p. 250)

Basic Books, Inc. New York, New York, USA. 1979

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

The unanimity with which the galaxies are running away looks almost as though they had a pointed aversion to us. We wonder why we should be shunned as though our system were a plague spot in the universe.

*The Expanding Universe*

Chapter I, Section III (p. 12)

The University Press. Cambridge. 1933

Meanwhile the knowledge that has been attained shows only the more plainly how much there is to learn. The perplexities of today foreshadow the discoveries of the future. If we have still to leave the stellar universe a region of hidden mystery, yet it seems as though, in our exploration, we have been able to glimpse the outline of some vast combination which unites even the farthest stars into an organised system.

*Stellar Movements and the Structure of the Universe*

Chapter XII (p. 261)

Macmillan & Company Ltd. London, England. 1914

I would feel more content that the universe should accomplish some great scheme of evolution and, having achieved whatever may be achieved, lapse back into chaotic changelessness, than its purpose should be banalised by continual repetition. I am an Evolutionist, not a Multiplicationist. It seems rather stupid to keep doing the same thing over and over again.

*The Nature of the Physical World*

Chapter IV (p. 86)

The Macmillan Company. New York, New York, USA. 1930

Looking back through the long past we picture the beginning of the world – a primeval chaos which time has fashioned into the universe that we know. Its vastness appalls the mind; space boundless though not infinite, according to the strange doctrine of science.

*Science and the Unseen World*

Lecture I (p. 11)

The Macmillan Co. New York, New York, USA. 1929

If we have still to leave the stellar universe a region of hidden mystery, yet it seems as though, in our exploration, we have been able to glimpse the outline of some vast combination which unites even the farthest stars into an organised system.

*Stellar Movements and the Structure of the Universe*  
Chapter XII (p. 261)  
Macmillan & Co Ltd. London, England. 1914

...the theory of the expanding universe is in some respects so preposterous that we naturally hesitate to commit ourselves to it. It contains elements apparently so incredible that I feel almost an indignation that anyone should believe in it – except myself.

*The Expanding Universe*  
Chapter III, Section IV (pp. 86–87)  
At the University Press. Cambridge, England. 1952

### Editorial

It is obvious that we must regard the universe as extending infinitely, forever, in every direction; or that we must regard it as not so extending. Both possibilities go beyond us.

Einstein's Finite Universe  
*Scientific American*, Volume 124, Number 11, March 12, 1921 (p. 202)

**Ehrmann, Max** 1872–1945  
American lawyer and writer

You are a child of the universe, no less than the trees and the stars; you have a right to be here. And whether or not it is clear to you, no doubt the universe is unfolding as it should.

*Desiderata*  
Published by author. 1927

**Eliot, T. S. (Thomas Stearns)** 1888–1965  
American expatriate poet and playwright

Do I dare

Disturb the universe?

In a minute there is time

For decisions and revisions which a minute will reverse.

*The Collected Poems and Plays 1909–1950*  
The Love Song of J. Alfred Prufrock (p. 5)  
Harcourt, Brace & World, Inc. New York, New York, USA. 1952

**Elliot, Hugh** 1752–1830  
British diplomat and adventurer

No sign of purpose can be detected in any part of the vast universe disclosed by our most powerful telescopes.

*Modern Science and Materialism* (p. 39)  
Longmans, Green & Company. 1919

**Emerson, Ralph Waldo** 1803–82  
American lecturer, poet, and essayist

Philosophically considered, the universe is composed of Nature and the Soul.

*Ralph Waldo Emerson: Essays and Lectures*

*Nature: Addresses, and Lectures*  
Introduction (p. 8)  
The Library of America. New York, New York, USA. 1983

We are taught by great actions that the universe is the property of every individual in it.

*Ralph Waldo Emerson: Essays and Lectures*  
*Nature: Addresses, and Lectures*  
Beauty (p. 16)  
The Library of America. New York, New York, USA. 1983

Everything in the universe goes by indirection. There are no straight lines.

*The Complete Works of Ralph Waldo Emerson (Volume 7)*  
*Society and Solitude*  
Works and Days (p. 181)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

...the universe does not jest with us, but is in earnest...

*Letters and Social Aims*  
Poetry and Imagination (p. 3)  
James R. Osgood & Company. Boston, Massachusetts, USA. 1876

There are no fixtures in nature. The universe is fluid and volatile. Permanence is but a word of degrees. Our globe seen by God, is a transparent law, not a mass of facts. The law dissolves the fact, and holds it fluid.

*Essays, Orations and Lectures*  
Circles (p. 173)  
William Tegg & Co. London, England. 1848

**Engard, Charles J.**  
American botanist

We accept the universe as far as we know it, but we do not attempt to explain why it exists. It is difficult enough to understand how!

In Johann Wolfgang von Goethe, Bertha Mueller, and Charles J. Engard  
*Goethe's Botanical Writings*  
Introduction (p. 14)  
University of Hawaii Press. Honolulu, Hawaii, USA. 1952

**Estling, Ralph**  
No biographical data available

There is no question about there being design in the Universe. The question is whether this design is imposed from the Outside or whether it is inherent in the physical laws governing the Universe. The next question is, of course, who or what made these physical laws.

*The Skeptical Inquirer*, Spring 1993

I do not know what, if anything, the Universe has in its mind, but I am quite, quite sure that, whatever it has in its mind, it is not at all like what we have in ours. And, considering what most of us have in ours, it is just as well.

*The Skeptical Inquirer*, Spring 1993

**Euler, Leonhard** 1707–83  
Swiss mathematician and physicist

For since the fabric of the universe is most perfect and the work of a most wise Creator, nothing at all takes

place in the universe in which some rule of maximum or minimum does not appear.

In Morris Kline

*Mathematical Thought from Ancient to Modern Times* (p. 573)  
Oxford University Press, Inc. New York, New York, USA. 1972

**Ferris, Timothy** 1944–

American science writer

There could be more life out there than we've ever imagined – for if the universe has taught us anything, it is that reality is richer and more resourceful than our wildest dreams.

*Life Beyond Earth*

The Ice Zone (p. 116)

Simon & Schuster. New York, New York, USA. 2000

We live in a changing universe, and few things are changing faster than our conception of it.

*The Whole Shebang: A State-of-the Universe's Report*

Preface (p. 11)

Simon & Schuster. New York, New York, USA. 1996

**Feynman, Richard P.** 1918–88

American theoretical physicist

This universe has been described by many, but it just goes on, with its edge as unknown as the bottom of the bottomless sea of the other ideas – just as mysterious, just as awe-inspiring, and just as incomplete as the poetic pictures that came before.

*The Meaning of It All: Thoughts of a Citizen Scientist*

Chapter I (p. 10)

Perseus Books. Reading, Massachusetts, USA. 1998

Is no one inspired by our present picture of the universe? The value of science remains unsung by singers: you are reduced to sharing not a song or poem, but an evening lecture about it. This is not yet a scientific age.

*What Do You Care What Other People Think?*

The Value of Science (p. 244)

W.W. Norton & Company, Inc. New York, New York, USA. 1988

**Feynman, Richard P.** 1918–88

American theoretical physicist

**Leighton, Robert B.** 1919–97

American physicist

**Sands, Matthew L.** 1919–

American physicist

A poet once said, “The whole universe is in a glass of wine.” We will probably never know in what sense he meant that, for poets do not write to be understood.... How vivid is the claret, pressing its existence into the consciousness that watches it! If our small minds, for some convenience, divide this glass of wine, this universe, into parts – physics, biology, geology, astronomy, psychology, and so on – remember that nature does not know it! So let us put it all back together, not forgetting

ultimately what it is for. Let it give us one more final pleasure: drink it and forget it all!

*The Feynman Lectures on Physics* (Volume 1)

Chapter 3-7 (p. 3-10)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1983

**Field, Edward** 1924–

American poet

Look, friend, at this universe

With its spiral clusters of stars

Flying out all over space

Like bedsprings suddenly bursting free;

*New and Selected Poems from the Book of My Life*

From Stand Up, Friend, with Me (1963) Prologue

**Flammarion, Camille** 1842–1925

French astronomer and author

May we conclude, then, that in these successive endings the universe will one day become an immense and dark tomb. No: otherwise it would already have become so during a past eternity. There is in nature something else besides blind matter; an intellectual law of progress governs the whole creation; the forces which rule the universe cannot remain inactive. The stars will rise from their ashes. The collision of ancient wrecks causes new flames to burst forth, and the transformation of motion into heat creates nebulae and worlds. Universal death shall never reign.

*Popular Astronomy: A General Description of the Heavens*

Book I, Chapter VII (p. 80)

Chatto & Windus. London, England. 1894

When the last human eyelid closes here below, and our globe – after having been for so long the abode of life with its passions, its labour, its pleasures and its pains, its loves and its hatred, its religious and political expectations and all its vain finalities – is enshrouded in the winding-sheet of a profound night, when the extinct sun wakes no more; well, then – then, as today, the universe will be as complete, the stars will continue to shine in the sky, other suns will illuminate other worlds, other springs will bring round the bloom of flowers and the illusions of youth, other mornings and other evenings will follow in succession, and the universe will move on as at present; for creation is developed in infinity and eternity.

*Popular Astronomy: A General Description of the Heavens*

Book II, Chapter VI (p. 164)

Chatto & Windus. London, England. 1894

What pleasures await us in the study of the Universe! Nothing could speak more eloquently to our heart and intellect!

Translated by Frances Alice Welby

*Astronomy for Amateurs*

Introduction (p. 13)

D. Appleton & Co. New York, New York, USA. 1915

**France, Anatole (Jean Jacques Brousson)** 1844–1924  
French writer

The universe which science reveals to us is a dispiriting monotony. All the suns are drops of fire and all the planets are drops of mud.

In Stanley L. Jacki  
*Creator*  
Chapter Two (p. 26)  
Scottish Academic Press. Edinburgh, Scotland. 1980

If desire lends a grace to whatsoever be the object of it, then the desire of the unknown makes beautiful the Universe.

*My Friend's Book*  
Chapter XI (p. 159)  
Dodd, Mead & Company. New York, New York, USA. 1924

**Frayn, Michael** 1933–  
English dramatist

The complexity of the universe is beyond expression in any possible notation. Lift up your eyes. Not even what you see before you can ever be fully expressed. Close your eyes. Not even what you see now.

*Constructions*  
No. 1  
Wildwood House. London, England. 1974

**Friedman, Herbert** 1916–2000  
American space scientist and astrophysicist

It is impossible for any sensitive person to look at a star-filled sky without being stirred by thoughts of creation and eternity. The mystery of the origin and destiny of the universe haunts us throughout our lives.

*The Amazing Universe*  
Chapter VII (p. 166)  
National Geographic Society. 1975

**Fritsch, Harald** 1943–  
German theoretical physicist

The universe is more than merely an accretion of electrons, quarks, and galaxies, more than space and time. The complex, interrelated world of the earth which created us is part of it. It is our duty not only to ourselves to preserve this world. The universe itself imposes this task on us.

*The Creation of Matter: The Universe from Beginning to End*  
Chapter 17 (p. 282)  
Basic Books, Inc. New York, New York, USA. 1984

**Frost, Robert** 1874–1963  
American poet

The Universe is but the Thing of Things  
The things but balls all going round in rings  
Some of them mighty huge, some mighty tiny  
All of them radiant and might shiny.

*Complete Poems of Robert Frost*  
Accidentally on Purpose  
Henry Holt & Company. New York, New York, USA. 1949

...all reasoning is in a circle. At least that's why the universe is round.

*Complete Poems of Robert Frost*  
Build the Soil  
Henry Holt & Company. New York, New York, USA. 1949

**Galilei, Galileo** 1564–1642  
Italian physicist and astronomer

No one will be able to read the great book of the Universe if he does not understand its language which is that of mathematics.

In A. Zee  
*Fearful Symmetry*  
Chapter 9 (p. 122)  
Macmillan Publishing Company. New York, New York, USA. 1986

Philosophy is written in this grand book, the universe, which stands continually open to our gaze. But the book cannot be understood unless one first learns to comprehend the language and read the letters in which it is composed. It is written in the language of mathematics, and its characters are triangles, circles, and other geometric figures without which it is humanly impossible to understand a single word of it.

Translated by Stillman Drake  
*Discoveries and Opinions of Galileo*  
The Assayer (pp. 237–238)  
Doubleday & Company, Inc. New York, New York, USA. 1957

I should think that anyone who considered it more reasonable for the whole universe to move in order to let the Earth remain fixed would be more irrational than one who should climb to the top of a cupola just to get a view of the city and its environs, and then demand that the whole countryside should revolve around him so that he would not have to take the trouble to turn his head.

*Dialogues Concerning the Two Chief World Systems*  
Second Day (p. 115)  
University of California Press. Berkeley, California, USA. 1967

**Gaarder, Jostein** 1952–  
Norwegian intellectual

It is enough to hold a stone in your hand. The universe would have been equally incomprehensible if it had only consisted of that one stone the size of an orange. The question would be just as impenetrable: Where did this stone come from.

Translated by Paulette Møller  
*Sophie's World: A Novel about the History of Philosophy*  
The Big Bang (p. 389)  
Farrar, Straus & Giroux. New York, New York, USA. 1994

The universe has no timeless geography. The universe is a happening.

Translated by Paulette Møller  
*Sophie's World: A Novel about the History of Philosophy*  
The Big Bang (p. 393)  
Farrar, Straus & Giroux. New York, New York, USA. 1994

**Gamow, George** 1904–68  
Russian-born American physicist

Shall we consider the universe as extending into infinity and conclude that bigger and better telescopes will always reveal to the inquiring eye of an astronomer new and hitherto unexplored regions of space, or must we believe, on the contrary, that the universe occupies some very big but nevertheless finite volume, and is, at least in principle, explorable down to the last star?

*One Two Three...Infinity: Facts and Speculations of Science*  
Part IV, Chapter X (p. 294)  
The Viking Press. New York, New York, USA. 1947

**Giacconi, Riccardo** 1931–  
Italian-born American astrophysicist

The universe is popping all over the place.  
*NY Times*, May 8, 1984

**Giraudoux, Jean** 1882–1944  
French novelist, playwright, and essayist

COUNTESS: I know perfectly well that at this moment the whole universe is listening to us – and that every word we say echoes to the remotest star.

English adaptation by Maurice Valency  
*The Madwoman of Chaillot*  
Act Two (p. 94)  
Random House, Inc. New York, New York, USA. 1947

**Gleiser, Marcello** 1959–  
Brazilian-born physicist and astronomer

Our planet is not in a special place in the solar system, our Sun is not in a special place in our galaxy and our galaxy is not in a special place in the Universe.

*The Dancing Universe*  
Chapter 9 (p. 274)  
The Penguin Group. New York, New York, USA. 1997

**Guth, Alan** 1947–  
American physicist

The universe may be the ultimate free lunch.  
In P.C.W. Davies (ed.)  
*The New Physics*  
The Inflationary Universe (p. 54)  
Cambridge University Press. Cambridge, England. 1989

**Guth, Alan** 1947–  
American physicist

**Steinhardt, Paul**  
American physicist

The inflationary model of the universe provides a possible mechanism by which the observed universe could have evolved from an infinitesimal region. It is then tempting to go one step further and speculate that the entire universe evolved from literally nothing.

The Inflationary Universe  
*Scientific American*, Volume 250, Number 5, May, 1984 (p. 128)

**Guyau, Jean-Marie** 1854–88  
French philosopher and poet

To explain the universe by hydrogen is like explaining it by the sun and the planets.

*The Non-religion of the Future: A Sociological Study*  
Part Third, Chapter V (p. 489)  
Henry Holt & Co. New York, New York, USA. 1897

**Halacy, Jr., D. S.**  
No biographical data available

Our universe operates not at the whims of those who live in it, but by inexorable natural laws.

*They Gave Their Names to Science*  
Prologue (p. 9)  
G.P. Putnam's Sons. New York, New York, USA. 1967

**Haldane, John Burdon Sanderson** 1892–1964  
English biologist

...the universe is not only queerer than we suppose but it is queerer than we can suppose.

*Possible Worlds and Other Papers*  
Chapter XXXIV (p. 298)  
Harper & Brothers Publishers. New York, New York, USA. 1928

The conclusion forced upon me in the course of a life devoted to natural science is that the universe as it is assumed to be in physical science is a spiritual universe in which spiritual values count for everything.

*The Sciences and Philosophy* (p. 260)  
Doubleday & Co., Inc. New York, New York, USA. 1929

**Hale, George Ellery** 1868–1938  
American astronomer

It is a far cry from the facile imaginings of the philosopher to the rigorous demonstrations of exact science, and the true structure of the universe is not yet known.

*Beyond the Milky Way*  
Beyond the Milky Way (p. 100)  
Charles Scribner's Sons. New York, New York, USA. 1926

**Hardy, G. H. (Godfrey Harold)** 1877–1947  
English pure mathematician

'Imaginary' universes are so much more beautiful than this stupidly constructed 'real' one; and most of the finest products of an applied mathematician's fancy must be rejected, as soon as they have been created, for the brutal but sufficient reason that they do not fit the facts.

*A Mathematician's Apology*  
Section 26 (p. 135)  
Cambridge University Press. Cambridge, England. 1967

**Harrison, Edward Robert**  
Cosmologist

What determines the design of a universe; is it the Universe, God, fortuity, or the human mind?

*Masks of the Universe*

Chapter 1 (p. 5)

Macmillan Publishing Company. New York, New York, USA. 1985

We cannot doubt the existence of an ultimate reality. It is the Universe forever masked. We are part of an aspect of it, and the masks figured by us are the Universe observing and understanding itself from a human point of view. When we doubt the Universe we doubt ourselves. The Universe thinks, therefore it is.

*Masks of the Universe*

Chapter I (p. 14)

Macmillan Publishing Company. New York, New York, USA. 1985

The universe consists only of atoms and the void: all else is opinion and illusion.

*Masks of the Universe*

Chapter 4 (p. 55)

Macmillan Publishing Company. New York, New York, USA. 1985

We do not know what sets limits to the Great Chain of hierarchical structures, nor do we know what unifies it. We are clueless as to why atoms exist and why the Universe is structured the way it is. Of course, if the Universe were structured in any other way, we would not be here asking these pertinent questions; or so we are told. But I am a heretic and inclined to think the other way: without us this Universe would not be here.

## A Twinkle in the Eye of the Universe

*Quarterly Journal of the Royal Astronomical Society*, Volume 25, Number 4, December, 1984 (p. 428)

From the outset we must decide whether to use Universe or universe. This in not so trivial a matter as it might seem. We know of only one planet called Earth; similarly, we know of only one Universe. Surely then the proper word is Universe?

*Cosmology: The Science of the Universe*

Chapter 1 (p. 10)

Cambridge University Press. Cambridge, England. 1981

**Haught, James A.**

No biographical data available

The universe is a vast, amazing, seething dynamo which has no discernable purpose except to keep on churning. From quarks to quasars, it's alive with incredible power. But it seems utterly indifferent to any moral laws. It destroys as blindly as it nurtures.

*2000 Years of Disbelief: Famous People with The Courage to Doubt*

Afterthought (p. 324)

Prometheus Books. Amherst, New York, USA. 1996

**Hawking, Stephen William** 1942–

English theoretical physicist

There ought to be something very special about the boundary conditions of the universe and what can be more special than the condition that there is no boundary.

In John D. Barrow and Frank J. Tipler

*The Anthropic Cosmological Principle*

Chapter 6.15 (p. 444)

Clarendon Press. Oxford, England. 1986

...we do not know what is happening at the moment farther away in the universe: the light that we see from distant galaxies left them millions of years ago and in the case of the most distant object that we have seen, the light left some eight thousand million years ago. Thus, when we look at the universe, we are seeing it as it was in the past.

*A Brief History of Time: From the Big Bang to Black Holes*

Chapter 2 (p. 28)

Bantam Books. Toronto, Ontario, Canada. 1988

We see the universe the way it is because we exist.

*A Brief History of Time: The Updated and Expanded Edition*

Chapter 8 (p. 128)

Bantam Books. Toronto, Ontario, Canada. 1988

Even if there is only one possible unified theory, it is just a set of rules and equations. What is it that breathes fire into the equations and makes a universe for them to describe? The usual approach of science of constructing a mathematical model cannot answer the questions of why there should be a universe for the model to describe. Why does the universe go to all the bother of existing?

*A Brief History of Time: From the Big Bang to Black Holes*

Chapter 11 (p. 174)

Bantam Books. Toronto, Ontario, Canada. 1988

I do not agree with the view that the universe is a mystery, something that one can have intuition about but never fully analyze or comprehend.

*Black Holes and Baby Universes and Other Essays*

Preface (p. viii)

Bantam Books. New York, New York, USA. 1993

I think the universe is completely self-contained. It doesn't have any beginning or end, it doesn't have any creation or destruction.

In Renée Weber

*Dialogues with Scientists and Sages: The Search for Unity* (p. 89)

Routledge &amp; Kegan Paul. London, England. 1986

**Hawkins, Michael** 1942–

British astrophysicist

The stars and galaxies that fill our view as we survey the depths of the Universe are really just a froth delineating the massive, dark unseen structures beneath.

*Hunting Down the Universe: The Missing Mass, Primordial Black Holes, and Other Dark Matters*

Chapter 13 (p. 183)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA.

1997

**Hayflick, Leonard** 1928–

American microbiologist

Everything in the universe ages, including the universe.

In Nancy Shute

*U.S. News and World Report*, 18/25 August, 1997 (p. 57)

**Haynes, Margaret**

No biographical data available

The universe is just a bowl of spaghetti.

In Eric J. Lerner

*The Big Bang Never Happened*

Chapter 1 (p. 49)

Random House, Inc. New York, New York, USA. 1991

**Heinlein, Robert A.** 1907–88

American science fiction writer

Tomorrow I will seven eagles see, a great comet will appear, and voices will speak from whirlwinds foretelling monstrous and fearful things – This Universe never did make sense; I suspect that it was built on government contract.

*The Number of the Beast*

Chapter II (p. 19)

Fawcett Columbine Books. New York, New York, USA. 1980

No storyteller has ever been able to dream up anything as fantastically unlikely as what really does happen in this mad universe.

*Time Enough for Love*

Prelude, Chapter II (p. 51)

G.P. Putnam's Sons. New York, New York, USA. 1973

A zygote is a gamete's way of producing more gametes. This may be the purpose of the universe.

*Time Enough for Love*

Intermission (p. 262)

G.P. Putnam's Sons. New York, New York, USA. 1973

**Henderson, Archibald** 1877–1933

American mathematician and writer

We are doomed to dwell within a finite universe a thousand million times greater than the region now accessible to astronomical observation. Our glances are confined forever within this giant – this all too minute – monad.

*The Size of the Universe**Science*, Volume 58, Number 1497, 7 September, 1923 (p. 172)**Herschel, Sir John Frederick William** 1792–1871

English astronomer and chemist

...after dilating his thoughts to comprehend the grandeur of those ideas his calculations have called up, and exhausting his imagination and the powers of his language to devise similes and metaphors illustrative of the immensity of the scale on which his universe is constructed, he shrinks back to his native sphere, he finds it, in comparison, a mere point; so lost – even in the minute system to which it belongs – as to be invisible and unsuspected from some of its principal and remoter members.

*Outlines of Astronomy: By Sir John F. W. Herschel*

Introduction (p. 23)

American Home Library Co. New York, New York, USA. 1902

**Hickok, Laurens Perseus** 1798–1888

No biographical data available

There must somewhere be a position from whence it may clearly be seen, that the universe has laws which are necessarily determined by immutable and eternal principles. Nothing in nature, and equally so not nature itself, can be made intelligible except as it has been subjected to rational principle, and such principle must both have been, and been made controlling, in the very origination of nature, or nature must forever be without meaning or end.

*Rational Cosmology: Or, The Eternal Principles and the Necessary Laws of the Universe*

Preface (p. 3)

D. Appleton &amp; Co. New York, New York, USA. 1858

**Hinshelwood, Sir Cyril** 1897–1967

English chemist

To some men knowledge of the universe has been an end possessing in itself a value that is absolute: to others it has seemed a means of useful application.

*The Structure of Physical Chemistry*

Chapter I (p. 2)

Clarendon Press. Oxford, England. 1951

**Hogan, John**

No biographical data

...cosmologists – and the rest of us – may have to forego attempts at understanding the universe and simply marvel at its infinite complexity and strangeness.

Universal Truths

*Scientific American*, Volume 263, Number 4, October, 1990 (p. 117)**Holmes, John Haynes** 1879–1964

American clergyman

The universe is not hostile, nor yet is it friendly. It is simply indifferent.

*A Sensible Man's View of Religion*

Is the Universe Friendly? (p. 39)

**Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

There is a coherent plan in the universe, though I don't know what it's a plan for.

*Wired*, 2/98 (p. 174)

...if there is one important result that comes out of our inquiry into the nature of the Universe it is this: when by patient inquiry we learn the answer to any problem, we always find, both as a whole and in detail, that the answer thus revealed is finer in concept and design than anything we could ever have arrived at by a random guess.

*The Nature of the Universe*

Chapter 7 (p. 140)

The University Press. Cambridge. 1933

Perhaps the most majestic feature of our whole existence is that while our intelligences are powerful enough to penetrate deeply into the evaluation of this quite incredible Universe, we still have not the smallest clue to our own fate.

*The Nature of the Universe*  
Chapter 7 (p. 142)  
The University Press. Cambridge. 1933

The Universe is everything; both living and inanimate things; both atoms and galaxies; and if the spiritual exists as well as the material, of spiritual things also; and if there is a Heaven and a Hell, of Heaven and Hell too; for by its very nature the Universe is the totality of all things.

*Frontiers of Astronomy*  
Chapter Eighteen (p. 304)  
Harper & Row, Publishers. New York, New York, USA. 1955

**Hubble, Edwin Powell** 1889–1953  
American astronomer

We find them smaller and fainter, in constantly increasing numbers, and we know that we are reaching out into space, further and ever further, until, with the faintest nebulae that can be detected with the greatest telescope, we arrive at the frontiers of the known universe.

In Joseph Silk  
*The Big Bang* (p. 26)  
W.H. Freeman & Company. San Francisco, California, USA. 1980

...equipped with his five senses, man explores the universe around him and calls the adventure science.

*The Nature of Science and Other Lectures*  
Part I, The Nature of Science (p. 6)  
The Huntington Library. San Marino, California, USA. 1954

**Huygens, Christiaan** 1629–95  
Dutch mathematician, astronomer, and physicist

What a wonderful and amazing Scheme have we here of the magnificent Vastness of the Universe! So many Suns, so many Earths...!

*The Celestial Worlds Discover'd; or, Conjectures Concerning the Planetary Worlds, Their Inhabitants and Productions*  
Kosmotheoros (p. 222)  
Printed for T. Childe. London, England. 1698

**Inge, William Ralph** 1860–1954  
English religious leader and author

If the universe is running down like a clock, the clock must have been wound up at a date which we could name if we knew it. The world, if it is to have an end in time, must have had a beginning in time.

*God and the Astronomers*  
Chapter 3 (p. 48)  
W.W. Norton & Company, Inc. New York, New York, USA. 1978

**Ingelow, Jean** 1820–97  
English poet and novelist

Fair world! these puzzled souls of ours grow weak  
With beating their bruised wings against the rim  
That bounds their utmost flying, when they seek The distant and the dim.

Contentment comes not therefrom; still there lies  
An outer distance when the first is hailed;

And still forever yawns before our eyes  
An utmost – that is veiled.

*Poems*  
13th Honours (p. 24)  
Longmans, Green & Co. London, England. 1867

**Ionides, Stephen A.**  
No biographical data available

**Ionides, Margaret L.**  
No biographical data available

Today we regard the universe as utterly indifferent, a vast expanse into which we have wandered, perhaps by accident, perhaps by divine providence. We are not at all necessary to it, but we know that it is necessary to us, and we must learn its rules if we are to survive.

*Stars and Men*  
Chapter XVII (p. 393)  
Bobbs-Merrill. Indianapolis, Indiana, USA. 1939

**Ionesco, Eugene** 1912–94  
French playwright

...the universe seems to me infinitely strange and foreign. At such a moment I gaze upon it with a mixture of anguish and euphoria; separate from the universe, as though placed at a certain distance outside it; I look and I see pictures, creatures that move in a kind of timeless time and spaceless space, emitting sounds that are a kind of language I no longer understand or ever register.

*Notes and Counter Notes: Writing on the Theatre*  
Part II, Interviews, Brief Notes for Radio (p. 136)

**James, William** 1842–1910  
American philosopher and psychologist

Whatever universe a professor believes in must at any rate be a universe that lends itself to lengthy discourse. A universe definable in two sentences is something for which the professorial intellect has no use. No faith in anything of that cheap kind!

*Pragmatism: A New Name for Some Old Ways of Thinking*  
Lecture I (p. 4)  
Longmans, Green & Company. London, England. 1914

**Jastrow, Robert** 1925–  
American space scientist

Theologians generally are delighted with the proof that the Universe had a beginning, but astronomers are curiously upset. Their reactions provide an interesting demonstration of the response of the scientific mind – supposedly a very objective mind – when evidence uncovered by science itself leads to a conflict with the articles of faith in our profession. It turns out that the scientist behaves the way the rest of us do when our beliefs are in conflict with the evidence. We become irritated, we pretend the conflict does not exist, or we paper it over with meaningless phrases.

*God and the Astronomers*

Epilogue (p. 117)

W.W. Norton & Company, Inc. New York, New York, USA. 1978

Thus, the facts indicate that the Universe will expand forever. We still come across pieces of mass here and there in the Universe, and someday we may find the missing matter, but the consensus at the moment is that it will not be found. According to the available evidence, the end will come in darkness.

*God and the Astronomers*

Epilogue (p. 123)

W.W. Norton & Company, Inc. New York, New York, USA. 1978

### **Jeans, Sir James Hopwood** 1877–1946

English physicist and mathematician

The universe cannot go on forever as it now is, and neither can it have existed in its present condition from all eternity.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1926*

The New Outlook in Cosmogony (p. 155)

Government Printing Office. Washington, D.C. 1928

If the universe is a universe of thought then its creations must have been an act of thought.

*The Mysterious Universe*

Into The Deep Waters (pp. 133–134)

Cambridge University Press. Cambridge, England. 1930

The Universe can be best pictured, although still very imperfectly and inadequately, as consisting of pure thought, the thought of what, for want of a wider word, we must describe as a mathematical thinker.

*The Mysterious Universe*

Chapter V (p. 136)

The Macmillan Company. New York, New York, USA. 1932

The universe begins to look more like a great thought than a machine.

In Jefferson Hane Weaver

*The World of Physics* (Volume 2)

Q.3 (p. 632)

Simon & Schuster. New York, New York, USA. 1987

The physical universe never has any choice – it must inevitably move along a single road to a predestined end.

Contributions to a British Association Discussion on the Evolution of the Universe

*Nature*, Supplement, October 24, 1931 (p. 701)

The universe consists in the main not of stars but of desolate emptiness – inconceivably vast stretches of desert space in which the presence of a star is a rare and exceptional event.... The stars move blindly through space, and the players in the stellar blind-man's-buff are so few and far between that the chance of encountering another star is almost negligible.

*The Universe Around Us*

Chapter I (pp. 84–85)

The Macmillan Company. New York, New York, USA. 1929

Every star is continually radiating energy away into space, and we have no knowledge of any appreciable part of this radiation coming back or of the stars replenishing their sources of energy in any way. The universe is running down like a clock which no one winds up.

*Annual Report of the Board of Regents of the Smithsonian Institution (1926)*

Cosmogony (p. 155)

Government Printing Office. Washington, D.C. 1927

### **Jeffers, Robinson** 1887–1962

American poet

It seemed to Barclay the cloud broke and he saw the stars,

Those of this swarm were many, but beyond them universe past universe

Flared to infinity, no end conceivable. Alien, alien, alien universes.

In Tim Hunt (ed.)

*The Collected Poetry of Robinson Jeffers* (Volume 1)

The Women at Point Sur (p. 312)

Stanford University Press. Stanford, California, USA. 1988

The learned astronomer

Analyzing the light of most remote star-swirls

Has found them – or a trick of distance deludes his prism – All at incredible speeds fleeing outward from ours.

I thought, no doubt they are fleeing the contagion

Of consciousness that infects this corner of space.

In Tim Hunt (ed.)

*The Collected Poetry of Robinson Jeffers* (Volume 2)

Margrave (p. 161)

Stanford University Press. Stanford, California, USA. 1988

The universe expands and contracts like a great heart.

It is expanding, the farthest nebulae

Rush with the speed of light into empty space.

*The Beginning and the End and Other Poems*

The Great Explosion (p. 3)

Random House, Inc. New York, New York, USA. 1963

### **Jennings, Herbert Spencer** 1868–1947

American zoologist

...the universe is not “a mere clockwork mechanical wonder swinging in a vast vacuum,” but is a system that, in the course of time, comes to life.

*The Universe and Life*

Chapter II (p. 33)

Yale University Press. New Haven, Connecticut, USA. 1941

### **Jevons, William Stanley** 1835–82

English economist and logician

Were this indeed a Chaotic Universe, the powers of mind employed in science would be useless to us.

*The Principles of Science: A Treatise on Logic and Scientific Method* (2nd edition)

Chapter I (p. 2)

Macmillan & Co Ltd. London, England. 1877

...the Universe in which we dwell is not the result of chance, and where chance seems to work it is our own deficient faculties which prevent us from recognising the operation of Law and of Design.

*The Principles of Science: A Treatise on Logic and Scientific Method*  
Introduction (p. 2)  
Macmillan & Co Ltd. London, England. 1887

**Joad, Cyril Edwin Mitchinson** 1891–1953  
English philosopher and broadcasting personality

When the scientist leaves his laboratory and speculates about the universe as a whole, the resultant conclusions are apt to tell us more about the scientist than about the universe.

*Philosophical Aspects of Modern Science*  
Chapter XI (p. 339)  
George Allen & Unwin Ltd. London, England. 1939

**Kaku, Michio** 1947–  
Japanese-American theoretical physicist

The fact that our universe, like Appleworld, is curved in an unseen dimension beyond our spatial comprehension has been experimentally verified. These experiments, performed on the path of light beams, shows that starlight is bent as it moves across the universe.

*Hyperspace: A Scientific Odyssey Through Parallel Universes, Time Warps, and the 10th Dimension*  
Chapter 1 (p. 17)  
Oxford University Press, Inc. New York, New York, USA. 1995

**Kant, Immanuel** 1724–1804  
German philosopher

If the grandeur of a planetary world in which the earth, as a grain of sand, is scarcely perceived, fills the understanding with wonder, with what astonishment are we transported when we behold the infinite multitude of worlds and systems which fill the extension of the Milky Way! But how is this astonishment increased, when we become aware of the fact that all these immense orders of star-worlds again form but one of a number whose termination we do not know, and which perhaps, like the former, is a system inconceivably vast – and yet again but one member in a new combination of members! We see the first members of a progressive relationship of worlds and systems; and the first part of this infinite progression enables us already to recognise what must be conjectured of the whole. There is here no end but an abyss of a real immensity, in presence of which all the capability of human conception sinks exhausted.

*Kant's Cosmogony as in His Essay on the Retardation of the Rotation of the Earth*  
Chapter II, First Part (pp. 64–65)  
James Maclehose & Co. Glasgow, Scotland. 1900

**Kepler, Johannes** 1571–1630  
German astronomer

This very cogitation carries with it I don't know what secret, hidden horror; indeed one finds oneself wandering in this immensity to which are denied limits and centre and therefore also all determinate places.

In Alexander Koyre  
*From the Closed World to the Infinite Universe*  
Chapter III (p. 61)  
The Johns Hopkins Press. Baltimore, Maryland, USA. 1968

The diversity of the phenomena of Nature is so great, and the treasures hidden in the heavens so rich, precisely in order that the human mind shall never be lacking in fresh nourishment.

*Mysterium Cosmographicum*  
Original Dedication (p. 55)

**Keyser, Cassius Jackson** 1862–1947  
American mathematician

Depend upon it, the universe will never really be understood unless it may be sometime resolved into an ordered multiplicity and made to own itself an everlasting drama of the calculus.

*The Human Worth of Rigorous Thinking: Essays and Addresses*  
Mathematical Emancipations: Dimensionality and Hyperspace (p. 101)  
Columbia University Press. New York, New York, USA. 1925

**Kirshner, Robert P.** 1949–  
American astrophysicist

If Copernicus taught us the lesson that we are not at the center of things, our present picture of the universe rubs it in.

*The Extravagant Universe*  
Chapter 11 (p. 259)  
Princeton University Press. Princeton, New Jersey, USA. 2002

Although the Universe is under no obligation to make sense, students in pursuit of the Ph.D. are.

Exploding Stars and the Expanding Universe  
*Quarterly Journal of the Royal Astronomical Society*, Volume 32,  
Number 3, September, 1991 (p. 240)

**Koestler, Arthur** 1905–83  
Hungarian-born English writer

There are no longer any absolute directions in space. The universe has lost its core. It no longer has a heart, but a thousand hearts.

*The Sleepwalkers*  
Part Three, Chapter II, Section 6 (p. 217)  
The Macmillan Company. New York, New York, USA. 1966

In my youth I regarded the universe as an open book, printed in the language of physical equations, whereas now it appears to me as a text written in invisible ink, of which in our rare moments of grace we are able to decipher a small fragment.

*Bricks to Babel*  
Epilogue (pp. 682–683)  
Random House, Inc. New York, New York, USA. 1980

**Kolb, Edward W. (Rocky)** 1951–  
American cosmologist

There are many beautiful and wondrous things to see in the universe, and to discover them we simply have to gaze into the dark night sky.

*Blind Watchers of the Sky*

Chapter One (p. 1)

Addison-Wesley Publishing Company, Reading, Massachusetts, USA. 1996

Whether our cosmological view of the universe is right or wrong, or just incomplete, we were brave enough to confront our ignorance and look. We looked with all our might, and with boldness and imagination managed to see a little bit farther than our predecessors. We were not proud of our blindness, but neither were we ashamed of it or intimidated by it, for we chose to look for the light of truth fully cognizant of our blindness.

*Blind Watchers of the Sky*

Chapter Ten (p. 282)

Addison-Wesley Publishing Company, Reading, Massachusetts, USA. 1996

**Komarov, Victor G.**

No biographical data available

The universe is an inexhaustible source of knowledge. But the more we know the deeper we realize the extent of what is yet unknown and the greater the probability of stunning discoveries.

Translated by N. Kittell

*This Fascinating Astronomy* (p. 299)

MIR Publishers, Moscow, Russia. 1985

**Krauss, Lawrence M.** 1954–

American theoretical physicist

There is a maxim about the universe which I always tell my students: That which is not explicitly forbidden is guaranteed to occur. Or, as Data said in the episode “Parallels,” referring to the laws of quantum mechanics, “All things which can occur, do occur.”

*The Physics of Star Trek*

Chapter Two (p. 16)

Harp Perennial Publishers, New York, New York, USA. 1995

**Kunitz, Stanley** 1905–2006

American poet

I see lines of your spectrum shifting red,  
The Universe expanding, thinning out,  
Our worlds flying, oh flying, fast apart.

*The Collected Poems*

The Science of the Night (p. 88)

W.W. Norton & Company, Inc. New York, New York, USA. 2000

**Kunz, F. L.**

No biographical data available

The whole universe is one mathematical and harmonic expression, made up of finite representations of the infinite.

In Renée Weber

*Dialogues with Scientists and Sages: The Search for Unity* (p. 139)

Routledge & Kegan Paul, London, England. 1986

**Lambert, Johann Heinrich** 1728–77

Swiss-German mathematician and astronomer

...the firmament must be more enduring than things on our earth and the empires of the world.

Translated by Stanley Jaki

*Cosmological Letters on the Arrangement of the World-Edifice*

Twentieth Letter (p. 193)

Science History Publications, New York, New York, USA. 1976

**Lao Tzu** fl. 6th century BCE

Chinese philosopher and father of Taoism

Something mysteriously formed,

Born before heaven and earth.

In the silence and the void,

Standing alone and unchanging,

Ever present and in motion.

Translated by Gia-Fu Feng and Jane English

*Tao Te Ching*

Twenty-five

Alfred A. Knopf, New York, New York, USA. 1974

**Lawrence, D. H. (David Herbert)** 1885–1930

English writer

The universe is dead for us, and how is it to come to life again? “Knowledge” has killed the sun, making it a ball of gas, with spots; “knowledge” has killed the moon, it is a dead little earth pitted with extinct craters as with small-pox...

*Lady Chatterley’s Lover*

A Propos of ‘Lady Chately’s Lover’ (p. 331)

Penguin Books, London, England. 1994

**Lederman, Leon** 1922–

American high-energy physicist

We hope to explain the entire universe in a single, simple formula that you can wear on your T-shirt.

In Richard Wolkomir article

Quark City

*OMNI Magazine*, February, 1984 (p. 41)

**Lemaître, Abbé Georges** 1894–1966

Belgian astronomer and cosmologist

Our universe bears the marks of youth and we can hope to reconstruct its story. The documents at our disposal are not buried in the piles of bricks carved by the Babylonians; our library does not risk being destroyed by fire; it is in space, admirably empty, where light waves are preserved better than sound is conserved on the wax of phonograph discs.

*The Primeval Atom*

Chapter II (p. 75)

D. van Nostrand Company, Inc. New York, New York, USA. 1950

**Lerner, Eric J.** 1947–  
American popular science book

A universe of unlimited progress from an infinite past to an infinite future makes sense when society is advancing. But when that advance halts, when the idea of progress is mocked by the century of Verdun, Auschwitz, and Hiroshima, when the prospect of human betterment is dim, we should not be surprised that the decaying cosmos again rises to dominance.

*The Big Bang Never Happened*

Part One, Chapter 4 (p. 115)

Time Books. New York, New York, USA. 1991

**Lloyd, Seth** 1950–  
American engineer

I wanted to get a handle on why the universe is so complex.... Or at any rate why there seems to be so much information processing going on. You can look at life and almost all the things – well, all the things – that we see going on around us in terms of information processing. You could say that life is an example of information being processed in the service of getting a free lunch out of your environment. A typical event in evolution, for example, is some organism suddenly, by a mutation, being able to produce an enzyme that allows it to digest something it couldn't get at before. The free lunch is there, but in order to get it, you've got to be able to process information.

In Tim Folger

The Best Computer in All Possible Worlds

*Discover Magazine*, October, 1995

**Lodge, Sir Oliver** 1851–1940  
English physicist

The Universe is huge and awful every way, we might so easily be crushed by it; we need the help of every agency available, and if we had no helpers we should stand a poor chance. The loneliness of it when we leave the planet would be appalling; sometimes even here the loneliness is great.

In James Edward Hand

*Ideals of Science & Faith*

A Physicist's Approach (p. 48)

Longmans, Green & Co. New York, New York, USA. 1904

**Longfellow, Henry Wadsworth** 1807–82  
American poet

The Universe as an immeasurable wheel  
Turning for evermore

In the rapid and rushing river of Time.

*The Poetical Works of Henry Wadsworth Longfellow*

Rain in Summer

Houghton Mifflin Company. Boston, Massachusetts, USA. 1883

**Lucretius** ca. 99 BCE–55 BCE  
Roman poet

...the existing universe is bounded in none of its dimensions; for then it must have an outside.

In *Great Books of the Western World* (Volume 12)

*Lucretius: on the Nature of Things*

Book One, l. 958 (p. 12)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Mach, Ernst** 1838–1916  
Austrian physicist and philosopher

The universe is like a machine in which the motion of certain parts is determined by that of others, only nothing is determined about the motion of the whole machine.

*History and Root of the Principle of the Conservation of Energy*

Chapter IV (p. 62)

The Open Court Publishing Company. Chicago, Illinois, USA. 1911

**Maclaurin, Colin** 1838–1916  
Scottish mathematician

We can perceive no bounds of the vast expanse, in which natural causes operate, and fix no limit, or termination, to the universe. The objects we commonly call great, vanish, when we contemplate the vast body of the earth. The terraqueous globe itself is lost in the solar system; the sun itself dwindles into a star; Saturn's vast orbit, and all the orbits of the comets, crowd into a point, when viewed from numberless places between the earth and the nearest fixed stars.

*An Account of Sir Isaac Newton's Philosophical Discoveries*

Chapter I Section 5

London, England. 1748

**Maeterlinck, Maurice** 1862–1949  
Belgian playwright and poet

However far the telescope... may penetrate, what it would disclose to us would always be the same island, the same bubble, even when it touches the ultimate spiral nebulae; and this island or this bubble of which the surface is millions or billions of light years, is only a point in the ocean of the All.

Translated by K. S. Shelvankar

*The Supreme Law*

Chapter VII (p. 145)

E.P. Dutton & Company, Inc. New York, New York, USA. 1935

**Marden, Orison Swett** 1850–1924  
American writer

The universe is one great kindergarten for man. Everything that exists has brought with it its own peculiar lesson. The mountain teaches stability and grandeur; the ocean immensity and change. Forests, lakes, and rivers, clouds and winds, stars and flowers, stupendous glaciers and crystal snowflakes – every form of animate or inanimate existence, leaves its impress upon the soul of man.

*Rising in the World: Or, Architects of Fate*

Chapter XXIV (pp. 424–425)

The Success Co. Cooper Union, New York, USA. 1897

**Marquis, Don** 1878–1937  
American newspaperman, poet, and playwright

No biographical data available

This immense, beautiful, and varied universe is a book  
written by the finger of Omnipotence and raises the  
admiration of every attentive beholder.

In John Archibald Wheeler

*At Home in the Universe*

The Spirit of Collegueship at Princeton (p. 89)

The American Institute of Physics. Woodbury, New York, USA. 1994

**Mitchel, Ormsby MacKnight** 1805–62  
American astronomer

Man having obtained the mastery over his own system,  
boldly wings his flight to the star-lit vault, and resolves to  
number its countless millions, to circumscribe its limit-  
less extent, to fathom its infinite depth, to fix the centre  
about which this innumerable host is wheeling its silent  
and mysterious round.

*The Planetary and Stellar Worlds: A Popular Exposition of the Great  
Discoveries and Theories of Modern Astronomy*

Lecture I (p. 34)

Baker & Scribner. New York, New York, USA. 1848

**Moore, Benjamin** 1745–1816  
Episcopal writer and professor of rhetoric

The mystery of life is often spoken of as if it were the  
crowning mystery of all things, and indeed it has its

wonderful secrets like all the natural phenomena of the world. But the riddle of the universe lies much deeper than life.

*The Origin and Nature of Life*

Chapter I

Henry Holt & Co. New York, New York, USA.

**Morehouse, George Wilkinson** 1840–?

American naturalist

How grand, complete and sublime are the works and workings of nature. We stand with bowed heads, entranced and speechless in the presence of the Universe. Held in its all-embracing arms, we are of it – one and inseparable.

*The Wilderness of Worlds*

Preface (p. 8)

Peter Eckler, Publisher. New York, New York, USA. 1898

**Morris, Richard** 1939–2003

American physicist and science writer

How is it that common elements such as carbon, nitrogen, and oxygen happened to have just the right kind of atomic structure that they needed to combine to make the molecules upon which life depends? It is almost as though the universe had been consciously designed.

*The Fate of the Universe*

Chapter 8 (pp. 154–155)

Playboy Press. New York, New York, USA. 1982

**Muir, John** 1838–1914

American naturalist

When we try to pick out anything by itself, we find it hitched to everything else in the universe.

*My First Summer in the Sierra*

July 27 (p. 211)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

The clearest way into the Universe is through a forest wilderness.

*The Wilderness World of John Muir*

The Philosophy of John Muir (p. 312)

Houghton, Mifflin & Company. Boston, Massachusetts, USA. 2001

How hard to realize that every camp of men or beast has this glorious starry firmament for a roof! In such places standing alone on the mountaintop it is easy to realize that whatever special nests we make of leaves and moss like marmots and birds, or tents or piled stone we all dwell in a house of one room the world with the firmament for its roof and are sailing the celestial spaces without leaving any track.

*The Wilderness World of John Muir*

The Philosophy of John Muir (p. 312)

Houghton, Mifflin & Company. Boston, Massachusetts, USA. 2001

...when we contemplate the whole globe as one great dewdrop, striped and dotted with continents and islands, flying through space with other stars all singing and

shining together as one, the whole universe appears as an infinite storm of beauty.

*Travels in Alaska*

Chapter I (p. 5)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1915

**Newton, Sir Isaac** 1642–1727

English physicist and mathematician

The most beautiful system of the sun, planets, and comets, could only proceed from the counsel and dominion of an intelligent and powerful Being.

A Heavenly Master governs all the world as Sovereign of the universe. We are astonished at Him by reason of His perfection, we honor Him and fall down before Him because of His unlimited power. From blind physical necessity, which is always and everywhere the same, no variety adhering to time and place could evolve, and all variety of created objects which represent order and life in the universe could happen only by the willful reasoning of its original Creator, Whom I call the Lord God.

Translated by Andrew Motte

*Newton's Principia: The Mathematical Principles of Natural Philosophy*

General Scholium

Daniel Adee. New York, New York, USA. 1848

...since Space is divisible in infinitum, and Matter is not necessarily in all places, it may be also allow'd that God is able to create Particles of Matter of several Sizes and Figures, and in several Proportions to Space, and perhaps of different Densities and Forces, and thereby to vary the Laws of Nature, and make Worlds of several sort in several Parts of the Universe.

In *Great Books of the Western World* (Volume 34)

*Optics*

Query 31

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Munroe, J.**

No biographical data available

The universe may be silent and dark where there is no mind and sense; but it springs into light and music wherever there is an eye and an ear.

Science and the Sense of Beauty

*The Journal of Science, and Annals of Astronomy, Biology, Geology,*

Volume IV (Third series), April, 1882 (p. 206)

**Newcomb, Simon** 1835–1909

Canadian-American astronomer

The farther we advance in knowledge, the clearer it becomes that the bodies which are scattered through the celestial spaces are not completely independent existences, but have, with all their infinite diversity, many attributes in common.

*Side-Lights on Astronomy and Kindred Fields of Popular Science*

Chapter XIX (p. 299)

Harper & Brothers Publishers. New York, New York, USA. 1906

The problem of the structure and duration of the universe is the most far-reaching with which the mind has to deal. Its solution may be regarded as the ultimate object of stellar astronomy, the possibility of reaching which has occupied the minds of thinkers since the beginning of civilisation.

*The Stars: A Study of the Universe*

Chapter XIV (p. 226)

G.P. Putnam's Sons. New York, New York, USA. 1901

**Nietzsche, Friedrich Wilhelm** 1844–1900

German philosopher

If the universe may be conceived as a definite quantity of energy, as a definite number of centers of energy – and every other concept remains indefinite and therefore useless – it follows therefore that the universe must go through a calculable number of combinations in the great game of chance which constitutes its existence. In infinity, at some moment or other, every possible combination must once have been realized; not only this, but it must have been realized an infinite number of times.

*Complete Works*

Volume IX (p. 430)

Foulis. Edinburgh, Scotland. 1913

**Noyes, Alfred** 1880–1958

English poet

This universe exists, and by that one impossible fact Declares itself a miracle.

*The Torch Bearers: Watchers of The Sky*

Newton, VII (p. 226)

Frederick A. Stokes Company Publishers. New York, New York, USA. 1922

**Oates, Joyce Carol** 1938–

American writer

Nothing is accidental in the universe – this is one of my Laws of Physics – except the entire universe itself, which is Pure Accident, pure divinity.

*Do What You Will*

The Summing Up: Meredith Dawe

Random House, Inc. New York, New York, USA. 1982

**Pagels, Heinz R.** 1939–88

American physicist and science writer

...the universe contains the record of its past the way that sedimentary layers of rock contain the geological record of the earth's past.

*Perfect Symmetry: The Search for the Beginning of Time*

Part One, Chapter 2 (p. 24)

Simon & Schuster. New York, New York, USA. 1985

**Parker, Barry**

Canadian science writer

Looking into the dark night sky we feel a tingle of excitement as we are overcome by its grandeur and beauty.

Each point of light we see is the image of a star, an image of light that may have left the star long before we were born. The universe is vast beyond imagination – almost terrifying in its intensity and complexity.

*Einstein's Dream: The Search for a Unified Theory of the Universe*

Chapter 1 (p. 1)

Plenum Press. New York, New York, USA. 1986

**Pascal, Blaise** 1623–62

French mathematician and physicist

[The Universe] is an infinite sphere, the centre of which is everywhere, the circumference nowhere.

In *Great Books of the Western World* (Volume 33)

*Pensées*

Section II, 72

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

The spaces of the universe enfold me and swallow me up like a speck; but I, by the power of thought, may comprehend the universe.

In *Great Books of the Western World* (Volume 33)

*Pensées*

Section VI, 348

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Pasteur, Louis** 1822–95

French chemist

The universe is asymmetrical; for, if the whole of the bodies which compose the solar system moving with their individual movements were placed before a glass, the image in the glass could not be superimposed upon the reality.

In René Dubos

*Louis Pasteur: Free Lance of Science*

Chapter IV (p. 111)

Little, Brown & Company. Boston, Massachusetts, USA. 1950

**Pearson, Karl** 1857–1936

English mathematician

The universe is a variable quantity, which depends upon the keenness and structure of our organs of sense, and upon the fineness of our powers and instruments of observation.

*The Grammar of Science* (2nd edition)

Chapter I (p. 15)

Adam & Charles Black. London, England. 1900

**Peattie, Donald Culross** 1898–1964

American botanist, naturalist, and author

There is no certainty vouchsafed us in the vast testimony of Nature that the universe was designed for man, nor yet for any purpose, even the bleak purpose of symmetry. The courageous thinker must look the inimical aspects of his environment in the face, and accept the stern fact that the universe is hostile and deadly to him save for a very narrow zone where it permits him, for a few eons, to exist.

*An Almanac for Moderns*

March Twenty-Ninth (p. 11)

G.P. Putnam's Sons. New York, New York, USA. 1935

**Penzias, Arno** 1933–

German-American mathematical physicist

Either we've seen the birth of the universe, or we've seen a pile of pigeon shit.

In Roylston Roberts

*Serendipity: Accidental Discoveries in Science*

John Wiley & Sons, Inc. New York, New York, USA. 1989

**Peirce, Charles Sanders** 1839–1914

American scientist, logician, and philosopher

The universe ought to be presumed too vast to have any character.

*Chance, Love, and Logic: Philosophical Essays* (p. 127)

University of Nebraska Press. Lincoln, Nebraska, USA. 1998

**Plato** 428 BCE–347 BCE

Greek philosopher

Time and the heavens came into being at the same instant, in order that, if they were ever to dissolve, they might be dissolved together. Such was the mind and thought of God in the creation of time.

In James Jeans

*The Mysterious Universe*

Chapter V (p. 182)

The Macmillan Company. New York, New York, USA. 1932

...had we never seen the stars, and the sun, and the heaven, none of the words which we have spoken about the universe would ever have been uttered.

In *Great Books of the Western World* (Volume 7)

*Timaeus*

Section 47 (p. 455)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Poe, Edgar Allan** 1809–49

American short story writer

I design to speak of the Physical, Metaphysical and Mathematical – of the Material and Spiritual The Universe is a plot of God.

*Eureka*

Line 7 (p. 120)

Geo. P. Putnam. New York, New York, USA. 1848

Universe: – of its Essence, its Origin, its Creation, its Present Condition and its Destiny.

*Eureka*

Line 9 (p. 7)

Geo. P. Putnam. New York, New York, USA. 1848

Telescopic observations, guided by the laws of perspective, enable us to understand that the perceptible Universe exists as a roughly spherical cluster of clusters irregularly disposed.

*Eureka*

Line 16 (p. 96)

Geo. P. Putnam. New York, New York, USA. 1848

**Polanyi, Michael** 1891–1976

Hungarian-born English scientist, philosopher, and social scientist

The universe is still dead, but it already has the capacity of coming to life.

In Freeman Dyson

*Personal Knowledge*

Chapter 13, Section 7 (p. 404)

Harper & Row, Publishers. New York, New York, USA. 1962

**Pope, Alexander** 1688–1744

English poet

Order is Heav'n's first law.

*The Complete Poetical Works* (Volume 2)

An Essay on Man, Epistle IV, l. 49

Houghton Mifflin Company. New York, New York, USA. 1903

**Prigogine, Ilya** 1917–2003

Russian-born Belgian physical chemist

I certainly think we are only living in the prehistory of the understanding of our universe.

In Renée Weber

*Dialogues with Scientists and Sages: The Search for Unity* (p. 199)

Routledge & Kegan Paul. London, England. 1986

**Rabi, Isidor Isaac** 1898–1988

Austrian-born American physicist

The scientist does not defy the universe. He accepts it. It is his dish to savor, his realm to explore; it is his adventure and never-ending delight. It is complaisant and elusive but never dull. It is wonderful both in the small and in the large. In short, its exploration is the highest occupation for a gentleman.

In Leon Lederman

*The God Particle: If the Universe Is the Answer, What Is the Question?*

Chapter 4 (p. 104)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1993

**Ramón y Cajal, Santiago** 1852–1934

Spanish neuropathologist

As long as the brain is a mystery, the universe will also be a mystery.

In Victor Cohn

Charting the Soul's Frail Dwelling-House

*The Washington Post*, September 5, 1982, Final Edition (p. A1)

**Rand, Ayn**

Russian-born American novelist and philosopher

I know not if this earth on which I stand is the core of the universe or if it is but a speck of dust lost in eternity.

*Anthem*

Chapter XI (p. 95)

E.P. Dutton & Company. New York, New York, USA. 1995

**Raymo, Chet** 1936–

American physicist and science writer

Give me the ninety-two elements and I'll give you a universe. Ubiquitous hydrogen. Standoffish helium, Spooky boron. No-nonsense carbon. Promiscuous oxygen.

Faithful iron. Mysterious phosphorous. Exotic xenon.  
Brash tin. Slippery mercury. Heavy-footed lead.

*The Soul of The Night*

Chapter 7 (p. 65)

Prentice-Hall, Inc. Englewood Cliffs, New Jersey, USA. 1985

**Reade, Winwood** 1838–75

English philosopher and historian

The universe is anonymous; it is published under secondary laws; these at least we are able to investigate, and in these perhaps we may find a partial solution of the great problem.

*The Martyrdom of Man*

Chapter IV (p. 465)

E.P. Dutton & Company. New York, New York, 1926

**Reed, Ishmael** 1938–

American poet, essayist, and writer

The universe is a spiraling Big Band in a polka-dotted speak-easy, effectively generating new lights everyone-night stand.

In A. Zee

*An Old Man's Toy: Gravity at Work and Play in Einstein's Universe*

Chapter 8 (p. 123)

The Macmillan Company. New York, New York, USA. 1989

**Rees, Martin John** 1942–

15th Astronomer Royal of England

...the more we study the Universe, the more we're aware that there's a mystery lying behind it.

BBC News interview

January 24, 2002

**Reichenbach, Hans** 1891–1953

German philosopher of science

Instead of asking for a cause of the universe, the scientist can ask only for the cause of the present state of the universe; and his task will consist in pushing farther and farther back the date from which he is able to account for the universe in terms of laws of nature.

*The Rise of Scientific Philosophy*

Chapter 12 (p. 208)

University of California Press. Berkeley, California, USA. 1951

**Remsen, Ira** 1846–1927

American chemist

The universe is inexhaustible, and its mysteries are inexplicable. We may and must strive to learn all we can, but we cannot hope to learn all. We are finite; the mysteries we are dealing with are infinite.

The Age of Science

*Science*, New Series, Volume 20, Number 407, July 15, 1904 (p. 73)

**Renard, Maurice** 1875–1939

French writer

Man, peeping at the Universe through only a few tiny windows – his senses – catches mere glimpses of the

world around him. He would do well to brace himself against unexpected surprises from the vast unknown; from that immeasurable sector of reality that has remained a closed book.

In Charles Noël Martin

*The Role of Perception in Science* (p. 7)

Hutchinson of London. London, England. 1963

**Rey, Jean** 1583–1645

French physician and chemist

There is no power in nature which from nothing could have made the universe, and none which could reduce the universe to nothing:

*Essays of Jean Rey*

Essay IV (p. 11)

William F. Glay. Edinburgh, Scotland 1895

**Rice, Harvey** 1800–91

American lawyer and newspaper publisher

...the origin of the material universe presents a problem which neither the vagaries of the ancients nor the speculations of the moderns have been able to solve in a satisfactory manner.

*Nature and Culture*

Chapter 1 (p. 7)

Lee & Shepard. Boston, Massachusetts, USA. 1875

**Richards, Theodore William** 1868–1928

American chemist

The mystery that enshrouds the ultimate nature of the physical universe has always stimulated the curiosity to the thinking man.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1911*

(Faraday Lecture) The Fundamental Properties of the Elements (p. 100)

Government Printing Office. Washington, D.C. 1912

Both infinity and eternity are beyond our mental grasp. We know that we cannot hope to understand all the wonders of the universe; but, nevertheless, we may be full of hope for the future. Step by step we gain in knowledge, and with each step we acquire better opportunity for improving the lot of mankind and for illuminating the dark places of our philosophy of nature.

*Annual Report of the Board of Regents of the Smithsonian Institution (1916)*

Ideals of Chemical Investigation (pp. 222–223)

Government Printing Office. Washington, D.C. 1917

**Rindler, Wolfgang**

Physicist and author

Modern scientific man has largely lost his sense of awe in the Universe. He is confident that given sufficient intelligence, perseverance, time, and money, he can understand all there is beyond the stars.

In M. Taube

*Evolution of Matter and Energy*

Chapter 2 (p. 18)

Springer-Verlag. New York, New York, USA. 1985

**Rothman, Tony** 1953–  
American cosmologist

When confronted with the order and beauty of the universe and the strange coincidences of nature, it's very tempting to take the leap of faith from science into religion. I am sure many physicists want to. I only wish they would admit it.

In J.L. Casti

*Paradigms Lost: Images of Man in the Mirror of Science*

Chapter 7 (pp. 482–483)

William Morrow & Company, Inc., New York, New York, USA. 1989

**Rubin, Vera** 1928–  
American astronomer

The joy and fun of understanding the universe we bequeath to our grandchildren – and to their grandchildren. With over 90% of the matter in the universe still to play with, even the sky will not be the limit.

In Marcia Bartusiak

*The Woman Who Spins the Stars*

*Discover*, October, 1990 (p. 94)

**Ruderman, M. A.**  
No biographical data available

**Rosenfeld, A. H.**  
No biographical data available

We are peeling an onion layer by layer, each layer uncovering in a sense another universe, unexpected, complicated, and – as we understand more – strangely beautiful.

An Explanatory Statement on Elementary Particle Physics

*American Scientist*, Volume 48, June, 1960, Number 2 (p. 210)

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

So far as scientific evidence goes, the universe has crawled by slow stages to a somewhat pitiful result on this earth, and is going to crawl by still more pitiful stages to a condition of universal death.

*Why I Am Not a Christian: And Other Essays on Religion and Related Subjects*

Has Religion Made Useful Contributions to Civilization (p. 32)

Watts. London, England. 1927

The Universe may have a purpose, but nothing that we know suggests that, if so, this purpose has any similarity to ours.

*Why I Am Not a Christian: And Other Essays on Religion and Related Subjects*

Do We Survive Death? (p. 92)

Watts. London, England. 1927

All the labors of the ages, all the devotion, all the inspiration, all the noonday brightness of human genius, are destined to extinction in the vast death of the solar system; and the whole temple of Man's achievement must inevitably be buried beneath the debris of a universe in ruins.

In George Smoot

*Wrinkles in Time*

Chapter 4 (p. 69)

William Morrow & Company, Inc. New York, New York, USA. 1993

**Sagan, Carl** 1934–96  
American astronomer and science writer

We might have lived in a Universe in which nothing could be understood by a few simple laws, in which Nature was complex beyond our abilities to understand, in which laws that apply on Earth are invalid on Mars, or in a distant quasar. But the evidence – not the preconceptions, the evidence – proves otherwise. Luckily for us, we live in a Universe in which much can be “reduced” to a small number of comparatively simple laws of Nature. Otherwise we might have lacked the intellectual capacity and grasp to comprehend the world.

*The Demon-Haunted World: Science As a Candle in the Dark*

Chapter 15 (pp. 273–274)

Random House, Inc. New York, New York, USA. 1995

The universe is not required to be in perfect harmony with human ambition.

But the fact that some geniuses were laughed at does not imply that all who are laughed at are geniuses. They laughed at Columbus, they laughed at Fulton, they laughed at the Wright brothers. But they also laughed at Bozo the Clown.

*Cosmos*

Chapter II (p. 31)

Random House, Inc. New York, New York, USA. 1980

A universe in which everything is known would be static and dull, as boring as the heaven of some weak-minded theologians. A Universe that is unknowable is no fit place for a thinking being.

*Broca's Brain: Reflections on the Romance of Science*

Part I, Chapter 2 (p. 18)

Random House, Inc. New York, New York, USA. 1979

A religion old or new, that stressed the magnificence of the universe as revealed by modern science, might be able to draw forth reserves of reverence and awe hardly tapped by the conventional faiths. Sooner or later, such a religion will emerge.

*Pale Blue Dot: A Vision of the Human Future in Space*

Chapter 4 (p. 52)

Random House, Inc. New York, New York, USA. 1994

The Frontier Universe: At the Edge of the Night (p. 1)

Cambridge University Press. Cambridge, England. 2001

**Sullivan, Walter** 1918–96  
American science journalist

We do know enough already, however, to believe that no myth or legend could be as rich in beauty, wonder, and awe as the full reality of the universe that is our home.

In Ray Bradbury, Arthur C. Clarke, Bruce Murray, Carl Sagan, and Walter Sullivan

*Mars and the Mind of Man*

Walter Sullivan (p. 127)

Harper & Row, Publishers. New York, New York, USA. 1973

**Swann, William Francis Gray** 1884–1962  
Anglo-American physicist

There is one great work of art; it is the universe. Ye men of letters find the imprints of its majesty in your sense of the beauty of words. Ye men of song find it in the harmony of sweet sounds. Ye painters feel it in the design of beautiful forms, and in the blending of rich soft colors do your souls mount on high to bask in the brilliance of nature's sunshine. Ye lovers are conscious of its beauties in forms ye can but ill define. Ye men of science find it in the rich harmonies of nature's mathematical design.

*The Architecture of the Universe*

Chapter XII (p. 424)

The Macmillan Company. New York, New York, USA. 1934

**Swimme, Brian** 1950–  
American mathematical cosmologist

I am convinced that the story of the universe that has come out of three centuries of modern scientific work will be recognized as a supreme human achievement, the scientific enterprise's central gift to humanity, a revelation having a status equal to that of the great religious revelations of the past.

In Connie Barlow (ed.)

*Evolution Extended: Biological Debates on the Meaning of Life*

The MIT Press. Cambridge, Massachusetts, USA. 1994

**Talbot, Michael** 1953–92  
American physicist

...we have to begin to view the universe as ultimately constituted not of matter and energy, but of pure information.

*Beyond the Quantum*

Chapter 6 (p. 155)

The Macmillan Company. New York, New York, USA. 1986

**Teller, Woolsey** 1890–1954  
Essayist

...the picture of the universe presented by astronomy is one of dismal stretches of time and space and unparalleled desolation. In the eternal abyss of space – bleak, cold, and dark – there are no signs of a Cosmic Consciousness.

*The Atheism of Astronomy*

Chapter VI (p. 120)

Arno Press & The New York Times. New York, New York, USA. 1972

**Tennyson, Alfred (Lord)** 1809–92  
English poet

This truth within thy mind rehearse,  
That in a boundless universe  
Is boundless better, boundless worse.

*Alfred Tennyson's Poetical Works*

The Two Voices, Stanza 9

Oxford University Press, Inc. London, England. 1953

**Thompson, Francis** 1859–1907  
English writer

The universe is his box of toys. He dabbles his fingers in the day-fall. He is gold-dusty with tumbling amidst the stars. He makes bright mischief with the moon. The meteors nuzzle their noses in his hand.

*The Works of Francis Thompson*

Shelley (p. 18)

Burns & Oats. London, England. 1913

**Thomson, Sir John Arthur** 1861–1933  
Scottish naturalist

The picture of the Universe which the astronomer offers to us is imperfect; the lines he traces are often faint and uncertain. There are many problems which have been solved, there are just as many about which there is doubt, and notwithstanding our great increase in knowledge, there remain just as many which are entirely unsolved.

In John Arthur Thomson

*The Outline of Science: A Plain Story Simply Told*

Chapter I (p. 9)

G.P. Putnam's Sons. New York, New York, USA. 1922

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

The universe is wider than our views of it.

*The Writings of Henry David Thoreau* (Volume 2)

*Walden*

Chapter XVIII (p. 493)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

...the universe is not rough-hewn, but perfect in its details.

*The Writings of Henry David Thoreau* (Volume 9)

*Natural History of Massachusetts* (p. 132)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

**Toynbee, Arnold J.** 1852–83  
English historian

Huddled together in our little earth we gaze with frightened eyes into the dark universe.

*Toynbee's Industrial Revolution*

Notes and Jottings (p. 256)

A.M. Kelley. New York, New York, USA. 1969

**Trimble, V.**

Those of us who are not directly involved in the fray can only suppose that the universe is open ( $W < 1$ ) on Wednesday,

Friday, and Sunday and closed ( $W > 1$ ) on Thursday, Saturday, and Monday. (Tuesday is choir practice.)

Dark Matter in the Universe: Where, What, and Why?  
*Contemporary Physics*, Volume 29, 1988 (p. 389)

### Turner, Michael S.

American astrophysicist

The progress made in our understanding of the universe during the twentieth century is nothing short of stunning.

A Sober Assessment of Cosmology at the New Millennium  
*Publications of the Astronomical Society of the Pacific*, Volume 113, 2001 (p. 653)

### Tyron, E. P.

No biographical data available

If it is true that our Universe has a zero net value for all conserved quantities, then it may simply be a fluctuation of the vacuum of some larger space in which our Universe is imbedded. In answer to the question of why it happened, I offer the modest proposal that our Universe is simply one of those things which happen from time to time.

Is the Universe a Vacuum Fluctuation?

*Nature*, Volume 246, Number 5433, December 14, 1973 (p. 397)

### van Vleck, Edward B. 1863–1943

American mathematician

The stupendous size of the universe hushes thought itself.

Address at the Dedication of the van Vleck Observatory  
*Popular Astronomy*, Volume XXIV, Number 7, August-September, 1916 (p. 418)

### von Goethe, Johann Wolfgang 1749–1832

German poet, novelist, playwright, and natural philosopher

Man is not born to solve the problems of the universe, but to find out where the problems begin, and then to take his stand within the limits of the intelligible.

In Louis Berman

*Exploring the Cosmos*

Chapter 16 (p. 351)

Little, Brown & Company. Boston, Massachusetts, USA. 1973

### Warden, Jack 1920–2006

American character actor

[The universe] is all random, radiating aimlessly out of nothing and eventually vanishing forever. The universe, all space, all time, it's just a temporary convulsion. And I get paid to prove it.

*September*

Film (1987)

### Weil, Simone 1909–43

French philosopher and mystic

Two forces rule the universe: light and gravity.

Translated by Arthur Wills

*Gravity and Grace*

Gravity and Grace (p. 45)

G.P. Putnam's Sons. New York, New York, USA. 1952

### Weinberg, Steven 1933–

American nuclear physicist

...the urge to trace the history of the universe back to its beginning is irresistible.

*The First Three Minutes*

Chapter I (p. 4)

Basic Books, Inc. New York, New York, USA. 1988

It is very hard to realize that this all is just a tiny part of an overwhelmingly hostile universe. It is even harder to realize that this present universe has evolved from an unspeakably unfamiliar early condition, and faces a further extinction of endless cold or intolerable heat. The more the universe seems comprehensible, the more it also seems pointless.

*The First Three Minutes*

Epilogue (p. 154)

Basic Books, Inc. New York, New York, USA. 1988

The effort to understand the universe is one of the very few things that lifts human life a little above the level of farce, and gives it some of the grace of tragedy.

*The First Three Minutes*

Epilogue (p. 155)

Basic Books, Inc. New York, New York, USA. 1988

### Wells, H. G. (Herbert George) 1866–1946

English novelist, historian, and sociologist

Few people realise the immensity of vacancy in which the dust of the material universe swims.

*Seven Science Fiction Novels of H. G. Wells*

*The War of the Worlds*

Chapter the First (p. 312)

Dover Publications, Inc. New York, New York, USA. 1934

### Wharton, Edith 1862–1937

American novelist

...she had never been able to understand the laws of a universe which was so ready to leave her out of its calculations.

*The House of Mirth*

Book I, Chapter III (p. 42)

Charles Scribner's Sons. New York, New York, USA. 1919

Harper Collins Publisher, Inc. New York, New York, USA. 1988

...this is our universe, our museum of wonder and beauty, our cathedral...

*A Journey into Gravity and Spacetime*

Opening

Scientific American Library. New York, New York, USA. 1990

**Wheeler, John Archibald** 1911–

American theoretical physicist and educator

**Thorne, Kip S.** 1940–

American theoretical physicist

A model universe that is closed, that obeys Einstein's geometrodynamics law, and that contains a nowhere negative density of mass-energy, inevitably develops a singularity. No one sees any escape from the density of mass-energy rising without limit. A computing machine calculating ahead step by step the dynamical evolution of the geometry comes to the point where it cannot go on. Smoke, figuratively speaking, starts to pour out of the computer. Yet physics, surely continues to go on if for no other reason than this: Physics is by definition that which does go on its eternal way despite all the shadowy changes in the surface of reality.

*Gravitation*

Part X, Chapter 44 (p. 1196)

W.H. Freeman & Company. San Francisco, California, USA. 1973

**Whewell, William** 1794–1866

English philosopher and historian

The constitution of the universe, so far as it can be clearly apprehended by our intellect, thus assumes a shape involving an assemblage of mathematical propositions: certain algebraical formulae, and the knowledge when and how to apply them, constitute the last step of the physical science to which we can attain.

*Astronomy and General Physics*

Chapter V (p. 18)

Carey, Lea & Blanchard. Philadelphia, Pennsylvania, USA. 1833

**Whitman, Walt** 1819–92

American poet, journalist, and essayist

Praised be the fathomless universe

For life and joy and for objects and knowledge curious...

*Complete Poetry and Collected Prose*

Memories of President Lincoln, Stanza 14

The Library of America. New York, New York, USA. 1982

The whole theory of the universe is directed unerringly to one single individual – namely to you.

*Complete Poetry and Collected Prose*

*Leaves of Grass*

By Blue Ontario's Shore, Stanza 15

The Library of America. New York, New York, USA. 1982

The world, the race, the soul –

Space and time, the universes

All bound as is befitting each – all

Surely going somewhere.

*Complete Poems and Collected Prose*

Going Somewhere

The Library of America. New York, New York, USA. 1982

**Wiechert, Emil** 1861–1928

Prussian geophysicist

The universe is infinite in all directions.

In Freeman Dyson

*Infinite in All Directions*

Part One, Chapter Three (p. 53)

HarperCollins Publisher, Inc. New York, New York, USA. 1988

**Young, Louise B.**

American science writer

The universe is unfinished, not just in the limited sense of an incompletely realized plan but in the much deeper sense of a creation that is a living reality of the present. A masterpiece of artistic unity and integrated Form, infused with meaning, is taking shape as time goes by. But its ultimate nature cannot be visualized, its total significance grasped, until the final lines are written.

*The Unfinished Universe*

Conclusion (pp. 205, 208)

Simon & Schuster. New York, New York, USA. 1986

**Zebrowski, George** 1945–

Polish-American science fiction writer

The rationality of our universe is best suggested by the fact that we can discover more about it from any starting point, as if it were a fabric that will unravel from any thread.

Is Science Rational?

*OMNI Magazine*, June, 1994 (p. 50)

In a perfectly rational universe, infinities turn back on themselves...

Is Science Rational?

*OMNI Magazine*, June, 1994 (p. 50)

## UNIVERSE AND COSMOGENESIS

**Ackerman, Diane** 1948–

American writer

Fifteen billion years ago, when the Universe

let rip and, in disciplined panic,

Creation spewed mazy star-treacle and resin,

shrinking balls of debut fire smoldered

and glitched.

*The Planets: A Cosmic Pastoral*

Neptune, IV (p. 129)

William Morrow & Company, Inc. New York, New York, USA. 1976

**Adams, Douglas** 1952–2001

English author, comic radio dramatist, and musician

In the beginning the universe was created. This made a lot of people very angry and has been widely regarded as a bad move. Many races believe that it was created by some sort of god, though the Jatravartid people of Viltvodle VI believe that the entire Universe was in fact sneezed out of the nose of a being called the Great Green Arkleseizure.

*The Ultimate Hitchhiker's Guide to the Galaxy*  
The Restaurant at the End of the Universe  
Chapter 1 (p. 149)  
Ballantine Books. New York, New York, USA. 2002

### Author undetermined

In the beginning there was nothing... which exploded.  
Source undetermined

**Barrow, John D.** 1952–  
English theoretical physicist

One day we may be able to say something about the origins of our own cosmic neighborhood. But we can never know the origins of the universe. The deepest secrets are the ones that keep themselves.

*The Origin of the Universe*  
Chapter 8 (p. 137)  
Basic Books, Inc. New York, New York, USA. 1994

The most extreme example of this direct observation of the past arises from our understanding of what occurred in the Universe during the brief interval of time between one second and three minutes after it began its present state of expansion from some unknown state that we usually call the “beginning of the Universe” (although it may have been nothing of the sort). Our mathematical theory allows us to determine the ambient conditions of the Universe during those first few minutes of cosmic history from what we observe at present, some fifteen billion years later.

*Pi in the Sky*  
Chapter 6 (p. 269)  
Back Bay Books. 1993

**Bowyer, Stuart** 1934–  
American astrophysicist

Ultimately, the origin of the universe is, and always will be, a mystery.

In Henry Margenau and Roy Abraham Varghese (eds.)  
*Cosmos, Bios, Theos*  
Chapter 2 (p. 32)  
Open Court. La Salle, Illinois, USA. 1992

**Cardenal, Ernesto** 1925–  
Nicaraguan poet and Roman Catholic priest

In the beginning there was nothing  
neither space  
nor time.

The entire universe concentrated  
in the space of the nucleus of an atom,  
and before that even less,  
much less than a proton,  
and even less still,  
an infinitely dense mathematical point.

Translated by John Lyons  
*Cosmic Canticle*  
Cantigua 1, Big Bang (p. 11)  
Curbstone Press. Willimantic, Connecticut, USA. 1993

**Egyptian Myth** ca. 2500 B.C.

In the beginning, only the ocean existed, upon which there appeared an egg. Out of the egg came the sun-god and from himself he begat four children: Shu and Tefnut, Keb and Nut. All these, with their father, lay upon the ocean of chaos. Then Shu and Tefnut thrust themselves between Keb and Nut. They planted their feet upon Keb and raised Nut on high so that Keb became the earth and Nut the heavens.

In Eric J. Lerner  
*The Big Bang Never Happened*  
Chapter 2 (p. 58)  
Random House, Inc. New York, New York, USA. 1991

**Flaubert, Gustave** 1821–90  
French novelist

SMARH: How vast creation is! I see the planets rise, I see the fiery stars driven along.... Space opens out as I rise, worlds revolve around me, and I am the center of this bustling creation.

*Early Writings*  
Smarh (p. 216)  
University of Nebraska Press. Lincoln, Nebraska, USA. 1991

**Gamow, George** 1904–68  
Russian-born American physicist

Before we can discuss the basic problem of the origin of our universe, we must ask ourselves whether such a discussion is necessary.

*The Creation of the Universe*  
Chapter 1 (p. 6)  
The Viking Press. New York, New York, USA. 1952

In the beginning God created radiation and ylem. And ylem was without shape or number, and the nucleons were rushing madly over the face of the deep.

*My World Line: An Informal Autobiography*  
Chapter 6 (p. 127)  
The Viking Press. New York, New York, USA. 1979

**Hawkins, Gerald S.** 1928–2003  
English archaeoastronomer

In the beginning.... A scientist cannot continue this sentence with absolute certainty. It would be like asking a child to give an account of his birth or a description of his conception.

In *Reader's Digest*  
Marvels and Mysteries of the World Around Us  
Earth's Ancient Drama (p. 10)  
The Reader's Digest Association. Pleasantville, New York, USA. 1972

**Hein, Robert**  
No biographical data available

The first world the cosmic colossus created with a word:  
One lightning word from the golden lips of Truth  
And electric earth condensed on a creamy cloud,  
Adorned with a necklace of blue-gold stars and a chain

Of peppermint planets in the amphitheater of space.

*Quest of the Singing Tree*

The Larger Creation, Creation of the Earth

H. Harrison. New York, New York, USA. 1938

**Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

Without continuous creation, the Universe must evolve toward a dead state in which all the matter is condensed into a vast number of dead stars.

*The Nature of the Universe*

Chapter 6 (pp. 131–132)

The University Press. Cambridge. 1933

**Kipling, Rudyard** 1865–1936

British writer and poet

Before the High and Far-Off Times, O my Best Beloved, came the Time of the Very Beginnings; and that was in the days when the Eldest Magician was getting Things ready. First he got the Earth ready; then he got the Sun ready; and then he told all the Animals that they could come out and play.

*Just So Stories*

The Crab that Played with the Sea (p. 171)

Doubleday & Company, Inc. Garden City, New York, USA. 1952

**Marquesas Islanders**

In the beginning there was nothing. There arose a swelling, a ferment, a black fire, a spinning vortices, a bubbling, a swallowing – there arose a whole series of pairs of props, posts, or piles, large and small, long and short, crooked and bent, decayed and rotten. Similarly there arose pairs of roots, large and small, long and short, and so forth; there arose countless and infinitely many supports. Above all, there now arose the ground, the foundation, the hard rock, there arose the space for light, there arose rocks of different sorts.

In John A. Wood

*Meteorites and the Origin of Planets*

Creation Myth (p. v)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1968

**Reeves, Hubert** 1932–

Canadian astrophysicist

In the beginning was the absolute rule of the flame: The universe was in limbo. Then after countless eras, the fires slowly abated like the sea at the outgoing tide. Matter awoke and organized itself; the flame gave way to music.

*Atoms of Silence*

Introduction (p. 5)

The MIT Press. Cambridge, Massachusetts. USA. 1984

**Sagan, Carl** 1934–96

American astronomer and science writer

If the general picture of an expanding universe and a Big Bang is correct, we must then confront still more difficult

questions. What were conditions like at the time of the Big Bang? What happened before that? Was there a tiny universe, devoid of all matter, and then the matter suddenly created from nothing? How does that happen? In many cultures it is customary to answer that God created the universe out of nothing. But this is mere temporizing. If we wish courageously to pursue the question, we must of course ask next where God comes from. And if we decide this to be unanswerable, why not save a step and decide that the origin of the universe is an unanswerable question. Or, if we say that God has always existed, why not save a step and conclude that the universe has always existed?

*Cosmos*

Chapter X (p. 257)

Random House, Inc. New York, New York, USA. 1980

**Singh, Jagjit** 1919–2002

Indian mathematician and science writer

In the beginning there was neither heaven nor earth, And there was neither space nor time. And the Earth, the Sun, the Stars, the Galaxies and the whole universe were confined within a small volume like the bottled genie of the Arabian Nights. And then God said, “Go!” And straight way the Galaxies rushed out of their prison, scattering in all directions, and they have continued to run away from one another ever since, afraid lest some cosmic Hand should gather them again and put them back in the bottle (which is not bigger than a pin-point). And they shall continue to scatter thus till they fade from each other’s ken – and thus, for each other, cease to exist at all.

*Mathematical Ideas: Their Nature and Use*

Space and Time (pp. 209–210)

Hutchinson & Company Ltd. London, England. 1972

**Smoot, George** 1945–

American experimental astrophysicist

The question of “the beginning” is as inescapable for cosmologists as it is for theologians.

*Wrinkles in Time*

Chapter 9 (p. 189)

William Morrow & Company, Inc. New York, New York, USA. 1993

**Spenser, Edmund** 1552–99

English poet

Through knowledge we behold the world’s creation,  
How in his cradle first he fostered was;  
And judge of Natures cunning operation,  
How things she formed of a formless mass.

*The Complete Poetical Works of Edmund Spenser*

The Tears of the Muses, l. 499–502

Houghton Mifflin Company. Boston, Massachusetts, USA. 1908

**Sturluson, Snorri** 1179–1241  
Icelandic writer

Erst was the age when nothing was:  
Nor sand nor sea, nor chilling stream-waves;  
Earth was not found, nor Ether – Heaven,  
– A Yawning Gap, but grass was none.

*The Prose Edda*

Here Begins the Beguiling of Gylfi (p. 16)  
The American-Scandinavian Foundation. New York, New York, USA.  
1916

### Sufi Creation Myth

I was a hidden treasure and desired to be known: there-  
fore I created the creation in order to be known.

In George Smoot

*Wrinkles in Time*

Chapter 1 (p. 1)

William Morrow & Company, Inc. New York, New York, USA. 1993

**Tagore, Rabindranath** 1861–1941  
Indian poet and philosopher

It seems to me that, perhaps, creation is not fettered by  
rules,

That all the hubbub, meeting and mingling are blind hap-  
penings of fate.

Translated by Indu Dutt

*Our Universe* (p. 75)

Jaico Publishing House. Bombay, India. 1969

### The Bible (King James Version)

In the beginning God created the heaven and the earth.  
Genesis 1:1

**Townes, Charles H.** 1915–  
American inventor of the laser

I do not understand how the scientific approach alone,  
as separated from a religious approach, can explain an  
origin of all things. It is true that physicists hope to look  
behind the “big bang,” and possibly to explain the origin  
of our universe as, for example, a type of fluctuation. But  
then, of what is it a fluctuation and how did this in turn  
begin to exist? In my view the question of origin seems  
always left unanswered if we explore from a scientific  
view alone.

In Henry Margenau and Roy Abraham Varghese (eds.)

*Cosmos, Bios, Theos*

Chapter 25 (p. 123)

Open Court. La Salle, Illinois, USA. 1992

**Updike, John** 1932–

American novelist, short story writer, and poet

By computation, they all must have begun at one place  
about five billion years ago; all the billions and trillions  
and quadrillions squared and squared again of tons of  
matter in the universe were compressed into a ball at the  
maximum possible density, the density within the nucleus

of the atom; one cubic centimeter of this primeval egg  
weighed two hundred and fifty tons.

*The Centaur*

Chapter I (p. 38)

Alfred A. Knopf. New York, New York, USA. 1995

**Weinberg, Steven** 1933–  
American nuclear physicist

...the urge to trace the history of the universe back to  
the beginnings is irresistible. From the start of modern  
science in the sixteenth and seventeenth centuries, physi-  
cists and astronomers have returned again and again to  
the problem of the origin of the universe.

*The First Three Minutes*

Chapter I (p. 4)

Basic Books, Inc. New York, New York, USA. 1988

**Wilmot, John (Second Earl of Rochester)** 1647–80  
English libertine and satirical and bawdy poet

E'er time and place were, time and place were not,  
When Primitive Nothing something straight begot,  
Then all proceeded from the great united – What.

*Collected Works of John Wilmot Earl of Rochester*

Upon Nothing

The Nonesuch Press. London, England. 1926

### Zuni Creation Myth

In the beginning of things Awonawilona was alone. There  
was nothing beside him in the whole of time. Everywhere  
there was black darkness and void. Then Awonawilona  
conceived in himself the thought, and the thought took  
shape and got out into space and through this stepped out  
into the void, into outer space, and from them came nebu-  
lae of growths and mists, full of power and growth.

In Raymond van Over

*Sun Songs*

Zuni Creation Myths

Cosmic Creation (p. 23)

New American Library. New York, New York, USA. 1980

## UNIVERSE AND GOD

**Alighieri, Dante** 1265–1321  
Italian poet and writer

...the entire universe is naught else than a footprint of  
divine goodness.

*The De Monarchia of Dante Alighieri*

Book I, Chapter VIII (p. 26)

Houghton Mifflin & Co. New York, New York, USA. 1904

**Barber, Margaret Fairless** 1869–1901  
English Christian writer

There are, I take it, two master-keys to the secrets of the  
universe, viewed *sub specie aeternitatis*, the Incarnation  
of God, and the Personality of Man...

*The Roadmender*

At The White Gate (p. 197)  
Thomas B. Mosher. Portland, Maine, USA. 1905

**Carlyle, Thomas** 1795–1881  
English historian and essayist

Then sawest thou that this fair Universe, were it in the meanest province thereof, is in very deed the star-domed City of God; that through every star, through every grass-blade, and to most through every Living Soul, the glory of a present God still beams.

In Archibald Macnechan  
*Sartor Resartus*  
Book III (p. 240)  
Ginn & Co. Boston, Massachusetts, USA. 1896

**Clutton-Brock, Arthur** 1868–1924  
Essayist and journalist

So long as we see the universe in the relation of use to ourselves, it remains cold, indifferent, meaningless to us; but when we see it in relation to God, sharing the life which is God, but sharing it even more imperfectly than ourselves, then the process of nature is no longer a meaningless intimidating mechanism, but pathetic and forgivable to us even as we are to ourselves.

*Essays on Religion*  
Introduction (pp. xx–xxi)  
Books for Libraries Press. Freeport, New York, USA. 1969

**Lewis, C. S. (Clive Staples)** 1898–1963  
British author, scholar, and popular theologian

If the universe is so bad, or even half so bad, how on earth did human beings ever come to attribute it to the activity of a wise and good Creator?

*The Problem of Pain*  
Introduction (p. 3)  
HarperCollins. New York, New York, USA. 2001

**Parker, Theodore** 1810–60  
American Transcendentalist

The power of nature is God; the universe, broad and deep and high, a handful of dust, which God enchants. He is the mysterious magic that possesses the world...

*A Discourse of Matters Pertaining to Religion*  
Book I, Chapter V (p. 76)  
American Unitarian Association. Boston, Massachusetts, USA. 1907

**Trine, Ralph Waldo** 1866–1958  
Philosopher

The great central fact of the universe is that Spirit of Infinite Life and Power that is behind., all, that animates all, that manifests itself in – and through all; that self-existent principle of life from which all has come, and not only from which all has come...

*In Tune With the Infinite: Or, Fullness of Peace, Power, and Plenty*  
Chapter II (p. 11)  
George Bell & Sons. London, England. 1905

**von Goethe, Johann Wolfgang** 1749–1832  
German poet, novelist, playwright, and natural philosopher

The contemplation of the architecture of the universe in the infinitely great and infinitely little of which it is composed, leads us inevitably to the conclusion that at the bottom of the whole an idea lies, according to which God in nature, and nature in God from eternity to eternity, works and shapes forth all things.

In John Stuart Blackie  
*The Wisdom of Goethe*  
Nature – Natural History (p. 181)  
William Blackwood & Sons. Edinburgh, Scotland. 1883

## UNIVERSE, CITIZENS OF

**Herrick, Charles Judson** 1868–1960  
American neurologist

We are citizens of the universe. This universe is dynamic and intrinsically creative at all levels of organization. This native creativity is amplified in the domain of organic evolution and glorified when aware of itself in human purposive planning. The sublimity of this conception of man's place in nature commands our reverence and our utmost effort to meet the demands imposed upon us by that nature which is our alma mater.

*The Evolution of Human Nature*  
Epilogue: The Unknown God (p. 466)  
University of Texas Press. Austin, Texas, USA. 1956

## UNIVERSE, DEATH OF

**Balfour, Arthur James** 1848–1930  
English prime minister

...the energies of our system will decay, the glory of the sun will be dimmed, and the earth, tideless and inert, will no longer tolerate the race which has for a moment disturbed its solitude. Man will go down into the pit, and all his thoughts will perish.

*The Foundations of Belief*  
Part I, Chapter I, Section III (p. 33)  
Longmans, Green & Company. London, England. 1912

**Byron, George Gordon, 6th Baron Byron** 1788–1824  
English Romantic poet and satirist

I had a dream, which was not all a dream.  
The bright sun was extinguish'd, and the stars  
Did wander darkling in the eternal space,  
Rayless, and pathless, and the icy earth  
Swung blind and blackening in the moonless air.

*The Complete Poetical Works of Byron*  
Miscellaneous Poems, Darkness  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1933

**Davies, Paul Charles William** 1946–  
British-born physicist, writer, and broadcaster

Many billions of years will elapse before the smallest, youngest stars complete their nuclear burning and shrink into white dwarfs. But with slow, agonizing finality perpetual night will surely fall.

*The Last Three Minutes: Conjectures About the Ultimate Fate of the Universe*  
Chapter 5 (p. 50)  
Basic Books, Inc. New York, New York, USA. 1994

A universe that came from nothing in the big bang will disappear into nothing at the big crunch. Its glorious few zillion years of existence not even a memory.

*The Last Three Minutes: Conjectures About the Ultimate Fate of the Universe*  
Chapter 9 (p. 123)  
Basic Books, Inc. New York, New York, USA. 1994

**Dyson, Freeman J.** 1923–  
American physicist and educator

Since the universe is on a one-way slide toward a state of final death in which energy is maximally degraded, how does it manage, like King Charles, to take such an unconsciously long time a-dying.

Energy in the Universe  
*Scientific American*, Volume 224, Number 3, 1971 (p. 52)

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

...the universe will finally become a ball of radiation, becoming more and more rarified and passing into longer and longer wave-lengths. The longest waves of radiation are Hertzian waves of the kind used in broadcasting. About every 1500 million years this ball of radio waves will double in diameter; and it will go on expanding in geometrical progression forever. Perhaps then I may describe the end of the physical world as – one stupendous broadcast.

*New Pathways in Science*  
Chapter III, Section VI (p. 71)  
The Macmillan Company. New York, New York, USA. 1935

In the beginning was vastness, solitude and the deepest night. Darkness was upon the face of the deep, for as yet there was no light.

*Science and the Unseen World*  
Lecture I (p. 12)  
The Macmillan Co. New York, New York, USA. 1929

**Eliot, T. S. (Thomas Stearns)** 1888–1965  
American expatriate poet and playwright

This is the way the world ends  
Not with a bang but a whimper.

*The Collected Poems and Plays 1909–1950*  
The Hollow Men (p. 59)  
Harcourt, Brace & World, Inc. New York, New York, USA. 1952

**Frost, Robert** 1874–1963  
American poet

Some say the world will end in fire,  
Some say in ice.  
From what I've tasted of desire  
I hold with those who favor fire.  
But if it had to perish twice,  
I think I know enough of hate  
To say that for destruction ice  
Is also great  
And would suffice.

*Complete Poems of Robert Frost*  
Fire and Ice  
Henry Holt & Company. New York, New York, USA. 1949

**Gamow, George** 1904–68  
Russian-born American physicist

Galaxies are ever spinnik,  
Stars will burn to final sparrk,  
Till our universe is thinnink  
And is lifeless, cold and darrk.

*Mr. Tompkins in Paperback*  
Chapter 6 (p. 60)  
At The University Press. Cambridge, England. 1965

**Gribbin, John** 1946–  
British science writer and astronomer

“Big Crunch” is...an ugly term which hardly seems appropriate for so important an event as the end of the universe. But there is no convention as yet for a label of the moment of destruction at the end of time, and I am free to borrow the term “omega point.”

*The Omega Point: The Search for the Missing Mass and the Ultimate Fate of the Universe*  
Introduction (p. 2)  
Bantam Books. Toronto, Ontario, Canada. 1988

**Harrison, Edward Robert** 1919–2007  
English-born American cosmologist

The stars begin to fade like guttering candles and are snuffed out one by one. Out of the depths of space the great celestial cities, the galaxies, cluttered with the memorabilia of ages, are gradually dying. Tens of billions of years pass in the growing darkness. Occasional flickers of light pierce the fall of cosmic night, and spurts of activity delay the sentence of a universe condemned to become a galactic graveyard.

*Cosmology: The Science of the Universe*  
Chapter 18 (p. 360)  
Cambridge University Press. Cambridge, England. 1981

**Hawking, Stephen William** 1942–  
English theoretical physicist

The present evidence therefore suggests that the universe will probably expand forever, but all we can really be sure of is that even if the universe is going to recollapse,

it won't do so for at least another ten thousand million years, since it has already been expanding for at least that long. This should not unduly worry us: by that time, unless we have colonized beyond the Solar System, mankind would long since have died out, extinguished along with our sun!

*A Brief History of Time: From the Big Bang to Black Holes*

Chapter 3 (p. 46)

Bantam Books, Toronto, Ontario, Canada. 1988

**James, William** 1842–1910

American philosopher and psychologist

Though the ultimate state of the universe may be its vital and psychical extinction, there is nothing in physics to interfere with the hypothesis that the penultimate state might be the millennium – in other words a state in which a minimum of difference of energy-level might have its exchanges so skillfully canalised that a maximum of happy and virtuous consciousness would be the only result. In short, the last expiring pulsation of the universe's life might be, "I am so happy and perfect that I can stand it no longer."

Letter to Henry Adams dated June, 17, 1910

*The Atlantic Monthly*, September, 1920 (p. 316)

**Jastrow, Robert** 1925–

American space scientist

Within the isolated galaxies, the old stars burn out one by one, and fewer and fewer new stars are formed to replace them. Stars are the source of the energy by which all beings live. When the light of the last star is extinguished, the Universe fades into darkness, and all life comes to an end.

*God and the Astronomers*

Epilogue (p. 117)

W.W. Norton & Company, Inc. New York, New York, USA. 1978

**Jeans, Sir James Hopwood** 1877–1946

English physicist and mathematician

Everything points with overwhelming force to a definite event, or series of events, of creation at some time or times, not infinitely remote. The universe cannot have originated by chance out of its present ingredients, and neither can it have been always the same as now. For in either of these events no atoms would be left save such as are incapable of dissolving into radiation; there would be neither sunlight nor starlight but only a cool glow of radiation uniformly diffused through space. This is, indeed, so far as present-day science can see, the final end towards which all creation moves, and at which it must at last arrive.

*Eos or the Wider Aspects of Cosmogony* (p. 55)

Kegan Paul, Trench, Trubner & Company, Ltd. London, England. 1931

**Jeffers, Robinson** 1887–1962

American poet

For man will be blotted out, the blithe earth die, the brave sun

Die blind and blacken to the heart...

In Tim Hunt (ed.)

*The Collected Poetry of Robinson Jeffers* (Volume 1)

To the Stone-Cutters (p. 5)

Stanford University Press. Stanford, California, USA. 1988

I seem to have stood a long time and watched the stars pass.

They also shall perish I believe.

Here today, gone tomorrow, desperate wee galaxies

Scattering themselves and shining their substance away

Like a passionate thought. It is very well ordered.

In Tim Hunt (ed.)

*The Collected Poetry of Robinson Jeffers* (Volume 2)

Margrave (p. 171)

Stanford University Press. Stanford, California, USA. 1988

Time will come no doubt

When the sun too shall die; the planets will freeze, and the air on them; frozen gases, white flakes of air

Will be the dust: which no wind will ever stir: this very dust in dim starlight glistening

Is dead wind, the white corpse of wind.

Also the galaxy will die; the glitter of the Milky Way, our universe, all the stars that have names are dead.

In Tim Hunt (ed.)

*The Collected Poetry of Robinson Jeffers* (Volume 3)

The Double Axe: The Inhumanist (p. 261)

Stanford University Press. Stanford, California, USA. 1988

It will contract, the immense navies of stars and galaxies, Dust-clouds and nebulae

Are recalled home, they crush against each other in one harbor, they stick in one lump.

*The Beginning and the End and Other Poems*

The Great Explosion (p. 3)

Random House, Inc. New York, New York, USA. 1963

**Joyce, James** 1882–1941

Irish expatriate writer and poet

Gasballs spinning about, crossing each other, passing. Same old dingdong always. Gas, then solid, then world, then cold, then dead shell drifting around, frozen rock like that pineapple rock. The moon.

*Ulysses* (p. 164)

Random House, Inc. New York, New York, USA. 1946

**Lucretius** ca. 99 BCE–55 BCE

Roman poet

And so someday,

The mighty ramparts of the mighty universe

Ringed round with hostile force,

Will yield and face decay and come crumbling to ruin.

In Paul Davies

*About Time: Einstein's Unfinished Revolution*

Header (p. 33)

Simon & Schuster. New York, New York, USA. 1995

**MacLeish, Archibald** 1892–1982  
American poet and Librarian of Congress

And there, there overhead, there, there hung over  
Those thousands of white faces, those dazed eyes,  
There in the starless dark the poise, the hover,  
There with vast wings across the canceled skies,  
There in the sudden blackness the black pall  
Of nothing, nothing, nothing – nothing at all.

*Collected Poems 1917–1952*

The End of the World

Houghton Mifflin Company, Boston, Massachusetts, USA. 1952

**Nicholson, Norman** 1914–87  
English poet

And if the universe  
Reversed and showed  
The colour of its money;  
If now observable light  
Flowed inward, and the skies snowed  
A blizzard of galaxies,  
The lens of night would burn  
Brighter than the focused sun,  
And man turn blinded  
With white-hot darkness in his eyes.

*The Pot Geranium*

The Expanding Universe (p. 212)

Faber & Faber Ltd. London, England. 1994

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

...in the vast death of the solar system, and the whole temple of Man's achievements must inevitable be buried beneath all the labours of the ages, all the devotion, all the inspiration, all the noonday brightness of human genius, are destined to extinction debris of a universe in ruins – all these things, if not quite beyond dispute, are yet so nearly certain that no philosophy which rejects them can hope to stand. Only within the scaffolding of these truths, only on the firm foundation of unyielding despair, can the soul's habitation henceforth be safely built.

*Mysticism and Logic: And Other Essays*

Chapter III (pp. 47–48)

Longmans, Green & Co. London, England. 1919

**Swinburne, Algernon Charles** 1837–1909  
English poet

Then star nor sun shall waken,  
Nor any change of light;  
Nor sound of waters shaken,  
Nor any sound or sight: ...  
Only the sleep eternal  
In an eternal night.

In Richard Henry Stoddard (ed.)

*The Poems of Algernon Charles Swinburne*

The Garden of Proserpine

Thomas Y. Crowell & Co. New York, New York, USA. 1884

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

There will be a time when the day will be as long as a year is now, and the cooling sun, shorn of its beams, will hang motionless in the heavens.

*The Outline of History* (Volume 1)

Book 1, Chapter I, Section 3 (p. 15)

Garden City Books, Garden City, New York, USA. 1961

...a steady twilight brooded over the Earth.... All traces of the moon had vanished. The circling of the stars, growing slower and slower, had given place to creeping points of light...the sun, red and very large, halted motionless upon the horizon, a vast dome glowing with a dull heat.... The rocks about me were of a harsh reddish colour, and all the traces of life that I could see at first was the intensely green vegetation...the same rich green that one sees on forest moss or on the lichen in caves: plants which like these grow in a perpetual twilight.... I cannot convey the sense of abominable desolation that hung over the world.

*The Great Ideas Today* 1971

*The Time Machine*

Chapter Eleven (p. 497)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1971

**Yeats, William Butler** 1865–1939  
Irish poet and playwright

When shall the stars be blown about the sky,  
Like the sparks blown out of a smithy, and die?

*The Collected Poems of W.B. Yeats*

The Secret Rose (p. 67)

The Macmillan Company, New York, New York, USA. 1956

## UNIVERSE, EVOLUTION

**Barrell, Joseph** 1869–1919  
American geologist

The logic of all branches of science points to the existence of some system of evolution of the universe, its complete nature hidden in the vastnesses of time and space, but nevertheless developed in accordance with Nature's laws.

In Joseph Barrell and Charles Schuchert

*The Evolution of the Earth and Its Inhabitants*

Introduction (p. 1)

Yale University Press, New Haven, Connecticut, USA. 1919

## UNIVERSE, EXPANDING

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

We walk the stage of life, performers of a drama for the benefit of the cosmic spectator. As the scenes proceed he notices that the actors are growing smaller and the action

quicker. When the last act opens the curtain rises on midget actors rushing through their parts at frantic speed. Smaller and smaller. Faster and faster. One last microscopic blur of intense agitation. And then nothing.

*The Expanding Universe*

Chapter III, Section VI (pp. 91–92)

At the University Press. Cambridge, England. 1952

## UNIVERSE, LIMIT OF

**Henderson, Archibald** 1877–1963

Mathematician

If a voyager of the skies travel deep into the interstellar spaces, past the great blue helium stars of Orion, past Betelgeuse and Antares, beyond the white variable Cepheids, the gaseous red and yellow giant-stars, the faintest of the super-nebulæ, “lying like silver snails in the garden of the stars” but whirling in fiery spirals in the dim void of remoter space – will he ever reach any limit to the universe?

Is the Universe Finite?

*American Mathematical Monthly*, Volume 32 1925 (p. 215)

## UNIVERSITY

**Babbage, Charles** 1792–1871

English mathematician

A young man passes from our public schools to the universities, ignorant almost of the elements of every branch of useful knowledge...

*Reflections on the Decline of Science in England, And on Some of Its Causes*

Chapter I (p. 3)

Printed for B. Fellowes. London, England. 1830

**Branford, Victor**

No biographical data available

The university is, in a sense, the cathedral – a somewhat truncated one doubtless – of the American city, and every citizen is unhappy until his city gets what he conceives to be its full complement of culture, in the possession of a university.

*Science and Citizenship*

Section VIII (p. 20)

George Allen. London, England. 1906

**Cooke, Josiah Parsons** 1827–94

American chemist

The time has passed when we can afford to limit the work of our higher institutions of learning to teaching knowledge already acquired. Henceforth the investigation of unsolved problems, and the discovery of new truth, should be one of the main objects at our American universities, and no cost grudged which is required to

maintain at them the most active minds, in every branch of knowledge which the country can be stimulated to produce.

*Scientific Culture: And Other Essays* (2nd edition)

Scientific Culture (p. 25)

D. Appleton & Co. New York, New York, USA. 1855

The university should be the center of scientific investigation and literary culture, the nursery of lofty aspirations and noble thoughts, and thus should become the soul of the higher life of the nation.

*Scientific Culture: And Other Essays* (2nd edition)

The Nobility of Knowledge (p. 49)

D. Appleton & Co. New York, New York, USA. 1855

**Everett, Edward** 1794–1865

Whig Party politician

Universities have been wittily compared to vessels at anchor in the stream of time, serving little purpose but to show with what rapidity independent Research moves down the current.

*Inauguration of Washington University at Saint Louis, Missouri. April 23, 1857*

An Address (p. 79)

Little, Brown & Co. Boston, Massachusetts, USA. 1857

**Keyser, Cassius Jackson** 1862–1947

American mathematician

Unlike man the individual, a university is, like man the race, immortal.

*The Human Worth of Rigorous Thinking: Essays and Addresses*

Chapter X (p. 202)

Columbia University Press. New York, New York, USA. 1916

**Oppenheimer, James Robert** 1904–67

American theoretical physicist

...a university rightly and inherently is a place where the individual man can form new syntheses, where the accidents of friendship and associations can open a man's eyes to a part of science or art which he had not known before, where parts of human life, remote and probably superficially incompatible, can find in men their harmony and their synthesis.

*The Open Mind*

Prospects in the Arts and Sciences (p. 142)

Simon & Schuster. New York, New York, USA. 1955

## UNIVERSITY PRINTING PRESS

**Cornford, Francis M.** 1874–1943

English academic

University printing presses exist, and are subsidised by the Government for the purpose of producing books which no one can read; and they are true to their high calling.

*Microcosmographia Academica*

The Principles of Government, of Discipline (Including Religion), and of Sound Learning

Bowes & Bowes, Publishers. Cambridge, England. 1908

## UNKNOWABLE

**Mencken, H. L. (Henry Louis)** 1880–1956  
American journalist and literary critic

Penetrating so many secrets, we cease to believe in the unknowable. But there it sits nevertheless, calmly licking its chops.

*Minority Report*  
#304 (p. 241)

Alfred A. Knopf. New York, New York, USA. 1956

**Pearson, Karl** 1857–1936  
English mathematician

...the business of the scientist is to know, and therefore he will not lightly assent to throwing anything into the unknowable...

*The Grammar of Science* (2nd edition)  
Chapter III (p. 102)

Adam & Charles Black. London, England. 1900

## UNKNOWN

**Asimov, Isaac** 1920–92  
American author and biochemist

If it is exciting to probe the unknown and shed light on what was dark before, then more and more excitement surely lies ahead of us.

*The Universe*  
Chapter 19 (p. 294)

Walker & Company. New York, New York, USA. 1966

**Auvaiyaar** ca. 9th century  
Tamil sage and poetess

What is known is a handful; the unknown is as vast as the universe.

Attributed

*The Physics Teacher*, Volume 15, Number 9, December, 1977 (p. 544)

**Berry, Wendell** 1934–  
American man of letters

...though we pretend otherwise, the unknown increases with the known.

*The Unforeseen Wilderness: Kentucky's Red River Gorge*  
Chapter Five (p. 77)

The University of Kentucky Press. Lexington, Kentucky, USA. 1971

**Carlson, A. J.** 1875–1956  
Swedish-American physiologist

We recognize the unknown but not the unknowable.

Science and the Supernatural

*Science*, Volume 73, Number 1887, February 27, 1931 (p. 221)

When we know that we don't know, that is itself an achievement, for then the field is cleared of the confusing and obstructing rubbish of tradition, and we are free to use all our ingenuity and imagination in contriving methods to find out.

Science and the Supernatural

*Science*, Volume 73, Number 1887, February 27, 1931 (p. 221)

**Chargaff, Erwin** 1905–2002  
Austrian biochemist

I have always oscillated between the brightness of reality and the darkness of the unknowable.

*Heraclitean Fire: Sketches from a Life before Nature*  
Part I

The Silence of the Heavens (p. 55)

Rockefeller University Press. New York, New York, USA. 1978

**Charles, John**  
American planetary geologist

We want to research what we call the "known unknowns"... This will reduce total risk in the face of the unknown unknowns, the true surprises....

In James Olberg

Red Planet Blues

*Popular Science*, July 2003 (p. 64)

**Clerke, Agnes Mary** 1842–1907  
Irish astronomer

The unknown, it is true, is indefinitely vast, and the rays of light which we can project into its darkness penetrate but a short way.

*Problems in Astrophysics*

Preface (p. vii)

Adam & Charles Black. London, England. 1903

...such a region of inquiry...where we feel that at every step the Unknown may merge into the Unknowable, has a particular and an illimitable fascination.

*Problems in Astrophysics*

Chapter XL (p. 537)

Adam & Charles Black. London, England. 1903

**Crookes, Sir William** 1832–1919  
English chemist and physicist

We are on the track and are not daunted, and fain would we enter the mysterious region which ignorance tickets 'Unknown.'

*Report of the Fifty-sixth Meeting of the British Association for the Advancement of Science*

Presidential Address (p. 560)

John Murray. London, England. 1887

## David Reed (Fictional character)

The unknown always seems unbelievable...

*Creature from the Black Lagoon*

Film (1954)

**Davy, Sir Humphry** 1778–1829  
English chemist

It has justly been said that the greater the circle of light, the greater the boundary of darkness by which it is surrounded.

French astronomer and writer

The Known is an infinitesimal island in the midst of the vast ocean of the Unknown.

Translated by Frances Alice Welby

*Astronomy for Amateurs*

Chapter XII (p. 320)

D. Appleton & Co. New York, New York, USA. 1915

**Harvey, Moses** 1820–1901

Irish clergyman, essayist, and naturalist

Behind all that is known stretch the vast realms of the unknown.

Science and Religion

*The Maritime Monthly*, Volume II, November, 1873 (p. 479)

**Heaviside, Oliver** 1850–1925

English electrical engineer, mathematician, and physicist

If there be something which cannot be reduced to a quantity, or more generally to a definite function, no matter how complex and involved, of any number of other quantities which can be measured (either actually, or in imagination), then that something cannot be accurately reasoned about, because it is in part unknown. Not unknown in the sense in which a quantity is said to be unknown in algebra, when it is virtually known because

virtually expressible in terms of known quantities, but literally unknown by the absence of sufficient quantitative connection with the known.

*Electromagnetic Theory* (Volume 1)

Chapter I (p. 10)

D. van Nostrand Co. New York, New York, USA. 1893

The unknown is not necessarily unknowable; fresh knowns may make the former unknowns become also known.

*Electromagnetic Theory* (Volume 1)

Chapter I (p. 10)

D. van Nostrand Co. New York, New York, USA. 1893

**Hinshelwood, Sir Cyril** 1897–1967

English chemist

...as the chart of the unknown becomes filled in, judgment of the most profitable course to follow changes. Mysterious inlets may prove dead ends or may open into vast seas.

Science and Scientists

*Supplement to Nature*, Volume 207, Number 5001, 4 September, 1965

(p. 1057)

**Hugo, Victor** 1802–85

French author, lyric poet, and dramatist

Grasping your head between your hands, you strive to see and to know. You are at the window opening into the unknown. On all sides the deep layers of effects and causes, heaped one behind the other, wrap you with mist.

Translated by Melville Best Anderson

*William Shakespeare*

Part Second, Book V, Chapter I (p. 175)

A.C. McClurg & Co. Chicago, Illinois, USA. 1887

**Huxley, Aldous** 1894–1963

English writer and critic

Cheerfully...let us advance together, men of letters and men of science, further and further into the ever-expanding regions of the unknown.

*Literature and Science*

Chapter 38 (p. 118)

Harper & Row, Publishers. New York, New York, USA. 1963

**Huxley, Thomas Henry** 1825–95

English biologist

The known is finite, the unknown infinite; intellectually we stand on an islet in the midst of an illimitable ocean of inexplicability. Our business in every generation is to reclaim a little more land.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 1)

Chapter XIV (p. 557)

D. Appleton & Company. New York, New York, USA. 1896

**Kennedy, John F.** 1917–63

26th president of the USA

Despite the striking fact that most of the scientists that the world has ever known are alive and working today, despite the fact that this Nation's own scientific manpower is doubling every 12 years in a rate of growth more than three times that of our population as a whole, despite that, the vast stretches of the unknown and the unanswered and the unfinished still far outstrip our collective comprehension.

Address at Rice University  
Houston, Texas  
September 12, 1962

**Keyser, Cassius Jackson** 1862–1947  
American mathematician

...to be indefinable is not to be unknowable and not to be unknown.

*The Human Worth of Rigorous Thinking: Essays and Addresses*  
Chapter VI (p. 125)  
Columbia University Press. New York, New York, USA. 1916

**Kingsley, Charles** 1819–75  
English clergyman and author

Always try to explain the unknown by the known. If you meet something which you have not seen before, then think of the thing most like it, which you have seen before; and try if that which you know explains the one will not explain the other also.

*Scientific Lectures and Essays*  
Chapter I (p. 31)  
Macmillan & Co Ltd. London, England. 1893

**Leiber, Jr., Fritz** 1910–92  
American writer of science fiction and horror

Science has only increased the area of the unknown. And if there is a god, her name is Mystery.

*Our Lady of Darkness* (p. 44)  
Berkley Publishing Corp. New York, New York, USA. 1977

**Lindbergh, Charles A.** 1902–74  
American aviator

Whether outwardly or inwardly, whether in space or in time, the farther we penetrate the unknown, the vaster and more marvelous it becomes.

Chapter Fifteen (p. 402)  
Harcourt Brace Jovanovich. New York, New York, USA. 1967

**Locke, John** 1632–1704  
English philosopher and political theorist

For the understanding, like the eye, judging of objects only by its own sight, cannot but be pleased with what it discovers, having less regret for what has escaped it, because it is unknown.

In *Great Books of the Western World* (Volume 35)  
*Concerning Human Understanding*  
Epistle to the Reader (p. 87)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**London, Jack** 1876–1916  
American author

He had caught a glimpse of the apparently illimitable vistas of knowledge.... In the alchemy of his brain, trigonometry and mathematics and the whole field of knowledge which they betokened were transmuted into so much landscape. The vistas he saw were vistas of green foliage and forest glades, all softly luminous or shot through with flashing lights. In the distance, detail was veiled and blurred by a purple haze, but behind this purple haze, he knew, was the glamour of the unknown...

*Martin Eden*  
Chapter II (pp. 19–20)  
The Review of Review's Co. New York, New York, USA. 1916

**Melville, Herman** 1819–91  
American novelist

...I am tormented with an everlasting itch for things remote. I love to sail the forbidden seas...

In *Great Books of the Western World* (Volume 48)  
*Moby Dick*  
Chapter I (p. 4)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Mencken, H. L. (Henry Louis)** 1880–1956  
American journalist and literary critic

Penetrating so many secrets, we cease to believe in the unknowable. But there it sits nevertheless, calmly licking its chops.

*Minority Report: H.L. Mencken's Notebooks*  
No. 364 (p. 241)  
Alfred A. Knopf. New York, New York, USA. 1956

**Mitchel, Ormsby MacKnight** 1805–62  
American astronomer

...the twilight of the known flings its feeble light into the domain of the unknown; and we are permitted to gather some idea, not of all that remains to be done, but of that which must be first accomplished.

*The Orbs of Heaven, or, The Planetary and Stellar Worlds*  
Lecture I (pp. 15–16)  
Office of the National Illustrated Library. London, England. 1851

We stand on the dim confines of the unknown. All behind us is clear and bright and perfect, all before us is shrouded in gloom and darkness and doubt.

*The Planetary and Stellar Worlds: A Popular Exposition of the Great Discoveries and Theories of Modern Astronomy*  
Lecture I (p. 36)  
Baker & Scribner. New York, New York, USA. 1848

...the twilight of the known flings its feeble light into the domain of the unknown, and we are permitted to gather some idea, not of all that remains to be done, but of that which must first be accomplished.

*The Planetary and Stellar Worlds: A Popular Exposition of the Great Discoveries and Theories of Modern Astronomy*  
Lecture I (p. 36)  
Baker & Scribner. New York, New York, USA. 1848

**More, Louis Trenchard**

American educator

After centuries of effort, the ocean of the unknown lies before us unexplored.

*The Limitations of Science*

Chapter VII (p. 261)

Henry Holt & Co. New York, New York, USA. 1915

**Morehouse, George Wilkinson** 1840–?

American naturalist

There are always some men, who, actuated by the love of truth for its own sake, are forever prospecting along the borders of the unknown.

*The Wilderness of Worlds*

Chapter I (p. 10)

Peter Eckler, Publisher. New York, New York, USA. 1898

As the dread of the unknown weighs less and less heavily upon us, the known becomes more enjoyable.

*The Wilderness of Worlds*

Chapter I (p. 11)

Peter Eckler, Publisher. New York, New York, USA. 1898

**Nansen, Fridtjof** 1861–1930

Norwegian explorer, scientist, and diplomat

...the limits of the unknown had to recede step by step before the ever-increasing yearning after light and knowledge of the human mind...

*Farthest North* (Volume 1)

Chapter I (pp. 1–2)

Harper & Brothers Publishers. New York, New York, USA. 1898

**Nicholson, Norman** 1914–87

English poet

No man has seen it; nor the lensed eye  
That pin-points week by week the same patch of sky  
Records even a blur across its pupil. Only  
The errantry of Saturn, the wry  
Retarding of Uranus, speak  
Of the pull beyond the pattern:  
The unknown is shown  
Only by a bend in the known.

In Neil Curry (ed.)

*Norman Nicholson Collected Works*

The Undiscovered Planet (p. 211)

Faber & Faber Ltd. London, England. 1994

**Nietzsche, Friedrich Wilhelm** 1844–1900

German philosopher

To trace something unknown back to something known is alleviating, soothing, gratifying and gives moreover a feeling of power, Danger, disquiet, anxiety attend the unknown – the first instinct is to eliminate these distressing states. First principle: any explanation is better than none....

In Alexander Tille (ed.), Thomas Common (trans.)

*The Works of Friedrich Nietzsche* (Volume 11)

*Twilight of the Idols*, The Four Great Errors, Section 5 (p. 138)

Henry & Company. London, England. 1896

**Oppenheimer, James Robert** 1904–67

American theoretical physicist

The problem of doing justice to the implicit, the imponderable and the unknown is always with us in science, it is with us in the most trivial of personal affairs, and it is one of the great problems of all forms of art.

In Lincoln Barnett

*Writing on Life: Sixteen Close-Ups*

Physicist Oppenheimer (p. 358)

William Sloane Associates, Publishers. New York, New York, USA. 1951

**Pinter, Harold** 1930–

English absurdist playwright

In other words, apart from the known and the unknown, what else is there?

*The Homecoming*

Act Two (p. 52)

Methuen & Company Ltd. London, England. 1966

**Rabi, Isidor Isaac** 1898–1988

Austrian-born American physicist

With the beginning of direct exploration of the solar system and promise; in fact science derives its sustenance from the unknown; all the good things have come from that inexhaustible realm.

Faith in Science

*The Atlantic Monthly*, Volume 187, Number 1, January, 1951 (p. 28)

**Rice, Harvey** 1800–91

American lawyer and newspaper publisher

In modern methods of logic, we reason from cause to effect, from the known to the unknown; but, in attempting to penetrate the region of the unknown, we are often left without a reliable guide.

*Nature and Culture*

Chapter I (p. 7)

Lee & Shepard. Boston, Massachusetts, USA. 1875

**Rumsfeld, Donald** 1932–

American businessman, politician, and secretary of state

...as we know, there are known knowns. There are things we know we know. We also know there are known unknowns. That is to say we know there are some things we do not know. But there are also unknown unknowns, the ones we don't know we don't know.

Department of Defense News Briefing

February 12, 2002

**Service, Robert William** 1874–1958

Canadian poet and novelist

Let us probe the silent places,  
let us seek what luck betides us;  
Let us journey to a lonely land I know.

There's a whisper on the night-wind,  
there's a star agleam to guide us,  
And the Wild is calling, calling...let us go.

*The Complete Poems of Robert Frost*

The Call of the Wild

Stanza 5

Dodd, Mead & Company. New York, New York, USA. 1940

**Singer, June** 1920–2004

American Gnostic

As knowledge proceeds with spiraling movement to penetrate the vast universe of black mystery, one is continually astonished to discover that at the outer limit of awareness where science interfaces with the unknown, there is nothing but a growing edge, where knowledge and ignorance meet. The more one learns, the more one discovers the increasing magnitude of the unknown, as anyone who has tried to do “exhaustive” research knows very well!

*Androgyny: Toward a New Theory of Sexuality* (p. 59)

Doubleday & Company, Inc. Garden City, New York, USA. 1967

**Vernon, A. G.**

No biographical data available

It is the successful, or even the unsuccessful, pursuit of truth which gives happiness to each generation of scientific men, and not the value of the truth itself – the energy, the doing, not the thing done. If a time could arrive when all was known, when there could not be a new investigation or experiment, our keenest pleasure would be at an end. We may therefore feel happy in the thought of how much is still unknown.

In Sir Richard Arman Gregory

*Discovery; or, The Spirit and Service of Science*

Chapter II (p. 28)

Macmillan & Company Ltd. London, England. 1918

**Whitney, Willis Rodney** 1868–1958

American chemical and electrical engineer

Scientists know that research merely discloses parts of the infinite unknown. Paradoxically, the enticing, helpful “unknown” increases as men continue to subtract from it. Progress in every line of experimental science follows the same law. The apparently narrow path gradually expands into unlimited, unexplored territory.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1924*

The Vacuum – There's Something in It (p. 194)

Government Printing Office. Washington, D.C. 1925

## UNKNOWN QUANTITY

### Author undetermined

Among the Unknown Quantities assembled at Court, there was none of more brilliant promise than the hero of our tale. Young x was descended from a family of Symbols,

which abstractly considered as the representatives of a mathematical truth, could have had no beginning: but without venturing on such dangerous metaphysics as speculations on this point would lead to, it is sufficient to know that our hero's ancestors had been people of consideration ever since the discovery of algebra; ever since the light of reason pierced the obscuring fog banks and touched the cliffs of that continent where the disciples of science will forever wander as in a paradise.

The Symbol of Darkness

*The Knickerbocker*, Volume 34, Number 3, September, 1849 (p. 214)

## UNNOTICED

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

Not invisible, but unnoticed, Watson. You did not know where to look, and so you missed all that was important.

*The Adventures of Sherlock Holmes*

A Case of Identity (p. 66)

*The Strand Magazine*

Harper & Brothers Publishers. New York, New York, USA. 1892

## UNSCIENTIFIC

**James, William** 1842–1910

American philosopher and psychologist

Fondness for the word ‘scientist’ is one of the notes by which you may know its votaries; and its [science's] short way of killing any opinion that it disbelieves in is to call it ‘unscientific.’

*The Will to Believe and Other Essays in Popular Philosophy*

Is Life Worth Living, IV (p. 53)

Longmans, Green & Co. New York, New York, USA. 1899

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

...cowardice is unscientific; for there cannot be a science of ignorance. There may be a science of bravery, for that advances; but a retreat is rarely well conducted; if it is, then is it an orderly advance in the face of circumstances.

*Excursions*

Natural History of Massachusetts (p. 40)

Thomas Y. Crowell Co. New York, New York, USA. 1913

## UNSCIENTIFIC MAN

**Foster, Sir Michael** 1836–1907

English physiologist

Man, unscientific man is often content with “the nearly” and “the almost.” Nature never is. It is not her way to call the same, two things which differ, though the difference may be measured by less than the thousandth of

a milligramme or of a millimetre, or by any other like standard of minuteness.

Presidential Address

*The Chemical News and Journal of Industrial Science*, Volume LXXX, Number 2077, September 15, 1899 (p. 130)

## UNTRUE

**Topsell, Edward** 1572–1625

English cleric

But for my part, which write the English story, I acknowledge that no man must looke for that at my hands, which I have not received from some other: for I would bee unwilling to write anything untrue, or uncertaine out of mine owne invention; and truth on every part is so deare unto mee, that I will not lie to bring any man in love and admiration with God and his works, for God needeth not the lies of men: To conclude, therefore, this Praeface, as the beast is strange, and never seene in our countrey, so my eyesight cannot adde anything to the description; therefore harken unto that which I have observed out of other writers

In John Ashton

*Curious Creatures in Zoology*

The Rhinoceros (p. 99)

John C. Nimmo. London, England. 1890

## UREA

**Wöhler, Friedrich** 1800–82

German chemist

The fact that in the union of these substances they appear to change their nature, and give rise to a new body, drew my attention anew to the subject, and research gave the unexpected result that by the combination of cyanic acid with ammonia, urea is formed, a fact that is more noteworthy inasmuch as it furnishes an example of the artificial production of an organic, indeed a so-called animal substance, from inorganic material.

In Henry M. Leicester and Herbert S. Klickstein

*A Source Book in Chemistry: 1400–1900*

Friedrich Wöhler (p. 310)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1952

## URINANALYSIS

**Addis, Thomas** 1881–1949

English-American physician

When the patient dies the kidneys may go to the pathologist, but while he lives the urine is ours. It can provide us day by day, month by month, and year by year, with a serial story of the major events going on within the kidney.

*Glomerular Nephritis: Diagnosis and Treatment* (p. 2)

The Macmillan Company. New York, New York, USA. 1948

**Harington, John** 1561–1612

English inventor of flush toilet

He called for his urinal and having made water in it, he cast it, & viewed it (as Physicians do) a prettie while; at last he swore soberly, he saw nothing in that man's water, but that he might live.

*The Metamorphosis of Aiax: A New Discourse of a Stale Subject*

1596

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

FALSTAFF: What says the Doctor to my water?

PAGE: He said, Sir, the water itself was good healthy water; but, for the party that owned it, he might have more diseases than he knows for.

In *Great Books of the Western World* (Volume 26)

*The Plays and Sonnets of William Shakespeare* (Volume 1)

*The Second Part of King Henry the Fourth*

Act I, Scene ii, l. 1–4

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## URINE

**Dinesen, Isak** 1885–1962

Danish author

What is man, when you come to think upon him, but a minutely set, ingenious machine for turning with infinite artfulness, the red wine of Shiraz into urine?

*Seven Gothic Tales*

The Dreamers

Modern Library

New York, New York, USA. 1961

## USE

**Tait, Peter Guthrie** 1831–1901

Scottish physicist and mathematician

Nothing is without its use in this world, though it may occasionally be difficult to discover that use.

*Properties of Matter* (2nd edition)

Preface (p. viii)

Adam & Charles Black. Edinburgh, Scotland. 1890

## USELESS

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

What a master a man would be in his own subject if he taught nothing useless!

Translated by Thomas Bailey Saunders

*The Maxims and Reflections of Goethe*

#562 (p. 196)

The Macmillan Co. New York, New York, USA. 1906

**UTILITARIAN**

**Everett, Edward** 1794–1865  
Whig Party politician

it would be a grievous wrong to mathematical, as indeed to any science, to rest its importance mainly on a utilitarian basis. The great truths with which it deals, are clothed with an austere grandeur, far above all purposes of immediate convenience or profit. It is in them that our limited understandings approach nearest to the conception of that absolute and infinite, toward which in most other things they aspire in vain.

*Inauguration of Washington University at Saint Louis, Missouri. April 23, 1857*

Mr. Everett's Inaugural Address on Academic Education (p. 91)  
Little, Brown & Co. Boston, Massachusetts, USA. 1857

**UTILITY**

**Teale, Edwin Way** 1899–1980  
American naturalist

The difference between utility and utility plus beauty is the difference between telephone wires and the spider web.

*Circle of Seasons* (p. 184)

Dodd, Mead & Company. New York, New York, USA. 1987

**von Helmholtz, Hermann** 1821–94  
German scientist and philosopher

Whoever, in the pursuit of science, seeks after immediate practical utility, may generally rest assured that he will seek in vain.

Translated by E. Atkinson

*Popular Lectures on Scientific Subjects*

First Series

On the Relation of Natural Science to General Science (p. 29)

D. Appleton & Co. New York, New York, USA. 1897

**Whittaker, James Thomas**

No biographical data available

Nothing so dampens enthusiasm, so hampers progress, as doubt of the utility of the work.

*Physiology*

Lecture I (p. 4)

Chancy R. Murry. Cincinnati, Ohio, USA. 1879

## V

### VACCINATION

**Jeffers, Robinson** 1887–1962  
American poet

They take horses  
And give them sicknesses through hollow needles, their  
blood saves babies: I am here on the mountain making  
Antitoxin for all the happy towns and farms...

In Tim Hunt (ed.)

*The Collected Poetry of Robinson Jeffers* (Volume 1)

A Redeemer (p. 407)

Stanford University Press. Stanford, California, USA. 1988

**Jenner, Edward** 1749–1823  
English scientist

My opinion of vaccination is precisely as it was when  
I first promulgated the discovery. It is not in the least  
strengthened by any event that has happened, for it  
gain no strength; it is not in the least weakened, for if  
the failures you speak of had not happened, the truth of  
my assertions respecting those coincidences which occa-  
sioned them would not have been made out.

In John Baron

*The Life of Edward Jenner* (Volume 2)

Chapter IX (p. 311)

Henry Colburn. London, England. 1838

### VACUUM

**Bacon, Roger** 1214–92  
English philosopher, scientist, and friar

For vacuum rightly conceived of is merely a mathemati-  
cal quantity extended in the three dimensions, existing  
per se without heat and cold, soft and hard, rare and  
dense, and without any natural quality, merely occupying  
space, as the philosophers maintained before Aristotle,  
not only within the heavens, but beyond.

*Opus Majus* (Volume 2)

Part Five, Ninth Distinction, Chapter II (p. 485)

**Huygens, Christiaan** 1629–95  
Dutch mathematician, astronomer, and physicist

...but what God has bin pleas'd to place beyond the  
Region of the Stars, is as much above our Knowledge, as  
it is our Habitation.

Or what if beyond such a determinate space he has left  
an infinite Vacuum; to show, how inconsiderable is all  
that he has made is, to what his Power could, had he so  
pleas'd, have produc'd?

*The Celestial Worlds Discover'd; or, Conjectures Concerning the  
Planetary Worlds, Their Inhabitants and Productions*

Book the Second (p. 156)  
Printed for T. Childe. London, England. 1698

**Marquis, Don** 1878–1937  
American newspaperman, poet, and playwright

he i said is afraid of a vacuum  
what is there in a vacuum to make one afraid said the flea  
there is nothing in it i said  
and that is what makes one afraid to contemplate it  
a person can t think of a place with nothing at all in it  
without going nutty  
and if he tries to think that nothing is something after all  
he gets nuttier

*the lives and times of archy & mehitabel*

the merry flea (p. 45)

Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1933

**Morris, Richard** 1939–2003  
American physicist and science writer

In modern physics, there is no such thing as “nothing.”  
Even in a perfect vacuum, pairs of virtual particles are  
constantly being created and destroyed. The existence of  
these particles is no mathematical fiction. Though they  
cannot be directly observed, the effects they create are  
quite real. The assumption that they exist leads to predic-  
tions that have been confirmed by experiment to a high  
degree of accuracy.

*The Edges of Science*

Chapter II (p. 25)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1955

**Pagels, Heinz R.** 1939–88  
American physicist and science writer

Once our minds accept the mutability of matter and the  
new idea of the vacuum, we can speculate on the origin  
of the biggest thing we know – the universe. Maybe the  
universe itself sprang into existence out of nothingness –  
a gigantic vacuum fluctuation which we know today as  
the big bang. Remarkably, the laws of modern physics  
allow for this possibility.

*The Cosmic Code: Quantum Physics as the Language of Nature*

Part II, Chapter 8 (p. 278)

Simon & Schuster. New York, New York, USA. 1982

**Pascal, Blaise** 1623–62  
French mathematician and physicist

Because...you have believed from childhood that a box  
was empty when you saw nothing in it, you have believed  
in the possibility of a vacuum.

In *Great Books of the Western World* (Volume 33)

*Pensées*

Section II, 82

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Rey, Jean** 1583–1645  
French physician and chemist

...in the bounds of nature, a vacuum, which is nothing, can find no place. There is no power in nature which from nothing could have made the universe, and none which could reduce the universe to nothing: that requires the same virtue.

*Essays of Jean Rey*

Essay IV (p. 11)

William F. Clay. Edinburgh, Scotland. 1895

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

You cannot have first space and then things to put into it, any more than you can have first a grin and then a Cheshire cat to fit on to it.

In Sir Arthur Stanley Eddington

*New Pathways in Science*

Chapter II, Section VI (p. 48)

The Macmillan Company. New York, New York, USA. 1935

**Williams, Tennessee** 1911–83

American playwright

...a vacuum is a hell of a lot better than some of the stuff that nature replaces it with.

*Cat on a Hot Tin Roof*

Act 2

A New Directions Book. New York, New York, USA. 1975

**VALLEY**

**Austin, Mary Hunter** 1868–1934

American writer

...valleys are the sunken places of the earth, cañons are scored out by the glacier ploughs of God.

*The Land of Little Rain*

The Streets of the Mountains (p. 183)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1903

**King, Thomas Starr** 1824–64

American Unitarian clergyman

less it not one of the rich rewards of a long visit in any valley, to be able to drive directly to the seats which Nature has fixed along her picture-gallery, for studying leisurely, to the best advantage, her masterpieces of drawing, her most fascinating combinations of sublimity and loveliness, and the most mystic touches of her pencils of light, that edge the “mountain gloom” with “mountain glory?”

*The White Hills: Their Legends, Landscape, and Poetry*

The Four Balleys (p. 9)

Crosby & Ainsworth. Boston, Massachusetts, USA. 1866

**VALUE**

**Bronowski, Jacob** 1908–74

Polish-born British mathematician and polymath

The values by which we are to survive are not rules for just and unjust conduct, but are those illuminations in whose light justice and injustice, good and evil, means and ends are seen in fearful sharpness of outline.

*Science and Human Values*

The Sense of Human Dignity (p. 73)

Harper & Row, Publishers. New York, New York, USA. 1965

**Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

If a new result has value it is when, by binding together long-known elements, until now scattered and appearing unrelated to each other, it suddenly brings order where there reigned apparent disorder.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1909*

The Future of Mathematics (p. 126)

Government Printing Office. Washington, D.C. 1910

**VAN ALLEN BELT**

**Kennedy, John F.** 1917–63

26th president of the USA

I know there's been disturbance about the van Allen belt, but van Allen says it's not going to affect the belt, and it's his! [Laughter]

*The President's News Conference*

May 9. 1962

**Ray, Ernest**

American physicist

Space is radioactive!

In Wallace Cloud (ed.)

James van Allen Tells What Space Is Really Like

*Popular Science*, April 1963 (p. 75)

**VANISH**

**Browning, Robert** 1812–89

English poet

Suddenly, as rare things will, it vanished.

In William J. Rolfe and Heloise Edwina Hersey

*Select Poems of Robert Browning*

One Word More

**VARIABILITY**

**Hill, Austin Bradford** 1897–1991

English epidemiologist

The variability of human beings in their illnesses and their reactions to them is a fundamental reason *for* the planned clinical trial and not *against* it.

*Principles of Medical Statistics* (9th edition) (p. 13)

Oxford University Press. New York, New York, USA. 1971

**VARIABLE**

**Fort, Charles** 1874–1932  
American writer

There can be no real science where there are indeterminate variables, but every variable is, in finer terms, indeterminate, or irregular, if only to have the appearance of being in Intermediateness is to express regularity unattained.

*The Book of the Damned*

Chapter III (p. 25)

Boni & Liveright. New York, New York, USA. 1919

**VARIANCE**

**Boring, Edwin Garrigues** 1886–1968  
American psychologist

McDougall's freedom was my variance. McDougall hoped that variance would always be found in specifying the laws of behavior, for there freedom might still persist. I hoped then – less wise than I think I am now (it was 31 years ago) – that science would keep pressing variance towards zero as a limit. At any rate this general fact emerges from this example: freedom, when you believe it is operating, always resides in an area of ignorance. If there is a known law, you do not have freedom.

When Is Human Behavior Predetermined

*The Scientific Monthly*, Volume 84, 1957 (p. 190)

**Cooley, Charles Horton** 1864–1929  
American sociologist

It is clear that one who attempts to study precisely things that are changing must have a great deal to do with measures of change.

Observations on the Measure of Change

*Journal of the American Statistical Association*, New Series, Number 21, March, 1893

**Crichton, Michael** 1942–  
American novelist

The computer informed her that three spaces accounted for eighty-one percent of variance.

*The Terminal Man*

Chapter 6 (p. 47)

Alfred A. Knopf. New York, New York, USA. 1972

**VARIATION**

**Darwin, Charles Robert** 1809–82  
English naturalist

Many laws regulate variation, some few of which can be dimly seen.... I will here only allude to what may be called correlated variation. Important changes in the embryo or larva will probably entail changes in the mature animal.... Breeders believe that long limbs are almost always

accompanied by an elongated head...cats which are entirely white and have blue eyes are generally deaf.... [I]t appears that white sheep and pigs are injured by certain plants whilst dark-colored individuals escape....

In *Great Books of the Western World* (Volume 49)

*The Origin of Species by Means of Natural Selection*

Chapter I (p. 11)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...individuals of the same species often present, as is known to everyone, great differences of structure, independently of variation, as in the two sexes of various animals, in the two or three castes of sterile females or workers amongst insects, and in the immature and larval states of many of the lower animals.

In *Great Books of the Western World* (Volume 49)

*The Origin of Species by Means of Natural Selection*

Chapter II (p. 25)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...the number of intermediate varieties, which must have formerly existed, [must] be truly enormous. Why then is not every geological formation and every stratum full of such intermediate links? Geology assuredly does not reveal any such finely graduated organic chain; and this, perhaps, is the most obvious and gravest objection which can be urged against the theory.

In *Great Books of the Western World* (Volume 49)

*The Origin of Species by Means of Natural Selection*

Chapter X (p. 152)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

The mind cannot possibly grasp the full meaning of the term of even a million years; it cannot add up and perceive the full effects of many slight variations, accumulated during an almost infinite number of generations.

*The Origin of Species by Means of Natural Selection* Volume 2

Chapter XV (p. 295)

John Murray. London, England. 1888

But at present, after drawing up a rough copy on this subject, my conclusion is that external conditions do extremely little, except in causing mere variability. This mere variability (causing the child not closely to resemble the parent) I look at as very different from the formation of a marked variety or new species.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 1)

C. Darwin to J.D. Hooker, November 23rd [1856] (p. 445)

D. Appleton & Company. New York, New York, USA. 1896

**Fieller, E. C.**

American statistician

Before the inherent variability of the test-animals was appreciated, assays were sometimes carried out on as few as three rabbits: as one pharmacologist put it, those were the happy days.

The Biological Standardization of Insulin

*Supplement to the Journal of the Royal Statistical Society*, Volume 7,

Number 1, 1940–41 (p. 3)

**Harvey, William** 1578–1657  
English physician

...to me the form of the egg has never appeared to have aught to do with the engenderment of the chick, but to be a mere accident; and to this conclusion I come the rather when I see the diversities in the shapes of the eggs of different hens.

In *Great Books of the Western World* (Volume 28)  
*Anatomical Exercises on the Generation of Animals*  
Exercise 59 (p. 462)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Hume, David** 1711–76  
Scottish philosopher and historian

Nothing so like as eggs; yet no one, on account of this appearing similarity, expects the same taste and relish in all of them.

In *Great Books of the Western World* (Volume 35)  
*An Enquiry Concerning Human Understanding*  
Section IV, Part II (p. 462)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Huxley, Thomas Henry** 1825–95  
English biologist

The student of anatomy is perfectly well aware that there is not a single organ of the human body the structure of which does not vary, to a greater or less extent, in different individuals.

*Man's Place in Nature and Other Anthropological Essays*  
Chapter III (p. 185)  
D. Appleton & Company. New York, New York, USA. 1896

**Leibniz, Gottfried Wilhelm** 1646–1716  
German philosopher and mathematician

...there are never in nature two beings which are exactly alike...

*Philosophical Papers and Letters* (Volume 2)  
Monadology, 9 (p. 1044)  
The University of Chicago Press. Chicago, Illinois, USA. 1956

**Pallister, William Hales** 1877–1946  
Canadian physician

What shall we say of a plot of ground  
Planted in similar seed,  
Where thousands of similar plants are found  
But one is a new type indeed;  
When dissimilar comes from similar,  
And freedom has its hour,  
When the scion is not as ancestors are,  
What is this latent power?

*Poems of Science*  
De Ipsa Natura, Variation (p. 213)  
Playford Press. New York, New York, USA. 1931

**Peirce, Charles Sanders** 1839–1914  
American scientist, logician, and philosopher

The endless variety in the world has not been created by law. It is not the nature of uniformity to originate variation, nor of law to beget circumstance.

*Collected Papers* (Volume 6)  
Chapter 6, Section 2 (p. 373)  
Harvard University Press. Cambridge, Massachusetts, USA. 1960

**Tippett, L. C.**  
English statistician

Variation is, of course, an important characteristic of populations that individuals cannot have.... A thousand exactly similar steel bearing balls (if such were possible) would be no more than one ball multiplied one thousand times. It is the quality of variation that makes it difficult at first to carry in mind a population in its complexity.

*The World of Mathematics* (Volume 3)  
Sampling and Standard Error (p. 1480)  
Simon & Schuster. New York, New York, USA. 1956

**Waddington, Conrad Hal** 1905–75  
British biologist and paleontologist

To suppose that the evolution of the wonderfully adapted biological mechanisms has depended only on a selection out of a haphazard set of variations, each produced by blind chance, is like suggesting that if we went on throwing bricks together into heaps, we should eventually be able to choose ourselves the most desirable house.

*The Listener*, 13 February, 1952

**Wheeler, William Morton** 1865–1937  
American entomologist

Since no two events are identical, every atom, molecule, organism, personality, and society is an emergent and, at least to some extent, a novelty.

Emergent Evolution of the Social  
*Proceedings of the Sixth International Congress of Philosophers*, Cambridge, Massachusetts, USA, 1926.

**Ricklefs, R.**  
No biographical data available

Variation in the environment is a fact of life for all plants and animals, except perhaps for inhabitants of the abyssal depths of the sea.

*Ecology* (2nd edition) (p. 159)  
Chiron Press. New York, New York, USA

## VARIETIES

**Wallace, Alfred Russel** 1820–1913  
English humanist, naturalist, and geographer

One of the strongest arguments which have been adduced to prove the original and permanent distinctness of species is, that *varieties* produced in a state of domesticity are more or less unstable, and often have a tendency, if left to themselves, to return to the normal form of the

parent species; and this instability is considered to be a distinctive peculiarity of all varieties, even of those occurring among wild animals in a state of nature, and to constitute a provision for preserving unchanged the originally created distinct species.

*Contributions to the Theory of Natural Selection* (2nd edition)

Chapter II (p. 26)

McGraw-Hill Book Co., Inc. New York, New York, USA. 1871

...there is a tendency in nature to the continued progression of certain classes of varieties further and further from the original type – a progression to which there appears no reason to assign any definite limits ...

*Contributions to the Theory of Natural Selection* (2nd edition)

Chapter II (p. 43)

McGraw-Hill Book Co., Inc. New York, New York, USA. 1871

## VARIETY

**Cowper, William** 1731–1800

English poet

Variety's the very spice of life,  
That gives it all its flavor.

*The Poetical Works of William Cowper*

The Task, Book II (The Timepiece), l. 606

John W. Lovell Company. New York, New York, USA. No date

**Feyerabend, Paul K.** 1924–94

Austrian-born American philosopher of science

Unanimity of opinion may be fitting for a church, for the frightened or greedy victims of some (ancient, or modern) myth, or for the weak and willing followers of some tyrant. Variety of opinion is necessary for objective knowledge. And a method that encourages variety is also the only method that is comparable with a humanitarian outlook.

*Against Method: Outline of an Anarchistic Theory of Knowledge*

Chapter 3 (p. 46)

Verso. London, England. 1978

**Wren, Sir Christopher** 1632–1723

English designer, astronomer, and geometer

In things to be seen at once much variety makes confusion, another vice of beauty. In things that are not seen at once, and have no respect one to another, great variety is commendable, provided this variety transgress not the rules of *optics* and *geometry*.

*Lives of Eminent Persons*

Sir Christopher Wren (p. 30)

Baldwin & Cradock. London, England. 1833

Variety of uniformities makes complete beauty. Uniformities are best tempered, as rhymes in poetry, alternately, or sometimes with more variety, as in stanzas.

*Lives of Eminent Persons*

Sir Christopher Wren (p. 30)

Baldwin & Cradock. London, England. 1833

## VECTOR

**Gibbs, J. Willard** 1839–1903

American mathematician

If I wished to attract the student of any of these sciences to an algebra for vectors, I should tell him that the fundamental notions of this algebra were exactly those with which he was daily conversant.... In fact, I should tell him that the notions which we use in vector analysis are those which he who reads between the lines will meet on every page of the great masters of analysis, or of those who have probed deepest the secrets of nature...

*Nature*, Volume 47, Number 1220, March, 1893 (p. 464)

**Kelvin, Lord William Thomson** 1824–1907

Scottish engineer, mathematician, and physicist

Quaternions came from Hamilton...and have been an unmixed evil to those who have touched them in any way. Vector is a useless survival...and has never been of the slightest use to any creature.

In Jerrold E. Marsden and Anthony J. Tromba

*Vector Calculus*

Chapter 1 (p. 1)

W.H. Freeman & Company. New York, New York, USA. 2003

**Warren, Robert Penn** 1905–89

American writer and critic

What if angry vectors veer  
Round your sleeping head, and form.  
There's never need to fear  
Violence of the poor world's abstract storm.

*Poems*

Lullaby: Smile in Sleep

Louisiana State University Press. Baton Rouge, Louisiana, USA. 1998

## VECTOR ANALYSIS

**Gibbs, J. Willard** 1839–1903

American mathematician

If I wished to attract the student of any of these sciences to an algebra for vectors, I should tell him that the fundamental notions of this algebra were exactly those with which he was daily conversant.... In fact, I should tell him that the notions which we use in vector analysis are those which he who reads between the lines will meet on every page of the great masters of analysis, or of those who have probed the deepest secrets of nature.

Quaternions and the Algebra of Vectors

*Nature*, Volume 47, Number 1220, 16 March, 1893 (p. 464)

The numerical description of a vector requires three numbers, but nothing prevents us from using a single number for its symbolical designation. An algebra or analytical method in which a single letter or other expression is

used to specify a vector may be called a vector algebra or vector analysis.

*Elements of Vector Analysis Arranged for the Use of Students in Physics*, 1881

## VEGETABLE

### Hawks, Ellison

No biographical data available

Great as have been the victories of the human intelligence over the forces of the vegetable world, the problems solved seem only to point the way to further questions that yet await solution. As in all other sciences, the more we learn, the wider does the path open out, so that we see ever more before us.

*Pioneers of Plant Study*

Preface (p. v)

The Shelton Press. 1928

### Phillips, Henry 1779–1840

English banker

The vegetable world presents an almost infinite variety of objects, calculated not only to supply our numerous wants, but to gratify the senses, to delight the most refined taste, and to elevate the mind to the God of Nature.

*History of Cultivated Vegetables* (Volume 1) (2nd edition)

Introduction (p. 2)

Henry Colburn & Co. London, England. 1822

## VEGETABLE LIFE

### von Humboldt, Alexander 1769–1859

German naturalist and explorer

Without entering on the difficult question of spontaneous motion, or, in other words, on the difference between vegetable and animal life, we would remark that if Nature had endowed us with microscopic powers of vision, and the integuments of plants had been rendered perfectly transparent to our eyes, the vegetable world would present a very different aspect from the apparent immobility and repose in which it is now manifested to our senses. The interior portion of the cellular structure of their organs is incessantly animated by the most varied currents, ...rotating, ascending and descending, ramifying, and ever changing their direction. ... If to these manifold currents and gyratory movements we add the phenomena of endosmosis, nutrition, and growth, we shall have some idea of those forces which are ever active amid the apparent repose of vegetable life.

Translated by E.C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1) (p. 341)

D. Appleton & Co. New York, New York, USA. 1850

## VEGETARIAN

### Hutchison, Sir Robert Grieve 1871–1960

English radiologist

Don't scrape your insides with much roughage as it is more likely to do harm than good. Vegetarianism is harmless enough though it is apt to fill a man with wind and self-righteousness.

Address

British Medical Association, Winnipeg, Canada, 1930

## VEGETATION

### Carson, Rachel 1907–64

American marine biologist and author

The earth's vegetation is a part of the web of life in which there are intimate and essential relations between plants and the earth, between plants and other plants, between plants and animals, and we must learn to respect that fine and fragile web if there is to be anything left for the next generation.

*Silent Spring*

Chapter 6 (p. 64)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1961

### White, Gilbert 1720–93

English naturalist and cleric

Vegetation is highly worthy of our attention; and in itself is of the utmost consequence to mankind, and productive of many of the greatest comforts and elegancies of life.

*The Natural History of Selborne*

Letter XL (p. 192)

Robert M. McBride & Company. New York, New York, USA. 1925

## VENOM

### Bunyan, John 1628–88

English Christian writer and preacher

SPIDER: My venom's good for something, since God made it.

*The Complete works of John Bunyan*

The Sinner and the Spider

Bradley, Garretson & Co. Philadelphia, Pennsylvania, USA. 1872

### Roberts, Charles, D.

The stinging fire of it [ant stings] ran like lightning all over her arms and body. With a piercing scream she sprang away from the tree and began tearing and beating frantically at her body with both hands. She was covered with furious ants – the great, red, stinging ants whose venom is like drops of liquid flame.

On the Face of the Waters

*Cosmopolitan*, Volume LIX, Number 5, October, 1915 (p. 648)

## VERMIN OF THE SKIES

**Moulton, Forest Ray** 1872–1952  
American astronomer

I have heard the great geologist Suess, a man of the widest interests and richest imagination, describe a certain astronomer as “one of those who busy themselves with those vermin of the skies – minor planets and comets.”

The Progress of mathematical Astronomy  
*Popular Astronomy*, Volume 24, Number 9, November, 1916 (p. 555)

## VERNAL EQUINOX

**Cuppy, Will** 1884–1929  
American humorist and critic

Among things you might be thinking about today is the vernal equinox – it’s March 21, you know. The vernal equinox is the point at which the sun apparently crosses the celestial equator toward the north, or you can say it is the moment at which this occurs, or you can simply say: “Hooray! Spring is here!” Exactly why the sun does this on March 21 is a long story.

*How to Get from January to December*  
March 21 (p. 61)  
Holt. New York, New York, USA. 1951

## VERNIER

**Langley, Samuel Pierpoint** 1834–1906  
American astronomer and aviation pioneer

That little Vernier, on whose slender lines  
The midnight taper trembles as it shines,  
Tells through the mist where dazzled Mercury burns,  
And marks the point where Uranus returns.

*The New Astronomy*  
Chapter I (p. 3)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1889

## VERTEBRATE

**Lamarck, Jean-Baptiste Pierre Antoine** 1744–1829  
French biologist

...if the vertebrates differ markedly from one another in their organisation, it is because nature only started to carry out her plan in their respect with the fishes; that she made further advances with the reptiles; that she carried it still nearer perfection with the birds, and that finally she only attained the end with the most perfect mammals.

Translated by Hugh Elliot  
*Zoological Philosophy: An Exposition with Regard to the Natural History of Animals*  
Chapter VI (p. 81)  
The University of Chicago Press. Chicago, Illinois, USA. 1984

## VIBRATE

**Rowland, Henry Augustus** 1848–1901  
American physicist

Something vibrates.

*The Physical Papers of Henry Augustus Rowland*  
The Roentgen Ray, and its Relation to Physics (p. 586)  
The Johns Hopkins Press. Baltimore, Maryland, USA. 1902

## VIBRATION

**Tuttle, Hudson** 1836–1910  
American spiritualist

There is no breath of air so gentle, no wave breaking on the sands, but the vibrations of these movements run through all space.

In Ludwig Buchner  
*Force and Matter*  
Chapter III (p. 16)  
Trubner & Company. London, England. 1864

## VIEW

**Dewey, John** 1859–1952  
American philosopher and educator

It is not truly realistic or scientific to take short views, to sacrifice the future to immediate pressure, to ignore facts and forces that are disagreeable and to magnify the enduring quality of whatever falls in with immediate desire. It is false that the evils of the situation arise from absence of ideals; they spring from wrong ideals.

*Reconstruction in Philosophy*  
Chapter V (p. 130)  
Beacon Press. Boston, Massachusetts, USA. 1920

## VIEWPOINT

**Hobbs, William Herbert** 1864–1952  
American geologist

Experience has shown that whenever a new and more advanced viewpoint has been gained to take the place of an earlier one, and its superiority has come to be acknowledged, the tendency has always been to sketch in from that one standpoint even the more distant objects, rather than to move forward to new and independent positions.

*Characteristics of Existing Glaciers*  
Introduction (p. 1)  
The Macmillan Co. New York, New York, USA. 1911

## VIEWS

**Keyser, Cassius Jackson** 1862–1947  
American mathematician

Nothing is quite so practical, in the sense of being effectual and influential, as the views men hold, consciously or unconsciously, regarding the great locus of their lives and their cosmic home.

*The Human Worth of Rigorous Thinking: Essays and Addresses*  
The Walls of the World (p. 83)  
Columbia University Press. New York, New York, USA. 1916

## VIRTUAL PARTICLES

### Gilmore, Robert

No biographical data available

‘What *is* forbidden had better be done pretty quickly.’

This is the rule followed by the virtual particles.

*Alice in Quantum Land*

Chapter 6 (p. 95)

Springer-Verlag. New York, New York, USA. 1955

## VIRUS

### Author undetermined

A virus is a Latin word translated by doctors to mean ‘Your guess is as good as mine.’

Source undetermined

### Cudmore, Lorraine Lee

American cell biologist

All living things need their instruction manual (even non-living things like viruses) and that is all they need, carried in one very small suitcase.

*The Center of Life: A Natural History of the Cell*

The Universal Cell (p. 8)

New York Times Book Company. New York, New York, USA. 1977

### Newman, Michael

No biographical data available

Observe this virus: think how small

Its arsenal, and yet how loud its call;

It took my cell, now takes your cell,

And when it leaves will take our genes as well.

*The Sciences*

Cloned Poem, 1982

### Thomas, Lewis 1913–93

American physician and biologist

We live in a dancing matrix of viruses; they dart, rather like bees, from organism to organism, from plant to insect to mammal to me and back again, and into the sea, tugging along pieces of this genome, strings of genes from that, transplanting grafts of DNA, passing around heredity as though at a great party. They may be a mechanism for keeping new, mutant kinds of DNA in the widest circulation among us. If this is true, the odd virus disease on which we must focus so much of our attention in medicine, may be looked on as an accident, something dropped.

*The Lives of a Cell: Notes of a Biology Watcher*

The Lives of a Cell (p. 5)

The Viking Press. New York, New York, USA. 1974

## VISION

### von Goethe, Johann Wolfgang 1749–1832

German poet, novelist, playwright, and natural philosopher

*Microscopes and telescopes*, properly considered, put our human eyes out of their natural, healthy, and profitable point of view.

In John Stuart Blackie

*The Wisdom of Goethe*

Philosophy, Metaphysics, Logic, Truth and Science (p. 161)

William Blackwood & Sons. Edinburgh, Scotland. 1883

## VITALITY

### Bergson, Henri 1859–1941

French philosopher

A very small element of a curve is very near being a straight line. And the smaller it is, the nearer. In the limit, it may be termed a part of the curve or a part of the straight line, as you please, for in each of its points a curve coincides with its tangent. So likewise “vitality” is tangent, at any and every point, to physical and chemical forces; but such points are, as a fact, only views taken by a mind which imagines stops at various moments of the movement that generates the curve. In reality, life is no more made of physico-chemical elements than a curve is composed of straight lines.

Translated by Arthur Mitchell

*Creative evolution*

Chapter I (p. 31)

Henry Holt & Co. New York, New York, USA. 1913

### Burroughs, John 1837–1921

American naturalist and writer

Biological science has hunted the secret of vitality like a detective, and it has done some famous work; but it has not yet unraveled the mystery.

*The Breath of Life*

Chapter IV (p. 76)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1915

## VITAMIN

### Drummond, Jack Cecil 1891–1952

English biochemist

The suggestion is now advanced that the final “-e” [of Funk’s “vitamine”] be dropped, so that the resulting word Vitamin is acceptable under the standard scheme of nomenclature adopted by the Chemical Society.... It is recommended that the somewhat cumbersome nomenclature introduced by McCollum (Fat-soluble A, Water-soluble B),

be dropped, and that the substances be spoken of as Vitamin A, B, C, etc.

The Nomenclature of the So-Called Accessory Food Factors (Vitamins)  
*Biochemical Journal*, Volume 14, 1920

## VIVISECTION

**Shaw, George Bernard** 1856–1950

Irish playwright

If the medical profession were to outdo the Anti-Vivisection Societies in a general professional protest against the practice and principles of the vivisectors, every doctor in the kingdom would gain substantially by the immense relief and reconciliation which would follow such a re-assurance of the humanity of the doctor.

*The Doctor's Dilemma*

Preface (p. 36)

Penguin Books. Baltimore, Maryland, USA. 1954

## VOCABULARY

**Bell, E. T. (Eric Temple)** 1883–1960

Scottish-American mathematician and educator

To interrupt one's own researches in order to follow those of another is a scientific pleasure which most experts delegate to their assistants. Consequently, the confusion of tongues increases as the square of the number of talkers, until only ever more select coteries of narrow specialists really understand the refinements of their esoteric vocabularies.

*The Development of Mathematics* (p. 510)

## VOID

**Blake, William** 1757–1827

English poet, painter, and engraver

For the Chaotic Voids outside of the Stars are measured by The Stars...

*The Complete Poetry and Prose of William Blake*

Milton

Book the Second

University of California Press. Berkeley, California, USA. 1982

**Pagels, Heinz R.** 1939–88

American physicist and science writer

The nothingness “before” the creation of the universe is the most complete void that we can imagine – no space, time, or matter existed. It is a world without place, without duration or eternity, without number – it is what mathematicians call “the empty set.” Yet this unthinkable void converts itself into the plenum of existence – a necessary consequence of physical laws. Where are these laws written into that void? What “tells” the void that is pregnant with a possible universe? It would seem that

even the void is subject to law, a logic that exists prior to space and time.

*Perfect Symmetry: The Search for the Beginning of Time*

Part Three, Chapter 5 (p. 347)

Simon & Schuster. New York, New York, USA. 1985

**Thomson, James** 1700–48

Scottish poet

With what an awful, world-revolving power,  
Were first the unwieldy planets launched along  
The illimitable void! There  
to remain

Amidst the flux of many  
thousand years,

That oft has swept the toiling race of men,  
And all their labored monuments, away.

In Eli Maor

*To Infinity and Beyond: A Cultural History of the Infinite* (p. 206)

Birkhäuser. Boston, Massachusetts, USA. 1987

## VOLATILITY

**Bowen, Norman L.** 1887–1956

Canadian geologist

To many petrologists a volatile component is exactly like a Maxwell demon; it does just what one may wish it to do.

*The Evolution of the Igneous Rocks*

Chapter XVI (p. 282)

Dover Publication, Inc., New York, New York, USA. 1956

## VOLCANO

**Anderson, Tempest** 1846–1913

British ophthalmic surgeon

Very few branches of science still remain available for the amateur of limited leisure. Electricity, Chemistry, Bacteriology, most branches of Geology and Mineralogy, have all led to results of highest economic value, and they are cultivated by a large body of professional men subsidized by Colleges or by the Government. They are in a position to give their whole time to their work, and their results are so voluminous that to keep abreast of the literature of any single branch would occupy more than the entire leisure of most men, yet this is a necessary preliminary to any attempt at original work. I was consequently led to seek some branch of Science which gave no prospect of pecuniary return, and I determined on Volcanology, which had the additional advantage of offering exercise in the open air, and in districts often remote and picturesque.

*Volcanic Studies in Many Lands*

Preface (p. ix)

John Murray. London, England. 1917

**Anidoho, Kofi** 1947–

Ghanaian poet

Our Earth survives recurring furies  
of her stomach pains and quakes  
From the bleeding anger of her wounds  
volcanic ash becomes the hope  
that gives rebirth to abundance of seedtimes.

*Earthchild, with Brain Surgery: Poems*

The Homing Call of Earth

Woeli Publishing Services. 1985

**Author undetermined**

Just as the dairy-maid believes the moon to be a great cheese, so the astronomer fancies our globe a condensed nebula; the chemist, an oxydized ball of aluminium and potassium; the mineralogist, a prodigious crystal – “one entire chrysolite”; and the zoologist, an enormous animal – a thing of life and heat, with volcanoes for nostrils, lava for blood, and earthquakes for pulsations.

Principles of Geology: Being an Inquiry How Far the Former Changes of the Earth's Surface Are Preferable to Causes Now in Operation

*London Quarterly Reviews*, Volume LIII, April, 1835 (p. 217)

Among the many wonderful works of God, none exhibits so much of awful grandeur as an active volcano.

*Wonders of Creation: A Descriptive Account of Volcanoes and Their Phenomena*

Preface

T. Nelson. London, England. 1890

For the clouds that overhang an active volcano during an eruption of its vapours are, in reality, thunderclouds highly charged with electricity. They accordingly produce what Baron Humboldt calls the volcanic storm. It includes all the most terrible of atmospheric phenomena – lightnings of extraordinary vividness; thunders that peal and reverberate as if they would rend the echoes asunder; torrents of rain that pour down upon the mountain and its neighborhood, hissing like thousands of serpents when they fall on the glowing lava-torrent; and whirlwinds that sweep the volcanic ashes round and round in vast eddies, and before whose violence no man of mortal mould is able for a moment to stand.

*Wonders of Creation: A Descriptive Account of Volcanoes and Their Phenomena*

Chapter I

T. Nelson. London, England. 1890

A volcano is a mountain that is busted and squirts out stuff.

In C. Judson Herrick

*The Evolution of Human Nature*

Chapter Five (p. 57)

University of Texas Press. Austin, Texas, USA. 1956

Since the small hours of this morning lava from Vesuvius has been slowly eating its way through this village. It is a slow, deliberate process. In the darkness of the night the

flames, the incandescent glow from the rolling masses of lava, and above all the great lambent red tongue on the mountain side overhanging all, make it indescribably awesome.... We were watching the lava preparing to swallow a house which still bore somewhat unnecessarily in the circumstances the Fascist slogan ‘*Viva pericolosamente*’ (Live dangerously). Presently the house collapsed. As the dust-cloud subsided a mongrel collie suddenly emerged from the masses of plaster. It shook itself and dashed to safety. It had lived up to Mussolini's injunction.

In the Track of the Lava: Stricken Villages on Vesuvius'

*The Times*, March, 21, 1944 (p. 3)

The ocean conveys an idea of power; but not in the same sense or degree with which the volcano, which hurls great masses of rock, amidst fire and smoke, to the utmost range of human vision, and makes the solid earth tremble over the area of an entire province with its deep reverberations. Imagination must be wanting in the people to whom such a spectacle does not appeal with singular force, and on whose minds it does not leave a profound impression.

The Volcanoes of Central America

*Harper's New Monthly Magazine*, Volume 19, Number 114 (p. 739)

Two agencies of the most opposite character have apparently been, at all times, acting on the crust of the earth to change its form, or add to the surface of the dry land – the volcano and the insect! – the one the most sudden and violent imaginable, producing in a short time the most astonishing effects; the other gradual, silent, and imperceptible, yet leaving the most stupendous monuments of its activity. The volcano has thrown up a mountain in a single night; there is an instance, too, on record, where a mountain has quite as suddenly disappeared, destroying itself in its own violent combustion, and breaking up with repeated and terrific explosions. On the other hand, besides what has been long known of the works of the coral insect, the microscope has revealed to us that huge cliffs have been constructed of the minute fossil shells of animalculae.

Physical Geography

*Blackwood's Edinburgh Magazine*, Volume 66, Number 408, October, 1849 (pp. 465–466)**Bonney, Thomas George** 1833–1923

English geologist

Were it not that Nature sometimes supplies new material, there would be little excuse for another book on Volcanoes.

*Volcanoes: Their Structure and Significance*

Preface (p. v)

John Murray. London, England. 1899

**Bradley, Jr., John Hodgdon** 1898–1962

American geologist

Volcanoes are personalities that resist classification.

*Autobiography of Earth*

Chapter VII (p. 211)

Coward-McCann, Inc. New York, New York, USA. 1935

**Burnet, Thomas** 1635–1715

English cleric and scientist

There is nothing certainly more terrible in all Nature than Fiery Mountains, to those that live within the view or noise of them; but it is not easier for us, who never see them nor heard them, to represent to ourselves with such just and lively imaginations as shall excite us in the same passions, and the same horror as they would excite, if present to our senses.

*The Sacred Theory of the Earth* (2nd edition)

Book III, Chapter VII (p. 272)

Printed by R. Norton. London. 1691

**Cassius Dio** 150–235

Roman senator and historian

Thus day was turned into night and light into darkness. Some thought that the Giants were rising again in revolt (for at this time also many of their forms could be discerned in the smoke and, moreover, a sound as of trumpets was heard), while others believed that the whole universe was being resolved into chaos or fire.

*Dio's Roman History*

Epitome of Book LXXVI (p. 211)

Heinemann. London, England. 1914–27

**Cloos, Hans** 1885–1951

German geologist

Giant smoking volcanoes stand in a row like the pipes of a cosmic organ through which the mighty breath of the earth blows its roaring music.

*Conversation with the Earth*

Prologue (p. 5)

Routledge & Kegan Paul. London, England. 1954

**Conway, Sir William Martin** 1856–1937

English art critic, politician, and mountaineer

...with what a bold brush volcanoes can stain a whole landscape...

*Mountain Memories: A Pilgrimage of Romance*

Chapter XVI (p. 168)

Cassell & Co. London, England. 1920

**de Saint-Exupéry, Antoine** 1900–44

French aviator and writer

This day, as I fly, the lava world is calm. There is something surprising in the tranquility of this deserted landscape where once a thousand volcanoes boomed to each other in their great subterranean organs and spat forth their fire. I fly over a world mute and abandoned, strewn with black glaciers.

*Wind, Sand and Stars*

Chapter 5, Section I (pp. 99–100)

Reynal & Hitchcock. New York, New York, USA. 1939

He carefully cleaned out his active volcanoes. He possessed two active volcanoes; and they were very convenient for heating his breakfast in the morning. He also had one volcano that was extinct. But, as he said, "One never knows!" So he cleaned out the extinct volcano, too. If they are well cleaned out, volcanoes burn slowly and steadily, without any eruptions. Volcanic eruptions are like fires in a chimney.

Translated by Katherine Woods

*The Little Prince*

Chapter IX (p. 32)

Harcourt, Brace & Company. New York, New York, USA. 1943

**Decker, Robert** 1927–2005

American volcanologist

**Decker, Barbara**

American science writer

Volcanoes assail the senses. They are beautiful in repose and awesome in eruption; they hiss and roar, they smell of brimstone. Their heat warms, their fires consume; they are the homes of gods and goddesses.

Volcanoes are described in words and pictures, but they must be experienced to be known. Their roots reach deep inside the Earth; their products are scattered in the sky. Understanding volcanoes is an unconquered challenge.

*Volcanoes* (3rd edition)

Preface (p. vii)

W.H. Freeman & Company. San Francisco, California, USA. 1981

Volcanoes are nature's forges and stills where the elements of the Earth, both rare and common, are moved and sorted.

*Volcanoes* (3rd edition)

Chapter 13 (p. 168)

W.H. Freeman & Company. San Francisco, California, USA. 1981

**Francis, Peter** 1944–99

English volcanologist

If mountains can have personalities, then volcanoes are schizophrenic – they have split personalities. For most of their life, they are dormant, and one tends to think of them as graceful unsweeping cones, delicately capped with snow, dreaming serenely over the cherry-blossom-draped landscapes of calendars and travel posters. Sometimes, perhaps not very often during their lifetimes, volcanoes erupt and present a wholly different character. Convolute eruption clouds tower above them, raining hot ashes on the helpless humans who live on their flanks, and glowing tongues of liquid rock ooze inexorably downwards, engulfing the flimsy structures which stand in their way.

*Volcanoes: A Planetary Perspective*

Chapter 1 (p. 13)

Penguin Books Ltd. Middlesex, England. 1976

**Guterson, David** 1956–

American writer

"Everything up here is crumbling," he said. "Erosion city or something."

Basalt lava,” Christine said.  
 “Old volcanoes.”  
 “Very old volcanoes.”  
 “Like fifty million years.”  
 “Even older.”

*East of the Mountains*

Chapter Two (pp. 37–38)

Harcourt Brace & Company. New York, New York, USA. 1999

**Herschel, Sir John Frederick William** 1792–1871  
 English astronomer and chemist

Everyone knows that a volcano is a mountain that vomits out fire, and smoke, and cinders, and melted lava, and sulphur, and steam, and gases, and all kinds of horrible things ...

*Familiar Lectures on Scientific Subjects*

Lecture I (p. 1)

George Routledge & Sons. New York, New York, USA. 1871

**Hunt, Leigh** 1784–1859  
 English author, poet, and editor

Did Aetna [a volcano] exist before the human race? Was it, for ages, a great lonely earth monster, sitting by the sea with its rugged woody shoulders and ghastly crown; now silent and quiet for centuries, like a basking giant – now roaring to the antediluvian solitudes, vomiting forth fire and smoke, driveling with lava, then silent again as before – alternately destroying and nourishing the transitory races of analogous gigantic creatures, mammoths, and mastodons, which preceded nobler humanity?

*A Jar of Honey From Mount Hybla* (p. 36)

Smith, Elder & Co. London, England. 1897

**Hutton, James** 1726–97  
 Scottish geologist, chemist, and naturalist

Volcanoes are natural to the globe, as general operations; but we are not to consider nature as having a burning mountain for an end in her intention, or as a principal purpose in the general system of this world.

*Theory of the Earth: With Proofs and Illustrations* (Volume 1)

Chapter I, Section III (p. 145)

H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

A volcano is not made on purpose to frighten superstitious people into fits of piety and devotion, nor to overwhelm devoted cities with destruction; a volcano should be considered as a spiracle to the subterranean furnace, in order to prevent the unnecessary elevation of land, and fatal effects of earthquakes; and we may rest assured, that they, in general, wisely answer the end of their intention, without being in themselves an end, for which nature had exerted such amazing power and excellent contrivance.

*Theory of the Earth: With Proofs and Illustrations* (Volume 1)

Chapter I, Section III (p. 146)

H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

**Judd, John Wesley** 1840–1916  
 British geologist

[Volcanoes] are just...holes in the earth’s crust...by means of which a communication is kept up between the surface and the interior of our globe.

*Volcanoes: What They Are And What They Teach*

Chapter I (p. 2)

D. Appleton & Co. New York, New York, USA. 1881

**Kircher, Athanasius** 1601?–80  
 German Jesuit scholar

That there are Subterraneous Conservatories, and Treasuries of Fire (even as well, as there are of Water, and Air, &c.) and vast Abysses, and bottomless Gulphs in the Bowels and very Entrals of the Earth, stored therewith, no sober Philosopher can deny; If he do but consider the prodigious Vulcano’s, or fire-belching Mountains; the eruptions of sulphurous fires not only out of the Earth, but also out of the very Sea; the multitude and variety of hot Baths everywhere occurring. And that they have their source and birth-place, not in the Air, not in the Water; nay, nor as the Vulgar perswade themselves, not at the bottom of the Mountains; but in the very in-most privy-Chambers, and retiring places of the Earth, is as reasonable to think; And there Vulcan, as it were, to have his Elaboratories, Shops, and Forges in the profoundest Bowels of Nature.

*The Vulcano’s, or, Burning and Fire-vomiting Mountains, Famous in the World* (p. 1)

John Allen. London, England. 1669

**Krafft, Katia** 1942–91  
 French volcanologist and photographer

I would always like to be near craters, drunk with fire, gas, my face burned by the heat. ... It’s not that I flirt with my death, but at this point I don’t care about it, because there is the pleasure of approaching the beast and not knowing if he is going to catch you.

In Stanley Williams and Fen Montaigne

*Surviving Galeras*

Chapter 6 (p. 101)

Houghton Mifflin Company. Boston, Massachusetts, USA. 2001

**Lowry, Malcolm** 1909–57  
 English novelist

...it was in eruption, yet no, it wasn’t the volcano, the world itself was bursting, bursting into black spouts of villages catapulted into space with himself falling through it all, through the blazing of ten million bodies, falling...

*Under the Volcano*

Chapter XII (p. 375)

Penguin Books, USA. New York, New York, USA. 1971

**McBirney, Alexander R.** 1924–  
 American geologist and founder of Center for Volcanology

The progress that volcanology has made since ancient scholars explained the lavas of Vesuvius and Etna as products of combustion and subterranean storms is more

apparent than real. The sad fact is that we desperately need a coherent and demonstrable theory on volcanism. Why do volcanoes erupt? The only honest answer is that we do not have the vaguest idea.

In Katia Krafft

*Volcanoes: Earths Awakening* (p. 4)

Hamond World Atlas Corporation. 1916

**Michener, James A.** 1907?–97

American novelist

For nearly forty million years the first island struggled in the bosom of the sea, endeavoring to be born as observable land. For nearly forty million submerged years its subterranean volcano hissed and...spewed forth rock, but it remained nevertheless hidden beneath the dark waters of the restless sea...a small climbing pretentious thing of no consequence.

*Hawaii*

Chapter I (p. 5)

Random House, Inc. New York, New York, USA. 1959

**Miller, Hugh** 1802–56

Scottish geologist and theologian

The billows fall back in boiling eddies; the solid strata are upheaved into a flat dome, crusted with corals and shells; it cracks, it severs, a dark gulf yawns suddenly in the midst; a dense strongly variegated cloud of mingled smoke and steam arises black as midnight in its central volumes, but chequered, where the boiling waves hiss at its edge, with wreaths of white....

*Sketch-Book of Popular Geology*

Lecture Third (p. 109)

William P. Nimmo & Company. Edinburgh, Scotland. 1880

And over the roar of waves or the rush of tides we may hear the growling of a subterranean thunder, that now dies away in low deep mutterings, and no, ere some fresh earthquake-shock tern – pests the sea, bellows wildly from the abyss.

*Sketch-Book of Popular Geology*

Lecture Third (p. 109)

William P. Nimmo & Company. Edinburgh, Scotland. 1880

**Morton, Ron L.**

Chapter III (p. 56)

Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

**Noonan, Dominic A.**

No biographical data available

Now volcanoes are like women, lad, There are no two the same; Though underneath each crest and breast, There burns the self-same flame.

*Alaska: The Land of Now* (p. 105)

Publisher undetermined

Seattle, Washington, USA. 1921

**Ovid** 43 BCE–17 AD

Roman poet

Near Troezen, ruled by Pittheus, there is a hill, high and treeless, which once was a perfectly level plane, but now a hill; for (horrible to relate) the wild forces of the winds, shut up in dark regions underground, seeking an outlet for their flowing and striving vainly to obtain a freer space, since there was no chink in all their prison through which their breath could go, puffed out and stretched the ground, just as when one inflates a bladder with his breath, or the skin of a horned goat. That swelling in the ground remained, has still the appearance of a high hill, and has hardened as the years went by.

Translated by Frank Justus Miller

*Metamorphoses* (Volume 2)

Chapter XV (pp. 385–387)

William Heinemann. London, England. 1916

**Peattie, Roderick** 1891–1955

Geographer and romanticist

Fuji is benign. Its serenity gives it a place in Japanese philosophy. It is sacred and it is the most common motive of Japanese art. Etna, if one is a dualist, is a devil rather than a divinity. It is a force for evil whose boiling arms of lava reach out fiendishly toward the villages.

*Mountain Geography*

Introduction (p. 4)

Harvard University Press. Cambridge, Massachusetts, USA. 1936

**Perry, Lilla Cabot** 1848–1933

American poet

Forgive me not! Hate me and I shall know  
Some of love's fire still burns in your breast!  
Forgiveness finds its home in hearts at rest,  
On dead volcanoes only lies the snow.

*Ode to Volcanoes and the Living Earth*

**Scrope, George Poulett** 1797–1876

English geologist and political economist

The action of a Volcano, in its simplest and most general form, may be described as, the rise of earthy substances in a liquefied state and at a high temperature (Lava,) from beneath the outer crust of the earth; accompanied by

prodigious volumes of elastic fluids, which, appearing to be evolved from the interior of the mass, burst upwards with violent successive detonations, scattering into the air, to a considerable height, numerous fragments, still in a liquid state, of the lava, through which they tear their way, together with shattered blocks of the solid pre-existing rocks, which obstructed their expansion.

*Considerations on Volcanos*

Chapter I, Section 1 (pp. 1–2)

Printed by W. Phillips. London, England. 1825

### **Shelley, Percy Bysshe** 1792–1822

English poet

Nature's most secret steps

He like her shadow has pursued, where'er

The red volcano overcanopies

Its fields of snow and pinnacles of ice

With burning smoke.

*The Complete Poetical Works of Percy Bysshe Shelley*

Alastor

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

### **Shindler, Tom**

Musician

Those lovely white snow peaks, those rulers of mountains,

Who knows what secrets they keep?

But when they look like forever, just stop and remember

The Giants are only asleep.

*The Giants Are Only Asleep*

Source undetermined

### **Sontag, Susan** 1933–2004

American critic and writer

It's the mouth of a volcano. Yes, mouth; and lava tongue. A body, a monstrous living body, both male and female. It emits, ejects. It is also an interior, an abyss. Something alive, that can die. Something inert that becomes agitated, now and then. Existing only intermittently. A constant menace. If predictable, usually not predicted. Capricious, untamable, malodorous. Is that what's meant by the primitive? Nevado del Ruiz, Mount Saint Helens, La Soufrière. Mount Pelée, Krakatoa, Tambora. The slumbering giant that wakes. The lumbering giant who turns his attentions to you. King Kong. Vomiting destruction, and then sinking back to somnolence.

*The Volcano Lover: A Romance* (pp. 5–6)

Jonathan Cape Co. London, England. 1992

### **Tazieff, Haroun** 1914–98

Polish-born French volcanologist

In all ages volcanoes have frightened, fascinated and attracted man, because what they hold is at once terrifying, splendid, and mysterious.

*Craters of Fire*

St. Martin's Press. New York, New York, USA. 2000

### **Twain, Mark (Samuel Langhorne**

**Clemens)** 1835–1910

American author and humorist

Here was a yawning pit upon whose floor the armies of Russia could camp, and have room to spare...over a mile square of it was ringed and streaked and striped with a thousand branching streams of liquid and gorgeously brilliant fire! Occasionally the molten lava flowing under the superincumbent crust broke through – split a dazzling streak, from five hundred to a thousand feet long, like a sudden flash of lightning, and then acre after acre of the cold lava parted into fragments, turned up edgewise like cakes of ice when a great river breaks up, plunged downwards, and were swallowed in the crimson cauldron.

*Roughing It* (Volume 2)

Chapter XXXIII (pp. 296, 298, 299)

Harper & Brothers Publishers. New York, New York, USA. 1899

### **Verne, Jules** 1828–1905

French novelist

Above our heads, not more than 500 feet away, was the crater of the volcano. Every quarter of an hour there came flying from it a tall column of flames mixed with pumice-stone, ashes, and lava, together with a deafening explosion. I felt the whole mountain heave every time it breathed, sending out, like a whale, fire and air through its enormous blowholes. Below, on a steep slope, layers of eruptive material could be seen extending 700 or 800 feet down, meaning that the volcano couldn't be more than 2,000 feet high. Its base was

hidden by a real basket of green trees, amongst which I distinguished olive and fig trees, plus vines laden with purple grapes.

It didn't look much like the Arctic, I had to admit.

Translated by William Butcher

*Journey to the Centre of the Earth* (p. 210)

Oxford University Press. Oxford, England. 1992

**Virgil** 70 BCE–19 BCE

Roman epic, didactic, and idyllic poet

There is an isle hard by Sicania's coast.  
That rises, and Aeolian Lipare,  
With smoking rocks precipitous, where beneath  
Thunders a cave, and Aetna's vaults, scooped out  
By Cyclopean forges; the strong strokes  
Of anvils to the ear bring echoing groans;  
Hisses the steel ore through its hollow depths,  
And from its furnaces pants fire – the home  
of Vulcan, and Vulcania the land's name.

 Introduction – Water, the Unique Chemical (p. 18)  
 Plenum Press. New York, New York, USA. 1972–82

**Herbert, Sir Alan** 1890–1971  
 English novelist, playwright, poet, and politician

The rain is plenteous but, by God's decree,  
 Only a third is meant for you and me;  
 Two-thirds are taken by the growing things  
 Or vanish Heavenward on vapour's wings:  
 Nor does it mathematically fall  
 With social equity on one and all.  
 The population's habit is to grow  
 In every region where the water's low:  
 Nature is blamed for failings that are Man's,  
 And well-run rivers have to change their plans.  
*Water*  
 Source undetermined

**Hugo, Victor** 1802–85  
 French author, lyric poet, and dramatist

The water is supple because it is incompressible. It glides away from under the effort. Borne down on one side, it escapes on the other. It is thus that the water becomes a wave. The wave is its liberty.  
 Translated by Isabel F. Hapgood  
*The Toilers of the Sea*  
 Part II, Book Third, Chapter II (p. 402)  
 The Heritage Press. New York, New York, USA. 1961

**Hutton, W.**  
 No biographical data available

With water our choicest bread is mixed, and life makes part of the composition of our favourite beverage. By water the beasts of the field, and the fowls of the air, quench their thirst; and by means of it the lofty cedar of Lebanon derives its nutriment, as well as the tender herb that creepeth against the wall ...

Chapter XIV (p. 321)

Harper & Brothers. New York, New York, USA. 1855

**van Helmont, Jean-Baptista** 1579–1644

Flemish chemist

That all plants immediately and substantially stem from the element water alone I have learnt from the following experiment. I took an earthen vessel in which I placed two

hundred pounds of earth dried in an oven, and watered with rain water. I planted in it the stem of a willow tree weighing five pounds. Five years later it had developed a tree weighing one hundred and sixty-nine pounds and three ounces. Nothing but rain (or distilled water) had been added. The large vessel was placed in earth and covered by an iron lid with a tin-surface that was pierced with many holes. I have not weighed the leaves that came off in the four autumn seasons. Finally I dried the earth in the vessel again and found the same two hundred pounds of it diminished by about two ounces. Hence one hundred and sixty-four pounds of wood, bark and roots had come up from water alone.

In William H. Brock

Grass, Brush, Timber, and Fire in Southern Arizona (p. 122)

The University of Wisconsin Press

Madison, Wisconsin, USA. 1991

## WAVE

**Burroughs, John** 1837–1921

American naturalist and essayist

On the beach [at Ocean Grove] the waves at times come wallowing ashore like a great flock of sheep; they break

far out, and then comes that rushing line of tossing, leaping, woolly heads and shoulders; they are not steeds, but a wild mob of woolly-headed sheep.

*The Heart of Burroughs's Journals*

Oct. 3, 1885 (p. 125)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1928

The wave blossoms when it breaks.

*The Heart of Burroughs's Journals*

November 23, 1920 (p. 328)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1928

### Crew, Henry

American physicist

To the mathematician the problems of wave-motion offer a field for his highest power of analysis; to the physicist they suggest experiments demanding all the skill at his disposal; to the engineer and to those who go down to the sea in ships these problems are matters of life and death, while to the poet and the artist they are "the sea dancing to its own music."

In Lloyd William Taylor

*Physics: The Pioneer Science* (Volume 1)

Chapter 24 (p. 327)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1941

### Emerson, Ralph Waldo 1803–82

American lecturer, poet, and essayist

Thou canst not wave thy staff in air,  
Or dip thy paddle in the lake,  
But it carves the bow of beauty there,  
And the ripples in rhymes the oar forsake.

*Poems* (Volume 9)

Woodnotes, II (p. 53)

Houghton Mifflin Co. Boston, Massachusetts, USA.

### Feynman, Richard P. 1918–88

American theoretical physicist

There are the rushing waves...mountains of molecules  
each stupidly minding its own business...trillions apart...  
yet forming white surf in unison.

In Jeffrey Robbins (ed.)

*The Pleasure of Finding Things Out*

The Value of Science (p. 144)

Perseus Books. Cambridge, Massachusetts, USA. 1999

### Maury, Matthew Fontaine 1806–73

American astronomer, astrophysicist, historian, and oceanographer

The billows there lift themselves up in long ridges with deep hollows between them. They run high and fast, tossing their white caps aloft in the air, looking like the green hills of a rolling prairie capped with snow, and chasing each other in sport. Still their march is stately and their roll majestic.

*The Physical Geography of the Sea: and its Meteorology*

The Winds, 845 (p. 292)

Sampson Low, Son & Co. London, England. 1857

### Morton, Ron L.

No biographical data available

A wave wants nothing more from life than to roll on, free and easy, across the ocean blue. When land gets in its way, there is only one thing for a good wave to do – give up the carefree life and go to work. Work for a wave means to move, crumble, erode, smash, gouge, submerge, and maim the land.

*Music of the Earth: Volcanoes, Earthquakes, and Other Geological Wonders*

Chapter 8 (pp. 210–211)

Plenum Press. New York, New York, USA. 1996

### Thomson, Sir George Paget 1892–1975

British physicist

The wind catches the filaments and the spider is carried where the filaments take it. In much the same way the point which represents the energy of the electron is guided by the waves which surround it, and extend possibly to an indefinite distance in all directions. If the waves pass over an obstacle like an atom their direction is modified and the modification is transmitted back to the electron and enables it to guide its path in accordance with the distribution of matter which it finds around it.

*The Atom*

Chapter VII (p. 110)

Oxford University Press, Inc. London, England. 1956

## WAVE MECHANICS

### Eddington, Sir Arthur Stanley 1882–1944

English astronomer, physicist, and mathematician

Schrödinger's wave-mechanics is not a physical theory, but a dodge – and a very good dodge too.

*The Nature of the Physical World*

Chapter X (p. 219)

The Macmillan Company. New York, New York, USA. 1930

### Gamow, George 1904–68

Russian-born American physicist

In wave mechanics there are no impenetrable barriers, ... as the British physicist R.H. Fowler [also] put it after my lecture on that subject at the Royal Society of London...

*My World Line: An Informal Autobiography*

Chapter 3 (p. 60)

The Viking Press. New York, New York, USA. 1979

### Gardner, Willard

No biographical data available

The dancing, vanishing, fuzzy pygmies are indeed fantastic people, but the dancing, vanishing, wavy, evasive electrons, positrons, neutrons, and photons, may prove to be quite the ordinary fundamental entities.

*The Scientist's Concept of the Physical World*

First Annual Faculty Research Lecture (p. 18)

Delivered at Utah State Agricultural College, April 22, 1942

**WAVE-PARTICLE DUALITY**

**Glashow, Sheldon L.** 1932–  
American physicist

One quantum notion that mystifies the novice is the wave-particle duality. Does light consist of a beam of particles or is it a wave phenomenon? the question is hundreds of years old. Newton thought light was probably a stream of particles. Maxwell seemed to answer the problem decisively by showing light to be an electromagnetic wave. Yet Einstein in 1905, demonstrated that under some circumstances light behaves as if it were a beam of discrete particles, which are now called photons.

*Interactions: A Journey Through the Mind of a Particle Physicist and the Matter of This World*  
Chapter 3 (p. 51)  
Warner Books. New York, New York, USA. 1988

**WEAPON**

**Amis, Martin** 1949–  
English writer

Nuclear weapons...are remarkable artifacts. They derive their power from an equation: when a pound of uranium-235 is fissioned, the "liberated mass" within its 1,132,000,000,000,000,000,000,000 atoms is multiplied by the speed of light squared – with the explosive force, that is to say, of 186,000 miles per second times 186,000 miles per second. Their size, their power, has no theoretical limit. They are biblical in their anger.

*Einstein's Monsters*  
Introduction: Thinkability (p. 8)  
Jonathan Cape Ltd. London, England. 1987

**WEATHER****Author Undetermined**

A remark about the weather is like the move P to K4 in chess; it has become the established way of beginning a conversation and it holds its ground for the same reason, that no better opening has been discovered.

Talk About the Weather  
*The Independent*, Volume 75, Number 3372, July 17, 1913 (p. 126)

When the air is soft and warm  
And the sun's aglow, Get your trusty overshoes, It's pretty sure to snow.

When the sky is overcast  
And the wind is high, You want to take precautions 'gainst A sunstroke by and by.

The weather's easy to foretell In moments such as these;  
It's sure to rain or snow or thaw, Or get red hot or freeze.  
In Jennie Day Haines

*Weather Opinions*  
Prelude  
Paul Elder & Co. San Francisco, California, USA. 1907

**Blair, Thomas Arthur**  
No biographical data available

They [mathematicians] are hitching the weather to the engine of a formula, measuring it with the yardstick of an equation, and weighing it in the balances of a co-efficient.

The Mathematician, The Farmer and the Weather  
*The Scientific Monthly*, Volume 11, Number 4, October, 1920 (p. 353)

**Cox, Marcelene**  
No biographical data available

Weather means more when you have a garden. There's nothing like listening to a shower and thinking how it is soaking in around your green beans.

*Ladies Home Journal*, 1944

**Eggleston, Edward** 1837–1902  
American clergyman, novelist, and historian

"It is a beautiful day," said Whittaker....  
"Yes, nice day," growled Adams, "but a weather-breeder."

*ROXY*  
Chapter XIII (p. 112)  
Charles Scribner's Sons. New York, New York, USA. 1903

**Einstein, Albert** 1879–1955  
German-born physicist

...when the number of factors coming into play in a phenomenological complex become too large scientific method in most cases fail us. One need only think of the weather, in which case prediction even for a few days ahead is impossible. Nevertheless no one doubts that we are confronted with a causal connection whose causal components are in the main known to us. Occurrences in this domain are beyond the reach of exact prediction because of the variety of factors in operation, not because of any lack of order in nature.

*Out of My Later Years*  
Science and Religion, II (p. 28)  
Kensington Press. New York, New York, USA. 1956

**Holmes, Oliver Wendell** 1809–94  
American physician, poet, and humorist

A warm day in December is a memory of October; a warm day in February is a dream of April. Their character is unmistakable; we cannot help going back in imagination with the one, and forward with the other.

*Pages from an Old Volume of Life: A Collection of Essays*  
The Seasons (p. 135)  
Houghton Mifflin & Co. Boston, Massachusetts, USA. 1883

**Hopfield, John** 1933–  
American physicist and neural scientist

You might understand how a few gas molecules interact with one another, but you wouldn't imagine that putting millions of them together would get you weather.

*Weather: A User's Guide to the Atmosphere*

Chapter 1 (p. 1)

Icarus Press. South Bend, Indiana, USA. 1985

**Jerome, Jerome K.** 1859–1927

English author

...who wants to be foretold the weather? It is bad enough when it comes, without our having the misery of knowing about it beforehand.

*Three Men in a Boat, to Say Nothing of the Dog!*

Chapter 5 (p. 65)

Collins. London, England. 1957

**Martin, Edward Sandford** 1856–1939

Editor

We all know about the rheumatic people whose bones ache and whose tempers creak for days before a storm. When the storm finally breaks, they limber up at once and feel better; but something in the preliminary airs – waves of ether, electrical disturbances, one cross-grained atmospheric influence or another – rasps their nerves and strains their powers of self-control. And it is observed that these preliminary distresses come oftentimes in weather that to the eye makes an excellent appearance. Fine-looking days may be full of crotchets and cross words, and rainy ones be temperamentally amiable.

The Macmillan Co. New York, New York, USA. 1905

## CLIMATE CHANGE

### American Geophysical Union

...There is no known geologic precedent for the transfer of carbon from the Earth's crust to atmospheric carbon dioxide in quantities comparable to the burning of fossil fuels without simultaneous changes in other parts of the carbon cycle and climate system. This close coupling between atmospheric carbon dioxide and climate suggests that a change in one would in all likelihood be accompanied by a change in the other.

Climate Change and Greenhouse Gases, American Geophysical Union Report, 1999

Quoted in David Hafemeister

*Physics of Societal Issues. Calculations on National Security, Environment, and Energy* (p. 199)

Springer. New York, New York, USA. 2007

**Crichton, Michael** 1942–

American novelist

[I]n this elastic anything-goes world where science – or non-science – is the hand maiden of questionable public policy, we arrive at last at global warming. It is not my purpose here to rehash the details of this most magnificent of the demons haunting the world. I would just remind you of the now-familiar pattern by which these things are established. Evidentiary uncertainties are glossed over in the unseemly rush for an overarching policy, and for grants to support the policy by delivering findings that are desired by the patron. Next, the isolation of those scientists who won't get with the program, and the characterization of those scientists as outsiders and "skeptics" in quotation marks – suspect individuals with suspect motives, industry flunkies, reactionaries, or simply anti-environmental nut-cases. In short order, debate ends, even though prominent scientists are uncomfortable about how things are being done.

Lecture

Aliens Cause Global Warming, California Institute of Technology, January 17, 2003

**Gore, Al** 1948–

45th vice-president of the USA and environmentalist

...the more we understand about climate change, the more it looks as if [the United States] may be the real culprit. The United States emits about a quarter of the world's greenhouse gases, while the entire continent of Africa is culpable for only about 5% of it. ...We helped manufacture the suffering in Africa, and we have a moral obligation to try to fix it.

*An Inconvenient Truth: The Planetary Emergency of Global Warming and What We Can Do About It* (p. 117)

Rodale. New York, New York, USA. 2006

The age-old rhythm of the Earth's seasons – summer, fall, winter, and spring – is...changing as some parts of the world heat up more rapidly than others.

*An Inconvenient Truth: The Planetary Emergency of Global Warming and What We Can Do About It* (p. 152)

Rodale. New York, New York, USA. 2006

Climate does naturally change. By studying tree rings, lake sediments, ice cores, and other natural features that provide a record of past climates, scientists know that changes in climate, including abrupt changes, have occurred throughout history. But these changes all took place with natural variations in carbon dioxide levels that were smaller than the ones we are now causing. Cores taken from deep in the ice of Antarctica show that carbon dioxide levels are higher now than they have been at any time in the last 650,000 years, which means we are outside the realm of natural climate variation. More CO<sub>2</sub> in the atmosphere means warming temperatures.

*An Inconvenient Truth: The Planetary Emergency of Global Warming and What We Can Do About It* (p. 312)

Rodale. New York, New York, USA. 2006

**Hafemeister, David** 1934–

American physicist

Few scientists debate the fact that Earth is getting warmer. Seventeen of the eighteen warmest years in the 20th century occurred after 1980. The IPCC determined that Earth's surface temperature rose 0.6°C (±0.2°C) during the 20th century. Half this increase occurred since the mid-1970s to reach the highest temperatures in a millennium.

*Physics of Societal Issues. Calculations on National Security, Environment, and Energy* (p. 197)

Springer. New York, New York, USA. 2007

Until alternate energy becomes competitive, natural gas and coal will be the bridging fuels that will supply portable energy as petroleum becomes expensive and less plentiful. And the burning of fossil fuels will probably double CO<sub>2</sub> levels during the next century, causing an unknown amount of climate change.

*Physics of Societal Issues. Calculations on National Security, Environment, and Energy* (pp. 249–250)

Springer. New York, New York, USA. 2007

## Intergovernmental Panel on Climate Change (IPCC)

It is *very likely* that heat waves will be more intense, more frequent and longer lasting in a future warmer climate. Cold episodes are projected to decrease significantly in a future warmer climate. Almost everywhere, daily minimum temperatures are projected to increase faster than daily maximum temperatures, leading to a decrease in diurnal temperature range. Decreases in frost days are projected to occur almost everywhere in the middle and high latitudes, with a comparable increase in growing season length.

In S. Solomon, D. Qin, et al. (eds.)

*Climate Change 2007: The Physical Science Basis. Contribution of Working Group I to the Fourth Assessment Report of the Intergovernmental Panel on Climate Change*

Cambridge University Press. Cambridge, UK, and New York, New York, USA.

If greenhouse gas concentrations could be reduced, global temperatures would begin to decrease within a decade, although sea level would continue to rise due to thermal expansion for at least another century.

In S. Solomon, D. Qin, et al. (eds.)

*Climate Change 2007: The Physical Science Basis. Contribution of Working Group I to the Fourth Assessment Report of the Intergovernmental Panel on Climate Change*

Cambridge University Press. Cambridge, UK, and New York, New York, USA.

**Jevons, William Stanley** 1835–82

English economist and logician

Climate, indeed, is a subject upon which the most extravagant and unreasonable statements are made. Not only do

many men, even of much scientific information, imagine that within the short scope of their own recollection they can detect a permanent change in weather or some phenomenon, which would involve a connected change over all the regions of the earth, but they even assert that man's muscular strength and mental ingenuity can affect such changes. The clearing away of trees they say will render a climate dry; extensive reservoirs of water may increase the moistures of the atmosphere.

*Waugh's Australian Almanac, for 1859*

Some Data Concerning the Climate of Australia and New Zealand (p. 79)  
Sydney, Australia. 1859

**Sagan, Carl** 1934–96

American astronomer and science writer

The inadvertent side effects of technology can challenge the environment on which our very lives depend. That means that we must understand science and technology; we must anticipate long-term consequences in a very clever way – not just the bottom line on the profit-and-loss column for the corporation for this year, but the consequences for the nation and the species 10, 20, 50, 100 years in the future.

Wonder and Skepticism

*Skeptical Inquirer*, Jan/Feb 1995 (p. 24)

**Stewart, R. W.** d. 2005

Canadian oceanographer

...one can imagine a gambler's die lying on the floor of a truck running over a rough road; the die is stable on any of its six faces so that in spite of bounding and vibration the same face usually remains up – until a particularly big bump jars it so that it lands with a different face up, whereupon it is stable in its new position.... Perhaps in recent years we have been bouncing along with, say, a four showing. Perhaps 200 years ago the die flipped over to three for a moment, then flipped back to four. It could one day jounce over to a snake eye and bring in a new ice age!

The Atmosphere and the Ocean

*Scientific American*, Volume 221, Number 3, September, 1969 (p. 86)

**Weiner, Jonathan** 1953–

American fiction and non-fiction writer

It is amazing that chemicals measured in parts per million, billion, trillion, should matter to a planet. Yet, together with carbon dioxide, all these trace gases will shape Earth's next one hundred years and beyond. We are turning up the planet's thermostat a little more each year, committing the planet to a higher and higher temperature.

*The Next One Hundred Years*

Chapter 4 (p. 51)

Bantam Books. New York, New York, USA. 1990

**Wohlforth, Charles** 1963–

American journalist and writer

Choosing shorts or long underwear on a particular day is about weather; the ratio of shorts to long underwear in the drawer is about climate.

*The Whale and the Supercomputer: On the Northern Front of Climate Change*  
Chapter 6 (p. 150)

North Point Press. New York, New York, USA. 2004

**CLOUD**

**Bach, Richard** 1936–

American writer

A cloud does not know why it moves in just such a direction and at such a speed, it feels an impulsion.... this is the place to go now. But the sky knows the reason and the patterns behind all clouds, and you will know, too, when you lift yourself high enough to see beyond horizons.

*Illusions: The Adventures of a Reluctant Messiah* (p. 119)

**Hamerton, Philip Gilbert** 1834–94

English artist and art critic

They [clouds] come to the dullest and dreariest of scenes like the splendid cortege of an Oriental sovereign who traverses some miserable village.

*Landscape*

Chapter XXXVIII (p. 421)

Roberts Brothers. Boston, Massachusetts, USA. 1885

**Hawthorne, Nathaniel** 1804–64

American novelist and short story writer

When scattered clouds are resting on the bosoms of hills, it seems as if one might climb into the heavenly region, earth being so intermixed with sky, and gradually transformed into it.

*The Works of Nathaniel Hawthorne* Volume 9

*American Note-Books*

January 4, 1839 (p. 208)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1914

**Lowell, James Russell** 1819–91

American poet, critic, essayist, editor, and diplomat

Nature is always kind enough to give even her clouds a humorous lining.

*My Study Windows*

Thoreau (p. 195)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1899

**Ruskin, John** 1819–1900

English writer, art critic, and social reformer

...clouds are so opaque that, however delicate they may be, you never see one through another. Six feet depth of them, at a little distance, will wholly veil the darkest mountain edge.... And this opacity is, nevertheless, obtained without destroying the gift they have of letting broken light through them, so that, between us and the sun, they may become golden fleeces, and float as fields of light.

*Modern Painters* (Volume 5)  
Part VII, Chapter 2 (p. 119)  
John Wiley & Sons. New York, New York, USA. 1879

## FOG

### Cohen, J. B.

No biographical data available

Town fog is mist made white by Nature and painted any tint from yellow to black by her children; born of the air of particles of pure and transparent water, it is contaminated by man with every imaginable abomination. That is town fog.

*Annual Report of the Board of Regents of the Smithsonian Institution*  
The Air of Towns, Lecture 3 (p. 368)  
US Government Printing Office. Washington, D.C. 1896

## HAIL

### Pliny (C. Plinius Secundus) 23–79

Roman savant and author

Hail is formed of Rain, congealed into Ice: and Snow of the same Humour grown together, but not so hard. Frost is made of Dew frozen. In Winter Snows fall, and not Hail. It hailleth oftener in the Daytime than in the Night; yet Hail sooner melteth by far than Snow.

*Pliny's Natural History. In Thirty-seven Books*  
Book II, Chapter LX (p. 98)  
Printed for the Club by G. Barclay. London, England. 1847–1849

## HOAR-FROST

### Hamerton, Philip Gilbert 1834–94

English artist and art critic

The beauty of hoar-frost is nothing by itself, nothing on naked rock or mountain, nothing in the streets of the city, and out at sea it is visible only on the ship's cordage, if by accident it may whiten it for awhile. But on sylvan landscape it settles like a fairy decoration. No human work is delicate enough to be compared with such delicacy as this, no human artificer in silver or in ivory ever wrought such visible magic as these millions of tiny spears that thrust out points of unimaginable fineness from the lightest spray's utmost extremity. The perfect beauty of this adornment is visible only on tree-branches, and most visible on the thinnest and lightest; on the dark thin twigs of the birch, that bend under the weight of a robin, or on the slender long sprays of the bird-cherry tree, that the little birds love so well.

*The Sylvan Year: Leaves from the Note Book of Raoul Dubois*  
Chapter XI (p. 54)  
Robert Brothers. Boston, Massachusetts, USA. 1886

## HURRICANE

### Blount, Sir Thomas Pope 1649–97

English author

Hurricanes by some are call'd HURRACANOS, and by others, ORANCAN. In some of the CARIBBE ISLANDS the Word HURRICA signifies the DEVIL, where the Tempest took its Name, it being commonly call'd in Latine TEMPESTAS DIABOLICA.

*A Natural History*  
Observations Concerning Hurricanes (p. 416)  
Printed for R. Bentley. London, England. 1693

## ICE STORM

### Twain, Mark (Samuel Langhorne

Clemens) 1835–1910

American author and humorist

...in America the ice-storm is an event. And it is not an event which one is careless about. When it comes, the news flies from room to room in the house, there are bangings on the doors, and shoutings, "The ice-storm! the ice-storm!" and even the laziest sleepers throw off the covers and join the rush for the windows.

*Following the Equator* (Volume 2)  
Chapter XXIII (p. 277)  
Harper & Brothers. New York, New York, USA. 1899

...the Taj has had no rival among the temples and palaces of men, none that even remotely approached it – it was man's architectural ice-storm.

*Following the Equator* (Volume 2)  
Chapter XXIII (p. 277)  
Harper & Brothers. New York, New York, USA. 1899

It occurs to me now that I have never seen the ice-storm put upon canvas, and have not heard that any painter has tried to do it. I wonder why that is. Is it that paint cannot counterfeit the intense blaze of a sun-flooded jewel?

*Following the Equator* (Volume 2)  
Chapter XXIII (p. 279)  
Harper & Brothers. New York, New York, USA. 1899

## LIGHTNING

### Brīhādaranyaka Upanishad

The lightning is like yawning; the shaking of the members is like the rolling of the thunder; the passing of urine is like the rain of the clouds ...

Translated by Edward Röer  
*The Brīhād Aranyaka Upanishad* Column 2, Part 2  
First Chapter (p. 10)  
Society for the Resurrection of Indian Literature. Calcutta, India. 1908

**Huxley, Thomas Henry** 1825–95  
English biologist

The lightning was the angel of the Lord; but it has pleased Providence, in these modern times, that science should make it the humble messenger of man, and we know that every flash that simmers about the horizon on a summer's evening is determined by ascertainable conditions, and that its direction and brightness might, if our knowledge of these were great enough, have been calculated.

*Collected Essays* (Volume 2)

*Darwiniana*

The Origin of Species (p. 59)

Macmillan & Company Ltd. London, England. 1904

**Muir, John** 1838–1914  
American naturalist

If you are not very strong, try to climb Electric Peak when a big bossy, well-charged thunder-cloud is on it, to breathe the ozone set free, and get yourself kindly shaken and shocked. You are sure to be lost in wonder and praise, and every hair of your head will stand up and hum and sing like an enthusiastic congregation.

*Our National Parks*

Chapter II (p. 59)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

It is a curious fact that all the very old Sequoias have lost their heads by lightning. All things come to him who waits. But of all living things Sequoia is perhaps the only one able to wait long enough to make sure of being struck by lightning. Thousands of years it stands ready and waiting, offering its head to every passing cloud as if inviting its fate, praying for heaven's fire as a blessing; and when at last the old head is off, another of the same shape immediately begins to grow on.

*Our National Parks*

Chapter IX (p. 277)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

## SNOW

### Author Undetermined

While watching the snow fall, you can almost fancy that the flakes are white blossoms shaken from a land of flowers that lies somewhere above the sky; those that touch the river are gone in an instant, while some, as they fall slantways, unite together before they touch the earth. Science has seized upon and pictured the fantastic shapes the falling snow-flakes assume, and they are 'beautiful exceedingly.

In Robert Chambers

*The Book of Days* (Volume 1)

January (p. 17)

W. & R. Chambers. London, England. 1864

**Bentley, W. A.** 1865–1931  
American amateur snowflake photographer

Besides combining her greatest skill and artistry in the production of snowflakes, Nature generously fashions the most beautiful specimens on a very thin plane so that they are specially adapted for photomicrographical study.

Photographing Snowflakes

*Popular Mechanics Magazine*, Volume 37, 1922 (p. 309)

**Burroughs, John** 1837–1921  
American naturalist and essayist

For so gentle and on the whole so beneficent an element, the snow asserts itself very proudly. It takes the world quickly and entirely to itself. It makes no concessions or compromises, but rules despotically. It baffles and bewilders the eye, and it returns the sun glare for glare. Its coming in our winter climate is the hand of mercy to the earth and to everything in its bosom, but it is a barrier and an embargo to everything that moves above.

*Writings of John Burroughs* Volume 5

*Pepacton*

Chapter VIII (p. 233)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1909

**Longfellow, Henry Wadsworth** 1807–82  
American poet

Out of the bosom of the Air,  
Out of the cloud-folds of her garments shaken,  
Over the woodlands brown and bare  
Over the harvest-fields forsaken,  
Silent and soft and slow  
Descends the snow.

*The Poetical Works of Henry Wadsworth Longfellow*

Snow-Flakes

Houghton Mifflin Company. Boston, Massachusetts, USA. 1883

**Macmillan, Hugh** 1833–1903  
Scottish minister

It [snow] makes a spiritual world of this dull, dark earth of ours; and the fields that seemed fit only for the growth of man's food, and the tread of weary feet in the common labours of life – covered with its white immaculate carpet – look like a celestial floor on which white-winged angels on lofty errands of mercy might alight from the kindred heavens.

*Two Worlds Are Ours*

Chapter XVII (p. 270)

Macmillan & Company Ltd. London, England. 1880

The line of mountain snow on the blue verge of the horizon is the most exquisite of all sculpture.

*Two Worlds Are Ours*

Chapter XVII (p. 271)

Macmillan & Company Ltd. London, England. 1880

The snow-crystals are the blossoms of inorganic nature. . . . A wreath of snow is thus, indeed, a bank of flowers; and we little think, when walking over its cold and barren surface, that we are treading down at every step a tiny garden.

*Two Worlds Are Ours*  
Chapter XVII (p. 273)  
Macmillan & Company Ltd. London, England. 1880

**Muir, John** 1838–1914  
American naturalist

To lie out alone in the mountains of a still night and be touched by the first of these small silent messengers from the sky is a memorable experience, and the fineness of that touch none will forget.

*Steep Trails*  
Chapter IV (p. 75)  
Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

The fertile clouds, descending, glide about and hover in brooding silence, as if thoughtfully examining the forests and streams with reference to the work before them...

*Our National Parks*  
Chapter VIII (p. 249)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

Small flakes or single crystals appear, glinting and swirling in zigzags and spirals; and soon the thronging feathery masses fill the sky and make darkness like night, hurrying wandering mountaineers to their winter quarters.

*Our National Parks*  
Chapter VIII (p. 249)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

The faint lisp of snowflakes as they alight is one of the smallest sounds mortal can hear.

*Our National Parks*  
Chapter IX (p. 274)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

How full of creative genius is the air in which these are generated! I should hardly admire them more if real stars fell and lodged on my coat.

In Bradford Torrey and Francis H. Allen (eds.)  
*The Journal of Henry D. Thoreau* (Volume 8)  
January 5, 1856 (p. 87)  
Houghton Mifflin Company, Boston, Massachusetts, USA. 1949

Rain ! whose soft architectural hands have power to cut stones, and chisel to shapes of grandeur the very mountains, as no artist could ever do !

In William Drysdale (ed.)  
*Proverbs from Plymouth Pulpit*  
Nature (p. 10)  
D. Appleton & Co. New York, New York, USA. 1887

## STORM

**Conrad, Joseph** 1857–1924  
Polish-born English novelist

An earthquake, a landslide, an avalanche, overtake a man incidentally, as it were – without passion. A furious

gale attacks him like a personal enemy, tries to grasp his limbs, fastens upon his mind, seeks to rout his very spirit out of him.

*Typhoon*  
Chapter X (p. 77)  
Doubleday, Page & Company. Garden City, New York, USA. 1920

**Muir, John** 1838–1914  
American naturalist

Even the storms are friendly and seem to regard you as a brother, their beauty and tremendous fateful earnestness charming alike.

*Our National Parks*  
Chapter IV (p. 99)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

## THUNDERSTORM

**Crawford, F. Marion**

The bravest and coolest men have felt their hearts beating faster just before facing cold steel or going into battle, and almost all of them have felt something else too, which has nothing to do with the heart, and which I can only compare to what many women suffer from when there is going to be a thunderstorm – an indescribable physical restlessness and bodily irritation which makes it irksome to stay long in one position and impossible to think consecutively and reasonably about ordinary matters.

Fair Margaret  
*Munsey's Magazine*, Volume XXXIV, Number 4, January, 1906 (p. 510)

## TORNADO

**Aristotle** 440 BCE–322 BCE  
Greek philosopher

It [the tornado] moves things by its wind in the direction in which it is blowing in a straight line, and whirls round by its circular motion and forcibly snatches up whatever it meets.

*Great Books of the Western World* Volume 8  
*Meteorology*  
Book II, I (p. 475)  
Encyclopaedia Britannica, Inc. Chicago, Illinois, USA. 1952

**Finley, John P.**  
No biographical data available

Ignorance of our surroundings is a most unfortunate plea for those who stubbornly fail to heed the warnings of science. Thousands of people comfort themselves with the thought that as they have escaped in the past, so will they always remain free from danger; but a knowledge of the tornado, and the necessary precautions to be taken for purposes of safety, should be as common and familiar to the people living in tornado districts as a knowledge of the ordinary methods of extinguishing fire.

*Tornadoes*

Tornadoes (pp. 8–9)

The Insurance Monitor. New York, New York, USA. 1887

**Fort, Charles** 1874–1932

American writer

The tornado came wriggling, jumping, whirling like a great green snake, darting out a score of glistening fangs.

*The Book of the Damned*

Chapter XVII (p. 224)

Boni &amp; Liveright. New York, New York, USA. 1919

**WHIRLWIND****Fort, Charles** 1874–1932

American writer

A whirlwind runs amok, and is filled with confusions ...

*Lo!*

Chapter 1 (p. 17)

Claude Kendall. New York, New York, USA. 1931

**WIND****Chandler, Raymond Thornton** 1888–1959

American novelist

Those hot dry Santa Anas [winds] that come down through the mountain passes and curl your hair and make your nerves jump and your skin itch. On nights like that every booze party ends in a fight. Meek little wives feel the edge of the carving knife and study their husbands' necks. Anything can happen.

*Red Wind: A Collection of Short Stories*

Red Wind (p. 11)

World Publishing Co. Cleveland, Ohio, USA. 1946

**Conrad, Joseph** 1857–1924

Polish-born English novelist

It was something formidable and swift, like the sudden smashing of a Vial of Wrath. It seemed to explode all around the ship with an overpowering concussion and a rush of great waters, as if an immense dam had been blown up to windward. It destroyed at once the organised life of the ship by its shattering effect. In an instant the men lost touch of each other. This is the disintegrating power of a great wind. It isolates one from one's kind. An earthquake, a landslip, an avalanche, overtake a man incidentally, as it were – without passion. A furious gale attacks him like a personal enemy, tries to grasp his limbs, fastens upon his mind, seeks to rout the very spirit out of him.

*Typhoon*

Chapter X (p. 77)

Doubleday, Page &amp; Company. Garden City, New York, USA. 1920

The olive hue of hurricane clouds presents an aspect peculiarly appalling. The inky, ragged wrack, flying before a nor'west wind, makes you dizzy with its headlong speed that depicts the rush of the invisible air. A hard sou'wester startles you with its close horizon and its low, gray sky, as if the world were a dungeon wherein there is no rest for body or soul. And there are black-squalls, white-squalls, thunder-squalls, and unexpected gusts that come without a single sign in the sky; and of each kind no one of them resembles another.

*The Mirror of the Sea*

The Character of the Foe (p. 131)

Doubleday, Page &amp; Co. New York, New York, USA. 1916

**Dalton, John** 1766–1844

English chemist and physicist

Winds have ever been considered, with reason, as having a principal share in producing changes of weather, and therefore they demand a particular regard in meteorology.

*Meteorological Observations and Essays* (2nd edition)

Essay Second (p. 81)

Printed by Harrison &amp; Crosfield. Manchester, England. 1834

**Dickens, Charles** 1812–70

English novelist

...a wailing, rushing sound, which shook the walls as though a giant's hand were on them; then a hoarse roar as if the sea had risen; then such a whirl and tumult that the air seemed mad; and then, with a lengthened howl, the waves of wind swept on...

*Barnaby Rudge*

Chapter 33 (p. 172)

George Routledge &amp; Sons. London, England. 1884

**The Bible (King James Version)**

The wind bloweth where it listeth, and thou hearest the sound thereof, but canst not tell whence it cometh, and whither it goeth...

*John 3:8***Longfellow, Henry Wadsworth** 1807–82

American poet

Through woods and mountain passes

The winds, like anthems, roll.

*The Poetical Works of Henry Wadsworth Longfellow*

Midnight Mass for the Dying Year

Houghton Mifflin Company. Boston, Massachusetts, USA. 1883

**Maury, Matthew Fontaine** 1806–73

American hydrographer and naval officer

Properly to appreciate the various offices which the winds and the waves perform, we must regard nature as a whole, for all the departments thereof are intimately connected. If we attempt to study in one of them, we often find ourselves tracing clews which lead us off insensibly into

others, and, before we are aware, we discover ourselves exploring the chambers of some other department.

*The Physical Geography of the Sea*

Chapter X (p. 181)

Harper & Brothers. New York, New York, USA. 1855

‘Tis a noble and herioc thing, the wind! whoever conquered it? In every fight it has the last and bitterest blow. Run tilting at it, and you but run through it.

*Moby Dick*

Chapter CXXXV (p. 523)

The St. Botolph Society. Boston Massachusetts, USA. 1892

### Peattie, Donald Culross 1898–1964

American botanist, naturalist, and author

The oldest voice in the world is the wind. When you see it fitfully turning the blades of a mill lazily to draw water, you think of it as an unreliable servant of man. But in truth it is one of our masters, obedient only to the lord sun and the whirling of the great globe itself.

*Weather: A National Journal* (p. 24)

Weldon Owen Pty Ltd. Sydney, Australia. 1996

### Poynting, John Henry 1852–1914

English physicist

Compare, for instance, the accuracy with which we can describe and foretell the path of a planet with our ignorance of the movements of the atmosphere as dependent on the heat of the sun. The planet keeps to the astronomer’s timetable, but the wind still bloweth almost where it listeth.

Address to the British Association

*Chemical News and Journal of Industrial Science*, Volume 80, Number 2079, September 29, 1899 (p. 156)

### Tyndall, John 1820–93

Irish-born English physicist

...the Italian wind, gliding over the crest of the Matterhorn, is as firmly ruled as the earth in its orbital revolution round the sun ...

*Fragments of Science* (Volume 2)

Chapter I (p. 9)

P.F. Collier & Son. New York, New York, USA. 1905

## WEATHER-FORECAST

### Jerome, Jerome K. 1859–1927

English author

I do think that of all the silly, irritating tomfoolishness by which we are plagued, this “weather-forecast” fraud is about the most aggravating. It “forecasts” precisely what happened yesterday or the day before, and precisely the opposite of what is going to happen today.

*Three Men in a Boat, to Say Nothing of the Dog!*

Chapter 5 (p. 61)

Collins. London, England. 1957

## WEIGHT

### da Vinci, Leonardo 1452–1519

Italian High Renaissance painter and inventor

Weight, pressure, and accidental movement together with resistance are the four accidental powers in which all the visible works of mortals have their existence and their end.

*Leonardo da Vinci’s Note Books* (p. 55)

Duckworth & Company. London, England. 1906

### Rey, Jean 1583–1645

French physician and chemist

I retrace my steps, and affirm that the examination of weights which is made by the balance differs greatly from that which is made by the reason. The latter is only employed by the judicious: the former can be practiced by the veriest clown.

*Essays of Jean Rey*

Essay VIII (p. 17)

William F. Clay. Edinburgh, Scotland. 1895

### Woolcombe, Walter George

No biographical data available

We can no more lock up forces in a box than Pandora could imprison Hope in a casket, so that it is incorrect to talk of a *box of weights* – the correct term being a *box of masses*.

*Practical Work in General Physics for Use in Schools and Colleges*

Units of Measurements (p. 3)

At The Clarendon Press. Oxford, England. 1894

## WEIGHTLESSNESS

### Verne, Jules 1828–1905

French novelist

Fancy has depicted men without reflection, others without shadow. But here reality, by the neutralizations of attractive forces, produced men in whom nothing had any weight, and who weighed nothing themselves.

*From the Earth to the Moon, and Round the Moon*

Chapter VIII (p. 228)

A.L. Burt Company. New York, New York, USA. 1890

## WETLANDS

### Beebe, William 1877–1962

American ornithologist

The marsh, to him who enters it in a receptive mood, holds, besides mosquitoes and stagnation – melody, the mystery of unknown waters, and the sweetness of Nature undisturbed by man.

*The Log of the Sun*

Night Music of the Swamp (p. 172)

Henry Holt and Company. New York, New York, USA. 1906

**Lanier, Sidney** 1842–81

American writer and musician

Ye marshes, how candid and simple and nothing-with-  
holding and free

Ye publish yourselves to the sky and offer yourselves to  
the sea!

In Goodridge Bliss Roberts

*Younger American Poets, 1830–1890*

The Marshes of Glynn

Griffith, Farran, Okeden & Welsh. London, England. 1891

**WHIRLPOOL****Author Undetermined**

When two or several currents meet each other, or cross at  
angles, violent circular motions of the sea are produced,  
which attract everything coming within their vortex, and  
whirling it round in decreasing gyrations, finally engulf  
it in their bosoms. These motions of the sea are called  
*whirlpools*.

*Ocean Scenes: Or, The perils and Beauties of the Deep*

Properties of the Sea (p. 480)

Leavitt & Allen. New York, New York, USA. 1854

**Poe, Edgar Allan** 1809–49

American short story writer

I became possessed with the keenest curiosity about  
the whirl itself. I positively felt a wish to explore its  
depths, even at the sacrifice I was going to make; and  
my principal grief was that I should never be able to  
tell my old companions on shore about the mysteries  
I should see.

In H. Beaver (ed.)

*The Science Fiction of Edgar Allan Poe*

A Descent into the Maelstrom (p. 83)

Penguin Books. Hammondsorth, England. 1976

**Verne, Jules** 1828–1903

French novelist

The maelstrom ! Could a more dreadful word in a more  
dreadful situation have sounded in our ears! We were  
then upon the dangerous coast of Norway. Was the Nau-  
tilus being drawn into this gulf at the moment our boat  
was going to leave its sides? We knew that at the tide the  
pent-up waters between the islands of Ferroe and Lof-  
foden rush with irresistible violence, forming a whirlpool  
from which no vessel ever escapes. From every point of  
the horizon enormous waves were meeting, forming a  
gulf justly called the “Navel of the Ocean,” whose power  
of attraction extends to a distance of twelve miles. There,  
not only vessels, but whales, are sacrificed, as well as  
white bears from the northern regions.

*20,000 Leagues Under the Sea* (p. 301)

Geo. M. Smith & Co. Boston, Massachusetts, USA. 1875

**WHITE DWARF****Updike, John** 1932–

American novelist, short story writer, and poet

You offer cheer to tiny Man

‘Mid galaxies Gargantuan

A little pill in endless night,

An antidote to cosmic fright.

White Dwarf

Source undetermined

**WHY****Poynting, John Henry** 1852–1914

English physicist

On the purely physical or descriptive view, the idea of  
cause is quite out of place. In description we are solely  
concerned with the “how” of things, and their “why” we  
purposely leave out of account.

Address to the British Association

*Chemical News and Journal of Industrial Science*, Volume 80, Number  
2079, September 29, 1899 (p. 155)

**WILD LIFE****Hornaday, William Temple** 1854–1937

American naturalist

It is time for all men to be told in the plainest terms that  
there never has existed, anywhere in historic times, a vol-  
ume of wild life so great that civilized man could not  
quickly exterminate it by his methods of destruction.

*Our Vanishing Wild Life: Its Extermination and Preservation*

Chapter I (p. 6)

Charles Scribner’s Sons. New York, New York, USA. 1913

**WILDERNESS****Abbey, Edward** 1927–89

American environmentalist and nature writer

We would guard and defend and save it [wilderness]  
as a place for all who wish to discover the nearly lost  
pleasures of adventure, adventure not only in the phys-  
ical sense, but also mental, spiritual, moral, aesthetic, and  
intellectual adventure. A place for the free.

*The Journey Home: Some Words in Defense of the American West*

Chapter 8 (p. 88)

E.P. Dutton & Company. New York, New York, USA. 1977

Come on in. The earth, like the sun, like the air, belongs  
to everyone – and to no one.

*The Journey Home: Some Words in Defense of the American West*

Chapter 8 (p. 88)

E.P. Dutton & Company. New York, New York, USA. 1977

On this great river [the Colorado River] one could glide forever – and here we discover the definition of bliss, salvation, Heaven, all the old Mediterranean dreams: a journey from wonder to wonder, drifting through eternity into ever deeper, always changing grandeur, through beauty continually surpassing itself: the ultimate Homeric voyage.

*The Journey Home: Some Words in Defense of the American West*  
Chapter 17 (p. 201)  
E.P. Dutton & Company. New York, New York, USA. 1977

The idea of wilderness needs no defense. It only needs more defenders.

*The Journey Home: Some Words in Defense of the American West*  
Chapter 21 (p. 223)  
E.P. Dutton & Company. New York, New York, USA. 1977

Now I can do no more than offer one final prayer to the young, to the bold, to the angry, to the questioning, to the lost. Beyond the wall of the unreal city, beyond the security fences topped with barbed wire and razor wire, beyond the asphalt belting of the superhighways, beyond the cemented banksides of our temporarily stopped and mutilated rivers, beyond the rage of lies that poisons the air, there is another world waiting for you. It is the old true world of the deserts, the mountains, the forests, the islands, the shores, the open plains. Go there. Be there. Walk gently and quietly deep within it.

*Beyond the Wall*  
Author's Introduction (p. xvi)  
Ballantine Books. New York, New York, USA. 1968

But the love of wilderness is more than a hunger for what is always beyond reach; it is also an expression of loyalty to the earth, the earth which bore us and sustains us, the only home we shall ever know, the only paradise we ever need – if only we had the eyes to see.

*Desert Solitaire*  
Down the River (p. 190)  
Ballantine Books. New York, New York, USA. 1968

How difficult to imagine this place without a human presence; how necessary. I am almost prepared to believe that this sweet virginal primitive land will be grateful for my departure and the absence of the tourists, will breathe metaphorically a collective sigh of relief – like a whisper of wind – when we are all and finally gone and the place and its creations can return to their ancient procedures unobserved and undisturbed by the busy, anxious, brooding consciousness of man. Grateful for our departure? One more expression of human vanity. The finest quality of this stone, these plants and animals, this desert landscape is the indifference manifest to our presence, our absence, our coming, our staying or our going. Whether we live or die is a matter of absolutely no concern whatsoever to the desert.

*Desert Solitaire*  
Bedrock and Paradox (p. 300)  
Ballantine Books. New York, New York, USA. 1968

It is my fear that if we allow the freedom of the hills, and the last of the wilderness to be taken from us, then the very idea of freedom may die with it.

*Down the River*  
Part II, Chapter 8 (p. 121)  
E.P. Dutton & Company. New York, New York, USA. 1982

**Berry, Wendell** 1934–  
American essayist, poet, critic, and farmer

There does exist a possibility that we can live more or less in harmony with our native wilderness; I am betting my life that such a harmony is possible. But I do not believe that it can be achieved simply or easily or that it can ever be perfect, and I am certain that it can never be made, once and for all, but it is the forever unfinished lifework of our species.

*The Land of Harmony*  
Preserving Wilderness (pp. 138–139)  
Five Seasons Press. Hereford, England. 1987

This wilderness, the universe, is somewhat hospitable to us, but it is also absolutely dangerous to us (it is going to kill us, sooner or later), and we are absolutely dependent upon it.

*The Land of Harmony*  
Preserving Wilderness (pp. 138–139)  
Five Seasons Press. Hereford, England. 1987

We live in a wilderness, in which we and our works occupy a tiny space and play a tiny part. We exist under its dispensation and by its tolerance.

*The Land of Harmony*  
Preserving Wilderness (pp. 138–139)  
Five Seasons Press. Hereford, England. 1987

**Brower, David** 1912–2000  
American environmentalist

My feeling is we need to save wilderness for its own sake, for the mysterious and complex knowledge it has within it. Thoreau was right when he said, “In wilderness is the preservation of the world.”

In Jonathan White  
*Talking on the Water*  
Sierra Club Books. San Francisco, California, USA. 1994

...we need boundaries around cities, not around wilderness.

*Let the Mountains Talk, Let the Rivers Run*  
Chapter 5 (p. 43)  
HarperCollins Publishers. New York, New York, USA. 1995

**Carr, William H.** 1902–85  
American desert environmentalist and writer

I am thankful for the wild spaces that are yet untouched. May they not decrease in size and number!

*The Stir of Nature*  
Chapter Eight (p. 116)  
Oxford University Press, Inc. New York, New York, USA. 1930

**Dubos, René Jules** 1901–82  
French-born American microbiologist and environmentalist

Man has now succeeded in humanizing most of the earth's surface but paradoxically, he is developing simultaneously a cult for wilderness. After having been for so long frightened by the primeval forest, he has come to realize that its eerie light evokes in him a mood of wonder that cannot be experienced in an orchard or a garden.

Humanizing the Earth  
*Science*, Volume 179, Number 4075, February 23, 1973 (p. 772)

**Eiseley, Loren C.** 1907–77  
American anthropologist, educator, and author

The world, I have come to believe, is a very queer place, but we have been part of this queerness for so long that we tend to take it for granted. We rush to and from like Mad Hatters upon our peculiar errands, all the time imagining our surroundings to be dull and ourselves quite ordinary creatures. Actually, there is nothing in the world to encourage this idea, but such is the mind of man, and this is why he finds it necessary from time to time to send emissaries into the wilderness in the hope of learning of great events.

*The Star Thrower*  
The Judgment of the Birds (p. 27)  
Times Books. New York, New York, USA. 1978

**Gerould, Katherine Fullerton** 1879–1944  
American writer

The wilderness is a good place to cry in; the echoes are magnificent.

*Modes and Morals*  
The Extirpation of Culture (p. 67)  
Charles Scribner's Sons. New York, New York, USA. 1920

**Gould, Stephen Jay** 1941–2002  
American paleontologist and evolutionary biologist

I can easily understand why, for most naturalists, the highest form of beauty, inspiration, and moral value might be imputed to increasingly rare patches of true wilderness – that is, to parcels of nature devoid of any human presence, either in current person or by previous incursion.

*Leonardo's Mountain of Clams and the Diet of Worms*  
Introduction (p. 1)  
Harmon Brown. New York, New York, USA. 1998

**Hopkins, Frederick Gowland** 1844–89  
English biochemist

What would the world be, once bereft  
Of wet and of wilderness? Let them be left,  
O let them be left, wilderness and wet;  
Long live the weeds and the wilderness yet.

In W.H. Gardner and N.H. MacKenzie (eds.)  
*The Poems of Gerard Manley Hopkins*  
Inversnaid, Stanza 4  
Oxford University Press, Inc. London, England. 1930

**Hubbard, Henry Vincent** 1875–1947  
American landscape architect

**Kimball, Theodora** 1887–1935  
American librarian

A possession of inestimable value to mankind, which was once so common that it went unheeded, is now becoming in our country so rare that we are beginning to appreciate its preciousness; and the responsibility rests upon us, especially upon our landscape architects, as it has never rested upon any generation of men before, to see to it that the scattered remnants of natural character and natural beauty, which we still have left to us, are preserved for the recreation and inspiration of the generations to come.

*An Introduction to the Study of Landscape Design*  
Chapter V (p. 74)  
The Macmillan Co. New York, New York, USA. 1917

**Krutch, Joseph Wood** 1893–1970  
American naturalist, conservationist, and writer

The Wilderness and the idea of wilderness is one of the permanent homes of the human spirit.

*Grand Canyon: Today and All Its Yesterday*  
William Sloane Associates, Publishers. New York, New York, USA. 1958

**Leopold, Aldo** 1886–1948  
American naturalist

Shall we now exterminate this thing [wilderness] that made us Americans?

In Susan L. Flader and J. Baird Callicott  
*The River of the Mother of God*  
Wilderness as a Form of Land Use (p. 137)  
The University of Wisconsin Press. Madison, Wisconsin, USA. 1991

All wilderness areas, no matter how small or imperfect, have a large value to land-science. The important thing is to realize that recreation is not their only or even their principal utility. In fact, the boundary between recreation and science, like the boundaries between park and forest, animal and plant, tame and wild, exists only in the imperfections of the human mind.

In Susan L. Flader and J. Baird Callicott  
*The River of the Mother of God*  
Wilderness as a Land Laboratory (p. 289)  
The University of Wisconsin Press. Madison, Wisconsin, USA. 1991

**Lindbergh, Charles A.** 1902–74  
American aviator

In wilderness I sense the miracle of life, and behind it our scientific accomplishments fade to trivia.

The Wisdom of Wilderness  
*Life*, Volume 63, Number 25, December 22, 1967 (p. 10)

**Safina, Carl** 1955–  
Ecologist

I am drawn to the wild not because it is wild but because it is sensible, logical, ordered, stable, resilient.

Wild Comfort  
*Audubon*, January, 2002

**WILDLIFE**

**Borland, Hal** 1900–78  
American writer

The newcomer to the country will find the first signs of “wild life” in his own house. Even before he explores the dooryard he can sharpen his eyes indoors. He may be surprised at the outsiders who want to share that house with him.

*Beyond Your Doorstep: A Handbook to the Country*  
Chapter 1 (p. 1)  
Alfred A. Knopf. New York, New York, USA. 1962

**Hornaday, William Temple** 1854–1937  
American naturalist

And yet the game of North America does not belong wholly and exclusively to the men who kill! The other ninety-seven per cent of the People have vested rights in it.... Posterity has claims upon it that no man can ignore.... A continent without wild life is like a forest with no leaves on the trees.

*Our Vanishing Wild Life*  
Preface (p. ix)  
C. Scribner’s Sons. New York, New York, USA. 1913

**Myers, Norman** 1934–  
British environmentalist

Without knowing it, we utilize hundreds of products each day that owe their origin to wild animals and plants. Indeed our welfare is intimately tied up with the welfare of wild-life. Well may conservationists proclaim that by saving the lives of wild species, we may be saving our own.

*A Wealth of Wild Species: Storehouse for Human Welfare*  
Wild Species (p. 3)  
Westview Press. Boulder, Colorado. 1983

**Prince Philip (Phillip Mountbatten), Duke of Edinburgh** 1921–  
British naturalist

Miners used to take a canary around the coal mines to warn them when the air was so foul that the canary died. This is the importance of wildlife to us; because if wild-life dies it is our turn next. If any part of the life of this planet is threatened, all is threatened. If you say “not interested” to wildlife conservation then you are signing your own death warrant.

*The Times (London)*, May 17, 1988

**WILDNESS**

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

In wildness is the preservation of the world.

Walking  
*The Atlantic Monthly*, Volume 9, Number 56, June, 1862 (p. 665)

There is in my nature, methinks, a singular yearning toward all wildness.

*A Week on the Concord and Merrimack Rivers*  
Sunday (p. 36)  
Charles Scribner’s Sons. New York, New York, USA. 1921

We need the tonic of wildness – to wade sometimes in marshes where the bittern and the meadow-hen lurk, and hear the booming of the snipe; to smell the whispering sedge where only some wilder and more solitary fowl builds her nest, and the mink crawls with its belly close to the ground. At the same time that we are earnest to explore and learn all things, we require that all things be mysterious and unexplorable, that land and sea be infinitely wild, unsurveyed and unfathomed by us because unfathomable.

*Walden or Life in the Woods* (p. 350)  
Houghton Mifflin & Co. New York, New York, USA. 1910

**WIND**

**Jefferies, Richard** 1848–87  
English nature writer

As the wind, wandering over the sea, lakes from each wave an invisible portion, and brings to those on shore the ethereal essence of ocean, so the air lingering among the woods and hedges – green waves arid billows – became full of fine atoms of summer.

*The Pageant of Summer*  
*Eclectic Magazine of Foreign Literature, Science, and Art*,  
Volume XXXVIII, Number 2, August, 1883 (p. 146)

**WISDOM**

**Abelard, Peter** 1079–1142  
French scholastic philosopher

...The first key to wisdom, assiduous and frequent questioning.... By doubting we come to inquiry; by inquiry we perceive the truth ...

In Frederick Denison Maurice  
*Mediaeval Philosophy, Or, A Treatise of Moral and Metaphysical Philosophy from the Fifth to the Fourteenth Century*  
Chapter 1 (p. 138)  
Macmillan & Company Ltd. London, England. 1870

**Aquinas, St. Thomas** 1227?–74  
Dominican philosopher and theologian

Wisdom is a kind of science in so far as it has that which is common to all the sciences, namely, to demonstrate conclusions from principles. But since it has something proper to itself above the other sciences, in so far, that is, as it judges of them all, not only as to their conclusions, but also as to their first principles, therefore it is a more perfect virtue than science.

*Summa Theologica*  
I–II, 57, 2

**Aristotle** 384 BCE–322 BCE  
Greek philosopher

Again, we do not regard any of the senses as wisdom; yet surely these give us the most authoritative knowledge of particulars. But they do not tell us the “why” of anything – e.g., why fire is hot; they only say that it is hot.

In *Great Books of the Western World* (Volume 8)

*Metaphysics*

Book I, Chapter 1 (pp. 499–500)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Bell, E. T. (Eric Temple)** 1883–1960

Scottish-American mathematician and educator

Wisdom was not born with us, nor will it perish when we descend into the shadows with a regretful backward glance that other eyes than ours are already lit by the dawn of a new and truer mathematics.

*The Queen of the Sciences*

Chapter X (p. 138)

The Williams & Wilkins Company. Baltimore, Maryland, USA. 1931

**Berrill, Norman John** 1903–96

English-born American biologist

Wisdom, the highest product of the human mind, comes late; the young are rarely wise and are not expected to be.

*Man's Emerging Mind*

Chapter I (p. 14)

Dodd, Mead & Company. New York, New York, USA. 1955

German-born English physicist

...many scientists are not philosophically minded and have hitherto shown much skill and ingenuity but little wisdom.

*Natural Philosophy of Cause and Chance*

Introduction (p. 2)

Clarendon Press. Oxford, England. 1949

**Bush, Vannevar** 1890–1974

American electrical engineer and physicist

There are also the old men, whose days of vigorous building are done, whose eyes are too dim to see the details of the arch or the needed form of its keystone, but who have built a wall here and there, and lived long in the edifice; who have learned to love it and who have even grasped a suggestion of its ultimate meaning; and who sit in the shade and encourage the young men.

*Endless Horizons*

Chapter 17 (p. 181)

Public Affairs Press. Washington, D.C. 1946

**Campbell, Donald T.** 1916–96

American evolutionary philosopher and social scientist

In going beyond what is already known, one cannot but go blindly. If one can go wisely, this indicates already achieved wisdom of some general sort.

In Paul Arthur Schlipp (ed.)

*The Philosophy of Karl R. Popper*

Evolutionary Epistemology (p. 422)

Open Court. La Salle, Illinois, USA. 1974

**Chargaff, Erwin** 1905–2002

Austrian biochemist

Knowledge and wisdom are far from being communicating vessels, and the level of one has no bearing on that of the other.

*Heraclitean Fire: Sketches from a Life before Nature* (p. 110)

The Rockefeller University Press. New York, New York, USA. 1978

**Charlie Chan (Fictional Character)**

Dividing line between folly and wisdom very faint in dark tomb.

*Charlie Chan in Panama*

Film (1940)

**Collingwood, Robin George** 1889–1943

English historian and philosopher

A man ceases to be a beginner in any given science and becomes a master in that science when he has learned that...he is going to be a beginner all his life.

*The New Leviathan; or, Man, Society, Civilization and Barbarism*

Part I, Chapter I, aphorism I. 46 (p. 3)

At The Clarendon Press. Oxford, England. 1942

**Davies, Robertson** 1913–95

Canadian novelist

Knowledge may enable you to memorize the whole of Gray's Anatomy and Osler's Principles and Practice of Medicine, but only wisdom can teach you what to do with what you have learned.

*The Merry Heart*

Chapter 5 (p. 105)

McClelland & Stewart. Toronto, Ontario, Canada. 1996

Knowledge and Wisdom and they are not the same, because Knowledge is what you are taught, but Wisdom is what you bring to it.

*The Cunning Man* (p. 167)

McClelland & Stewart. Toronto, Ontario, Canada. 1994

**Descartes, René** 1596–1650

French philosopher, scientist, and mathematician

...human wisdom...always remains one and the same, however applied to different subjects, and suffers no more differentiation proceeding from them than the light

of the sun experiences from the variety of things which it illumines....

In *Great Books of the Western World* (Volume 31)

**Procter, Bryan Waller** 1787–1874

English poet

...he who can draw a joy

From rocks, or woods, or weeds, or things

That seem all mute, and does it – is wise.

*The Poetical Works of Barry Cornwall*

A Haunted Stream

Henry Colburn & Company London, England. 1822

**Rowland, Henry Augustus** 1848–1901

American physicist

The holy flame of wisdom burns brightly in a scientific mind and its rays are diffused for the benefit of mankind.

*Discovery, Or. The Spirit and Service of Science*

Chapter III (p. 50)

Macmillan & Co Ltd. London, England. 1916

### The Bible (King James Version)

... I gave my heart to seek and search out by wisdom concerning all things that are done under heaven: this sore travail hath God given to the sons of man to be exercised therewith.

Ecclesiastes 1:13

For in much wisdom is much grief: and he that increaseth knowledge increaseth sorrow.

Ecclesiastes 1:18

**Tolstoy, Leo** 1828–1910

Russian writer

The highest wisdom is established, not on reason alone, not on those worldly sciences, physics, history, chemistry, and the like, on which intellectual knowledge stumbles. The highest wisdom is one. The highest wisdom has one science, the science of the All, the universal science which explains all creation, and the place which man occupies in it.

Translated by Nathan Haskell Dole

*War and Peace* (Volume 2)

Part Second, Chapter II (p. 73)

Thomas Y. Crowell & Co. New York, New York, USA. 1889

### WISE MEN

**Kingsley, Charles** 1819–75

English clergyman and author

...remember the wise; for they have laboured, and you are entering into their labours. Every lesson which you learn in school, all knowledge which raises you above the savage or the profligate – who is but a savage dressed in civilized garments – has been made possible to you by the wise. Every doctrine of theology, every maxim of morals, every rule of grammar, every process of mathematics, every law of physical science, every fact of history or of geography, which you are taught here, is a voice from beyond the tomb. Either the knowledge itself, or other knowledge which led to it, is an heirloom to you from men whose bodies are now mouldering in the dust, but whose spirits live forever before God, and whose works follow them, going on, generation after generation, upon the path which they trod while they were upon

earth, the path of usefulness, as lights to the steps of youth and ignorance.

*Discipline, and Other Sermons*

The Temple of Wisdom (p. 15)

Macmillan & Co Ltd. London, England. 1899

### WONDER

#### Author Undetermined

Many other creatures look up into the night-time sky and see the stars, but we stare at them, wonder how many there are, wonder how far away they are, wonder how they got there, wonder what they are made of, wonder – indeed – why they are there at all.

*Fragments of Reality*

Chapter 1 (p. 6)

Cambridge University Press. Cambridge, England. 1997

**Carson, Rachel** 1907–64

American marine biologist and author

If a child is to keep alive his inborn sense of wonder without any such gift from the fairies, he needs the companionship of at least one adult who can share it, rediscovering with him the joy, excitement and mystery of the world we live in.

*The Sense of Wonder* (p. 41)

HarperCollins. New York, New York, USA. 1998

**Chesterton, G. K. (Gilbert Keith)** 1874–1936

English author

The world will never starve for want of wonders; but only for want of wonder.

*Tremendous Trifles*

Tremendous Trifles, I

Dodd, Mead & Company New York, New York, USA. 1909

**Cole, William** 1530–1600

English man of letters

When we contemplate the works of creation in the construction of the planetary system, and the stupendous parts of the universe, we are struck with admiration at their magnitude; so, when we descend the scale of nature, and contemplate the minutiae of material objects, we discover an equal harmony and beauty in their disposition, and are equally lost in wonder.

*Philosophical Remarks on the Theory of Comets, a Dissertation on the Nature and Properties of Light*

Conclusion (p. 93)

B.J. Holdsworth. London, England. 1823

**Dawkins, Richard** 1941–

British ethologist, evolutionary biologist, and popular science writer

The feeling of awed wonder that science can give us is one of the highest experiences of which the human psyche is capable. It is a deep aesthetic passion to rank with the finest that music and poetry can deliver. It is truly one of the things that makes life worth living and it

does so, if anything, more effectively if it convinces us that the time we have for living it is finite.

*Unweaving the Rainbow: Science, Delusion and the Appetite for Wonder*  
Preface (p. x)  
Houghton Mifflin Company, Boston, Massachusetts, USA. 1998

The fact that we slowly apprehend our world, rather than suddenly discover it, should not subtract from its wonder.

*Unweaving the Rainbow: Science, Delusion and the Appetite for Wonder*  
Chapter 1 (p. 5)  
Houghton Mifflin Company, Boston, Massachusetts, USA. 1998

The mystic is content to bask in the wonder and revel in a mystery that we were not “meant” to understand. The scientist feels the same wonder but is restless, not content; recognizes the mystery as profound, then adds, “But we’re working on it.”

*Unweaving the Rainbow: Science, Delusion and the Appetite for Wonder*  
Chapter 2 (p. 17)  
Houghton Mifflin Company, Boston, Massachusetts, USA. 1998

We have an appetite for wonder, a poetic appetite, which real science ought to be feeding but which is being hijacked, often for monetary gain, by purveyors of superstition, the paranormal and astrology.

*Unweaving the Rainbow: Science, Delusion and the Appetite for Wonder*  
Chapter 6 (p. 114)  
Houghton Mifflin Company, Boston, Massachusetts, USA. 1998

I believe that astrologers, for instance, are playing on – misusing, abusing – our sense of wonder. I mean when they hijack the constellations, and employ sub-poetic language like the moon moving into the fifth house of Aquarius. Real astronomy is the rightful proprietor of the stars and their wonder. Astrology gets in the way, even subverts and debauches the wonder.

*Science, Delusion and the Appetite for Wonder*  
Richard Dimpleby Lecture, BBC1 Television, November 12th, 1996

There is an appetite for wonder, and isn’t true science well qualified to feed it?

*Science, Delusion and the Appetite for Wonder*  
Richard Dimpleby Lecture, BBC1 Television, November 12th, 1996

### **Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

I do not wonder at a snow-flake, a shell, a summer landscape, or the glory of the stars; but at the necessity of beauty under which the universe lies; that all is and must be pictorial; that the rainbow and the curve of the horizon and the arch of the blue vault are only results from the organism of the eye.

*The Conduct of Life*  
Fate (p. 48)  
Houghton Mifflin Co. Boston, Massachusetts, USA. 1904

Men love to wonder, and that is the seed of our science ...

*Society and Solitude*  
Work and Days (p. 152)  
Houghton Mifflin Co. Boston, Massachusetts, USA. 1899

### **Gardner, Martin** 1914–

American writer and mathematics games editor

...almost all scientists believe that as their knowledge increases, their sense of wonder also grows. The scientist sees a flower, said physicist John Tyndall, “with a wonder superadded.”

*Science vs. Beauty?*  
*Skeptical Inquirer*, March 1, 1995

### **Guiducci, Mario** 1585–1646

Italian follower of and ghost writer for Galileo Galilei

When new or rarely seen things awaken in our minds more wonder than those which are common and ordinary, our desire to learn their causes should be aroused accordingly, and with it our wish to put to test those things reported to us by others or supplied by our own minds.

*Discourse on the Comets*  
Discourse on the Comet (p. 2)  
Published by the author. Florence, Italy. 1619

### **Hardy, Thomas** 1840–1928

English poet and regional novelist

Until a person has thought out the stars and their inter-spaces, he has hardly learnt that there are things more terrible than monsters of shape, namely, monsters of magnitude without known shape. Such monsters are the voids and waste places of the sky.

*Two on a Tower*  
Chapter IV (p. 34)  
Harper & Brothers, Publishers. New York, New York, USA. No date

### **Herschel, Sir John Frederick William** 1792–1871

English astronomer and chemist

Accustomed to trace the operation of general causes, and the exemplification of general laws, in circumstances where the uninformed and unenquiring eye perceives neither novelty nor beauty, [the scientist and natural philosopher] walks in the midst of wonders.

*A Preliminary Discourse on the Study of Natural Philosophy*  
Part I, Chapter I, Section 10 (p. 15)  
Printed for Longman, Rees, Orme, Brown & Green. London, England. 1831

### **Hunt, Leigh** 1784–1859

English author, poet, and editor

...no wonder is greater than any other wonder: and, if once explained, ceases to be a wonder.

*Table Talk*  
Wonder Never Ceases (p. 52)  
Smith, Elder & Co. London, England. 1902

### **Jacobi, Henri**

No biographical data available

Wonder is only the daughter of Ignorance ...

In William Hamilton  
*Discussions on Philosophy and Literature, Education and University Reform*  
On the Study of Mathematics as an Exercise of the Mind (p. 302)  
Harper & Brothers Publishers. New York, New York, USA. 1861

**Johnston, James Finlay Weir** 1796–1855  
Agricultural chemist

The common life of man is full of wonders, Chemical and Physiological. Most of us pass through this life without seeing or being sensible of them, though every day our existence and our comforts ought to recall them to our minds.

*The Chemistry of Common Life*

Author's Introduction (p. ix)

D. Appleton & Co. New York, New York, USA. 1880

**Krauss, Lawrence M.** 1954–  
American theoretical physicist

There is plenty of wonder left in the universe even after we have examined all the clues nature has thrown our way. I really believe that our imaginations have not even begun to exhaust the possibilities of existence. To proclaim the slogan “The Truth IS Out There” is perhaps too trite. I prefer “You ain’t seen nothin’ yet!”

*Beyond Star Trek: Physics from Alien Invasions to the End of Time*

Epilogue (p. 175)

Basic Books, Inc. New York, New York, USA. 1997

**Mach, Ernst** 1838–1916  
Austrian physicist and philosopher

Novelty excited wonder in persons whose habits of thought are shaken and disarranged by what they see. But the element of wonder never lies in the phenomenon or event observed; its place is in the person observing. People of more vigorous mental type aim at once at an adaptation of thought that will conform to what they have observed. Thus does science eventually become the natural foe of the wonderful.

Translated by Thomas J. McCormack

*Popular Scientific Lectures* (2nd edition)

On Transformation and Adaptation of Scientific Thought (p. 224)

The Open Court Publishing Co. Chicago, Illinois, USA. 1897

**Poe, Edgar Allan** 1809–49  
American short story writer

...wonders and wild fancies...strangely rife among mankind.

In H. Beaver (ed.)

*The Science Fiction of Edgar Allan Poe*

The Conversation of Eiros and Charmion (p. 67)

Penguin Books. Hammondsorth, England. 1976

**Pope, Alexander** 1688–1744  
English poet

Pretty! in amber to observe the forms  
Of hairs, of straws, or dirt, or grubs, or worms!  
The things, we know, are neither rich nor rare,  
But wonder how the devil they got there.

*The Complete Poetical Works*

Prologue to the Satires, l. 169

Houghton Mifflin Company. New York, New York, USA. 1903

**Sagan, Carl** 1934–96  
American astronomer and science writer

Claims that cannot be tested, assertions immune to disproof are veridically worthless, whatever value they may have in inspiring us or in exciting our sense of wonder.

*The Demon-Haunted World: Science as a Candle in the Dark*

Chapter 10 (p. 171)

Random House, Inc. New York, New York, USA. 1995

**Steeff, Duncan**  
No biographical data available

There is philosophy, and hope, in this great enterprise [of planetary exploration]. What a tribute to the human mind it is! We are replete with ambitions and egotisms, and with our love of the temporal – and yet we project our consciousness to the moons of Jupiter and light-years beyond, to the edges of the universe.

This fascination, which has endured in some form since our ancestors first contemplated the stars, has nothing to do with the material. It exists because we already possess the greatest treasure of all, wonder. wonder. For such a species, there is hope indeed.

In Nigel S. Hey

*Solar System*

Ices in the Solar System (p. 257)

Weidenfield & Nicolson. London, England. 2002

**Thompson, Sir J. Arthur** 1861–93  
Scottish biologist

In the heavens the navigator sails in a practically infinite ocean; for leagues and leagues beyond there is always more sea. There is room for wonder.

*The Bible of Nature*

Chapter I (pp. 10–11)

Charles Scribner's Sons. New York, New York, USA. 1908

**Trimmer, Joshua** 1795–1857  
English geologist

A contemplation of the variety of organization manifested in the world around us, cannot fail to excite our wonder; but if we extend our researches to the remains entombed in the earth's crust, our wonder is increased at the existing variety we find; and we are convinced that the increased system of nature is but a part of what has been, and that the whole visible creation, past and present, may be but an atom compared with the invisible.

*Practical Geology and Mineralogy*

INTRODUCTION (p. 38)

Lea & Blanchard. Philadelphia, Pennsylvania, USA. 1842

**Verhoeven, Cornelis** 1928–2001  
Dutch philosopher and essayist

Wonder is a certainty which has only just been established and has not yet lost the expectation of seeing its opposite appear. This does not exclude the knowledge of that which is incited by wonder. On the contrary: the more we know about something the more we realize that this knowledge is never exhaustive. Knowledge may nourish wonder since it can postulate the possibility that things may be different than they are.... Wonder that a thing is so is motivated by the possibility that it might be different. This movement is endless since this “difference” remains completely undefined.

Translated by Mary Foran

*The Philosophy of Wonder*

Two (p. 27)

The Macmillan Company. New York, New York, USA. 1972

## WOODS

**Carson, Rachel** 1907–64

American marine biologist and writer

A rainy day is the perfect time for a walk in the woods.

*The Sense of Wonder* (p. 30)

Harper & Row, Publishers, New York 1984

**Foss, Sam Walter** 1858–1911

American librarian and poet

The woods were made for the hunters of dreams,

The brooks for the fishers of song ...

*Dreams in Homespun*

The Bloodless Sportsman (p. 177)

Lothrop, Lee & Shephard. Boston, Massachusetts, USA. 1903

**Howitt, William** 1792–1879

English author

Woods have in all ages vividly impressed the human mind; they possess a majesty and sublimity which strike and charm the eye. Their silence and obscurity affect the imagination with a meditative awe. They soothe the spirit by their grateful seclusion, and delight it by glimpses of their wild inhabitants, by their novel cries, and by odours and beautiful phenomena peculiar to themselves.

*The Book of the Seasons*

October (pp. 350–351)

Henry Colburn & Richad Bentley. London, England. 1831

... woods are to us anything but solitudes – they are populous and inexhaustible worlds, where creatures that mock the grasp but not the mind, a matchless phantasmagoria, flit before us; alternately make us merry with their pleasant follies, delight us with their romantic grandeur and beauty, and elevate our hearts with their sublime sentiments.

*The Book of the Seasons*

October (p. 353)

Henry Colburn & Richad Bentley. London, England. 1831

**Hudson, William Henry**

Argentinean/English ornithologist, naturalist, and author

Pine woods...are monotonous because the trees are nearly all pines and one tree is like another, and their tall, bare trunks wall you in, and their dark stiff foliage is like a roof above you.

*The Book of A Naturalist* (pp. 1–2)

George H. Doran Co. New York, New York, USA. 1919

**Meredith, George** 1828–1909

English novelist and poet

For him the woods were a home and gave him the key  
Of knowledge, thirst for their treasures in herbs and flowers.  
The secrets held by the creatures nearer than we  
To earth he sought, and the link of their life with ours ...

*The Works of George Meredith* (Volume 29)

Melampus

Archibald Constable & Co. Westminster, England. 1898

**Peattie, Donald Culross** 1898–1964

American botanist, naturalist, and author

What we love, when on a summer day we step into the coolness of a wood, is that its boughs close up behind us. We are escaped, into another room of life. The wood does not live as we live, restless and running, panting after flesh, and even in sleep tossing with fears. It is aloof from thoughts and instincts; it responds, but only to the sun and wind, the rock and the stream – never, though you shout yourself hoarse, to propaganda, temptation, reproach, or promises. You cannot mount a rock and preach to a tree how it shall attain the kingdom of heaven. It is already closer to it, up there, than you will grow to be. And you cannot make it see the light, since in the tree’s sense you are blind. You have nothing to bring it, for all the forest is self-sufficient; if you burn it, cut, hack through it with a blade, it angrily repairs the swathe with thorns and weeds and fierce suckers. Later there are good green leaves again, toiling, adjusting, breathing – forgetting you.

*Flowering Earth*

Chapter 3 (p. 22)

G.P. Putnam’s Sons. New York, New York, USA. 1939

## WORD

**Becker, Carl Lotus** 1873–1945

American historian

If we would discover the little backstairs door that for any age serves as the secret entranceway to knowledge, we will do well to look for certain unobtrusive words with uncertain meanings that are permitted to slip off the tongue or the pen without fear and without research; words which, having from constant repetition lost their metaphorical significance, are unconsciously mistaken for objective realities.

*The Heavenly City of the Eighteenth Century Philosophers*  
Chapter II (p. 47)  
Yale University Press. New Haven, Connecticut, USA. 1932

### Dewar, Redcote

No biographical data available

Words undoubtedly are words, but they are meaningless save when expressing intelligible ideas, or symbolising objects.

*From Matter to Man: A New Theory of the Universe*  
Chapter II (pp. 14–15)  
Chapman & Hall, Ltd. London, England. 1898

### Duke of Argyll (George Douglas Campbell)

1823–1900

English statesman and writer on science, religion, and politics

Words, which should be the servants of Thought, are too often its masters; and there are very few words which are used more ambiguously, and therefore more injuriously, than the word “Law.”

*The Reign of Law* (4th American edition)  
Chapter II (p. 63)  
George Routledge & Sons. New York, New York, USA. 1873

### Eddington, Sir Arthur Stanley

1882–1944

English astronomer, physicist, and mathematician

...in science and in most philosophies spoken and printed words are treated, not only as immediate sensory data of our own consciousness, but as communicating to us data existing in other consciousnesses.

*New Pathways in Science*  
Chapter I (p. 10)  
At the University Press. Cambridge, England. 1935

### Heisenberg, Werner Karl

1901–76

German physicist and philosopher

Words have no well-defined meaning. We can sometimes by axioms give a precise meaning to words, but still we never know how these precise words correspond to reality, whether they fit reality or not.

In Paul Buckley and F. David Peat (eds.)  
*Glimpsing Reality: Ideas in Physics and the Link to Biology*  
Werner Heisenberg (p. 7)  
University of Toronto Press. Toronto, Ontario, Canada. 1996

### Hobbes, Thomas

1588–1679

English philosopher and political theorist

...the light of human minds is perspicuous words, but by exact definitions first snuffed, and purged from ambiguity; “reason” is the “pace”; “increase of” science, the “way;” and the benefit of mankind, the “end.” And, on the contrary, metaphors, and senseless and ambiguous words, are like *ignes fatui*; and reasoning upon them is wandering amongst innumerable absurdities and their end, contention and sedition, or contempt.

*Leviathan, Or, The Matter, Form, and Power of a Commonwealth, Ecclesiastical and Civil* (2nd edition)

Chapter V (p. 30)  
George Routledge & Sons. London, England. 1886

### Horace (Quintus Horatius Flaccus)

65 BCE–8 BCE

Roman philosopher and dramatic critic

If so be there are abstruse things which absolutely require new terms to make them clear, it will be in your power to frame words which never sounded in the ears of a cinctured Cethegus, and free pardon will be granted if the license be used modestly.... Each generation has been allowed, and will be allowed still to issue words that bear the mint-mark of the day.

In James Boswell  
*Boswell's "Life of Samuel Johnson"*  
Ars Poetica 48 (Wickham) (fn p. 158, year 1750)  
Oxford University Press, Inc. Oxford, England. 1965

### Lewis, Gilbert Newton

1875–1946

American chemist

There is always the danger is scientific work that some word or phrase will be used by different authors to express so many ideas and surmises that, unless redefined, it loses all real significance.

Valence and Tautomerism  
*Journal of the American Chemical Society*, Volume 35, 191 (p. 144S)

### Locke, John

1632–1704

English philosopher and political theorist

...a loose use of their words serves them [men] well enough in their ordinary discourses or affairs. But this is not sufficient for philosophical inquiries. Knowledge and reasoning require precise determinate ideas.

*The Works of John Locke: In Three Volumes* (Volume 1)  
Book Three, Of the Abuse of Words, 22 (p. 292)  
Printed for John Churchill. London, England. 1714

Vague and insignificant forms of speech, and abuse of language, have so long passed for mysteries of science; and hard and misapplied words, with little or no meaning, have, by prescription, such a right to be mistaken for deep learning, and height of speculation, that it will not be easy to persuade, either those who speak, or those who hear them, that they are but the covers of ignorance, and hindrance of true knowledge.

*An Essay Concerning Human Understanding*  
Epistle to the Reader (p. viii)  
Printed for Thomas Tegg. London, England. 1841

### Lowell, Percival

1855–1916

American astronomer

Let us not cheat ourselves with words. Conservatism sounds finely, and covers any amount of ignorance and fear.

*Mars*  
Chapter VI (p. 210)  
Houghton Mifflin & Co. Boston, Massachusetts, USA. 1895

### Mach, Ernst

1838–1916

Austrian physicist and philosopher

Without its associated thought a word remains a mere sound.

Translated by Thomas J. McCormack

*Popular Scientific Lectures* (2nd edition)

On Instruction in the Classics and the Mathematico-Physical (p. 343)  
Sciences

The Open Court Publishing Co. Chicago, Illinois, USA. 1897

**Maxwell, James Clerk** 1831–79

Scottish physicist

When a physical phenomenon can be completely described as a change in the configuration and motion of a material system, the dynamical explanation of that phenomenon is said to be complete. We cannot conceive any further explanation to be either necessary, desirable, or possible, for as soon as we know what is meant by the words configuration, mass and force, we see that the ideas which they represent are so elementary that they cannot be explained by means of anything else.

*Scientific Papers*

II, On the Dynamical Evidence of the Molecular Constitution of Bodies (p. 419)

**Osler, Sir William** 1849–1919

Canadian physician and professor of medicine

Beware of words – they are dangerous things. They change color like the chameleon, and they return like a boomerang.

In W.S. Thayer

*Sir William Osler, Bart.: Brief Tributes to His Personality, Influence and Public Service*

Osler, The Teacher (p. 52)

The Johns Hopkins Press. Baltimore, Maryland, USA. 1920

**Patri, Angelo** 1876–1965

Italian-American author and educator

We tell children things in the clearest words at our command. They say the words back to us and we are satisfied that they have learned something. We think that because they have the words they have the idea. A little investigation will show that very often the words are all they have, the sounds, and nothing whatever of the idea. So, whenever you teach a child something new, be sure to tie the stranger to an old familiar friend. If that does not seem possible, use pictures and drawings and illustrations until the child has a group of related ideas concerning this new idea. Then let him talk it back, making his meaning clear by word and gesture and drawing. Beware the empty word!

*The Problems of Childhood* (p. 188)

D. Appleton & Co. New York, New York, USA. 1926

**Popper, Karl R.** 1902–94

Austrian/British philosopher of science

The relationship between a theory (or a statement) and the words used in its formulation is in several ways

analogous to that between written words and the letters used in writing them down.

In Paul Arthur Schlipp (ed.)

*The Philosophy of Karl Popper* (Volume 1)

Book I, Part I

Autobiography of Karl Popper

Section 7 (p. 15)

The Open Court Publishing Company. LaSalle, Illinois, USA. 1974

**Schuster, Sir Arthur** 1851–1934

English physicist

Scientific controversies constantly resolve themselves into differences about the meaning of words.

In C. K. Ogden and I. A. Richards

*The Meaning of Meaning*

Introductory Quotations (p. xxiv)

Harcourt, Brace & Company. New York, New York, USA. 1949

**Smith, George Otis** 1871–1944

American geologist

It seems that in our hunt for general principles we feel the need of tagging each observed fact with some word that may connect it with the language in which the great fundamental laws of the universe are proclaimed at the seats of learning.

Paper presented to the Society of Economic Geologists at the Amherst Meeting

December 28, 1921

The chief purpose of words is to convey thoughts, and unless the wavelengths of the words are right the receiving apparatus will utterly fail to pick up the thoughts.

Paper presented to the Society of Economic Geologists at the Amherst Meeting

December 28, 1921

**Whewell, William** 1794–1866

English philosopher and historian

I am always glad to hear of the progress of your researches, and never the less so because they require the fabrication of a new word or two. Such a coinage has always taken place at the great epochs of discovery; like the medals that are struck at the beginning of a new reign – or rather like the change of currency produced by the accession of a new sovereign; for their value and influence consists in their coming into common circulation.

In Silvanus P. Thompson

*Michael Faraday: His Life and Work*

Chapter IV

Letter from Whewell to Faraday

14 October, 1837 (p. 163)

Cassell & Company Ltd. London, England. 1901

**Wolfenden, John Frederick** 1906–85

English education leader

The everyday difficulty is to use words “pure and simple,” without getting entangled in their emotional lives.... [T]he scientist is to a large extent freed from

this temptation. He knows very well the danger of using words.

*The Gap – The Bridge*

Essay on institutional dichotomy

## WORK

**Darwin, Charles Robert** 1809–82

English naturalist

I forget whether I ever told you what the object of my present work is – it is to view all facts that I can master (ehou, ehau, how ignorant I find I am) in Natural History (as on geographical distribution, palaeontology, classification, hybridism, domestic animals and plants, &c., &c., &c.) to see how far they favor or are opposed to the notion that wild species are mutable or immutable: I mean with my utmost power to give all arguments and facts on both sides.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 1)

Letter to Fox, March 27, 1855 (p. 409)

D. Appleton & Company. New York, New York, USA. 1896

**Davy, Sir Humphry** 1778–1829

English chemist

The most important part of the history of a man of science is necessarily recorded in his work.

*The Collected Works of Sir Humphry Davy* (Volume 1)

Memories of the Life of Sir Humphry Davy

Chapter I (p. 1)

London, England. 1839–1840

## Editor

No man is truly equal to his work until he is superior to it.

Editor's Outlook

*Journal of Chemical Education*, Volume 10, Number 2, February, 1933 (p. 66)

English novelist and playwright

Well, my deliberate opinion is – it's a jolly strange world.

In A.E. Trueman

*This Strange World*

Chapter I (p. 15)

The Scientific Book Club. London, England

**Bridgman, F. W.**

No biographical data available

The world is not a world of reason, understandable by the intellect of man.... It is probable that new methods of education will have to be painfully developed and applied to very young children in order to inculcate the instinctive and successful use of habits of thought so contrary to those which have been naturally acquired.

*Harper's Magazine*, March, 1919

**Bronk, William** 1918–99  
American poet and author

Whether what we sense of this world is the what of this world only, or the what of which of several possible worlds – which what?

*The World, the Worldless*

Metonymy as an Approach to a Real World  
New Directions. New York, New York, USA. 1964

**Bruno, Giordano** 1548–1600  
Italian philosopher and pantheist

God is infinite.... He is glorified not in one, but in countless suns; not in a single earth, a single world, but in a thousand thousand, I say in an infinity of worlds.

*On the Infinite Universe and Worlds*  
1584

**Buchner, Ludwig** 1824–99  
German physician and philosopher

That the world is not governed as is frequently expressed, but that the changes and motions of matter obey a necessity inherent in it, which admits of no exception, cannot be denied by any person who is but superficially acquainted with the natural sciences.

*Force and Matter*

Chapter I (p. 5)  
Trübner & Co. London, England. 1864

**Castaneda, Carlos** 1925–98  
Peruvian-born American author

The world doesn't yield to us directly, the description of the world stands in between.

*Tales of Power*

Appointment with Knowledge (p. 47)  
Washington Square Press. New York, New York, USA. 1974

**Davies, Sir John** 1569–1626  
English poet

Behold the world how it is whirled round,  
And for it is so whirl'd, is named so;  
In whose large volume many rules are found  
Of this new Art, which it doth fairly show:  
For your quick eyes in wandering too and fro  
From East to West, on no one thing can glance,  
But if you make it well, it seemes to daunce.

*Orchestra*

Stanza 34  
1596

**Emerson, Ralph Waldo** 1803–82  
American lecturer, poet, and essayist

The world is an immense picture-book of every passage in human life.

The Scholar (p. 258)  
Houghton Mifflin & Co. Boston, Massachusetts, USA. 1887

**Epicurus** ca. 55–135  
Greek philosopher

A world is a circumscribed portion of the universe, which contains stars and earth and all other visible things, cut off from the infinite, and terminating in an exterior which may either revolve or be at rest, and be round or triangular or of any other shape whatever.

Letter to Pythocles

**Goldsmith, Oliver** 1728–74  
Anglo-Irish writer, poet, and physician

The world may be considered as one vast mansion, where man has been admitted to enjoy, to admire, and to be grateful.

*A History of the Earth and Animated Nature* (Volume 1)

Chapter I (p. 9)  
Claxton, Remson & Haffelfinger. Philadelphia, Pennsylvania, USA. 1875

**Hazlitt, William Carew** 1834–1913  
English bibliographer

If the world were good for nothing else, it is a fine subject for speculation.

In W. Carew Hazlitt (ed.)

*The Round Table; Northcotes Conversations; Characteristics*

Characteristics, CCCII (p. 505)  
George Bell & Sons. London, England. 1884

**Hunt, Leigh** 1784–1859  
English author, poet, and editor

There are two worlds; the world that we can measure with line and rule, and the world that we feel with our hearts and imaginations.

*Men, Women, and Books* (Volume 1)

Fiction and Matter of Fact (p. 9)  
Harper & Brothers Publishers. New York, New York, USA. 1847

**Kant, Immanuel** 1724–1804  
German philosopher

The world around us opens before our view so magnificent a spectacle of order, variety, beauty, and conformity to ends, that whether we pursue our observations into the infinity of space in the one direction, or into its illimitable divisions on the other, whether we regard the world in its greatest or its least manifestations – even after we have attained to the highest summit of knowledge which our weak minds can reach, we find that language in the presence of wonders so inconceivable has lost its force, and number its power to reckon, nay, even thought fails to conceive adequately, and our conception of the whole dissolves into an astonishment without the power of expression – all the more eloquent that it is dumb.

*Critique of Pure Reason*  
Section Sixth (p. 463)  
American Dome Library Co. New York, New York, USA. 1902

### **Keller, David R.**

No biographical data available

### **Golley, Frank B.**

No biographical data available

Looking at the world scientifically is like looking at the world through sunglasses: the color of the lens, like the cultural filter through which each scientist sees the world, adds a quality to the world that is not inherent in the world.

*The Philosophy of Ecology: From Science to Synthesis*  
Introduction (p. 2)  
The University of Georgia Press. Athens, Georgia, USA. 2000

Funk & Wagnalls. New York, New York, USA. 1968

### **Lubbock, John, First Baron Avebury** 1834–1919

English banker, politician, biologist, and archaeologist

The world we live in is a fairyland of exquisite beauty, our very existence is a miracle in itself, and yet few of us enjoy as we might, and none as yet appreciate fully, the beauties and wonders which surround us. The greatest traveler cannot hope even in a long life to visit more than a very small part of our earth, and even of that which is under our very eyes how little we see!

What we do see depends mainly on what we look for. When we turn our eyes to the sky, it is in most cases merely to see whether it is likely to rain. In the same field the farmer will notice the crop, geologists the fossils, botanists the flowers, artists the coloring, sportsmen the cover for game.

*The Beauties of Nature and the Wonders of the World We Live In*  
Chapter I (p. 3)  
Macmillan & Company Ltd. London, England. 1904

### **Lucretius** ca. 99 BCE–55

Roman poet

...lack of power to solve the question troubles the mind with doubts, whether there was ever a birth-time of the world, and whether likewise there is to be any end ...

Translated by H.A.J. Munro  
*T. Lucreti Cari De rerum natura libri sex*  
Book V (p. 145)  
George Bell & Sons. London, England. 1903

### **Mach, Ernst** 1838–1916

Austrian physicist and philosopher

A competent view of the world can never be got as a gift; we must acquire it by hard work.

Translated by Thomas J. McCormack  
*The Science of Mechanics: A Critical and Historical Account of Its Development*  
Chapter IV (p. 465)  
The Open Court Publishing Co. Chicago, Illinois, USA. 1893

Properly speaking the world is not composed of “things” as its elements, but colors, tones, pressures, spaces, times, in short what we ordinarily call individual sensations.

Translated by Thomas J. McCormack  
*The Science of Mechanics: A Critical and Historical Account of Its Development*  
Chapter IV, Part IV, Section 2 (p. 483)  
The Open Court Publishing Co. Chicago, Illinois, USA. 1893

### **Milne, John** 1850–1930

English geologist

In comparison with ourselves our world is large, its mountains and valleys are gigantic excrescences on its surface, whilst the elevations and depressions, representing continental elevations and ocean basins, form irregularities the magnitude of which we can only appreciate by the aid of figures.

*Seismology*  
Chapter I (p. 1)  
Kegan Paul, Trench, Trubner & Co. London, England. 1908

From creation to decay  
Like the bubbles on a river

Sparkling, bursting, borne away.  
*The Complete Poetical Works of Percy Bysshe Shelley*  
Worlds on Worlds

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

**Stevenson, Robert Louis** 1850–94  
Scottish essayist and poet

The world is so full of a number of things,  
I'm sure we should all be as happy as kings.

*A Child's Garden of Verses*  
Happy Thought  
Delacorte Press. New York, New York, USA. 1985

**Tennyson, Alfred (Lord)** 1809–92  
English poet

Come, my friends,  
'T s not too late to seek a newer world.

...  
To sail beyond the sunset, and the baths  
Of all the western stars.

*Alfred Tennyson's Poetical Works*

Ulysses, l. 56–57, 60–61  
Oxford University Press, Inc. London, England. 1953

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

This curious world which we inhabit is more wonderful than it is convenient, more beautiful than it is useful; it is more to be admired than to be used.

Commencement address  
Harvard University, 1837

**Toulmin, Stephen** 1922–  
English philosopher

**Goodfield, June**  
Science writer, screenwriter, and historian

The picture of the natural world we all take for granted today has one remarkable feature, which cannot be ignored in any study of the ancestry of science: it is a historical picture. Not content with achieving intellectual command over the world of their own times, men have been anxious to go further, and discover how the present state of things came to be as it is. Having mapped the existing topography of the heavens and grasped the principles now governing the world of matter, they have also reached back into the darkness of past time, to a period which earlier generations would have found inconceivably remote.

*The Discovery of Time*  
Introduction (p. 17)  
Harper & Row, Publishers. New York, New York, USA. 1965

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910  
American author and humorist

It takes a long time to prepare a world for man, and such a thing is not done in a day. Some of the great scientists, carefully ciphering the evidence furnished by geology, have arrived at the conviction that our world is prodigiously old, and they may be right, but Lord Kelvin is not of their opinion. He takes the cautious, conservative view, in order to be on the safe side, and feels sure it is not so old as they think. As Lord Kelvin is the highest authority in science now living, I think we must yield to him and accept his view. He does not concede that the world is more than a hundred million years old.

In Bernard Devoto (ed.)  
*Letters from the Earth*  
The Damned Human Race  
Chapter I (pp. 211–212)  
Harper & Row, Publishers. New York, New York, USA. 1959

**Weyl, Hermann** 1885–1955  
German mathematician

The world does not happen, it simply is.

*Symmetry*  
Bilateral Symmetry (p. 5)  
Princeton University Press. Princeton, New Jersey, USA. 1960

**Wittgenstein, Ludwig Josef Johann** 1889–1951  
Austrian-born English philosopher

The world is the totality of facts, not of things.

Translated by C. K. Ogden

*Tractatus Logico-philosophicus*

1. 1 (p. 31)

Routledge. London, England. 2005

**Wordsworth, William** 1770–1850  
English poet

...worlds unthought of till the searching mind  
Of Science laid them open to mankind.

*The Complete Poetical Works of William Wordsworth*

To the Moon, Rydal, l. 40

Crowell. New York, New York, USA. 1888

## WORLD, CREATION OF

**Lyell, Sir Charles** 1797–1875  
English geologist

...it is not unreasonable, nor derogatory to the attributes of Omnipotence, to imagine that some general laws may be observed in the creation of new worlds; and if man could witness the birth of such worlds, he might reason by induction upon the origin of his own. But in the absence of such data, an attempt has been made to fancy some analogy between the agents now employed to destroy, renovate, and perpetually vary the earth's surface, and those whereby the first chaotic mass was formed, and brought by supposed nascent energy from the embryo to the habitable state.

*Principles of Geology*

Book I, Chapter II (p. 26)

James Kay, Jun, & Brother. Philadelphia, Pennsylvania, USA. 1837

**Rhind, William** 1797–1878  
Scottish scriptural geologist

The creation of the world, and the planetary system of which it forms a part, is an exercise of the Divine power so utterly beyond the conception of man, that, in speculating upon it, he is glad to throw around the whole the envelopment of infinitude, and filling his imagination with ideas of boundless space and indefinite duration, he endeavors to bring up his mind in some degree commensurate with the subject.

*The Age of the Earth Considered Geologically and Historically*

Section I (p. 11)

Fraser & Co. Edinburgh, Scotland 1838

## WORLD, END OF

**Byron, George Gordon, 6th Baron Byron** 1788–1824  
English Romantic poet and satirist

I had a dream which was not all a dream, The bright sun was extinguished, and the stars Did wander darkling in the external space, Rayless and pathless; and the icy earth Swung blind and blackening in the moonless air; Morn came and went – and came and brought no day...

*The Works of Lord Byron*

Darkness (p. 283)

John Murray. London, England. 1835

**Verne, Jules** 1828–1903  
French novelist

I have always fancied that the end of the world will be when some enormous boiler, heated to three thousand millions of atmospheric pressure, shall explode and blow up our Globe.

Translated by William Lackland

*Five Weeks in a Balloon*

Chapter Sixteenth (p. 123)

D. Appleton & Co. New York, New York, USA. 1869

## WORLD, PLURALITY OF

**Brewster, David** 1781–1868  
Scottish scientist, inventor, and writer

There is no subject within the whole range of knowledge so universally interesting as that of a Plurality of Worlds. It commands the sympathies, and appeals to the judgment of men of all nations, of all creeds, and of all times; and no sooner do we comprehend the few simple facts on which it rests, than the mind rushes instinctively to embrace it.

*More Worlds Than One: The Creed of the Philosopher and the Hope of the Christian*

Introduction (p. 1)

Chatto & Windus. London, England. 1876

## WORLD-EXPOSITION

**Keyser, Cassius Jackson** 1862–1947  
American mathematician

A world-exposition will, therefore, as far as practicable, avoid placing in the forefront matters so abstruse as to be fit for the contemplation and understanding of none but specialists; it will, as a whole, and in all its principal parts, address itself to the general intelligence; for it aims at being, for the multitudes of men and women who avail themselves of its exhibitions and lessons, an exposition of humanity: an exposition, no doubt, of the activities and aspirations and prowess of individual men and women, but of men and women, not in their capacity, as individuals, but as representatives of humankind. Individual achievements are not the object, they are the means, of the exposition.

*The Human Worth of Rigorous Thinking: Essays and Addresses*  
Chapter II (pp. 26–27)  
Columbia University Press. New York, New York, USA. 1916

## WORLDS

**Flammarion, Camille** 1842–1925  
French astronomer and writer

Like a shower of stars the worlds whirl, borne along by the winds of heaven, and are carried down through immensity; suns, earths, satellites, comets, shooting stars, humanities, cradles, graves, atoms of the infinite, seconds of eternity, perpetually transform beings and things; all move on, all wing their flight under the breath divine...

Translated by John Ellard Gore  
*Popular Astronomy: A General Description of the Heavens*  
Book II, Chapter III (p. 109)  
Chatto & Windus. London, England. 1907

**Fort, Charles** 1874–1932  
American writer

But data we shall have of round worlds and spindle-shaped worlds, and worlds shaped like a wheel; worlds like titanic pruning hooks; world linked together by streaming filaments; solitary worlds, and worlds in hordes: tremendous worlds and tiny worlds: some of them made of material like the material of this earth; and worlds that are geometric super-constructions made of iron and steel.

*The Book of the Damned*  
Chapter XII (pp. 154–155)  
Boni & Liveright. New York, New York, USA. 1919

## WRITE

**Amiel, Henri-Frédéric** 1821–81  
Swiss philosopher, poet, and critic

When I write for publication every word is misery, and my pen stumbles at every line, so anxious am I to find the ideally best expression, and so great is the number of possibilities which open before me at every step.

Translated by Humphry Ward  
*Amiel's Journal: The Journal Intime of Henri-Frédéric Amiel* (Volume 2)  
1 September, 1875 (p. 191)  
McGraw-Hill Book Co., Inc. New York, New York, USA. 1894

## WRITER

**Sharp, Dallas Lore** 1870–1929  
American author and university professor

For the nature-writer, while he may be more or less of a scientist, is never mere scientist – zoologist or botanist. Animals are not his theme; flowers are not his theme.

Nothing less than the universe is his theme, as it pivots on him, around the distant boundaries of his immediate neighborhood.

*The Face of the Fields*  
Chapter V (p. 116)  
Houghton Mifflin & Co. Boston, Massachusetts, USA. 1911

## WRITING

**Cohen, I. Bernard** 1914–2003  
American physicist and science historian

The writings of all great men stand as a perpetual challenge to each succeeding generation which attempts to make an interpretation suitable to its own age.

*Franklin and Newton*  
Chapter One (p. 3)  
Harvard University Press. Cambridge, Massachusetts, USA. 1966

**Einstein, Albert** 1879–1955  
German-born physicist

Your exposition is of matchless clarity and perspicuity. You did not dodge any problems but took the bull by the horns, said all that is essential, and omitted all that is inessential.

*The Collected Papers of Albert Einstein* (Volume 8)  
Letter 297. Letter to Moritz Schlick, 6 February, 1917 (p. 284)

**Eiseley, Loren C.** 1907–77  
American anthropologist, educator, and author

Man without writing cannot long retain his history in his head. His intelligence permits him to grasp some kind of succession of generations; but without writing, the tale of the past rapidly degenerates into fumbling myth and fable.

*The Star Thrower*  
The Long Loneliness (p. 41)  
Times Books. New York, New York, USA. 1978

**Emerson, William** 1701–82  
English mathematician

I am very sensible how difficult a thing it is to write well upon the science of Astronomy; by reason the subject is so comprehensive, and consists of so many parts, and is connected with so many other sciences, which it requires the perfect knowledge of; and besides, is a work of so much time, that a man had need have the life of Mathusalem, to go thro' the whole of it.

*A System of Astronomy: Containing the Investigation and Demonstration of the Elements of that Science*  
The Preface (p. iii)  
Printed for J. Nourse. London, England. 1769

**Fabre, Jean-Henri** 1823–1915  
French entomologist and author

...if I write for men of learning, for philosophers, who, one day, will try to some extent to unravel the tough

problem of instinct, I write also, I write above all things for the young. I want to make them love the natural history which you make them hate; and that is why, while keeping strictly to the domain of truth, I avoid your scientific prose, which too often, alas seems borrowed from some Iroquois idiom.

Translated by Alexander Teixeira de Mattos

*The Life of the Fly*

Chapter I (p. 15)

Dodd, Mead & Co. New York, New York, USA. 1925

**Gould, Stephen Jay** 1941–2002

American paleontologist and evolutionary biologist

I could not bear merely to write the shibboleths of the movement – or, even worse, to emote for show, catharsis, or accountability, but with nothing different to add to the hyperabundance of current expostulations.

*Eight Little Piggies: Reflections in Natural History*

A Reflective Prologue (p. 13)

W.W. Norton & Co. New York, New York, USA. 1993

**Kepler, Johannes** 1571–1630

German astronomer

...prolixity of phrases has its own obscurity, no less than terse brevity. The latter evades the mind's eye while the former distracts it; the one lacks the light while the other overwhelms with superfluous glitter; the latter does not arouse the sight while the former quite dazzles it.

*New Astronomy*

Author's introduction (p. 47)

At The University Press. Cambridge, England. 1992

**Locke, John** 1632–1704

English philosopher and political theorist

I have put into thy hands what has been the diversion of some of my idle and heavy hours. If it has the good luck to prove so of any of thine, and thou hast but half so much pleasure in reading as I had in writing it, thou wilt as little think thy money, as I do my pains, ill bestowed.

In *Great Books of the Western World* (Volume 35)

*An Essay Concerning Human Understanding*

Epistle to the Reader (p. 87)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Lowell, Percival** 1855–1916

American astronomer

I believe that all writing should be a collection of precious stones of truth which is beauty. Only the arrangement differs with the character of the book. You string them into a necklace for the world at large, pigeon hole them in drawers for the scientist. In the necklace you have the cutting of your thought, i.e., the expressing of it and the arrangement of the thoughts among themselves.

In Ferris Greenslet

*The Lowell's and Their Seven Worlds*

Book VII, Chapter I (p. 355)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1946

**Moog, Florence** 1915–87

American biologist

Good writing, after all, is just clear thinking. Anyone who can think well enough to make advances in any learned field ought to be able to write about his work. I am, of course, aware that many research papers submitted to scientific journals are, from a literary standpoint, putrid; but usually such essays are scientifically not very fragrant either.

Can Scientists Write for the General Public

*Science*, Volume 119, Number 3095, 23 April, 1954 (p. 567)

**Oersted, Hans Christian** 1777–1851

Danish physicist and chemist

So much is certain: that nothing is better adapted to form a mind which is capable of great development, than living and participating in great scientific revolutions. I would therefore counsel all those whom the period they live in has not naturally presented with this advantage, to procure it artificially for themselves, by reading the writings of those periods in which the sciences have suffered great changes. To pursue the writings of the most opposite systems, and to extract their hidden truth, to answer questions raised by these opposite systems, to transfer the chief theories of the one system into the other, is an exercise which cannot be sufficiently recommended to the student. He would certainly be rewarded for this labour, by becoming as independent as possible of the narrow opinions of his age.

*The Soul in Nature with Supplementary Contributions*

Observations on the History of Chemistry: A Lecture 1805–1807 (p. 322)  
Henry G. Bohn. London, England. 1852

**Rossi, Hugo** 1935–

American mathematician

It is extremely hard for mathematicians to do expository writing. It is not in our nature. In fact, the very nature of mathematical meaning and grammar militates against it. However, this puts us at a distinct disadvantage relative to other sciences.... Good exposition should be valued, not only for the success in communication but also as evidence of real mathematical insight. It is no accident that among our greatest mathematicians are our greatest teachers and expositors.

From the Editor

*Notices of the American Mathematical Society*, Volume 42, Number 1, January, 1995 (p. 4)

**von Braun, Werner** 1912–77

German-born rocket scientist

When a good scientific paper earns a student as much glory as we shower upon the halfback who scored the winning touchdown, we shall have restored the balance that is largely missing from our schools.

Text of Address by von Braun Before the Publishers' Group Meeting  
Here  
*New York Times*, 29 April, 1960, L 20, column 5

## WRONG

**Kingsley, Charles** 1819–75  
English clergyman and author

You must not say that this cannot be, or that that is contrary to nature. You do not know what Nature is, or what

she can do; and nobody knows, not even Sir Roderick Murchison, or Professor Owen, or Professor Sedgwick, or Professor Huxley, or Mr. Darwin, or Professor Faraday, or Mr. Grove.... They are very wise men; and you must listen respectfully to all they say: but even if they should say, which I am sure they never would, "That cannot exist. That is contrary to nature, you must wait a little and see; for perhaps even they may be wrong."

*The Water-Babies*

Chapter II (p. 58)

Dodd, Mead & Company. New York, New York, USA. 1910

## X

### X-RAY

#### Author Undetermined

The Roentgen Rays, The Roentgen Rays  
What is this craze,  
The town's ablaze,  
With the new phase  
of X-rays ways  
I'm full of daze,  
Shock and amaze,  
For nowadays,  
I hear they'll gaze,  
Thro' cloak and gown – and even stays,  
These naughty, naughty Roentgen Rays.

In John G. Taylor

*The New Physics*

Chapter 2 (p. 46)

Basic Books, Inc. New York, New York, USA. 1972

#### Bacon, Roger 1214–92

English philosopher, scientist, and friar

No substance is so dense as altogether to prevent rays from passing. Matter is common to all things, and thus there is no substance on which the action involved in the passage of a ray may not produce a change. Thus it is that rays of heat and sound penetrate through the walls of a vessel of gold or brass. It is said by Boethius that a lynx's eye will pierce through thick walls. In this case the wall would be permeable to visual rays. In any case there are many dense bodies which altogether interfere with the visual and other senses of man, so that rays cannot pass with such energy as to produce an effect on human sense, and yet nevertheless rays do really pass, though without our being aware of it.

In Victor Robinson

*The Story of Medicine*

Chapter VII (pp. 208–209)

The New York Home Library. New York, New York, USA. 1943

#### Charlie Chan (Fictional Character)

X-ray machine most useful for seeing where eye cannot reach.

*Charlie Chan in Egypt*

Film (1935)

#### Hildebrand, Joel Henry 1881–1983

American educator and pioneer chemist

...X-rays are like ordinary light in that they are electromagnetic waves, and unlike it merely on account of their vastly smaller wave length. Just as some substances are opaque, for example to blue light but transparent to red

light, so many substances opaque to ordinary light are transparent to X-rays.

*Principles of Chemistry*

The Constitution of the Atom (p. 274)

The Macmillan Co. New York, New York, USA. 1919

#### Jauncey, G. E. M. 1888–1947

Australian physicist

O Roentgen, then the news is true  
And not a trick of idle rumor  
That bids us each beware of you  
And of your grim and graveyard humor.

*Scientific American*, February 22, 1896

#### Lewis, Edwin Herbert 1866–1938

American rhetorician, novelist, and poet

...left alone with the X-ray man, Marvin plied him with questions. He so fascinated the radiographer that presently he was rewarded with a mystery even greater than that of the subtle unseen light. He was taken into a dark closet and permitted to peer into a small instrument containing salts of radium.

He saw a flight of stars, a sheaf of rays, a faint fierce sparkling! The heavy metallic radium atom was exploding! It was bombarding a small black screen with cannon flashes!

Instantly the boy inquired why somebody did not capture the power of that explosion and set it to work. He was told that any such achievement was impossible. The show was not affected by heat or cold, and would continue for a thousand years or more till the radium was all used up.

What were those flashes? How could he learn more about them? He must wait till he had enough physics to follow the writings of a man named Rutherford.

*White Lightning*

Chapter 2 (p. 8)

Covici-McGee. Chicago, Illinois, USA. 1923

#### Nichols, Ernest Fox 1869–1924

American physicist

In one sense the principal difference between X-rays and the yellow light from a sodium flame is analogous to the difference between the air disturbances caused by an irregular jumble of sharp thin reports of small percussion caps, and the droning of a heavy organ pipe. One is a tangle of single shocks, the other a steady wave motion.

*Physics*

Lecture (p. 20)

The Columbia University Press. New York, New York, USA. 1907

#### Polanyi, Michael 1891–1976

Hungarian-born English scientist, philosopher, and social scientist

One of the greatest and most surprising discoveries of our own age, that of the diffraction of X-rays by crystals

(in 1912) was made by a mathematician, Max von Laue, by the sheer power of believing more concretely than anyone else in the accepted theory of crystals and X-rays.

*Personal Knowledge*

Chapter 9, Section 5 (p. 277)

Harper & Row, Publishers. New York, New York, USA. 1962

### **Röntgen, Wilhelm Conrad** 1845–1923

German physicist

For brevity's sake I shall use the expression "rays," and to distinguish them from others of this name I shall call them "X-rays."

In Otto Glasser

*Dr. W.C. Röntgen*

Chapter IV (p. 42)

Charles C. Thomas, Publisher. Springfield, Illinois, USA. 1945

### **Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

Everybody knows something about X-rays, because of their use in medicine. Everybody knows that they can take a photograph of the skeleton of a living person, and show the exact position of a bullet lodged in the brain. But not everybody knows why this is so. The reason is that the capacity of ordinary matter for stopping the rays varies approximately as the fourth power of the atomic number of the elements concerned....

*The ABC of Atoms* (p. 97)

E.P. Dutton & Company. New York, New York, USA. 1923

### **Russell, L. K.**

No biographical data available

She is so tall, so slender, and her bones –  
Those frail phosphates, those carbonates of lime –  
Are well produced by cathode rays sublime,  
By oscillations, amperes and by ohms.  
Her dorsal vertebrae are not concealed  
By epidermis, but are well revealed.

Line on an X-Ray Portrait of a Lady

*Life*, March 12, 1896

### **Shakespeare, William** 1564–1616

English poet, playwright, and actor

Come, come, and sit you down, you shall not budge;  
You go not till I set you up a glass

Where you may see the innermost part of you.

Cell-Free Fermentation  
Elsevier Publishing Co. Amsterdam, The Netherlands. 1966

## Z

### ZEEMAN EFFECT

**Zeeman, Pieter** 1865–1943  
Dutch physicist

In consequence of my measurements of Kerr's magneto-optical phenomena, the thought occurred to me whether the period of the light emitted by a flame might be altered when the flame was acted upon by magnetic force. It has turned out that such an action really occurs.

The Effect of Magnetisation on the Nature of Light Emitted by a Substance  
*Nature*, Volume 55, Number 1424, 11 February, 1897 (p. 347)

### ZERO

**Berlinski, David** 1942–  
American mathematician

It required an act of profound intellectual audacity to assign a name and hence a symbol to all that nothingness. Nothing, *nada*, Zip, Zero, 0.

*A Tour of the Calculus*  
Chapter 2 (p. 13)  
Pantheon Books. New York, New York, USA. 1995

**Bôcher, Maxime** 1867–1918  
American mathematician

...there is what may perhaps be called the method of optimism which leads us either willfully or instinctively to shut our eyes to the possibility of evil. Thus the optimist who treats a problem in algebra or analytic geometry will say, if he stops to reflect on what he is doing: "I know that I have no right to divide by zero; but there are so many other values which the expression by which I am dividing might have that I will assume that the Evil One has not thrown a zero in my denominator this time."

The Fundamental Conceptions and Methods in Mathematics  
*Bulletin of the American Mathematical Society*, 2nd Series, Volume 11, 1904 (pp. 134–135)

**Carroll, Lewis (Charles Dodgson)** 1832–98  
English writer and mathematician

"Take some more tea," the March Hare said to Alice, very earnestly.

"I've had nothing yet," Alice replied in an offended tone: "so I can't take more."

"You mean you can't take less," said the Hatter, "it's very easy to take more than nothing."

*Alice's Adventure in Wonderland*  
Chapter VII  
Lea & Shepard Publishers. Boston, Massachusetts, USA. 1869

**Carus, Paul** 1852–1919  
American philosopher

Infinity is the land of mathematical hocus pocus. There Zero the magician is king. When Zero divides any number he changes it without regard to its magnitude into the infinitely small; and inversely, when divided by any number he begets the infinitely great.

The Nature of Logical and Mathematical Thought  
*Monist*, Volume 20, Number 1, January, 1910 (p. 69)

**Dunham, William**  
American mathematician

Dividing by zero is the closest thing there is to arithmetic blasphemy.

Zero is where it all begins, the clean slate.  
*Zero to Lazy Eight*  
Zero (p. 20)  
Simon & Schuster. New York, New York, USA. 1993

**Marquis, Don** 1878–1937  
American newspaperman, poet, and playwright

We can admire 0 [zero]; we can wonder at it; we could never love it, nor sin for its sake; neither would it regenerate us; it is lacking in heat and humanity.

*Prefaces*  
Preface to a Moral Book of Arithmetic (p. 194)  
D. Appleton & Co. New York, New York, USA. 1919

**Oken, Lorenz** 1779–1851  
German naturalist

The whole science of mathematics depends upon zero. Zero alone determines the value in mathematics. Zero is in itself nothing. Mathematics is based upon nothing, and, consequently, arises out of nothing.

*Elements of Physiophilosophy*

Part I (p. 5)

The Ray Society. London, England. 1847

**Pirsig, Robert M.** 1928–

American writer

He used the number zero as a starter. Zero, originally a Hindu number, was introduced to the West by the Arabs during the Middle Ages and was unknown to the ancient Greeks and Romans. How was that? he wondered. Had nature so subtly hidden zero that all the Greeks and all the Romans...millions of them...couldn't find it? One would normally think that zero is right out there in the open for everyone to see.

*Zen and the Art of Motorcycle Maintenance*

Chapter 19 (p. 298)

HarperCollins Publishers, Inc. New York, New York, USA. 2006

**Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

Zero is the number of objects that satisfy a condition that is never satisfied. But as never means *no case*, I do not see that any progress has been made.

In Morris Kline

*Mathematics: The Loss of Certainty* (p. 233)

Oxford University Press. Oxford, England. 1980

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

The point about zero is that we do not need to use it in the operations of daily life. No one goes out to buy zero fish. It is in a way the most civilized of all the cardinals, and its use is only forced on us by the needs of cultivated modes of thought.

*An Introduction to Mathematics*

Chapter V (p. 63)

Henry Holt & Co. New York, New York, USA. 1911

**Zamyatin, Yevgeny** 1884–1937

Russian novelist, playwright, and satirist

The circles are at times golden, sometimes they are bloody, but all have 360 degrees. They go from 0 degrees to 10 degrees, 20 degrees, 200 degrees, 360 degrees – and then again 0 degrees. Yes we have returned to zero. But for a mathematically working mind it is obvious that this zero is different.

Translated by Gregory Zilboorg

*We*

Record Twenty (p. 110)

E.P. Dutton & Company. New York, New York, USA. 1952

## ZETA

**Conrey, B.**

No biographical data available

It's a whole beautiful subject and the Riemann zeta function is just the first one of these, but it's just the tip of the iceberg. They are just the most amazing objects, these L-functions – the fact that they exist, and have these incredible properties are tied up with all these arithmetical things – and it's just a beautiful subject. Discovering these things is like discovering a gemstone or something. You're amazed that this thing exists, has these properties and can do this.

In K. Sabbagh

*The Riemann Hypothesis: The Greatest Unsolved Problem in Mathematics*

Chapter 12 (p. 196)

Farrar, Straus & Giroux. New York, New York, USA. 2002

**Gutzwiller, M. C.**

Swiss-born American physicist

The zeta function is probably the most challenging and mysterious object of modern mathematics, in spite of its utter simplicity.... The main interest comes from trying to improve the Prime Number Theorem, i.e., getting better estimates for the distribution of the prime numbers. The secret to the success is assumed to lie in proving a conjecture which Riemann stated in 1859 without much fare, and whose proof has since then become the single most desirable achievement for a mathematician.

*Chaos in Classical and Quantum Mechanics*

Chapter 17.9 (p. 308)

Springer-Verlag. New York, New York, USA. 1990

**Sabbagh, K.**

Writer and television producer

In 1859, a German mathematician called Bernhard Riemann, a "timid diffident soul with a horror of attracting attention to himself," published a paper that drew more attention to him than to almost any other mathematician in the 19th century. In it he made an important statement: the non-trivial zeros of the Riemann zeta function all have real part equal to  $1/2$ . That is the Riemann Hypothesis: 15 words encapsulating a mystery at the heart of our number system.

In Ernst Peter Fischer

*Beautiful Mathematics*

Prospect, January, 2002

## ZETA FUNCTION

**Bombieri, Enrico** 1940–

Italian mathematician

I am firmly convinced that the most important unsolved problem in mathematics today is the truth or falsity of a conjecture about the zeros of the zeta function, which was first made by Riemann himself.... Even a single exception to Riemann's conjecture would have enormously strange consequences for the distribution of prime numbers.... If the Riemann hypothesis turns out to be false, there will be huge oscillations in the distribution of primes. In an orchestra, that would be like one loud instrument that drowns out the others – an aesthetically distasteful situation.

Prime Territory: Exploring the Infinite Landscape at the Base of the Number System

*The Sciences*, Sept/Oct 1992

**Borwein, J.** 1951–  
Scottish mathematician

**Bradley, D.**

No biographical data available

It is intriguing that any of the various new expansions and associated observations relevant to the critical zeros arise from the field of quantum theory, feeding back, as it were, into the study of the Riemann zeta function. But the feedback of which we speak can move in the other direction, as techniques attendant on the Riemann zeta function apply to quantum studies.

Computational Strategies for the Riemann Zeta Function

*Journal of Computational and Applied Mathematics*, Volume 121, 2000

**Sarnak, P.** 1953–  
South African-born American mathematician

[It has been] said that the zeros [of the Riemann zeta function] weren't real, nobody measured them. They are as real as anything you will measure in a laboratory – this has to be the way we look at the world.

1999 *Mathematical Science Research Institute lecture*

Random Matrix Theory and Zeroes of Zeta Functions – A Survey

## ZODIAC

**Porter, Jermain Gildersleeve** 1852–1933  
Astronomer

This zone or girdle, stretching around the celestial sphere, might be called the zoological garden of the sky, our title, zodiac, coming from the Greek and signifying “a circle of animals.”

*The Stars in Song and Legend*

The Starry Heavens (p. 25)

Ginn & Co. Boston, Massachusetts, USA. 1901

## ZOO

**Diolé, Philippe** 1908–77  
French author and undersea explorer

The world of animals in captivity offers us at once a prophetic glimpse and a caricature of the world in which modern man lives out his life. The animal suffers psychologically and his suffering is not unlike that of man himself, since its world is characterized by deterioration of its environment and by its own degradation. The causes are the same in both cases: the increase in the number of individual animals in a zoo – baboons, for example – suffer from, and are deformed by, lack of sufficient space for them to lead a harmonious social existence. When captivity has done its work and an animal has become truly dangerous, it then becomes necessary to isolate it in a cage of its own.

Translated by J.F. Bernard

*The Errant Ark: Man's Relationship with Animals*

The Cruelty of Paradise

Putnam. New York, New York, USA. 1974

**Hediger, Heini** 1908–92  
Swiss zoologist

One of the most frequent misconceptions which is constantly met in the zoo is the business of regarding the animals as prisoners. This is as false and old-fashioned as if in these days everybody still thought that radio and television sets contained little men who talked, sang and danced inside the sets.

Translated by Gwynne Vevers and Winwood Reade

*Man and Animal in the Zoo*

Chapter 3 (p. 99)

Delacorte Press. New York, New York, USA. 1969

**Queneau, Raymond** 1903–76  
French poet, novelist, and publisher

In the dog days while I was in a bird cage at feeding time I noticed a young puppy with a neck like a giraffe who, like the toad, ugly and venomous, wore yet a precious beaver upon his head. This queer fish obviously had a bee in his bonnet and was quite bats; he started yak-yakking at a wolf in sheep's clothing claiming that he was treading on his dogs with his beetle-crushers, but the sucker got a flea in his ear; that foxed him, and quiet as a mouse he ran like a hare for a perch.

I saw him again later in front of the Zoo with a young buck who was telling him to bear in mind a certain drill about his fevers.

*Exercises in Style*

Zoological (p. 179)

**Wynne, Annette**

American poet

Excuse us, Animals in the Zoo,  
I'm sure we're very rude to you;  
Into your private house we stare  
And never ask you if you care;  
And never ask you if you mind.  
Perhaps we really are not kind:  
I think it must be hard to stay  
And have folks looking in all day,  
I wouldn't like my house that way.

*All Through the Year*

Excuse Us, Animals in the Zoo

Frederick A. Stokes. New York, New York, USA. 1932

**ZOO CHEMISTRY****Lehmann, Karl Gotthelf**

No biological data available

Zoo-chemistry should not only embrace, according to the principles of pure chemistry, all substances standing in a more or less intimate relation to the matters actually found in animal bodies, but it should likewise make the fullest and most extended application of the various propositions and theories by which general chemistry have at different times been embraced.

Translated by George E. Day

*Physiological Chemistry* (Volume 1)

The Organic Substrata of the Animal (pp. 35–36)

Blanchard &amp; Lea. Philadelphia, Pennsylvania, USA. 1855

**ZOOLOGIST****Agassiz, Jean Louis Rodolphe** 1807–73

Swiss-born American naturalist, geologist, and teacher

Lay aside all conceit. Learn to read the book of nature for yourself. Those who have succeeded best have followed for years some slim thread which has once in a while broadened out and disclosed some treasure worth a life-long search.

In David Stair Jordan

*Popular Science Monthly*, Volume 40, 1891**Brooks, William Keith** 1848–1908

American zoologist

If I sometimes speak of things that are not commonly held to fall within the province of zoology – if I try now and then for soundings in waters which able pilots tell us are far out of the course of our ship – I hope they who follow me to the end of our voyage will admit that I have not wandered from our true course; although it may be well to show now, by way of introduction, how it is that zoologists find themselves face to face with many problems which other men of science have agreed to lay aside as insoluble or irrelevant.

*The Foundations of Zoology*

Lecture I (p. 14)

Macmillan &amp; Co Ltd. London, England. 1899

**Crampton, Henry Edward** 1875–1956

American paleontologist

Glorying in the great achievements of his science, reveling like the mathematician in the ordered assemblage of related and organized knowledge, the student of zoology joins his fellows yet again for a renewed attack upon the distant ramparts of the unknown, deriving courage and inspiration from the motto: *Ignoramus, in hoc signo laboremus* [We are ignorant; so let us work].

*Lectures on Science, Philosophy and Art, 1907–1908*

Zoology (p. 36)

The Columbia University Press. New York, New York, USA. 1908

**Hornaday, William Temple** 1854–1937

American naturalist

Trained zoologists are men and women of mental resources. They are accustomed to taking initiative, to creation, to organization and direction. A well trained zoologist is like a high-class business man; he knows how to attack any subject or cause and go to the bottom of it. More than that, he knows how to find out how to promote any cause.

*Proceedings of the American Association of Museums*

The Duty of American Zoologists to American Wild Life (p. 113)

Charleston, South Carolina, USA. 1912

**Huxley, Thomas Henry** 1825–95

English biologist

If the study of man is his object, he is called an anatomist, or a physiologist, or an ethnologist; but if he dissects animals, or examines into the mode in which their functions are performed, he is a comparative anatomist or comparative physiologist. If he turns his attention to fossil animals, he is a palaeontologist. If his mind is more particularly directed to the description specific, discrimination, classification, and distribution of animals, he is termed a zoologist.

*Lay Sermons, Addresses and Reviews*

Chapter VI (pp. 95–96)

D. Appleton &amp; Co. New York, New York, USA. 1903

**Wheeler, William Morton** 1865–1937

American entomologist

...I shall strenuously endeavor to be modern, I can only beg you, if I fail to come within hailing distance of the advance guard of present-day zoologists, to remember that the range of adaptability in all organisms, even zoologists, is very limited.

*Essays in Physiological Biology*

Essay I (p. 4)

Harvard University Press. Cambridge, Massachusetts, USA. 1939

**ZOOLOGY**

**Agassiz, Jean Louis Rodolphe** 1807–73  
Swiss-born American naturalist, geologist, and teacher

A man cannot be professor of zoology on one day and of chemistry on the next, and do good work in both. As in a concert all are musicians, one plays one instrument, and one another, but none all in perfection.

Quoted in David Starr Jordan

*Science Sketches*

Quoted in David Starr Jordan (p. 146)

A.C. McClurg & Co. Chicago, Illinois, USA. 1896

**Bierce, Ambrose** 1842–1914

American newspaperman, wit, and satirist

**HIPPOGRIF**, n. An animal (now extinct) which was half horse and half griffin. The griffin was a compound creature, half lion and half eagle. The hippogriff was, therefore, only one quarter eagle, which is \$2.50 in gold. Zoology is full of surprises.

*The Devil's Dictionary*

Doubleday & Company, Inc. Garden City, New York, USA. 1967

Zoology (p. 8)

The Columbia University Press. New York, New York, USA. 1908

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

Living, as I do, in an educated and scientific atmosphere, I could not have conceived that the first principles of zoology were so little known. Is it possible that you do not know the elementary fact in comparative anatomy, that the wing of a bird is really the forearm, while the wing of a bat consists of three elongated fingers with membranes between?

*The Lost World*

Chapter IV (p. 55)

The Colonial Press. Clinton, Massachusetts, USA. 1959

**Elton, Charles S.** 1900–91

English biologist

...the discoveries of Darwin, himself a magnificent field naturalist, had the remarkable effect of sending the whole zoological world flocking indoors, where they remained hard at work for fifty years or more, and whence they are now beginning to put forth cautious heads again into the open air.

*Animal Ecology*

Chapter I (p. 3)

Sidgwick & Jackson, Ltd. London, England. 1927

**Feynman, Richard P.** 1918–88

American theoretical physicist

I began to read the paper. It kept talking about extensors and flexors, the gastrocnemius muscle, and so on. This and that muscle were named, but I had not the foggiest idea of where they were located in relation to the nerves or to the cat. So I went to the librarian in the zoology section and asked her if she could find me a map of the cat. "A map of the cat, sir?" she asked horrified. "You mean a zoological chart!"

*Surely You're Joking, Mr. Feynman!: Adventures of a Curious Character*

A Map of a Cat? (p. 72)

W.W. Norton & Company, Inc. New York, New York, USA. 1985

**Hornaday, William Temple** 1854–1937

American naturalist

The love of wild life springs eternal in the human breast. It is as natural for every child to be interested in animals as it is for every child to love the sound of music. Sad to say, however, that natural love for zoology often is completely stifled, or warped out of shape, by lack of opportunity. Those who by force of circumstances are compelled to grow up and live out their lives without knowing the satisfaction that is derived from an intimate acquaintance with at least one section of animal life, lose much pleasure to which they legitimately are entitled,

*The Science-history of the Universe*

Introduction (p. ix)

The Current Literature Publishing Co. New York, New York, USA. 1909

Under favorable conditions, the study of animal life becomes not only profitable to mankind, but also as musical as Apollo's lute. To know the animal life of the world is to know the world. It is impossible for an intelligent mind to grasp the principal animal forms of a given country without at the same time acquiring a great store of knowledge of that country's topography, soil, climate and people.

In Francis Rolt-Wheeler

*The Science-history of the Universe* (Volume 6)

Introduction (p. ix)

The Current Literature Publishing Co. New York, New York, USA. 1909

Part II, Book Third, Chapter III (p. 418)

The Heritage Press. New York, New York, USA. 1961

### **Kovalevskii, V. O.**

Russian paleontologist

And so, the task of modern zoology consists in this; it should acquaint us with the entire variety of animal forms which populate our world, not in terms of a disorganized multitude from which this or that form happens to catch our attention, but as a structured whole, in which each form occupies a designated place, so one can instantly note and critically analyze all the particularities of each separate member; it should show us the inner structure of these groups and of their individual members, and in what relationship they stand to members of other groups; it should present the history of each member, beginning with its [first] appearance...it should open the ancient tombs of the earth and demonstrate to us the endless series of ancestors and relatives which proceed those animals which we now see.

In William Coleman and Camille Limoges (eds.)

Before any progress can be made with the study of Zoology, it is necessary to get clear ideas on two points: firstly, as to what is meant by life and living things; and secondly, as to how an animal is to be distinguished from a plant.

*Zoology: An Elementary Text-book*

Chapter I (p. 1)

At the University Press. Cambridge, England. 1904

### **Wilson, Edmund Beecher** 1856–1939

American zoologist

The pioneer days of zoology are past. The naturalist of the future must be thoroughly trained in the methods and results of chemistry and physics. He must prepare himself for a life of intensive research, of high specialization; but in the future, even more than in the past, he will wander in vain amid the dry sands of special detail if the larger problems and general aims of his science be not held steadfastly in view. For these are the outstanding beacon lights of progress; and while science viewed at close range seems always to grow more complex, a wider vision shows that her signal discoveries are often singularly simple.

*Annual Report of the Board of Regents of the Smithsonian Institution* (1915)

Some Aspects of Progress in Modern Zoology (p. 408)

Government Printing Office. Washington, D.C. 1916

## ZOOLOGY, LEARNING

### **Hudson, C. T.**

No biographical data available

...the happier country lad wanders among fields and hedges, by moor and river, sea-washed cliff and shore, learning zoology as he learnt his native tongue, not in paradigms and rules, but from Mother Nature's own lips.

On Some Needless Difficulties in the Study of Natural History

*Nature*, Volume XLI, February 20, 1890 (p. 376)

# About the Editors

**Alma E. Cavazos-Gaither** was born on January 6, 1955, the sixth of eleven children, in the sleepy south Texas town of San Juan. Her parents were migrant farm workers and she grew up working long hours in the fields with her brothers and sisters. Upon graduating from high school she joined the US Navy. Alma has degrees from Central Texas College and the University of Mary Hardin-Baylor. She is in the Navy Reserves and has made two deployments in support of Iraqi Freedom. She enjoys traveling, scrap booking, photography, swimming, and writing.

**Carl C. Gaither** was born on June 3, 1944 in San Antonio, Texas. He was an only child, grew up in an Air Force family, and quit school while in the tenth grade to join the US Navy. Carl has degrees from the University of Hawaii, McNeese State University, Northeast Louisiana University, and the University of Southwest Louisiana and has completed the US Army Command and General Staff College. He enjoys writing, swimming, and music.

Carl and Alma were married in December 1995, and, together, they have compiled ten books on science quotations.
